The New Year brought a decisive change though April 14th was a half-holiday. Movements in all sections pointed to a radical change in sentiment, especially, in regard to jute shares. Evidently, the Stock Exchange takes a favourable view of the Price Control Order. And the sharp recovery in Government Paper to Rs. 96-12 on Thursday in Bombay has arrested the downtrend in other sections. War news is also assessed more carefully in the light of Sir Philip Joubert's opinion as to the battle for Imphal. A more constructive view will not take long to appear and a mild revival in coal shares has followed the recovery in jute shares on Friday.

Government securities have been undecided this week and the major change in Government Paper limited business, though small lots were taken readily. Government Paper has hardened slightly to Rs. 97 after being down to Rs. 95-12 on Tuesday. Dated loans have followed Government Paper and all the 3 per cent issues are below par. During the week 3½ per cent loan 1947-50 came to business at Rs. 101-14 and small lots of 5 per cent 1945-55 tax-free loan were absorbed at Rs. 104 to Rs. 104-8. No dealings in Provincial loans have taken place and a stray transaction in Howrah Bridge 3½ per cent loan at Rs. 99-12 alone has been recorded.

The fall in securities lowered the prices of bank shares slightly, and some selling of new bank shares, with the premium naturally lower, has been reported. Reserve Bank after being done at Rs. 127-8 has recovered to Rs. 129.

Since the Macneill group results are not encouraging to the market most coal shares have weakened. Burrakur has been an exception as the higher dividend (As. 8 for the half-year) has been well received. The return of Ondal to the dividend list should encourage buying of selected coal shares at the decline, but the bigger shares have been very dull. Bengal after receding to Rs. 560 has recovered only slightly. Amalgamated has shaded to Rs. 44 and big changes in Equitable and West Jamuria show that coals are speculative. Burrakur has moved around

Rs. 29 to Rs. 30 on most days and the high and low for this week are Rs. 28-14 and Rs. 31. There has been considerable selling of South Karanpura and Kuardi but Talcher has been in request as the dividend announcement has created some interest. Of the bigger shares Raneegeunge has attracted moderate interest around Rs. 41.

Jute shares have been rather irregular though the swift rise on Friday showed that any abrupt fall leads to a marked recovery. Howrah after receding to Rs. 67-10 has advanced to Rs. 69-8 and Kamahatty after going as low as Rs. 548 has appreciated to Rs. 568. While most movements have been against holders, Alliance has been particularly steady around Rs. 495 and Gondalpara in view of the full yield of 5 per cent has been well absorbed at rates from Rs. 1,492 to Rs. 1,506. Revival is most marked in the case of Kanknarrah with buyers at Rs. 499 on Friday after business was done at Rs. 484 on April 11th. The most abrupt change is, however, in regard to Soorah which has risen against the trend from Rs. 16-6 to Rs. 19-12 on various rumours. On Friday there was less selling and ready buying of Anglo-India, Barnagore, Champdany and Kinnison. Fresh appraisal of yields and prospects has led to a favourable opinion of jute shares.

Engineering shares have been erratic since the fall in Indian Iron led to sharp decline in quotations. Arthur Butler which stood at Rs. 19-8 last month has moved down to Rs. 16-4. In spite of the notice regarding reconstruction Kumardhubi has been flat at Rs. 9. The maintenance of the interim dividend at Re. 1 per share has not checked the fall in Jessop ordinary to Rs. 21-12. There has been a fall in National Iron to Rs. 12-5. Saran Engineering has receded to Rs. 10-2 and Braithwaite has dropped to Rs. 9-12 x.d.

Cotton shares have been mostly dull but mild improvement has followed on Friday with Cawnpore Textiles at Rs. 15-1 and New Victoria at Rs. 8-12.

There has been a fall in all mining shares and Burma Corporation at Rs. 3-9, Rhodesia Copper at Rs. 2-1 and Indian Copper at Rs. 2-9 are quotations noted this week.

In the Miscellaneous section the features are the fall in Assam Saws to Rs. 4-6 on Monday followed by a sharp recovery to Rs. 4-12. Assam Bengal Cement moved down to Rs. 14-4 and the Deferred shares to Rs. 3. Paper shares have lacked special support but Titagur has moved up to Rs. 27-12 after being down to Rs. 27.

In the Sugar section, Carew ordinary has fluctuated around Rs. 28 and Murree Brewery has been firm around Rs. 25, while U. P. has dropped to Rs. 31-8 ex-dividend.

In the Tea section general apprehension has caused grave irregularity. Tengpani at Rs. 26 and Hasimara at Rs. 64-8 show sizeable losses and Tezpur at Rs. 16 has been barely supported. Of the speculative shares Loobah has weakened to Rs. 15 though Dhunseri has been high enough at Rs. 8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 13.

Easy conditions prevailed on the market throughout the period under review. War news from the Imphal front was the single factor that had any effect on the stock ex-

change. As operators and investors interpreted the reports according to their individual judgment no definite trend could be discerned. Rumours had their share in the continued prevalence of irregular conditions. A comparison of the prices prevailing a week ago and the present quotations will show that there has been further decline in scrip values. Of all the sections steels and Government securities were worst affected.

In the gilt-edged market 3½ per cent Government Paper were easy with a steady drop in the quotation. The latest quotation at Rs. 96-12, however, is slightly better than the quotation earlier in the week.

Though Textiles have not been much affected conditions in this section are far from steady. Prices have given way in sympathy with steels with the result quotations at the moment disclose considerable loss in comparison with quotation a week ago. Bombay Dyeing are easy at Rs. 2,060 while Century are quoting at Rs. 995. Vishnu are not much changed at Rs. 570, Kohinoor are slightly higher at Rs. 683. Swadeshi were wanted up to Rs. 630.

Steel shares were still the worst sufferers with prices recording further losses during the period under review. This section was mainly responsible for the irregular conditions that prevail on the market. Tata deferreds were Rs. 2,000 and the quotation was even lower earlier in the week. Tata ordinaries were Rs. 393 and Indian Iron Rs. 35-4.

The Miscellaneous section attracted little attention and generally prices remained more or less unchanged. Alcock Ashdown were Rs. 615; Shivrajpur Syndicate were easy at Rs. 62-8; A.C.C. were better at Rs. 225 and Premier Construction Rs. 216.

THE MODERN MILLS, LIMITED

NOTICE IS HEREBY GIVEN that the TENTH ORDINARY GENERAL MEETING of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday the 16th May, 1944 at 12-45 p.m. (S.T.). THE UNITED COMMERCIAL BANK LIMITED

Closing of Share Register and Transfer Books

NOTICE is hereby given that Register of members and Transfer Books of THE UNITED COMMERCIAL BANK LTD., will be closed from 20th April to 15th May, 1944 both days inclusive.

By Order of the Board,
 B. T. THAKUR,
 General Manager.

Calcutta, 10th April, 1944.

KUMARDHUBI ENGINEERING WORKS, LIMITED.

NOTICE TO SHAREHOLDERS.

The attention of all shareholders is invited to the Circular issued to them dated 26th August, 1943, in which was outlined the proposed scheme for the Capital re-organisation of the Company. It is intended to proceed with the scheme in the near future. All persons holding shares in the Company who are not registered as members, should apply for registration without delay and forward their scrip and transfer deeds duly stamped to Messrs. Bird & Co. Kurseong.

By Order of the Board,
 BIRD & CO.
 Managing Agents.

Chartered Bank Buildings,
 Calcutta, 14th December, 1943.

THE BHAGALPUR ELECTRIC SUPPLY COMPANY, LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Office of the Company's Managing Agents, No. 14 Old Court House Street, Calcutta, on Friday the 28th day of April 1944 at 3-0 p.m. for the following purposes:—

- (1) To pass the Directors' Report and the audited Accounts for the year ended 31st December 1943.
- (2) To declare a dividend.
- (3) To elect a Director in place of the retiring Director.
- (4) To elect Auditors for the ensuing year, and to fix their remuneration.
- (5) To transact any other business that may be brought forward.

The Share Register of the Company will be closed from 20th April 1944 to 28th April 1944 both days inclusive.

OCTAVIUS STEEL & CO., LTD.
MANAGING AGENTS.

Calcutta, 4th April 1944.

Note:—The Directors recommend payment of a dividend at the rate of three annas per share free of Income Tax for the year ended 31st December, 1943.

In accordance with the Government of India Notification No. 1564-OR/42 dated 7th September 1942 the Directors Report and the Accounts will not be published.

JESSOP & COMPANY, LIMITED.

Notice is hereby given that the Directors have declared the payment on 1st May 1944 of the dividend due on the 5% Cumulative Preference Shares of the Company for the half-year ended 30th April 1944 and an ad interim dividend free of tax on the Ordinary Shares on account of the profits of the year ending 31st October 1943 at the rate of Re. 1/- per share.

The Share Transfer Registers of the Company will be closed from 26th April to 1st May 1944, both days inclusive. Dividends are paid only to registered shareholders or their mandatees.

By Order of the Board
 C. C. Matheson
 Secretary.

Dated the 7th April 1944.

TREASURY BILLS

Central Govt.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, May 2, 1944. Total amount offered was Rs. 12,14,50,000. Tenders at Rs. 99-13-6% were accepted in full and those at Rs. 99-13-3% were allotted approximately 70%. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-10-11% per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday May 9, 1944 in Bombay up to 11 a.m. (IST) and up to the close of business on Monday May 8, 1944 at other centres. Successful tenderers should make payment on Friday May 12, 1944. Other conditions are as usual.

During the week ended April 28, 1944 Government of India Treasury Bills for Rs. 2,35,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

A marked improvement in London gilt-edged quotations this week appears to support the most favourable comments on Sir John Anderson's first budget. It was inferred by Mr. A. J. Cummings in the News Chronicle that Sir John Anderson is a likely Prime Minister in view of the good reception given to the budget. For the present, the Dominion Premiers' meeting concerned with war and secondarily with plans for Empire unity is as good as the budget for London markets. A revival in textile issues points to calculations of peace coming rather earlier than expected. Leading industrialists also may be supported on the strength of Anglo-American talks in progress concerning income-tax. The City correspondent of the Manchester Guardian describing the effects of overseas taxation of profits earned by British enterprise referred to the handicap created by double taxation. Relief may come. It is necessary to remember that within the Empire there is an agreement as to relief but the average sterling company is not so well-placed as the rupee company in spite of the increase in taxation here. The kind of adjustment that is promised in regard to agricultural income-tax in Bengal thus may not be enough. A change of domicile for companies is obviously ruled out by the Treasury's action in respect of some West Australian gold-mining companies. The leading industrialists have certainly strengthened of late and Lord Halifax's careful plea for Anglo-American agreement in regard to shipping and trade has raised the quotation for P & O deferred stock.

Similar improvement in regard to leading industrialists in New York is based on the Republican revival still growing. Mr. Dewey's success at Philadelphia last week has brought about a rise in most shares. The problems of reconversion are not very big for well-established enterprises for whom overseas expansion is recommended for good reasons. The effect of a rise on Wall Street is discernible in Bombay at any rate. The important thing is that the upward trend is visible in advance of the Chicago Convention. Two likely candidates are out and Mr. Dewey's running mate is practically fixed as the Republicans favour Governor Warren for the Vice-Presidency.

Mention of a new financial agreement with China offering that country a loan of £50 millions along with a promise of leasehold supplies, is more than a result of the goodwill mission which described opportunities and pledged China to the old 'open door' policy. The U.S.A. is giving a bigger loan to China and both these loans may counter the evil effects of inflation. China has tried gold sales as a remedy and more recently selected a new director of financial policy in Dr. Kung who took the place of Mr. T. V. Soong. That was that the Allies favour in China. The point that credits have been made available to China by Britain from 1938 should not be overlooked. The principal supporter of the defunct Exchange Stabilisation Board has been the British Government acting in this case through two exchange banks. Mr. V. A. Grantham in his statement to the annual meeting of the Chartered Bank dwelt on the prospects in China after the war in relation to the opening of a new

branch in Chungking last year. The U. S. air transport command flying round the Hump keeps one route open but Mr. Grantham remarked that there is practically no trade to finance. One important point emerged in Mr. Grantham's survey. The bank's operations abroad now are mainly centred in India. Exchange banks in India certainly attracted more deposits as the Chartered Bank's deposits rose by over £1.77 million in 1943. Increases under bills discounted and loans by £1.14 millions show that business in India is progressing satisfactorily. In the balance-sheet as on December 31 the total deposits amount to £78.7 millions and investments are shown as £39.86 millions. Like the maintenance of the dividend at 5 per cent for the year the strong liquid position received special mention in the Chairman's review.

The agreement with Spain has scarcely raised the price of Rio Tinto shares. Evidently the discouraging outlook which led to a fall in Rhodesian shares on the ground that free and full production is not desired of the mines at present, is a more serious factor for Rio Tinto's many subsidiaries. The Allies having enough copper for war requirements are not eager to see production increase continuously. As for the U.S.A. there is always abundance of copper, the only shortage is in regard to tin which was one reason for the stern view taken of the revolution in Bolivia. The most important result of the Anglo-Spanish agreement is in regard to wolfram supplies. Probably, the Allies will take off the quantity withheld from the German market and acquire something of immediate value for the oil that Spanish tankers take from the Caribbean. Complete neutrality has lately been forced on Spain and this might raise the volume of trade as well as the quotations for free pesetas and for Spanish bonds.

From recent reports, it looks as if the Anglo-American oil conversations are of interest to the Soviet Union. The European market is of some importance as Rumania's oil output must fall away, and the only important producer left would be Russia. American aid to Saudi Arabia has taken the form of a supply of silver riyals for Saudi Arabia struck in the Philadelphia mint this year. Saudi Arabia Philadelphia mint this year. Saudi Arabia anyhow could not be immune from the inflation in evidence in the Middle East. The recent conference is said to have reached complete agreement on the measures required. One may deduce that gold sales will be continued in Egypt and supplies of U. S. textiles kept up for the same reason. The problems created by Allied war expenditure are the same for nearly all Eastern countries. The agreed solution has to be put into practice and one may forecast that a result would be larger exports from India to the Middle East partly because the Middle East is linked to the sterling group.

A notification issued last month declared that Corsica had ceased to be an enemy territory for purposes of trade. The island is now grouped with the French overseas empire. In the list of territories there is mention of the French Establishments in India; probably because there is a complete satisfactory arrangement in force. What Corsica represents is, of course, the addition of a part of France to the territory under the Committee of National Liberation which is engaged in fomenting resistance to Petain and Laval and claims that it is entitled to special treatment in respect of its communications abroad. The recovery of Dutch New Guinea might lead to the restoration of normal trading relations with territory from which the enemy has been driven out. The Dutch took over in New Guinea promptly and the S. W. Pacific version of Amgot did not appear. As Dutch concerns transferred overseas are eligible for the same treatment as British or American concerns the Colonial concerns may be more eager to do the reconstruction work in New Guinea. The Dutch colonial empire had no separate currency or trade arrangements though weights and measures were different and supplementary token coins were issued. Dutch New Guinea, however, must be distinguished from the rest of the Empire as the territory is mixed up with the mandated Territory below the Equator administered from Rabaul.

Not long ago it was decided that the United Nations would not buy gold offered by neutrals. The reason given was that Germany having stripped Occupied countries of their gold was offering gold to the neutrals who in turn were ready to sell. It was assumed that the restrictions on takings of gold from neutrals would prevent Germany from getting precious and scarce materials. Those countries which have broken off trade relations with the Axis can, of course, sell gold, but neutrals like Argentina trading with Spain or Portugal still maintaining relations with Germany could not sell gold. The gold market became a market only for new-mined gold from certain countries. Gold in the possession of Germany was made useless. A further step has been taken by Norway according to a statement issued on Wednesday. Norway has endorsed the decision of Britain and the U.S.A. and has decided also that transfer of title to looted gold is not without flaw. She reserves the

(By Cable).

LONDON, April 25.

A revolution in United States foreign trade prospects after the war is revealed in an analysis of the U. S. Commerce Department's figures as to retrospective financing indicating that the Far East, Soviet Russia, India and China may supplant Canada, Britain and Japan as the principal peace-time customers for America. A new pattern for postwar United States' international operations is developing although officials here have been reticent in commenting thereon yet. The general assumption has been that South America will be the great market for the U.S.A. once this war is over. Actually Russia may alone take the equivalent of much as two-thirds of the United States' pre-war exports.

The total value of United States exports in 1938-39 averaged slightly over 3,000 million dollars yearly. In the last few weeks members of a Soviet Mission have been conducting important negotiations with corporations and Government officials in New York and Washington with a view to assuring Russia of a vast supply of industrial equipment after the war. It is reported that Russian equipment requirements may approximate to two billion dollars annually for a ten-year period. United States lend-lease shipments to Russia last year totalled almost 2,900 million dollars and there is even a possibility that this average may be maintained in the next decade. General Motors Corporation, the General Electric Company, the International Telephone and Telegraph Company, have been among the huge American corporations negotiating with Soviet representatives recently.

Meanwhile India and China emerged last week as two other potential front-rank American customers after the war. Mr. S. M. Ahmed, Consultant on Indian Trade told the members of the New York Export Managers Club that the United States may become India's "best supplier and customer". Mr. Ahmed said that India will require large quantities of both capital and consumer goods. He also said that India's financial position will be excellent. "There are few countries at present involved in this war whose economic position will be better than India's."

A day earlier Mr. Richard C. Patterson, President of the Sino-American Council of Commerce, announced that China's textile requirements from the United States in the first semester after the war will exceed 840,000 tons of cotton while other foreign traders forecast American participation in the ambitious Chinese ten-year plan. The postwar plan for China's rehabilitation will extend the tremendous market for both merchandise and capital exports.

Some United States foreign traders are still unprepared to concede that Russia and the Far East will be the most important foreign markets for American goods after the war. They point out that Latin

American nations have almost three milliard dollars' worth of gold earmarked with U.S.A. which will probably be used for the purchase of American goods. That amount becomes insignificant compared with the potentialities of the Soviet Union, India, and China which unofficially have been estimated capable of absorbing as much as four milliard dollars' worth of products from U.S.A. yearly. Whether that expectation will be realized depends largely on the credit policies, both private and Governmental, adopted in this country before the end of the European War.

(Continued from previous page)

right to choose the vendor in this case. The Norwegian gold reserve was brought away in April, 1940 but future purchases will be regulated by the view now propounded. A moral element enters into gold sales and purchases. This might possibly help South Africa to sell more gold in the future to countries desirous of gold while neutrals who have repatriated gold will have to furnish special proof to convert gold into dollars. Reduced turnover in the immediate future might also promote stability of prices.

How much is 91,660 Miles?

It's nearly four times the earth's girth! To be exact, it is 3 1/2 times the circumference of the earth. All this tremendous length of cloth is produced annually by the India United Mills Limited—not to outdo the equator—but to clothe India's tinker, tailor, soldier, sailor, and all the teeming population.

Today, our mills are humming with war orders. The needs of the fighting services receive first consideration. As soon as Victory is won we shall go all out to meet civilian requirements. Remember, when better cloths are woven, "INDU" will take the lead.

Editorial Comments

A Dubious Solution

Data in a more detailed, though still incomplete, form are available since we wrote last week on the International Monetary Fund. The basic principles of the working, though not of the constitution, of the Fund have been set out by the British and American experts; and the explanatory notes of the former, which are characterised by an evident satisfaction that the Keynes Plan has scored many a point over its rival, have been made known. It is difficult to say how much of importance has been left out of the summaries that are now available. But a perusal of the ten sections of the main proposals seems to call for a revision of the impressions gained from the cabled reports and comments of last week. Differences of emphasis are often of great importance to the final judgment; and we are now inclined to ask whether in the general loosening of restrictions, which we welcomed last week and which is certainly necessary for giving the Fund a fair start, the experts have not indeed gone too far. In their present form, the provisions seem to leave the Fund a too narrow orbit of effective functioning. And on the question of the Executive of the Fund, nothing more has been said than that the Fund shall be governed by a Board on which each member will be represented and by an Executive Committee of at least nine members, of which five will represent the five countries with the largest quotas. All matters except the vital question of changes in quotas and a uniform change in the gold value of currencies of member countries shall be settled by majority of votes. In their explanatory notes, the British experts confess that "the provisions for the management of the new institution have not been worked out in detail in the statement of principles" and that thus "an important matter has been left for further discussion and development at a later date." In view of the restricted scope of its working, the Fund may not present, in the sphere of its management, any insuperable difficulties. But till this contentious question is tackled successfully, the present feeling of satisfaction would seem to be somewhat premature.

As has been hinted already, unexpectedly speedy agreement has been facilitated by what seems to us a drastic restriction of immediate purposes. In the statement of the purposes of the Fund, the emphasis seems to have been shifted from the regulation of international financial relations to the maintenance of orderly exchange arrangements among member countries and assistance in the establishment of multilateral payments facilities on current transactions. Exchange stability, growth of international trade and maintenance of a high level of employment and of real income, no doubt, figure among the declared purposes of the Fund. But the subsequent provisions leave no room for doubt that the authors of the new scheme have been anxious to restrict the scope of the Fund to current transactions. Thus the whole problem of assisting the return to normal conditions in international finance has been left to the member countries for each to solve according to its capacity. A country is not to be debarred by reason of its retention in large part of the features of war-time regulation from becoming a member of the proposed Fund. Nor will membership entail the obligation to effect a speedy readjustment to peace-time methods. For, member countries have only the three obligations cited below:

1. Not to buy gold at a price which exceeds the agreed parity of its currency by more than a prescribed margin and not to sell gold at a price which falls below the agreed parity by more than a prescribed margin.
2. Not to allow exchange transactions in its market in the currencies of other members at rates outside a prescribed range based on the agreed parities.
3. Not to impose restrictions on payments for current international transactions with other member countries (other than those involving capital transfers or in accordance with VI above) or to engage in any discriminatory currency arrange-

ments or multiple currency practices without the approval of the Fund.

While these three undertakings are seemingly satisfactory, the concessions given in consideration of the need for transitional arrangements take away the force of the provisions quoted above. For, it has been expressly stated that "since the Fund is not intended to provide facilities for relief or reconstruction or to deal with international indebtedness arising out of the war," the agreement of member countries not to impose restrictions on current international transactions "shall not become operative until it is satisfied as to the arrangements at its disposal to facilitate the settlement of balance of payments differences during the early post-war transition period by means which will not unduly encumber its facilities with the Fund. During this transition period member countries may maintain and adapt to changing circumstances exchange regulations of the character which have been in operation during the war." All that is expected of them is that "they shall undertake to withdraw, as soon as possible, by progressive stages any restrictions which impede multilateral clearing on current account. In their exchange policy they shall pay continuous regard to the principles and objectives of the Fund; and they shall take all possible measures to develop commercial and financial relations with other member countries which will facilitate international payments and the maintenance of exchange stability." The role of the Fund is restricted to making "representations to any member that conditions are favourable to the withdrawal of particular restrictions or for the general abandonment of restrictions." As the three year period draws to a close, any member still retaining wartime restrictions "shall consult the Fund as to their further retention."

It will thus be seen that relief, reconstruction and international indebtedness arising from the war have all been specifically left outside the scope of the Fund. Member countries have been given considerable freedom in the matter of removal of wartime controls. The obligation of a member currency, which has the right to buy another member's currency from the Fund in exchange for its own currency, to discharge the corresponding duty of buying its own currency from that member with that member's currency or with gold shall not apply to currency which is part of what may be called the reserved portfolio of wartime controls. This exemption shall apply also to "holdings of currency which have accumulated as a result of transactions of a current account nature effected before the removal by the member country of restrictions on multilateral clearing."

There is a segregation, not only of special features of war time finance, but also of war balances and other commitments, the effects of which it is difficult to foresee to any nicety. If the experience of the last post-war period is a warning against burdening international financial authorities with the aftermath of the war period, there is nothing to warrant a rush to the other extreme of neglecting altogether the ravages of war on international finance. This attitude would appear to be more indefensible in regard to capital movements in the post-war period. The cabled reports of a week ago suggested that the general attitude of sympathetic tolerance towards war time restrictions included even an encouragement to members to keep a controlling hand on capital movements. That would now appear to have been somewhat misleading, since the provisions aim only at keeping capital movements outside the orbit of the Fund. For it is stated that—

A member country may not use the Fund's resources to meet a large or sustained outflow of capital, and the Fund may require a member country to exercise control to prevent such use of the resources of the Fund. This provision is not intended to prevent the use of the Fund's resources for capital transactions of reasonable amount required for the expansion of exports or in the ordinary course of trade, banking and other business. Nor is it intended to prevent capital movements.

which are met out of a member country's own resources of gold and foreign exchange, provided such capital movements are in accordance with the purposes of the Fund.

The general loosening of restrictions seems to be commendable only in respect of changes in the par value of the currencies of member countries. No regret will be felt at the abandonment of the unitas and the bancor or at the provision that the value of currencies should be expressed in terms of gold and that the Fund will bank with the national central banking institutions and deal only with them or with the Treasury or other national fiscal institutions. These provisions are, no doubt, a help for the exploration of points of concord among the nations. And it is practically expedient that the fear that membership of an International Fund may involve undue rigidity of external value of a country's currency certainly needs to be dispelled. It is out of the question, though the experts state it specifically, for the Fund to change the par value of a member's currency without the country's approval. An agreed uniform change may be made in the gold value of member currencies provided every member country having 10 per cent, or more of the aggregate quotas approves. But in individual cases, "member countries agree not to propose change in the parity of their currencies unless they consider it appropriate to correct a fundamental disequilibrium." Otherwise, the obligation to approve of changes is laid on the Fund.

The Fund shall approve a requested change in the par value of a member's currency, if it is essential to correct a fundamental disequilibrium. In particular, the Fund shall not reject

a requested change, necessary to restore equilibrium, because of the domestic, social or political policies of the country applying for a change. In considering a requested change, the Fund shall take into consideration the extreme uncertainties prevailing at the time the parities of currencies of member countries were initially agreed upon.

Two stages of such isolated changes are contemplated, firstly, change or changes not exceeding 10 per cent since the establishment of the Fund and secondly, a change of not more than 10 per cent on which the Fund shall give its decision, if so required, within two days of receiving the application.

In these circumstances, the activities of the Fund seem to have been too severely circumscribed. The transactions of the Fund are limited to providing exchange for the members within the limits of 200 per cent of a country's quota, or a 25 per cent increase in the Fund's holdings of the applying member's currency during the previous twelve months. Certain safeguards against abuse of the facilities offered by the Fund are prescribed. But what is noteworthy is that when disequilibrium develops through the shortage of a member's currency, the Fund shall announce the fact, produce a report on the causes thereof and leave the other members free to adopt economic sanctions against the country which offends by its heavy favourable balance. For our part, we cannot help feeling that the proposed fund is a reincarnation in the financial sphere of the old derelict League of Nations with about the same penalties for defection and the same rewards for co-operation.

POST-WAR NEEDS OF ENGINEERING INDUSTRY

If a rise in the general standard of living in India cannot be achieved except by a wider extension of industrialisation, industrialisation depends for its success on the healthy growth and development of engineering and allied concerns. India's industrial structure cannot grow to its full stature except on the foundations of a comprehensive engineering development. So long as machines, and the metals out of which machines are fabricated, are not produced within the borders of the country, the engine will continue to dominate the engineer, and inspire by reaction a sentimental hankering for the 'golden age' of pastoral poverty. In these conditions industry will never succeed in throwing off its exotic nature and like all exotics, its influence on the national economy will not be entirely beneficial. This serves to emphasise the importance of the engineering industries in any scheme of postwar development which recognizes that manpower is not the only power which can be utilized for economic ends.

The problems which will face the engineering and the allied industries in the postwar period, and what they will need by way of state assistance, to effect the change-over to peacetime conditions, are explained in detail in a memorandum submitted by the Engineering Association of India to the Government. Besides, they have made some suggestions of very great value for the proper planning of the nation's industrial structure.

The central problem of industry is the problem of power. Cheap supply of power with easy access to power resources, is the most important condition of industrial advance. The natural distribution of India's coal resources led to the localisation of the major portion of Indian industries in the area bordering the coal mines in Eastern India. The balance has been redressed to some extent by hydro-electric developments in other parts of the country, which are thus enabled to keep abreast of the march of industrial technique. The region which pioneered in industrial development is likely to be left behind, with its comparatively primitive methods.

The Eastern provinces have to depend for electric power on thermal stations, and it is in this regard that the Engineering Association reinforce the plea, which was made years ago in these columns, for the establishment of three or four big power stations in the colliery districts of Bengal and Bihar, utilizing the low grade coal available in abundance in the locality. These will supply the power necessary for industries and agriculture in these provinces as well as for the electrification of railways within a range of 100 to 150 miles from Calcutta. The indirect advantages of this scheme are of considerable value. Electrification of the railways and cheap electric power available for industries, will reduce the consumption of first grade coal which is essential for metallurgical industries, and make it possible to conserve the limited stocks at our disposal. When the industries get their power in the form of electricity, there will be less need to transport coal from pit heads to the industrial centres, and congestion on railways will be relieved to a great extent. Besides, general electrification will make for technical progress both of processes and of personnel. The scheme has several attractive features, and if the authori-

ties concerned are able to collaborate in its execution, there is no reason why it should not be the basis of the postwar plan for the Eastern provinces.

If the power industry is the heart of the industrial structure, transport facilities are the arteries. To a country with a coastline of 4,500 miles, a mercantile marine under national control is as important as a network of railways to transport goods overland. In the conditions of the postwar period there will be a glut of war-built shipping, and indigenous shipping and shipbuilding will not be able to keep afloat without active government assistance. The Council of the Engineering Association rightly point out that utility of shipbuilding should not be judged from a narrowly commercial standpoint, but its beneficent reactions on the economic life of the country as a whole should be taken into consideration in evaluating its claim for state assistance.

While Indian shipping requires state assistance before it can find its sea legs, Indian railways are already in a position to assist industries by a freight policy designed to foster their growth. Some promising industries in India which are situated at great distances from their markets as well as from the source of their raw materials, deserve the generous consideration of the railway administration. Concessional rates for full train loads, as one of the ways in which they can be helped, is recommended.

Progress in industrial development depends as much on the personnel as on the equipment, and imported technicians will prove more costly than imported machinery. So the memorandum, calls for more facilities for technological research and readjustment of research organisations on the lines advocated by Mr. J. J. Ghandy in his presidential address to the Engineering and Metallurgy Section of the Thirty-first Indian Science Congress, 1944. The scheme envisages a Council of Scientific and Industrial Research, co-ordinating and controlling the activities of the Board of Scientific Research and the Industrial Research Utilization Committee. The memorandum also recommends that technological education should be made a Central subject, in order to avoid overlapping of facilities, and to rescue technical education from the vagaries of Provincial politics.

Management of labour is one of the most important aspects of the technique of large scale industrial organisation. Labour disputes will put an effective brake on industrial progress. Experience in other countries warrants the hope that the development of sound trade unions will minimise friction between employers and labour; and labourers in our country should find the services of officials trained in a labour college, invaluable in piloting their organisations for collective bargaining.

It is not labour alone which is unschooled in the ways of modern industry. The administration of this country, good and efficient as it is, was designed for a predominantly agrarian economy, and is rather ill suited to deal with high pressure industries. Therefore, the Engineering Association offer an ingenious suggestion to get over the difficulty. Most of the industries in India are concentrated in the region of the coal fields, and this area can be constituted into a separate adminis-

trative province under an Engineer-Governor and administered by civil servants with engineering qualifications.

Businessmen in India will be able to embark on industrial enterprises with greater confidence, if they know that they are not encroaching on the spheres reserved for Government enterprise from which they may be summarily ejected, as happened with Hindustan Aircraft, Limited, two years ago. A declaration of policy in this regard is necessary so that Indian industrialists may know exactly where they stand 'vis-à-vis' the Government.

The war has been responsible for lop-sided development in certain branches of engineering industries, which may find difficulty in finding their balance once the hectic conditions of the war period yield place to normal demands of peace in a setting of keen international competition. The Government is responsible for these war babies and their responsibility for nursing them through the postwar period does not require emphasising. The taxation policy of the Government stands in the way of these concerns building up adequate reserves. An 'ad hoc' protective duty for a period of years after the war, assurance of orders from Government departments and railways, and generous revision of the obsolescence rate under the Income-tax Act to encourage replacement of obsolete machinery are some of the measures suggested to tide these industries over the early postwar period.

Special Article.

UTILISATION OF TANNERY WASTE FOR MAKING GLUE

P. BANERJEE, B.Sc., A.M.C.A.E.

Industrialists are aware of the problem of manufacturing refined glue and gelatine in the tropics. Though sun-dried glue in thin flakes was produced by a group of technologists on a laboratory-scale it was generally believed that refined glue and allied products of the same standard as foreign cannot be manufactured on a commercial scale unless a favourable climate or any air cooling device is available. There is however a good prospect of success after overcoming difficulties and unfavourable conditions. That perfectly high class refined glue and gelatine can be manufactured in India on a commercial scale, to cope with the demand of the existing market, is a belief based on experience and practical experiments. With the co-operation of the Government and enterprising capitalists, a number of factories can be set up for the manufacture of glue and allied products, where technologists can be trained under experts. The output would feed the Indian market, and can also be exported to other countries.

Raw materials which are required for the manufacture of glue gelatine and other bye-products are abundant in India and the plants and machineries can be mostly made to specifications at any competent workshop at a price within the reach of a willing capitalist.

My experiments on the utilization of waste leather and waterproof hide glue (refined) to produce some valuable leather goods began while I was in the glue factory of the Bata Shoe Company at Batanagar in 1942. Thanks to Mr. Mach, their Tannery Expert and Manager, I was successful in producing nearly all varieties of glue, gelatine and a composition similar in strength, appearance and chemical properties to those manufactured abroad. They were continued in the Dayalbagh Tanneries Limited at Agra.

The most promising product was obtained by the chemical treatment of waterproof hide-glue with chrome shavings of the tannery which lie in heaps inside the tannery compound and the leather dusts and cuttings which are merely waste products. As to the materials used special reference may be made to leather waste. When it is intended to be quick manure it is best treated along with shoddy and raw ground phosphate, with sulphuric acid in the super-phosphate mixer. The mixture, which contains nitrogen equal to 24 per cent of ammonia, forms a base for a compound manure that can be measured for either cereal or root crops. The most valuable and useful products from leather waste however are artificial leather and leather-boards. For these, the waste is first steeped in a weak alkaline solution and then ground into a fine powder in a rag engine like that used by papermakers. The ground leather is then mixed with a requisite amount of chrome shavings, good manila rope waste, and finally treated with water-proof hide glue (refined hide glue can be produced in the glue factory from tannery waste). Finally the paste is coloured with venetian red to make it look like high class English leather and it is then ready to be made either into leather board or stiffenings for the heels and toes of boots and shoes. This leather should be water-proof. It can be most advantageously used for producing soles, heels, etc. for military boots and shoes. They would be cheaper and lighter. If the sole and the upper were water-proof it should answer military requirements and also save rubber and costly, rather rare, chemical solvents.

In view of the basic importance of electric power and capital goods industries in any scheme of development no one will quarrel with the conclusion that these together with research institutions have claim for first priority for importing machinery from abroad. A recommendation to this effect concludes the first part of the memorandum which is concerned with a survey of the factors which affect industry in general.

The special problems and potentialities of particular engineering and metallurgical industries form the subject matter of the second part. Aluminium, bicycle manufacture, steel and re-rolling industries, non-ferrous metals, textile machinery manufacture, and a host of miscellaneous industries like manufacture of fans, motors, electric bulbs, machine tools, etc., are dealt with in this part. In a brief note it is not possible to do more than enumerate the different heads.

But one thing which is clear from a perusal of the memorandum is that India today is in a position to meet many of her requirements of metals and machines out of her own resources, if the technical advance forced by the war is not allowed to be lost on the conclusion of peace. It is equally clear that most of these industries have a difficult time ahead, and will not be in a position to stand up to foreign competition unless the policy of the Government is designed to safeguard the larger national interest.

Through another treatment, leather scrap is shredded and then mixed with chrome shavings and a strong solution of ammonia which forms a gelatinous mass. Soluble in water, it has no elasticity until it is mixed with either water-proof glue paste or with India rubber dissolved in carbon bisulphide solution and well-kneaded, when it is rendered water-proof. The kneaded mass is then pressed into moulds. Both the India rubber and the solvents are very costly and rather rare in India. India rubber can also be produced from refined glue and some chemicals. This artificial rubber possesses all the properties of rubber; in some cases, it acts more satisfactorily.

The use of leather board in the manufacture of boots and shoes is widely recognised. One kind of board may be used for lapping and for veneering laps as the material is made to look like leather and cut like leather. A thin split of true leather makes a veneer that satisfies the demands of the buffing machines. The best board is made from scrap leather mixed with jute and is used for counters, heels, stiffenings or box-toes, etc. When properly treated and manufactured these counters give good service. When leather board is backed with a leather split and moulded into a stiffening, the product is a union counter. Leather board is also used in the making of suitcases, chair-seats, table-tops, etc.

Since India has many high class tanneries and leather factories, plant and machinery for the manufacture of refined glue and a knowledge of the technique alone are wanted to utilize their waste products to advantage. It may further be claimed that a successful attempt has been made to adapt the details of manufacture to the conditions prevailing even in the hottest parts of India and to clear up some of the trade secrets of glue manufacture.

Calculating at Control prices an estimate covering plant and machinery for a factory capable of turning out a couple of tons of glue per day would call for investment of about Rs. 1 lakh which amount will include money for maintaining a minimum stock of raw materials and of finished products. It is hardly possible to give details here. On a liberal estimate the daily expenditure will not exceed Rs. 1,500. Since the outturn of glue will not be less than 5,000 lbs. per day, the cost of glue at its highest for the manufacture may be taken to be about eight annas per lb. Allowing for an income from the refuse material sold as fertilizer its post-war cost may not exceed 3 to 4 annas per lb.

It must not be forgotten that in the process of glue manufacture, there is obtained a very valuable bye-product, the selling price of which will go a long way to cover the cost of raw material. This is the residue after extraction. When bones constitute the raw material, it is the manufacture of glue that becomes the subsidiary industry, the more important one being the working up of the residue into fertilizer. The amount of residue left after digesting the fleshings is not small, being probably more than 50 per cent of the weight of raw materials but the nitrogen content averages about 6 to 7 per cent of ammonia. If dried in a super-heated, steam-jacketed horizontal cylinder, a very valuable product will be obtained ready for use as manure. As it is not possible to touch upon all points connected with manufacture, I offer to answer queries concerning the new industrial opportunity through the editor of this journal.

Editorial Notes

Wheat Supplies

In view of the small reduction in the Indian wheat crop and the decrease in the Canadian and Australian crops this year, the export surpluses of other countries acquire great importance. The U. S. crop prospects are not very bright. Food is going to be the chief problem of the year, and questions are asked as to the necessity for using so much grain as feed. While liberation of Europe proceeds the demands on U. S. supplies will remain apparently considerable and the restrictions on distillers underline the view that the U. S. A. is short of grain at present. But there is a larger surplus in the Argentine. Political developments however, compromise the prospects of a country which uses grain for fuel. The 1942-43 crop is known to be far larger than that of 1941-42 and the exportable surplus at the end of December, 1943 was put at over 7 million metric tons. The carry-over from the 1941-42 crop was put at 3.11 million tons and the late increase of nearly 2 million tons in the exportable surplus was not accompanied by any increase in exports during December. Except for local millers there were no keen buyers according to the Buenos Aires correspondent of the Imperial Economic Committee. Weather favoured a plentiful crop and the official forecasts in respect of wheat and linseed pointed to an appreciable increase in Argentine supplies. Prices were pegged and the Grain Board did not offer any wheat for sale. In the last season out of an exportable wheat surplus of 5.05 million metric tons, only 1.95 million tons were exported as grain and flour. Though the Argentine carryover was reduced owing to the large increase in home consumption the results of a larger crop must be favourable to importers. Among the customers for Argentine wheat are Switzerland, Portugal and Sweden but Brazil is more important, and the only expanding market is in Latin America. Britain contracted to buy for March-April shipment (said the report cited), but interest in the new crop was small. British farmers have been assured higher prices by Mr. Hudson in deference to their agitation and the Argentine exporter with a larger surplus can hardly count on full prices from Britain. In December Federal Government authorised the purchase of 300,000 tons of the new crop but this will probably make no impression on the stocks put at 11.02 million tons on January 1. The increase in the Argentine crop and the maintenance of the export price at 10 pesos for 100 kilos will may enlarge the demand for jute and jute manufactures. The fact that both the linseed and wheat crops in Argentina are well above average is of some importance to the hessian market which is likely to benefit from the improved shipping posi-

tion as well as the adoption of price control for raw jute and jute manufactures. If the bag famine did not help the jute export trade much in the past, reference may be made to the Argentine Government's break with the Axis in January and to the Government's declaration that it is going to pay off some part of the debt to Britain. Argentina as the good debtor when many defaulters are making unfair offers of compensation has received the praise of the Council of Foreign Bondholders in its annual report. If Col. Peron's ascendancy over the reconstructed government is viewed as unsatisfactory to the Allies, the export surplus is of importance to Europe this year when the question of relief appears overwhelming.

Issues at Philadelphia

The Philadelphia meeting of the I.L.O.'s governing body has been welcomed as creating an opportunity for Russia to regain the only world organisation for labour employers and governments. Improvements in both spirit and administration have been suggested after challenge over credentials including those of the Indian delegates ceased to be an issue of any importance. The main problem of the future lies in the individual country's adoption and enforcement of conventions. India's own record in the matter of adopting conventions is not reassuring, and a late breach in regard to the employment of women underground in mines may suggest that uniformity is difficult to prescribe or attain. The I.L.O. however has hopes of making itself more effective. The Government of Italy has applied for membership, and the I.L.O.'s part in post-war reconstruction (its relations with U.N.R.R.A. appear rather uncertain) is a matter of importance to the Canadian

sponsors of a resolution considered last week. It was a Belgian trade union leader, who pointed out that the I.L.O. had been assigned no place in regard to Allied relief plans. Small nations then argued that instead of the brand new council, the I.L.O. could handle the relief problems as well or better because the recipients could then state their needs to an informed and impartial authority. But the decision as to I.L.O.'s part in postwar relief arrangements has been deferred. Nor is there any indication of sovereign legislatures executing at once its directions as to labour welfare. Colonial labour problems are also viewed as primarily the concern of the Empires concerned and the effectiveness of super-national direction is compromised. The I.L.O. in its career certainly shaped agreement as to holidays with pay and the eight-hour day. But its position has been sorely shaken and the adoption of emergency regulations in one country after another broke the wall of uniformity reared by the I.L.O. The Philadelphia session though it has brought the Latin American countries nearer to the I.L.O. has not enhanced the usefulness of the conference. On such a question as to Indian seamen's wages for instance, the formal appeal still has to be made to Parliament and the Secretary of State has to promise the necessary relief in respect of a claim for equality as between British subjects.

The Strain of War

The outline of the economic consequences of the war for India given by Dr. L. C. Jain in the six chapters of 'Indian Economy during the War' (L. C. Jain, Lahore Rs. 3-4) is not different in scope from other books except that it puts money in the second place and rivets attention on the inadequate response of

both agriculture and industry to the situation as it developed from 1939. It is urged that India was unprepared for war, and the readjustments in agriculture and trade were slow and painful. Reviewing the limitations of agricultural progress after the fall in food imports had provoked anxiety, Dr. Jain concluded, that inflation was not the sole or even the chief cause of the food crisis. How war has helped farmers in the Punjab and damaged small cultivators in Bihar and Bengal by changing the burden of debt and the proportion of land tax to net income in one case, and in the other depriving of land and working capital, is certainly recognised by one who does not miss the unequal gifts of war. The trade returns of the war years which leave out Government's transactions are examined with care. But the increase in manufactures and the decline under raw materials are not wholly due to the application of controls. They represent natural consequences of the war like the increase in trade with the British Empire and the U.S.A. The increase in exports certainly accounts for the debt repatriation and the accumulation of sterling balances. Dr. Jain's view that trade controls have worked reasonably well must be cited here because he is distinctly critical as to the anti-inflation measures and the policy that impelled Government to act. Since Dr. Jain deprecates wartime banking expansion and advocates control by the Reserve Bank of both flotations and operations. It is argued that unhealthy tendencies require to be checked at once. In Dr. Jain's view the changes in taxation have not obscured the poverty problem or the general inadequacy of Indian industry. War has accentuated class differences and led to a relaxation of moral standards that makes many wonder whether the transfer of power to the people will ever take place. The occasionally sombre note is perhaps justified by what is known as to administrative failures in the recent past.

Postal Traffic

Continued increase in postal traffic may be inferred from the growth of revenue. But the increase in telegraphic traffic from 1938-39 has not been very large or unbroken while the increase in registered parcels sent by post particularly in 1942-43 is probably due to railway traffic restrictions. In the case of registered letters, the increase in the war period is not considerable. In fact, the 1941-42 total was slightly lower than that for 1938-39 and the real increase belongs to 1942-43. There is, however, little doubt as to the main trend and the increase in both parcels and registered letters noted in September, 1943, marks the continuance of the tendency that lifted the total for telegrams transmitted in 1942-43 by 1½ millions over the previous year's total. The increase in foreign telegrams during the war period is far more pronounced than the increase under inland telegrams. It is clear that in spite of complaints of delays and mistakes the postal and other facilities were more widely resorted to. Except for August, 1942 when the disturbances influenced business and other activity in India, every month witnessed a rise in the traffic. A welcome indication is the increase in the number of registered newspapers carried by the post to readers. There was a decline under books and pattern packets in 1941-42 partly on account of the enhanced charges, but unregistered parcels were in fair volume. Though 1939-40 appears to have been the

best year in regard to the total number of letters sent by post, the largest increase under postcards was noted in the second half of 1941-42. The increase under foreign money orders from 1939 to 1941 is inseparable from the effects of the war, but the money order figures point to no substantial increase over two years in number of value up to 1940-41. This may have been modified by subsequent developments for larger remittances from industrial centres have been the rule and estimates of working class prosperity are invariably based on the remittance of workers to their homes.

If it is hard to relate the progress of literacy with the increase in correspondence to which the departmental statistics point, there is some reason to think that the larger increase under postcards in 1941-42 was a result of the increase in postal charges. The statistics suggest that unregistered parcels are fewer than registered parcels; also that parcels tendered for registration at post offices increased in December every year. Examination of four years' figures suggests that telegraphic traffic rose suddenly in September, 1939 after the war was

declared and fell away to the normal level in the next month. In regard to inland telegrams the peak period was March, 1943. But the fillip given by the war in the first month to Indian business is certainly established by the figures relating to correspondence and telegrams, inland and foreign.

Cotton Consumption

According to the Indian Central Cotton Committee, Indian mills took 42,30,000 bales of Indian cotton in 1942-43. Total consumption in the year is put at 42,81,000 bales. The most important change of the year was the increase under cotton above 7/8 inch staple. In 1942-43 the percentage was 68 per cent and 32 per cent for cotton under 7/8 inch staple whereas it was 58 and 42 per cent respectively in the previous year. Though some mills do not report to the Committee, it may be assumed that the great fall in exports was offset by the increase in mill consumption. Outside the U. K. there is no real market for Indian cotton and exports in 1942-43 constituted hardly 2½ per cent of the total supply while imports certainly

Now Available CHEVROLET TRUCKS

CHEVROLET TRUCKS (with and without bodies built by General Motors India Limited) are now available in limited quantities for essential civil requirements only under special arrangements with the Government of India.

Special consideration will be given to those who are prepared to operate with an approved charcoal gas plant.

exceeded India's exports of cotton. In 1942-43 the imports of Egyptian cotton totalled 200,000 bales as compared with 118,000 bales of East African cotton. The most important development is not the decline of Oomra or the increase in supplies of Jarilla cotton; but the large increase under Punjab-American. Three varieties of Cambodia are now grouped with Americans and the longstaple types alone accounted for 17,65,000 bales out of the total of 42,30,000 bales. This certainly raised, a hope of longstaple cotton cultivation steadily increasing. Of the Indian States both Hyderabad and Indore are producers of Oomras though Indore grows Jarilla also. As a guide to textile production the committee's statistical bulletin suggests that finer and more varied types of yarn and cloth from Indian mills are possible in the near future. The postwar prospects require scarcely any notice after the assurance that the U.S.A., Britain and India will have to ration cloth supplies for available markets. The more important result of the stabilisation of mill consumption at over four million bales per annum would be that the export surplus would cease to count in foreign trade and the only condition to be fulfilled would be the continuance of crop restriction or the diversion of land to food crops. From the figures available it appears that receipt of deshi types in the U. P. are scarcely a tithe of the Punjab-American types and so far as raw material supplies go the U. P. gets as much as Madras though consumption statistics indicate that both consumed much less than Bombay as Bombay took 23,03,000 bales out of the total of 46,56,000 bales in 1942-43 while Bombay also took the bulk of the cotton imported into India.

New Rules as to Capital Issues

Questions asked not long ago as to the control of capital issues have been answered. Relaxation is certainly promised by the Government, and any doubts as to scarcity of working capital after the demand for advance payment of taxes and the deposit for E.P.T. must be settled. Additions to capital have been permitted when under-capitalisation has been duly notified or the future needs in regard to replacement and the renewal put forth but the formal enunciation of the principle as to the diversion of idle savings for investment has come only now. Companies are free to raise money for postwar development and extension but a condition is imposed as to the investment in defence loans. This is by no means unusual, and the main result may be that a special reserve raised now may create a bigger market for gilt-edged when conditions are normal and money is taken for use after the war. Information as to machinery needs has been already sought and industrial planning is the object of Government and private interests alike. Private enterprise receives notable encouragement through the permission to raise money. The older and more solid concerns of course would not require the concession, but shareholders of other concerns would doubtless welcome the opportunity to increase their own interest. Safeguards have been imposed, and the actual intake of new capital may be limited, especially, as the repayment of unsecured loans is not an approved purpose. But the point that postwar industrial development will require much more capital than is available in India has been recognised at the same time as the partiality of our own investors for industrial shares rather than gilt-edged.

Though promoters have to accept the conditions prescribed, the collection of funds will be helpful. Major industries which have an export stake should be able to get the money needed for the development of production, but concerns with large reserves may find no special use for the concession. The result may be smaller and the Government as a borrower may derive real benefits. Possibly another effect would be the large-scale import of capital goods on the basis of new capital for schemes already prepared and the strain on sterling balances may be correspondingly reduced. In any case, the investing public would benefit although it may be urged that additions to capital (not actually used in business) would not promote the growth of company profits and might conceivably lower the proportion of earnings to issued capital.

New Sponsor

The promise of liberation for Czechoslovakia led to the issue of a statement last month by the Foreign Minister indicating the readiness of the Czechoslovak committee to help the Russian Army by direction to the local resistance movements. The Treaty of December led previously to the calculation as to the restoration of pre-Munich boundaries in the case of Czechoslovakia. The Red Army's future role in Czechoslovak territory has been defined. There is to be no Amgot and the change-over to Czech rule is to be both prompt and orderly. The Soviet-Czech latest agreement has been notified to the Allies who have probably been advised of the intentions of the Dutch Government in regard to Holland. The status of co-belligerent is not to be acquired by any special declaration. Some might hope that similar accord might be soon reached in regard to Poland in view of the Polish Government's willingness to negotiate, if and when diplomatic relations are restored. The point, however, requires little notice here as compared with the Soviet Union's readiness to use Czechoslovaks only alongside of the Red Army. There will be no real place for foreign intervention in Eastern or Central Europe. Approval of the Soviet-Czech agreement has been given by the U.S.A. It may be necessary to compare cursorily the detailed arrangements for restoration with the emergence of the Republic after the last war. As H. A. L. Fisher pointed out, Czechoslovakia is the child of propaganda. But propaganda is superfluous at present though, the restoration of the Republic is one of the Allied war aims. The constitution and the laws are already there, and the Czechoslovak national committee will be no new revolutionary regime thrown as a makeweight by the Russian invader. The Czech's new agreement with the Red Army is meant to further the rapid transition to peacetime arrangements. Differences with Germany and Hungary would not affect the emergency government's own measures and Czechs in the Soviet Army would probably become at once the standing army of the Soviet Union's ally. The considerations that arose in North Africa or Italy would not arise at all and the Czechoslovak Committee apparently has not got to dispose of any issues comparable to those noted in Yugoslavia or Greece. The new agreement will put the Soviet Union in the place occupied in 1918 by the U.S.A.—the sponsor of the Republic which merely had to receive recognition in the Treaty of Versailles. It is evident that the Czech government on its own territory would formulate claims and

receive compensation. Since it is known that Upper Silesia has been highly developed for war purposes by the Nazis, the further issue of the economic disarmament of Germany is largely one for the Czechoslovak Committee especially as the Allied Advisory Commission in London hibernates.

No Serious Effort

The Muslim League's plan for Pakistan embraces the development of trade industries developed and practised by Muslims. At Karachi the League asked the Com-

mittee of Action to draw up plans dependent on Separation. It is noteworthy that the economic results of Partition as such do not invite special investigation though it is known that Separation would create handicaps of a special nature. The questions on which information is sought are those connected with the economic up lift of Muslims, they are not concerned with the development of Pakistan's proved resources. The questionnaire issued on April 15 from Delhi seeks information presumably from Muslims only as to obstacles and competition encountered

BAREILLY CORPORATION (BANK), LTD.

(ESTABLISHED IN 1928)

by Muslim traders and artisans today. Suggestions as to new trades and occupations are certainly sought, but in every part of the questionnaire there is reference to the means of neutralising obstruction or competition and particular mention of salvation from money lenders. As to finance, the little information as to available resources may not help greatly, the only note of optimism struck is in regard to co-operative banks which certainly have very limited scope in industry and trade.

In the League's anxiety to gather details as to separate organisation of Muslim Labour some will discover a fresh move to extend communal representation. Particular information as to women labourers also is required by the questionnaire though purdah workers in sweated industries may not help. In regard to new industries the only suggestion made is in regard to cottage industry based on local raw materials. What the questionnaire wants to get at is the proportion of Muslim interests in a schedule of industries and occupations. That may be otherwise ascertained, perhaps from the census tables. As the questionnaire repeatedly mentions competition, exploitation and remedies for making economically independent its purpose is self-protection, perhaps tariff protection later. It has been urged that Muslim industries can be developed by Muslim Chambers, aided by a Muslim Research Institute proposed to be set up at Aligarh. But Muslim capital is small and existing industries in which Muslim predominance is established for good reasons may not be able to develop outside beyond a point. The questionnaire does not prescribe a survey of the natural resources of Pakistan and outline the conditions of development. From the League President's deprecations of planning many concluded that it was intended to plan separately against the contingency of partition. The questionnaire does not suggest that serious preparation for post-Partition development is under way at present.

Helping Europe

Before Parliament voted £80 million as Britain's own contribution to the U.N.R.R.A. discussion as to the needs of Europe began. Professor John Marrack comparing the experience of 1918-19 with that anticipated now observed that the relief administration in six months up to September 1919 supplied over five million tons of food of which two-thirds was grain or food. There was privation for a year and Russia's problem remained considerable up to the end of 1922. It was admitted that lack of preparation accounted for the fact that postwar relief ended much too soon. This time requirements are estimated. Food comes first, but preparations to restore Europe's agriculture by supply of seed, fertilisers and implements have been undertaken. Vitamin deficiency can be corrected by supply of tablets but the main problem will be food rather than medicine. For much illness food is the proper remedy and changes for the better can be expected only if the victorious countries control the production and distribution of food. Health need not suffer, and the readjustment of priority in favour of the occupied countries may prove good business. Prosperity in Europe must be restored because the occupied countries have their claim; bombing, sabotage and guerrilla warfare are part of the same struggle. This outline of Europe's basic require-

ments makes it clear that India's imports after the war will be determined by the immediate requirements of Europe and the only effective local policy is the addition to food supply. Mr. Casey at his press conference in Delhi suggested that Burma after liberation may be in need of food from India and cannot export rice for years. That is to be considered the final argument in favour of agricultural expansion. For Bengal irrigation like other methods is recommended though it is admitted that projects cannot be executed when the war is in progress. The decay of Europe's agriculture and the time taken for rehabilitation (industrial equipment too must be restored) must influence food prices for some years. The rewards must be substantial even when agriculture is expanded.

Emergency Houses

The Prime Minister's advocacy of emergency houses of the pre-fabricated pattern was based on the report of an expert mission to the U.S.A. The decision as to the kind of houses was taken before the Premier's broadcast by Lord Portal on account of the anticipated labour difficulty. For two years or more emergency dwellings must be provided. The temporary houses are to be owned and licensed by Government for a limited period. Prefabrication is deserved as the aircraft factories afford the necessary facilities for rapid manufacture. The Bossom mission came out in favour of mass production and rapid erection. Private building tends to be slow, expensive and individualistic. A decisive move away from the past was demanded. Whether the proposed departure in practice in Britain would influence Indian housing schemes seems debatable. Steel in this climate has disadvantages but design and technique may be varied to suit Indian conditions. The Ministry of Works claimed in February to be ready with plans for use when war ends. Experiments by local authority were supported and supervised. Architects were called in by the Ministry of Health to ascertain the differences in costs. For Scotland the plan included the conversion of wartime hostels near towns into dwellings. Lord Portal divided the housing plans into two—the first for the two years after the war when pre-fabricated houses largely would be needed and the second for the following ten years. The second part of the programme too has been prepared for on the basis of an inter-departmental committee's report. Reorganisation of the building trades has been considered, and in regard to both materials and measures, the predictable changes have increased after the mention of experiments undertaken by the Ministry as on as equipment was released from the construction of airfields.

Taxes and Loans

Australia's war finance has rested on saving. The Commonwealth has relied largely on incometax and Mr. Chifley aimed that direct taxation produced 125.4 million in 1942-43 as against £93.7 million from indirect taxation. Tax receipts rose from £69.8 million in 1937-38 to 219.1 million in 1942-43 but the increase has been insufficient. In order to support the borrowing programme the control of investment was undertaken and the Treasury soon got a grip over savings. Borrowing for non-war purposes declined and the Commonwealth raised £129.1 millions for the war alone in a year. Since tax revenue has exceeded loans raised in the four years of the war, the orthodoxy is unquestionable. But revenue and taxation combined have fallen

short of expenditure and loans from the Commonwealth Bank increased after Labour took office. Mr. Chifley in an account of the methods pursued has said that treasury bills were issued and discounted at 1½ percent. Bills are discharged and credit remains easy as trading banks attract more deposits when Government pays out. Control of banking including the closure of branches was adopted and rules as to bank investments in Government loans and trade advances were promulgated. Overdrafts were also reduced by order and trading banks had to deposit with the Commonwealth Bank the excess of deposits over the total as on October 31, 1939 and the additional deposit earned less than one per cent. For trading banks there was also the deposit made to cover adjustments and balances in transit. The Commonwealth Bank has been the chosen instrument but borrowing from the public has taken the form of loans, bonds and savings certificates. Even for £1 a certificate carrying interest at 3½ percent and free of tax is for sale. Savings bonds for £10 free of State tax, offered for 10 years at 3 percent, could be taken up by paying

a deposit of £1 and payments of £1 monthly were another type of security meant for the small investor. The Victory Loan of this year for £150 million too is a 3½ percent loan like the Liberty Loan. The differences in rates as between India and Australia should be regarded as a sign of the less stringent taxation in India as well as the comfortable conditions for Government as a borrower in the market.

U.S. Steel Output

Though U. S. steel output was affected by coal-miners' strikes and the many quarrels between the War Labour Board and the C.I.O. the improvement anticipated took place. The total output of ingots and castings advanced by 3½ million tons as compared with 1942. The 1943 output according to Mr. Walter Tower was 80 percent higher than the peak touched in the last war. Support is given to the estimates by Mr. Ickes' survey of U. S. minerals production in 1943 which was higher by 3 percent than 1942 output. Non-metallic minerals fell away but fuel production rose by 12 percent and metal production by 6 percent over the 1942 totals. The total of 89 million tons in

respect of steel ingots and castings is very near 100 percent of rated capacity and is probably equal to the entire output of Europe. A lead of 70 percent over Axis countries and Japan at present is claimed by the U.S.A. Rated capacity for 1944 is 96 million tons, but warlike demand is expected to be lower. The Navy's building programme may, however, influence steel consumption this year to some extent. Lend-lease supplies are expected to be lower than in the past. U.S. steel output running at over 99 percent for most months of 1943 led to the rise in output estimated at over 89 million tons. The increase certainly accounted for the increase in shipyard output to five vessels per day and the record production of tanks and aircraft. In the steel industry the gap between resources and production was narrowed though it is clear that the degree of mobilisation noted in Britain has not been reached in the U.S.A.

Abundance in America

In the average survey of U. S. production achievements in 1943 it is pointed out that the average industrial production of 1939 was raised by as much as 100 per cent. Shipbuilding capacity was up by 80 per cent, aluminium production capacity had increased sevenfold and steel capacity by 15 per cent; the increase in production in the case of the last as compared with 1939 is far bigger. The largest and most significant increase was under aircraft as equipment had been increased by 40 times. General Marshall's claim in his report on two years' preparation that enemy air power had been shattered appears to be fully supported by the figures relating to the U. S. airforce which has expanded approximately 12,000 per cent in two years. (July, 1941 to June, 1943). The enormous increase in machine tool production supported the defence programme. This increase was achieved without any cut in the standard of living. Retail sales increased in 1943 as the U.S.A. produced \$90 billions' worth of civilian goods. Manpower ceased to be a problem and placing of returned veterans in new jobs gave some relief to employers. Plenty was assured though capital and durable goods production alone climbed steadily as capacity was raised, by 600 per cent as against the 25 per cent for non-durable goods in the war period. Total investment of \$20 billions accounted for this change and of this total \$16 billions was provided by the U. S. Government. At the end of 1943, the question arose as to the peacetime use of new factories. But there was also the consideration that surplus capacity could anyhow match recent additions to purchasing power. The uniqueness of U. S.

J.K. BALING HOOPS and STEEL TOOLS

The "J. K." baling hoops, steel tools and other products represent a high degree of excellence in manufacture and workmanship.

In temper, tensile strength and durability Electric Steel as used by "J. K." for making baling hoops and tools is ideal. No ordinary steel could have the enduring strength required for these products. Electric Steel is rolled and then heat-treated to ensure the uniformity so essential for this exacting service.

Other products from this factory include steel bars, iron and steel castings and hardware such as hammers, pipe-cutters, chisels, screw-drivers, anvils, etc.

experience in the twenties was reproduced in 1943: the coolidge age began anew. The estimate of U. S. national income in 1943 at over \$140 billions put taxes at \$20 billions and savings at another \$20 billions. Both savings and taxation had risen swiftly after 1940. Diversion of superfluous resources to countries standing in need of development or even investment at home along with redistribution of income by taxation, were remedies readily offered for stabilising abundance in peace. During the autumn itself postwar reconstruction became a live issue in the U.S.A. Cash savings uninvested during 1943 were put at \$10 billions indicating that war bond drives in the current year could count on adequate response.

Sanctions Against S. Africa

The position of Indian nationals abroad has ever been pitiable. This vast sub-

continent has functioned, during the 19th century and upto 1913, as a reservoir of coolies for European-owned plantations in the Tropics. The original impetus to recruiting labourers for overseas work was afforded by abolition of slavery in the British Empire and U.S.A. but the periodic famines of India during the latter half of the 19th century lent momentum to the wide dispersion of Indian peasants over lands far and near. Nationalist opinion in this country has ever claimed that since the emigration was effected with the full consent and co-operation of Great Britain it was her solemn responsibility to safeguard the interests of the emigrants and their descendants settled abroad. The agitation for fair deal to India conducted by Mahatma Gandhi, C. F. Andrews, Sastri and others improved matters to some ex-

tent but South African Government has been showing persistent racial arrogance that deserves some effective reply. Time and again severe disabilities have been imposed on Indian settlers in South Africa, sometimes under the pretext of economic exigencies but often on plain grounds of colour. Being a subordinate government, the Government of India could not be as effective as one would desire. This war, fought for the preservation of democracy and goodwill amongst different races, has left no impression on the anti-Indian white group in South Africa. The Pegging Act, now withdrawn, indicates that India should forge more telling weapons than mere wordy appeals to justice in order to correct the unhealthy animosity against Indians displayed in this Dominion. In a memorandum to the Govern-

(Continued from page 887)

If you want to AVOID the discomfort and inconvenience of wartime travel, you can always think of an excuse. If it's a marriage you should attend, you can send the rail fare as a practical present, but stay at home yourself. If it's business, you can conduct it just as well by correspondence. If it's a religious festival you can send an offering by money order. If it's a holiday, no excuse is required. Who wants to spend hard-earned leave, crushed into a railway compartment spending twice as much money as ever before on tongas, gharis and other incidentals? Spend your leave near home—get a real rest,

and the maximum benefit from those precious days. But if you want an over-riding excuse, it is that the Railways are busy. They have to feed all the people of India, and assure the supplies of other necessities of life. So great is their task that passenger travel must be reduced.

GRAND HOTEL

The Leading Hotel of Calcutta

"Eavesdropper" wires from Bombay:

Visiting Bombay after seven long years I have received from my friends the kind of welcome which stresses the regret I fitfully feel that my permanent lot is not cast in this western city. I say fitfully, because Calcutta is not without its points. I have no reason to complain of my lot since I moved to what I have now come to consider my permanent abode. There is a solidity and sedateness about Calcutta which Bombay perhaps does not value to the same extent. Bombay is more prone to throw itself more wholeheartedly into passing movements, whether it is nationalist agitation, or a business boom or depression. The result is a vastly more lively and vivacious city. Life in this city sets its stamp on the outlook and ways of businessmen in Bombay. My baptism in business was in Bombay and I, for one, still bear in my mind the traits of my early upbringing. When I am again in the vortex of life in Bombay the fitful regret deepens into a momentary melancholy. But I have more than ample consolation. I feel a special pride in being of the few who can claim to belong to both the premier cities. To Calcutta, I belong indubitably. And in Bombay my friends wish that, wherever my lot may be cast, I am one of them.

The meeting of the General Policy Committee which is the primary purpose of my visit to Bombay began today with a statement as frank and pellucid as any that the Finance Member has ever made. Sir Jeremy has a frankness of manner and clarity of presentation which disarm even his bitterest critics. Bombay has ever since the Ratio controversy, been the traditional foe of India's Finance Members. But even Bombay, I think, is disposed to grant Sir Jeremy his good points. In the discussion which followed, the members succeeded in giving point to it and raising some concrete issues. The debate was all confined to the future of our sterling assets. Sir Shanmukham and Sir George Morton opened the joust, each representing his community's or country's case. A. D. Shroff when he spoke insisted on the Government clarifying their policy in regard to the sterling assets. And he was ably supported by Sir Purshottamdas. For my part, I proposed that a special Re-out of the sterling holdings in excess of the limit of Rs. 350 crores in our currency reserves. I suggested that the British Government should make a statement agreeing to deliver capital goods of agreed value per year against an appropriation

Clive Street Gossip

"I must have liberty
 Withal, as large a charter as the wind
 To blow on whom I please."
 —(As You Like It)

from this Fund. Gagan Mehta followed me and imparted liveliness to a discussion which I had perhaps rendered frigid. I understand the international monetary discussions are considered so near that Sir Jeremy Raisman, Sir C. D. Deshmukh and Sir Theodore Gregory are to leave immediately for Washington. Sir Purshottamdas has been invited but it seems unlikely that he will agree to take on himself the hardships of a long voyage. Dr. John Matthai, I am told, will supplement the non-official element.

Amidst the preoccupations of this meeting, I found time, to visit my old friends in Dalal Street. And I found to my amazement that there is nothing like the activity we used to have in the olden days. Of course, Tata Steel Deferred has continued to be King of speculative counters and there have been ups and downs in this particular scrip due to frequent jobbings mostly by our Marwaris in other sections. I found turnover was negligible and the broking world is not making as much money as the public imagines. I am, however, glad that brokers as well as investors, particularly after the recent taxation proposals in the Central Budget have taken to serious study of balance sheets with an attempt to find out the probable dividends in the coming years. The entire excess profit is immobilised by way of tax and compulsory deposit and even

from the standard profit much goes away by way of income-tax super-tax, corporation tax, etc. Wherever I went in Dalal Street, people were talking of the Textile Industry. For my part I feel that the industry would do well. But as mentioned earlier, the distributable surplus to the shareholders will be negligible though the financial position of the companies in the textile industry will be strengthened considerably if the war should last, say, even for 2 to 3 years. I was this morning talking to a leading broker in Bombay and I did impress upon him that investors henceforth should be satisfied with investments on a lower yield basis in the case of first class investment scrips. In Bombay, I, for my part, would consider a prospective yield of 4 per cent. as very satisfactory. Bombay Dyeings, for instance, have paid a dividend of Rs. 100 for 1943 and for the coming year I expect a dividend of Rs. 75 to Rs. 80 since Bombay Dyeings have a very good standard profit by using this kind of yard stick. I find that many of the shares in the Bombay market, probably with the exception of Bombay Dyeings, seem to be overvalued. In the case of Madras and Calcutta Mill shares, investors have been accustomed to higher yields than in Bombay shares. My Dalal Street friend, therefore, was suggesting that in their case a 6% prospective yield basis should be considered as quite attractive. As for the shares in the steel group, Tatas should be in a position to

maintain last year's dividend; and I feel that Tata Deferreds and Ordinaries are a long term investment for income as far well as capital appreciation. There have been rumours last month about the possibility of conversion of Deferreds into Ordinaries; but I hear no progress has been made. Of course, if the conversion scheme should fructify, investment in Deferreds should prove profitable and for those who would like to take a little risk, deferred is the best counter. And I would not worry about the war situation, despite occasional bouts of selling in Dalal Street based on rumours. The Steel industry has excellent post-war prospects too.

While following the fluctuations in the Bombay market in the last two days, I noticed particularly that investors have assessed the post-war prospects of the cement industry correctly and Associated Cements have been moving up by a point or two every day on genuine demand. Cements should continue this steady improvement. I would like to tell my investing friends: "Never mind the yield, lock up Cements for substantial capital appreciation." Bombay seems to be interested a great deal in South Indian plantations. Tea, Rubber and Coffee shares and first class shares in South India still have scope and should appeal to the investor in view of the handsome yield the shares afford and the equally favourable prospects in the coming years.

I consider myself lucky to have reached Bombay on Wednesday, since I was just in time to attend the opening ceremony of a branch of the Bank of Mysore. Dewan Bahadur K. Matthan, the Chairman of the Bank and Mr. Abdul Wajid, Director, pressed me to come as soon as they heard I was here. I must congratulate the directors on securing Sir M. Visvesvaraya to perform the opening ceremony. Sir Purushottamdas Thakurdas, while wishing all success to the Bank in Bombay, aptly and correctly stressed the point that the Bank of Mysore has done great honour to Bombay by requesting Sir M. Visvesvaraya

to open the Branch of the Bank which was established in Mysore, when Sir Moksha Kundam was the Dewan of the State. Sir M. Visvesvaraya in his speech dealt in great detail with all the Banking questions of current interest; and I hope Indian bankers would heed his note of warning that unless the Indian Joint Stock Banks work in harmony in order to eliminate cut-throat competition, there is every danger of their getting into trouble. He has also not spared the foreign exchange banks or the Government of India; and the old veteran's address had all the freshness and vigour and incisiveness which one expects from one who has always been a keen student of public finance and political economy.

Supplies At An End

Neutrals lately advised of the need to limit warlike supplies to Germany have not adopted the same course. Turkey has surprisingly accepted the view that chrome exports must end, and the Foreign Minister by reference to the alliance with Britain, has made it clear that Turkey looks to the Allies. A revival of chrome exports to Britain is certainly indicated. Empire producers may possibly suffer for that reason, but Germany will lose half the supplies needed, and will be dependent either on Greece and Yugoslavia where guerilla warfare is a threat to regular, assured trade. Germany's shortage of wolfram has led to smuggling from Portugal. Wolfram travels by plane from Spain, the ore being taken from Portugal in headloads. The combination of transport methods is, however, an indication of Germany's acute need, especially as blockade-runners with supplies from the East have failed to reach Germany. It is only in the case of ball-bearings, that the Allied note has been infructuous. Sweden has refused to accept the British argument and relies on the old agreement as to the necessity for Sweden keeping in touch with the German market. Recent laying of mines in the Baltic may not be a bar to the maintenance of trade. After the damage done to Schweinfurt, the import of ball-bearings is most essential for Germany and efforts would doubtless be made to create a safer route through Denmark. There is however persistent unrest in Denmark and the diplomatic exchanges between Sweden and Britain may be ignored.

That Sweden, in spite of ready appreciation of Norway's position and needs after the war, declines to accept the Allied view may excite some surprise. If the foreign subsidiaries of Swedish concerns were subject to any pressure Sweden would probably stick to the same view for the Riksdag has instructed the Cabinet to refuse the British request. The iron ore and woodpulp exports are regulated by agreement, but Sweden's wartime trade across the Atlantic is negligible and Germany appears most important for that reason. The Swedish view always tends to be precise but having failed in the effort to get Finland out of the war, Swedish foreign policy might take a turn favourable to the Allies. The recent map incident has not been overlooked and it is worth noting here that Sweden began to turn away from Germany in April last when small naval losses occasioned anxiety. The cessation of oil supplies might even influence Spain so that the outline as to neutrals' duty in regard to trade with Germany may be regarded as acceptable to some, if not all neutrals. The Turkish decision affects all countries linked with Germany. There is reference to increased exports from Turkey and careful balancing of imports. Whether lease-lend will be revived for the benefit of Turkey appears uncertain as the Turkish Government has not apparently accepted the demand for air bases to be used against the German army in the Balkans. It may be inferred that signs of collapse in Rumania and Russian success in the Crimea had a greater effect than calculations of commercial benefits.

U.S. Foreign Policy

Mr. Hull's broadcast on foreign policy marks a complete break with the old quarantine theory of 1937. Alliances are enduring and necessary rather than convenient for the U.S.A. according to the Secretary of State who indicated that the

committees of both Houses on Foreign Affairs, have been asked to help in the creation of the framework of an organisation to maintain peace. Mr. Hull's broadcast certainly goes further than the Connally resolution as regards foreign policy. Collaboration is defined as essential and U.S. interest in European ques-

tions is related to the definition of the common responsibility for peace. Whether Mr. Hull's definition of interest in alliances is the plank for the Democratic platform or the agreed minimum, its importance unquestionably lies in the removal of doubt as to continuous consultation. It supplements Mr. Eden's own

outline of coeval interests and M. Molotov's reference to acknowledgment and agreement in regard to the Russian offer of peace on certain terms to Roumania. The post-victory policy of the U.S. Government should be the same as the present for the peace settlement has to be underwritten by the U.S.A. like the three other countries. Plainly the scope for compromise as to frontiers in Europe is immense. No cut and dried solutions are desired, and except for the declaration as to Austria's independence, there is no undertaking as to what is wanted. The broadcast left Latin America out, for the pre-war policy was friendship (and that will be the post-war policy also) and as regards the Pacific all that is required is the working out of the Stimson doctrine. If Mr. Stettinius' visit to London takes place at the same time as Mr. Hull's warning to neutrals, and the assumption of responsibilities after victory, previous doubt as to the limits of U.S. collaboration is removed by Mr. Hull's argument that the Allies are united and hence strong. If there is no decision as to the French National Committee following General Giraud's resignation, it is made clear that French national resurgence is both welcome and probable. The main conclusion

derivable from Mr. Hull's whole argument as to the U.S.A.'s duty in war and peace is that instead of being a leader, the U.S.A. is going to be a helper. While the most recent estimate is that the war

will continue for another two years it may be presumed that the peace settlement could be worked out within the interval as the goal is complete inter-Allied agreement.

DAILY PAPER

NEWSPRINT

It is one of the wonders of nature that a log of timber grown on the heights of Scandinavia should within a period of eight days bear current history in the form of a newspaper available in the streets of Great Britain. The remotest origins of paper and its method of manufacture are shrouded in mystery. The raw materials which will be employed in the future are also speculative, in view of the advances of modern science. Whereas the past is somewhat legendary, the future, in the light of scientific achievement, is a matter of conjecture. Before the advent of the modern paper-making industry, the raw material for paper-making was the bark of the tree. The bark of the tree is cut into strips and then into small pieces, which are then pressed into a pulp. The pulp is then mixed with water and other chemicals to form a slurry. This slurry is then poured onto a screen and the water is allowed to drain off. The remaining pulp is then pressed into a sheet and then into a roll. The roll is then cut into sheets of paper. The sheets are then dried and then are ready for use. The process of paper-making is a complex one, involving many steps and many different materials. The result is a product that is essential to modern life. Without paper, we would have no newspapers, no books, no documents, and no many other things that are important to us. The paper industry is a vital part of our economy and it is one that we must continue to support and improve.

IN India, as in many other countries in a world at War, the scarcity of newsprint has caused daily newspapers to shrink. Compare the paper of to-day with the one you bought say in 1940, let alone 1939. The difference in size and bulk is astonishing. The fact that we are still well served with papers and magazines is a tribute to the efficiency of the newspaper industry and to the paper-makers. They have shown how with care and resource a little may be made to go a very long way. But behind their efforts stands the skill of the research chemist and the strength of the British chemical industry. The chemist has not only improved the yield of paper from such normal raw material as is still available, but has discovered highly satisfactory methods of recovering new paper from old. The greatly increased use of re-fashioned paper brings with it a host of subsidiary problems, such as the provision of suitable printing-inks, sizing material, and "loaders". These are all matters demanding skilled chemical research, often of a surprisingly intricate kind. Colour-printing sets even stiffer tasks, which the British chemical industry has solved by the production of remarkable new pigments with a wide flexibility. Shortage of tin and other metals needed for printers' type is another poser for the chemist. You can rely upon him finding a satisfactory answer to this as to the other problems inseparable from the regular appearance of your daily paper in time of War.

(FROM OUR CORRESPONDENT)

Bombay, May 2.

AFTER the fierce controversy in the press here, the Sophia College dispute has a tame sequel. The Bombay Government has refused to treat the Senate decision as binding on it. Disaffiliation is not approved. The Registrar has been favoured with a letter which stated that after a careful perusal of proceedings the Bombay Government concludes that disaffiliation of the college was recommended on the ground that the Principal broke an agreement by permitting the conversion of two students. The disaffiliation would ruin the college and spoil the career of its students; hence disaffiliation is not approved. The letter recognises that the Senate is right in frowning upon the conversion of students from one religion to another. It is hoped that assurances given by the Principal would be respected in the future scrupulously.

Anxiety over food is not peculiar to Bombay. Grow-more-food plans are not quite prompt or satisfactory in results. Someone asked the Forest Department for a lease of fallow land and the reply given eight months after to the applicant was that the Forest Department had no concern with the land which the applicant wanted to cultivate. That is, however, a small matter as compared with the permanent food deficit and the difficulty as regards imports and transport. The People's Food Council meeting last week recorded dissatisfaction with the Central Government's failure to treat Bombay in the same way as Calcutta in regard to food supply. The Council thinks that in spite of the Gregory report, imports are not sufficiently large. The war effort makes it necessary to get in food from outside but Bombay has received no assurances for supply to rationed towns. The situation causes alarm and the Food Council turned readily to an examination of grievances. The procurement and crop planning schemes are not enough to make local farmers put up with the regulations. Rival delegates narrated the difficulties met with. The Council has an active Chairman in Mr. Masani and Mr. F. I. Rahimtoola who was on the Food Grains Policy Committee is a member like the new Mayor who was welcomed by the Council.

The second visit of Lord Wavell has led to the appointment of a committee of enquiry into the dock disaster. This time the Viceroy inspected the continued salvage work and complimented the services concerned. The Indian Sailors Home escaped damage in the recent fire except for broken plasters. The insurance companies' decision as to liability has produced no special enthusiasm except perhaps in regard to cement shares in the hope that the local demand for cement will be sudden and large. The insurance companies took legal opinion but there is also the old plea that Government should pay out. There has been no survey or assessment, but insurance companies have agreed to help claimants to open claims bureaux. The insurance companies having declared that they are not liable there is a desire that whoever pays out afterwards. The common policy agreement which throws burden of proof upon the insured. Loss by explosion except in regard to gas used for domestic purposes, is not covered and the courts have already laid down the rule as to liability of

insurers. The Port Trust's liability is modified by the Defence of India Act, but the statutory liability remains. The Trustees were advised in 1939 that in regard to third parties liability for damage caused by landing of explosives for Government there may be an agreement with the Port Trust. There was a special act in Britain transferring liability for explosions to Government not the insurer and the current argument is that if the same act does not apply here morally at least the Government is liable. There has been a gift for relief of victims but the Central Government has its War Risks Insurance Fund to draw upon. Marine and motor policies fall into a different class and companies have not yet decided about policyholders who presented claims, though in this case, too, the fire was merely the effect of the explosion.

Following a lead given by Calcutta, the Bombay Art Society arranged at the Cowasji Jehangir Hall a special show for artists in the Services. There is much talent and constant practice evidently is the rule as work is submitted for criticism. The Army helped the sponsors but the Governor thanked Sir Cowasji Jehangir specially for giving the public a chance to see meritorious work from the brushes of brigadiers to privates. Amateurs are represented but the Hanging Committee was less than usually critical as nearly 400 paintings were accepted. The best items were not entered for competition. Italian prisoners of war turned in some studies, but the only prize-winner to take a prize on the spot was Pte M. S. Litten. American professionals certainly did not ignore the exhibition held here.

As Maharashtra wants a new university Muslims want to stand out. The influential deputation that went to the Secretariat last week merely wanted that the Anglo-Urdu schools should turn to Hyderabad or Bombay instead of Poona. They don't disapprove of a new university, but ask for cultural autonomy mainly because they don't care for

Marathi. The Governor heard the deputation put its own case for staying outside the scheme. New colleges admittedly could be set up but the idea is that Poona should look after the colleges that are given up by Bombay. The Maharashtra University evidently looks for much support from Berar and some Central Indian states so that Muslims think it is only right that Urdu would get proper support only from the Osmania University.

(Continued on page 881)

ment of India on "Economic Sanctions against South Africa" Swami Bhawani Dayal Sanyasi, Mahomed Ahmed Jadwat and Dr. Lanka Sundaram point out that economic sanctions against South Africa can be, and should be, successfully enforced. It is urged that the favourable balance of trade with South Africa should not be an argument for imbecility in foreign policy, particularly when our people are subjected to humiliation and economic suffering. While India could easily get on without African wattle bark, that country would suffer without Indian jute, jute manufactures, yarn, leather, oilseeds, fats and wax. An embargo on jute exports, it is claimed, would be effective and would not affect Indians either at the exporting or importing end. The contention that economic war between two Allied countries would now hamper war effort, they point out, is irrelevant because South Africa should not be allowed to injure the interest of Indians whose brothers are shedding blood even for the safety of the African coasts. The memorandum states that 250,000 Indians in South Africa welcome economic sanctions and are prepared for the consequences. The talk of sanctions has now to be postponed since the Pegging Act has been withdrawn but, as the Rt. Hon. V. S. Srinivasa Sastri has pointed out, the mere withdrawal of legislation does not guarantee absence of injurious ordinances and regulations. The trouble may bubble up again and, if unfortunately it happens, India should do everything in her power to vindicate the rights of her much oppressed sons abroad.

(From Our Correspondent)

Madras, May 3.

PRESIDENTS and Vice-Presidents of District Boards in the Presidency met in conference last Wednesday at Saidapet, Madras, to discuss ways and means for safeguarding their limited powers. Mr. S. Ranganathan, I.C.S., Collector of Chingleput in declaring the conference open said that if all the District Boards in the Presidency came forward and formed a centralised organisation called the Chamber of District Boards, it would give ample opportunity for Presidents and Vice-Presidents of District Boards to meet together periodically and discuss common problems and ventilate their grievances more effectively. Any suggestion or demand emanating from such a body could not be easily dismissed by the Government.

Mr. K. Sitarama Reddi, the President of the Conference wanted a common organisation for safeguarding the rights and privileges of District Boards and for keeping constant vigilance over the serious inroads the Government is making into the powers and duties of District Boards. The conference resolved to form a Chamber of District Boards with headquarters at Saidapet. It was also resolved to address the Government asking for sanction for the Chamber.

Whatever may be the hardship both consumers and dealers might have undergone in the past twelve months, the Government of India's action in controlling the price of cotton cloth and yarn has, it is maintained, resulted in an appreciable increase in the savings of the consumer. As a result of the recent conference of provincial Textile Commissioners, it is expected, the consumers would be required to pay far less for their clothing in the current year than previously. The provincial Textile Commissioner disclosed in a statement that to prevent black-marketing in cotton cloth and yarn, the Textile commissioner had ordered taking control of the production of two mills in Coimbatore.

But a memorandum submitted to H. E. the Governor during his visit to Coimbatore by the Southern India Mill-owners' Association puts the blame for the prevalence of malpractices, if any, in the trade, on the Provincial Textile Commissioner, who, it is alleged, ever since he assumed office was going on with a prejudiced mind against the mill-owners. The memorandum accused the Provincial Textile Commissioner as being high-handed and as having failed to take the mill-owners into his confidence. In short the memorandum was a catalogue of charges against the Provincial Textile Commissioner. In the opinion of the mill-owners if there were any malpractices in the trade in the province they could have been removed long ago, if the Provincial Textile Commissioner had sought the co-operation of the trade. For it was exactly with this assumption that the whole Textile control was embarked upon by the Government.

The Government have passed into law the Bill to amend the Madras General Sales Tax Act, providing for an increase in the slab rate of tax from a uniform rate of Rs. 5 per month on dealers with a turnover exceeding Rs. 10,000, and not exceeding Rs. 20,000 per annum to Rs. 8 per month on dealers with a turnover between Rs. 10,000, Rs. 15,000 and Rs. 12 per month on those with a turnover between Rs. 15,000 and Rs. 20,000. This part of the Amending Bill providing for the slab rate revision was more or less ex-

pected to be passed into law. But the Government's action in withdrawing the exemption from liability to sales tax of sales of bullion and specie has caused some disappointment.

While accepting that the proposal to levy sales tax on sales of bullion and specie has been the target of attack, the Government argue that in spite of the arguments put forward against the withdrawal, the ordinary customer will prefer to buy locally rather than go outside the province to escape the Act. The Government refused to accept the contention that sales of bullion and specie are akin to banking transactions and hence the taxation of the sales of bullion and specie amounts to taxing of the currency itself. With the present high prices of gold and the speculation and the hoarding that is going on, says the Press Note, the sales tax of one per cent will make no appreciable difference.

People in the city are asking the question "Will Bengal Famine repeat itself on the West Coast?" It is said that the food scarcity in Kerala is very acute verging on famine and that if immediate steps are not taken to supply rice to the villagers, whose monthly per capita quota of rice is

very small, famine may well stalk the land again. A public meeting at Madras demanded immediate despatch of the sanctioned quota of rice by such means as would cause the least delay.

Extract from His Excellency the Viceroy's speech
to the joint Legislatures on 17th February 1944.

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, April 28.

ENORMOUS local interest has been aroused by the Delhi announcement about the great place Karachi would assume in the post-war aviation scheme. Apart from our city being the entry air port for India, she has inestimable advantages which lend themselves for exploitation. For one thing, there is practically no rainfall in Sind and hence it is possible to land aircraft during all seasons of the year. The lay out of aerodromes is also not such a costly proposition as there is no need to have concrete run-ways and other wet weather devices. Again being a sea port, Karachi is in a position to receive both land and sea planes. She will hence play the most leading part in India in post-war aviation plans. Our city will be the most important link in the international system of airways.

As it is, we have two big aerodromes, one at Drigh Road and the other at Maripur. The Governor in his recent address to the Karachi Chamber of Commerce categorically stated that both would be kept up and developed after the war. A Delhi report has it that a mammoth hotel with a hundred rooms will be put up at Karachi. This is absolutely essential. At present, there is only a small number of retiring rooms at Drigh Road and many of the passengers have to come all the way to the city to spend the night. Americans are already taking a keen interest in the growth of Karachi and planes belonging to the Pan-American Airways come here frequently. Enterprising Sindhis will take full advantage of the vista of possibilities that opens in the realm of aviation.

Cotton is again in the news. Almost panicky conditions prevailed in the cotton market because of the decline in prices. The Indian Merchant's Association made representation for government purchase of cotton which alone would relieve the existing situation. The plight of the cotton growers of this province is to be pitied. The Government have deliberately, as a measure of agricultural improvement, encouraged by means of subsidies or otherwise, cultivation of long staple cotton, as a result of which, large tracts which ordinarily grew deshi cotton were used for the growth of long staple varieties. The present decline has not only adversely affected the grower but it was feared that it would eventually prove a setback to the agricultural improvement of the province.

The government has at last agreed to purchase cotton. They will set up a panel of surveyors who will survey the cotton purchased for government. It is understood that the government is to buy Sind N T cotton and up-country of 3/8 inch staple at the Karachi price of round about Rs. 50-8 per maund. An ad hoc committee has been appointed, consisting of members of the Karachi Cotton Association. This report toned up the market today and 4 F May opened about 4 as. dearer at Rs. 47-13 as., but speculators and traders were rather cautious in following the advance. Jobbers were also somewhat disappointing. The market declined by about six annas during the day.

The Wheat Syndicate, Karachi, which is the only purchasing agency for wheat in the province has pushed down the prices to Rs. 9 per maund, instead of Rs. 9-8 as, as the controlled rate. This has created some resentment among the khatedars, who it is report-

ed are withholding their stocks from sale. The total purchase made by the Syndicate is hardly 5,000 maunds.

It is understood that the Registrar of Co-operative Societies in Sind is keen on reviving the now defunct Sind Co-operative Club and has decided to convene a Co-operative Rehabilitation Conference to discuss and thrash out all aspects of co-operative movement in Sind, as a preliminary to our five-year planning programme. This conference is to consist of departmental and provincial bank experts and the non-official element of the Provincial Bank, Provincial Institute and Provincial and District Union Boards. The Registrar's sanction for the calling of the conference is waited.

At a meeting of the Zamindars and Jagirdars' Association, Karachi district, held under the chairmanship of Khan Bahadur Muhammad Lagari, it was decided to request the government not to enhance assessment rates in Karachi district, to grant more facilities to local zamindars and to increase prices of rice, which is the main agricultural product of the district.

Local ration shop-keepers have voiced their complaints about the low profit and the low quality of some of the grains supplied to them at a meeting held at the Buyers and Shippers' Chamber recently. The main complaint was that the margin of profit left to them worked out at 2 as. 3 ps. per maund and several shops had to work at a loss, if the expenses on staff, etc. were taken into consideration. The ration shop-keepers have taken up this matter with the rationing authorities and the latter have invited suggestions about the former's ideas of a fair margin of profit.

The Karachi Port Trust Labour Union have served the Chairman of the Karachi Port Trust with 14 days' notice of strike which will expire on May, 3, 1944. It is reported that 2,384 workers of the Karachi Port Trust had made a representation in January last, requesting the government to appoint an impartial man to go into their grievances but so far, nothing has been done. Recently a suggestion was made to Sir Edward Benthall, member for war transport to have Mr. D. D. Warran, Joint Secretary to the department of the war transport as sole arbitrator in the dispute but that offer has also not been accepted. Hence the decision to go on strike.

(Continued from page 888)

The opinion that 1944 would be a critical rubber year was expressed by Mr. C. H. Masterman who explained the general position of motor transport in the Presidency at a public meeting here. This war is truly a war of motor-driven machines, which depended on supply of petrol, tyres and spare parts. Any economy in the use of these therefore helps the war effort directly. In spite of the numerous handicaps and the huge requirements of the military, the motor transport position in the Presidency is satisfactory from all angles. There were enough tyres, enough petrol and enough spare parts only as long as vigorous economy is observed in their use. Speaking of Post-war prospects Mr. Masterman stressed the need for wise planning. With the large number of vehicles and drivers and mechanics that would be available there would be a great opportunity for giving an efficient motor transport service for the people after the war.

Agriculture in India is still in a backward state and that is one of the reasons why

famine conditions prevailed in parts of the country, and still some other parts are threatened. Malabar, as an agricultural district offers unique opportunities for improvement. In spite of a good climate, equitable rainfall, altitudes, variety of soils, and a long coast line, Malabar is a deficit area in the matter of food supply. Rao Bahadur C. Gopala Menon, who presided over the eighth anniversary of the Palghat Merchants' Association urged the Government to take possession of all irrigation sources and devise ways and means for extending and improving these facilities without delay. Before perfecting plans for the development of roads and railways, the Government must pay attention to increasing the production both agriculture, and industrial.

FOR QUALITY TOOLS

The letters **BATU** on tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers, B.T. Tools, Reamers, Dies, Milling Cutters, Slitting Saws etc. are unequalled in quality and precision.

All B.T. Tools are treated by modern scientific thermal processes and their accuracy is guaranteed to conform to British Industrial Standard.

Resume of Commodity Markets

GENERALLY steady conditions have been noticeable in the commodity markets during the past week with the exception of cotton. The jute and jute manufactures markets have been uninteresting, while the bullion markets are a shade easier. The piece-goods market was rather quiet following the proposals by the Textile Commissioner to put an end to black marketing and to bring about a more effective distribution of the total production of mills in this country. The raw cotton market struck a bad patch earlier in the week with the lack of investment support and the reports regarding the increase in the size of the crop for the last season. Mills also were not buying on a large scale in the ready market as it was feared that Government support would not be forthcoming. There was naturally a decline in prices to below Rs. 420. The entry of Government agents into the market caused a reversal of the downward movement, but there has been no appreciable improvement in the general sentiment.

There is nothing of importance in the raw jute market and business passing is on a small scale without any appreciable increase in prices. There is considerable difficulty in respect of jute supplies from the chief producing centres and much is still to be done regarding efficient utilisation of existing transport facilities. With the possibility of the new crop arriving on the market in a short time, there is need for a regulated movement of jute supplies to the consuming centres. In the absence of a regulated movement of the jute crop, mills might be obliged to restrict production while the glut of supplies in particular centres may have an adverse effect on jute prices. It has also to be borne in mind that the jute crop has to be effectively disposed of and that production by mills has to be maintained at as high a level as possible, at least, to the extent coal supplies permit.

The position in the raw cotton market has given rise to many problems. With the weakness of the ready market, mills naturally were not anxious to extend any support. In the absence of any appreciable mill buying, there could not be any large support to the market. Jobbers are still depressed by the loss in the recent Bombay disaster. Buying by the Government in the Karachi and Bombay markets did to a certain extent arrest the downfall of prices. There was a spurt in the quotation for Jharilla May to Rs. 428 though renewed selling at the higher levels has brought down prices to very near the former levels. It has been suggested that Government buying has not been very liberal, and that with the strict scrutiny by Government agents, much of the cotton tendered has been rejected. The poor quality of the crop this season and the controversy over three-fourth inch staple have created much confusion in the trade and it is genuinely feared that in the absence of co-operation between the interests concerned, it will not be possible to maintain values around the minimum levels. Meanwhile it is reported that the Government of India have accorded permission to the East India Cotton Association for trading in new crop on the same terms as for the 1943-44 crop.

The textile control authorities have been moving fast in recent weeks and various loopholes in the Textile Control Order are being closed. It is said that with the passing of the Cotton and Yarn Transport Con-

trol Order and the increase in the powers of the Textile Commissioner, cloth supplies will be freely available to consumers at ceiling rates. In order to prevent mills from taking advantage of the black market, the Textile Commissioner gave directions recently to some mills to suspend their sales. It was pointed out that the mills concerned were not free to dispose of their production without direction from the Textile Commissioner or his nominee. The Textile Commissioner has directed every dealer to submit to him on or before February 15, May, August and November each year, the returns of cloth and yarn held in stock by them as on January 31, April 30, July 31 and October 31, respectively of the same year.

It is estimated that during the past 12 months, consumers of cloth in India have paid Rs. 140,00,00,000 less than they did in the previous year. There will be further reduction in prices for cloth produced during the next quarter ending May 1944. The latest amendment to the Cloth Control Order has been designed to prevent evasions of the order.

A review of the working of the Cloth Control Order shows that following its promulgation cloth prices declined by about 35 to 40 per cent. Three months "texmarking" was decided upon, prices were reduced by a further 10 per cent.

When the Textile Commissioner first called for a declaration of stocks in July, 1943, it was found that there were 1,946,722,515 yards of cloth with dealers. A subsequent order to dispose of the stocks within a specified period and a second stocktaking on December 10, 1943 showed that dealers had sold out about 1,600 million yards of cloth.

It is estimated that the total output of cloth in India for civilian consumption ensured 12 yards for each individual per annum. As a result of the action taken by the Textile Commissioner and the Textile Board, the

consumer has got half his annual quota within 180 days.

It was pointed out last week that the British Ministry of Food was allotting a smaller quota of tea for export from this country in 1944-45 as it is feared that production of tea in the current season will be affected very much by the shortage of labour, coal and fertilisers.

By a notification dated April 29, 1944, the Government of India has declared the Indian tea export allotment for 1944-45 under the Indian Tea Control Act at 364,080,770 lbs. which approximates to the quantity released for export during this year.

The allotment represents 95 per cent of the Indian standard export figure as against the maximum release of 125 per cent of the standard figure permitted by the International Tea Committee. Should, however, the revised estimates of production of tea exceed the present estimates, allowing of more tea to be released for export during the year the Government of India would consider the question of raising the Indian export allotment also.

The International Rubber Regulation Committee has been dissolved, as was pointed out in these columns earlier. Negotiations are in progress to secure the establishment of a new committee on a wider basis without any regulating powers. The Government of Britain, Netherlands East Indies and India had agreed to a four-month extension of the life of the committee from January 1, 1944.

The All-India Third Wheat Forecast for the season 1943-44, published recently, estimates the area under the crop at 33,611,000 acres against 34,091,000 acres (revised) according to the corresponding forecast for 1942-43. There is a decrease in the area by 1 per cent. The yield is estimated at 10,356,000 tons against 10,943,000 tons (revised), a decrease of 5 per cent. The crop is reported to be affected in places by rains, hailstorms and rust but its present condition appears to be fairly good on the whole.

JUTE

Thursday, May 4, 1944.

RATHER quiet conditions have been noticeable in the raw jute market during the past week and business has been restricted. Mills have not taken any great interest as considerable difficulty is being experienced at the present moment regarding supplies of jute, and there is no point in placing fresh orders at the present moment for which despatch instructions cannot be issued at an early date. Difficulties in regard to transport are acute particularly in the district of Mymensingh the biggest jute producing centre. The glut of supplies is great with jute prices in this district and the neighbouring areas relatively lower. Business has come to a standstill on account of the difficulty in storage. Unless it is assured that there will be regular supplies of jute and transport facilities are effectively utilised, it cannot be ensured that will be a correct disposal of the crop and a bottle-neck would be avoided. In certain centres, however, imports have been coming in in small quantities and sellers are taking up whatever is offering.

In the Calcutta market, there is no great anxiety to do business. In the absence of regular supplies, it is no use to enter into fresh contracts. Developments in the next few weeks are keenly awaited.

The progress of the new crop is reported to be satisfactory though dry weather in the past week has not been conducive to sowing operations in the highlands and midlands. A little rain is still needed in some places.

In the loose jute section business has been on a small scale. Mills have been buying only for immediate requirements. Balers are not interested owing to the poor demand in the pucca bales section. Higher grades are available at a slight discount but lower qualities are still scarce. Supervised Jat Middles and Bottoms were done at Rs. 17 and Rs. 14 per maund with Middles 4 annas less. Indian District Tossa were Rs. 14 per maund with Jungly 8 annas lower.

In the pucca bales section not much of business has been done for export though shippers are reported to have purchased small quantities of Dundee Daisee 2/3 at Rs. 78 per bale and Tossa 4's at Rs. 83 per bale. Mills have taken advantage of the anxiety of balers to do business and have knocked down rates. Combined Firsts, Lightnings and Cuttings were done at Rs. 83, Rs. 79 and Rs. 42 per bale with N.C.'s at Rs. 43 per bale. Outport Tossa 4's were Rs. 74 and Hearts Rs. 73.

JUTE MANUFACTURES

Calcutta, May 4, 1944.

There is nothing of importance to report in the jute manufactures market. Firm conditions have continued to prevail with a scarcity of sellers. Apart from small business in standard varieties for positions between August and December, mills have kept out of the market as they have orders on hand and there is no sign of any appreciable setback in values. Business for positions beyond March is not being taken up at the present moment. There is confidence that it will always be possible to do business at maximum rates.

In the heavy goods section, there are very few sellers and only B. Twills and Heavy Cees are available at maximum rates.

GOLD

Calcutta, May 4.

After earlier firmness the Bombay gold market has been rather quiet in the last three days. Investment demand has been conspicuous by its absence. With the resumption of selling by the Reserve Bank rates have been naturally marked lower. The improvement in the war situation also has been responsible for the slightly easier tone of the markets and the close is around the lowest levels for the week. Gold ready quoted Rs. 75-12 and forward Rs. 75-12. The quotation at the end of last week was Rs. 76-12 for both ready and forward.

SILVER

Calcutta, May 6.

Similar conditions have been noticeable in the silver market during the past week. The technical position has been corrected to a certain extent though there is still great difficulty in regard to ready supplies. Quotations are lower at Rs. 138-8 for ready and Rs. 136-12 for forward. The quotation was Rs. 140-8 for ready and Rs. 139-4 on the last occasion.

It is interesting to note that there has been a widening in the discount for forward over ready. Towards the close it was as much as Rs. 1-12 per 100 tolas against Rs. 1-4 last week.

COTTON

Calcutta, May 4.

The absence of any buying by mills and the panic in the Karachi market led to a big decline in prices in both Bombay and Karachi cotton markets. As a matter of fact the position in the Bombay raw cotton market was so bad at one time that the East India Cotton Association found it necessary to remind the Government regarding their obligations to the cottongrower. There was some delay in Government buying but when it was known that Government agents had entered the market the downward trend was arrested and there was a jump in the Bombay quotation from Rs. 419 to Rs. 428 for Jharilla May. The initial rise in price, however, could not be maintained as it was reported later that considerable quantities of cotton tendered for delivery were rejected and that dealers were experiencing great difficulty thereby. Government buying was not sustained and mill support also ceased as soon as the Government agents withdrew from the market. There is, therefore, no appreciable change in quotations on balance and closing prices are around the lowest levels. The publication of the third Cotton forecast disclosing an increase in the yield for the next season had also a depressing effect. Jharilla May closed at Rs. 418 against Rs. 427-8 on Friday last, July at Rs. 438-12 against Rs. 438-4 and September at Rs. 450-8 against Rs. 446-8. The movement in prices would seem to be intriguing but the weakness of the spot position will be evident

from the heavy discount over July. The quotation for July is not very much changed on balance while that for September is even 4 points higher at Rs. 450-8. The increase in the yield for the crop for the next season has not come as a great surprise to the market but the publication of the forecast at the present moment has actually proved to be an advantage to bears. There was some selling and it should be said that the effect of this forecast has now been discounted.

The figures are given below:—

Trade Description:	Area (In Acres)	Yield Bales.
Bengal	1,832,000	627,000
Americans	3,550,000	1,556,000
Oomras	5,594,000	1,026,000
Broach	676,000	225,000
Surti	501,000	130,000
Dhollerias	1,332,000	278,000
Others	6,913,000	1,226,000
Total	20,398,000	5,078,000

PIECEGOODS

Calcutta, May 4.

Quietly steady conditions have been noticeable in the piecegoods market. The vigorous efforts being made by the control authorities to affect a speedy distribution of the total available production and the measures taken to control black market activities have given rise to expectations that cloth supplies will be available freely at controlled rates. Consumers are inclined to await further developments. Dealers are more anxious to do business and quite a large amount of business has been reported in summer styles at ceiling prices.

MONEY TO BURN

Among those who have taken an active part in helping us reach our goal of forty lakhs during the year 1943, there may be a misguided few who think we now have "money to burn".

Let us explain that our need is as great as ever.

Fathers and sons are still fighting the battle for our freedom and are still suffering from wounds and sickness. We must take care of them.

The Indian Red Cross supply, with your money, all Military Hospitals in the Indian war Zone, with things to help heal both body and soul.

Walking sticks, playing cards, football gear and musical instruments, are several examples of just where that money goes.

Please continue to send your regular donations to the Hon. Treasurer, Indian Red Cross Appeal, The Imperial Bank of India, 5, Strand Road Calcutta

RISE IN JUTE AND COAL SHARES

VERY firm conditions have been noticeable on the Calcutta market during the past week though the Bombay market was inclined to be slightly easier with operators awaiting further developments. The optimistic view taken by Calcutta operators is due to the improvement in the situation on the Assam front and the hopes that industries in Eastern India would do better in the coming months. The decision of the Government of India to fix prices for all grades of coal and take over from the beginning of June complete control of despatches from the collieries has had an encouraging effect on coal shares. It is also believed that larger supplies of coal to the jute industry will result in a higher level of production though it is too early yet to expect that there will be any appreciable increase in coal supplies to jute mills. The earnings reports of important jute companies published at the present moment are said to be better than market expectations. With rationing in force for some time, it can be expected that there will be a large reduction in the loss on account of subsidies to labour. The developments in the next few weeks should prove to be very interesting.

It was announced in mid-week that the Government of India have decided to fix from June 1, the prices of all grades of coal at the pithead at each colliery and to take over from that date complete control of despatches from the collieries. The manner in which the requirements of consumers are to be assessed was discussed at a conference of representatives of provincial governments and several commercial organisations in Calcutta this week. Measures to ensure that coal supplies would be of the quality which the price assigned to it entitles the consumer to have and arrangements for dealing with companies regarding the quality of coal supplied under direction have also been discussed.

As a result of this decision, it is hoped that there will be a large increase in despatches and that no great difficulty will be experienced in respect of transport facilities as the Government authorities themselves are responsible for the movement of coal. The head will solve many difficulties for the companies. With the report that there has recently been an increase in the pithead price for coal, there has naturally been greater activity in coal shares and a good rise

in prices has been recorded for the popular shares. There is every possibility that the recent increase in prices for coal will more than offset the increase in production costs. With labour attendance satisfactory at the collieries since the beginning of the year, it can be expected that earnings will show an appreciable increase.

In this connection the balance-sheet of the North Damuda Coal Company Limited, for the half-year ended January, 1944 makes interesting reading. Even with the decrease in both raisings and despatches it has been possible to maintain the net profit, before providing for taxation and depreciation, at Rs. 78,532 against Rs. 78,550 for the previous six months. Provision for depreciation is lower at Rs. 3,000 (Rs. 10,999) while the transfer to taxation reserve is as much as Rs. 50,794 (Rs. 48,794). It would have been possible to maintain the dividend at 12½ per cent per annum, the level of the previous half-year, but for the compulsory E. P. T. deposit of Rs. 10,000 (nil). The distribution for the half-year is thus lower at 5 percent against 6¼ percent.

Raisings during the half-year were 49,223 tons against 58,872 tons. The proceeds of coal sold were higher at Rs. 4,45,562 against Rs. 4,07,477. For four months in the half-year under report, labour was in extremely short supply which resulted in a heavy drop in output. The labour position has since improved and raisings are now reported to be normal.

The announcement this week that the tea export quota allotment would come to 95 percent of the standard figure is a reflection of the difficulties experienced by tea companies in India owing to the scarcity of labour, coal and fertilisers. Even in 1943 tea companies have not done very well. The balance-sheet of the Teesta Valley Tea Company Limited, for this year shows that the net profit, before providing for taxation and depreciation, is lower at Rs. 1,33,792 against Rs. 1,83,245 for 1942. The average sale price was lower at 14.65 annas against 15.49 annas per lb. while there was an increase in working cost per lb. of tea produced to 9.25 annas from 7.77 annas in 1942. Weather conditions were favourable and a large drop of

412,725 lbs., against 404,938 lbs. for 1942, was made. But for the lower average sale price and the increase in the cost of production, the net earnings would have been higher. It need not, therefore, be emphasised that the prospects for the current year are not quite satisfactory especially with the fears regarding lower production. A sum of Rs. 25,000 (Rs. 30,000) has been placed to reserve for renewals and additions while provision for taxation is lower at Rs. 28,688 (Rs. 38,888). The final dividend of 20 per cent with the interim dividend of 5 percent, already paid, makes 25 percent for the whole year against 27½ percent for 1942. No transfer has been made to general reserve against Rs. 15,000 on the former occasion. The amount carried forward is not very much changed at Rs. 49,994.

The difficulties in regard to coal supplies have been fully reflected in the earnings of Fort Gloster Jute Manufacturing Company, Limited, for the half-year ended March, 1944. The net profit, before providing for taxation and depreciation, is Rs. 4,36,881 against Rs. 8,55,906. The loss in working hours on account of lack of fuel was as much as 43 per cent. The allocation to reserve for taxation is Rs. 2 lakhs (Rs. 5 lakhs) while the amount set aside to depreciation is Rs. 1 lakh (same). The dividend on ordinary shares has been reduced to Rs. 8 per share from Rs. 12-8 per share. The amount carried forward is Rs. 61,630 against Rs. 85,770 brought in.

The results of Fort William Jute Company, Limited, for the same half-year, on the other hand, make better showing, the loss of working hours due to lack of fuel being only 18 per cent. of the total time. With the same amount of sales, it has been possible to report a higher level of earnings. The net profit, before providing for taxation and depreciation, is Rs. 4,42,048 against Rs. 2,82,204. There is a reduction in the loss on foodgrains provided for the employees by as much as Rs. 36,000. The provision for taxation including compulsory E.P.T. deposit is Rs. 2.1 lakhs (Rs. 1.2 lakhs). The sum set aside to depreciation is unchanged at Rs. 50,000. The dividend on ordinary shares has been maintained at Rs. 4 per share. The amount carried forward is slightly lower at Rs. 68,990 against Rs. 77,943 brought in.

KUMARDHUBI ENGINEERING WORKS, LIMITED

NOTICE TO SHAREHOLDERS

The attention of all Shareholders is invited to the Circulars issued to them dated 26th August, 1943, and 15th February, 1944, in which were outlined the proposed scheme for the Capital reconstruction of the Company. It will be seen from the latter Circular that the Class Meetings of Shareholders have been called for 6th July, 1944 and as it is probable that the Books of the Company will be closed for about 3 weeks before the Meetings, all persons holding Shares in the Company who are not registered as Members, should apply for registration without delay and forward their Scrip and Transfer Deeds duly stamped to Messrs. Bird & Co., Kurseong.

By Order of the Board,
BIRD & CO.,
Managing Agents

Chartered Bank Buildings,
Calcutta, 24th April, 1944.

(Half-yearly General Meeting on 12th May, 1944 at 12 noon. Transfer books closed from 4th to 12th May, 1944).

Audited Accounts of the Association for the half-year ended 31st December, 1943:—

	Rs.
The Profit for the half-year after providing for Depreciation and Taxation and placing Rs. 10,000 to General Reserve, was	43,014
To which is added the balance brought forward of	49,284
Total Rs.	92,298
The Directors recommend that the balance of Rs. 92,298 available for distribution, be dealt with as follows:—	
Dividend at the rate of 10 annas per share	37,500
Balance carried forward	54,798
Total Rs.	92,298

The repayment of Capital of Rs. 2-8-0 per share sanctioned at the Extraordinary General Meeting, held on 23rd June, 1943, was effected during February 1944. For simplicity the dividend has on this occasion been recommended in annas per share instead of a percentage on Capital.

The demand for Ice showed further improvement throughout the period and resulted in a satisfactory half-year's trading.

The factory of the Lightfoot Refrigeration Company, Limited, did not produce Ice from the 1st December until the end of the year and the Company sold to them their requirements at a fixed rate over that period.

Managing Agents.—Balmer Lawrie & Co. Ltd.

Authorised, Issued and Subscribed capital—Rs. 6,00,000 in 60,000 shares of Rs. 10 each fully paid up.

*Includes Preliminary and other expenses written off.

(Annual General Meeting on 19th May at 12 noon)

Audited Accounts for the year ended 30th September, 1943:—
They show a profit for the year of Rs. 6,19,161 from which has been deducted—
Provision for Taxation .. 4,60,000
Amount written off Preliminary Expenses .. 9,157
Amount written off Share Brokerage .. 6,261
Amount written off Discount on Debentures .. 50,000

The balance of Rs. 5,25,418 falls to be set off against the debit balance brought forward from the last year of Rs. 93,743 leaving an amount at credit of Profit and Loss Account to be carried forward of Rs. 4,238

The balance of Rs. 1,50,000 remaining under the heading of Discount on Debentures in the Balance Sheet will fall to be written off out of future profits.

Depreciation on Sugar Factory Block amounting to Rs. 1,14,161 has been charged in the accounts. No depreciation has been charged in respect of Yeast Factory Buildings and Machinery as erection of the full scale plant had not been completed during the year, while the manufacture of the product was still in an experimental stage.

During the year a number of Debenture-holders exercised their options to apply for ordinary shares in the Company at par on the basis of 12 shares for every Debenture held. The number of shares allotted to Debenture-holders by 30th September, 1943, under the option scheme and against payment in cash was 66,732. As applications for shares were received, the Company, in accordance with the provisions of the Debenture Trust Deed, gave the Debenture-holders six months' notice of its intention to redeem the Debentures. Since 30th September, 1943, further applications for shares have been received and at date the share capital of the Company is 255,646 shares of Rs. 7-8 each. Of the Debenture issue, 5,561 Debentures have already been redeemed and on or before 2nd August the balance will be redeemed. No further applications for shares from Debenture-holders can be entertained after 2nd May, 1944.

Crushing started on 9th December, 1942, and finished on 11th April, 1943, during which period 19,94,147 maunds of cane were handled, the percentage recovery of sugar from cane being 11.34 or 2,26,105 maunds of sugar. Of this, 122½ maunds had been lost in 31st December, 1943, at an average price of Rs. 14-5-4 per maund: crushing and re-bagging and 2,20,099 maunds had been sold up to the sugar remaining unsold at that date has been valued for the purpose of the accounts at Rs. 14-5-4 per maund. The average cost of cane at the factory was 11.44 annas per maund.

The development of a suitable process for the manufacture of yeast extract on a commercial scale and the acquisition of the necessary items of plant has been much slower than anticipated, due to experimental work in the laboratory and in the pilot plant necessitating frequent changes in ideas regarding what was required for commercial production. Owing to prevailing conditions, the obtaining of the required items of plant has presented very considerable difficulty. It is hoped, however, that the full scale plant may be ready and that regular production may start within the next month or two. Until trials have been conducted in the commercial plant it is impossible accurately to estimate the capacity of the plant or the cost of production; it is hoped, however, that both will prove satisfactory. The Government of India has sponsored the project and has first call on the Company's production. Experimental lots produced in the pilot plant have been palatable and their analyses have shown satisfactory figures of Vitamin B1-content.

Managing Agents.—James Finlay & Company, Limited.

Authorised Capital—Rs. 21,30,000. Issued—Rs. 15,50,490. Subscribed—Rs. 15,40,415 in 2,06,722 shares of Rs. 7-8 each fully paid up. Debentures—Rs. 10,00,000 in 10,000, 5½ per cent. bearer bonds of Rs. 100 each, issued in 1934 at Rs. 80 repayable in 1944 at par.

*After transferring Rs. 15,000 from Contingency Reserve.

†After transferring Rs. 20,000 from Contingency Reserve.

(Half-yearly General Meeting on 15th May, 1944 at noon. Transfer books closed from 28th April to 5th May, 1944)

Audited Accounts for the half-year ended 31st December, 1943:—

The balance available for appropriation, after the inclusion of the amount brought forward from last half-year and after transferring Rs. 15,000 from Contingencies Reserve, is Rs. 1,06,843. Out of which the directors recommend the payment of a Dividend at the rate 15% per annum, free of Income Tax, absorbing Rs. 1,01,250.

Leaving to be carried forward .. 5,593

Sales.—There was a further deterioration in the labour position during the half-year in spite of every effort being made to recruit more labour from outlying districts. The short supply of labour is reflected in the output figures, and in the Accounts.

The directors are pleased to report that there has been an improvement in the labour attendance since the beginning of the year.

Managing Agents.—Messrs. Shaw Wallace & Co.

Authorised Capital—Rs. 15,00,000. Issued and Subscribed—Rs. 13,50,000 in 135,000 shares of Rs. 10 each fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1943.

Liabilities.		Assets.

PUSSIMBING TEA COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1943:—
Profit and Loss Account.—The gross profit for the year is Rs. 43,397 and after allowing for the reserves shown, there is a net profit of Rs. 28,784 and a final balance on this Account of Rs. 49,210, which, it is proposed to deal with as follows:—

	Rs.
Pay the Preference Dividend for 1943	14,350
Pay a Dividend of 7½ per cent on the Ordinary Shares	15,375
Carry forward to 1944	19,485
Total Rs.	49,210

Crop.—Weather conditions were favourable and a crop of 187,772 lbs. was made. The estate supplied 159,573 lbs. of tea to the Tea Controller for India on contract with the Government of the United Kingdom.

	Annas.	Annas.
Gross average export sale price	17.26	16.24
Gross average internal sale price	17.07	17.38
Total net average sale price	16.98	16.33
Total working cost per pound of tea produced	14.76	10.89

Allowances to labour and establishment necessitated by the increased cost of living, mostly incurred in the issues of rice and cloth at concession rates, amounted to Rs. 31,524. Other costs continued to rise sharply and though the allowance received on the Government Contract for this purpose was increased to 3½ pence a pound it proved to be substantially inadequate.

Estimates for 1944 have been based on a crop of 2,000 maunds at a total cost of Rs. 1,76,540.

Managing Agents.—Messrs. Davenport & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 4,10,000 in 2,050 7 per cent Cum. Pref. shares of Rs. 100 and 20,500 ordinary shares of Rs. 10 each, both fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1943.

		Cash Balances	34,010
Total	6,49,406	Total	6,49,406
		Total Liquid Assets	2,39,406

BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1943:—

After making the necessary provisions for depreciation and Excess Profits tax, Income-tax and Corporation-tax, and compulsory E. P. T. deposit as per new proposals of the Government of India, the balance for the year is Rs. 29,16,868 to which has to be added Rs. 3,45,702 brought forward from last year's account, making a total of Rs. 32,62,570.

The directors have already paid on the 15th September 1943, an Ad Interim dividend of Rs. 35 per share absorbing Rs. 8,78,430, leaving a balance of Rs. 23,84,140.

They now recommend to declare from the above balance a final dividend, including bonus, at the rate of Rs. 65 per share, free of tax, absorbing Rs. 16,31,370 and to carry forward Rs. 7,52,770 to this year's account.

Trading Conditions.—As mentioned in the last report, there was a further steady increase in the prices of cloth and yarn throughout first half of the year, so much so that the prices soared to very high levels. Therefore, in order to check the rising tendency in the market, the Government promulgated last June a Cotton, Cloth and Yarn Control Order, and accordingly a Textile Control Board was appointed to advise Government. Ceiling prices were fixed for the very great number of different cloths and counts of yarn and the spiral of rising prices was brought under control. So, the directors do not think that the current year will show such satisfactory results as 1943, and with increased taxation and compulsory deposit to be given to Government, the directors will have to reduce the dividends in future.

Authorised Capital Rs. 64,00,000. Issued and Subscribed—Rs. 62,74,500 in 25,098 shares of Rs. 250 each, fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1943.

TREASURY BILLS

Central Govt.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, May 9, 1944. Total amount offered was Rs. 13,18,75,000. Tenders at Rs. 99-13-9% were accepted in full and those at Rs. 99-13-6% were allotted approximately 4%. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-9-0% per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday May 16, 1944 in Bombay up to 11 a.m. (IST) and up to the close of business on Monday May 15, 1944 at other centres. Successful tenders should make payment on Friday, May 19, 1944. Other conditions are as usual.

During the week ended May 5, 1944, Government of India Treasury Bills for Rs. 3,35,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

Figures as to lease-lend expenditure were released in Washington this week. Mr. Denby estimates total expenditure between March 1941 and December 1943 at \$20 billion. Current expenditure is running at \$1 billion per month. That justifies Mr. Roosevelt's request for an additional appropriation of over \$3,450 million for 1944-45. The President's request to Congress for voting back of unexpended funds proves that lease-lend supplies are not despatched very swiftly. Since Congress was considering amendments to the Act, now renewed for a year, the Administration provided figures as to reciprocal aid. The U.S.A. has received \$2 billions' worth of supplies from Britain, the Dominions and other countries. Repayment under the treaties appurtenant to the lease-lend act is taking place. The Republicans who are suspicious of future claims have been reminded that two-way traffic is already a fact.

The long visit of Mr. Stettinus to London, his talks with the U. S. Ambassador in Russia, and the assurance that agreement has been reached regarding the Middle East have sustained markets for some time. The rise in Wall Street certainly accords with anticipations of improvement. U. S. corporations' profits are expected to improve when reconversion takes place. The dissolution of the rubber committee is certainly a gesture made to please the U.S.A. The Dutch Government anxious to recover the lost colonies is likely to co-operate with the U.S.A. in working out the rule as to equal access to raw materials. The further assurance that Britain helps in the blockade of Japan has followed so as to make it clear that the Pacific war concerns Britain as much as Australia at present.

The Chancellor of the Exchequer has pronounced against the gold standard. The House of Commons thus is notified that the international monetary fund recommended by the experts will make no breach in the declaration made in 1932 at Ottawa as to monetary policy for the Empire. The Chancellor's declaration means that the premium on gold will remain. The bullion market here, dull but steady, will draw the conclusion that gold prices will not fall because the exchange rates of the future will be adjusted without large changes in the balance of payments. In a way, the Chancellor's assurance is better than Keynes plan for gold-mining companies because the concentration of gold purchase in Britain is going to help them in the future. Undeveloped properties in South Africa are likely to increase in value. Already gold-mining shares have hardened, and the 1942, results for the big groups must be appearing.

The major attraction of gold for the U.S.A. will remain since the dollar has been devalued, and the U. S. Treasury's price of \$35 per ounce is more or less the same as the impracticable, and postwar capital movements will be strictly limited, the enlarged supplies alone would help to put gold prices down. The general price-level will, however, counteract any considerable change. Sir John Anderson's rejection of the Soviet Union's suggestion requires special notice on account of the report that the international fund plan is approved by the Soviet Union. As an ex-

porter of gold, the Soviet Union is likely to gain in the long run. Large loans contracted for reconstruction will require the building up of gold export. In the past, the Soviet Union ranked after South Africa as a producer of gold. Wheat, oil and timber can hardly be abundant in the years following the peace so that Russia's bulwark must be the export of gold. As the projected agreement does not touch exchange control and will probably leave out lease-lend supplies and repayments, the minimum change is contemplated. The straight declaration against gold is meant to reassure the Dominions, forced off gold (in the case of South Africa, however, the decision was wholly voluntary) that the sterling group will remain as it was before the war. The Commonwealth relations debate indicated that tariff policy would be same as before for Britain as well as the Empire and British export trade must be the chief concern of the Commonwealth. Success in currency management explains the Cabinet decision which gives also the true measure of the experts' agreement as to the fund that will keep the exchanges steady after the war. There would be no abrupt departure from the controls in force and Anglo-American trade relations would be regulated by the level of tariffs. Arguments heard in 1938 are likely to be resurrected, when Britain conserves gold for the approved purposes. The Chancellor's declaration implies that within the sterling area the value of currencies would be unchanged, whether it is the gold bullion standard or the gold exchange standard that is the ideal. It may be inferred also that devaluation is not contemplated unless by international agreement, and sterling, protected by exchange control and possibly the new fund to get dollars on occasion, would be less likely to suffer depreciation than currencies theoretically based on gold.

It is not unlikely that U. S. comment stimulated by news that invitation for

summer talks has been issued already led to the formal declaration against the gold standard. If regional agreements take care of temporary fluctuations in value, European currencies are likely to follow sterling rather than the U. S. dollar. Latin American systems based mostly on the foreign exchange reserve are not likely to alter much in the future though payments agreements and blocked balances are not likely to survive the war. The postwar gold standard adopted by Mr. Churchill in 1925 was given up when the French took their balances. Short-term balances will create no complications when sterling is fully independent of gold. Evidently the U. S. Government too has made up its mind as to the place of gold outside the proposed fund which is not meant for stabilisation or a common monetary policy, but is meant to canalise exchange control under joint supervision when special measures are required.

The Cunliffe Committee wanted the gold standard. Mr. Norman too was an adherent of gold, but Lord Catto's first month in office is marked by a specific declaration against gold. The familiar argument that export trade would suffer if imports required an outflow of gold is less important than the other question as to there being enough gold to go round. The British Government's decision throws upon the U.S.A. the responsibility for accumulating gold through the normal export surplus; also the responsibility to let others have a share in the gold. The Bank of England ordinarily has less than a quarter of the gold held by the Reserve Bank here though the currency reserve is largely made up of sterling securities. The decision reached also implies that the gold bullion standard as planned in 1927 will not be adopted; the rupee-sterling link too would remain largely because the foreign trade of India with countries outside the sterling group is inconsiderable. The Middle East, too, is linked with the sterling area and control of inflation is a task of the war cabinet as much as the local government.

The famine in Southern Arabia is not the concern of Bombay since Aden has been transferred to the Colonial office. The grant of £300,000 for relief work in the Hadhramaut was made alongside of R.A.F.'s own relief operations. The Middle East Supply Council is probably interested as the messages came from Cairo while the Arab countries are not perhaps very keen on assistance to others. Arab union plans are hardly in the news at present and Anglo-U. S. agreement over oil would raise no local queries or quarrels. The U. S. pipeline project is meant to create a permanent stake in the Middle East, but it is well to remember that Syrian independence and the Jewish National Home are also matters of interest to the U.S.A. The disappearance of France and Italy from the Levant is a settled fact while the Anglo-French monetary pact has brought Syria into relation with the British currency. The promise of agreements over oil, spelter, lead and rubber does not signify a shortage in the U.S.A. as much, the U.S.A. being an importer. A permanent arrangement in regard to jute and jute manufactures is probably unnecessary as price control at the instance of the U.S.A. indicates that one commodity wanted by the U.S.A. is available at the buyers own price. The point deserves notice in view of a bank officials' opinion as to the uses of the proposed dollar reserve to be built up out of the usual excess of Indian exports to the U. S. A.

LLOYDS BANK LIMITED

(Incorporated in England.)

STOCK MARKETS ACTIVE

Rubber and Oil Shares Prominent

(Special for "Indian Finance")

(By Cable).

LONDON, May 10.

The first week of May marked the busiest week in the stock markets for nearly eighteen months. It was the result of cumulative reasons, namely, reinvestment of capital returned to five per cent. Conversion loanholders, the slowing down of savings drives, the curtailment of ordinary spending on commercial goods due to coupons and rationing, the search for sound securities for investment of surplus funds, and the shortage of stocks in all markets.

This activity coupled with eager conjecture as to post-war markets injected a spirit of high interest in financial circles. One of the topics attracting continued examination is the proposal for an international monetary fund superseding the individual Keynes and White Plans. The reaction ranges from whole-hearted acceptance to active condemnation. The plan appeals to many because of its approximation to old orthodoxy; however it is anathema to some, especially, in the United States because of its internationalism. None of the Governments concerned will find safety in a multitude of counsellors according to financial circles who contend that they will have reached their own conclusions if the pending international conference concerning the agreement is summonable at an early date.

Pundits claim that the principles underlying the proposals are entirely sound, pointing out that exchange stability is essential for equilibrium in trade and that a mechanism promoting consultation and co-operation would occupy the leading place in the discussion of postwar commodity matters.

The British Rubber Manufacturers Federation in a memorandum to the Board of Trade emphasizes the importance of an adequate volume of natural rubber if the industry is to recover its prewar productivity pointing out that synthetic rubber cannot yet be regarded as a complete substitute.

Dispatches from New York have indicated that rubber is viewed as a knotty problem and that the State Department is adopting a cautious attitude in this connection in defining its own attitude regarding participation in an informal world rubber agreement.

In this respect, it is noteworthy that rubbers and oil shares are performing well in markets. Presumably rubber shares are stimulated by the apparently successful development of the offensive in Burma while oils are stimulated by reports of an agreement reached between Britain and the U.S.A. over oil.

FOR QUALITY TOOLS

The letters BATU on tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers. B.T. Taps, Reamers, Dies, Milling Cutters, Slitting Saws etc. are unexcelled in quality and precision.

All B.T. Tools are treated by modern scientific thermal processes & their accuracy is guaranteed to conform to British Industrial Standard.

India and the Monetary Fund

The publication of the joint statement of the British and U. S. experts on the international monetary fund of the post-war period has served to invest the question of India's attitude to post-war international financial regulation with some degree of practical importance and even urgency. According to "Eavesdropper's" telegraphic report published in our last week's issue, Sir Jeremy Raisman and Sir Theodore Gregory are to leave for Washington immediately, while the non-official delegates are to follow a little later. It may be presumed, therefore, that it will not be long before this country will have to define the position it will take up regarding the proposed international fund. The General Policy Committee has discussed in more than one session the issues connected with India's post-war finance. It has emphasised the importance of certain preliminaries to India's participation in international schemes. But it is still by no means certain whether India and other countries, which are outside the small group of great powers, can regard the present proposals for the international monetary fund as a stable basis of discussion. Close on the heels of reports that the international monetary fund has a wide basis of preliminary support comes the statement of Sir John Anderson, that America and other nations should recognise the importance of the sterling area to Britain in the efforts to secure a better regulation of international finance in post-war times. It is somewhat difficult to understand how such repetitions of well-understood conditions are called for. The terms of the proposals outlined by the British and American experts do not involve at any point the surrender of Britain's right to continue the close financial links between the members of the sterling bloc. Nor do the provisions regarding gold parities and relative exchange values necessitate the return to the gold standard in the form in which British public opinion has since September 1931 regarded it as a national menace. If in spite of this, the British Chancellor of the Exchequer feels called upon to reiterate Britain's opposition to the gold standard, it can only serve to deepen the already large amount of scepticism felt about the feasibility of any useful and concrete schemes of regulation of post-war international finance.

In our analysis of the provisions of the proposed Fund last week, we expressed the view that the attitude of cautious aloofness from the more knotty problems of international financial regulation had been somewhat overdone and that the monetary fund now proposed may be likened to the now defunct League of Nations, since the scheme contains no considerable penalties for defection or rewards for sincere co-operation. It would seem to follow from this that the tendency to leave the international monetary fund, the moment the advantages of membership seem to be outweighed by its irksome obligations, is bound to be strengthened within a few years of the signing of peace. Sir John Anderson's emphasis on not returning to the gold standard can only mean that Britain herself would not shy at torpedoing the scheme, if it should prove to gold has directly or indirectly some crampy effect on her national financial policy. In these conditions, it would appear that countries like India which are called upon to define their attitude to the proposed fund should consider not only the provisions of the scheme on their merits but also the possibility of the Fund proving to be as moribund as the League of Nations or the Bank for International Settlement.

So far as India is concerned, there is no certainty yet that the question of her relation to the International Fund of the future will be decided on its merits. There is yet no reliable sign of improvement in the political sphere. And so long as decisions are made by officials subordinate to the Secretary of State for India, it may be presumed that in this sphere, as in many others, India will have to follow the lead of Great Britain. Nevertheless, the Indian public must have clear ideas

WORTHINGTON SIMPSON LTD

**10, CLIVE ST
CALCUTTA**

of the position in the future and the nature of the financial relations that would arise from time to time between India and other countries. We have in these columns indicated more than once the advantages which the great powers like Great Britain and U.S.A. seek from measures of international financial regulation. Britain has to seek the means by which she can maintain a large adverse balance of trade without being called upon to make frequent settlements of such balance with foreign countries on terms likely to have unfavourable consequences on her currency and credit policy. For the United States of America, on the other hand, the chief danger to guard against is the prevalence of exactly this attitude in Britain and in a few other countries as well. While the present joint statement has been patched up by devising a scheme which is severely limited to the management of current transactions, these differences of interest and viewpoint are bound to have freeplay in the sphere of post-war international finance. For India, it is hard to define any special need for the satisfaction of which she need look up to these schemes of financial regulation. Doubtless, she is interested in the smooth interchange of goods among nations and as also of the facilities of productive activity and trade. But so far as one can see the possible developments of the future, India will have no need to ask for special favours from other countries.

It is possible to think out the question of India's financial relations with the rest of the world under three broad heads, namely, current or normal transactions, which are the primary, even sole, concern of the proposed Monetary Fund, capital movements or movements of large scale values of an abnormal kind, and lastly, wartime balances. The three divisions are not of course clear cut; and each will shade off more or less imperceptibly into the other. But the distinction is, nonetheless, real and certainly important. It is pertinent to recall here that this question is of practical importance to our efforts at planned development of our economic life in the post-war period. In the estimate of capital resources provided in the Bombay Plan, its authors refer to three different sources of external capital for purposes of economic development, viz., normal favourable balance of trade, foreign borrowing and the accumulations of foreign currency which India is making during wartime. This aspect of the Bombay Plan has given rise to a great deal of controversy in certain circles, which take the view that the authors of the Plan are unduly optimistic about the availability of our sterling and other foreign balances, as also of foreign loans which will not be easy to procure if the Plan is to rest to any considerable degree on the expenditure of created money. A similar pessimism is also prevalent about the favourable balance of trade. It will be seen from this that the question of India's financial relations has a direct bearing on some of the most vital aspects of post-war planning.

Taking first the question of our foreign trade, it is difficult to spot the source of danger to the balance of trade to which we have been accustomed over centuries. It is true that the war has destroyed the links between India and many of her foreign markets. Another adverse circumstance is that the war has given a great fillip to the invention of substitutes. But neither of these can possibly affect India's export trade. The continental countries will be only too eager to resume normal trade relations with India, as soon as political conditions become favourable to such resumption. As for artificial substitutes, none of the great staples of India's export trade can be affected. India's export trade is made up to a very large extent of monopolies like jute and shellac. And the cry after this war will continue to be access to raw materials. Fear of foreign competition in commodities like linseed can be easily overdone. But India is bound to improve her competitive capacity.

The danger to the import trade is more likely to come from our own industrialisation than from changes in our foreign markets. Here again, it should be remembered that, if more of our normal exports should be utilised in Indian industry,

such utilisation of raw material should lead either to the export of finished or half manufactured goods of greater value, or to a cut in the imports of such goods or more probably to both. The chances therefore are for an increase in the favourable balance of trade, rather than a decrease. And its significance in the world of finance will be all the greater because of the decline in our foreign obligations. It will thus be seen that, so far as current transactions go, India's only interest lies in the provision for their prompt settlement through some form of international clearing which will not be caught in the tentacles of national controls.

We may now consider the other two aspects, war balances and capital movements. About capital movements, it seems too early to venture any pointed forecasts. The resources of the great lending countries are not as much beyond doubt as formerly. That the U.S. will continue to be in surfeit of capital ready for export may not be doubted. But in the case of Great Britain, her capacity to export capital has been thought of in relation to her capacity to produce capital goods—it is a common place of economic textbooks that, in factual terms, export of capital is export of capital goods. That can be so, only when the country is in a position to pay for current imports with exports of consumer's goods on a scale sufficient to leave the value of capital goods intact to represent long-term British investment in foreign countries. It is extremely doubtful whether such a position will obtain in the immediate post-war years. Britain may well seek, by a sort of standstill or blocking arrangement regarding war balances, to secure a surplus which will replenish her lost investments. It is precisely this policy that India has to guard against. Neither the puerile contention of the British Press that our sterling balances are due to British generosity in the allocation of military expenditure, nor the possible financial embarrassment of Britain after the war can constitute a ground for denying us the use of these balances. India has a right to use her sterling assets for purposes of her economic development. And only our sterling securities can enable us to make large scale

imports of capital goods without suffering the consequences of heavy adverse trade balances.

The question of foreign borrowing is, however, on a different footing. For our part, we are inclined to the view that no question of foreign borrowing should arise till our foreign assets are utilised and the normal favourable balance of payments is found insufficient for financing our imports of capital goods. Foreign borrowing in the initial stages is conceivable only on the basis of necessity for slower utilisation of sterling assets and consequent need to raise loans in countries other than Britain. It is only fair that India does not suffer in interest charges and in other ways by such tentative arrangements. Considering the question from a broader standpoint than that of national needs, it is necessary that international financial institutions should be helped in course of time to exercise control over the whole realm of international finance than that they should be delimited to what are called current transactions.

With the scheme for the Monetary Fund as it is, India's special requirements are not difficult to outline. Firstly, India should know where she stands in respect of her sterling assets. If Britain has need for a special understanding on this matter, that understanding should precede, not follow, India's participation in international schemes. Secondly, India's status in such an institution should be clearly defined. Her importance in international finance is out of all proportion to her political status or military capacity. She cannot consent to be a mere member of the British Commonwealth; and the disputes between Britain and the U.S.A. as to their relative voting strength should not be allowed to determine India's position. Thirdly, the working principles of the Fund should include recognition of the special needs of undeveloped countries for capital equipment, whether for borrowed funds or against favourable balances of trade. It is only when these conditions are met that the question of India's participation can be seriously considered by the public in this country.

PLANNING AND POPULATION

The choice between planning for national development and the disaster that may follow when the population gets altogether too top-heavy for present methods of supporting it has been mentioned this week by Prof. A. V. Hill whose main concern, however, is with the change that may be secured by the applications of science for solving India's problems. But one more reference to the low margin of safety invites examination of the problem of numbers. The economic problem in India is one of poverty. One of the causes is over-population. These two curt conclusions have jostled one another in the pre-famine and post-famine analyses of the food problem in India. How far numbers depress the standard of living can never be ascertained to satisfaction. The Plan looks for an annual increment of 5 millions to the population and fixes the post-plan total in 1960 at 489 millions. This formidable total may be justified by the increase of 50 millions between 1931 and 1941. Though Bengal showed an increase of 20 percent the inter-censal increase was largest in the N.W.F.P. and, singularly enough, least in Baluchistan. In British India alone the increase was 39 millions in ten years and questions raised in 1939 as to the effects of unrestricted growth in numbers even if the death rate remained intractable have been reiterated by reference to the requirements of a minimum standard. The two-fold increase in the per capita income postulated in the Plan therefore appears essentially the result of the adjustment of population policy. There is yet no indication of policy, though it is to be hoped that the Health Survey Committee impressed by Calcutta's infantile mortality figure would pass to the examination of fundamentals.

The situation basically is different from that in Britain where the stationary population is dreaded for various reasons including that of age distribution and full employment. A reduction in numbers might even affect investment, the volume of imports and the improvement of resources. Hence the strong plea for children's allowances. The situation in India is vastly different as the census of 1941 showed. Even the famine has not unsettled the trend except for a half-year and insistent questions as to the food supply can only be met by pointing to the new efforts at compulsory cultivation and the sale of surplus produce at ceiling prices. The highest death rate known in any country is a symptom of the poverty that accords ill with the growth of numbers. The increase between 1921 and 1931 led only to a statistician's warning as to the positive check that would follow inevitably in the next few years. But until the effects of war developed with hindrance, the deficit in Indian food production was unnoticed. There is already another warning that the increase in national

income procured by effective utilisation of natural resources will avail little if the population keeps growing. The Bombay plan allows for the annual increase in population by assuming in a way that the expenditure on education and public health would be progressively adjusted to the needs of a growing population. The assumption is, however, associated with the fact that measures in the interest of public health may promote an undue increase in numbers and the surplus may be unsupported if the limit of expansion is passed in 15 years. The death rate however may not change greatly if public expenditure is limited in relation to taxable wealth. The cure for poverty may lie away from the political solution for the industrialisation, the power development and other remedies now prescribed are not likely to touch the agricultural population to a great extent. The increase in rural population, therefore, requires separate consideration as the single largest obstacle to agricultural progress in India since fragmentation is only the overt effect of the pressure on the soil. The late admission that the peasantry in Bengal and Bihar have suffered most from the scarcity and high prices associated with war may seem to many a compelling reason for the reform of land system or at any rate for an independent assessment of its merits. Industrialisation even on the planners' scale is not likely to ease the situation to any extent though the proposed outlay of Rs. 4480 crores may create a demand for Indian industry's products.

The fitful voluntary propaganda advocating birth control has been seldom concerned with the large economic efforts. In any case its general practice is largely dependent on education as well as the inclusion of birth prevention in the health services. It is clear from Swedish and other experience that family life is virtually unshaken by the limitation of the family. One cannot expect cyclical variations to do the work of rectification. In proportion to food production, and even defence the population is excessive, and unless Chinese experience in the last 13 years is to be reproduced exactly, the net increase from year to year will appear a liability. In the enumeration of post-war possibilities in India little attention has been so far devoted to the damaging effects of the enlarged population. Previous discussion turned merely on the relation of food supply to the population enlarged by evacuees but not on the unduly depressed standard of living. Whether a population with a majority of young adults would support the plan for development need not be asked because the inherent bias of young adults would be for self-improvement and even more for national progress.

Editorial Notes

Forestry and Agriculture

There should be 100,000 square miles of additional forests in British India according to Sir Jogendra Singh who described lately the relations between agriculture and forestry in India. The expansion of the forest departments is also forecast by the Inspector-General of Forests who has been asked as to the training facilities for additional candidates at Dehra Dun. The main object of forestry is to give fuel to the villages so that in five years after planting the available cowdung would be used solely for manure. It is estimated that cowdung now used as fuel could be used for 72 million acres or 30 per cent of the sown area. The manure would raise food production by 50 per cent in the view of Sir Jogendra Singh. Airplane propellers, shoelasts and ammunition boxes of wood represent the wartime contribution of India's forests which give a million tons of timber in a year, but in the future, the main problems would be to increase the timber supply from the reserved forest, protection against erosion by means of new planting, and the use of forestry for developing agriculture. Sir Jogendra Singh said that in spite of excessive felling for war the reserved forests gave proper protection against flood and erosion. In regard to erosion, the problem is not limited to the Punjab, and the need for inter-Provincial co-operation was indicated by reference to the need for controlling the run-off at the headwaters of rivers. Sir Jogendra Singh placed the forest area in India at 100,000 square miles against 4,00,000 of cultivated land and current fallow. Since Indian timber production is well up to European averages, the main need is to grow either trees or grass on cultivable waste. Special measures adopted in Africa to save trees may not be necessary here because trees cut down for fuel mean a real saving of farm manure. Cowdung supply per annum placed at 250 million tons would render the land independent of synthetic fertiliser, and oilcake could supplement both cattle feed and manure supplies. Small forests providing fuel to the villagers must be made out of a part of the 300,000 square miles of waste. Sir Herbert Howard's opinion that new forests can be raised for fuel and supply of small timber for various purposes was cited and there are hopes even as to Sind, the Punjab and Rajputana because irrigation could supplement the scarcity of rainfall. Experiments in afforestation on land receiving less than 12 inches of rain per annum are in progress. These will help to meet the major evil of soil erosion in the western half of Northern India.

Cotton and Wheat

Two crop forecasts with a bearing on prices this year appeared late last month. The final cotton forecast pointing to an in-

crease of 6 per cent in area and 8 per cent in yield did not show any change on the previous forecast discussed here. The increase in American types is interesting, but the increase of over 300,000 bales in the year's supply has already propelled prices downwards. It is not necessary to look upon fitful official intervention in the market as a serious factor, especially, as the Karachi market is showing the immediate effects of an increase in the cotton crop (the decline under deshi cotton has little significance). The fall under Cambodia is of little importance when other long-staple cotton is available. A point to consider is how the crop regulation programme next year would influence the consumption or carryover. In effect the growth of mill consumption, say, to 4.5 million bales a year, should be enough to make the surplus a small matter; but the mills have fuel and labour difficulties. This year's trend, if it is settled by price control and other factors, is by no means clear, except in regard to raw cotton. Obviously price control measures will be sustained by a bearish tendency in the market, and the mills stand to gain by a policy of limited purchases at intervals.

The drop in wheat production by 5 per cent in the third forecast must be linked up with stories of crop damage. Area is lower by 1 per cent and the outturn by 5 per cent as compared with 1942-43. An up-to-average crop of over 10.3 million tons is looked for as wheat is the second largest cultivated crop in India. The increase of 23 per cent under rice on the subnormal crop of 1942-43 is thus offset by a shorter wheat crop. Imports of course are possible if the shipping position allows India to buy Argentine or Australian wheat. The crop in the Southern hemisphere is harvested before the year ends. It is noteworthy that control of prices has kept the price at Lyallpur and Hapur below Rs. 10 per maund but anxiety over imports and transport in the deficit Provinces is certainly attributable to the reduction in the Indian crop.

Planning and Purpose

Research is recommended for national development and Prof. Hill's visit has led to plans for more than one new laboratory on the basis of increased Government grants. Private expenditure on industrial research exceeds Government grants in most countries, and the main problem is the kind of levy that organised industry must make through trade associations. Prof. Hill has summed up his views in a broadcast after his return to London; but the one large purpose is national development. Political advance is regarded as unrelated to the national planning. The great plan of development is expected to give the motive power and resources.

CALCUTTA COMMERCIAL BANK LTD
15, CLIVE STREET, CALCUTTA

In these three ways, you can save money, save time, save inconvenience, AND yet deserve the admiration of your friends.

Firstly, instead of attending distant marriages, fairs and holy places, stay at home and send the railway fare as a present or an offering, thus saving yourself an uncomfortable journey, and lending a practical and really welcome form to your sentiments.

Secondly, conduct your business from your headquarters. Do not tour extensively.

Thirdly, when you take a holiday, spend it at home or near home. Long railway trips are both inconvenient and expensive.

You cannot hope to derive the full benefit from a rest if you subject yourself to all the discomforts and annoyances of wartime travel.

In doing these three things, you will not only save yourself fatigue and worry; you will be helping the railways, whose primary task of distributing supplies to civilians and soldiers MUST come before passengers' comfort.

Travel Less

ISSUED BY THE RAILWAY BOARD

universal primary education; but it certainly means abundant Central expenditure on education in the future.

Fertiliser Conference

There can be no difference of opinion about the urgency of increasing the foodgrains production of India to avoid the recurrence of famines. At least in the matter of foodgrains production the Government of India should stir themselves to activity instead of following the usual delaying tactics of instituting never-ending enquiries and appointing expert committees. It is well known that war has been an excuse for not importing the essential machinery for starting large-scale and key industries. Foreign interests are possibly interested in thwarting India's progress towards industrialisation, but nobody can justifiably obstruct starting a fertiliser industry in this country meant to increase the yield from land so that people may hope to eat and live. It is regrettable indeed that, though schemes and plans are published, the Government of India have not yet succeeded in importing the required plants for organising a fertiliser industry in India. The Fertiliser Conference held at New Delhi on the 29th April under the Chairmanship of the Supply Member had nothing immediate to offer for agricultural rehabilitation. The Government, it appears, have now decided to establish Government controlled units for the production of fertilisers on non-profit basis. Much care would be taken, we are assured, to organise everyone of these units to optimum sizes making the most economical cost of production possible. The required capital would be provided by the Centre, Provinces and the States. The fertiliser produced would be distributed to the Provinces and States according to their requirements and they, in their turn, would look to the local distribution. It is not indicated, however, when the people can expect the schemes to materialise, even though the Governments of U.K. and U.S.A. are supposed to have offered every possible help. Another interesting result of the Fertiliser Conference is the proposal to secure a team of experts, possibly as usual from abroad, for tackling such problems as management of the factory, the type of plants to be erected, form of fertiliser to be produced, conditions in respect of power, the utilisation of new materials for economic production etc. The scheme for production and the idea of expert investigation etc. are, so far as they go, welcome. But the country has a right to expect quick action at least in the matter of offering facilities to fill up the food shortage. The question of fertilisers was already discussed at a conference of the representatives of the chemical industry and of the Supply, Food Commerce and Education and Health and Land Departments at Delhi on the 29th and 30th September, 1943. A target of 1 million tons of ammonium sulphate was fixed. The Foodgrains Policy Committee laid down that 350,000 tons should be produced in two years while actually India does not produce more than a tenth of this figure. We were told that a survey of raw materials for sulphate of ammonia was on the way and would be completed soon. Many months have passed and we are still in the dark regarding the imports of the machinery needed for the fertiliser production. While the public would appreciate the Government's attempt to evolve a Manure Policy for India, it can hardly escape the feeling that the authorities

are moving too slow in an urgent matter. If Indian farming is to be modernised a well-thought-out manure policy should be immediately evolved. A bold agricultural plan is inconceivable without a successful conservation of organic manures and the establishment of a modern fertiliser industry. Since delay involves decay in the soils' fertility and consequent loss of grains and suffering for the masses, we hope the Government would use their influence for procuring the required plants without the least possible delay.

Aerodromes for Post-War Development

In their plan for the development of post-war civil aviation in India the Government of India carefully omitted any reference to the building up of an aircraft industry but details are furnished regarding the aerodromes and landing grounds to be dotted all over India. A memorandum on aerodrome and route construction circulated at the first meeting of the Reconstruction (Policy) Committee for Posts and Aviation proposes to construct a network of 111 aerodromes at a cost of Rs. 154

crores to be completed within ten years after the war. Since there are already 91 aerodromes in existence only 20 are to be newly constructed. Such of the existing R.A.F. aerodromes as are available at the end of the war will be taken over for civilian use. Seventy-eight of the total aerodromes will be equipped with night flying facilities. The location of the aerodromes and landing grounds have been determined with reference to the population of the towns and the necessity to link up the Indian system with international air routes. Of the cities with a population of over a lakh 46 will be served by aerodromes while 9 are not included in the schedule. 29 aerodromes will be located at towns with a population of over 50,000 and 36 will be distributed for towns with population less than 50,000. Under the present plan 56 towns with a population over 50,000 would not be served by aerodromes. 11 internal air routes are provided for viz.: (1) Karachi-Colombo; (2) Calcutta-Peshawar (if possible to be extended to Kabul); (3) Karachi-Delhi; (4) Bombay-Calcutta; (5) Calcutta-Colombo; (6) Delhi-Madras; (7) Bombay-

Many built during the war have done good service. Those who designed and built midgets that made such a mess of the Tirpitz are proud of their work. Corvettes meant for anti-submarine work were the chief problem in 1939 as the need then was for ships faster than trawlers and requiring only a small crew. Messrs. Smith's dock who had specialised in ships to catch whales suggested that such ships could equally well catch submarines. Frigates have followed Corvettes as killers of U-boats. Being both larger and faster they were equal to the new tactics of larger enemy submarines. Some frigates have been built inland and the parts sent to the shipyards for erection. Sir Stanley described also the revival of wooden naval architecture after the magnetic mine appeared. In the little places round the coast and also in Canada, Australia and the West Indies, ships of wood are being built again. From the makers of cranes for the shipyards to the Royal Corps of Naval Constructors, all helped to keep shipyards busy and the latest product, landing assault craft, is a link between the Navy and the Army like the troopship.

Australia's Minerals

Development of tin mines with Chinese labour in Australia was made known nearly two years ago, but the Commonwealth's mineral production goes beyond that as it is reported that Government funds, exceeding £1 million have been employed in sustaining and expanding production of minerals and metals. The minerals directorate developed in West Australia the mining of Tantalum a very rare metal whose wartime use in some respects is secret and which Australia is now exporting to America. Tantalum is a blue-white metal stronger than steel, as non-corrosive as glass, with a melting point so high that no crucible exists in which it can be smelted. Australia is exporting also beryllium copper. According to the monthly newsletter, the Commonwealth is sanguine about its scheelite deposits. Tungsten is made from scheelite. New deposits are being extensively developed and will be of importance to the United Nations to whom Australian exports will go. It is known that Tasmania produces wolfram. Tungsten steel is being made now at the Newcastle steel works of the Broken Hill Pty Co., solely from Australian supplies. Diamond drilling of deposits revealed that the King Island mine was one of the largest, if not the largest scheelite mine in the world. The Commonwealth Government provided £64,866 towards the erection of the new mill estimated to cost between £200,000 and £300,000. A subsidy for aluminium production in Tasmania has been announced recently. The Government hydro-electric scheme generating 143,500 h.p. is the chief factor in the Australian aluminium production plans. Tasmania's principal mineral is copper and coal is unimportant; hence the hydro-electric scheme. Zinc supplies were supplemented by large imports but the largest share in the Commonwealth's mineral output was claimed by West Australia.

Indians in Postwar Burma

Recently certain occurrences have shattered the confidence of Indian evacuees from Burma that, when peace is restored, they would go back to Burma to enjoy the rights and privileges previously

granted to them in that country. No one imagined that the very right of going back to Burma for settlement would prove doubtful. In a recent speech the Governor of Burma referred to the question of Indian evacuees from Burma and said that there would be no doubt about the return of those Indians who have evacuated from Burma, if they have "genuine roots" in that country. This qualifying statement of "genuine roots" has caused much alarm amongst Indian merchants and the rest who have evacuated from Burma but are eagerly waiting for the day when Burma would be reconquered so that they could go back to prewar avocations. Their moorings in Burma are strong and creditable. Their contribution to Burman economic development has been substantial. They believe, and rightly, that Indians have a right to re-enter Burma just as it is the right of every Britisher to enter Burma or the right of every Burman to enter both the U. K. and India.

The question of "genuine roots" now raised by the Governor sounds ominous and the position needs to be clarified satisfactorily. The resolution on Indians in Postwar Burma adopted by the Federation of Indian Chambers of Commerce and Industry at its 17th Annual Session held on the 4th and 5th March, at Delhi, voices forth the serious concern of Indian evacuees in this very important matter. Merchants link up the Governor's references to "genuine roots" to the proposal of the Government of Burma to set up a Civil Affairs Committee to follow the footsteps of the military to look after the interests of those who advance behind the Armed forces. It is feared that, in the absence of adequate representation of non-official Indian opinion on the committee, commercial agencies like the U.K.C.C. would be set up during the period of reconquest of Burma and that these agencies would endanger Indian commercial interests in Burma in postwar years. Speaking in support of the resolution Mr. S. N. Haji pointed out that "neither the social nor the economic requirements of Burma would justify any restrictions placed upon the movements of Indians from one country to another". He said that after the ravages of the war and the scorched earth policy likely to be adopted by the Japs, Burma would surely be in need of Indian capital, labour and business enterprise. Even before the war Indians have only supplemented the requirements of Burma, not supplanted the Burman from legitimate spheres of activity. This is also supported by the findings of the Baxter report. Those who have the abiding interests of Burma at heart would do well to remember that Burma's progress lies, not in restricting the flow of Indian labour and capital, but in the fixing of minimum wages for labour in Burma. Postwar reconstruction plans for Burma are reported to be in progress but, while European interests have been closely associated with the preparation of schemes, Indian interests are being excluded. As Mr. Mohamed Hussin Hassam Premjee pointed out, Indians constituted one-tenth of the population of prewar Burma and Indian labour had a great deal to do with the trebling of the rice production of Burma during the last three decades. Surely Indians have a right of re-entry into Burma and any attempt on the part of non-Burman interests to jeopardise the position of Indian nationals in postwar years should be resisted.

**Its her whole
EXISTENCE**

Who is so wise as can fashion a woman's heart? Mysterious are its ways, curious its expression. Yet, whoever has had the great fortune of having been loved by a woman knows how precisely her live engulfs a man's personality in unimaginable love—how it inspires him to heights he would never otherwise have achieved. Perfect as a woman's love in its action over the body and the mind is the ideal tonic—LADCOVINE.

★

"We have come a long way together up the steep and difficult mountain at the summit of which lies complete Indian self-government. We are almost within sight of the top, but as with most mountain climbs that are worth doing, the final cliffs are the steepest and most baffling of all. At such a time it is doubly necessary to test each hand-hold and foot-hold, to cut adequate steps in slippery ice, so that the whole party, roped together, may not fall back in ruin. It is not the moment that prudent mountaineers choose to unrope, to dismiss their guides, and after violent dispute to take separate routes towards different peaks. We must go on together; we cannot halt too long at the heights which we have reached, and we cannot with honour or safety turn back".

Expectation of Life

When public health has become a leading topic of discussion comparative statistics as to expectation of life have real value. The League of Nations statistical bulletin using approximate data for British India puts the expectation of life,

for males at 26.91 years and for females at 26.56. Compared with 1911 figures there has been prolongation of the term of human life. At various age groups the term increases, but over 10, the expectation of life is reduced. There are, of course, various other factors than six

differences, but a point to note here is that a reduced proportion of those over 70 is no disadvantage. The main difference between European lands where the average expectation of life is over 50 years and India deserves special notice in view of the fact that the high death-rate here is regarded as the most disturbing aspect of the population problem. It is noteworthy that Egyptian figures correspond to those of Europe generally. Available figures suggest that India is lowest in the list, but women are not perceptibly more long lived than men though they appear to live longer than men in Germany, the U.S.A. and Canada.

The best showing of any country is certainly made by Denmark though New Zealand's vital statistics would indicate that climate combined with social security is a decisive inducement to longevity. Available figures suggest that Fascism increased the Italian's average expectation of life. It may be noted also that the depression had no material effect on the term of life for this new though the trade cycle is known to influence natural increase. In the years 1935-37 improved expectation of life was a mark of both Eire and Italy. As may be guessed the backward countries like Bulgaria have fewer old men than fully developed countries like Belgium although it is surprising to find that in Greece the average number of years still remaining for a person aged 70 was greater than in the U.S.A. The general rule appears to have been reduced mortality, especially, of the very young in all countries including India as compared with 1911 or any later base. The Popular impression as to the lower standards of living affecting expectation of life is confirmed by the considerable differences as between White and Black in S. Africa as well as the U.S.A. though adult negroes in the U.S.A. especially women over 40 had a better chance of survival for a longer term than the White population. Though great caution is necessary in scrutinising the averages the tables appearing in December certainly support the view that preventable disease takes a heavy toll in the tropics though Brazil's figures are not greatly different from those of Costa Rica.

**MORALE**

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends of the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Harlons play the leading role in these supplies. Whatever the kind of quality in ropes may be Harlons have the variety to choose from.

THE EXCHANGE BANK OF INDIA & AFRICA LTD.

BOMBAY

ANNOUNCEMENT

We are pleased to announce that further 9727 Ordinary Shares of Rs. 100 each will be issued at a premium of Rs. 10 per share, for which the necessary consent of the Central Government has been obtained under the Defence of India Rule 94-A. It must be distinctly understood that in giving the consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statement made or opinions expressed with regard to them.

J. M. AKHANEY,
Managing Director.

Allahabad Bank

In the Allahabad Bank's balancesheet as on March 31st, 1944, the principal feature claiming attention is the increase of Rs. 4 crores in Deposits. That this includes Rs. 2½ crores under Fixed Deposits is certainly significant while the increase of Rs. 4.19 crores in the balance-sheet total, considering the number of new banks and branches that have entered the field, furnishes proof of the high standing that the Allahabad Bank continues to enjoy. Reserve Fund at Rs. 58 lakhs is to be strengthened further by Rs. 4 lakhs. This enhanced allocation (Rs. 4 lakhs as compared with Rs. 2 lakhs in 1943) and a similar transfer to contingencies are influenced directly by the growth of the year's net profit from Rs. 11.24 lakhs to Rs. 15.06 lakhs. Maintenance of the dividend and bonus for the year at the rate of 18 per cent. leaves a larger balance in the books out of the disposable profits.

The main features on the assets side are the increases in banking advances and investments by nearly Rs. 2 crores in each case. Enhancement of cash resources to Rs. 3 crores is noteworthy. It will be observed that investments are almost exclusively in Government securities, the

relatively small proportion falling outside this category being in trustee issues. This reflects the conservatism of policy for which the Allahabad Bank has always been noted.

Comilla Banking Corporation

Another bank balance sheet but relating to an earlier date appears today. The Comilla Banking Corporation turns in gratifying figures as usual. At the end of 1943 the total deposits amounted to Rs. 564.47 lakhs. The paid-up capital stood at Rs. 30.47 lakhs, and the Reserves

totalled Rs. 14 lakhs. It is noteworthy that bills for collection amounted to Rs. 47.65 lakhs out of a balancesheet total of Rs. 6.8 crores. The high degree of liquidity to which Indian banks are prone is illustrated very clearly in this year. Cash balances total Rs. 246.48 lakhs while Advances and Bills total Rs. 155.97 lakhs. The increase under Government securities is a generic feature of all bank statements. In the case of the Comilla Banking Corporation the net profit is reduced by taxation and provision for Reserve to Rs. 1,33,276 but the carry forward is higher

on the year. The increase in the bank's resources was supported by the abundance of funds though it will be noted that the percentage increase in Deposits in the case of a medium-sized bank is as pronounced as in the case of larger banks. Such growth may well warrant optimism especially as the policy of managements tends to be correct and dignified. The more important conclusion that Bengali banks have obtained their proper share of the increase in savings or disposable funds last year certainly finds real support in the figures cited.

Gratitude to Godrej

Godrej hold a long record of resistance against fire and burglars. To their prized possession of innumerable tributes are now being added many further proofs of gratitude: Here are a few of the heroic accounts rendered by GODREJ SAFES during the conflagration that blazed after the recent ammunition explosions in Bombay. And no safe-maker could have expected these stalwarts to succeed in saving their valuable contents in such an *unprepared for emergency* that baffles the imagination: *days and days against* the fury of relentless tongues of fire—battering falls—the soaking heat of the engulfing debris of buildings burnt down, *without any* effective help from fire-engines.

For safe-custody of vital papers and other valuables, the importance of reliable security equipment *cannot* be overstressed. Governments, banks, business houses and the public throughout India specify "Godrej", because they know that better protection cannot be obtained.

Mulund, Bombay, 24-4-1944.
M/s. Godrej & Boyce Mfg. Co., Ltd.,
Bombay.

Dear Sir,
We had in use at our 'pedhi' situated at Dena Bunder a Safe made by you nearly 35 years ago. The above safe was caught in the terrific fire which broke out consequent upon the recent fearful explosions in the docks. A heap of burning houses had fallen on this safe. Intensely burning houses in such intense fire for 9 days. Our books and documents were kept in this safe. We had given up hope of recovering any of our possessions were kept safe; but our books and documents were found intact when we brought this safe to your Workshop today and had it opened.
We cannot congratulate you enough on making safes which give such protection. Wishing your firm increased success.
Yours faithfully,
Sd. PRADHAN OOKEDA.

Bombay, 22nd April, 1944.
M/s. Godrej & Boyce Mfg. Co., Ltd.,
Lalbagh, Parel, Bombay.

Dear Sirs,
We are hereby certifying that M/s. Godrej & Boyce's Safes have proved most safe by actual test in this disastrous fire which broke out on the 14th instant. We had a 'C' quality Godrej Safe of 1909 make and that was caught in fire in our office at 255/87, Narsee Natha Street. We had our very valuable belongings in that safe including Government vouchers, currency notes, ornaments and share everything and to our great surprise we found everything quite intact, when the safe was opened in the Godrej Workshop after seven days.
Further we are very much obliged to M/s. Godrej & Co. for their cordial help and assistance given to us in this matter.
Yours faithfully,
For HIRJEE GHELLABHOY,
Sd. RAWJI GHELLABHOY,
Vice-President, Rice Merchants' Assn., Bombay.

Bombay, 24-4-44.
M/s. Godrej & Boyce Mfg. Co., Ltd.,
Lalbagh, Parel, Bombay.

Dear Sirs,
It gives us great pleasure to state that a many years high Godrej Safe purchased from you explosive fires with flying colours. While the contents of our other safe of a well-known foreign make were completely destroyed by the fire, our precious papers, currency notes and jewellery which were kept in your Safe remained unscathed by that same fire.
Although we cannot thank you sufficiently, as a small token of our appreciation we request you to supply to us a similar safe of yours.

Yours faithfully,
Sd. KHIMJEE MOOLJEE,
Sole Proprietor,
Premjee Umashri & Co.,
Carnac Bunder,
Iron Market, Bombay.

STAY AT THE
GRAND HOTEL

The Leading Hotel of Calcutta

It was on Wednesday noon while I was sitting in the office of Merwanjis in Bombay that I heard of the early-morning alert in Calcutta. Mr. Bhide who is now looking after the government securities section in Merwanjis—what other section can Bhide look after? And what better man could Merwanjis have secured than Bhide to look after gilt-edged?—said that, in the course of two trunk calls from Calcutta, he was informed that there had been an alert. Many other friends in Bombay had similarly heard of this alert. No one could say definitely whether it was only an alert or more than an alert. "It may be more than an alert", argued some, "our friends in Calcutta cannot talk freely on the trunk telephone." Bhide added that, but for this news from the Eastern capital, 3½ per cent paper would have forged ahead to over Rs. 98-8. The technical position was sound; and enquiries for 3½ per cent paper were for quite substantial amounts. But the news of the alert arrested enthusiasm. If the authorities had released in time the official news about the alert together with the more important information that the all-clear was given soon after on its being known that it was only a friendly plane, the afternoon session on Wednesday would have witnessed a remarkable revival of confidence. Up to the time of my leaving Bombay, no official communique had been issued. The actual news was known to me this morning at Kharagpur. I made enquiries at Nagpur from Mr. A. D. Mani who had come to meet me at the station. He said that, up to Thursday morning, he had received no news of the alert in Calcutta. Surely, there must be a more expeditious way of releasing information, especially when all that had to be reported was that the alert was given on what might be called mistaken identity.

There is much that I have to write on what I heard and saw in Bombay, but the release of Mahatma Gandhi must take precedence over aught else. This is my principal theme; and, before I take it up, let me say a word or two on the Bombay fire about which everyone is agog to know the true facts and the full facts. There are many who believe or wish to believe that the fire was due to Fifth Column activities. To them, the straight answer may be given that there is absolutely no truth in such reports. There is no doubt that the fire wrought such havoc and was so terrific in its range and fury because of some ammunition ships being involved in the fire. The accounts that have reached us about the extent of damage and loss do not by any means err on the side of extravagance. Even on Wednesday, I noticed, as my train passed Masjid,

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like it)

smoke in a number of places. After nearly a month, there is still smoke in sundry places; and this provides a measure of the seriousness of the fire. The loss in human lives cannot yet be accurately estimated. Those who escaped from the fire have been mostly accommodated by friends and relations in other parts of Bombay. The good-neighbourliness of Bombay citizens is of such high order that there are hardly any destitutes left to be looked after by organised charity. The two main problems are: (1) how are the victims to be recompensed for their damages? and (2) what special facilities by way of building materials or otherwise are to be given with regard to the reconstruction of buildings that now lie devastated? The first question brings up prominently the conundrum of the liability of insurance companies. For a clear understanding of this matter, it is useful to analyse the fire damage under specific heads.

Much damage has been caused to the dock installations and to steamers and their contents. These are matters which the Government of India will perforce have to deal with directly. There are also reports of people having lost black market commodities and black money. Amongst the stocks of grains burnt in the fire, a moiety represent foodstuffs held by people who hoped to sell them in the black market at fabulous prices. I am also told that quite a large amount of currency notes have been burnt, these currency notes representing cash which

CHAMPAGNES, WINES
AND SCOTCH WHISKY
ALWAYS AVAILABLE

the owners had kept at home through tax-dodging devices. No one need be sorry for the loss of these traffickers in black markets. There are losses of properties and personal belongings of comparatively poor people who did not take any insurance cover. In their case, the Government are bound to provide compensation as their loss is attributable to the fire caused and fanned to such fury by ammunition. Lastly, there are the losses for which insurance cover had been taken. If the people who had not insured their properties are entitled to compensation on the ground of the fire being directly connected with explosions in ammunition dumps, how do the insurance cover cases differ in the vital respect of compensation payable by the Government? The insurance companies, on an honest analysis of the facts of the situation, do not come into the picture at all. To drag them into this controversy and to begin a process of higgling and haggling on the basis that the Government would pay a proportion if the insurance companies pay a specified moiety, is to expose insurance companies to unnecessary and unjustifiable clouding of their good name. This is a matter which calls for statesmanlike decision and quick action on the part of the Central Government. The Central Government should accept full responsibility and take upon itself the task of negotiating with the Allied governments as to the apportionment of financial liability as amongst them. As I said in the interview I gave the "Blitz," the Government will do well to realise that he gives double who gives quick.

The release of Mahatma Gandhi came just a little too late for notice in these columns last week. One could have anticipated it, except that of late we have come to think that anything is too good to be true. So deep-rooted is our pessimism; and such pessimism is not temperamental but based on past experience. On the last occasion the Mahatma was hovering between life and death, Lord Linlithgow thought, not of release, but of preparation against the possible consequences of his death, should it occur. It was a display of the kind of mental strength which India has never seen her way to admire. But however that may be, we could not help regarding it as a clue to established policy. And though reports of Mahatma's health were highly disquieting, we dared not hope for his release. Does malaria, in place of a grave moral issue, make a difference? There are those who say that not only it does, but also it should. And they say it, less out of faith in that view than out of an anxiety to discourage those who like to read in the release of the Mahatma some political significance. But how is any one, whether

in India or abroad, to be persuaded that Gandhi has been released purely on medical grounds? It was not for his health that he was taken to the Aga Khan's Palace at Poona. Nor was he detained because mere citrus juice was thought to be a rejuvenating tonic for an old man of eighty. There was nothing in our past experience to suggest that the Government were not prepared to tend an ailing leader in detention or arrange for the obsequies to be performed within prison walls.

And yet the release has been ordered. The question inevitably arises, whether the mood of the Government has changed. Personally, I cannot help feeling that between the position a week ago and the position at the time of Gandhi's fast a year ago, the main difference lies in the personality of the Viceroy. It is certainly too soon to say whether Lord Wavell has taken on hand a new Indian policy. It is quite understandable that he is not yet quite free to do so. It is understandable, too, that he has not sufficient strength as distinct from courage, which Lord Wavell surely has—of conviction. But there is ample evidence to suggest that he is looking at the Indian problem quite differently from his predecessor. To Lord Linlithgow, the problem was one of completely foiling the Congress and preserving a set of conditions which would enable the British Government to put forward plenty of plausible excuses for not bringing about a political settlement and which would at the same time keep every prominent political party disabled for action. He had certainly outstanding success to his credit in this line. But Lord Wavell hardly seems to look for such dubious honours. His speech to the Central Assembly, though it did not hold out definite hopes of a change of policy, did contain hints of a new approach on the part of the Viceroy to the Indian problem. His references to the working of the coalition ministry in the Punjab, meant, no doubt to encourage attempts towards similar arrangements in the all-India sphere, could also be interpreted as a reflection on the treatment of Mr. Fazlul Huq by Sir John Herbert and Lord Linlithgow's implicit commendation of it. The contrast between Sir Bertrand Gancey and Sir John Herbert is a measure of the difference between Lord Wavell and Lord Linlithgow. Sir John wangled a letter of resignation from Mr. Fazlul Huq to put a League Ministry in power in Bengal, while Sir Bertrand dismissed a minister in the Punjab in the knowledge that it would help to keep the ministry in and intruders out. One should expect from this that as soon as a situation arose for the exercise of the Viceroy's discretion, the discretion would be properly exercised. That is exactly what has happened now. Gandhi's malaria has given Lord Wavell the chance to show that he can bring a new and fresh mind to bear on major issues. I can well believe that Mr. Amery has no share in the responsibility for this decision to release Mahatma unconditionally, though I fancy that the brevity of his reply to newspaper correspondents reveals a degree of sullen demur. If the stage is set for a change in major policy, it will accord with the changed mood in the ruling classes in Britain.

The ruling classes in Britain unlike Mr. Churchill and Mr. Amery probably realise now that they have over-played their hand in the matter of the Congress-League differences. If Congress is checked

with the pawn of Pakistan, the result is a stalemate which serves neither side. With the war drawing towards its inevitable end, the future claims its attention. The Government's walk-over in Indian politics is a triumph, as sterile as it is dubious. If they can do without a popular Government in peacetime as they have been able to during the war, then surely putting Congress in the cold storage of India's innumerable prison houses should involve no privations for the Government. But that surely is impossible. You need an Indian Government to figure in the international conferences of the future, which will be more numerous after this war than they were after the last one. You need an Indian Government to treat with on all questions of trade and commercial relations. If that need is there at some date in the future to be faced, surely the longer the stalemate lasts, the less likely is the need to be met smoothly and well. Some day, the League Dictator will be forced to see that he is playing an impossible game and to ask for his bond so that he may go. It is a job for the Government more than for the Congress; and they must be applying themselves to it consciously or unconsciously.

When the Trade Delegation goes to Britain and the talks with British industry develop, the latter should be able to see that its interest in India lies in the orders that will flow from India, rather than the orders that Whitehall will issue to India. There is far more in a good trade agreement than in all the ingenious ways that Mr. Amery can think of for thwarting the Congress. Big business in Britain is so closely affiliated to the conservative party that it has never occurred to it to question the wisdom of Mr. Churchill's Indian policy. But the problems of the post-war period do not lend themselves to the same treatment as those of the war period. Foiled in the political sphere, the Indian intelligentsia has turned to economic planning as a better means of breathing life into the inert limbs of India's body politic. The Bombay Plan has been laid before the country and the country has welcomed it with great enthusiasm. The Government of India have joined in the welcome. It is for British business to decide on which side it will throw its weight. It will have to make up its mind as to whether it will strengthen the cause of planning and make for itself, or whether it will try to scotch the plan in a desire to protect the pre-war exports to India. No one can deny that the bird in the hand is worth two in the bush. But the bird in the hand is not incapable of flying away. Anyway, British industrialists will have to do some hard thinking and a lot of cold calculation before they decide to continue in their old habits of thought and ask for a virtual veto on the ambitious plan of the Bombay industrialists.

If they so decide, they will find little of common ground between them and the Indian industrialists who will be proceeding to Britain shortly. It is a strong team that will go out from this country. Sir Purshottamdas Thakurdas is a veteran alike in business and in negotiations at a conference. Mr. J. R. D. Tata is an industrialist as tall as any in the world and in the campaigning of big business programmes, the captains of British industry will find in him more than a match for themselves. There is then Mr. G. D.

Birla, who has on his brows the laurels of more than one Caesarian campaign in the world of business. And then, Mr. N. R. Sarker with his rare blend of political acumen and eye for business opportunities, which makes him, not perhaps the cynosure of all eyes, but always a man to reckon with. Such a team should have no difficulty in clarifying for the benefit of British industry the alternatives from which they have to choose. It is up to them to show that, if British industry at all cares for a stable and expanding trade with India, it ought to turn its back on the ideas and policies of the past. What is the use of gaining Pyrrhic victories over a non-violent Congress, or of placating parties which can never weld India into a strong effective unit in the British Commonwealth and the comity of nations?

I doubt if British industrialists have been taught to think on these lines. They have, not unnaturally, thought of Indian industrial development in terms of a protectionist policy, which does not enrich India, but makes Britain poor, indeed. All the talk, common in Leftist circles, of a prosperous India being a cure for Britain's unemployment naturally struck

Olympus

(From Our Correspondent)

New Delhi, May 8.

MAHATMA GANDHI's release during the week-end has brought a sense of deep relief to political circles here as elsewhere throughout the country. Though woefully belated, it is hoped that the release will at last help to break the vicious deadlock that has so deeply embittered Indo-British relations during the past two years. Much more, however, has to be done before a new political settlement can be negotiated with any chances of success. Particularly other important Congress leaders have to be set free before a fresh start can be made. It is not yet known how far this Government's contention that the release has been effected 'solely on medical grounds' is literally true. Only future will show whether the Wavell Government have any really keen desire for a new settlement. But the universal relief felt at the release in Allied forces perhaps indicates that even the British Government may attempt some sort of solution for the Chronic deadlock which impedes their war effort. ...

The Government of India do not seem to have made up their minds yet regarding the extent of the compensation to the victims of the recent Bombay explosions. The Joint Secretary to the Legislative Department who has been sent to Bombay to discuss the matter with the insurance companies, is expected to submit his report in a few days. It is believed that while the settlement of responsibility for the compensation between the British and Indian Government may take a long time, the New Delhi is bound to take quicker action and settle the claims at an early date. It may be prepared to indemnify the insurance companies to a large extent, the whole incident being directly due to the war. There is general regret here that no non-official Indians have been included in the Enquiry Commission, and that though the accident is three weeks old, the Government have not announced their decision on the compensation claims.

India's postwar monetary policy continues to arouse keen interest here, though there is much surprise at the Government's reluctance to define their policy in concrete terms as other major allied nations have done. It is not yet definite whether Sir Jeremy Raisman is joining in the Washington currency talks; he is likely to do if the dates of the Washington Conference do not clash with his talks in London for a revision of the financial settlement with Britain. Sir Jeremy Raisman and Sir Theodore Gregory both discussed the latest Allied currency plan with the General Policy Committee in Bombay last week. Unless certain vital details are known, it is difficult to say how the plan will work out for India. While Russia and China have been assigned independent places on the Executive, India has been refused such a place. Moreover the first essential for India is that she is not forcibly linked to sterling and is free to vary the sterling-rupee and the dollar-rupee exchange rates to suit her postwar needs and to ensure that the huge foreign exchange assets now built up at such great sacrifice are not frittered away by some invidious exchange manoeuvres. Moreover until India's quota is known it is difficult to know the extent of her likely credit in foreign exchanges needed to finance her postwar industrial programme.

It is understood that the Central Government, which is at present consuming over two-thirds of the country's entire paper production, may soon introduce a drastic price control at a much lower level than the prevailing rates. Negotiations with the industry with a view to arrive at a workable price amalgamation without recourse to Defence of India Rules are reported to have broken down. The Government's proposal seems to have been to allow a profit only 9 pence per pound of paper which the industry considered quite inadequate. The Government's contention is that so far the industry has been allowed to make monopolistic profits amounting to over a hundred per cent on the capital invested.

The first official report on postwar agricultural planning in India issued by General Hutton suggests higher targets for increased yield per acre of India's main food crops. The new target for rice is 1,000 lbs. per acre compared to the present 829 lbs. per acre. It is claimed that with proper planning the yield can be increased by even 50 per cent, 40 per cent by adequate manuring and 10 per cent by using improved varieties. Even the new target will be very much lower than what has been achieved in several agriculturally advanced countries. It is suggested that the wheat yield per acre can be almost doubled for irrigated areas from the present 840 lbs. per acre to 1,200 lbs. per acre. The sugarcane yield can be tremendously increased from about 15 tons per acre to 30 to 55 tons per acre. No production target is suggested for cotton as there is considered to be dependent on several international factors. It is, however, stated that the present yield can be obtained from a much smaller area and a lot of cultivable area released for food crops. The production of tobacco and potatoes can be almost doubled while there is enormous scope for development of fruit-growing. It is thought possible to increase the country's milk supply by 75 per cent by proper breeding of livestock. As regards postwar forest development, it is estimated that excess felling of timber for war purposes has resulted in a decrease in yield of 30 to 40 per cent for about ten years. To meet the fuel, housing and manner needs of the cultivators, it is essential to bring a much larger area under forests (from 14 to 20 per cent). Out of 288,000 square miles of the so-called cultivable and uncultivable waste, 100,000 square miles should be used for growing forests properly distributed for the villagers' supply.

According to the report this three-fold aim of agricultural reconstruction in India should be to provide adequate nutrition for her increasing population, to produce raw materials for her developing industries and commodities for which there is likely to be big demand in foreign markets in the postwar period. Then are at present about 111 million acres of cultivable waste, a large part of which can be brought under cultivation.

The Government has at last taken note of the dangers facing the Indian mica industry and appointed an inquiry committee. The Committee is supposed to deal with matters of long-term policy and reconstruction primarily. But, as the industry has long been pointing out, there are more urgent problems needing urgent solutions. The menace of piracy has to be checked and adequate supplies of rice and coal made available in the mining areas. Due to shortage of coal, there is danger of the mines being flooded during the monsoon. It is

hoped the committee will effectively deal these problems.

I understand that the Centre has already despatched to Calcutta more than half of the promised 640,000 tons of rice, keeping ahead of the time schedule. Rice exports to Malabar are to be increased soon as the West Coast deficit-areas have not been receiving adequate quantities for some time. Meanwhile according to the latest forecast, the wheat crop prospects are fair despite the damage suffered in the recent hailstorms. The extent of the damage in U. P. alone can be gauged from the fact that it has needed revenue and rent remissions amounting to Rs. 7 lakhs and Rs. 30 lakhs respectively in the affected areas. The wheat crop yield this year is expected to be 10,356,000 tons which falls short of the last year's bumper harvest by over half a million tons, though still in excess of the 1941-42 yield.

The rationing cards have all been distributed and registered here and full-fledged rationing is expected to come into force in a few days. There has been no allocation of shops to the rationed citizens and everybody has been free to register at any one of the registered shops. In spite of the demands of organised labour, manual workers have not been allotted any increased rations. Only rice, wheat and sugar are at present covered by rationing and there have been demands, particularly from the poorer sections of the population, to include fuel and kerosene which are often difficult to obtain.

There is general criticism of the new relaxed rules for control of capital issues owing the serious check they put on new industrial ventures in the form of safeguards. It is stated that there will be no objection to such safeguards if a full-fledged national Government were to plan the country's industrial future. As there is little likelihood of this, it is feared that the new restrictions on industrial enterprises will seriously compromise the country's future. As the whole postwar position regarding state and private enterprises and location of industries is still very uncertain, it will be difficult for the investing public to launch or plan its new enterprises.

(FROM OUR CORRESPONDENT)

Bombay, May 9.

All roads lead to Parnakutti, where Mahatma Gandhi is convalescing. His release is like a beam of light in the encircling gloom that two years of stalemate had engendered. On Friday when his illness took a serious turn, the city wore a grim mien born perhaps of the Defence of India rules, but there was no mistaking the anxious throbbing within. The markets were listless and 3½ Rupee Paper went down to Rs. 98-2. Late on Friday night, the news of the release was flashed to Bombay, and on Saturday, the city woke up to read the best news for many a long day, appropriately featured in banner headlines in the Press. The markets were not slow to record their appreciation of the gesture and received a new lease of life. Paper going up by a good few annas. The outlook is one of wistful expectancy. The hope is rife that the release of the sage of Sevagram might lead to a general jail delivery and to a settlement. A mellow optimism pervades all quarters. It speaks much for the intrinsic robustness of our outlook that two years of Maxwell's gibes have not impaired the nation's optimism nor made it cynical. That perhaps is our great national heritage—the ability to condone malice in others, and to exorcise rancour in ourselves. Gandhiji is expected here shortly and the apostle of non-violence will chant his hymns to the accompaniment of the roar of planes in Juhu.

Newsreels and press photos must have given India an idea of the fire havoc. Many gaunt ruins stand out and salvage is accompanied by destruction. An official decision empowers the City engineer and a military engineer to decide about the demolition of unsafe buildings before the monsoon breaks. There is as yet no break in the job of clearance of debris and removal of property. An omnibus inquest on the victims of the disaster is proposed by the City Coroner. It may be held in camera but those who can tell the jury about the disaster have been invited to tender evidence. The verdict will probably be less important than the findings of the judges deputed to enquire. The Coroner has been informed of the death of 319 persons though some bodies have been identified. Careless talk in letters has led to prosecution. Relief work goes on and cloth is being given away by the Marwari Sammelan and the Bohras' own committee busy on good works.

Dr. Sortey and another officer asked the Government to encourage local shipbuilding and sea transport. During 1943, the country craft organisation set up by government relieved the railways. Much traffic was diverted and traders found the usual delays removed. The increase of coastal trade on the Western coast is not limited to Bombay. Tonnage of imports into Sind and Malabar shows an increase as compared with 1942. Western India States have a special interest in country craft as builders, and as carriers too. The imposition of control has not affected the growth of traffic in this case, and the War Transport Department has reason to feel pleased. The monsoon means only the temporary suspension of coastal traffic, but it remains to be seen whether the postwar development of coastal traffic will give country crafts and minor ports the

place they deserve. In regard to maritime labour landlocked provinces like Assam and the Frontier are as much interested as Bombay.

Stockbrokers had their annual meeting on Saturday. Mr. K. R. P. Shroff their President complained of high taxation as a barrier to be removed. Enterprise and investors deserve to be encouraged when rewards are niggardly. Capitalistic economy will not expand; hence the plea for the removal of the surcharge and the corporation tax. Mr. Shroff favours government borrowing at low rates, but thinks there is a limit to increase of debt. As the Defence Rules hamper business in the share market the President thinks that some harm has been done. There is much budia business outside the market. Protesting letters in the papers indicated that the forward business goes on and speculative buyers can get in when they annas. Mr. Shroff's opinion as to E. P. T. is interesting. He thinks that dividends are affected by the surcharge and the Corporation tax not by the E.P.T. His view that the spread between gilt-edged yield and that offered by sound industrials would be narrowed down corresponds to the general opinion. The drop in cotton and other prices will probably create more interest in shares, especially, as the political tension of two years is likely to pass away gradually. The cotton market is depressed and hopes of official intervention are modified by the fact that a lot of cotton tendered and refused is on the market.

Rent control does not increase, accommodation. There is a housing problem; with so many houses out of use the increased population represents a problem for the Corporation. Mill labour has increased owing to the war from 130,000 to

210,000 and workers are among those directly handicapped by the lack of accommodation. Over half the population still lives in tenements and slums remain. Town-planning and housing reform are required. A letter in the papers refers to the duty of employers and Government because the working class standard of living must be improved. The Commissioner has prepared a scheme for temporary dwellings, but the old plan for Greater Bombay by developing the many suburbs needs special support. When roads are built or improved living at a distance will appear fairly easy. Postwar housing plans are expected to increase employment when war demands for men and materials disappear. De-concentration is demanded also in the interests of health. Government has recently framed housing regulations in the interests of workers.

The Finance Member accompanied by Sir S. A. Shah had a look round the docks. There is no requisitioning and the area under military control will be visited by the judges who enquire into the disaster but it will be turned over to the municipality fairly soon. Landlords and tenants, however, are free to claim and remove assets. Small traders who have lost their stock have been offered help by the Relief Committee. The five assessors' names are not yet known and the Court of Enquiry will not publish its report in full though it will decide what should be withheld. That may affect the insurance companies' view as to liability for the damage done in April to property. The Shroffs Association too asked for prompt decision by the Government. Landlords have scarcely helped the police in clearing the streets, but when compensation is remote, the Relief Committee cannot expect much. The Indian Merchants Chamber outlined the claim for Government compensating the merchants. At the protracted meeting on Wednesday last the

GOLD SALES AND INFLATION

THE SWISS EXPERIMENT

SPECIAL FOR "INDIAN FINANCE".

(By Cable)

Washington, May 10.

Gold is assuming increasing importance in the whole plan of international finance. Last week's announcement by the Swiss Government that Switzerland has decided to sell gold in an effort to absorb purchasing power followed similar action by India, Egypt, China and Mexico although there is little comparison between Swiss inflation and that experienced by other nations.

The source of gold sales wherewith the Swiss National Bank is prepared to deal is secret but it is believed that Switzerland has about four milliard francs in gold stocks although there is no indication how much Switzerland has earmarked in the United States and how much gold is actually in Switzerland.

Since the war started the Federal Reserve Bank, New York, has not published details of earmarked gold, but it is obvious that the Swiss Government's decision to open the gold market constitutes a reversal of policy wherein the sale of gold for long time was considered a bad programme. Currently Swiss francs are quoted in New York at 152.50 for one hundred gold francs or according to the 30% devaluation of Swiss francs in terms of gold which occurred several years ago.

Swiss action also means that the current gold dollar is worth about 7.90 Swiss francs and the £ sterling about 19.20 francs. The Swiss National Bank has exercised rigid control over all franc transactions on the U. S. market while dollar transactions on behalf of Swiss importers, and exporters are also subject to Swiss control and the National Bank uses its funds in the United States to earmark gold.

The Swiss National Bank resorted to the same device after the first world war when its fiscal experts decided to put gold coins into circulation. The coins were hoarded and the result was a reduction in the outstanding note issue in circulation.

It is obvious that none of the United States officials will advocate the same action on behalf of this Government which owns 22 milliards dollars worth of gold since there has been comparatively effective control so far of money in circulation even though it has reached a potentially dangerous level, over 21 milliards dollars. But it is reported that the Chinese Government also intends to sell gold to the public to achieve some price stabilization. It is understood here that approximately 20 per cent. of the 500 million dollar loan floated in March, 1942 by the United States will be sold to the public in the form of gold.

Similarly gold sales in India and Egypt have been recently discussed here in reviews explaining that one object was to offset to "some degree sterling policies." Although this explanation has partially satisfied Wall Street it has been far more interested in reports that an agreement has been reached between Britain and India whereby dollars acquired by India may be retained. The United States still hopes that India after the war will be one of its leading markets; also hopes it will have the exchange wherewith to purchase American goods.

(Continued from page 937).

President said that the extent of damage left citizens gasping. Rebuilding of lost buildings was demanded and a loan issued by Government for the purpose would meet with good response in the opinion of Seth Pranlal D. Nanjee.

The Textile Commissioner by permitting the sale of goods marked October and November, 1943, has helped the cloth trade; so has a notification ordering mills to sell only to people with whom they have traded for three years. There is to be a yarn quota and a cloth quota for established traders; and manufacturers have to deliver against orders. But those

who have paid in advance will get their goods and mills are also free to sell at ex-mill prices to certain customers, to employees or through their own shops. The supplementary control arrangements are meant to regenerate the yarn and cloth trade but one year has seen many amendments in the order. As cotton prices are developing the promise of lower prices is not unreal. Mill company statements for 1943, are reassuring, but the problem is not merely taxation. The fuel shortage is not limited to Calcutta and stories of scarcity are carefully scrutinised like the report that coal control will promote exceptional prosperity in the mining industry.

austerity

in the houses of the rich

prevents want

in the homes of the poor

THERE was a time when we loved to entertain lavishly—in fact, it was a sign of a large heart and a generous disposition. Indian hospitality was one of our greatest traditions which was cherished in thousands of well-to-do homes. But that time has now passed. Rationing, and all-round good management, are helping to relieve the food situation, but every extra economy still eases the plight of some hungry man, woman or child somewhere in India.

THIS is no time for feasts, and even in everyday life we can reduce the number of dishes served at each meal. We can economise in rice and bread, and substitute fruit, vegetables, meat, fish, eggs and so on—according to whatever diet we follow. This is our definite obligation to the less fortunate. By preventing waste in our homes we are doing something really useful. Let us intensify our efforts from to-day.

A.A.A. 751.

food for all

..but none to waste

Issued by the National War Front

(Continued from page 935)

British industrialists as stupid cant and left them cold. The results of two decades of discriminating protection were before them as a sample of the impact of Indian industrialisation on Britain's national economy. But the position we take up now is far different. The snail's pace industrialisation of the last two decades, we have turned our back on. We would rather go back to the villages, as Gandhiji would have us do, than have a sprinkling of modern factories built at great cost to the consumer. What is worth having is a genuine industrialisation of sufficient strength and scope to ensure equilibrium between industry and agriculture. That is so far as it concerns us. But what is important for British industry to realise is that, while a slow piecemeal building up of new industries can have nothing but adverse effects on Britain's trade, the rapid and comprehensive economic development, which is the aim of planning, can be a tonic to international trade as a whole and British industry in particular.

Such a plan would be impossible without a National Government. A divided India can be ruled, but cannot be made to help British trade and industry. Only a National Government can. That is a simple fact which British industry must be enabled to see clearly and appraise properly. Normally, the Indian delegation should be deemed to be wholly non-political. But these are not normal times. All the prominent members of the Delegation are either signatories to the Bombay Plan or its adherents since its publication. And the basic assumption of the Plan is the establishment of a National Government. It is difficult to see how this delegation can lighten the emphasis on a National Government or carry on its talks with British industry on the assumption that Whitehall will continue to be the Great Moghul of the Indian Empire. The Delegation will have to stress the importance of the political problem. And British industry will do well to take to heart the old maxim, beloved of businessmen, that a man is never more harmless than when he is engaged in legitimate money making. That maxim is more true of nations than even of individuals. India would wish nothing better of British industry than that it should consider its best interests.

I like to imagine that some day, not long from now, British industry will evince a better understanding of the Indian problem than British politicians and get a move on. We would then have all the Congress leaders back in our midst, and popular ministries, coalitionist or other, will be exerting themselves in co-operation with India's businessmen to raise the standard of living. They will be actuated by the motto "let live and live"; they will work in such a way that for every immediate cut in Britain's import trade there will be offered instead a vista of sure possibilities of increasing trade in other lines. Then will the old talk of the divine dispensation which brought India and Britain together begin to acquire meaning.

Town Planning FOR TOMORROW

Concrete — the most versatile of all building materials — is essential to town planning.

Concrete roads connecting the town with the railhead, cities, industrial localities and villages are strong, smooth and dustless besides being attractive and economical. Concrete water-tanks and drainage pipes meet the most fastidious and exacting demands of public health. Concrete brings a fresh beauty of shape, colour and functional design to dwellings and public buildings alike.

Economy in maintenance costs makes concrete an ideal specification in good town-planning. The services of The Concrete Association of India, Victoria House, Calcutta, are freely available to all those interested in this subject or in building on any scale.

THE CEMENT MARKETING Co. OF INDIA, Ltd.

CMT. 3072

South India

(From Our Correspondent)

Madras, May 9.

At long last the Government of Madras have realised that out of 3,01,000 acres expected to be irrigated under the Cauvery-Mettur project a large area still remains unirrigated and hence uncultivated. The food shortage has given a fillip to investigations regarding production of food grains. The reasons for the non-utilisation of the vast potentialities of Mettur project are not far to seek. Want of capital, lack of labour and the disputes between landlords and tenants are the main obstacles to the removal of which the Government have worked out a plan. A scheme to bring about 40,000 acres of the commanded but unirrigated land in the Cauvery Mettur Project in the Tanjore District, under irrigation has been sanctioned. It is proposed to provide the necessary irrigation facilities wherever necessary at an estimated cost of Rs. 1,50,000. In addition to the necessary irrigation facilities loans will be granted by the officers of the Revenue Department to the ryots for the reclamation of their lands. The loan is repayable in five equal annual instalments beginning from the second year and no interest will be charged in the first year, the interest from the second year onwards being 3 per cent per annum. A subsidy of Rs. 10 per acre will also be granted under certain conditions. Concessional water rates have been continued for the duration of the war. The scheme is to be first worked in the Tanjore District and will be extended to other areas in due course.

The Travancore Government have entered the loan market for a sum of rupees 3 crores. The loan is issued at par and will carry interest at 3 per cent per annum free of Travancore Income-tax, and it will be repaid at par on or after 15th May, 1952 and not later than 15th May, 1954. A notification by the Government states that the loan is issued in the first instance to absorb the accumulating surplus purchasing power and to provide an effective check on inflationary tendencies that have recently been in evidence in the State. It is the object of the Government, says the notification, to provide adequate finance for implementing capital schemes such as extension of Hydro-Electric schemes, establishment of basic and heavy industry, improvement of agriculture and to finance the Government's food grain purchase programme.

The working of the Anti-hoarding and Profiteering (Prevention) Ordinance in the province was reviewed by the Chairman of the Madras Traders Association recently. Instead of fixing the prices of essential commodities, he said, the Government were busy making enquiries about commodities limited in stock and not urgently demanded by the people. Playing cards, lip sticks, nail polish, ping-pong balls etc. received the attention of the Government while food grains and other essential commodities were more or less neglected.

There are indications that the Government have taken active steps for speeding up hydro-electric schemes in the province. The Jeypore Hydro-Electric scheme or the Machkund scheme has been engaging the attention of the Madras Government who are executing the entire work. Talks

have been successfully concluded and work on this project will soon be started. The dispute regarding sharing of the Tungabhadra Waters is a longstanding one. It may be remembered that the Industries Minister of the Mysore Government rebuked all those responsible for not im-

plementing the scheme. It is now known that the Madras Government representatives have had discussions with the Mysore Government and an understanding had been reached. The results of a further meeting which took place on Monday at Bangalore are eagerly awaited.

A Matter of Policy

Wise investors always appreciate and welcome Insurance because of its special benefit i.e., the covering of risk.

While share-scrips shunt about in the field of fortune, your Insurance Policy will stand fast, ready to shoulder your greatest risk.

Resume of Commodity Markets

There is nothing interesting to be recorded in the commodity markets during the past week. The jute and jute manufactures markets have been steady while the raw cotton market was very weak even with the support afforded by the Government authorities at the lower levels. The bullion markets, too, have remained inactive. Speculative activity has been at a low ebb. There is some confusion in the piecegoods market following the recent amendments to the Textile Control Order and the fears regarding the misunderstanding between mills and the Government authorities.

The raw jute market has been uninteresting and business passing is mostly in inferior grades of jute for which mills are keen buyers at the moment. There is practically very little business in higher grades and as such, sellers are very anxious to do business for mixed assortment. There is also a tendency to await the proposals for the rationalisation of the jute mill industry, reports about which have been current during the past few days. It will be remembered that the first proposal for rationalisation of the jute industry was made in the middle of 1942, the need for rationalisation then being to effect a reduction in the consumption of electrical energy. At the moment, however, rationalisation will result in an increase in electrical consumption as the problem is one of ensuring adequate coal supplies and it is feared that during the next few months it will not be possible to supply mills with all the coal they need. Also there is a possibility of some more mills being requisitioned. It is considered that it would be advantageous if the more efficient units of the industry were used to greater effect and the inefficient steam-driven units needing larger coal supplies closed down. The question, however, is not capable of easy solution as the rate of compensation, allocation of profits between different members of the industry and similar other questions will have to be satisfactorily solved.

That rationalisation cannot result in a lower level of production is a point to be noted as with the present large demand for jute goods, the industry cannot contemplate on any reduction in the level of output. It is due to the uncertainty regarding coal supplies and the fear of requisition that the Committee of the Indian Jute Mills Association have not agreed to the U.S. Government's request for the acceptance of an order similar to the one that was placed in May 1943, perhaps on the same terms. It is pointed out that, with the fixation of prices for both raw jute and jute manufactures, there is no need for entering into any separate arrangement for delivery of goods to the U. S. Government as they can be purchased in the open market as and when they were available.

The raw cotton market has been very weak and purchases by the Government have not had any appreciable effect on prices. The large number of delivery orders for May position has had a depressing effect while the switching-over to July position has resulted in an increase in the premium over May. Government agents have been busy in both the Karachi and Bombay markets, but it is said that buying has not been enough to take up prices. Mills are taking no interest and there has been very little business in the ready market. It is reported that the Bombay Government is anxious to prevent an undue fall in prices and

that there have been discussions between the East India Cotton Association and the representatives of the Bombay Government on this question. Nothing definite is yet known. Meanwhile, the quality of cotton tendered against contracts has been below standard and several lots have again been rejected.

An amendment to the control order has been issued a few days back compelling all mills to sell only to those dealers to whom they sold in the years 1940, 1941 and 1942 and in the same proportions. No sales may be made to a dealer who does not hold a dealer's license from the local government. The Textile Commis-

sioner intends to keep a watch on sales from mills until goods reach licensed importers in the consuming areas. It will then be the duty of the Provincial or State Government to ensure proper distribution within the Province or State and to see that goods are ultimately sold at the correct retail prices.

It is also understood that as a result of recommendations made at a recent meeting of the representatives of the Provincial and States Governments and also by committees of the Control Board, a final date is likely to be fixed for the disposal of all unpriced goods, whether textured or not, including hand-printed cloth, and when the date is fixed, no exceptions whatever will be made, except for the most compelling reasons. This date is likely to be December 31, 1944.

JUTE

(By Our Staff Correspondent).
Calcutta, May 11.

The raw jute market has remained steady with good demand for lower assortment. Mills have not been very anxious buyers but both balers and mills are prepared to take up any quantities of lower grade jute offered by sellers. In fact, it was reported that quite a large quantity of Northern Bottoms has been done at Rs. 13-4 and that there are not many sellers for this quality at maximum rates. Demand for high grade jute is practically nil and sellers are even prepared to offer a slight discount in rates. Mofussil centres have remained firm with imports coming in on a small scale. Reports regarding dry weather in jute districts had a discouraging effect. In the last two days, however, favourable showers have helped weeding and sowing. The anxiety is regarding regular supplies of jute to mills to keep up production. At the present moment the insufficient utilisation of transport and the pressure of military supplies are preventing any large stocks of jute reaching the mofussil centres.

In the loose jute section, Northern Bottoms were done at Rs. 13-4 per maund and there was great demand. Earlier in the week some business was reported in District Bottoms at Rs. 13-8 per maund. Some business has been reported in Supervised District Jat Middles and Bottoms at Rs. 17 and Rs. 14 per maund but there were not many buyers towards the close.

In the pucca bales section export business has been rather restricted with Short Group Dundee Daisee 2/3 at Rs. 83 per bale and Tossa 4's Rs. 84 per bale. Mills bought Firsts and Lightnings at Rs. 84 and Rs. 80 per bale respectively. Outport Tossa 4's were Rs. 77 and H. J., Rs. 67 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent).
Calcutta, May 11.

There is nothing of importance in the jute manufactures market and quotations are nominally at maximum rates. As reported last week, mills are not anxious sellers as they are confident that it will be possible to dispose of the whole output at maximum rates. Fresh difficulty in respect of coal supplies prevents them from entering into any large commitments. It was reported during the week that the U. S. Government had approached the Indian Jute Mills Association for the conclusion of another large order as last year but the Committee seems to be

FILLING IN THE BLANKS

Many of our fighting men who undergo the hardships of battle in order that we may be safe, now lie recuperating in hospitals, from sickness and wounds.

These men, during the long hours of inactivity, are bound to feel depressed unless they have something to occupy their thoughts.

The Indian Red Cross tries to fill in some of the blanks in their lives, by sending to Military Hospitals in the Indian War Zone, puzzles, playing cards and other kinds of games, as well as musical instruments.

Help us to relieve monotony of their convalescence, by contributing regularly and generously.

Please send your donation now to the Hon. Treasurer, Indian Red Cross Appeal, The Imperial Bank of India, 5, Strand Road, Calcutta.

INDIAN RED CROSS

Space given by The Imperial Bank of India

rather unwilling to accept fresh commitments. It was pointed out that with the statutory regulation of prices, it will be possible to get supplies of jute goods against fixed prices as and when they are available.

The local stock figures for the month of April published this week show that there is no appreciable change in total stocks, the decrease in hessian stocks being offset by the increase in sacking stocks. It will be remembered that sacking production has been running at a very high level in the past few months and that the increase in sacking stocks both on civil and military account, is mainly due to the higher level of production. Hessian stocks, on civil account, were 16.94 crores yards at the end of April against 18.06 crores yards at the end of the previous month and on military account 22.62 crores yards against 26.45 crores yards. Total stocks were thus nearly 5 crores yards lower at 39.56 crores yards the figure at the end of March being 44.51 crores yards. Sacking stocks on civil account at the end of April were 26.63 crores yards against 24.47 crores yards and on military account 2.73 crores yards against 2.36 crores yards. Expressed in tonnage it will be seen that there is no appreciable change in total stock figures, weight of hessian stocks at the end of April being 100,581 tons against 111,345 tons. That of sacking at the end of April was 121,066 tons against 111,263. Against the decrease in hessian stocks of 10764 there is an increase in sacking stocks by 9,803 tons. The net decrease in total stocks is only 961 tons.

BULLION

(From Our Correspondent).
Bombay, May 11.

Gold is barely steady at Rs. 75-5. From Tuesday the Reserve Bank has been selling daily 50,000 tolas. The allotment of tenders is half in bars of thousand tolas and the rest in small bars of one to five tolas. Such acceptance is compulsory. The offtake is estimated at 30,000 tolas per day. Local Stocks are estimated at 4,00,000 tolas. As the Bank's sales are more than market's requirements and small bars are not tenderable for settlement delivery, there is an accumulation of small bars, and there is a discount of two annas per tola whereas formerly premium of four annas existed. The trend is quiet.

Silver arrivals at 100 bars daily are equal to offtake. The stock estimated at 500 bars remains unchanged. Silver ready is quoting at a premium of Re. 1-12 over settlement which is quoted today at Rs. 136-12.

COTTON

(From Our Correspondent).
Bombay, May 11.

The Cotton market is weak. Government are placing orders for 10,000 bales daily for Jharilla around Rs. 410. There is little relief to the market as few bales pass muster. The reaction on contract is rather feeble and prices are sagging, May being Rs. 411.

In Karachi, Government are buying 4F. at the floor price of Rs. 46. Also Sind Nt. ½ at Rs. 49-8 and Punjab 289F. at Rs. 51. 13/16 NT. was sold in Karachi at Rs. 45, which is one rupee below floor of 4F. This shows the distress in the cotton market. Official purchases are ineffective being confined to ¼ and ½ staple. Relief is really needed for cotton below ¼ staple. There is heavy pressure in Surat, Bijapur and Western styles which form the bulk of the crop and Government, are not buying these qualities. The policy seems to be designed to support the contract, rather than the cotton-grower. Mills would like to buy at current dirt cheap levels even one year's requirements but for the lack of finance, thanks to the larger excess profits deposits. There is therefore, very poor buying. The closing quotations on Thursday were Jharilla May Rs. 410-8, July Rs. 431, September Rs. 442½. The spread between the positions speaks for itself.

PIECEGOODS

(By Our Staff Correspondent).
Calcutta, May 11.

Easier conditions have been noticeable in the piecegoods market and dealers have been

more anxious to dispose of their stocks. It is feared that the recent orders of the Textile Commissioner will cause some dislocation in the trade for some time but it is expected that in future there will be no great difficulty in regard to supplies and consumers can get their requirements freely.

SATURDAY, MAY 13, 1944

Price Re. 1

Stock Markets to-day and to-morrow:

LOWER STEEL CORPORATION FINAL DIVIDEND

Amidst the sustained rise in prices in the last two weeks slightly easier conditions have been noticeable on the Calcutta Stock Exchange in the past three days. It should be said, however, that Tuesday's session was definitely active and a substantial rise in prices was recorded for most of the counters. It appears that operators are inclined to await more positive developments as it is said that most of the popular shares are correctly valued and that, without any appreciable rise in prices for gilt-edged, it would not be possible to record any further improvement in prices for equities.

As the rise in Coal shares has been rather rapid in the past two weeks, there may not be any appreciable change in the quotations in the coming weeks. With the fear of further drastic measures by the Textile Commissioner affecting adversely cotton mills and the reports regarding the possibility of rationalisation of the jute industry there would naturally be a tendency to postpone fresh commitments. It is rather significant that Sugar shares have been active. With a relatively higher yield available on these shares, there might be yet further rise in prices.

The important feature of the week is the announcement of the final dividend by the Steel Corporation of Bengal, Limited for the year ended December, 1943. The dividend of 8 annas per share against 10 annas per share for 1942, is below market expectations. With the reduction in the interim dividend of the Indian Iron and Steel Company for 1943-44, the decrease in the dividend of Steel Corporation could not have come as a surprise. It was, however, generally expected that, with the higher level of production, it would still be possible to maintain the dividend at 10 annas per share and make large provision for taxation purposes. There has been a slight decline in the quotation for the shares from Rs. 28-8 to Rs. 27-12. At the lower levels there has been some buying. One important factor to be taken into consideration in assessing the prospects of Steel Corporation shares is the possibility of substantial refunds on account of taxation in the postwar period. The earnings of the Corporation are running at very high levels and as the standard profit is computed on a statutory percentage basis, the amounts of taxation paid to the Government are

naturally very high. The payment of large taxes means the payment of large refunds. As the postwar prospects are considered satisfactory, it stands to reason that the shares afford good scope for appreciation from the long-term point of view.

Five important jute companies have published their balance-sheets for the half-year ended March, 1944, during the past few days. All the accounts reveal that there has been a net increase in working expenses and that the earnings have been unfavourably affected. In spite of the increased cost of production three out of the five companies report an increase in earnings with larger sales. The need for providing larger sums for taxation has resulted in a reduction in the distribution of dividend of Bally, Anglo-India, Khardah and Gourepore have maintained their dividends.

The net profit of the Anglo-India Jute Mills Company, Limited for the half-year ended March, 1944 is Rs. 9,78,323 against Rs. 7,63,393 for the previous six months. The amount set aside to taxation reserve is considerably higher at Rs. 4,75,000 (Rs. 2,50,000). A sum of Rs. 50,000 (nil) has been placed to War Contingencies Reserve. The dividend on ordinary shares has been maintained at Rs. 7-8 per share. The amount carried forward is slightly lower at Rs. 1,63,698 against Rs. 1,76,105 brought in. The earnings for the period would perhaps have made better showing but for the difficulties experienced in utilising the loom hours of the requisitioned mills and the loss in working hours on account of insufficient coal supplies.

The earnings of the Bally Jute Company, Limited for the same half-year, before providing for taxation and depreciation, are Rs. 9,86,120 against Rs. 9,31,591 for the previous half-year. The amount set aside to depreciation is Rs. 45,000 (Rs. 50,000) while the provision for taxation is unchanged at Rs. 6.6 lakhs. The amount transferred to E. P. T. Deposit Reserve is Rs. 80,000 (Rs. 20,000) while an additional sum of Rs. 41,000 has been transferred to Reserve for Deferred Repairs. On account of these increased allocations, it has been necessary to reduce the distribution on ordinary shares to Rs. 5 per share from Rs. 8 per share on the former occasion. It would appear that

POOR OIL
STEALS PETROL

USE
VEEDOL
SAVE PETROL

Tide Water Oil Co.
(India) Limited
8, Clive Row, CALCUTTA

the directors have been unduly conservative in the payment of the ordinary dividend.

Khardah Company, Limited has done very well and there is a substantial increase in earnings to Rs. 21,03,142 from Rs. 19,75,695. The allocation to taxation reserve, however, is very much more than the increase in earnings, the sum being Rs. 16 lakhs against Rs. 13.6 lakhs. The amount written off furniture, cars and lorries is Rs. 934 against Rs. 733. The ordinary dividend has been maintained at Rs. 15 per share. The amount carried forward is lower at Rs. 2,88,672 against Rs. 3,53,464 brought in.

Gourepore Company, Limited has been able to maintain sales at a satisfactory level in the six months ending March, 1944 but the increase in working expenses has resulted in a smaller net profit, the sum before providing for taxation and depreciation being Rs. 10,75,048 against Rs. 14,12,925. Provision for taxation is lower at Rs. 7.5 lakhs (Rs. 9.7 lakhs). The dividend on ordinary shares has been maintained at Rs. 15 per share. The sum carried forward is Rs. 3,38,992 against Rs. 4,53,443 brought in. Mills were shut down for a brief period as a result of insufficiency of coal supplies but the hours lost were substantially made up.

There is a large increase in sales of Nuddes Mills Company, Limited, for the same period but earnings are lower there being a big increase in manufacturing and selling expenses. The net profit before providing for taxation and Depreciation is Rs. 10,19,811 against Rs. 15,30,729. Provision for taxation is lower at Rs. 6.88 lakhs (Rs. 10.3 lakhs) while the charge for depreciation is very much the same at Rs. 1,75,353 (Rs. 1,75,406). The dividend is lower at 3 per cent against 4½ per cent.

Difficulties in regard to the transport of timber have resulted in a reduction in the earnings of the Assam Mills and Timber Company, Limited for the year ended September, 1943. Total sales were Rs. 21.34 lakhs against Rs. 28.99 lakhs. As the average price realised from sales was higher there is no proportionate reduction in earnings, the

(Continued on page 963).

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 12.

RATHER firm conditions were noticeable on the Calcutta Stock Exchange in the early part of the period under review and business passing was on a large scale. In the latter half of the week slightly easier conditions were prevalent though the tone is again steadier. There has been some disappointment over the declaration of the final dividend of 8 annas per share by the Steel Corporation for the year ended 31st December, 1943, as it was confidently expected that the Directors would maintain the same at the level of the previous year, that is, 10 annas per share. But beyond the slight decline in prices for Steel Corporation towards the close on Friday, there has been no reaction in other sections. The general improvement in the war situation and the prevalence of extremely easy money conditions have been responsible for the greater enquiry for equities. It is expected that, with the continuance of the present conditions, a further improvement in prices will be recorded.

The gilt-edged securities section has been steadier with 3½ per cent Paper quoting higher at Rs. 98-7 against the lowest level last week of Rs. 98-1. Terminable loans also have improved in sympathy, 3 per cent 1953-55 being Rs. 99-10, 3 per cent 1963-65 Rs. 98-8, 3½ per cent 1947-50 Rs. 102-15, 4½ per cent 1955-60 Rs. 115-12 and 5 per cent 1945-55 Rs. 104-6. There has been no business in provincial loans. Easy conditions continue to prevail in the money market and there has been a further decline in the average discount rate to 9 annas per cent per annum from 10 annas and 11 pies per cent last week.

Bank shares have been steady with Imperial Bank fully paid at Rs. 1,890 and Reserve Bank at Rs. 130. United Commercial Bank were higher at Rs. 27-8 and Hind Bank at 56-4. Calcutta National Bank were unchanged at Rs. 14-12. There has been no business in public bodies debentures and business passing in first-class preference shares is as difficult as ever. Anglo-India were Rs. 181, Delta Rs. 149-8 and National Rs. 185. Steel Corporation were unchanged at Rs. 133 while New Victoria pref. were Rs. 11-13. Associated Hotels were Rs. 116-8 and Bengal-Assam Steamship Rs. 108-8.

Cotton shares have been rather quiet with the reports that more mills will be compelled to dispose of their production under instructions from the Textile Commissioner. But for Mahalaxmi, which are higher by nearly 3½ points at Rs. 42-10, there is no important change in the quotations to be recorded. Cawnpore Textiles were Rs. 15-4, Elgin Rs. 76-12, Kesoram Rs. 18-2, and New Victoria Rs. 8-4.

Coal shares have improved further Burrakur, Equitable and South Karanpura being in great favour. Bengal have improved from Rs. 616 to Rs. 636 and Bokaro and Ramgur from Rs. 32-8 to Rs. 34. Bhalgora were unchanged at Rs. 16 while Burrakur were nearly one point higher at Rs. 34-6. Equitable have come in for greater attention and there is a rise of 3 points to Rs. 57 while Hurriladih were unchanged at Rs. 26-6 and North Damuda at Rs. 10-4. Jainty Central were firmer at Rs. 5-7, New Beerbhoom at Rs. 33-2 and Raneegunge at Rs. 44-8. There

has been a sudden burst of buying for South Karanpura and the quotation has improved from Rs. 13 to over Rs. 16. There are reports that there has been a large increase in raisings from the company's collieries and that it would be possible to pay a dividend out of the current year's earnings. Talcher fluctuated around Rs. 7-4 and West Jamuria Rs. 58-10.

There is nothing of interest in the Jute section but prices are higher in some cases. A general rise in price would perhaps have been recorded but for the fears that coal supplies in the next few months might be seriously affected. Howrah were Rs. 73-4 against Rs. 72-12 at the end of last week while Anglo-India were not very much changed at Rs. 425. Champdany were Rs. 240, Kamarhatti Rs. 592 and Khardah Rs. 430. The McLeod group of shares has continued to be in request, Empire being Rs. 51, Chitavalah Rs. 32-12, Keltin Rs. 785 and Nellimarla Rs. 31-4. Presidency were Rs. 8-12. Nuddea were uninteresting around Rs. 115 while National were steady at Rs. 31. Soorah were held at the same level.

In the Engineering section, Indian Iron have been fluctuating for the most part of the week around Rs. 36-4 while Steel Corporation were higher at Rs. 28-4. With the announcement of a final dividend of 8 annas per share for the last accounting period, there has been a decline to Rs. 27-12. Kumardhubi Engineering came in for some buying and the quotation is nearly 1 point higher at Rs. 11-2 while Marshalls have been done up to Rs. 4-12. Saran Engineering were Rs. 11-6, National Iron and Steel were steady at Rs. 13-15 and Bhartia Electric Steel Rs. 18-4. Jessop were inclined to easier at Rs. 24-2 but there has been a recovery towards the close to Rs. 24-12.

Sugar shares have been more active with Balrampur a point higher at Rs. 19-8. Belsund are in greater favour and a quotation as high as Rs. 15-4 was touched during the week. The close is slightly lower at Rs. 14-14. Carew & Co., were steady at Rs. 13, Champarun at Rs. 40-2 and Darbhanga Sugar at Rs. 33-1. Ramnugger Cane and Sugar are nearly a point higher at Rs. 15-1. Murree Brewery were unchanged at Rs. 26-12 and Buland at Rs. 42.

With the improvement in the situation on the Assam frontier there has been slightly more enquiry for tea shares and prices are a shade higher with Baradighi at Rs. 71, Hantapara at Rs. 753, Hasimara at Rs. 70-8, Sapoi at Rs. 20-4 and Tezpur at Rs. 17.

In the Miscellaneous section, Burma Corp. and Indian Copper were fluctuating around Rs. 3-12 and Rs. 2-12 respectively but Karanpura Development have been active with a rise of 2 points to Rs. 32. Orissa Minerals also were up done up to Rs. 31-12, Assam-Bengal Cement were steady at Rs. 16-4 and Dalmia Cement ordy. at Rs. 18-15. Calcutta Ice have further improved to Rs. 21-9. B. I. Corp., continued steady around Rs. 6-6. India General Navigation are further higher at Rs. 180 while there is no important change in Midnapore Zemindary at Rs. 158. Assam Saw were Rs. 5-14 and Bararee Coke Rs. 33-4.

Among Paper shares, there was heavy selling of Titagur A & B ordy. early in the week and the quotation came down to Rs. 27-5 from Rs. 28-10. The close is better at Rs. 28. Star Paper were Rs. 21-14 and India Paper Pulp Rs. 222.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, May 12.

GENERALLY irregular conditions prevailed on the local stock exchange with some of the leading mill shares losing further ground. The Steel section while continuing to be active is also irregular. Other sections are almost unchanged. It is surprising to note that the Great news of last weekend has failed to induce enthusiasm. It is argued that scrip values in the Textile section could not be raised higher in the face of a comprehensive control measure by which Companies' earnings are also more or less limited. The Steel section was naturally better though it was also affected by the general dullness.

Mill shares opened dull on Monday and have advanced lightly in the past few days. Bombay Dyeing were 15 points higher at Rs. 1,977-8 while Central India were better at Rs. 440. Century which were dull at Rs. 950 on Monday have regained the lost ground and the present quotation at Rs. 960 is the same as that of a week ago. Kohinoor were neglected at Rs. 665 while Swadeshi were Rs. 627. Vishnu were dull at Rs. 500.

On Monday Steels were dull and neglected but soon began to move up. There was a rise of nearly 40 points in Tata Deferreds to Rs. 2,145 on Tuesday but again became irregular on Monday and the quotation came down to Rs. 2,136-4 on Wednesday. Tata ordinary which were Rs. 404-8 on Monday, went up by 3 points to Rs. 411 on Tuesday only to come down to Rs. 408 on the next day.

In the Hydro-Electric section there was not much change. Andhra Valley were Rs. 1,840, Tata Power Rs. 1,870 and Tata Hydro Rs. 200.

(Continued on page 963).

THE STEEL CORPORATION OF BENGAL, LIMITED.

NOTICE

In view of the uncertainty of mails from and to the United Kingdom the publication of the Directors' Report and the Accounts of the Steel Corporation of Bengal, Limited, for the year ended 31st December, 1943, which are to be published simultaneously in India and England, will be delayed. All possible steps are, however, being taken to have matters expedited. In order to enable shareholders to obtain payment of their dividends as soon as possible, however, the Directors have sanctioned the payment by way of an ad-interim dividend of Annas eight per share on the Ordinary shares of the Corporation ranking for dividend for the year ended 31st December, 1943, which shareholders must understand, will be the final dividend for the year. The Transfer Books of the Corporation will be closed from 2nd to 16th June, 1944, both days inclusive. Payment will be made on and after 30th June, to those members or their mandatees whose names appear in the registers on the 1st June, 1944.

By Order of the Board,

BURN & CO.
Managing Agents.

11th May, 1944.

(Half-yearly General Meeting on 26th May, 1944 at noon. Transfer books closed from 15th to 26th May, 1944).

Audited accounts for the half-year ended 31st March, 1944:—

These show a profit on Revenue Account of Rs. 9,27,028. On transfer of this sum to Profit and Loss Account and after reserving Rs. 4,75,000 for Taxation there is a balance at credit of that account of Rs. 6,79,428. Of this balance the directors have transferred Rs. 5,000 to War Contingencies Reserve Account and now recommend that the following dividends be paid, free of income-tax:—

	Rs.
On Preference Shares at the rate of 7 per cent per annum (Rs. 3-8-0 per share)	96,677
On Ordinary Shares at the rate of 15 per cent per annum (Rs. 7-8-0 per share)	3,69,053
Total Rs.	4,65,730

leaving a balance of Rs. 1,63,699 to be carried forward.

The Company's mills in common with all other mills in the membership of the Indian Jute Mills Association closed down owing to deficient coal supplies for one week in September, November and December and for two weeks in October.

The transfer to Lower and Jagatdal Mills of the loom hours lost at Upper Mill through requisition was not carried out without friction, the workers showing unwillingness at first to work multiple shifts at these mills, and loss of production ensued, but after a start was made at the beginning of the year labour soon settled down to the new conditions and work has proceeded satisfactorily since. At Middle Mill shortage of coal was responsible for irregular working and the loss of production on these counts has adversely affected results for the half-year.

Managing Agents.—Messrs. Duncan Brothers & Co., Ltd.

Authorised, Capital—Rs. 1,00,00,000. Issued and Subscribed—Rs. 76,82,900 in 49,207 Ordinary and 27,622, 7 per cent Cum. Pref. shares, both of Rs. 100 each, fully paid up.

(Half-yearly General Meeting on 22nd May, 1944 at 3 p.m. Transfer books closed from 8th to 22nd May, 1944).

Audited accounts for the half-year ended 31st March, 1944:—

	Rs.	A. P.
The accounts, after writing off for Depreciation Rs. 1,00,000, show a profit of	3,36,861	0 0
To which has to be added the balance brought forward from the last account, namely	85,769	0 0
Giving a total of	4,22,630	0 0
From this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of Deposits under Section 10-1) of the Finance Act 1942	2,00,000	0 0
Leaving a balance for disposal of	2,22,630	0 0

The directors recommend that this should be dealt with as follows:—

To paying the dividend on the Preference Shares for the half-year ended 31st March, 1944 at the rate of 7 per cent per annum (i.e. Rs. 3-8 per share), without any deduction for Income-tax payable by the Company	49,000	0 0
To paying a dividend on the Ordinary Shares at the rate of 16 per cent per annum (i.e. Rs. 8 per share), without any deduction for Income-tax payable by the Company	1,12,000	0 0
To carry forward	61,630	0 0
Total	2,22,630	0 0

During the half-year the weekly hours according to the Working Time Agreement were 54 with a full complement of looms, except for the emergency closed weeks from October-December which were fixed by the Indian Jute Mills Association owing to the shortage of coal.

Despite the fact that Government arranged a rationing programme for coal there have been very few weeks in which full supplies have been received at the Jute Industry's central dump, the arrivals for the remaining period varying down to 50 per cent. The Company's mills have suffered severely both through lack of coal and the very inferior quality of such as has been made available, and in the period under review they lost altogether 586 working hours, equivalent to 43 per cent of the total time. The loss of production, which entailed compensation payments to all workers during stoppages in addition to their amenity allowance and food provided at heavily subsidized prices, has caused a large increase in the manufacturing costs.

Managing Agents.—Messrs. Kettlewell Bullen & Co., Ltd.
Authorised, Issued and Subscribed Capital—Rs. 23,00,000 in 14,000 Ordinary and 14,000, 7 per cent Cum. Pref. shares, both of Rs. 100 each, fully paid up.

Synopsis of the balance sheet as at 31st March, 1944.

(Half-yearly General Meeting on 22nd May, 1944 at 3 p.m. Transfer books closed from 8th to 22nd May, 1944).

Audited accounts for the half-year ended 31st March, 1944:—
The accounts, after writing off for Depreciation Rs. 50,000, show a profit of

To which has to be added the balance brought forward from the last account, namely	2,92,047	0 0
Giving a total of	77,943	0 0
From this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of Deposits under Section 10(1) of the Finance Act 1942	3,69,990	0 0
Leaving a balance for disposal of	2,10,000	0 0
	1,59,990	0 0

The directors recommend that this should be dealt with as follows:—

To paying the dividend on the Preference Shares for the half-year ended 31st March, 1944 at the rate of 7 per cent per annum (i.e. Rs. 3-8 per share), without any deduction for Income-tax payable by the Company	35,000	0 0
To paying a dividend on the Ordinary Shares at the rate of 8 per cent per annum (i.e. Rs. 4 per share), without any deduction for Income-tax payable by the Company	56,000	0 0
To carry forward	68,990	0 0
Total	1,59,990	0 0

The Company's mills have suffered through lack of coal and the very inferior quality of such as has been made available, and in the period under review lost 251 working hours, equivalent to 18 per cent of the total time. The loss of production, which entailed compensation payments to all workers during stoppages in addition to their amenity allowance and food provided at heavily subsidized prices, has caused a considerable increase in the manufacturing costs.

Managing Agents.—Messrs. Kettlewell Bullen & Co., Ltd.

(ii) In payment of an additional Preference Dividend of 5 per		

cent per annum, making 10 per cent for the year ended 31st January, 1944 (free of Income-tax), absorbing

(iii) In payment of an Ordinary Dividend for the half-year ended 31st January, 1944, at rate of 20 per cent per annum (free of Income-tax), absorbing	37,500	0 0
	25,000	0 0
Leaving a balance at credit of	81,250	0 0
	27,368	0 0

to be carried forward to next account.

In accordance with the Indian Jute Mills Association Supplementary Working Time Agreements the Mill was closed down for the weeks which ended on 7th August, 4th September, 2nd and 9th October, 27th November and 25th December, 1943. This compulsory closing scheme was introduced by the Association as a result of deficient coal supplies. In addition to the compulsory closed weeks the shortage of supplies of coal of good quality necessitated the closing of the Mill for the further period of a week on one occasion during the half-year. The Mill is allowed to make up the hours lost during the latter stoppage when circumstances permit, and part of the time lost has already been recovered.

In order to absorb the "loom hours" and provide work for the labour of Craig Mill, which has been requisitioned, double shift working was introduced at Waverley Jute Mill on the 17th January, 1944. Since that date the hours of work have been 108 hours per week, with 34 looms sealed to compensate for the lesser number of looms in Craig Mill.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

In less than a month, the monsoon will break; and, in all parts of India save the Eastern territories in the Peninsula, the sowing season will shortly begin. Between sowing and harvesting, the interval varies with each crop; but it may be said generally that, while the crops grow, there is the least demand for finance and the least pressure on the money market. In the case of some of the cash crops, loans are arranged in advance of the sowing season. For, viewing the problem of crop finance as a whole, it may be said that the real demand for money arises mainly in connection with the movement of produce from the growing centres. It thus happens that the main feature of what we may call monsoon months finance is slack money conditions. Writing this review on the eve of the monsoon, it may be said that conditions today are true to form. Money is in glut. In spite of larger and brisker tax collections, and in spite of the schemes for advance payments of taxes, the plethoric conditions in the money market have not been in any way affected. Owing to satisfactory tax receipts, the Central Government's deposits with the Reserve Bank are standing at the high altitude of Rs. 60 crores and over, in spite of the drastic reduction in the floating debt from nearly Rs. 130 crores to Rs. 50 crores. Again, deposits maintained by scheduled banks with the Reserve Bank are at the record level of Rs. 94½ crores, in spite of large withdrawals by constituents in connection with tax payments. The treasury bill discount rate this week has dropped to 8 annas percent per annum. The Imperial Bank has established a new high record for deposits at Rs. 222½ crores on May 12. If these are the signs and symbols of superabundant credits on the eve of the monsoon, we may well anticipate record-breaking figures in every sphere while monsoon months finance is, so to say, in its full stride. In one important respect the financial transactions during the monsoon months will differ from those of previous years. The tax-gathering plans of the Government of India were hitherto so designed as to result in somewhat poor collections in the first nine months of the fiscal year and in accelerated receipts in the final quarter. The changes now made with regard to E.P.T. and income-tax will have the effect of spreading out tax receipts more evenly over the twelve months

of the year. That is to say, while, in the former years, the second and third quarters of the financial year did not require tax payers to withdraw sums from banks, the position would be different in the current year. There will be a fairly large transfer of tax amounts from the accounts of banks to those of the Government. The practical significance of this is that, from the point of view of Central Government revenue, deposits of banks will be adversely affected and the cash position of the Central Treasury will be substantially replenished. It is, therefore, argued that the deposits of the Central Government with the Reserve Bank will continue to swell in the coming six months. The augmentation of cash balances may be such as to warrant further reduction in treasury bill sales. This comfortable cash position may also be utilised to cancel more and more ad hoc treasury bills now held in the issue department of the Reserve Bank. At the same time, the drain on the deposits of scheduled banks on account of tax payments of constituents may be well counterbalanced by fresh accruals of deposits. Taking all in all, both the Government and the banks in the country are likely to pass through exceptional affluence in the coming months.

We have to review, in this week's issue, the returns of the Reserve Bank for two weeks. There has been expansion of currency against sterling securities for Rs. 5 crores as compared with a week ago and for Rs. 15 crores as compared with a fortnight ago. The outflow of rupee coin into circulation continues unabated. Rupee coin held in the issue department has declined by Rs. 1.12 crores as compared with May 5, and by Rs. 2.13 crores as compared with April 28. As a result of these changes, active note circulation crossed the Rs. 900 crores mark in the week ended May 5, being Rs. 4.24 crores higher as compared with a week ago and Rs. 13.29 crores as compared with a fortnight ago. Rupee securities held in the issue department remain unchanged at Rs. 58.33 crores. The deposits of the Central Government with the Reserve Bank fell from Rs. 63.13 crores on April 28, to Rs. 61.02 crores on May 5, and Rs. 61.37 crores on April 5. There has been a drastic fall in the deposits of Provincial Governments. These deposits standing at Rs. 11.04 crores on May 12, are less by Rs. 5.55 crores as compared with May 5, and less by Rs. 12.14 crores (Continued on page 979)

Finance Abroad.

Thursday Morning.

THERE is little to indicate that pre-invasion markets have any special features. Except for an assurance from President Roosevelt that the cost of war in 1944-45 would fall below estimates there is nothing to cheer up U. S. markets. The estimated fall of \$4.8 billions in war expenditure may limit the demand for additional taxation. Congress voted \$8 billions less than what the President asked for in the Bill prepared in September last. This may affect calculations not as to U. S. war production but merely in regard to the daily bill which showed a tendency to rise early this year. The fall in spending should have little effect on the election prospects because the Republican revival has gone too far to be arrested. In Congress now the Democrats' present majority is hypothetical and the electorate might set greater store by Mr. Dewey's balanced budgets in New York State than on the improvement in the Treasury's position. Curtailed spending will have little or no effect on reconversion. The restoration of private enterprise to its former position is the chief issue, for experience of the New Deal has made U. S. businessmen twice-shy. The assumption that corporate reserves are large enough to tide U. S. business over the transition (available resources are placed at \$10 to 20 billions) remains the enervating feature. The more important factor is the growth of reserves in the war period despite higher taxation. It is possible that U. S. experience is reproduced in countries like India.

The reference of Sir Richard Appleby to Canada's mutual aid did not refer to the fact that Canada has reduced the annual appropriation for the Allies' benefit to \$500 to \$600 millions as compared with \$1000 millions in 1943-44 and 1942-43. The reduction does not affect the pledge of reciprocal aid to Canada. The recipients would not have to negotiate as the agreements already concluded secure for Canada what is wanted. Canada obtained an undertaking that policies designed to implement the Atlantic Charter would be pursued by the countries eligible for aid namely, Russia, Australia and China. The main difference between lend-lease and mutual aid was mentioned by Mr. Mackenzie King to the Canadian House of Commons in March when he pointed out that there would be no indeterminate obligations at the end of the war. The Dominion's export plans on the basis of wartime industrial expansion however have to be taken into account. The Canadian import surplus will have to be paid for largely in U. S. dollars and how Canada is to get them is the problem of triangular trade after the war. The U. S. demand for Canadian dollars may diminish but the Canadian demand for U. K. manufactures may be smaller. Whatever may have been obtained by tariff preference in the past may not inure to the sole advantage of U. K. exporters.

There has been no mention of trade policy in connection with the Dominion Premier's conference. It may be concluded that the outline of British objects and purposes seems satisfactory. It is certainly noteworthy that Sir John Anderson's pronouncement against gold took place when the Premiers were in London and the independence of the sterling area was arrested. The really significant point of the declaration last week is that the Government would not favour any plans likely to interfere between States which had been associated with one another under the sterling area arrangement. This had been

made quite clear in the discussions with the U.S.A. In the face of this declaration much that is feared seems utterly stale and pointless. The Chancellor of the Exchequer also referred to the condition that there was no obligation on Britain to abandon Imperial Preference in consideration of lease-lend facilities. The British Government according to Sir John Anderson intend to work for a 50 percent increase in export and did not regard that as in any way unobtainable. From Prof. Brown's recent study it appears that unless there is a really enormous increase in total real income in the outside world coinciding with industrialisation or a great lowering of trade barriers British export trade is likely *ceteris paribus* to be seriously reduced. Methods of adjustment however remain open, and the British Government obviously sticks to trade and financial agreements. The interest in others industrial plans springs from the estimate of benefits available after the Indian market is transformed. The forthright statement of Britain's own minimum conditions left out what part the U. S. A. is to play. Evidently it is believed that U. S. tariff will be the Republican's concern in 1930 and argument at this stage would not help anyone much. These points require special notice because the scheme of Empire Free Trade allows the members of the Commonwealth freedom to promote industry at home and makes no claims on the international development board that the Labour party apparently wants. The Fabian group earlier showed the way by remarking that the export of capital to promising markets must be resumed by Britain after the war in the interests of her own trade. The National Executive of the Labour Party thinking primarily of employment at home asks that exports be raised by at least 50 percent. Agreement within the Coalition appears very substantial because the objection to the gold standard is advanced at the same time as the objection to postwar deflation or to cyclical depression. Expansionist opinion in the Fabian ranks is what it was ten years ago.

The claim made by the Algiers Assembly to be regarded as the provisional Government of France must inevitably affect the Anglo-French financial agreement. If it is conceded the post-invasion exchange rate etc., may be regarded as settled in advance, though the food crisis in France must have lowered the value of the franc. The claim for favourable terms implies more than the like to U. N. relief supplies. The Algiers resolution following Mr. Hull's sympathetic reference last month to the National Committee makes it clear that the French have no special interest in the Atlantic Charter's amendment or the trade and money talks, but think of the status and function to be discharged in the event of deliberation.

The revolt in El Salvador in April found the police on top. Martinez in power for fourteen years found it necessary to use force though force has not made him permanent. Apart from the notoriety conferred by prompt recognition of Manchukuo and Franco's regime before others there is the fact that Salvador is a bad debtor. She made a raw offer to creditors by promising interest on the dollar and sterling loans. The republic's three loans of which about £10 millions is outstanding were in default. The sterling debt amounts to about £850,000 only but all payments even after the agreement of 1935 were suspended. Salvador's economic position did not justify the injustice to foreign creditors. Salvador's offer was to cut the rate of interest by half and the reduction was to be retrospective for 6 years while the arrears of interest was to be funded by the issue of

be a Host to the Poor

INSTEAD of acting as a host towards your friends and business acquaintances who are as rich as yourself, why not be a host to India's poor? You can do this, with very little effort, in these three ways :—

1. Stop entertaining lavishly. The tradition of Indian hospitality is now out of date in a country in which food has to be rationed. You can still be hospitable without incurring unnecessary waste.
 2. Economise in your home by having less dishes served. That is, do not serve a large variety of dishes many of which are not likely to be touched.
 3. Improve your diet by eating more of the following—vegetables, fruit, fish, meat, eggs and milk products. We nearly all eat more rice and bread than is good for us. It is a habit worth breaking for the sake of our health, as well as for the poor who need all the rice and wheat they can get.
- IN these ways we can save hardship amongst the poor, who look to us, in time of trouble, for just this kind of practical help and support. This is the new hospitality!

Rational Reconstruction

One heartening difference between the present war and the last is that, on questions of postwar reconstruction, the emphasis is shifted from the political to the economic aspect of international relations. In the last war, too, there was keen consciousness of the importance of economic reconstruction; and it would be folly to think that politics is easily pushed to the background. Politics, as an operative force in human relations, is such a strange blend of all that are noble and base in man that the human mind clings tenaciously to it. Bread, which by itself does not suffice for life, has a comparatively feeble hold. Nevertheless, economic problems have in recent times succeeded in robbing purely political issues of their primacy. In fact, there is a readiness to recognise that political antipathies derive substance from economic conflicts and that, whenever economic conflicts are capable of being resolved on the purely economic plane, there is a valuable chance of starving out the forces of political hatred. The relation between the economic and the political is not one of the things which Man can claim to have understood clearly. It has not lent itself to scientific analysis; nor has intuition or insight availed us much. Particular facets of the truth have been now and then apprehended; and the result is that the whole matter has been the subject of shibboleths and platitudes or of unctuous cant, or of brazen cynicism. Man does not live by bread alone! Neither does he live by murder and suicide rolled into one. Does each race wish to dominate another? A peace-loving people is not even in a war-ridden world, a rare species. Will a plenitude of material requisites of life ensure for the world a stable peace? There is no conclusive warrant for an "Yes" or "No." Those who urge that economic reconstruction will bring about an automatic solution of more than one political issue have no more than common-sense to support their contention. If the world should put its shoulder to the wheel of economic progress, it can only be in the faith that the urge to misguided heroism often comes from an empty stomach or the fear of one. Peace has never had a chance to reveal the glories it is capable of; and war wins by its ability to exploit alike the noble and the base in man as a social animal.

With the increase in the scope and scale of warfare, the worship of Mars must suffer decline. So long as wars were fought between a limited number of belligerents, there was room for their glorification; and wars could pay, too, in a way. But world wars are a different matter. And world war I was naturally the first to drag economic issues from their back seat. Their prominence was however on sufferance. It was in a purely political frame-up that war debts and reparations, international loans and gold conferences were discussed and settled as well as they could be. The victors in the last war had few serious scars to show. They stood outside the ring of peoples who were singed and scalded by four years of warfare. The present war is in many respects different from the last. The economic life of the victors will not be less in need of reconstruction than that of the vanquished. And in between victor and vanquished, there will be hordes of camp followers and neutrals dragged into the fray. What will be thrown into the melting pot of reconstruction is not alone the economic systems of the vanquished, but those of the victors and of non-belligerents and neutrals alike.

The wider scope of reconstruction after this war is what will give economic issues a genuine primacy instead of the prominence which they had on sufferance after the last war. For, this time reconstruction will so largely be of the character of construction anew. Over the whole of the European continent, the national economies of countries which have come under the heel of the Axis have got completely mixed up with the economic system which the Nazis had organised to feed

their war machine. Inflation and black markets, two of the worst foes of social amity and stability, have been actively and incessantly encouraged by the Nazis to serve them while they are there and, when they are forced to leave those countries, to give them a spiteful self-satisfaction. Large masses of men have been torn from their home and village and transported to remote places, there to work for the Nazi war machine. Production of the basic necessities of life has been thoroughly disorganised and trade is but a bitter memory.

In these conditions, postwar reconstruction has to be in the initial stages mere relief work on a mammoth scale. Will the victors be in a position to provide relief on that scale without inflicting on themselves serious injury by such inordinate strain? It remains to be seen. But even apart from this question of relief to the sufferers in the war ravaged areas, the victors will have their hands full with demobilisation, liquidation of their war effort, and rehabilitation of trade with neighbours and old customers. It is natural that the U.S.A. and Britain should give more thought to this aspect of postwar reconstruction than to that of relief work proper which may be left to the pressure of the moment. What is the amount of constructive thought that is given to this aspect of postwar reconstruction? So far the promise of four freedoms contained in that discredited document, the Atlantic Charter, is the only concrete evidence of a wish for a truly stable solution. Pious wishes lose their proverbially low value, when even their sincerity is open to question. The question as to who will work for the redemption of these promises and how has not been posed, much less faced. The reason is not far to seek—the question brings in precisely those political problems which are supposed to have been elbowed out by the economic. Nations and nation states are, whether we like it or not, the only available instruments of securing good, where vast masses of men are concerned. And since they are palpably unequal in power, reconstruction depends a great deal upon the policies of the great powers and the way they revise their economic relations with their neighbours and satellites.

Of the three great Allied nations, Britain, the U.S.A. and the U.S.S.R., the last has been so far least tainted by imperialism. Her political ambitions are indistinguishable from her economic programmes. Soviet Russia probably looks to incorporating a large part of the European continent in her own economic and political system. And, politically and economically conditions are quite favourable to her ambitions. But the larger the Soviet system, the more it must impinge on the rest of world economy. Russia's new found interest in postwar international finance may probably be attributed to lively expectations of adding to her already large sphere of influence. But there is yet no warrant for the fear that Russia will exert adverse influences on the development of other national economies. On the other hand, it may well turn out that for the first time a larger area than ever before will have its economic life ordered by a single authority with the minimum of exploitation of one country or class by another. The reorganisation of world economy on a regional basis will certainly be more conducive to political stability and economic progress than the multiplication of political frontiers which the Treaty of Versailles brought about.

In that case, the responsibility of the U.S.A. and Great Britain for making their contribution to the reconstruction of a world economy, at once stable and progressive, will have vastly increased. The problem in these two cases is not identical. The U.S.A. has more or less wholly outlived the stage when it had to impose a quasi-imperialistic domination over her sphere of influence. The variety and immensity of her natural wealth has brought her to a position in which the old political and economic relations have become an encumbrance. The Axis menace has imposed on her the wardship of the whole of the Western hemisphere. The conduct of the war has entailed lavish outlay in neighbouring countries

maybe you know this already

If you have been on a journey by train recently, you need not read this announcement. You will find it only an unhappy history of your own experiences. You will know what it is like trying to get a conveyance to any of the main stations. You know how booking office windows are crowded these days, and what a struggle it is to get tickets. And you

will have argued with porters who demand exorbitant payment for their work. And you remember how difficult it was to find space in the crowded train, and having found space, to KEEP IT! Even food at Railway stations is not what it used to be. These difficulties made your journey full of trouble and discomfort. It was hardly worth it, was it? For women especially, travel is unpleasant because of the congestion.

Remember next time you travel—it isn't the Railways' fault. They have important work to do. They have to transport huge quantities of food-grains, fuel, cloth and other civil supplies. Be wise—stay at home.

Travel Less

through lend lease and through other ways. The natural suspicions which weak nationals entertain of a powerful neighbour are being overcome only slowly and under the stress of war. But American policies and methods are not always well-conceived or executed with an eye to the conditions prevalent in the countries concerned. Even in India, where American expenditure is not on a large scale, complaints are heard of the differences in wages and salaries. These complaints have their counterpart in countries like Mexico. Economic conditions in Mexico, which to some extent are typical of conditions in that part of the world, have a striking similarity to conditions in India. Just as India is experiencing inflation and scarcity at home and large sterling securities abroad, Mexico finds herself in the receipt of large money incomes and accrual of dollar assets without goods to spend on or to import. In Mexico, as here, the privations of the present are suffered in the hope that the end of the war will usher a period of economic development, of large scale industrialisation and of help, discerning and ungrudging, from her powerful neighbour. Mexico's foreign policy in the economic sphere is the same as all representative public men have outlined it for India, appreciative acceptance of foreign offers of co-operation, if they are free from all desire for imperialistic exploitation.

Imperialism is the meeting point of politics and economics in the sphere of international relations. It is a two-pronged attack by the powerful against the weaker nations, one prong or the other being driven, according to circumstance. It is only during a crisis that politics comes into the foreground.

POST-WAR FOREST POLICY FOR INDIA

The general public in India are not yet aware of the enormous importance of forests for comfortable and prosperous living. To many, forests are merely large inaccessible tracts of hilly land thick with trees and shrubs, harbouring various species of wild animals. The common man is yet to realise that the function of forests in Nature is to keep the climate equable, to prevent havoc, sudden or long-term, by floods or erosion and to provide an immense depository of very valuable materials needed for agriculture and industry alike. Certain recent occurrences have focussed public attention on the supreme importance of forests for public safety and welfare. First and foremost, the excessive floods in Bengal, Orissa and other places which took an unusually heavy toll of human lives and cattle wealth reminded the Government that forests served as natural dams softening the rigours of floods and that, it is the recent unplanned destruction of forest tracts in different parts of the country, that has brought terrible floods on the country. Secondly, the loss of Burma has opened our eyes to the necessity of outlining a scientific forest conservation and land utilisation policy for filling up the gap caused by the inaccessibility of foreign sources of timber. Houses, big or small, in towns or villages, cannot be built as speedily as population increases, unless the capacity of our forests is intelligently developed and economically utilised. The extreme scarcity of fuel has caused untold suffering to the masses, particularly during the past two years, and the various Provincial and State Governments had to accelerate the felling of trees to meet civilian demands. The heavy war demands for timber has been a forceful factor which has already speeded up the destruction of forests to dangerously excessive limits. Forest wealth, which had been poorly developed during normal times, has been greatly depleted under the strain of war demands. The paper shortage, acutely felt by schoolboys and newspapers, compelled us to think of our forests and their potentialities. Experts are now busy conducting surveys of different areas with a view to reporting on the possibility of developing the grass or bamboo which are the raw materials for paper manufacture. While the industrialists are looking to forests for cellulose, turpentine oil, lac, herbs, rubber etc., the agriculturists, who have keenly felt the absence of grazing and fodder facilities for their cattle, demand better forest organisation if they should grow more food as the Government want them to. Wartime urgency to grow more food has raised the problem of supply of adequate manures and fertilisers to the cultivators. While the manufacture of inorganic fertilisers has to wait for the import of machinery etc., it is widely felt that, if the 250 million tons of cowdung now burnt by the poor villagers for want of cheap fuel is preserved for manurial purposes, the fertility of the soil can be greatly enhanced. The poor quality of Indian livestock, their low stamina, their heavy mortality are all related to the extremely poor grazing facilities in several parts of the country. Thus war and other recent happenings have thrown into bold relief the necessity of

But the ultimate purpose at all times is the exploitation of the weak by the strong. The contribution which imperialism has made to the onward march of the human race may not be belittled, now that its end is approaching. To have forged the commercial unity of the world, to have developed industry and the sources of raw material, to have brought into being varied forms of Government suited to varying degrees of control of backward peoples—these achievements are not to be underrated by reason of the moral foibles of imperialism. But it is time that the shortcomings of the political cult and the economic theory that lie behind imperialism are recognised and discarded for good. Politically, it foments class conflict at home and world wars abroad. It puts a brake on the expansive and progressive character of democracy as a form of government. Economically, it becomes, after a stage, like a leech that seeks to fatten on its own blood. It starves the workers at home and impoverishes its markets abroad. It divides countries into industrial and agricultural. It sets one group of industrial nations against another and draws the whole world into a common ruin. All because of the benighted belief that the prosperity of one nation is the ruin of another. The "good neighbour" policy of the U. S. is slowly, but surely, shedding the traits of an out-of-date imperialism. Britain is lacking in both the emotional urge and the material resources to emulate the American example. And yet it is on the abandonment of imperialism and the early acceptance of the development of backward countries as a powerful force for peace that the future of the world rests. The nations of the world are today neighbours, without neighbourliness.

planning our forests for economic and social betterment of the teeming millions of India.

The public should feel grateful to Sir Herbert Howard, Inspector General of Forests, for his very valuable note on post-war forest policy for India. He has given details regarding the depletion of timber resources under the stress of war. He has also pointed out that "upto the end of the financial year 1943 an excess felling of timber of 162% of all-India over the normal annual pre-war figures. Taken as a total, this means 1½ years advance fellings and is really an infinitesimal overdraft on the forest capital of India—far less than the advance fellings of most other countries." We are not sure how far a comparison of India with other progressive nations of the world yields a satisfactory result. But Sir Herbert himself admits that the demands of the general village consumer are at present most insufficiently met and that wartime felling of timber forests have upset the forest development plans in several provinces necessitating a thorough revision after the war. Only 14 per cent of the total area of India is under forests and in the light of the European average of 26% the inadequacy of our forest wealth is indisputable. Sir Herbert suggests "that it be laid down as a general aim that the area of properly managed forest land for India should be between 20 and 25 per cent and so far as possible, this minimum should be attained in each province and equally distributed throughout the province."

In British India there are 288,000 square miles of area at present classified as "cultivable waste" or "not available for cultivation," which could be developed for providing timber and fuel to the agricultural village consumer. At present there are only 106,000 sq. miles of forests in British India and another 100,000 square miles would correct the deficiency in India's forest wealth. As a basis of all-India, as well as regional, forest planning, Sir Herbert suggests an immediate provincial reclassification of land from the forest crop point of view instead of from the standpoint of agricultural crop. He draws pointed attention to the excessive grazing prevalent in large areas and opines that, if afforestation is to be a success, proper control of grazing would be essential. The cost of maintaining minor forests properly distributed throughout the country would be Rs. 6 to 10 lakhs per year. He suggests that the Central Government should appoint officers to deal with the question of floods, erosion and dessication and a Private Forest Act supplementing the present Indian Forest Act is suggested to prevent devastation of forests and to enable acquisition of lands for afforestation. The Note also makes recommendations for organisation of Forest Education and Forest Research.

One may agree with Sir Herbert that the existing forest policy of India evolved in 1874 laid down excellent principles on forest matters. But pious wishes recorded on paper do not yield social good or economic gains. Though the Government of India is supposed to have adopted a forest policy as early

as 1890 for the benefit of the people, the actual achievements since 1890 are not remarkable. Taking, for instance, the facilities for grazing alone, we find that forty-five years after the above mentioned date, the Agricultural Commission Report pointed out that the percentage of livestock grazing in forests to the total number in different provinces has been as follows:—

Bombay 13.4%.
C. P. and Berar 25.7%.
Madras 5.9%.
Punjab 13%.
U. P. only 2.6%.

The forest administration has been all along guided more by commercial motives than by consideration of agricultural improvement. For instance the number of Indians well trained in forestry (though the training began in 1878) is inadequate. Very little progress has been attained in the matter of industrial utilisation of our forests. Since the international Forestry Congress held at Budapest in 1936 several foreign countries forged ahead in the matter of afforestation and better utilisation of forest wealth. India has been lagging behind in forestry as in other lines of progress. War has to some extent depleted our resources and emphasised the supreme necessity of conserving our forests. We hope that Sir Herbert's recommendations would be adopted as early as possible so that India's agriculture as well as industries could progress and open up new vistas of economic betterment.

The utility of forests for national progress should be viewed from three distinct standpoints, firstly, forests as a factor affecting the climate, rainfall, floods, soil erosion and fertility etc.;

SPECIAL ARTICLE.

COCONITE OR WEALTH FROM WASTE

Proper disposal of waste and its utilization to yield by-products makes just the difference between success and failure in many industrial undertakings. The German aniline industry with its subsidiaries, whose growth seemed a fairy tale until the Nazis made it a nightmare, derives from coal-tar, the sticky, smelly waste product of the distillation of coal whose disposal presented an embarrassing problem to gas companies before the discovery of aniline purple by a British chemist in the middle of the 19th century. Several chemical industries depend for their successful working on their by-products which thus overshadow the main product for which the industry was first started. This peculiarity of the chemical industry perhaps accounts for the tendency to centralisation and the growth of octopus combinations in this field.

The value of waste is not confined to the industrial sphere. The peasant knows it very well. The products of the field which cannot be consumed at home go back as manure. But when agricultural production is carried on for markets which are competitive, the profitable disposal of waste products cannot be left to the customary methods of the peasant cultivator. The help of the chemist and the engineer has to be sought if agricultural operations are to be strictly economic at every stage.

Coconut plantations offer a case in point. Mention of the coconut in connection with waste may surprise those who remember their days at a school and the essays enumerating the numerous uses of the coconut palm leading to the conclusion that every part of the tree finds useful application. This conclusion was almost correct, but not quite. There was no conceivable use for the unfertilised nuts which fall off in large numbers and for the husks of the immature coconuts. The husk of the tender nut contains a resinous constituent which renders it unfit for coir manufacture. But the investigations carried out under the auspices of the Ceylon Coconut Board tend to justify the conclusion of the school boy's essay by discovering a use for what formerly went to waste. The result of these investigations should prove of great value to the coconut plantations on which depends the prosperity of Ceylon and Malabar, now that the importance of rubber has been eclipsed by the development of artificial substitutes.

It is remarkable that the very defect that rendered the tender coconut unfit for coir manufacture is responsible for its utility in a different sphere. The discovery of a resinous constituent with strong binding properties was the starting point of a series of experiments which resulted in the production of 'coconite' which apart from a variety of uses can, it is claimed, be used as a substitute for plywood in the manufacture of tea chests.

The laboratory experiments were followed up by pilot plant trials to test the commercial possibilities. The process and the result of the experiment are described in a brief but lucid article by Mr. S. R. K. Menon, of the Ceylon Coconut Board in the April number of the Journal of Scientific and Industrial Research. The process of manufacture is simple. The immature coconuts are chopped into small bits, boiled in water and crushed to form a pulp to which is added pulped waste-paper, resin, soap and alum. The pulp which should

secondly, as a source of raw materials for industries, old and new, and thirdly, as the handmaid of agriculture, supplying fuel and timber for villagers, releasing cowdung for manure and affording pasture for livestock. Forgetting the errors of commission and omission in the forest policy adopted by the Government of India in the past, the ideal to be achieved in future is a well-co-ordinated forest development plan which would serve national welfare from the three aspects mentioned above. Throughout history forests have played a great role in shaping the progress of races and regions. To the primitive man they meant nothing more than dangerous spots acting as barriers to travel but in recent centuries man has learnt to use forests for his own advantage. With the advance of plant science, the science of soils and science of atmosphere they have come to be viewed as a biological entity which could be pressed to human advantage if only we understand the life history of the forests, their relation to climatic, soil and other environmental factors. Forests should be conceived as a plant society governed by definite natural laws capable of yielding unlimited benefit to human society. The Science of forestry, concerned with the production of wood crops like timber, has already progressed remarkably and we should be able to maximise the immense advantages that can be made to accrue from well-planned forests. We hope that the Government of India, instead of merely rectifying the drain of forest wealth necessitated by this war, should recognise the modern conception of forests and evolve a post-war development plan which would yield the greatest possible biological and economic advantage to the people of this vast sub-continent.

contain water to solid matter in the proportion of 8:1, is spread out on mats and pressed in a hydraulic press to squeeze out the water. It is then subjected to a hot pressing process at a temperature of 160°C and pressure of 560 lbs. to the sq. in. The resulting product "is an attractive glazed board of high tensile strength and density." 'Coconite' has excellent heat and sound insulating properties, and high electrical resistance. It can be subjected to all the processes of a carpenter's shop and it can be varnished, painted, distempered or whitewashed. Three specific fields with extensive commercial possibilities are (1) internal panelling of railway coaches (2) roofing (3) ginwashers.

It is estimated that an economic plant with an output of one ton of boards per shift can be put up at a cost of one lakh. The cost of the finished product works out to Rs. 230 per ton in Ceylon where the raw material is available at the factory at prices ranging from Rs. 7 to Rs. 13 per ton. The minimum market rate for the finished product is Rs. 300 per ton.

The equipment required, such as pulping machines, mixers, roller benches cages for holding pulp sheets, hydraulic presses etc., can be manufactured in India in any competent workshop. The coconut husk contains tannin compounds which are not entirely eliminated and therefore it is necessary to use rollers of stainless steel or non-ferrous metals in the machinery.

Bengal, especially Calcutta, is very advantageously situated to develop this industry. In spite of large coconut groves the coir industry has not made appreciable headway in the Province, perhaps because more coconuts are consumed as beverage while very tender than are allowed to mature on the trees.

In Malabar and in Ceylon coconuts are grown on a plantation scale mainly for the oil and for the important subsidiary product—coir. Both require fully mature coconuts. Therefore even though the merits of the tender coconut are fully appreciated, the planter is interested in keeping as many nuts as possible on the tree until they reach the limit of growth. This means that the Coconite factories in the South have to depend on fortuitous circumstances, on storms, insect pests and the like, for their supply of the raw material.

It is in this respect that Calcutta has a very great advantage. Every day an immense number of tender coconuts is brought into Calcutta and consumed. The nuts after use are thrown on the streets to add to the weight and volume of the city's garbage and the result is seen in the road blocks in front of every pavement pashop. The husks of the nuts now thrown on the streets, if collected, can keep at least one factory working to capacity and there should be no difficulty in disposing of a product with such a variety of uses especially at present when timber is in short supply. Prospects are really bright for an enterprising industrialist prepared to work up a new idea not to mention the considerable lightening of the load of rubbish which at present the Corporation tries unsuccessfully to clear from the streets of the second city of the Empire.

Editorial Notes

Spending and Borrowing.

Large increases in public expenditure are universal and the slower growth of public revenue has made deficits the rule rather than the exception. In 1943-44 minor administrations like Palestine had the same problem as Britain and the only countries to report a possible fall in expenditure were Belgium and Turkey. In the case of Switzerland the revenue from customs, stamp and the postal department's surplus fell in 1942 and since. The Swiss federal revenue for 1943 was put at 784 million francs and expenditure at 930 millions. The continuous increase in Swiss federal expenditure from 1939 is perhaps sufficient cause or evidence of inflation to which the steady rise in bank deposits in a fashion. At the end of 1941, the Swiss note circulation totalled 2,637 million francs and a steady rise marked the second and third quarters of 1943. But the Swiss bank rate was maintained at 1½ per cent and the money market was as easy as in Britain. The increase in Swiss holdings from 1941 is unmistakable like the increase in foreign assets held by the National Bank in and after 1942. Savings increased at only a moderate rate because the cost of living rose throughout 1942 and 1943.

The experience of the European neutral accords with that of New Zealand or Australia in many respects. One of the direct results of the growth of expenditure was the increase in public debt. The floating debt, especially in Germany, rose at an alarming rate. Of countries at war, South Africa is almost exceptional in reporting a fall in the floating debt last year. Australia limited rigidly the increase in external floating debt; but at home, the floating debt certainly increased. In the case of several countries, the floating debt is a direct consequence of the German occupation costs. As the regular increase in debt is characteristic of both Finland and Sweden, the usual conclusions are hardly necessary. When the rise in prices and the cost of living is the result of reduced supplies and enlarged demand, the governmental budget of every country reflects the higher price-level. From the rise in expenditure it may be inferred that the increase in floating debt was pre-ordained, even where monetary policy was carefully adjusted as in Sweden. From available figures it is clear that the reduction in external debt is limited to certain Latin American countries. Japan's external debt ceased to decline after 1942. The uniqueness of Indian experience is sufficiently indicated.

Election in Eire.

Mr. de Valera has sprung an election on the Opposition led by Gen. Mulcahy whose military record is post-Treaty and is hardly equal to that of Mr. de Valera.

As the Opposition's disinclination to face the electorate is plain, it is not difficult to predict victory for Mr. de Valera this time also. The Allied notes are not likely to figure largely in the election nor is the road transport merger proposal. That Eire wants to copy Ulster in the matter of road transport organisation may not seem surprising as Mr. de Valera has been a consistent upholder of nationalisation. During British rule co-operation was earnestly recommended; but the present regime believes in nationalisation. Bus services in Eire carry more passengers than the railways and the receipts in a year exceed £1 million so that the proposal to have one big undertaking seems proper especially in view of a probable fuel shortage. Mr. de Valera's main hope lies in beating the Farmers' party in the rural constituencies. How far Anglo-American pressure directed against Eire for her refusal to break diplomatically with Germany and Japan will influence the Irish voter has not been indicated, though mention is made of Mr. de Valera's enhanced prestige at a time when the exclusion of Eire from the British Commonwealth stands out starkly.

The poll is fixed for May 30th and the main vote will be cast for parties rather than persons as Eire has adopted proportional Representation in spite of its disadvantages under the new Constitution as in the old. The Irish election would take little note of fiscal difficulties, the new Bank's working or the probable results of a reduction in imports. It would not be concerned with partition against which the Constitution has protested formally or the definite exclusion of a neutral state from post-war consultation as to immigration, trade or aviation. It would be obviously concerned with Mr. de Valera's own record in office. There is little doubt in Eire as to the merits of neutrality. The last election put Mr. de Valera again ahead of his opponents but made the Farmer's party's support essential in a house of 138 members. The victory over the I. R. A. has been made complete by measures against parachutists. The elimination of one radical group is, of course, an advantage for Mr. de Valera. The protest of Mr. Norton suggests that in a Catholic country Trade Union is weaker than usual. Incidentally it may be remarked that Dr. Hyde has acted like the Governor-General of a Dominion. The implied acceptance of the Statute of Westminster by Eire could be inferred from that as well as the adoption of a separate flag on the lines of South Africa. The Irish election, if it puts Mr. de Valera in power for another term, would drive a wedge between Eire and the British Commonwealth which is apparently Mr. de Valera's object in view of the steps adopted by Britain to further Second Front preparations.

Bengal's Needs.

If economic planning in India should prove a success, it should be well related to the needs and resources of the component parts. It is quite unwise to think that India's economic development can be schemed solely from an all-India point of view. Due weight should be given to the productive powers of the provinces and States, the requirements of their population, their inter-dependence, etc. This country is a vast sub-continent covering several provinces, some of them bigger than several of the main European States. Excessive concentration of industries in one area and an overcentralised system of distribution are likely to result in inter-regional injustice provoking discontent amongst several special local interests. Mr. M. L. Khemka in his presidential address at the annual general meeting of the Marwari Chamber of Commerce, held here on the 29th April, laid due emphasis on the necessity of regional economic surveys and regional plans. An all-India plan should, he pointed out, be built as a co-ordinated edifice standing on regional plans carefully prepared. There are certain spheres of economic activity, for e.g., key industries, which would best be planned more from the all-India standpoint, but it should not be forgotten that there are many other spheres where regional development should not be thwarted by an over-simplified all-India plan. Small scale industries, and certain big industries for which the province of the State has special advantages, should be deemed the legitimate line of regional planning. The war not only revealed the gaps in our national economic structure as a whole but has brought to light certain dangers of excessive dependence of certain parts on others. Bengal's shortage of rice may be part of an all-India distress, but her acute shortage of sugar, salt and cotton textiles now caused by transport bottleneck could have been avoided. Mr. Khemka suggests that instead of shifting the blame on the Centre the Bengal Government should exploit the extensive sea coast for salt manufacture. It has been estimated that Chittagong alone can produce the entire salt requirements of Bengal's population. Steps should therefore be taken to fill up this gap in Bengal's economy. In sugar hardly 20 per cent of the total requirements is produced locally. Mr. Khemka calculates that Bengal has 1,377 lakhs maunds of sugarcane which could be utilised by mills and the case for more sugar mills is also built on the fact that the need for molasses (a bye-product used in mytheled spirit, fertilisers, cattle food, ascetic acid, etc.), is great. Coming to the cotton textiles, he said that more mills are needed for this province where only 172 million yards are locally produced while the total

consumption stands at 700 million yards. Of course, the sugar interests of U. P. and Bihar and the cotton interests of Bombay may not relish the idea of wider dispersion of the sugar mills and cotton mills in other parts of the country where natural advantages exist. But wider distribution of sugar and cotton mills could not be arrested in recent years because such a tendency is a direct result of local demand and special advantages in different areas. Further, the high railway rates amply justified springing up of mills at several provinces where the local population could get the produce at cheaper price. Bengal's immediate need is certainly a rehabilitation plan, but the time is not a day too soon to evolve a satisfactory economic plan for this Province. Like other provinces she has to get ready with her local plan for post-war development which could be adjusted to an all-India plan. Therefore an exhaustive economic survey of the province, with a view to minimising Bengal's dependence on outside sources in important articles, should be conducted. Such a survey would reveal the feasible lines of provincial development. It is hoped that the Reconstruction Committee of the Bengal Government would base their recommendations on a comprehensive economic survey covering all the requisite statistics and facts regarding agriculture and industrial resources of Bengal.

U. K. Export Control.

The working of Britain's export control is the subject of occasional enquiry only but the general caution that advertised goods are not always available for export receives support from the control order issued in December 1943 and published for information in the Indian Trade Journal this month. The Control applies first to territories and secondly to groups of goods. The Order applies to British exports to Spain as well as the Vatican City and exemptions by license only indicate that control is far more strict in Britain. Goods meant for the Chinese Government passing through India are not affected by the prohibition, but goods insured with an enemy firm are non-exportable. Special favour shown to films approved by the MOI is understandable; but stamps of philatelic interest also qualify for special treatment. As regards coal and coke, the Ministry of Fuel must permit shipments. Packets and parcels sent by post to prisoners of war are not touched by the order. In the case of textile exports from Britain special authorisation is required and the prohibition of exports of bullion and coin, except when permitted by the Defence (Finance) Regulations is absolute. In the case of exports, not covered by prohibition, the British exporter has to give proof that cargo was not diverted. For carriage out of Britain as ships' stores also, the official permit is required and in the case of ships' passengers there is provision for the usual declaration and search as for incoming tourists who face a customs examination. The Board of Trade has power to cancel or modify any export license issued. The statutory prohibition covers 18 groups and the articles in the Schedule range from cocoa and coffee to rare chemicals. In the case of sugar and tea the prohibition is determined by rationing and the arrangements made to supply friendly countries. It is interesting to note here that Eire is not one of the countries to which specified exports cannot go.

The export prohibitions cover much the same kind of goods as those listed in India.

But it is noteworthy that common fibres like jute and cotton or manufactures thereof are not to be exported without special permission. The same procedure is applicable to wool and woollen manufactures and even staple fibre. One explanation of the shortage of imports here may be found in the prohibition of exports like cycles, footwear, spectacles, clocks and watches. From the schedule it may be inferred also that retention of essential imports for Britain's own use is the chief object of the Order. The order affects home manufactures as well as imported goods. The prohibition of the sale of works of art may be governed by a desire to save shipping since works of art as a source of dollar exchange must always rank high. The number of groups in the schedule is larger than any noted so far in India and the really important differences appear to lie in respect of food. Export of fruit, spices and vegetables is prohibited in Britain because of the war, while the blanket order as to fuel and foodstuffs has not been provided so far in India, though the case for drastic curtailment has been made out. Foreign trade in war usually cuts a small new channel for itself and the comparison with restrictions in force here, for example, the inclusion of cotton raw, not of Indian origin, and cotton waste among prohibited exports, indicates the nature and purpose of the system adopted for the associated purposes of war production and economic warfare.

Crops and Prices.

The crop forecasts for the year 1943-44 have all appeared by now. The largest increase under cultivation reported is in respect of sugarcane, but the percentage increase of supplies is greatest in regard to rice this year as compared with 1942-43. Except for groundnuts, there is little doubt that the oilseeds position has grown tighter. The increase under food crops is limited to rice owing to the recovery in Bengal; attested also by the decline in the jute crop of 1943. The many changes that have come over commodity markets can be seen readily enough in the case of cotton. An increase of 8 per cent in the year's crop has led to a virtual breakdown of the system of floors and ceilings. The major change however, is that brought about by the adoption of ceiling prices for foodgrains. From the sugarcane forecast it was deduced that the sugar mills' season now ended must have been good, and the investor has been made aware of current prospects by the improvement in sugar shares.

Since tea and certain other export crops are left out by the scheme of crop forecasts, it is not easy to ascertain how far India's export trade will show the effects of the improved agricultural season. It is, however, unlikely that trade in raw materials like cotton and jute will increase to any extent when the demand at home for larger production has to be satisfied. The revival of Liverpoolian interest in Indian wheat is not supported by the decrease of 5 per cent in supplies. Indeed, the latest official prohibition as to the use of wheat flour in soap manufacture points to some concern over the fall in supplies. The stabilisation of prices for both commercial and food crops this year can be hardly inferred from the familiar comparative tables as to index number; but it is well to remember that the first half of May 1943, represented the peak period for commodity prices and the wholesale price index fell in June 1943

after the promulgation of anti-inflationary ordinances and regulations. Whether the reduction in supplies of wheat or mustard this year would engender hoarding and keep prices up is mainly a problem for the future. Present indications are that bullion sales encouraging the sale of surplus grain or produce by agriculturists have limited value; but the provision for the stability of prices in the case of bullion as well as foodgrains may enhance the probable gains to the seller of bullion as well as the public which may find that food imports are limited by the war's demands on shipping space.

India's Foreign Trade

The seaborne trade accounts for December make comparisons for nine months possible. The increase under re-exports has raised the total over the 1942-43 total. Imports valued Rs. 82.92 crores were drawn in nine months while merchandise exports for nine months were valued Rs. 143.44 crores. The balance of trade for nine months is Rs. 69.84 crores. It is noteworthy that increased trade with the

Empire accounted for the growth of the active balance. The surplus of exports to the Empire for nine months was Rs. 53.09 crores whereas the net imports valued Rs. 41.79 crores from non-Empire countries were accompanied by exports valued only Rs. 49.23 crores. This may suggest that a bigger share in wartime imports is claimed by the U.S.A. and other countries because the Empire cannot give India the goods wanted though the Empire's war purchases in India remain large. The recovery in trade with the U.S.A. is reflected in the figures relating to jute manufactures, but the biggest non-Empire customer is Iran. Takings of oil last year increased steadily and the recent statement that in two months India has given much oil to the U.S. forces under reciprocal lease-lend can be supported by reference to the figures of mineral oil imports and total Indian imports from Iran. The increase of cotton imports from Egypt belongs to the period before control was applied to India's raw cotton imports. Of more importance is the fall in imports from Ceylon, while India's exports to the island have increased in value. The tendency

TAKING UP THE THREADS

Many of our men who have endured the hardships and dangers of battle for our safety, are now confined to the dreary monotony of camps, far from their homeland.

To keep these men mentally alert, the Indian Red Cross sends them regular parcels of educational books, correspondence courses, artists' materials, musical scores and instruments, tools and material for handicrafts.

When this world-wide conflict is over, these men will be able to take up the threads of their interrupted lives with confidence and resume more easily their rightful places in "Civvy Street".

We depend on your help in order to continue this vital work.

Please send a regular donation to the Hon. Treasurer, Indian Red Cross Appeal, C/o. The Imperial Bank of India, Strand Road, Calcutta.

may continue to operate. The increase of Indian exports to Canada should result in the accumulation of useful exchange or alternatively to an increase of imports of capital goods in the near future. The trade with the Dominions in such essential items as grain and wool has apparently increased last year, but there is no prospect of permanent increase during the war. In spite of representations made against any relaxation of import control, the drop in Indian imports of most manufactures appears to warrant a change in trade policy. Except for dyes and colours all imports of manufactures were lower in 1943 as compared with 1942. The decline in imports of food as compared with 1941 is so substantial as to make it clear that a policy of free imports of food is essential for India. From the longterm viewpoint the improvement noted under exports of jute manufactures and tea last year is less interesting than the high level at which exports of cotton yarn and manufactures have been maintained. This may be in evidence for some time in view of the general belief that Europe relief plans will make large demands on India's textile industries.

(Continued from page 989)

countries. The warning from the Norwegian Government as to the examination of title in the case of neutral sellers of gold was the result of German sales of gold seized by force. Australian war success requires mention. As the acting Prime Minister expects that the total of £150 millions for the Victory Loan would be had without subscription from the banks a claim that Labour has succeeded in the financial sphere may be made. Mr. Ward's plea for nationalisation of banks is, however, of less interest than the total of 440,000 subscribers; many applications from industrial groups and from the forces are still outstanding. The commonwealth loan for £A150 million follows that for £A125 millions issued in October. The issue offered at par to Australian subscribers was divided into two parts—2½ percent bonds repayable in 1948-49 and 3¼ percent bonds maturing in 1950-60. The 3 percent savings 1960-70 bonds sold in Britain appear to offer less than the Commonwealth loan.

(Continued from page 987)

as compared with April 4. On the other hand, there is as sharp a rise in the deposits of scheduled banks, the rise being Rs. 3.04 crores as compared with a week ago and Rs. 12.52 crores as compared with a fortnight ago. The present figure of bank's deposits is Rs. 94.34 crores. Foreign balances in the banking department stand at Rs. 177.08 crores as compared with Rs. 180.45 crores on April 4, recording a fall of Rs. 3.36 crores in a fortnight. During the same period, sterling securities in the issue department have risen by Rs. 15 crores. The net increase in the sterling holdings of the Reserve Bank between April 28 and May 12, is, thus, Rs. 11 2/3 crores. There has been a steady increase in the investment portfolio of the Reserve Bank. The total of investments as on May 12, is Rs. 12.65 crores.

The statement of the Imperial Bank for the week ended May 12, shows deposits at Rs. 227.57 crores, which is an all-time record. Investment continues the downward trend and now stands at Rs. 116.89 crores. Advances, however, have increased from Rs. 64.88 crores to Rs. 69.26 crores. In the result, cash shows a slight decline to Rs. 46.31 crores.

The exchange market has been steady without much business passing.

"Are the five victims in Bombay in great distress? Are there many cases of destitution amongst them? Has the general economy of Bombay been seriously affected by this stupendous disaster? Is there any panic among the public with regard to banks or insurance companies through rumours that this bank or that insurance company is heavily involved in the fire? If it is finally decided that insurance companies, some or any of them—these are some of the questions which have been put to me on my return to Calcutta. The impression created by newspaper reports in the minds of Calcutta people was that last month's fire in the Western capital was unprecedented in its fury and in its range of havoc. After seeing things for myself, I can say that the havoc is as serious as we were led to believe from reports appearing in the papers. In fact, I may go so far as to say that the reports, if anything, erred on the side of understatement. It may, perhaps, be true to say, that in the annals of fires in India, last month's happening in Bombay is far and away the worst experienced. Realising, then, the colossal damage in human lives and properties, friends in Calcutta naturally recall to their mind their own tragic experience of last year caused by the province-wide famine and unprecedented shortage of foodstuffs. Calcutta's heart goes to Bombay in an impulse of spontaneity; and Calcutta is greatly concerned if it is now Bombay's turn to pass through scenes of suffering and destitution which it had itself known in the early months of this year. The questions I have set down at the beginning of today's gossip are suggested by this psychology.

As I indicated in an earlier despatch, Bombay to a man has stood up bravely to this ordeal. A comparison of Calcutta's calamity on account of food shortage and of the behaviour and general attitude of the people in that situation with Bombay's calamity due to the recent fire and its repercussions amongst the people provides interesting conclusions about the relative economic stamina and the people's attitude and bearing as between the population of this province and that of Bombay. Having personal experience of Bombay in some of the critical phases through which it has passed, I may be permitted to say that the citizens of Bombay rise to their full stature in the presence of a crisis. My first experience in this regard was when Bombay was in the grip of the worst epidemic of influenza in 1918. The daily deaths were over 700. Influenza as it raged in 1918 proved fatal in half the cases. It was also found that it was contagious. The first problem that had to be solved was the providing of adequate space for cremation and of ade-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like It)

quate firewood. I remember very well how, as if by a wave of the magic wand, the one-furlong pavement adjacent to the cremation ground on Queen's road was overnight filled to overflowing with piles and piles of firewood, to be made available free of cost for each case of cremation. Similarly, volunteers were in attendance at the cremation ground to assist in the quick burning of the body. The congestion at the burial ground and the shortage of firewood were solved without so much as a day wasted. Meantime, equally effective and comprehensive steps were taken for the quick availability of doctors, of attendants for people who could not afford to pay for nurses, medicines and other facilities. The work of volunteers in flu-ridden Bombay was a hazardous enterprise. Not a few volunteers themselves got the contagion and died. I remember the poignancy of the bereavement of Mr. K. Natarajan, whose brilliant son, then a medical student, was working as a volunteer, contracted influenza and died in spite of the best treatment. These hazards, however, did not deter the leaders and the public of Bombay from providing, to the fullest extent, the organisation, personnel and services that were required for successfully coping with the virulent epidemic.

There have been quite a few occasions when widespread havoc was caused by a disastrous debacle in the cotton market or the share market. Disaster in any of these markets affects Bombay at a larger number of points than a similar calamity

will affect any other centre in India. The operations in these markets in Bombay are not confined to the professionals. The man in the street generally likes to have a small flutter on his own account. That is to say, if the markets are prosperous, there is widespread prosperity in Bombay. If the markets are in doldrums, there is widespread depression. But the depression in Bombay is never destitution. This is due to two important factors. Most people who speculate in the Western Presidency are not gamblers in the sense of putting their last shirt on the gamble. There is a plan and method in their speculation. They understand up to what limit they can go and where they should pull themselves up. Even after the worst disaster, the average speculator in Bombay is in the position of having some reserve intact. In the second place, the habit of keeping something for a rainy day is universal among the people of the province which has a wider experience of practical business. There is hardly any housewife in the Bombay Presidency who has not a few tramway shares, and a few thousands worth of Port Trust scrips and a good many sovereigns tucked away somewhere, which she would never touch herself nor allow anybody to touch. This is the kind of individual reserve that inspires and sustains the economic stamina of Bombay Presidency. I have known settlements in the Bombay cotton market or the Bombay stock exchange which had involved payment of differences in crores. Well, these crores are paid without much fuss; there is some

excitement and a great deal of strain for a few days; but, after those few days, the excitement subsides and everything returns to normal. The unfortunate party who has lost heavily will be helped to restart his career by the very operators who played the opposite role in the speculative deals. This kind of sportmanship is a speciality of Bombay; but I will not be fair to Calcutta if I do not mention that we have also had such undoubted sportsmen here in the person of the late Sir Chhajjiram Chowdhury and in the person of our esteemed friend, Sir Adamjee Hajee Dawood. But the Bombay markets are full of Chowdhurys and Dawoods.

It is this general sportmanship, good-neighbourliness, keen public spirit, well-spread financial reserves, zest for volunteer work, forceful leadership and flair for organisation—it is these which enable Bombay to face up to every crisis and come as little scathed as possible. There is also a strong urge to or and sturdy pride in self-reliance. All these account for the fact that, while the losses from the fire are estimated at several crores of rupees, there has been no need for organising any public relief, no agitation to inspire and secure sympathy from others, no desire of any kind to dramatise the incident; on the other hand, whatever had to be done by way of immediate assistance for people rendered homeless was done without any fuss or advertisement. The fire victims are now provided for, so far as immediate and near requirements are concerned. There are only a few hundred destitutes; and these are being looked after by the Corporation. Within a few days of the havoc, all near-range problems had been smoothly and efficiently solved. The long-range problems such as reconstruction and compensation are being tackled by responsible leaders with thoroughness and tact.

All these provide a pleasing contrast to the spectacle which Calcutta presented during the days of the food famine. The saddest and most unedifying part of that story was that the zemindars and leaders in Bengal allowed things to happen in a way to suggest that they themselves had little to contribute for the relief of Bengal and that Bengal's distress could be relieved only by donations from other provinces and by charity from non-Bengalees. In the large collections that were made for the relief of Bengal, Bengalees figured little. When one looks into this matter closely, it becomes clear that

there are quite a number of Bengalees of large means who could have themselves contributed whatever was necessary and saved their province from the reproach of begging from others. Why did the Rajahs and Maharajahs, the landlords and the rich professional classes of Bengal allow their province to be tarnished with such a reproach? It is because they did not have the same pride in self-reliance as our friends in Bombay have always shown, in every crisis. Distress in Bengal passed easily into destitution. Why? Because of an almost total lack of any reserve for a rainy day on the part of the average people of this province. In the various arrangements that were made for cooking and supplying food, I, for one, could not help noticing the difference between the kind of arrangements here and the kind of arrangements generally made in Bombay. Bengal has a great deal of enthusiasm, but there is none of the warm-hearted but cool-headed determination of Bombay. It is this kind of determination that builds and promotes competency.

I must also add that people in general in Bombay have abundantly shared in the exceptional prosperity which the cotton mill industry has enjoyed during the war years. It is true that the textile industry is most unfavourably situated from the point of view of standard profit; and that all wartime taxes such as Excess Profits Tax affect cotton mills more severely than any other industry. In fact, in a despatch which I telegraphed from Bombay, I sounded a note of warning about the present market quotations for cotton mill shares; and I advanced the view that, due to the particularly cruel effects of recent tax measures on the textile industry, the dividend-paying capacity of cotton mills in 1944-45 will not be the same as in previous years. This is a consideration which is of vital moment to, and for careful appraisal by, investors in cotton mill shares. But the managing agents of cotton mills are not so badly placed as the shareholders. Generally speaking, the commission payable to managing agents is calculated before any provision is made for taxes. It may appear anomalous and even invidious that, while shareholders are most adversely affected, managing agents go scot free. From the point of view of my present discussion, the point to take note of is that, though the outlook for investors in cotton mill shares may not be bright, the prospects for managing agents are quite as rosy. And, let me say it in whispers, the managing agents and their

satellites in most cases make much more than their legitimate commission. The high level of E.P.T. has induced and familiarised various tax-dodging devices, from all of which the managing agents and their associates derive substantial profit. The large transactions in terms of cash rather than through cheques have

now become the vogue. The present-day prosperity of Bombay is at the peak—thanks to the good showing which industry and trade make under the stimulus of war, and thanks, no less, to the bumper harvest in black markets of various kinds and degrees.

(From Our Correspondent)

New Delhi, May 15.

A number of important decisions are reported to have been taken by Lord Wavell—in consultation with Whitehall. About the major decision—the decision to release Mahatma Gandhi—it is still difficult to say how things will shape themselves in the next few weeks, but there is no doubt that a good deal is going on behind the scenes. The other decisions, though they are more or less of an administrative character, are helpful in revealing the spirit in which the new Viceroy is approaching his task. It is believed that he has made up his mind to create a new Postwar Reconstruction portfolio. Though at one time the officials of the Government of India held the view that the best way to deal with postwar reconstruction was to set up a coordinating agency in the shape of a subcommittee of the Viceroy's Council, the work has already grown to such dimensions that the need for a separate Department with a separate Member is already being felt. According to New Delhi reports the Viceroy is thinking of inviting one of the signatories of the Bombay Plan itself to take charge of the new portfolio—probably Sir Ardeshir Dalal who has also considerable experience in the Secretariat itself. It is not yet finally known whether Sir Ardeshir will agree to enter official life again, but if he accepts the offer, there can be no better start for the Postwar Reconstruction Department. It is evident that the Viceroy, in making new appointments, is anxious to show himself progressive and select persons whose public record entitles them to some respect. I understand, for instance, that for the High Commissionership in Australia the name of Sir S. Radhakrishnan is being considered. If he can be persuaded to go it will prove to be as wise a choice as that of Mr. V. S. Srinivasa Sastri as India's first Agent General to South Africa twenty years ago.

The process of converting the Supply Department for peacetime functions has already begun. As Sir Ramaswami Mudaliar told a Press Conference the other day, it has come earlier than was expected by the Department itself. Considerable stocks, manufactured or purchased for war requirements, have accumulated. As the surplus portion can now be safely switched on for civilian use,

the question of organising the "disposals" side in such a way as to get the best return for the taxpayer and also to ensure that civilian industries are not unduly interfered with has been taken up. It is a difficult problem, but the Supply Member has wisely decided to work through, and with the representatives themselves for disposing of unwanted Government stocks. Sir Ramaswami Mudaliar told the Press Conference: "The keynote of the disposals policy is not to injure industrial and commercial interests but to assist them and, wherever appropriate, utilise trade channels for the disposal of surplus stocks. The first stock to be disposed of are 20,000 motor trucks and vehicles for which the Army authorities have no more any use. Some of them may be fit for reconditioning while others, being far too damaged to be fit for reconditioning, may have to be fabricated for other uses. Next year the Army authorities are expected to release a still larger number, and as soon as the war is over several thousands of used vehicles may be available. To the motor industry this affords an opportunity to develop their workshops and see whether from reconditioning they cannot proceed one step further and organise automobile manufacture itself on a large scale. If the Government of India can come forward with the necessary help this can be easily done. After the last war the Government of India very seriously bungled in their disposal measures and threw away also the opportunities available for starting new industries. That mistake should not be repeated. There is every reason to think that Sir Ramaswami Mudaliar is adopting a vigorous and progressive policy and is determined to avoid the mistakes committed after the last war.

Another question which is receiving the Viceroy's personal attention is the Indo-Ceylon problem. Mr. Aney, the Government of India's representative in Ceylon, spent nearly a week in New Delhi conferring with the Viceroy and other officials. A number of deputations representing the Indian mercantile community have also been here to protest against the recent measures of the Ceylon Government which are calculated to squeeze out Indian traders from business altogether. In theory the Ceylon Ministers have agreed to maintain the status quo, but in actual practice the results are very different. It is complained that taking advantage of the control powers available under Defence rules, the Ceylon Ministers have been depriving Indian traders of their long-established business and diverting it to their own

nominees. If this goes on, very few Indian traders will be left in the island at the end of the war. In the course of a joint representation to the Commerce Member, the Ceylon Textile Merchants Association, the South Indian Textile Merchants Chamber of Colombo and the South Indian Muslim Mercantile Chamber of Colombo state: "Since the introduction of the present constitution in Ceylon in 1930 the spirit of goodwill with which Indian capital, enterprise and labour were welcomed in Ceylon has been daily growing weaker. The power that has passed into the hands of the elected Ministers who are all but one Sinhalese, has manifested itself in devising methods and means by legislative and administrative action to strike at the position and prosperity of the Indian community in Ceylon and to undermine and deprive it of its legitimate rights and interests. The abnormal conditions that prevail as a result of the present war have afforded fresh opportunity to the Ministers to impose disabilities and inflict hardships on the Indian merchants in Ceylon". They go on to point out that of the two principal trades upon which the Indian trading community depends—the trade in rice and other foodstuffs and the textile trade—the first has already gone out of their hands as a result of

Textile Control Board

FOR THE ATTENTION OF ALL CLOTH AND YARN DEALERS

WARNING

Any merchant contravening the provisions of the Cotton Cloth and Yarn Control Order is liable to have his Dealer's Licence cancelled. Under the recent ruling by the Textile Commissioner no mill may sell or deliver cloth or yarn to a merchant who does not hold a valid Dealer's Licence. Therefore, cancellation of a Licence means forfeiture of any quota which might be due to a dealer under the recent amendment to the Cotton Cloth and Yarn Control Order.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, 17th May, 1944.

THE issue of settling the financial responsibility for the losses caused by the recent explosion is still hanging fire. The insurers are expected to go to Delhi very shortly, while in the meantime, a definite reply from London insurance circles as to the liability of the insurance companies is expected any minute. The preliminary talks between representatives of companies and of the Government of India were, no doubt, useful in spurring officialdom to a realisation of its responsibility in the matter. It is a pity, however, that the question even now has not been correctly posed. The disaster was directly brought about by handling of war material, no matter what the cause, and that, too, in breach of International Port rules. British decisions in the Southport disaster in the last War have clearly acquitted the insurance companies from any liability for an occurrence for which the risk was never covered. What is sauce for the goose is sauce for the gander. In this case, too, the United Nations should bear the cost and the whole cost. A prominent insurer confessed his inability to understand how the question could possibly be posed in any other terms, except by disregard of precedent and legal principles. There is an unedifying alacrity on the part of many Indian businessmen to receive whatever is doled out by the Government. To take up an attitude of caddging, such as one frequently comes across, is neither here nor there. And it is the height of irrationality to suggest that those merchants who lost perhaps their all in the holocaust should be content to take what they are given.

The half-hearted stand taken up by many of our doubting Thomases has already given rise to rumours, which one has to take seriously, about the terms of an understanding between Government and Insurers. It has been said that in respect of Marine and Accident policies, Government would contribute 33-1/3% and 50%; and as regards Fire insurance Government seem ready to pay 70% if Companies meet 15% of the losses (estimated at Rs. 15 crores). Government may agree to compensate loss of property and goods not covered by fire insurance to the tune of 60%. If these terms are acceptable to the Companies, it is said that an ordinance may be issued indemnifying the insurance companies or any other party for additional compensation and making payments under the Ordinance final. The Indian companies are mostly affected by fire losses. They are said to be haggling for 10% instead of the 15% suggested by Government. They are by no means unanimous among themselves. Some would take whatever Government gave; others would admit no liability whatever. Government, on their part, have to foot a formidable bill, including compensation to the Port Trust. But then, the responsibility is collective and equity demands that the British and American Governments should pay the greater part of it. It has cost the Indian companies infinite travail over a quarter of a century to build up, in the face of formidable competition, general insurance. It would be a great pity if they have to pay even a fraction of the losses by an unwarranted interpretation put upon their liability. It is also said that amendment of the War Risks Insurance scheme is likely.

The exporters are also disgruntled at the textile export control scheme of the Board. They feel that the proposed fixation of export prices at 12 to 20 percent over ex-mill prices (12 for non-discriminating countries and 20 for others) will retard exports and spoil the goodwill the Indian textile exporter is enjoying in overseas markets. Moreover, except for 7 per cent which would accrue to the mills, all the proceeds will go to meet Government inspection expenses and to form a research fund. The latter will thus be contributed to by a few exporting mills but the benefit will go to all. In any case, this is so slipshod a method of tackling the research question which requires much more serious consideration. Mr. N. L. Kara, President of the Shipper's Association, feels that

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends of the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Harions play the leading role in these supplies. Whatever the kind of quality in ropes may be Harions have the variety to choose from.

the millowners should not become tax-collectors for Government, as they will under the Board's export control scheme. It is no doubt hard to please everyone, but modifications seem to be called for.

It is good news that the Viceroy is to take in his Executive Council a Member to be in sole charge of post-war economic development. For sheer importance, the new portfolio will put even Home and Finance in the

shade. Once again, Bombay may be asked to provide the person for the position and it will not be a surprise if Sir Ardeshir Dalal is charged with the responsibility of guiding our economic destiny. If rumour is not a lying jade, then Government have made a brilliant choice. It is the best thing they have done for a long time. One begins to acquire a growing faith in Lord Wavell's judgment of men and things.

The cotton market was somewhat lively yesterday, with operators evincing a sudden interest in the May contract, which improved to Rs. 418-8 (as against Rs. 406 on the 12th) at the expense of the July and September positions. Government purchases have somewhat steadied the market, although their volume is small owing to the cotton not satisfying the test. As there is little of 3/4 inch cotton available, a good part has to be rejected. The budli difference between May and July has come down to Rs. 14. It was as much as Rs. 30 some time ago. As regards the trading in the new crop, there is reason to believe that Government may not after all permit the opening of futures trading, as it may not be inclined to shoulder the responsibility of buying cotton. The E.I.C.A. committee has had discussions with the Finance Member and the upshot of it is not known. The feeling in the trade is that, unless Government's buying policy is more vigorous and embraces all cottons, relief to the cotton grower flowing from the present policy is likely to be incommensurate with the effort.

(Continued from page 984)

the Food Control measures, and the second is also in the process of being squeezed out. The representation points out how under the guise of fostering cooperative societies the Ceylon Government are making it impossible for Indian traders to carry on their old business. "It is deplorable", says the representation, "that the abnormal war conditions should be availed of as a convenient opportunity by the Ceylon Ministers to displace the Indian section of the island's population from its regular and accustomed occupations when as a matter of fact, for the war effort of Ceylon, it is the contribution of Indians that stands foremost in the essential services whether it be in the production of tea and rubber, or work in the ports and harbours or in the construction of aerodromes or in the import and distribution of clothing."

An urgent meeting of the Standing Emigration Committee is being summoned when the whole Indian problem in Ceylon will be discussed. There is also the question of wages—not to mention the question of political rights arising from the constitutional discussions now going on. So far as the textile trade is concerned, something urgent has to be done if the Indian trading community is to be saved from disaster. There is a proposal that a Trade Commissioner—some one with commercial experience should be attached to the staff of the Government of India's Representative in Ceylon so that the latter may have competent advice and be fully in a position to understand the difficulties of Indian traders. Trade questions have assumed such importance that the Agent General in Ceylon cannot properly function without a trade official on his staff.

HILL-BIRD

MEASURED TREAD

RUBBER is today a munition of war as well as a domestic necessity. It is as much an essential for air force or mechanised army as petrol, but no less than 90 per cent. of the world's supply of natural rubber is grown in countries now in Japanese hands. If the war effort of the United Nations is not to suffer, there must be the strictest economy in every use of rubber, from motor tyres to hot-water bottles. Old rubber must be collected as systematically as old iron. While we use our motor-car tyres carefully and send those worn hose-pipes to the salvage collector, we can be sure that the chemical industry is also working to help solve the rubber problem. First, the organic branch of the industry is engaged on the discovery, improvement and production of chemicals designed to improve the quality and lengthen the useful life of rubber. Secondly, the chemical industry is concentrated on developing the manufacture of synthetic rubbers of different types from common raw materials such as coal and oil. The Necessity of War will be the Mother of Invention. Research in the laboratory will enable chemical workers to produce a variety of synthetic rubbers, each having properties suited for one or more specific uses. May not the future of rubber lie in the laboratory and the factory as much as in the plantation?

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

South India

(From Our Correspondent)

MADRAS, May 17.

All over the world people are talking about post-war schemes for a better, more stable world. In India also we hear of both official and unofficial plans for civil aviation, transport, education and a mammoth plan for the reconstruction of the country from the very foundation. Of all the schemes published so far by the Government, the Sargent Scheme of education received the enthusiastic support of both the layman and educationists and no conference of teachers or people interested in education omitted to pay its tribute to the scheme though there was not agreement with one or more details in the plan. The 34th Provincial Educational Conference which met at Annamalai Nagar last week under the Presidentship of that able administrator and statesman Sir N. Gopalaswami Iyengar subjected the Sargent Scheme to close scrutiny. The President's address was itself a critical survey of the Plan. Speaking to a large and distinguished gathering including 450 delegates, Sir N. Gopalaswami Iyengar said that the objectives of the present educational policy of the Government of India "have been narrow, its content unrelated to Indian life and genius, its method antiquated and influenced by healthy modern developments in modern educational technique, its results lamentably disappointing." The scheme of basic education or the Wardha scheme as it is popularly known, was a step in the right direction.

The Sargent Scheme constituted a fresh landmark in the educational history of the country and there should not be any delay in proceeding with the further necessary steps for implementing a national educational system. While it is of utmost importance to entrust this task to a really National Government, Sir N. Gopalaswami Iyengar wanted the present Government of India to go ahead with the implementation of the first stages of the plan even during the war, if the setting up of a National Government was delayed.

The Plan was however defective in three respects. It does not pay adequate attention to the proper disposal or otherwise of the existing system which is run by a considerable number of teachers who will be rendered more or less useless under the Sargent Scheme. The President suggested that they should be absorbed in the new scheme by giving them suitable additional training. The second defect is the time limit. It is quite possible to reach the objective within a period of 15 years. The Russian example should be utilised to suit the conditions in India. Russia was able to achieve complete literacy of its masses in 13 years by effecting economies in equipment and personnel. The idea of double shifts in schools may seem strange but it was adopted in Russia with success and there is no reason why we in our country should not do likewise. Instead of waiting for full-fledged teachers to turn up, the state should raise teachers on the basis of an emergency training system which puts the emphasis on quantity rather than on quality.

Adult education is another important factor, proposals in respect of which were quite out of place. Here again the Russian example should be followed and the objective should be the liquidation of the illiteracy of the adult in the quickest possible

time. The responsibility of the Government should not cease with the formulation of a suitable plan but the initiative and sustenance of the drive for the eradication of adult illiteracy should rest with them.

While the Provincial Textile Commissioner is intensifying the drive against black market in cotton yarn and cloth, the situation in the Madras Yarn Market is far from satisfactory. There is a regular yarn famine and weavers are unable to get even coarse varieties. This contradiction of poverty in plenty in the yarn business is akin to the world problem of a like nature; for Madras produces yarn far in excess of the local demand and with the control measures already in operation and the quota system for which statistics are being collected, there is absolutely no reason why such scarcity should prevail. The one and only answer is "black market". It may also be argued that huge outside orders for yarn are absorbing the entire production of mills in the province.

Whatever may be the cause, the scarcity should go and the Provincial Textile Commissioner seems bent upon the complete eradication of malpractices in the trade wherever it may be found. It is said that the action taken against two Coimbatore Mills is part of an All-India campaign and Madras took the decision quicker than other provinces. The piecegoods position is reported to be slightly better. The stamping of unmarked cloth is almost complete and stocks will be released before the end of the month. Arrivals of

mill cloth into the Province in recent weeks are fairly continuous and with the introduction of the quota system, it is hoped, the position will show marked improvement.

A close analysis of the reports received from the various villages and towns in Malabar and the official and semi-official statements made by the Government spokesman shows clearly the existence of

Dharamtolla Street, Calcutta

a transport bottleneck on the West coast. Eyewitnesses say that the food situation in North Malabar is really serious and that only effective measures taken immediately can check further deterioration. It is stated that a scheme

for the rationing of non-urban areas in Malabar is under the active consideration of the Government. The provincial controller is expected to study the working of rationing in villages in Travancore and Cochin States and then introduce a simi-

lar system in Malabar. The Government have introduced food rationing in 5 surplus municipalities in the Tanjore District. It is stated that food rationing will be introduced in all the municipalities by the end of this month.

THE DAWN OF A NEW ERA

Agricultural products which feed Indian factories—Cotton, Jute and Sugar—already yield a better income to the cultivator as a result of scientific research to improve the yield and quality of these crops, which have been made possible only by the support of large-scale industry.

Factories can afford to pay better wages than farms. Industry causes mines to be developed, hydro-electric schemes to be executed, railways and roads to be improved and thus creates new sources of wages, besides the real wealth brought into existence.

The Indian manufacturer knows the needs of his countrymen, and this enables him to keep his production of goods simple and avoid the stimulating of false buying power. Thus the rising standards of living will be controlled, so as to benefit all sections of the people of India.

These are the aspects of industrialisation with which J. K. Industries are primarily concerned. With the experience and the resources at their command, they are planning for the dawn of a new era of plenty and prosperity for the country.

J. K. INDUSTRIES
INDIA'S RECONSTRUCTION BY PRODUCTION IN INDIA

J.K. 31.

Resume of Commodity Markets

RATHER dull conditions have been noticeable in the commodity markets during the past week. The raw jute market has been quietly steady while the jute manufactures market has continued firm. Bullion markets have been uninteresting with the cotton market rather depressed. The piecegoods market is in a confused state and dealers are awaiting further developments.

As was pointed out last week there can be no appreciable change in the raw jute market for some time. It is now reasonably sure that the new crop will be definitely smaller than last year's and that all the jute offered will be required by jute mills even with the fears regarding rationalisation and further requisitioning of mills adversely affecting consumption. There is no great anxiety, therefore, both on the part of sellers and mills to do any business. At the moment efforts are being made to speed up arrears of deliveries as far as possible. It is important that all the stocks of old crop of jute should be moved as speedily as possible as when the new crop will begin to arrive in the first week of July there will be a congestion in mofussil centres. Even with the assured outlook for jute, congestion in upcountry centres might result in a disparity in prices between Calcutta and the mofussil. No further reports have been received about the proposals for rationalisation and the jute market apparently is not very much concerned about these proposals. There is a feeling that production for the rest of the year will be maintained around one lakh tons per month. In spite of the difficulties regarding coal in the last three months output is at a satisfactory level and the average is very nearly 95,000 tons.

The control of cotton prices seems to be causing great embarrassment to the authorities and various reports have been current during the week. While there is much dissatisfaction with the policy of the Government in regard to purchases of cotton at minimum prices, the authorities feel that it would not be possible for them to give effective support to the market without active cooperation from members of the trade and industry. There have been even reports during the week that Government's attitude regarding trading in the new crop might be modified and that the consent given to the East India Cotton Association for futures trading might be withdrawn. Nothing, however, is definitely known in this regard. Meanwhile there has been heavy selling of Spot with very little business in the ready market. Bulls are tired and there is liquidation for even the far forward positions. The premium for forward over spot has thus tended to diminish.

The various questions affecting cotton control and cloth and yarn control will be discussed at the meeting of the Textile Control Board which will be held in Bombay shortly. The recent drive against black market activities in the cloth markets has been considered rather severe though with the repeated warnings given to dealers one cannot criticise the action of the control authorities. The Textile Commissioner has come in for a lot of criticism as recently five mills have been instructed that the production at the factories should be disposed of only under the directions of the Textile Commissioner or his nominee. The subject of distribution of cloth supplies and the need for assuring minimum prices to the cotton grower will, we believe, be the main question that will be discussed at the forthcoming meeting of the

Textile Control Board. Hitherto, the success of the cotton cloth and yarn control order has been due to the cooperation between members of the industry and the government. It is only to be hoped that such cooperation will continue to be in evidence and that any misunderstanding will not affect adversely the interest of the consumer or the cotton grower.

It is reported that tentative plans have been made by the Government of India for

the control and distribution of pulses from surplus to deficit dal areas. This is considered to be a further step in the control over the country's food resources. Preliminary figures which are subject to revision in the light of experience gained, indicated that as against the declared surpluses of 338,000 tons of dals, the requirements of the deficit areas, defence services etc., are 442,800 tons. The major surplus dal areas are the U.P., C.P., and Berar with a declared surplus of 98,000 tons and 94,000 tons respectively, while the two most heavy deficit areas are Bombay and Bengal.

Above **OPTIMUM**

Faced in 1939 with the production problem that he is today solving, the average Works Manager would have said 'Utterly impossible'. Everyday throughout India industrial concerns are achieving output far in excess of their normal capacity. Indian tea has played its part in this great achievement. Tea is known throughout the world as a harmless yet valuable stimulant and today, in hundreds of factories in India, it is being served to workers on the job, giving them new energy, greater concentration and thus helping to keep output at a steady high level.

Fight Fatigue with
INDIAN TEA

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

Jute and Jute Manufactures

(Special to "Indian Finance")

(By Our Jute Correspondent)

CALCUTTA, 18th May.

April being a shorter month than March in the matter of working hours, the Jute Mills Production figures for April, at 94,406 tons, a drop of only 5,600 tons or 5.6% from March, may be considered quite satisfactory. It suggests that coal supplies were fairly constant during the month and involuntary stoppages on this account comparatively few. Of the total production, 8,838 tons, or 9.36% of the whole, was for Government account, which is just about normal in recent months. The total hessian produced was 1372 lakhs yards of which 102 lakhs was on Government account. The total sacking produced was 1228 lakhs yards of which 119 lakhs was for Government account.

Compared with previous years however the April figures do not make such a good showing, April 1943 totalling over 120,000 tons and April 1942 over 107,000. For the 10 months since the beginning of the Jute season, the total tonnage of goods produced now amounts to 763,153 tons as compared with 997,666 tons for the similar 10 months of the 1942/43 season and over one million tons in the 1941/42 season. Translated into terms of jute consumed, weight for weight the 10 months production this season would account for a consumption of 42½ lakhs of bales. But with batching materials in short supply, the actual consumption of raw jute probably amounts to over 43 lakhs of bales.

From the point of view of despatches of goods, with stocks at the end of April showing a reduction of less than 1000 tons from the previous month, it is apparent that mills just kept pace with their production in their despatches. The April figure works out at 95,367 tons of goods despatches against 89,789 tons in March and 101,289 tons in February. In April 1943 the despatches were over 108,000 tons, but a year before that they were less than half that figure owing to enemy action in the Bay of Bengal virtually closing the Port of Calcutta for some time. As an indication of the strong demand for Jute Goods, it is of interest to record that despatches of goods for the 10 months July to April have exceeded production by almost 54,000 tons, which amounts to more than two-thirds of an average months production during that period.

Arrivals of Jute into Calcutta during April are estimated at 4,40,000 bales as compared with 5,98,000 bales the year before. The total arrivals for the first 10 months of the season amount to 45,54,000 bales against 56,32,000 bales in the similar period last season. Exports of raw jute in April totalled 74,000 bales against 93,000 bales a year ago, and total exports for the 10 months this season now amount to 8,42,000 bales compared with 10,82,000 bales in the similar period last season. With arrivals only 45½ lakhs of bales and exports nearly 8½ lakhs of bales, it is obvious that Mills, in consuming probably over 43 lakhs of bales, have eaten heavily into their stocks in hand. Their purchases probably more than cover the apparent shortage, but mills cannot be free of anxiety as to when they will get delivery, particularly of rail-borne jute. Rail arrivals during April were admit-

tedly the best for 6 months at 8½ lakhs of maunds but that is only by comparison with the deplorable level to which rail carriage dropped after October—actually to less than 5 lakhs of maunds in December and again in March. In April last year the Railways managed to carry 14 lakhs of maunds after having been jerked into greater activity by strong protests from the trade. While admittedly military demands must be heavy, it is difficult to believe that the railways are handling other traffic to the maximum efficiency. Inexplicable restrictions when waggons are obviously available are a matter of constant occurrence, and there appears to be a grave lack of co-ordination between headquarters and the districts, resulting in waggons standing idle because bookings for certain destinations are restricted for no apparent reason. How the crop is to be cleared from the Mymensing district, for instance, before the advent of imports of new crop, unless some more active measures are taken to meet the situation, is a major problem facing traders in that section.

Coal supplies, while by no means generous, have been keeping up fairly well, though it is worth noting that never once since the introduction of the quota system for the Jute Mills Dump, has the full quantity been received. With the approach of the monsoon however, there is considerable apprehension that the situation is liable to become worse. Those likely to be worst affected are steam driven mills which are still working single shift. It is understood that units which are working multiple shifts will receive priority over units which are not, and if this is so it may result in some degree of rationalisation (so called) amongst existing groups which are mainly coal-consuming. It is believed also that requisitioning of mill premises has not yet come to an end. It will certainly be the aim of the I.J.M.A. to endeavour to maintain a high level of production of jute goods, but while higher authority has been lavish in specious promises in the past, experience does not encourage the expectation that the case of the Jute Mills will receive any special consideration if the coal situation shows signs of deteriorating.

While there have been a few reports of rain here and there in the jute districts, much more is required and very soon, for the welfare of the coming crop. In many cases high land sowings are held up for lack of rain and the young plants require a thorough good soaking to buck them up and bring them on. Overhead sowings are estimated to be from 10 to 12 annas of last year, so there is little or no margin for damage on account of unfavourable weather, if the industry is not to be starved of its raw material.

There has been continued interest shown on the Export side during the past week. Short Group Daisee sold at Rs. 88-8 for June shipment. Dundee Daisee assortment sold at Rs. 78 and Rs. 78-8, with Fours at Rs. 72, also for June. Dundee Tossa 4s sold at Rs. 82-4 for ready and at Rs. 83 for May shipment. No interest was showing in white jute. Mills only showed a limited interest in Pucca bales, transactions being reported in Old Crop Lightnings at Rs. 81 with New Crop at Rs. 83. Some sales of Dundee Daisee assortment were also reported

at Rs. 81 and of Dundee Tossa 4s at Rs. 88. A speculative sale to Mills was reported of Ropes and Straight morahed Rejections for July/October shipment, Old or New Crop, at Rs. 65, with Rs. 63 paid for Habi-Jabi Rejections on similar terms.

In Loose Jute the turn-over has been light. Small quantities of European packing have been recorded at maximum rates of Rs. 17 and Rs. 14 for Mids and Bots. Old Crop, with Supervised District jute at eight annas less. Indian District packing sold at Rs. 13-8 for Bottoms alone and also Northern Bottoms at Rs. 13-4. Some enquiry is reported for New Crop, but in low assortments, which sellers are not inclined to meet. Early sales ought to be on the basis of something like 20-60-20 Tops, Middles and Bottoms if standards are to be maintained at their existing level, which is the avowed intention of the I.J.M.A. Committee. It would almost seem that a reminder to their members, such as was issued last year when dealings in New Crop commenced, that purchases in the early months should be of high assortments and with a proportion of Tops included, if the aim of the Industry to keep the existing standards of the grades steady, is to be attained. To permit sales at this juncture of Middles and Bottoms only is tantamount to eliminating the Top grade, altogether with the inevitable result of rising standards if the crop is a good, or even a normal one. It is seldom difficult to get mills to agree later on to accept Middles in place of Tops, if a dealer finds himself in difficulty in providing the higher quality. But it would be fatal to the whole scheme of standards if trading were to be permitted to any extent with the Top grade excluded.

The Fabrics market can be summed up in a word—plenty of buyers at maximum rates for any goods mills are willing to dispose of. The sole exception is 'B' Twills which continue to be available at a slight discount. Some doubt seems to have existed with regard to the correct prices of certain hessian bags under the Jute (Price Control) Order, 1944, and on a reference to the I.J.M.A. these prices were laid down as Rs. 34-3 for Wheat Bags, Rs. 56-13 for 20oz Bran Bags, Rs. 132 for tar sewn 3 lb Cotton Packs and Rs. 33-8 for tar sewn Onion Pockets.

JUTE

(By Our Staff Correspondent).

Thursday, May 18.

The raw jute market has continued steady with mills still interested in inferior grades of jute. The unsatisfied demand for lower assortment, the difficulties regarding transport and the unfavourable reports about the progress of sowings in the jute districts have naturally imparted strength to the jute market. There can be no appreciable rise in prices, however, as quotations for inferior grades are at the maximum rates and mills are not anxious to purchase in large quantities. As has been pointed out on earlier occasions, the problem at the moment is one of ensuring regular supplies to mills so that there will be no bottle-neck in transport when the new crops arrive. Sellers are not anxious to do any large business in the absence of any definite assurances regarding deliveries. It is also felt that there will be no difficulty in marketing the new crop as the latest reports reveal that only about 80 percent of the area sown under the crop last season has been utilised so far. Nothing is yet known regarding the rationalisation proposals. The jute market does not appear to be greatly disturbed at the prospect of rationalisation as production will have to be maintained at the present levels if the demand of the United Nations is to be met.

In the loose jute section sellers have not been very eager to do business though they are more free to take up business for higher assortment at slightly below maximum rates. Large business has been reported in Northern Bottoms at last week's levels.

In the pucca bales section easier conditions have been noticeable with balers pressing for business. Mills were not eager buyers as owing to the difficulty in storage space there was a tendency to await a further decline in prices. Dundee Daisee 2/3 were done at Rs. 78 per bale and Dundee Tossa 4's at Rs. 84 per bale. Short Group Dundee Daisee assortment were done at Rs. 88 per bale. Mills bought old crop Firsts at Rs. 86 and Lightnings at Rs. 81 per bale. New crop were at Rs. 2 premium.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, May 18.

The jute manufactures market has been absolutely uninteresting but rates have been fully maintained with a scarcity of sellers. Mills have entered into contracts for small quantities for positions between August and December at maximum rates.

In the heavy goods section also there were very few sellers and no business of importance is to be reported. Production figures for the month of April published during the week show that irregular supplies of coal were responsible for the slight reduction in production. The total output during the month being 94,406 tons against 100,006 tons in March. Hessian cloth and bags were 38,521 tons against 40,298 tons while sacking manufactures were 3730 tons against 4347 tons. The figures are given below:

SUMMARY.

N.B.—April stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Kathihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of March 1944.

GOLD

(From Our Correspondent)

Bombay, May 18.

Rather quiet conditions have been noticeable in the gold market during the past week. It was pointed out on the last occasion that, with the sales by the Reserve Bank exceeding offtake and the lack of investment demand, the tendency was for a further decline in prices. The Reserve Bank has continued sales of 50,000 tolas per day during the week and delivery is again compulsory half in large bars and half in small bars. Quotations were fluctuating for most part of the week around Rs. 75-8 but towards the close there has been a sudden decline and prices are now around the lowest levels for the week, Gold ready being Rs. 74-14 and forwards Rs. 74-14 against Rs. 75-8 for both positions last week. The improvement in the war situation is definitely a disturbing factor for operators. With the depression in both the cotton and stock markets, due to special factors, it cannot be possibly expected that bullion prices would be higher. Sovereigns were Rs. 51-13 against Rs. 52 in the previous week.

General offtake is around 30,000 tolas while stocks are estimated at 3 lakhs tolas.

SILVER

(From Our Correspondent)

Calcutta, May 18.

The silver market also has been uninteresting and quotations have declined. The large arrivals from Kathiawar have considerably eased the spot position. The market is not now oversold as recently bears have covered their commitments, the carry forward charges being unduly high. Silver ready closed at Rs. 135-14 and forward Rs. 134-14. The easier supply position and the covering by bears have resulted in a narrowing in

the discount for forward from Rs. 1-12 per 100 tolas to Rs. 1 per 100 tolas. While the stocks are estimated at 500 bars, the daily offtake is around 100 bars.

COTTON

Bombay, May 18.

The Bombay raw cotton market was inclined to be very weak early in the period under review. The weakness of the stock exchange and the reports that there will be no futures trading in the new cotton crop were mainly responsible for the slump in prices. Fresh Government buying however has resulted in a rally in the past three days. Mills also have extended greater support to the ready market. It is believed that as a result of the discussions between the representatives of the Bombay Government, the control authorities and members of the East India Cotton Association a definite policy will be formulated regarding purchases of raw cotton to stabilise prices above the minimum levels. The feeling that there may not be any large fluctuations in prices in the next few months has resulted in a decrease in the premium for forward position. Jharilla May closed at Rs. 417-8 against the lowest level of Rs. 413-8 last week, July Rs. 431-12 against Rs. 429 and September at Rs. 441 against Rs. 439-8. It will be seen that against the increase in the quotation for May by 4 points, July have improved by only 2½ points and September by 1½ points.

Total purchases are estimated at 25,000 bales in Bombay, 5,000 in Karachi and 10,000 in Broach and upcountry.

The opinion in market circles is that trading in new crop is unlikely to be permitted. There is a feeling that Jharilla Contract has been a failure since tenderable cotton is limited. There is a talk of amending the basis to suit current conditions. Some are of the opinion that Broach and 4F should be tenderable without discount and that discounts on varieties other than Jharilla should go in order that contract may have easily tenderable cotton.

PIECEGOODS

Calcutta, May 18.

Rather confused conditions prevail in the piecegoods market. The vigorous drive against black market activities has created some nervousness in the market. Dealers are anxious to clear off stocks as it is feared that the continuation of black market activities will result in the cancellation of their licenses. It is believed that further important decisions will be taken at the meeting of the Textile Control Board which is to be held in Bombay shortly.

Stock Markets to-day and to-morrow:

BALMER LAWRIE 1943 ACCOUNTS

IRREGULAR conditions have been noticeable on the Calcutta Stock Market during the past week while a rather quiet feeling has prevailed in the Western Centre throughout the period. The week began well on the Calcutta Stock Exchange and a further sharp rise in prices was recorded for selected Coal shares but business passing was mostly on professional account. As outside buying was not on a large scale operators changed their minds in mid-week. In the selling that followed some of the gains were lost. The subdued tone of the Bombay market helped bears but in Friday's session the undertone is again steadier and there is no appreciable give in prices.

The depression in the Bombay market is due to the fears that the vigorous efforts of the control authorities to check black market activities and the possibility of a further decline in ceiling prices would affect appreciably mill earnings for the current year. As the general tone of the Bombay market is decided by the strength of textile shares, it is not surprising that there has not been any appreciable activity in either Tata deids. or miscellaneous shares. The table given below will show clearly the trend in cotton textile shares in the past fortnight:

	18-5-44	12-5-44	5-5-44
	Rs. A.	Rs. A.	Rs. A.
Bombay			
Dyeing	1,916 4	1,932 8	1,965 0
Central India	434 8	434 0	433 0
Century	935 0	985 0	965 0
Gokak	336 0	343 0	341 0
Kohinoor	645 0	651 0	663 0
Sholapur	8,600 0	8,600 0	8,675 0
Simplex	254 0	261 0	262 0
Swadehi	537 0	580 0	623 0
		ex-div.	

Without any support from operators in the Western centre there has naturally been an anxiety on the part of investors and operators in Calcutta to await further developments. The Calcutta market has moved independently of the Bombay market in the past one month and there is a feeling that the rise in prices for some of the Coal shares is overdone. Reports regarding the rationalisation of the jute industry have also induced a certain measure of caution. There has been an appreciable reduction in the volume of business in the past two days. The reduction in the interim dividend of Indian Iron for 1943-44 and the final dividend of Steel Corporation

for the year ended December 1943 have checked speculative activity in Engineering shares though it should be said that Marshalls have provided the feature of the week with a rise to over Rs. 5-2.

The general situation of the market can thus be said to be as follows. Greater outside support is necessary for a further improvement in prices. It is pointed out that without the reconciliation of the average investor to a lower yield basis it will not be possible to take up prices to higher levels. There is also a tendency to await developments in the Bombay market in the next two weeks.

The strength of the gilt-edged securities market, however, augurs well for the future of markets as it is by now accepted that there will be a narrowing in the difference between the yield on gilt-edged and preference shares and the yield on preference and ordinary shares. With the narrowing in the yield between different classes of shares there will have to be a rise in prices for equities. Markets are in a transitional stage and it will be interesting to watch their course in the next few weeks.

The accounts of *Balmer Lawrie & Company, Limited*, for the year ended December, 1943 show that the several departments were working satisfactorily throughout the year. The increase in working expenses, however, has been responsible for the slight reduction in net earnings, before providing for taxation and depreciation, to Rs. 35,60,655 from Rs. 36,72,568. The amount set aside to depreciation is Rs. 1,09,748 against Rs. 87,379 in the previous year. The allocation to General Reserve is lower at Rs. 1 lakh against Rs. 1,50,000 and to other funds Rs. 24,000 against Rs. 2,25,400. After providing Rs. 23,50,365 (Rs. 23,99,873) for taxation, the dividend on the ordinary shares has been maintained at 25 percent and that on deferred shares at 20 percent. The amount carried forward is Rs. 3,64,665 against Rs. 3,38,297 brought in.

A new department was formed during the year at the request of the tea trade and the Port Commissioners to handle the warehousing of tea in the Calcutta port. As the various departments of the company will continue to benefit from the present conditions during the current year also, it can be expected that earnings will be maintained at

high levels. With a quotation of Rs. 450 cum-dividend the yield should be considered satisfactory. Indeed, it is so high as to warrant a further rise in the quotation.

The accounts of the *Indian Galvanizing Company (1926) Limited*, show that earnings for the year ended December, 1943 have been adversely affected by the higher cost of production. The workshops continued to be fully employed and the orders on the books of the company indicate a further period of activity in the current year. The reduction in the net profit has not in any way affected the distribution to shareholders which has been maintained at 25 percent. The net earnings, before providing for taxation and depreciation, was Rs. 6,99,556 against Rs. 8,30,801 for 1942. The provision for depreciation is lower at Rs. 44,208 against Rs. 84,598 while the allocation to Stock Reserve has been reduced to Rs. 50,000 from Rs. 75,000. The provision for taxation is Rs. 5,01,823 against Rs. 5,64,048. As mentioned above the dividend has been maintained at 25 percent. The amount carried forward is Rs. 45,592 against Rs. 45,693 brought in. The shares of the company at Rs. 48 cum-dividend afford a good yield.

The satisfactory aspects of the first half-year of the Hind Bank's career received proper notice in the Chairman's speech published to-day. The 50% liquidity is suggestive of closer correspondence between British and Indian banking trends than is imagined. What this promises for the future was touched upon by Mr. K. P. Goenka who dwelt on the immediate plans for developing the Bank's business and connexions. The appeal to save and let the banks do the investing in Government securities is properly related to the anti-inflationary measures that constitute a feature of both public and private finance at present. The figures in the balance sheet and profit and loss statement (as noted last month), are eminently encouraging, and the Chairman, in expressing satisfaction with the initial results made appreciative reference to the Board and the staff.

For the 31st Edition of the Investors' India Year Book published by Place Siddons & Gough the usual welcome is assured as it maintains the high standards that have made

(Continued from page 1015)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 19.

AFTER early firmness rather quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week. In the absence of any large outside buying, professional bears got busy and there was some selling of speculative counters. The general undertone, however, remains steady and it is confidently expected that the ultimate tendency will continue to be upward. Developments in the war situation have been satisfactory from the market point of view. If only investors reconcile themselves to a lower yield basis there will be an increase in activity before long. With the continuance of easy conditions it can be expected that the subdued tone of the market will not be in evidence for long.

The gilt-edged securities section was definitely firmer earlier in the period under review and 3½ per cent paper was done as high as Rs. 99-2. Towards the close there has been some selling and the quotation is a shade easier at Rs. 98-14. In sympathy with 3½ per cent Paper terminable loans also have improved, 3 per cent defence bonds 1949-52 being Rs. 101-2, 3 per cent loan 1951-54 par and 3 per cent 1953-55 Rs. 99-14-6 against Rs. 99-10-0. 3 per cent 1963-68 were Rs. 98 and 3 per cent 1963-65 Rs. 98-10 against Rs. 98-6. 5 per cent 1945-55 were steady at Rs. 104-4 while 3½ per cent 1947-50 were further higher at Rs. 102-15. The only transaction reported in provincial loans was in 3 per cent U. P. 1961-66 at Rs. 98. Easy conditions have continued to prevail in the money market and there has been a further decline in the average discount on treasury bills to 8 annas percent from 9 annas percent last week.

No transactions have been recorded in either Public Bodies Debentures or Industrial Debentures. Among preference shares *Alliance* were Rs. 155-8, *Barnagore* Rs. 70 and *Empire* Rs. 172. *Gourepore* were better at Rs. 163-8 and *Hooghly* Rs. 23. *Lansdowne* were Rs. 168, *Kumardhubi Eng.* were 33 points higher at Rs. 403 while *Steel Corp.* were slightly higher at Rs. 134. *Titagur First Pref.* were as high as Rs. 212-8.

Bank shares have continued steady with *Hind Bank* providing the feature of the week with a rise of 3 points to Rs. 59-4. *Calcutta National Bank* were Rs. 14-8, *Central Bank* Rs. 78-12 and *Imperial Bank* fully paid Rs. 1,890. *United Commercial Bank* were unchanged at Rs. 28 premium as also *Reserve Bank* at Rs. 130.

Cotton shares have been very quiet on expectation of a reduction in dividends by the important companies. It is also pointed out that with rigorous control measures there is every possibility of a further decline in mill earnings. *Cawnpore Textiles* have dropped nearly a point to Rs. 14-5 while *Basanti* were Rs. 13-12 against Rs. 14-4. *Dunbar* were unchanged at Rs. 299 but *Elgin* were 5 points lower at Rs. 72. *Kesoram* were Rs. 17-13 and *Mahalaxmi* Rs. 40-12 against the highest level for the week of Rs. 42-8.

Coal shares have been rather irregular and speculative counters have lost some ground. After the sustained rise in prices in the past

few weeks, the reaction was not altogether unexpected. *Amalgamated* were Rs. 48-8 against Rs. 49-4 and *Bengal* Rs. 633 against Rs. 648. *Bhalgora* were Rs. 15-13 while *Burrakur* were Rs. 34 against the highest level for the week of Rs. 35-2. *Bokaro & Ramgur* were Rs. 32-13, *Equitable* Rs. 55-14 against Rs. 58, *New Beerbhoom* Rs. 32-8 against Rs. 33-12 and *Raneegunge* Rs. 45-10 against Rs. 46-8. *South Karanpura* were done up to Rs. 17-6. There was a reaction in the quotation to Rs. 16-2 but the close was steadier at Rs. 16-8. *Satpukuria* and *Asansol* moved against the general trend of the market with a quotation of Rs. 5-14. *Talcher* were Rs. 7-6 and *Jainty Central* Rs. 5-14. *West Jamuria* changed hands around Rs. 59.

There has been a perceptible increase in the volume of business in the jute section. There is a tendency to await the rationalisation proposals, reports regarding which have been current during the past two weeks. *Anglo-India* improved from Rs. 424 to Rs. 436 but closed lower at Rs. 432. *Bally* were quieter at Rs. 35 on the reduction of dividend while *Champdany* were Rs. 241-8 and *Clive* Rs. 36-14. *Chitavalsah* were Rs. 32-12 against Rs. 33-10. *Empire* were rather quiet at Rs. 49-8 while *Fort William* were Rs. 365 and *Ganges* Rs. 460. *Howrah* were steady at Rs. 53-8 and *Kankannarrah* at Rs. 534. *National* changed hands at Rs. 31 and *Nuddea* at Rs. 118. There was a rise in *Rameshwara* to Rs. 22 from Rs. 19-4 but the close is very much lower at Rs. 20.

In the Engineering section there was no important feature. *Indian Iron and Steel* were fluctuating around Rs. 36-4. The quotation at the time of writing is Rs. 36. *Steel Corporation* have been marked lower at Rs. 27-3 as also *Kumardhubi Eng.* at Rs. 11-4 against Rs. 12-4 at the end of last week. *Marshall's* moved up to Rs. 5-2 from Rs. 4-12 while *Steel Products* were better at Rs. 8-10. *Bhartia Electric Steel* changed hands at Rs. 18-4 and *Braithwaite* at Rs. 11.

Sugar shares have been uninteresting. *Belsund* encountered some selling and the quotation is lower at Rs. 14-10 against the highest level of Rs. 15-8. *Carew & Co.* were Rs. 29-14 and *Balrampore* Rs. 19-2. *Ram-nugger Cane & Sugar* were Rs. 13-11 against Rs. 14-2. *Buland & Raza* were unchanged at Rs. 42. *South Behar* deferreds were crossed at Rs. 9-8.

There is slightly more enquiry in the Tea section but there has not been any large increase in the number of transactions. *Hattikhira* were Rs. 30, *Namburnadi* Rs. 11-6, *Tezpur* Rs. 17-4, *Sapoi* Rs. 20-4 and *Hasimara* Rs. 72.

In the Miscellaneous section, *Burma Corp.* and *Indian Copper* were unchanged at Rs. 3-11 and Rs. 2-12 respectively. *Karanpura Development* were firm at Rs. 38-4, *Dalmia Cement* registered a rise of one point to Rs. 19-2 while *B. I. Corporation* were steady at Rs. 6-6. *Calcutta Ice* were Rs. 22-2, *Indian Wood Products* Rs. 32-6 and *Aluminium Corp.* Rs. 19-10. *Assam Saw* were firm at Rs. 6 while *India General Navigation* were a shade easier at Rs. 162-8. *Midnapore Zemindary* were Rs. 152-8.

Among paper shares *Bengal Paper* changed hands at Rs. 225 and *Star Paper* at Rs. 22. *Titagur Paper A & B* continued quiet around Rs. 27-12.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, 18th May, 1944.

With the prospects of high prices for cotton cloth and yarn becoming dimmer mill shares received scant attention at the hands of the investing public. Now that the field had been left clear speculators began to sway the market according to their fancies. Vague rumours were circulated and prices were allowed to fluctuate very widely. Profit-taking operations were noticed frequently. All this resulted in a narrow market which was dull and irregular by turns.

The gilt-edged market was steady with 3½ per cent Government Paper quoting at Rs. 98-15. 3 per cent 1953-55 were Rs. 99-15 and 5 per cent (1945-55) Rs. 104-7.

Wide fluctuations were noticed in the Textile section of the market. *Bombay Dyeing* were to-day very weak at Rs. 1916-4, while *Century* were down by 30 points at Rs. 935. *Kohinoor* were Rs. 645 as against Rs. 665. *Vishnu* were Rs. 546-4.

Steel shares though generally better were unable to make much headway. In sympathy with textiles, prices in this section were also adversely affected. But steady investment support averted deterioration in scrip values. *Tata Deferreds* were Rs. 2,160 while *Tata ordinaries* were wanted up to Rs. 410.

Steady conditions continued to prevail in the Hydro-Electric Section with *Andhra Valley* quoting at Rs. 1,855; *Tata Power* at Rs. 1,870 and *Tata Hydro* at Rs. 203.

Among miscellaneous shares *B.E.S.T.* were in good demand at Rs. 148-8 on rumours of extension of the period of company management. Otherwise this section was dull and uninteresting. *Shivrajpur* were Rs. 60-8, *Alcock Ashdown* Rs. 607-8. *A. C. C.* were slightly higher at Rs. 233-8, while *Premier Construction* were further weak at Rs. 223.

COMPANY MEETING

THE HIND BANK LIMITED

4, CLIVE GHAT STREET, CALCUTTA

Speech delivered by Mr. K. P. Goenka, Chairman at the first Ordinary General Meeting of the Shareholders held on 15th May, 1944.

GENTLEMEN,

The audited Balance Sheet and the Profit & Loss Account of the Bank have been in your hands for some time and I presume that it is your wish that I should take them as read.

The result of the working of the Bank shows a net profit of Rs. 1,02,828/- from which the Directors propose to write off the entire amount of preliminary expenses and brokerage on shares which amount to a little over Rs. 40,000/- and to add to the general reserve Rs. 50,000/-. This leaves a balance of Rs. 12,797/- to be carried forward to the next account. As you are aware, the Head Office of the Bank has worked for just over six months while the Bombay and Burra Bazar Branches started functioning only early this year. Considering the short period the Bank has worked, I hope you will agree that the results of the Bank's working are satisfactory. I am particularly gratified that the results have enabled us to wipe out in full the intangible asset of preliminary expenses and brokerage and to add Rs. 50,000/- to the General Reserve of Rs. 3,75,000/- which has been created out of the premium collected on the new issue of shares.

You will also notice that the capital structure of the Bank has been strengthened in February last by the issue of 75,000 shares at Rs. 55/- per share with the result that the Paid-up Capital now stands at Rs. 50,00,000/- and the premium of Rs. 5/- per share collected on the new issue has gone to constitute the nucleus of our reserve funds. Our deposits on the 31st March stood at Rs. 2,23,00,000/- of which over three quarters represent demand liabilities. This, however, is in conformity with the general trend of bank deposits in this country.

We are fully alive to the necessity of keeping a thoroughly liquid position. Our cash balance including Call money on the date of the Balance Sheet amounted to Rs. 1,19,00,000/- and our investments in Government Securities and Treasury Bill were Rs. 72½ Lakhs. These two items together constitute 86% of our total deposits and 110% of our demand liabilities. Our advances and bills discounted stand at a little over Rs. 90,00,000/- and as you will see from the classification given in the Balance Sheet, practically the entire amount is fully secured. The other items of the Balance Sheet and the Profit & Loss Account do not call for any comment.

In spite of War conditions, and in fact to a large extent due to these conditions the Bank's business has been remarkably active, with expanding turnover and a notable increase in the number of new accounts. The last mentioned feature is particularly encouraging, for it is a clear indication that the people generally are becoming increasingly banking-minded and are making still greater use of the bank's many services. This is all to the good; for the years immediately following the termination of the war dangers of inflation, than those through which we are now passing. The increasing note issue is a warning and in this connection it may be relevant to say that the proper employment of currency notes is not to keep them in wallets or private hoards, but, so far as saving is possible, to keep them invested in Government loans. All notes not required for immediate need should be taken out of circulation by such investment, or by paying them into banking accounts. In this way the public who are in receipt of the money dispensed on account of war production will become not only banking-minded but savings-minded also to the great advantage of the country and to themselves. It is essential that the habit of saving and investing, as opposed to spending, engendered through-

out these war years should be carried forward to the post-war period.

So long as the war lasts the relatively low figure of advances is likely to continue but the minds of all men are now being directed towards post-war problems, and from this point of view a condition of liquidity is essential.

We are earnestly studying possibilities of so improving or widening our banking service always presupposing the maintenance of cheap money as a primary essential, as to furnish the fullest possible support for promising enterprises under good auspices-support which shall be based as much upon the character, integrity and business capacity of the borrower as upon the extent and nature of his own material resources.

We are also actively engaged in considering the question of expanding the business of the Bank by the opening of Branches and otherwise and we hope shortly to launch on a carefully thought-out programme of expansion. Apart from the opening of Branches, it is our intention to commence the transaction of foreign Exchange Business and with this end in view the necessary steps are being taken to secure a license to become an authorised dealer and to fix up the necessary Agency arrangements. We have also arranged to shift to more commodious premises in Royal Exchange place where our customers will be provided with better facilities and amenities for the transaction of their banking business.

I now turn to broader issues which nevertheless have a close bearing on the future of our own Bank. The year 1943 has witnessed the inauguration of a number of new banks. Considering that banking in India before the War had been very much underdeveloped and that very considerable expansion of credit and currency has taken place as a result of war time activities, there is certainly room for quite a number of well organised banks to share in the increased business which is now offering and it is to be hoped that there will be no unsound or unfair competition among the banks. Economic planning is very much in the air and both the Government and businessmen are alive to the necessity of the planned expansion of our economic activity as soon as the war ends. The 15-year plan and the Government's own scheme for expansion indicate that banks will have a good scope for development in the post-war era.

The tasks of reconstruction and readjustment to a state of peace will be no less complex than those arising in the course of war. We are trying to prepare ourselves for the difficulties which will confront our business customers and ourselves in the period of transition from war to peace economy. With ready adaptability to circumstances and needs as they develop, we feel confident that subject always to our obligations as custodians of our customers' funds, we in this bank shall be able to play our part in the great national effort of revival, expansion and advancement.

I cannot conclude without paying a very sincere tribute to those who carry on the daily work of the bank and reminding the shareholders of what they owe to the very hard working members of our staff. I am also very grateful to my colleagues on the Board for the valuable advice and co-operation they have readily given me in the discharge of my duties as Chairman.

I now beg to move that the Audited Balance Sheet and Profit and Loss Account as on 31st March, 1944, be received, approved and adopted.

THE TILKAH TEA CO., LTD.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 4, Old Court House Street, Calcutta on Tuesday the 30th day of May, 1944 at 3-40 p.m. to receive and pass the Directors' Report and the Audited Accounts for the year ended 31st December, 1943 to declare a dividend, to elect a Director in place of the retiring Director, to elect Auditors for the ensuing year and fix their remuneration and to transact any other business that may be brought forward.

It is recommended that this be disposed of:—	
By Payment of a Dividend on Preference Shares at Rs. 3 per Share or 6 per cent. per annum	79,500
„ Payment of a Dividend on Ordinary Shares at Rs. 15 per Share or 30 per cent. per annum	3,60,000
	4,39,500
Leaving to be carried forward	3,38,992

Pursuant to Rule 45B of the Defence of India Rules the Balance Sheet as at 31st March, 1944, and the relative Profit and Loss Account of the Gourepore Electric Supply Co., Ltd., are not published as appendices to the Company's Accounts.

The Dividend in respect of the holding in this subsidiary Company which has been credited to Profit and Loss Account is that which it is proposed be declared out of the profits for the half-year to 31st March, 1944. No provision for losses has been made nor has it been considered necessary in the books of the Gourepore Co., Ltd., in respect of this subsidiary Company.

Stocks.—The stocks of Jute and Linseed have been entered at or under cost prices and the stock of fabrics at or under Contract rates.

Working Hours.—In accordance with the working time agreements of the Indian Jute Mills Association, the Mills worked 54 hours per week and were closed down for four weeks during the half-year, to alleviate the position resulting from shortage of coal supplies. In addition to these compulsorily closed weeks the Mills were shut for brief periods as a result of deficient coal supplies, but the hours lost were subsequently made up.

Secretaries and Agents.—Messrs. Barry & Co.

Authorised Capital.—Rs. 62,00,000. Issued and Subscribed—Rs. 50,50,000 in 24,000 Ordinary and 26,500, 6 per cent Cum. Preference shares, both of Rs. 100 each, fully paid up.

Synopsis of the balance sheet as at 31st March, 1944.

From this sum there has to be deducted:—	
Reserve for Taxation	Rs. 16,00,000
Amount written off Furniture, Cars and Lorries	934
	16,00,934
Leaving an available balance of	8,55,672

which it is recommended should be dealt with as follows:—

For payment of the Dividend for the half-year on the Preference Shares at the rate of 6 per cent. per annum, without any deduction in respect of Income Tax paid by the Company	27,000
For payment of a Dividend for the half-year on the Ordinary Shares of Rs. 15 per share, without any deduction in respect of Income Tax paid by the Company	5,40,000
To be carried forward	2,88,672
	8,55,672

During the period under review the Mill worked its full complement of looms for 54 hours weekly with the exception of the calendar weeks ending 2nd October, 9th October, 27th November

and 25th December, 1943, which were declared closed weeks in accordance with the working policy laid down by the Indian Jute Mills Association.

The policy of providing the labour force at the Mill with essential food supplies at reasonable prices through the Company's Labour Welfare Shop has been continued with beneficial results throughout a difficult period of food shortage and high prices.

Managing Agents.—Messrs. Anderson, Wright & Co.

Authorised Capital.—Rs. 54,00,000. Issued and Subscribed—Rs. 45,00,000 in 9,000, 6 per cent Cum. Preference shares and 36,000 Ordinary shares, both of Rs. 100 each, fully paid up.

Taxation	3,67,000	4,30,000	1,68,000
Dividend amount	1,10,645	1,29,085	1,10,645
Carry forward	11,816	14,176	17,973
Dividend per cent	37½	42¾	37½

(Annual General Meeting on 2nd June, 1944 at 12 noon. Transfer books closed from 19th May to 2nd June, 1944).

Audited accounts for the year ended 30th September, 1943:—

The Revenue Account shows a credit balance of Rs. 6,93,949 and the Profit and Loss Account, after making the Reserves referred to above, placing Rs. 10,000 to Reserve, and providing for Depreciation, Interest, Income Tax, Excess Profits Tax, etc., shows a credit balance of Rs. 1,22,461, which the directors propose shall be disposed of as under:—

In paying a Dividend on 295,052 Ordinary Shares at the rate of As. 6 per share (without any deduction for Income Tax paid by the Company)	Rs. 1,10,645
In carrying forward	11,816
	1,22,461

A Reserve has been made for post-war contingencies equal to the estimated amount of the compulsory deposit to be made in respect of Eycess Profits Tax.

It has also been deemed desirable to make a reserve for the benefit of aged and infirm workers, who will require financial assistance when they retire.

The results for the year under review were very satisfactory. The sales for the current season ending 30th September, 1944, are satisfactory. Nevertheless in view of the financial position of the Company the Directors recommend a conservative policy with regard to dividends.

The extraction from the forest of timber requirements is at present very largely dependent on motor transport, which it has been impossible to maintain adequately owing to war-time difficulties in obtaining either new vehicles or spare parts. It is, therefore, necessary to lay down an additional 8 miles of tramline at a cost of about Rs. 1,42,000, failing which the necessary timber supplies will decline rapidly, with the danger of their ceasing almost entirely within the next 3 or 4 years. This expenditure will be undertaken in the near future.

Managing Agents.—Messrs. Bird & Co.

Authorised Capital.—Rs. 10,20,000. Issued and Subscribed—Rs. 2,95,052 in shares of Re. 1 each, fully paid up.

SHRI AMBICA MILLS LIMITED

Audited Accounts and Balance Sheet for the year ended 31st December, 1943:—

After providing a sum of Rs. 3,50,000 for depreciation and a sum of Rs. 63,00,000 for estimated taxations and compulsory E.P.T. deposit the account shows a profit of Rs. 13,64,214 to which a sum of Rs. 8,256 is added making a total of Rs. 13,72,470. The Directors propose to appropriate these profits as under:—

Dividend on 5,600 Cum. Pref. shares at the rate of 5%	Rs. 28,000
Dividend on 7,000 2nd Cum. Pref. shares at the rate of 4%	28,000
Dividend on 32,340 Ordinary shares at the rate of Rs. 15 and Bonus Rs. 10 per share free of Income Tax	8,08,500
Reserve Fund	2,17,000
Machinery Renewal Fund	1,00,000
Insurance Fund	1,50,000
Balance to be carried forward to the next year's account	40,970
	Rs. 13,72,470

The Company's Mills are equipped with 1,381 Looms and 54,324 spindles.

The Company's properties and stocks are fully insured against Fire and Riot (Rs. 1,25,87,850), and Loss of Profits (Rs. 29,00,000).

Chairman.—M. C. Ghia. **Authorised, Issued and Subscribed capital.**—Rs. 28,77,000 in 32,340 ordinary shares of Rs. 50 each, 5,600, 5 per cent. Cum. Pref. shares of Rs. 100 and 7,000, 4 per cent. Second Cum. Pref. shares of Rs. 100, all shares fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1943.

*Compulsory E. P. T. Deposit.

(Annual General Meeting on 22nd May, 1944 at 10-30 a.m.)

Transfer books closed from 12th to 22nd May, 1944).

Audited accounts for the year ended 30th September, 1943:—
After sundry adjustments the Profit and Loss Account discloses a credit of Rs. 1,32,425 to which has to be added the sum of Rs. 1,662 remaining balance from last accounting period making in all Rs. 1,34,087 less the amount of Rs. 93,205 transferred to taxation reserve for the year under review and Rs. 13,000 reservation for compulsory E. P. T. deposit, leaving an available balance of Rs. 27,881 which the directors recommend should be disposed of as follows:—

Payment of a Dividend at the rate of As. 3 per share equivalent to 9% per cent per annum, absorbing Rs. 22,500 and carrying forward to next accounting period the remaining sum of Rs. 5,381.

Trading conditions during the year continued to be satisfactory. Future trading still depends on the continuance of receipt of supplies.

Managing Director.—Messrs J. B. Harper.

Authorised Capital—Rs. 4,80,000. Issued and Subscribed—Rs. 2,40,000 in 1,20,000 shares of Rs. 2 each, fully paid up.

(b) Issued at par in 1937, and repayable at par on 15th November, 1938, date of redemption has been extended to 15th November, 1936, and rate of interest reduced to 4 per cent (taxable) from 10th November, 1936. Option of repayment at premium of 5 per cent at any date after 15th November, 1936, on three months' notice. (c) Issued at par on 15th May, 1938, repayable at par on 15th April, 1934, repayable at par on 1st April, 1939 with option of 5 per cent premium. (d) Issued at par on 1st October, 1932, redeemable at par on 30th September, 1943, out of a Sinking Fund to which 5 per cent of the total issue, is due to be placed annually. (e) Carry in the event of a winding up preferential claim to cumulative dividend and to one fourth of the balance of assets available. (f) Entitled to participate in dividends only up to 10 per cent per annum after the preference shares have received accumulated dividend of 5 per cent, and ordinary shares 10 per cent. Surplus dividend profit remaining after these dividends will be apportioned in three equal parts for payment of further dividends to the three classes shares. (g) In payment of dividend of 4 per cent, preference shares for half-year ended December, 1937. (h) Bonus for every ordinary shareholder the amount of Rs. 125,000 to be paid to the end of December, 1937 outstanding. (i) Includes 1153 male shares of Rs. 75 bearing interest at 4 1/2 per cent. TREASURY BILLS

Central Govt.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 23rd May 1944. Total amount offered was Rs. 13,30,00,000. Tenders at Rs. 99-14-6 per cent. were accepted in full and those at Rs. 99-14-3 per cent. were allotted approximately 42 per cent. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Rs. 0-6-10 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 30th May, 1944 in Bombay upto 11 A.M. (Standard time) and upto the close of business on Monday, the 29th May, 1944 at other centres. Successful tenderers should make payment on Friday, the 2nd June 1944. Other conditions are as usual.

During the week ended the 19th May 1944 Government of India Treasury Bills for Rs. 3,85,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Planning the Plan

The first report on the progress of Reconstruction Planning issued by the Government of India, though it does not contain clear-cut proposals, which are indeed too much to expect at this stage, furnishes on the whole heartening reading. It holds out convincing evidence that the Government of India are serious in their professions of concern for postwar reconstruction and that they intend to make such reconstruction the beginning of planned development of India's economic resources. Considering that the Postwar Reconstruction Committee, when it was first appointed a few years ago, was suffered for a long time to remain more or less completely idle without any attempt to formulate, much less grapple with, its tasks, the methodical and realistic approach that is now being made is a refreshing contrast. The development of ideas regarding postwar reconstruction in recent times accounts for the striking change. When the war was young, postwar reconstruction was thought of more in the light of the experiences of the past than in consideration of the special requirement of national and world economy after this war will come to an end. It naturally took time for people to realise that on this occasion not only will the problems be far different but that the needs and desires of even the great Powers will call for an altogether different set of measures by way of postwar reconstruction. The Report observes, in language reminiscent of the opening sentence of our last week's leading article, that "during this war, the emphasis has shifted from the purely political to the social and economic aspects of the postwar reconstruction and the programme of reconstruction is far wider both in its scope and in origin."

Formerly, postwar reconstruction in the economic sphere was thought of mainly in terms of the liquidation of the war effort in general and the Supply Department in particular. After the last war this liquidation was carried out so precipitately and with so little thought for its repercussions on business and on the economic life of the country, that it was in itself a strong factor working for a postwar slump. The memory of this blunder suffices to emphasise the importance of effecting this liquidation with a great deal of forethought. The fate of the demobilised services on the last occasion also calls for special measures to provide them a kind of social security, to which in one view they have a stronger title than other sections of the population. In India, too, reconstruction was thought of more or less wholly in these terms and the peculiar position and circumstances of this country were thought to call for categorical assurances about the future of industries that had come into being to strengthen the war effort. So long as the Reconstruction Committee had such narrow views of the problems on hand, its activities could suffer postponement and delay. But the pressure of events, as of opinion both at home and abroad, has served to widen the scope and objects of reconstruction.

In regard to postwar reconstruction in India, it is well to remember that there are three different factors working for

more or less the same ends. The first is the need felt by the Great Powers, both in the immediate interest of victory over the Axis and the longterm requirements of avoidance of war, to provide for the wellbeing and contentment of all the peoples of the world. The second is the need felt by the Government of India to give the demobilised men and war industries a fair deal and to secure the general contentment of the people at large by attempts to cure the national economic system of its more serious shortcomings such as inadequacy of food production. The third factor is the increasing economic consciousness of the people of India and the growing strength of the industrial and business community in this country. The last mentioned must ultimately prove the most powerful of the three, especially if India should succeed in establishing a National Government of some sort in the Centre and in the Provinces. For, then, the popular demand for economic progress will find in the business community an effective mouthpiece. The Bombay Plan is in reality a prophetic expression of the working of the popular mind in the years to come. The signatories to the Bombay Plan have had the insight and the skill to sketch a plan of economic development, which can be expounded in terms of the standard of life of the masses and which at the same time will provide the community which they represent all the wider avenues of business activity, which its increasing strength and importance call for. This coincidence of popular and "capitalist" interest, though it has nothing unnatural or sinister about it, serves for misrepresenting the motives and purposes of the Bombay Plan. But as an objective factor in the future evolution of our national economy, its importance is undeniable, though for the present it is the feeblest of the three forces, so far as public policy is concerned.

A perusal of the first report of the Reconstruction Committee is helpful to a clearer perception of the relative importance of these three factors. An official publication of this kind naturally makes no direct reference to the Bombay Plan. It starts with a recapitulation of the aims and policies which have gained the acceptance of the United Nations and presents these aims and policies as the background against which our own plan of postwar economic reconstruction has to be drawn up and viewed. One can see that while the official mind works down from the plane of international objectives to the minutiae of our economic problems, big and small, the popular mind starts, as in the case of the Bombay Plan, with a decent minimum of the necessities of life for the average Indian. The foremost of the postwar aims of the United Nations is adequacy of nutrition for all the peoples of the world. It is agreed also that 'the primary responsibility lies with each nation for seeing that its own people have the food needed for life and health; steps to this end are for national determination'. The Hot-springs Conference also realised that to the extent self sufficiency is impossible, international co-operation is necessary. In the case of India, self sufficiency in the matter of food and clothing, and the primary necessities of life is by no means difficult to secure. So that, while for the official committees the work of international conferences provides the starting

point, the popular view of postwar planning starts with the standard of life of the average Indian.

The process by which the common goal will be reached in the face of the difference in approach should be extremely interesting. The Bombay Plan, it will be remembered, starts from an estimate of the increase in the annual national income required to secure the desired improvement in the standard of living. It distributes the increase so estimated among the three sources, namely, agriculture, industry and the services and proceeds to examine how each of the three items can be made to yield the necessary additions. The sphere of commercial relations with the rest of the world is touched only when the question of the increase in the principal crops comes up for consideration. Since the future of international trading relations is so much in doubt, the Plan contemplates adjustment to the changing conditions of the future. In the official report, however, agriculture and social security come last, though this is not necessarily an index of the relative importance which the official mind attaches to the various questions on hand. The liquidation of the war effort and the provision of employment and security for ex-service men are in the eyes of the Government their first task in the postwar period. With these goes the problem of disposals and contracts. As for the larger economic problems, Lord Wavell accorded priority to communications; and only after communications come trade and industry, agriculture and social security. But however begun or worked out, the schemes do need integration in terms of a compact national economic system. The one notable result of the official approach is the proposal to give in the future planning of our economic life special preference to ex-service men, in the Railways and in schemes of land development. Public reactions to this proposal have to be watched and need not be anticipated. But what is important is that the Government should recognise that what they consider to be a fair deal to ex-service men can appear likewise to the rest of the public only in conditions of adequacy of employment for all classes. The care with which special funds have been built up for this purpose is commendable.

In the case of the other heads in the problem of reconstruction, the points of contact between the popular and the official

ideas of planning emerge more clearly to view. For the broader national considerations are inescapable when one deals with transport and communications or public works and electric power. In agriculture, the need to increase production in general and food production in particular is paramount. The enquiry conducted by Dr. Burns into the possibilities of narrowing the difference between the yields per acre in India and those in other countries will be found to open up some interesting possibilities. An increase in cereal production of 50 per cent is estimated to be possible without an addition to the acreage. Since better manuring is to be the biggest contributor to the increase, the conservation of manures and the manufacture of artificial manures are extremely important. The latter is important for providing demand for electric power. And in the consideration of schemes for increase of hydro-electric power, the possibility of electrification of railways and of stimulating new industries with a view to ensure the consumption of electric power has to be examined. Likewise, the spread of electricity in rural areas, that is, what are called large villages, and the encouragement to utilisation of electricity for water lifting and other purposes have to be planned out. The inter-relationships between the various heads become apparent when the details are worked out; and the stage will be reached when the Plan can be both compact and comprehensive.

It is in this view that we consider the first progress report to be heartening. Doubtless, the work ahead is massive and intricate. As the various Committees progress with their work, issues will come up, on which public opinion must express itself. At the same time, unofficial enquiries must also be proceeded with, both to educate public opinion and to provide correctives to the official view. Too many in this country make the mistake of thinking that an all-India Plan can be produced, as by magic, by a committee of experts. Neither the scope of the Plan we need nor the intricacy of the issues involved can justify that convenient belief. The Plan itself must be a process of natural growth and evolution drawing its sustenance from the total stock of the nation's economic wisdom. We trust that present policy of publishing the results of these enquiries at every stage will be followed in the future, so that the public as well as the students of planning in the country may make their contribution to the formulation of a wise plan.

MICA PIRACY ?

By CHANDMULL RAJGARIAH

The sum and substance of all that has been stated in connection with the "Mica Piracy" is that, on account of some aggravating factors, the scale of thieving has increased in recent months to such an extent that the problem really baffles solution and as a consequence thereof the mechanized miners are finding it very difficult to make both ends meet and perhaps will have to close down very shortly. A few of them have been stated to have ceased to function in the Mica world for the reasons aforesaid. It is, however, admitted that poignancy is added to the situation by the fact that theft occurs

in some cases with the active connivance of the employees of the big firms.

But nothing at all probative has yet been written to prove the accuracy of the above statements. In the absence of any statistics in support of the statement, it is unfair to say at random that illicit trade in mica has increased to the extent of making it impossible for bigger miners to continue mining profitably. Moreover, as far as the knowledge of the writer goes, not a single Mine Operator worth mentioning has closed

down his business solely or even mainly on grounds of theft of mica. It is, of course, true that as in every sphere of life, in mica as well, there is some amount of thieving; and some of the Mine Operators, especially those whose mine operating staff is badly corrupted on account of lack of supervision and other reasons, do lose a portion of their production.

It has been stated that at least 30% of the production of the mechanized mine operators is stolen in one way or another and the estimate has been based on the quantity of mica exported from Calcutta, as compared with the output on which taxes are paid to Government. But the percentage deducted from the export figure and the output, on which taxes are paid to the Government, cannot possibly be even approximate. Because taxes are paid only on the production of Bihar, whereas export includes mica from Madras, Rajputana, and at times from some other countries as well. In the last few years, colossal quantities of mica were imported into Bihar from Rajputana and Madras; an excess of 30% shown in the export figures cannot possibly suggest any illicit practice in the trade.

Moreover before the promulgation of the present Mica Control Order, there was the Mica Act of 1930 in force and in view of the said Act and this Control Order, every bit of mica stolen has to be legalised before it can be sold in the open market by showing it in the account books of different dishonest miners as production from their own mines, and as such tax also has to be paid on such illicit mica as well.

In pre-war days there never was a uniform demand for mica from foreign countries. As a matter of fact, the mica industry had to experience a very long period of slump before the present war, as a consequence of which there had been accumulation of large stocks, specially with the mechanized miners, which were cleared off when demand increased.

Under the circumstances and taking into consideration all the above facts, if the situation is judged properly, a difference of 30% between the exported quantity and the estimated production on the basis of the taxes paid to the Government will be found to leave only a negligible quantity which can be attributed to theft; and such a quantity cannot be treated as an evidence of large-scale piracy.

It has been further emphasized that "It is strange that so far the Government have paid little attention to the definite recommendations of the Kodarma Mining Association which is representative of 90% of the output of Bihar Mica. It is predominantly Indian, only one firm being Anglo-American. Its views are that no permanent solution can be found unless, as in many other industries, the actual producers are exclusively allowed to sell their own output and licenses to trade are issued only to Mine Operators."

Firstly, it is very doubtful whether the Kodarma Mica Mining Association is representative of the 90% of the Bihar output of mica. It is predominantly Indian, no doubt, with the exception of only one Anglo-American concern, wielding great influence over the association. Even if the association is representative of 90% as claimed, the views expressed by the association are not unanimous. Moreover, most of the actions of the said association referred to had been hopelessly unconstitutional. For example in one of their recent meetings of the Executive Committee they passed a resolution suggesting the total elimination of Dealers as a class with an ultimatum threatening the complete closure of the mechanized mines in case this request of the association is not heeded to by the Government. Copies of this resolution were circulated amongst the various Government Departments concerned. The resolution was moved by Mr. D. B. Sahana and seconded by Mr. Watson (representative of the only Anglo-American concern referred to above).

The writer fails to understand as to how such a resolution of vital importance could be moved and passed in a meeting of the Executive Committee and, further more, how it could possibly be circulated without the approval of the General Body. Mr. U. R. Moseley, Chairman of the Joint Mica Mission in reply to the above resolution wrote a letter to the Association a copy of which was sent to the writer and to some of the big mechanized miners who are also the members of the Kodarma Mica Mining Association. Mr. Moseley enquired in his letter if the resolution was a unanimous one and he wanted to know the names of those who were for and against the resolution; but it is not yet known as to what reply has been given to Mr. Moseley. Further, it is very interesting to know that there were only five members present in the meeting out of which one dissented; and amongst those who were not present

in the meeting, some leading mine operators, expressed their views in writing to Mr. Moseley against such a resolution.

At a later date when the Hon'ble Labour Member Dr. B. R. Ambedkar visited the mica field, the same association in the memorandum presented to the Hon'ble member urged a drastic reduction in the number of dealers to a figure consistent with the requirements of the industry. In this particular case, they seemed to have changed their minds regarding the total elimination of such Dealers. Now, again, in one of the recent articles in a journal, the views of the Kodarma Mica Mining Association have been expressed in a different way suggesting the monopoly of this business to mechanized miners only.

In a recent meeting they have passed a resolution asking the Joint Mica Mission to increase their prices by 50% and such increment to be given only to the Mechanized Miners. The writer fails to understand on what basis the association on behalf of the mechanized miners claim this preferential treatment and how can it possibly be given effect to. The resolution which runs as follows was also proposed by Mr. D. B. Sahana and seconded by Mr. Watson and passed unanimously:

"That in view of the greatly increased, and still increasing cost of mica production, due to higher and steadily rising salaries, wages and dearness allowances, and to the increased costs of machinery, spare parts and mining stores of all categories, 'coupled with the steady loss of the cream of production to the mica thieves,' this Association views with deep concern both the heavy losses its members have sustained during the past several months and their inability any longer to recoup the cost of their production, and therefore urges by way of relief, that the Joint Mica Mission should meet the situation by increasing to 50% the price premium paid by them, said increase to be retroactive to January 1st of 1944 and paid solely to the producers of mica, upon whom alone falls this heavy loss, as well as the burden of producing the bulk of the mica required by the United Nations.

"That any increase in price granted by the Mission should be strictly denied to all except the producers of mica since a general increase to the trade as a whole will not only further stimulate thieving and therefore defeat its purpose, but will unduly favour that large body of dealers whose supplies are being produced at no such increase in cost to anyone."

If it is remembered that according to these interests at least 30% of the production is being stolen and that is the cream of the production its value should be more than can be compensated by the increase asked for.

It is possible that the Kodarma Mica Mining Association itself does not know what is really lacking or what sort of protection is needed. When the Government has agreed to their proposal of forming an Enquiry Committee to examine the long term and the immediate problems of the industry, their trying to complicate things by making sweeping statements and fantastic claims will make things all the worse for them and for the industry.

While a Committee of Enquiry is impending, the attempt on the part of every one should be to help impartial findings and judicious decisions to be reached. Since so much is made to rest on the bogey of mica piracy, it is necessary that the public should know what it is.

The problems of the mica industry have of late been very much in the public eye. While normally an industry should welcome lively public interest in its problems, in this instance, the publicity which the mica industry has had would seem to be of the propagandist kind. It is one thing to describe the ills from which the industry is suffering. It is quite another to exaggerate the importance of some of them and coin catchy slogans calculated to create in the public mind a bias in favour of a particular set of measures. When the public is told that the mica industry is today suffering from large-scale theft and wasteful methods of mining, both the sanctity of private property and the conservation of national resources would be thought to require the most drastic measures for improvement of the present position. The public can have no idea either of the exact magnitude of these evils or of their bearing on the efficient conduct of the industry or of the dangers to which the industry might expose itself in a frantic attempt such as is favoured in some circles to extirpate these evils. While statements of doubtful accuracy are numerous, especially when ulterior motives are there correction seems to be most necessary in the case of "mica piracy" and "mica conservation".

three passengers

FOR EVERY SEAT

It is a long time now since there was a seat for every passenger. Now it's three passengers for every seat in nearly every compartment of every train that ever leaves a platform.

Add to that the difficulty of persuading a tonga or garri-wallah to take you to the station for twice the normal fare—of getting a ticket at a crowded ticket office—of finding your luggage and a porter to carry it, and you start to wonder whether travel is worth while these days!

For even when you are safely on the train, you have such difficulties as that of obtaining food at stations. It is neither as cheap nor as plentiful as it used to be. For women especially, travelling to-day is more

uncomfortable than ever before. Women's compartments are fewer, and over-crowding for them is even worse than for men.

No, travel is not what it was. Nor CAN it be in wartime when the Railways have other important tasks. They have to transport food, clothing, fuel and other supplies for you in addition to military traffic.

Rigorous Refusal

Interest in the political future is nipped in the bud by Mr. Amery's reply to ten Labour M. P.'s. From the market angle disclaimers as to intentions have little value. The extension of term for the Central Legislature like the postponement of the next session can only be explained in terms of Mr. Amery's refusal to let India have elections in wartime. While it is freely suggested that Canada may experience another war election as the liberal leader wants to check the growth of the CCF it is remarkable that elections are avoided, even in Provinces where they are necessary. The Punjab Unionists have no option but to carry on the controversy with the Muslim League because the Constitution allows only the expansion of a Ministry. The refusal to release Congress leaders is traceable to Mr. Amery's well-known views on the responsibility for the August disturbances. It is, however, difficult to assume that Congress-League co-operation is improbable. The publication of the undelivered letter of last summer has brought out the main possibility of an agreement in India though the co-operation desired by Government on its terms appears remote. That the general desire for an election shared by the non-party leaders' conference is flouted by an appeal to Parliament's decision in 1941 is established by Mr. Amery's conclusion as to climatic conditions in India. It is however strange to find that the deadlock is regarded as a result of the August, 1942 resolution. The deadlock arose when seven Congress ministries vacated office and took its main features when the 1940 August offers were rejected. The neutrality of the Muslim League which anti-dates the Cripps offer is admittedly a factor in the deadlock. Private suggestions as to the immediate tasks of the Congress party have not gained in value from Mr. Amery's combined refusal to order an amnesty and to hold elections in India. The majority would readily conclude that the refusal to let the Indian voter exercise his rights does not accord with the glowing descriptions of provincial autonomy given to American reporters by Lord Halifax to the point that formal comparison as between American States and Indian Provinces was instituted.

Public Health

From the brief message as to the Public Health Ordinance it is clear that the Provinces alone are now concerned with public health. The Ordinance authorises interference with local self-government for approved purposes. But that is the limit of the Central Government's interest. Public health is the subject of investigation, and the only possible direction in the Ordinance. Local governments are thus free to encourage or neglect public health. Their budgets, therefore, would not re-

fect in any measure the new-found interest in public health of another Government though the Ordinance is, to some extent, an admission that decentralisation in health administration has gone too far in India. The immediate results can scarcely be indicated though a system of block grants to the Provinces, to be distributed in turn, would be the only way of effecting improvements in public health. This may not encourage the belief that health insurance or even insurance for a small class of organised factory workers would be introduced in India. Whether a health cess corresponding to the education cess is desirable may be asked when the main object is to take health administration away from local bodies. The main aim seems to be the exercise of such control in regard to epidemics etc. The direct influence of emergency measures in Bengal where 520 new hospitals providing 20 to 100 beds each can be seen in the permission given to increase provincial staff against epidemics and supplement local measures, as shown in the increase in the preventive staff in Bengal from 2,950 to 4,500. The Central Government's own functions are limited to advice but taking over any branch of municipal or local board administration under the Ordinance should necessarily lead to a question as to expenditure. To claim compensation from the authority superseded would be ordinarily difficult while a special surcharge on the rates would not be acceptable either to the rate-payers or the collecting agency. How far local governments would go in the matter of extending and improving health services can only be indicated in regard to their own reconstruction plans. So far as the Provinces are concerned, public health as distinct from medical relief, is not a considerable head of expenditure. The ordinance is not going to alter proportions radically though disaffected ratepayers may indulge more freely in protests and petitions. If the justification for the new ordinance is not lacking till the Central Government institutes a scale of grants as for rural reconstruction or on the more substantial scale of allotments for civil defence expenditure decisive benefits are unlikely.

Cawnpore's Problem

In 1908 Cawnpore was described officially as the most congested city in the U. P. An Improvement Trust was set up in 1909 but the real work of expansion was undertaken only after Sir Henry Ledgard's Committee reported in 1917. Though the Trust has achieved something in 24 years by getting through nearly 30 schemes it is urged that the great progress of industry in Cawnpore has made slum clearance and new housing equally important. In the four years of war the Trust has been forced to stand aside. Development has taken place as important factories have been set

Banking in the Dominions

Banks in the Dominions in 1943 shared the experience of British banks in most respects. Larger deposits with the Commonwealth Bank call attention to the drop in the discounts and advances of Australian banks. These deposits rose in a year from £54.9 millions to £124.1 millions and were made over to the Government for its war finance. Since the average valid of advances to deposits was 48.9 per cent it cannot be said that trading banks lost much, particularly as deposits not bearing interest exceed the deposits bearing interest. Bank profits have been lower on account of the war and this important difference must not be overlooked nor must the very striking increase in savings banks deposits escape attention. A rise of 32 per cent in the year ended October, 1943 indicates that the increase of 17 per cent in the case of the commercial banks' deposits was surpassed. New Zealand too reports an increase of 17½ per cent in respect of bank deposits in a year. The addition to resources explains the increase in securities held. Advances fell and Government when it wanted money turned to the Reserve Bank. The increase in the note circulation was doubtless a factor in the rise in bank deposits last year but war receipts have supplemented the normal addition to overseas balances. The same progress in regard to deposits is to be noted in Canada where bank advances fell away and the securities held showed a remarkable increase. The increase under call loans to the 1939 level stands out as a special feature like the advances made to subscribers desirous of taking up the Victory loan. Canada, too, is familiar with Treasury deposits receipts which are grouped with securities. Treasury deposits now appear as the largest single item in British bank statements though the treasury bill offer tends to be larger than expected. Reduction in dividends for 1942 despite the subsequent growth of profits is peculiar to Canadian banks but the explanation is found in E.P.T. Rediscout rate of 1½ per cent which was lowered is a sign that Canada is going to keep down interest rates. South Africa shared in the banking expansion last year in spite of the fall in gold-mining output. The two major banks, Standard Bank and Barclays Bank (D. C. O.) reported an increase of 30 per cent in their deposits last year. The reduction in private borrowing explains the increase in balances with the S. A. Reserve Bank. At the same time, the reserve of credit has been favourable to the Union Government's new internal loans.

Oilcakes and Agriculture

The need to increase the productivity of Indian agriculture is well-known and the recent fertiliser conference held at Delhi contemplated the starting of factories for the production of artificial fertilisers. While the utility of inorganic manures for agriculture has been acknowledged to be great the difficulty of procuring plants etc., from abroad during war time necessitates the greatest possible use of indigenous materials for manure. Oilcakes are excellent manures, and there is an urgent need for an all-India manurial policy directed towards the maximum utilisation of oilcakes at present wasted or exported. In an article on "Oilcakes and their uses" in "Indian Farming" (November, 1943) Mr. J. A. Daji of the College of Agriculture, Poona, gives interesting details regarding the uses of the oilcakes as cattle feed and manure. 45 to 50 million acres are under oilseeds and the annual output

in the neighbourhood of 8 million tons. India produces a greater variety of oilseeds than any other country and exports one million tons valued at Rs. 20 crores every year. While the oilcake production is estimated at 1½ million tons per year the bulk of it is exported to foreign countries where they are used for a variety of industrial and non-industrial uses. There has been a clamour for discouraging the heavy exports of Indian oilcakes, but till now no planned attempt has been made. Mr. Daji points out the enormous importance of oilcakes for improving the cattle breed in this country. Average chemical compositions of nine oilcakes are given in a tabular form. The nutritional value of oilcakes is also examined with reference to different types of oil extraction. All oilcakes contain moisture to the extent of about 10%. Albuminoids are particularly useful for young growing animals as well as cows in calf or giving milk. In order to give a correct idea of the nutritive value of the different oilcakes a table analysing the cakes from the standpoint of nutrients is also given. Oilcakes are devoid of vitamins and none of them contain vitamin C while the content of vitamins A and B are very small. They contain enough mineral matter needed for the cattle and though poor in lime they are rich in phosphoric acid. As manures, oilcakes are not as yet fully exploited. The value of oilcake lies in the fact that it contains a good percentage of nitrogen and small quantities of phosphoric acid and potash. When oilcake undergoes decomposition in the soil several plant nutrients are liberated. Mr. Daji points out that oilcakes give better results on clay than on sandy soils, and that it is better suited to irrigated crops. The manurial contents of oilcakes are given and the merits and demerits of principal oilcakes are explained at good length. This article offers valuable information to the cultivators regarding the proper utilisation of oilcakes for manuring and feeding the cattle. An approximate estimate of the valuable nutritional and manurial materials wasted every year can be calculated on an all-India basis from the tables furnished. It is evident that a good deal of effort shall have to be put forth to conserve oilcakes and educate the public regarding their correct application to agriculture.

pulp and paper. The trend in Canada was not dissimilar. That inflation accounts for the very limited improvement in industrial production in Mexico and Chile may be inferred readily in view of the facts and figures available in India. But the adjustment of monetary policy did not bring about any steady increase in Sweden's production last year. A fact of some significance is the drop in coal production in the U.S.A., Canada and the U.K. While

the close correspondence with the trend in India is indicated, the steady rise in U. S. oil output has supported hopes of more oil for the war. Improvement in zinc, copper, lead and production, belong to 1943 though the increase in U. S. mineral output is less striking than the rise under steel. Figures suggest that production increased in the case of cotton textiles in India only but the increase under food was hardly enough in any country.

let the day of Blessing be a Blessing to the Poor

WEDDINGS are the gayest of all ceremonies and when you and your friends are so happy and radiant, it is a sad reflection that, so near your kind and generous lavishness, there is still so much real WANT. Yet it is so, and for this reason, socially progressive people no longer allow waste to mar the perfection of such occasions. They feast their guests well, but reckless waste is not permitted. In this way, without detracting in any way from the joyousness of the happy day, they fulfil an inescapable obligation to the poor—who still find food so hard to get.

WE ALL CAN, by reasonable economy, extend our blessings to the poor and needy without spoiling our own enjoyment. If we all follow this wise example, there will be fewer needy people in India who find food difficult to buy.

food for all

The Company has been formed for the purposes of transacting Life, Fire, Marine, Accident, (Workmen's Compensation and generally all kinds of insurance and re-insurance business.

Applications for shares should be made on the form of application accompanying the Prospectus or in form similar to the same and be forwarded to any of the following Bank Offices together with a remittance of the amount of deposit namely Rs. 15/- per share (including Rs. 5/- per share as premium):—

The Bank of Jaipur, Ltd., at its Office in Cook's Building, Hornby Road, Fort, Bombay, or in Laxmi Bhuvan, Kalbadevi Road, Bombay, or at 65, Kazi Sayed Street, Mandvi, Bombay, or at its Head Office and Branch Offices in Jaipur State; or the Central Bank of India, Ltd., at its Branch Offices in Ahmedabad, Calcutta, Delhi, Karachi, Lahore, Lucknow, Madras and Patna.

(Cheques drawn on Banks at places other than those stated above should include the necessary amount to cover collection charges at ¼%.)

APPLICATIONS SHOULD BE MADE IN UNITS OF FIVE SHARES OR ANY MULTIPLE THEREOF. The subscription list will open on 29th May 1944 and close at 1 P.M. on 3rd June, 1944.

Copies of the Prospectus and/or forms of application can be obtained at the registered office of the Company or from the above-mentioned Bank Offices.

Jute Prospects

The experience of the jute industry in the U. K. under control has not been overlooked in connection with the imposition of price control by order last month. The Indian Jute Committee's bulletin for April contains an extract from a trade review which describes the labour shortage and the reduced intake of raw jute. The increased use of substitute fibres is attributed to the shortage of jute manufactures caused by a fall in production. The higher wages paid by Dundee mills were an element in the increase in costs. But a sentence in the trade review may well occasion a surprise here. The Indian jute mills have paid good dividends, and in some cases, given bonus shares. This statement appears to contradict well-received opinion here as to the difficulties encountered by mills so that the mills which could maintain dividends in 1943-44 at the 1942 level are in a small minority. Higher prices were received by Dundee's jute manufacturers after the year began. Improved trade demand for goods after May led to the obtaining of maximum price-order books are said to be good and the main problem for 1944 appears to be labour supply. At any rate, the coal crisis which has dogged the Indian jute industry for ten months did not affect the Dundee mills. The difficulties of the Indian mills were not unknown to Dundee, for the review stated that owing to the state of trade, the Indian mills were not in a position to insist on the payment of the maximum price in July. The assumption that Indian prices for jute and jute manufactures throughout 1943 have been moderate receives some support from the mention of speculation being eliminated. The Indian Jute Mills Association's annual meeting produced many references to requisitioning. The problem was peculiar to Calcutta since the U. K. industry encountered only labour shortage. The war's effects on the world's consumption of jute are plain enough from the reduction in Indian jute exports. The drop is not likely to be permanent for jute remains cheap and acceptable. Wartime production is sub-normal reckoning by the intake of raw jute so that peace prospects are to be gauged without difficulty in the case of jute mills.

The Miner's Health

In the Chief Inspector of Mines' report for 1941 the most striking feature is the improvement in health in the mining areas. The birthrate rose, infant mortality fell and the general deathrate fell as compared with 1939. The mining population enjoyed a better standard of health than the general population in the Asansol Mines Board's jurisdiction. The incidence of sickness certainly was influenced by an outbreak of malaria but the sickness rate among colliery employees and their families was as low as 9.9 per cent in December. Collieries undertook a survey of medical facilities in order to bring them up to the standard prescribed in the by-laws. In order to guard against epidemics of cholera, the water supply was protected. Inoculation was general; so was revaccination which became a routine measure in the collieries. As for maternity and infant welfare the report refers to 13 welfare centres serving a population of 140,000 in 45 collieries, 55 villages and one town. Leprosy work was carried on with the help of 13 clinics and 98 cures out of 2,850 cases treated were recorded. Anti-malaria work in areas where seasonal virulence was noted was conducted. In the Jharia area

though the death-rate rose, the infant mortality rate fell substantially and the general standard of health was better than that of the general population. Jharia too reported outbreaks of cholera and mass inoculation was restored to Maternity and child welfare centres were maintained. A housing survey was begun. Since 1941 was better in regard to rainfall, the water supply in the mining areas turned out to be better. Jharia's Water Board provided about 555 million gallons of water, the greater part to collieries. The District medical staff's reports and recommendations were duly taken note of by the Mines Board. Ambulance and first aid is important for miners and the Dhanbad-Jharia St. John's Ambulance Association formed four new divisions. More trained candidates passed out than in the four preceding years. Competitions were held and the mining staff of Andrew Yule & Co.'s collieries arranged an inter-colliery competition besides the three held during the Health Exhibition.

The increase under sand stowing activity in 1944 is less important than the training carried out at the rescue stations. At Jharia and Raneeungee alike the vans and

equipment were got ready with trained men and the total outlay was Rs. 2,15,000 for each rescue station. The report also speaks of two labour unions. The Colliery Labour Union is credited with 9,301 members consisting chiefly of miners and skilled and unskilled labourers. Rates of subscription vary from 3 pies to 4 annas per month. The Association arranged lectures like the Indian Miners Association (a registered Union with 7,500 members) and interested itself in claims for compensation. As to production figures etc. the report is silent but 633 collieries (20 more than in 1940) worked in 1941. The investigations into accidents carried out by the Department formed a part of its routine work. It was only the increase in accidents on haulage roads that claims notice in the report which deals with the more widespread use of safetyhats.

Indian Mica

Since the Labour Member convened a conference of mica interests in Bihar and one branch of the mining industry has passed or is to pass under control, it has been urged that mica as the chief mineral export, with India dominant in world

THERE'S DANGER IN FOOD

Cholera is remarkable for the lightning rapidity with which it strikes its victims.

Impure water is the chief source of infection. Flies also carry the germs and contaminate food; in particular they swarm round damaged and over-ripe fruit and vegetables.

Be very careful to keep food covered and eat only what you know to be pure. Always boil drinking-water and unpasteurised milk. For additional safety any doctor will readily arrange to have you inoculated, free of cost.

In India, Cholera takes a yearly toll of 96,000. Its chief symptoms are sudden collapse accompanied by acute diarrhoea, vomiting and cramps in the legs and abdomen.

Should these symptoms become apparent in anybody you know, send for a qualified doctor with all possible speed. By so doing, you better the patient's chances of recovery and help to check the spread of the disease.

EDUCATIVE ASSISTANCE

A correct appreciation of the best methods of preparation, an understanding of the effects of the other constituents in the material and an extended knowledge of its uses, are essential to all present and prospective users of Concrete.

To provide this basic knowledge, the Concrete Association of India was formed in 1927. Through its staff of qualified Engineers, Overseers and Mistries and by means of publications, practical demonstrations, training schools, and practical assistance on the job, the pooled experience of the industry is made available to responsible officials, architects, engineers, surveyors and the general public interested in any form of building construction.

In addition to their normal duties, the Association's staff are now helping the Fighting and Civil Defence Services to use cement in the most economical ways possible.

For full particulars write to Dept. I. J.
The Concrete Association of India, Victoria House, Calcutta.

trade, has special claims to regulation and development. The deposits, mining methods and the trade organisation have been noticed along with the relations between the electrical equipment industry and mica. It is now ranked as an essential mineral because of its resistance to electricity. Indeed it is as important as copper in the electrical industry. For condensers and for insulating material only the highest quality mica is wanted. For certain purposes, the use of mica like that of shellac has increased rapidly. Scrap or ground mica finds an application in the building trades as well as the electrical industry. Since India is the chief producer of muscovite the export trade in the last three years has become important especially as India is the main source of sheet mica. But the biggest mica producer is the U.S.A. As for Madagascar it is more important than Canada as a source of phlogopite (the better, amber variety of mica) and South Africa is latterly an exporter on some scale. As the title muscovite shows the U.S.S.R. is a big mica producer, claiming 23 per cent of the total production as against 20 per cent in India in 1935. But the proportions must have changed owing to the war; hence the concern of the United Nations with India's mica.

Strain in China

The progress of the Jap offensive brought out many queries as to the scope and intensity of China's war effort. More frank references to inflation became the rule and some found the internal political differences a cause for definite criticism. Underlying the inflation is the scarcity engendered by the disappearance of all foreign trade. When the coast was lost trade disappeared; the customs revenue likewise was lost. As the note issue expanded in response to the financial requirements of the government in Chungking, the characteristics of inflation were easily established. Foreign credits helped internal borrowing to some extent but Government started to collect the land tax in kind by fixing provincial and county quotas and using the food grains for the Army. After Britain's losses in the Far East interest in whatever happens to the Chinese currency is regulated not only by the desire to build up a new stake but to see the Government of Free China succeed in its enterprises. While taxation has been increased war wealth has increased, and the failure of price control is established. Of course China's natural resources in relation to future demands are far larger than those of India, and planning under the auspices of an independent government offers special possibilities.

Aid to China promised by the U. S. President may take many forms and the National Resources Commission may get the equipment for developing both the iron and steel industry and synthetic oil production. Major problem for China during the war is the loss of railways in a country with a low route mileage in proportion to its population. While much was heard last year about export trade plans and the advance of China's industry it is fairly clear that the absence of any figures (figures relating to China can be had but few as to China) makes it hard to indicate the scale of inflation. From a recently published note as to bank deposits and note issue in the war period, the biggest increase in 1942 and 1943 appears to have taken place in Iraq. The dissolution of the Stabilisation Board may have been without effects on the external value of

the Chinese dollar but a hundred per cent devaluation was secured easily this year by U. S. citizens who found the progressive rise almost intolerable. Adjustment of the rate to one dollar equal to 2½ U. S. cents makes it obvious that the Chungking dollar is not worth 3d. (the conventional value in sterling before Japan declared war). The U. S. Vice-President's mission to Chungking may, however, produce special results outside the field of small-scale co-operatives and lead to the trotting out of the theory that foreign exchange for the Bank is generally of less value than presumed. The loans made in 1942 were meant to curb inflation and stimulate production. If the latter has been secured in a way, it is manifest that the loss of overseas trade and income has accentuated the disturbance caused by the fact that the note issue (twelve times the prewar size in 4½ years) was directly responsible for the admission that the Chungking

price-level rose by 60 per cent in two months (January and February). It was urged in defence even in March that China's economy was still largely medieval and therefore able to stand more than a modern structure while difficulties in the way of enhancing taxation were mentioned when there was a reference to leniency towards the well-to-do and war profiteers in China.

Changes in Exports

A marked increase in India's seaborne exports during January makes it clear that the increase under imports in December and January was accompanied by improved shipping facilities for exporters. Though exports are not very much above the 1942 level, the improvement under certain imports is of distinct advantage to industry. The larger takings of dyes and colours certainly contribute to prosperity in the

textile industry like the increase under raw cotton while the increase under mineral oils is of material benefit to any country at war. From the figures available, it is clear that oil is the chief import and doubts provoked by the relaxation of import control certainly have no basis as the only noteworthy increases are under imports of drugs and medicines and machinery. The continued increase in imports of tobacco and wool is a distinct advantage to the secondary industries, one of which pay an excise duty. On the export side the arresting feature is the sharp rise in exports of jute manufactures. Of late the really important exports are jute manufactures and tea and the increase under both in 1943-44 (ten months ended January) warrants confidence as to the export outlook. Though cotton manufactures acquired considerable importance last year, the decrease largely due to ex-

MORE TRIBUTES TO

No. 2

Godrej

28th April, 1944.

M/s. Godrej & Boyce Mfg. Co., Ltd.,
Lalbagh, Parel, Bombay.

Dear Sirs,

Your Safe about 28" high, owned by us, was razed to the ground by the catastrophic explosive fire and remained in intense fire for a long time. On having the safe opened by you it is found that it withstood the monstrous fire admirably, and our valuable ornaments, notes, etc. were recovered intact from the safe. It gives us pleasure to give this certificate and to tender our congratulations.

Yours faithfully,
(Sd.) SONI BHAGWANJI MONJI,
Ganmukh Bhuvan, Mandvi, Bombay 9.

Vishrani Nivas,
Matunga, Bombay, 28th April, 1944.

M/s. Godrej & Boyce Mfg. Co., Ltd.,
Lalbagh, Parel, Bombay.

Dear Sirs,

In the devastation caused on account of the terrific explosions followed by intense fires such as have never been seen in Bombay, our office premises at Dana Bunder collapsed and brought down with it two of our Godrej Safes which were on the 3rd floor. These Safes were nearly 30 years old, and they could not be removed from the debris till on the tenth day. Realising fully well that a safe like any other thing has its own limitations, we were fully prepared for the destruction of our valuable documents, insurance policies, ornaments and currency notes, which were in the safes. We were therefore overjoyed when on opening the safes in your factory we saw that all our valuable belongings in the safes had remained in a condition which has to be seen to be believed. The papers were no doubt darkened by the intense fire, but beyond this the numbers and text, etc. on them were clearly visible, and our ornaments came out intact.

We cannot express to you sufficiently our gratitude and we wish your firm ever increasing prosperity in your valuable work.

Yours faithfully,
Per Pro Velji Lakhamsi Nappoo,
(Sd.) PREMJI VELJI,
President, Grain Merchants' Association.

GODREJ & BOYCE MFG. CO., LTD.

Offices and Agencies all over India.

CALCUTTA: 102, Clive St.; BOMBAY: 51, Churchgate Street and 299, Kalbadevi Road; DELHI: 168, Chandni Chowk; MADRAS: 164, Broadway; LAHORE: Messrs. M. P. Dastur & Co., Bunder Road.

Godrej hold a long record of resistance against fire and burglars. To their prized possession of innumerable tributes are now being added many further proofs of gratitude: Here are some more of the heroic accounts rendered by GODREJ SAFES during the conflagration that blazed after the recent ammunition explosions in Bombay. And no safe-maker could have expected these stalwarts to succeed in saving their valuable contents in such an unprepared for emergency that baffles the imagination: days and days against the fury of relentless tongues of fire—battering falls—the soaking heat of the engulfing debris of buildings burnt down, without any effective help from fire-engines.

For safe-custody of vital papers and other valuables, the importance of reliable security equipment cannot be overstressed. Governments, banks, business houses and the public throughout India specify "Godrej", because they know that better protection cannot be obtained.

BONE GLUE

The adhesive properties of this preparation are extremely powerful, and resistant to exceptional conditions of heat and moisture. Joiners, Cabinet-makers and book-binders find this glue most economical and easy to use.

One of the Largest Nationalists' Bank
in India

Managing Director:
Dr. N. C. DUTTA, M.A., B.L.

In my office, I have an assistant whose own reactions provide for me a true and direct measure of the reactions of my readers towards my comments and criticisms, my whims and fancies. He hardly understands anything of the technical aspects of the articles in "Indian Finance," but he has a keen eye for what I may call the commercial or popular side of expositions and interpretations. He accompanied me in my last visit to Bombay and, after staying there a few days longer, has just returned. He is pleased with the last three instalments of gossip as reflecting what he himself saw and noted in the Western Capital. "Our readers are quite gratified and amused," he assured me and added that "the tit-bit about managing agents of cotton mills versus shareholders was particularly appreciated." He is however, greatly puzzled by a problem arising from this discussion of cotton mill profits; and he posed his conundrum thus: "The cotton mills have been making phenomenal profits in the last three years. These profits constitute a record in the annals of Indian cotton mills. Even in the hectic boom that prevailed in the closing year of the last war and the two or three years after the last war, cotton mills in India did not make such profits as they are making now. But there is only one important difference between the prosperity of cotton mills in the last war and their prosperity in the present war. The Excess Profits Tax was levied not during the last war but after the war. Even so, the E.P.T. was not so high as now. The result was that the shareholders of cotton mills were able to participate directly and substantially in the big earnings of cotton mills. In the present war, however, E.P.T. was one of the first measures to be introduced. The E. P. T. has been stiffened in stages so that, for all practical purposes, no portion of the excess profit is available to shareholders. That is to say, in the last war, both cotton mills and their shareholders participated in the prosperity. In the present war, cotton mills are prosperous but not the shareholders. The managing agents who run the cotton mills are fully aware of this position. They know that selling cloth at high prices and making profits does not in any way benefit the shareholder. The consumer is fleeced; but the shareholder is not benefitted. Is it not the part of prudence and wisdom for managing agents of cotton mills to sell cloth at lower prices and be content with making modest profits? For, in any case, the shareholder will not be benefitted; and it should certainly be worth while to build up the goodwill of the consumer. The high price policy pursued by all cotton mills in India is not calculated to strengthen the goodwill of cotton mills with their consumers. On the other hand, they have contrived to put the maximum

burden on the backs of the consumers; and, all this for whose benefit? The beneficiary is the Government who walk off with everything of the excess profit. My puzzle is this: Why are cotton mill agents, many of whom are said to be staunch nationalists, acting in a way that makes them nothing but tax-collecting agents for the Government?"

With his uncommon commonsense, my assistant has secured a firm grip over the headlines in this story of cotton mill profits. This anomaly is all the more astounding as Sir Jeremy Raisman, who is the beneficiary from this policy of cotton mills, has repeatedly said that he would not mind getting a lesser contribution from cotton mills by way of E. P. T. if only the cotton mills would carry out a wide-range plan of reasonable prices of cloth for consumers. To the shame of our cotton mill magnates, it must be owned

that no move or initiative for the reduction of cloth prices came voluntarily from them. It was only after Industries Secretary, Hydari, ably assisted by Textile Controller, Vellodi, sat up and worked the cloth control in a grim and determined way, that the process of decline in cloth prices began. Even after the control had started functioning, the co-operation from some of the cotton mills has been not only faint-hearted but even evil-hearted. That is, there have been quite considerable elements in the cotton mill business that have stood out for higher prices and that have sustained the black market. It is no less important to remember that, in prices of cloth, the current prices are still too high in relation to the purchasing power of the masses. It may also be added that, what with the wiles and stratagems of the trader and the simplicity and ignorance of the average consumer, the benefit of controlled prices is not yet available to the whole community.

SALE OF SHARES NATH BANK LTD.

Head Office :—135, CANNING ST., CALCUTTA.

INSURANCE

of all
CLASSES
A Specialized
Country-Wide
Insurance Service

GOVAN BROS. LIMITED
INSURANCE DEPARTMENT
Seindia House—New Delhi
and

We may sum up the position thus:

- (1) The cotton mill industry in this country is predominantly in Indian hands.
- (2) The proportion of nationalists amongst cotton mill managing agents is far higher than the proportion in any other industry.
- (3) Yet, this industry with its predominantly Indian control and substantial nationalist proportion has fleeced the consumer to a far greater degree than has any other industry.
- (4) By thus penalising the consumer, the shareholders of cotton mills have not secured any corresponding benefit.
- (5) By acting in this way, our cotton mill agents have only served as so many tributaries to Government coffers.
- (6) They have also been able to reap considerable profit for themselves to the extent that managing agency commission is calculated before any allocation is made for taxes, and to the further extent that, in a large number of cases, the legitimate commission is supplemented in a variety of ways.

This is an indictment which I make more in pain than in anger. But it is necessary in public interest that this picture is drawn in true and correct colours. There is an imperative reason why this presentation of the case must be made without any delay. The reason is this. In my recent travels which have taken me south, north and west, I have noticed a gathering bitterness amongst all classes and in various provinces against the Indian cotton mill industry as such. Remarks such as the following are now quite common, and you hear them everywhere: "After this war is over, I shall not buy any Swadeshi cloth"—"To teach these Bombay and Ahmedabad fellows a lesson, I would rather buy Lancashire cloth than Indian cloth once peacetime imports start"—"These Bombay people are always the same. They exploit Bengal whenever they can. In the last war, they made us pay fancy prices for cloth. They are again making us pay fancy prices. No more Swadeshi cloth for me."

This is the kind of feeling that is growing in the country. Let me earnestly and solemnly warn our cotton mill managing agents that, by their present policy, they have sowed a wide and wild crop of ill-will and rancour. As one who has followed economic events in this country for over twenty-five years, I can realise how easy and simple it will be for enemies of Indian industrialisation to take advantage of this rancour and use it to the detriment of the postwar prosperity of Indian cotton mills. When one talks of mill-owners in India, the layman always associates the term with Bombay millowners. There are cotton mills in Cawnpore, Mysore, Madras, and Coimbatore. But mill-owners mean, for the average man, Bombay mill-owners. In most of the recent economic controversies in Bengal, one could not help hearing that Bengal interests were not the same as Bombay interests. If you ask for a further elucidation of this statement, you will be told that Bombay exploited the Swadeshi movement started by Bengalees; and that Bombay built its prosperity at the cost of Bengal. This kind of impression is general. I would like my friends in the cotton mill industry, particularly those shaping the destiny of the mills in Bombay and Ahmedabad, to remember that their policy in the last war and after the last war left many sores in many parts of India; and to realise that their policy during the present war has not only reopened these sores but made them more raw. It is upto them to take immediate measures to heal the sores. There must be clear and categorical evidence that, of their own free will and accord, and not under compulsion, they are executing plans for providing cloth for all at prices within reach of all. The example of Delhi Cloth Mills and of Buckingham and Carnatic Mills of selling cloth to all and sundry through their own shops at controlled rates may well be copied on a co-operative basis by groups of mills.

Reports from New Delhi, when they refer to impending appointments, are not easily appraised. For they may be either feelers put out to ascertain popular reactions or they may be part of the tactics of aspirants to office. But in the case of the report that Sir Ardeshir Dalal is to be appointed Reconstruction Member of the Viceroy's Executive Council, there is no question of tactics. Nor for the matter of that is there need for feelers. For Sir Ardeshir has reinforced his claims to this office by adding to his abilities as an administrator the representative character which flows

from his being one of the signatories of the Bombay Plan. When one thinks of it, it is hard to mention another who combines in himself the administrative ability and experience of the Indian Civil Service and the headship of the largest of Tata's gigantic concerns. The vast and many-sided developments which the Tata Iron & Steel Company has achieved during the period of this war should have added greatly to the already large and valuable knowledge which Sir Ardeshir had of our industrial problems. Work on the Bombay Plan has given him the grasp of larger national problems without which the ablest administrator will be a misfit in a ministerial office.

While there is thus no question about the appropriateness of this choice, the Government have also a great deal to gain by calling on one of the signatories of the Bombay Plan to take charge of the Reconstruction portfolio. For my part, I can think of no other single action which can convince the people of this country of the Government's readiness to go ahead with schemes of postwar economic development. In spite of what the spokesmen of the Government from His Excellency the Viceroy downwards have said about improving the standard of life in the country, there is still a strong undercurrent of suspicion that the Government are more concerned to secure large-scale orders for British industry than to give the average Indian more of the necessities of life. The appointment of Sir Ardeshir will go a long way to remove such suspicion. It is true that, in so far as the Bombay Plan is looked askance by certain political parties, there is possibility of estranging them. But to charge the Bombay Plan with communal or class bias is a travesty of truth. The realities of economic life show no respect for communal sentiment. Nature yields food and the raw materials of industry for all alike—only railway station yards have Muslim Cha and Hindu Cha. Once the Reconstruction portfolio is entrusted to Sir Ardeshir, who belongs to neither of the two big communities, the misapprehensions are bound to be removed. The reactions to the reports now current should serve to show His Excellency Lord Wavell that no proposal attributed to him will be more popular with the public in India than this one.

"EAVESDROPPER."

New Insurance Company

For three days the subscription lists of the new All-India General Insurance Company will be open. The prospectus published today gives particulars as to the amounts payable on application and allotment. The issue of shares at a small premium is easily explained while the reserve liability of shareholders should be a factor in the future of a large composite insurance office. Since Bombay, Hyderabad and Sind are strongly represented on the Directorate the business prospects require no special description. War has certainly opened up a wider field for Indian insurance. The chances are improved also by the large capital and influential connections of the All-India General Insurance Company Limited. The Company will start with a reserve equal to one-fourth of its paid-up capital. Underwriting surpluses would lead to the creation of separate funds and reserves for unexpired risks, but the company's shareholders and policyholders alike would have a real advantage if the reserve from share premium supports the capital. The Sheriff of Bombay, the Hon. Sir S. Askaran

and a former Mayor Mr. B. N. Karanjia are among the directors of the company. As the prospectus duly notes the company has been fortunate in getting an experienced Manager in Mr. S. B. Cardmaster. The investor should remember that the scope for capital appreciation is very large in the case of insurance shares. Though the income for some years may not be commensurate with hopes the exceptional

security vouchsafed by investment in financial shares should be regarded as balancing the other features. Remarkable proof of confidence is provided by the taking of half the issue by the Directors and their friends. The appearance of another Indian insurance company under the highest auspices suggests that the expansion noted in the case of banking in India is characteristic of insurance as well.

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Harlons play the leading role in these supplies. Whatever the kind of quality in ropes may be Harlons have the variety to choose from.

61, HARRISON ROAD, CALCUTTA.

Olympus

(From Our Correspondent)

New Delhi, May 22.

Official circles are closely watching the moves of Mahatma Gandhi. So far as is known, the Viceroy's Council has so far had no discussion on the constitutional question. It is still being maintained that the only reason which weighed with the Viceroy in ordering the Mahatma's release was his illness and the recommendation of the doctors that his release would facilitate his speedy recovery. But there is hardly anyone in New Delhi who does not recognise the political implications of the Mahatma's release. According to those who have visited Mahatma Gandhi, it may take him at least a couple of months to regain his health and get back to normal activity, but he is already busily engaged in studying papers and meeting friends in order to acquaint himself fully with present conditions. Apparently official circles think that as they have already taken the first move in releasing Mahatma Gandhi, it is for the latter now to respond suitably. Already, subsequent to the fast, there has been some important correspondence between Mahatma Gandhi and the Viceroy. The reply which Gandhiji is reported to have given to the Government's notice of "charges," as required by the ordinance, is also understood to be politically important. Undoubtedly the next step which Mahatma Gandhi can usefully take is to write to the Viceroy and try to meet him personally as early as possible. In the meantime efforts are being made in England to secure the unconditional release of other Congress leaders. Both in England and in the United States public opinion appears to be getting more and more impatient at the delay in settling the Indian question.

Often the question is asked—is it too late to set up an all-party Government at the Centre? The fact is that all the Members of Government, appointed after the 1940 declaration, have been clearly informed that if as a result of settlement with the major parties the Viceroy's council is reconstituted they may have to vacate their offices. On more than one occasion Mr. Bhulabhai Desai, the leader of the Congress Party in the Central Legislature, has categorically stated that a National Government can be formed at the Centre within the limits of the present constitution itself. In Muslim League circles there is also an impression that Mr. Jinnah is not in the same intractable mood as before. And above all it is generally recognised that the present Commander-in-Chief, General Auchinleck, is sympathetically inclined. Conditions are certainly far more propitious than at any time before, but everything depends upon the word from White Hall. No clear indications are available of the results of the London discussions in connection with the Dominion Premiers' Conference, but if the speeches of the Canadian and New Zealand Prime Ministers are any clue, there is now a desire in the Dominions also to end the present policy of frustration in India and bring India wholeheartedly to the side of the allies.

In a number of ways the new Viceroy, Lord Wavell, has shown a proper appreciation of Indian feeling. I have already referred to the proposed appointment of Sir Ardeshr Dalal, a signatory to the Bombay Industrial Plan, as the Post-war Reconstruction Member. It is due to him also that a well-known Indian journalist, Sir U. N. Sen, is being appointed Chief Press Adviser—a

post which hitherto had been kept as one of the close preserves of Europeans. This appointment certainly means that Lord Wavell is anxious to improve the relations between the Government and the Press and remove all the old sources of friction. Another interesting decision taken by the Government of India is the creation of a separate Department of Agriculture and the appointment of Sir P. Kharegat as the Additional Secretary in charge. This is a direct result of the post-war plans for agricultural development which the Viceroy has taken up for immediate consideration. Sir P. Kharegat has a reputation for strong views and independent judgment. As he has already done very good work as Vice-Chairman of the Imperial Council of Agricultural Research the retention of his services in a bigger capacity for the development of agriculture is widely welcomed. The time is also not distant when something more will be done to bring together the various research activities of the Government of India and make industrial and scientific research one of the major responsibilities of the Government of India. Thanks to the interest and zeal shown by Sir Ramaswami Mudaliar, the organisation set up under Sir S. S. Bhatnagar has already done good work, but far more can be, and has to be, done by the Government of India if post-war plans are to be tackled in the manner visualised by Prof. Hill and others. After the return of the proposed delegation to England, the question of setting up a separate Department may be taken up in right earnest.

The weekend saw more than one important meeting convened by the Government of India. To the Indian Press, the meeting of the Newsprint Advisory Committee is of some importance owing to the stringency of the paper position. As a result of the recent explosion in Bombay about 2,000 tons of newsprint are reported to have been lost or damaged, but the Government of India are reported to be hopeful that even with the present available stocks, newspapers can comfortably go on with the present number of (Continued on page 1041)

V. R. SONALKAR
MANAGER

British Interest in Indian Plans

SPECIAL FOR "INDIAN FINANCE".

(By Cable)

LONDON, May 24.

Eager eyes searching the atlas for postwar markets have viewed the great possibilities offered in and by India, and financial quarters have indicated that there may be rivalry either between the United States, and Britain or at least a mutual effort to supply India's demands.

The arrangement whereby a part of the proceeds of India's exports to the United States are to be available to India as a dollar reserve for her postwar development has excited speculation. Financial experts have pointed out that both the United States and Britain will have difficulty in meeting the demands of the world which will need material for reconstruction and said that India's requirements will be chiefly agricultural and manufacturing machinery, locomotives and railway equipment, rolling stock, electrical goods in large quantities, and motors or other vehicles.

The well-informed 'Economist' commenting on the arrangement, said that hitherto India had surrendered dollars acquired in the course of external trade by payments to the United Kingdom and had taken sterling in exchange wherefore the present procedure would not be possible if the British Government's own dollar position had not improved. It is added that India's direct dollar income has been small and most of the merchandise trade between India and the United States had been channelled through British merchants before the war. It is said, that the main direct dollar income would be that derived from United States' military expenditure in India.

Competent students of finance have pointed to India's decision to allow issues of capital for postwar developments and warned also that it should remind British manufacturers about India's need for equipment. It is said that India's industrialists are anxious to avoid delay in executing postwar plans and India's large sterling balances are an assurance that there will be no exchange difficulties.

The "Times" counselled lately that "manufacturers should go as far as possible to make arrangements to meet the first practicable moment." Meanwhile, the City has hailed India's favourable economic situation and said that Indian railways are increasingly prosperous because of increased defence expenditure and said also that the industrial trend is upward since October while India's external trade shows a steady export surplus with the net result that India has benefited by over £1,000 million sterling from the standpoint of foreign indebtedness, together with prospects of further increase in her credit balances.

With the increasing war tension the stock market has reflected a scissors movement between war and peace stocks. The movement of the Actuaries' Index shows that aircraft and railway stocks fell in April while building, cotton and Stores shares rose. However, it is significant that sections once registered in the war cate-

gory are now moving into the peace group, for example, iron and steel shares. The motor group and shipping shares are swinging into the peace category with the assurance that the future warrants a bright outlook.

The Stock Exchange quickened its pace in the past couple of months contrary to earlier expectations of slackening due to the uncertainties about the opening of the Second Front. Some believe that actual invasion may bring on a period of uncertainty but the opinion how prevails that investors do not hope to obtain stocks cheap at the time of the Second Front, because the investor is too confident of military prospects to have any hesitant buying policy.

NOTICE

In order to encourage the starting of industries in the State, the Government of Bikaner is pleased to declare that the following concessions would be granted to suitable applicants who can satisfy the State of their bonafides to set up industries in the State within a reasonable period:—

- (1) The State would be prepared to assist private enterprise financially by taking up a portion of the issued capital if necessary.
- (2) Exemption from customs duty would be granted on all machinery, imported for purposes of the industries and subsequent replacements, on stores, building materials and raw materials of production, and fuel, if any.
- (3) As regards water supply, while industries requiring large quantities of water would have to make their own arrangements, industries requiring comparatively small quantities would be provided with water at concession rates.
- (4) Electric power would also be supplied from the State Power House at a concession rate. The rates, both in the case of water and electric power, will be subject to negotiation.
- (5) Land for the factories will be granted on favourable terms.
- (6) In suitable cases, the promoters would be protected by the grant of monopoly of production during the initial stages of the industry.

2. His Highness' Government will be prepared to entertain applications from individuals or jointstock companies for the grant of the above mentioned concessions preferably within a period of two months from the date of this notification. Applicants should give full particulars of the industries proposed to be started.

3. In selecting the applicants, preference will be given to subjects of the State or joint-stock companies registered in the State.

4. In the case of joint-stock companies obtaining concessions from the State, it would be necessary to reserve a reasonable portion of their capital to be issued to subjects of the State.

H. K. KIRPALANI,
Prime Minister.

FOR QUALITY TOOLS

The famous BATU tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers, B.T. Taps, Reamers, Drill, Milling Cutters, Slitting Saws etc. are unsurpassed in quality and precision.

All B.T. Tools are created by modern scientific thermal processes and their accuracy is guaranteed to conform to British Industrial Standard.

(Continued from page 1039)

pages though no further increase is possible for the present. The position will again be reviewed when the committee meets in August. It is understood that the Government of India have decided to appoint a Paper Controller with his headquarters in Calcutta. As a result of discussions with the representatives of the mica industry the Government of India has also decided to set up a committee to consider immediate problems relating to the Mica Control Order both in regard to war production and to its effect on longterm policy including the present system of marketing, inland and abroad.

There is a good deal of criticism about the Government's sudden decision to give up their agreement with the representatives of the fertiliser industry and run the proposed factories as a Government concern. The original intention was that the Government of India and the industrialists concerned should jointly subscribe the capital, but it appears that certain Provincial Governments made strong representations to the Government of India that they (the Provincial Governments) should themselves be allowed to own and run the industry. It has, for the present, been decided that the Government of India and Provincial (or State) Governments should jointly subscribe the capital and take charge of production. This decision covers only the proposed arrangements for manufacturing 3,50,000 tons of chemical fertilisers, but later the Government of India will reconsider the question in consultation with the industry. The capital required will be in the neighbourhood of Rs. 9 crores. It is also likely that instead of having one central factory for the whole country, the Government may decide to split it up into seven or eight factories to suit the convenience of Provincial and State Governments. At the invitation of the Government of India a number of British experts—drawn from the Imperial Chemicals and fertilisers plant manufactures will visit this country. They are expected to stay in India about a year and a half and make all the necessary arrangements for placing the industry on a stable basis.

The dissatisfaction in industrial circles seems to be due to two reasons. They are, firstly, aggrieved that though definite agreement was reached between the Government of India and the industry, the former went back on it without even consulting the industry. Apparently the Provincial Governments feel that if the more needy classes of agriculturists are to be benefited, the distribution arrangements must be in the hands of the Government agencies—if necessary, through a subsidy system. The Government of

India's contention evidently is that since the Government themselves have decided to take charge of production there was no need to consult the industry. Secondly, criticism of the Government's decision proceeds also from the fear that as foreign interests like the Imperial Chemicals are going to be in charge of the initial arrangements, it may prejudice indigenous enterprise. Anyway there is a general desire that no further time should be wasted in discussions and that immediate arrangements should be made to set up the industry.

Two officers with considerable scientific reputation have during the last few weeks retired from the Government of India. The present popularity of the Imperial Institute of Agricultural Research is largely due to the labours of Dr. Vishwanath who had both administrative ability and a passion for agricultural research. There is little doubt that in letting him retire—when he is still in a position to carry on his duties with the same energy and zeal as before—the Government of India have not acted wisely. As he has accepted the Directorship of Agriculture in Madras, he has now an opportunity to show his usefulness in another field of activity. The retirement of Mr. Dikshit who, as Director General of Archaeology, has done notable work is also a great loss to the Government of India. After handing over charge to his successor Brigadier Wheeler, Mr. Dikshit has gone to Poona to settle down for carrying on private research work. Brigadier Wheeler

has already earned a good name for his energy and singleminded devotion to the cause of archaeology. If he succeeds in winning the co-operation of those above him—it cannot be said that Mr. Dikshit enjoyed this advantage in every case—he may be able to reorganise the whole Department on stronger foundations and provide greater scope for the development of Indian archaeology. Brigadier Wheeler strikes one as the sort of man who will either insist on getting things done as they should be or quit.

port licensing rules has put jute manufactures ahead. The decline under raw jute exports is explained by the reduction in the 1943 crop as well as the increased demand at home. The continued increase (in terms of money) under exports of manufactured goods is of less interest than the recovery under raw cotton and wool exports in 1943-44. This may be attributed to the increase in Indian exports to the U.S.A. The steep decline under re-exports is explained by the reduction under im-

ports of food and manufactures. When much of foreign trade is excluded from the trade statistics, the features that immediately claim attention are not many. Attention certainly must be drawn to the increase under exports of mica and manganese as well as the large increase under raw hides and skins when exports of tanned or dressed hides and skins are not up. The fall under pigiron exports is a symptom of increased steel output. Of the changes recorded the most interesting are the increase under coffee and the fall

under tobacco. Both can be readily explained at present. The prohibitions, in force account for the curtailed shipments of groundnut oil and oilcakes but the fall under lac must be put down to the smaller crop rather than the increase in prices. The fact that India's cotton imports exceed substantially the exports of raw cotton appears to have a bearing on the future of the textile industry as well as the structure of cotton prices after the lapse of one year of price control.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of Issue Rs. 100-7-4 from 22nd

May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

Airway Port

(FROM OUR CORRESPONDENT)

KARACHI, May 20.

May 15 was a red letter day in the history of Provincial autonomy in Sind as she threw off all her financial shackles that day by paying off the last instalment of the Sukkur Barrage debt to the Government of India, in accordance with the terms of a settlement reached with the provincial government on the basis of "No subvention. No debt". The lump sum payment in itself would result in a saving of Rs. 55 lakhs for Sind, thus materially altering the financial picture of the province. Such payment was made possible by bumper surpluses in the last two or three years, better land sales and profits made out of sales to the deficit areas in other parts of India. The actual estimated surplus this year is about Rs. 187 lakhs which is to be utilised in setting up a revenue equalisation fund and a post-war reconstruction fund and Rs. 55 lakhs more would now be available to the Government to add to the cash balance that would still be there in spite of the huge lump-sum payment.

It may be recalled that the Sukkur barrage administration was made the special responsibility of the Governor in the India Act in order to safeguard Centre's financial interests in it, but now that the Sind Government had paid off the whole debt, does the Governor automatically forego the special powers conferred on him in this connection? This controversy which has been engaging the attention of press and politicians on this issue has culminated this week in drawing out a reply from Sir Hugh Dow, Governor of Sind. In the course of a letter to the "Daily Gazette", the Private Secretary to His Excellency says:

"I am to point out that the Governor's special responsibility of securing the proper administration of the Lloyd barrage and canals scheme remains unaffected by the fact that the Barrage debt has been repaid. That scheme will, therefore, continue to be administered, as at present, in accordance with the advice of the ministers subject to the special responsibility of the Governor. The nature and the limits of that special responsibility were fully dealt with by His Excellency in a minute which was published at the time of the introduction of the new Barrage settlements last year."

Popular opinion, however, is that the special responsibility of the Governor in regard to the administration of the Sukkur Barrage should now be considered a dead letter.

Some important changes are to be introduced in the machinery set up by the Government of India in pursuance of their Cloth Control Order with a view to check the growing menace of the black market in the textile trade. The features of the changes which are proposed to be introduced is the licensing system for cloth dealers. No one would be allowed to trade in cloth unless he possesses a license. The Government recently issued orders that those dealers who were not engaged in trade before January 1, 1943, should not be permitted to get any stocks from the mills and only those who were in existence before 1943 are to be allowed to have stocks. Several newly started shops have been affected by the recent order including one run by Rao Bahadur Shivrattan Mohatta

in the market where cloth was sold under controlled prices.

Black market in cloth which was detected two months ago, is at present thriving. Local dealers are but secondary operators in the black market which starts right from the top at the producing centres themselves. The Government of India's stamping order and the presence of marked prices on every piece of cloth proved of no avail in preventing the black market. Consignees or their agents are asked at the textile producing centres to pay some percentage over the fixed prices on the understanding that the extra price is not to be shown on invoices. This extra percentages asked may be anything from 20 per cent, the margin in the stamped wholesale and retail prices shown on the piece, to 30 per cent. When the producing centres started operating the black market, the local stockists also joined.

The changes that are contemplated in the Cloth Control Order are said to have been moved with a view to check the black market and provide among other things that any dealer suspected of any unfair trading might be deprived of his license, though it may not be possible to substantiate these suspicions in the legal and technical sense.

Another warning to piecegoods merchants to maintain the highest traditions of the trade and stop black-marketing of any kind as otherwise the Government were determined to suppress the evil firmly was given by Mr. Ramnarain Chelaram, president of the Bangalore Piecegoods Merchants Association who is now in Karachi speaking at an 'at home' organised this week in his honour by the the Karachi yarn and Piecegoods Merchants Association.

Young, handsome Yusuf Haroon, Karachi's youngest Mayor, whose election as the first citizen took place last week, gave

an assurance to the Municipal Corporation that he would discharge his new duties considering himself above all parties. Mr. Yusuf Haroon who is also a member of the Central Assembly and prominent Muslim Leaguer, is a son of late Sir Abdulla Haroon.

The release of Mahatma Gandhi, albeit on medical grounds, has naturally given rise to great expectations of an early rapprochement in the Indo-British relations. Among the many that have congratulated the Viceroy on his wise step in releasing the Mahatma, the Karachi Cotton Association recently passed a resolution earnestly hoping that Field Marshal Wavell would follow it up with a meeting with Mahatma Gandhi at the earliest possible date to evolve measures designed to put the Indo-British relationship on a sound and mutually helpful basis.

Resume of Commodity Markets

The feature of the week is the sharp decline in prices for both the precious metals, silver especially. The raw jute and jute manufactures markets have remained unchanged while the raw cotton market has been steadier though the outlook for the commodity is still confused. The piecegoods market has been easier but business has not been on a large scale as supplies are still small.

The raw jute market has continued steady and business with mills is still confined to lower assortments. The complaints regarding the difficulties of transport are being attended to, and it is reported that more wagons have been placed at the disposal of dealers for the transport of jute from Mymensingh and other districts. A new order has been passed under the Defence of India Rules regulating traffic on the B. & A. Railway stations to enable consumers get their requirements directly and without loss of time. It is pointed out that the new procedure might create fresh difficulty but it is assured that the mills will get their supplies direct and this it is believed would more than compensate the hardships experienced mills. The text of the Order is given below:

"In exercise of powers conferred by section 85A of the Defence of India Rules the following orders are hereby issued and shall take effect as from June 15, 1944.

1. For baled jute traffic originating at any B & A railway station or siding a separate forwarding note shall be made out for each wagon, and, in the case of each traffic, consigned to a mill or press house situated in the Calcutta industrial area or served via Naihaiti. Each such forwarding note shall bear the official stamp of Mill or Press House concerned together with an endorsement signed by the Manager thereof to the effect that the consignment is in compliance with an order placed by him. The number of bales to be booked shall not be entered in forwarding notes until a wagon is supplied for the traffic when the number to be entered by the consignor shall be the number required to fill completely the wagon provided.

2. A consignor having registered with B & A Railway his requirements for the transport of jute no alteration of any sort in the entries first made shall be permissible in any circumstances whatever, and should any alteration be made, the registration in question shall be deemed to have been cancelled.

3. Diversion and rebooking of jute consignments originating at any B & A

railway station or siding shall not be permitted in any circumstances whatever.

N. B. The expression Calcutta Industrial area mentioned in order 1 above shall be deemed to mean the railways including all sidings—(a) between Naihaiti and Sealdah (both inclusive) (b) the southern section of the B & A railway as defined in the tariffs of that railway and (c) the C.P.C. railway."

It is reported that regulation of boat traffic is still far from satisfactory and that recently many boats have had to go back from Calcutta without any cargo they being hurried to Calcutta earlier for taking some expected shipments.

As the sowing season is fairly well advanced, it is now estimated that the crop for the next season will be between 65 and 70 lakhs bales. With the present consumption of mills between 55 to 60 lakhs bales there will not be any surplus left for exports. The total of exports in the next season is expected to be about 12 lakhs bales so that if unfavourable weather conditions affect the growth of the crop to any great extent, mills might experience even a shortage of the raw material. There is naturally some anxiety to conserve supplies of jute as far as possible and a census of stocks in Calcutta at the end of the season is to be undertaken for this purpose. The Bengal Government has issued an order directing all who hold stocks of jute to submit a statement before July 21, showing the quantity of jute or manufactured jute goods in his possession or under his control on June 30, 1944.

The policy of the Government of India regarding purchases of surplus cotton is still not clear. With the substantial increase in acreage under cotton for the next season it is feared that it will not be possible to purchase all the surplus short staple cotton. As a matter of fact, Government buying in the past few weeks has been mainly confined to three-fourth inch staple and in the past few days to Jharilla cotton. May contract was satisfactorily got over and prices for July and September are now at the recent high levels. In the absence of any definite announcement regarding trading in the new crop and the change in the basis of contract, it cannot possibly be expected that prices for cotton will show any appreciable improvement. Mill buying has been more satisfactory but there is no policy behind the purchases and these seem to be confined to immediate requirements.

The anxiety of the Government that there should not be any large increase in the area under cotton for the next season

will be evident from the press note published recently.

"The final cotton forecast, just published, discloses a marked reversion in the past season to cotton, largely at the expense of food crops. The extent

of the reversion to cotton is estimated at 1,196,000 acres, two-thirds of it being in areas exclusively or predominantly given up to the cultivation of short staple varieties.

Short staple cotton is not in heavy demand. It is needed much less than food. In the national interest a substantial diversion of acreage from short-staple cotton to food crops is imperative. The Government of India consider that of the 10-1/4 million acres under short-staple cotton last season 3 1/2 million acres or roughly 30 percent should in the forthcoming season be producing food crops.

The principal alternative crops to short-staple cotton are Jowar and Bajra. To protect the interests of producers the Government of India have decided to announce their willingness to accept from the crop of 1944-45 all Jowar and Bajra of fair average quality offered for sale in the main assembling markets of the U.P., and C.P. and Berar, Madras, the Punjab, Sind and Ajmer-Merwara at prices of Rs. 5-8 and Rs. 6 a maund respectively, should prices fall. Prices for Bombay will be announced later. Current prices are generally higher and the all-India maxima are Rs. 7 and Rs. 7-8 for these crops.

For an unwanted crop, like short-staple cotton, the Government can guarantee neither a minimum price, nor adequate transport facilities. Considering the risk of food shortage in areas which are not self-sufficient, it is the course of wisdom to grow a food which may prove saleable. Those who put land under short-staple cotton hoping to buy food with the proceeds, may find they have grown something they can neither consume nor sell. Government wish it to be clearly understood that they have no intention of entering the market during the forthcoming season merely to support the price of an unwanted short-staple cotton crop."

The decisions taken at the conference of representatives of the Central and Provincial Governments and members of the Textile Board are now taking effect. The drive against black market activities by the Control authorities began a few weeks back. Two mills in S. India were the first to be given directions that their output should not be disposed of except under the express orders of the Textile Commissioner or his nominee. Two more mills in Ahmedabad were given similar directions though, in the case of one mill, the order was subsequently withdrawn. In the past week, however, more drastic action has been taken against two mills. The Commissioner has taken over the Shri Ram Mills and Saksaria Mills in Bombay and appointed a controller to run them. In addition, the production of seven other mills (five in Bombay jointly called the United India Mills and the Maheswari and Lal Mills in Ahmedabad) have been taken over and will hereafter be distributed under the orders of the Textile Commissioner with a view to making cloth reach the markets and areas where cloth is most needed and at controlled prices. Parallel action is also being taken against recalcitrant cloth merchants and in addition all cloth Tex-marked April and earlier, including handprinted cloth which was hitherto excluded from Tex-marking and the operation of selling dates, is to be finally disposed of by December 31, 1944.

Provincial Governments are being requested to give the fullest co-operation in this drive against the black market. The Central Government are determined that their efforts and the efforts of the textile

industry itself shall not be sabotaged by an unsocial minority and Government will not hesitate to take such further steps as may be necessary to ensure that the malpractice of black marketing shall cease.

The vigorous drive against black market activities and the action taken against several members of the industry would, it was feared, create some friction and that the aim of the cotton cloth and yarn control order might be defeated. It is happy,

however, to note that the Chairman of the Bombay Millowners' Assn. has issued a statement to the effect that the action of the Textile Commissioner has the full support of the members of the industry and that every effort would be made to market mill production at controlled rates. The Association itself is taking note of malpractices in respect of mills and members of the trade and will take the necessary action through the Textile Commissioner.

Announcement

This is not a Prospectus and is not to be regarded as an invitation to the public to subscribe for shares.

NATIONAL SAVINGS BANK LTD.

43-45, APOLLO STREET, FORT, BOMBAY

We have pleasure to announce that the necessary consent of the Central Government under the Defence of India Rule 94A has been obtained to the issue of 29,320 ORDINARY SHARES OF RS. 50 EACH PAYABLE BY RS. 25 WITH APPLICATION AND THE BALANCE NOT EARLIER THAN 3 MONTHS after the date of allotment. It must be distinctly understood that in giving the said consent, the Government of India do not take responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

NOTICE is hereby given that the Company has published the Prospectus dated 12th day of May, 1944, copies of which have been filed with the Registrar of Joint Stock Companies at Bombay and at Baroda, inviting applications for the said shares. Applications will only be received on the footing of the full prospectus filed with the Registrar of Joint Stock Companies at Bombay and at Baroda.

Copies of the said Prospectus, together with the forms of application for shares can be had on application to the Managing Director at the Head Office or at any of the Branches.

N. C. KHORANA,

Jute and Jute Manufactures

(Special to "Indian Finance")

(By Our Jute Correspondent)

Calcutta, 25th May.

We had occasion last week to animadvert on the doubtful efficiency of the railways—mainly the B. & A. Railway—in the handling of jute traffic. It seems open to doubt whether a new system, promulgated to come into force from 15th June next, will be of material help in clearing up the situation. Rather does it seem probable that it will make confusion worse confounded. The orders are that, for baled jute traffic originating at any B. & A. station or siding, a separate forwarding note shall be made out for each wagon, and in the case of traffic consigned to a Mill or Press House in the Calcutta industrial area, or served via Naihati, each such forwarding note shall bear the official stamp of the Mill or Press House concerned, together with an endorsement signed by the Manager thereof to the effect that the consignment is in compliance with an order placed by him. The number of bales to be booked shall not be entered in forwarding notes until a wagon is supplied for the traffic when the number to be entered by the consignor shall be the number required to fill completely the wagon provided. We can foresee quite a few complications in working this scheme. For instance a Seller may be holding stock in several upcountry stations, against which he makes a sale with the option of delivering from any or all of, say, four agencies. From which station he will ultimately deliver will depend mainly on where he can get waggon supplied. But he is not in a position to predict which station will provide the waggon, nor indeed is the railway likely to be in such a position. Is the Buyer therefore to endorse forwarding notes for the total contract quantity for four different stations, thus giving the impression that the contract is four times as large as it really is? If not, and F/Notes are only endorsed for one station and suddenly waggons become available at an alternative station, there will almost certainly not be time for fresh F/Notes to be signed and sent upcountry to take advantage of the wagon supply, or on the other hand there will be culpable delay in detaining waggons till the necessary forwarding notes come to hand.

The scheme seems to have been evolved to deal with a particular situation which has by no means universal application, and a situation moreover which to no small extent has arisen from the prolonged and inexplicable restrictions which have been placed by the railway authorities on bookings to certain destinations. Unscrupulous advantage has certainly been taken by certain shippers to get jute down to the local bazar by fictitiously consigning it to Mills in the near neighbourhood. On the other hand, some sympathy must be felt with a seller who, after waiting weeks for a wagon, is finally supplied with one, only the contract is closed. If he does not utilise the wagon, his name goes down to the bottom of the registration list again. He hopefully consigns to another mill to which booking is open, preferably a mill in the same group if possible, in the hope that his broker may be able to adjust the matter in Calcutta and enable the seller to realise some of his tied-up-money. A far greater number of false consignments fall into the latter class than into the former according to our information and the new regulation regarding the endorsement of forwarding notes appears analogous to using a

steam hammer for cracking a walnut. A general covering letter from a Buyer to the effect that a certain seller has a contract to deliver so much jute from such stations to his Mill or Press House, which letter would have to be presented to the Railway before the seller's registration was accepted, would appear to meet the requirements of the situation without the waste of endorsing innumerable blank forwarding notes. Waggons vary quite a lot in size and carrying capacity, alternative stations may be situated, some on the broad gauge, some on the narrow gauge, so that for a quantity of even 5000 maunds it would be difficult to determine beforehand how many forwarding notes would be required to cover the total consignment. We are inclined to think that this scheme has been evolved in a hurry without all the implications being taken into consideration, and certainly, so far as can be ascertained, without any section of the interested parties being consulted.

Another happening in regard to the handling of jute freight, this time by river flats, has given rise to some uneasiness. At an important upcountry river station there were recently lying a number of flats which sellers were confidently looking forward to load with jute and there was no lack of jute offering for carriage. What was the consternation of the shippers when all the flats bar one were despatched empty to Calcutta, in order, it was said, to handle urgent military traffic. It is now credibly reported that, either because the inward freight had not yet arrived, or for some other unknown reason, half these flats were not immediately required in Calcutta at all and have had to be despatched upcountry again, and again empty, to resume the carrying of jute. Such lack of coordination, or disregard for public convenience and urgent industrial interests, is unpardonable at a time when freight is scarce enough at best, and the utmost should be made of all available carrying capacity. We pointed out last week that owing to the shortage in arrivals of jute into Calcutta, Mills were eating into their godown stocks. One almost despairs of any material improvement in the quantity handled by the rail-

ways, and Mills must look to the river steamer companies for supplies adequate to keep them going. Estimated arrivals of jute into Calcutta for the first half of May were only just over two lakhs of bales, the same figure as last year. But in the aggregate, from the beginning of the season, arrivals are now more than ten and a half lakhs of bales behind last year, only 47,20,000 B/s at this time last year. It appears quite on the cards that the productive capacity of the jute mills may be conditioned not only by the available supplies of coal, but also of the available supplies of jute. Even with many interruptions from lack of coal, mills look like consuming in the current season 51½ lakhs of bales, to which has to be added exports probably amounting to 10 lakhs of bales, an aggregate of 61½ lakhs of bales. Arrivals do not seem likely to exceed 53½ lakhs of bales, so that stocks in and around Calcutta may be reduced by eight lakhs of bales by the end of June as compared with a year ago. It must be borne in mind that military requirements of freight space of all descriptions are unlikely to diminish. Indeed if there were any opening up of Lower Burma after the rains, as is by no means improbable—in fact it is certain to take place at some point in the campaign, the demand for the transfer of river transport to the Irrawaddy and other Burma rivers would be immediate and insistent, to such an extent that the Bengal rivers might easily be denuded of their normal transport facilities. And Mills might well be in extreme difficulties for their raw material. The whole position bristles with factors almost incalculable, and prudence would seem to dictate the accumulation of as much stock of jute as possible in Calcutta.

JUTE

(By Our Staff Correspondent).

Calcutta, May 25.

The raw jute market has been uninteresting during the past week and there is nothing of importance to be recorded. Business by mills is confined to lower grade jutes with not many sellers. It is satisfactory to note that efforts are being made to effect a more speedy despatch of jute from the important producing centres and that, with the insistence on direct consignment to mills there would not be any great difficulty in getting supplies. The pressure on railway traffic is, however, so great that wagon space has to be very efficiently used. Meanwhile reports from the jute growing districts during the past few days have not been very encouraging. It is said that the dry spell of weather has not been quite conducive to the growth of the standing crop and that sowings in the highlands have been held up. As pointed out last week, with a smaller area under the crop, there will be very little surplus left after meeting mills requirements and adverse weather conditions might leave the mills in want.

The Bengal Government have issued an order directing all who hold stocks of jute to submit a statement before July 21 showing the quantity of jute or manufactured jute goods in his possession or under his control on June 30, 1944. Failure to comply with the order will be punished with six months' imprisonment or fine upto Rs. 250.

In the loose jute section business has again been confined to lower grade jutes at unchanged rates. Supervised Jat Middles and Bottoms were done at Rs. 17 and Rs. 14 per maund and Indian District Bottoms at Rs. 13-8 per maund. Northern Bottoms were again purchased at Rs. 13-4 per maund.

In the pucca bales section business for export has been only small. Dundee Daisee 2/3 for May shipment sold at Rs. 80 per bale. Mills purchased Firsts at Rs. 81 per bale and Lightnings at Rs. 80 per bale. Hearts were sold at Rs. 75 per bale. Cuttings also were in demand but there were not many sellers at the maximum rates.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, May 25.

There is very little change in the conditions in the jute manufactures market and in the absence of any large selling, business has necessarily been restricted. Nothing is known further of the American order. There is naturally some anxiety regarding the ability of mills to maintain the rate of production. The problem of adequate raw material supplies has also to be satisfactorily solved. Quotations are mainly unchanged at maximum rates. In the last two weeks, a larger amount of business has been done for positions between August and December. Intra-bazar operators have been more busy than usual making month-end adjustments. In the heavy goods section firm conditions have continued to prevail with very few sellers. B Twills were the only exception, being freely available at maximum rates.

BULLION

(From Our Correspondent)

Bombay, May 25.

The bullion market has been very interesting during the past week. It was marked by an uncertain tendency in gold and a bearish tone in silver. There is a regular tussle between bears and bulls. An influential bear clique offered 3,000 bars on Monday by giving currency to rumours of possible arrivals of silver from America for sale in the Indian markets. Silver ready went down to Rs. 127-4 at one time. The market is heavily oversold with floating stocks at only 500 bars. The undertone is steady. Bears are carrying an open position of 8,000 bars in respect of sales while arrivals are only around 60 bars daily. In order to dis-

courage indiscriminate sales of bullion the Committee has raised the penalty for non-delivery to eight annas for the current period and one rupee upto 10 weeks with no restrictions thereafter.

Tenders for gold have been rejected by the Reserve Bank in the past four days as they were below Rs. 75. The rate improved to-day to Rs. 75-4 whereupon the Bank announced that there would be a resumption of sales on Friday in the result the price declined to Rs. 74-7.

It is understood that the merchants have requested the Reserve Bank to resume sales. The stock in the market is two lakhs tolas while the daily offtake is 20,000 tolas only. There is a short position of about 3 lakhs tolas.

COTTON

(From Our Correspondent)

Bombay, May 25.

The cotton market was better earlier in the week, but on fears of Government discontinuing buying, after liquidating May contract, the market weakened. Official buying, however, continues and July contract has improved to Rs. 431-8 today. Government are buying in upcountry centres and also Jharilla at Rs. 410 for Bombay delivery. The Broach position is disturbing as the big crop may suffer damage if there is no movement. The official communique about purchase of food crops will not improve matter as prices offered are low.

PIECEGOODS

(From Our Correspondent)

Calcutta, May 25.

Easier conditions have been noticeable in the piecegoods market for sometime. The greater restrictions on trading and the vigorous drive again black market activities have made business in piecegoods more easy at

ceiling rates but if it is pointed out that with demand far in excess of available production black market activities cannot be effectively checked unless production of standard cloth were reduced. Five more mills have been given orders that their production should be disposed of under the instructions from the Textile Commissioner while two mills have been taken over by Government and a controller appointed to supervise the affairs of these mills.

"HOME THOUGHTS FROM ABROAD"

Those of our men who are forced to endure the hardships and deadly monotony of captivity in prison camps abroad, spend a great deal of their time thinking longingly of home.

One of the many problems facing the Indian Red Cross is to try and prevent these men from sinking into despondency.

Gift parcels containing small luxuries, which we enjoy as a matter of course, act as a mental tonic to these men. The regular arrival of toilet requisites, food and reading matter is ample proof that they are not forgotten.

We rely upon your help to continue this important work.

Please send your donation now to the Hony. Treasurer, Indian Red Cross Appeal, C/o. The Imperial Bank of India, 5, Strand Road, Calcutta.

Stock Markets to-day and to-morrow:

PROSPECTS FOR COAL SHARES

EXCEPT for the activity in Coal shares there was not much of interest on the Calcutta Stock Exchange for the most part of the week. The apathetic tone of the Bombay market was mainly responsible for the general improvement in prices. Indian Iron are Rs. 36-4 ex-dividend and Steel Corporation Rs. 28-2.

The boom in coal shares is in full swing. In the past two months there has been a sustained rise in prices and the smaller denomination shares especially have been in great favour. The reports about improved labour conditions at the mines early in the year and the hopes that mechanisation of the collieries will result in a large increase in raisings were responsible for the early rise in prices. However, recent reports have not been encouraging and labour attendance has again been poor. It is true that there is a large demand for coal and that present prices for the commodity admit of a good margin of profit but without any definite reports about a large increase in production it will not be advisable to push up prices unduly.

An interesting development which is of interest to investors in coal shares is the present official examination of the possibilities of utilising bulldozers wherever coal lends itself to be quarried. An expert in bulldozers is making a study of these mines where outcrops are substantial and surface mining can, expeditiously and with minimum of labour, be carried out with the help of these machines. The Government are, it is said, agreeable to give priorities for the securing of bulldozers where these are proved to be a practicable and profitable proposition. Bokaro and South Karanpura are particularly noteworthy from the point of view of substantial outcrops. Burrakur has also possibilities for surface mining; and these are being fully exploited by mechanical equipment in which all the collieries belonging to Bird Group have been well provided in good time. With more details forthcoming in the future as regards the success of the bulldozer experiment, interesting developments for particular coal shares may be expected. This is a line of progress that needs to be closely watched and opportunely awaited.

The manufacture of green tea by the companies in the Davenport group has resulted in an appreciable rise in earnings in the last year. Though it is more expensive to produce green tea and the outturn would be smaller than would be the case otherwise, prices during 1943 have been such as to more

than offset the increase in working expenses and the decrease in outturn.

The balance-sheet of Belgachi and New Chumta Tea Companies make very good showing for the year ended December 1943 and the dividends in the case of both companies have been increased substantially.

The gross profit of the Belgachi Tea Company Limited was Rs. 1,34,765 against Rs. 1,28,179 for 1942. After allowing for taxation and placing Rs. 35,000 (same), to Renewals and Additions Reserve, the dividend has been increased to 68 per cent from 50 per cent. The General Reserve receives Rs. 5,000 (Rs. 10,000). The amount carried forward is Rs. 32,303 against Rs. 38,721 brought in.

271,631 lbs. of green tea were manufactured in 1943 of which 263,440 lbs. were supplied to the Tea Controller for India on contract with the Government of U.K. The net average sale price was 19.19 annas against 13.58 annas for the previous year while working cost per lb. of tea purchased was 8.7 annas against 7.06 annas for the previous year. It will be seen that the increase in the average sale price is very much more than the increase in the working cost per lb.

The net profit of the New Chumta Tea Company Limited for the same year is Rs. 2,41,438 against Rs. 1,80,377 for 1942. Provision for taxation is Rs. 77,002 against Rs. 44,857 while the allocation to funds is Rs. 55,000 (Rs. 50,000). The final dividend of 90 per cent, with the interim dividend of 20 per cent already paid, makes 110 per cent for the whole year against 10% for 1942. The amount carried forward is Rs. 42,893 against Rs. 43,457 brought in.

The estate reverted to the manufacture of green tea of which 369,758 lbs. were made, weather conditions again being favourable; of this 352,435 lbs. were supplied to the Tea Controller for India on contract with the Government of the United Kingdom.

The net average sale price was very much higher at 19.22 annas in 1943 against 13.26 annas in 1942. The working cost per pound of tea produced was 8.25 annas against 6.24 annas per lb.

The impressive progress made by these two companies will be evident from the increase in dividend payments in recent years. New Chumta paid a dividend of 5 percent in 1935. There has been a successive increase in the dividends in the last four years

from 20 per cent to 110 per cent. Belgachi paid a dividend of only 5 per cent in 1938. Thereafter it increased by 5 per cent every year to 20 per cent in 1941. The dividend for 1942 was 40 per cent.

The maintenance of the dividend of Bengal Paper Company Limited for the half year ended December, 1943 has been satisfactorily received by the market as, with the difficulties in regard to production and the shortage of coal, it was expected that earnings would be affected adversely and a reduction in the distribution to shareholders would be necessary. The accounts, now to hand, reveal that output was nearly maintained at the previous half year's level, the total value of sales being Rs. 58,47,370 against Rs. 62,64,779 for the previous six months. The profit for the period would have made better showing, but for the increase in working expenses from Rs. 38,03,420 to Rs. 41,23,148. The net profit, before provision for taxation and depreciation, is Rs. 19,44,192 against Rs. 27,68,498 in the previous six months. The amount set aside to depreciation is Rs. 2,34,322 against Rs. 2,64,099 on the previous occasion. The provision for taxation is very much lower at Rs. 13,31,875 against Rs. 19,74,303. No amount has been placed to Debenture redemption Fund against Rs. 58,335 formerly. The Reserve for War Contingencies again receives Rs. 1.5 lakhs though there is no allocation to the Reserve for Indian Workers' Pensions and Gratuities against Rs. 40,000 on the former occasion. The dividend has been maintained at 12½ per cent, and the bonus at 10 per cent. The amount carried forward is Rs. 1,86,035 against Rs. 1,90,521 brought in.

Discussing the prospects of paper shares the report of a reduction in the production of Indian mills by 30,000 tons per annum is rather discouraging. It is said that paper would be imported in order to save the consumption of coal. It is hoped that a liberal allotment of coal would be made to the paper mills and that there would be Government assistance in securing raw materials to help maintain output.

The results of the Nagaisuree Tea Company Limited for 1943 provides a strong contrast to those of Belgachi and New Chumta for the same year owing to the increase in costs of production and the lower average price realised. The outturn of tea at the

(Continued on page 1051)

Bombay Investors and Indian Stock Exchanges:

HEAVY DECLINES IN MYSORE SCRIPS

DISAPPOINTING ALCOCK DIVIDEND

(By "ANALYST")

Bombay (By Wire).

Tata Steels continued to be in good demand throughout the week and Deferreds were done up to Rs. 2,187-8, and Ordinaries up to Rs. 410, and closed at Rs. 2,166-4, and Rs. 409 respectively. After the recent announcement of lower dividends by the Indian Iron and Steel Company and the Steel Corporation of Bengal, investors have gradually begun to show their partiality towards Tata Deferreds and there have been many switches from Indian Irons and Bengal Steels to Tata Deferreds. I consider Tata Deferreds the cheapest share going in the market; and whenever Tata Deferreds decline to somewhere around Rs. 2,000, I favour investment purchase. Tatas will be able to maintain a dividend of around Rs. 130; and if, at a later date, the conversion scheme should fructify, Deferreds would have a substantial spurt.

Textiles:

Textile Control prices are going to be further reduced and production of some Bombay mills like India United have been taken over by Government. India United Ordinaries have declined to Rs. 16-9 and Deferreds to Rs. 3-5-6. There has been very heavy selling; and I look for further decline in these shares. With the exception of Bombay Dyeing, which has been steady around Rs. 1,917-8, all other mill shares are evincing a sagging tendency and I look forward for a substantial decline in most of the Bombay mill shares since many of them have very poor Standard Profit and prospective dividends will be probably 50 per cent lower compared to last year's dividends. Centuries have been neglected around Rs. 900/- and Kohinoors around Rs. 648, despite Kohinoors having good Standard Profit. In view of the last year's increase in capital by 5 per cent, I look forward for a dividend of Rs. 20 to Rs. 22. I, therefore, feel Kohinoors should decline further.

Hyderabad State shares like Azamjahis and Osmanshahis are quoting around Rs. 595 and Rs. 345 and look a good investment in view of the fact that the incidence of taxation in the Hyderabad State is lower. Minervas and Mysore are steady around Rs. 313-12 and Rs. 323-12. Though their registered offices are in Bombay, the mills are situated in Mysore State and look attractive for investment. Minervas have recently declared a dividend of Rs. 20 per share. In the case of Madras Textiles shares, they also show a downward trend; and, even in the case of first-class scrips, there has been no enquiry. Sitarams declined to Rs. 203 at the close. Rajalakshmis were the only exception to be steadier around Rs. 233, due to demand from Bombay. Lakshmis were unchanged around Rs. 210 and Cambodias found sellers around Rs. 37/-. As in the case of Bombay, I also recommend liquidation of most of the Coimbatore mills shares except first-class shares like Buckingham and Carnatic, Maduras and Vasantas.

Miscellaneous:

In the Miscellaneous Section, Cements were in keen demand throughout the week,

with Associated Cements at Rs. 234. Looking to the post-war prospects for cement industry, despite the low yield the shares offer, Cements should show substantial capital appreciation. Dalmias have also moved up to Rs. 19-12, and even a neglected scrip like Andhra Cements (Madras) were done up to Rs. 128 on continuous buying from Bombay.

In the Electric Group, Tramways had a spurt to Rs. 147 on rumours that the municipality is going to extend the licence by 10 more years from 1947.

In the Engineering Group, Alcocks gave a rude shock to the investors on the publication of a report announcing a dividend of Rs. 10 only and the shares dropped by hundred points to-day and closed at Rs. 521. It is really surprising that Alcocks should issue such a report when, as a matter of fact, they have huge contracts from the Government and even on the basis of cost plus small percentage of profit they should make good money on the turnover. If these shares, however, decline a little further, I would rather pick them up for investment. Belapur Sugars were steady around Rs. 224 and I look for a gradual rise in these shares.

In Madras the Mysore group of Shares have declined rather sharply this week owing to breakdown of the power plant at Sivsamudram. I hear that the factories in the Mysore State will not be able to get electric power for 3 to 4 months though it was recently announced that the Government will be in a position to supply power in a month's time. First class shares which used to be very popular in Bombay found sellers at the close, with no buyers in evidence. Mysore Fertilisers are nominally quoting around Rs. 36, Mysore Paper Rs. 32, Mysore Lamp Rs. 36, Mysore Glass Rs. 24, but business cannot be put through in Mysore shares. I look for further substantial declines probably Rs. 4 or Rs. 5 in each share. I would avail myself of such an opportunity to buy shares like Mysore Chemical and Fertilisers, and Mysore Paper.

Bank and Insurance:

In Bombay as well as in Madras, most of the shares were almost unchanged throughout the week. Central were around Rs. 76-12, Imperial Fully Paid Rs. 1915. Among the new shares, Jaipur were in demand around Rs. 68 and Bharat at Rs. 127, United Commercial Rs. 78. In Madras, Indian Bank Fully Paid were around Rs. 320 whereas Rs. 50 paid were around Rs. 183 and the Rs. 25 paid Rs. 125. I recommend the Rs. 50 and Rs. 25 paid up shares for investment.

There has been very good enquiry for Coal Shares and Jute Shares from Bombay side and there has been very heavy turnover in Mahakali Coal and Burrakur Coals around Rs. 20-8 and Rs. 35-12 respectively. I look for a good rise in these shares.

In the Plantation Group, there has been no activity, and most of the shares have declined due to paucity of business and of in-

vestment enquiry. I hear A. V. Thomas brought Rani Travancore Estate and is clubbing the estates with Midland and T. S. giri and has already obtained permission from Travancore as well as Government of India to issue 6 per cent Travancore-T. S. free Preference Shares at annas 4 premium to the existing shareholders. The Preference Shares are an excellent investment and should appeal to conservative investors.

It is reported that Delhi is sending down a cost accountant to S. India to ascertain the cost of production of rubber and therefore South Indian planters feel that an increase in the price of Rubber will be announced in a month's time i.e., as soon as the cost accountant is able to submit his report to the Government of India. It is felt that the Government of India should agree to the recommendation of the Rubber Production Board, i.e., to raise the price of rubber to 91 cents. Regarding Tea and Rubber Mr. J. H. Titterton, Chairman of the Ceylon Association expressed the opinion at the annual meeting of the members that the lessons learned in canteens, factories and rest cen-

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, May 26.

STEADY conditions have been noticeable on the Calcutta Stock Exchange during the past week though on Tuesday a slightly easier tone was noticeable on profit-taking and selling. The continued weakness of the Bombay market did not encourage any large buying but in the last two days the upward trend has been resumed and there has been more of investment buying. Coal shares have again led the market with the shares belonging to the Bird group in the forefront. There has been some selective buying of Jute shares but Cotton shares have been uninteresting along with Sugars. Tea shares were firm with selective buying while in the Miscellaneous section Midnapore Zemindary were very much in favour being done up to Rs. 165. The undertone in the several sections is quite steady and it is felt that, given the continuance of present conditions, the upward trend might be sustained.

There is no further improvement in prices in the gilt-edged securities section though it is reported that there is larger buying especially of the short and medium-dated securities. 3½ percent Paper was fluctuating around Rs. 98-5, while among terminable loans, 3 per cent Defence bonds were Rs. 102, 3 per cent 1953-55 Rs. 100-2, and 3 percent 1963-65 Rs. 98-14. 3½ percent 1947-50 were crossed at Rs. 103-4 and 4 per cent 1960-70 at Rs. 112-4. 5 percent 1945-55 were a shade better at Rs. 104-6. Among Provincial loans, 3 percent Madras 1959 were Rs. 98-12 and 5 percent U.P. 1944 Rs. 100-12. There was no business in public bodies debentures and the only transaction in industrial debentures was in Steel Corporation 4½ percent convertible debentures at £156-10.

Preference shares still have very few sellers. Basanti were Rs. 12-10, Albion Rs. 181, Dalhousie Rs. 184 and Lawrence Rs. 175. Steel Corporation were unchanged at Rs. 133 while B. I. Corp. were further higher at Rs. 216-8. Star Paper changed hands at Rs. 116 and Kesoram at Rs. 166.

Bank shares have been firmer with Reserve Bank at Rs. 131-8 and United Commercial Bank at Rs. 28-8 premium. Hind Bank remained steady at the higher level of Rs. 59-3, Bharat Bank ordy. were Rs. 126-8 and Imperial Bank fully paid Rs. 1,189 and contributories Rs. 475.

With the continued weakness of Textile issues in the Bombay market not much of attention has been paid either to Calcutta or Cawnpore shares. Closing prices, however, are really higher than the lowest levels for the week, Basanti being Rs. 14-8, Cawnpore Textiles Rs. 14-8, Kesoram Rs. 18 and Dunbar Rs. 300. Elgin were lower at Rs. 67 but closed higher at Rs. 69. New Victoria Rs. 8-15 and Pravati Textiles Rs. 11.

Active conditions have been noticeable in the Coal section and there has been good buying of the smaller denomination shares. Parasea registered a rise of more than 2 points to Rs. 8-8 in Friday's session while Samla were Rs. 8 and Talcher Rs. 9-12 against Rs. 7-12. Bigger denomination shares have registered a rise of one to two points with Amalgamated at Rs. 48-14, and Bengal at Rs. 840. Bhulanbararee registered a rise of two points to Rs. 25-12 while Bokaro

and Ramgur were Rs. 33-7 against Rs. 32-14 at the end of last week. Burra Dhemu are two points higher at Rs. 10-8 while Burrekur have improved from Rs. 34-6 to Rs. 35-14. New Beerbhoom have suddenly risen to Rs. 34-12 from Rs. 32-4 as also Raneegunge to Rs. 47-12 from Rs. 46-8. Sendra encountered sudden buying and the quotation has improved by more than two points to Rs. 21-7. South Karanpura have not been very interesting with the quotation around Rs. 17-4.

Jute shares have remained steady and the prices are higher only for those counters which have been subject to special buying in the last two weeks. Anglo-India were Rs. 435, Clive Rs. 36-12, Ganges Rs. 485 and Hukumchand Rs. 36-12. Howrah fluctuated around Rs. 74. Kamarhatti were Rs. 602. National Rs. 31-2, Nellimaria were a shade easier at Rs. 31-7 as also Presidency at Rs. 8-10. Soorah improved to Rs. 33-8 though the close is lower at Rs. 32-8.

In the Engineering section there is nothing of interest to be recorded, Indian Iron being eight annas higher on balance at Rs. 36-4 ex-dividend. Steel Corporation also steadied up to Rs. 27-14. Kumardhubi Engineering were fluctuating around Rs. 11-12 and Marshalls Rs. 5-1. Saran Engineering were Rs. 11-5 and Braithwaite Rs. 11-2.

Sugar shares have been neglected. Bel-sund were Rs. 15-1, and Carew & Co., 29-14. Ramnugger Cane & Sugar were Rs. 13-14 and Buland and Raza Rs. 42-2. Ryam were the only exception being higher at Rs. 42-8.

In the Miscellaneous section, Burma Corporation and Indian Copper Corporation were quoting Rs. 3-10 and Rs. 2-12 respectively while Karanpura Development were unchanged at Rs. 33-4. B. I. Corp. were quiet at Rs. 6-4 while British Ceylon Corp. were active at Rs. 21-8. Indian Cables were Rs. 29-4 and National Insulated Cables Rs. 14-2. India Oil Plastics have been frequently around Rs. 11-8 and Dehri Oil Refinery Rs. 12-4. Midnapore Zemindary have improved further to Rs. 165 on reports of larger dividends while India General Navigation were steady at Rs. 161. Calcutta Landing & Shipping are firm at Rs. 30-8. Among Paper shares, Titagur Paper were Rs. 27-12, Star Paper Rs. 22-2 and India Paper Pulp Rs. 222.

U. P. STOCK EXCHANGE

Cawnpore, May 25.

THE local Stock Exchange market ruled steady during the past week under review, due to encouraging War news from the Assam front. Only the Textiles Shares ruled irregular, specially Elgins and Cawnpore Textiles which are still victims to rumours and counter rumours about the expected Balance Sheets and dividends. On every rise there has been profit-taking and consequently a set-back. Elgins opened at Rs. 76/- on Monday, the 5th morning and closed at Rs. 73-/- On the 18th it went as low as Rs. 70-8 but shortly recovered and closed at Rs. 71-10. After that the market has been steady round Rs. 73-/- Cawnpore Textiles on Monday opened at Rs. 14-14 and closed on Saturday at Rs. 14-6. New Victoria Ordinaries have been steady around Rs. 9-/- Muir Mills opened at Rs. 450/- after the week end and remained practically unchanged.

Swadeshi has been steady at Rs. 1,725/- with sellers reserved. There have been some activities in Raza Textiles the market for which ruled around Rs. 103/- J. K. Cotton Manufacturers have been steady at Rs. 295.

Banks kept steady with Hindustan Commercial Bank fairing around Rs. 59-/- Bharat Bank opened at Rs. 120/- and closed on Saturday at Rs. 125-/- Reserve Bank was altogether neglected.

There has been some activity in Sugar shares. Champarans were in fair request and the market improved from Rs. 38/- to Rs. 42/- but again fell down to Rs. 39-12 due to profit-taking. Cawnpore Sugar ruled steady around Rs. 42/-.

In the miscellaneous section Northern India Oil have been in great demand, the market for which went as high as Rs. 24/- B. I. C. remained unchanged at Rs. 6-5, while Alluminium Corporation ruled quiet around Rs. 19-8. J. K. Investment Trust (B), although recently introduced in the market are quoted at Rs. 13/- premium, and are in fair request around Rs. 38-/- Saran Engineering remained unchanged at Rs. 11-5.

SHREE GOPAL PAPER MILLS LTD.

Notice is hereby given that the next Ordinary General Meeting of the Company will be held at its Registered Office at No. 5, Royal Exchange Place, Calcutta on Friday the 16th June 1944, at 4 p.m. for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ending 31st December 1943, declaring Dividends, electing Directors, appointing Auditors, and for transacting any other ordinary business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 2nd June 1944 to the 16th June 1944, both days inclusive.

COMPANY MEETING

APOLLO MILLS LIMITED

RECORD EARNINGS FOR 1943

CHAIRMAN ON GOVERNMENT'S TAXATION POLICY

Presiding at the Annual General meeting of the Apollo Mills Ltd., held on Friday the 19th May '44, at the Registered Office of the Company, at Delisle Rd., Bombay, Mr. C. H. Bhabha, M.A., B.Com., J.P., said:—

Gentlemen,
The Report of the Directors to the Shareholders, along with the profit and Loss Account and the Balance Sheet of the Company for the year ended 31st December 1943 have been in your hands now for some time past and with your permission, I shall take them as read.

I feel confident that you will find the results achieved during the year under review to be very gratifying. A profit of Rs. 80,20,069/- before providing for taxation and depreciations has been recorded. This is indeed a result which has never before been achieved in the Company's history. But, inasmuch as the major slice of the profit is being taken away by the Government in the shape of taxation, the Company is unable to reap the maximum benefit out of the same. The Company has been able to set apart after meeting taxation and depreciation charges, a sum of Rs. 9,37,500 for payment of dividends. This figure inclusive of an interim dividend indicates a return of 18.75% on the Capital invested by the share-holders. There has been, you will notice, a substantial increase in the Carry-Over, accompanied by an impressive increase in Cash Balances. On the whole, the latest position of the Company is sounder than ever before.

But it will be extravagant to hope that the prospects for the current year and the subsequent years will also be as rosy in view of the reduction in prices of cloth and yarn resulting from control measures adopted by Government and moreover owing to the recent taxation proposals involving an imposition of additional Corporation Tax of one anna per Rupee and the move to immobilise the entire excess profits, a reduction in the dividend level for the current year will undoubtedly be found necessary. While not being unduly pessimistic regarding the demand for cloth and yarn in the coming few years owing to the big factor referred to above as well as the gradually diminishing margin of profit, it is necessary for me to warn you about the reduction of the trading profit of textile Companies hereafter.

Regarding the recent taxation proposals, I must join the chorus of disapprobation of same. I feel that the whole background of these proposals has been unsound, scientifically and psychologically. The proposed taxation, I fear, will cause serious repercussions leading to inefficiency and reduced output resulting in less profits, which means loss to shareholders as also to the Government of India, our senior partner. The Government seem to overlook the fact that there is a limit to everything and that when that limit is crossed, the Law of Diminishing Returns comes into operation. The taking over of the liquid balances would effect a change-over in the position of Companies—a most unenviable position for the Companies. The Companies will be compelled to resort to borrowings at higher rates of interest. One wonders whether the Government have considered the possible reactions of the change-over on the Government's own borrowing policy. It must also be borne in mind that the manufacturing Companies now increasingly require Working Capital to a greater extent than in Pre-War times owing to a considerable rise in the cost of every material required in manufacture. It is Taxation policy and place it on a more scientific and rational basis so as to allow the manufacturers to build up appreciable reserves to meet renewals and repairs occasionally, and, at the same time, to ensure a

proper equilibrium between the varied interests, viz., the Company, the Shareholders and the Government themselves.

As regards the proposed increase in Corporation Tax, it is obvious to all that the underlying object is to limit the dividends to Shareholders. This is iniquitous. If partners in a partnership firm are to be allowed to draw their shares without any limitation, I cannot understand why there should be discrimination in the case of shareholders. Furthermore, an unpleasant and objectionable feature of the proposal is that it will not be possible to claim any refund in respect of increased Corporation Tax. The adverse effect of the adoption of the proposal will be particularly felt by small investors whose income on investments is their main source of livelihood and there are millions of such investors.

While I have criticised the Taxation policy of the Government, I feel it my duty to congratulate them on the measures they have adopted with a view to eradicating the black markets. It is indeed deplorable that a section of the manufacturers have been unscrupulous enough to indulge in their nefarious black-marketing activities. With a view to checking the mal practices resorted to by them and the cloth dealers and to ensuring an equitable distribution of supplies throughout the Country, the Government have enacted an amendment of the Cloth and Yarn (Control) Order, 1943, pursuant to which the manufacturers are directed to sell only to those dealers to whom they have sold in the years 1940, 1941 and 1942—the quota to be sold being based on the present rate of production in proportion to the average of sales in these Standard years. The dealers in their turn should only see to those with whom they were dealing in these years. The scheme undoubtedly is good so far as it goes, but it is not without snags. It has the effect of excluding from the trade some genuine and experienced traders who came into business after 1942. Some of them prior to the war were dealing in British and Japanese manufactures but had to take to Indian goods owing to stoppage of imports. These, even if they are honest, have to be eliminated and the Mills concerned have to sever their valuable connections with them and deny themselves the benefit of the valuable knowledge gained by these dealers in their business in imported piecegoods. It is hoped that the authorities concerned will use their discretion and will make special concessions in such cases. I might also suggest that they might excude from the application of the provisions of the Order, the Co-operative Consumers' Societies, as it has been found from experience that the interests of consumers are best served when distribution is done through such Societies.

As stated in the Directors' Report, the present Agents took over charge of the management of the Company in the first week of July 1943 from Messrs. E. D. Sassoon & Co. Ltd., thus, the latter managed the Company for the first half of the year under review. I think, and you will agree with me, that we would be failing in our duty if we did not express our best thanks to Messrs. E. D. Sassoon & Co., Ltd., for the splendid results to which they also have been contributors. I may assure you that the present Agents and the Directors will strive to work in the interests of the Shareholders. Your Directors have in mind a scheme of husbanding the resources of the Company with a view to meeting the post-war needs of the Company in respect of replacements and renovations.

Our thanks are also due to the Company's staff at the Head Office and at the Mills for the assiduity and Zeal with which they have worked during the year.

Synopsis of the Balance Sheet as at

Liabilities	31-12-1943	31-12-1942

DEVKARAN NANJEE INVESTMENT COMPANY, LIMITED.

First Report and Audited Balance Sheet as at 31st March, 1944:

The Net Revenue for the period ended the 31st March 1944 amounted to Rs. 3,45,489. Out of this sum, Rs. 34,549 are payable to the Managing Agents, Rs. 41,113 represent deductions of tax on interest on Govt. Securities and dividends on Shares, the Preliminary Expenses amounting to Rs. 8,051 have been fully written off and the Underwriting Commission has been written off to the extent of Rs. 35,000. This leaves a balance of Rs. 2,26,775 which the Directors recommend to appropriate as follows:

To Dividend at the rate of Re. 1/- (Free of Income-Tax) per Share Rs. 1,00,000, To Carry Forward (Including Provision for Taxation) Rs. 1,26,775, Total Rs. 2,26,175.

The Company was incorporated under the Indian Companies Act on the 15th February 1943 and obtained the Certificate for Commencement of Business on the 30th March, 1943.

The Company appointed Messrs. Denasons Limited, Managing Agents of the Company and entered into an Agreement with them as provided in Article 3 of the Articles of Association of the Company.

The Directors trust that the progress of the Company will be considered satisfactory. Since the promulgation of Rule 94-A of the Defence of India Rules as to the Issue of Capital, the scope for the Underwriting activities of the Company has become limited.

THIS IS NOT A PROSPECTUS BUT SIMPLY AN ANNOUNCEMENT

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94-A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

THE JASWANT SUGAR MILLS LIMITED

(Incorporated under the Companies Act. 1913-36)

Registered at Calcutta on the 21st day of Sept. 1943

Authorised Capital Rs. 40,00,000

DIVIDED INTO :

2,50,000 Ordinary Shares of Rs. 10 each Rs. 25,00,000
15,000 Preference Shares of Rs. 100 each Rs. 15,00,000

ISSUED :

2,00,000 Ordinary Shares of Rs. 10 each Rs. 20,00,000
10,000 5½% Taxfree Redeemable Cumulative Preference Shares of Rs. 100 each redeemable at any time after five years at the option of the company either in part or in whole at a premium of Rs. 10 per share. Preference Shares do not carry any votes. Rs. 10,00,000

As all the Issued Shares have been subscribed for by the Managing Agents, Directors and their friends, no Application will be received and no Prospectus has, therefore, been issued. No commission or brokerage has been incurred in raising this Capital. An application will be made to the Secretary, Calcutta Stock Exchange Association for an official quotation of the shares of the Company.

DIRECTORS.

SUGAR MILL:
SITUATED AT MEERUT (U. P.)

OBJECTS:

The Company has been formed for the purposes fully set forth in the Memorandum of Association and in particular to take over the sugar factory belonging to Jaswant Sugar Mills, Meerut, which has an up-to-date Sugar Manufacturing Plant having a crushing capacity of about 900 tons of sugarcane per day.

PROSPECTS:

Since the grant of protection to the Sugar Industry in this country in 1932, the Sugar Industry has achieved great success in India. As against 32 Cane Factories and 1,58,000 tons of sugar production in the year 1931-32, the production of sugar in 1942-43 was about 10½ lacs tons and the number of factories working was about 150. The per capita consumption of sugar in this country is very low as compared with other civilised countries in the world. The following figures will explain this.

Country.	Per Capita Consumption.
Great Britain	112 Pounds.
Australia	114 "
New Zealand	115 "
U. S. A.	103 "
Denmark	128 "
Cuba	88 "
Germany	59 "
France	54 "
India	6.5 " (25 pounds) including gur consumption.

With the rapid development of industries, the standard of living in this country will go up which will lead to increased consumption of sugar. Sugar Factories in India have a good secured home market apart from possibilities of export of sugar to the adjacent countries.

War has, however, made India an important sugar producing centre, particularly after the occupation of Netherlands East Indies and Philippines by the Japanese. There is, therefore, considerable demand of sugar not only from Indian market but also from other countries which were previously having their supplies from Java and Philippines. It is presumed that even after the war, Sugar Factories in Java would take time to rehabilitate their position and thus India would continue to occupy an important place for the manufacture of sugar for several years to come.

The Sugar Mill acquired by the company at Meerut is enjoying a number of special advantages in that it has abundant cane supply from nearby areas and the recovery which is the main factor in the cost of production of sugar has been second highest in 12 sugar mills working in the Western U. P. The following results of cane crushed, recovery percentage and sugar produced by Jaswant Sugar Mills during the last five seasons would indicate these advantages.

Season.	Cane Crushed.	Recovery Percentage	Sugar Produced
1939-40	17,00,000	9.64%	1,63,885
1940-41	16,42,375	10.10%	1,63,300
1941-42	16,00,900	10.36%	2,05,240
1942-43	20,57,000	10.00%	1,68,230
1943-44	35,77,700	10.00% (App.)	3,57,000

The cane crop next season is expected to be quite good and the Company can confidently look forward to good crushing results in future. The Company has programme to extend the capacity of the mills as cane in the nearby area, with little improvement in road, would be available in abundance.

ACQUISITION OF PLANT:

The Company has acquired the plant and machinery which is in a running condition of Messrs. Jaswant Sugar Mills at Meerut. The plant is manufactured by Messrs. Blairs Limited—Glasgow who are the largest Sugar Mill Machinery Suppliers in this country.

MANAGING AGENTS TERMS:

Messrs. Associated Industrial Development Co., Ltd., who are Managing Agents to a number of well established companies have been appointed as Managing Agents for a period of 20 years from the date of incorporation of the company subject to usual provisos. Powers and remuneration of the Managing Agents are fully set forth in the Articles of Association.

Subsidy for Stock-Raising

BRITAIN'S NEW AGRICULTURAL POLICY

(By Cable)

LONDON, May 24.

Livestock production is the first British industry to have its post-war stability guaranteed by Government.

This, as the public is slowly realizing, is the real meaning of Mr. R. S. Hudson's almost casual announcement in the House of Commons last week that for a period of four years beginning from July 1st the Government will guarantee an assured market at prices, not below the present prices for all milk, fat cattle, calves, sheep and lambs produced in the United Kingdom.

The current prices of animal products as paid by consumers are now 31 per cent above prewar prices, but prices, if received by farmers, are much higher than this, since they include substantial subsidies. These prices will be the minimum not the maximum prices. Hence unless agricultural wages and other farming costs soar faster than the prices they can be raised to cover them. Dairy and livestock farmers seem assured of four years of prosperity. No other industry thus far has achieved such a comfortable position.

Taken as a whole, livestock production accounts for about one-third of Britain's total agricultural production, with an output in a normal prewar year valued about £87 million out of a total of £245 million. To get this one-third it requires about nine-tenths of all agricultural land in use. Furthermore, as frequently pointed out, it is an expensive means of securing human food. For example, one acre planted with wheat yields an average of 18 cwt. of wheat which in turn can be converted upto 16 cwt. to flour which goes directly into human consumption. On the other hand the same acre devoted to raising pigs produces only 4 cwt. of pork and if devoted to beef cattle, furnishes only 2 cwt. of beef. Normally it takes about 16,000 calories of food feed to cattle to produce 1,000 calories of human food. But

the livestock industry is strongly entrenched—politically in the Conservative Party, and sentimentally in the hearts of the British public which feasts its eyes on famous green fields in the country-side where cattle and sheep graze.

The Press has so far refrained from comment on the new agricultural policy, but Parliament will almost certainly ask for fuller details regarding the estimated costs of the policy, perhaps the most striking feature of the new policy is that it is completely free from conditions of any sort. These guaranteed prices will be available to the indifferent farmer who maintains herds of 'scrubby stock' in the same manner as to the progressive farmer who improves his herds. Admittedly, the latter will be repaid by higher prices, naturally commanded by a superior product, but price policy as such will not be used to stimulate quality though it is expected to have a marked effect in raising the quantity. In this connection, Mr. Hudson has repeatedly declared that Britain must raise another one million heads of cattle in order to replace imports of meat which must be earmarked after the war for Europe.

let the day
of Blessing
be a Blessing
to the Poor

WEDDINGS are the gayest of all ceremonies and when you and your friends are so happy and radiant, it is a sad reflection that, so near your kind and generous lavishness, there is still so much real WANT. Yet it is so, and for this reason, socially progressive people no longer allow waste to mar the perfection of such occasions. They feast their guests well, but reckless waste is not permitted. In this way, without detracting in any way from the joyousness of the happy day, they fulfil an inescapable obligation to the poor—who still find food so hard to get.

WE ALL CAN, by reasonable economy, extend our blessings to the poor and needy without spoiling our own enjoyment. If we all follow this wise example, there will be fewer needy people in India who find food difficult to buy.

food for all
..but none to waste

SOUTH INDIA

CRISIS IN THE RE-ROLLING INDUSTRY

POSITION OF 'B' AND 'C' MILLS

Mr. K. D. JALAN'S REMARKS

Mr. President, Sir,
I thank you for inviting me to this meeting today.

We meet today under the shadow of the gravest crisis in the history of the Re-Rolling Industry, a crisis unprecedented in more senses than one for I have never heard of such developments overtaking any other industry anywhere on the globe during war or peace. It is all the more remarkable that when steel forms the sinews of war, an industry which bases itself on this vital metal should be called upon to close down 87% of its units for the furtherance of the same war effort. It is exactly the contrary of what the Tariff Board foresaw in 1934 when they freely advocated the place of this useful industry in the life of the community and even recommended free importation of billets, if need be, to feed it.

The first few years after this open encouragement, Re-Rolling Mills came to be established in large numbers and I cannot but describe this feature as a result of this encouragement. These new units naturally followed the much trodden track for when, on the one hand, there was no reliable data of any other type of production holding out hopes of success, there was also the dearth of technical advice to explore any new avenue. Scrap therefore continued to be exported to Japan and finished products came back, these were very lean years for the industry.

The war cut off export of Scrap to Japan and the Re-Rollers had enough to keep busy with. Then came the problems of Coal and Transport and the Government who sat tight so long now stepped in and came out every day with a new scheme formulated by persons who either had not the expert knowledge of the industry or who had not the interest of the industry in their heart. The Association that was formed limited their membership to a selected few and the only aim of this unholy-alliance was to strangle the rest and when at last it was made representative, its internal weakness was already known to all.

As a matter of fact, had the Association taken the trouble to prepare themselves for protecting the interest of all the members, had the Association tried to find out new ways of expansion in production, had the Association from the beginning taken all and one with them and stood as a body, they could today stand their ground from whatever quarter the danger might come. Even today if those who were not going to be touched were eager to share the lot of their less fortunate brethren, things would be otherwise.

The problems of Coal and Transport are not peculiar to this industry alone. The washing away of the bridge on the Damodar, the heavy demands of wagons, the dearth of locomotives, the poor raisings of coal are not to affect one industry to the exclusion of others, specially when the Steel Industry has all along enjoyed a much higher priority over the textile and other industries. Under similar circumstances, things have been otherwise with other industries. The great Jute Industry of Calcutta made their own arrangements in distribution of Coal and even of Jute when this was necessary. The problem that faces this Industry today appeared before the Jute Industry in no less acute a form 2 years ago, when the Government on the same plea aimed at Rationalisation. Even then they had approached the problem with a set purpose but the Indian Jute Mills Association stood in a body and succeeded in prevailing upon the Government to let them manage their house as best as they could. They asked the Government how much finished products they considered necessary to be produced, how much Coal the Association

could expect and then they made their own arrangement. As in this industry so in Jute some Mills run on steam and some by electricity. But they have not closed down the Steam driven units concentrating production in Electrically driven ones. They have restricted hours of production according to demand and, when they receive their quota of Coal short, as always they do, they distribute it according to requirements of a particular unit showing no favour to the economic units at the cost of uneconomic ones. If only the more powerful members would agree to make some sacrifice, things would have been the same with this industry also. What I urge on the Government is to adopt the same procedure here too. They could give the Association the total quantity of Coal they are allocating for this industry which they indicated to be 4,000 tons monthly.

The arrangement described above would relieve the Government of a great burden and at the same time do so much good to the industry. With the strong backing and ungrudging co-operation of the Association who could bring their invaluable experience to bear on the question the vital problem facing the industry could be solved to the satisfaction of all.

If the Association as one body takes up the matter with the Government and if they place before the Government their scheme on the same line as other industries have done I have no doubt that this Association would be able to convince the Government to entrust them with this responsibility.

I do not see why this cannot be done. From the point of principle, I cannot but characterise this scheme to amputate this industry as arbitrary, ill conceived and based on inadequate study of the working of this industry and insufficient acquaintance with the data. I confess to a sense of disappointment at a scheme which aims at closure of 87 out of 99 Mills.

I now propose to examine the arguments of the Government in some detail. If the problem is of transport, the proposed scheme not only does not save any but may well tax it all the more. When one-third ton of coal produces one ton of finished material, the transportation of coal rather than the transportation of finished products would obviously save wagon usage, locomotive power and thus more coal in turn. Moreover, the Mills, say in the Punjab roll scrap to a great extent available in the Punjab. With this scheme, the scrap will have to be carried from the Punjab all the way to one of the 12 and then finished products back to the Punjab.

To turn now to coal, the Government, as I have said before could well entrust the industry with its quota and ask the Mills to work on its own share. It is regrettable that the Bajoria Committee's Scheme was not even given due consideration, but was shelved on the inept advice of some second-grade officials. The Government have laid great stores by coal. It is their professed plea that in taking this drastic step they have been led by the serious coal situation. The B. & C. Class Mills have extended their co-operation by agreeing to work on the same proportion of coal as Mills forming the 'A' Class. If the Government are true to their professions, they can have no objection to allow these Mills to work on this basis. I hope this proposal would prove acceptable to the Government and they would not press their scheme of compulsory closure of Mills specially when that cannot certainly be the ideal to be attained.

The classification of Mills has not been made on Coal efficiency basis. Some Mills within A Class consume more coal than B Class ones. I do not therefore understand why the Government should show them favour at the cost of others. Looking to Government requirements and the capacity of the Industry to produce it, I feel a proper realisation of the entire position is called for. I am of the opinion that the recorded capacity of Mills leaves much to desire. When the recorded capacity of the 7 A Class Mills is 8,916 tons a month, their average monthly production has never exceeded 3,564 tons the recorded capacity of the 33 B Class Mills is 5,655 tons, their actual production has never exceeded 2,642 tons. These production figures are the highest achieved in months when there were no dearth of coal or raw materials. On the basis of actuals then, the A and B Class are together able to produce nothing more than 6,200 tons a month and adding to it the maximum produced by C Class Mills, the target figure of 10,000 tons, which the Government require, is not reached. From the figures, therefore, far from closing down the B and C Class Mills, what is required is to step up production of B and C Class Mills. For, when A Class Mills have worked more shifts than one to achieve the maximum production figures mentioned above, the fact that the target could not be reached has been due to the B and C Class Mills never getting enough coal and raw materials. I must urge the Government, therefore, to ascertain the actual capacity of these A Class Mills and find out if they are able to produce the 10,000 tons required by them. I have no doubt they cannot. Even if the entire quota of 4,000 tons of coal were given to them they would not be able to produce the required amount of 10,000 tons of finished products. I therefore fail to discover any legitimate cause of taking the contemplated step. If the target figure of steel production has come below 10,000 tons the quota for each Mill should be reduced proportionately. No transport is wasted thereby, as I have pointed out before, no more coal than the Government thinks necessary to allocate is being required nor again it saves any transport in carrying finished products and coal—I therefore see no reason why such a scheme should at all be mooted and why the Association should not, in the interest of its members, oppose such a move tooth and nail.

It is the recognised principle in all civilised societies that the strong support the weak even at some cost to the majority who should minority's interest is always to be protected even at some cost to the majority who should carry the minority along with them rather than stangle them.

The Supply Member spoke of difficulties in getting coal, transport etc. and tried to defend Government's policy by referring to reasons which he said, were not within the knowledge of the industry. But the Industry might expect the Government to take measure to improve the Coal raisings by bringing back labour from the construction works where higher wages await them.

In conclusion I must plead for a re-orientation of the Government's outlook and request them to take the industry into their confidence and not to impose on them ideas imported from abroad which had no bearing on the conditions of this country. Huge sums of public money are buried in this enterprise and thousands will go starving who depend on returns on their shares in these companies, thousands of labour, trained personnel and office employees will be thrown out of employment in these days of rising prices. The industry which had come into being as a result of direct Government encouragement would be led to ruin and disaster for no fault of theirs.

Sir, I have laid my views before you as much as has been possible on a hurried study of the situation. I hope, your Association will be able to attain the status of other Associations and be able under your stewardship to safeguard the interest of the members who are unfortunately in a minority.

Editorial Comments

India and the International Conference

The Indian delegation to the forthcoming International Monetary Conference will, before long, be applying its mind to the monetary problems of the post-war period, as they concern India and the world at large. The news report containing its announcement draws attention to the fact that both the General Policy Committee and the Consultative Committee of Economists have already considered the joint statement of the American and the British experts on the International Monetary Plan and that the members of the Indian delegation will be guided by the conclusions arrived at by these two Committees. It has been said that "reaction in India is broadly in favour of participation in an international monetary system provided that India's special requirements are taken into account and provided that certain important aspects of her economy are duly safeguarded." To say this is to say the obvious. The countries which have taken the initiative in bringing about the conference are more interested in such schemes than India. India cannot reap as substantial an advantage from a better order in international finance as those who are eager to bring about the national economic system of Britain or the U.S.A. cannot function without an understanding about the guiding principles of international finance in the post-war period, India's economy does not depend to the same extent on the smooth working of the mechanism of international finance. However, the fact that India stands to gain from a better international financial order and, what is more, stands to lose if an international financial agreement which is not in accord with her interests should be formulated is sufficient to induce in this country a keen interest in the forthcoming Conference.

The principal difficulty in considering this question at this stage is that the scope of the Conference has not yet been clearly stated. One would normally presume that the purpose of the Conference is to discuss in greater detail the scheme sponsored by the British and American experts of the International Monetary Fund of the future. If the scheme, as it has been drawn up, had comprised all aspects of international finance in which the various nations of the world are interested there would indeed be little room for doubt about the agenda before the Conference. But the joint statement of the British and American experts leaves out of the scope of the proposed Fund many of the topics which were embraced by the Keynes and the White Plans. Will the coming Conference be content with securing the greatest common measure of agreement on the provisions of the proposed Monetary Fund and such aspects of it as have not been considered till now, or will the Conference seek to cover the whole gamut of post-war financial problems? According to the White House announcement, it is said the Conference is "to discuss proposals to meet post-war international monetary problems."

The scope is not as wide as may be thought at first sight. 'Discussion of proposals' is not the same thing as consideration of measures; and "monetary" is a far more restrictive term than "financial". While it may be supposed, therefore, that there are other proposals beside those of the joint statement for the Conference to consider, one cannot be quite sure that the agenda of the Conference will include all the matters that are relevant to the better regulation of international finance in the post-war period.

In these circumstances, it will not be easy for the Indian delegation to make up its mind as to the line it should adopt or to clarify its position. The subjects for discussion, for the purpose of the Conference, seem to form, so as to say, three concentric circles. The innermost comprises the proposals of the British and the American experts for an International Monetary Fund, together with questions like the constitution

of the Board of Management and the Executive which the experts have not considered in the joint statement. The next bigger circle may be deemed to include the problems which the White Plan considered, and which have now been left out of the joint statement. A further expansion of the scope of the Conference will lead to a consideration of such questions as capital movements, large scale foreign investments and the like. Even this extension would leave untouched a penumbra of quasi-economic problems of great importance to the better regulation of international finance.

Britain and the U.S.A., while they are, doubtless, interested in all these three sets of problems can be content with tackling them in the order in which they have been mentioned in the last paragraph. If they succeed in getting an International Monetary Fund established and getting a fairly large number of the nations into its membership, they can well hope to have the other two groups of problems solved in due course to their satisfaction. For the Fund, once established, will be the only duly constituted agency in International finance; and there can be no question of the great powers not having a dominant voice therein. Agreements about wartime balances and capital movements will follow and their working brought within the orbit of the Fund. The power that capital movements and foreign investments will give can be trusted to secure adjustment of tariffs and other matters.

India's approach has to be from the diametrically opposite end. As mentioned already, the inauguration of a scheme like the International Monetary Fund has not the same vital importance to her as to Britain or the U.S.A. Her trade balance is not adverse like that of Britain, or so large as that of the U.S.A., to create special problems regarding settlement. The means of utilising her foreign balances for purposes of planned development is more important than arrangements for payment of current trade balances. And more important, in one view, than either is the general background of conditions in international trade and international finance. India needs to know whether the Powers that put an end to aggression in international politics are going to revive it in the sphere of world economy. To the future of our national economy, it is of immense importance to know whether these Powers will sympathise with the needs and aspirations of undeveloped countries and adjust their programme of economic reconstruction to the economic plans of these countries or whether they will just resume the old wars for markets and sources of raw materials. If there is a readiness on the part of the great industrial nations to let the backward countries make up the leeway, investments which are now outside the scope of the joint proposals could be brought on to the table of the Conference. For it is a short step from sympathy to active help, especially when active help, like the quality of mercy, is twice-blessed. On the basis that the advanced industrial nations help the backward countries to attain to full development, the requisite volume of investment can be estimated; and the share of each of the great nations pre-determined. On that basis the contours of international finance in the post-war period can be foreseen to a nicety and the industrial nations can plan their post-war reconstruction without the uncertainties which competition among themselves and protectionism in their markets render inevitable.

It is probably out of the question for the forthcoming Conference so far to widen the scope of its discussions. In the sphere of international relations, it is thought better to get started on something, however small, than to be discussing bigger ideals and schemes on which agreement is more difficult to secure. Though recent experience does not confirm the wisdom of that view, the coming Conference will concentrate on getting the International Monetary Fund accepted by the majority of nations with the minimum of changes. But the Indian Delegation can ill afford to overlook the fact that India's interests lie more in schemes of wider import. Even more im-

portant is the fact that concentration on specific issues and schemes of narrow range will tend to dwarf India's stature and prejudice those problems in which the world at large, as distinct from the few big powers, are interested.

Since, however, the Indian Delegation can deal only with the agenda of the Conference, it will have to formulate all its observations, proposals and demands with close reference to the proposals before them, but only in the light of the larger objectives. Of these objectives, the question of the sterling balances is less befogged than before for the Acting Finance Member has suggested that annual instalments payable by Great Britain in discharge of her debt to India would rank under the Plan as "current transactions." The City Editor of the "News Chronicle" in interpreting the statement observes that "What Mr. Jones had in mind, and was too polite to say, was that India could, if necessary, compel Britain to borrow from the Fund amounts required to repay her annual instalments of debt." The City Editor adds that "India would derive the advantage of converting the sterling instalments of debt into any currency she chooses and then of spending the money in buying goods in some other country than Great Britain if it suited her." Liquidity and convertibility are the two chief needs; and if the annual instalments are not too small, an understanding between Britain and India on these lines would

be satisfactory to Indian opinion. The facility for conversion of sterling into other currencies would of itself be a strong argument for India's participation in the Monetary Fund

But, as we have been careful to emphasise at every stage, the most important condition of India's participation must be the place accorded to India in the scheme. If the earlier proposals which were more detailed are a clue then the criteria of importance are the value of foreign trade and gold balances. But these are not the sole tests of importance in world economy. While population may seem to be a crude test, the value of total production, share in the staples of world trade and potentialities of future development—all these must also go into the reckoning. Both Sir Ramaswami Mudaliar and Sir Theodore Gregory had emphasised these points on earlier occasions. And the General Policy Committee rightly insisted that India must be an independent member of the Executive and that the whole plan must have reference to the special needs of undeveloped countries. The record of Indian delegations to International conferences has rarely been impressive. But since the views of the Government of India are not far different from those of the public, it may be hoped that the delegation to the International Monetary Conference will distinguish itself by effective espousal of the popular view.

ALL-INDIA HANDLOOM BOARD

It is reported that, at a meeting recently held of the representatives of the Government of India, members of the Handloom Committee of the Textile Control Board and representatives of the Provincial and State Governments a decision was arrived at to form an All-India Handloom Board. The functions of the Board will be (1) to recommend to the Government of India as to what proportion of the yarn available from Indian production should be supplied to each Province and State interested in obtaining yarn for handloom weaving; (2) to assist the handloom weavers through recognised associations or Provincial or State authorities in obtaining dyes, chemicals stores etc., (3) to examine the problem of marketing the handloom products and (4) to organise and direct research for improving production. The administration of grants-in-aid from the Central Government will also be entrusted to this Board of twenty-five members, of whom fifteen will be representatives of the Provincial Governments and the handloom industry and four will be representatives from the Indian States. The mill-owning interests and yarn trade will have six members, to be nominated by the Textile Control Board. The Textile Commissioner to the Government of India will function as the Chairman of the All-India Handloom Board. Provincial Governments and the various commercial organisations have been addressed for eliciting their opinion and suggestions.

The proposal must be welcomed as a promise of rational reconstruction of the handloom industry. Indian handloom products are not a mere relic of departed glory—they still occupy a big place in the national economic life. The mills, both foreign and Indian, have succeeded no doubt, in depriving them of the whole of the foreign markets and a large part of the home market. But they still hold their own and remain the biggest small-scale industry in India. The handloom industry offers work for 2½ million workers, most of them live in the villages, and a population of 10 millions are directly dependent on the fortunes of this industry for their living. Probably, more than any other small-scale industry, handloom production is most intimately connected with Indian agriculture, sharing all its strong points and shortcomings. Hand-spinning and weaving are more important for our problem of distribution and consumption than for our problem of production. That has been the chief justification for the khadi movement and the Congress support to it. Before the war handloom weavers produced 1617 million yards of cloth valued at Rs. 72.8 crores. Apart from the fact that handloom weaving is serving as a subsidiary to agriculture in so far as it affords profitable employment to cultivators during the idle months, it is so well distributed in all parts of India that money passed through the wage bill of this industry, secures a satisfactory distribution of income to villagers without localising the benefits here or there. If an organisation should be set up for aiding this industry, it is a sure way of giving succour to agricultural workers and an ideal agency for helping Indian agriculture without local preferences. It is well-known that during the years before the outbreak of the present war the handloom industry had fallen on evil days, the income of the workers having been reduced by 60 percent or 70 percent during the decade from 1929 to 1939. Just before this war, the outlook of the handloom industry was thus very gloomy. The competition

of the indigenous mills and imported foreign cloth had been severe. While the mills had excellent organisation for research, publicity and sales, handloom weavers had none to help them except, probably, the All-India Village Industries Association and the meagre help given by Provincial authorities. The dearth of credit facilities and the rapid increase of middlemen had worked havoc on them. Often they had to face over-production, owing to inadequate facilities for efficient production and profitable marketing. The millowners who have captured 70 percent of the Indian market had powerful organisation to agitate for tariff protection, and could even clamour for a duty on imports of foreign yarn, the raw material which feeds millions of handloom weavers. In short, the handloom industry was in a desperate plight and it looked to the Government to come to its rescue.

The war brought hope and cheer, at least for the present. The mills, working to their maximum capacity, could not meet all the demands of the military. The handlooms had a good share in war work and the Government of India made it its policy to encourage small-scale industries as far as possible. While, on the one hand, the demand for these products has increased beyond expectations the supply of yarn, stores, dyes, chemicals, etc., had pulled the handloom weaver the other way. Above all, the stoppage of yarn imports hit him hard and no serious attempts were made by the Government to speed up indigenous production of yarn to keep the weaver going. For the past several months, the chief worry of the authorities has been as to how to ration out the limited stocks of yarn, dyes, chemicals etc. The Provincial Governments entrusted with the task of helping the handloom weavers could naturally do very little. The necessity for an All-India Board for satisfactory distribution of raw materials and other requirements of this industry had been keenly felt. The financial help given by the Central Government to the handloom industry was meagre, and served merely as a token of sympathy and the annual Industries Conferences only took stock of the woes of the handloom weavers and settled the actual distribution of the central subsidy, but could do nothing effective on an All-India basis. At a conference convened by the Central Government in 1940, it was decided to set up a Fact-Finding Committee so that complete factual data could be gathered for the purpose of concerting suitable measures. The Fact-Finding Committee did find some facts, but since their report has not been published, the public do not know anything about it. The present decision to constitute an All-India Handloom Board is obviously on the recommendation of the said committee. Though belated, the formation of the Board is quite welcome and, if ample resources are placed at its disposal, can certainly go a long way in pulling up the handloom industry and the workers engaged in it from the present morass.

The immediate problems before the Board would presumably be evolving a satisfactory scheme for rationing short supplies of yarn, dyes, and chemicals, but it can be profitably used for post-war planning of the handloom industry in this country. Handloom weavers, it is admitted, cannot be elbowed out by the mills. In fact, investigators who have gone deep into the problem of handloom versus the mill have often raised the

question if there is any competition at all between the big mill and the cottage handloom. The difficulties of the handloom weavers lie more on the side of inferiority in organisation, capital and research than on the side of technical efficiency. Remove the middlemen, he can fight the mills with confidence. The weaver preserves traditional skill, can study the local customs and manners better and caters to local tastes. In a sub-continent like India where there are a variety of customs and fashions the local small scale producer has an advantage which the mills, highly concentrated in a few provinces only, cannot hope to enjoy. If the millowner can organise efficient advertisement and selling agencies it should also be remembered that the handloom weaver who caters to immediate surroundings is spared from these overhead charges. If it is contended that machines could produce in a day what thousand workers cannot, the answer is we have thousands of able and skilled weavers keeping idle for a major part of the year and sheer numbers can do what machines can. In fact, the recent decadence of handloom industry was due more to lack of facilities normally needed for an industry and not the superior productive capacity of big units. The Handloom Board would thoroughly investigate the problem of giving the village weavers a helping hand if only because behind the millions of handloom weavers, there is a supreme social problem to be tackled. Disturb the handloom industry, you are hitting agriculture and the agriculturists very hard. This aspect of the industry should be borne in mind by the Board and a satisfactory scheme of co-operation between the handloom and the mill should be worked out. If, for instance, it is necessary to zone the markets, or allocate the different lines of cloth production between the two agencies, the Board should not shrink from doing so. Owing to its immense importance to national economy the yarn needed for handloom should be produced by the mills and the Government should make the necessary arrangements for adequate and regular supply. Given reasonable financial and organisational aid the handloom weavers can

hold their own in the market. If the Board rationalises the handloom industry and places it on a firm footing before the war is over, it is not too much to expect that they would not only solve their local problems and maintain the export markets they could capture during the war but would even make a drive for more.

A post-war plan for the handloom industry has to be linked up with similar plans for the regeneration in other sectors in our national life. With the spreading of hydro-electric works and the establishment of thermal stations electricity will enter rural areas and infuse a new energy and power to handloom industry. It is evident, therefore, that planners of post-war hydro-electric schemes for India should bear in mind how much they can help the handloom industry also and evolve the best possible distribution of electricity which can serve the weavers throughout the length and breadth of the land. Likewise, those who are bothered about the task of resettlement of demobilised military personnel would do well to remember that the scope for agricultural colonies cannot be greater than the scope in absorbing them in handloom industry started and strengthened in the different localities to which the soldiers belonged. If a master plan like the Bombay Plan is to be put into operation after the cessation of hostilities, the immediate aim can not possibly be anything but greatest possible employment of labour and the importance of small scale and rural industries like handloom weaving in this respect cannot be exaggerated. Key industries, though vital, take time to develop and cannot easily absorb the large numbers of unemployed or under-employed rural labour. The real and urgent needs of the handloom industry are of an all-India nature and if properly resuscitated it can greatly help in solving several other countrywide problems as well. The proposed Handloom Board is therefore most welcome and, if it works in right earnest and without delay, it may well be the prime-mover for post-war agricultural progress.

PROFITS AND PROSPECTS

Periodical examination of the trend of profits may be as far removed from an analysis of market movements as to suggest that long-term or peace prospects govern the investor's view of most industrial ordinary shares. The presumption is indeed related to what has been happening in London, and a change of some interest today is the London quotation for Barnagore Jute. The jump from £9½ to £14½ in the case of this share is certainly governed by the very striking changes noted in the case of most jute shares, suggesting that moderate appreciation in values will be the rule as progressively easier money conditions set in. The fact that a peace scare does not operate as in the past is of decisive importance for the Indian investor. Shares of engineering concerns directly associated with the war effort have moved up in no uncertain manner this week. The buying movement actually suggests that the customary summer peak is likely to be reached in the case of all except cotton textiles. The contrast between the main market trend and the very mild recovery of mill shares will suggest, that indicators as to earnings are overlooked. So far as available company results (culled from the accounts of representative concerns) suggest 1943 was the boom year. The aggregate earned profits of 12 companies (based on reports received between January 1 and May 13) totalled Rs. 10,30,42,867 as against Rs. 5,19,79,919 in 1943. The doubling of profits is reflected in the enhanced depreciation allowances and the allocations to reserves, namely Rs. 2.38 crores against Rs. 1.05 crores in 1943. Taxation absorbed the greater part of the increase in profits but disposable profits did not fail to increase though the proportion of undistributed profits to net profits showed some decline.

This patent prosperity has been ignored for the reason that apprehensions as to control are pervasive. The dissonance between recorded results and market opinion is, however, of limited interest now as compared with the drop in yield on industrials generally, as the yield on gilt-edged and fixed interest stocks continues to go down. The consequence of the investor's preference for preference shares can hardly pass unnoticed in view of the flattening out of the curve of profits even in miscellaneous industries. A moderate fall in profits in the case of 14 companies did not reduce the liability to taxation or the proportion of undistributed profits. The fall has not hampered the rise of share values in certain cases, for enhanced allocation to reserve and increased charge for depreciation is the rule. The additions to reserves thus seems

to offset the impression that a fall in distributable profits ordinarily makes on the investor. The revival of prosperity is most strongly in evidence in the case of sugar companies. The four company reports tabulated for purposes of comparison indicate that in spite of the weight of taxation, both distributable profits and the balance carried in the books of the companies improved in 1943. From reports it was easy to infer that the outlook on the whole is very good which was one reason why it was urged that investors would turn readily to sugar and cotton shares in the future. If the expectation has been only partially fulfilled, it is noteworthy that the mild increase in corporate profits of coal companies for 1943 makes a profound impression.

Coal companies' profits have not been cut drastically by taxation; and normal depreciation allowances have led to a rise in distributable profits as compared with 1943. What was said about prospects generally has to be supplemented by reference to the increase in coal company profits over the level of 1942 and 1941 in spite of known difficulties in regard to raisings and despatches. The meritorious performance (on the basis of 20 companies' results) is the main factor in the present boom. The return of more than one company to the dividend list this year supports the conclusion that prospects are unclouded by any fears as to control of production and prices in the case of coal. If corporate profits tell only half the story in this case, it is suggestive that an abrupt decline in profits in the case of the tea industry underlines the caution that was administered to reserves and the sums assigned to dividends are reduced by the fall in profits which are back to the 1941 level to judge by the total for 4 companies whose results were tabulated last week on p. 1076. This certainly has not weighed much with the market, since the quotations for popular tea shares have risen this week along with the general rise in jute and other shares.

When reference to peace prospects is made it is the jute industry that comes first to mind. The results of 18 companies now available point to a sharp fall in aggregate profits. This is offset by the reduction in the provision for taxation but disposable profits have certainly shrunk in the case of jute mills as compared with similar results for reports analysed in 1943 and 1942. There is, of course, the consideration that results for the current year may be more reassuring when fuel transport and requisitioning problems cease to be acute, while

rationalisation may secure a due increase in profits. Nevertheless, the main factor (as pointed out here in the pre-Budget spasm of easiness) is the adjustment of the average investor's notions of yield. In comparison with fixed yields variables have alternated rapidly this year but the long-term outlook for most industries can be gauged without much difficulty. Stock market performance of late holds out an indication of what would happen in the transition from war to peace. Where tax refunds will operate favourably the investor is most impressed by that rather than the qualified merits of control of prices of raw material and manufactures. It is not without interest to prove that familiar forecasts as to changes in value have proved mostly incorrect in the case of jute shares. Perhaps the really operative factor is the considerable rise in corporate

profits from Rs. 11.8 crores to Rs. 15.99 crores (for 72 companies grouped between January 1 and May '13). This has been attended with good results in regard to strengthening of reserves, while the reduction in undistributed profits is more than offset by the increase in disposable profits as compared with the two previous years. If totals are deceptive and averages misleading, it is noteworthy that mixed industrial meaning thereby merchanting firms and the like have developed a degree of immunity to the influences of the past that supports confidence as to the future. Lower yields and rising values appear an inevitable combination while the absorption of profits by taxation and the level of dividends announced indicates that the volume of unemployed funds always determines the secular trend.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd

May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

Crisis To Re-Rollers

The decision of the Government of India to close down 87 out of the existing 99 re-rolling mills, though it was expected for some time, will surely be received by those affected with resentment and not without some public sympathy. The importance of re-rollers in doing war work today and in catering to the civilian needs in normal times cannot be gainsaid. And there is also the fact that many of the re-rolling units came into being after the encouragement given by the steel Tariff Board of 1934. No doubt, conditions changed greatly since then. The conditions of the re-rolling industry and its relations with foreign importers of billets or the steel manufacturers at home were different from what were contemplated by the Tariff Board. And, at the present time, there is the crisis in the coal situation. All the same the closure of the greater part of a big industry should be based on more satisfactory grounds than a shortage of coal which may prove to be temporary. Mr. K. D. Jalan in a forceful speech, delivered at a meeting of the Steel Re-rolling Mills Association held here on May 29th, made a good case for the reconsideration of the Government's decision and appealed to the mills for greater co-operation and organised agitation. The present grave crisis to the smaller units of the industry, Mr. Jalan believes, is the result of inadequate study of the situation by the Government on the one hand and the want of co-operation from the larger units on the other. One has only to see how the jute mills tackled the coal crisis and presented a united front to the Government in order to save some of the smaller and even uneconomic units from utter ruin, to understand how lack of union can spell disaster to an industry during bad weather. By ascertaining from the Government beforehand how much of finished products were needed and how much of coal could be spared for the industry as a whole the I.J.M.A. made suitable arrangements for distributing the coal among its members without unfair discrimination. The re-rolling mills can make no claim to the same spirit of co-operation. Mr. Jalan suggests, that if the Government entrust the 4000 tons of coal allocated to the re-rolling industry to the Association, a satisfactory scheme of distribution to different member units can be evolved and the closing down of the mills avoided. Transport difficulties cannot be eased by the closing down of the B & C class mills. As one-third ton of coal is required to produce one ton of finished material, wisdom lies in economising transport of finished products and not in reducing coal movements. The Punjab mills use local scrap and under the present scheme of the Government this scrap will have to be carried to the twelve bigger units and the finished products taken back to the Punjab. The existing classification

of mills into A, B, and C class, it is contended, has not been made on coal efficiency basis. In fact some of the A class mills consume more than some of the B class ones. Mr. Jalan also questions the correctness of the recorded capacity of the mills and presents facts which suggest that "far from closing down the B and C class mills, what is required is to step up production of B and C class mills." Since A class mills working on more shifts than one could not reach the target, it is clear that the other units were necessary to fill the gap. Even if the full quota of 4000 tons of coal is given to the A class mills they cannot, he points out, reach the 10,000 tons of finished products required. If this target is to be lowered the quota for each mill should be proportionately reduced. There is thus a more than prima facie case for the Government reconsidering the decision to close the B and C class mills. The tendency to regard the coal shortage as unalterable or permanent or as otherwise a deciding factor where the policies of big industries are concerned is unreasonable and must be condemned.

No Increase In Imports

The trade returns for January record the value of cotton textile imports valued at Rs. 109.99 lakhs in the ten months of 1943-44. Compared with 1941-42 figures the decline is very heavy, as heavy as the decline under re-exports. Similar decreases under silk, woollen and other yarn and fabrics are attributable to the war which has reduced India's imports of manufactures. Imports of raw wool have increased along with imports of raw cotton. The continuous increase of imports of wool admittedly points to prosperity in the woollen industry which has lately been permitted to produce goods for the civilian quota fixed by Control Order in the winter in respect of both woven and knitted goods. The main factor in the reduction under imports has been the decline under textiles. India's exports of textiles have risen steadily up to 1943. Though exports of wool exceed the exports of woollen goods it is clear that Indian textile industries' prospects have improved greatly. Cotton and jute manufactures account for half the value of merchandise exports at present and the preservation of export markets by various means is already an issue of importance. The most remarkable feature of imports is the virtual disappearance of yarn imports as well as hosiery. Though India's exports of cotton twist and yarn in 1942-43 were valued at only half the total value recorded in 1941-42 the proportion of manufactures to raw materials exported has altered completely. Jute exports in ten months were valued at Rs. 6.77 crores while exports of gunny bags and gunny

cloth amounted in value to Rs. 38.58 crores. Cotton yarn and piecegoods exported in the ten months ended January were valued at Rs. 33 crores while raw cotton exports were valued at Rs. 4.62 crores only. (Imports during the same period were valued at Rs. 13.92 crores). Exports of wool have declined to a smaller extent but the only raw material shipped in greater quantity in 1943-44 as compared with 1942-43 appears to be hemp. Prospects for hemp improved by compulsory grading rules can be assessed by reference to the fall in flax and hemp supplies in the U.K. rather than the values of Indian exports of hemp. The trade returns which point to an increase in 1943-44 in imports from Egypt, though not from the Sudan, also show that exports of manufactures sustain trade with the Empire. Exports to Kenya, Nigeria and the Sudan increased to the same extent as exports to the U.S.A. Canada and New Zealand showed improvement while India's imports tended to fall away. Imports from foreign countries in 1943-44 exceed imports from the U. K. and the Empire but about two-thirds of Indian exports were taken by the U.K. and the Empire, the total figures showing very slight variation as compared with 1942-43. Allowing for the increases under oil from Iran and cotton from Egypt it is clear that last year did not witness any forced increase in imports, while India's exports of manufactures tended to improve at a more rapid rate than exports of either foodstuffs or raw materials. The effects of industrialisation on India's own foreign trade can be guessed without reference to the large decrease under exports of steel, metals, rubber, glass and paper in 1943-44.

Full Employment

Complaints as to delay in outlining Britain's reconstruction plans have impelled Lord Woolton to make a statement of policy, concerned more with the trade cycle than the technicalities of public assistance. The statement does not imply that the Government has adopted the Beveridge report and all its assumptions. But one assumption is duly accepted, and the Government has moved far enough towards Social Credit theory to think of reducing the insured's contributions. When the Means Test was given up this was certainly implicit in British policy. But the statement leaves out of its scope the novel suggestion that consumer goods should be manufactured in abundance to Government's own order and held in stock. This proposal was grounded in the utility principle and its main purpose was to spread work. The Reconstruction Minister's statement on the other hand leans heavily towards public works. Monetary policy being adjusted for the depression period is not an original principle but the notion of stabilising consumption at a

high level proceeds directly from experi-
ence of rationing. Consumer subsidies
are approved of inasmuch as depression
is attributed by some to under-consump-
tion. But depression if it is caused by an
excess of saving can be dealt with only
by taxation. The principle of an Excess
Profits Tax and refund is to be projected
into depression years. Apart from the
capital levy tried out in many lands there
has been a suggestion that a special in-
come-tax on capital should supplement
the regular income-tax in good years. If
the principle of refund is applied, the ac-
tual burden of taxation in bad years may
be lighter. The statement is perhaps a
defence of current taxation policy as well
as a signpost to the future. Where it dif-
fers from past policy is in regard to pri-
ces and wages. Regulation of both is pro-
mised in relation to employment but in
the case of export industries the problem
of markets and prices cannot be dealt with
merely by prohibition of restrictive agree-
ments. Ships may be laid up and ship-
yards may stand idle in spite of the
new argument that larger output is essen-
tial for the maintenance of employment.
Where the statement is most hopeful is
in regard to the transition to peace. There
is no fear of unemployment when demo-
bilitation takes place because the statu-
tory arrangements needed are complete.
There is also the hope that Europe's re-
construction and the demand at home will
eliminate the labour reserve. The ortho-
dox economist's view (expressed in Nov-
ember by Prof. Pigou) has not been dif-
ferent but the Government is almost Tap-
leyish in expecting that shortages abroad
would sustain activity at home. Where
the statement is most positive is in regard
to credit policy, largely on the basis of
previous experience. But many will
urge that U.S. recovery was not due en-
tirely to public works. The policy of res-
triction certainly had to be applied to
agriculture and minerals notably petro-
leum. Of course Britain's coal stands on a
different footing but how miners' employ-
ment would be kept up when markets
are shrinking can only be ascertained
from experience. Lord Woolton's pre-
scription is not a remedy for all climes and
all times. There is, however, the useful
suggestion that taxation can be adjusted
between prosperity and depression. The
uses of a capital levy are certainly
brought out by an extension of the depo-
sit refund principle.

Agricultural Policy For Bengal

At a Press Conference held a few days
ago Mr. K. B. Moazzamuddin Hossain
the Minister for Agriculture, Government
of Bengal, outlined attempts made, or to
be made in future, to speed up the agri-
cultural prosperity of this province.
Foodgrains production naturally received
due attention and the Minister said that
normally Bengal's production of rice
stood at 88 lakhs of tons, while the total
consumption ran upto 100 lakhs tons.
The barest minimum per head is 10 chat-
tacks per day and on this basis Bengal
requires 125 lakhs tons annually. This
gap between the present agricultural
capacity and the target to be achieved
can be bridged without serious difficulties
but the growing population has also to be
tackled. Bengal's population swelled up
by 22% during the last decade and in
spite of the terrible famine and its conse-
quences the weight of increasing numbers
will surely be felt on rice supplies even
in future. The Minister for Agriculture
is therefore right in urging that new crops
like wheat and grain should be encourag-
ed and crops like potatoes which give

Hindusthan Buildings, Calcutta

substantially heavy yields should be cul-
tivated. One crore of rupees has been
allotted for irrigational facilities this
year and it is expected that the Central
Government would grant one crore. Em-
phasis was laid on manures and the public
are told that the Bengal Government con-
templates the establishment of a factory
for manufacturing fertilisers to be distri-
buted to agriculturists at cost price.
Cultivators should do well to conserve
cowdung and green manure and prepare
composts for use. Seed distribution has
an important place in the Grow More
Food drive. The minister disclosed that
steps will be taken to bring the entire
paddy area under the departmentally im-
proved paddy. Tested seeds will be dis-
tributed through seed stores in every
thana and union. 1,42,000 maunds of
aman and 30,000 maunds of aus paddy
seeds will be distributed this year. This
quantity will be doubled next year, and
the seed multiplication programme, it is
hoped, would cover up the entire Bengal
in about 8 or 10 years. Agriculture is
linked up to the livestock position and in
order to protect the animals from viru-
lent diseases the Government have pre-
pared the animal diseases prevention bill
for adoption. Shortly a market regulation
bill will also be introduced in the legisla-
ture for standardisation of weights and
measures, for regulating prices and im-
proving markets and bazars. Importing
experts is part of an all-out programme
for reorganising the development depart-
ment and an expert from Egypt and an-
other from Punjab would cooperate in
strengthening the department. One of
the most welcome proposals referred to
by Mr. Hussain is the decision to collect
agricultural statistics of every crop after
plot to plot inspection. An agricultural
plan for Bengal could not till now be
evolved because of lack of detailed facts
and figures. The public will surely appre-
ciate the collection of basic data and re-
search scholars and the newspapers would
find it easier to offer valuable suggestions
and criticism only if reliable and compre-
hensive statistics are available. Collec-
tion of statistics, we suggest, should not
be entrusted to ignorant village officials
but should be scientifically conducted by
duly qualified men. If public cooperation
is to be maximised the data collected
should be published and placed before the
public at an early date.

For The C. P. and Berar

Apart from the cotton textile industry
(much smaller than that of either Bengal
or Madras) there is little to suggest that
industrial development has taken place in
the C. P. and Berar. In a large cotton-
growing area cotton mills like gins and
presses represent a natural consequence of
agriculture. The mineral resources apart
from manganese, which is a raw material
for export, are not considerable. Fuel
certainly does not constitute a problem in
the C. P. but the only substantial concern
is a cement factory. What possibilities
the future holds can only be inferred from
the usual survey of linseed, hemp and
groundnuts. Oilcrushing, like ricemilling,
is only an ancillary or seasonal industry.
In regard to forests at present the C. P. is
ahead of other Provinces and in regard to
minerals, notably coal, the C. P. is well
placed as compared with other Provinces.
The C. P.'s coal reserves are placed at
17,000 million tons and the main sugges-
tion advanced is that a thermal station for
generation of electricity, as proposed by
some in Bengal, in order to help to new,
urban industry. A point to note here is

that both Hyderabad and Central India
States have developed the cotton mill in-
dustry to a point at which imports are
likely to be unnecessary. New industries
approved as feasible are oilcrushing,
porcelain manufacture and the manufac-
ture of starch (an industry that enjoys a
measure of natural protection owing to
the war) along with the canning or other

use of oranges which may be described as
an export crop at present.

A departmental pamphlet refers to the
possibilities of paper manufacture but the
suggestion must be taken as one made
without prejudice. In 1936 when new
paper mills were planned the usual argu-
ments against hasty expansion were
heard; they may be heard again for it is

NOTHING LIKE LEATHER

CHEMICALLY this is not true. Leather is a protein and
so are wool, silk, hair, nail and horn! The manufacture
of leather is a highly-skilled and complex craft which has
developed slowly but surely through centuries of trial and
error. The hides must go through many treatments before
being tanned. Tanning converts the soft skin into durable
leather, but it is not the end. The leather must be brought to
the required degree of pliability and finally dyed or finished
to obtain the wide range of effects, say, between an army
boot and a bright bedroom slipper, a fancy handbag and a
riding saddle. All these many and varied processes have been
developed by the leather industry, but gradually, as the
chemistry of leather has become better known, the chemist
has been increasingly brought in, replacing the old agents
for leather treatment, lime, animal excreta, eggs, offal and
crude fats, with standard alkalis and sulphides, pancreatic
enzymes, disinfectants, purified and analysed fats, the chrome
tanning process and so on. Most of all, the chemist is helping
the leather manufacturer to understand the principles
of his processes, to speed them up and standardise them.
The excellence of British leather is universally recognised,
and British chemists are among the first in the field
of leather research. Professor H. R. Procter, known
affectionately as "the father of leather chemistry" led
a pioneer school at Leeds University from
1890-1913 and the work he initiated has been
pursued and developed all over the world.

DIRECTORS' REPORT

The Directors have the pleasure in presenting to the Shareholders, the audited Balance Sheet and Profit and Loss Account of the Bank for the period of six months ending March 31, 1944. The gross earnings amount to Rs. 37,67,770-2-3 and the total expenses amount to Rs. 27,55,084-9-4 including all expenses incurred in establishing and organising new offices opened during the period under review, thus leaving a balance of Rs. 10,12,685-8-11. After adding the previous balance of Rs. 2,56,218-5-10 the total amount available for appropriation comes to Rs. 12,68,903-14-9.

The Directors recommend the above sum of Rs. 12,68,903-14-9 to be appropriated as under:—

	Rs.	A. P.
1. To Transfer to General Reserve (raising it to Rs. 10 lacs)	3,71,158	13 8
2. To payment of dividend at the rate of 6% p. a. less Income Tax on 53,572 Cumulative Shares from January 1, 1943 to March 31, 1944	2,88,786	9 0
3. To provision for Income Tax	5,00,000	0 0
4. To carry forward	1,08,958	8 1

The growth of the Bank during the year has been quite satisfactory. Its working capital exceeds Rs. 19 crores, which shows increasing confidence in the Bank on the part of its constituents and patrons.

With a net-work of Branches all over India, the Bank is now in a position to offer banking facilities of all types to the public in general and to the mercantile community in particular.

The Directors place on record their deep sense of gratitude to the Constituents and the Shareholders of the Bank for their unflinching patronage and co-operation in its successful working and appreciate the loyalty and devotion to duty of the officers and the staff of the Bank. They thankfully acknowledge the valuable assistance rendered by their colleagues on the various Local Boards.

R. DALMIA
Chairman.

Dated May 20, 1944.

not enough to point out the advantages in respect of either raw materials or market. The temporary and limited advantages of the tariff are not likely to sustain the saw-milling or plywood industries that are recommended. The provincial or district development scheme that goes with any plan must pass in review the advantages of industrial location, not merely in relation to defence but in regard to supply of labour. Without large cities and in industrial tradition, such as

it is, the main conditions favouring the growth of large-scale enterprise are absent in the C. P. It is only fair to recognise that endemic labour trouble is not a permanent handicap. But to suggest that industries subject to new excises can be started readily in the C. P. is to mistake the size of the market. Hosiery making is described as quite suitable but the U. P. and Bengal have had trouble in getting over foreign competition and the small-scale industry that is distributed

over many provinces has an export surplus that should render expansion in other Provinces unnecessary. The C. P. as an exporter of coal has admittedly a freight advantage, but the positive suggestions in favour of prospecting are less important than the measures that may be adopted to increase coal production by other means than requisitioning. Whatever suggestions may be offered in regard to Provincial plans today the main point that heavy industries come first must not

AUDITORS' REPORT

We have audited the above Balance Sheet of the Bharat Bank Limited, Delhi, as on March 31, 1944, along with the Profit and Loss Account for the half-year ended that date as above set forth with the books and accounts at Head Office and New Delhi Branch, and returns from Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account have been drawn up in con-

formity with the Law and the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books at Head Office and New Delhi Branch and returns from Branches. The books have been kept as required by Section 130 of the Indian Companies Act.

be lost sight of. If coal-mining is developed so as to support new heavy industries in India, the gains are not limited to the coal industry, so that it is coal that the C. P. must prize, not cotton for which the market is gone.

Portugal's Claims

Portugal, run by an economist who happens to be a dictator, has a single party that is pledged to friendship with Britain. The party executive, made aware of Britain's intentions in the war and peace, has promptly recorded its opinions. It may be assumed that the Portuguese Government's desires correspond to those of the Uniao Nacional party's foreign affairs committee. The principle of Iberian solidarity receives warm support. It is not improbable that Britain's new attitude to Spain is conditioned by due appreciation of Portugal's neutrality. The affirmation of friendship with Britain of course proceeds from the Azores agreement and the Portuguese protest to Japan over the occupation of Timor. Of some interest to India is the demand that there should be a Cardinal in Goa. It means the relic of the Portuguese Empire would be as carefully preserved as the circumstances warrant. The Portuguese Government's supporters take note of African developments and mention particularly relations with South

Africa. The Colonial Empires of France, Belgium and Portugal in Africa are more closely tied to South Africa than presumed. The assurance of friendship for France overseas is based on Portugal's desire for a position in North Africa. It may be readily assumed that revision of the Tangier convention would give Portugal the place held by Italy. In the two Moroccan crises the Powers concerned were Britain, France and Germany and Spain to a lesser degree. The claim now advanced for Portugal is based on the assurance of friendship for both France and Spain as well as Britain on the part of the republic. As Brazil is hailed as the land of future Portugal's need for the larger republic's friendship is independent of the claim that Portugal is an Atlantic Power that must be in alliance with the U.S.A. for various reasons. Portugal's desire for alliances of the old type is associated with the distrust of a world organisation dominated by three or four Great Powers. Portugal asserts both the principle of equality and her friendship for the Anglo-Saxon powers. It is interesting to note that the small nationality's distrust of the Atlantic Charter is illustrated by Portugal's protest against a supra-national organisation for peace. Portugal clearly expects that security would be obtained from the maintenance of the alliance with Britain rather than a federal union or its latest variant, the peace organisation planned by Britain. It is significant that the neutrals as far removed as Sweden and Portugal take a different view of the new concert of Europe. But for the present it is important to note that Portugal too plans to develop her colonies. British plans certainly have set up an answering echo in Lisbon.

Looking For Guarantees

The U.S.A. is prepared to export capital after the war. That much is evident from the proposals for a World Bank and exchange stabilisation. Where India comes into the U.S. scheme is in relation to exports of capital goods. The wartime expansion of U.S. industry implies a surplus of productive capacity after the war. Disposal of the redundant equipment and goods to likely customers has become a pressing issue. It is therefore necessary to connect the desire for overseas equipment with the problem of reconversion. Conversations in New York between a high Indian official and U.S. bankers has been mentioned. It is noteworthy that private interests turned to the Soviet mission as they have turned to Indian possi-

bilities. The question of repayment for lease-lend supplies does not come in; the only thing the U.S. banker is said to seek is an assurance of sanctity or immunity. There is little doubt that countries which have lost investment in Europe and the Far East look for virgin fields. The volume of U.S. investment in Latin America is already heavy. In Asia her investment is relatively slight and the only country that can offer a direct immediate return on investment in the future is India. Participation in colonial development plans would not help the U.S. investor much.

The week-end report from New York dwelt on India's need for capital goods and the maintenance of India's export surplus. Conditions certainly favour the large-scale import of certain U.S. goods—agricultural machinery and machine tools have been cited—because India's active balance of trade will support it. Where the future conflict may develop is not in relation to India's inability to tolerate foreign capital but in regard to the British desire to liquidate sterling balances in the future by the export of British goods. The U.S. bankers have sought assurances that independence would not threaten foreign capital. Having regard to the main recommendations of the External Capital Committee made twenty years ago, it may be suggested that influx of new capital must be regulated by certain considerations. However acute the need for fresh capital for development, a national government would certainly define the conditions of entry, especially, as the majority of Indian industries are protected and in most cases, have suffered from excess capacity. Any desire to supply consumer goods to India must be restrained by the consideration that capital here is not inadequate or excessively shy. If the U.S.A. is set on developing an export credit's guarantee system in the future for developing sales of capital

goods, the benefits will not be limited to the U.S.A. But political aspirations can hardly be modified to suit the U.S. banker. It is open to some to suspect that dollar diplomacy is going to take India in its sweep while others will assume that the desire is derived from India's acceptance of Imperial preference. Of course, a higher standard of living would support an increase in imports but the desire to develop India into a market for U.S. manufactures takes no account of the possibility that a fast-growing industry in India may not require either outside capital or direction.

More And Varied Food

Though food production in Canada declined last year (to judge from available figures) the explanation as to the decrease was given. Bad weather and labour shortage combined to reduce the field crops raised last year. Increase under hogs, cattle and poultry underline the fact that the drop in wheat has only an effect on exports. The quinquennial average (1937-41) was certainly expressed in regard to all crops except rye and turnips. It was noted that only the Eastern Provinces were likely to be short of grain this year. The rise in prices that has been officially deprecated of late probably will influence consumption only to a slight extent. What is significant is that food consumption in Canada has risen. Since Canada like the other Dominions became a producer of livestock and dairy products for export home consumption has risen. Per capita consumption reflects the Dominion's prosperity as well as the limited effects of rationing. Actually food exports in relation to total exports have fallen. The explanation is found in the increased production of milk and meat. Except for sugar and syrup the Dominion's consumption of food has been steadily rising. The restriction in the wheat acreage has not affected livestock production. The difference as compared with India where exports for essential purposes bit deep into limited supplies is obvious in this case. The more important difference however lies in the steady increase in agricultural production in the wake of higher industrial output and higher wages. That prices in Canada have risen without evidence of scarcity might suggest various conclusions although it is important to note here that Winnipeg prices have merely followed Chicago wheat up to January. The Dominion cost of living rose in 1943 by three points only (from 116 to 119 Base June 1939) and this was a decisive factor in the steady increases in food consumption during the war. The more important conclusion at present is that the New World's standard of living has risen as usual while the East has experienced the unmitigated effects of inflation. The original difference between the countries exporting food and those importing food has not been obscured by the war. One of the direct results of the war in India is a lowering of health and a recent student of war economy has mentioned the deterioration of the industrial workers' health as a consequence of the failure of wages to catch up with the cost of living.

Minor Textile Manufacturers

Brazil's like Peru's cotton nourishes a textile industry. Cotton-growing countries, notably Egypt, are keen on their own mills. One factor in the rise of Latin America's cotton industry is concentration in Lancashire still reinforced by export quotas. The shortage of import

goods invariably accounts for the considerable increase in the textile output of minor producers. There is little doubt that cotton-spinning and weaving can be carried on in backward as well as advanced countries, hence progress in Mexico as well as Argentine falls into its place. It is known that the Middle East has been short of cotton textiles for some years; hence the increase in textile production in Iran, Palestine and Egypt. An increase of over 1,000 million square yards in the home production of countries previously importing cloth raises at once the question as to the big exporters' chances after

the war. Recovery of former markets is not ruled out as the countries that have made progress in spinning and weaving are backward industrially and the local production must be of a low grade. Dependence on Britain would therefore be only modified. Since the countries imported machinery there is a gain to balance any prospective loss. That Latin America (shut out from Europe's markets by the war) has found use for her cotton at home is not surprising. The U. S. A. sold secondhand machinery largely because the industrial progress in wartime

How much is
91,660 Miles?

It's nearly four times the earth's girth! To be exact, it is 32½ times the circumference of the earth. All this tremendous length of cloth is produced annually by the India United Mills Limited—not to outdo the equator—but to clothe India's tinker, tailor, soldier, sailor, and all the teeming population.

Today, our mills are humming with war orders. The needs of the fighting services receive first consideration. As soon as Victory is won we shall go all out to meet civilian requirements. Remember, when better cloths are woven, "INDU" will take the lead.

The Government of India have announced in a communique their decision as to the compensation for loss and damage caused by the Bombay fire of April last. The announcement is by itself calculated to cause a sense of relief in the public mind, not to speak of those who have been directly affected by the great disaster. For, the position, a few weeks ago, was that, while the insurance companies were satisfied that the claims made in respect of this tragedy were not covered by the policies issued by them, the Government's position and attitude could not be clarified as quickly as the public and the victims in their impatience would like them to be. That so great a disaster could happen without its victims obtaining any help or relief was, indeed, quite impossible. But the uncertainty was harrowing. And great credit is due to Lord Wavell for keeping up the reputation he gained soon after his arrival in India for acting in grave emergencies like this with a promptitude that has no precedent in the history of this country. In fact, when you think of it, it is even more creditable to formulate this scheme of compensation within a few weeks of the incident than to have switched on the machinery of the military department to the distribution of food in famine-stricken Bengal. For, in this matter, are involved the interests of insurance companies, Indian and foreign, a tangle of legal and ethical considerations of a hazy kind, with some of the issues having a bearing on the relations with other Governments. Even without the last mentioned aspect, the problem is complicated enough. When the insurance companies have been advised that they have no legal ability in respect of these claims, it is difficult to persuade them to take on themselves a portion of these liabilities and much more so to step up that percentage. The insurance companies are apparently satisfied with this settlement of the problem and are not inclined to grouse over their lot therein. The public at large, which is more concerned about relief to the victims than the technical aspects of the problem, will feel satisfied that not only the insured but the uninsured claims will be met. It is not alone the big merchants or the big industrialists who had insured their goods and properties that will be able to secure compensation, but also the man who has lost an eye or an arm or who is otherwise disabled for work. The bereaved families of victims are to get compensation. In these cases, it is natural that the Workmen's Compensation Act should provide the scale for fixing the compensation to be paid. We are told that the relief will be even more liberal than that provided under the Act. There is thus cause for a general feeling of satisfaction that so big and so complicated a question has been settled with little or no loss of time.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like It)

But it can hardly be overlooked that relief for the victims of the tragedy has to come from the insurance companies and the revenues of the Government of India and that the decision of the Government raises other issues of equal or, in one view, even greater, importance. The aftermath of the Bombay tragedy may be even more serious than its immediate consequences in the destruction of life and property. For, if the victims are to be fully compensated, nearly 200 crores would probably be required. There is first the destruction of public property such as that of the Bombay Port Trust; there is then the property of companies which have nearly the same character as public institutions and there are then losses sustained by individuals. Perhaps, compensation can be denied without compunction for loss of property which is tainted by some kind of illicit character. The Government announcement makes it clear that no claims will be entertained in

respect of stocks kept in contravention of Government orders of control and regulation. Compensation will not be payable in respect of certain other kinds of goods like bullion, cash or currency notes and negotiable instruments. Even with these deductions, the amount that will have ultimately to be paid out will run into many crores.

It is therefore of importance to see in the first place the effects of this settlement on the insurance companies and their future and secondly, the effects of the liabilities which the Government have now had to take upon themselves on the finances of the Central Government. It will be well, however, to note the basis on which the burden of these compensations devolves on those concerned. For the division as between the Government and the insurance companies is not on the same basis in all classes of claims. Nor are insurance companies

concerned with every kind of loss or damage sustained. The claims fall into two broad divisions, insured and uninsured. But if it is remembered that insurance companies are not, legally speaking, liable for these claims, the distinction is somewhat unimportant. In so far as the disaster was incidental to war, the consequences of which are expressly excluded from the risks covered by fire insurance policies, the Government alone are liable to find the compensation; and the same circumstance suggests that in meeting this liability, the Government of India are entitled to help from other allied nations. If the insurance Companies come into the picture, it is because they would not like to be thought of as standing on the letter of the law or because their contributions to what is really the liability of the Government will rank as a contribution to the war effort. However, the fact remains that in respect of damage to property, the compensation to be paid is full 100 per cent and the insurers have agreed to make a voluntary contribution of 12½ per cent to the Government. In the case of marine policies, the insurance companies will pay ascertained claims in full and the Government is to reimburse them to the extent of 40 per cent. The arrangement is the same in regard to miscellaneous policies, but the Government's share is to be 50 per cent. Other clauses are exclusively the concern of the Government.

The question may be asked whether the burden which will now devolve on the insurance companies is such as they can be reasonably asked to bear or is such as will not affect their future. Till the magnitude of the claims as it affects each company is ascertained, no definite opinions can be ventured. But it is certain that the amounts they will have to pay bear no proportion to the normal routine claims which they will be called upon to meet. For one thing, the difference between company and company is not a matter to be overlooked. To build up a general insurance company of reasonable strength is a matter of decades. And it is only recently that Indian insurance companies have come to be thought of as entities to reckon with. But in relation to claims of this magnitude, they can hardly be reckoned as the equals of the historic British institutions which have reserves built over nearly or even more than a century. The negotiations that preceded this settlement were probably conducted, so far as British companies are concerned, between their Home Offices and the Secretary of State rather than between the local offices and the Government of India. Their ideas of what insurance Companies can pay must have been determined by the stature of the British Companies and the scale of their operations. Whatever that may be, it is unlikely that the share of the Insurance companies as a class has been determined with an eye to the effects of these claims on the capacity of each company and its future. Even among the Indian companies, all are not of the same standing. But this is not going to affect the contribution each company will have to make to the settlement of these claims, since each company will be paying the 12½ per cent or 15 per cent of the claims made in respect of the policies issued by it. And yet there is no relation between the policy and the claim, since the claim is not admittedly covered by the terms of the policy. The result of all this may well be that the relative strength of the

various insurance companies may be affected for reasons which have no relation to their efficiency in the conduct of their normal business.

Somewhat similar conditions apply to the Government of India as well. The liability in respect of this disaster cannot devolve wholly on the finances of the Indian Government. For it is now established that the explosion was caused by the departure from the established procedure of unloading ammunition in a place far away from the port and in a place which is comparatively secluded. A departure which was fraught with such serious consequence was necessitated by the requirements of the war. And it is reasonable to ask that other allied nations who are directly concerned in the war in the Far East should be approached for making a contribution to this liability. There is no means of knowing now what the liability to the Central revenues will be; but it seems certain that it will be a big addition to this year's expenditure. Probably, the Government are also considering how the other Governments concerned can be approached. Sir Jeremy Raisman, who has proved himself so zealous and so able a negotiator in many other matters, will, I hope, look to this as well.

In stating the problems of the transition in very general terms Sir Alexander Roger described both the responsibilities and the opportunities for Britain. Nothing on the same scale will arise in India, but it is useful to note now that the average or hardened individualist takes a forward view and projects present hopes into the future. Emphasis duly laid on the political background for most predictable changes certainly receives its justification from experience. Sir Alexander Roger—hardly a new name in this country—looking at overseas industrialisation thinks also of trade opportunities for Britain. That may be called a representative view for which reason we may refer to the statement circulated to the shareholders of British Insulated Cables, Ltd. before the annual meeting on April 20th. Greater interest naturally attaches to his assurance that British industry is well-equipped, and a measure of deconcentration has improved the competitive position. More recent pronouncements as to Britain's needs and the finite connexion between full employment and export revival confer interest on Sir Alexander's outline—precise, if rugged—of obligations and commitments, of privileges and duties. The summing up of the years of endurance and effort should make understanding easier in this country of what follows the changes in Britain's position from a creditor to a debtor country. Others have already spoken of Britain's third chance. It is Sir Alexander's belief that the chance is there to be grasped. The figures passed in review afford merely an illustration of what is being done to further the war effort, but a point that requires special notice in respect of the balance-sheet is that in the case of a solidly established and progressive concern patents and goodwill are written off completely while depreciation charges are (as noted by Sir Alexander) in excess of that allowed by the Board of Inland Revenue.

(From Our Correspondent)

New Delhi, May 22.

RATIONING began in Delhi to-day. Only a few week's working of the scheme will bring out its weak points, but already there has been a growing apprehension among the citizens regarding some patent defects. These are the reported bad quality of some of the wheat and rice supplied to the ration depots, perhaps out of old Government stocks, the inadequacy of the sugar ration quotas, the non-inclusion of fuel among the rationed articles and the absence of any control over the supply price of such articles of food as vegetables, fruit and eggs. For sometime the prices of these articles have been prohibitive and unless a rigid control is quickly enforced regulating supply and consumption, the health of the city is bound to suffer due to unbalanced diet. The rationing authorities have been made aware of most of these things. They have already promised to consider an increase of 50 per cent in the sugar quota and to remove the bad quality wheat supplied to the ration. An assurance has been given that all the foodgrains supplied to consumers will not only be tested by experts but also properly cleaned.

Though the decision to investigate the causes of and responsibility for the Bengal famine has been taken, it will take some time before the personnel of the enquiry commission is announced. It is feared that very few non-officials, if at all any, would be associated with the enquiry and that the commission would be a purely official body. The names at present mentioned in this commission include Sir John Woodhead, Khan Bahadur Abdul Aziz, Chairman of the U. P. Public Services Commission, Mr. A. D. Forowala and Col. E. Cotter, Public Health Commissioner with the Government of India. Sir Purushottamdas Thakurdas's name is also mentioned as one of the likely members. It is apprehended that such a body will hardly create confidence in the public mind. The unanimous non-official view here is that only a commission composed of prominent Indian public men can adequately analyse the disaster that devastated Bengal last year.

A report on the technological possibilities of agricultural development in India by Dr. Burns formerly Agricultural Commissioner with the Government of India, envisages an increase of 50 per cent in wheat production and 30 per cent in rice production. Dr. Burns's report together with one note that Sir Theodore is preparing on the economic background of postwar agricultural policy will form the basis for agricultural reconstruction after the war. The increased yield is expected to meet India's needs fully.

The two main objectives, for a rational agricultural policy for India are described as the abolition of the poverty of the cultivators and the abolition of the poverty of the soil. Dr. Burns states that mechanisation has already proved useful and essential in good operations as eradications of deep-rooted weeds, clearing land originally under jungle, in making roads, in anti-erosion work on large sugar estates where big areas have to be dealt with quickly and efficiently. Dr. Burns

explodes the fallacious view that mechanisation must result in widespread unemployment. Mechanisation creates new classes of employed men, those who make, those who manage, and those who repair machines. It employs, in addition, more groups who are in supplies and distributions of these spheres, the fuel and lubricants. An area which has been mechanised, he thinks, easily give double the income that it could previously. Dr. Burns thinks that big increase in yield are possible in the case of rice crops as cotton, jute and tobacco. About three-quarters of a million acres can be saved for food crops in Bengal by increasing jute yield from 16 maunds to 20 maunds an acre. Dr. Burns emphasises the need to cut out various kinds of waste seen as waste of fertilising material, water and soil which exist at present and the need for collective action in matters like soil conservation and control of pests.

The recent drastic steps taken against certain unscrupulous mills in Bombay are welcomed here. It is learnt that the production of the mills taken over by the Government will be supplied to Provincial Governments who will arrange free distribution through existing trade channels. The Government will also allow mills to open their own retail depots. The Government thus hope to end the malpractices of wholesale and retail cloth dealers. It is stated in fairness to the mills that only very few of them indulged in malpractices by entering into bogus transactions with their relations and friends to absorb this 20 per cent margin allowed between wholesale and retail prices thus forcing genuine cloth dealers to buy at higher prices and sell in the black market.

The broad outlines of this final compensation plan for this huge damage caused by the recent Bombay explosions are published. I understand full compensation for insured and 80 per cent compensation for uninsured property of goods. Insurance Companies it is understood, shall have to bear out of small percentage (12½) of the compensation and the rest of the cost will be borne by the Government. The total bill for the Government is expected to amount to about 25 crores. It is learnt that a maximum of Rs. 5,000 per family will be paid as compensation for household effects. There is, of course, no question of the payment of the black market stocks destroyed in the explosions.

(From Our Correspondent)

Madras, May 31.

Ever since news came from Mysore that the Hydro-Electric power generating station at Sivasamudram was hit by lightning, it was assumed that industrial concerns, in the State that depend on electric power would not be able to work for a considerable time to come. On the local stock exchange the Mysore Group of industrials—a usually active counter-registered a setback and scrip values were marked down appreciably. It was also said that the State budget would be adversely affected and that the necessary alterations were being made. While presenting the budget proposals for 1944-45 which by the way were made in the original form as it was too late to carry out alterations, the Dewan gave an account of the exact state of affairs at Sivasamudram. A substantial part of the plant is in a condition that admits of the station being brought into partial service within a comparatively short time and the Dewan said that the supply of power will be restored as early as possible with the co-operation of the Central Government who have agreed to give the highest priority for this work. A rough estimate of the cost of repairing and replacing the equipment was given by the Minister of Public works who put the figure around Rs. 25 lakhs. The temporary and partial shut down of power will curtail the revenue of the department during 1944-45 to the extent of Rs. 30 lakhs.

The total revenue of the State from year to year shows an upward trend and the estimates for 1944-45 stand at the record level of Rs. 818.01 lakhs. The total expenditure is estimated at Rs. 816.08 lakhs which includes contributions of Rs. 103.57 lakhs to various special funds to finance postwar schemes. Under taxation, Enhancement of super-tax, income-tax, tobacco duty and new duties on coffee, tea and betelnut are proposed. New schemes of development include extension of education, improvement of public health and starting of supplementary industries. The postwar plans of the State represent in many cases a continuation or reorientation of past effort.

India alone among the civilised nations is still backward in her film industry. While it is true that the industry cannot show much progress under the prevailing conditions owing to its dependency on foreign manufacturers for its raw materials, it is rather difficult to find adequate reasons for the Government's apathy towards the Indian film industry. Apart from its inherent value as a means of effective propaganda, a growing film industry is a healthy source of revenue for the Government. So far the Government do not seem to have bestowed the requisite amount of attention on the matter. When controls and regulations were applied to other industries, the Government promptly remembered the film industry, and then forgot all about it. The public is now told that the control measures have affected the industry adversely.

Film producers in South Indian languages especially were put to untold difficulties by a policy of discrimination. The President of the South Indian Film Chamber of Commerce in his address to the 5th Annual meeting of the Chamber enumerated the disabilities the industry is labouring under and made an appeal to the Government to take immediate

steps to put the industry in its proper place which is in no way inferior to other major industries. In spite of the vigorous efforts of the Chamber's representatives at the Film Advisory Board which met in New Delhi on May 8, the Government Representative had made it plain that nothing could be done this year. While it is assumed that there are not many chances of improvement for the industries in war time, it is however, deemed necessary to plan for the postwar period. That the Government have realised the necessity of planning for the future is evident from the various sub-committees they have set up. But the film industry has not found a place in the postwar plans for industries and Mr. Ramabrahmam, the President of the Chamber urged the Government to set up a committee in order that the industry might not suffer in future. The annual report and the President's remarks clearly show that the Government are meting out a step-motherly

treatment to the film producers in South India. It is further alleged that control measures are enforced in South India rather harshly while the situation seems to be better in other parts of the country as is evident from the number of new films produced in the past year in North India.

Reports from Malabar regarding the food situation have been agitating the public mind for some time past. Eye witnesses declared that scarcity of foodgrains was very acute and warned the Government that if immediate steps were not taken to alleviate the distress the country would be faced with another famine comparable to that of Bengal a few months ago. A deputation of citizens led by the Mayor waited on the Civil Supplies Commissioner and urged the Government to acquaint the public with the actual state of

is outside the textile field (home consumption of cotton has fallen further in 1943-44) and also because the U. S. cotton crop has been growing continually smaller in the past ten years and the mills are too many for the goods required for export. Brazil with an output of 1,400 million square yards in 1942 is now described as a potential exporter. In view of the growth of inter-American trade and the increasing production of secondary industry, the trend is likely to persist. The growth of mill capacity is due only partly to double shift working; the addition to equipment implies that losses in Europe are offset to a great extent by the growth of textile manufacture in Australia, Canada and other lands.

New Sugar Company

Both ordinary and preference shares in a sugar company are taken up in entirety by the directors managing agents and their friends. The announcement to-day mentions that the company registered in 21st September 1943 obtained its capital, and the present indications are that the shares, in relation to the earning power of the Meerut factory (seasonal crushing capacity has been rising steadily from 1939) and Indian sugar prospects generally must be at a premium. The Jaswant Sugar Mills equipped with plant made by Blairs of Glasgow has many advantages, not the least being the new connection with the Associated Industrial Development Company, skilled pioneers of industries in India. The Board is one to inspire great confidence, with Sir O. W. Roberts and Lala Yidhraj now associated with the Calcutta group that sponsored the acquisition and the issue.

Reference may be made to the present level of sugar shares to indicate the nature and prospects of a new share in what is an old concern. The main points to remember now are that the last season has been good for sugar mills, and prospects are very fair; also, the cane supply in Meerut is promising for the mills there. The Jaswant Sugar Mills' crushing capacity is to be soon enhanced and the promise of vigorous and enterprising direction is of some importance even when the recovery percentage is well up to average and factory output figures are wholly encouraging. The ten-rupee ordinary shares must therefore evoke special interest among investors who may be aware that sugar shares are more remunerative than other industrial shares at present.

Bharat Bank Limited

There has been a sizeable addition to bank deposits in the second half of 1943 of which the Bharat Bank claimed its share. Total deposits in the balance sheet as on March 31 rose to over 13.95 crores. The substantial growth of resources in the first year of working is due presumably to the large number of branches which has distinguished the Bharat's working from the inception. An addition to these is promised in the report, and an increase in deposits seems assured for that reason. The first report and balance sheet issued by the Bank received special notice for the reason that a new bank with large paid-up capital, in relations with the States, acquired deposits on the scale expected. The latest balance sheet and accounts require notice, not only for the addition to Reserve, but for the payment of the preference dividend of 6 per cent less tax for the

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

period January 1943 to March 1944. The stratified capital structure is of less interest than the arrangements that have produced a profit of Rs. 37,67,770-2-3 for six months. The net profit returned is Rs. 10,12,685-8-11 because expansion has proceeded at a rapid pace in the period referred to. The provision for taxation is Rs. 5 lakhs while the Reserve receives Rs. 3,71,158-13-8 raising the Reserve to Rs. 10 lakhs. The transfer lowers the carry forward, but the marks of vigorous growth are to be found on the other side of the balance sheet. The cash ratio, in any case, is as high as may be expected, and it is not surprising to find that Investments top the other assets. The appearance of preference and ordinary shares of joint stock companies along with debentures signifies a useful departure. It is however noteworthy that Government securities exceed Rs. 6 crores out of the balance sheet total of Rs. 19 crores. The fairly high level at which Advances were running in the latter half of 1943-44 is illustrative of the basic changes of the period (nourishing bank profits) as well as the limited emphasis on liquidity to which the satisfactory increase under fixed and savings bank deposits points. The reasonably high proportion of bills to total assets (Rs. 1.45 crores against Advances of Rs. 5.65 crores) calls for special mention in view of the general expectation that discounting of inland bills would figure prominently in the new bank's activities. The specific marks of progress are not merely to be found in the higher totals under all heads but in the generally conformist pattern of the balancesheet explaining in a way the activity in the share market—all the Bharat shares are at a premium.

(Continued from page 1101)

affairs in Malabar and the steps taken to meet the acute food situation there. A Press Note issued by the Madras Government says that reports of scarcity are far too exaggerated. Figures are given in support of the argument. According to the Government's calculation rice production in Malabar District amounted to 3,64,000 tons in 1943-44. But the requirements are estimated at 6,01,000 tons. If the 60,000 tons representing the year's production of tapoca which is an important article of diet of the working classes in Malabar is deducted the deficit comes to 1,77,000 tons. The district was allotted 78,000 tons rice for the six months ending April 1944, but actually 87,502 tons were despatched. Delay was inevitable and only 86,793 tons reached their destination. The Government have appointed a special officer to arrange for the timely despatch of quotas. The Collector of Malabar is taking action to requisition locally produced rice and the Government are confident of making the necessary movement of stocks even during the monsoon months.

WAR TRANSPORT DEPARTMENT.

Applications are invited for grant of quota for import of spare parts and accessories for motor vehicles from U.S.A. during 1945. Applicants should state the f.o.b. dollar value of the spare parts and accessories which they desire to import under each of the following heads—

- (1) Genuine parts for each make of motor vehicle (Separate figures should be given for each make).
- (2) Non-genuine parts for each make of motor vehicle (Separate figures should be given for each make).
- (3) Batteries.
- (4) Miscellaneous parts & accessories (including sparking plugs, fan-belts, hydraulic brake-fluid electric lamp bulbs).

2. Information should also be furnished showing the value of imports (f.o.b.) in dollars of the parts and accessories under each of the above heads imported by the applicant during each of the years 1938, 1939, 1940.

3. No application will be considered unless the information required in para 2 is furnished.

4. Applications must reach the undersigned on or before the 30th June, 1944.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, June 1, 1944.

The substance of Professor John A. Todd, lately Special Officer (Jute) to the Government of Bengal, has departed from our midst, but his shadow remains in the shape of a Second, and presumably final. Report on the working of Futures Markets for the Jute and Jute Fabrics industries in Calcutta. The Professor's preliminary report was the subject of considerable criticism and no inconsiderable portion of the current publication appears to consist of replies to such criticisms. But we shall defer dealing with the Report till we have had time to digest its contents at greater leisure.

The measures proposed by the Regional Controller of Priorities (North) for dealing with jute traffic on the B. & A. Railway have been the butt of much criticism also, and doubts have been expressed as to their efficacy in overcoming the difficulties they are supposed to meet. It seems unfortunate that Trade interests were not consulted before the scheme was promulgated as something less cumbersome and clumsy could surely have been evolved than the endorsing by Mill or Press House Owners of innumerable Forwarding Notes to the effect that the goods to be shipped thereon were sold on contract for delivery at that particular Mill or Press House. The quantity of paper alone involved, at a time when we are all being urged to economise in paper, would, it might be suspected, open up the vials of wrath of the Paper Controller if that gentleman realised the full implications of the scheme. It is understood that a meeting has been arranged between certain representatives of the trade and the Regional Controller at which the whole matter will be discussed and an endeavour made to propose some simpler system which will be equally, if not more effective. An appeal might well be made to the Calcutta Jute Dealers Association, who of all the trade interests involved, must be most vitally interested in the speeding up and the smooth working of the Jute traffic over the B. & A. Railway, to prepare a list of all the outstanding unfulfilled contracts due for delivery from rail stations to Mills and Press Houses. Such a list would cover probably 95 per cent of mill deliveries if not such a large proportion of the Press House deliveries, but arrangements could possibly be made to include contracts even outside the jurisdiction of the Calcutta Jute Dealers Association. With such a list in their hands, it should be a simple matter for the Railway Company to disseminate the information throughout their system, station by station, so that local stationmasters would be in a position to check applications for registration by reference to the list and to mark off despatches as and when made. Revision of the list could be made monthly, or even more frequently if thought necessary, by addition of fresh contracts entered into. Such a system was in fact introduced, and worked very satisfactorily, with shipments by river at a time when the existing system of priorities was the subject of considerable abuse. Similar information was at that time offered to the Railway Company, but was declined for some obscure excuse that its use might invalidate their position as common carriers. The steamer companies are no less common carriers than the railway companies and in any case the manifold restrictions at present in vogue would

seem to have shelved the Carriers Act for the duration at least. So if the good offices of the relative interested associations of the trade can be secured to supply the necessary information, it would appear to offer a far simpler method of checking false registrations than the system proposed by the Railway authorities, which system itself is by no means free from loopholes.

The May issue of the Bulletin of the Indian Central Jute Committee contains an interesting exhortation to the Argentine Republic to concentrate on the bulk-handling of its seed crops. It is pointed out that the Argentine is the only great producing country which continues to use the bag system. It is emphasised that harvesting in bulk is both much more economical and much more expeditious than handling in bags, while storage in bags exposes the grain to greater possibilities of damage. This propaganda to supplant the bag system of handling crops in the Argentine is another blow aimed at the old established markets for Indian Jute goods. But with the experience of the war behind them and the innumerable new fabrics which they have been called upon to manufacture will-nilly, the Indian Jute Mills should have no difficulty in finding outlets for all their production in the future as they have done in the past.

The question of whether Purneah jute should be classified as "District" or "Jungli" has recently been agitating the Loose Jute trade. It would appear that certain purchases have been made which include the option of delivery from stations in Purneah, along with other stations in Bengal which are recognised as "District" jute, the price paid being the maximum rate for "District" jute. There appears to be a fairly sharp cleavage of opinion as to whether the transactions come within the ambit of the Ordinance. Of course it can be maintained that quite good jute comes out of Purneah. In the same way much jute has been produced in the Murshidabad and Malda districts which is superior to the average and could quite easily escape the stigma of being classified as "Jungli". But one or two swallows do not make a summer, and if the terms of the Ordinance are to be adhered to, it seems desirable that some official ruling on the subject should be issued so that the position may be clarified, whether some Purneah stations should be accepted as "District" and others relegated to the "Jungli" classification, or whether the whole district should be considered as producing only "Jungli" jute. There are of course anomalies in Bengal itself. Mymensingh by and large is a "Jat" district, but few mills will accept stations north of Singiani as anything but "District" jute though these are still technically in Mymensingh and the jute produced may be no whit worse than that produced lower down the line.

JUTE

(By Our Staff Correspondent).

Calcutta, June 1.

The raw jute market has been quietly steady with business passing on a small scale. Mills are interested only in buying immediate requirements as it is pointed out that, in the absence of any speeding up of deliveries, there is no point in entering into fresh commitments. The immediate outlook for the industry is not clear. The absence of any large buying by mills, however, has not had a quietening effect on the raw jute market as it is confidently expected that it would be possible to market all the available supplies and that there is no hurry to effect sales at the present moment. Quotations are fully at maximum rates for Bottom grades though higher assortments are quoted slightly lower and fair quantities are available. Mofussil centres have remained very firm and quotations in some districts are even above Calcutta parity prices.

In the loose jute section, business passing, as pointed out above, is on a small scale and purchases have again been confined mostly to bottom grades. There is a scarcity of Jat varieties. Indian Jat Middles and Bottoms being done at Rs. 17 and 14 per maund. Indian District Bottoms were done at Rs. 13-8 and Northern 4 annas lower.

In the pucca bales section, business for export has not been large. As a matter of fact, towards the close, quotations were slightly lower with Dundee Daisee being done at Rs. 78-8 per bale. The price earlier in the week was Rs. 81 per bale. Cracks were done at Rs. 88-8 per bale. Mills bought Firsts at Rs. 83. Lightnings at Rs. 80 and Hearts at Rs. 76 per bale. A larger amount of business was reported in the new crop for delivery July-August at a premium of Rs. 2 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, June 1.

In the jute manufactures market there is nothing of importance to be recorded, quotations being nominally at maximum rates. Mills are not anxious to do business as it was feared that further requisitioning might affect

DIRECTORATE-GENERAL MUNITIONS PRODUCTION, DEPARTMENT OF SUPPLY, CALCUTTA.

Group No. 14—Boilers.

The import of Dry Shell type boilers of the specification given below from the United Kingdom will, henceforth, be regulated under the Panel Scheme under Group No. 14 which hitherto has covered only Vertical Boilers up to 12 N.H.P. Importers of the above class of goods are hereby requested to apply to the Director General, Munitions Production, American & Panel Imports Directorate, 7, Ezra Mansions, Calcutta for particulars regarding the procedure to be followed and for a copy of the questionnaire in form W. S. B.—Import/Pan, which must be completed and returned, in duplicate, by the 30th June 1944.

Categories

- | | |
|---|---------------------------|
| (a) Lancashire Boilers | } All sizes and Pressure. |
| (b) Cornish Boilers | |
| (c) Horizontal Economic Boilers | |
| (d) All types of Vertical Boilers excluding Marine Boilers, Water-tube Boilers and Locomotive Railway Engine Boilers. | |

In furnishing the particulars called for in the Questionnaire form, W.S.B.—Import/Pan, Importers must give details of their previous imports in terms of Numbers and net tonnage separately for each of the above sub-groups. Importers are also requested to furnish C.I.F. values of their previous imports separately for each sub-group.

forward deliveries and it was no use entering into any fresh commitments. Most of the business done is for standard varieties. There is good demand for special varieties but there are not many mills who are prepared to accept these orders.

In the heavy goods section also firm conditions were noticeable with very little fresh business done. B. twills were the only exception which were available at maximum rates.

BULLION

(From Our Correspondent)

Bombay, June 1.

The behaviour of the gold market in the past two weeks has been rather queer. Although the Reserve Bank has declined tenders for 14 days now the market refuses to rise over Rs. 75 per tola. The off-take was poor with 15,000 tolas early in the week, but is now better at 40,000 tolas per day. The quotation to-day is higher at Rs. 74-8-6, the close being steadier. There is a short position to the extent of 5 lakhs tolas. Bears are taking full advantage of the poor demand. They are also in the belief that at a pinch gold could always be had from the Reserve Bank at Rs. 75. At the close of market to-day a firmer tendency was noticeable on improved demand although at the higher levels up-country hoarders turned out as sellers. In some quarters it is expected that the rise in prices in the next few days would be such as to cause selling by the Reserve Bank at Rs. 75, if not higher. Local stocks are estimated at 2 lakhs tolas. The quotation for both ready and delivery is quoting level.

Silver started the week quietly on reports that the Allies were within 21 miles from Rome. As Monday was the last day for covering by bears there was rise in the quotation to Rs. 131-4. A moderate amount of sales was carried forward to the next settlement at a difference of 8 annas against sellers. Out of the oversold position of 6,000 bars about 2,000 bars were covered. Wednesday witnessed a regular stampede for covering as the majority of the chokseys would not sell and forced bears to carry forward sales at one rupee difference after current settlement. Finding themselves squeezed bears had to cover hastily and to-day silver is very firm at Rs. 134-8 with the undertone steady. Forward is quoting at a discount of one rupee.

Kathiawar advices are firm and prices might be marked further higher. The daily off-take is 40 bars while arrivals are 50 bars. Local stocks are 500 bars.

COTTON

(From Our Correspondent)

Bombay, June 1.

The raw cotton market was rather weak with Jharilla July declining to 425 on a tired liquidation. The spread between July and September is expected to widen to Rs. 25 before those who tendered for July can transfer their sales to September. Government buying continues for Jharilla but not for Broach, which already shows some discolouration. There was small mill buying in Sind N.T. and Punjab 289F. The total of Government purchases in Bombay uptodate is estimated at 24,000 bales of Jharilla and 20,000 bales of Broach. So far 20,000 bales have been purchased in Karachi.

PIECEGOODS

(From Our Correspondent)

Calcutta, June 1.

In the piecegoods market easier conditions have been noticeable and dealers were anxious to dispose of their stocks. The further reduction in the ceiling price for Texmarked goods has had a depressing effect. It was announced towards the close of last week that ceiling prices of cloth and yarn would be reduced by 1½ annas to 2 annas in the rupee respectively for all goods Texmarked June or later. The anticipated reduction in prices for cloth and yarn has, therefore, materialised.

Govt. of India Department of Supply (Munitions Production Branch) **MACHINE TOOLS**

The Government of India have decided to revert to the use of trade channels for the acquisition of new machine tools to be manufactured in India, but at the same time to preserve the basis of the rationalisation measures that are now in force through the Licensing system. Under the old arrangements, orders for the manufacture of machine tools in India, whether required on Government account or for industrial users, were aggregated and contracted for by Government who arranged for the re-sale and distribution of the machine tools required by industrial users. With effect from the 1st of April, 1944, the following new arrangements have been brought into force.

- (1) Manufacturing licenses will be issued to Indian machine tool manufacturers to cover their forward production programmes on applications to the Machine Tool Controller, Directorate General, Munitions Production, Calcutta.
- (2) Industrial users desirous of acquiring Indian-made machine tools will apply in the same manner as before, through the appropriate Regional Representatives of the Machine Tool Controller located at Calcutta, Bombay, Madras, Cawnpore and Lahore, for an authorisation to acquire. Having received his authorisation, the industrial user will be at liberty to enter into direct purchase negotiations with any individual machine tool manufacturer and/or his agents or recognised dealer.
- (3) Statutory maxima prices will from time to time be published for new machine tools manufactured in India. These statutory prices, whilst imposing a limit on the price at which newly manufactured Indian machine tools can be sold, will not debar sales at a lower cost.
- (4) To assist industrial users in their negotiations with Indian manufacturers and/or their agents or recognised dealers, a list of manufacturers, showing the types and grades of machine tools they are licensed to manufacture will be furnished on application to the Machine Tool Controller. Industrial users are advised to deal only with those manufacturers and/or their agents or authorised dealers, in accordance with the Machine Tool Controllers list, who are capable of supplying the grade they require. In placing orders on manufacturers in India and/or on their agents or authorised dealers, care should be taken to specify the precise grade of machine tool required.
- (5) Manufacturers holding manufacturing licences from the Machine Tool Controller, should obtain their requirements of steel from the Machine Tool Controller, to whom they should also apply for any other assistance required. The same technical assistance as hitherto will be available to manufacturers.
- (6) Industrial users who require machine tools of classes or grades which cannot be made in India and can only be secured from overseas, should continue to place their orders, as hitherto, on the Machine Tool Controller (through regional representatives where these are appointed). The Machine Tool Controller will arrange to import machine tools which can be manufactured in India only in exceptional circumstances and for special and sufficient reasons.

TOTAL ASSETS EXCEED Rs. HALF A CRORE

During 1943 highest profits earned in the history of this Bank.

The bank has got a very high percentage of liquid assets and is one of the safest and strongest Banks of Upper India. Attractive rates allowed on Fixed Deposits. Loans granted against approved Securities. Terms on application.

G. K. CAPOOR, A.L.B., Managing Director.

THE CRY OF DISTRESS

Despite the very great efforts of the Railways; despite the co-operation of the agriculturists, of townspeople and of business men alike, there are still people in this country whose very lives are in peril.

Some of them suffer from food shortage, some from lack of other necessities of life. Mercifully, their number is getting less and less, but there are still many and their cry must not go unanswered. The Railways' first obligation is to them. The distribution of food and civil supplies must take precedence

over passenger travel. So, if your accommodation is crowded—if tickets are difficult to buy—if travelling is uncomfortable, bear in mind those poor people. Appreciate the Railways' difficulties, and if you want to do your bit, stay at home and travel only when you must.

Price Re. 1

Stock Markets to-day and to-morrow:

BIRD-HEILGERS JUTE GROUP RESULTS

ACTIVE conditions have continued to prevail on the Calcutta stock market in the past week. It should be said that there has been a general broadening of interest with larger business passing. The rally in prices in the Bombay market in the last two days has resulted in an improvement in the general sentiment. Activity during the past few days has not been confined to anyone particular section though it might be said that there is not so much excited trading in the Coal section and the attention of speculators has been diverted to Jute and Engineering counters. The encouraging news from the several war fronts and the persistence of cheap money conditions have naturally resulted in an improvement in values. The technical position of the market has been strengthened by the regular hunt for ordinary shares of companies, small-sized, in which managing agents have no controlling rights. With a large professional interest in the market and the slow absorption by investors of shares of the more established companies the tendency has recently been to mark up prices regardless of yield and prospects. It would appear that the present quotations for most of the shares have discounted prospects far ahead and that investors have almost reconciled themselves to a low interest basis in the absence of suitable channels of investment.

The recovery in the Bombay market in the latter half of the week has been due to the hopes that the recent decline in prices for cotton shares was rather exaggerated and that the drive against black market activities of certain members of the industry cannot possibly affect to any great extent mills earnings. The latest decision of the Textile Control Board to effect a further reduction in prices for both cloth and yarn might be said to be a bearish factor for mills; but against this there has been a big decline in prices for cotton and there is a possibility that there will be greater production for civilian consumption with the reduction in the output of standard cloth. The margin of profit on the manufacture of standard cloth is very small. Any reduction in standard cloth output can therefore be said to be a favourable factor for cotton mills. The developments during the next few months will be interesting.

The results of the Bird and Heilgers group of jute companies for the half-year ended March, 1944 have been published. It should be said that they make satisfactory showing.

Those relating to Auckland, Standard, Clive and Kinnison are of particular interest to the market. The results of the Auckland for the six months ending March, 1944 would have made a better showing but for the reduced rate of production in the first three months of the accounting period. Total sales were Rs. 48.95 lakhs against Rs. 46.4 lakhs. The net profit, before providing for taxation and depreciation, is considerably higher at Rs. 8,92,001 against Rs. 5,61,330 for the previous six months. The figure for the half-year ended September, 1943 included Rs. 60,000 on account of excess provision for taxation. The amount set aside to depreciation is unchanged at Rs. 1,30,837 while the provision for taxation is higher at Rs. 5,87,513 (Rs. 2,90,294). The allocation to War Contingency Reserve is Rs. 70,000 (Rs. 50,000) and Welfare Reserve Rs. 16,700 (Rs. 15,230). The larger provision for taxation has prevented any increase in the distribution to the ordinary shareholders which has been maintained at Rs. 4 per share. As the mills are electrically driven no working hours were lost beyond those on account of the closed weeks.

The working of the Kinnison Jute Mills Company, Limited, for the same half-year clearly shows the difficulties experienced by the requisitioning of units. Apart from the uncertainty regarding the financial liability that will be undertaken by the Government of India the question of looking after the company's property and putting in a claim for damage to machinery and other property through requisitioning is difficult of solution. There is also the difficulty in arranging for the execution of outstanding orders and ensuring continuity of production at the units of sister companies. The mills were requisitioned on February 21, 1944. Arrangements were made by the Standard Jute Company, Limited, to take over the company's outstanding orders and part of the staff and an equivalent amount of jute was sold to them. The Standard Mill has worked double shift since the Kinnison mills closed down, thereby making up working hours lost by 650 looms out of the total of 1,250. Dalhousie Mills as from March 3, 1944, arranged to work a further 199 hours under a profit-sharing arrangement but no means of making up the working time lost in respect of the remaining 401 looms has been found. The results for the half-year under report take into account the estimated share of the profits of the two accommodating companies that will be due

to the company under the profit-sharing arrangement. Details of the financial understanding between the three companies are still under consideration.

The net profit, before providing for taxation and depreciation, is Rs. 4,96,523 against Rs. 5,29,890 for the previous half-year. Provision for taxation is Rs. 2,85,136 (Rs. 1,25,000) while the amount set aside to depreciation is Rs. 57,364 (same). The previous half-year's account included Rs. 95,528 on account of profit on sale of investments and Rs. 50,000 on account of excess provision for taxation. The figure for the latest half-year includes Rs. 70,000 being excess provision for taxes. The estimated share of profits due from the Standard is Rs. 1,60,000 and that from Dalhousie Rs. 32,000. The larger provision for taxation has resulted in a decrease in the dividend to the ordinary shareholders to Rs. 4 per share from Rs. 7 per share. The amount carried forward is lower at Rs. 9,904 against Rs. 28,375 brought in.

The amount realised by the sale of certain unused mill stores, which were no longer required owing to the requisitioning of mills, has been credited to provision for Repurchase of Stores Account. When the mills reopen it will be necessary to purchase the equivalent stores, possibly at a time when prices are much inflated. The amount realised by the sale of machinery parts and furnishings, which being of a perishable nature, must be disposed of while the machinery is out of action, has been credited to Machinery Account, thus reducing the value of machinery shown in the balance sheet.

Standard Jute Company, Limited has made a profit of Rs. 3,49,443 before providing for taxation and depreciation against Rs. 2,62,889. The provision for depreciation is Rs. 41,000 (Rs. 36,775) while the sum placed to reserve for taxation is Rs. 2,01,210 (Rs. 85,496). War Contingency Reserve receives Rs. 20,000 (Rs. 50,000). A sum of Rs. 22,467 was placed in addition to Welfare Reserve. As a result of the requisitioning of Kinnison Mills arrangements were made with that company whereby all outstanding order were taken over and an equivalent amount of goods was said to this company. The mill has worked on double shift since February 21, 1944, thus making up the working hours lost by 659 looms out of 1,250 mills belonging to Kinnison.

(Continued on page 1115).

Bombay Investors and Indian Stock Exchanges:

MYSORE BUDGET: NO E.P.T. BUT HIGHER INCOME-TAX

RUBBER PRODUCTION BONUS

(By "ANALYST")

Bombay (By Wire).

TATA Steels were in the limelight again this week and Deferreds and Ordinaries gradually improved to Rs. 2,260 and Rs. 419. Rumours of conversion scheme still persist and I look for a further rise on short covering. Indian Irons have moved up to Rs. 37-10 and Steel Corporations to Rs. 28-10. I think the present is a good opportunity to effect the switch-over from Indian Irons to Tata Steels.

Textiles

Along with other 7 mills, Apollo has been taken over this week. Textiles have been rather quiet, with nothing special to report. *Bombay Dyeing* were done as low as Rs. 1,890, but closed better at Rs. 1,925 due to investment demand. There was good profit-taking in other mill shares. *Minerva* have declined to Rs. 297-8 as against a high of Rs. 320, last week; and since this is inclusive of the Rs. 20 dividend, I would like to watch and buy there shares on further decline of about 25 points. There was heavy speculative turnover in *Indore-Mahwa*. For instance, they touched to-day a low of Rs. 870, then were done as high as Rs. 930 and closed at Rs. 900. I recommend liquidation of these shares and would prefer a switchover to first class shares like *Bombay Dyeings*, *Azam Jahis*, *Osman Shahis*, *Minerva*, *Rajalakshmis*, *Maduras Buckingham* and *Carnatics*, *Vasantas*, etc.

In Madras also most of the shares lost a few points this week. Among Calcutta Textiles dealt in Bombay. New Victorias have improved to Rs. 9-4 and the Preference shares to Rs. 11-4. I suggest booking profits in these shares. Raza Textiles also have become very active in Bombay and there is heavy turnover between Bombay and Delhi in this scrip. Raza closed to-day around Rs. 105-8. I would suggest booking profits on a further rise of about 10 points.

Cements

Associated Cement were done at Rs. 237. I would not be surprised if this scrip moves up gradually by a few points every fortnight without catching the imagination of the general investor about the rise. *Dalmia* were around Rs. 20, *Andhra* were rather quiet at Rs. 127.

Coals

Coals continued to attract the attention of investors and there has been practically a boom in Coal Shares in the last two weeks. A scrip like *Burrakur Coal* was done upto Rs. 36-8 on rumours that the Company has obtained a substantial contract though closed quiet at Rs. 35-8. *South Karanpura* changed hands around Rs. 17. *Mahakali Coal* were freely dealt in Bombay around Rs. 20-2. *Talcher* moved upto Rs. 11 and *New Beerbhoom* to Rs. 34-10.

Plantations

This week, there has been better enquiry in Bombay for first class Rubber Shares on the announcement that the Government of India have introduced a production bonus scheme under which bonus payments will be made for rubber ranging from Rs. 11-1-9 to

the Coffee group, I recommend *Outcherloney* for investment.

Miscellaneous

I have already indicated last week that I am slightly bearish in Mysore shares, due to stoppage of electric power to industrial factories. Of course, most of the shares have been maintained at same levels of last week probably due to bear covering but I would take this opportunity for liquidating one's holdings to replace same a little later. The Mysore Budget has been well received. There is no excess profits tax but income-tax and super-tax have been raised.

THE METHONI TEA CO., LTD.

NOTICE

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 23rd day of June 1944 at 3 p.m. to receive and pass the Directors' Report and the audited Accounts for the year ended 31st December 1943, to declare a dividend, to elect a Director in place of the retiring Director, to elect Auditors for the ensuing year and fix their remuneration and to transact any other business that may be brought forward.

The Share Transfer Book of the Company will be closed from 15th June 1944, to 23rd June 1944, both days inclusive.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 2.

RATHER buoyant conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing in the past two days has been on a much larger scale. Coal shares continued to be firm earlier in the week though in midweek, there were some selling of speculative counters especially the smaller-priced shares. After Wednesday's session, however, it has been the turn of jute shares and Howrah are at the time of writing quoting at the highest level for the week at Rs. 76-8. Engineering shares also have been firmer with Sugar shares in greater demand. There has been slightly more activity in the Tea section, but business has been restricted owing to the scarcity of sellers.

The strength of the markets during the past week has been due to the further improvement in the situation on the Assam-Burma frontier and the satisfactory progress made by the Allied troops in Italy. The prevalence of extremely easy money conditions also has been a helpful factor.

The gilt-edged securities section has improved further and 3½ per cent Rupee paper is now quoting at the highest level for some time at Rs. 99-5. There has been greater enquiry for short and medium-dated securities, but there are not many sellers and quotations are a shade better with 3 per cent 1949-52 at Rs. 100-2, 3 per cent 1951-54 at Rs. 100-6, and 3 per cent 1963-65 at Rs. 98-13. 3 per cent 1966-68 were at Rs. 98-3; 3½ per cent 1947-50 were not very much changed at Rs. 108-4 as also 4 per cent 1960-70 at Rs. 112. A small lot of 4½ per cent 1955-60 changed hands at Rs. 117 while 5 per cent 1945-53 were sticky at Rs. 104-5.

There were no transactions in Provincial loans. Only one transaction was recorded in Public Bodies Debentures, in *Calcutta Port Trust* 5 per cent 1958-68 being crossed at Rs. 119-8. Preference shares have not been in great demand though prices have been fully maintained. *Bally* were Rs. 184-8 cum-dividend, *Empire* Rs. 173 and *Kankannarrah* Rs. 162. *Steel Corporation* were sticky at Rs. 133-8 while *Kesoram* came in for attention at Rs. 168. *Cawnpore Sugar* were Rs. 181, *Dhunseri* Rs. 6 and *Alkali and Chemical* Rs. 142-4.

The continuance of easy money conditions has resulted in a further decline in the average discount rate on treasury bills to annas 6 and 11 pies per cent per annum from annas 6 and pies 10 per cent last week.

The strength of the gilt-edged securities section has been naturally reflected in Bank shares, *Reserve Bank* being quoted higher at Rs. 135 and *Calcutta National Bank* at Rs. 14-8. *Hind Bank* made further headway to Rs. 64. The quotation till recently was Rs. 55. *United Commercial Bank* were Rs. 31.

The Week in the Exchanges

KUMARDHUBI
ENGINEERING WORKS.

Agents:
BIRD & CO., Calcutta

There was no appreciable rise in prices for Coal shares in the early days of the period under review, but one or two counters recorded a sharp rise in prices, *Bhulanbararee* being outstanding with an improvement in the quotation to Rs. 27-4 from Rs. 24-8 at the end of last week. *Central Kurkend* improved from Rs. 25 to Rs. 27-8 but are easier at the time of writing at Rs. 26-4. *Churulia* suddenly improved to Rs. 5-10 on speculative buying but when it was realised that the properties of the company had been sold at a good price and that the improved prospects for the industry would not in any way be beneficial to the existing shareholders there was a recession to Rs. 4-12. The company will be voluntarily liquidated and the shareholders would be only entitled to the repayment of capital plus such surplus assets as are available. It is estimated that the break-up value of the shares on the basis of the proposed price is about Rs. 4-14. *Dhemo Main* were listless around Rs. 23, as also *Equitable* at Rs. 57-8. *Hurriladih* were further higher at Rs. 29-4 against Rs. 28-14; *Bengal* were not very much changed at Rs. 646 as also *Amalgamated* at Rs. 49-8. *New Beerbhoom* were Rs. 34-10, *North Damuda* Rs. 11-4 and *Raneegunge* Rs. 47-4. *Samla* were weak at Rs. 7-14 after being higher at Rs. 8-14. *Satpukuria* and *Asansol* were Rs. 7-4 after being done up to Rs. 7-10; *Talcher* registered a rise of 2½ points to Rs. 11-8. Selling at the higher levels brought down the quotation to Rs. 10-15. *South Karanpura* have not been very active and the close was quieter at Rs. 16-12. *Burrakur* were Rs. 35-6 and *West Jamuria* Rs. 58-2.

The improvement in the Bombay market has led to greater enquiry for Cotton issues on the local Stock Exchange. *Cawnpore Textiles* were higher at Rs. 14-12. *Dunbar* changed hands at Rs. 8-11 and *Kesoram* at Rs. 19-7. There were buyers for *Elgin* at Rs. 71. *New Victoria* improved by 8 annas to Rs. 9-6.

Jute shares were steady in the early days of the week under review. In Thursday's session active conditions were noticeable and almost all the counters were higher. *Anglo-India* were Rs. 444 against Rs. 432, while *Bally* were Rs. 359, *Belvedere* Rs. 521 and *Champdany* Rs. 243. *Empire* were unchanged at Rs. 45-12. *Howrah* were 2½ points higher at Rs. 76-8, *Hukumchand* were Rs. 36-12 and *Kamarhaty* Rs. 616 against Rs. 602. *Kankannarrah* were Rs. 548 against Rs. 537, *Nellimla* 1 point higher at Rs. 33-8, *National* Rs. 81-8 and *Nudea* Rs. 122-8 against Rs. 119. *Presidency* encountered sudden buying and the quotation improved from Rs. 8-10 to Rs. 10-10. The close is a shade easier at Rs. 10-5. *Rameshwara* were unchanged at Rs. 21 while *Soorah* were very firm at Rs. 33-8.

In the Engineering section, there has been greater buying of *Indian Iron* and *Steel Corporation* and the quotations for both counters are more than one point higher at Rs. 37-12 and Rs. 28-14 respectively. Prices at the end

of last week were Rs. 36-4 and Rs. 28-2. *Kumardhubi Engineering* jumped to Rs. 13-14 from Rs. 11-10 on speculative buying. *National Iron and Steel* also have been in greater request being done up to Rs. 15-1 from Rs. 14-1. *Jessop & Co.*, were relatively quieter at Rs. 24-6 and *Saran* at Rs. 11-8. *Steel Products* were unchanged at Rs. 9-10 while *United Iron* came in for business at Rs. 11-8.

Sugar shares were more active with *Ram-nugger Cane* and *Sugar* at Rs. 15-15. *Belsund* were steady at Rs. 15-8 while *Cawnpore* were one point higher at Rs. 41-12. *Champaran* were dealt in at Rs. 40-10, *New Savan* at Rs. 22-4 and *Purtapore* at Rs. 26.

Business in the Tea section has been on a smaller scale but values are higher owing to scarcity of sellers. *Hantapara* were Rs. 775, *New Chumta* Rs. 105 cum-dividend, *Sapot* Rs. 20-8 and *Tezapore* Rs. 20-8.

In the Miscellaneous section, *Burma Corporation* had a spurt to Rs. 4-10 from Rs. 3-14. They are now quoting lower at Rs. 4-4. *Indian Copper* were firmer at Rs. 3-11. *Assam Bengal Cement* ordinary improved suddenly to Rs. 18-12 from Rs. 16-12 while *Alkali and Chemical* have been further steady at Rs. 31-15. *B. I. Corporation* were higher at Rs. 6-12, *Calcutta Tram* at Rs. 28-12 and *Indian National Airways* deferreds Rs. 11-8. *Indian Oil* *Plastics* were Rs. 11-12 and *Dehri Oil Refinery* Rs. 12-4. *Midnapore Zemindary* were very firm at Rs. 165-8. Among Paper shares, *India Paper Pulp* were Rs. 222, *Orient Paper* were quiet at Rs. 31-12 and *Titagur Paper* "A" and "B" Rs. 28.

THE EASTERN FEDERAL UNION INSURANCE CO., LTD.

(Incorporated in India)

Head Office: 9, Clive Street, Calcutta. Notice is hereby given that the Eleventh Ordinary General Meeting of the Shareholders of the Company will be held at the abovementioned address at 11 a.m. on Saturday, the 24th June, 1944, to receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1943; to Declare a Dividend to Elect a Director; to Appoint Auditors and to fix their remuneration; and to transact any other business that may be brought before the Meeting by the Chairman.

The Share Transfer Books of the Company will be closed from the 5th June, 1944, to the 25th June, 1944, both days inclusive.

By Order of the Board,
M. A. Aziz Ansari,
Resident Director.

COMPANY MEETING

BRITISH INSULATED CABLES LIMITED

SIR ALEXANDER ROGER'S SPEECH

POST-WAR BRITAIN'S COMPETITIVE POWER

This review of activities for the year is being sent to Stockholders with the Directors' Report and Accounts.

ACCOUNTS

Effect has been given, as far as is practicable under present conditions, to the recent recommendations issued by the Institute of Chartered Accountants.

PROFIT AND LOSS ACCOUNT. Turn-over has been almost as high as that of 1942, but there have been important changes in its composition; and this, coupled with higher costs, has resulted in a reduced rate of profit and a decrease in the total Trading Profit. The decrease, however, has been mitigated by the use of part of the E.P.T. cushion available from previous years, leaving the Profit as stated in the Accounts £18,778 lower at £1,130,253.

The heavy burden of Income-Tax is strikingly revealed in the provision of £566,482 necessary for estimated liability on 1943 Profits. The increase as compared with 1942 is due to a combination of many factors, such as the increased provisions necessary for such items as Deferred Repairs which, although treated as charges against current profits, are not so allowed for Income Tax purposes. In addition, it may be stated that the depreciation provided is substantially in excess of that allowed by the Inland Revenue for taxation.

£100,000 has been transferred to strengthen War Contingencies Reserve Account, and after providing for a final distribution on the Ordinary Capital at the same rates as for some years past, there is left a balance to be carried forward to 1944 of £390,484.

BALANCE SHEET. There is nothing on the Liabilities side calling for special comment.

As regards the Assets, the depreciation applied on Fixed Assets has exceeded the capital additions, leaving this item £8,810 lower on balance. No material changes have taken place in either Subsidiary Company or General Investments, and the valuation made of these shows an excess over the Balance Sheet figures.

PENSION FUND. Certain *ex-gratia* annual payments are at present being made by the Company to older staff who have retired, for the purpose of bringing the pensions they are receiving from the B. I. Pension Trust Limited up to the same levels as those to which the younger Staff will ultimately be entitled.

These payments have hitherto been charged annually to revenue but to put their continuance beyond question and not subject to the results of trading, your Directors last year adopted the prudent course of creating an internal reserve of £50,000 against which these annual costs should be charged. As a result of subsequent consultation with the Actuary, it has been determined that this sum is sufficient to institute a Supplementary Pension Fund which would have the additional advantage of segregating the matter from the Company's ordinary business. Your Directors therefore recommend the creation of this Supplementary Pension Fund and are confident Stockholders will approve. It should be made clear that as this Fund will only be used to pay pensions to certain of the older staff who have already retired or will be retiring in the near future, it will have a limited life, during which it is estimated the £50,000 together with interest thereon will all be utilised.

GENERAL

We are still in the throes of war, but the signs and portents encourage us to take the view that we are in sight of a victorious conclusion of the European war, while definite progress is being made in dealing effectively with the Japanese menace.

It would be well, however, if the public, which is so deeply interested in industry, were

able to give some thought to the immensity of the task which will have to be undertaken in due course by both Government and people in changing over from war to peace and also to some of the problems which will require to be overcome.

Using approximate figures, some 18,000,000 or 19,000,000 men and women were employed in 1938, and it is probable that today at least half our male and female population is engaged in the Services or in war work.

Britain's gigantic industrial machine is harnessed to war with an annual production valued at several thousand million pounds. Great concerns employing thousands of people down to tiny engineering plants and shops run by only a few craftsmen are entirely engaged on war production. Every part of our economic life is affected and nothing comparable has ever been known before.

When peace comes this vast war production will gradually cease and the gap must be filled by the production of civilian needs if we are to reach full employment successfully. We are going to meet numberless difficulties in achieving this but there are encouraging features which we can and will convert for the common good, and our international traditions and experience will be of great aid in such directions.

As an extreme example of the problems associated with changing over to peace the aircraft industry employs nearly 2,000,000 men and women and it has been said that the post-war production may for a time represent only 10 per cent. of this.

It is probably easier to convert from peace to war than from war to peace, and it must be remembered that it has taken years for industry to achieve the present great volume of war output. Conversely, it will take years before we are completely turned over to peacetime occupations.

A big problem is involved, for example, in post-war imports and exports, in 1938 imports were over £900,000,000, and if peacetime volume of home and export production is recovered, let alone expanded, imports will be required at least to the same value. But in 1938 we had some £200,000,000 coming in from investments overseas, plus £120,000,000 from shipping and other services, and this income together with that derived from our ordinary export trade was available to pay for imports, and will take some time to build up again.

Some anxiety has been expressed that the Dominions have been rapidly industrialising. The problem is there but it need not necessarily mean a falling off in British trade. It has been shown that exchange of goods between industrial nations has increased just as much as exchange between industrial nations and raw material producers.

The standard of living in many countries can and must be raised, which in turn will increase their purchasing power and increase the demand for goods of the character which Britain and other industrial nations can supply. Here there is an unlimited field.

Again, the reconstruction of Europe is more vital to this country than to any other, and we ought to share in satisfying what is likely to be a great market for capital goods and ultimately for consumption goods.

There is also real ground for hope that economic collaboration will come about on a mutually satisfactory basis between the United States, Britain, Russia and China, and if that not too easy task is surmounted many other nations will follow their example. One of the few benefits which have already arisen from this war is the better understanding and the satisfactory growth of mutual respect among the United Nations.

It is true that competition for world markets will be keen, but much has been

done in this country to modernise plant and machinery during the war, and the finest machine tools have been installed, not only in big plants but in thousands of small plants, leading to much improved methods in factory production generally. This has put Britain in a better competitive position than it was prior to the war.

The world is going through convulsions of the most frightful character. The United Nations and the enemy have had their whole mode of life altered and in many directions shattered. When victory arrives, as assuredly it will, the world and this country in particular has to recover its health and strength and will require a period of convalescence in an atmosphere of stability and tranquillity.

The country, its politics, its local government, its business, of course, need reform. And I hope reform will never cease. It has been going on for hundreds of years. But evolution out of existing tried and proved methods is the medicine required during the difficult and absorbing period of change from war to peace.

Violent changes within our country providing political, social and trade schisms and cleavages would give our enemy just the opportunity he wants to organise another war and inflict untold suffering on those who are least able to resist it. They would retard recovery and progress.

When this world war comes to an end, peace is going to be vastly more complicated to arrange and will require sagacity and courage of the highest order and, make no mistake about it, Europe will look to our Government and our country to take an absorbing part in solving problems and making settlements if still another conflagration is to be avoided.

No one can take any pride in the peace made after the last war. For years afterwards there were provisional arrangements, plebiscites, evacuations, non-evacuations, delays, non-payments, alarms of every kind, booms and slumps happening everywhere, with stable prosperity becoming more and more difficult to preserve.

Clemenceau, who was probably one of the greatest political realists of the century, described the peace as "one which misread and disregarded political experience in the maelstrom of abstract thought. It was doomed to collapse in a total disaster—and did."

As I see it industry must work and strive ever harder to produce everything that is asked of it for the war in Europe and in the Pacific until the last shot is fired. Secondly it should collaborate and plan effectively so that it may carry out successfully the changeover from war to peace and so rebuild employment and prosperity.

Government will then be free and undisturbed for the gigantic task of directing the prosecution of the war followed by the almost equally onerous task of planning a world peace that will endure.

Our incomparable Prime Minister—another realist of the Clemenceau calibre—is on the bridge and the last thing that should be done today is to attempt to divert his energies from reaching the Port of Peace.

Turning to essentially domestic matters, we have not been unmindful of the welfare of our employees, and in particular I would mention our constant endeavours to improve working conditions and health services; the incentives we give to investment in Savings Certificates (to which our employees themselves contributed some £70,000 last year); the maintenance and improvement of our Pension and Provident Funds to take care of our employees after retirement from the Company's service; and the substantial allowances we are making to those 2,164 of our employees who are serving in H. M. Forces.

Finally, I am sure you would wish to join with your Directors in expressing our sincere thanks to our Executive Managers, Staff and Workpeople for the devotion once again shown to the interests of the Company and the country, and to remember with gratitude those 49 of our employees who during this war have made the supreme sacrifice.

COMPANY REPORTS

ADJAI COLLIERIES, LIMITED

	Year ended January.

(Half-yearly General Meeting on 14th June, 1944 at 11-05 a.m.)

Transfer books closed from 1st to 14th June, 1944).

Audited accounts for the half-year ended 31st January, 1944.

After providing Rs. 40,440-12-3 for Depreciation and Rs. 55,000/- for Taxation, there is a balance of Rs. 1,02,173-3-8 at the credit of the Profit and Loss Account out of which the Directors recommend:—Dividend of Rs. 1-4-0 per share Rs. 62,500, Carry forward Rs. 39,672-3-8.

Raisings and despatches were lower than in the previous half-year but a better average selling price was realised.

The new pits at Laikdih Deep Colliery have now been fully equipped and raisings were satisfactory.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 5,00,000 in 50,000 shares of Rs. 10 each, fully paid up.

(Annual General Meeting on 9th June, 1944 at 3-5 p.m. Transfer books closed from 1st June to 9th June, 1944).

Audited accounts for the year ended 31st December, 1943:—

The Revenue Account shows a profit of Rs. 1,04,755 and after deducting from this:—Manager's Commission on Profits Rs. 8,639, Reserve for Taxation Rs. 30,000, and adding:—Dividend on Investments (Nett) Rs. 15, there is a net profit for the year of Rs. 68,131.

After adding to this the credit balance of Rs. 22,849 brought forward from the previous year, there is a credit balance of Rs. 89,980 on Profit and Loss Account as at 31st December, 1943. An Interim Dividend of 2% for the Season was paid on 19th January, 1944, and the balance now available for distribution is Rs. 76,980.

The Directors recommend that this balance be disposed of as follows:—Pay a Final Dividend of 8%, free of Income Tax (making 10% for Season 1943) Rs. 48,000, Place to Reserve Account Rs. 20,000 and Carry forward Rs. 8,980.

The Estimates for Season 1944 are framed for a crop of 4000 mds. at a cost of Rs. 1,75,95.

(Loss on Foodstuffs: A sum of Rs. 15,000 being the estimated loss on the supply of rice and other foodstuffs to the labour force has been included in the above figures.)

Managing Agents.—Octavius Steel & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 6,00,000 in 60,000 shares of Rs. 10 each, fully paid up.

Synopsis of the balance sheet as at 31st December, 1943.

Dividend per cent Ord.	15	22½	15	12½

(Annual General Meeting on 14th June, 1944 at 3 p.m. Transfer books closed from 1st to 14th June, 1944).

Audited accounts for the year ended 31st December, 1943:—
After providing for depreciation, the season's working resulted in a profit of Rs. 21,625. After making sundry adjustments and providing Rs. 3,000/- for taxation there remains a balance of Rs. 27,512 at credit of Profit and Loss Account. From this the directors recommend the payment of a dividend of Rs. 15/- per share absorbing Rs. 18,000/- leaving a balance of Rs. 9,512 to be carried forward.

Owing to the great increase in the cost of rice and other commodities made available to the labour force at concession rates, the losses on these concessions were very much greater than in 1942.

Estimates for the current year have been framed for a crop of 2,500 maunds to cost Rs. 1,26,242/- excluding any provision for losses on sale of food to the labour which it is impossible to estimate.

Managing Agents.—M/S. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 1,20,000 in 1,200 shares of Rs. 100 each, fully paid up.

(Annual General Meeting on 14th June, 1944 at 11 a.m. Transfer books closed from 3rd to 14th June, 1944).

Audited accounts for the year ended 31st December, 1943:—
They disclose a profit of Rs. 4,05,722 and on transfer of this sum to Profit and Loss Account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 3,84,869, of which the directors have transferred Rs. 50,000 to Reserve and Rs. 50,000 to Contingencies Reserve to meet expenditure on renewals and replacements of buildings, machinery, etc., that will be necessary after the conclusion of hostilities.

It is proposed to pay a dividend of 45 per cent. and to carry forward Rs. 95,869.

Estimates for 1944 provide for a total crop of 13,500 maunds at an outlay of Rs. 6,61,732, including inland freight and sale charges.

Managing Agents.—Duncan Brothers & Co., Ltd.

Authorised Capital—Rs. 5,50,000. Issued and Subscribed—Rs. 4,20,000 in 4,200 shares of Rs. 100 each fully paid up.

(Annual General Meeting on 20th June, 1944 at 11-30 a.m. Transfer books closed from 12th June to 20th June, 1944).

Audited accounts for the year ended 31st December, 1943:—

The Balance of Profit brought forward from Season 1942 is Rs. 5,159, and adding Revenue Profit 1943 of Rs. 6,575, and Claims Realised for Loss of 1942 Crop of Rs. 17,969, and deducting:—Loss on Unsold Tea 1942 of Rs. 2,869, there is a balance of Rs. 26,834.

Out of this sum the directors have:—Paid Interest of Rs. 3,150. Made Provision for Taxation of Rs. 3,000, and Written off for Depreciation Rs. 5,000, Leaving an available Balance of Rs. 15,685.

The directors recommend that the available Balance should be dealt with by Paying Arrears of Cumulative Preference Dividends at the rate of 6% per annum (free of income tax) for 5 years from 1st January, 1934, to 31st December, 1938 absorbing Rs. 12,000. and Carry Forward to next account Rs. 3,685.

A claim has been submitted to Government for Rs. 32,181/- for loss of 1943 crop but, as no decision in regard to that has so far been received, it has been left out of account.

The estimates for 1944 provide for a crop of 2,88,000 lbs. at a cost in Cachar of Rs. 1,60,000/-. The Calcutta Expenditure is estimated at Rs. 22,500/-.

Managing Agents.—Messrs. George Henderson & Co., Ltd.

(Annual General Meeting on 9th June, 1944 at 3 p.m. Transfer books closed from 1st June to 9th June, 1944).

Audited Accounts for the year ended 31st December, 1943:—

The Revenue Account shows a profit of Rs. 57,276 and after deducting from this:—Manager's Commission on Profits Rs. 3,925. Managing Agents' Commission on Profits Rs. 1,135, Reserve for Taxation Rs. 12,000 and adding:—Interest on Investments (Nett) there is a nett profit for the year of Rs. 40,621.

After adding to this the credit balance of Rs. 7,010 brought forward from the previous year, there is a credit balance of Rs. 47,631 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—Pay a Dividend of 12½%, free of Income Tax, for Season 1943. Rs. 30,756, Place to General Reserve, Rs. 10,000 and carry forward Rs. 6,874.

Estimates for Season 1944 are made up for a crop of 3,400 maunds at a cost of Rs. 1,66,141.

Managing Agents.—Messrs. Octavius Steel & Co., Ltd.

Authorised Capital—Rs. 3,00,000. Issued and Subscribed Rs. 2,46,050 in 24,605 shares of Rs. 10 each, fully paid up. Synopsis of the balance sheet as at 31st December, 1943.

(Half-yearly General Meeting on 9th June, 1944 at 11-30 a.m. Transfer books closed from 30th May to 9th June, 1944).

Audited Accounts of the Company for the half-year ended 31st December, 1943:—

The profit for the half-year, after providing for Debenture Interest, Depreciation and Taxation, was Rs. 3,77,986 to which is added the balance brought forward of Rs. 1,86,035 out of which the Directors have transferred Rs. 1,50,000 to the Reserve for War Contingencies, leaving a balance of Rs. 4,14,021 available for distribution, which they recommend be dealt with as follows:—

Dividend on Cumulative Preference Shares at 7 per cent per annum, free of Income Tax Rs. 7,000, Dividend on "A" Cumulative Preference Shares at 7 per cent per annum, free of Income Tax, Rs. 14,000, Dividend on Ordinary Shares at 25 per cent per annum, free of Income Tax Rs. 14,000, Dividend on Ordinary Shares at 25 per cent per annum, free of Income Tax Rs. 1,12,500, Bonus of Rs. 2-8 per share on Ordinary Shares, free of Income Tax Rs. 90,000 and carried forward Rs. 1,90,521.

The output was substantially maintained during the period in spite of the fact that the Mill was at times very short of raw materials. Transport difficulties were the chief cause of these shortages and with the many demands now being made on the Railways it seems unlikely that there will be any material improvement in the position in the near future. Approximately 70 per cent of the Mill's production was again supplied to the Central and Provincial Governments, the Defence Services, State Railways, etc., with the result that it was not possible to meet to anything like the full extent the many demands received from other sources and a scarcity of paper for civil needs still persists.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ltd.

Authorised Capital—Rs. 18,00,000. Issued and Subscribed—Rs. 15,00,000 in 36,000 Ord. of Rs. 25 each, 4,000 7% Cum. Pref. of Rs. 50 each and 4,000, 7%, 'A' Cum. Pref. of Rs. 100 each, all fully paid up.

THE PATNA ELECTRIC SUPPLY CO. LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Office of the Company's Managing Agents, No. 14, Old Court House Street, Calcutta, on Tuesday, the 20th day of June, 1944, at 3 P.M. for the following purposes:—

- (1) To pass the Directors' Report and the audited Accounts for the year ended 31st December, 1943.
- (2) To declare a dividend.
- (3) To elect a Director in place of the retiring Director.
- (4) To elect Auditors for the ensuing year, and to fix their remuneration.
- (5) To transact any other business that may be brought forward.

The Share Register of the Company will be closed from 10th June 1944 to 20th June 1944, both days inclusive.

OCTAVIUS STEEL & CO. LTD.

Managing Agents.

Calcutta, 29th May 1944.

Note:—The Directors have recommended payment of a dividend at 5% free of Income-tax for the year ended 31st December 1943. In accordance with the Government of India Notification No. 1564-OR/42 dated 7th September 1942 the Directors' Report and the Accounts will not be published.

THE BIRLA JUTE MANUFACTURING CO., LTD.

Notice is hereby given that the Half-yearly Ordinary General Meeting of the Shareholders of the above-named Company will be held at the Registered Office of the Company, No. 8, Royal Exchange Place, Calcutta, on Wednesday, the 21st June, 1944, at 3-30 P.M. for the following purposes:—

- (1) To receive and consider the Report of the Directors and to pass the Audited Accounts for the half-year ended 31st March, 1944.
- (2) To declare Dividends on Preference and Ordinary shares which are payable, on application, to the shareholders, when declared.
- (3) To appoint Auditors.
- (4) To transact any other business which may be brought before the meeting.

As already notified before, the Share Transfer Register of the Company will remain closed from the 5th to the 21st June, 1944, both days inclusive.

By order of the Board,
BIRLA BROTHERS LTD.,
Managing Agents.

Calcutta, the 31st May, 1944.

(Continued from page 1109)

son mills. The ordinary dividend has been maintained at Rs 3 per share. The amount carried forward is not very much lower at Rs. 7,228 against Rs 9,904 brought in.

In pursuance of the scheme announced earlier regarding production and distribution of coal by the Central Government, as from the beginning of this month, a notification announces the fixation of the price of coal from the collieries on and after June 1, 1944 for six months. Bengal and Bihar coal has been divided into six grades and prices vary from Rs. 13 to Rs. 11 per ton, Rs. 11 per ton for C.P. and Berar coal, Rs. 29-12 per ton for Baluchistan coal, Rs. 22 per ton for Punjab coal, Rs. 33-8 per ton for Assam and Rs. 11 per ton for Orissa coal. The prices are exclusive of loading charges, excise duty, cess or other import and the middleman's commission.

Prices for Assam coal seem to provide a reasonable margin of profit though it should be said that the higher price for coal has been fixed on account of transport difficulties and labour shortage. If the Nazira coal company, one of the important collieries in Assam, is able to effect an appreciable increase in raisings, it might benefit considerably from the present prices for coal. Having regard to the high prices for speculative counters it should be said that Nazira at the present quotation of around Rs. 15 afford scope for further appreciation.

Calcutta, Saturday, June 10, 1944.

£2-15s. including Year Book, all supplements routine as well as special.

Against Rs. 6 crores of Central treasury bills on offer on June 6, applications came to Rs. 11.10 crores, which are Rs. 1.30 crores less than last week. As a result, there has been a slight hardening in the discount rate from annas 5 pies 11 percent per annum to annas 6 pies 2 percent. The offer of Central treasury bills for next week remains unchanged at Rs. 6 crores. Against Rs. 1 1/2 crores of

The return of the Imperial Bank for the week ended June 2 shows a strident advance in deposits from Rs. 224.25 crores to

The opening of the Second Front has induced a quieter tone in the Indian stock exchanges. The professional bears, who have more tricks and stratagems than the bulls, utilised the occasion to put out a depressing story that the end of the war, which is being quickened by the opening of the Second Front will mean considerable reduction in the profits of industrial concerns. In sympathy with industrials, 3 1/2 percent Rupee Paper has also dropped a few annas. So far as 3 1/2 percent Paper is concerned, the slight setback is nothing more than the inevitable profit-taking that takes place whenever the rate touches Rs. 99/8. It may now be said that automatic buying pressure is released in the market when 3 1/2 percent paper sinks to Rs. 97/8 and automatic selling pressure when the price rises to 99/8. As for the cock-and-bull story of the bears in regard to the peace prospects of industrial shares, we need only point out that, just as war finance and war economy in the last five years have been entirely different from war finance as we have known in previous wars, so the period after this war will differ entirely from former postwar periods. This is a question which needs to be discussed and explained at length. Suffice it in this context to say that, thanks to the new economic world which has arisen and thanks to the elaborate economic plans that are being devised, the years after this war will not witness the usual postwar slump. On the other hand, the word "slump" as such can be eradicated from the dictionary of economics if only our economists and statesmen know how to proceed about their business. By all current tokens

Finance Abroad.

Thursday Evening.

The financial developments of Invasion Week can hardly be indicated by reference to the lease-lend appropriations for 1945. The House of Representatives was asked to provide more funds as demands from Europe for U. S. equipment would increase. That the Pacific and China would claim more may be concluded from the figures given in Mr. Leo Crowley's review last week. But the Soviet newspaper's charge that China has not made full or proper use of Allied supplies has not been so far met, and it is not unlikely that Congressmen, hostile to the President, would ask for details, since the total for lease-lend aid is put at 24,225 billion dollars by the House Committee which votes 450 million dollars for U.N.R.R.A. It may be recalled that Parliament in February approved the grant of £80 millions. The British contribution to U.N.R.R.A. is fully equal to the general expectation, but a supplementary grant is expected in the U.S.A. which intends to add 350 million dollars from Lease-Lend. In the Lease-Lend Budget, too, food claims a big share. There is, however, the fear of food shortage in the U.S.A. Last year's increase in food supply may not be followed up by an increase. The 'Manchester Guardian' lately analysed the wheat position to prove that outside Argentina the exportable surplus is not considerable. Demand in Europe must increase; how much will be had in Soviet Russia remains debatable. These facts certainly have a bearing on the rise in Indian wheat prices since April. The Canadian crop of 1943 was substantially lower than that of 1942 and farm income like the value of retail trade in the Dominion showed a decrease. How the money will be used by the U.S.A. for relief work in Europe is not a pressing question. But it looks as if Africa and the Middle East would get less by way of food imports and India's claims on Australian supplies must be subordinated to the needs of strategically more important areas giving to the Allies including the U.S.A., essential supplies like oil. The budget message given in January as usual has not produced the appropriations. Congress has to vote 87.7 billion dollars and the small reduction in war expenditure (not merely due to renegotiation of war contracts) has not induced generosity on the part of Congress. The big heavy plans of course secured ready support. Meanwhile Congress has to prepare for the conventions and elections. It may be assumed that the largest part of the funds would be voted hurriedly and the Administration's new plan for Collective Security (divorced from Disarmament) would promote agreement as to the objects and scale of expenditure in 1944-45.

From the choice of the Indian delegation to the Button Woods monetary conference it may be inferred a little too readily that it is all over bar the shouting. The French National Committee aside from the question of note issue wants that inflation in France should be dealt with swiftly and effectually. The experience of France under Hitler's division led to the hoarding and black marketeering for which new money offered by the Allies would not be a remedy at the best of times. General Eisenhower's proclamation to France to be patient and brave hardly deals with the points at issue between the Allied Govern-

ments and the French Committee, Vichy clearly keeps some gold to support in its way the French currency. The German army taking over the defence in collusion with M. Petain and M. Laval would probably make heavy demands on available goods, and prices would naturally soar. Invasion (followed by new issues) would aggravate the difficulties. In any case the fixation of exchange rates under the agreement of February would not at all be a remedy for the situation. Difficulties would recur and spread in all the countries awaiting deliverance. Mr. White's apprehension that if a stabilisation fund is not set up by arrangement serious disruption would follow makes too much of the blocked balances. The English press comments on inflation in India at the time of the Budget did not overlook the large-scale Allied expenditure in India and the Indian Government's own small-scale spending. In view of the conference to come, the claim for a war gift has been obliquely stated in newspapers. The arguments heard are familiar but little has been said as to what could be secured for Britain in respect of her own liability by a satisfactory solution of the Indian problem. A special levy on the protected princes (whose subsidies are paid to the Government of India, not to Britain) is likely to find favour in view of what has been done as regards attachment of very small States to certain larger States. The possibility of making the princes pay for British protection (their non-sovereign status is always an overwhelming argument) should be examined in relation to the unknown suffering of the peoples of India. It should be possible to cut through the tangle of interests, especially, as some States have raised anti-inflation loans, ostensibly for the development and reconstruction which could be now devoted for Benevolences of a special nature. The war gifts and the contributions in kind from the States are not on such a scale as to

make it unnecessary. Of course to defeat any charge of discrimination the principle of a capital levy can be applied in Africa to the Opopi Chiefs who got their claim against the Colonial Office allowed recently and in Asia to the Trucial Chiefs on the coast of Arabia even to the queen of Tonga in the Pacific, and above all, to the Indian princes. An address from both Houses to the King would be an effectual demonstration of the Imperial Parliament's power to make all others remember their duty. When protected princes in Java, Malaya and Borneo have lost all or much protected princes in the British Empire could be made to pay. African Chiefs like the natives under indirect rule have been forced to pay more by way of taxes in wartime so could Indian Chiefs and the principle that Paramountcy is paramount could be applied fruitfully again.

Before and after the invasion London markets have shown real firmness. Last Friday gilded and all prices hardened. The buying of Home Industrial has apparently continued for the capture of Rome impressed the market as much or more than the invasion. Peace prospects have been viewed in a different way altogether in Indian markets where price changes contradict the facile inference that markets advanced when the news of landings in Normandy came through. In London leading oil shares have been rising with the exception of Mexican Eagle. Planting shares also are higher of late and Heavy Industrials have gone up. The improvement shows that the modest rise in Wall Street is surpassed in London where markets are uniformly cheerful. The Indian bullion market has gone down rather quickly while gold-mining shares in London have risen. The changes for a week accord with general expectations. The more important results can be ascertained without reference to prospects of an international monetary agreement. Since the World Economic Conference of 1933 failed, it is clear that the Ottawa declaration on monetary proposals from April 1943 are of limited value. By Mr. White's own admission now sterling is as good as anything else especially if the Empire is fully agreed as to British requirements after the war. Agreements as to planning in India approved by the outer world take note of the division of responsibility for India's defence in the future. The fundamental handicaps must limit India's claims to an independent financial policy. It is easy to see that an anti-depression policy after the war in the U.S.A. or Britain would help India. The improved credit status of Britain can be ascertained by reference to the fact that the National Debt in spite of its size in 1942-43 took only a little over 12 per cent of the year's expenditure in Britain. If permanent debt takes so little the short-term debt could be easily dealt with especially as production and investment would be regulated by Government in the interests of unemployment. Effective use of resources and skill for getting out the goods wanted has been promised and the cost of adjustment as well as expansion of credit seems likely after the war. The example set by Sweden in 1943 deserves notice for that reason, and the critics of the Indian prize bonds scheme may well take note of the issue for Kr 150 millions of a premium loan, part of the interest was set aside for prizes, and rationing had to be adopted to limit the maximum takings to 100,000 Kr.

British Press and Sterling Balances

The British Press has returned to the charge. The presence of Sir Jeremy Raisman in London and suggestions of Indo-British agreement on the future of our sterling balances have provided the pretext for another outburst against the present basis of allocation of military expenditure between India and Britain. In surprising disregard of its liberal traditions "The Economist" has revived the campaign against the Financial Settlement. "The Economist" argues, that the Financial Settlement has achieved "arbitrary fantastic results" and therefore "contains some serious defect". "The Manchester Guardian" calls it "the dishonest Indian arrangement". Obviously, a new climate of opinion on this issue is being sought to be created, one which will favour the imposition on India of burdens which had formerly been regarded as inequitable. Indian opinion has never felt too sure about the future of our foreign assets, past experience and present political disabilities being equally strong forces for pessimism. While Britain's part is to afford some reassurance, the British Press has nothing but periodic eruptions of hate and jealousy, which India in her present position can only interpret as a formidable threat to her sterling balances. Reuter's City Correspondent has since the publication of the "Economist's" article emphasised that "most certainly Britain is not going to repudiate either India's or any other country's sterling balances", and that "any suggestion of repudiation or default would be as hotly resented here as in India". Though this statement is badly needed and would be welcomed more heartily if it were more authoritative, the confusion of issues which the British Press is wilfully persisting in is a serious portent which India cannot afford to ignore.

It will not be lost on any section of the Indian public that the basis of the attack on the Financial Settlement and on the sterling balances which are supposed to flow directly from that Settlement has varied from time to time. A year or so ago, the main contention was that Britain had been generous; and the tendency was more to take pride in that generosity than to condemn it as a blunder and its consequences as a disaster. At a later stage, the British Press emphasised the fact that the goods which Britain will be shipping to India in payment of the latter's sterling balances will yield no current return. This was probably intended as a reminder to India that it would be extremely unseemly on her part to ask for her pound of flesh. There was thus credit for generosity, with mild remonstrance against the possibility of unsympathetic enforcement of claims. On the Indian side, there was discreet emphasis that British generosity must be qualified alike by the necessity for its display and by a scale of suffering in India for which her sterling balances are but poor recompense. But the acrimony which characterises the comments of "The Economist" and "The Manchester Guardian" is a late development.

What has happened during the last few months that can account for the change? Our sterling assets have risen since the beginning of the year from Rs. 855 crores worth to Rs. 995 crores. About the rate of increase in the future, we have no means of judging it though the British Press may have come by some means of anticipating it. But it is extremely unlikely that the rate of increase by itself should impel respectable and staid organs of British public opinion to indulge in a line of comment which call for subsequent disavowals of British intentions to repudiate obligations to India or any other country. The only plausible explanation would seem to be that with the approach of the end of the war and with the negotiations for the regulation of post-war international stage well advanced, city editors and financial publicists have begun to study more intently the picture of Britain's national economy and finance in the post-war period. That this picture is not conducive to generous feelings towards other countries need hardly

be said. It was only recently estimated that, if the war does not drag, unduly long, Britain will emerge out of the war with £3,000 million owed to other members of the Empire, of which £1,000 million will be owed to India. These debts and their repayments will have to be fitted into the framework firstly of inter-Imperial relations and then of the international relations as they will be regulated by the agreement over the International Monetary Fund. One of the moot problems of post-war international finance is the liquidation of war time balances and it is significant that, while the White Plan included this problem within the scope of the International Stabilisation Fund, the later proposals on which the British and American experts agree leave it for separate adjustment between the parties concerned. In the case of India, the liquidity and convertibility of her sterling balances are of the utmost importance to the future of her national balances. They are so in principle, at any rate; for, liquidity and convertibility can lose their importance only if British co-operation in Indian economic developments is so sincere, efficient and economic that India will have no need to look elsewhere for the goods and services she will need. On this point, past experience leaves no room for hope. On the other hand, there is reason to fear that if our foreign balances are immobilised in the hands of Britain, these balances will be used as a handle to be turned against India's economic aspirations. India is therefore obliged to rule out of consideration, if only for the moment, the contingency of Britain finding a substantial part of her requirements in respect of capital goods and, for that reason, to insist that her foreign balances shall not be held exclusively in sterling and that her sterling balances should be available to her not only for expenditure in Britain, but also for conversion into any other currency she may require. This position, however, India takes up only after the Government have refused to adopt those methods of financing Allied war expenditure in India which do not involve inflationary additions to the currency circulation in India. India is thus forced to emphasise that her foreign investments should be diversified and that her sterling balances should not be blocked. The need for an understanding on this question has been accentuated by India having to define her position in regard to the proposals for the International Monetary Fund. For, India has no great interest in this or similar international schemes except to the extent that they may facilitate the liquidity and convertibility of her foreign balances. The General Policy Committee, which considered this question sometime ago, insisted that, if the liquidation of India's war balances is not to be within the functions of the Fund, then an understanding between India and Britain on this point must precede, not follow, India's participation in international schemes.

The Government of India have been, broadly speaking, in sympathy with the attitude of the Indian public on this question. Though they have not been able to alter the methods of financing Allied war expenditure in India, except to the extent of the sales of gold, they have recognised the legitimacy of the claim to the accumulation of dollar balances. They have accepted the principle that the payments which Britain will make from year to year towards liquidation of our sterling balances should be available for conversion into other currencies. The last mentioned principle may conceivably involve Britain having to borrow from the International Fund in order to provide India the foreign currency she may require, while Britain is looking to the facilities of the Fund for maintaining the volume and value of her foreign fund in disregard of temporary disequilibrium.

It is this position which is acting as an irritant on large sections of the British Press. But neither in their origin, nor in the purposes to which they will be put need India's sterling balances upset the British public. For these balances originate in a war effort, which is sincere and strenuous so far as India is concerned, and which is as vital to Britain's success in this war as any other part of the war effort. In its ultimate utiliza-

tion, too, these sterling balances can well have the effect of turning India from the weak link, which she is now in the chain of national economies, to an invaluable source of strength to world economy as a whole and British economy in particular. But the British Press in its present mood of petulance sweeps aside both these aspects. It looks with dismay on the size of these balances, attributes it to the Financial Settlement and attacks the whole basis of the Settlement. "The Economist" stresses the fact that "India during the war has invested in Britain and repaid sterling debt to about twice the amount of British capital which went to India over the preceding three quarters of a century". "The Economist" certainly knows that this is not the only instance of war changing the time scale and crushing a century into the space of a decade. The last war changed the U.S.A. into a creditor of whole continents, not to speak of one nation or two. What the last war did for the U. S. on a large scale, this war has done for India on a small scale, with the difference that, while America lent abroad from the surplus of her prodigious productive capacity, India has poured out her life blood—and no metaphor this!—in support of the war effort. Reuter's City Correspondent has the sense of fairness to admit that "the physical side of this (financial) agreement has cruelly burdened India during the war." "The Economist", too realises "that the weight of the whole defence expenditure in India—whether financed by the Indian or by the Allied Governments—is currently borne by India's population".

In the face of this realisation, how can there be any question, such as the "Economist" has raised, "whether its financial counterpart shall be borne by the British or the Indian taxpayer?" Reuter's City Correspondent suggests that the financial side of the agreement cruelly burdens Britain after the war, the same as its physical side has cruelly burdened the Indian masses. "The Economist" seems to think that there is an Indian taxpayer different from the Indian population and that, while the latter has borne the physical burden, the former may be asked to bear the financial burden. The upshot of it all is that between them the Indian taxpayer and the Indian population will relieve the British taxpayer of all his burdens in this regard! How is the financial burden to be shifted from the British to the Indian taxpayer? Apparently, if the sterling balances are to be denied to India, the whole of the inflationary addition to the currency circulation will become a public debt which will have to be shouldered by the taxpayers in this country. Is there any reason to think that the heavy debt charges will not affect the masses who have been, admittedly, cruelly burdened by the physical side of the war expenditure? And would it be an equitable division of expenditure as between Britain and India?

TARGETS FOR AGRICULTURE

Though planning and post-war reconstruction have been before the Government and the public for a long time, preparation for a Plan have not yet reached the stage of technological study of specific problems. Impatience in this matter is no help; and in those directly concerned with the formulation of the Plan, it may even be a danger. But it is necessary that the stage of discussion of principles and fixing of targets should be left behind and that attempts should be made to define the difference between the desirable and the feasible and then to reduce it as far as possible. The official mind has till recently worked in terms of post-war reconstruction rather than of an ambitious plan to increase the standard of living of the masses. But results, as we showed a fortnight ago in our comments on the First Progress Report of the Reconstruction Committee, are quite valuable from the point of view of planning as well. For, the work of the various Committees has a concreteness which is the essence of the technological approach. Experts of a higher calibre will no doubt be called for when the problems of heavy industries are taken up. But the ground is being prepared for such enquiries. The most valuable part of the spade work so far done is the report of Dr. Burns on the "Technological Possibilities of Agricultural Development in India". The significance of Dr. Burns' work can be understood only when one appreciates the relation of agricultural development to the rest of our economic plan, as also the assumptions under which alone it is worth while making such a study.

The relation of agriculture to our economic planning of the future, it is unnecessary to discuss in detail. It has been brought out most forcibly by famine and food shortage. The inefficiency of agricultural operations in India has been slow

The truth is that British opinion looks at the whole question from the standpoint of Britain's capacity for repayment in the post-war years. And that capacity is to be judged, not in the light of her productive power or the feasibility of transferring values from Britain to India, but with a major proviso that Britain's standard of living should not only be spared any reduction, but should be raised. Surely, it is too much to contend that repayment of debts incurred in a life and death struggle like the present war should not affect the standard of living. If Britain could be so particular about her standard of living in the years to come, could not India ask for some compensation for all the misery and suffering she has undergone during these war years? India's interest in the present war is, of course, no open question. Granted that it is equal to Britain's, is there a similar equality in the capacity to pay for war expenditure? India has no financial system which can raise all the money that is needed for the war by taxation and distribute the burden equitably among all classes. India has no industrial system which can produce in large part the equipment needed for modern warfare. In such conditions, necessarily, the burden of war expenditure, even as the capacity to declare war or keep out of it, should be unequally divided. If India is to be kept incapable of producing internal combustion engines, she should be incapable of making a big contribution in war material. Britain cannot eat the cake and keep it, too.

But India has more than made up for her industrial backwardness. There is no demand which she is capable of meeting and which she has not met. The system of allocation is based on the simple fact that war expenditure in India falls into three classes Indian, British and joint. The whole machinery for classifying these measures, appraising them and accounting for them is in the hands of officials who are subordinate to the British Government. And it is these accounts that show a credit for India. To rage against these credits merely on the ground that they total up to a big sum is to betray a fond faith in having wars fought at others' expense.

Britain must learn to separate the legitimacy of her obligations to India from the question of their discharge in the post-war period. Practical difficulties in effecting repayment, the need for spreading payments over a period, the value of special trade agreements for facilitating liquidation of the debt to India, these must rank as facts which India cannot shirk and which she will have to adjust herself to. But it is one thing to consider schemes of repayment; it is quite another to have the whole liability called in question. India has had no end of suffering in doing her part in the war effort. And she will refuse to be balked of the only possible compensation for it, a brighter future for her national economy.

to gain the attention of the public, which was ready to assume that it was Indian industry and not agriculture that needed special care. The actual results of the Grow More Food Campaign and the irresponsiveness of Indian agriculture to the stimuli which war time conditions have provided have served as an eye opener. The fact is that, in recent decades, Indian agriculture has been showing signs of deterioration and weakness and "Indian Finance" has often pointed out in the past the dangerous inelasticity of our economic system in general and agriculture in particular. In spite of higher prices, greater demand, national urgency and active official help, the production from land could not rise substantially. This irresponsiveness cannot be explained away by reference to monsoon conditions which generally operate as a powerful factor governing the success of agriculture. The defect is deeprooted in our economic structure and only a sustained and planned drive can pull up the productivity of the soil and revive the acute shortage of foodgrains.

It is not to be supposed, however, that the Indian cultivator has a wooden mind. He is as good, shrewd and experienced as the ryots of other countries and the general conditions under which cultivation is undertaken here are not particularly unsatisfactory by comparison. More than thirty years ago, Sir Henry Cotton wrote: "Elaborate and costly departments have been created, but the indigenous methods of agriculture have not been improved one jot or little by official enterprise. The rayats of India possess an amount of knowledge and practical skill within their own humble sphere which no expert scientist can ever hope to acquire." Much has happened since he wrote with such confidence of indigenous village and cultivation. The progress of science has been since

1920 rapid, and even the democratic countries, not to speak of communist Russia, have achieved wonders both in extensive and intensive cultivation. In the case of India the position is, far from following up the other countries in their race for efficient and scientific production, we have allowed soil deterioration, extreme fragmentation of land, excessive pressure of population and waste of manure. Compare the acreage yields of the important crops in India with those of other countries, the low productivity of Indian soil is glaring. If we compare again the yield of the same crop in different areas of this vast country we are confronted with a wide range of differences in quantity and quality.

The competitive power of India's agricultural staples in foreign markets has been maintained, not by the efficiency of production, but by the low costs which the ludicrously low standards of living in this country have made possible.

In the period that will follow the present war, agricultural development will be found to be indispensable firstly, for ensuring adequacy of food for the whole population, secondly, for maintaining the place of India's agricultural staples in competitive foreign markets in the face of rising standards of living among the masses and thirdly, for providing a sure and stable foundation for the expansion of the national economy which we seek to achieve. The trends of population and food production in the country have been such as to make the question of possible imports a gratuitous complication. For the export trade, and for indigenous industry alike, it is of great importance that the yield of land should be improved both in quality and quantity. The future of India's raw cotton and cotton industry is bound up alike with a heavier yield per acre and a change over to long staple. Something similar may be said of sugarcane. Linseed had need for the props of preference. And in food, the spectre of shortage cannot be exorcised without a heavier yield of rice and wheat. In fact, one may go to the length of saying that agricultural development should enable us not only to raise production, but also to reduce acreage. For, there is need to increase the area under forests and to provide more pastures for our livestock.

It is tempting in such conditions to presuppose the most drastic changes in social and economic conditions and to draw up a plan for agriculture based thereon. But that would be just dreaming; and a dream is no substitute for a plan. The limitations of life have to be accepted before they can be got over.

It is best therefore to regard the problem as one of increasing the productivity of agriculture rather than that of overhauling the social and economical structure. The problem can be tackled in two ways. Firstly, making the best of the present day methods of cultivation, applying such measures as are immediately possible under the present day handicaps and secondly, to bring about a thorough reconstruction of not only the agricultural sector, but other aspects of the national economy and achieve the best results from modern mechanical appliances, large-scale agriculture, collective farming and the like. Obviously, this latter approach depends upon favourable political and social changes and can only be the aim of long-term agricultural policy for a country.

In this note on "Technological Possibilities of Agricultural Development in India" Dr. W. Burns, seeks to fix the limits of increase in the production of India's cereals, oilseeds, etc. He has obviously taken the line of investigation of an expert in Agriculture asked to report on how much India could speed up her agricultural production in the near future making the best of the present day methods of cultivation and indigenous resources and working within the limitations imposed by the social structure or political conditions in India. The results of 5,000 scientific investigations carried out in different places of India at different research centres are brought to bear on the problem of productivity of Indian agriculture and the results are tabulated below:

Cereals, Oil-seeds etc.	Present all-India yield per acre	% of increase possible according to Dr. Burns
1. Rice	738 lbs.	30
2. Wheat	640 lbs.	to 1200 lbs. per acre in irrigated and 600 lbs. in unirrigated land.
3. Jowar	Irrigated, 1200 to 1500 lbs. barani, 100 to 700 lb.	20%
4. Bajra	320 lbs.	25% "
5. Maize	800 lbs.	25% "
6. Gram	356	to 500 to 600 lbs. per acre
7. Pulses	800 lbs. if sown alone. 200 to 300 lbs. in mixture.	(No opinion is given)
8. Linseed	500 lbs. in Deccan	No experiments in improved variety. Hence no opinion given.
9. Brassicose oilseeds	373 lbs.	25%
10. Ground nuts	900 lbs.	11% i.e., to 1000 lbs.
11. Castor	259 lbs.	10%
12. Sugar cane	15 tons	30 to 55 tons
13. Cotton	90 lbs.	No target fixed, because the matter is one of national or international policy.
14. Jute	16 maunds.	25%
15. Fibres		He advises that India should not compete with Africa in Sisal.
16. Tobacco	100 million lbs. of cigarette tobacco on 100,000 acres in 1940-41.	to 200,000 acres of cigarette tobacco producing 150 million lbs. of fine-cured tobacco contemplated.
17. Fruits	No statistics available	No target possible but possibilities are enormous.
18. Vegetables	No statistics	No target. A survey of marketing of fruits suggested.
19. Potatoes	No statistics, but 5776 to 8275 in unmanured and 10,140 to 20,000 lbs. in manured tracts of India.	Production can be doubled.

The methods suggested for hitting the targets are better manures, improved varieties of seeds and implements, insect control, crop rotation, more scientific cultivation and conservation and maximum utilisation of available fertilisers, water, labour, soil and livestock. That the cost of cultivation is an important factor is fully realised by Dr. Burns and he, further, seeks to minimise the waste of time at present imposed on the rural population. The targets he has suggested are impressive and he believes that India can hit these targets without much difficulty in the near future. In order to achieve these aims he suggests that the existing means of the Provincial and State Agricultural Departments must be enormously strengthened in trained men, funds, and in power. He believes that the existing inamdars, jagirdars and zamindars can be made excellent instruments for organising collective effort for agricultural progress. Village organisations, he points out, can do a big job, particularly for soil conservation and collective effort for avoidance of waste of all kinds. Since mere persuasion and propaganda may not achieve much particularly in this country, Dr. Burns rightly suggests that "while proceeding with all necessary caution, we must not be afraid of invoking a certain degree of compulsion to ensure such collective action." With regard to the application of vernalization in India he holds the opinion that the scope is very meagre. The usefulness of mechanisation is limited to the eradication of deep-rooted weeds, clearing of jungles, making roads, anti-erosion work, and cultivation of large estates, particularly of sugarcane. It is best suited and economic only for large farms. Methods of collective farming methods, Dr. Burns points out, are applicable only if peasant structure of agriculture can be abolished in India as quickly as the Soviet planners could do in Russia. It is, however, useful here to recall the conclusions arrived at recently by the Board of Agriculture and Animal Husbandry. The general applicability of tractors is deemed impracticable under the present conditions and political opposition is mentioned as a major stumbling block to collectivisation. The Hot Springs Conference also enunciated the principle that "the inherent natural and economic advantages of any area should determine the farming systems adopted." Further, the farming system should be such as to "maintain the optimum level of productivity consistent with ensuring the preservation of basic resources for future generations."

Dr. Burns report will surely be received with great satisfaction and from the point of view of an expert's approach to the agricultural problem his recommendations are exceedingly useful. Together with the report on post-war agricultural policy prepared by Dr. Gregory to be shortly published, this Note will form the basis of future agricultural policy of the Government of India. But the Note is obviously the starting point of other enquiries, and irrigation schemes, hydro-electric works, manufacture of artificial fertilisers, construction of roads, etc. have to be formulated and put into effect if we are to attain the targets fixed by Dr. Burns. A comprehensive all-India Soil survey and collection of reliable and regular statistics are essential for planning production. It is to be hoped that the implications of Dr. Burns report will be followed up without loss of time.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd

May to 27th May, and thereafter increasing by 8 paise per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

Changes In Markets

Peculiar changes in the foreign trade of India during 1942-43 may be discerned in the totals furnished in the January returns. Imports from foreign countries increased because India took more oil from Iran and more cotton from Egypt. The only material change is the increase under imports from Switzerland in spite of the fact that exports to Switzerland from India were negligible. This may be due to the fall of Italy as well as the Swiss policy of doing without. Except for fuel there is nothing that really can be called an essential import. Self-sufficiency is accepted as an inescapable necessity by one neutral. Notable for certain reasons is the large increase in trade with Turkey. The Near East became a more important market than the Middle East last year. There was a lull in exports to Egypt, Iran, Syria and other countries while India's trade with Turkey increased. Except for the Belgian Congo (linked with the Empire at present) the Colonial markets took less than in the previous year. This may be ascribed to export restrictions in force rather than to the lack of demand. The fall in exports to Portuguese East Africa follows the fall in imports. The contraction in trade can scarcely be due to exchange difficulties for rupee accounts were opened in India by importers who bought Indian goods while the rupee-escudo exchange too was steady and such difficulties as were noted during 1942 in Goa hardly had any influence on trade with the Portuguese colonies. The increase in trade with South America as well as North America is independent of the rather small increase in Indian imports. The increase under gunnybags and gunnycloth is a symptom of the expansion in trade with the New World. The fall under imports of sugar has not reduced to any great extent exports to Mauritius and the dependencies (including Seychelles). The fall under spices is bound up with the decline noted under imports from Zanzibar and Pemba. In January it was stated that at present there is little demand from the usual markets for cloves. And the general fall noted in the imports into India except under tobacco, wool and raw materials wanted for Indian industry, e.g., paper-making materials, supports the view that the increase in the value of sea-borne imports after October cannot be called disturbing.

Defence Loan Progress

Subscriptions to the 4th Defence Loan in February totalled over Rs. 13.95 crores. In the months that preceded Bombay instead of Bengal claimed the largest share. In February, Bengal again took the first place, followed closely by Madras. This may well suggest that the savings drive coincided with Bengal's re-

covery from the 1943 disaster or that specially large subscriptions were forthcoming from the financial institutions because of the belief that the defence loan would be given up in favour of another not so attractive to the buyer. The striking feature of the month is the improvement in the flow of subscriptions through States and Central Treasuries. Since Baluchistan, Ajmer-Merwara and even Coorg are shown separately, it is clear that the Rs. 114.21 lakhs came from the States. The inclusion of Nepal may appear surprising. To find an independent kingdom—relations are regulated by the Anglo-Nepalese treaty of December 1923—put at the head of the table over British Indian provinces might be somewhat surprising, but Nepal is linked with India by the rupee—the local mohur made of silver like the copper pice is a token coin—so that an interest-free loan made by someone in Nepal is merely testimony to the trade and financial relations between India and Nepal. The total investment in 3 percent loans at the end of February amounted to Rs. 248.57 crores, the months total was over Rs. 13.95 crores. The jump in defence loan subscriptions explains the sturdy optimism of the Finance Member in planning for new borrowing—an approved remedy for inflation—as well as the considerable increase in short-term borrowing. What is, however, important is that the increase in the Government's short-term borrowing has been without effect on subscriptions. Notable for several reasons is the increase under sales of savings certificates; the progressive total was Rs. 619.06 lakhs while the total for February alone was Rs. 138.85 lakhs. The very considerable increase after the indifferent start in October deserves notice for the reason that national savings certificates have evoked much better response than defence savings certificates to judge merely by the totals. Of the gross total of Rs. 268.66 crores Rs. 349.2 lakhs only carried no interest. The provision for renewal has not materially influenced the total under interest-free bonds. But the substantial improvement under subscriptions as compared with 1942 and 1943 indicates that apart from the control of capital issues, the factor sustaining the expansion of debt has been the halt called to rising prices. The steady increase in small savings from year to year in Britain (Lord Kindersley put the total for 1943 at £739 million as against £1164 from large savings) may have no precise parallel but the affinity between income and savings is established.

Cloth Export Control

The Industries Committee of the Textile Control Board has met last week to consider among other things the objections raised by the millowners and the exporting interests to certain features in

the cloth export control scheme adumbrated last month. It will be recalled that the scheme included certain provisions fixing the export prices for cloth to be exported to the countries discriminating against India and those not so discriminating. There were proposals for standardization of specifications of the cloth to be exported, and also provision for inspection by the Textile Commissioner of the goods to be exported. Keen opposition has been brewing in the last fortnight among the mills to these features, and the Bombay Millowners' Association has met twice to discuss the question and is also reported to have protested to the Government of India against these provisions. The provisions for a levy for technical research included in the export prices has been strongly criticized all round on the ground that it is unfair to ask certain members of the industry alone to contribute to a fund, to which really the entire industry ought in fairness to contribute. Moreover, by raising the export prices on this account to the extent of 13% in the case of discriminating countries and of 5% for other countries, the price structure is unduly interfered with and may conceivably lead to loss of goodwill among consumers in importing countries, besides placing the Indian exporter at an un-

IDEA FOR
**wedding
present!**

Instead of travelling long distances to attend weddings, why not send the cost of your railway tickets as a present!

However much the young couple missed your presence, they would realise that rail travel in wartime, is difficult and uncomfortable; and they would applaud your practical gesture. It would help the Railways to maintain a constant and even flow of civil supplies including food-grains, fuel, clothing and other necessities of life; to keep our troops well supplied with

weapons of war. These factors alone, dictate that passenger traffic must be reduced.

So, in saving yourself an inconvenient and uncomfortable journey, you will please both those you love, and those who serve you!

necessary disadvantage as compared with his rival in the U.K. or U.S.A. There is no doubt that the research side of the industry is all important, but the scheme propounded by the Government merely tinkers with an important problem which should receive far wiser and more detailed consideration. The mills also feel that the proposals for inspection by the Textile Commissioner of the whole quota of exportable goods (600 million yards) may not prove to be feasible, partly because of the lack of suitable personnel and partly because of the magnitude of the task. This aspect can probably be well left alone, since importing countries have the right to demand arbitration by recognised commercial bodies in those instances where imported goods are below par. The introduction of minimum specifications to which the exported goods are expected to conform, is also criticized for the reason that this is not by itself sufficient to guarantee quality and that the exporter may be relied upon to look to the requirements of his clients abroad. It is true that latterly there have been complaints that Indian textile exports have not come up to his scratch and that they were different from the samples furnished. But then in the new scheme the shippers are fully controlled and there is no room for malpractices. In any case, the mills had nothing to do with them. It may be that the importing countries cannot entirely be left to take the necessary steps for controlling quality as the fair name of the Indian manufacturer may be tarnished by short-sighted practices in the trade. The authorities should be able to draw a line at which the application of standards and specifications should stop. By far the most substantial objection to the export control scheme, admirable as it is, seems to reside in the price structure. The 10% margin for dealers exporting cloth seems somewhat too high, especially as only a margin of 4% is allowed in internal distribution. Also it may be worthwhile for the Commerce and Industries and Civil Supplies Departments, which are really concerned with this question, to consider whether lower prices may be fixed for the exportable varieties, thereby dispelling the impression abroad that India is trying to take undue advantage of the shortage of cloth there. Probably, if the question of building up a research fund is viewed on a separate footing and dealt with in a more comprehensive way, the mere deduction of the extra percentage now included in the export margins on account of the research levy would suffice for the moment.

Additional Gold Reserves

Changes in currency reserves during the war are not limited to an increase in the sterling balances of India and some other countries. Gold holdings have increased in the case of neutrals who have tried credit control or gold sales with the approved purpose of curbing inflation. The U.S.A. lost a little of its gold; Latin American countries gained. For the changes of 1943 have favoured the smaller countries and the appreciation of the bolivar since 1941 is largely due to the increase in the Republic's gold reserve. The increase in overseas balances certainly explains the reduction in external debt in the case of Egypt and South Africa. Of the Empire countries South Africa alone went on adding to the gold reserves last year, and the gold holding was well above the statutory ratio in this case. Mexico's experience of inflation accounts for the

large addition to her gold reserve in June 1943. That Brazil's export surplus in wartime would help the currency reorganisation to stand may be inferred from the changes recorded in 1943. There is, however, the consideration that Mexico and Brazil have not passed on any of the benefits to their foreign creditors. The small-scale acquisition of gold by Japan is explained by the circumstances of Occupied China. The additions since April 1943 are not large, but the need for foreign exchange has apparently disappeared. In the past, the yen followed sterling regularly. Its new independence is hardly attributable to the New Order in East Asia. Foreign trade has fallen off. Overseas assets are therefore lacking. The increase in Japan's gold stocks therefore is of limited value. Of the countries with sterling balances Eire was best off as the increase in 1943 was limited. Neutrals received gold and accumulated foreign exchange. Spain was typical in being able to increase her gold reserves last year while Portugal did not do more than reduce the bank rate when funds became abundant. The Occupied countries lost and got more marks in 1943 if the case of Belgium is typical. Sweden's acquisition of gold was even more important than the addition to foreign exchange. Actually, her foreign assets decreased and Sweden's ability to negotiate a new trade treaty this year must be derived from the decline in Berlin's blocked balances. Switzerland has far more gold than foreign balances, offering in this respect a considerable contrast to India.

Mica Enquiry

The Resolution of the Labour Department dated May 15 announcing the appointment of a Mica Enquiry Committee referred to the wasteful mining practice and the possibility of competition from foreign countries. The Resolution followed the conference arranged earlier at Kodarma with the interests concerned. The amendment of the Control order was promised in the resolution which made it clear that licensing would be strict. The Labour Member's chief interest was improvement of wages and working conditions. Mica mining differs from coal in respect of its use of both female and child labour as well as the reliance on the home-worker. The industry has consented to a welfare cess according to report. The use of cess for housing improvement and other purposes is less important than the assurance of employment. If conservation reduces directly the demand for labour, the effects may be different from those prescribed by the Bihar Labour Enquiry Committee. The adoption of machinery applied to the coal mining industry in the case of mica naturally raises some questions as to what is in store after the war demand flags. The case of coal is peculiar, for the home demand may be expected to increase steadily at all times whereas mica is primarily an export mineral and the predominance of not well organised Indian capital is a distinguishing feature whereas foreign capital is strongly entrenched in most other branches of mineral industry. The investigation that has been ordered should, however, still doubts provoked easily by the assumption that small-scale enterprise would suffer in the future. Reorganisation especially of marketing methods is also prescribed in the resolution notified last month but the familiar question as to the post-war outlook for the industry is not disposed of

by an assurance that a Cess Committee similar to the Lac Committee would look after the interests for the difference between the imports of lac that India drew and the exports every year appears to support the view that a natural monopoly obtains in one case.

The U.S. Market

The U.S.A. is the main market for jute and hessian. What the U.S.A. means to the export trade is as clear in war as in peace. The U.S. markets significance for the jute-grower and the industry too has been examined by Professor D. Ghosh in the latest issue of the Jute Committee's bulletin. The U.S.A. produces jute goods (valued in 1937 at 90 million dollars). Two-thirds of the total value was accounted for by bags made from imported fabric, the balance being made up of twine, yarn and bagging. Imports in 1937 were below domestic production. A high percentage of the imports was drawn from India which sent raw jute to a lesser extent than jute manufactures excepting yarn and twist etc., in which the domestic

production is helped by the tariff. The U.S.A. exported by itself little. This is not surprising in view of the large demand at home for sacks and bags. In fact, the value of U.S. imports of bags exceeded the value of U.S. production. Stocks in the case of bags tended to be small in relation to output. In fact, a part of the imports is always meant to increase home stocks. The U.S.A. took much of the raw jute imported for making yarns (used in the manufacture of carpets and rugs) while nearly all the burlap for making bags came from abroad. The automobile and furnishing industries took some burlap but 80 per cent of the total supply was meant for making bags. The grain trade was the principal outlet for bags but sugar and fertilisers were packed in bags like tropical produce e.g. coffee and vegetables like potatoes and onions. No great changes have been enforced by the war and the recovery in exports of Indian jute manufactures in the second quarter of 1943-44 can be duly inferred from the rise in the value of Indian exports to the U.S.A. and of exports of jute manufactures.

Now Available CHEVROLET TRUCKS

CHEVROLET TRUCKS (with and without bodies built by General Motors India Limited) are now available in limited quantities, for essential civil requirements only, under special arrangements with the Government of India. Special consideration will be given to those who are prepared to operate with an approved charcoal gas plant.

ADDRESS YOUR DEMANDS TO THE PROVINCIAL MOTOR TRANSPORT CONTROLLER OF YOUR PROVINCE.

Government make a special appeal to truck owners and drivers to exercise the greatest care with tyres. Here are a few simple rules:

- 1 Keep tyres at correct pressure.
- 2 Don't overload.
- 3 Don't exceed 30 M.P.H.
- 4 Reduce speed at corners.
- 5 Don't jam on brakes.
- 6 Don't rub walls of tyres on curb.

Population And Progress

The famine last year provoked critical analyses of the population problem. Familiar conclusions endorsed by the News Chronicle lately only indicate that in the two Plans prepared this year, the question of population is left out of consideration. The deviations from the normal i.e., the averages in other countries in regard to death-rate and the expectation of life are less alarming than the annual increase in numbers. But it is scarcely correct to assume that for half a century the standard of living has not risen. There would have been no indus-

trial progress or even the war effort which receives special notice abroad if there has been no expansion except in numbers. Productivity has increased since 1919 though the increase in population is not a consequence of the increase in production. Permanent remedies for over-population must be independent of the relief that may be given by migration. Hence the argument in favour of internal development and planning.

It may be generally concluded that the poverty problem in India interests Britain. If the natural remedy for over-population is a higher standard of living

here the progressive decline in demand may not be of much consequence. There is, however, the consideration that shifts in population or changes in natural increase affect both trade and industry. If the human increase in the East fails year after year the agricultural surpluses of some countries may have no market in Europe. To some at least the News Chronicle's assumption that the deadlock must be ended will appear more interesting than the analysis of India's poverty. The most that can be hoped for is, however, the tabulation of recommendations made by official committees in regard to post-

war reconstruction does not affect the old argument that India has to work out in practice the doctrine of an optimum. Where Soviet Russia planning was really favoured was in respect of the absence of any population problem after the positive checks operating for a few years after the Revolution. Russian planning technique is recommended to India but this argues a degree of taxation and borrowing unfamiliar to this country. Whether the latter would damage the standard of living before it can rise to the desired level must be duly ascertained now for

planning involves control as well as temporary impoverishment that may make the population problem all the more acute. The cost of planning in regard to deferment of consumption and acceptance of rigid controls is not the least part of the general argument in favour of effective political appeasement.

New League

Discussions in Washington are to begin soon. A new League of Nations under another name is promised. Small coun-

tries' susceptibilities are respected to some extent in the proposals for an Assembly and an Executive Council. Disarmament is excluded from consideration and the covenant for the new League may not be written at all. Function assigned to the league planned at present are far wider than the old League's but Mr. Hull's scheme for security ignores the Atlantic Charter. The fade-out of the Charter is not surprising because previous obligations are exalted over the promises for the future. Last week some criticism as to details was offered but the main merit, that machinery for peaceful change will be set up in advance of the post-war settlement, deserves to be noted. The commissions and committees planned after the Moscow meeting in October last cannot deal with frontier questions. The nations most interested must offer submissions. They may now be less eager for treaties of any kind if a new organisation takes up the job of planning. What it could achieve for the relief administration or the agency for regulating trade, exchange and investment can be inferred only from previous experience. More important than presumed is the preparation undertaken in advance of the Presidential election. In April Mr. Hull formally asked Congress to join in the work of planning for peace. The organisation planned in Washington will have the previous approval of the U.S. Senate. Claims for the great Powers in regard to territory or influence do not figure. Russia has certain territorial changes in view. China wants to recover all lost possessions. The Anglo-American alliance however has no complications to deal with. Press forecasts have not emphasised so far the absolute difference between a still Russia embroiled with Poland and Britain whose Empire is fully prepared for coordination. This may not affect the Russian view of the plan because the collective security programme was accepted last year and the U.S. plan is meant merely to give effect to such details as the triplicate guarantee to Iran. What the new organisation would do for such neutrals as Switzerland need not be examined because the organisation must accept certain things carried down from the last century, for instance, the 'open door' in China, should China consent to the plan. The Prime Minister's scheme for regional councils necessarily has been elbowed out by the plan but the declaration of the Dominions as to peace in the Pacific is unaffected by any plan for a world council to work out the peace settlement. Where the League failed in regard to Sanctions in 1935 will doubtless be rectified by creating a force to carry out orders issued by agreement.

Secession

As a protest has been entered by King Christian of Denmark lately against the dissolution of the union, the problem of Iceland is almost like that of Ireland in the struggle for repeal and home rule. The original suggestion heard in 1941 that Iceland should give up the not-so-old Danish connection and join the British Commonwealth has been evidently rejected by Iceland's republicans. What the Althing voted or may not be merely for separation from Denmark but may be the removal of the rights and privileges accorded to Danish citizens. The personal union dating from December 1918 provided for reciprocal preferences but Iceland had a Minister at Copenhagen and Denmark had a Minister at Reykjavik. The changes now contemplated are

Bombay.

Dear Sirs,

It gives us great pleasure to state that many years ago we had purchased two 30" high Godrej Safes. Our residence was in house No. 353, Samuel Street, Vadgadi. As a result of the terrible fires which broke out after the explosions in the city on 14th April, 1944, the house in which we were living collapsed completely. After many days when the debris was cleared, both the said safes were found safe, and our valuable documents, jewellery and ornaments kept in the safes have come out intact and without any sort of damage. On this account, we thank you very much and we congratulate you on the high quality of your safes.

Yours faithfully,
Sd/- BAI MOTIBAI, WIDOW OF
VIRCHAND OOMERSEY.

PURSHOTAM MATHRADAS & CO., LTD.

Bombay, 4th May, 1944.

M/s. Godrej & Boyce Mfg. Co., Ltd.,
Bombay.

Dear Sirs,

During the big fire which broke out on 14th April, such as has not seen in Bombay for years, the building of our 'pedhi' at 80, Kazi Syed Street collapsed and thereafter was caught in fire as a result of the fire which had broken out in a neighbouring house. For nearly 8 to 10 days there was such a cordon around that locality that even going towards that side was not permitted.

In this 'pedhi' we had two safes. Out of these, one was purchased from you, and in it were kept our 3-year-old account books, hoondies worth about seven lacs of rupees, receipts against moneys loaned and Rs. 6,950/- in notes and some cash. When this safe was removed from the debris and opened on 1st May, 1944, all our account books, cash and hoondies etc. were found intact. In the second safe, which was of another make, were our important documents which were burnt to ashes. We are therefore much pleased with your safe and we wish you increased success.

THE GENERAL ASSURANCE SOCIETY LIMITED have pleasure in announcing the opening of their General Department which transacts FIRE, MARINE and all classes of ACCIDENT insurances including Workmen's Compensation.

The salient features which contributed to the phenomenal growth and popularity of the Society in transacting LIFE insurance, form the foundation on which the new structure of their General Department is being raised. Coupled with its impressive past, the Society have the added advantage of an expert and progressive administration. The new management is backed by a Board of Directors which includes Mr. B. N. Jalan (Chairman) and other leading members of the well-known house of Soorajmull Nagarmull, besides prominent personalities and businessmen of India.

the abolition of the union by a plebiscite in favour of a republic. The future will thus see Iceland independently separated abroad instead of by Danish diplomats. How Iceland's currency will be valued (the Icelandic Krona was distinct from the Danish Krona) cannot be ascertained at present but a point to note here is that Ireland had its bank also to look after the fishing trade. Iceland lives as much by cod as Newfoundland. The herring fishery is less important but agriculture is hardly of an significance as six-sevenths of the island is unproductive and the only crops

raised are hay, potatoes and turnips. Iceland's permanent neutrality certainly was broken by the Nazi occupation of Denmark but the islanders who reject monarchy now have no army at present. Alien garrisons are fully established so the most familiar attribute of sovereignty will be absent in this case. What happens to Iceland's foreign debt may be of even less interest than usual as much of the debt really was contracted by the banks and mortgage institutions. Denmark's preponderance in Iceland's trade must have ended in 1940 since when Britain's posi-

tion therein must have improved. In the past the principal import from Iceland was fish for two-thirds of Iceland's exports was fish classed as animal food followed by oil, tallow etc., but the principal customer in most years was Spain. Iceland has no railways and the amount of foreign or local capital must be small. The claim to independence affects only the dynasty which followed the House of Oldenburg and took over the island. The scope and nature of secession may be understood from the Danish King's disapproval.

Looking Ahead

Plans are being laid for the large scale development of agriculture, industry and commerce in India.

A consequent rise in the standard of living will create new markets for articles of everyday use.

The Iron & Steel industry is looking ahead and stands ready to supply the basic metals to Indian manufacturers.

Japanese Misrule

Japanese rule in the conquered territories through the belated exaltation of the puppets has left the Dutch Indies outside the general scheme. Indonesian opposition to Japanese authority has taken many forms, so that Japanese tyranny has been most marked in Java. Two years of misrule have been reviewed by the Dutch colonial authorities who refer to forced labour and rationing. In the fertile islands food is scarce at present. The price of rice has risen five-fold according to reports reaching early this year. The daily ration of eight ounces of rice, soyabean and coconut allowed to Japanese labourers falls far short of the Indian ration that the urban labourer in Indian cities can get at present. Unemployment is widely prevalent as the plantations have rapidly decayed. It is known Japan's main requirement is cotton, not tea or rubber; and sugarcane in the Philippines or Java is regarded merely as a source of power alcohol. The new colonialism that Japan expounded has touched Java only to the point that agriculture and industry alike have decayed rapidly. The keen demand for oil and minerals from the East Indies and Malaya has been at the root of the policy of encouraging self-sufficiency on the model of the conquering country. Specialised tropical agriculture has been condemned because Japan today cannot play the provider. Their own garrisons lay claim to available supplies and the chronic confusion that has been noted in Occupied China has spread to Java. Shipping difficulties limit the trade development of the new Empire. The first instalment of deliverance in Dutch New Guinea renders it unnecessary to ask how the Change-over could or would take place. The possibilities of reconstruction must be examined without reference to the previous growth of secondary industry in Java or even to the position of Holland as the senior partner in the combination with the N.E.I. The French and Belgian colonial Empires have suffered as little as the British in the war. It is only Holland's Empire (save the West Indies) that like the homeland has been occupied by the enemy. While Dutch plans for recovery at home has been made known, the colonial reconstruction plans call for international assistance. But Java in most respects is too advanced to admit of application of the joint mandate principle while other colonial powers may be able to show less than the Dutch in regard to administration.

To-day's Prospectus

A small-scale issue, well designed to interest, in due measure, careful and prudent investors of the day is promised in the offer to the public of a part of the share capital of Chatra Cottage Industrial Works Limited. The capital secured is meant to further the nation-building work undertaken by a running concern which was connected with the Munitions Board and has since been on the I.S.O. and other lists. The home work that will be financed and extended is important from other angles than that of profit. Having regard to Lado's steady rise to success, the connection subsisting makes the new company an affiliate with advantages that must be recognised readily as Mr. J. Chakraverti is to be the Managing Director. What could be done for rural employment can be guessed easily from the opportunities outlined. It is noteworthy that Mr. B. C. Roy of N. L. Roy is on the

FROM BLUE PRINT TO BUILDING

In ordinary times, months of planning are necessary before one begins to build one's ideal house. Often the perfect living place is spoilt by insufficient designing on paper before the work of building begins. Consequently restrictions on building in wartime should result in houses which are more thoroughly planned, and which will therefore combine beauty and comfort with the maximum economy.

To stimulate your ideas about the house you are going to build some day, the C.M.I. have issued an illustrated brochure "The Modern House in India" (cost Re. 1/- and As. 4 postage), which is available from Department I.K., the Concrete Association of India, Victoria House, Calcutta. If at the same time you will give some details of the kind of house you want, they will be pleased to give you further suggestions and advice.

PROSPECTS

Objects of the Company.

One of the principal objects for which the Company has been formed is to take over the Chatra Cottage Industrial Works and so to strengthen and extend and ramify its activities so as to make it play a leading role in the establishment of Bengal's cottage industries on a well-organised, well-planned and self-contained basis. The objects are fully set out in the Memorandum of Association of the Company.

It has been recognised that cottage industries have a strategic significance in Indian National Economy. In a country which has been hitherto predominantly agricultural and which since the last war and particularly during the present war, has forged ahead in strident style in industrialisation, cottage industries provide a valuable and indispensable link and meeting ground between agriculture and industry.

Cottage industries are spread all over India and though no accurate statistics available in this respect the manufactures from these industries amount to a considerable figure both in total value and in variety. That cottage industries have, in varying degrees of prosperity, maintained their ground in spite of the keen competition offered by factory produced manufactures, is itself a tribute to their intrinsic vitality and a sign and symbol of the important position they occupy in the peculiar conditions of India's economy.

Attempts have been made in various provinces and at various times to create some kind of organisation for cottage industries. In the main, cottage industries will remain without any organisational unit. But wherever attempts have been made to bring cottage industries under some form of efficient organisation, results have been gratifying and the earning power of these industries has been greatly increased.

The Chatra Cottage Industrial Works undertook this programme of organisation as early as 1918. The beginning was modest, with a few handlooms worked in a small factory. The number of looms increased gradually, but, up to a stage, the industry was located in one centre. It was soon found necessary and possible to open out in several centres and to variegate the products turned out under its auspices. Within a few years, thousands of people were engaged in various textiles, weaving, roperies, tapes and such other small industries.

Not only did the Chatra Cottage Industrial Works keep in line with local conditions and local potentialities, but, wherever possible, new lines were improvised and improved and innovations in quality and variety were adopted. The Chatra Cottage products came to be effective substitutes for many imported lines such as Jackonet, Gauge and Bandages for surgical dressing etc.

The utility and range of Chatra Cottage Industrial Works were enrolled on the list of suppliers to the Munitions Board in the last war. Since then, it has been on the approved list of suppliers of the Indian Stores Department and other Government bodies, central and provincial.

AUTHORISED CAPITAL:

5,000 five per cent (tax-free) cumulative preference shares of Rs. 100 each	-	-	Rs. 5,00,000
5,000 Ordinary shares of Rs. 100 each	-	-	„ 5,00,000
			10,00,000

The Chatra Cottage Industrial Works were bought over by Lister Antiseptics and Dressings Company (1928) Ltd. four years ago. While Chatra Cottage Industrial Works has continued to progress in its new association it is now realised that in so far as Lister Antiseptics is engaged in activities not altogether similar to Chatra Cottage, the full possibilities of Chatra Cottage can be worked out better if its affairs were run by an independent company.

The present situation in Bengal, in the aftermath of the food crisis through which the province has passed, will involve enormous efforts to rehabilitate the rural parts and revitalise the rural population. In this important plan of rural restoration, cottage industries will prove a blessing and boon in enabling the villagers to augment their income at a time when such augmentation is of fundamental importance.

While the new company will thus be able to provide timely service to the population of Bengal, it will also be able to serve the Government by providing more sources of war supplies. In fact, many cottage industries such as blankets and pig-hat making nets, tents, rope, etc., have contributed largely to the war effort. Chatra Cottage Industrial Works hopes to organise industrial production on a basis that will serve both the community and the Government.

The experience of the past furnishes the assurance that the earning capacity of the Company will be substantial.

MANAGEMENT:

Mr. J. Chakravarti shall be the Managing Director of the Company as from the date of incorporation of the Company for three years at a remuneration of Rs. 500 per month. The Company may appoint Managing Agents on such terms and conditions it thinks fit and in the event of there being Managing Agents, they shall be entitled to nominate Directors on the Board not exceeding one-third of the total number. The Managing Director or Managing Agents notwithstanding anything herein contained shall refund annually to the Company a sum equivalent to 50 per cent. of the remuneration to which he or they, as the case may be, be entitled until a sum of Rs. 15,000 is repaid to the Company to be utilised by the Company for reducing the value of goodwill to Rs. 10,000.

MINIMUM SUBSCRIPTION:

The minimum subscription upon which the Directors may proceed to allotment is 500 shares—aggregating Rs. 50,000 which will meet the requirements of Section 101

PRELIMINARY EXPENSES:

The preliminary expenses have been estimated at an amount not exceeding Rs. 5,000.

DIRECTORS: THEIR REMUNERATION AND QUALIFICATION:

The number of directors shall not be less than three nor more than seven including ex-officio directors.

The qualification of a Director shall be the holding in his own right alone or jointly with any other person of 50 ordinary shares of Rs. 100 each and this qualification shall be acquired within two months after appointment.

Each Director shall be paid out of the funds of the Company by way of remuneration for his service the sum of Rs. 32 for each meeting of the Board of Directors attended by him. The Directors shall also be entitled to receive in each financial year of the Company such further sum or commission as may be equal to 2 per cent on the net profits of the Company in that year to be divided among the Directors equally. Such commission shall be calculated on the profits of the Company in such year after deducting therefrom the interest payable on any debentures issued by the Company and depreciation but before charging the commission payable to the Managing Agents.

The Board may from time to time sanction such remuneration to any Director or Directors, in addition to the remuneration provided in Clause above either by way of consolidated allowance or commission or royalty or a combination of any of them or of all, as they may think expedient in the interest of the company including travelling and other expenses of attending meeting of the Board or undertaking special work.

INTEREST OF DIRECTORS:

Mr. Gouri Shankar Mukherjee is a partner of Messrs. Mukherjee & Biswas, Solicitors of the Company and Mr. B. C. Roy is a partner of Messrs. N. L. Roy & Company, Stock and Share brokers.

Save as aforesaid no other Director has any interest in the Company except as a shareholder. No sums have been paid or will be paid to any Director in cash or shares or otherwise to induce him to become or qualify him as a Director.

CONTRACT:

An Agreement between the Company of the one part and Messrs. Lister Antiseptics & Dressings Co. (1928) Ltd. of the other part being a contract for the purchase of the goodwill of Chatra Cottage Industrial Works at a sum of Rs. 25,000 the consideration being payable in 250 fully paid up ordinary shares of Rs. 100 each will be entered into.

VOTING POWERS:

On a show of hands every member other than preference shareholders present in person shall have one vote and upon a poll every holder of ordinary shares present in person or by Proxy shall have one vote for every ordinary share of which he is the holder. If any member be lunatic idiot or non-compos mentis he may vote by the Committee Receiver, curator bonies or other legal curator and such last mentioned persons may give their votes either personally or by proxy.

RIGHTS OF PREFERENCE

SHAREHOLDERS:

The Preference Shares shall carry cumulative income-tax free dividend at 5 per cent per annum and shall be preferential as to the capital as well as to this dividend alone up to the date of winding up and no more.

RESTRICTIONS:

Save as herein expressly provided no person other than a member duly registered and who shall have paid everything for the time being due from him and payable to the Company in respect of his shares shall be entitled to be present or to vote any question either personally or by proxy or as proxy for another member or to be reckoned in a quorum at any General Meeting.

If two or more persons are jointly entitled to a share then in voting upon any question the vote of senior who tenders a vote whether in person or by proxy shall be accepted to the exclusion of the votes of the other registered holders of the share and for this purpose seniority shall be determined by the order in which the names stand in the Register of members the one prior being senior to those that follow.

The Directors may decline to register any transfer of shares, not being fully paid shares, to a person of whom they do not approve, and may also decline to register any transfer of share on which the Company has a lien. The Directors may also suspend the registration of transfer during the fourteen days immediately preceding the Ordinary General Meeting each year. The Directors may decline to recognise an instrument of transfer unless—

- a fee not exceeding two rupees is paid to the Company in respect thereof; and
- the instrument of transfer is accompanied by the certificate of the shares to which it relates, and such other evidence as the directors may reasonably require to show the right of the transfer or to make the transfer.

The directors are only restricted from exercising any power or doing any act which under the Articles of Association of the Company or by law expressly is directed or required to be exercised or done by the Company in General Meetings.

POWER OF DIRECTORS:

No restrictions are imposed by the Articles of Association on the Directors' powers of management and the control of the Company's affairs is vested in the Directors. The powers of the Directors are, however, subject to any regulations, not being inconsistent with the Articles of Association or the Indian Companies Act, which may be made by the Company in a General Meeting.

COMMISSION AND BROKERAGE:

The brokerage for the present issue has been fixed at a sum not exceeding 2½ per cent for the preference and ordinary shares and shall be payable on applications received from those who are not at present shareholders of the Lister Antiseptics.

No underwriting contract has been entered into.

No promotion money is payable. No business or property is being purchased out of the present issues. The Lister Antiseptics and Dressings Co. (1928), Ltd., is selling the name and goodwill for a consideration of Rs. 25,000 payable in 250 fully paid up shares which it bought in 1939-40 at a value of Rs. 18,000.

DOCUMENTS:

Copies of the Memorandum and Articles of Association of the Company and of the contract referred to above can be inspected at any time whilst the subscription list is open during the usual business hours at the Registered Office of the Company or at the Office of the Solicitors, Messrs. Mukherjee & Biswas, Calcutta.

A copy of the Company's Memorandum of Association is printed in the fold of this Prospectus and forms part thereof.

APPLICATION FOR SHARES:

Application for shares should be made on the form accompanying this Prospectus and sent to the Company's Registered Office at Calcutta, together with a remittance of the amount payable on application. Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number of shares applied for, the balance of the deposit will be applied towards the amount payable on allotment in respect of the shares allotted. If after such appropriation there be any excess the same will be refunded.

For and on behalf of
CHATRA COTTAGE INDUSTRIAL WORKS LIMITED

Board of the Company now launched. A long-established concern naturally interests promoters to a high degree, and the Board and friends have provided, in this case, a fair part of the share capital, both ordinary and preference. In view of what may be well called the public objects special commendation appears justified.

Nath Bank

In the balance-sheet of the Nath Bank Limited (appearing in this issue) the most noteworthy feature is the ratio of cash and bank balances first to Deposits and secondly to Advances. The increase under Advances is proportionate to the rise under Deposits which have risen very sharply indeed throughout 1943. The increase in resources accompanied the increase in capital; the effects of the latter are distinctly beneficial to the Reserve Fund as well as the growth of business. With total deposits of over Rs. 4 crores an era of expansion is certainly promised. The total for Advances is ahead of investments and cash balances in the case of the Nath Bank, and this also may be held to be a guarantee of profitable

expansion. The Nath Bank's investments outside Government securities are small at Rs. 5.46 lakhs and its advances are distributed in the strictly conventional pattern. Credit is certainly due to the management for having raised the Nath Bank's paid-up capital to support the increase in business and influence to which the balance-sheet bears witness. The figures convey an impression of very remarkable progress in 1943 as compared with the previous year. The dividend of

8 percent less tax takes only a part of the net profit of Rs. 220,366-6-0 (the year's gross profit was Rs. 11.94 lakhs) out of which Rs. 55,000 is allocated to Reserve Fund. The latter is going to increase in view of the share premiums received and receivable. It is claimed that 1943 was a record year for the Nath Bank and the figures as to Deposits and Advances certainly support that claim like the other, that it is progressive and equipped to grasp opportunities.

The
Feast of
Shiraz

SHEIKH SAADI OF SHIRAZ, the celebrated poet of Iran, once visited a rich merchant in another town, where he was lavishly entertained. After meals, he frequently sighed and said "Ah, Dawat-e-Shiraz" (Ah, the feast of Shiraz). The merchant, scenting dissatisfaction, redoubled his efforts to provide fare worthy of his distinguished guest. But always after a meal it was the same "Ah, Dawat-e-Shiraz," and after three days the poet left. Later the merchant visited Shiraz and he determined to call on the poet and find out what made the feast of Shiraz so much better than his own fare. He was surprised, and even angry, when he received a modest meal. "This is but simple fare and costs so little that you may stay, if you like, for a year," said the poet. This, he explained, was true hospitality—embarrassing neither to the host nor to the guest. We, too, can prove ourselves good hosts by giving our guests simple food. We can make every meal "The Feast of Shiraz." Food is in short supply and it is the poor who suffer most. Now, more than ever, is the time to follow the advice of the wise poet of Iran.

ESTD 1871 THE BOMBAY MUTUAL LIFE ASSURANCE SOCIETY LTD. ASSETS EXCEED 300,00,000. THE OLDEST LIFE OFFICE IN INDIA

NATH BANK LIMITED

ESTABLISHED 1926

Head Office:—135, CANNING STREET, CALCUTTA

SEVENTEENTH ANNUAL REPORT OF THE DIRECTORS

TO

THE SHARE-HOLDERS,

LADIES AND GENTLEMEN,

Your Directors have much pleasure in placing before you the duly audited Balance-sheet and Profit and Loss Account for the year ended 31st December, 1943.

In spite of the uncertainties of the war-condition, the Balance-sheet under report reflects an all-round progress during the year. Deposits have almost been doubled in comparison with the preceding year and paid-up capital marks a sharp increase from Rs. 12,20,365-10-6 in the previous year to Rs. 20,20,732-8-9 in the year under review. And at the time of writing the paid-up capital of the Bank stands well over Rs. 30,00,000. While comparing with the last year's Reserve Fund, it will be observed that the said Fund has risen to Rs. 2,96,950 as shown in the Balance-sheet by appropriation from the profit of 1942 and by inclusion of premium-receipts from sale of shares. To this as the further premium-income of Rs. 2,03,050 received from sale of shares in the current year is added, the Reserve Fund reaches the figure of Rs. 5,00,000 at the time of writing. The total net profit for the year under review after writing off bad debts amounts to Rs. 2,22,931-6-3 including the previous year's surplus profit of Rs. 2,565-0-2. Out of this, the Directors propose to transfer to Reserve a sum of Rs. 55,000, which being added

to Rs. 5,00,000 will raise the Reserve Fund to Rs. 5,55,000. Next the Directors propose to set apart, out of the profits, a sum of Rs. 22,036 for charity and bonus and recommend a dividend of 8 per cent per annum subject to Income-tax leaving the balance to be carried forward. The review of the Balance-sheet will prove beyond doubt that the management adopted all through a cautious and progressive policy, which contributed to a remarkable increase in the business of the Bank. Sufficient allowance was made for the maintenance of the efficiency of the staff, whose services during the emergency were much appreciated. During the year seven new offices were opened, which are now full of promise.

Two of the Directors Mr. D. P. Das Gupta and Mr. S. K. Roy retire and being eligible offer themselves for re-election.

The Auditor Mr. S. C. Dutt retires but offers himself for re-election.

One of the Directors Mr. R. G. Nath being absent from the meeting could not sign the Balance-sheet.

AUDITOR'S REPORT

I beg to report that I have audited the Balance Sheet as on 31st December, 1943 and Profit and Loss Account for the year ending 31st December, 1943 of NATH BANK LTD., as over-leaf and in an attached sheet set forth respectively with books and accounts of the Head Office and returns of the Branches and have obtained all the information and explanations I have required.

In my opinion, the Balance Sheet and Profit and Loss Account as referred to in this report are drawn up in conformity with the law and such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of my information and explanations given to me and as shewn by the books and accounts as kept by the Bank as required under section 130 of the Indian Companies Act VII of 1913 (as amended in 1936).

What time I was airing my views on cotton mill profits Mr. Kasturbhai Lalbhai was discussing the general cloth position in India with a news agency correspondent. While Mr. Kasturbhai is, so to say, born and bred up in the atmosphere of the textile industry, he has greatly added to his hereditary knowledge by a careful and shrewd study of the cotton mill industry and cotton trade in the world setting and by carrying out successful experiments along new lines in his own mills. It will be trite but very true to say that what Mr. Kasturbhai does not know about the cotton industry and trade is not worth knowing. He is one of the few who deliberately shun the limelight and are totally free from the itch for publicity. It stands to reason that, when he makes a public statement, it has the stamp of authority; and he must have had an important purpose in thus releasing his views through a news agency. The most significant point that Mr. Kasturbhai has made out concerns the consumption and production of cloth in 1944. For his part, he is unable to reconcile himself to the great shortage that has appeared on the surface for Indian cloth. Why should there be this shortage?—he asks. According to his examination of the statistical position, the Indian mill production for 1944 will be in the vicinity of 4,800 million yards; the requirements of defence services and exports may absorb 800 million yards. In relation to the past average Indian consumption, supply of 4,000 million yards for a year cannot be said to be inadequate. In the light of these figures, how is the persisting shortage to be accounted for? Mr. Kasturbhai suggests that the gap between demand and supply is, perhaps, being widened by illicit exports; and he suggests that the Government should take immediate steps to eradicate such exports. While it is necessary to deal drastically with this problem of smuggling in exports, it does not seem probable that the quantity of cloth that is involved in this trade can amount to much. It is the enormous profits which continue to be made in black markets that encourage hoarding and impede the flow of supplies. The root cause of the apparent shortage is that, in spite of various efforts, the black markets do persist. Mr. Kasturbhai seeks to find out, the root cause of the black markets; and his answer is that supply is less than demand.

On his own examination of the cloth statistics, Mr. Kasturbhai is able to show that there is not much of a gap between supply and demand. May I suggest that the root cause of black markets is the prevalence of black human nature all over the globe? Black markets are not confined to India nor are they the speciality of Indians. I may recall here an interesting view put forward by a friend while

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It.)

I was recently in Bombay. As everyone knows, there has been, in the war years, an influx of foreign refugees into Bombay. Most of them came with some capital. The first thing they did was to invest a good part of their capital in some kind of goods or other. From their experience in Europe, they took the view that, in war conditions, so long as one kept his capital in the form of some commodities, any commodities, a steady appreciation in value was inevitable. From razor blades and cigarettes to bales of cloth, the foreign refugees in Bombay bought up as much as they could and, providing for their safe custody, went on a holiday to Poona or Mahabaleshwar. After two months, they returned to Bombay and sold their hoarded stuff. The sale proceeds were reinvested in some other kinds of commodities. Thus was the process of hoarding given a start under impressive and knowledgeable auspices. Our friends in the Western Presidency are not slow to learn a lesson where a lesson is proved to be profitable. This evil of hoarding has spread like the hyacinth and black markets have come into being in the case of most commodities.

Some of the cotton mills themselves have not been totally innocent of connection with black markets. Quite a number of cloth dealers are engaged in black market practices. And outsiders like our foreign guests in Bombay have lent a helping hand to the rise and growth of black markets. If the cotton mill industry had been genuinely interested in protecting and safeguarding the interests of the consumers, it would not have been beyond the industry's power of control and organisation to devise means for reducing mid-

dlemen's profits to a minimum and for eliminating profiteering altogether. On a former occasion, I pointed out that the cotton mills did not, on their own initiative or of their own free will and accord, do anything to arrest the fantastic rise in the prices of cloth. Such cuts in the price of cloth as have taken place are due to the pressure brought to bear on the industry by the Textile Controller. The following passage in Mr. Kasturbhai's statement is significant:

"Within less than a year, they (Industry Committee of the Textile Control Board) have proved by their action that they have been able to reduce prices so that the public may obtain their supplies at reasonable prices. The first reduction was to the tune of thirtyfive to forty percent on the prices prevailing in last May and June. The second one was by the end of February when the Industry Committee decided to reduce by one and a half annas in the rupee (approximately ten percent) in case of piecegoods and two annas in the rupee in the case of yarn, (approximately twelve and a half percent). Again on 24th of May, they made a further reduction of one and a half annas in the rupee on the price prevailing in May, in the case of piecegoods, and two annas in the rupee in the case of yarn. The cumulative effect of these decisions has been to reduce the prices by fiftyfive to sixty percent, both in the case of cloth and yarn."

In this matter of price reduction, the following points need to be carefully noted:

(1) It is only within the last ten months that prices of cloth have been reduced.

TEXTILE CONTROL BOARD TO ALL CLOTH DEALERS

In a recent Notification issued by the Textile Commissioner it is laid down that all cloth packed in and Texmarked April 1944 or earlier, all unpriced hand-printed cloth and any stocks that may remain without a price mark or Texmark or both are to be finally disposed of before the 31st December, 1944.

There are many ready buyers and all dealers holding stocks of such cloth are urged, in their own interests, to sell at once to allow for possible delays in transport. If sales are delayed retailers will not be disposed to buy, as there will be insufficient time for them to sell the cloth. The cloth will then be left in the hands of the holders and they will then be liable to **cancellation of their dealer's licence, prosecution and confiscation of the goods.**

No exemptions to this notification will be given by the Textile Commissioner save for the most compelling reasons. So sell your cloth without delay.

T. V. BADDELEY,
Acting Chairman.

SOUTH INDIA

(2) This is also the period during which the cloth and yarn control has been in operation.

(3) That is to say, till the Government took forceful steps, the cotton mills did not care a brass farthing about the sufferings of the consumers.

(4) Since the Control came into effect, prices of cloth have been brought down in three successive stages.

(5) It is claimed that the total reduction thus effected amounts to 55 to 60 percent on the prices ruling in May and June 1943.

This bald statement of facts provides a definitely unflattering commentary on the attitude of the Indian cotton industry towards the general population, which, for decades, has stood by the industry as the symbol and embodiment of the Swadeshi movement, which has stoutly supported the various claims of the industry for protection at various stages, and had willingly paid dearer prices for Indian cloth. Those in charge of Indian cotton mills cannot be acquitted of the charge of callous indifference to customers who stood by them in their adversity. If, through the administration of the cloth and yarn control, reduction of 55 to 60 percent in prices could have been brought about within the last few months, what justification can the cotton mills have for having failed to take action right at the beginning of the soaring of prices? Their conduct is all the more inexcusable as the profits which were thus made at the cost of the consumers were available, only to a small extent, to the shareholders. In broad terms, it may be said that, while the consumers were fleeced and the shareholders got a modest return, it was the Government and the managing agents that reaped the richest harvest. I have analysed the revenue-expenditure figures of twentyfive cotton mills and I am astounded at the conclusions arrived at in this study. These twentyfive mills have made an aggregate profit of Rs. 20.78 crores. Out of this, the Government take away, by way of taxes, as much as Rs. 15.08 crores. The managing agents' allowances and commission absorb Rs. 2.62 crores. The total distribution of dividend among ordinary shareholders is only Rs. 2.03 crores. Taking preference shares also into account, the

dividend distribution comes to Rs. 2.17 crores. In other words, the managing agents have made 25 percent more than all the shareholders put together. The Government have made seven times as much as the whole body of shareholders.

Individual examination of companies leads to even more startling conclusions. Let me take the instance of New City of Bombay. The profit is Rs. 58.15 lakhs. The provision for taxation is Rs. 44.20 lakhs. The managing agents walk off with Rs. 6.69 lakhs. The poor shareholders get a look in with Rs. 3 lakhs as their share of the disbursements. Edward Sassoon is a more poignant instance from this point of view. The profit is Rs. 69.47 lakhs. The tax allocation is Rs. 52½ lakhs. While the shareholders get Rs. 2.55 lakhs, the managing agents receive the magnificent sum of Rs. 12.28 lakhs. In the case of Meyer Sassoon, the shareholders fare somewhat better as they get Rs. 8 lakhs against Rs. 12.85 lakhs drawn by the managing agents. Colaba Land and Mill enriches the Government by Rs. 36½ lakhs, the managing agents by Rs. 5.81 lakhs and the shareholders by Rs. 2.80 lakhs. The Century Mill makes a present of Rs. 1.57 lakhs to the Government and Rs. 20.36 lakhs to the managing agents. The shareholders are asked to be content with Rs. 11.49 lakhs. Delhi Cloth and General is impressively generous to the Government and the managing agents, the former getting Rs. 170 lakhs and the latter Rs. 31.15 lakhs. The shareholders must be grateful for the Rs. 20.84 lakhs they are permitted to receive.

It is obvious, from these figures, that our super-nationalist cotton mill magnates have functioned as voluntary and honorary tax-collectors of this unrepresentative and unresponsive Government. It is equally obvious that the disposable profit of cotton mills will in no way be affected by the recent reduction in prices. The principal loser by this reduction will be the Government and Sir Jeremy Raisman has already expressed his willingness to accept this loss sportingly. The behaviour and attitude of the cotton mills during this war as in the last war and in the post-war years, raises questions which cannot but be disquieting to those who are

Its her whole EXISTENCE

Who is so wise as can fathom a woman's heart? Mysterious are its ways, curious its expression. Yet, whoever has had the great fortune of having been loved by a woman knows how perfectly her love engulfs a man's personality in an unimagined bliss—how it inspires him to heights he would never otherwise have achieved. Perfect as a woman's love in its action over the body and the mind is the ideal tonic—LADCOVINE.

LADCOVINE

COSSIPORE

CALCUTTA

genuinely interested in the prospects of Indian industries. The cotton mills have wantonly thrown away the best opportunity they had to cultivate and consolidate the goodwill of their customers. On the other hand, they have proved themselves unworthy of the spontaneous support which they had hitherto received from the population. There is another important question which concerns the relationship of the shareholders of cotton mills to the managing agents. It must be galling to the shareholders that, while their stake in the financing of the industry is between 70 percent and 80 percent, the managing agents are able to draw sums far in excess of the aggregate total of their dividends. I need hardly add that the known and published figures of managing agency emoluments are quite apart from incomes and perquisites which, in the case of not a few mills, are quite substantial, through dubious devices. One's sense of fairness and proportion is upset by the fact of managing agents drawing more than the shareholders. With regard to the interest paid on loans, this sense of fairness and decency is responsible for the principle of 'damdupat' which insists that, under no circumstances, the total interest payable can exceed the principal. There must be a similar 'damdupat' law for managing agents. It must be strictly provided that the total of emoluments for managing agents, legitimate or illegitimate, by way of allowances or commissions or both, should not be more than 25 percent of the total amount distributed among shareholders.

The mid-year distribution of honours and titles brings well-known names quickly into the news in a way that helps the public to remember that Lord Passfield (without his eminent, deceased collaborator) has a claim to general recognition like the most decorated soldier or sailor. In the Indian list which appeared a day earlier the most noteworthy names are those of persons associated with Control in one way or another. Mr. Hydari like Mr. Vellodi has conducted the war against the hoarder and profiteer for almost a year and their success in some measure accounts for the titles now bestowed. Services of another kind, but not far removed, are rewarded by the knighthoods bestowed on Mr. Burder and Mr. Fairweather. The latter as the Commissioner of Police in Calcutta in wartime had as many problems as the Bengal Chamber's past President in regard to food supply for the City's workers. Their efforts have secured now due recognition. For skilled administration and careful exposition Mr. C. E. Jones had gained a name for himself years ago besides being called upon to act as Finance Member in Sir A. J. Raisman's absence. General Hutton's civilian post has already grown important and some of all of his committees have got down to bedrock. Mr. L. P. Misra's translation to Delhi-Simla has been followed by a formal official recognition of his work on the B. & A. Railway. The merchants of Madras should feel pleased that Mr. J. Nuttall and Balasundaram Naidu have come in for acceptable honours. In the list only two names connected with the press occur. Brig. Jehu and Mr. Kirchner have been in direct relations with Government and Press at all times, and contributed to the understanding and resolving of one another's difficulties.

I must own that the Birthday Honours List would have been of far more interest

to me if it had included the name of my friend, Hargobind Misra. He has just returned from the United States, where he, like our friend R. S. Sarma (to give his full style and description, Sir Srinivasa Sarma), lost over two stones in weight, due to a mission which should have taken it out of them. Misra has, in addition, done a good job of work in Britain, where he was particularly at home as one who typified Indo-British co-operation in practical business. From this point of view the following extract from a letter of Sir George Nelson (President, Federation of British Industries) is of significance to India's post-war planning: "It affords me much pleasure to repeat what I said to you at the meeting and to assure you again of our goodwill and our wish to co-operate with Indian interests in furthering your post-war developments. It is our earnest desire to place our technical resources at the services of India in connection with any schemes which they may promote, the carrying out of which is within the scope of our range of products and capacity."

"EAVESDROPPER".

(Continued from page 1135)

world economic planning is now being designed on such lines that the boom after the war will be broader-based and ampler-proportioned than the war boom itself.

(From Our Correspondent)

New Delhi, June 5.

With the onset of the monsoon in Assam, there is a lot of speculation here about the course of the military operations during the next four or five months. The earlier anxiety about the possible overrunning of the Manipur plain east of the Brahmaputra has of course disappeared. No startling changes are expected during the monsoon as it would be rather difficult for the Japanese to get reinforcements over lines of communication rendered impassable by incessant rains. Whatever chances there were for the Japanese to take Imphal or reestablish themselves in Kohima have practically disappeared. But it is not certain whether it would be easy to dislodge them from the strong points they have established along the Manipur road and at various other points round Imphal, particularly in the Bishenpur area. The Allies will have to put in a tough fight to get the land communications with Imphal reopened. As regards North Burma, the allied plans appear to be to hold on to the strategic places already captured and to try to extend the Ledo road up to Myitkyina so that supply for further operations is rendered easy. The main problem for both sides during the coming months will be supplies to maintain their troops over widely separated areas, some of them long isolated. Meanwhile the fall of Rome has again riveted attention to the course of war in Europe and the opening of the second front is anxiously awaited for on the outcome of that will depend the future of the war as much in Assam as in Europe.

With the end of the first week of Delhi's rationed existence, public grievances are taking a more definite shape. A citizens' conference is being called this week by several workers', traders' and consumers' organisations to consider the various issues connected with rationing. The main public demands are: that wheat and rice prices should be lowered to those of the pre-rationing period, the inadequate sugar ration should be increased; the manual workers must get a supplementary, apart from a basic, ration; and fuel and kerosene must be included in the rationing scheme. According to the present rates prevailing in the Punjab wheat markets, it is calculated that wheat should have been selling here about Rs. 10 a maund, whereas the retail price fixed by the local government is Rs. 11-11. The only explanation so far forthcoming is that the Delhi administration perhaps wants to net a huge profit on wheat transactions. As Delhi's quota of wheat for the year is one lakh of tons (worth Rs. 2½ crores), at the present rates the local government would be roughly making a profit of Rs. 40 lakhs. As these profits have to come from the poorest consumers most, it is difficult to find any justification for it. Another recent development causing much public concern is the formation of a wheat syndicate consisting of only three firms, which is to have the complete monopoly of supplying all the ration shops. No adequate explanation has so far been given as to why the existing trade channels have not been utilised. The Delhi administration has so far not replied to the profiteering charge, but the recent disclosure by Mr. N. M. Buch, Director of Civil Supplies, Punjab,

that they had been supplying wheat to Delhi from Rs. 8-6 to Rs. 8-8 a maund finally confirms the public suspicion that under rationing the consumer gets a thoroughly raw deal from the Local Government.

A drastic ordinance fixing standard rents, providing for refund of excessive rent with retrospective effect and safeguarding the tenant against eviction on unjustifiable grounds has been promulgated for Delhi. The ordinance is generally welcomed and affords much needed relief to the harassed tenants.

It is learnt here that as the post-war plans of the Central Government regarding agriculture take more concrete shape, the Food and Agriculture departments may be combined to form a new portfolio. According to latest reports, the Government's agricultural development plans envisage a capital expenditure of about Rs. 1,000 crores with a target of an all-round 50 per cent increase in agricultural production. As recently there has been a lot of criticism in Britain that the Bombay planners did not pay sufficient attention to agriculture, it is pertinent to recall here that their target for agricultural development was fixed at a much higher figure—an increase of 135 per cent in production—for almost the same expenditure (Rs. 845 crores non-recurring and Rs. 400 crores recurring). Any large-scale scheme of agricultural reconstruction in this country will involve extensive consolidation of holdings on a big scale. The existing land tenure systems have to be revised and some drastic legislation may have to be undertaken before any big and rational agricultural plan can be enforced. Before the government's plans take final shape, a lot of survey work has to be done by experts on production, irrigation, statistics, fisheries, livestock, agricultural debt and land tenure. The Agricultural Department has to be ex-

panded a good deal before all this work can be undertaken.

The Government's post-war plans include an ambitious scheme to double the area at present under forests. The new forests will be mostly needed for the need of agriculturists. It is intended to bring an additional 100,000 square miles under forests. As this huge afforestation plan would require a large body of trained personnel, it is proposed to double the number of rangers and forest officers under training at present. It will take about 25 years, it is calculated, to double the number of the present staff. The afforestation target aimed at should also be reached by the end of that period.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, 6th June 1944.

THE Government of India's scheme of compensation to the sufferers from the April explosions came a little too late for inclusion in the last despatch. Reactions to the scheme have been varied. The Anglo-Indian press regales its readers with accounts of favourable reactions. Doubtless, the Fire, Marine, Accident and Salvage Corps associations, which met a week ago, were loud in their praises. The members were duly instructed on the procedure to be followed in working out of the scheme. It is, however, an open secret that Government have driven a hard bargain with the fire companies, particularly the Indian ones. Nor is the general public so happy about the discrimination made between insured and uninsured claims or about the decision not to pay 100 per cent compensation to the sufferers. Nevertheless, it would be ungracious to deny Government the credit for realising the responsibility of the State in this great tragedy or to minimise the effects of the scheme in restoring confidence and credit. The public's relief is the greater because of the consternation which prevailed earlier, when insurance companies took their stand upon the letter of their policies. The belief is widely held that Lord Wavell's deep sympathy and Sir John Colville's sincerity are responsible for the scheme being generous to the extent it is. And Mr. Pranlal Devkaran Nanjee, the President of the Indian Merchants' Chamber, has duly acknowledged this.

Indian commercial opinion, however, has not been slow to point out the inadequacies of the scheme. The Committee of the Indian Merchants' Chamber has in a telegram apprised the Viceroy of the modifications needed to make the scheme subserve its avowed purpose of giving relief where it was due. These are: full compensation in respect of all classes of property, insured or not, movable or immovable, stock-in-trade or merchandise should be paid; the choice of the 1939 value for paying the 75% compensation is illogical; the limit for compensation in respect of household and personal effects should be raised to Rs. 10,000/- and full compensation on the first Rs. 5,000/-; jewellery should be included in personal effects; compensation over the limit of Rs. 15,000/- in respect of uninsured and stock-in-trade and merchandise is necessary; losses should be investigated without undue rigour and claims paid with the least delay. Some, at least, of these are deserving of serious consideration, though others may sound too much like special pleading for a weak case. Further modifications, however, seem unlikely. Two Committees, one for fire claims and the other for Marine, have already been appointed. The Fire Committee of 18 members will comprise a small Indian personnel, and parties should forward to it their claims and the surveyors' reports. The claims will then be paid out by the Accountant General. The Insurance companies will pay their "Voluntary Contribution" of 12½ per cent within three months after the claims are paid by Government. The Marine Committee will deal likewise with the claims preferred to it—only, the final disbursements will be made by it, Government paying the 40 per cent share, as agreed already. The Government are anxious to pay the claims as early as possible, but in view of the procedure and

the nature of the work, delay would be inevitable. Thus, for certain reasons, the form for fire claims is being printed at Delhi and is yet to be made available.

Barring the air we breathe, everything is under control. Lack of housing accommodation in this city is notorious, and even flats, if at all, are only available in the "black market". Almost every description of house construction material is under control and Sir Santidas Askuran has beseeched the Viceroy to order the release of materials for constructing godowns and reviving trade and for providing houses for the dishoused. The monsoon will, soon be upon us, and even if the Viceroy should remove the present restriction in the flow of building materials, little can be done. It looks as if the homeless people have very wet days ahead of them. To the horrors inflicted by man, Nature is going to add a bit more.

It was a just a year back that textile control was instituted and no one who has any regard for facts can deny that a most intractable problem has been well handled. Public memory is proverbially short and it may help to recall a part of the setting as it obtained a year ago. Standard cloth had been elusive, retailers were sucking the community dry and mills were having a roaring time. Mr. Hydari came on the scene. He gave no pep talk. On the other hand, he made it clear to the millowners that Government meant business in regard to standard cloth and that they would not stick at anything to put cloth into the market at progressively lower prices. Here at last was a man who called the bluff. And like the shrewd men they are, the leaders of the textile industry quietly accepted control. The Board came, then the Control Order and a new department, well-equipped with necessary technical and administrative personnel. Slowly, it worked its way through, and its power and prestige is nowhere more abund-

antly in evidence than in the manner all people, high and low, have been latterly dealt with. Cloth prices have been reduced by 40 per cent through four reductions; and further reductions are on the cards. What is perhaps more important, the cloth in hiding has come to the surface, and in the cloth stores, the assistants complain of aching arms in meeting the demands from an insatiable public. At last, the distribution side as well as production is handled in the proper manner.

Since the taking over of many mills and the vigorous drive launched against the "black market", millions of yards of cloth have been made available. Their distribution has had to be looked into and a scheme has been evolved for selling the cloth at concession rates in Bombay City and suburbs. The ten mills, whose production has been taken over, will produce about 350 million yards per annum, while about 5.6 million yards have been frozen with wholesale dealers. The Bombay Government have laid down that they will distribute this cloth to approved dealers who have to keep deposits with Government, which will be forfeited if any malpractice is noticed. The dealers have to agree to the condition that frozen cloth will be sold at not more than 14 per cent above ex-mill price and that the 10 Mills' output will be sold at only 10 per cent above the ex-mill price. The arrangement has been well received and consumers are to benefit to the extent of 10% and 6% respectively, while the Mills get their due profits. Consumers have a prospective benefit of about Rs. 2.3 crores for the year. The 300 shops opened under the scheme start selling cloth today. About 90 million yards are immediately available and include fine quality goods which hitherto were not available except in the black market. The controlled mills' output will ensure a steady supply. In respect of goods made after June 1st, the retail price at the authorised shops will be 20% less than the ruling prices now. The scheme will start working with a swing and should prove to be a success.

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Harlons play the leading role in these supplies. Whatever the kind of quality in ropes may be Harlons have the variety to choose from.

Harlons Ltd.

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, June 2, 1944

Ambitious plans for the development of Sind, both on the industrial and agricultural planes are outlined in the memorandum and the articles of association of the newly constituted Sind Resources Corporation, with a strong and influential directorate, of persons belonging to all schools of political thought. Sind Industrial Syndicate Limited is to have a capital of one crore of rupees and it is proposed to manufacture everything from pins to motor cars. It remains to be seen how these dreams would be translated into reality. Sind has nothing by way of machinery and several raw materials so necessary for industrial enterprises are conspicuous by their absence here. Excepting for a cement factory, promoted before the war by the Dalmias, a factory for the manufacture of electric bulbs and a textile factory which had to pass through several ups and downs, we have nothing here to boast of and ambitious Sindhis with capital migrate to Bombay or Ahmedabad.

The joint board of Karachi Piecegoods and Yarn Merchants Association, at a meeting held during the week under review, resolved that increase in the price of wheat made by Sind was unnecessary and unwarranted on any ground and add in these days of the inflated cost of living to the groans and the burdens of the already care-worn and poor middle class families. The Association registered its emphatic protest against the increase and urged the government to rescind it.

Regarding import quotas, the Association stated that Sind stood on a different footing from other provinces. Before the war, Karachi imported large quantities of foreign cloth from Japan and England. In fixing quotas for Sind such foreign quotas should be considered and taken with imports of mill-made cloth. In other words,

quotas for Sind should be fixed on the basis of the sum total of both foreign and Indian imports. Moreover, dealers already dealing in foreign goods should be given quotas on the figure of foreign imports.

The newly elected Mayor of Karachi, Mr. Yusuf Haroon is planning an Improvement Trust for Karachi, on the Bombay model, with a view to clear slums and build decent sanitary, residential dwellings for labourers. If government approves of the schemes, it is proposed at the outset to build labour quarters at Karachi. The Premier of Sind who was Minister for local self-government at the time when the Bombay improvement trust plans were being put into shape is credited with having blessed the Mayor's proposals.

A bill to provide separate legislation to prevent food adulteration will be introduced in the forthcoming session of the Sind Assembly by Dr. Hemandas R. Wadhvani, Minister for Public Health. The bill aims at overhauling the whole of the Bombay Food Adulteration Act which is in force in the province at present. Stringent measures against offenders are being planned.

Sind government have collected data and statistics from various sources with regard to the establishment of a textile mill in the province. The mill will probably be located either at Hyderabad or Mirpurkhas.

Measures to push the sale of national savings certificates and to make Karachi saving minded are going apace. So far, more than 25 authorised agents have been appointed.

The Government of Sind proposes to import wheat and gram seeds certified by the Punjab agricultural department from the Punjab if there is sufficient demand for the same among Sind zamindars.

An appeal to the Sind government to come to the assistance of those Sindhis who had suffered financially in foreign lands owing to the ramifications of the present war was voiced by the President of the Sindwork Merchants' Association at Hyderabad, Rai Sahib Lalchand Vatanmal. According to him, the Sindhi losses are estimated to be in the neighbourhood of 20 crores. Sind used to receive every month from Sindhis engaged in Far East alone about 4 lakhs of

rupees. With foreign trade cut off for the duration, Sindhis propose to have some industries started but they require government help at the outset.

Within a month Government has been in the market for purchasing cotton in order to keep up its price at the floor level. The Government have so far purchased in Karachi 20,000 bales of cotton worth Rs. 60 lakhs. The "Ad hoc" Committee of eight members of the Karachi Cotton Association which has been appointed by the Government to do the purchasing meets almost daily for three hours or more, examining the samples tendered for sale to the Government-agents for purchase. The Government have appointed twelve local firms as their purchasing agents in Karachi and five more agents for purchase in up-country.

Rao Bahadur Shivratan Mohatta opened the Karachi branch of the Punjab and Kashmir Bank. This will make the number of banks at Karachi 28, said R. B. Shivratan. He said that there was scope for more banks, but he also told them to keep in mind the unhealthy competition in the banking profession which was likely to cause more harm than in any other profession. He agreed that banking had a bright future in Karachi.

CALCUTTA COMMERCIAL BANK LTD

15, CLIVE STREET, CALCUTTA

Resume of Commodity Markets

THERE are no important developments in the commodity markets during the past week. In the raw jute market a larger volume of business has been passing while conditions in the jute manufactures market are very much the same. The raw cotton market was rather depressed as Government buying in the ready market was not quite helpful and there were no reports regarding futures trading in the new crop and the change in the basis of contract. The piecegoods market was rather confused though business is still difficult on account of the scarcity of ready goods. The bullion market turned quiet on reports that the Allies had been successful in their landings on the Western coast of France and that the initial operations had been successful. The prospect of an early peace is naturally a depressing factor for the bullion market.

In the raw jute market mills have been rather anxious buyers and quite a large amount of business has been reported in the new crop. Buying would have been on an even greater scale if transport facilities were more freely available. But with the reserved attitude adopted by sellers and the fears regarding the requisitioning of mills and coal supplies there is a tendency to await actual arrivals. That the demand for jute will be on a large scale need not be doubted as with the need for a large measure of relief to the Occupied countries in Europe, with the success of the operations that are now going on, there will be great demand for jute goods, especially sacking. As has been pointed out in these columns on former occasions, mills should be prepared for this eventuality. It is unfortunate that there are no surplus stocks of jute at the present moment. Developments in the next few months are of great interest to the jute industry.

In the jute manufactures market offtake is limited by mill production. There is a large unsatisfied demand for standard varieties. While the immediate operations connected with the Second Front might have a restraining influence on shipping space it can be expected that more shipping space will be available later on and that the offtake will continue to increase. It is doubtful, however, whether mills can increase their output as coal supplies are inadequate and there is the fear of further requisitioning of mills.

Local stock figures for the month of May show that output for the whole of that month was moved and actually there is a decline of 1,016 tons over the figures at the end of April. The figures for April show a decline of 961 tons over the figures for March. In the absence of production figures it cannot definitely be said that the May offtake was higher than the April figure but as it was reported that coal supplies had improved in the latter half of April, production could not have been appreciably lower.

An interesting situation exists in the bullion market at the present moment. Investment demand is poor and the Reserve Bank is not a seller below Rs. 75. While the unwillingness of the Reserve Bank has been a helpful factor in favour of bulls, the presence of large stocks and the opening of the second front has encouraged buyers to effect sales even in the absence of fresh supplies to the market. There has thus been a decline of one point in the price for gold ready to Rs. 73-5. It will be remembered that the rise in prices to above Rs. 75 could not be sustained and the fears of selling by the Reserve Bank brought down quotations to Rs. 74-6.

The silver market has been rather weak but scarcity of supplies is still a factor to be reckoned with.

The piecegoods market is yet to derive the benefits from the recent drastic action taken by the Textile Control authorities. It is expected that larger supplies will be forthcoming but at the present moment business is rather restricted on account of the scarcity of goods. It is significant, however, that dealers have been more anxious to clear off their goods at ceiling prices as, with the possibility of a further reduction in maximum rates in the coming months, it is feared that it would not be possible to dispose of higher priced stocks as the months go by.

A survey of the sugar position in all producing areas in India for the week ended May 15, 1944 estimates total production at 1,198,165 tons or an increase of 15,783 tons over the increase for the previous week. Despatches during the week amount to 29,891 tons bringing the progressive total to 480,149 tons. Despatches in the previous week were 27,791 tons and the progressive total was

430,458 tons. The physical stock was lower by 13,908 tons 738,316 tons. The percentage of progressive despatches to production works out to 38.4 percent against 36.4 percent. Balance of stock for 1941-42 and 1942-43 season sugar as on May 15, 1944 was 2,965 tons or 199 tons less.

The Textile Commissioner has decided to extend by one further month, the exemption from price-stamping of cloth, that was given to manufacturers possessing 25 or more powerlooms. Products of these powerloom units will, however, to be stamped with control prices from July 1, 1944.

In this connection, it will be recalled that the Textile Commissioner announced his decision on February 18, that manufacturers who possess 25 powerlooms or more on January 1, 1944 would be required to stamp their products with control prices fixed by him.

The recent order of the Textile Commissioner that all mills must supply their 1940/42 orders has caused a number of mills to ask what their position is going to be under the Cotton Cloth Movements Control Order which prohibits despatch of cloth except in accordance with a zonal scheme. For the informa-

tion of all concerned the position is that both orders must be complied with and no special permits can be granted under the Cotton Cloth Movements Control Order to enable such goods to move contrary to the provisions of the Order and General Permit.

Mr. B. C. Patel has been appointed by the Textile Commissioner, to be in charge of the special work of disposal of goods manufactured by those mills, which continue to work under the old management but whose production are to be disposed of according to the textile commissioner's directions.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 8th June.

It was quite apparent when he was interviewed by certain representatives of the trade last week that the Regional Controller of Priorities was not prepared to be accommodating with regard to his scheme of endorsed Forwarding Notes for all consignments to Mills and Presshouses. His object is of course to ensure that waggons are not held up, or unloading delayed, because there is any question of the jute concerned not being against a contract, and he appears to apprehend that, with probable further restriction of bookings to Bazar destinations, this practice of fictitious bookings to Mills might tend to increase. He admitted that the remedy was largely in the hands of Mills and was prepared to forego the scheme if Mills would undertake to accept every consignment that was tendered to them. It is unlikely of course that Mills would agree to this, though the risk they might run by doing so is, in our opinion negligible. By charging consignors through the nose for handling and other charges, Mills can make the practice of fictitious consignment so unprofitable as to lose any popularity it may have had in the past. Some mills have already cured the evil so far as they are concerned by this action, and the incidence of the practice is in fact very limited in its area. But the Controller seems determined to pass the liability on to the Mills by insisting on endorsed Forwarding Notes for all rail consignments, in spite of the loop-holes which were pointed out to him in respect of the necessity which will arise to have far more Forwarding Notes for optional stations than will be required for the covering of the actual consignment. This liability again the Controller passed to the Mills, and it remains to be seen how it will be accepted. Once a Mill endorses a Forwarding Note, he is bound to accept a consignment sent under it. On the other hand it is manifestly impossible for a consignor to be able to tell at which of a number of optional stations he will be supplied with waggons, or what the carrying capacity of these waggons will be. Naturally, to be prepared for emergencies, he will wish to be provided with the necessary number of Forwarding Notes to cover his contract from each and every one of his optional shipping stations. The honest shipper will naturally cancel or return any excess Forwarding Notes when his contract is completed. The less particular shipper may pass on any excess Forwarding Notes to a distressed brother for a consideration. Mills consequently, with the liability of having to accept whatever is shipped under an endorsed Forwarding Note, will be diffident about issuing any excess number unless they are well assured that they will not be misused. And the restriction of the number of Forwarding Notes where a number of optional stations is concerned is liable to complicate matters and will do nothing to speed up shipments. When it was suggested to the Controller that the Trade Associations concerned could supply authentic details of probably 95 per cent of the outstanding quantities due to mills, the proposal was turned down on the ground of the impossibility of disseminating such information over 750 stations. We have not counted the number of stations on the B. & A. Railway, but they do not by any means all export jute. For when a similar list to that suggested was actually prepared some two years ago, the number of stations concerned was no more than 120.

The whole scheme seems unnecessarily elaborate and top-heavy for the purpose of coping with a comparatively minor evil, and it will involve the issue and endorsement of Forwarding Notes running into thousands. It might be likened to erecting a structure the size of the Victoria Memorial to house a couple of chickens—and then leaving half a dozen holes in the foundation to permit the chickens to escape. For the scheme is far too fool-proof or hole-proof and it has to be remembered that the guileless Marwari has a positive genius for circumventing regulations.

The figures for stocks of manufactured goods held by Mills as at the end of May make rather interesting reading. Had it not been for a heavy reduction in Government holdings of goods, stocks would have shown a substantial increase over the April figures. As it is, a decrease is shown of just over 1000 tons. Commercial Hessians were lower by 593 tons or 52 lakhs yards but commercial Sacking goods jumped up by no less than 4875 tons or 115 lakhs yards. Sacking goods held on Government account were also higher by 1580 tons or 35 lakhs yards but Government Hessians were reduced by no less than 6858 tons or 241 lakhs yards. Stocks of Government Hessians still stand at a higher figure than the commercial holdings despite this substantial reduction, at 20 crores of yards compared with 16½. The stock of Sacking goods is still preponderantly on commercial account at over 27½ crores yards against 3 crores on Government account. Altogether, 3663 lakhs yards of Hessians and 3085 lakhs yards of Sacking goods were held in stock in Mill godowns at the end of May, a total tonnage of 220,667. The variation in the position over the month of May merely indicates that there has been more freight space available for Government goods than for commercial requirements. Evidences of demand suggest that stocks would be rapidly reduced if the necessary overseas freight could be provided. And with the more optimistic appearance of the War situation, this development might not be so long delayed.

Probably the most valuable section of Professor Todd's Further Report on Futures Markets and on the organisation of the Jute Markets in Bengal, is that devoted to statistics. Certainly the Professor has delved deep and unearthed figures long lost to view, and compiled them into tables more comprehensive, and going back a longer way, than those usually readily available. For this he deserves the thanks of the trade, but it is doubtful if he will be awarded much else. When the Professor suggests a Spot market at Cossipore where Mills should make the bulk of their purchases, he is not only trying to impose on the largest section of the industry a completely revolutionary method of conducting their business, but also one, we venture to suggest, utterly incompatible with climatic conditions such as subsist here the bulk of the year. The idea of asking a mill purchaser to desert his comfortable—perhaps air conditioned—office at this time of year and spend a few hours following brokers around a series of non-air-conditioned godowns in Cossipore, is not one likely to be received with enthusiasm, either by Buyers or Brokers. The Broker has often in present conditions to have the hide of a rhinoceros if he is to preserve the semblance of amicable relations with his buyers, but we fear even his equanimity would scarcely stand the

strain that the transfer of all these activities to Cossipore would impose. This is only one aspect of the proposals which fails to take local conditions into due consideration. We shall return to the subject and to other aspects of it on another occasion.

The market for Export Jute has not been active. White jute is entirely neglected and Sellers for Daisee and Tossa descriptions are showing less anxiety to sell. Short Group Daisee was taken for shipment at Rs. 89 and Dundee Daisee, Long Group firmed up from Rs. 79 to Rs. 80 for shipment. Mills have not been operating to any extent either in this section, some Mill Cuttings having been reported, also Dundee Daisee buyers only getting on with difficulty at Rs. 82 being among the few transactions recorded.

The interest in Loose Jute diminished towards the week-end and little more has been recorded in New Crop. Most sellers now have something on their books and the pressure to sell is less, equally with the anxiety to buy. Old Crop, if of fairly low assortment, is still in demand and full rates have again been paid for supervised Jat. Estimated arrivals of jute into Calcutta during May are returned at 4,25,000 bales against 5,18,000 bales in May last year. For the eleven months of the season, July to May, the comparative figures are 49,41,000 bales this season against 60,86,000 bales a year ago.

Crop prospects show some improvement this week. Rain has been general and beneficial in the districts and the growing crop is looking much healthier. Rivers are more or less normal.

There is nothing of interest to record in the Fabrics section. Mills can dispose of anything they have to sell without any difficulty for any position up to March next year and all quotations are at maximum rates. The coal position is by no means satisfactory and a number of units are at a standstill for lack of it.

WAR TRANSPORT DEPARTMENT.

Applications are invited for grant of quota for import of spare parts and accessories for motor vehicles from U.S.A. during 1945. Applicants should state the f.o.b. dollar value of the spare parts and accessories which they desire to import under each of the following heads—

- (1) Genuine parts for each make of motor vehicle (Separate figures should be given for each make).
- (2) Non-genuine parts for each make of motor vehicle (Separate figures should be given for each make).
- (3) Batteries.
- (4) Miscellaneous parts & accessories (including sparking plugs, fan-belts, hydraulic brake-fluid electric lamp bulbs).

2. Information should also be furnished showing the value of imports (f.o.b.) in dollars of the parts and accessories under each of the above heads imported by the applicant during each of the years 1938, 1939, 1940.

3. No application will be considered unless the information required in para 2 is furnished.

4. Applications must reach the undersigned on or before the 30th June, 1944.

New Delhi, the
19th May, 1944.

Controller of Road
Transport.

JUTE

(By Our Staff Correspondent).

Calcutta, June 8. The raw jute market has been very active during the past week and a large volume of business has been reported in the loose jute section. Mills have taken good interest in the new crop and have paid full rates. At first business was done to a certain extent in higher assortments but later sales have consisted mostly of Middles and Bottoms. Supervised Jat Tops, Middles and Bottoms were done at Rs. 19, Rs. 17 and Rs. 14 respectively. Sellers are rather more reserved in the latter half of the week. Pending the deliveries against contracts recently effected there is no tendency to enter into further commitments. Upcountry markets have been very firm and whatever imports are coming in are eagerly taken up. As mills effect sales of all their goods as and when they are produced, there is naturally a tendency to effect fresh purchases of jute with fresh sales of jute goods. Offtake from mills is at the present moment equal to the total production of goods. If only it were possible to ensure greater supplies of coal mill production could be expected to increase further. The growth of the standing crop is reported to be satisfactory and fair weather conditions have prevailed in the jute growing districts. If there are no adverse developments in the next few months, it can be said that the industry will be assured of its essential raw material supplies. It is reported, however, that the Brahmaputra is in floods. How the crop in East Bengal will be affected cannot yet be anticipated.

In the loose jute section, as pointed out above, a large amount of business has been put through in the new crop for July-August and July-September positions. Mills have been anxious buyers and have paid full rates. Sellers, however, are reserved towards the close. Indian District Middles and Bottoms were Rs. 16 and Rs. 13-8 respectively.

In the pucca bales section no fresh business has been done for export. Mills also have not been keen buyers. Quotations are nominal at last week's levels. A small lot of Firsts was purchased at Rs. 83 and Lightnings at Rs. 80. Ropes were Rs. 66 and H. J. Rs. 63.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, June 8. In the jute manufactures market there is no important change to be recorded. Mills have been selling whatever surplus production they have at maximum rates. It is reported that they are well sold for the next six months and they are free sellers only for positions early in 1945. If only producers were more confident of their supplies of raw jute and coal it can be expected that there would be greater selling and that buyers would not experience the same difficulties as at the present moment. Rates are at the maximum levels.

In the heavy goods section, in spite of the increase in sacking production the position is unrelieved. With the exception of B. twills, which is available at Rs. 66-12, there are few sellers.

Local stock figures for the month of May show that total stocks have declined from 221,683 tons at the end of April to 220,667 tons at the end of May. Hessian stocks have decreased from 1,00,584 tons to 93,133 tons while sacking stocks have increased from 1,21,099 tons to 1,27,534 tons. The decrease in hessian stocks is mostly on military account those at the end of May being 20.21 crore yards against 22.62 crore yards at the end of the previous month. Stocks, on civil account, are 16.42 crore yards against 16.94 crore yards. Sacking, on civil account, were 27.77 crore yards against 26.63 crore yards and on military account 3.08 crore yards against 2.73 crore yards.

COTTON

(From Our Correspondent)

Bombay, June 8. The Cotton market is on the verge of demoralisation as ready holders are selling freely. There is a general apprehension that Government may remove the floor next season and that the hedge contract may go. Yesterday Punjab slumped from Rs. 555 to Rs. 525 on the rush for selling towards close. Jharilla July is easy at Rs. 421 while September contract is quoted 432½.

BULLION

(From Our Correspondent)

Bombay, June 8.

The silver market has been rather uncertain during the past week. The quotation dropped to Rs. 133-12 on the evacuation of Rome by the Germans, but spurted up to Rs. 134-10 on Tuesday morning owing to bear covering. When the news of the Allied invasion of Europe came heavy speculative sales caused a slump in prices to Rs. 130-2. Later, firm technical position brought about reviving tendency. Bulls have good grip over the market and are supporting at every decline. Yesterday, bears found it difficult to give delivery of even 300 bars. The heavy budla charges are compelling bears to cover sales. The report that German resistance is stiffening is keeping the undertone of the market still firm, thanks to poor stock of 500 bars including upcountry arrivals of 40 bars. The daily offtake is 60 bars. Bazar operators are keenly watching the news about the Second Front progress. Silver ready quoted Rs. 132-2 and settlement Rs. 131-2.

The gold market opened strong with the quotation at Rs. 74-8, but the invasion news saw hurried bull unloading and speculative offerings, pushing price to Rs. 73. In mid-week a sudden demand developed, from 25,000 to 50,000 tolas, and the market recovered to Rs. 74. Owing to the discontinuance of gold sales by the Reserve Bank local supplies are getting smaller and ready is quoting at a premium of 1½ annas over settlement. At this premium some gold ready was diverted to market people selling ready and buying delivery settlement. The undertone is steady with stocks at 1½ lakhs tolas. The offtake is on an average 40,000 tolas daily.

PIECEGOODS

(By Our Staff Correspondent)

Calcutta, June 8.

The piecegoods market has continued uninteresting and dealers are awaiting further developments. It appears that the directions by the Textile Commissioner to the effect that producers should sell their quota to dealers who had business with them in the years 1940-42 have given rise to some difficulties, especially in Bengal. The Textile Control Board, however, seem to be very particular that business should be transacted through established channels of trade and that newly appointed dealers should get no manner of preference. Fresh developments in the war situation have had a depressing effect on prices. The decline in values would perhaps have been more pronounced but for the existing confusion in the market in regard to the distribution of the products manufactured by mills within the zone area.

Stock Markets to-day and to-morrow:

MARKETS AND THE SECOND FRONT

The report regarding the opening of the Second Front by the Allies in Europe on Tuesday this week had a rather discouraging effect on share values especially in the Calcutta market. The complete success achieved by the commanders in the initial operations has given rise to the hope that there will be an early end to the war in the West and that prospects of an early peace constitute a bearish factor for the share markets. Bombay operators were at first not inclined to take this view and for a time there was even a small rise in prices with Steels in the forefront. But with the continued downward trend in Calcutta a cautious feeling set in that market too. Only in Friday's session a slightly firmer feeling is noticeable and both operators and speculators are inclined to await further developments.

While, naturally, greater emphasis is laid on the postwar prospects for industries, it is perhaps too early to say that earnings of Indian industries would be unfavourably affected by the conclusion of the hostilities in the West. The programme of reconstruction will be so great in the immediate postwar years that demand for all the products from the chief producing countries in the world will continue to be at a high level. It might be that the present inflated prices will not be available for sellers, but the margin of profit may not be affected to any great extent as costs of production would be appreciably lower. In any case, there is no reason for taking a pessimistic view of the future for Indian industries, and it can be very well expected that satisfactory dividends will continue to be paid.

Textile issues in the Calcutta market have suffered badly. Cawnpore Textiles and Elgins in particular, on reports of drastic reductions in dividends payable to ordinary shareholders. So far there is no confirmation regarding the reduced dividend payments by these companies. But if the dividend distributions happen to be smaller they should not come as a surprise to the market. It will be remembered that ceiling prices for cloth and yarn have been reduced in recent months and earnings might be unfavourably affected thereby. Also the higher level of taxation and larger compulsory deposits will immobilise to a great extent the distributable earnings.

In this connection, it would be relevant to assets the prospects of textile issues. There has been some anxiety regarding the drive by the Textile Control authorities against black market activities and the assumption of control over production and distribution of certain mills. It is overlooked

by many that the action by the authorities in respect of the requisitioning of mills is only confined to the disposal of output of the affected units at the rates approved by the Textile Control Board and the abolition of black market activities cannot by any means result in a lower level of earnings. It is also to be remembered that profits in black market transactions have not been of any help to the mills concerned. They have been beneficial only to the managing agents or their friends. As raw material prices are at a low level and there has been a reduction in the value of stores and other supplies, the decrease in the selling prices has been offset to a certain extent by the lower costs of production. As was pointed out in this column on an earlier occasion, the prospect of a reduction in the output of standard cloth should also afford mills a large amount of profit on their total output. Fresh purchases of shares, however, should be confined to those of the older companies which have a strong financial position and which have a good profit for the standard period. Otherwise, the higher level of taxation and the large compulsory deposit under E.P.T. might necessitate a big reduction in dividends.

The accounts of the South Karanpura Coal Company, Limited, for the half-year ended February, 1944 was eagerly awaited by the market. The rise in the quotation from Rs. 9 to Rs. 17 has focussed much attention on these shares. It was not expected that the working for the last accounting period would show a large profit especially as considerable difficulty was experienced in regard to labour. But the fact that there is still a debit balance of Rs. 1,04,604 to be wiped off out of earnings diminishes the prospect of payment of a good dividend at an early date. The net profit, before providing for taxation and depreciation, is Rs. 34,875 against the loss of Rs. 1,772 for the previous half-year. The amount set aside to depreciation is Rs. 28,588 (Rs. 28,300). The debit balance carried forward is slightly lower at Rs. 1,04,604 against Rs. 1,10,941 brought in.

Raisings were 30,748 tons against 32,475 tons in the previous six months. But despatches were appreciably higher at Rs. 37,191 tons against 22,879 tons.

Discussing the prospects of coal shares in this column in the issue of May 27, 1944, I remarked as follows:

"An interesting development which is of interest to investors in coal shares is the present official examination of the possibilities of utilising bulldozers wherever coal lends itself to be quarried. An expert in

bull-dozers is making a study of these mines where outcrops are substantial and surface mining can, expeditiously and with minimum of labour, be carried out with the help of these machines. The Government are, it is said, agreeable to give priorities for the securing of bulldozers where these are proved to be a practicable and profitable proposition. Bokaro and South Karanpura are particularly noteworthy from the point of view of substantial outcrops. Burrakur has also possibilities for surface mining; and these are being fully exploited by mechanical equipment in which all the collieries belonging to Bird Group have been well provided in good time. With more details forthcoming in the future as regards the success of the bulldozer experiment, interesting developments for particular coal shares may be expected. This is a line of progress that needs to be closely watched and opportunely awaited."

I now understand that the Bird Group of collieries have not received any supply of additional machinery or equipment for either Burrakur or S. Karanpura from the Government or any other source though it is hoped that they will get it at some future date.

The earnings of Katras Jherria Coal Company, Limited, for the half-year ended January, 1944 should be considered satisfactory as even with a large reduction in raisings, it has been possible to maintain earnings at a high level. The net profit, before providing for taxation and depreciation, is Rs. 1,54,566 against Rs. 1,73,253 for the previous six months. No amount has been transferred to funds against Rs. 1 lakh on the former occasion. The dividend has been increased to Rs. 1-4 per share from Rs. 1 per share. The amount carried forward is slightly lower at Rs. 39,672 against Rs. 43,047 brought in.

It was remarked earlier that Tea companies had not done very well in 1943 and that the increase in the cost of production more than offset the increase in the average selling price. New Cinnatolia Tea Company Limited has been able to earn only Rs. 1,03,538 against Rs. 1,80,252 for 1942. The provision for taxation was Rs. 31,750 (Rs. 52,500) while the transfer to reserves and other funds was Rs. 20,000 (Rs. 30,000). The dividend has been reduced to 27 1/2 per cent from 40 percent. The amount carried forward is lower at Rs. 39,546 against Rs. 56,008 brought in.

(Continued on page 1171)

Bombay Investors and Indian Stock Exchanges:

EXCELLENT RESULTS OF RAZA TEXTILES

CONVERSION OF TATA DEFERREDS?

(By "ANALYST")

Bombay (By Wire).

Giltedged Market has been quiet at the close, with 3½ per cent. Paper at Rs. 99-1 as against a high of Rs. 99-7 this week. In the past few months, whenever Paper has moved up to Rs. 99-8, there has been very heavy profit-taking around Rs. 99. There has been very good support for 3½ per cent. Paper. If there should be further reaction of one rupee, around Rs. 98, I would definitely favour investment in 3½ per cent. Paper with a view to booking profit on a rise of two rupees. The 3 per cent. 1952-54 Travancore Loan, which was over-subscribed recently, is changing hands at Rs. 2-12 premium.

Iron, Steel and Engineering:

Steels have again been prominent with Tata Deferreds fluctuating around Rs. 2,240 and Ordinaries around Rs. 416-8. I hear that negotiations between Tatas and prominent shareholders have been going on and that Tatas have offered 5½ Ordinaries for every Deferred Share. If the conversion scheme is put through, there is likelihood of Tatas issuing ordinary shares at a premium of Rs. 100 in order to raise monies for the conversion scheme. If the shareholders should agree to the conversion scheme, I look forward for a substantial rise in Tata Steel Deferreds. By next week, I hope to get more detailed information and discuss in greater detail. Indian Irons and Steel Corporations have declined to Rs. 36-8 and Rs. 27-12. In the Engineering section, Jessops were in good enquiry around Rs. 24. I recommend investment purchases of Jessops. In Bombay, Premier Constructions were in demand around Rs. 234. I think this is an excellent post-war scrip and I would suggest investment purchases. In Madras, Brunton Engineerings are quoting Rs. 16 X.R. I suggest booking profit in Bruntons with a view to repurchase on a further reaction.

Textiles:

In Bombay, textiles lost further ground with the exception of Bombay Dyeing which has been remarkably steady around Rs. 1,913-12. There was very good turnover in Raza Textiles which, after declining to Rs. 93 as against a high of Rs. 106 last week, closed at Rs. 93 on investment demand particularly on receipt of the information that profit for the year 1943 was Rs. 35 lakhs and, inclusive of the carry-forward, total profit amounted to Rs. 41 lakhs. I hear that a sum of Rs. 23,50,000 has been transferred to Reserve making the total reserve Rs. 30,50,000 and that the Directors have decided to issue thirty 6½ per cent. "B" Preference Shares of Rs. 10 each as free bonus for every 100 shares held plus a dividend of Re. 1 per share and also to issue 28 Ordinary Shares for every 100 Shares held at Rs. 50 premium i.e. at Rs. 60 per share. Looking at the huge profits, the directors could have even paid a dividend of Rs. 10 per share. But I am glad to note that much money has been put to reserve to be utilised at a later date for expansion and the position has been remarkably strengthened. The results are exceedingly encouraging and since the mill is situated in Rampur State, I feel that the Rs. 10 paid-up shares quoted at Rs. 95 C.R. look cheap and I would not be surprised if the shares move up to Rs. 115 or Rs. 120. Very recently, the shares were done upto Rs. 130 on rumours of a dividend of Rs. 8 and later

on rumours of a dividend of Rs. 3 declined to Rs. 90 and were pushed up again to Rs. 110. It is true these shares have caught the imagination of the speculators but I feel the present levels are attractive for genuine investors.

In Madras also, Textiles, were downward but though some of the Madras Textile scrips look very attractive, I would rather watch for a little while before making fresh commitments. In the event of a good reaction I would suggest investments in scrips like Buckingham and Carnatic, Vasantas, Maduras, Rajalakshmis, Mettur Industries and Sitarams. As for other scrips, I would favour liquidation as in the case of Bombay scrips.

Bank and Insurance:

There has been nothing very special to report in the last two weeks. Most of the quotations have remained unchanged. Imperial Bank contributories look attractive for long term lock-up around the current price of 512-8, despite the yield being only 3 per cent.

In Travancore, very recently, Thomcos Bank Limited raised the capital from Rs. 2½ lakhs to Rs. 5 lakhs by issuing to the existing shareholders one share for every share held at Rs. 5. The shares are quoting Rs. 5-4 and even in the very first year i.e. 1943, dividend was 5 per cent free of Travancore tax. Net profit was around Rs. 40,000 as against the paid-up capital of Rs. 2 1/2 lakhs.

Travancore Forward Bank Limited—another small and progressive bank like Thomcos Bank—are also raising their paid-up capital from Rs. 1,50,000 by the issue of Rs. 3,50,000 worth of shares at par. Though the issue is first offered to the existing shareholders in the proportion of 7 shares for every 3 shares held, since the last date for receipt of applications from existing shareholders is 26th June, I would like investors to apply for these shares as there is every likelihood of a small allotment from the unabsorbed portion. The Bank has been regularly paying a dividend of 10 per cent free of Travancore Tax.

Plantations:

Messrs. A. V. Thomas & Co. Ltd., Managing Agents of the Midland & Rajagiri have bought Rani Travancore Estates, London and are clubbing the estates with Midland and Rajagiri. I hear the Midland Rubber and Produce Company is issuing 6 per cent. (Travancore tax free) cumulative preference shares for Rs. 34,40,000 by offering 125 preference shares for every 100 shares held by the existing shareholders and that the Rajagiri Rubber and Produce Company Limited is issuing 6 per cent (Travancore tax free) cumulative preference shares to the tune of Rs. 22.6 lakhs in the proportion of 160 shares for every 100 shares held. The preference shares look to me as a first class investment and are issued at annas 4 premium to the existing shareholders. I think the shareholders are lucky enough to get such first class investment particularly when there is ample security for the preference capital and the preference dividend is likely to be covered more than 4 times on the basis of earnings inclusive of the old and new estates. I hear from the underwriters that there has been great rush from the investing public for these

preference shares though they are not shareholders for the year ending 31st March, 1943. Midland paid a dividend of 15 per cent free of Travancore Tax on the ordinary shares for the year ending 30th June, 1943. Rajagiri paid 12 1/2 per cent and for the current year has paid an interim dividend of 8 3/4 per cent. The company's estates are said to be one of the finest rubber estates in the Travancore State. The distributable surplus for Midland Ordinary and Rajagiri Ordinary is likely to be around 30 per cent after paying the preference dividend. I, therefore, feel that the acquisition of the new estate is a real boon to the ordinary shareholders and I would therefore recommend investment purchases of both Midland and Rajagiri Ordinaries quoting around Rs. 16 and Rs. 17 respectively.

As for Calcutta scrips, Coal and Jutes declined a little due to profit-taking. I think this is purely a technical correction of the overbought position in the market and probably after a further decline, coals and jutes will improve. I would, therefore, on a further reaction like to accumulate first-class jute shares like Howrah. In the Coal group, I like Amalgamateds around the current price of Rs. 48-8.

Debenture and Preference:

I have been very closely watching the market particularly from the point of view of genuine investors and I find that, after making inquiries with leading brokers, despite there being much money in the market, money is flowing into fixed interest securities like debentures and preference shares rather than into speculative ordinary shares. Of course, investors have taken to first class scrips due to post-war prospects, but the general tendency has been to liquidate ordinary shares and reinvest the proceeds in the debentures and preference shares. I personally feel that this is a correct move since after all the Second Front has been opened and if we should continue at the rate we are progressing, the war in Europe must be over very soon and naturally speculators might try to bring down the market in industrial ordinary shares, whereas investors who have now made investment in fixed interest securities would be in a position to switch over to attractive ordinary shares at really attractive prices.

New Floatations:

Of late there have been many new floatations. I take this opportunity of cautioning investors not to apply particularly for the ordinary shares unless they are in a position to consult a first class broker and unless it is an exceptionally good issue only. I have noticed several South Indian plantations changing hands and new companies formed at inflated prices. In the case of several of those companies the debentures and preference shares have been really attractive but ordinary shares have been a regular wash-out.

IMPERIAL BANK OF INDIA

NOTICE

Bombay, the 17th May, 1944

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 9.

Full Tuesday this week very steady conditions were noticeable on the Calcutta Stock Exchange and transactions were on a fairly large scale. The news of the Second Front, however, on Tuesday afternoon reversed the trend. On the reports that the initial operations were successful prominent operators sold heavily. Popular speculative counters were lower by one point. The easier feeling continued to be in evidence on Wednesday and Thursday. Only in Friday's session a slightly better feeling is noticeable and quotations are higher than the lowest levels for the week though considerably lower on balance. The prospect of an early peace, it is pointed out, is an unfavourable factor for the market and that the present high level of prices cannot be sustained. There is a tendency to await further developments.

Giltedged securities section has continued to be firm though towards the close quotations are slightly easier in sympathy with the other sections. 3½ percent Paper quoted Rs. 99-6 after being done higher at Rs. 99-12 earlier in the week. Terminable loans have remained steady, 3 per cent 1951-54 being Rs. 101-2, 3 percent 1953-55 Rs. 100-4, and 3 percent 1946 Rs. 102-2. 3 percent 1963-65 were better at Rs. 99-4 while 2½ percent 1948-52 were eagerly taken up at Rs. 99-10. 5 per cent 1945-55 were 10 annas higher at Rs. 105 and 4 percent 1960-70 Rs. 112-8. 3 percent U. P. changed hands at Rs. 98-12.

No business has been reported in Public bodies' debentures or Industrial debentures while in preference shares, Alexandra were Rs. 174-8, Bally Rs. 181 ex-dividend, Fort Gloster Rs. 182 and Anglo-India Rs. 181 ex-dividend. Steel Corporation were unchanged at Rs. 134 while B. I. Corp. were Rs. 217. Dunlop Rubber First Pref. were Rs. 171 and Titagur Second Pref. Rs. 116.

Bank shares have been firmer with Imperial Bank fully paid at Rs. 1,950 and Reserve Bank at Rs. 138. United Commercial Bank were easier at Rs. 29 premium and Hind Bank at Rs. 60. Bank of India were quoted Rs. 180-8.

The Cotton section struck a bad patch on the rumours that dividends of Cawnpore Textiles and Elgin for the half-year ended March 1944 would be very much lower. There was heavy selling. Cawnpore Textiles were nearly 2 points lower at Rs. 12-12 but the quotation at the time of writing is better at Rs. 13-2. Elgin came down to Rs. 62-8 from Rs. 71 at the end of last week and are now quoting Rs. 64-8. New Victoria were nearly one point lower at Rs. 8-6 but closed slightly better at Rs. 8-10. Bengal-Nagpur shed 3 points to Rs. 38-4.

In the Coal section the only feature of interest was provided by Nazira with an increase in the quotation from Rs. 14-10 to Rs. 17-10 earlier in the week. On selling

The Week in the
Exchanges

there has been a setback to Rs. 16-8. Burra-kur were lower at Rs. 35-4 but have recovered to Rs. 35-12. Equitable were Rs. 57-10 against Rs. 59-10 and Jainty Central Rs. 6-6 against Rs. 6-10. Mundulpore were Rs. 24, Raneegunge Rs. 47-6 and West Jamuria Rs. 57. Talcher were marked back to Rs. 10-8 but there has been a sudden rise in today's session to Rs. 11-12. South Karan-pura were uninteresting at Rs. 16-8 but were as low as Rs. 16 during the week.

Jute shares were at first inclined to be quieter but are now definitely firmer on the hopes that these shares should benefit to a great extent from the increased demand in postwar years. Howrah receded to Rs. 75-4 but are now higher at Rs. 78-12. Chitavalsah were steady at Rs. 33-11, Bally at Rs. 359, Kamarhatti at Rs. 616, and National at Rs. 32-1. Nellimaria were rather quiet at Rs. 32-13 while Nuddea were steadier at Rs. 124-8. Presidency fluctuated around Rs. 9-10 while Reliance were better at Rs. 65.

In the Engineering section, Indian Iron declined by 1½ points to Rs. 36-4 but have recovered to Rs. 36-12 on Friday. Steel Corp. were particularly weak being done as low as Rs. 27-8. There has been a recovery to Rs. 28. Braithwaite were steady at Rs. 12 as also Marshalls at Rs. 5-10. Kumardhubi Eng. have dropped by one point to Rs. 13, Bhartia Electric Steel were steady at Rs. 18-12 and Indian Malleable Castings ordy. at Rs. 9.

Sugar shares have not been very much affected though Belsund and Ramnugger Cane & Sugar were lower at Rs. 15-4 and Rs. 15-1 respectively. Carew & Co. were Rs. 29-14 and Champarun Rs. 41. New Savan were Rs. 22-10 and Murree Brewery Rs. 27-8.

There was more selective buying of tea shares earlier in the period but buying in the last three days has been restricted due to the weakness of the other sections. Bishnauth were Rs. 40-12, Hasimara Rs. 75, Tezporer Rs. 20-2 and Birpara Rs. 455.

Among miscellaneous shares, Burma Corporation were quiet at Rs. 4 and Indian Copper at Rs. 2-15. B. I. Corp. were rather sticky at Rs. 6-7 while British Ceylon Corp. were steady at Rs. 22-4. Calcutta Trams were done up to Rs. 33 on special buying. The quotation at the time of writing is only slightly lower at Rs. 32-4. Calcutta Ice were steady at Rs. 23-4 while Spencer were a shade better at Rs. 14-2. Paper shares were firmer earlier in the week on reports that a satisfactory agreement has been reached between members of the industry and the Central Government but the rise in prices could not be maintained with the weakness of other sections. India Paper Pulp were Rs. 223 after being higher at Rs. 231 while Sree Gopal were Rs. 24-11 and Titagur Paper A & B Rs. 27-14. Assam Saw were Rs. 5-8 ex-dividend, Midnapore Zemindary were steady at Rs. 155-8 and Tide Water Oil at Rs. 28-1. India General Navigation were crossed at Rs. 60-2 and Scindia Steam at Rs. 35-10.

(Continued from page 1169)

The Government of Travancore recently floated a 3 percent Loan of Rs. 3 crores and the Loan was heavily oversubscribed. Unfortunately, there are several very unsatisfactory features about this floatation, frank and fearless criticism of which is, I consider, very necessary.

The list of the loan opened on 10th May, 1944 but interest on the bonds commences only from the 15th May 1944. Why should any Government ask for interest-free loan for 5 days? Even though applications are invited on this basis, the condition is an intolerable one and I am surprised that the Imperial Bank of India should have agreed to receive applications in respect of a notification that contains a stipulation of this kind. In future, no Government ought to be permitted to get away with a levy on the public like this.

I have reasons to believe that subscriptions for this loan had been canvassed well in advance and that the Durbar or the brokers handling the loan had in their hands applications exceeding the amount of the loan before the list actually opened on the 10th. Why then should the Durbar have invited applications from such far off places as Calcutta, Lahore and Karachi? Any way, having invited applications from these places, the list should have been closed immediately after opening, i.e., as soon as it came to the knowledge of the authorities that the full amount had been slightly oversubscribed. Instead of this, the list was kept open for quite a long time on the opening day with the result that the loan was four times oversubscribed.

In the matter of allotments and refunds of excess subscriptions there has been inordinate delay. While subscriptions were received on the 10th May, the allotment letters and refund cheques were received in Madras only on the 5th June 1944, i.e. after an interval of 26 days. During this period Rs. 9 crores, representing oversubscription, were locked in the Travancore treasury. The allotments were not made on any well-defined basis. While under the notification the Government had reserved to themselves complete discretion in regard to allotment, I understand that some people received full allotment, others 50 per cent, others still 40 per cent while the general public received on an average about 20 to 25 per cent allotment. There has apparently been a great deal of discrimination.

The Imperial Bank of India, from whom a fair amount of money had been borrowed to finance this loan, benefited by interest receipts while the subscriber has lost interest for 26 days on 80 percent of the amount he subscribed.

The Travancore Government are to be congratulated on this impressive demonstration of the highest credit they enjoy. They are also to be commended for the plan of the loan as well as for the purpose for which the loan was issued (the loan was mainly an anti-inflationary measure). That, in the case of a loan so well-supported by the public, such incompetent handling has been allowed, is, indeed, a great pity.

WATCH-DOG.

COMPANY MEETING

NATIONAL BANK OF INDIA LTD.

Mr. R. LANGFORD JAMES' STATEMENT

The Annual General Meeting of the National Bank of India Limited was held at 24, Bishopsgate, London, E.C., on May 2. The following is the statement of the Chairman, Mr. R. Langford James, circulated with the report and accounts:—

Since we met last, the directors extended to Sir Robert Reid an invitation to join the Board. Sir Robert has recently retired from the Indian Civil Service after a distinguished career—latterly as Governor of Assam—and our satisfaction in receiving his acceptance was enhanced by the fact that his father, Mr. David Reid, was a valued director of the Bank from 1878 to 1909.

The total of the Balance Sheet constitutes a record for the Bank at £61,867,357. This is an increase of £7,500,000 over the figure for the previous year and is accounted for by a similar increase under the heading of Current and Fixed Deposit Accounts which continue to reflect the large volume of war expenditure in the areas in which the Bank operates.

Cash on hand and with our Bankers and money at call shew an increase of nearly £4,000,000. The ratio of this item to the amount of our liabilities to the public is greater than is normally considered necessary, but under present conditions it is desirable to maintain a very liquid position. Indian and Ceylon Government Securities are higher by £2,413,000 while our holding of British Government Securities has increased by £1,140,000. Discounts and Loans Receivable are £490,000 higher.

We are now in the fifth year of the War and the way in which Banks and business concerns in general, both in this country and in the Dominions, have adapted themselves to war time conditions is alike remarkable and laudable. Problems of one description or another present themselves almost daily, of course, but they always seem to find a solution. Latterly a material contraction in the time taken in transit by the overseas mails has facilitated working.

CONFLICTING EXPERIENCES

For India 1943 was a year of conflicting experiences; practically universal financial prosperity on the one hand and a distressing shortage of food stuffs in certain parts of the country on the other. This shortage made itself felt in particular in Bengal and in the Southern Indian States of Travancore and Cochin. In Bengal actual famine conditions prevailed, resulting in a lamentable loss of life, not only from starvation but from the effects of disease on debilitated people. Fortunately Nature vouchsafed to Bengal a bountiful rice crop last winter and this should at least make the food position of that great Province reasonably safe for the time being.

In my address to the shareholders six years ago I drew attention to a statement made at that time by the late Sir James Taylor, then Governor of the Reserve Bank, to the shareholders of that Institution. Sir James pointed out that the area under cultivation in India was not keeping pace with the growth of population; as he put it, "the pressure of population on cultivated land" was a matter for concern. How correct he was in his views last year's famine conditions appear to indicate.

I have seen it stated recently in a responsible publication, that, against an increase of 27 per cent in population in the last 20 years the area under food crops had increased by only 1 per cent. Whether or not the latter figure is correct I do not know but its meticulous accuracy is not a matter of great moment. What, however, does emerge as a question of the first importance to India is the urgency of growing sufficient food for the adequate nourishment of a population increasing at a phenomenal rate.

The recent publication by a group of eminent business men in India of a fifteen year plan for the economic development of that country after the War has attracted considerable attention. The industrial pen-

dulum started to swing in India some years ago. Under normal conditions its rate, was appreciable and this has been accelerated greatly by the War. Whether it will be desirable to force the pace further by elaborate planning is perhaps a matter open to difference of opinion but I presume there will at least be agreement on the desirability of agricultural development taking precedence of all other planning until the food requirements of the country are placed on a permanently safe basis. The institution of new industries and the erection of costly factories however desirable, in themselves—would not be of much avail without a health and well nourished supply of labour to work them.

OTHER CENTRES

Of the other centres in which our interests lie—Ceylon, East Africa and Aden—there is nothing of special interest to report. To them also the War has brought prosperity.

An event of much interest to the banking world is the impending change in the governorship of the Bank of England. Mr. Norman's unrivalled experience, his wise counsel and kindly help were always available to us and in acknowledging—as we do with gratitude—our indebtedness to him we wish him many peaceful years in which to enjoy a rest from his strenuous labours. His successor, Lord Catto—himself a director for some years of the Mercantile Bank of India has an intimate knowledge of Indian affairs through his connection with the firm of Andrew Yule & Co., Calcutta. It is a matter of much satisfaction to us to know, that, in losing officially one good friend, we have in his successor one well qualified to appreciate the problems which may control Indian Banking in the future.

Last year I mentioned that the increase of ill-health among members of the overseas staff was a cause for anxiety and naturally a further year of war time working has not improved matters in that respect. There are however, indications that short periods of furlough may be possible before long, which must be welcome news to many though, for the time being, an extra strain will be thrown on those of our depleted staff remaining in the East, to carry on. In extending to the staff, both overseas and at Head Office, our warm thanks for their work on behalf of the Bank, I assure them again that the directors realize in full measure the difficult working conditions of these present times.

THE LANSDOWNE JUTE COMPANY, LIMITED.

By order of the Directors,
BIRD & CO.,
Managing Agents.

Note.—Dividends will be paid to registered shareholders only.

Chartered Bank Buildings,
Calcutta, 20th May, 1944.

share, without any deduction for Income Tax paid by the Company Rs. 89,896 and carrying forward Rs. 7,945-14-0.

Throughout the period under review the normal hours of work were 54 per week, with all looms operating except for certain weeks during October, November and December, when owing to the continued shortage of coal all mills had to remain closed in accordance with the supplementary working-time agreement arranged by the Indian Jute Mills Association. It was permissible, however, for mills that had lost hours prior to 1st September, 1943, owing to lack of coal, to work during the weeks of enforced closure in order to make good these lost hours. Actually, however, mills were unable to adhere to this programme of work because coal supplies continued to be very short and quality very inferior. In January the supplementary working-time agreement was dispensed with and individual mills allowed to work the normal 54 hours per week, plus any extra hours they were capable of working in order to make up hours lost previously, with the proviso that the hours that had been lost during the weeks of enforced closure could not be made good later. During the whole period the Company lost 477 hours, of which 89 hours cannot be made up.

Coal supplies have of late shown an improvement but the outlook for the future is very uncertain in this respect.

As a result of the requisitioning of Northbrook Mill, arrangements have been made with the Northbrook Jute Co., Ltd., whereby their outstanding orders will be taken over by this Company and an equivalent maundage of jute sold and the mill has worked a double shift since 13th March, thus making up the working hours lost by the Northbrook Mill's total of 567 looms. The remaining 199 looms working on the second shift are being worked by arrangement with the Kinnison Jute Mills Co., Ltd., the mills of which have also been requisitioned. Part of the staff of these two Companies has been taken over by this Company, and most of the Northbrook Mill labour force is working in the mill, though still occupying their own quarters.

Details of the financial understanding between the three Companies are still under consideration by the Directors and cannot be embodied in this report but estimated shares of the profits due to the Northbrook Jute Co., Ltd., and the Kinnison Jute Mills Co., Ltd., as a result of these arrangements have been taken into account.

The sum of Rs. 82,040-8-8 shown as Water and Drainage Improvement Reserve has been transferred from Liabilities Account, where it has been included for a number of years, pending the completion of the project. It is hoped to proceed with the Company's plans after the war.

Managing Agents.—Messrs. Bird & Co.

*After taking into credit Rs. 50,000 E. P. T. excess provided in previous accounts and Rs. 95,528. Profit on Sale of Investments.

†After taking into credit Rs. 70,000 being E.P.T. excess provided in previous Accounts and estimated share of profits due from Standard Jute Co., Ltd. Rs. 1,60,000 and Dalhousie Jute Co., Ltd., Rs. 32,000 from double shift working.

(Half-yearly General Meeting on 17th June, 1944 at 11-5 A.M. Transfer books closed from 3rd June to 17th June, 1944).

Audited Accounts of the Company for the half-year ended 31st March, 1944:—

They show a profit of Rs. 4,96,529-1-0. After providing Rs. 2,85,136 for taxation (including Excess Profits Tax), Rs. 57,384 for depreciation, there is an available balance at credit of Profit and Loss Account of Rs. 1,82,403-11-2 which includes Rs. 28,374-10-2 brought forward from last half-year.

The Directors propose to dispose of this by paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent. per annum, without any deduction for Income-tax paid by the Company Rs. 52,500, paying a Dividend on the Ordinary Shares of Rs. 4 per share, without any deduction for Income Tax paid by the Company Rs. 1,20,000, and carrying forward Rs. 9,903-11-2.

During the whole period the Company lost 310 hours, of which 74 hours cannot be made up.

The mills closed down on 21st February, 1944, having been requisitioned under Rule 75A of Defence of India Rules on and from 24th February, 1944, until six months after the termination of the present war unless relinquished earlier. It is understood that financial liability will be undertaken by the Government of India, though negotiations in regard to this are not finally completed. Arrangements have been made with the Standard Jute Co., Ltd., to take over the Company's outstanding orders and part of the staff, and an equivalent maundage of jute has been sold to them. Standard Mill has worked double shift since the mills closed down, thereby making up the working hours lost by 650 looms out of the total of 1,250. Dalhousie Mill has since 13th March arranged to work a further 199 looms under a profit-sharing arrangement with the Company, but no means of making up the working time lost in respect of the remaining 401 looms has been found.

The amount realised by the sale of certain unused mill stores, which were no longer required owing to the requisitioning of the mills, has been credited to Provision for Repurchase of Stores Account. When the mills reopen it will be necessary to purchase the equivalent stores, possibly at a time when prices are much inflated.

The amount realised by the sale of machinery parts and furnishings, which being of a perishable nature must be disposed of while the machinery is out of action, has been credited to Machinery Account, thus reducing the value of machinery shown in the Balance Sheet.

Every attempt will be made to preserve the Company's machinery and other property while the mills are requisitioned and a claim will lie against Government for any loss arising from the requisitioning, but the position in this respect cannot be regarded without some anxiety.

Managing Agents.—Messrs. F. W. Heilgers & Co.

*After taking into credit a sum of Rs. 50,952 E.P.T. excess provided in previous accounts.

†After taking into credit Rs. 20,000 being E. P. T. excess provided in previous accounts and providing Rs. 1,60,000 being estimated share of profits from double shift working due to the Kinnison Jute Mills Co. Ltd.

(Half-yearly General Meeting on 17th June, 1944 at 11-55 A.M. Transfer books closed from 3rd June to 17th June, 1944).

Audited Accounts of the Company for the half-year ended 31st March, 1944:—

They show a profit of Rs. 3,49,441-11-3. After providing Rs. 2,01,210 for taxation (including Excess Profits Tax), Rs. 41,000 for depreciation and Rs. 20,000 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 97,135-8-10, which includes Rs. 9,903-13-7 brought forward from last half-year.

The Directors propose to dispose of this by paying a Dividend on the Preference Shares at the rate of Rs. 6 per cent. per annum, without any deduction for Income Tax paid by the Company Rs. 27,000, paying a Dividend on the Ordinary Shares of Rs. 3 per share without any deduction for Income Tax paid by the Company Rs. 62,907 and in carrying forward Rs. 7,228-8-10.

During the whole period the Company lost 374 hours, of which 74 hours cannot be made up.

As a result of the requisitioning of Kinnison Mills, arrangements have been made with the Kinnison Jute Mills Co., Ltd., whereby their outstanding orders will be taken over by the Company and an equivalent maundage of jute sold to us. Your mill has worked a double shift since 21st February, thus making up the working hours lost by 650 out of the total of 1,250 looms belonging to Kinnison Mills, which have been closed down owing to the requisitioning. Part of the staff of the Kinnison Jute Mills Co., Ltd., has been taken over by the Company, and part of their labour force is working in the mill, though still occupying their own quarters.

Details of the financial understanding between the two Companies are still under consideration by the Directors and cannot be embodied in this report, but an estimated share of the profits due to the Kinnison Jute Mills Co., Ltd., as a result of these arrangements has been taken into account.

(Half-yearly General Meeting on 16th June, 1944 at 4 P.M. Transfer books closed from 3rd June to 17th June, 1944).

Audited Accounts of the Company for the half-year ended 31st December, 1943:—

During the period under review, the Company made a gross profit of Rs. 22,11,414-14-6. After allowing for interest, Debenture interest, Managing Agents' remuneration, Directors' remuneration, commissions, etc., providing Rs. 1,37,900 for depreciation, and setting aside Rs. 22,140 for payment to the Trustees of the Shree Gopal Staff Welfare Fund, the accounts show a net profit of Rs. 18,17,128-4-2. A sum of Rs. 14,00,000 has been set aside for Income Tax, Super Tax and Excess Profit Tax, leaving a balance of Rs. 4,33,889-14-9 in the profit and loss account including Rs. 16,761-10-7 brought forward from the last year's account, which the Directors propose to dispose of as under:—

(i) To Dividend on Preference Shares for the half-year ended 31st December, 1943, at 8 per cent. per annum Rs. 20,000, (ii) To Dividend on Ordinary Shares for the half-year ended 31st December, 1943, at Rs. 12 per share Rs. 1,85,906-4-0, (iii) To reserve for raw materials and stores Rs. 50,000, (iv) To reserve for contingencies Rs. 1,00,000, (v) To General Reserves Rs. 50,000 and (vi) To carry forward Rs. 27,983-10-9

A general bonus equivalent to two months' salary to the Company's labour and direct staff and ¼th month's salary to the common staff has been allowed by the Directors in appreciation of the services rendered by them.

The incidence of taxation having been further increased by the Finance Act of 1944, the provision for taxation has absorbed as much as Rs. 14,00,000.

During the period under review, the Mills continued to work at full production in spite of manifold difficulties in the matter of supply of their full requirements of primary and auxiliary raw materials and scarcity of labour. The high standard of quality and efficiency was maintained in manufacturing as far as possible. With the prices of grass and other raw materials and stores continuing to advance, the manufacturing cost showed a further increase during the half-year under review. Difficulties had also been experienced in the matter of coal supplies. Owing to shortage of raising at the collieries, the Government appreciably reduced Paper Mills' coal quota, resulting in the closing down of the machines now and then. Representations have been and are being made for increasing the quota of coal allotted to the Mills. Inadequate coal allocation resulting in the shut-up of the machines, and consequent drop in the output of paper, coupled with the increase in the cost of grass and other raw materials, would result in the manufacturing cost showing a further increase during the current half-year.

The quota of paper allocated for civil requirements continued to be at 30 per cent which has been found to be insufficient to meet the urgent civil demands. Representations have already been made to Government for allocating a larger percentage for civil requirements, but with no results.

Some further machinery has since arrived and is being installed. Others are expected to be received in the course of the year. It is hoped that with all these additions the Mills would be able to achieve a limit of production of 10,000 tons.

In February last, a meeting of the Paper Industry was convened by the Government of India at Delhi, at which the representatives of the various Paper Mills, the Supply Department and the Department of Industries and Civil Supplies were present. At that meeting it was proposed by the Government that the prices for the Government contracts for the year 1943-1944 be reduced by 2½ annas per lb. and the prices for the next year be fixed at 2 annas per lb. less. It was further suggested that if the above rates be not acceptable to any Mill, it would be open to that Mill to have its cost investigated by the Government Cost Account Department as per their basis of costing and the prices would be fixed on the basis of actual cost as arrived at on that basis plus a profit margin of 7½ per cent. The prices so arrived at were intended to be applicable for the year 1943-1944 and for the first quarter of the year 1944-1945, the prices for the subsequent quarter being determined in accordance with the variation of the costs of main raw materials used in the manufacture. These proposals of the Government, for obvious reasons, were not acceptable to the Industry, and one and all put in strong objections to the same being adopted. Subsequently, another Conference was held in the month of March, 1944, wherein various proposals and counter-proposals were considered, but no understanding could be arrived at. Eventually the Government of India, on the 30th March, 1944, intimated to the Mills their following final offer in the matter:—

(a) The prices already paid for the supplies made from April to September, 1943, will be regarded as final.

(b) The prices for supplies made during the second half of the year 1943-1944, viz., October, '43 to March, '44, would be provisional prices already paid, reduced by 1 anna per lb.

(c) For the year 1944-1945, for the first quarter a fixed price of 6 annas per lb. would be paid for the Bleached paper, the prices of other varieties bearing the same relation to the prices as they did to the prices of Bleached paper in the schedule of last year's prices. For the subsequent periods, the Government has reserved the right to conduct a cost investigation of each Mill and fix the prices accordingly, after allowing a profit of 9 pies per lb. At the time of writing this report, negotiations with the Government for fixation of prices on a more equitable basis are proceeding.

The basic rate of 6 annas per lb., as offered by the Government, is too low having regard to the fact that the prices of various raw materials have gone up by 100 per cent over the 1942 prices when the basic price of Re. 0-5-3 was fixed by the Government. During the last three years, the Mills have been working under heavy pressure and as such most of the existing machinery would need heavy repairs, replacements and additions after the war. All these would

COTTON MILLS (BOMBAY)

[illegible][illegible][illegible]

Includes Depreciation Fund of Rupees 26,04,880. (x) Taxable because debentures issued in 1939 at par redeemable in 1940 out of a sinking fund, established 1st April 1931, of which 5% is to be applied annually in redeeming stock. (xx) Includes Depreciation Fund to the value of Rs. 62,87,425. (d) There is a contingent liability of Rs. 95,551 being Dividend on cumulative preference shares for ten years ended 31st December, 1938. There is also a liability of Rs. 6,11,000 being interest on debentures for the year 1935. 1936 and 1937, out of which Rs. 2,385,000 @ Rs. 3·55,000 @ Rs. 38'8 per centum in 1938 has been paid. (dd) Carry cumulative interest at 5 per cent. per annum (variable) payable out of profits only and redeemable at 31st December, 1940. (dr) Includes Depreciation Fund of Rs. 31,84,418. (dp) Includes Depreciation Fund of Rs. 61,26,598. (ep) Includes Depreciation Fund of Rs. 31,84,418. (fp) Includes Depreciation Fund of Rs. 32,75,037.

COTTON MILLS (All India excluding Bombay).

[illegible]

(b) Issued at par in 1897, and repayable at par on 16th November, 1926, and rate of interest reduced to 4½ per cent (taxable) from 10th November, 1926. Option of repayment at a premium of 3 per cent at any date after 16th November, 1926, on three months' notice. (c) Issued at par on 14th May, 1932, repayable at par on 1st April, 1959 with option of repayment any time after 1st April, 1941, at 3 per cent premium. (d) Issued at par on 30th September, 1943, out of a Sinking Fund to which 5 per cent of the total issue, is due to be placed annually. (e) Carry in the event of a winding up preferential claim to cumulative dividend and to one fourth of the balance of assets available. (f) Entitled to participate in dividends only up to 10 per cent of the total issue, after the preference shares have received accumulative dividend of 9 per cent and ordinary shares 10 per cent. Surplus divisible profit remaining after these dividends will be apportioned in three equal parts as payment of such dividends to (1) preference shares, (2) ordinary shares, and (3) bonus for every ordinary shareholder in the above proportions. (g) The rate of interest on the preference shares of Rs 26 having interest at 4½. (h) Dividend Bonus. (i) Amount of dividend for each half-year ended 31st Dec. 1951. (j) Amount of dividend for each half-year ended 30th June, 1952. (k) Amount of dividend for 2 half-years ended 31-12-1952 (l) 6% for the year 1952 and 5% for 1957. (m) Dividend for five years ended 30-6-1943. (n) For five half-years ended 31-12-1951. (o) Rs. 1-0-15, 84 per share. (p) Rs. 3-4-51, 56 per share.

(Continued from page 1178).

need a huge expenditure and this can only be possible if adequate margin is allowed to the Mills to create sufficient reserves for meeting such expenses. It has also been represented that the rate would be unfair in the case of new Mills (this being one of them), which merit special consideration in view of the fact that they had got no standard period and the standard profits fixed for them were comparatively very low and have not been in existence long enough to build up sufficient reserve to meet the heavy post-war expenditure. It would be of interest to point out here that the basic price, as proposed by the Government, is lower than the basic price fixed for White Printing in the United Kingdom, a country where the Government exercises a complete control on the prices of various raw materials. In India the position is quite different inasmuch as no such control exists on the prices of raw materials. Take, for instance, the cost of grass, which has gone up 200 per cent. during the last one year, and similarly, in case of chemicals and other auxiliary materials required for paper manufacture. It is trusted the Government, in the best interest of all concerned, would take a broad and equitable view of the whole situation in fixing the basic price, giving due consideration to the case of the new Mills.

Managing Agents.—Messrs. Karamchand Thapar & Bros., Ltd.

Authorised and Issued Capital—Rs. 32,50,000. Subscribed—Rs. 29,78,750 in 5,000 8 per cent. Cum. Pref. of Rs. 100 and 2,47,875 ordinary shares, of Rs. 10 each, both fully paid up.

Synopsis of the balance sheet as at 31st March, 1944.

Liabilities.		Assets.	
Capital paid up	29,78,750	Gross block	42,57,103
Debentures	11,16,000	Depreciation	17,28,821
Reserve and other funds	10,13,600	Block (net)	25,28,472

Total	98,88,347	Total	98,88,347
		Total Liquid Assets	73,59,875

SONE VALLEY PORTLAND CEMENT COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1943:—

After providing for all charges including depreciation amounting to Rs. 6,43,403-10-3 and reserving Rs. 5,05,000 against taxation there is a net profit for the year of Rs. 3,83,202-7-7; to this is added the balance of Rs. 1,37,907-13-4 brought forward from 1942, making a total available balance of Rs. 5,21,110-4-11.

The Directors recommend dividend at the rate of 5 per cent per annum free of Income Tax for the year absorbing Rs. 3,75,000, and the balance Rs. 1,46,110-4-11 be carried forward.

Cement produced during the year under review totalled 174,425 tons and deliveries 175,097. In comparison with 1942 both output and deliveries show a decrease occasioned by transport restriction on both inward and outward traffic.

The entire output continued under the control of the Government of India, and owing to Government demands, restrictions on sales to the public were in force throughout the year. There was an increase in the cost of production due principally to a rise in cost of all materials and the grant of allowances both in cash and kind to labour in view of the increased cost of living.

Production was governed largely by coal supplies which continue to be a source of anxiety.

The incidence of trading expenses on the lower sales tonnage coupled with the rise in cost of production and packing charges raised the total cost per ton sold, but this increase was fully covered by an increase in the selling price, the reduction in profit being due to the lower tonnage sold.

The labour situation throughout 1943 was on the whole satisfactory.

The prospects for 1944 are reasonably good, but will be governed to a large extent by the supplies of coal available throughout the year.

Managing Agents.—Messrs. Martin & Co.

Authorised, Issued and Subscribed Capital—Rs. 75,00,000 in 1,800 shares of Rs. 5 each, fully paid up.

Synopsis of the balance sheet as at 31st December, 1943.

Finance Abroad

Thursday Evening.

The most important development following the Allied invasion of Western France is the announcement of Sir John Anderson that the Allied troops would take 200 francs for a pound. The rate was fixed by agreement after consultation with the French National Committee according to Sir John Anderson. The territory liberated by the invasion forces is small but the flow of invasion notes would have begun. The French National Committee through its President has taken command without waiting for a direction from London or Washington. The avoidance of a regular debate in the Commons indicates that tacit approval is to be expected for the second or the French invasion. The rate chosen is the rate ruling in France out-mer. In April a report from Washington said that the rate for Metropolitan France would not be the same but would be fixed at 300 francs to the £. It is proved incorrect while it is clear that the Allies have yielded to representations on behalf of the invaded country. If the franc were cheap in relation to the sterling or dollars, the cost of local supplies would be high and the French National Committee would have to pay out less when the settlement takes place.

The overwhelming argument is that trade with the colonies must be re-established. As Allied progress in Italy is rapid the prospects for the restoration of trade between Marseilles and Oran must be called bright. A rate of 200 francs to the £ is likely to check the rise in prices caused by chronic scarcity in France. The new rate ignores the depreciation arising from the occupation. The new rate would not force up prices in France though invading troops would have to spend more out of their pay. The main argument for a dear franc was that confidence in the franc has to be re-established by a rate which could be held. In the long run, the franc may alter in value for it is known that the pre-war rate of 176 to the £ was very shaky. It is, however, not-worthwhile that the principle of working the rates in force in August last (accepted after the monetary talks) has been projected into the invasion and temporary over-valuation of the franc may help France to draw supplies from the invading forces. The over-valuation of the mark helped the Nazis to drain occupied countries of goods. The French may get a little more than is to be got from a rate of 260 or 300 francs. This rate has nothing to do with Vichy's currency. But at some time the French gold reserve would pass into the right hands, and the new rate could be retained without disadvantage. French exports may derive little help in the future from a rate of 200 to the £ but France is wedded to tariff protection and imports would be all-important for some time after the war.

It is to be seen if the rates for Belgian and Dutch currencies would be kept near the prewar level after invasion takes place. The occupied countries must hold down prices to the proper level to get the rates going. The lira was devalued rather sharply by invasion, in Tripoli as well as Sicily, but the Italian Treasury has had little or no gold since 1935 while Vichy kept much of its reserve in Martinique. Even the loss of a part by court order in the U.S.A. would not prejudice the franc rate greatly. The calling up of old notes and exchange for invasion currency would raise no question as to their authority. The depreciation of the franc has been overlooked for the reason that all countries have experienced inflation in greater or smaller measure during the war. By keeping franc prices high in relation to soldiers' pay, the

people of the Occupied territory gain to some extent while the Allies have to spend more. Since the three European governments are according diplomatic recognition to the Algerians committee, to which Mr. Duff Cooper is accredited as special envoy, the status of the French National Committee has material-ly changed, and if it takes the £1-200 franc rate as the effective rate, the chances of economic revival are bright. Vichy notes may not be demonetised as rapidly as the Allies expect, but the Germans have few chances of collecting occupation costs, when another occupation is in progress, and the Nazis' credits and debts will cease to influence the value of the French currency, though the possibility that food and French industry's equipment may be removed during the German retreat remains.

It is known that the fifth war bond drive has begun in the United States well before the Republican Convention. The President hopes for swifter success, and that may well influence subscriptions. The Fourth Term issue has practically disappeared from view as the Southern Democrats have come back to the fold. Though federal spending would be lower in 1944-45 owing to adjustments and cancellations the increase in public debt (already over 200 million dollars) would not be a very good beginning for the next President's term. Since the tax bill was re-enacted over the veto, larger borrowing is inescapable. There is not much about price stabilisation though emergency legislation is due for renewal this month. The inflation problem has passed out of notice for the President is now soothing the farmers with a promise of high prices and export subsidies. This may, however, boost subscriptions for the war loan drive. The first in December 1942 yielded 7.8 billion dollars and the fourth brought over 16 billion dollars (all from private investors because special quotas were fixed for U. S. banks). The U. S. banks called upon to lend largely to the Government cut down advances in 1943 in order to increase investments in securities. By the middle of 1943 the trend changed as the pro-

portion of Advances to resources began to rise and bank profits consequently improved. The drop in excess reserves is a result of the increase in U. S. banks' investments by 10.62 billion dollars in the year 1943 while their total deposits rose by 5 billion dollars only suggesting incidentally that war bonds rather than bank accounts attracted new savings in the U. S. A. The cost of living has risen, but an increase in civilian supplies has been planned for this year and the preliminaries of the change-over from war to peace production have been apparently settled. Interest in the export outlets for the agricultural surplus indicates that the U.S.A. favours international commodity agreements and the agreements for and against subsidies under the New Deal are likely to be heard again.

Except for the news that Lord Keynes is going soon to Bretton Woods (N.J.) and the Hon. R. H. Brand will attend, the conference ceases to capture attention, for the big subject is the future of sterling balances. Sir John Anderson has declined to say anything definite about the application of the sterling balances to promote planned development but a statement appears likely in which case great satisfaction will be derived by India where the objections re-negotiation are formulated by these business leaders. If the Muslim League or the 52 Indian parties (or leaders) take another view the merits of the comments made about the London paper's opinions may not be manifest. There is nothing to suggest that the Indian delegation is not going to put forth claims though the rigid maintenance of the Indo-British financial settlement cannot be insisted upon at a conference arranged for other purposes.

The marked improvement in leading oil shares in London is governed by the appreciation of peace prospects. All issues including Royal Dutch have gone ahead. Similar improvement in rubber shares is a symptom of the unusual buoyancy developed by the London stock exchange before and after invasion. For some time, shipping issues have been steadily rising and the stagnation of mining shares is more than offset by the improvement in leading industrials like Dunlop Rubber. The sharp rise in quotations on Wall Street accounts for the rise in International Nickel. During 1943 the Canadian company's output rose by 55 million lbs though copper output fell away much more platinum was procured. In spite of a cut in the dividend for the first quarter the shares have gone up because plant has been extended and resources are larger. Postwar rather than immediate prospects regulate the market's appreciation of Int. nickel on which the dividend paid last year was two dollars per share.

The more important, local results of invasion can only be conjectured from the instructions issued by the Germans to banks in France to move out or to give up business. Branches of British banks in the Channel Islands and France are however likely to disregard the notice which was promoted by a desire to help Vichy. The Bourse must have experienced a shock or two like French banks. Those allied to heavy industry are likely to have a difficult future while mortgage institutions are likely to be kept busy by the demands of reconstruction. A change from short-term to long-term credit might influence the rate of interest and defeat current calculations as to universal and permanent cheap money. How best employment could be increased would be the biggest and most pressing problem for Europe including France. If costs are not adjusted, and credit is too easy to obtain, some difficulties might arise but the provisional government or its legitimate successor would not disregard the

KEEPING TABS ON THE CROOKS

THE STOCK EXCHANGE'S RECORDS

(By Cable)

London, June 12.

The basement of the London Stock Exchange is believed to contain Britain's most complete records of all financial rogues, all financial bankrupts and all individuals whose credit is dubious. Known placidly as the Stock Exchange's "records department" it is outwardly a mere place of storage for the annual reports of all companies whose shares are dealt in on the London Stock Exchange but for the past two decades the records department has developed its own black list of individuals whose names when attached to a company prospectus is considered a sufficient warning to leave alone.

This private 'rogues' gallery heretofore has never been publicized but now it has attracted attention as a result of efforts on the part of the Government committee on the reform of company law to learn just what protection the stock exchange is able to throw around the investor.

Spokesmen for the Stock Exchange have explained that whenever a broker submits to the Stock Exchange details regarding a new enterprise which wants its shares to be sold through the stock exchange all details are submitted firstly to the records department which traces exhaustively the careers of all individuals connected with the new enterprise.

If the department's experts find one or more individuals with unpleasant records they send for the broker and tell him orally not in a writing—"take it a way". There is no appeal from this.

In addition, another department examines the legal aspects. If these two hurdles are crossed, the scheme goes to a small panel of brokers and dealers who are expert members of the Stock Exchange's executive committee. The panel usually raises one or more questions and the whole scheme is submitted to the executive committee which must approve.

According to the spokesmen referred to between 1929 and 1940 two schemes were rejected by the committee, 38 schemes in polite language (indefinitely deferred). Eleven of the 38 were subsequently allowed the privilege of being listed. Of the remaining seventeen, ten companies were subsequently liquidated and the remaining seven vanished completely from the public view.

Asked how many financial enterprises were dismissed with the formula "Take it away".

The new system has admittedly not produced companies completely depression-proof but spokesmen for the Stock Exchange claim it has protected British investors from losing money in many enterprises, floated solely for promotion profits and without any real intention of engaging in business for the benefit of shareholders.

(Continued from page 1195)

sits from Rs. 231.09 crores to Rs. 227.17 crores. Investments have gone down from Rs. 125.67 crores to Rs. 123.29 crores while advances have gone up from Rs. 68.84 crores to Rs. 70.29 crores. Cash at Rs. 45.38 crores shows a small rise.

Mr. G. D. Birla presiding at the first annual meeting of the United Commercial Bank has, as is to be expected, made a speech worthy of the occasion and worthy of a Bank which has created history in the annals of banking in India. The policy and motto of the Bank have been stated by Mr. Birla in clear terms:

"You Directors do not suffer from lack of ambition in making their plans, but for that reason, they do not throw caution to the winds." The Bank has been fortunate in securing as Manager one who is well equipped and well trained to carry out such a policy. Those who know Mr. Thakur and those who have followed the remarkable career of the Bank with interest will endorse and acclaim the following tribute of Mr. Birla: "The executive of the Bank under the able guidance of our General Manager Mr. B. T. Thakur deserves no mean credit for the success of the Bank. In Mr. Thakur we have a banker

of a very high calibre. He is a seasoned man with vast knowledge and experience of banking in India, Burma, Ceylon, Europe and America extending over a quarter of a century. As such, he is a great asset to the Bank."

The exchange market has been dull but steady. There were a few dollar bills showing.

Following are the closing rates: Bank's buying 90 days/St ls. 6 9/32d. for one and two months. Bank's buying 90 days/St ls 6 5/16d. for three and four months.

austerity

in the houses of the rich

prevents want

in the homes of the poor

THERE was a time when we loved to entertain lavishly in fact, it was a sign of a large heart and a generous disposition. Indian hospitality was one of our greatest traditions which was cherished in thousands of well-to-do homes. But that time has now passed. Rationing, and all-round good management, are helping to relieve the food situation, but every extra economy still eases the plight of some hungry man, woman or child somewhere in India.

THIS is no time for feasts, and even in everyday life we can reduce the number of dishes served at each meal. This is our definite obligation to the less fortunate. By preventing waste in our homes we are doing something really useful. Let us intensify our efforts from to-day.

food for all

National & World Economy

Though professions of faith in free trade have not declined during the five years of the war, there can be no mistaking the increasing need for deliberate direction, both in national and in world economy. This need is the result, in part, of a social ideology which insists on economic security for all the members of a community, and in part, of the changes in productive technique and, consequently, in the potentialities of each national economy. The stage has been long left behind when a ready alternative to such direction lay in mere relapse into the less satisfactory, but nonetheless orderly, conditions of laissez-faire and free trade. That alternative is no longer open to the governments of the world. For, each government will have after the war a plentiful crop of internal economic problems which will be insoluble except on the basis of a fuller State responsibility for the economic life of the community. Conjointly too, the governments of the world will have to solve a number of problems common to them all, either because these problems are of direct interest to them or because their solution is necessary for securing the appropriate milieu of world economic conditions, in which alone a proper development of national economies can be hopefully expected. Every important country in the world thus finds itself impelled to spend a great deal of constructive thought on these two different sets of problems. The mind has to keep moving like a flying shuttle between national and international problems; and in the case of the great Powers, their governments are able, on the strength of their bargaining and, it must be added, coercive power, to make certain minimum assumptions about the suitability of international economic conditions to their progress towards the objectives of their own national economic policy. In the case of a country like India, we shall have, in the event of our failure to secure an autonomous national government, to trim the sails of our national policies to the winds of British or Empire or international economic policies.

That hardly means that there is an ineradicable conflict between the economic interests of one country and those of every other and that the economic security of one people must be got at the price of the prosperity and security of other peoples. The idea that all the nations can live in happiness and prosperity, is one that may be a pious wish in keeping with the general longing for peace natural during a cataclysmic world war or it may be something very near a conviction resulting from a study of the potentialities of each national economy and the nature of the links that must subsist between the economic systems of the nations of the world. At the present state of the development of international opinion, it would appear to be neither. It is true, national opinion, of goodwill for neighbours—even countries professions of goodwill for neighbours—to-day—are not lacking. But they are to be attributed firstly to the need to promote international goodwill and secondly, to the instinct of the shop-keeper which makes him wish well of his customers. From the standpoint of the reconstruction of world economy, there is a world of difference between this selfish instinct of the shop-keeper and a recognition of the changes in national economies and international trade which national and world opinion calls for and which the progress of science and the development of productive technique have rendered not only possible but to some extent even necessary. The shop-keeper who wishes his customers well has little thought for the means by which his customers can find larger and more lucrative custom for himself. And there is no close analogy between the relations of a shop-keeper with his customers and the trading relations between country and country.

Most nations, however, especially the advanced industrial nations, think only in terms of a larger demand for the goods which they are now in a position to produce and do not think

of the means by which their existing customers can increase their custom. They overlook the need to reason out the whole relation from the other side as well. The result is that, while, within the limits of their national economy, they are responsive to the new spirit of conscious regulation of the economic life, there is no similar progressiveness in their attitude to the problems of world economy. In the latter sphere progress for them consists in a return to those conditions of free trade which the world left behind under pressure of ponderous economic and political forces. If opinion in economic questions is to be abreast of the times, it has to take its cue, not from arbitrary notions of national good derived from a distant past, but from the potentialities opened up by the discoveries and inventions of the time. These discoveries and inventions to-day are such as to modify very considerably the geographical division of industry that obtained in the past and to enable each country to organise its national life on the basis of indigenous production of the basic necessities of life.

The implications of this position are, indeed, far reaching and not easy to analyse. In the first place, it does not mean absolute self-sufficiency in the basic necessities of life. The self-sufficiency may be relative to the extreme interdependence that obtained in the past. Secondly, the production of the basic necessities of life to a large extent within the borders of each country does not mean the death knell of international trade. Modern man does not live the life of a primitive savage. His wants are many; and even more varied are the wants of the industries which cater to his primary needs. The needs of the average individual are not the needs of the nation. Copper or tungsten or manganese is required by basic industries, not by the people of a country; and when such materials are not evenly distributed all over the world, trade in these goods is a necessity. Likewise, human wants have a far wider range than food and clothing and other necessities. Economic self-sufficiency is an idea, which cannot be brought into contempt except by ridiculous caricature. Those who dislike it for reasons of their own are sufficiently unscrupulous to prejudice its cause by unfair exaggerations. They are not lacking in incentives to indulge in this game. To the extent that modern industry is war potential, political suspicions strengthen economic jealousy in the fight against the development of backward countries and peoples. The rise of new centres of production involves a temporary duplication of productive equipment and loss of foreign markets and over-production and the like. The industrial nations saw enough of these in the inter-war period to wish for their avoidance in the period following this war. The result is that the great Powers' ideas of post-war planning are restricted to the provision of economic security for their own people through a better organisation of their system of production and trade and distribution. The need for a better world order is recognised in the talk about the four freedoms and possibly a readiness to provide relief in cases of acute suffering.

Planning the post-war world is essentially a matter of reconstructing national economies and integrating them into a world economic system. The least that can be said of national economic policies is that they enable a better grasp of the realities of the economic problem in each country. Even a world State, should it be brought into being, would find it expedient to decentralise the responsibilities for economic well-being, instead of concentrating them in the hands of an executive Government for the whole of the earth's surface. In the same way a practicable degree of economic self-sufficiency is a concrete objective of national policy. The alternative to it lies in asking other countries to suit their policies to your convenience. And that is exactly what Britain and other free trade nations ask of the rest of the world. This requirement will be met only so long as the free trade countries have the power to prevent the economic

91A, HARISH MUKHERJEE ROAD, CALCUTTA.

autonomy of other nations. That power has unmistakably dwindled in recent times and might conceivably vanish altogether when the present war draws to a close. Economic policy, therefore, must take account of the prevalent conditions and seek to reduce the dependence, for the progress and prosperity of the national economic system, on extraneous factors. Such an attitude will bring about a careful development of internal resources and clarify the nature and extent of the links that bind national economies together into a world system. It will narrow the scope for inequalities within the country and minimise the sources of friction among the nations.

It is, however, this attitude which some of the great Powers have persistently refused to take. The reason is not far to seek. The craze for markets abroad is due primarily to the fact that big business cannot expect to make as large profits by catering to domestic demand as by exports to foreign countries. Once it is obliged to work within the limits of a self sufficient economic system, the immensity of its power and profit is bound to be reduced very considerably. This may apply to countries as differently situated as Great Britain and the U.S.A. But in the case of Great Britain, there is also the fear that the development of backward countries will deprive her of her markets, reduce her foreign trade and enforce a cut in her standards of living. This fear is no doubt, entitled to greater consideration than the concern of big business for its present scale of profits. It is worthwhile examining whether the progress of undeveloped countries like India towards a measure of economic self sufficiency in the necessities of life should necessarily mean a reduction in the standard of living of countries like Great Britain.

The reasoning involved in this is to a large extent hypothetical. One has to imagine the kind of British goods, for which demand will decline to vanishing point and the kind for which the demand will increase. The repercussions of these changes on international trade as a whole and their final impact on Britain's national economy have also to be thought of. But some facts of economic history are not only relevant but seem to have a decisive significance in this controversy. During the period of Germany's industrialisation, Great Britain's trade with Germany was bigger than with any other country. Trade between the U.S.A. and Europe did not fall after the U.S.A. accomplished her industrialisation. The trade relations between the U.S.A. and Canada do not suggest that the biggest trade is between the richest and the poorest country in the world. History affords no warrant for the feeling that the industrialisation of India must cut seriously into Britain's foreign trade and her standard of living. There are however, certain features of Britain's national economy which are peculiar to it and have no parallel in the instances cited above. The density of population the intricate nature of the economic organisation, the elaborate mechanism of interdependence reaching to the farthest countries of the globe, these argue against optimism about British economy adjusting itself to the new order. That is why economists like Lord Keynes who perceive the facts of the international situation as well as any other insist that, unless British exports can be increased by 50 per cent over the pre-war level, a decline in the standard of living cannot be avoided. But there can be no doubt that, unless Britain is to force her economic policy on a number of foreign countries, she will have to abandon this dream of a larger export trade in the staples of pre-war times. She will have to devote her productive equipment to satisfying the needs of the people direct-

ly instead of indirectly through far-flung foreign trade. But more than that, she will have need for greater faith in the expansive qualities of economic prosperity. There is no reason that the future trends of trade between Britain and industrialised India should be different from the trade between Britain and industrialised America. Modern civilisation has demonstrated the illimitability of human wants. The frontiers of human knowledge and inventiveness are receding faster than ever before. New values and new amenities are constantly being created by the nations who are in the vanguard of scientific progress. The luxuries of yesterday are the necessities of tomorrow. A country like India when it is poor and undeveloped is good enough for an offtake of coarse cotton cloth of the value of a few tens of crores; and the demand is in the lap of the rain-god. An India economically well developed may take far more by way of luxury goods and high grade manufactures than what she can now afford to have of the necessities of life.

But there is little sign yet, apart from occasional letters to the Editor in the columns of "The Times," that British opinion has undergone a new orientation. The attitude of the U.S.A., too, is not appreciably different from that of Great Britain. Recently, Reuters cabled out to India a report of a conversation between an unnamed Indian Official and certain leaders of American business. One fails to see the reason for the anonymity of the Indian official. But leaving that aside, the opinions attributed to the American businessmen seem to show little comprehension on their part of the essentials of the economic problem in India or of the terms on which nations can cooperate with one another in the economic sphere. The Americans seem to be still thinking in terms of guaranteed investments, guaranteed, that is, not by the honour of a people but by control over political life. It is said that American capital would freely flow into India if political stability could be guaranteed. There has been enough in American experience of foreign investments to show that this kind of guarantee is in nobody's hands to give. The last two decades abound in instances of repudiation of debts and expropriation of property of foreign nationals. This war is being fought not to improve on the quality of these guarantees, but to create a world in which there will be no need for them. For political and economic, no less than broadly human, considerations, the economic and political strength of India has to be developed. America either appreciates this position and joins in the task or she does not. Nothing is gained by asking for guarantees of political stability when the only possible guarantee lies in the prosperity of this vast sub-continent. Nothing is gained by fear of political changes. The British Premier foretold dire consequences for provincial autonomy in India. The problem is to make political issues an irrelevancy in the economic sphere; and that cannot be done without the equal economic development of all parts of the world. The U.S.A., more than any other country, has to regard the post-war problem of world economy as one of correcting the lop-sided development of the past. But instead, the U.S.A. allows itself to be sidetracked from its purpose with hollow plea for free trade on the one hand and plans for the control of industrial raw material on the other. But the time spirit is behind the development of backward countries, which will not wait for the Powers to discard their old habits of thought. At this rate, an international economic conference in the post-war period will reveal even sharper differences than the ill-fated World Economic Conference of 1933 and court another cataclysmic failure.

REACTIONS TO INVASION

The invasion of Europe is an accomplished fact and the Allied Commander's report on the progress made in the first week quickens general anticipation as to the outcome as well as the more interesting possibility of the termination of European hostilities by the end of the year. Apart from the familiar changes in the rates for marine insurance, the consequences for markets are fairly clear at present. The exciting possibility of peace in the immediate future has been duly laid aside for a more precise evaluation of consequences for producers and exporters. The prospect of larger imports of certain classes of consumer goods does not compromise the future of Indian industry. The stability of commodity prices for over a week indicates most clearly what is to be expected or desired. Such changes as are made in regard to ceilings do not affect the general high level of commodity prices. The prospect of increased production in regard to coal or other minerals is perhaps a bigger factor than imagined. The view now taken of the jute industry's future contains a very clear indication of the progress from defeatism to optimism, based inevitably on the decision as to the renewal of the working hours agreement.

It is noteworthy that the U.S. administration's proposals for export and import quotas in respect of cotton come close on the heels of invasion. The reopening of the European market is both desired and expected. The old peacetime procedure is to be revived, partly because the South requires special encouragement, partly because the U.S.A. as a creditor wants to use her position to provide goods in return for goods. Yet the programme suggests that in the expansionary period the U.S.A. wants to avoid adjustment of costs. Farm production and prices are to be maintained at a high level, long before depression is glimpsed; though the repercussions on other producers would not be wholly favourable high prices in the U.S.A. would not be detrimental to others. It may be urged that a weakened position in respect of wheat, maize, bacon, lard and tobacco make the U.S. cotton programme intelligible. It is not unlikely that future control schemes in regard to copper or coffee may be approved by the U.S.A. if the cotton plan goes through. Preparation for bargaining at this juncture suggests that an exchange stabilisation agreement is merely a preliminary. Trade will require special adjustments in spite of the fact that most or all commodities

surpluses would be absorbed by the U.N.R.R.A. while export subsidies do not appear old-fashioned, it is quite possible that other regulation schemes temporarily renewed will acquire additional strength for several reasons. The tea and tin schemes as well as the wheat agreement may be regarded more favourably in the future if the U.S.A. has its own way in regard to cotton. Since cotton exports have very limited significance at present for India and the import quota could (as Japan demonstrated in the past) be used to sustain textile exports, the plans are not likely to be deprecated by India. For the present, it is important to note that the forecast by Sir V. N. Chandavarkar as regards the world's textile supplies is well within the range of realisation.

A direct and precise result of the war is the exchange rate fixed by agreement for the franc. The heavy depreciation of the Occupation period is ignored for the main object is to enlist French support for the Allied invasion and secure the downfall of Vichy. It may also be suspected that scarcity in France would be alleviated after the invasion by the flow of Allied supplies. The gains would be evenly distributed for the Allied army would be able to get a little by way of local supplies and labour; and the French National Committee's scruples are respected. The action promptly taken may have no effects beyond the theatre of war but it suggests that the ruling principle is Back to 1940 in which case the effects in a wider sphere may accord with anticipations

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd

May to 27th May, and thereafter increasing by 8 pias per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

During 1943 highest profits earned in the history of this Bank.

The bank has got a very high percentage of liquid assets and is one of the safest and strongest Banks of Upper India. Attractive rates allowed on Fixed Deposits. Loans granted against approved Securities. Terms on application.

G. K. CAPOOR, A.I.B., Managing Director.

If you want to AVOID the discomfort and inconvenience of wartime travel, you can always think of an excuse. If it's a marriage you should attend, you can send the rail fare as a practical present, but stay at home yourself. If it's business, you can conduct it just as well by correspondence. If it's a religious festival you can send an offering by money order. If it's a holiday, no excuse is required. Who wants to spend hard-earned leave, crushed into a railway compartment spending twice as much money as ever before on tongas, gharis and other incidentals? Spend your leave near home—get a real rest,

and the maximum benefit from those precious days. But if you want an over-riding excuse, it is that the Railways are busy. They have to feed all the people of India, and assure the supplies of other necessities of life. So great is their task that passenger travel must be reduced.

Travel Less.

ISSUED BY THE RAILWAY BOARD

AAB-274

of a fairly large and regular supply of dollars in return for other currencies. As between the lira and the franc, a useful distinction has been made on account of the alliance in North Africa.

The point that bullion prices in Europe or elsewhere will be unrelated to exchange rates can scarcely be overlooked and French stabilisation may influence Allied dealings with other European currencies. The preference for the pre-Occupation rates in any or every case would hardly lead to a large increase in overseas supplies for a freed Europe; but it would be a blow to the Berlin clearing system under which some neutrals have used their blocked balances as external reserves. The re-entry of sterling implies the reorientation of the Scandinavian and Baltic currencies towards sterling in the future. The depreciation merely incidental to borrowing or privation is ignored for Vichy may be compelled to replace the 1940 armistice by another armistice. The programme of restoration undertaken might have no special bearing on the foreign trade of France but it is more than likely that Mediterranean trade would be distinguished from European trade and the connection between Africa and Europe (to which Moorish rule in Spain bore witness) may be broadened by stages to cover emigration from Italy.

Since the opposing armies in Northern France are fairly evenly balanced, except in the matter of our support. The issue is dependent on the progress of insurrection. The decision as to the exchange rate made in consultation with the French National Committee suggests that the aim is not to take things away but to turn the abundance of money arising from Nazi occupation into a factor of confidence by promising convertibility into sterling when invasion is complete. Though it may be urged that the decision relates only to the small invaded or occupied area only it is now clear that the French Empire is to be treated as one and the agreement of February is to be applied to the limit. The franc-dollar rate will probably be based on the £1-200 f. rate agreed upon and the new set-up will be readily linked with the original promise to let the rates ruling in August stand if and when an international monetary agreement is negotiated. Though premature surmise as to the status of the franc is unwarranted, it is clear that the memory of the 1936 agreement persists.

What this promise of stability signifies for the European

currencies formerly united in the Gold Bloc cannot be dissociated from the probable effects on the various cross-rates. Immediate appreciation of Allied currencies and the fall of the Mark in a market like Zurich would not convey the first hint of what course trade and investment would take after the war. But it must be admitted that the rate as fixed for France would make borrowing easier for post-war purposes while all the currencies that have altered in external value owing to the increase in note issue, are likely to regain strength from the fact that the rate for French francs is fixed sufficiently near the prewar rate to spare France (and Europe necessarily) the grave troubles experienced after the last war. If confidence in the currency is not restored by a single step the countries removed from the war are likely to experience, in some measure, the benefits. As the drop in bullion prices illustrates clearly the rupee is not falling; it is only silver that is falling and the permission given to remit rupees to certain specified countries will certainly be appreciated abroad. It is suggestive that no news as to Alexandria gold prices has been received of late for gold sales would be superfluous. While the commodity markets show no determinate effects, it is not unlikely that firmness is in evidence in jute and hessian, to some extent a result of the invasion.

Some may note that the trend of last week has been decisively reversed and the movements in London and India are identical this week. The real importance may, however, lie away from investments and their value in the disbanding of goods and a scaling down of prices. The favourable effects on the price-level would extend to the volume of savings and targets set for Government loans this year may be more easily reached than presumed. It is in the sphere of price control and augmented savings that large and immediate results can be hoped for. A recent decision to raise Rs. 50 crores at 2½ percent by means of a tap issue requires little explanation in view of the sustained improvement in gilt-edged that is more interesting for us than the rise on what are called peace shares though the distinction between peace and war shares is apt to be blurred. More interesting than the proximate market reactions to invasion is the effect in regard to planning. The fertiliser manufacture project is under way and private plans for automobile manufacture have come into the news like the proposal to set up a private aircraft manufacturing plant.

Editorial Notes

No Repudiation—No Repayment Either

The cat is at last out of the bag. It was never quite concealed and probably was not meant to be. But it is as well that attacks on the Financial Settlement and tall talk about British generosity have yielded place to proposals of virtual repudiation of Britain's sterling obligations to India. "A compromise", writes the "Financial News", "seems to be indicated". The compromise so called is that "a part of the balances might be available for purchases within Britain and the sterling bloc, while probably a larger part should be earmarked as special non-interest bearing reserves for use only in an emergency". That is, India must be content with being privileged to buy goods from the sterling area for less than half her sterling balances; and to get the other part, she must work up a major crisis. Since the qualifying crisis may cost much more than the blocked sterling, it would be economical for India to write it off. It remains to be seen how much support this ingenious suggestion evokes in the rest of the British press. As for India, public opinion has expressed itself, clearly and firmly against the surrender of any part of the sterling assets, to which she has every imaginable manner of title, though India is prepared to be as accommodative as possible about the mode of repayment. Talks of common interest cut no ice. If British opinion is so insistent that this war is as much India's as Britain's it might, with a little forethought have strengthened this argument in advance by letting the Indian Legislative Assembly have a say in the declaration of war and inaugurating a National Government to prosecute it. A £1,000 million would be no bad return for what is after all a requirement of propriety.

Comprehensive Inquiry

The committee over which Mr. D. V. Rege presides has issued a questionnaire to those interested in labour problems. The investigation into labour conditions is in connection with social security measures contemplated. Opinion as to labour legislation required has been sought, and a review of the working of acts in force is promised in connection with the labour enquiry. So far only a few Provinces can show data as to wages and Labour Enquiry committees in the past were concerned almost exclusively with wages in one industry or another. The new enquiry starts with questions as to previous investigations, existing legislation and its effects. Opinion as to desirable amendment is invited. The main interest lies away from legislation in regard to changes in wages since 1938. Though allowances are common and overtime is familiar, the adjustment as between wages and the cost of living has not been complete or prompt. Information secured by the Committee so far would indicate what compensation is available in the

form of cheap grain shops. Details as to contract labour would appear necessary to show that labour directly engaged has certain advantages.

The most important question raised is regarding rationalisation. To ascertain the effects on efficiency, employment and wages by a single question of employers and workmen may appear ambitious. The information obtained in any case would afford hopes of rapid industrial progress in the future. A detailed wage census also is contemplated. Like the formal large-scale enquiry of the past the labour investigation committee looks also for information as to recruitment, turnover and apprenticeship. The questionnaire suggests that the Committee was to go over the whole ground including conditions of work. A separate set of questions as to housing might appear necessary on account of the slum evil to which the public health enquiry is related. The questions asked as to migration are too few to merit attention for mobility. Like the Whitley Commission the enquiry is not going to encourage or discourage mobility. Like the Whitley Commission the committee seeks information as to working class debt as well as welfare arrangements in force. It is rather singular that no questions as to profit-sharing or a share in the control of industry occur in the list. Employers and interested persons are asked to state their opinion as to the nature and extent of social security, but the most relevant part of the enquiry is in regard to insecurity of employment and a possible reduction in employment after the war. The setting up of labour exchanges is only a part of the attack on unemployment contemplated in questions 103-4 of the general questionnaire. Employers regarding labour as a provincial subject only would perhaps be surprised by the sweeping questions as to social security, but they are authorised to cite arguments against any scheme or proposal though from the labour standpoint the complete omission of any reference to trade unions in the questionnaire may create some doubts as to the ultimate value of the enquiry undertaken.

Indian Agriculture

The recent food crisis in the country has compelled everyone to think of the fundamental problems of Indian agriculture. Official and non-official planners for post-war economic development of India emphasise the need to increase the productivity of the soil through technological improvements and recommend suitable agrarian reforms to save the rural population from distress. News and views are also pouring in from abroad that this global war is likely to leave a legacy of food shortage for the world at large. Every country should maximise its agricultural production and solve its food problem likely to worry the administrators in post-war years. It is therefore necessary that everyone in this country

should know all about the present condition in order to appreciate the future prospects of Indian agriculture. Mr. R. D. Tiwari's book on "Indian Agriculture." (New Book Company, Bombay, Rs. 16) contains good deal of information on India's agricultural resources, tillage, size of holdings, cattle wealth, irrigation, rural indebtedness, and rural finance. The problems connected with many important aspects of Indian agriculture have been clearly explained and suitable remedies suggested. Facts and figures contained in the recent rural surveys conducted in different parts of India are carefully sifted and included in the relevant chapters for the benefit of students. The author pleads for Government financial help to agriculture in order to increase the efficiency of cultivation. Agriculture should be treated as the cinderella of national life; it should be looked upon not as an industry or a business but as "a public function or service performed by private individuals for the care and use of the land in the national interest." Viewed against the social background it can be seen that agriculture is more a mode of living than a business pursuit and hence the Government should evolve an agricultural policy best suited to conserve the material and human resources, provide for national security and make way for social and economic progress. Examining the plea for restrictions on the export of foodstuffs the author says that exports, being a small fraction of internal production, may be allowed since they increase the purchasing power of the agriculturist. Prof. Wadia and Joshi who favour retraction are no doubt aware of the advantages of preserving and even expanding the

SOUTH INDIA

scope of agricultural exports, but looking at the problem not merely from the point of view of the big land-owners, who are by no means the majority in our villages, but from the point of view of the landless proletariat also, there is a strong case for restricting export of foodstuffs and certain essential raw materials. While higher prices may benefit the big landowners the huge bulk of the village population being landless can be helped only by greater and more varied employment and higher wages. If exports of foodgrains and essential raw materials are absolutely unrestricted they tend, under the present conditions in India, to increase the acreage under cash crops at the expense of food crops and this trend, as the war has now revealed, is not best calculated to guarantee national safety during critical times. From the standpoint of social welfare Prof. Wadia and Joshi are correct in condemning a policy of free trade "that favours the export of foodstuffs and makes it more difficult for people to buy the necessities of life." The best way of increasing the purchasing power of the people is to speed up the industrialisation of the country and not tolerating unrestricted export of foodstuffs while population swells and land tends to concentrate in the hands of the few. The abject poverty of the masses is a proof that if their purchasing power is increased the foodstuffs will have a great internal demand to satisfy and need not seek outlets abroad.

Mr. Tiwari has furnished a wealth of details regarding important aspects of agriculture but a chapter on forests or rural marketing problems would have increased the value of the publication. Wartime developments have not received due attention and one feels that in many places the figures furnished could have been made more up-to-date. A note on post-war agricultural policy for India would have made this useful book more attractive and timely.

Mysore Budget

The Mysore Budget Estimates for 1944-45 presented by the Dewan, Pradhana Siromani N. Madhava Rao, reveal a small surplus of Rs. 2 lakhs after providing for new schemes and contributing over a crore of rupees to the special funds. The Accounts for 1942-43 showed that while total receipts stood at Rs. 638.95 lakhs the expenditure was Rs. 636.91 lakhs leaving a surplus of Rs. 2.04 lakhs. The revised estimates for 1943-44 record large variations from original estimates. The revenues stand as Rs. 807.42 lakhs and the expenditure comes to Rs. 804.97, leaving a small surplus of 2.45 lakhs. The high prices of gold ruling throughout the year resulted in an increase of over Rs. 1 crore under the duty on gold, while income tax and excise yielded an increase of Rs. 30 lakhs and Rs. 16 lakhs respectively. Receipts from Railways and Hydro-electric works tell the same story. The excess on the expenditure side is accounted for by the expenditure connected with food and civil supplies, the grow-more-food campaign, increase in the salaries of Government servants and grant of dearness allowance, etc. Increases in income tax, super tax and excise duties on betel nuts, coffee and tea are proposed not so much with a view to adding revenues for the current needs of the State but to keep in line with developments in British India. It is expected that the new excise duties would yield Rs. 7 lakhs while the increases in income tax and super tax would bring in Rs. 18 lakhs. The duty on gold is expected to rope in Rs. 100 lakhs more than the current year's receipts. On the side of development schemes a total of Rs. 96 lakhs has been provided.

The opening of 400 primary schools during the year ahead and the provision for opening a Metallurgical Department in the Institute of Science are part of the new drive for greater educational facilities. Rs. 33 lakhs are set apart for public improvements including Rs. 5 lakhs for the Bangalore City Improvement Trust and Rs. 1.7 lakhs for rural reconstruction schemes. Rs. 14 lakhs are allotted for distribution of seed and manure to ryots. Dealing with the progress of industries the Dewan in his budget speech referred to the satisfactory working of industrial concerns. Among the completed schemes of expansion are the ferro-alloy furnaces of the Mysore Iron and Steel Works, the construction of an additional furnace and the manufacture of steamed bonemeal at the Government Dichromate Factory and the establishment of a Sandal Oil Factory at Shimoga. Mysore has its own post-war reconstruction committees to tackle problems of re-settlement, re-employment of demobilised men and disposal of stocks and stores. A Commissioner for Economic Development and Planning has been appointed to evolve suitable plans for post-war progress. The Government have also proposed to have their financial position and methods thoroughly reviewed by an expert from outside. The budget estimates for 1944-45 were framed before the breakdown of the Sivasamudram Power Station and though it is now known that normal conditions will shortly be restored the temporary industrial dislocation it has caused will surely affect the estimates and probably necessitate new adjustments.

Ships and Men

Australia's industrial progress can be learnt from lease-lend figures for China made known by Mr. Hall in the Commons, also from the figures of ordnance production. Weapons and equipment, embracing thousands of items, have been produced by the Munitions Department. The Minister for Munitions said that the Ordnance Directorate has to complete production valued at £26,587,000 to raise the total to the programmed total of £72,236,000. The Ordnance branch also is responsible for agricultural machinery, output valued at £35,825,000 has been completed weapons and mobile equipment are considerable items. Virtually complete is the fighting vehicles programme estimated to cost £3,879,000. Electrical equipment, naval requirements, and water pumping and air compressor equipment also were provided. According to a monthly news summary, the Ordnance Directorate produced internal combustion engines, valued at £1,914,000 and mobile bridging equipment and small marine craft. The Cabinet has approved shipbuilding plans. Additional vessels of thin types for coastal island trade have been ordered. The Minister for Munitions referred to the extension of the shipbuilding programme beyond the construction of twelve standard vessels and naval craft. Ships for overseas work are obtained from Australian yards, and India has received some. In Victoria dock facilities are being increased to deal with the new order. A new berth to build small coastal vessels is building and a 9,000-tonner

is nearing completion. Repair facilities too are being extended and an electric floating crane costing £40,000 is being extended and being got ready for help in repairs. A railway marine dock at Melbourne is under consideration but lack of man-power has held up the project. Production achievements listed recently on the supply of 14 million boots in wartime. That explains the shortage of footwear for civilians. The trade, having lost over 1,000 employees in Victoria alone, has faced strain on account of demand for repairs as well as new army boots. Production trends are likely to change as factory workers have gone down in numbers since March, 1943. New South Wales, followed by Victoria, has the largest number of factory workers. Plans to take men out of the protected industries for the Services were under way, but the Australian authorities also meant to place more back in essential occupations which wanted men so that the strength of the Army would be reduced by 90,000 in 12 months.

Restoration In Rome

Except for the Navy Minister the colleagues of Badoglio have left with their chief. The new cabinet finds a place for Croce and Sforza but the old Premier and the young Regent represent a survival from the past. The capture of Rome made the changes inevitable but the principal question arising as to the extent of territory that will be assigned to the government of Italy cannot be met by reference to the past. The pursuit of the German forces in retreat should enlarge the conquered territory though, the Allied Advisory Commission may stick to very gradual transfers of small tracts. If Italy is not typical it is fairly clear that restoration and rehabilitation will be a long-drawn-out procession in the Occupied countries. The Italian Government has to carry out the armistice terms—the economic and financial clauses still remain a secret. The burdens that are shouldered by the new Ministry that has stepped into Badoglio's place are not limited to destruction of Fascism and encouragement of the Patriots in the north. Italy's postwar position is going to be difficult for the new regime will contract debts on the wartime scale and the foreign creditors will perhaps have a say in Italy's affairs even if the principle of self-determination is applied to Italy now and always. The friendship of the Vatican does not mend matters greatly though, it is possible that the dispersal of the navy and the merchant fleet represents, in the main, an asset of some importance to Italy. If compensation to Greece and Norway is made at the expense of Italian shipping after the war, the asset would shrink in importance. Overseas settlement may offer possibilities of a sort even after the loss of Libya but the impoverishment of Italy would remain. While the fascist government's acts could be repudiated, the large internal debt cannot be covered by the outside devaluation of the lira. After the war the tourist traffic is not likely to revive quickly and Italy's losses in regard to railways, irrigation works and electric supply would be an addition to the cost of war. The restoration of the parliamentary regime would not thus be a remedy for the ills that are likely to be in evidence after peace. The redistribution of wealth that has taken place makes it hard to say if taxation would set things right. Russian experience might suggest optimistic conclusions like the declaration of war in October against the Nazis. The Cabinet changes mean that Italy is ready to act on advice. The gains that may accrue

from Allied victory however must be reckoned very small. Autarky on the old pattern is inescapable for several reasons including the decay of the former export industries and the loss of convenient markets. The desire to limit and qualify promises contained in the Atlantic Charter certainly must influence the Italian outlook.

Film Producers' Prosperity

In 1942 it was freely said that U. S. film companies were unable to get their overseas income transferred, were also compelled to look at manpower and similar problems squarely and were plunged into depression. The actual experience belies this, and more recently, it has been known that the U. S. film industry has struck deeper root in England owing to the revival that has taken place there by re-grouping in the film industry. The Ostrers have yielded to a Rank. In any case, cinema prospects are assessed more favourably in Britain and American enterprise has reacted conventionally by increasing its own stake in Britain. At home the U. S. film industry has apparently got over most of its problems, and some companies increased dividends in 1943 while the rise in earnings was attributable to the increase in the number of super-pictures. Longer runs for million-dollar pictures were the result of the war prosperity of workers craving for amusement. The increase in costs has been balanced by higher film rentals. Box office records are wholly encouraging and a direction to provide 100 new theatres gives a clear clue to producers' prosperity. This year is expected to be better than last for producers and theatre-owners alike. On this basis, the post-war future is good. It is good also for the reason that conversion has no meaning inside the film studios though the bottom of the market for war films would inevitably drop out. The decay of Europe's film industry may possibly assist the U. S. industry to hold its own against any threat from better British pictures in the U. S. market. The essential advantage that Hollywood still attracts and keeps the best British or other talent will probably be retained by the U. S. film industry. Though U. S. film shares did not stay anywhere near the top at the end of 1943, the two factors that companies which had not paid dividends began to pay and the best results were turned in by Loews' Inc. as usual require notice. When other amusements are again freely available, and holidays away from home are the rule, the market for motion pictures would show no real change. It is noteworthy that Indian film-makers in spite of peculiar production difficulties have met a growing demand in wartime but statistics are singularly lacking though the claim that films are a major industry in respect of capital and turnover is sufficiently familiar.

South African Plans

The Industrial and Agricultural Requirements Commission set up in 1941 was the first South African body engaged in considering postwar development. It issued soon reports on long-term economic development. The third report, dealing with fundamentals of economic policy in the Union dealt with resources, institutions and economic structure. It offered criticism, and urged that past policy had been mistaken, as weaker industries had been assisted by the tariff. It was pointed out that Protection had partly defeated its own ends by contributing to raise the industries from being self-supporting. Criticism of agricultural policy also figured in the report, for it was noted that State help had been attended with adverse effects on the Union's soil. Skilled workers are always too few, but the classification

called for critical notice. Railway rates policy was assessed critically to show that industries, favourably located, were deprived of natural advantages by concessions to high cost producers. A Planning Commission of judicial status, to investigate and advise on South Africa's problems, was recommended. A planning committee under Dr. H. J. Van Eck was then set up with an instruction to report to the South African cabinet. A secretariat is being formed for the purpose. The starting-point appears to be regional surveys so as to help re-employment, roads and housing schemes. The committee has taken up the earlier commission's work and the transition problems are being examined. Similarity between Indian and South African practice may be hard to ascertain, but it is enough to note that the precise formal judgment on wartime development has not so far been attempted in India. The acquisition of knowledge before launching on specific proposals is, however, common to both countries. A common feature is the relative scarcity of trained labour but South Africa cannot as yet disentangle labour from the native problem. A commission sat last year taking evidence and the most important employer, the gold-mining industry, led much evidence to show that native labour got a square deal. It has been recognised that the Union does not help herself by keeping down the coloured worker but opposed to this view in some measure is the demand for immigrants. Afrikaners are not very eager to bring in settlers from Europe, and natives too are not enthusiastic. But it is fairly clear that agriculture would change if basis of agriculture changed quickly; wool would be less important than maize or fruit in the future, and farm subsidies along with price control may be retained in the Union. The main difference as compared with Indian however lies in the absence of any population problem in South Africa, also the absence of the defence problem that brings African projects for closer union well within range of realisation.

Land Boom

Whether or not registration records and stamp revenue figures furnish conclusive evidence as to the rise in land values, it is noteworthy that the general tendency for investors to look favourably upon land when the value of money is changing has been operative for long. The rise in the value of produce like the reduction in agrarian debt is more than a symptom of the appreciation in land values. It would be difficult to disconnect this increase from the war profits of the new rich or even the desire to avoid tax by investment in land. While land sales in Bengal on an unprecedented scale were the direct result of the 1943 famine in other parts of India they were due to the higher values now realisable. The improvement in values when the money income went up was hardly unexpected, but the land craze was due also to the fear that food might become impossible to get for those who lived in towns. In any event, the substantial rise in values is a result of the general rise in prices though it is unlikely that there is exact correspondence between the value of land and the level of wholesale prices.

The buying of farmland by men from cities anxious to invest is not peculiar to India. Last year a big land boom was under way in the United States and the turnover in rural real property was even larger than in 1919-20. Rich immigrants from the cities promoted the inflation that appeared to them a hedge against inflation. The U. S. Government thought at once of a special tax on capital gains from land sales. An increase of 35 to 60 per cent in values was noted last year, and the farmers were not the prin-

cipal buyers of land. Values rose independent of quality or uses, and non-residents frequently took over properties. Business men retired from the cities quickly turned buyers of land but farmers nourished by high prices mostly paid off mortgages and refrained from buying land. A large reduction in rural debt was recorded between 1938 and 1942 but an upturn was noted as insurance companies and banks showed themselves ready to lend money on land. Farmers did not like the rise in prices and a Senator got a bill ready for taxing during and after the war too all those who bought land for a quick sale. The main danger of a boom in land was held to be the best argument for taxing speculators. Similar legislation may not be needed but the enhancement of stamp duties in several Provinces appears an inadequate means of getting for Government its share of unearned increment.

National Bank of India

At the annual meeting of the National Bank of India, Mr. Langford James dwelt on the increase in resources arising from the war. The increases under cash and investments are logical but the rise in total Deposits to £61.87 million indicates that Exchange Banks in India have showed in the increase of deposits reported by scheduled banks while the mild improvement under Loans and Discounts indicates that in India the chances continued to improve and the adaptability claimed has helped them. Mr. James' observations on the economic record of 1943 are of less interest than his acceptance of the necessity of planning and his own choice of priorities. Food is placed first, but not for the maintenance of exports, only for safeguarding the efficiency of labour in India. The order and scale of investment prescribed must necessarily change but the prominence given to agriculture suggests that the British business community's views in India, and in London, are more or less the same.

Hindusthan Co-operative Insurance

The 37th Annual Report Accounts and Balance Sheet of the Hindusthan Co-operative Insurance Society Ltd., for the year 1943 present a gratifying picture of the achievements of the Society during that year, which has proved to be a record one for the Society in every respect. The new business of the Society has registered an increase of 84 per cent. over the previous year's figure, the Life fund has been increased by the substantial amount of Rs. 66½ lakhs to Rs. 5,39 lakhs; the total premium income has exceeded the one crore mark

AUDITOR

V. K. Cherian Esq., B. Com. (Bombay).

By a special resolution of the Board of Directors passed at a meeting held at the Registered Office of the Bank at Kottayam, on 27th May, 1944, it was resolved that a further 35,000 shares of Rs. 10/- each out of the balance un-issued capital of the Bank shall be issued at par, payable in full along with application.

The Bank was formed in 1929 with a small net paid-up capital of only Rs. 15,750. The capital has, from time to time been added to until today the figure stands at Rs. 1,50,000/-, but this is found to be totally inadequate for the requirements of the Bank's business in view of the Bank's present status and largely expanded

activities. The present enhancement of the paid-up capital of the Bank, will provide a further 3½ lakhs of actual cash for employment in the Bank's present business, and at the same time facilitate the execution of the carefully considered plan of expansion.

The Bank has now branches in all the important centres of Travancore. All these branches are working very successfully and are now self-supporting units. At present the Bank with its net-work of branches throughout Travancore and also at Ernakulam in the State of Cochin and Tiruppur and Coimbatore in British India does a considerable and lucrative business

in local exchange and is contributing greatly to the flow of trade rendering valuable service to the public. But the Directors keenly feel the want of fully equipped Branches at Madras and two or three other important commercial cities in British India.

The capital proposed to be raised by the present issue will not only provide sufficient capital for the proposed new branches, but will also enable the Bank to come scheduled to the Reserve Bank of India.

The Audited Balance Sheets of the bank for the previous years show the following progress:—

Year	Paid-up Capital Rs.	Reserve and other funds Rs.	Deposits Rs.	Investment Rs.	Working Funds Rs.
1930	26,750	1,300	33,069	Nil	67,205
1933	35,750	2,800	48,652	..	91,572
1936	41,950	8,500	151,816	28,866	207,173
1939	54,910	11,500	397,112	76,085	539,634
1942	61,561	31,500	1,587,900	142,414	1,787,028
1943	150,000	60,000	3,172,010	339,194	3,725,200

Although the Bank is comparatively a small one, and in the past its activities were seriously handicapped for want of capital, the Directors in each year, since the Bank opened its doors, have been able to declare and pay a dividend of not less than 10% per annum.

Net Profit for the year 1943 amounted to Rs. 45,932/- equivalent to more than 30% of the paid-up Capital.

Thus the Bank has steadily advanced from very small beginnings and has today become a well-established and highly respected institution by following sound Banking principles.

THE NEW SHARES WILL RANK FOR DIVIDEND AS FROM 1st JULY 1944 UNDERWRITING & BROKERAGE

No part of the present Issue is being underwritten. Brokerage at 2% on Paid-up amount of the shares will be ever be paid to recognised Brokers.

Year	Capital Paid-up Rs.	Reserve & Other Funds Rs.	Total Rs.
1930	26,750	1,300	28,050
1933	35,750	2,800	38,550
1936	41,950	8,500	50,450
1939	54,910	11,500	66,410
1942	61,561	31,500	93,061
1943	1,50,000	60,000	2,10,000

Bankers on allotments made in respect of applications bearing their stamp.

As per Articles of Association of the Bank, the present issue of 35,000 shares is to be offered in the first instance to the existing shareholders, in the proportion of 7 new shares for every 3 shares held by a member now. Members are entitled to apply for more than their rights, if they desire to do so.

Members on the Share Register of the Bank as on 15th June, 1944, will have the benefit of this issue.

The Directors have fixed 26th June, 1944 as the last date for receipt of applications from existing shareholders any shares remaining unsubscribed after that date will be allotted to the outside public at the discretion of the Directors.

It is open for the members to have the new shares allotted in their own names or of their nominee or nominees.

Application form is attached to this circular, which may be completed and signed and forwarded to the Registered Office of the Bank or to any of its Branches with a remittance in full at Rs. 10 per share, not later than 26th June, 1944.

By Order of the Board,

M. C. MATHEW,
Managing Director.

Kottayam,
27-5-1944.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It)

Professor K. S. Krishnan, recently of Calcutta and now of the Allahabad University, spent a few days with us; and we had many opportunities of discussing the research and scientific aspects of postwar planning. As I could gather, the Professor's main difficulty is this: he is not yet sure of the Government's genuine interest in planning for India's prosperity. He believes that most of the British elements in India continue wedded to the old attitude that India's industrial expansion spells ruin to Britain's industries. Those in authority in Britain's trade and industry are still unable to realise the fallacy of this attitude. The result is that every measure or plan to develop, extend and enlarge India's industries is, by our British friends, put to the test as to how this development or expansion will affect Britain's industries. The people who apply the test are, not often, influenced by others whose own vested interests are involved in this, that, or other industry. So, according to Prof. Krishnan, the first requisite is the dawning, among all sections of Britons, of the conviction that a fully industrialised India will be a better, not a lesser, customer for Britain's manufactures. In simple terms, the old Colonial policy must be rung out which believed that a highly industrialised country could reap a continuity of dividend in foreign trade only if the country of the other part remained an agricultural country for aye and ever. The new and correct policy is illustrated and emphasised by the foreign trade relations between the United States and Canada. Both are highly industrialised countries with a prosperous agricultural economy. And trade between these two countries is far larger and far more mutually remunerative than is the exchange of trade between the United States and South America. Moral? The whole world, and particularly industrialised countries like Britain and the United States, stand to benefit more and more as India is more and more industrialised and as the standard of living of India's millions grows higher and higher.

Prof. Krishnan cited the instance of internal combustion engines. A committee was appointed under the Chairmanship of Mr. J. C. Mahindra to examine the possibility of manufacturing these engines in India. The Committee was satisfied that it could be done and gave a detailed report. This report has been submitted to critical study by various departments and limbs of the Government. Departments and limbs note and re-note on files which keep growing fatter and fatter. But the internal combustion engine is as far off as ever. No one department seems to have the final say. Everyone has something to say; but it

seems to be the business of nobody to take the matter out of the noting and circulating stage. "I am frankly despondent about the future of planning"—concluded the Professor.

"For my part," I said to the Professor, "I have confidence in the fullest success of planning for India because firstly I see the 'inevitability' of planning and secondly I am, and everyone should be, more than pleased with the distinguished auspices under which planning will now pass through the stages of study, consideration and execution." The chaotic liquidation of the problems left over by the last war has impressed upon the leaders of all nations that demobilisation (using the word in its widest application) after this war must be carefully planned and scientifically carried out. Such demobilisation plans have to be linked with reconstruction plans as, through the war in the air, much damage to civilian properties has been caused and all this has to be repaired. Reconstruction plans have to be so framed as to become plans for a better world to live in for everyone. This conception of a plan for a better world is inspired by two factors—the thought that, while we are repairing damages why not make as good a job of it as possible; and the wisdom that, while making a good job, why not take advantage of the tremendous achievements of science and research which, in the quickened activity of this war, are as notable in a quinquennium as ordinarily they would be in a century.

That is why I say that, in the conditions of the present war and in the kind of postwar period which is foreshadowed, planning is inevitable. Any country will evade or shirk planning only at its peril. There is a special reason which underlines and emphasises the inevitability of planning in the case of India. Some of the other countries have to have recourse to planning so as to restore standards of life and living. India needs to plan so as to introduce a suitable standard of living. The strategic position which India now holds and will increasingly hold in this part of the world has focussed world attention on the disparity between Indian standard of living and what may be called the minimum standard of living. From all points of view, the raising of India's standard of living to that minimum is of more than Indian interest—it is of world interest. I am an optimist about India's political and economic future because I see the inevitability of the problem that a politically contented and economically prosperous India is the concern of the world; and world neglect of this problem will hit the world more than it will hit this country.

Apart from what I have described as the inevitability of planning for India, it is important to take note of the fact that planning as such has now been transferred to a new and impressive setting. As our readers may recall, the plea for economic planning was urged in the columns of "Indian Finance" 15 years ago; and again and again, we pointed out how the potential wealth of India, which was almost as

great as that of the U.S.A., could be converted into kinetic wealth if only suitable personnel and machinery were secured for working out the full details of planning suitable to the conditions and conformable to the great opportunities in this country. Our plea for planning was a cry in the wilderness all these years. At an early stage of this war, however, the Government of India realised that something had to be done for the orderly solution of the problems that would arise soon after the war was over. For this purpose, a sub-committee of the Viceroy's Executive Council was set up to deal with what was called reconstruction plans. It is fortunate that the Vice-President of this sub-committee is Sir J. P. Srivastava. Now that the portfolio of planning is to be transferred to other hands, it is but meet and proper that we place on record the great services which Sir Jwala Prasad has rendered to the cause of planning by his drive, organising ability and sympathetic lead. I have had many discussions with Sir Jwala Prasad about planning; I have been struck by his fanatical devotion to the cause of planning. Most of the credit for the setting up of various committees and the selection of appropriate personnel goes to him. In another context, I had written that, if a national government had been called upon to appoint a General Policy Committee, the men they would have chosen would not have been much different from the present composition of the General Policy Committee. The right kind of men have been secured for the various aspects of planning; wide terms of reference have been given them for their task; and every facility provided for a detailed examination and collection of data for each topic of study. In the result, we have already valuable reports of sectional planning and much progress has been made with regard to other sections of planning. Thus, reconstruction plans, which originated as an inter-departmental enquiry, have now been brought to a condition in which non-official assistance has been sincerely sought and amply forthcoming.

This gradual transition from an official red tape business to a joint and intimate discussion and planning between officials and non-officials has taken place, so to say, in such an unobtrusive way that the public have not realised its full import. When I attended the meeting of the General Policy Committee in January, what struck me most was that planning had been taken out of the hands of the Government and established in a setting in which, whether the Government are keen or lukewarm, whole-hearted, half-hearted, stout-hearted or faint-hearted, the cause of planning will march forward in strident style gathering greater and greater momentum. Nothing, not even an unsympathetic Government, not even a hostile government, can now queer the pitch of planning.

Another remarkable incident happened to strengthen and reinforce the non-official "say" in planning. Mr. A. D. Shroff was one of the members of the General Policy Committee; and, at the January session, he distributed among the members the first copies of the Tata plan. I was to know later how the release of the Tata plan was arranged to coincide with the session of the General Policy Committee. Till the third week of December, the first outline of the plan was under circulation among the members who had planned to work out the details of the 15-year plan.

In the ordinary course, a few more months would have elapsed before the plan secured the assent of all the members. Sir Purshottamdas realised that, if the plan could see the light of day roundabout the time of the first session of the General Policy Committee, it would have the effect of enabling the 15-year plan to make a most effective debut; at the same time, the publication of the non-official plan will come to be an important determining factor in respect of official plans. Between Sir Purshottamdas and Dr. J. Matthai, they decided to rush the consultation among the members and to see to it that the plan in the final printed form was ready by the second week of January.

The publication of the Bombay plan may be described as one of the most fateful events in India's economic history. The Indian public gave it a rousing welcome. The objective of Mr. Tata and his associates was fulfilled in the sense and to the extent that their plan became a topic of such country-wide discussion that it may be said to be the beginning of the movement to make Indians plan-minded. These are developments about which we have every reason to feel gratified. It is the tragedy of subject countries that in most matters, the Government and the people think exactly in the opposite terms. To mention only one instance, if Indians think that a lower ratio is suitable for India, Simla must think that a higher ratio is suitable. It thus came about that the reactions of Britons to the Tata plan was the reverse of the reaction of Indians. A London paper went to the extent of saying that the aim of the Tata plan was to detract from the good work which Lord Wavell was doing through his keen interest in the work of the Reconstruction Committee of his Executive Council. The

British businessmen in India have hardly said anything about the 15-year plan. In general terms, it may be said that the British non-official elements are none too pleased. At the same time, it is a sign of the times, a sign particularly of the new official attitude was made clear that the plan would be examined in a critical and constructive spirit. The views which Sir Jeremy Raisman expressed on the plan in the course of his budget speech, were quite friendly. In the subsequent months, Sir Jwala Prasad Srivastava, as the titular architect of the official plans arranged for frank and full discussions between him and his colleagues and associates on the one hand and the authors of the Bombay scheme on the other. The next logical step in this process is the appointment of Sir Ardeshtir Dalal, one of the authors of the Bombay plan, as a member of the Government of India in charge of Development and Planning.

I have traced the history of planning in such detail in order to show that the materialisation and progress of plans will, in the light of past developments and present and future conditions, be determined not so much by the acts of commission or omission on the part of the Government, as by the intelligent and constructive support which plans in their conception and execution receive from the various interests concerned and from the public at large.

I, for one, have been hoping for the establishment of a Supreme Economic Council. Here, then, is an Economic Council comprising Mr. J. R. D. Tata and his illustrious colleagues, as authoritative a body as it is possible to constitute in India. Above all, the most heartening feature is that this self-constituted council is headed by Mr. J. R. D. Tata, the Chairman of Tata Sons. That Tata Sons are thus and in other ways represented on this council, may be taken as a guarantee that whatever enterprises have to be brought into existence as part of the industrial plan, will not remain as mere paper schemes, but will soon be converted into concrete schemes. Tatas have the necessary organisation, the experience in pioneering, the ability to secure technical assistance from any country in the world and financial resources. Tatas have stood for pioneering in Indian industry in a unique way. The biggest hydro-electric scheme in India is their creation. The first making of steel in this country is due to them. The largest general Indian insurance company was started by them. With regard to flying, Tatas have made a noteworthy contribution. The expansion that is taking place in Jamshedpur is a continued tale of pioneering. My friend, Prof. Krishnan, was despondent as a result of the dilatoriness in the case of internal combustion engines. Well, all that I can say is that, if the Government will not do anything in this regard, Tatas may be dependent upon to set up the plant to manufacture internal combustion engines. Tata Iron and Steel Company recently set up machinery to manufacture axles and wheels. I understand that the plans for the manufacture of boilers have reached an advanced stage. Tatas will be making locomotives. The association of Tatas with the cause of planning is the sign and symbol that whatever schemes are proved practicable, will be given practical shape and rendered accomplished facts.

INDIAN FINANCE

1213

It is the happiest augury for planning that Mr. J. R. D. Tata is, I may be excused the expression, plan-mad. He has all the pioneering zest and zeal of his predecessors; and what is more, he has a perennial youngness of look and outlook, great energy of patriotic aspiration. Let me conclude my today's gossip with what Dr. John Matthai said of young Tata. Dr. Matthai said: 'I have not in my experience come across an abler and a more honest-minded man to work with than Mr. Tata'. Neither for Tata Sons nor for Mr. Tata, there is any personal axe to grind in planning. What matters to them is the glory of translating the dream of planning into fact.

"EAVESDROPPER."

Travel Less

Objections to the Travel-less campaign are formulated by the Indian Merchants Chamber in a recent letter to the Government deploring the reduction of railway services. The Indian Merchants Chamber takes the view that if overcrowding in trains has increased, the proper remedy is the provision of more trains or coaches. As to reduction of non-essential travel, it is suggested that poverty and the many real discomforts of travel have restrained would-be passengers. The discomforts have increased greatly in wartime. Travel on the footboards and roofs of trains has been noted. The committee's main point is that the services have not cut down travel. At the meeting of the G.I.P. Railway's Advisory Committee Sir P. Thakurdas mentioned that he

had questioned marines up at Simla and found that they were there on holiday, and he thought that the Government could reduce this unnecessary travel. The 'don't travel' advertising is described as ineffective and damaging. On the other hand, the Chamber asks for amenities and improvements in order to preserve the goodwill of the travelling public. The Chamber also makes a grievance of the appeal to the rich to go to the Hills issued by a travel agency and the habit of reservation for Government servants when travelling excites disapproval. The Chamber's main point that the poor have to suffer more while the rich are catered for by the railways requires no detailed evidence to support it. It is a strong and self-sufficient plea and an alteration in classes or reduction in the grades in the future has little to do with it. Census of opinion taken reveals that only essential journeys are undertaken at present and the Chamber feels that the railway traveller does not need education through a Travel-less campaign.

(From Our Correspondent)

New Delhi, June 12.

The dramatic launching of the second front offensive last Tuesday has shoved off all other war news to the back pages for the present. The issue of the tremendous beachhead battles is keenly awaited here though it is realised that there will be a tough going for the Allies and it will take long before the main German forces and armour are engaged successfully. The monsoon battle in Assam drags and the rains do not seem to have put a complete check to fighting there. The sudden Japanese pull-out from the strongpoints around Kohima does not mean that the Japs will abandon all other strongpoints on the Manipur Road and in the Bishenpur and Pail areas also easily. They would like to stick to their footholds around the Imphal plains to be able to resume their offensive soon after the monsoon.

The Delhi authorities are still maintaining a studied silence about the excessive rationed wheat prices—above Rs. 2 a maund over the prevailing Punjab prices. One Local Government spokesman is reported to have explained that the stocks released to the ration shops at present were purchased at a much higher price (about Rs. 9-8 a maund) than the present rates.

And that the stocks bought recently will be released to the consumers at correspondingly lower rates. The explanation is no consolation to the consumer who is being forced to pay a much higher price for his food for no fault of his. There is a lot of profiteering in rice too and the quality that was being sold for Rs. 16 a maund in the period immediately preceding the introduction of rationing is now sold at a controlled rate of Rs. 20 a maund. It is rather strange that rationing should also mean soaring prices for the citizens. It is learnt that milk prices will also be shortly controlled.

Fears are being entertained here regarding the possibility of an effective British control over the fertiliser industry to be soon started in this country. The present plans are to produce about 350,000 tons of artificial fertilisers a year and a British technical mission is shortly coming to this country to advise the Central Government on this matter. Reports are current here that the mission will base its recommendation on the basis of a complete control and management of the new company to be floated to undertake the manufacture by the Imperial Chemicals and that out of the estimated capital investment of Rs. 10 crores, 25 per cent each will be subsidised by the Central Government, provincial governments, Indian public and British chemical manufacturing interests. It is recalled in this connection that a tentative decision had been reached in October last that the production of fertilisers should be a semi-public undertaking with the State holding 51 per cent of the share capital, the rest being subscribed by the Indian public. This arrangement appears to have been reversed at a conference held in April this year from which all representatives of trade and industry had been excluded. There has been no adequate explanation for this reversal yet. It is generally felt here that no foreign interests should be allowed to obtain control over an industry so vital to India's food production.

An analysis of India's present food situation shows that acreage targets for the prin-

cipal food crops based on the maximum figures obtained during the past decade have been fixed for this year. If the targets are achieved, there should be no big worry for a recurrence of famine conditions. As a part of the food production drive loans totalling Rs. 1 crore (compared to Rs. 70 lakhs last year), grants of over Rs. 80 lakhs from the Central Revenues and of over Rs. 13.5 lakhs from the Cotton Fund have been already distributed this year. The results obtained last year (1943-44) were quite satisfactory. While there was a drop of 1,348,000 in the acreage under wheat, there was an increase of 50 lakh tons in rice production and appreciable rise in the yield of millets, groundnuts and sugarcane. With over 50 million agricultural holdings in the country, there are obvious difficulties in the way of a plan for increased food production. Short-term plans for establishing a fertiliser industry and undertaking emergency irrigation projects are already under consideration. It is proposed to irrigate an additional 850,000 acres of land by the end of 1945. Moreover food and agriculture are being brought under one Central Department to make any national planning more easy.

Despite the decision to ban all respective cartels after the war, there have been recent indications that the cotton producing interests in the U. S. A. may agitate not only for subsidised exports but restrictive import quotas on the lines of pre-war tin and rubber schemes. Though the war has stimulated U. S. cotton production at the expense of her competitors in the international market, the prices in the U. S. A. are comparatively much higher due to increased production costs. It is stated here that any control plan which stabilises the relative position of the various cotton producing countries at the level of a given basic period will be greatly

resented by India where the cotton grower has suffered so grievously from the efforts of war by the shutting up of her best export markets. Any suggestion to restrict exports after the war will be resisted by the cotton growing interests here.

It is reported here that the reorganised Food Department which will include Agriculture will put under Dr. Ambedkar. A wholesale cabinet reshuffle seems to be under consideration with Sir Jagendra Singh getting the Defence and Civil Defence portfolio and Sir Firoz Khan being given the Labour Department. Other likely changes are Sir J. P. Srivastava getting the Commerce portfolio and Sir Azizul Haque being put in charge of Education and Health.

The recent suggestions in the British Press for a revision of the financial settlement with India to increase the latter's financial liabilities and whittle down her sterling assets, in Britain, accumulated at such a terrible sacrifice, has naturally raised a universal storm of protest from financial and industrial interests in this country. There is general agreement here with Mr. A. D. Shroff's views that "unless a satisfactory arrangement is reached between India and his Majesty's Government regarding an orderly liquidation of the sterling balances at an early date no scheme of international monetary arrangement can be a matter of supreme interest to us". As Mr. Shroff will be one of the delegates of the forthcoming International Monetary Conference, it is hoped that this country's case will be satisfactorily put at the Conference. It is vital for our industrial future that a just solution is found for a proper utilisation of the sterling balances soon after the war to promote industrial development. India

COMPANY MEETING

UNITED COMMERCIAL BANK LIMITED

IMPRESSIVE PROGRESS IN FIRST YEAR

MR. G. D. BIRLA ON THE FUTURE OF BANKING

Presiding at the first Ordinary General Meeting of the Shareholders held on Monday, the 12th June, the Chairman Mr. G. D. Birla said:

GENTLEMEN,

I have pleasure in presenting to you the First Report of the Directors and the Bank's First Balance Sheet and Profit and Loss Account.

Before I touch upon the affairs of the Bank and discuss other economic and financial problems facing India, I would, with your permission, express my deep sense of sorrow and heart-felt condolence on the death of Bharatmata Shree Kasturba Gandhi. Besides being the life long partner of a big personality, she represented in her the best tradition of Indian motherhood and as such, leaves behind her an example to be emulated by the womanhood of India. We all mourn the loss.

Last year witnessed the terrible tragedy in Bengal—the tragedy of scarcity, starvation and deaths. There is no correct record of the loss of life caused by this terrible famine, but from what we can gather from observation, it appears as if millions lost their lives for want of food. In this age of so-called civilisation, it is a disgrace that millions should have died like cats and dogs because there was not sufficient food to feed the hungry mouths. If the scene of people dying by the roadside was pathetic, it was relieving to see how the nation's sense of comradeship rose to the occasion and people from far and near ran down to Bengal with succour as lay within their power to relieve the deadly pangs of hunger. Bengal's economy, I fear, will suffer immensely from the loss of large man-power. I, however, hope that all section of society in Bengal, and both Government and private agencies, will leave no stone unturned to reduce to the minimum evil effects of the famine and its aftermath.

Coming now to the affairs of the Bank, I feel that we are lucky that within a short average working period of 5 months, and with only 12 branches, we have been able to build up deposits exceeding Rs. 12½ crores. The amount of cash in hand and with bankers stands at Rs. 4 crores. This is 41 per cent of our demand liabilities and over 31 per cent of our total deposits. Our investments in Government Securities, Treasury Bills and Dollar Treasury Notes of the Government of the United States of America stand at Rs. 6.38 crores, which is 50 per cent of our total deposits. Most of these are in short and medium term loans. Our advances and bills, mostly secured, stand at over Rs. 3½ crores, and this is 27.7 per cent of our total deposits.

Coming to the earning side of the Bank, there is a profit of over Rs. 4 lacs. This represents result of average working of 5 months. Expenses for organising the Bank and its twelve branches, which have been already provided for before arriving at the profit figure, are very substantial, particularly in these days when prices of men and material are so high.

You will agree, I suppose, that both the deposits and the profit positions could be called quite satisfactory.

We have thought it prudent to write off all the preliminary expenses and even brokerage. Nothing out of profit on sale of investments has been taken to the profit & Loss Account. Following the best banking traditions your directors consider it wise to build up invisible reserves in addition to the disclosed surpluses.

In building up our business, we have not adopted any ruinous devices of high rate of interest or deposit and unremunerative rates on other forms of banking service. Our policy in this respect is very orthodox. Past banking history of the country provides us too many warnings to think of any other method of growth. Your Directors do not suffer from lack of ambition in making their plans, but for that reason, they do not throw caution to the winds.

I must take this opportunity to thank the depositors for their faith and confidence in the Bank. I pray that we may continue to deserve their goodwill and patronage. On behalf of the Bank, I may assure them that their interests will remain to be our first and foremost consideration.

The executive of the Bank under the able guidance of our General Manager, Mr. B. T. Thakur, deserves no mean credit for the success of the Bank. In Mr. Thakur we have a banker of a very high calibre. He is a seasoned man with vast knowledge and experience of banking in India, Burma, Ceylon, Europe and America, extending over a quarter of a century. As such, he is a great asset to the Bank. I can say from my personal knowledge how with zeal and energy he is trying to mould this institution on the pattern of the best in banking traditions. I must, therefore, thank him and also the other members of our staff.

As personnel is a very important element in the success of any concern, your directors are contemplating to introduce a scheme for imparting efficient training in banking to youngmen who have distinguished themselves in university examinations and propose to adopt banking as their career. Such facility will obviously be limited in the beginning and will grow with growth in the size of the Bank's activities and the number of our branches.

In certain quarters, there is a bit of scepticism about the necessity of new banks. I, however, feel that as in every other sphere, so in this, one cannot generalise things. Each case has to be judged on its merits. If a bank is built up to serve one's individual needs, it cannot be looked upon with favour. On the other hand, if the question is looked from the angle of service, I think India needs many more banks specially small provincial and district banks. India has been very backward in modern institutions; and this deficiency is further aggravated by disappearance of the old indigenous banking institution called the shroffs that existed until a few years back. Even to make up this deficiency we need more banks and when trade expands and production mounts up, we will need still more.

The war is working a silent revolution in many directions. And we find that banking too has not remained untouched. Deposits of scheduled banks in India, which stood at Rs. 238 crores at the end of March 1939 have swelled up to Rs. 693 crores at the end of March 1944. Yet, if compared to the rate of expansion of currency which during the same period has increased from Rs. 207 crores to Rs. 895 crores, it is less. Perhaps the deposits have not as yet received the full benefit of the currency expansion and reasons for this discrepancy must lie in the habit of the people. As far as money spent by the Government is paid in small units to workers, soldiers, technicians and such others, a good portion of it is perhaps lying in millions of pockets with practically no velocity. It will never see either bank vaults of Government treasury until it is converted into goods. On the other hand, the money expended in large units is either going back to the Government in shape of taxes and loans or to banks in shape of deposits from where again it goes to the Government chest through loans purchased by banks.

A very interesting analysis is made recently in some countries as to who owns the bank deposits. In Europe and America it is found that during the war the growth in bank deposits is mostly due to increased deposits of business firms and companies. Perhaps in India too it may be said that the larger portion of the increased deposits is owned not by individuals but by business firms and companies. A similar analysis as to who owns the currency may be of equal interest. If such an analysis was made in India it may be found that the larger portion of currency is owned not by business firms and concerns but by individuals. The money that is deposited with banks increases credit facilities and is easy to tap for the purpose of the Government borrowing. The money that lies in pockets of the public is a potential purchasing power the regulation of which is not so easy. This, therefore, lead us to the conclusion that while the purchasing power of the business firms is being neutralised through taxes compulsory deposits and even voluntary deposits to banks—since all this goes back to the Government through taxes or loans—the purchasing power of the individual so and long as the money remains in his pocket, remains untouched. This may perhaps be confirmed by another interesting fact that while in England during the war currency has expanded by 550 million sterling, the deposits have gone up by 1400. Whereas, in India currency has expanded by 700 crores and the deposits have gone up only by 450 crores. This shows how in England due to banking habits money does not remain in the pockets of people but goes as deposits in banks. And how due to lack of banking facilities in India a lot of money lies in pockets failing in its function that it should perform.

This also leads us to the conclusion that the outgoing money, a substantial portion of it, until it is spent (it is doubtful whether it will ever go to banks) will continue to lie in millions of pockets as a potential purchasing power. The solution lies in providing more consumer goods to the money holder through increased production and more banking facilities through district and provincial banks. Expansion of banking habits will take a pretty long time. The question of production which is so totally neglected by the Government, should receive greater attention from our countrymen.

High taxation on high and low, compulsory savings for all and sundry, prices control and rationing—this is the remedy nowadays freely suggested by many to fight scarcity. The Government in their zeal have appointed small loan agents in rural area. I fear neither those who suggest these methods nor the Government have realized that this remedy at the best is only a palliative and that this should be applied only with discrimination. When we suggest taxes and compulsory saving, we ought first to analyse how all this is going to effect the production of the country. We should also find out whether by a rule of thumb we are not suggesting immobilising B's purchasing power when money is held by A. If the money be in the pocket of the soldier, the tax on agriculturist or compulsory saving by the worker is not going to solve the problem. I have no doubt that whatever we do, we won't be out of woods until we can produce more. More consumer goods alone will make the small money holder part with his money. The remedy for inflation is no doubt more production.

The question of our sterling accumulations is another problem which is naturally causing speculation. How England is going to liquidate this large liability is a thing that needs satisfactory settlement. India must, of course, set its face against any move to compel us to make our post-war purchases only in England. At the same time we will no doubt not be unreasonable and will try to accommodate England to our mutual benefit. Let us hope that England will not use her dominion over India to deny us justice and fairplay.

There is lot of talk of international co-operation in monetary field. There was the Keynes and the Whyte scheme. Then, there is the Monetary Fund scheme. And behind the scenes they are discussing in England the establishment of Sterling bloc scheme. As far as we are concerned, we can examine all these schemes dispassionately only if we know in what manner England is going to discharge her sterling liability to India. This question must be settled to India's satisfaction before we commit ourselves to any of these schemes.

Before I conclude, I would like to say something on the necessity of some machinery for co-operation and consultation between Indian banks. Exchange banks have an Association to protect their interests. Why should not the Indian banks form an association of their own, which should not only safeguard their interests but also deliberate on method and policies of working for the common good? In Canada a bankers' association is a statutory body formed under special act of Canadian Parliament; although in India such recognition and help from Government may perhaps not be easily available, there is no reason why by private arrangements banks should not combine to increase their strength and protect their common purpose. There are questions like discrimination against foreign banking in England, America and other countries; and one wonders why similar protective measures should not be introduced here against banks incorporated in such discriminating countries. Monopoly of currency chest and kindred privileges to the Imperial Bank are unfair advantages, and serve as great handicaps on Indian banking. These advantages must be broadbased for the benefit of Indian banking system. Surely Indian banks can visualise a common trust created by them and on their guarantee, to take over such functions

for the benefit of the whole banking system in the country. Then there are weakening and disintegrating tendencies like ruinous rates, lowering of margin on securities with which some banks try to induce business, forgetting that these methods have always spelled disaster in the past and must weaken their very existence. But such questions can

only be settled if there is a strong bankers' association. Our Bank will fully co-operate in the establishment of such a body and help it to energetically tackle questions of common interest and introduce healthy methods of working in Indian banks.

Gentlemen, I thank you all.

NERO'S EMERALD

THE Roman Emperor Nero is said to have used a finely polished emerald as an eyeglass. In his day aids to eyesight must have been rare, but to-day many of us wear spectacles for one purpose or another. Yet our pince-nez, lorgnettes, monocles, or "horn-rims" form only a small part of the optical glass industry, the products of which are as various as they are important in War as in Peace. Industry needs microscopes, spectrophotometers, polarimeters, refractometers, photometers and pyrometers! The fighting services need lenses, prisms and mirrors for range and height finders, gun sights, cameras, field glasses, sextants and submarine and tank periscopes. When war broke out in 1914, more than 90 per cent. of optical glass required by Great Britain had to be imported. The result was a serious temporary shortage but British chemists, physicists and glass manufacturers set to work with such energy and resource that not only was the immediate supply problem solved, but British optical glass is to-day equal to that made anywhere in the world. Only chemical ingredients of the utmost purity satisfy the makers of our modern optical instruments and apparatus. The manufacturing processes demand the most accurate scientific control by the physicist and chemist. It is in large part due to the British chemist that you, perhaps, are able to read this type, or a British camera to take air photographs of the damage done to an enemy vessel by a torpedo sighted through the periscope of a British submarine.

(FROM OUR CORRESPONDENT)

Bombay, June 13.

Food problems take the pride of place during the week and in fact they bulked large at a press conference held on Friday last, when Mr. M. J. Desai of the Revenue Department of the Bombay Government unfolded the Government's plans to enforce a vigorous grow more food drive. The Growth of Food Crops Act has just been enforced in certain areas of the Presidency and is expected to bring under food cultivation more than 600 thousand acres of land now under non-food crops. Although the campaign was launched more than a year ago, it has not had much success since cash crops are still attractive for the cultivator to grow. The switch from cash to food crops had therefore to be effected by providing a stimulus more compelling than that of prices or persuasion. In fact the act is meant primarily to apply to those areas where money crops were favoured. Under Section 3, it is obligatory on the cultivator to keep the same proportion of food crops on his holding in the coming year as in the preceding year. The next section provides for the fixation of maximum non-food crops and the minimum of food crops. As a result a fair balance between the two kinds of crops is expected to emerge.

Section 9 really embodies the major change on the draft bill. The impression that the Government would buy whatever was offered was created by the Bill, but has now been dispelled by the provision of Section 9 which clearly states that the Government would fix and guarantee prices for cereal food crops only. The prices, it appears would be fixed only just before harvest time. This is perhaps not so well conceived and might in the event of prices going down lessen the inducement to grow more food. The prices for jowar, bajra, and maize would not be lower than those existing at present. Mr. Desai contended that the official promise to buy up all cereals would act as a big encouragement to the cultivator, since the latter can start sowing under the assurance that prices will not go down owing to transport and other difficulties. It remains to be seen how far the Government's promise goes. It must be noted that there is no guarantee to buy pulses. In order to mitigate the inconvenience which might be caused to the cultivator by switching over from money to food crops, Government will give a remission of 2 as. in the rupee. This would mean that a remission equal to double this amount would have to be given by the landlords on rent due to them.

It was somewhat strange to hear the official spokesmen state bluntly that Government were interested in depressing cotton prices. Even as it is the spread in the prices of cotton and food crops has been considerably narrowed down and cotton prices are low enough. It is one thing to urge the production of more food and quite another to start a campaign which would have the effect of mulcting the cotton cultivator of his fair price, which would enable them to average up the depression years. It is true that the enormous quantities of unwanted short staple cotton are depressing the market, but the fault is not of the cultivator, but of the Government which was merely looking on without taking any worthwhile steps to stop the suicide of the cotton grower.

An impressive resolution in favour of a five year programme of production of protective and other foods was passed at a conference held in the city under the presidency of Sir H. P. Mody. The conference was

convened under the joint auspices of both popular and medical food associations. By far the most important suggestion put out at the conference was the one urging the subsidising of schemes by the Government for the production and supply of food at reasonable prices. In view of the heavy demands made on the food supplies by service personnel, it was recommended that Government should import milk powder, dehydrated egg and meat and even vegetables. The proposal certainly sounds well, but its feasibility is at least open to doubt since shipping space is becoming increasingly scarce. A National Nutrition Organisation consisting of experts was favoured by the conference, which also made the interesting recommendation that immediate rationing of milk in Bombay and other cities should be started. The milk problem is becoming more and more acute, in fact so bad that Government have had to take cognisance of the matter and set about making it right. Sir Homi Mody rightly congratulated Bombay on being the pioneer in the matter of food supply regulation and observed that it would be fitting and proper if the Bombay Government were to extend their experiments to protective food also. He emphasised how the present exorbitant prices for milk and other products are causing great anxiety from the point of view of the health of the rising generations. He foresaw the serious situation developing in the country if steps were not taken immediately, and said that vigorous educated propaganda was necessary in order to bring about an equilibrium between the fertility of the soil and the virility of the race.

The Bombay Government's plan to supply children below 2½ years with half a pound of milk a day at the market price is altogether creditable, especially when it is remembered that the cost of subsidising this would be about Rs. 17 lakhs and will be borne by Government. The Municipality will do its part by taking charge of distribution and making it a part of the ration scheme. When the scheme comes into effect the numerous families in the city will be able to give milk to their children who have now to go without it. Really, the situation from the nutrition point of view had become unsatisfactory, owing to the soaring prices of fruits and vegetables and the utterly disgraceful quality of the fluid that goes by the name of milk in Bombay city today. There is no doubt that Bombay Government takes the palm for initiating schemes of this kind, and blazing the trail for the other provincial governments in the matter of popular welfare. The credit should be shared equally by the government which does not lack either the executive ability to enforce the scheme or the idealism to plan them, and between a public which has only been too ready to co-operate with the government.

It is significant that the positive side of the problem of milk supplies has not been overlooked by the government. Plans to open shops to sell cattle fodder at controlled prices have been announced. Steps are being taken to increase the supply of milk cattle, by arranging for supplies from neighbouring areas of these animals and by discouraging the indiscriminate slaughter of buffaloes which have gone dry. It is shocking to think that people should prefer the ready cash which the butcher gives to keeping the animal until it is in milk again. The salvaging of these animals is an absolutely essential step not only from the point of view of increasing the milk supply in the immediate future but in the interest of saving essential live-stock in the country.

THE BANK OF BARODA, Ltd.

(Incorporated in Baroda, the liability of members being Limited)

Under the Patronage of and largely supported by the Government of H. H. the Maharaja Gaekwar

Capital Authorized : Rs. 2,40,00,000

and total assets amount to nearly Rs. 6 crores. The Balance Sheet also reveals the very strong and sound financial position of the Society, for which the credit must go to the extreme caution exercised by the Management in the selection of investments. In fact, the investments chosen by the Society are so wide, varied and scientific that even in these days when it is so difficult to secure high interest yields, the Society has been able to register a net yield of 4.63 per cent. on its assets, while at the same time observing the fundamental principle of Life Office investments viz. the maximum security of assets. In these days of very low interest yields, particularly on first class fixed interest bearing securities, the problem of investing Life Office funds to the best advantage has become an acute and difficult one; and the Chairman of the Board of Directors has not failed to emphasise this point in his address at the Annual General Meeting held recently. The increase of premium rates and the reduction of bonuses are the two remedies suggested by him to tide over the difficult period and there can be no gainsaying the fact that both these measures are warranted by present conditions.

Coming to a detailed analysis of the Accounts, we find that the Society has placed during the year 30,307 new proposals for an assurance of nearly Rs. 6.86 crores and of these 25,621 proposals resulted into policies assuring an aggregate sum of about Rs. 5.32 crores. This constitutes the high water mark of new business ever attained by the Society and represents an increase of more than 84 per cent. over the preceding year's new business. The total business of the Society at the end of the year was 1,29,131 policies assuring a sum of Rs. 24.83 crores. The total premium income for the year amounted to Rs. 1.115 crores while the income from interest and other sources amounted to about Rs. 23 lakhs. Claims by death, inclusive of bonuses, absorbed Rs. 16.58 lakhs while claims by maturity amounted to Rs. 16.12 lakhs. Management expenses inclusive of commission amounted to about Rs. 33 lakhs. Though the over-all expense ratio shows a slight increase (which is inevitable on account of the considerable increase in the volume of new business) over the last year's figure, the renewal expense ratios calculated after allowing 90 per cent. of new premiums and 7½ per cent. of single premiums as cost of new business, has registered a sharp decline of 3 per cent. and stands at 14.54 per cent. It is noteworthy that at the end of the year the Life fund has been increased by the substantial figure of Rs. 66,26,390 to Rs. 5,39,16,201.

The Balance Sheet shows on the liabilities side a paid-up ordinary share capital of Rs. 4.6 lakhs, Life and miscellaneous insurance funds amounting to Rs. 5.42 crores, various reserve funds amounting to Rs. 12.7 lakhs, outstanding claims totalling Rs. 18.7 lakhs and other sundry creditors to the extent of Rs. 16 lakhs. On the assets side, Government and other approved securities have passed the Rupees Three Crore mark, Policy loans account for Rs. 52 lakhs, mortgage loans amount to Rs. 32 lakhs, House and landed properties amount to Rs. 1.15 lakhs, cash on hand and with banks total Rs. 37 lakhs and other miscellaneous assets about Rs. 60 lakhs. The assets are scientifically distributed in consonance with the statutory provisions in this regard and the two fundamental canons of Life Office investments viz. maximum yield consistent with the maximum security of capital.

The Society continues to enjoy the help and guidance of its President, Mr. N. R.

Sarker, while the management is in the able hands of Mr. N. Datta.

Bombay Mutual Results

Broadly speaking Indian insurance business has been influenced favourably by the war as new business and revenue figures for 1943 show accelerated increase. The older life offices, of whom Bombay Mutual is typical, have derived substantial benefits. The revenue account appended to the report for 1943 shows first year's premium of Rs. 15.45 lakhs and renewal premiums of Rs. 64.01 lakhs. The comparable figures for 1942 namely Rs. 7.63 lakhs and Rs. 57.85 lakhs indicate the growth less completely than the increase under new policies from 8,558 assuring Rs. 172.59 lakhs to 14,707 policies assuring Rs. 325.5 lakhs. The 1943 report states that business in force has increased to Rs. 16.61 crores from Rs. 14.02 crores at the end of 1942. The improvement in business explains the rise in total premium income from Rs. 66.01 lakhs in 1942 to Rs. 81.22 lakhs. The investment income also improved from Rs. 11.77 lakhs to Rs. 12.84 lakhs; but the main factor in the growth of the Society's funds last year was the excess of receipts over outgoings totalling Rs. 41.44 lakhs. The marked expansion of business has not affected the year's expense ratio to any extent, as total expenses of Rs. 22.34 lakhs shown in the revenue account while the proportion of renewal premium to total premium income for the year is sufficiently large to make it clear that this year's ratio in respect of renewal premium would be lower than that of 1943. In fact, it has fallen from 13.93 per cent. in 1941 to 13.51 in 1942 and since to 12.88 per cent. in 1943. The increase in the Society's investments by Rs. 59.48 lakhs as against Rs. 44.33 lakhs in 1942 is attributable to the rise in the annual income and the corresponding increase in the surplus. The revenue account shows that the Life Fund has increased from Rs. 295.59 lakhs to Rs. 348.57 lakhs in a year, fulfilling the most liberal expectations as to the Society's future. The promise for the future contained in the figures cited must be related to the favourable claim experience of 1943 when the total claims came to Rs. 14.18 lakhs. That the balance-sheet issued with the accounts confirms opinions expressed here in the past as to the 'mixing' adopted and the steady observance of rules, statutory and other, is not the least interesting feature. Bombay Mutual's total investment in Government securities has increased by Rs. 40.29 lakhs in a year while the total increased under stock exchange securities is about Rs. 52 lakhs. The more important feature of the summary of assets admittedly is the reduction under mortgages. The increase under Policy loans is too slight to deserve notice, while the increase under House Property in the latest balance-sheet is a pointer to progress and added influence. Such increases as are noted under premiums due and accrued dividends like the increase under cash balances are inseparable from the increase in business, which puts the Bombay Mutual firmly and indubitably among the Big Five of Indian insurance. The Directors before recording satisfaction with the year's results mention the additions to the Investment Reserve, the Building Depreciation fund and special provision for depreciation of dead stock including books. There is little doubt as to the assured future of the Society on the basis of the recorded results of two years, while the management is strengthened duly and greatly by the acceptance of the Managementship by Mr. T. C. Kapur—an acceptable and appreciable change by current standards.

To-day's Prospectus

The offer of 35,000 shares of Rs. 10 each contained in to-day's prospectus requires special notice in view of the fact that the Travancore Forward Bank showed itself to be depression-proof. A consistent dividend record supports the claim that every enhancement of capital has led duly to an increase of resources. The figures extracted from the last balance-sheet point to an exceptional degree of liquidity in spite of a substantial increase in profits—attested by the large addition to Reserve Fund. The present issue is for Rs. 3½ lakhs and the new shares qualify for dividend from July 1, 1944. The reason assigned for the increase in capital is wholly familiar. The doubling of deposits in a single year in this case justifies the expectation of expansion. Already equipped with a score of branches, the Travancore Forward Bank plans for the essential admission to the Second Schedule by raising its paid-up capital to Rs. 5 lakhs. Existing share-holders on the register have preferential rights in regard to application and allotment. The current level of quotations for all bank shares suggests that the immediate response would be wholly favourable. The figures in the progress statement mark the ascent of funds, their uses and the disposal of the Forward Bank's profits which incidentally totalled Rs. 45,932 against a paid-up capital of Rs. 150,000 indicating that the 10 per cent dividend for 1943 was generously covered.

BROLASH

FAVOURITE OF THE FILM STARS

Eyes and brows tell the tale of any actress or woman aspiring to beauty. Long and curly eyelashes, full and beautiful eyebrows are an invaluable asset for any charming expression on the face. The modern woman can no longer afford to ignore this ideal and must attempt to attain it at any cost.

'BROLASH' is a scientific beauty product marketed for the first time in India by Messrs. COSMA & NIVA famous beauty specialists of India. An American formula that grows long and curly eyelashes, full and attractive eyebrows in a few days. Long and curly eyelashes enhance the natural beauty, and bring lustre and charm even on a plain face and compel the attention and admiration of all. Descriptive Literature Free.

South India

(From Our Correspondent)

Madras, June 14.

The view that there is nothing to prevent the Indian delegates from pressing for an adequate provision for dealing with India's sterling balances in the coming world Monetary Conference though these balances would not come within the purview of the conference, was indicated by Sir R. K. Shanmukham Chettiar, a non-official delegate. He said that nobody was yet committed to the scheme proposed. India's place in the proposed conference will naturally receive the greatest attention of the delegation. Out of the five ex-officio seats in the executive body India should have a seat. He revealed that he had already told the Finance Member that just as the U.S.A. would boost and back up China they expected the British Government to boost and back up India and Sir Shanmukham gave an assurance that the entire Indian delegation would certainly press for what was for the economic good of India. While Britain wants to keep up her standard of life India wants to raise her standard of life. And our task is to devise a formula of international trade which would not come into conflict with these two interests. India's industrial production has to be enormously increased and a better balance achieved between agriculture and industry.

In spite of synthetic rubber production the outlook for natural rubber is said to be bright. The recent announcement by the Government of India of a prize bonus scheme has given a fillip to production of rubber in India. Messrs. A. V. Thomas and Company, Limited, Alleppey, are negotiating for the purchase of five important rubber estates Sittar, Vellandi, Perinad, Shaliacary and Brindavanam from the Rani Travancore Rubber Company, Limited, London, the first three on behalf of Midland Rubber and Produce Company, Limited, and the other two for the Rajagiri Rubber and Produce Company, Limited. The two companies are now issuing 6 per cent. cumulative preference shares at a small premium of 4 annas (in the case of Midland 344,000 6 per cent. cumulative preference shares of Rs. 10 each at a premium of annas 4 each; the management of Rajagiri are issuing 226,000 6 per cent. cumulative preference shares of Rs. 10 each at a premium of annas 4 each) while the ordinary capital is left unchanged.

The situation both in the raw cotton and yarn markets is still somewhat disquieting. It seems textile mills in the province are not very anxious to buy high quality cotton ever at floor prices. The Tirupur cotton market committee in an appeal addressed to the Government say that present prices for both Cambodia and Karunganni are lower than the floor prices of Rs. 610 and Rs. 505 respectively for the two varieties. Mills are not buying freely and accumulation of stocks has brought down prices considerably. The yarn dealer's difficulties seem to be shortage of supply. The shortage according to the President of the Yarn dealers' Association, is not real but induced as a result of black marketing operations indulged in by unscrupulous middlemen. Two factors are responsible for the thriving of the black markets (1) high prices of handloom cloth leading to the weavers paying exorbitant prices for higher counts of yarn and (2) the refusal of most of the mills to sell yarn at

ex-mill prices. While it is known that large quantities of yarn are reaching the city markets bonafide weavers are still unable to get their requirements at control prices. Mushroom weavers seize all the yarn in the market thereby forcing bonafide weavers to pay black market prices for their requirements. The president suggested licensing of weavers in order to overcome this malpractice.

The Government plan for the distribution of seized and controlled production of certain mills in Bombay has brought out vigorous protests from the merchant community. It is said that the Government propose to entrust the distribution to some selected dealers only. It is argued that while there is already a scheme under which dealers are asked to take licenses, the proposed plan is superfluous and will only be interpreted as unjust to the majority of dealers.

The future of the cotton textile industry was discussed by Sir M.A. Muthia Chettiar in the course, of his presidential address to the Madras Piecegoods Merchants' Association on the occasion of the Silver Jubilee celebrations of the association. He was of the opinion that cloth production in the country should at least be doubled in order to increase the per capita consumption of cloth which is only 16 yards now. Indian textiles have gained many new markets and it is up to the piecegoods merchants to hold them. Referring to the handloom industry he welcomed the steps taken by the Madras Government to sustain the industry. A parallel development of the handloom industry is necessary in the interest of the weavers in remote villages where mills could not be established. Moreover handloom products had been very popular in overseas markets and there is every possibility of the products regaining those markets in the post-war period. He also emphasised the need for establishing more weaving mills in the province as there was a paucity of such mills at the present time. It was this factor that is responsible at least partly for the present cloth scarcity. There should be as many weaving mills as there are spinning mills.

Resume of Commodity Markets

The feature of the week in the commodity markets is the weakness of the Bombay raw cotton market. The situation in the Karachi market has been mainly responsible for the sharp decline in values in Bombay and business is practically at a standstill. The jute market has remained fully steady, while in the jute manufactures market there is nothing of importance to be reported. Bullion prices were lower. Business has been passing more freely in the piecegoods market and clearances are reported to be satisfactory.

There is very little speculation regarding the forecast figures for the jute crop for 1943-44 season as it is now expected that whatever supplies of jute that are available will be required by mills and that it would be possible to get them at maximum rates. Unless there is a large increase in the demand with the cessation of hostilities in Europe and mills are able to produce at a faster rate, it is expected that there will not be any squeeze for jute supplies. Thus while mills are not very eager buyers sellers are not anxious either as it is said that fresh supplies of jute will not be available before the middle of 1945, if there is a sudden increase in the demand towards the end of the year. A large amount of business has been put through in new crop in recent weeks but for further business mills are asking for assortments of 50-50 Middles and Bottoms while sellers are offering only a greater proportion of higher grades.

The Jute manufactures market is steady with fresh business limited to new production.

A difficult situation exists in the raw cotton market. Prices in Karachi are much lower than the floor level fixed by the Government authorities and there has been a flood of selling orders. The weakness of the Karachi market has naturally been reflected in Bombay. Nothing is yet known regarding futures trading in the new crop and the change in the basis of contract. Business passing in the ready market also is on a very small scale. It was expected that the opening of the Second Front would impart strength to the cotton market but the hopes have not materialised. It is pointed out that the shipping position is difficult and that for normal trading to be resumed in the continental markets it will take a long time.

Details are now available of the formation of the World Cotton Cartel according to the U. S. plan. The Committee of the U. S. Department of Agriculture on postwar programmes has made the proposal for the formation of an International market by fixing import and export quotas for each country. Officials explain that the United States would try to get a big enough quota, so that the United States could again export half its production of cotton. The officials concerned would not expect this arrangement to eliminate completely the need for the United States to subsidise exports of cotton after the war, (the Congressional farm bloc is agitating to raise this guarantee still higher) and even optimistic officials do not expect that all exporting and importing countries would agree to comparable international prices. Hence they envisage the United States might continue to pay export subsidies of about two cents per lb.

At present prices in the United States are so much dearer than in Brazil that United States cotton would need a subsidy of about seven cents to compete with Brazilian on the open international markets. Some experts believe that the competitiveness of U. S. cotton will be restored by mechanis-

ing the picking. These experts assert that the introduction of the mechanical cotton picker would alone reduce harvesting costs by nearly four cents per lb but others fear it would bring painful readjustments in farming. The mechanical picker has been talked of for decades, but is still mainly in the talk stage. Mechanically picked cotton is much dirtier than cotton picked by hand. Anyway no reduction in costs whatever can

make U. S. cotton internationally competitive as long as Congress fixes its price purely historically, based on the conditions ruling before the last war.

Formerly U. S. cotton dominated the world market, but it now has three principal rivals: Brazil, prewar average (in million bales) output 2, exports 1.1; Egypt 1.9 and 1.2; India 4.6 and 2.2; U. S. production 13.1, exports 5.3. Experts of the Agricultural Department profess little concern about mechanisation in Egypt and India where the smallness of farms and lowness of incomes

Greater output, and still greater, is the urgent need not only of India but of the United Nations. To meet this need factories throughout India are producing at a level far in excess of what, in peacetime, was thought possible. Many factors contribute to this success, not the least important being the ability of the worker to maintain a steady high level of effort. It is here that Indian Tea plays a valuable part. Tea served to the worker, on the job, has been proved in many hundreds of factories to be a wonderful reviver of failing concentration.

**Fight Fatigue with
INDIAN TEA.**

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

IK 232

would make the cost of machines prohibitive, but Brazil is thought sufficiently threatening "for some economists to advocate restrictive import quotas, which are, however, the weapons which the United States State Department hopes to outlaw after the war."

At a conference of provincial representatives held in Bombay for considering the methods with which to break up black markets for cloth, the Textile Commissioner for India was strongly in favour of stringent control and setting up a new machinery for checking black market activities. He was of the opinion that it would not be possible to ensure a regular supply and correct distribution if the hoarder was not penalised. It is expected that a vigorous drive against black market activity and a more speedy distribution of mill production would relieve the scarcity of supplies in particular areas and that the scheme for distributing production of controlled units and frozen stocks would add considerably to available supplies. Some objection, however, has been taken to the proposal for the distribution of production of controlled mills by selected dealers. It is emphasised that trade should be conducted through normal channels.

The scheme for the sale of Government controlled cloth in Bombay through authorised shops has been slightly delayed but it is expected to operate at an early date. Permits have been issued to 182 shops most of which have also received delivery orders. Stocks available for immediate distribution amount to 7 million yards in addition to the 80,000 sarees which were "frozen" in one godown.

The demand for the formation of a Central Sugar Committee has after all been successful. An announcement by the Government of India with regard to the setting up of the Central Sugarcane Committee is expected to be made shortly. The Central Sugarcane Committee, modelled on the lines of the Central Jute Committee, will be financed out of the proceeds of the Sugar Excise Fund. It is further reported that the expenditure of the Committee will not exceed Rs. 11,75,000 and the question of further increasing the amount will be considered after the war.

The functions of the Indian Central Sugarcane Research Committee will include besides development of cane growing, the marketing and manufacturing of sugarcane and its products in India. The scheme is expected to come into force in a month or two.

That agitation against sales of gold has been successful. The report that the United States Government has concluded an agreement with India for the lend-lease of 100 million ounces of silver to be used to maintain an adequate supply of coinage for the large numbers of forces of the United Nations in this country and for India's expanded war production should be greatly welcomed in this country. The statement that silver would be used to keep prices stable "in this important United Nations Supply base and war theatre" leads one to conclude that before long there will be official sales of silver. The quantity involved is fairly large amounting in value at the present market rate to over Rs. 30 crores. There has naturally been a slump in prices in the Bombay Market.

This arrangement will not in any way be disadvantageous to this country as after the war silver is to be returned to the United States ounce for ounce and the return of rupee coin from circulation alone will enable the Government to find the necessary quantities of silver to be returned.

TO ALL CLOTH DEALERS

In a recent Notification issued by the Textile Commissioner it is laid down that all cloth packed in and Texmarked April 1944 or earlier, all unpriced hand-printed cloth and any stocks that may remain without a price mark or Texmark or both are to be finally disposed of before the 31st December, 1944.

There are many ready buyers and all dealers holding stocks of such cloth are urged, in their own interests, to sell at once to allow for possible delays in transport. If sales are delayed retailers will not be disposed to buy, as there will be insufficient time for them to sell the cloth. The cloth will then be left in the hands of the holders and they will then be liable to cancellation of their dealer's licence, prosecution and confiscation of the goods.

No exemptions to this notification will be given, by the Textile Commissioner save for the most compelling reasons. So sell your cloth without delay.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 8th June.

An important event of the week was the ratification, by a special general meeting of the Indian Jute Mills Association, of the extension of the Working Time Agreement for a further period of five years from 12th December, 1944, when the current agreement will expire. With few minor modifications, the new agreement is on the same lines as the current one which has co-ordinated the activities of the Industry during the past critical five years. It is satisfactory that during the balance of the war period and during the early post-war years, which may present new and ever varying problems for solution, this co-ordination will be maintained intact. The Jute manufacturing Industry is probably the best organised of any of the major Indian industries, and it is most desirable from all points of view that it should so remain.

In connection with the scheme, which is supposed to come into force today, for the provision of a Forwarding Note endorsed by the consignee for every waggon load of jute tendered for shipment to mills or press houses, we remarked last week that we thought mills would run little risk in agreeing to the stipulation whereby the Regional Controller of Priorities intimated his willingness to waive the scheme—namely that mills and presshouses would undertake to accept, and immediately unload, every consignment directed to them. It is believed that certain Indian mills and Press houses have made it known to the trade that they are willing to lend their names, for a consideration, for any consignments which senders desire to ship outside of contracts. These mills and presses agree to accept goods on arrival and to make the sender an offer for them. If the sender is not agreeable to the bid offered, he may, on payment of the charges, plus the "consideration," remove the goods for sale elsewhere. Thus is the genius for evasion and circumvention, to which we also referred, once more displayed but at least it is highly improbable that, with this avenue for disposal open, mills in general will be worried with fictitious consignments, and the necessity for the irritating and time-wasting and paper-wasting performance of endorsing innumerable Forwarding Notes has ceased before it has commenced.

In this connection, intimation has been received that proposed new rules governing the registration of goods for transit, have been drawn up by the B and A Railway with a view to tightening up the system now in vogue, and at the same time eliminating the malpractices which have been of too frequent occurrence. The new draft rules have not yet been made public but it is believed that they should go far to accomplish the end in view. Interested trade associations have been asked for constructive suggestions, which will no doubt be forthcoming, but it seems a pity that the official proposals were not available beforehand to avoid the possibility of ground being unnecessarily covered twice.

Registration of another kind—that of Loose Jute Sellers and their marks—is again causing a stir in the dovecotes of Burra Bazar and neighbourhood. The publication by the Committee of a long list of names which have been expunged from the Register for non-compliance with certain requirements, has caused much heartburning and

indignation, even though repeated warnings had been given to the delinquents. Actually, owing to the length of time which has elapsed since the issue of the last edition of the Register, and the innumerable changes and deletions and corrections which have been published in the interim, it would be remarkable if a copy of the Register could be found—outside the Secretary's office at least—which had the remotest claim to accuracy. Not to put too fine a point upon it, the Register is in a hopeless mess and will inevitably remain so till an entirely new issue can be published. Moreover, despite the best efforts of the committee concerned, the book still remains cluttered up with a vast proportion of "dead wood." As, on account of the paper shortage, (liable to become still more acute in the immediate future owing to the demand for Forwarding Note Forms) there is small prospect of an early issue of a revised version of the Register, a suggestion has been put forward which might well be considered as at least a temporary clarification of the very involved position. Mills are supposed to report to the committee on every parcel of jute delivered in regard to its quality and condition and with details of any allowances awarded in arbitration. These reports are collated quarterly, the marks graded according to a formula, and the results published for information. This list therefore comprises practically all the jute in which the market is actually trading, with details as to the merits of the different marks. The number of different marks actually reported on runs to no more than some 160, and in all conscience this offers a wide enough selection for any purchaser to choose from. The suggestion is that, from the published reports of the past two seasons, a list of marks should be compiled which have been graded "A" and "G," that is, satisfactory both as regards quality and condition. This list might be described as a "Short Group" which mills might be recommended to make the basis of their purchases. At the same time, the ban on the purchase of any mark which does not appear in the "Register" might be withdrawn, thus eliminating any suggestion of restraint of trade. Buyers could purchase marks outside the "Short Group" at their discretion, and such marks, if reported on as consistently satisfactory, would be eligible for inclusion in the "Short Group" at the end of a year. On the other hand, any mark in the "Short Group" would be liable to be expunged from it if it failed to maintain its grading. This seems a practicable scheme to carry on with till such time as the Register can be thoroughly revised and brought up-to-date in a decipherable shape. Also, it would allow time for the proper examination of a very large number of fresh applications for inclusion in the Register, some of which may be genuine and worthy of inclusion, but very many of which are more than suspect of being merely multiple offshoots of existing firms, created simply to evade the incidence of current taxation. The object of the Committee is, we believe, to reduce the Register to a record of genuine actual traders, but the flood of fresh applications not only nullifies their best efforts, but would magnify the Register into a Frankenstein Monster which would be the despair of any Jute Buyer. On the other hand, the proposal outlined above eliminates all but dealers who are actually delivering jute to the mills, and to the mills' satisfaction, without restraining newcomers from trading if they can find a trusting buyer. Almost anything

would be preferable to the present inextricably involved position, and the simplicity of the proposed scheme ought to have its appeal.

The Export Jute market has ruled inactive and easier, though it would appear that Balers have been accepting direct business at lower rates. Dundee quotations have dropped 7-8 in the past week for old crop and as much as £1 for new crop. There are sellers of Dundee Daisee for June shipment at Rs. 77-8 with buyers only offering Rs. 77. Short Group Daisee sellers ask Rs. 83 against buyers bids of Rs. 86. Similarly Sellers of July shipment Dundee Tossa 4s at Rs. 84 can find buyers at no better than Rs. 82-8. Mills also have been able to reduce rates, Dundee Daisee having been done at Rs. 82 down to Rs. 81. Dundee Tossa 4s at Rs. 88 to Rs. 87. Old Crop Lightnings at Rs. 80 with New Crop at Rs. 81 and New Crop Hearts at Rs. 76.

In loose Jute the turnover has been much more restricted. Old Crop parcels of Super-vised low assortment Jat still find buyers at Rs. 17 and Rs. 14 for Mids and Bots while Indian District Tossa was reported at the same rates, with Jungli done at eight annas less. Some New Crop European packing has been reported in fairly high assortment at Rs. 19, Rs. 17 and Rs. 14 for Tops, Mids and Bottoms. Crop reports are generally satisfactory though more rain would be welcome in some districts. Most reports however speak of the crop as growing well. Rivers are about normal on the Eastern side but lower than usual on the Western side.

There is no change to record in the Fabrics section. Mills are well sold for the earlier months and with the coal position none too reassuring are unwilling to commit themselves fully. There are buyers to be found without difficulty at maximum rates for practically anything for any position up to March. Shortage of labour is retarding production in some of the Mill Districts and it seems unfortunate that there should not be some co-ordination between the rates of wages payable by the military authorities and those current in mills. Among the transactions heard of during the week were Cornsacks, Liverpools, Salts and "B" Twills, all at maximum rates.

JUTE

(By Our Staff Correspondent).

Thursday, June 15.

Not much of business has been passing in the raw jute market during the past week. Mills are inclined to await further developments. Reports regarding the growth of the standing crop in jute districts are satisfactory, and weeding operations are going on satisfactorily. Even on the basis of a higher yield, it cannot be expected that the total crop will be very much in excess of mill requirements. Mills would be inclined to buy jute on a larger scale if storage accommodation were more freely available and there was no great difficulty in respect of coal supplies. In the absence of any appreciable increase in the rate of arrivals it is no use entering into fresh contracts. Business in new crop has been reported at Rs. 16-8 and Rs. 13-8 per maund for Middles and Bottoms, District Jute. Sellers are not very anxious to do business and are offering only in higher assortments, that is Rs. 20/50/30, Tops Middles and Bottoms.

In the loose jute section only a small amount of business has been passing and buying has been confined to immediate requirements. Mills are not anxious buyers as there are large arrears of deliveries of jute against contracts concluded earlier. Also, an improvement in the coal situation is necessary for a bolder purchasing policy on the part of mills.

In the pucca bales section not much of business has been done for export. Mills purchased Dundee Daisee 2/3 at Rs. 81 per bale and Lightnings at Rs. 80 per bale. Some business was done in Cuttings at maximum rates with not many sellers.

District figures of the acreage in Bengal and the provincial figures of Assam, Bihar and Orissa in respect of the jute crop, will be published in groups of districts at 4 p.m. on July 4, 5, 6 and 7, and at 12 noon on July 8, 1944 in the Western arcade of Writer's Building, Calcutta. A printed forecast showing the figures of the jute growing districts in Bengal, Assam, Bihar and Orissa with remarks regarding the state of the crop and weather conditions, will be published at 12 noon at the above place on Friday, July 14, 1944.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Thursday, June 15.

The jute manufactures market has been uninteresting with no business of importance to be recorded. Mills are more reserved as in certain cases adequate supplies of coal are needed to execute even orders on hand. Quotations are nominally at maximum rates.

Manager: V. R. SONALKAR

In the heavy goods section there are very few sellers and business is again possible only in "B" twills at maximum rates.

At a special meeting of the members of the Indian Jute Mills Association held this week in the Royal Exchange, Calcutta, resolutions were unanimously passed whereby a Working Time Agreement has been made effective for a further 5 years period from the 12th December, 1944 when the existing one expires.

Under this agreement, member mills of the Indian Jute Mills Association which covers almost the entire jute mill industry of this country can work only such hours as the Committee may determine.

No change has been made in the existing hours which are 54 hours per week for all mills other than those with 220 looms and under which work 72. The hours under the new agreement will be determined closer to the time of effective operation viz. in December of this year.

Memo of total reported sales for the week ending Saturday, the 3rd June, 1944.

	This and next month.	Forward.

PIECEGOODS

(By Our Staff Correspondent)

Calcutta, June 15.

The piecegoods market has been uninteresting with a larger amount of business has been reported at ceiling prices and clearances are satisfactory. In spite of the speeding up in transport, arrivals are not quiet large. There is still some black market activity but consumers are now able to get their requirements without any great trouble. The representation to the Textile Commissioner that cash memos could be made out in vernacular languages also has been allowed.

COTTON

(From Our Correspondent)

Bombay, June 15.

Uncertainty faces the market in every direction and the whole week has been marked by desultory trading. The weakness of the Karachi market has prevented any rally in prices while the slump in prices for silver towards the close on the announcement that an agreement has been reached between the Government of India and the U. S. Government for the supply of silver of 100 million on lease-lend basis, worsened matters. Mills are not giving any support to the ready market while Government policy is not clear. The purchases on government account have thus been of no help to the market. There is speculation also about the position of Indian cotton in the post-war period. Closing prices are, therefore, at the lowest levels for the week, Jarilla July being Rs. 409-8 against Rs. 419 last week and September Rs. 420-12 against Rs. 431-12.

BULLION

(From Our Correspondent)

Bombay, June 15.

The gold market has been uninteresting for the most part of the week. There was no selling by the Reserve Bank but a generally weaker tone has been noticeable in the last three days. Investment demand has been poor and offtake is smaller. The decline in prices for gold ready to Rs. 73-14 was followed by a rally to Rs. 74-2 but the fall in prices for silver this afternoon has again resulted in lower prices. Ready continues to command a premium, the quotation being Rs. 73-13 against the rate for settlement of Rs. 73-10.

While the proposal to lend-lease silver is a factor which directly affects the silver market the release of the white metal on this basis may result in a change in the gold policy of the Reserve Bank. Silver is a war metal while there is no such use for gold at the present moment.

Till it was known that this country would be receiving supplies on a lease-lend basis rather steady conditions were noticeable in the silver market. The tightness of the spot position resulted in a firming up in prices and Silver ready was Rs. 134-8. Soon after the announcement, however, there was considerable selling and there has been a drop of five points in the quotation to Rs. 128. The close is little better at Rs. 128-12 Settlement quoted Rs. 127-12.

Reference has been made previously to the possibility of American supplies being brought into this country but it was never expected that the U. S. Government would be agreeable to give such large supplies on lease-lend basis. The U. S. Government has agreed to supply the Government of India under a special Lend-lease agreement with 100 million ounces of silver. This quantity of silver is to be returned on an ounce-to-ounce basis. It is reported that deliveries have already been commenced.

(Continued from page 1214)

cannot reconcile herself to any arrangement which is to saddle her with additional Rs. 800 crores on her defence during the war period—an enormous amount judged by the standard of our national income. According to a recent statement in the Commons India's present defence expenditure is running to about £225 million a year—over four times her pre-war defence budget of £54 millions. In view of this the financial settlement can hardly be called to generous to India.

Central Govt.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday. Total amount offered was Rs. 9,66,75,000. Tenders at Rs. 93-14% and above were accepted in full and those at Rs. 99-13-9% were allotted approximately 44%. Lower tenders were rejected. Total amount accepted was Rs. 6,00,00,000, the average rate of accepted tenders being Rs. 93-8-4% per annum.

Tenders for Rs. 6,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, June 27 in Bombay up to 11 a.m. and up to the close of business on Monday, June 26 at other centres. Successful tenderers should make payment on Friday, June 30 or on Thursday, June 29 where 30th is a holiday. Other conditions are as usual.

PREPARATION FOR PEACE
ECONOMY

Mr. NELSON ON RECONVERSION PROBLEMS

By Special Cable

WASHINGTON, June 21

Now that the invasion of Europe is officially regarded as successful, the War Production Board has taken several fundamental steps in the direction of re-gearing the American industrial machine for peacetime operations.

"Reconversion" methods have become the subject of widespread investigation and study in Congress and by wartime agencies but until this week the Administration has been content to leave this matter in the discussion stage without forceful leadership. And even now it appears that Congress will fail during the present term to lay down public policies for encompassing the broad range of reconversion tasks.

But Mr. Donald M. Nelson, Chairman of the War Production Board, took a long step forward when he announced the principles his agency will institute immediately to govern the preparations for expanded civilian production at the earliest moment so that American industry may readily realise domestic and export goals now forecast for the post-war period. Mr. Nelson said the job must be done immediately in order that the whole economy may get on with its war job, secure in the knowledge that re-conversion is being properly planned and prepared for.

Mr. Nelson told Congress that he purposely delayed the announcement in his programme until Europe was successfully invaded. "I felt that until after invasion and the establishment of a beachhead we could not take a chance on failure to deliver a single weapon that might be needed". With due insistence upon meeting war production goals "on schedule" Mr. Nelson said in a statement on re-conversion "there can be precious little in the way of expanded civilian production in the immediate future. But in the interest of war production itself, and for the protection of the entire U. S. economy, it is nevertheless essential to prepare now for a return to civilian production." Mr. Nelson announced that the W. P. B. would firstly authorize manufacturers to acquire materials and components to make and test a single working model of any product planned for post-war production. This, he said, would enable manufacturers to accept orders for their products, swing into production with minimum delay, and provide employment after the war. Secondly, the W.P.B. would revoke limits on the use of magnesium and aluminium so that manufacturers could fabricate them into finished products wherever manpower was sufficiently available. Thirdly, the W.P.B. would permit manufacturers to purchase machinery, tools and dies for civilian production, wherever it does not interfere with war production.

Mr. Nelson stressed that his policies on reconversion touched only one aspect of a broad problem. His statement is taken as a warning to Congress that legislation cannot wait much longer concerning post-war taxation, contract re-negotiation, Government loans, war contract termination, disposal of surpluses, manpower regulations and employment.

In the widely-heralded Baruch-Hancock Report these problems have been on public record for four months. It details in blue-prints every aspect of reconversion, but it was issued without comment by Mr. Roosevelt and thus far is untouched by Congress.

be a Host
to the Poor

INSTEAD of acting as a host towards your friends and business acquaintances who are as rich as yourself, why not be a host to India's poor? You can do this, with very little effort, in these three ways:—

1. Stop entertaining lavishly. The tradition of Indian hospitality is now out of date in a country in which food has to be rationed. You can still be hospitable without incurring unnecessary waste.

2. Economise in your home by having less dishes served. That is, do not serve a large variety of dishes many of which are not likely to be touched.

3. We nearly all eat more rice and bread than is good for us. It is a habit worth breaking for the sake of our health, as well as for the poor who need all the rice and wheat they can get.

IN these ways we can save hardship amongst the poor, who look to us, in time of trouble, for just this kind of practical help and support. This is the new hospitality!

food for all
..but none to waste

Editorial Comments

The Silver Deal

The announcement that the Government of India have secured from the U.S.A. the loan of a 100 million ounces of silver has mystified more people than it has satisfied or dissatisfied. Apart from the variety of issues connected with the utilisation of this silver or with the alternative means and methods of securing it, the absence of an authoritative pronouncement on the subject gives room for more or less pointless speculation. So far, Reuter's report announcing the news seems to afford the only basis for surmise or comment. It is said that "the U. S. Government has agreed to supply the Government of India under a special lend-lease agreement with 100 million ounces of silver to be used to maintain an adequate supply of coinage for the United Nations' forces there and for India's expanded war production". It is added that "a further aim is to keep prices stable in this important United Nations' supply base and war theatre." On the face of it, this is an explanation of its action offered by the American Government to its electorate—the emphasis on the place of the loan in the war effort of the United Nations makes it quite clear. But the Indian public would need something more by way of explanation of the step now taken by its Government. For, while in the case of the American Government the loan of a hundred million ounces of silver may be an isolated act, which leaves the financial policy of the Government and the financial fortunes of the country quite unaffected, in the case of India, the procurement of a large amount of silver is necessarily the starting-point of a number of measures of far-reaching importance to the people at large. There is also in the background the question whether the purposes for which silver has been procured could not be solved better by other measures. Another question which can be raised is whether the import of silver from abroad cannot be made incidentally to solve certain other problems as well, such as, for instance, the reduction in our sterling balances.

It is thus possible to conceive of silver, which has now been lend-leased to India, as being in the centre of a network of problems. Discussion of these issues is not easy in the absence of a statement from the Government as to the major considerations they had in mind in putting through this transaction or as to the ways in which they propose to utilise this silver. The silence is unfortunate. But it cannot account for or extenuate the grave misconceptions that have gained currency in some quarters.

In the first place, there is no reason to think that the primary purpose of obtaining silver from U.S.A. is other than what has been stated by the American Government, the maintenance of an adequate supply of coinage for the United Nations forces. It is not generally realised that a purely token currency is not quite suitable for the purposes of an army advancing into territory held by the enemy, except in the case of the Axis powers which are not scrupulous about paying for the goods and services they get from the local population. On this ground, it is quite credible that the United Nations' forces, when they started the campaign in North Africa, were provided with gold dollars. In the Far Eastern countries, silver may well serve the same purpose as gold. During the last war, it should be remembered, the price of silver went up mainly on the demand for the white metal for purposes of subsidiary coinage. It is quite possible, therefore, that the public has underestimated the quantity of silver needed to maintain an adequate supply of coinage in the war zones on our North eastern frontier. There is no question here, as some people imagine there is, of a waning confidence in any part of India in the stability of our note issue. It is not as if foreign members of the fighting forces are not pre-

pared to accept currency notes, for which a suitable metallic substitute has therefore to be found.

Nevertheless, the import of silver on so large a scale on terms, the suitability of which will be examined presently, furnishes an opportunity for the authorities to look into the position of our subsidiary coinage. We cannot possibly lay claim to any knowledge of official intentions. But it is neither unlikely nor undesirable that the Government should consider an increase in the silver content of the rupee and the half-rupee. The enormous demand for subsidiary coinage that sprang up from the third year of the war and the depletion of our silver stocks has led to our legal tender money being debased, so to say, into mere chips of base metal. It is one thing to have a note issue which is 100 per cent token money. It is quite another to let the rupee coin, which is legal tender for unlimited amounts, have an intrinsic value which has no relation to its token value. It is fortunate, indeed, that during the years that have elapsed since the last war, the rural masses have been educated, almost over-educated, to the use of currency notes. But at the present stage, it is of great value, psychologically and otherwise, to make the rupee coin less a pale ghost of its former self. The wide difference that may still persist between the bullion and token value of the coin, despite any feasible increase in its silver content, would be sufficient protection against melting of silver coins, if not the hoarding of them. Even if there should be hoarding on any scale, its value in the fight against inflation need hardly be despised.

This takes us to the relation between the loaned silver and the fight against inflation. Considering that the Allied Nations' sales of gold in India were thought of as an anti-inflationary measure, not less than as a means of financing Allied war expenditure in this country, it is a natural thought that the silver now obtained from the U.S.A. may be used to combat inflation. For one thing, the American Government have thought of their loan as a help to the Indian Government in maintaining the stability of prices. For another, the amount obtained is too large to be utilised in the provision of subsidiary currency for the fighting forces on the frontier. Another consideration is that the offer of gold sales leaves untouched the surplus cash in the hands of the lower middle and the lower classes. The role of the precious metals in the drive against inflation would be woefully incomplete, if the Government could not offer silver to the masses what time the needs of the big hoarders are met by offers of gold. Considering that the bullion market, unlike the currencies of the world, has remained consistently bi-metallic, its continued limping may be obviated by additions to the stocks of silver. The Government have since the beginning of the present policy of gold sales been regulating the price of gold. Such a policy would be ineffective if it lacks the means of controlling the silver market as well. That the market is keenly conscious of this aspect of the Government's deal in silver is seen from the reactions of the silver market to the news reports in this regard. Whether or not the Government allow the newly gained silver to be absorbed in silver hoards all over the country, it is certain they have the means of making their control over the bullion market complete.

It will be seen thus that the provision of adequate currency for the fighting forces, the improvement of the silver content of subsidiary coinage, sales of silver to the public with a view to immobilise surplus cash in the hands of the lower classes of the population and more complete control over the bullion market may reasonably form the chief motives of the Government in getting silver on loan from the American Government. The order of importance too, is as given above. There are some who feel tempted to swell this list. It is suggested that

INDIAN FINANCE

1255

this silver may be procured in a way that could bring about a reduction in our sterling balances. The idea seems to be that Britain should obtain this silver from the American Government either through lend-lease or through other means and sell it outright to India, in which case, India's payment in sterling for silver so obtained would lead to a corresponding reduction in our sterling balances. The recent movement in the British press for partial or covert repudiation of Britain's wartime obligations to India may reasonably inspire this anxiety for the realisation of a part of our sterling balances at every possible opportunity. But the suggestion can be supported only by dark pessimism about the fate of our sterling balances. If Britain should buy this silver from America, there is no reason why the latter should agree to sell it at any price lower than the present inflated price; and it is extremely unlikely, to put it most mildly, that Britain would hand over this silver to India at a loss to herself. That India sold silver to Britain at very low rates in the past cannot be expected to weigh with her now. Unless, therefore, it can be contended that the price of silver will not fall heavily in the post-war years, the suggestion of an outright purchase of silver has

nothing to be said in its favour, except, of course that, if we buy it from Britain, it will represent something in lieu of our loans to Britain, instead of the nothing that is now threatened. But it would be well not to lose a sense of proportion and to remember that the value of the silver now obtained can amount at present rates to only Rs. 28 crores against our sterling balances of over Rs. 900 crores. We trust that nobody sets much store by the efforts of Mexico to include the future of silver and a reconsideration of the possibility of bi-metallism in the agenda of the forthcoming international monetary conference. The wildest optimism will not serve to invest these efforts with any practical importance. For, the difficulties in the way of bimetallism have grown and multiplied since the world first elected to have a mono-metallic gold standard. The development of the production of silver as a by-product has sealed its fate as a monetary metal; and there are complications enough in the management of an international gold standard. In the case of a metal with so bleak an outlook, a loan for temporary use and return when done with is indubitably the wisest measure to adopt. And the question of sterling balances is wholly irrelevant in this context.

POST-WAR DEVELOPMENT OF INDIAN FISHERIES

In India's war against food shortage, Fisheries may be said to form a Second front. The sea is an immense store of a wide variety of fast-multiplying food fishes and offers pearls, corals, shells etc. for human use. Fish is an article of human diet and a raw material for the manufacture of medicinal and industrial oils, bones, soaps, etc. Man had learnt the art of fishing even before he understood the value of tillage of land and throughout history the lure of the sea and man's attempts to catch fishes have played a vital role in the destinies of nations. The seas contribute to equable climate, offer lucrative employment to thousands of families on coastal areas and necessitate the building of coastal crafts, trawlers and ships for fishing expeditions. Scientists have profited by systematic investigations into the plant life and animal life that thrive in the oceans and the advancement in the sciences of biology and engineering in turn have speeded up further exploitation of the oceans for human progress. While the progressive countries of Europe, U.S.A. and Japan have gained by sustained efforts at encouraging the fisheries, India offers a sad contrast where only an insignificant part of the resources of the sea has been pressed into social service.

A study of the industrial development of fisheries abroad, particularly in England and Japan, suggests that Indian fisheries have a glorious future if only the Indian Government takes a vital interest in this industry. In England the fish trade is extensively organised and consumes more than 300,000 tons of coal annually. Huge sums of money are sunk in providing fishing crafts, storage facilities and transport arrangements for the quick disposal of the catch. While the per capita consumption of fishes comes to 40 lbs for England the figure is very low for our country. In U.S.A. the fisheries and the fishing industries employed before the war nearly 2 lakhs of men and annually 1.3 million tons of fishes worth \$109 millions were sold. The property and equipment of the industry were estimated at \$210 million and every year about 11 million gallons of fish oil, besides huge quantities of fish glue, fish meal, poultry grit, etc., were extracted. In Australia fisheries had been neglected till recently owing to the difficulty of transport and the comparative cheapness of meat. But now a vigorous drive for more fish is being carried on with modern trawlers and boats. New Zealand has ever been proud of her high quality oyster and today more than 2,000 vessels are employed in the fishing industry. Fishery research has borne fruit and several North Atlantic varieties of fishes are successfully introduced in New Zealand waters. South Africa's repute in this respect is excellent, and the flourishing export trade in fish products achieved by her should inspire planned endeavours in India. Throughout the British Empire planned exploitation of the food resources of the sea has begun. It is not a day too soon for this country to evolve a plan for rational exploitation of the Indian seas.

India has a long coast line of 3,500 miles excluding the deltaic regions of the Ganges, the Godavari, the Krishna and the Indus. It is well known that the fisheries of the tropical regions differ from those of the colder seas and that the warmer waters offer greater species of fishes while the cold waters reveal concentrations of particular varieties. Classify-

ing fisheries into (1) inland (2) estuarine and (3) deep sea, we find that the deep sea fishing is practically non-existent in India, while inland and estuarine fishing is being carried on under crude methods without organisation or scientifically planned effort. The west coast of South India is comparatively well developed and in the Malabar coast nearly 54,000 tons of fish worth ₹400,000 were caught annually in pre-war years. While no estimate of the annual catch is possible for want of statistics, it is easy to see that the demand has been steadily growing and if proper storage and distribution facilities are forthcoming the progress would be remarkable. The drive for deep sea fishing can be undertaken only if India secures or builds fleets of steamers, motor trawlers, drifters, liners and cutters. Experts have stated that if deep sea fisheries are fully exploited the fish food requirements of Indian population can be fully met and the establishment of factories for fish canning, fish oil, fish guano, and fish meal can be made feasible and profitable. Even planning for exports is not scored out. Fishing industry, so vital for national wellbeing, has been relegated to the background, and the halting and the half-hearted measures taken by the Provincial Governments have not improved matters materially. Like industries, agriculture and forests, fisheries have been entrusted to Provincial Governments with poor resources and hence by sheer force of circumstances the Government of India have now come to realise the need for planning on all-India basis. In the past, there had been a few attempts at deep sea fishing; but no substantial results have been achieved because of the absence of fishery harbours with facilities for landing of catch, packing, sale and despatch to different centres, and the lack of refuelling facilities. If refrigerating plants are available in adequate numbers and if shore organisations are well laid out, the prospects would be bright. Fishing is at present carried on by poor and ignorant men of low castes and, owing to the very low price of fish and the difficulty of transport, capitalistic enterprise and organisation has been absent. It is clear that the initiative should emanate from the Central Government, if fishing industry and the fishermen are to thrive and contribute to national regeneration.

The memorandum on "Post-war Development of Indian Fisheries" by Dr. Baini Prasad, Director, Zoological Survey of India, is most welcome since it outlines a practical plan for the rational exploitation of the Indian waters. To be rational a plan has to be based on complete understanding of the sea, the fishes, catching methods, organisation of the fish trade and economic uplift of the fisherman. Dr. Prasad lays due emphasis on the collection of statistics and organisation of marine research as essential prerequisites for initiating correct plans of fisheries development. He recommends the establishment of a separate Central Fishery Research Institute (like the Agricultural Research Institute at Delhi) under a Director of Fishery Investigations. The location of the Institute will have to be decided by an ad hoc Expert Committee and its work will consist of four main sections, viz., (1) biological (2) physico-chemical (3) statistical and (4) technological and educational. The Government of India in consultation with the Director of Fishery Investigations should constitute an ad hoc committee to draw up a detailed plan of enquiries the results of which will form the basis of subsequent schemes of development. A preliminary survey of the commercial fisheries of country,

fishing grounds, vessels and boats employed for catch, utilisation of fishery products, etc., is to be conducted. An Advisory Fishery Research Council, composed of a number of Experts in fishery and biological sciences and representatives of the provincial and State fishery departments, will have to be formed to guide the Institute and approve the grants, staffs, etc. recommended by that body. Dr. Prashad has pointed out the need for training fishermen in the use of modern types of boats and pleads for the resumption of marine survey activities for making detailed charts of Indian seas. In order to educate the fishing communities in improved methods of fish culture demonstrations centres or fish farms have been suggested. A five year plan of development is favoured and the progress to be

achieved in the first five years is clearly outlined in detail. Initial and recurring expenditure of the plan has not been indicated but there is no doubt that expenditure on fisheries would in due course amply repay the outlay. The Provincial and State Governments will be entrusted with the actual execution of several important schemes. The food situation and the backwardness of the thousands of fisherman in the country require a speedy implementing of the plan suggested by Dr. Prashad. The fisherman communities have contributed creditably to the war effort and meekly suffered under wartime inflation and even denial policy as in Bengal. They have a right to expect the Government to come to their help.

CONSERVATION OF MICA

BY CHANDMULL RAJGARIAH

Like "MICA PIRACY", "WASTEFUL MINING" is another bogey raised in the public mind with a view to secure public support for a kind of regulation of the mica industry in which some sections of the industry are keenly interested.

Wasteful and unscientific methods of mining adopted by small miners, best known as surface scratchers and the considerable increase in the number of mica licensees are the two factors discussed in a much exaggerated form in the columns of certain journals under the caption of "CONSERVATION OF MICA".

The problems dealt with under this title by various papers are practically of the same nature. It is very disappointing to note that a lot of propaganda is being done through the Indian Press by some vested interests under the cover of the "CONSERVATION OF MICA," most obviously with a very ulterior motive. It has been suggested that Government should take immediate steps to force people to start scientific methods of minings on the grounds that the methods adopted by the various mine operators specially smaller ones (towards whom this blow is being directed) ruin the surface indications by their wasteful methods of mining.

It is difficult to understand in the first place what is really meant by "WASTEFUL METHODS". Does it refer to the cost of production? If it does, it is the concern of the producer and he may be left to take care of it as well as he can. But in case it means the waste of mica, it may be said without beating about the bush that it is not really the smaller miners better known as surface scratchers who are the real offenders but the medium sized ones operating proved mines with a few boilers and pumps. Ignorance of the geology of mica, and impatience in making profits lead them to cause waste for the nation, comparative loss to themselves. But even in this case, mica is not wasted really, because such mine operators operate up to the point at which their unsystematic and unscientific methods cease to be profitable and then they either stop working the mines or sell them to a better miner. Somehow or other ultimately the mines reach the hands of mechanized miners who straighten out the mine and develop it properly and recover as much mica as is humanly possible.

Now coming to the smaller miners, who are being charged with the crime of spoiling surface indications, by doing surface scratching, a miner does not in any way ruin the surface indications but on the contrary he makes them more conspicuous and to be more precise one can safely say that such surface scratchers, if not benefactors from the point of view of the mica industry, are certainly not parasites jeopardising the long-term interest of the industry. It is necessary to go into the geology of mica to explain this point.

Generally speaking, mica is found in a kind of rock known as pegmatite, mica being one of the chief constituents of these pegmatites. The pegmatites were originally in liquid form as magnetic solution; and under certain pressure they rose higher from the centre of the earth filling the cracks, already present in the earth's crust and developing cracks in weaker zones. When this process was going on, temperature and pressure was gradually dropping down at a certain temperature and pressure, other constituents of pegmatites crystallized forming a complete mica bearing pegmatite vein, as an intrusion in the country rock of Metamorphic Region which is generally known as Schist. These pegmatites are generally lenticular in shape. After the crystallization the whole deposit was subjected to an extensive system of denudation and as a result of which now-a-days we find in some places deposits very rich near the surface, but the vein vanishing after a depth of 40 to 50 feet. In a few cases the veins go very deep creating a fairly big mine. All these depend

on the extent the particular area had been denuded. The following sketch will explain this better:—

SKETCH SHOWING THE FORMATION OF PEGMATITES

The sketch shows a part of the earth's crust with magnetic intrusion from a certain point X. The magnetic solution under certain pressure rose up filling up the lenticular crack indicated by C. Mica and other minerals were crystallized and a regular vein was formed. While this was in process some more of this solution rose a bit higher and filled up another lenticular crack indicated by B and formed another vein. Between B and C the portion indicated by A is a sort of a narrow passage. The lense indicated by B was originally a fairly big one but as a result of denudation, the hatched portion disappeared exposing the vein at the surface. Now, if some one sinks a pit through this lense, he might get mica till he reaches the top portion of the section indicated by A and then, when he gets into the narrow zone, mica may disappear totally or partially as a result of the thinning out of the vein. The extent of the portion indicated by A may be anything between 5 and 50 feet or even more and one has got to sink through this zone in order to reach the portion indicated by C. But no scientific method has yet been invented which could give a definite idea as to how this lense will prove to be from the standpoint of profitable mica mining. As a matter of fact, this may or may not contain a workable quantity of mica. Under the circumstances, the only possible way of ascertaining whether this particular lense contains any workable quantity of mica is to sink through the barren portion and that would involve both money and patience. In case of a part of the lense B not being denuded, the complete lense might have produced a big mine itself. But in this particular case, if the lense C is not rich in mica, B becomes only a sort of surface deposit.

Now returning to the main point under discussion, as to whether the surface indications are really destroyed by these surface scratchers and whether their existence in the field is detrimental to the interest of the industry, one can safely say, considering the Geological aspect of the mica, that such diggers help the discovery of mines rather than spoil the area at all. In order to justify the above statement, let us take a concrete example:

Suppose one Mr. A with a small capital goes to a certain area sinks several pits (of the type shown in the following sketch) and after sinking it to a depth of 40 to 50 feet finds the vein pinching out at a point X, as shown

in sketch I and yielding no mica, then he may treat the mine in two ways:—

— SKETCH 1.—

SECTION ALONG THE DIRECTION OF DIP

— SKETCH 2.—

SECTION ALONG THE DIRECTION OF STRIKE

(a) He may slope out the sides of the pit for recovery of whatever mica is available as shown in the portions marked A and B in sketch II and abandon it.

(b) In case he is adventurous and has sufficient finance at his command he might sink further deep through barren rock to see if there is another productive lense down below.

The second method certainly is more systematic and scientific and would require appreciably more of mechanical equipment, at least, for pumping out water and removing debris. But even if Mr. A adopts the first method which is a crude one, he does not in any way ruin the indications. He rather makes the indications more conspicuous. He removes from the field only valuable mica, and small chips of mica along with the debris are always left at the pit head which are sufficient to attract the attention of even a passerby, telling him that a man extracted mica out of this pit. All that he takes away from the field is his legitimate dues which he earned by investing money and sinking through the bowels of the earth. Now, if at a later date some Mr. B with better financial standing acquires the very field he comes and finds some shallow pits at different places, some full of water, some full of debris. In this connection it must be mentioned that it is the general practice in a mica field to employ labourers from the adjoining villages with a view to collect information from the local people or the labourers who worked for the previous owner. Mr. A as to why the work in a particular pit was discontinued. The reasons for the abandonment would be as follows:—

- (1) Absence of mica after a certain depth;
- (2) Decrease in size and quality of mica, making the proposition uneconomical;
- (3) Working difficulties or lack of mechanical equipment or finance.

On receipt of such information Mr. B can more confidently judge for himself as to what amount of risk he can safely take. Moreover, it is much cheaper to clean a pit of 40 to 50

feet than actually to sink it. It is not only cheaper but it takes much less time. Under the circumstances, one can safely say that instead of doing any harm to the field, it does a lot of good by leaving a history behind it.

As already stated, such surface scratchings are done by those that work with mechanised units as well. Whenever a pit is considered not prospective, it is invariably treated in the same manner as the small miners do. One fails to see how the small miners should be specially condemned for practices which are common to all and which are not really unsound.

Furthermore, considering the vast extent of the mica area it is not possible for the limited few mechanized miners to work the entire field or to have so many rat-holes for exploiting the surface deposits. When for lack of supervision mica is being pirated from a few big mines they work, what will be the fate of such concerns if they have to manage hundreds of small pits for extraction of mica from shallow deposits stretching over 1500 square miles?

The Department of Labour by a recent circular has declared a sliding scale bonus on production and has exempted this from the scope of assessment to E. P. Tax. The object of this, obviously, is to encourage production on a large scale, but in view of the vast areas of mica-bearing lands lying idle, in the hands of those who have not the capacity to operate even 25% of lands kept in their possession it seems doubtful if this scheme can give any appreciable result.

An independent enquiry into this matter will at once reveal that some of those concerns have kept acquired in their possession substantial portion of mica properties although they can not work them. Thus about 75% of the mica bearing land is lying idle, which could have been worked by other parties and the production could have been multiplied.

Then the press propaganda has created also such panic all over that the majority of people have become shy, and this, in spite of the generous offer of production bonus has held back production.

Under the circumstances, if more production is really needed measures should be taken by the Government to quell the panic, thus created; and it is hoped that when panic is removed production may increase considerably.

The fear that has been raised in some quarters that our mica reserves may be extinguished in 25 years by wasteful methods of mining is wholly unreasonable. It is really amazing to read that the life of mica may drop down to 25 or 30 years under the existing conditions. In the absence of any scientific method of prospecting mica, it is practically impossible for any one to ascertain the life of a mica field. So far as I know not even a tenth of the entire field has yet been developed properly. Vast areas are lying intact in the hands of big concerns and in comparison with the area of 1500 square miles, the number of big mines is a negligible one.

It is equally wrong to suggest that in the olden days mining was limited to surface scratching and that its nature has changed only recently with the need to mine as far lower depth. It is only after a vein has been proved that one gets deep enough to call for mechanization. In a way mica mining is wholly a prospecting job till the commencement of stopping. It is impossible for one to say up to what depth a mine will yield mica. The deepest point in a mine may turn barren at any moment. There is a speculative element in mica mining from which there is no getting away. The difference between the distant past and present only lies in greater patience and readiness for mechanization at the appropriate stage. The writer can say that he himself has developed a good many mines given up for good by foreign interests credited with better knowledge than Indian miners.

I trust that I have shown, in the first place, that what is known as "SURFACE SCRATCHING" is not really a wasteful method of mining, that on the other hand, surface scratching attracts better and more persistent ghosts to exploit the surface deposits that, in the second place, even if these methods were really wasteful, the small miners are not the only sinners in this respect. It may be inferred from this that all this hue and cry for conservation of mica is directed not against surface scratching but against the small miners, whose elimination from the industry is being assiduously worked for by certain interested parties. That such elimination is not in the immediate interest of the war effort or the long term interests of Indian industry, not to speak of the injuries involved, is not a matter which needs to be substantiated at length.

A Matter of Policy

Wise investors always appreciate and welcome Insurance because of its special benefit i.e., the covering of risk.

While share-scrips shunt about in the field of fortune, your Insurance Policy will stand fast, ready to shoulder your greatest risk.

A "HOWRAH LIFE" Policy is admirably suited for the task.

Helping Glass Makers

A glass research institute in Calcutta following a meeting of a committee this month is to be set up at Calcutta. The decision is welcome because it indicates that the essential encouragement other than in the form of tariff protection is available to the Indian glass industry which gets the benefit of the rebate of the duty on soda ash. The U. P. certainly has made most progress in respect of glass manufacture during the war. But Bengal alone has developed the associated industries along with glass. The glass industry is known to have solved its fuel problem more or less independently. It has also been responsible for important departures in production. While the Glass Manufacturers' Association has taken the view that progress is to be ensured only by organised research, given the possibility of imports after the war, the young industry must be equipped. In the war period an improved furnace has been a factor in technical progress but the factories wanted an Institute to promote the development of glass manufacture. Exchange of available technical information, surveys of raw materials and questions of designs will properly belong to the institute that is prepared to advise and help. An area in which the glass industry is concentrated, such as Calcutta, is the proper site for the laboratory. The Bengal Glass Manufacturers' Association stress the need to carry out commercial tests after the results of investigations are obtained. The number of pottery makers is large and the manufacture of refractories in Bengal is well established. For the proposed institute the glass industry has already promised a contribution. The glass manufacturers organised in an Association, of which Mr. D. N. Sen is President, have successfully presented the claim of Calcutta because the porcelain and other industries have been developed in Calcutta over two decades and the industry's own realisation of the need for improvement of methods and materials furnishes in a way the best guarantee of success.

Points of Resemblance

The announcement that two Senators and two Congressmen would go to Bretton Woods would be linked up with reports of Congressional hostility to the monetary fund plan. It must also be noted that the U. S. press is unimportant as compared with the individual Congressmen who may be ready to believe again that the Fund is meant to take gold out of the Treasury. Domestic differences do not appear to upset the fifth war bonds campaign in which Labour has agreed to help the Administration. Success in the Empire State may again bring about rivalry between A.F.L. and C.I.O. The American view of the monetary fund may, however, be little influenced by the war loan drive as compared with the advocacy of the British delegates in regard to the 'escape' clauses.

The views of four Governments' experts are known but the other United Nations are more numerous. It is not likely that they are going to be tame beneficiaries of the arrangements concerted by others. The Canadian plan is withdrawn but Canada, like Britain, wants to keep up the export trade and thereby employment at a high level. The monetary fund plan would bring Canada into direct relations with the sterling group but Canada has paid off her external debt and bought out foreign investors although U. S. capital is strongly entrenched at present. The problem for Canada will evidently be different from Britain but in many ways India's position is not different since export outlets for both agriculture and industry developed in wartime can alone help to preserve a favourable balance of trade, especially if treasure exports and transfers of capital are going to be strictly regulated by India's debtors. The Canadian view as to essential imports for maintaining employment at the peak is not far removed from the generally accepted opinion that everything must be regulated by the needs of full employment at home. The Dominion of course, has no home development plans calling for capital, and even the increase in debt is regarded as unimportant, when taxable capacity has increased. Can similarity be indicated in this respect? Indian tax revenue figures show how additional expenditure is met. If this is left at a high level, borrowing for the Plan may be as easy as borrowing for the war and the new internal debt may be serviced by receipts from abroad. How much of the sterling accumulated is due to the cutting down of imports and the increase in India's trade with the Empire has not been examined as yet, not merely to show that sterling is better than Dominion or Colonial pounds or to show that the import surplus shown under Indo-Egyptian or Indo-Iranian trade is duly paid for in sterling. If both asked for gold for essential supplies there would be fresh problems for India.

Cost of living changes

The Bombay Labour Gazette for March announced that the cost of living in Bombay City fell in February. The curve rose continuously in 1943 and has dipped since January though the index in February was 125 points above that for August 1939. Food prices, except for meat and milk, were lower in February. The great change since 1943 when the cost of living rose by 45 points from 203 to 248 deserves special notice as it suggests that the rise in retail prices which was the leading feature of 1943, has really terminated. The elements of the rise in prices are apparent in a table which shows that prices of pulse rose by 87 percent during 1943 in Bombay while the price of rice, wheat and millet rose by 21 per cent. Sugar being rationed rose by 6 percent only but all vegetables were dearer like meat,

milk and fish for the working classes in Bombay City. The check given to the rise in prices in January was similar to that noted in Ahmedabad where the working class cost of living fell after the sustained rise during 1943. The same change was noted in Sholapur though the index rose in February owing to the higher cost of rice. The cost of living did not however drop in either Nagpur or Madras and the drop in Jubbulpore was less than the drop in Bombay. Up till now movements in index numbers have been far from uniform, but the rise in Madras during and after February, can be explained without much difficulty. Many of the recent industrial disputes in Bombay occasioned by demands for higher wages and allowances seldom resulted in favour of the employees since the cost of living ceased to rise this year. The following out of the wage level may have distinct effects on the quantum and rate of industrial profits.

Educational Advance

While the Secondary Education Bill promising larger grants for schools placed under the control of a new composite Board excites keen discussion in and outside the legislature the circumstances of expansion between 1937-38 and 1941-42 should not be overlooked. Education in Bengal certainly

In these three ways, you can save money, save time, save inconvenience, AND yet deserve the admiration of your friends.

Firstly, instead of attending distant marriages, fairs and holy places, stay at home and send the railway fare as a present or an offering, thus saving yourself an uncomfortable journey, and lending a practical and really welcome form to your sentiments.

Secondly, conduct your business from your headquarters. Do not tour extensively.

Thirdly, when you take a holiday, spend it at home or near home. Long railway trips are both inconvenient and expensive.

You cannot hope to derive the full benefit from a rest if you subject yourself to all the discomforts and annoyances of wartime travel.

In doing these three things, you will not only save yourself fatigue and worry; you will be helping the railways, whose primary task of distributing supplies to civilians and soldiers MUST come before passengers' comfort.

developed as 20 new colleges and 600 secondary schools were started during these four years. The number of pupils including those in special schools increased by 25 per cent and the increase in regular instruction is measured effectually by the increase under pupils of both sexes. It is noteworthy that the increase under Muslims was greater than that noted in the case of Caste Hindus. The increase in public expenditure on education is the direct result of the expansion indicated really by the increase in the number of children in primary schools which rise to 3.3 millions in Bengal. Bengal's lead in education over all other Provinces is best indicated by the number of high schools though the increase in the number of pupils between 1937 and 1941 was not great. There was also a disparity in the sexes as regards the number of pupils in the higher stages. Concentration and improvement after the striking expansion may be regarded as desirable, especially, as a number of useless schools were abolished and the curriculum remodelled during the quinquennium. The establishment of district school boards suggests that past policy in Madras is exerting some influence on Bengal, where also the backward classes claim more attention. The check given to education by the war in 1942 however should be remembered in evaluating prospects. The increase between 1931 and 1941 in the number of schools accounts for the higher percentage of literacy shown in the last census. The introduction of free primary education district by district certainly should lead to the maintenance of progress at the rate of the previous quinquennium in future.

Amended and Explained

Control of capital issues covers debentures, stocks and shares as well as instruments creating a charge on the assets of a Company and a Press Note issued lately deals with Rule 94-A, the exemption order and the sanction given to deal in shares, the issue of which has been permitted outside British India. Many Indian States have adopted the British Indian procedure and duplication of sanction is avoided and by the explanation now added. The Notification of June 9, also lays down rules as to application and the grant of sanction absolute or qualified. The exemption order excludes companies with paid-up capital less than Rs. 1000 and debentures which merely represent converted over-drafts are also excluded. The funds and moneys offering shares for members' subscription fall into a privileged class. Securities transferred by inheritance or succession or a decree of a Court are also exempt from the operation of the rule regarding approval of capital issues. The most important section of Rule 94-A namely Section 2(a) reads "No company whether incorporated in British India or not shall, except with the consent of the Central Government, make an issue of capital in British India; (2) make a public offer of securities for sale; (3) renew or postpone the date of maturity or repayment of any security maturing for payment in British India."

British Textile Exports

Export organisation in the case of British textiles has proceeded so far that a list of permitted and prohibited markets is ready. It is known that 26 only out of 130 markets are within reach of Lancashire exporters today. The system of allocations applies to only 26 countries while occasional allocations under special arrangements are possible in respect of 20 overseas markets. The four-fifths which are out of bounds include neutral as well as belligerent Europe, virtually the whole of Central and South

America, much of the Middle East along with India, China, Ceylon and the neutral countries of Asia. The loss of export outlets promises to be permanent, so far as cotton and rayon merchants are concerned. Planning by the controlling authority and the textile operatives organisation has been reported in regard to cotton mills but neither count on the export trade coming back in prewar volume. It is not likely that inclusion of the Dutch West Indies or Iceland is going to increase the quantity allotted for exports. Allotments for African colonial markets have certainly been increased this year, for the Allies put Africa first in regard to supply. The reduction in fine quality exports and the increase in utility prices is suggestive of an important change in Lancashire trade. Normally only a large increase in trade with the U. S. A. and Latin America would restore the prewar volume and composition of the export trade. Classification of exports as essential and non-essential has reduced the volume of woollen and cotton goods shipped from Britain. It is not yet known if the Middle East is going to get anything this year. Comparison between Britain's textile output and export quotas last year and those of India may indicate clearly the differences in export policy as well as the ranking of markets. In fact, woollen exporters' prospects are considered better as raw material supplies at fairly low prices during the war have been ample while the U. S. market for woollen textile is called far more promising. If cotton is displaced by wool it would be the familiar instance of historical redress that may be helped by the exclusion by the U. S. customs department of the British purchase tax in calculating the tariff value.

Foreign Investment

The Financial and Economic Committees reporting to the League of Nations Council on the work done in 1943 dwelt on the nature of capital movements. They agreed that control is desirable while the real remedy always will be the attainment of political and economic security. In regard to foreign investment the discussions relating to double taxation led to the outline of model Conventions providing for reciprocity and the suppression of tax evasion. The conference held at Mexico City in July last, decided to go into the canons and nature of investment. Foreign capital is wanted in certain countries to further economic progress and raise standards of living, but borrowers still have doubts about uneconomic exploitation of natural resources, the export of minerals or other wealth in crude form and about the risk of foreign companies acquiring excessive control over their economic and financial life.

The question of conditions conducive to investment and the export of capital is to be examined further for the Committees recognised that the legal or other regulations in force may limit the flow of capital. The actual examination of contracts previously in force may be duly related to the requirements of reconstruction. In the past, both Austria and Hungary received loans against which certain revenues were pledged, and relief loans in other cases took precedence over other loans. It is however possible to distinguish between the demand for relief and the demand for capital, apart from the money needed for exchange stabilisation. Frontier changes may also lead to a growth of capital investment. But conditions must be relaxed by those in a position to lend at low rates of interest. That borrowing should be convenient, and the money should be used for capital goods are postulated like the maintenance of proper labour standards. The case of Liberia suggests the need for

the last condition while the distinction drawn as to the import of luxury goods and of essential capital goods may find an application in other circumstances. The Committees suggest nothing as to organisation or procedure in respect of overseas investment and the world bank plans and the investment board proposals are not noticed since Governments must organise for peace before they could lend or borrow.

Canada's Exports

While scarcity in India has forced up prices, control in Canada has been supported by a surplus of production. The surplus actually led to an increase in exports. Detailed examination of Canadian trade reveals that exports increased while

domestic demand also increased. The means of payment for essential imports was secured at once by an increase in exports. The total value rose from 2363.8 million dollars in 1942 to 2971.7 million dollars in 1943. The exports in proportion to production showed no variation as compared with 1939. The increase in exports did not affect either the progress of war industries or the standard of living since Canadian citizen are believed to have lived better when the national income rose by 17 percent to 9 million dollars. Of the total exports over 1½ billions was accounted for by armaments and minerals for armament. The outstanding feature of the export trade in 1943 was the increase in motor vehicles and parts including tanks, Bren-gun carriers etc. valued at 472 million dollars. The second largest item was cart-

The element of UNCERTAINTY..

Ability and industry are not enough to provide for a dependent family; for there is in our lives that element of uncertainty that calls for precaution against the unpredictable. The wise husband and father naturally provides life assurance as a safety measure, ready to go into action if his dependents should encounter that most critical of all emergencies—the loss of their provider.

In the General Assurance Society, you have the complete protection and backing of the company's stability and financial security. It provides life and other assurances at the lowest possible cost consistent with absolute security. The General Assurance Society offers various attractive features in their numerous policies specially designed to meet Indian requirements.

The new management, which now guides the administration of the General Assurance Society Ltd., is backed by a Board of Directors which includes Mr. B. N. Jalan (Chairman) and other leading members of the well-known house of Soorajmull Nagarmull, besides prominent personalities and businessmen of India.

FROM BLUE PRINT TO BUILDING

In ordinary times, months of planning are necessary before one begins to build one's ideal house. Often the perfect living place is spoilt by insufficient designing on paper before the work of building begins. Consequently restrictions on building in wartime should result in houses which are more thoroughly planned, and which will therefore combine beauty and comfort with the maximum economy.

To stimulate your ideas about the house you are going to build some day, the C.M.I. have issued an illustrated brochure "The Modern House in India" (cost Rs. 1/- and As. 4 postage), which is available from Department I.K. the Concrete Association of India, Victoria House, Calcutta. If at the same time you will give some details of the kind of house you want, they will be pleased to give you further suggestions and advice.

and other important trade centres in India.

ridges and shells. Iron and steel exports were considerable as compared with non-ferrous metals. The agricultural surpluses of 1942 led to an increase in shipments of wheat, flour and bacon. The labour and other difficulties kept down wood pulp and newsprint exports to the 1942 level. At one time, timber and cognate products were the chief Canadian exports. They have been displaced rapidly by armaments. One-third of Canadian exports in 1943 was due entirely to the war so that in the future a contraction in exports is inevitable. Surplus capacity in the automobile and other industries represents the main postwar problem for Canada. For the present, the demand for Canadian manufactures is increasing alongside of the improvement in the Atlantic shipping position. Canadian imports in 1943 were valued at less than 1750 million dollars and the year's favourable balance of trade was the best ever known. Up to 1941 the export surplus tended to be small so that treasure represented an important item in the export surplus. Since 1941 the gap between imports and exports has widened greatly, treasure has declined in importance and the mutual aid programme is the direct result of the increase. It may be noted here incidentally that the Canadian war gift of 1000 millions is about equal to the excess of exports over imports in a year and the balance of payments in the main is unchanged as compared with 1939. The increase in Canada's national income has raised the yield of both direct and indirect taxation. The budget deficit is, however, larger as total expenditure in 1943 was over 4 billion dollars. The first month of 1944 has been marked by a continued increase in exports while imports stood just over the 1943 level. Production too has been maintained at the year-end level. Last year Canadian exporters' desires as to postwar markets were formulated so as to make it clear that Canada had the industrial resources necessary to keep up an expanding overseas trade. Increase under exports of chemicals, aircraft and parts like that noted under bacon and eggs last year, certainly indicate how Canada competes with the U. S. A. and Europe and what may be expected when closed markets are reopened. The principal markets for Canada, however, are the U. S. A. which took 1,149 million dollars worth of Canadian goods and the U. K. which took 1033 million dollars' worth in 1943.

United India's Record Results

The United India Life Assurance Company's annual meeting to-day will consider the report and accounts for 1943 which point to the maintenance of progress at a satisfactory pace. New business figures for 1943 are 8,235 policies assuring Rs. 178.53 lakhs in the aggregate. The premium income amounted to over Rs. 38 lakhs, and net investment income amounted to over Rs. 7.27 lakhs. The revenue account shows that claims took Rs. 11.86 lakhs and surrenders totalled Rs. 1.41 lakhs. The Directors express strong satisfaction with the record results for the 38th year of the Company's career and express a hope that support from staff and policy-holders in India and Ceylon during this year will continue in as abundant measure as in the previous year. The total revenue for the year namely Rs. 45,55,437 exceeded disbursements with the result that the Life Fund increased by Rs. 21.5 lakhs nearly. The Fund stood at over Rs. 185.58 lakhs at the end of 1943, but the balance-sheet total includes various Reserves and Deposits so that the total is now over Rs. 203.9 lakhs.

Of the fund over Rs. 88½ lakhs are invested in Government securities excluding statutory deposits totalling Rs. 6.89 lakhs. The next largest item is house property valued at Rs. 28.51 lakhs. Policy loans and mortgages account for over Rs. 44.44 lakhs. Cash balances exceeding Rs. 9 lakhs are more than outstanding claims and various deposits while revenue items among the assets total over Rs. 5.83 lakhs. The accounts of two subsidiary companies are presented with the main

report but their profit and loss accounts are excluded. Since the net yield on the funds was over 4 per cent and the expansion in business and revenue was pronounced, the United India like other leading Indian offices undoubtedly had a good year. Figures cited certainly confirm anticipations and in the balance-sheet the stock exchange investments shown at cost are moderate in relation to the total value of assets while the appreciation of debentures and preferences has been left out of consideration.

PAPER economy

After five years of war it is hardly necessary to emphasise the importance of economising in the use of paper. But it is worth your while to know how best to economise paper. The first point is, of course, to use only just the amount of paper which is absolutely essential and no more. The second, and no less important point is to use paper of a good quality which will enable you to write or type on both sides without affecting legibility.

This "Morning's Bag of News", as our stable-companion, the "Telegraph", would describe it, is unmixed good news. Never, since the war began, has there been such a complete coincidence of favourable reports from every front and in every respect. I cull the following headline items from today's papers:

"The Imphal road has been opened. With the relief of Imphal, the last hopes of Japanese designs in Assam have been shattered. It is believed that Myittha, North Burma's biggest town, will fall. . . . Admiral Chester Nimitz announced on Thursday that a major portion of the Japanese fleet has been smashed in the battle between the Marianas and the Philippines. . . . Algiers radio reported that Carnero and Umbra in Italy have fallen. . . . American forces last night penetrated the perimeter of defences guarding Cherbourg and drove to a point within two miles of the northern tip of the Peninsula. 30,000 or more Germans in the town are fighting with their backs to the sea and no hope of escape. . . . The Germans have lost on the Soviet front over 7,800,000 men as killed or prisoners. 70,000 tanks, 60,000 aircraft and over 90,000 guns, says the Soviet Information in a review of three years of war. . . . Mustang fighters of the United States' Eighth Air Force escorted American heavies the whole way to Russia in the first Russia-Britain shuttle raid, it was disclosed here today (Thursday). It was probably the longest flight of escort mission ever undertaken. . . . We have good reason to hope this will be the final year of the Japanese aggression in China, Asia and the Pacific, declared the American Vice-President Mr. Wallace at the State Banquet by Generalissimo Chiang-Kai-Shek. . . . Formation of Finnish Peace Cabinet? . . . Alleged German peace terms: manoeuvre ignored by Britain. I may add the following news which appeared in Tuesday papers:

Full victory might come this summer, hinted the Prime Minister, Mr. Churchill, in one of the most optimistic of his recent speeches. Referring to the invasion of Normandy, Mr. Churchill said that the plans agreed upon in Teheran had not yet all been put into operation, "but they are being steadily unrolled, and the months of summer may, by the victories of this Allied campaign, bring full success to the cause of freedom."

One cannot help feeling that such a goodly bunch of good news in one and the same day is too good to be true. By all tokens, the Second Front is proceeding not only according to schedule, but much more favourably than expected. Among the many hazards facing the opening and execution of the Second Front, the securing of a footing in Western Europe was the most hazardous; and it may, therefore, be said that well begun in Normandy is much more than half done in Europe. Progress in Italy continues to be steady and satisfactory. It is good to know what a h-l of a trouncing Russia has given to Hitler. Coming nearer home, it is certainly a great relief to learn that Japanese designs on Assam have been foiled. This report is all the more heartening because the campaign started under circum-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It)

stances which caused considerable disquietude. Not only have the Americans continued their success in hopping from island to island, but they have lured the Japanese fleet. War events are thus favourable in every theatre. News conducive to what may be called "morale" is equally cheerful. Ever since Mr. Churchill assumed the heavy responsibilities of war leadership in Britain, he has studiously refrained from sounding anything like an optimistic note: he almost took a cruel delight in urging, again and again, a plea for sweat, toil and tears. For the first time since he became Prime Minister, he has made a speech which has the complete ring of optimism. From this point of view, more than ordinary significance belongs to the British Prime Minister's hint of "full victory this summer." If this startling announcement of Mr. Churchill is a bombshell—an agreeable bombshell, let us say—the remarks of the American Vice-President have an even bigger bombshell effect. We have hitherto been led to believe that the first objective was the smashing of Hitler; that this might take certainly a year, perhaps even two years; that, once this was done, Britain would turn her attention to help the U. S. to smash the Japanese; and that the Japanese would, thus, be a matter of a few years. Lo and behold! Mr. Wallace informs us now that this will be the final year of Japanese aggression. If Mr. Churchill's hope and Mr. Wallace's prophecy are fulfilled, it would mean the ending of war much earlier than responsible world leaders have till recently been leading us

to believe. Both Mr. Churchill and Mr. Wallace speak with a full sense of the responsibility attaching to their respective offices; and it will be no rash or unjustified inference to point out that Mr. Churchill's is more than a hope and Mr. Wallace's more than a prophecy.

Most men and women have cause to feel gratified by this authoritative assurance. But there are some people who seek to prove the opposite of the old saying and who believe that there is a soul of badness in things good. These people belong to the stock exchanges. You and I are happy that the war is likely to end soon. But not the professional operator on the stock exchanges. He interprets the end of war as the beginning of the slump. The prospect of peace makes people happy but markets sad. As I am dictating these lines, I have not heard of the stock exchange reactions to today's news; but I may draw attention to the recent setback in share prices on the opening of the Second Front. The stock exchange operator has certain simple, short-cut methods of reasoning. His line of reasoning follows this pattern: "As soon as the war is over, orders from the Supply Department will cease. The various industrial concerns will have to depend solely upon the civilian consumer demand. Moreover, the capacity of various industries has been greatly expanded to cope with war requirements. That is to say, the production of civilian goods after the war will be much more than was the case before the war. Another complication is connected with the sale of surplus goods

by the various war departments. There will, therefore, be a glut of goods, drastic cut in prices, and steep fall in industrial profits. The average speculator is also aware that slumps have followed every known war in history. May I suggest that, to his simple knowledge of market technique and behaviour, the average speculator will do well to add another simple fact, namely, that this war has been entirely different from previous wars, and that the postwar period on the present occasion will likewise be entirely different from its predecessors?

When the hostilities began in September 1939, the first universal instinct among businessmen, brokers and bankers was that gilt-edged securities would slump heavily and that equity shares would experience a boom. Before many months were past, banker, broker and businessman learnt that this war was totally untrue to norm: it was gilt-edged that experienced the boom and equity shares made only a mixed showing. Those who were disappointed by the behaviour of gilt-edged in this war are now hoping that, at any rate in the postwar period, government securities must shed a good few points. Let me tell them that they are hoping against hope. The world has now a new monetary technique—a new economic technique. There is to be no such thing as dear money; the word "slump" disappears from the dictionary; unemployment is another word that does not find a place in the new lexicon; cheap money will be the order of the day; and good governments with good, wholesome policies will be able to borrow as cheap as they want. This is the new economic world; and speculators will do well to know more about it if they wish their operations to be based on correct assumptions.

Britain has planned shrewdly and elaborately for this new economic world. An inconspicuous news item in this morning's papers makes mention of the most important step taken in the House of Commons for the inauguration of the new economic world. Not many readers can have realised that this news pertains to what may be described as a revolution in Britain's economy and in Britain's economic thought and planning. Let me quote the following passage:

Opening the debate on the Government's recently announced full employment policy, the Minister for Labour, Mr. Bevin, declared: "The coming of the State into the arena, as it now proposes to do, must mean the writing of a new code of conduct for industry itself a new set of rules in our economic life which must be respected and must respond to the will of Parliament if the problem is to be solved."

It is surprising that Reuter has supplied such little information about a scheme which is the subject matter of this discussion in Parliament. The debate which began yesterday is on an official White Paper by Lord Woolton, Minister of Reconstruction. This has been hailed as a historic document. The "Daily Herald" describes it as a "revolutionary manifesto". I am in a position to give details about the main features of the White Paper; and these have to be studied in conjunction with our Washington cable which appears elsewhere in this issue and which deals with the American Administration's methods for tackling the switch-over from war production to civilian goods. The main significance of Lord Woolton's scheme is that the British Govern-

ment recognise unemployment as number 1 postwar problem; that they feel confident of executing plans which will have the effect of banishing unemployment for ever; and that every democratic government should recognise it as its duty to shoulder a broad, new, postwar responsibility to prevent depression and to ensure adequate employment. The British Government have taken more than two and a half years to study the relevant economic problems, the result of which is embodied in the White Paper now under discussion. The White Paper confirms the dynamic conception of national budgets, that is, deficit in lean years but budget balancing over a period of years taken as an unit. Full employment is not promised, but the aim and object of national policy is the maintenance of employment, which may be paraphrased as stabilisation of employment. An equally important aim is the encouragement of trade expansion. For the achievement of these needs, the following four requirements are considered necessary:

Greater exports than ever before (even by restricting home consumption), since Britain has had to sell the great bulk of her foreign investments, which formerly paid for a large part of her imports. Stabilising, where possible, the amount of private investment from year to year. Public works carefully adjusted to compensate for swings of private investment. Pumping out consumer purchasing power whenever private investment falls off.

This commits the British Government to such a degree of authoritarianism and to so nearly a complete abandonment of the private-enterprise economy, that it may be said to mark the death-knell of laissez faire.

Lord Woolton points out that the British Government knows that, by being committed to this scheme, they are pioneering; that they expect to meet difficulties and adopt new techniques. The British Government are willing to take, says the White Paper, "the responsibility of taking action at the earliest possible stage to arrest a threatening slump. This involves a

new approach and a new responsibility for the State". Lord Woolton gave the following explanation to the press: "We have discarded, and I hope forever, the old theory that you can cure unemployment by deflation, by lowering standards of living. That idea belongs now with the medical theory that you could cure a patient by bleeding him". In simple terms, the White Paper is the sign and symbol of Britain's confidence that governmental action can cure unemployment and prevent depression. Similar problems will be facing the other countries that are engaged in this war; and it may be taken as certain that Lord Woolton's White Paper will be the basis of discussion and study in every country which has a conscious economic policy.

Sensible Americans feel that Britain has stolen a march in this respect over the United States. The detailed discussion of postwar problems such as these was evaded by the U.S.A. Administration on the ground that the attention given to peace problems would affect the tempo of war production. On the other hand, a considerable volume of opinion in the States was highly critical of the delay in the posing of problems concerning the resumption of civilian production. The Chairman of the U.S. Senate War investigation Committee censured the Administration in the following words:

"Some of those in the armed services have opposed any reference to the fact that many of our requirements either have been met or shortly will be met. They believe that the truth should be kept from the public in order to avoid over-confidence. This is a strange argument. . . . I have noted that the armed services show little inclination to play down their military and naval accomplishments. . . . If over-confidence is not caused by such disclosures, it will not come from telling the facts about war production. . . . The only result of a false pessimism about our state of war production will be to create a trough of inactivity in which our economy will lose momentum."

Now that the invasion of Europe is officially regarded as successful, the U.S. War Production Board has, according to our Washington Correspondent, taken several fundamental steps in the direction of re-gearing the American industrial machine for peacetime operations. The most important of these is that manufacturers will be permitted to purchase machinery, tools and dies for civilian production wherever it does not interfere with war production. From Canada comes the news that the manufacturers in that country have already closed an important deal for the supply of hydro-electric machinery for 25 million dollars to Russia. Thus, from the point of view of ensuring full peacetime production, machinery manufacturers in America are now in the mood to deal with enquiries for orders to be executed in the postwar period. This is a point which should be carefully noted and opportunely availed of by Government and industrialists in India.

To the pile of verbal and written tributes paid to Sir P. C. Ray one more must be added for he filled a large place in the life of the City and the Province. His character and life-work can scarcely be summed up even with the readiest of pens; for, the blend of the abstract with the concrete, the practical with the visionary, in his case defies analysis or description. Yet the twists of nature made him comprehensible to more than one generation, and his own record of achievement so varied and substantial in

T. C. B. TO ALL CLOTH DEALERS

In a recent Notification issued by the Textile Commissioner it is laid down that all cloth packed in and Texmarked April 1944 or earlier, all unpriced hand-printed cloth and any stocks that may remain without a price mark or Texmark or both are to be finally disposed of before the 31st December, 1944.

There are many ready buyers and all dealers holding stocks of such cloth are urged, in their own interests, to sell at once to allow for possible delays in transport. If sales are delayed retailers will not be disposed to buy, as there will be insufficient time for them to sell the cloth. The cloth will then be left in the hands of the holders and they will then be liable to **cancellation of their dealer's licence, prosecution and confiscation of the goods.**

No exemptions to this notification will be given by the Textile Commissioner save for the most compelling reasons. So sell your cloth without delay.

T. V. BADDELEY,
Acting Chairman.

nature, is enhanced by the enterprises he created and fostered. Due praise has been bestowed on his promotion of a school of Applied Chemistry. To the Calcutta University he gave years of unremitting zeal for learning, and the practical benefits of his teaching have been received far outside the College to which he was devoted.

The years of intense activity admittedly left their mark on him as well as the enterprises he created. It is perhaps well that he exemplified a tradition a little remote from the eager race for wealth. That alone conferred a special value on his opinions which he could, on occasion, express with force. If his opinions were not always that of the majority, they were strongly held as many will remember in regard to the exchange ratio controversy. Much has been said of his deep and living interest in the countryside for he was no learned recluse to whom men were less actual than minds. Much has been justly said of the range of his interests as he accepted the culture of both East and West. But little has been said as yet of the clear spur which made him scorn delights and live laborious days. It is perhaps just to reckon that his own sense of achievement came first in any evaluation of what must be regarded as a remarkably well-spent life in which all the talents found their uses, and the fairly large world that knew him gained.

If the general demand for another term as Vice-Chancellor of the University was not satisfied, the Calcutta University has made amends in a most proper manner. That will be the opinion of all who read last week that a special Convocation on Wednesday was arranged so that Dr. B. C. Roy a Doctor of Medicine could be come a Doctor of Science. The Chancellor said more than what a Public Orator could say in another tongue of Dr. Roy—of his services and his ideals, of his work and his worth. Dr. Roy's term as the head of the largest University in India is not remarkable for the departments set up, studies begun or publications prepared, but for the vitality he imparted to the bodies and boards grouped round College Square. His successor spoke rightly of Dr. Roy's interest in making the years at the University preparation for life. The needs of the non-University man were certainly studied and dealt with by one who made the corporation, the medical profession and the community realise the magnitude and duration of the effects of the Bengal famine. His own zeal for good work spreads far beyond the University to which he gave more than his leisure.

I have just learned that, in my bouquets on the Birthday Honours, I had omitted mention of Mr. N. Sundaresan. Well, let me ask, how could I have missed Sandy? And let me answer my own poser. I didn't expect that Sandy would have figured in the O.B.E. group. The least for him, in my view, was the C.I.E. fraternity. Look at his record. He is the one man in India who could occupy any the highest job where aptitude for currency and money market counts. He did yeoman service for the Finance Department (in collaboration with Mr. Shankar Lal) in the Bombay fire episode. In quick decision, detailed knowledge and grasp of fundamentals, Sandy is the round peg in the round hole for budget planning. And he blossoms unnoticed in the Order of the British Empire. Which reminds me that this is a case of his honouring the Order as much as the Order conferring an honour on him.

The Institute of Costs and Works Accountants, which has now come into being as a registered company, will meet with general acclaim all over India. In cost accounting, as in so many other essentials of modern business, India has lagged behind. Till recently, we looked to London for an Institute of Bankers, for an Institute of Actuaries and for the regulation of qualifications for many of the learned professions. Even in Law and Medicine, in which Indians from the start more than held their own against foreigners, the British organisations played the dominant part. It is no wonder that cost

accounting has been so slow to receive attention. Cost accounting, to my mind, is like a highgrade machine tool in the accountancy of modern industry. If India is to go forward at great speed on the path of industrialisation, we should produce our costs and works accountants in adequate numbers. The first "Council" of the Institute has for its President Mr. Shoaib, the Chief Controller of Factory Accounts, Government of India. My friend, G. Basu is the active element of the new show.

"EAVESDROPPER."

I KNOW I WILL NOT APPEAL TO YOU IN VAIN

"Last year the people of Bengal subscribed the generous sum of 40 lakhs of rupees in order that the work might be carried on.

This year we will need more. We will need at least 44 lakhs of rupees if Bengal is to continue to meet her full liabilities to those in need. Every rupee contributed will be a real help towards achieving this result."

(H. E. Mr. R. G. Casey, Governor of Bengal, in a Radio Talk on May 19th 1944).

This year our funds must be stretched in order that we may continue to provide relief and care for the destitute people of Bengal as well as to alleviate the misery of our Prisoners of War.

Our sick and wounded fighting men still count on us for those things which spell speedy convalescence and health.

The Governor said "Please give and give generously out of human compassion".

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

(From Our Correspondent)

New Delhi June 19, 1944.

POLITICAL interest here just now centres round the recent correspondence between Mahatma Gandhi and Lord Wavell—released to the press only yesterday. Both parties still stick to the positions they took two years ago and the general impression left by the letters is the frustration of all hopes for an early political settlement. "What I see in this country happening day after day provides a complete vindication of the quit India demand," says Gandhiji. To the Viceroy's view for co-operation, Gandhiji replies: "Is it not high time that you co-operated with the people of India through their elected representatives instead of expecting co-operation from them." He makes it clear that Congressmen have no faith in "the competence of this government to ensure India's future good". Mr. Amery's recent statements in the Commons confirm this impression that the Government are not anxious for an early ending of the impasse and want a solution, if at all, on their own terms. For, if the Government had at all been anxious for a settlement, either the big Congress leaders would have been released to facilitate consultations on future policy or at least there would have been no hesitation to put Gandhiji in touch with the Working Committee members so as to enable him "to know their minds and reactions." Moreover, as Gandhiji has stated, present performance and not future promises would meet the situation.

Meanwhile Lord Wavell's reference to the "work to be done, particularly in the economic field, to prepare India to take her place in the modern world" has given rise to the hope in some quarters that the Viceroy is anxious to seek public cooperation in the vital task of economic planning for the future. This hope seems to have been strengthened by Sir Ardeshir's appointment as Member for Planning and Development. It is, however, apparent that no economic progress is likely in a political void and that even the preliminary conditions for a planned economy will not come into being unless there is a political settlement and the Central Planning Authority has the confidence of the people. As a matter of fact one of the main criticisms against the Bombay Plan is that "the authors of the plan have taken for granted, almost light-heartedly, that political and social conditions for an economic planning by the state can and will, exist in India after the war." This is a clear warning by a British paper that such conditions may not exist and that post-war India may find herself politically as helpless as during the war. A survey of the Government's post-war economic plans showed that while bold outlines for development of agriculture, roads, civil aviation and education have been already prepared envisaging an expenditure of about Rs. 4,000 crores (based on a 15 year period and a price level of 50 per cent over the pre-war costs) tentative schemes for industrial development, labour welfare and public health are still under preparation.

The British Technical mission to advise the Central Government in the manufacture of fertilisers in India has after all arrived here—over nine months after the Foodgrains Policy Committee recommended the need for urgent facilities to import plant with a capacity to manufacture 300,000 tons of Ammo-

nium Sulphate. According to the Committee this would ensure sufficient increase in production to meet half the average deficit in rice. The Government as usual have proceeded leisurely as if nothing had happened at all even after the terrible famine in Bengal. Even now there are all sorts of reports regarding the new industry and the likely control of British chemical manufacturing interests over it and the Government have not yet contradicted these reports. Anyway the feeling here is that while there may be a centralised control over the industry, production should be distributed over five or six units, situated in different provinces, to ease transport and distribution problems. It is stated here that the present production target is a mere beginning and that ultimately the production figure may have to be increased ten times to satisfy the needs of Indian agriculture in the post-war period. The mission is discussing the problem with the Government of India's experts and will leave Delhi in about a few days on a month's tour to visit the different provincial centres.

After 18 months of negotiations, the United States Government has after all agreed to

part with 100 million ounces of silver under a special lease-lend agreement with India. The silver will be utilised for coinage, appreciable quantities will be put on the market if required, to help in the anti-inflationary drive. It is stated that the long delay in the negotiations was due to the powerful silver interests in the U. S. senate, anxious to keep silver prices abroad at high level. It is expected that by judicious and large sales of silver at the proper time, the Government may succeed in appreciably bringing down the artificially high silver prices. Government sales may also help in forcing the holders to disgorge their silver stocks.

The persistent suggestions in some influential British papers for at least a partial cancellation of the blocked sterling balances justifies the public view that the issue of the disposal of these balances be raised at the forthcoming Monetary Conference. As there is general agreement among Indians on this issue—so vital to the country's post-war industrial development—all the delegates are expected to emphasise its settlement in accordance with Indian wishes.

(From Our Correspondent)

Madras, June 21.

Since the Grow More Food Campaign was taken up by the Government, an additional 10 lakhs acres of land have come into cultivation in the province. In the past five years the Government have spent on major and minor irrigation schemes Rs. 52 lakhs and Rs. 12 lakhs respectively. Takkavi loans to the extent of Rs. 2.65 lakhs were granted to the cultivators while land revenue concession had absorbed Rs. 1.6 lakhs. The extent of land under food crops was 270 lakhs acres in fasli 1348 and it has increased by 10 lakhs acres to 280 lakhs acres in fasli 1353. The approximate yield in 1943-44 is estimated at 108.5 lakhs tons while the yield stood at 97.2 lakhs tons in 1938-39 and 103.2 lakhs tons in 1942-43. Government expenditure on agriculture is more than doubled in the past five years from Rs. 19.80 lakhs in 1930-40 to Rs. 41.65 lakhs in 1943-44.

In furtherance of the Grow More Food Campaign the Government have extended irrigation facilities in the Nagapatnam taluk. The Government are now offering 25,000 acres of waste lands in compact blocks to agriculturists in the Chittoor district for growing food crops. There is no assessment for the first 3 years apart from water cess in case Government water is utilised. Agricultural loans at the rate of Rs. 10 or 15 per acre will also be granted. Out of this Rs. 5 per acre will be deducted from the total money due to the Government from the agriculturists if the land taken from the Government is brought under food crop cultivation before 31st October 1944. The loan will bear no interest in the first year but an interest at the rate of 3 per cent will be charged from the second year onwards. The Government press note says that the cultivators will be asked to surrender their land at any time if the Government needed the lands for the use of demobilised soldiers. Adequate compensation will of course be paid to the cultivators affected. Yet another indication that the Government have at last realised the need for giving a fillip to agriculture in the province is that they have agreed to the proposal for doubling the number of admission to the Coimbatore Agricultural College from 48 to 96.

The epidemic of shortage of essential articles is spreading fast in the province—the latest casualty being potato. It started with rice, then cloth, from cloth to foodgrains and so on to blackgram and now potato has entered the list. The blackgram shortage is very acute and the hotels in the city are almost at a standstill. Imagine the difficulty of consumers if they have got only 100 bags per month whereas the normal consumption is somewhere around 2,000 bags. In reply to representa-

tions made by consumers in the city, the authorities have assured the people that arrangements have been completed for the import of nearly 1200 bags of blackgram into the city. It is expected the situation may soon improve if the distribution is properly handled.

For the Potato shortage the Madras Government give two reasons: (1) comparatively poor swamp crop on the Nilgiris (2) Demands connected with war effort. The press note gives an assurance that the position will improve after the middle of July 1944, when the harvest of the main kar crop will commence. The army authorities have strongly denied any responsibility for the potato shortage in the presidency. A press note issued from H. Q. Southern Army says that "the Army in South India is not purchasing potatoes from the Madras area except in very small quantities." This note says that contrary to the suggestion that the military is partially responsible for the present shortage of potatoes in the province, the military authorities have on many occasions turned over their excess stocks in good condition for civilian consumption.

The export policy of the Government of India with special reference to the export trade in this province was discussed by the members of the Executive Council of South

Indian Chamber of Commerce with Mr. K. G. Menon, Deputy Chief Controller of Exports. The Chamber urged the Government to recommence the work of the reconstituted Export Advisory Council. The importance of the handloom industry in the province cannot be gainsaid. The Chamber wanted the Government to do all in their power to utilise foreign markets. In the proper use of the possible overseas markets lies the success of the industry and no subsidies will be necessary if handloom products are introduced in foreign markets.

Government was further asked to allow export of tobacco to Middle East countries. The stoppage has caused severe hardship to both cultivators and those engaged in the trade. Mr. Menon in his reply stated that the reconstituted Export Advisory Council would soon begin to function actively. The obstacle in the way of adopting a more liberal export policy, according to Mr. Menon, is all round shortage in the country. He however promised that he would give due consideration to the question of increasing the export quota of Madras handloom products. Referring to the reopening of exports of Indian tobacco to Middle East countries, Mr. Menon said the question had been favourably decided and it was expected exports would be allowed to be recommenced shortly.

June 24, 1944

Resume of Commodity Markets

The features of the week are provided by the cotton and silver markets. For over three weeks the Bombay raw cotton market is in doldrums and in the absence of any favourable developments it does not appear that there will be an early rise in prices. The slump in silver prices, however, was due to the announcement towards the close of last week regarding the conclusion of a special lease-lend agreement by the Government of India with the U.S.A. for the supply of 100 million ounces of silver. There was an abrupt decline in prices in the early days of the week but towards the close the quotation for Spot was firmer on account of the continued difficulty in respect of ready supplies and buying by bull chokseys at the lower levels. A statement of official policy is awaited.

The jute market is uninteresting while the jute manufactures market continues firm. In the piecegoods market easier conditions have been noticeable though supplies are not coming in as freely as was expected.

As has been pointed out on former occasions, no important change in the raw jute market can be expected for some time, until the new crop arrives. By then, the developments in the war situation might be so much in favour of the Allies that jute dealers would be sitting tight on their stocks in anticipation of a large increase in demand. The statutory control of prices, however, might prove to be advantageous to mills. Meanwhile, even at the present moment production by mills, in spite of requisitioning and the difficulty in respect of coal supplies, is at a fairly high level and the present consumption of around 5½ lakhs bales is well in excess of arrivals. Total arrivals for the month of May were only 4.18 lakhs bales against 5.19 lakhs bales in the corresponding month last year.

The jute manufactures market has continued firm. The offtake from mills is very satisfactory. That demand is considerably in excess of mill production will be evident from the reserve of sellers even at maximum rates for forward positions and the eagerness of buyers to take up whatever surplus production available. In the circumstances, it is a matter for congratulation that mills have been able to maintain output at a fairly high level, total production in May being 97,336 tons against 94,406 tons in April. Production of hessian on civil account is 35,932 tons against 34,841 tons and on military account 3,629 tons against 3,703 tons. Sacking production accounts for the total increase in output, the latest figure being 54,272 tons against 51,152 tons. Other manufactures, civil, were 3,503 tons against 3,730 tons. The increase in production of sacking during the month is, therefore, more pronounced.

The raw cotton market has continued very weak and there is no sign of an early recovery in prices. The market is dominated by sellers and Government buying around Rs. 410 has not been of any great help to the market. Nothing is yet known regarding trading in the new crop. There are several rumours afloat and it is feared that it will be very difficult for the Central Government to keep up values. Mills are not purchasing in the ready market on a large-scale as with the sure prospect of a reduction in prices there is no tendency to enter into fresh commitments. The position in the Karachi mar-

ket has not improved to any extent and it is expected that a similar fate might overtake the Bombay market too if there is no early statement of policy on the question of cotton prices. In view of the communique, issued some time back by the authorities, discouraging ryots from growing more cotton, it can be expected that minimum prices would be reduced though in view of the pledge given earlier there would be opposition from representatives of cotton growers to any step in this direction. The developments in the next few weeks will be very interesting.

The silver market registered a sharp decline in prices early this week on the news that the Government of India had entered into an

agreement with U.S.A. for the supply of 100 million ounces of silver to be used to maintain adequate supplies of coinage and to keep prices stable. It was reported that Government might make a statement on the subject of silver sales to the market on Monday this week but so far nothing has happened. It is too early to expect that the authorities will commence sales of silver though it is said that deliveries against this agreement have already commenced. The result has been panicky selling but at the lower levels bulls have turned up buyers and the shortage of supplies, in spite of large arrivals from up-country, has resulted in a late rally in prices. Discount for settlement has widened to as much as Rs. 5 per tola. The sentiment in the market is such that a substantial decline in prices can be expected as soon as official sales commence.

(By Our Jute Correspondent)

CALCUTTA, 22nd June

DESPITE the handicaps under which they are working, regarding coal shortage and in other respects, Mills made quite a good showing in the production figures published for the month of May. The total at 97,336 tons is nearly 3000 tons, or 3 per cent, better than the previous month. It is to be feared however that such good results will not be shown for the current month, during which enforced stoppages for lack of coal have been more frequent. The proportion of the production for Government account in May was 8316 tons or just about 8½ per cent of the total. In yardage, hessian production was over fourteen crores, of which 93 lakhs yards was on Government account. Yardage of sacking goods was over twelve and a half crores of which 113 lakhs yards was for Government account. Last month's figure of production was lower than in May 1943 when over 103,000 tons of goods were turned out, but only slightly under the total for May 1942 which amounted to just over 98,000 tons.

Taking the total production for the season, the figure for the eleven months up to May 1944 is 860,489 tons compared with 1,100,707 tons for the same period last season and 1,129,423 tons for the season before, so the loss through irregular working due to short coal supplies in the earlier months of the season is quite considerable, and it is to be feared that, unless energetic steps are taken to improve both raisings and transport of coal, history may repeat itself again in the coming months.

Stocks recorded in mill godowns at the end of May having shown a reduction of 1016 tons, despatches of goods by mills during that month must have totalled 98,352 tons, 3000 tons better than the previous month, but not so good as the figure recorded in February of over 101,000 tons. Quite satisfactory however, though in May 1943 also over 101,000 tons were cleared. Despatches for the eleven months up to the end of May 1944 total 915,463 tons against 1,085,331 tons for the similar period last season. It is of interest to note that during these 11 months, this season, mills have despatched 55,000 tons more than they have manufactured; that is they have reduced their stocks of goods by this amount, whereas during the similar period last season they had added 15,000 tons to their stocks.

May production figures predicate a consumption of raw jute approximating 5,45,000 bales, much the same as in May 1942 but 30,000 bales less than last year. For the eleven months of the season, consumption of raw jute must have totalled over 48 lakhs of bales compared with 61½ lakhs last season during the same period and over 63 lakhs for the season before that.

A scrutiny of the Arrival figures of raw jute into Calcutta during May show that the increase in movement by rail recorded last month has been maintained and actually somewhat improved. The best figure since October in fact. On the other hand, shipments by river show a regrettable falling off of nearly two lakhs of maunds, while shipment by country boat is less than half the previous month, probably due to reluctance of manjis to adventure on the big rivers when storms are frequent. Arrivals for the first half of June are estimated at 2,50,000 bales against 2,68,000 bales in the same period last year.

Exports of Raw Jute from Calcutta during May are returned at 58,000 bales against 74,000 bales last May and bringing the total exports for the 11 months of the season to 9 lakhs bales against over 11½ for the same period last season. The last pre-war year, exports totalled 37 lakhs of bales during a similar period.

Arrivals of jute for the season so far amounting to little more than 49½ lakhs of bales, 9 lakhs having been exported and a considerable stock lying in the Bazar and Presshouses, it is manifest that mills, in consuming over 48 lakhs of bales as demonstrated above, must have made severe inroads into their holdings of stock jute.

Copies of the proposed revised rules for the registration of jute bookings by railway have, it is understood, been submitted to trade interests for scrutiny and comment and on the whole have received approval. The proposed system is a combination of the packing capacity of each individual dealer combined with a check on the quantity he actually has in stock ready for shipment. No dealer may, under penalty, register for despatch more jute than he has in stock and even so, his daily registration is limited by his baling capacity according to a formula laid down. This, if honestly worked, should overcome some at least of the malpractices which have been common, but to ensure this it would appear necessary that the inspecting staff should be independent of the local station staff. Registrations, it is proposed, should be severely limited to the probable supply of waggons to prevent a recurrence of registrations running back over a period of nearly two years, as has happened in some stations recently, and when the limit laid down for each station has been reached, registration will be closed until such time as two thirds of the waggons already registered have been actually loaded and despatched. There seems to be little in the proposed new rules to which exception can be taken though some minor suggestions have been put forward in order to secure a fair deal for all shippers in a station.

It seems to be the general desire in the trade that the system of endorsed Forwarding Notes recently introduced, should be abandoned if at all possible. As an alternative, if the Railway authorities or the Movement Control wish to eliminate the shipment of any jute except such is actually under contract, it has been suggested that a system which has been working satisfactorily on the E. I. R. and which is much less laborious, should be given a trial. This is that, when a sender has jute ready for despatch against a contract, he should obtain from the buyer a certificate that he has a contract for that quantity. This certificate is presented to the authorities at the sending station and each despatch is endorsed on the back till the contract quantity is completed. Admittedly this system does not allow any elasticity in the matter of alternative or optional shipping stations. But in present circumstances Jute shippers may be expected to accommodate themselves to the situation by being more precise in their allocations to different stations. And in the event of a switch becoming necessary or desirable, it would still be possible to cancel an unfulfilled or partially fulfilled certificate at one station, and substitute a fresh one for another station.

The Export Jute market has ruled inactive though it would appear that Balers are still accepting direct business with Dundee at lower rates than they are prepared to offer

their jute locally. The only local business reported has been covering, of buying back, of Short Group Daisee for June shipment at Rs. 86/8 and of Long Group at Rs. 77/8. There are buyers over for this type of transaction, also buyers for the same descriptions. Mills have only shown meagre interest at further reduction in price and sales have been recorded in Dundee Daisee at Rs. 80/3, in New Crop Lightnings at Rs. 81/- and in Old Crop Hearts at Rs. 75/-. There has also been some demand for Rejections and Cuttings at maximum rates.

In the Loose Jute section turnover has not been extensive. Some sales of European packing Jat have been reported in assortments around 10/60/30 Tops, Middles and Bottoms at maximum rates, while buyers are now bidding for supervised packing four annas under the maximum for assortment around 60/40 Mids and Bots. The above are for New Crop. In Old Crop, Indian District Tossa sold at Rs. 17/- and Rs. 14/- for Mids and Bots in low assortment while high assortment is available at four annas less. There are still fairly free sellers of Northern Bengal in low assortment at Rs. 16/- Mids and Rs. 13/4 Bots. Crop reports are generally satisfactory. Sufficient rain has fallen on the Eastern side but more is still wanted on the Western side to promote growth. Rivers are fairly normal and if nothing untoward occurs, the prospects of a good crop seem reasonably promising.

The situation in the Fabrics market is unchanged with buyers far in excess of the paltry quantities of goods offering for sale. Mills seems to be rather apprehensive of the prospects in the near future and unwilling to commit themselves to sales beyond their present bookings.

COSSIPORE - CALCUTTA

JUTE

(By Our Staff Correspondent).

Thursday, June 22.

THE raw jute market has continued steady during the week though a slightly easier feeling was noticeable in the pucca bales section. Reports regarding the growth of the standing crop had a slightly discouraging effect but the publication of encouraging production figures for May and the hopes regarding the possibility of an increase in demand in the near future, have prevented a decline in prices. As a matter of fact, mofussil markets are very firm and whatever supplies of jute are coming in are eagerly taken up. Mofussil prices are higher than Calcutta parity prices and do not allow fully for an increase in the cost of baling and transport charges. Weather conditions in the jute districts are reported to be favourable although a little more rain is needed in some places for weeding operations to be completed.

In the loose jute section, full rates have been paid for Supervised Jat 50-50 assortment Middles and Bottoms. Indian District Tossa Middles and Bottoms new crop were done at Rs. 16-8 and Rs. 13-8 per md. while some business in Northern Middles and Bottoms was done at Rs. 16 and Rs. 13-4 per md. respectively. Mills are not very anxious buyers but are prepared to take up whatever low assortments that are offering as stocks are being eaten up at a faster rate than replacements.

In the pucca bales section not much of business has been done for export. Dundee Daisee 2/3 quoted Rs. 81 per bale. Mills are reported to have purchased new crop lightnings at Rs. 81 per bale and SMR at Rs. 65 per bale. Cuttings M. C. were purchased at the maximum rate of Rs. 42 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, June 22.

THE jute manufactures market has been featureless and business is more difficult than ever. There were very few sellers in spite of the fact that production has been maintained at a fairly satisfactory level. The position in regard to coal is expected to worsen further in the monsoon months and as such there is no anxiety to enter into fresh commitments. Production figures for the month of May published during the week show that even with the difficulties in regard to coal, referred to above, total production was 97,336 tons or an increase of 2,930 tons over the output achieved in April. It is, therefore, very satisfactory to note that the off-take during the month has been more than production, the net decrease in local stocks being 1,016 tons. Total production of hessian on civil account, was 35,932 tons and on military account 3,629 tons. Total of hessian on civil account was 48,561 tons and on military account of 4,687 tons. The total being 53,248 tons. Other manufactures on civil account were 3503 tons and the grand total was 97,336 tons.

Below is given a statement of total reported production of goods manufactured on Government account (by the mills in the membership of the Association and also by Gagalbhai Mills):—

Description.	Quantity.
1. Twist and Yarn—	
(a) For sale ..	1,680 tons
(b) All others, including that used in sewing bags ..	1,315 tons
2. Canvas ..	19,08,806 yards
3. Gunny Bag (Tonnes exclude sewing twist)—	
(a) Hessian ..	2,748 tons
	1,07,92,228 yards
	64,45,253 number
(b) Sacking ..	45,931 tons
	10,68,15,474 yards
	4,38,55,540 number
4. Gunny Cloth—	
(a) Hessian ..	32,165 tons
	11,84,34,045 yards
	3,654 tons
(b) Sacking ..	83,46,827 yards
5. Other Manufactures (including ropes) ..	508 tons

6. Total Production (above figures combined)—

(i) All kinds ..	89,020 "
(ii) Hessian (both as bags and cloth) ..	12,92,26,273 yards
(iii) Sacking (both as bags and cloth) ..	11,51,62,301 "
(iv) Canvas (both as bags and cloth) ..	19,08,806 "
*Exclusive of all Government orders.	
Description.	Quantity.
7. Sandbags ..	16 tons
	70,847 yards
8. Scrim cloth ..	125 tons
	3,81,705 yards
9. Hessian bags and cloth ..	3,488 tons
	88,50,794 yards
10. Sacking bags and cloth ..	4,687 tons
	1,13,03,007 yards

BULLION

(From Our Correspondent)

Bombay, June 22.

Both the gold and silver markets have been quiet during the past week. The weakness of the gold market has, of course, been due to the slump in prices for silver following the announcement that a special lease-

lend agreement had been concluded with the United States for the supply of 100 million ounces of silver. The nervousness in the silver market has naturally resulted in an easier feeling in the gold market. Even with the Reserve Bank out of the market investment demand has been poor and closing quotations are at the lowest levels for the week. Gold ready quoted Rs. 72-14 and Settlement Rs. 72-12. There is still a premium for ready delivery. Sovereigns were quoted Rs. 50-4.

In the silver market there was a drop in the quotation for silver ready to Rs. 128-8 as it was known that arrangements had been made for lend-lease silver from the United States. There was further selling earlier in the week and the price was lower at Rs. 127-8. Settlement came down to Rs. 123-8. Bear covering and buying by bull chokseys at the lower levels caused a recovery in the quotation for silver ready to Rs. 130. The close is a little lower at Rs. 128-12. The discount for settlement last week was three points over settlement. It has widened to as much as five points. It was expected that there would be government interference in the market early this week but it is now felt that it would be sometime before official sales begin. Rajkot advices were rather quiet earlier in the period under report but have been firmer in the last two days.

COTTON

(From Our Correspondent)

Bombay, June 22.

The weakness of the silver market has not been helpful to the cotton market. In the absence of any large buying in the ready market by mills and with the uncertainty regarding the immediate outlook the general sentiment in the market is inclined to be bearish. Conditions in the Karachi market are very bad and unofficial quotations are below the minima. Government have been buying in the Bombay market around Rs. 410. In the last two days purchases totalled 10,000 bales. This has resulted in a steadier feeling to-day but the undertone is still weak. Jharilla July closed at Rs. 421 and September at Rs. 420.

EAST INDIA FUND

Receipts for week ending 15th May - Rs. 9,248
Total to date - Rs. 1,16,52,436

Contributions may be sent for the general purposes of the fund or ear-marked for the following specific charities:—

Price Re. 1

Stock Markets to-day and to-morrow:

JUTE SHARES ACTIVE

VERY active conditions were noticeable on the Calcutta market till Thursday this week. Prices were moving independently of the Bombay market. The unwillingness of holders to part with their scrips and the continued investment demand were mainly responsible for the upward trend in prices. The encouraging news from the war fronts and the persistence of easy money conditions have imparted strength to the markets. Jute shares led the market and nearly all shares have been marked higher. The greater enquiry for jute shares is due to the feeling that jute mills are well-placed whether there is war or peace and that the prospects in the immediate post-war period are good. Coal shares also have been active in the latter half of the week.

In Friday's session, however, an easier feeling is noticeable with the emphasis on peace prospects. After the sustained rise in prices the reaction on Friday is only natural. So long as the present conditions in the money market prevail and there is continued expansion of currency it cannot be expected that the demand for equities will diminish. It should be said, however, that prices for several shares are overvalued and that fresh purchases at the higher levels should be confined to shares of regular dividend paying companies with assured prospects.

Last week, I had occasion to refer to the improvement in the financial position of companies on account of the phenomenal earnings in the war period. One of the companies that have benefited this way is the *Hooghly Docking and Engineering Company Limited*. Thanks to the war this Company has left behind the era of deficits and since June, 1939 there has been a progressive increase in earnings. Despite the larger earnings the directors could not distribute any portion of the profits to shareholders and it was only in the half year ended December, 1943 that it was possible to wipe off completely the debit balance. Even now, it is not possible to pay a dividend to shareholders. With the heavy incidence of taxation and the large E. P. T. deposit it has been found necessary to conserve the company's cash resources.

The net profit, before providing for depreciation and taxation, is Rs. 4,70,791 against Rs. 7,78,030 for the previous six months. The decrease in earnings is mainly due to the higher working ex-

penses as total turnover was fairly satisfactory at Rs. 45.99 lakhs against Rs. 46.34 lakhs. After providing Rs. 2.40 lakhs against Rs. 5.38 lakhs for taxation and Rs. 43,872 (same) for depreciation the debit balance of Rs. 74,827 is converted into a credit balance of Rs. 1,11,992. For the reasons mentioned above the directors have decided to carry this sum forward.

The directors point out as follows: "Due to the increased financial requirements consequent upon increased trading, coupled with the compulsory deposit for Excess Profits Tax and payment of tax in advance for 1945-46, which taxation payments alone, it is estimated, will exceed Rs. 10,00,000/- during the current year, it is essential to conserve the cash resources of the Company. Shareholders will appreciate that these demands are exceptional and that the present position arises out of circumstances over which the management has no control. It is with regret, therefore, that your Directors have to intimate their inability to recommend payment of any dividend for the half-year and propose that the entire balance of Rs. 1,11,992-6-9 be carried forward."

Saran Engineering Company Limited has done very well in the year ended March, 1944. The higher level of earnings, however, has been absorbed by additional provision for taxation and E.P.T. deposit and it has been possible only to maintain the dividend at eight annas per share. The net profit, before providing for taxation and depreciation, for the year is Rs. 3,71,862 against Rs. 2,01,884 for 1942-43. The amount set aside to depreciation is Rs. 30,000 (Rs. 20,000) and the allocation to funds Rs. 59,612 (Rs. 25,000). The amount carried forward is Rs. 35,732 against Rs. 31,532 brought in.

As the important colliery in South India the results of the *Singareni Collieries Limited* are always awaited with interest. It is unfortunate that raisings were seriously affected owing to scarcity of labour and total raisings in 1943 were only 1,000,206 tons against 1,214,019 tons in 1942. The earnings have not been affected adversely very much and the net profit, before providing for taxation and depreciation, for the twelve months ended December, 1943 was Rs. 9,80,457 against Rs. 10,73,348 for 1942. The amount set aside

to depreciation was Rs. 6.7 lakhs (Rs. 6.4 lakhs). The sum of Rs. 1 lakh (same) has been transferred to Contingency Reserve. Two interims amounting to six per cent against 2½ per cent for 1942 have already been paid and the directors do not propose to distribute any further dividends as the position in regard to the liability for British Income-tax is not clear. An assessment has been made for 1939-40 against which the Company has appealed. The balance of undistributed profits amounting to Rs. 4,35,674 is, therefore, carried forward.

The recent sharp rise in prices for *Samla Collieries Limited* makes necessary a study of the Company's latest balance-sheet. Till recently the shares of the Company were very unpopular and there does not seem to be any justification for the sudden rise in the quotation to Rs. 9.

The net profit for the half-year ended December, 1943 is Rs. 33,199 against a loss of Rs. 66,565 for the previous six months. The improved working in the latest half-year is due to the larger despatches. The amount set aside to depreciation is Rs. 16,000 (same). The debit balance is reduced from Rs. 12,27,129 to Rs. 12,09,930.

As on December 31, 1943 the paid-up capital of the Company was Rs. 18,40,400. Sundry liabilities were Rs. 6,30,910 and Workmen's compensation fund Rs. 8,468.

On the assets side, the net block was valued at Rs. 8,37,008. Preliminary expenses were Rs. 9,470; Stores Rs. 2,06,563; stocks Rs. 21,585; outstandings Rs. 1,66,323; investments Rs. 8,468 and cash Rs. 13,430. There was a debit balance of Rs. 12,09,930. Liquid assets were thus Rs. 4,23,370 against sundry liabilities of Rs. 6,30,910. At the present rate it will take a long time to wipe off the debit balance even on the assumption that earnings show further improvement. The capital is thus represented by assets only to the extent of Rs. 6,38,938. Even if the shares were written down in value to Rs. 3 per share the company will be short of working capital, and the earnings for the last half-year before providing for depreciation will be only 6 per cent on the reduced capital. It is, therefore,

(Continued on page 1295)

Bombay Investors and Indian Stock Exchanges:

GOOD ENQUIRY FOR JUTE & COAL SHARES

GROWING INTEREST IN INTER-MARKET COUNTERS

Bombay (By Wire).

Bombay has been taking keen interest in shares both of Calcutta and Madras. As between Calcutta and Madras, there is hardly any interest taken by Calcutta in Madras shares though the Southern capital pays quite a big compliment to concerns operating in Bengal. Similarly, Calcutta is only slightly interested in Bombay shares. Thus, Calcutta investors may be said to be insular; Madras investors have catholic tastes; and it may be said that Bombay investors have both catholicity and discrimination.

In the recent coal shares boom, Bombay has participated largely and contributed greatly to it. Bombay has a good stake in Burrakurs and South Karanpur. This week, quite good purchases were made of Bokaro and Ramgur. There is an unconfirmed report that this company has sold coal lands to Tatas for Rs. 19 lakhs. This will be quite a windfall as its capital is only Rs. 12.80 lakhs. If this report turns out true, there is a chance of a rise of Rs. 10 per share.

Bombay has been bullish about Midnapore Zamindary (due to collections of all arrears of rent and satisfactory current collections) and I. G. N. which is said to be doing very well. Bombay got into Chitavalah Jute round about Rs. 32, is happy at the present quotation of Rs. 37 and looks to Rs. 40, as this company has, I learn, good stocks of coal and gets a better price for its manufactures. India Jute is also Bombay's fancy as a Rs. 375 paid-up share is quoting only Rs. 620. Megna, too, is attractive by the same token.

The slump in silver prices has affected to a certain extent the share market. With the weakness of the cotton market and the speculation regarding the dividends of the Tata Iron and Steel Company Limited for the year ended March 1944 business is naturally restricted.

There is a tendency to await developments in the bullion markets. The implications of the lease-lend agreement, the details were announced last week, have not been correctly understood. Bulls are nervous but they are sure that they would be able to maintain prices if no fresh supplies of silver were received by the market and Government did not figure as a seller.

Minerva Mills has done very well in 1943 and a higher dividend is to be paid to the shareholders. Earnings for the year are higher at Rs. 29.16 lakhs as the control measures were in operation only for a few months in the year. Substantial allocations to funds are made, the Reserve Fund receiving Re. 1 lakh, Debenture Redemption Fund Rs. 8 lakhs and Labour Colony Fund Rs. 1.5 lakhs. The charge on account of depreciation is Rs. 4.5 lakhs while the provision for taxation is Rs. 15 lakhs. The dividend and bonus is higher at 20 per cent against the distribution for last year of 12 per cent.

The debenture capital of Rs. 12 lakhs is in 5½ per cent. (taxable) debentures of Rs. 500 each. They were issued in 1938 and are repayable in July, 1945 with the option of repayment at any time after July, 1943 on three months' notice. The Debenture Redemption Fund is already

Rs. 11 lakhs so that there should be no difficulty in redeeming the debentures next year.

There is a feeling that Elgin have been marked lower unduly. The balance sheet position is very good and the shares are tipped for a rise of 10 points.

The accounts of the Simplex Mills Limited for the year ended March, 1944 are very interesting. There is an increase in earnings by over Rs. 16 lakhs to Rs. 61.81 lakhs. The increase in earnings, as in the case of other companies, has been taken up by the larger provision for taxation. The amount set aside for this purpose is Rs. 46 lakhs against Rs. 41.5 lakhs for the previous four chargeable accounting periods. The provision for depreciation is lower at Rs. 2 lakhs (Rs. 2.5 lakhs) but the transfer to Machinery Renewal Reserve is Rs. 8.70 lakhs against Rs. 5 lakhs. The dividend including bonus is 36 per cent, the same as for 1942-43.

ANALYST.

SOMETHING "EXTRA" IN THIS INVESTMENT

Life insurance offers you an ideal investment proposition. Government Securities, Bank Deposits, etc., are First Class Investments, but certain New India policies afford better advantages. They are as follows:

- **Handsome Profits:** At the end of the term, the policy returns the Capital invested with an yield in compound interest which is very often larger than the yield from the Capital invested in other securities.
- **Full Life Coverage:** In the event of early demise, the full sum assured (with or without profits) is paid out to the beneficiaries. Very often this means a return out of proportion to the Capital invested.
- **Saving in Income Tax:** To those who pay Income Tax, such policies are an added attraction as a substantial rebate is allowed on the premiums that are paid.
- **No Depreciation:** The Capital invested does not depreciate nor is adversely affected by market fluctuations.

The Capital may be invested by instalments or in a lump sum at a discounted rate. As the yield varies in each individual case according to age, term, income tax payable, etc., a detailed plan to suit your own needs will be furnished on request.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 23.

THE Calcutta Stock Exchange has been very active during the past week with a large increase in the turnover. The improvement in the war situation and the persistence of easy money conditions have been mainly responsible for the firmer tone of the markets. The encouraging news from the Assam front especially has been of great advantage to speculators and closing prices are at the highest levels for the week. The Jute section, in particular, has been active though Coal shares have shared in the general rise in prices, in the last two days. Cotton shares have remained quietly steady as also Sugar shares. There is greater enquiry in these sections while in the Miscellaneous section there has been a further rise in Calcutta Trams to Rs. 38.

The gilt-edged securities section has continued steady though the further rise in the treasury bills rate has prevented any expansion of business in this section. 3½ percent Paper was unchanged at Rs. 99-5 while among terminable loans, 3 percent 1953-55 were Rs. 100-2, 3 percent Defence Bonds 1946 Rs. 102-3, 3 percent 1951-54 Rs. 100-10, 3 percent 1963-68 Rs. 98-6 and 5 percent 1945-55 Rs. 104-11. There is not much enquiry for the long-dated loans. Among Provincial Loans, 3 percent U. P. 1961-66 were Rs. 98-12.

Among bank shares, Bharat Bank were rather quiet at Rs. 118, while Hind Bank were a shade better at Rs. 61. Imperial Bank fully paid were Rs. 1,995. There was no business in Contributories. Reserve Bank were well held at Rs. 137-9 and United Commercial Bank Rs. 29 premium. Cotton shares were rather neglected with Bengal-Nagpur at Rs. 38-4, Cawnpore Textiles were a little better at Rs. 12-13, Elgin at Rs. 63 and New Victoria at Rs. 8-10. Bourneah were crossed at Rs. 530 while Benares fluctuated around Rs. 15-6.

In the Coal section some of the speculative counters are higher, Samla being Rs. 9-2, Jainty Central Rs. 6-12 and Bansra Rs. 12-13. Among popular counters, Raneegeunge improved to over Rs. 50 while Equitable were marked as high as Rs. 59-12. Bengal were not very much changed at Rs. 636 as also Bhalgora at Rs. 16-8. Bokaro & Ramgur were in greater request and were done up to Rs. 36-8 from Rs. 32-12 at the end of last week. Amalgamated were quiet at Rs. 48-12 while Dhemo Main were Rs. 23-10 against Rs. 23-3 and Hurrilalidh Rs. 38-12 against Rs. 36-12. Nazira were sticky around Rs. 16-12 while New Beerbhoom were Rs. 35-14. North Damuda were more than 1½ points higher at Rs. 12-5 while Pench Valley were Rs. 50-2 and Seebpore Rs. 42-8 premium. South Karanpura improved on special buying to Rs. 17-4. Standard also met with greater enquiry and were done up to Rs. 34-10. Talcher were Rs. 11-3 and Union Rs. 49-14.

The Week in the Exchanges

Jute shares have registered a general rise in prices on good investment buying. Agarpara were Rs. 38-3 against only Rs. 33-4 at the end of last week. Anglo-India were Rs. 453 against Rs. 451. Champdany Rs. 273 against Rs. 271 and Clive Rs. 39-12 against Rs. 39-8. Chitavalah were lower at Rs. 37-2 while Howrah were not very much changed on balance at Rs. 76-11. Hukumchand have been done up to Rs. 42 and Megna Rs. 104 against Rs. 101. Naskarpara were Rs. 35-8 against Rs. 33-4; National changed hands at Rs. 35-4 and Rameswara at Rs. 24-8 against Rs. 23-12. Presidency suddenly improved to Rs. 11-11. They are now quoting Rs. 11-7. The quotation at the end of last week was Rs. 10-4. Soorah were sticky at Rs. 40-8.

In the Engineering section, Indian Iron were quiet at Rs. 37-1 while Steel Corp. improved by more than 1 point to Rs. 29-2. Bhartia Electric Steel have improved further to Rs. 20 while Braithwaite registered a rise of 1½ points to Rs. 13-9. There was good buying for Jessop and the quotation is now Rs. 26-12 against Rs. 24-12. Kumardhubi Eng. were quiet at Rs. 13-13 and Marshalls at Rs. 5-13.

Among Sugar shares, Belsund were unchanged at Rs. 15-10 as also Balrampur at Rs. 19-8. Carew Co. were Rs. 30-4 and Champarun Rs. 40-8. Murree Brewery were very firm at Rs. 29-8.

In the Tea section business has not been freely possible with scarcity of sellers. Tezpur were Rs. 19-12 while Tukvar improved by more than 4 points to Rs. 26. Hasimara were Rs. 76 and Hatikshira Rs. 31-10.

In the Miscellaneous section, Burma Corp. improved to Rs. 4-7 on the encouraging news from North Burma. Calcutta Trams were done up to Rs. 38-4 on heavy speculative buying and the quotation towards the close is only slightly lower at Rs. 37-10. Indian National Airways ordy. were Rs. 26-13; Rohtas Industries were lower at Rs. 35-11. Midnapore Zemindary remained firm at Rs. 175, I.G. N. improved further to 174 and Bararee Coke to Rs. 33. B. I. C. were unchanged at Rs. 6-6 as also Indian Copper at Rs. 3. Alkali & Chemical shed two points to Rs. 36-6. Tide Water Oil were Rs. 28-2. Among Paper shares India Paper Pulp were Rs. 239-8 and Titaghur A & B Rs. 28.

THE DACCA ELECTRIC SUPPLY COMPANY LIMITED

A dividend at the rate of 6 per cent per annum, free of income tax, on the Preference Shares of the Company for the year ended 31st December 1943 has been declared payable at once.

†After taxation.

(Half-yearly General Meeting held on 21st June, 1944).

Audited accounts for the half-year ended 31st March, 1944:—
 They show a profit of Rs. 21,25,629-10-6, including the balance carried forward from the last half-year. After providing Rs. 1,00,000-0-0 for Reserve Fund, Rs. 1,00,000-11-0 for Depreciation and Rs. 10,90,000-0-0 for Taxes for the half-year (excluding the compulsory E. P. T. deposit), the period under review shows a profit of Rs. 8,35,628-15-6, which, the Directors recommend, should be disposed of (a) In paying a dividend on 23,642 Preference Shares at 7½ per cent per annum less income tax Rs. 63,722-9-3, (b) In paying dividend on 3,04,200 Ordinary Shares at 25 per cent per annum free of income tax (or Rs. 1-4-0 per share for the half-year) Rs. 3,80,250-0-0 and in carrying forward the balance of Rs. 3,91,656-6-3.

In accordance with Indian Jute Mills Association Working Time Agreement, the mills worked 54 hours per week during the period under review, but in common with other member mills of the Association, they remained closed during the weeks ending 2nd October, 9th October, 27th November and 25th December, 1943, on account of acute coal shortage. In addition the mills were also closed for a total period of another 11 days from time to time due to the same reason.

Managing Agents.—Messrs. Birla Brothers Ltd.

Authorised Capital—Rs. 80,00,000. Issued and Subscribed—Rs. 54,06,200 ordinary shares of Rs. 10 each and 23,642, 7½ per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

Synopsis of the balance sheet as at 31st March, 1944.

(Annual General Meeting held on 17th June, 1944).

Audited accounts for the year ended 31st December, 1943:—

After providing for the payment of Debenture interest and placing Rs. 6,70,000 to Depreciation, the net profits amount to Rs. 2,90,457-1-7, which with Rs. 6,24,503-12-1 brought forward from the previous account, leaves an available balance of Rs. 9,14,960-13-8. Out of this sum, the Directors have paid: (1) an Interim Dividend of 2½% on 7-8-1943 amounting to Rs. 1,58,036-4-0 and (2) a second Interim Dividend of 3½% on 29-3-1944 amounting to Rs. 2,21,250-12, and have placed Rs. 1,00,000 to Contingencies Reserve leaving a balance of Rs. 4,35,673-13-8.

The position with regard to the Company's possible liability to British Indian income tax remains confused. An assessment has now been made for 1939/40 against which the Company have appealed. In the circumstances the Directors do not recommend any further immediate distribution of profits, but propose that the balance of Rs. 4,35,673-13-8 be carried forward to the new account.

Coal prices throughout India are now controlled and in this company's case, they are fixed quarterly by H.E.H. the Nizam's Government, this arrangement having come into force from 1st January, 1944. Owing to the ease with which more congenial work can be

obtained and the improved conditions for agriculturists, shortage of underground labour continues in spite of increases in wages and amenities and intensive recruiting campaigns. In consequence, the Directors regret to report a reduction in the output in 1943 to tons 1,000,206 compared with the record figure of tons 1,214,019 in the previous year. Every possible effort is being made to improve the position.

A further 417 out of the 5000 6% Debentures held by H.E.H. the Nizam's Government were redeemed on 1st January, 1944 and 793 Debentures of the Public issue were also redeemed on the same date.

Authorised Capital.—Rs. 90,00,000. **Issued and Subscribed.**—Rs. 63,21,450 in 632,145 ordinary shares of Rs. 10 each fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1943.

*Arrears up to 31st March, 1943.

(Half-yearly General Meeting on 30th June, 1944 at 6-30 a.m.)

Audited Accounts for the period ending 30th September, 1943:

The Company's working during the period shows a revenue profit of Rs. 6,26,110 which together with the amount brought forward from the last half year Rs. 8,614 comes to Rs. 6,34,724. After allowing for depreciation Rs. 1,58,172 the net sum available for allocation comes to Rs. 4,76,552 which the directors recommend to be allocated as under:—

To Reserve for Taxes Rs. 2,75,000. To Dividend on Ordinary shares at the rate of 8 annas per share for the half-year ended 30-9-43 Rs. 1,63,617. To Dividend on Cum. Pref. shares at the rate of 7% per annum free of Income-tax Rs. 3,682.

This leaves a balance of Rs. 34,253-1-7. There is a sum of Rs. 42,913-10-9 lying to the credit of the Bonus Account to which the directors propose to add a sum of Rs. 8,000/- from the divisible profits of this half-year and pay a bonus equal to one month's salary or wages or less according to the tenure of their service and according to rules made in this behalf to the Staff and workmen of the company. A net sum of Rs. 26,253-1-7 is thus left which it is proposed to be carried forward to the next half-year.

During the half-year under report the company's Mills were stopped for 33 days apart from the weekly and other holidays due to strike 10 days, coal shortage 18 days and unprecedented floods in river Burna 5 days which surrounded the Mills. This has affected the results of the working of this half-year.

The Government of India took steps for progressively reducing year. The first order in this behalf being made in May, 1943. Prices went down by over 25% during this half-year.

There had been a further reduction of prices in the prices of cloth in the subsequent working periods and the Mills was working for two third time for about 2 months and a half during the next half year due to coal shortage.

Managing Agents.—Messrs. Sital Prasad Kharag Prasad.

Authorised Capital.—Rs. 75,00,000. **Issued and Subscribed.**—Rs. 45,49,970. Paid up—Rs. 33,77,540 in 3,37,754 ordinary shares of Rs. 10 and 1,052, 7 per cent Cum. Pref. shares of Rs. 100.

Synopsis of the balance sheet as at 30th September, 1943.

MINERVA MILLS, LIMITED

Audited Accounts for the year ended 31st December, 1943:—
The Company's operations during the year show a profit of Rs. 29,42,391, which with Rs. 6,20,366 (inclusive of provision for taxation) brought forward from the previous year's account makes a total of Rs. 35,62,756. From this sum the Directors have allocated to Provision for Taxation Rs. 15,00,000. Depreciation on Buildings and Machinery Rs. 4,50,000. Labour Colony Fund Rs. 1,50,000. Reserve Fund Rs. 1,00,000 and Debenture Redemption Fund Rs. 8,00,000 leaving a balance of Rs. 5,62,756.

The Directors propose to dispose of the same by paying a dividend of Rs. 6 per share and a bonus of Rs. 14 per share on 25,000 shares of Rs. 100 each Rs. 5,00,000; Bonus to Company's Staff at Bangalore Rs. 16,000 and to carry to Next Year's Account Rs. 46,756.

(Continued from page 1277)

difficult to see how a quotation of Rs. 9 can be justified for these shares. The same is the case with other speculative shares.

Hantapara Tea Company Limited has been able to report only a smaller level of earnings for the year ended December 1943 even though outturn of tea was larger than in 1942. The lower average price realised and the increase in cost of production have been responsible for the decline in earnings

The net profit, before providing for taxation and depreciation, for the year is Rs. 11,48,408 against Rs. 15,40,04. The sum of Rs. 75,000 (Rs. 1 lakh) is transferred to Funds while the provision for taxation is Rs. 4,05,000 (Rs. 4.5 lakhs). The final dividend of 50 per cent, with the interim of 10 per cent already paid, makes 60 per cent against 80 per cent. The amount carried forward is Rs. 2,02,005 against Rs. 2,19,513 brought in.

Teliapara Tea Company Limited also is reducing the dividend for the year 1943. The net profit, however, is not very much lower

as the average sale price realised was relatively higher.

The net profit, before providing for taxation and depreciation, is Rs. 3,21,024 against Rs. 3,97,535 for 1942. The provision for taxation is Rs. 1,05 lakhs (Rs. 1.2 lakhs) while the transfer to Contingent Reserve is Rs. 50,000. The final dividend of 30 per cent with the interim dividend of 10 per cent already paid makes 40 per cent against 50 per cent. The amount carried forward is Rs. 1,01,745 against Rs. 1,00,185 brought in.

WATCH-DOG.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. TREASURY BILLS

Central Govt.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, June 27. Total amount offered was Rs. 8,03,25,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 94 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6,00,00,000, the average rate of accepted tenders being As. 8 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, July 4 in Bombay, up to 11 a.m. and up to the close of business

on Monday, July 3 at other centres. Successful tenderers should make payment on Friday, July 7. Other conditions are as usual.

During the week ended June 23, Government of India Treasury Bills for Rs. 2,79,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad.

Thursday Evening.

VICTORIES at Cherbourg and Vitebsk do not seem to have brought about any real change after the improvement in stock markets produced by the invasion. There has been so far no estimate as to the daily cost of invasion, and the next Vote of Credit alone is likely to bring information as to the cost of landings. There has been so far no increase in short-term borrowing for the Salute the Soldier campaign would have taken off much idle money. The tendency for bank deposits to fall, and investments to increase, may have been stimulated by the invasion. The debate on postwar employment policy has been without much effect on Home Industrials which have been moving up mostly on war news. Any promise of State control and stabilisation of wages as well as adjustment of contributions for unemployment insurance neutralises the promise of spending on public works. Where British policy will differ from pump-priming as practised previously in the U.S.A. is in regard to the application of other remedies than control of borrowing or investment. Control of industry may proceed along the lines laid down for coal mining where wages are to be kept up in the interest of coal production for the war. Whether control would raise costs and impair competitive power has been ignored. Social security as a consequence of full employment is to play a part in what may be called a late grafting of social credit opinions on to official policy.

The variations in contributions by employers or workers may have less influence than rapid adjustment of taxation. But the break with the past is clean. Economy will not be the watchword when a depression overtakes British industry. The 1944 budget promised relief to both private industry and public bodies. E. P. T. refunds and adjustments are also meant to procure a strong and secure financial foundation for private enterprise. But the Socialist view has been given the go-by and the Tory Reform Committee's views as to Work—the Future of British industry obtain special approval. If the White Paper thinks mainly of domestic purchasing power, not at all of the balance of payments, it is due to the concern over reconstruction. So far as agriculture goes, high prices and high costs are to remain. The tariff will probably take care of other industries, as the high wages and the maximum employment arguments for Protection are accepted as they were regularly accepted in the U.S.A. The debate on Empire relations indicated that the British Government stuck to the Ottawa Policy. The White Paper on employment being concerned largely with national income and outlay left out markets. If money is kept at home, overseas development and export of capital may be subject to restraints. If money is to be conserved, the new short-term debt would be dealt with according to the desires of the debtor rather than the creditor.

The debate on employment suggests also that the monetary fund proposals will be viewed in a different light soon after the conference is over. It is not a matter of a dozen countries being represented or a dozen delegates reaching agreement. The real point is that if British exports are limited or raised by domestic requirements, the exchange rates would fluctuate, and the initial contribution may have to be soon supplemented.

The assurance that more and more industries would be sheltered implies the acceptance of quotas as in the case of flour or films. The reconversion problem is certainly got rid of in a sense. Private enterprise in the future will be directed, not controlled as at present, merely to provide high wages. Labour's claim for joint control is duly defeated but the high wages and insurance benefits promised are enough to overpower doubts. Population and emigration questions are shelved peremptorily. It may be noted that Britain takes the road which the British Dominions took long before the war under the influence of local Labour parties.

The connection between private discussions based on the Unilever Memorandum and the declaration of purpose is not easily indicated. But the work of Sir William Beveridge's committee has influenced policy to a greater extent than presumed. Demobilisation too should be regulated by the intake of industry after the war while the raising of the school-leaving age and part-time instruction would affect the quality and quantity of recruits for industry so that maintenance of high wages may be practicable after a time. How far profits would grow when taxation is high may not be easily learnt but the marked rise in textile shares suggests that prosperity is expected to follow concentration. In the interests of employment some industries may be allowed to revert to prewar size, partly on account of postwar demand abroad.

High wages are a good talking point for Stores shares generally and the only exception to the rising market in London is the heavy industrial typified by Vickers. Rubber shares have latterly responded to news from the East—the U. S. Navy's success off the Marianas has been helpful to dollar shares generally. Mining issues excepting Burma Corporation shares are unchanged but the success at Mogaung may propel the prices of mining shares upwards. The tin-mining group for example Aramayo and Pato Consolidated may be influenced by Anglo-

Planning Before Peace

The announcement of a Rs. 1,000 crore plan for Indian agriculture will be widely welcomed, if only because the public is eager to have concrete proof of the acceptance of planning as the Government's official policy. The need for such proof arises in the main from the continued bleakness of the political outlook. There is also the circumstance that Mahatma Gandhi has confessed to lack of interest in the Bombay Plan. This is not less tragic because it is no surprise. Economic planning in India is endangered by the political deadlock, the tepid interest of prominent political parties, the subordinate status of the Government of India to the British Government and, not the least, the inherent complexities of various practical problems. The public in India is vaguely conscious of these dangers; and it is not as well aware of the circumstances which drive the Government irresistibly towards planning of some sort. In these circumstances, every sign that the Government are serious in their talks of planning is welcomed by the people at large. The technical aspects of the various problems, which are baffling enough to the experts directly concerned, are naturally overlooked by the people. And where there is promise of immediate action without waiting for the end of the war, it is felt to be even more heartening.

That the Agricultural Plan announced by Sir Phiroze Kharegat is only a development of the grow-more-food campaign and not part of a plan for the postwar period is indeed the most welcome part of it. In all our comments on the problems of planning in Indian conditions, we have emphasised the importance of a certain set of measures which are preliminary to planning proper and which are essential for preparing the ground. An economic plan may provide for increase in agricultural and industrial production, for increase in the generation of power; it may aim at the expansion of export markets, of internal consumption. It may determine the relations between the various sectors of the national economic life after taking into account the changes in international economic relations. But the conditioning of the popular mind with a view to ensure the success of the plan does not, strictly speaking, come within the scope of economic planning. This problem has comparatively little importance in foreign countries. But in India, the people have to be schooled in the essentials of successful planning. They have to be enabled, well ahead of the inauguration of an economic plan, to appreciate its nature, the demands it will make on the people at large and the role which the masses have to play in ensuring its success. If even these tasks have to wait till the war will be over, the increase in the standard of living which the public is now encouraged to expect will recede farther and farther into the future.

There is also a strictly economic reason for the nation putting its hands without further delay to the essential preliminaries of planning. Planning till now has been so persistently dated to the postwar period that few people care to give thought to the nature of the relation between the two. It is not as if peace is an auspicious signal for beginning the ponderous tasks comprised in the economic plan. If peace is important only as an end to the pre-occupations of war, then we have also to consider the conditions created by our deference to such pre-occupations and see to what extent they help or hinder our plans for the future. If we view it that way, it will be found that inflation, food shortage and a few other features of our economic life call for immediate attention as well from the point of view of present needs as of postwar planning. The Government of India's policy, so far as inflation is concerned, is to fight the effects of inflation rather than inflation itself. Only in the case of the sales of gold can they be said to be fighting both. But whatever the scale or the wisdom of the

Government's efforts, the fact remains that inflation on a large scale is still with us and will hinder our plan if nothing is done in the meanwhile to mitigate its severity. The soundest part of any solution we may find for the problem of inflation is unquestionably an increase in the volume of internal production. Increased imports will not serve to the same extent unless they are balanced by exports and both the export and the import trades gain a fair degree of stability. For, the solution to the problem of inflation lies to a great extent in the country growing to a distinctly higher volume of currency than in the prewar period and costs and prices being stabilised at a slightly higher level. Too big a part of the present circulation is redundant, because what is needed on the basis of present production is too little. We have to increase the latter relatively to the former before the process of contraction of wartime circulation can be usefully and effectively begun. This increase in production which is necessary from the monetary point of view is indispensable from the point of view of maintaining the home front. And even a cursory examination of the main tasks of economic planning will show that what we may do today to increase production is also what we must do some day by way of preparing the ground for planning proper.

Needless to say, the increase in production, which has been shown to be necessary from a number of different points of view, has to be agricultural or has to do with the agricultural masses. Only then can the shortage of basic necessities be made up, the inflationary effects as they affect the people at large toned down, and the people as a whole made aware of all that economic planning promises or asks of them. The people will become plan-minded before the Plan is inaugurated, and the concrete tasks of planning will thus be rendered easier of accomplishment. We trust the agricultural plan now announced will be viewed in this light both by the public and the various agencies of the Government. The educative significance of the efforts that Government will be making to increase agricultural production seems to us to be far more important than even the additions to production which they may succeed in securing.

It is feared in some quarters that a drive for increased agricultural production unrelated to other parts of a proper economic plan is fraught with the danger of a slump in agricultural commodities immediately after the war. This fear, reasonable, no doubt, in ordinary conditions, may easily be overdone. It is not to be assumed that the increase is to be spread evenly over all agricultural products or that the aim is to maximise the output in the case of every commodity. The main aim as we see it is to get as quickly as possible out of the stage of mere exhortations to grow more food and to ensure appreciable additions to our production of foodgrains. The next in the order of importance is to raise the standard of nutrition in the country by paying special attention to problems of animal husbandry, particularly, milch cattle. Production of fruits and vegetables in increased quantities is essential for improving the standard of nutrition. Pulses and oilseeds which provide fats also come under the grow-more-food campaign. There can be no question for some time to come of over-production in any of these, such as may cause a fall in prices to unremunerative levels. Even after the war, if the volume of employment is prevented from falling by the inauguration of various schemes of essential public works expenditure and by an industrial boom for which the business community is already getting ready its plans, the volume of effective demand for foodstuffs of various kinds will be more than maintained.

It is only in regard to industrial raw materials that some doubts are possible about the wisdom of increasing their production. In the absence of the papers relating to the plan, we have no knowledge of the exact measures now proposed. But, considering that powers are taken in some of the provinces to

maybe you know this already

If you have been on a journey by train recently, you need not read this announcement. You will find it only an unhappy history of your own experiences. You will know what it is like trying to get a conveyance to any of the main stations. You know how booking office windows are crowded these days, and what a struggle it is to get tickets. And you

will have argued with porters who demand exorbitant payment for their work. And you remember how difficult it was to find space in the crowded train, and having found space, to KEEP IT! Even food at Railway stations is not what it used to be. These difficulties made your journey full of trouble and discomfort. It was hardly worth it, was it? For women especially, travel is unpleasant because of the congestion.

Remember next time you travel—it isn't the Railways' fault. They have important work to do. They have to transport huge quantities of food-grains, fuel, cloth and other civil supplies. Be wise—stay at home.

Travel Less

ISSUED BY THE RAILWAY BOARD

AAA 009

enforce a diversion of land from what are called cash crops to the production of foodstuffs, it is unlikely that an increase in the production of jute or oilseeds or cotton is contemplated. In fact, when the drive grows effective, a reduction in acreage under some of the crops may be decided on, on the strength of the heavier yields.

But the technological and financial aspects of the plan are far from clear in the press reports on which these comments have to be based. In the press conference which he held to announce the Plan, Sir Phiroze Kharegat has said more of the recurring expenditure of Rs. 20 crores than of the capital expenditure of Rs. 1,000 crores. He has related this to the corresponding figure of Rs. 1,250 crores in the Bombay Plan and emphasised that the aim of the present plan is a 100 per cent increase against the Bombay Plan's target of 130 per cent. He has also drawn attention to the fact that the estimate of Rs. 1,000 crores is on the basis of prewar prices and that at present prices the figure must be raised to Rs. 2,000 crores. But the important point is the rate of capital outlay and the ways and means of finding it. Comments on this aspect have necessarily to be deferred.

As for the technological aspect, the target fixed in the agricultural plan has to be judged in the light of Dr. Burns' report on technological possibilities of agricultural development. It is said that the Plan aims at an increase of 10 per cent in cereals 20 per cent in pulses, in fats and oils and in fruits, 50 per cent in vegetables and 300 per cent in milk. These figures, it is necessary to note, are not in close accord with the figures given by Dr. Burns, as he believes that the possible increase is 30 per

cent in rice, nearly 100 per cent in wheat and about 25 per cent in other cases. It is to be supposed that only the immediate increase is indicated though the very large figure under milk seems almost visionary. Nevertheless there is no reason to be sceptic of appreciable results even in the first year of the Plan. Apparently, the Government of India intend to spur the local governments to energetic action in the matter of irrigation facilities, distribution of improved seeds and better organisation of agriculture in the rural areas. The determination and impatience that will characterise the Government's drive are evident in the message which Lord Wavell has sent to the Policy Committee on Agriculture:

The use of all possible sources of irrigation, the supply of manure, the supply of improved seed and protection against pests and diseases must be vital elements both in our short-term and in our long-term programmes. I am confident that we have behind us a great deal of knowledge, the fruits of many years of research work and that the toughest part of the problem will be to translate this knowledge into action. Much has been done already, but our districts are not adequately staffed, and I shall not be satisfied until we are organised both at the Centre and in the Provinces so that there is an agricultural plan not only for each district but for each village or group of villages.

The crux of the problem is trained personnel. You may think that it is impossible to expand and reorganise the Provincial Agricultural Departments thoroughly enough or quickly enough to get early results, but I suggest you consider what has been done in industry, during the war.

It is heartening to know that not only is there an agricultural plan but its working is to be hustled.

ORGANISATION FOR BANKS

To the question whether Indian banks, joint-stock and other, require a separate organisation comparable to those of insurance Companies, there can be only one answer. It is therefore not surprising that Seth Pranlal Devkar's suggestion has fallen on fruitful soil. The meeting held last week in Bombay attracted Chairmen and Directors of banks as well as executives who are familiar with the many pros and the few cons relating to the proposal. It is believed that the Reserve Bank does not deprecate the formation of an association, to speak and act for Indian banks. When exchange banks have already what they want imitation far beyond the point of fixing holidays has become necessary. The case for a special organisation was stated by Seth Pranlal recently in Bombay before the Committee headed by Sir H. P. Mody to draw up a constitution was set up. It is certain that in the centenary year of Peel's Act the organisation that is proposed in India will have begun work.

While it is clear that the sixteen exchange banks running offices in India would stand out, it is possible that the special position of the Imperial Bank of India would not prevent the development of associations with other banks in and through the proposed association. Apart from the fact that wartime progress has been substantial Indian banks require certain measures of self-protection. In relation to the public, to other banks, and the Government, banks have certain duties and rights. To formulate and assert them may not be easy if a body able to speak for the business as a whole is not available. Due stress was laid upon common interests and common obligations in order to indicate that internecine competition presents dangers. It is known that over 1,800 branches and offices are working in India. The Scheduled Banks alone number over 63 at present and the problems of controlled development acquire some importance. To direct banking expansion to real, permanent advantage may be described as the primary task of an association for which the conditions of working have been outlined at the same time as the proposal appeared.

There is perhaps more than one point at which agreement should be secured through an association. Postwar conditions may require essential adjustment in regard to the cash ratio and investment policy. Changes made by concerted arrangement would have a validity of their own. Though it may be freely suggested that in the money market as a whole the Imperial Bank is always more than 'primus inter pares' but Indian banks, if organised, would exert a real influence on the conditions and working, for instance, of the Treasury bills market. To help such progress towards coherence and unity an association acting may be through branches, may be a necessity. Since discount houses are practically unknown, the banks may be able to fix a quota in regard to their own allot-

ment of treasury bills from week to week. British practice may claim special notice in this connection, for it is fairly clear that Government borrowing after the war would increase substantially. The fact that the Scheduled banks' average cash ratio at present is in excess of the needs of the situation may not be overlooked, for it has an important bearing on future credit policy and the requirements of economic progress. Should a national investment policy take shape the banks' original functions well might change, and in this case, credit for industry may have to be looked at in a new light. European as well as British practice then must be borne in mind. Not an individualistic but an agreed policy may be dictated by the conditions of industrial expansion. Insurance of deposits, of course, lies wholly outside the field of activity that may be mapped out but in regard to such questions as clearing houses the new organisation may be able to secure necessary improvements for it has been apparent that arrangements are susceptible of improvement.

While there is a suggestion that Indian banks must engage in foreign exchange dealings, if need be through a special bank floated for the purpose, the association would of itself help greatly in winning and keeping for Indian banks a share in the financing of foreign trade. If large changes in monetary and exchange policy are not forecast the principle of self-government requires notice. A Banking Act has been promised even after recent changes in the Company Law. The impact of legislation in the form of Defence Rules regarding advances should also be taken into account. When the Defence Rules cease to operate the essential principles may have to be carried forward. What may be here called the guild principle may yield real advantages to the depositor and client which is one more reason in favour of the proposed organisation. How the inland bill market should be developed, how produce advances should be regulated, and commercial activity assisted are, properly speaking, questions for the association to consider. In regard to banking legislation the Central Board of the Reserve Bank would be easily displaced by an association more familiar with actual banking practice and it is well that the association comes before the Act that is to regulate banking in India. The principle of reciprocity in the States can clearly be secured through the association rather than Central legislation or directions of the Reserve Bank.

As to relations with indigenous bankers the joint-stock banks may find the only adequate agency of development in an association formed to act in relation to the public as well as bankers. If the degree of concentration obtaining in Britain has not made clearing banks wholly able to stand up to the Treasury and the Bank of England, it is worth remarking that the equivalents do not exist in India. That seems a

factor favouring the success of the Association for which the justification is not merely the dread of a crisis caused by competition. The evolution and acceptance of standards has already taken place. A corporate sense produced by membership of an association, meant to advance common interests, may lead to the emergence of responsibilities towards the public. The suggestion is certainly older than the Bombay meeting which considered and approved it last week. It may be attributed to Mr. B. T. Thakur who examined Indian banking prospects to reach the conclusion that a separate organisation is required.

Last week the nature of the objects before the organisation was indicated to make it clear that there would be no ground for differences of opinion as between banks. The major object, as Seth Pranlal insisted, is to equip banks to deal with their problems; and an association could sponsor certain things in the common interest. If the opportunities appear vast the interesting fact that many banks in India require a 'big brother' movement of a new kind deserves some notice while union now may create for the majority of banks the conditions for progress.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd

May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice. Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

Editorial Notes

Mills and Machinery

The progress of the Indian cotton industry from a spinning side dependent on exports to an industry with weaving prominent is the result of other forces besides the tariff. There are now 50 spindles to each loom and the range and variety of textile production has increased. An officer of the Civil Supplies Department reviewing Indian textiles' progress mentioned the increase in yarn of fine counts, also the addition of bleaching, finishing and cloth-printing plants to many mills. But the production of finer goods has decreased during the war. In Lancashire too finer and special fabrics have been displaced by utility or standard types. It is believed that India's cotton mills producing 1550 million lbs. of yarn and 4500 million yards of cloth have gone coarser by 23 per cent as a square yard of cloth weighs 4.1 ounces as against 3.3 ounces in 1937. Wear and tear has increased and reconditioning of textile machinery according to an official spokesman is the first need of the future. During the boom period of 1921-25 much new machinery was installed in mills, the total number of machines being equal to 45 per cent of the machinery in use prior to 1920. But re-equipment was on a moderate scale during 1921-25 as wear and tear was not too heavy and most of the machines were fit to give good service. It is recognised that mills today have machinery forty years old which would be unfit for service after the war. The proportion of machines added between 1936 and 1940 to the total service is small as compared with those added between 1921 and 1925. The plea then is for modernisation, especially as 50 per cent of weaving machinery is obsolete. The conclusion as to relative efficiency reached in 1930 by Mr. Arno Pearce therefore requires to be modified. The claim that machinery able to deal with artificial fibres should be added has appeared along with a plea for automatic looms. More training for the supervisory staff of mills is but one aspect of raising productive efficiency. The strain of war has lowered Indian operatives' efficiency in mills. As to what may be obtained by way of spares and stores in the country, something is known. The mills nowadays get 20,000 tons of starch made in India, also healds and reeds, pickers and buffers as well as shuttles and bobbins. It is believed that 30 new bobbin factories based on a capital outlay of Rs. 50 lakhs are doing well. Products for finishing and dyeing are also made in India, to meet Indian mills' requirements. How the textile industry should support subsidiary industry is easier to indicate than to say how and whence the mills are to draw their machinery. The presumption that U. S. and British manufacturers can supply at once what is ordered may not be wholly

correct, but it is believed that the renewals and replacements programme would be based on the high profits earned by mills. The increase of capital made in certain cases during the war period is based on the need for extensions and additional machinery. The main point, however, that specifically generous depreciation allowances are required in the case of cotton mills has been made the subject of official enquiry but the outcome is still a subject for conjecture though the existence of overaged and overworked machinery is recognised.

Action in the Pacific

A fleet air arm action in the Pacific (recalling the success in April in the Palau Islands) in which Japanese aircraft losses were substantial like the loss of carriers and tankers raises questions as to when the next naval battle would be fought since it is clear that the Central Pacific east of the Philippines will be the area of decision. Like Midway the battle of the Marianas proves the power of the carrier-based bomber. U. S. aircraft production is thus the principal element in the victory of the Fifth Battle Fleet. Japanese insular possessions have been reduced in numbers since the Gilberts were taken. In the Marshalls a new naval base has been secured for the U. S. fleet which operates far beyond Truk since raids on the Bonin Islands have been reported. So far as Japan is concerned capital ships have been preserved at the cost of cruisers, and the battle fleet is temporarily secure in the Philippines. But the U. S. fleet has for months been seeking its prey, and the entire coastline between Shanghai and Rangoon has become unsafe for Japanese shipping. Escort vessels are admittedly a pressing problem for a country that is dependent on imported oil, iron ore and rubber. So is shipping. Lines of communication with New Britain and Dutch New Guinea have been cut before the promised junction of the British and U. S. battle fleets has taken place. The Japanese fleet may be adequate for defence in home waters, but the Superfortress raid on Kyushu brings the home bases like the fleet into the area of conflict. The South Seas campaign (1943-44) has been almost wholly defensive. Of the bases captured in 1942 few remain in Japanese hands and most including Sabang and Sourabaya have been attacked successfully. The blockade too has become rigorously effective. But it is well to remember that Allied invasion of the Asiatic mainland is still contingent on the destruction of the Japanese army which from December 7th 1941 has not met with a serious reverse. What may be achieved by effective co-operation with the Chinese army beyond Upper Burma can only be ascertained in the future. The market reactions outside the oil share market are not likely to be considerable

but it may be noted here that the rise in U. S. Steel and other shares has been influenced by the work of the fleet rather than the assurance of Mr. Dewey's nomination or the eventual repudiation of the New Deal.

Factories and Accidents

Factories in India increased from 11,868 to 12,527 in 1942 according to a note on the working of the Factories Act. The number of seasonal factories declined (probably fewer gins and presses were required when the cotton crop was reduced) while perennial factories increased. The fall in the number of seasonal factories accounts for the reduction in the number of women employed although the number of women employed in factories was equal to 11.4 per cent of the total number of factory workers. Since the number of factories increased in Madras, Bombay and the Punjab while the number of factories in Bengal decreased there is a clue to the employment situation as well as the transfer promoted by the Anglo-Japanese war. Except for the rise in the accident rate, it may be said that the position of operatives improved. The higher cost of living soon led to adjustments in wages and allowances. Improvement in housing was limited by the war but observance of rules concerning health and sanitation was more widespread though conditions left much to be desired in the case of mushroom factories. According to the report (which deals with Bengal but not Assam) a few cases of cholera and small-pox were reported from Titagur and the Doonars; the prevalence of blackwater fever in the tea districts was more severe than usual. The control of weather in the factories did not make much progress though mention is made of dust extraction plants in two ordnance factories. The effects of war on welfare work appear to be disappointing. Creches did not find much favour but Bombay mill dispensaries underwent improvement. The big innovation was the setting up of grain shops. Progress in respect of factory canteens clearly belongs to a later period. Improvement in labour conditions is not responsible for the rise in the number of workmen's compensation cases and the sum paid as compensation. The increase in accidents are due to lighting restrictions and the inability of most employers to apply safety measures. In the note relating to the working of the Act it is stated that Municipalities and District Boards in Bombay as also film-producing companies were among those who failed to furnish returns. In regard to the number of accidents both Bombay and Bengal reported increases in 1942. The Textile Labour Association in Ahmedabad assisted in the settlement of workmen's claims while the insurance companies in Bombay co-operated in

speedy disposal of cases. The marked increase in the cases of temporary disablement from injuries did not produce any such increase in compensation paid, but the number of minors who suffered death (400 in 1942 against nil in 1941) calls for special notice.

Penicillin's Progress

In "Endeavour," the I. C. I. house organ Prof. Florey and Dr. Chain have reviewed the progress of penicillin—a purely British discovery. It is described as an anti-bacterial agent produced by a mould. The original discovery was that of Prof. Fleming in 1929 when he found that staphylococci on an agar plate were destroyed by a green mould. Prof. Fleming ascribed the power of the medium to inhibit the growth of bacteria to the presence of an anti-bacterial agent which he named penicillin. He stated in 1932 that penicillin certainly appeared to be superior to dressings containing potent chemicals. The chemotherapeutic properties were ascertained only after investigation on lysozyme was undertaken. Prof. Florey took up in 1938 work on anti-bacterial substances. By great good fortune one of the first to be investigated was penicillin. A suitable assay method was devised by Dr. N. G. Heatley who also designed the first laboratory plant for growing the mould and extracting penicillin. The large-scale preparation was carried out in Oxford. The chief merit of penicillin is that it has little, if any, toxic effect even when administered in large doses. Leucocytes are not injured by penicillin which finds an ally though penicillin does not kill bacteria immediately but merely inhibits their growth. When the biological properties were known it was decided to prove that penicillin was more than an antiseptic 'though the step from mouse to man was a large one.' With material partly made in Oxford, and partly produced by I. C. I. it was possible to treat fifteen cases of severe sepsis, more of them patients who had every appropriate form of therapy before penicillin was used. During the clinical trial the effective dosage and method were worked out. The remarkable chemotherapeutic effects which can be obtained with penicillin in generalised and local infections have been amply confirmed by American workers. One possible exception to the curative effects is where the heart valves are infected. Another chemotherapeutic agent with properties similar to those of penicillin is helvolic acid but its prolonged administration results in severe liver damages. The latter was discovered and described in 1943 by Prof. Florey and three others. It is interesting to note that Claviformin from which patutin (publicised not long ago as a cure for the common cold) was an earlier discovery of the Oxford school of pathologists. The scarcity of penicillin is certainly admitted but Prof. Florey and Dr. Chain note that great efforts are being made by commercial firms and others, both in Britain and America, to bring production to a maximum. Questions were asked in February in Parliament about penicillin production and the lead acquired by the U.S.A. They led to a reply from the Ministry of Supply and the Therapeutic Research Corporation (consisting of the five big drug houses) Imperial Chemical Industries and Kemball, Bishop & Co., denying the existence of a monopoly, and also pointing out that chemical synthesis had not been attained and manufacture by biological methods demands assay.

Steady Market

At the end of 1942 exchange rates in New York were almost unchanged as compared with rates at the beginning except for the appreciation of the Argentine peso in the free market along with the appreciation of the cruzeiro which replaced the milrei in October, 1942 as Brazil's money. Sterling and associated currencies for a year showed no change whatever unless it be for a small rise in the value of the New Zealand currency. The marked

improvement noted in 1942 in respect of Latin American currencies except for the sharp rise in the Uruguayan peso was not discernible, partly because the countries concerned were taking gold out of the U.S.A. for their own reasons. The only currency to depreciate slightly was the Chilean peso. A change of some significance was the appreciation of the Canadian dollar in the free market. Towards the end of 1943 the free rate was very near the official rate of 90.91 cents to the Canadian

dollar. Improved status in the foreign exchanges was limited to the rial. The £ (Turkish) had no ascertained value in New York. It was certainly worth less than a dollar even before the U.S.A. entered the war.

Many European currencies including the Swiss were not quoted as exchange control blocked dealings in almost all currencies including the Chinese dollar whose depreciation can be judged only by the rise in the wholesale price index and the rise in Chungking's cost of living index (base 1939) from the average of 958 in 1941 to 6074 in June, 1943. The most interesting conclusion to be drawn is that inflation as for example in Mexico had no effect on the external value of any currency. The peso quoted at 20.58 cents for nearly a year. The substantial depreciation of the mark early this year can scarcely be ascertained from the last New York quotation (January-June, 1940) of 39.97 U.S. cents to the mark. The movements of the dollar rate in neutral capitals are even less well-known than the drop in the French franc which was equal to 2.08 cents in the first half of 1940. The exchange rate of 200 francs to the £ is probably a careful adjustment of the invasion rate without regard either to the steady rise in the French note issue since 1941 or the reduction in external value for example in relation to the Reichsmark. The Indian rupee in New York and London ruled steady throughout 1943 and the quotation of 30.12 cents per rupee indicates how the conventional equivalent for book-sellers' prices at present diverges from the market rate at which the importer's invoices are probably drawn.

Precious Minerals

The diamonds of Golconda have been famous but diamond mining has been carried out fitfully in modern times. A note on the mineral resources of Hyderabad refers to historic gems obtained in the past and a recent investigation of the mines given up in 1849 as unprofitable resulted in favourable conclusions. Semi-precious stones are more promising in relation to the development of a legendary industry in the State. Occurrences of amethysts, jasper, opals and onyx have been reported in the beds of rivers and streams in the Nizam's Dominions. Massive beds of cherts and other varieties have been noted in Gulbarga. Excellent raw material for the cutter and polisher has been reported from many other places. Garnets in conjunction with Kyanite have also been noted. Hyderabad's precious minerals include gold and a prospecting license was taken out in 1886 by the Hyderabad (Deccan) Co. The prospecting covered 12 years and old workings were uncovered in many places. The company set up subsidiaries e.g. the Huttir Gold Mines to work certain mines. The particular company took out gold valued £900,000 and paid £45,000 as royalty but closed down in 1920. The Mangalur field in Gulbarga Dt. was taken over by a company formed in 1905 and the old Maski field was assigned by arrangement to John Taylor and Sons who have run the Kolar Gold Mines with success for half a century. The Geological Survey carried out much prospecting work for years in areas where the companies worked and also in areas not included in the concessions. Revival of prospecting in the most likely areas has been referred to in a note that says work began in December 1937 when John Taylor and Sons under the Railway Board and financed by the State began to examine old workings.

The old mines near the Huttir Gold Mines was dewatered and developed but the war has stood in the way of further development though prospecting on behalf of the Nizam's Government led to the adoption of schemes for the revival of gold-mining. The premium on gold should support such a revival even in the future.

Russian Offensive

The capture of Viborg has not brought about any changes in Finland's Government though Stockholm reports suggest that an armistice may have a greater appeal than in February-April when Dr. Passikivi indirectly attempted to negotiate with Moscow. The Soviet success in the north has however resulted in a large-scale offensive such as expected by the German High Command. The summer offensive is directed against White Russia and the German-occupied territory beyond. The new attempt to roll up the German defence in the East corresponds to the Allied effort against the Atlantic Wall though the similarity between Vitebsk and Cherbourg may be hard to indicate. The results are not yet apparent except that the Soviet drive against Hungary and Roumania has been postponed. In view of German occupation of the satellite states and the long drawnout operations in the Ukraine the decision to begin with the north becomes intelligible. To deprive the Nazis of resources in Poland and the Baltic States may well appear more important than a break-through into Roumania. The latter is exposed to air attack by U. S. air forces using Russian bases as well as Soviet planes. If the chances of a revolution are less bright than at the time of Prince Stirbey's mission to Cairo Turkey's stand on the Allied side has made it clear that the German hold on the Black Sea is precarious. The Soviet offensive like the Allied advance up Italy supports the invasion from the West while the common element is the co-operation of the liberated population against the Nazis. This might even increase when the advance towards the West raises the question as to future boundaries.

A New Coal Company

Interest in the new coal company manifested in many markets in advance of the issue of a prospectus by Bharat Collieries Limited, may be ascribed to the connections with the Dalmia-Jain group as well as the fairly substantial size of the offer. Its appearance in the middle of a coal share boom is not likely to be overlooked but the main advantage for shareholders will lie in the setting up of a useful reserve from the share premiums. The Maharaja of Coosimbazar's collieries have been acquired for Rs. 81,85,000. The Jharia and Raneeunge properties produce over 400,000 tons. The facts are clearly indicated in the prospectus. The collieries are in working order and dividends are assured from the inception. The production bonus offered by special exemption of profits over from E.P.T. is a notable gain for the company which expects raisings from two new pits. The engineering workshop at Ekra is specially mentioned in the prospectus because the company would have no problem regarding stores and spares. Preliminary expenses in relation to the issue for Rs. 1 crore are very modest. For the ordinary shareholder the real advantage is admittedly the high proportion of capital with fixed interest to the total issue. The fact that half the capital is already promised should also weigh with investors who are asked to pay a small premium. No calculation as to profits or probable dividends is possible

as transport remains a major factor but the special efforts made to keep seasonal migratory labour on the coalfields should assuredly yield benefits in the immediate future. The debentures maturing in 1956 offer 4½ per cent should receive special

attention at present since good debentures are very scarce. The 5½ per cent preference shares issued at Rs. 101 are of the cumulative type but not taxfree so that the debentures are likely to be viewed by some as the more desirable security.

HOW DO YOU JUDGE PAPER?

The Master Printer knows how to select his paper for a particular job. Not so, the layman and yet he needs good paper. Surface, Texture and Strength determine the Quality of paper. It is not true that a smooth surface is necessarily better than a rough one or that a particular texture is superior to another or that the stronger the paper the better it will be, under all circumstances. It all depends on the nature of the job for which the paper is required. It is possible to-day, with the highly developed modern machineries, to manufacture paper to suit every purpose.

In making allotment preference will be given to those who apply for shares in small lots and also to those who make application both for shares and debentures.

OBJECTS OF THE COMPANY

The Company has been formed for the purposes of carrying on all or any of the objects set out in the Memorandum of Association and in particular to carry on the business of working coal mines and dealing in coal.

The promoters of the Company have purchased the properties formerly held by Maharaja Srischandra Nandi of Cossimbazar for Rs. 81,85,000 including the sum of Rs. 1,40,000 which has been paid to Messrs. Sohanlal Jajodia, Onkarnal Somani and Ramnath Bajoria in respect of the said purchase.

The collieries are situated at Ekra in Jharia fields and Baraboni and Chapul in Raniganj fields. The raising of the three collieries in the past were as follows:

Years	Ekra tons	Baraboni tons	Chapul tons	Total tons
1940-41	2,35,815	1,10,003	42,003	3,87,921
1941-42	2,25,750	1,11,175	47,456	3,84,381
1942-43	2,58,374	1,23,560	40,039	4,21,973

At Ekra two new pits have recently been sunk which will yield additional raising in the coming years.

The Company has an efficient Engineering Workshop at Ekra. Pressing war time demands make it exceedingly difficult these days to get engineering works executed at outside places, and having a workshop of its own at one of its collieries, confers on the Company an advantage of getting its works quickly executed and help to enhance the output of the collieries. This workshop, which is one of the largest of its kind in Jharia fields, undertakes the works of many other collieries in addition to those of the Company.

In the past while adjoining collieries were affected by labour shortage, the Ekra mine was comparatively better off due to work in its pits being more comfortable. It is expected that in future also labour position will be easier.

At Baraboni, the equality of the coal is Poniat seam, which is one of the best selected grade coals in Raniganj fields.

Shareholders of a new colliery do not obtain any profits until it is developed and machinery fitted. Profits also are meagre in the initial stages of production, the result being that a number of years pass before full profits are available. But it will be different in the case of this company, the collieries being fully developed and fitted already.

The above facts justify the view that shares of this Company cannot be regarded

as those of a newly floated concern and they should compare favourably with shares of companies of long standing.

Collieries at present have definite advantage in regard to Excess Profits tax, viz., amounts of bonus payable to them on excess raisings over the target fixed by Government will be exempt from E. P. T. These bonus earnings will be a considerable amount with increased raisings.

PRELIMINARY EXPENSES

Preliminary expenses including registration and printing charges and other incidental expenses, but excluding commission and brokerage for getting the capital and debentures subscribed and excluding expenses of registration of debentures, are estimated not to exceed Rs. 25,000/-.

AGREEMENT

An agreement has been entered into between Dalmia Cement & Paper Marketing Co., Ltd., one of the promoters of the Company on the one part and the vendor Maharaja Srish Chandra Nandi of Cossimbazar on the other part by which the vendors have agreed to sell to the said promoters or their nominee all lands, buildings, machinery, mining rights of collieries for Rs. 81,85,000 including the sum of Rs. 1,40,000 paid to Messrs. Sohanlal Jajodia, Onkarnal Somani and Ramnath Bajoria at the time of purchase of the said property.

An agreement has been entered into between Dalmia Cement & Paper Marketing Co., Ltd., and the Directors of the Company providing that Dalmia Cement & Paper Marketing Co., Ltd., will nominate the Company as purchasers of the said property.

An agreement has been entered into between Directors of the Company and the trustees Mr. V. H. Dalmia & others by which the Company has agreed to execute a Trust Deed transferring lands, buildings, machinery and other fixed assets to the Trustees after the certificate for commencement of business is received. The present issue will be governed by the said Trust Deed.

For purposes of identification, the above agreement and the Draft Trust Deed have been signed by the first three signatories to the Memorandum and Articles of Association.

Copies of the said agreement and the draft Trust Deed may be inspected at the Registered Office of the Company any time during the business hours on working days.

MINIMUM SUBSCRIPTION

The minimum subscription upon which the Directors may proceed to allotment is Rs. 30,00,000 in Preference Shares and Rs. 40,00,000 in Ordinary shares and Rs. 30,00,000 in Debentures.

VOTING AND RESTRICTION

The following is the procedure relating voting and restrictions thereof:—

No member shall be entitled to be present or to vote on any question either personally or by proxy, or as a proxy for another member, at any General Meeting or on a poll, or be reckoned in quorum whilst any money due from him alone or jointly, to the Company, in respect of any share or shares in the Company remains unpaid.

Preference shares confer the right on the holders thereof to receive notice or vote at General Meetings only when any resolution is proposed for reducing the Capital of the Company or winding up the Company or directly affecting the interest of holders of such shares as a class as regards Dividend, return of capital or voting, upon any question which entitled the holders of Preference shares to vote, these shares will confer one vote for each share held.

Every shareholder not disqualified by the preceding article or any other articles of Association and who has been duly registered for three months previous to the General Meeting, shall be entitled to be present, and to speak and vote at such meeting, and when present in person shall have one vote on show of hands, and on a poll, when present in person or by proxy, shall have one vote in respect of every share held by him in the Company, at least three months previous to the General Meeting.

Cumulative preference shares, will rank both as regards the dividend and claim capital in priority to ordinary shares.

The Directors may, at their own absolute and uncontrolled discretion, and without assigning any reasons, decline to register or acknowledge any transfer of shares other than fully paid shares.

DEBENTURE-HOLDERS TRUSTEES REMUNERATION

A sum of Rs. 1,000 will be payable to the trustees jointly per year.

DIRECTORS' QUALIFICATION AND REMUNERATION

Every shareholder of the Company is eligible for election as a director of the Company. The remuneration of a Director shall be fixed by the Board of Directors at their meeting for every meeting of the Board attended by him and he will be entitled to his travelling expenses properly incurred in connection with the business of the Company.

POWERS TO APPOINT MANAGING DIRECTOR, MANAGING AGENTS.

Directors may appoint any of them Managing Director or a Deputy Managing Director for such period and on such terms

may be determined by them and may delegate to the Managing Director or the Deputy Managing Director, such powers, in addition to the powers mentioned in the Articles, of association as they deem proper provided, however, that the monthly remuneration payable to such Managing Director or Deputy Managing Director shall not exceed Rs. ten thousand and Rs. eight thousand respectively.

The Directors may appoint any firm or Company as Managing Agents of the Company for a period not exceeding twenty years and on terms and conditions as may be determined by them. The remuneration so determined shall not exceed Rs. 2,000/- (Rupees two thousand) as allowance per month and commission of 10% of the net profits of the Company. (Nett profits will be taken to mean as defined in the Indian Companies Act).

INTEREST OF DIRECTORS

Seth Jaidayal Dalmia and Seth Shanti Prasad Jain and Mr. Vishnu Hari Dalmia, are Directors of Dalmia Investment Co., Ltd., who have underwritten this issue.

Seth Shanti Prasad Jain and Mr. V. H. Dalmia and Mr. Mriganka Kumar Roy, are Directors of Dalmia Cement & Paper Marketing Co., Ltd.

BROKERAGE

Brokerage will be payable to bonafide brokers at the rate of Re.1/- per Preference share and two annas per ordinary share and one per cent on debentures.

GENERAL

Inspection of the Memorandum and Articles of Association may be had at the registered office of the Company during the usual office hours on working days. Copies of Memorandum and Articles of Association may be obtained on payment of Re. 1/- at the registered office of the Company.

APPLICATION FOR SHARES

Application for shares should be made on the form accompanying this prospectus which may be obtained at the registered office of the Company and at the office of the Company's Bankers and sent in accordance with the directions contained therein with a remittance for the amount payable on application.

Applicants will be at liberty to pay the full amount with the application. If full amount is received with application, Dividend in respect of preference shares and interest on Debentures will be paid from the date the full money is received, to the extent of allotment.

Where no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable

able on the shares allotted and any balance thereafter remaining will be returned. Failure to pay any amounts due on shares allotted when due will render previous payment liable to forfeiture.

25th June, 1944.

(Sd.) S. P. JAIN
(Sd.) V. H. DALMIA
(Sd.) M. K. ROY

AUTHORISED CAPITAL

Divided into

80,000—Cumulative Preference shares of Rs. 100 each.
1,200,000—Ordinary shares of Rs. 10 each.

Issued Share Capital

Divided into

30,000—5% less tax cumulative Preference shares of Rs. 100 each.

400,000—Ordinary shares of Rs. 10 each.

Also

3,000—bearer debentures of Rs. 1,000 each carrying interest at 4% per annum redeemable in 1956 interest payable half yearly on 30th April and 31st October.

50% of the Capital has been promised to be subscribed by the directors and their friends. The balance is offered to the public for subscription at Rs. 101 per preference share and Rs. 12-8-0 per ordinary share and Rs. 1,010 per debenture. All these are payable as under:—

	On application	On allotment
	Rs. a.	Rs. a.
Preference share	51 0	50 0
Ordinary share	7 8	5 0
Debenture	510 0	500 0

The premium payable will constitute a very good reserve for the Company from its very start.

Rs. Ten lacs worth Debentures have been underwritten by Messrs. Mungneeram Bangur & Company and the whole of the issued share capital and the balance of the issued debentures has been underwritten by Dalmia Investment Co., Ltd., Dalmianagar in consideration of a commission at As. 4 on each Preference share and As. 1 on each Ordinary share and As. 4 per cent on each debenture. In the opinion of the Directors the resources of the underwriters are sufficient to discharge the underwriting obligations.

NOTE:—Prospectus and Forms of Application can be obtained from and payments (with application) may be made by cheque, hundies or in cash free of remittance charged at the Registered Office of the Company and to any of the Bankers or any of the concerns mentioned above.

It is not necessary that applications should be made on printed application forms. They may be type-written or written in hand.

Where application forms cannot be had, they may be written or typed as per form below:—

Governments are apt to forget that wartime controls cannot be justified merely by their view of the expediency of the moment. To serve their purpose, controls have to be workable. And to be workable, they must be acceptable to those among the interests affected, who are loyal to the broad public interest. These conditions can hardly be satisfied, if a great deal of forethought has not gone into the designing of such controls. To take a concrete instance, any measure of food control emanating from the Government of Bengal during last year's famine would have been resented by the whole population as adding insult to injury, while Lord Woolton in England, when he was Minister of Food, could rely on the people accepting cheerfully any hardships that he might have found necessary to impose on them. It is easy to account for this difference. Lord Woolton could claim credit alike for forethought and long vision. He had foreseen nearly all the difficulties of food supply in war time and had carefully accumulated large stocks of food; and if he was careful in the distribution of those stocks, it was not because of shortage, but because of prudence and the need to provide for unforeseeable contingencies of the future. Control in this context is so obviously in the public interest that none but the most perverse would demur to it. Even a child could see the wisdom of such control. The scheme was well conceived; all the conditions necessary for success were provided from well ahead. Administratively, its working was smooth; and the individual citizen suffered no avoidable hardships. Such control strengthens the individual's sense of civic responsibilities and makes him eager to contribute to the success of such measures.

pen, which is certainly mightier than the sword, where the affairs of the civilian population are concerned. But control orders have invariably had to be modified after consultation with the interests concerned and after the officials have been enabled to have a nodding acquaintance with the facts of the case. Whether it is the rice trade or the trade in cotton goods, the original orders of the authorities have had to undergo serious modifications.

But Governments are poor learners. The Paper Control Orders recently gazetted show clearly that the lesson of their previous experience in the matter of control is wholly lost on them. That lesson is that the Government must be able to claim in the first place that they had foreseen, to some extent, the situation that has now arisen; secondly, that they had taken such measures as it was in their power to take to mitigate the severity of this crisis; thirdly, that they had studied the problem from all angles; and fourthly, that in deciding on the measures of control, they had the necessary consultation with the interests affected. The Paper Control Order shows on the face of it that the Government cannot reasonably make any one of these claims. It is no use any one pretending that this situation had been foreseen and trotting out an afterthought in support. If the necessity for a cut of 70 percent had been foreseen, an attempt would have been made to attain it by stages instead of simply ordering it by a Tughlak-like fiat. Figures of local production, of imports, and of Government consumption should, no doubt, have pointed

to severe shortage. But it is one thing to foresee a growing shortage, it is quite another to experience a famine for paper and then rush wildly about for relief. Paper control, let it not be forgotten, has been actually functioning for more than two years. The screw was always in the hands of the authorities. They could have tightened or relaxed it according to circumstances. And if they now all of a sudden try to squeeze the life out of the periodicals, the publishing trades and all the consumers of paper other than newspaper, it can only be attributed to some unwelcome surprise. Personally, I am at a loss to know what this surprise can be like. The publication of Indian editions of a number of American periodicals may well lead to a serious strain on our resources of paper. Americans, it is true, generally contrive to import their requirements from the States. But we would like to be assured that Indian periodicals are not cut to the bone to meet the needs of the American forces in India.

In any case, the Government's claim to foresight in this regard would be utterly frivolous. They know the trend of internal production. It fell from 72,000 tons in 1942 to 70,000 tons in 1943, though in 1941 it rose to over 92,000 tons from below 60,000 tons in the pre-war year. Likewise, imports, which stood near about a lakh tons in pre-war years, have almost totally ceased. At the same time, demand on Government account has gone up steadily from 20,000 tons to about 70,000 tons. In these circumstances, Government should have been vigilant as much about additions

But the other kind of control, one in which the authorities suffer nasty surprises and pass them on in even nastier form to the public in the shape of crude, unworkable edicts is a positive danger to the home front. Most measures of control in India belong to this category. No methodical attempt was ever made to judge the impact of war conditions on the goods and services needed by the civilian population. It took years of acute food shortage to bring into being a rickety system of rationing. Cotton cloth prices rose to many times their pre-war rates before control was thought of. Sugar crop was allowed to be a short one, if I remember right, in the second year of the war. And the movement and distribution of salt still leaves a great deal to be desired. In all these cases, a crisis was allowed to develop before officials, who had more knowledge of the D. I. Rules than of the nature of their task, were rushed to provide relief. Their colution in most cases was a stroke of the official

to supply as about economy in use. But they took care of neither. Instances of inexcusable waste of paper have been numerous. The virtues of tea are proclaimed in de luxe art paper, as if good wine needs, not bush, but a whole forest. New periodicals have appeared in the last few years as if our problem was not shortage, but under-consumption. Every one who had a pull with a few advertisers brought out voluminous special publications with the encouragement of some exalted personage or other. No one thought of paper control then. And now, when the shortage of coal has cut down production and new, unidentified demands have sprung up, established journals of high repute and unquestionable usefulness to Government and public are asked to reduce themselves to mere ghosts of their former selves. Surely, the Government cannot claim to have done anything to mitigate the severity of the shortage. Nor have they tried to make out a case for such a drastic measure as they have now ordered. Either the order is the result of prior consultation with the interests affected or it must be accompanied by a statement which by itself can convince people that such a cut is unavoidable. As it is, the Government have passed an order which with the best will in the world cannot be complied with. If the reduction asked for had been limited to, say, 15 or 20 percent, the periodicals would have strained every nerve to comply with the order. By asking for far too much, the Government have got nothing at all.

It is frankly impossible at literally a moment's notice to reduce the size of a weekly or other periodical to less than a third of its normal size. The dailies always carry a great deal of superfluous adipose which they can shed according to need. But the periodicals, particularly financial journals, like "Capital" and "Indian Finance," have practically every one of their pages devoted to a special need of their readers. What may seem to the average official or even the average man a meaningless cluster of figures is a matter of life and death to the investor and the operator in the share markets. Our market reports may seem dull and more or less the same from week to week; but their importance to those who have big stakes in the various commodities will not suffer them to be cut any further. All this applies to every other section of these

papers. In advertisements, too, there is a similar classification of a clear cut kind, which argues against hasty reduction. Journals like ours do not carry any large volume of advertisements of consumer's goods. The virtues of particular brands of cosmetics or cigarettes are not displayed in our columns with the unfailing visual aid of girls in negligee. Our advertisers are banks, insurance companies and big industrial units which give indication of their standing in business in austere layouts and brief letter press. Such advertisements leave little scope for economy of space. In these conditions, it is humanly impossible to effect the reduction in size that has been ordered in lofty unconcern for the facts of the case.

Let me at this stage attempt to sum up briefly the content of these orders. The orders do not affect the consumers of newsprint; and it is not known daily newspapers are not the only users of newsprint nor do all the dailies use newsprint for their purposes. The present shortage is felt only in paper other than newsprint. In fact, the newsprint position is such that the authorities allowed an increase in pages during the session of the Central Assembly and contemplate even making it permanent. The consumers of non-newsprint paper are divided into dailies, periodicals of different frequency of publication, annual publications like Directories, guidebooks and the like, publishers of books and text books and printers catering to the needs of the public. In all these cases, the reduction of consumption is related to a percentage of the consumption in a base period, which varies from one class to another. It is not possible to reproduce here all the provisions of the order. I have indicated the general framework of the order. And it should suffice to say that the cut in relation to the base period is 50 per cent in the case of the dailies, 30 per cent for weeklies, 30 per cent for monthlies. It is most drastic in the case of publishers and general printers. Printing presses are required to submit a return of the quantity of paper (other than newsprint) consumed during the years 1939 and 1943, to submit a return every month of the quantity of such paper held, acquired, consumed, or otherwise disposed of in the previous month. The maximum quantity of paper that may be consumed in any month is laid down: for all printing presses in existence before 1944, such is to be not more than one-

twelfth of 30 per cent of the paper consumed in execution of printing work during 1943, while, for others, the quantity that may be used must be ascertained from the Paper Controller, to whom they have to apply in this behalf. Lastly, a printer is forbidden to operate any press which he did not regularly operate before 12th June, 1944, or to change the name of the press or its location from one district to another. Publishers of books have also to submit a few returns to the Paper Controller. They have to submit a return of books approved for use in educational institutions and also of other books printed by them during 1939 and 1943. In another return, they have to state what quantities of paper each of these categories of books consumed in the respective years. In respect of the former, they are permitted to use, in a month, up to one-twelfth of 50 per cent, used in 1939, or that used in 1943, if any publisher was not in business in 1939, while, in respect of the latter category of books, they can use only up to 30 per cent of the paper, used in 1939, or that used in 1943.

If the Paper Control Order had been accompanied as, indeed, it should be, by a statement of objects and reasons, the authors of this order would have felt called upon to indicate the amount of various classes of paper which they thus seek to economise. And then they would have had to confess that people of all age groups will be mentally starved so long as the orders will be in force. It is not sufficient that the country has been on short ration. It must be famished mentally as well. This is not a matter of "interest" ordinarily understood. What is threatened is the vital processes of juvenile and adult education, the maintenance of the whole standard of the public's education in matters of public importance.

And yet the daily press in Calcutta and elsewhere, with a few exceptions, has shown little or no interest in the effect of these orders. The "interests affected"—the economic complex of our time obliges

to use a phrase which is totally misleading—held a meeting to protest against the control orders and work for their withdrawal or modification. Neither the notice of this meeting nor the report of its proceedings had space provided for it promptly by some of our dailies, though both were duly reported by our news agencies. I cannot help feeling that the daily press, thanks to the increased attention it has been having from the Government during wartime, regards itself as the top stratum of the fourth estate, which can look down on the strata below. I can see no reason for the superior airs which are thus affected. On the other hand, the dailies are avowedly and patently ephemeral, while the periodicals, all the world over, are recognised to be more weighty and of more permanent value. Serious-minded readers have never missed the comparative shallowness of comments in the daily press. It is natural since perspective and time for reflection are in the nature of things denied to the dailies. It should be unseemly to emphasise these points, if the schism in the fourth estate were not regarded with such complacent unconcern by the dailies. I am not happy to mention these points; but I do not see how I can help it.

I have digressed perhaps. But it has to be brought home to the public at large that the daily press has failed in its duty to it, so far as the recent Paper Control Orders are concerned. Let no one make a mistake about the significance of these new orders. In their present form, they mean nothing less than mental malnutrition for the whole people. Paper is scarce, no doubt. But economy does not mean ruthless axing. It implies additions to production and discrimination and care in consumption. The Government owe it to the people to tell them what steps they contemplate for adding to supplies. The shipping position is by no means desperate. Production at home is not to full capacity. The use of paper in this country is such that the Goddess of Learning may feel far more aggrieved than the Goddess of Wealth. Books and pamphlets brought out by wealthy individuals for un-

abashed self-advertisement continue to pour in. Publications, which are just advertisement stunts, with no pretence of service to the public, are still being planned. Economy is to be prized even in conditions of affluence; neglect of it is the mark of the uncultured. But in condition of scarcity, its demands must be discriminate in addition to being imperative. The meeting of the representatives of periodicals and publishers which was held in this office last Monday has asked for nothing more than that the orders shall not come into effect till agreement is arrived at with the Government. A deputation is to proceed to New Delhi. The authorities may rest assured that the meeting was fully conscious of the importance of the economy of paper to the mental health and robustness of the growing generation and that they will find the deputation extremely reasonable. Likewise, I may express my confidence that Mr. Hydari will show himself to be most considerate and sympathetic. He showed himself at once strong and considerate in the matter of cloth control; and in that case, an initial stringency followed by subsequent accommodation has more to be said for it than in this case. The shortcomings of a department need not all of them be laid at the door of its overworked head. And as a member of the delegation proceeding to Delhi, I have reasonable confidence that we shall come to an understanding satisfactory to all.

Since the above was written, an Associated Press report has appeared in the press, which purports to answer criticism of the Paper Control Order. I don't feel called upon to change what I have written. If these measures have been in consideration from February, their defects should be deemed even more depressing. It takes far less than this drastic order to save valuable paper from vain and pompous zemindars. And imports, like the exemptions now mentioned, could have come much earlier.

(From Our Correspondent)

NEW DELHI, June 26.

The Congress case has for the first time been authoritatively and effectively put before the public. The entire correspondence which Gandhiji carried on with the Viceroy, the Home Member and others has appeared in the Press and even the Government has published in a separate booklet the more important of these letters; though the propagandist 'summary of contents' attached to the booklet again tries to embellish and distort facts. The painful impression left by the letters is the barren controversy about the responsibility for the past. What is more urgent now than the fixing up of this guilt for the disturbances is the need for an immediate and workable political settlement. It is no use the Government merely sticking to the Cripps proposals. What is needed is a fresh approach. There are at least signs of such a new angle in London where the India League's memorandum for a settlement in India is reported to be receiving encouraging support from a large number of M.P.s. The recent joint statement by Mr. Henry Wallace and Generalissimo Chiang have again rivetted attention to the 'United Nations' interest in a political settlement in India. Mr. Wendell Willkie was definitely requested by the President not to cover India during his global tour in 1942 to avoid embarrassment which his plainspeaking might cause to Anglo-American relations. Now Henry Wallace too is shunning India, probably again on the President's personal request. This anxiety of the U. S. Government to keep the Indian issue in the background at least as far as the American public is concerned is deeply resented here. As the war in Europe draws to a close and the Pacific becomes the main battlefield, the issue of India's freedom as well as the independence of other subject peoples of Asia is bound to loom larger. It is in the interest of the United Nations themselves to boldly face this issue, dropping all blinkers. Russia's studied silence on the issue so far is rather puzzling; but perhaps Kremlin's views on the colonial peoples' rights to independence are too well known to need restatement.

Meanwhile Mr. Lamton Berry, one of the secretaries to Mr. William Phillips, President Roosevelt's Personal Representative here whose request for an interview with Gandhiji was so curtly rejected by Lord Linlithgow, is leaving India to join the American Embassy staff in London. His departure also confirms the reports that Mr. Phillips, who demanded a more active U. S. intervention to resolve the Indian political deadlock, is not returning to India. Mr. Phillips did not see any use in merely sitting on the fence and watching the Indian political situation on behalf of the President.

The British Fertilizer Mission has completed its preliminary discussions with the Government of India experts here and has left on a tour of the provinces. Those who took part in the talks here included Sir T. Vijayaraghavachari, Sir S. S. Bhatnagar, and Sir J. C. Ghosh. I understand that the tentative conclusion reached at during these initial discussions was that the existing power plants in the country will not at present be able to spare the necessary hydro-electric energy to work the fertiliser plants and that the Mission shall have to rely on water and gas process rather than electrolytic method for its plans. There was no

unanimity regarding the location of the plant—whether it should be one plant at a central place or several smaller plants spread over different consumption areas. While one big plant will mean economy in overhead and other expenses, several plants will mean less pressure on the already strained transport resources of the country. There is still some uneasy uncertainty about the part of the Imperial Chemicals in the industry—whether it will have a large share in the share capital or will be merely satisfied with managerial control. Fears are even entertained that the Mission which includes several I.C.I. men among its personnel may be simply collecting useful data for utilisation by the Imperial chemicals at a later date. An interesting fact disclosed in this connection is that the Bihar and U. P. Congress Governments had already investigated the possibilities of this industry thoroughly. Complete details had been worked out with the help of Dr. Fauser of Italy, "whose patents are being exploited for the manufacture of ammonium sulphate in the majority of European and American countries and who is a bigger expert than any of the Britishers now touring the country." According to the Congress Government scheme, Bihar alone was to have a plant of 60,000 ton annual capacity. The Congress Government quitted office just as these schemes were about to be put into force. If the Central Government were at all genuine in their desire to quickly establish a fertiliser industry in this country to ensure adequate food production, they could have depended to a large extent on these provincial plans instead of marking time for over a year.

I learn that several of the Executive Councillors, particularly those who speak for the minorities, are strongly in favour of State control of the new industry though

no final decision has yet been taken in the matter.

Mr. Mulherkar, employee's delegate to the recent I.L.O. conference, has felt so disappointed with the results of the Conference that he advises employers' organizations to refrain from sending delegates to the I.L.O. unless they get a much larger quota of representation. Mr. Mulherkar felt an atmosphere of unreality about the conference as all sorts of wild promises were made to the workers to build up the morale of the fighting forces. His personal impression was that the American industrialists sympathised with India's keen desire for post-war industrialisation and not only wanted to help this country with technical skill and capital goods but also wished to see her get a fair deal over the issues of sterling balances.

"When I informed them about India's helplessness in respect of dollar resources which legitimately belonged to her but which had been, in the past, requisitioned by H.M.G. in the interest of the British Empire," says Mr. Mulherkar. "American financiers, while fully sympathizing with India's position, expressed the view that in the post-war period, Britain, in her own interest of keeping her position in the international finance, would have to offer a square and equitable deal to India in respect of sterling balances which had accrued to India out of her privations and sufferings. As dollars are no longer required for payments in respect of lease-lend goods to H.M.G., it was felt, in some American circles, that the dollars held in the Empire pool might be utilized by H.M.G. in redeeming British investments in America, which were pawned with the American Government prior to the enactment of the lease-lend legislation. It is, however, a happy sign that American

opinion is gaining strength towards securing a fair deal to India in respect of these balances. What form or shape it will take, it is difficult to conjecture at this moment, but it seems that the American Government would insist upon Britain making available

to India dollars which accrued to this country, as a result of the net favourable trade balance since 1939 and as a result of payments by the American Government to the Government of India in respect of supplies and services made available to the Ameri-

can forces stationed in India." Mr. Mulherkar seems rather too optimistic about U. S. intervention in getting India a fair economic deal, particularly when one recalls the

Gratitude to Godrej

Here are but three more of the very many proofs of gratitude to Godrej Safes, which rendered signal service during the catastrophic conflagration (and in the burning debris afterwards), that followed the recent ammunition explosions in Bombay.

SAFE ENGULFED FOR 15 DAYS IN FIERCE FIRE . . and they could sleep peacefully in the nights! Now, really . . . ! ★

SHAH RATANSI MOORJI

285/87, Narsi Naiba Street,
Mandvi, Bombay, 24-5-44.

M/s. Godrej & Boyce Mfg. Co., Ltd.
Lalbag, Parel, Bombay.

Dear Sirs,

A safe of your make which we have been using for nearly 35 years was caught in the terrible fire which broke out on 14-4-1944. When we removed this safe after it had remained in fire for 12 days, we had taken it for granted that all our belongings inside the safe must have been completely burnt. But when the safe was broken open, we were amazed and overjoyed to find our belongings in the same condition in which we had kept them inside the safe, and without the slightest damage. You really deserve congratulations for making such thoroughly fireproof safes. That there are such safe-makers in India is a matter of pride for our country.

Yours faithfully,
Sd.—RATANSI MOORJI

SHAH MEGHJI MORARJI & CO.

85, Clive Rd., Dana Bunder,
Bombay, 28th April, 1944.

M/s. Godrej & Boyce Mfg. Co., Ltd.,
Lalbag, Parel, Bombay.

Dear Sirs,

We are glad to inform you that an old safe 5 feet high of your make which we were using for a long time has been instrumental in saving our papers, documents, etc. which were in it. This safe was in our office at Dana Bunder which was burnt down after the explosions and was removed from the burning debris after about 8 days. We would not have been surprised if the contents of the safe were destroyed, but we were indeed surprised and delighted to find everything quite safe and sound even after such an intense fire.

Wishing you increased success.
Yours faithfully,
Sd.—MEGHJI MORARJI & CO.

TARMOHAMED JANOO GENERAL MERCHANT

Old Bardon Galli, Habib Building,
76-78, Essaji Street,
Bombay, 20th May, 1944.

Messrs. Godrej & Boyce Mfg. Co., Ltd.,
Lalbag, Parel.

Dear Sirs,

Our safe remained caught for 15 days in the fierce flames of fire which followed the ammunition explosions in Bombay last month. Such fires have never before been heard of in the history of Bombay. It was our great luck that this 28" safe was of your make, and which contained our precious documents, "hundi", bank deposit receipts worth lacs of rupees, etc. When you opened this safe for us, we were delighted beyond words to find that all our precious possessions were quite safe and unscathed inside your safe. Before we had the safe opened by you, we were confident that although our precious possessions were caught in fire of no matter what intensity, they were in the keeping of a safe of your well-known firm, so that during that period we were sleeping peacefully in the nights. Accordingly, your safe has protected not only our goods but has also taken care of ourselves. For this we are obliged to you and congratulate you on such unrivalled enterprise, and wish you greater and greater success.

Yours faithfully,
For Tarmohamed Janoo
Sd.—RAJAK HAJI HABIB JANOO

★ It is very gratifying that Seth Tarmohamed's safe triumphed over the fury of the relentless fire. But no safe-maker designs safes to withstand such an unprepared for and uncontrollable emergency that baffles the imagination. The only explanation for this 35 years old stalwart emerging successfully through its ordeal of fire and fall (like innumerable other Godrej Safes) is that the fire-heat, intense though it was, did not overcome its fire-resisting strength.

PROCEEDINGS OF THE ORDINARY GENERAL MEETING OF THE MEMBERS OF THE

BOMBAY MUTUAL LIFE ASSURANCE SOCIETY, LTD.

Held at the Registered Office of the Society, Bombay Mutual Building, Bombay, on
Saturday, 24th June, 1944, at 3-30 P.M.

The Chairman, Rao Bahadur U. S. Desai, called upon the Manager to read the Notice convening the meeting.

The Report of the Directors and the Accounts and Balance Sheet for the year ending 31st December 1943 were, with the consent of the Meeting, taken as read and the Auditors' Report appended to the Balance Sheet and Revenue Account for the year was read out at the Meeting.

The Chairman then, in moving the adoption of the Report and Accounts, said:—

GENTLEMEN,

It is a matter of great delight to be able to commend to you for adoption a very satisfactory Report by the Directors and Accounts and Balance Sheet of the Society.

Notwithstanding the difficulties created by the war in the form of ever-increasing prices of necessities of life. Taxes on Income and heart-rending situation created in Bengal, and Malabar by famine, the Society has, in the year under review, written a paid-for New Business of the value of about Rupees 34 Crores. This figure is higher than that in the previous year by 88 per cent, and is the highest ever attained by the Society in its history. The credit of this success must go mainly to the Chief Agents and other field workers who have strained every nerve to enhance the prestige and position of the Society.

It appears that the stress and strain which the war caused on the business of insurance and the consequential depression of business in 1940-41 is lessening and in some quarters it is being felt that the era of prosperity has set in. In my opinion we should be rather cautious in coming to such a conclusion. The level of prices of food-stuffs is still very high and indications of further increases are not wanting. The rate of taxes is mounting higher and higher every year. The saving capacity of a large percentage of the population has been seriously crippled and the growth of insurance habit has therefore to some extent received a setback. The increase in the business appears to be mainly due to the conditions created by war. This is evidenced by the fact that average amount of policy which before the war stood at Rs. 1,498 has risen to Rs. 2,213. The average premium per thousand of the now business has increased from Rs. 55-3 to Rs. 59-7. While appreciating the phenomenal rise in business, let us not be too optimistic. Let us be cautious and start planning ahead for the situation which may arise when war conditions disappear and the possibilities of heavy lapses, policies being made paid-up or being surrendered increase. I am not an alarmist and do not wish to make insurance men nervous, but wisdom lies in making preparations to cope with the situation which may or may not arise. Gentlemen, I wish to assure you that if, unfortunately this happens, your Directors will take all necessary steps to protect the interest of the Society and they are confident that the Chief Agents and other workers will do their level best not only to maintain the progress of new business but also to retain as much of the business as possible in the Society's books.

In the current year the progress of business is still more encouraging. We are, period for period, already ahead of last year by about one crore. Our Chief Agents have assured us that if the present tendency continues and no unforeseen adverse circumstances supervene, they will make the Society achieve greater progress.

INCOME AND EXPENSES

The premium income during the year including consideration for annuities granted amounted to Rs. 81,45,836-9-9 and the total expenses to Rs. 22,33,994-3-5 and as already reported by the Directors in their

report, the renewal expense ratio as calculated according to Rule 25(6) of the Insurance Rules 1939 is 12.88 as against 13.51 in the previous year. Increase in the cost of stationery and printing, higher rates of postage, all-round increase in the rates pertaining to other items of expense and, above all, the dearness allowance allowed to staff tend to increase the ratio of expenses. To have brought down the Renewal Expense Ratio in such circumstances is, therefore, very satisfactory.

CLAIMS

Our Claim experience is very satisfactory. The claims by death, inclusive of bonus additions, amounted to Rs. 10,04,010-2 as against Rs. 9,65,226-7 during 1942. Those by maturity amounted to Rs. 4,09,550-12-8 and Permanent Disability Benefit to Rs. 4,515. An amount of Rs. 13,154 was paid by way of annuities. Of the outstanding claims shown in the Balance Sheet Rs. 3,82,297 has since been paid and Rs. 3,00,163-9-8 has been passed for payment and is awaiting proof of title.

INVESTMENTS

The total investments at their Book Values in Government Securities are Rs. 1,35,81,644-13-0, in approved securities Rs. 78,08,408-11-1, in other securities Rs. 62,38,801-11-4 and in real estate Rs. 39,74,549-4-11.

The interest yield on the Life Fund for the year calculated according to Regulation 3(1) of Schedule IV, Schedule to the Insurance Act comes to 4.07 as against 4.19 for the previous year. According to that regulation the Tax deducted at source has to be excluded. This statutory provision for working out the yield, coupled with the provisions of Section 27 of the Insurance Act, has made the task of the Insurance Companies very difficult, specially when the rate of Income-tax is being increased every year. The representations made by the Life Offices generally and the Indian Life Assurance Offices Association specially have, however, brought welcome results inasmuch as the maximum rate of tax payable by a Life Office has been fixed at 63 pies in a Rupee. It must, however, be observed that the relief given is not satisfactory. In England the ceiling for Life Offices has been fixed at the rate prevailing in the year 1940-41. In India, unfortunately, it has been fixed at the level of rate applicable in the year 1942-43. May I earnestly appeal to the Government to reconsider the position and reduce the rate of tax to the 1940-41 level as has been done in England? I trust the Indian Life Assurance Offices Association will pursue the matter further and approach the Government to allow to Indian Life Offices the benefit of the same relief which has been conceded in England.

Another change of vital importance to the insuring public has been made in the Income Tax Law. In addition to the limitations on the extent of the amount on which actual rebate can be claimed on premium paid by a policy-holder, a third has been added. The amount of premiums paid in excess of 10 per cent. of the Sum Assured will now be disallowed and will not be taken into consideration while giving tax relief. This amendment has ostensibly been made to prevent misuse which it was alleged was being made of the concession, by taking short term policies. It is unfortunate that while following English Law in the matter the good features of that law have not been introduced. Under English Law there is no limit of amount upto which premium paid can be allowed as rebate except the amount which is in excess of 1/6th of Taxable income. If the Government considered imposing of this condition of 10 per cent. necessary it should have waived the limitation of Rs. 6,000. So long as this limitation of Rs. 6,000 operates it is really a great

hardship to disallow portion of the premiums in excess of 10 per cent. of Sum Assured. This provision will seriously affect the growing tendency of well-to-do people to divert surplus funds to insurance. The policy underlying the amendment will obviously checkmate to some extent, the role that Life Offices were and are playing in fighting inflation. The Government is itself addressing appeals to the public to put their surplus funds in, amongst other things, life policies. Either the limit of Rs. 6,000 or the restrictions of 10 per cent. limit on premiums should be removed. If either of the two things is done, Life Offices would be able to help the Government in checking, to a large extent, the inflation tendencies. I trust the Government will give the matter its sympathetic consideration.

The position regarding Calcutta building during the year under review is the same as in the previous year.

RELIEF

You must have noticed in the Revenue Account that the Board has donated, on behalf of the Society, Rs. 1,000 to the Bijapur Relief Fund, Rs. 1,000 to the Bengal Relief Fund and Rs. 500 to the Rayalaseema Famine Relief Fund. The terrific toll of life taken by the famine in these places is well known to you. It may be that some of the afflicted persons are members of the Society. Looking to the justice of the cause for which the donations were made, you will, I hope, appreciate the step taken by the Board and accord your confirmation to it.

GENERAL

In view of the rapid expansion of the business, the Directors have appointed Mr. T. C. Kapur, B.A., LL.B., as Manager of the Society. Mr. Kapur is a well-known figure in the insurance world and was connected with the Lakshmi Insurance Co., Ltd., of Lahore for a period of 17 years. During this period he successfully developed and efficiently managed the business of that Company and by his ability and devotion to work achieved a record of which anyone in the insurance world may well be proud.

In conclusion I take this opportunity of thanking sincerely all our Chief Agents and Agents for the great labour put in by them in the course of the year.

To the Secretary and the Staff at Head Office we owe our appreciation for their devoted service, in recognition of which your Directors recommend the staff who were in the Society's service on the 31st of December, 1943.

Gentlemen, now I beg to move that the Directors' Report and Audited Revenue Account and Balance Sheet for the year ended 31st December 1943, be approved and adopted.

The Report and Accounts were adopted. The Retiring Directors Mr. A. S. Parikh and A. H. Wadia were re-elected.

The meeting confirmed the donations of Rs. 1,000/- to the Bijapur Relief Fund, Rs. 1,000/- to the Bengal Relief Fund, Rs. 500/- to the Rayalaseema Famine Relief Fund. The payment of a bonus to the officers and staff of the Society was also sanctioned.

The Meeting terminated with a vote of thanks to the Chair.

(From Our Correspondent)

Madras, June 27.

Self-sufficiency in the matter of food production seems to be the watchword of the Government. Countrywide scarcity of foodgrains had its repercussion on the stock position in this province and the Government were able to get an idea of the extent of their dependence on imports from outside the province. It is said that there is deficit in all varieties of food grains. According to the Director of Agriculture the Government's attitude to the various post-war plans of agriculture will be governed by the idea of regional self-sufficiency. The Government propose to achieve this by the extension of cultivated areas and increasing yield by chemical fertilisers, distribution of improved varieties of seeds and the provision of technical aid by trained men. To increase lands under cultivation extension of irrigation facilities is indispensable and the Government are taking active steps in that direction. The inauguration of the Tungabhadra project naturally claims the first place in government plans.

Latest reports from Hyderabad regarding the sharing of the water of the Tungabhadra are encouraging. It is said that the Madras representatives and the representative of the Nizam Government have reached a working arrangement for the construction of a joint reservoir on the Tungabhadra. Mr. S. V. Ramamurti, Advisor to the Governor, has been busy exploring the possibilities of extending irrigation facilities in the province. The question of sharing the water of the Tungabhadra was a longstanding one and the three governments namely Madras, Mysore and Hyderabad failed to reach an agreement and the matter was almost forgotten by them though the general public was constantly urging the governments to inaugurate the project immediately. The food scarcity in the country has been an eyeopener to the authorities and the Madras Government reopened negotiation with the Mysore and Hyderabad Governments regarding the project. A series of conferences had already taken place between the Mysore Government and the representatives of the Madras Government and it was said some settlement had been reached. The news of the success of the mission to Hyderabad marks a welcome end to a controversy which has benefited none but has actually retarded progress.

Mr. Ramamurti recently visited a village in Madura District, where it is proposed to construct a dam across the river Vaigai. It is understood that the reservoir when completed will bring about 30,000 acres under cultivation.

While the Government are sparing neither money nor energy in intensifying the "Grow More Food Campaign" they seem to have forgotten one important aspect upon which depends the success of their campaign. Dearth of transport facilities is crippling the drive to increase production. According to the Southern India Chamber of Commerce the Regional Controller of railway priority is helpless in the matter as wagons placed at his disposal are dwindling away in number. The refusal of the railways to book seed parcels has caused resentment among "Grow More Food" enthusiasts. If the Government really mean what they preach at great

cost there is no justification for their indifference while the railways refuse to co-operate.

The economic possibilities of tobacco seed oil and cake have been almost neglected. It is said that the oil can be used in the manufacture of paints and the seed cake may be used as food for cattle and manure. The Government have approved proposals for demonstrations to be carried out at a cost of Rs. 10,000.

The progress made by the Information Films of India was explained to pressmen here by Mr. H. C. Hassum. The Department, Mr. Hassum disclosed, is producing one 'Short' in five languages every week and their distributing circuit is perhaps the largest in the world. All the 1284 theatres in India get two films each. The Department Mr. Hassum said, had evolved a film library scheme and the films when they finish their circuit will be stocked in the department's branch offices at Calcutta, Bombay, Lahore, Madras and Lucknow and intending exhibitors may get the films at a nominal rental of one rupee per reel.

Jaipuria) was a stupendous success. And, I must own, more stupendous than I expected. Considering that quite a number of big-sized banks under leading Mar-ware houses have commenced operations in recent months, I had formed the impression that Hindusthan Mercantile, coming last chronologically, might receive a less enthusiastic welcome. I was pleasantly surprised at the assemblage on the opening day—all the leading Indian businessmen were there and throngs and throngs of minor fry. My old friend, A. C. Bhat, who is the manager of the new bank, has made a splendid job of equipment and personnel; and, in these days when senior bankers are so difficult to secure, Mr. Jaipuria must be reckoned exceptionally lucky in having got a banker of such vast and versatile experience in a bank—Allahabad Bank—noted for its hundred per cent efficiency of service and administration. Stressing the personal note, I hail the occasion as celebrating the debut of Abdul Wahed Adamjee as a director in companies other than his own. He is one of the coming men in Clive Street and I bet he will be in much demand on the boards of good companies. Altogether, it was a red-letter day in the strident career of Mr. Jaipuria.

On Tuesday last, Jamshedpur bade a touching farewell to Sir Ardeshir Dalal. Sir Ardeshir took charge of the Iron and Steel Company in 1931, when it was still in the trough of the depression and leaves it at heights of prosperity, which no one could have dreamt of at that time. He is now called to an even bigger task, to accomplish for the country what he has achieved for his company. Jamshedpur, as both Sir Ardeshir and Mr. J. J. Ghandy, who presided at the farewell function, emphasised, has a spirit of camaraderie peculiar to it; and every one in Jamshedpur must have had a vicarious sense of past achievements and triumphs yet to come. I can well imagine, the function was far from formal. Sir Ardeshir's injunction of special care for Indian technicians is the true index of him as private individual and public man. The enthusiasm with which he looks forward to handing his office to a Minister in a National Government should raise him high in public esteem. As for Jamshedpur, Sir Ardeshir insisted it was in his case, not farewell, but au revoir, oftener, and sooner than his audience thought.

The farewell function to Sir Ardeshir was also, fittingly enough, the occasion for welcoming his successor Dr. Matthai. Formerly "at best a neutral, now our ally," is Ghandy's description of the new chief of the Tisco. And what better description could one ask for—impartiality while he was on the Tariff Board and now, readiness to give of his best to the Tatas.

Barrackpore witnessed on Saturday last a function, which was imposing, gay and gratifying to all concerned. The cottage industry which had been turned into a large scale one by Mr. S. C. Mitter in support of the war effort was celebrating its second anniversary. As I said, it was both gay and imposing. Mr. Mitter had handsome tributes paid to him by Mr. Targett, the Director-General and Mr. Elkins, the Controller of Supplies, and a round of well-planned entertainments gave the guests an enjoyable afternoon.

"EVENINGPOST."

(Continued from page 1317)

utter American helplessness over the issue of the huge debts which European countries incurred during the last war.

The Delhi rationing authorities have after all come out with a reply to the profiteering charge. The new Rationing Officer

has given a definite assurance that all the profits made would be wiped out by adjusting the future rates accordingly; and that it is not the local Government's policy to profiteer in foodgrains. The prices of rationed wheat have already been reduced by about eight annas a maund.

HILL BIRD.

CINEMA

CREDIT for the actual invention of the cinematograph is difficult to apportion. It is certain that Englishmen played an important part. As long ago as 1860 Sir John Herschel published a theory of cinematography, and about 1889 a patent for a cinema camera and projector was applied for by W. Friese Greene and M. Evans. Today the cinema is a great relaxation. The big films afford us an escape from the realities of a world at war, just as the short films and news-reels present us with sharp, hard pictures of that world and allow us to see ourselves, our allies and even our enemies as we live and fight. But how many of us who go to "the movies," who watch the latest performance of our particular "star," or of troops on a commando raid, realise what the cinematograph industry owes to the workers in many branches of science and technology, and not least to the chemist? No other form of entertainment owes him so heavy a debt. Celluloid itself, the basis of the industry, is a chemical achievement. This must be transparent to give clear images after great magnification, resilient and tough to stand great strain. It must be so treated that the danger from fire is reduced to a minimum. The hand of the chemist is indeed traceable from the make-up of the actors to the lamps in the projectors. In the apparatus used for the sound-recording rare metals are needed: in the lenses of cameras and projectors, optical glass of the highest quality: in the colour-photography, pigments of the truest and most vivid colour. The sets for the ball-rooms and palaces of the cinema's Cloudcuckoodom involve the use of large quantities of paints, quick-drying stucco and plasters: the costumes and draperies must be dyed. The tale is continued into the cinema theatre itself, in its decoration, its disinfection, its air-conditioning. When next you sit in your favourite cinema, think for a moment of the patient work in laboratory and factory that has enabled you to see the wonders of the world or the finest product of the cinematograph studio so clearly and still at so modest a price.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Resume of Commodity Markets

Commodity markets have been rather uninteresting during the past week and there is nothing of interest to be recorded. The jute market has been quietly steady while the jute manufactures market has remained firm. The raw cotton market has been weak in spite of the larger buying by Government. Bullion prices have been sagging and the general sentiment is inclined to be bearish. Conditions in the piece-goods market are expected to improve as a vigorous drive has been launched against traders engaged in black market activities.

The raw jute market has been featureless. Mills have been buying only their immediate requirements. What is important at the present moment is that arrivals of jute should be speeded up especially as there has been a reduction in boat traffic on account of the monsoonic weather. Otherwise, mills will have difficulty in respect of raw jute supplies as is the case with coal. It is, however, important to note that so far as jute supplies are concerned the question is only one of providing transport facilities.

The raw cotton market is still in doldrums. Government have been buying more liberally in the market and deliveries are being accepted more promptly. This gave rise to the feeling that more cotton would be absorbed but the purchase policy is not calculated to take up prices. Government are satisfied if they could maintain minimum prices. They seem to be now of the opinion that it would not be possible to keep up prices for cotton without the support of the industry. That is perhaps the reason mills have been buying in larger quantities around the lower levels. The position in the Karachi market has not improved. Unless the outlook gets clearer it cannot be expected that there would be any appreciable rise in prices.

The piecegoods market has been easier and large stocks are being unearthed. The Government's scheme of distribution of cloth in Bombay and Ahmedabad has met with success while the alertness of the authorities in preventing black market activities has made business more easy in other centres. The Textile Commissioner, reviewing the working of the Textile Control Order, was naturally enthusiastic about his achievement, there being a reduction in prices by 50 per cent. from the peak levels. Certain centres, however, still complain of scarcity of supplies and black market prices in spite of the large despatches to the consuming centres from the producers. The requisitioning of the production of certain mills has been a powerful weapon in the hands of the control authorities. The problem of distribution has been made easier. The vigorous steps to stamp out black markets should help the consumer get his requirements in full. The assertion, therefore, that there is no need for rationing of cloth is correct.

In Calcutta, it is believed that a certain section of wholesalers and semi-wholesalers is responsible for cloth going underground. The measures will affect no less than 3,000 merchants. Offending quota dealers may also come in for similar treatment.

It is stated that the quantity of cloth available can be easily handled through selected parties and distributed direct to

retailers under Government supervision at a more advantageous price.

The stocks of 36 dealers have been requisitioned by Government and sold through other dealers during the last three months. Licences of 20 dealers have been suspended and about 60 prosecutions have been launched for profiteering.

It is learnt that the Government of India have, on the suggestion of the Bengal Government, permitted manufacturers to sell cloth and yarn direct to retail dealers who hold licences, provided they are otherwise entitled to a quota. Such sales by the mills previously were restricted to dealers holding wholesale licences only.

The suggestion of the Provincial Government for the inclusion of 1943 dealers in the quota scheme recently promulgated by the Central Government has been rejected.

let the day of Blessing be a Blessing to the Poor

WEDDINGS are the gayest of all ceremonies and when you and your friends are so happy and radiant, it is a sad reflection that, so near your kind and generous lavishness, there is still so much real WANT. Yet it is so, and for this reason, socially progressive people no longer allow waste to mar the perfection of such occasions. They feast their guests well, but reckless waste is not permitted. In this way, without detracting in any way from the joyousness of the happy day, they fulfil an inescapable obligation to the poor—who still find food so hard to get.

WE ALL CAN, by reasonable economy, extend our blessings to the poor and needy without spoiling our own enjoyment. If we all follow this wise example, there will be fewer needy people in India who find food difficult to buy.

food for all

..but none to waste

Jute and Jute Manufactures

(By Our Jute Correspondent)

CALCUTTA, 28th June

Prolonged discussions over the amount of compensation to be paid by Government to the Jute Mills for property requisitioned for War purposes, have taken place over the week-end between representatives of the Jute Mills and the Chief of the Supply Department, who was accompanied by watchdogs of the Finance Department, presumably to make sure that he was not carried away by any impulses of undue generosity. Certainly the rate which it is believed was finally settled, three rupees per hundred square feet per month, can scarcely be said to err on the side of extravagance. It is understood however that certain concessions have been secured in the matter of costs of removing and replacing machinery, depreciation etc. and it is also reported that Government has undertaken to institute a system of Watch and Ward to safeguard such mill property as is left under their care, with compensation to be allowed for any pilferage which may take place. For concerns which have been able to arrange to carry on production more or less fully, by doubling up with another unit and working double or multiple shifts, the settlement outlined above will probably entail no loss on the Company. Where doubling has not been possible, or is incomplete however, the compensation will fall far short of the loss incurred.

It is rumoured that requisitioning of mill premises is not yet at an end and that certain units have received notice that their properties will be required. The number of units where rationalising is possible by the working of double time, is now very limited and it is to be hoped that the military authorities' requirements of space are now very nearly satisfied, for much further requisitioning would inevitably result in serious reduction in the production of jute goods, which, looking to the demand current in the market at present, would be little short of a calamity.

The question of Coal supplies it is apprehended, may have quite a serious enough effect on production in the coming three months. This is the time of year when the mining labour, which is primarily almost wholly agricultural, tends to drift away to tend their fields, and raisings invariably drop during the months of July, August and September. If it could be ensured that the labour force would duly return to the mines after the monsoon, the position would not be so bad. But there are so many other avenues into which the mining labour may be induced to stray, and unfortunately there is as yet no system of co-ordination between the various industries recruiting labour to prevent poaching, or inducement by the offer of higher wages. Coal after all is a prime necessity for all industries and it is most desirable that some method should be evolved whereby the supply of mining labour would be maintained as near as possible at its full strength. That the situation is dangerously acute is demonstrated by the fact that, in normal times, stocks to the amount of three million tons are accumulated to tide over the period of low raisings during the monsoon. At the present moment it is doubtful if such stocks exceed half a million tons all told. It is notorious that the Jute Mills are merely working hand to mouth so infrequently a mill has to close down for far as coal supplies are concerned. Not

a week in order to accumulate sufficient coal to enable it to be sure of working a full complement of hours the following week. As things look at present, some will be fortunate if they are able to keep running more than about one full week per month during the next three months. The outlook in this respect is pretty dismal.

Regarding the recently instituted system of endorsed Forwarding Notes for all Rail jute shipments, it is understood that the Mills, most of whom are already understaffed and finding the checking and signing of innumerable Forwarding Notes just about the last straw, have entered a strong request that the system should be abandoned. We have already advanced reasons why it is improbable that there should in future be any trouble to speak of from fictitious consignments, and it is extremely doubtful to what extent the endorsed Forwarding Note is a safeguard. For instance, Forwarding Notes which had been endorsed in type-writing by a Mill were refused acceptance at an upcountry station as not in accordance with the regulations, which require that the Note should bear the stamp of the Mill. What is there to prevent an enterprising malefactor getting a rubber stamp cut in the bazar with the mill's name, or half a dozen different stamps if it comes to that, and signing over them with an illegible squiggle? This, according to the regulations, would be quite acceptable to any upcountry station-master as complying with requirements. We do not suggest that it would be worth a shipper's while to try this on, not often anyway, but it makes it obvious that the endorsement, whether by rubber stamp or otherwise, is little or no safeguard.

We must now return to further comment on Professor Todd's scheme of Future markets for the Jute and Jute Goods trade. Of course the Professor has worked on the analogy of the Liverpool Cotton Futures market, and on that analogy his principles may be perfectly sound. We submit however that fundamentally there is little basis of comparison between the Lancashire Cotton trade and the Indian Jute trade. Lancashire's Cotton industry is situated far from its supply of raw material and secondly, is located mainly in congested districts where there is little space for storage of the raw material. The Indian Jute Mills on the other hand are situated right at the source of their supplies and their policy has always been to provide themselves with sufficient storage accommodation on their premises to carry several months stock of raw material. Also they have, from their own accumulated resources, or through their Managing Agents, command of ample finance to carry such stocks. If there ever had been a demand from the Dundee Jute trade for a Futures market in Jute, the analogy with the Liverpool Cotton Futures market would have been close. It is worthy of note however that there never has been any such demand evinced by the Dundee trade, for which it might have been a valuable trading adjunct. If Dundee has never wanted it, why should it be thrust upon an unwilling Calcutta trade where conditions are so vitally different as to render it even less necessary. That is only one aspect of the situation which Professor Todd completely ignores in his anxiety to foist his pet scheme on an industry which, generally speaking, manages its own business pretty well. There are

other aspects which we shall deal with from time to time as opportunity occurs.

There has been little coming the way of shippers in the matter of enquiry for Export Jute though it is probable that business is still being transacted direct between Balers and the Dundee market. Short Group Daisee at Rs. 87/- has been reported but little else. Mills have shown some interest and business has been reported in New Crop Firsts and Lightnings at Rs. 85/- and Rs. 80/- respectively. Old Crop Lightnings were done at Rs. 79/- while for a combined business in Old Crop Lightnings, Hearts and Cuttings the prices paid were Rs. 80/-, Rs. 75/- and Rs. 43/- and Rs. 42/- respectively. A line of "Bombay" was also reported.

In Loose Jute there has been a steady enquiry from Mills for European and Supervised New Crop packing. European has only been on offer in limited quantity and has all been taken up at full maximum rates, the assortment generally in the region of 10/60/30. Supervised Jat has sold at four annas under maximum in assortments from 10/50/40 to 50/50. Supervised District also sold on the basis of Rs. 16/4 Middies. There is little that is desirable offering in Old Crop now but any fairly low assortment Supervised Jat can find a buyer at Rs. 13/12 basis Bottoms. Sellers have been showing rather more anxiety to sell, probably on account of the doubtful coal position which may easily slow up the demand for jute.

Reports from upcountry are almost all favourable. Generous rain has fallen and some places would now like to see a little more sunshine. But generally speaking the crop is progressing well and unless anything untoward happens, floods now are about the only danger—the prospects for not only a good outturn, but also good quality crop, are distinctly hopeful. Rivers are behaving normally, being generally at, or a little below, the usual level for this time of year.

The Fabrics market defies comment these days. There is every evidence of a tremendous unsatisfied demand, while sellers show great reserve and are disinclined to part with anything but a secured manufactured surplus. All prices remain at ceiling levels.

JUTE

(By Our Staff Correspondent).

Calcutta, June 28.

The raw jute market has been quietly steady during the past week though a small amount of business has been passing. Mills have to increase their purchases of raw jute if they intend to execute the orders on hand. It is reported that they are well sold to the end of the year and that most of the business done is on account of the United States. Mofussil markets are very firm and there is no tendency on the part of sellers to enter into fresh commitments. It is feared that there will not be a sufficient margin of profit at the present level of prices in the mofussil centres. There has been some enquiry for old crop jute at maximum rates as arrivals into mofussil centres have slowed down on account of the rainy weather in the past few days.

The recent rains have been good for the standing crop and weeding has been going on satisfactorily.

In the loose jute section business has continued on a small scale. Mills are anxious buyers but are inclined to await actual arrivals as with the congestion in railway traffic and the difficulty in river traffic supplies of jute have been smaller and it cannot be expected that under the present conditions there will be an early improvement. It is expected that greater efforts would be made to transport jute by rail and in river steamers. Supervised Jat Middies and Bottoms, old crop, were done at Rs. 16-8 and Rs. 13-12 per maund. Some business was again reported in Northern Bottoms at Rs. 13-4 per maund.

In the pucca bales section, idle conditions continue to prevail. A small business was done in Short Group Daisee 2/3 at Rs. 87 per bale. Dundee Daisee 2/3 were done at Rs. 78 per bale. Mills bought Old crop Lightnings at Rs. 79 per bale. Firsts were done at Rs. 83 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, June 28.

The jute manufactures market is very firm and quotations are nominally at maximum rates. Mills are not prepared to enter into fresh commitments as it is feared that difficulties regarding coal supplies would result in a considerably lower level of production and that it would not be possible to execute orders on hand in time. It is reported that most of the business done recently has been on account of the United States.

In the heavy goods section there are very few sellers and no fresh business of importance has been reported. There is still considerable difficulty in respect of supplies and there are very few sellers for standard varieties at maximum rates even for distant positions.

Memo of total reported sales for the week ending Saturday, the 17th June, 1944.

	This and next month.	Forward.
Hessian	30,74,088	1,60,83,730
40 iss. 8 oz. Hessian (including in above)	Nil	Nil
Twills	72,52,901	62,73,860
Plains	7,99,810	29,71,777

BULLION

(From Our Correspondent)

Bombay, June 28.

The gold market has remained quiet and quotations are further lower. The weakness of the silver market has dried up investment buying and there is very little demand for ready gold. The Reserve Bank has not made any sales of gold during the week. Quotations have been fluctuating in narrow limits for ready and first settlement. But the general sentiment is inclined to be bearish as will be evident from the discount for forward positions, first settlement being at a discount of four annas and second settlement eight annas over ready. The quotations were Rs. 72-12 for spot, Rs. 72-8 for 2 days' delivery and Rs. 72-4 for new delivery.

There is no appreciable change in the conditions in the silver market and quotations are around the levels at the end of last week. The tightness of the spot position has prevented any appreciable decline in prices but it is admitted that a decline in prices cannot be prevented when Government appears as a seller in the market. Silver ready closed at Rs. 129-8, 2 days' delivery at Rs. 125-8 and new delivery at Rs. 124-8.

COTTON

(From Our Correspondent)

Bombay, June 28.

The Bombay raw cotton market has been slightly firmer in the past week and quotations are slightly higher. But the general undertone is still weak. It is said that no appreciable rise in prices is possible as Government is not a buyer above Rs. 410 and mills are buying only at the lower levels. It appears that some understanding has been reached between mills and Government as purchases in the ready market during the past week by mills have been on a larger scale and nearly 50 per cent of the cotton tendered has passed test. Nothing yet is known regarding trading in the new crop. Jharilla July closed at Rs. 405-12 and September at Rs. 425-4. The quotations at the end of last week were Rs. 406-4 and Rs. 421-8 respectively.

PIECEGOODS

(By Our Staff Correspondent)

Calcutta, June 28.

The piecegoods market has been quietly steady with a largervolume of business passing. The reports regarding the despatch of large supplies of goods to Bengal and Punjab have created some anxiety on the part of dealers to dispose of their holdings. It is felt that the drive against black market transactions will result in the disgorging of stocks and that there would be no difficulty in getting supplies at controlled rates. The Government scheme of distribution of cloth in Bombay has been reported to be a big success.

Price Re. 1

Stock Markets to-day and to-morrow:

BUOYANT MARKETS

For the third week in succession the Calcutta Stock market has been active. The Bombay market is still subdued and only in the last two days a slightly firmer tendency has been noticeable. After the sustained rise in prices there was some profit-taking on Wednesday but in Thursday's session the upward trend has again been resumed. Earlier in the week Jute shares were active and the important counters registered a rise of two or three points. In Thursday's session, however, greater interest has been shown in the Coal section and the shares of the better-established coal companies have been in great demand. Thus, Equitables have jumped four points to Rs. 64/8; Bokaro and Ramgur have recorded a rise of another two points to Rs. 41/4; Burrakur were Rs. 37/12. It would appear that, in relation to the rise in prices for shares of the more important companies the improvement in the quotation for Burrakur is not in proportion.

The sudden rise in prices for Coal shares is not due to any new developments relating to the industry. So much emphasis is placed on the need for additional raisings of coal that it is expected coal companies will be able to report a substantial increase in earnings. It is too early yet, however, to say anything definite in this regard as it is said that there is not much margin of profit even with the higher level of prices for coal and without any appreciable increase in earnings it would not be possible to derive the benefits under the bonus scheme.

Jute shares also have been firmer. It is generally accepted that the jute mill industry is better placed and that the post-war period would see it in a flourishing condition. At the present moment, however, there are special problems and only those mills which are electrically driven and which have no fear of requisition are well-placed. Even then it cannot be said that the advantage of requisition will be derived by those who are in a position to continue working. It is true that certain mills are now working double shifts by agreement with the requisitioned units but the financial arrangement has not been very beneficial to the mills working double shifts. This aspect of the question is not quite clear as, with the prospect of further requisitioning, it remains to be seen whether it would be possible for other mills to utilise labour from the requisitioned units and undertake their orders. There might come a stage when the loom rights would have to be purchased if production were to be kept up at the mills. In view of the fact that the

Indian Jute Mills Association has been hitherto following a policy which has been beneficial to all the members concerned it cannot be anticipated at the present moment as to what exactly will be the policy that would be pursued by the I.J.M.A. in the event of more mills being requisitioned. As for the requisitioned units the question of compensation is still under consideration. It is reported that a conference of the representatives of the industry and the Government of India was held last week to consider this question. It is said that the compensation proposed will not cover even the loss and that those units who are not able to make any arrangement with other units will be put to great difficulty.

It is rumoured that the dividend of the Tata Iron and Steel Company, Limited, will be the same as last year, i.e., Rs. 129 per deferred share and Rs. 23 per ordinary share. There are rumours in the market that there is likelihood of labour demanding a higher bonus. In which case, the shareholders stand to get a higher dividend, probably, Rs. 158 per deferred share. I for my part expect only a dividend of Rs. 129. But there is every likelihood of the conversion scheme becoming a reality despite slight opposition from some big holders. In the event of the conversion scheme being put through I hear that Tatas contemplate issuing new ordinary shares in the ratio of one for every 3 shares held at a premium of Rs. 75 per share. Now that two motor car companies are to be started in India, one by Mr. Walchand and the other by Birlas, and Tatas also contemplate manufacturing locomotives prospects for the steel industry are exceedingly rosy. I consider Tata Steel deferreds the cheapest share going in the market. I strongly recommend accumulation. In view of the fact that there is a heavy short position in Tata Steel Deferreds I would not be surprised if there is a sharp rise of about 100 points.

As for the automobile companies I think every Indian should be glad that we are starting this key industry and should invest the barest minimum in each concern. After all it might take a few years before the motor companies can pay any dividends.

Tide Water Oil Company (India) Limited has done very well in the last two years and there has been a good improvement in earnings. The net profit, before providing for depreciation and taxation for the half-year ended April, 1944 is Rs. 3,77,144 against Rs. 2,94,736 for the previous half-year. The amount set aside to depreciation

is unchanged at Rs. 3,477 while the provision for taxation is very much higher at Rs. 2.75 lakhs against Rs. 2.1 lakhs. The allocation to Special Reserve is Rs. 20,000 (nil). Other funds receive Rs. 30,000 (Rs. 40,000). The dividend on shares has been increased to twelve annas per share from ten annas per share.

There is no confirmation of the report that Bokaro and Ramgur has been able to sell coal lands to Tatas for Rs. 19 lakhs. But there are persistent reports that negotiations are going on for the sale of coal properties and that if these are completed the company would derive great advantage. As pointed out last week the company has a capital of only Rs. 12.8 lakhs and if the sale money realised is Rs. 19 lakhs it might be possible to make a substantial cash refund to shareholders. In 1916 the capital of the company was reduced from Rs. 16 lakhs to its present figure by reducing the nominal value of each share from Rs. 10 to Rs. 8 and by refunding to the shareholders Rs. 2 per share. This Company holds prospecting rights in the coalfields of Bokaro and Ramgur in Chota Nagpur, Behar. Considerable portions of the fields have been prospected and leased out and the company derives royalties from these. The Company itself owns the Dhori Colliery where the Kargali seam is worked. The results for the half-year ended December, 1943 made good showing. In spite of the difficulty in regard to labour earnings for the half-year were higher at Rs. 2,36,456 against Rs. 1,93,814 for the previous six months. It might be that Bokaro and Ramgur would be able to take advantage of the E.P.T. concessions and raisings might exceed the basic quota. There has been a further rise in the quotation for the shares in the past few days from Rs. 36-12 to Rs. 41-4.

Reviewing the Bombay Mutual Life Insurance Society's results for 1943 Rao Bahadur U. S. Desai expressed satisfaction with the growth of business and funds but declined to admit that there is no place for concern or doubt regarding future lapses and surrenders. The higher average value of policies issued in 1943 suggests that saving is still limited to the well-to-do who are able to ignore the difficulties created by high prices. Figures relating to the Society's investments indicate that the increase in Government securities has lowered the net yield on the funds. Though a limit to income-tax has been fixed the rate for the year 1942-43 has been chosen and life

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, June 29.

The Calcutta Stock Exchange has continued active during the past week and a larger amount of business has been passing. The close on Wednesday was slightly easier on profit-taking and selling at the higher levels. In today's session, however, firmer conditions are again noticeable. There is no special reason for the further improvement in values this week. Only the continued successes of the Allies in the various fronts have been responsible for the activity of professional operators. The rise is pronounced especially in speculative counters. The undertone is steady and there is no sign of any setback in prices.

The gilt-edged securities section was featureless and 3½ per cent Paper fluctuated around Rs. 99-5. There was some business in terminable loans around last levels. 3½ per cent 1933-35 being Rs. 98-12, 5 per cent 1945-55 Rs. 104-11, 3½ per cent 1947-50 Rs. 103-12, 3 per cent 1949-52 Rs. 100-10 and 3 per cent 1951-54 Rs. 100-12. 4½ per cent 1955-60 were Rs. 115-12 and 4 per cent 1960-70 Rs. 112-8. No business has been recorded in provincial loans as there are very few sellers.

Bank shares have not been quite active and quotations are more or less unchanged. *Bharat Bank* ordinary were a shade easier at Rs. 119; *Imperial Bank* Cont. were steady at Rs. 505 and fully paid at Rs. 1,995. *Reserve Bank* were Rs. 137-8. *United Commercial Bank* were a shade better at Rs. 30-8 premium.

Business in preference shares is restricted but quotations have been fully maintained. *Anglo-India* were Rs. 185, *Kamathatty* Rs. 167, *Kankannarrah* Rs. 167, *Kelvin* Rs. 168 and *New Central* Rs. 183. *Alkali and Chemical* preferences were Rs. 144-8, *Steel Corporation* Rs. 132 and *New Victoria* Rs. 10-8.

Cotton shares have been sticky. *Benares* changed hands at Rs. 15-4, *Bengal-Nagpur* at Rs. 38, *Cawnpore Textiles* at Rs. 12-12 and *New Victoria* at Rs. 8-8. *Elgin* were a shade better at Rs. 85.

The Coal section has been very active with a further rise in prices in speculative counters. There has also been good buying of investment counters, but the closing prices are in all cases lower there being heavy profit-taking towards the close. *Bansra* improved from Rs. 12-12 to Rs. 15 and *Baraboni* to Rs. 4-10, but the close is easier at Rs. 4-5. *Bhalgore* were 1½ points higher at Rs. 17-12, *Jainty Central* rose to Rs. 8-10, but closed lower at Rs. 7-14. *Parasea* were Rs. 11-12; earlier in the week the quotation was Rs. 8-4. *Samla* closed at Rs. 9-8 against Rs. 8-12 and are now quoting Rs. 9-2. *South Karapura*

The Week in the Exchanges

receded to Rs. 18-12 from Rs. 19-8 earlier in the week.

Among popular shares, *Bengal* were Rs. 640; *Bokaro and Ramgur* were further higher at Rs. 39-12; *Burrakur* improved to Rs. 37-8. They are now lower at Rs. 56-12. *Dhemo Main* were in good demand being done up to Rs. 27-4 from Rs. 23-4. The close is easier at Rs. 28-10. *North Damuda* were Rs. 12-8 against Rs. 11-14, *Sendra* Rs. 22-10 against Rs. 21-12 and *Talcher* Rs. 11-14 against Rs. 11-8. *Bhulanbararee* were Rs. 28-12 against Rs. 27-4.

In the Jute section also firmer conditions were noticeable, *Agarpara* being Rs. 38-12, *Anglo-India* Rs. 465, and *Barnagore* Rs. 234. *Bengal* were 2 points higher at Rs. 34-10, *Champdany* were unchanged at Rs. 275. *Chitavalah* were relatively quiet at Rs. 36-12 while *Clive* were Rs. 42-12 against Rs. 40-4. *Howrah* improved to Rs. 78-2 from Rs. 76-4 and are now quoting Rs. 78. *Hukumchand* are further higher at Rs. 44-8; *Kamathatty* were Rs. 644 against Rs. 628; *Kankannarrah* Rs. 576 against Rs. 557; *Rameshwara* were unchanged at Rs. 23-12; *Presidency* were higher at Rs. 12-2, but have receded to Rs. 11-8; *Soorah* were sticky at Rs. 40-8.

In the Engineering section there was a decline in the quotation to Rs. 38-12, but later there was a recovery to Rs. 38-2. The quotation is now steady around Rs. 37-14. *Steel Corporation* are now Rs. 28-14 after being higher at Rs. 29-8. *Bhartia Electric* *Steel* were very steady at Rs. 20-12 and *Braithwaite* at Rs. 13-8. *Jessop & Co.* were Rs. 27-8 against Rs. 26-8 and *Kumardhubi Engineering* Rs. 13-2.

Sugar shares have been a shade better with *Balmampore* at Rs. 19-12, *Belsund* at Rs. 15-12, *Cawnpore* at Rs. 41-8, *Murree Brewery* at Rs. 30 and *New Savan* at Rs. 23.

Business in Tea shares has been restricted but prices have been fully maintained. *Bishnauth* were Rs. 41-4, *East India* Rs. 18-8, *Tukvar* Rs. 24-12 and *Loobah* Rs. 17-4.

In the Miscellaneous section, *Bararee Coke* have improved further to Rs. 34-1 while *Britannia Biscuit* were crossed at Rs. 20-3. *British Ceylon and British India Corporation* were steady at Rs. 22-8 and Rs. 6-10 respectively. *Burma Corporation* were unchanged at Rs. 4-5 as also *Indian Copper* at Rs. 3-1. *Assam Cement* have encountered greater buying and the quotation for the ordinary shares is two points higher at Rs. 19-3. *Reliance Firebrick* were 1½ points higher at Rs. 23-12. *Calcutta Trams* were pushed up to Rs. 40-8, but have reacted sharply towards the close to Rs. 38-8. *Rohtas Industries* were quiet at Rs. 35-12 and *Assam Saw* at Rs. 5-10. Paper shares were a shade better with *Shree Gopal* at Rs. 23-12, *Star Paper* at Rs. 21-12 and *Tiragpur 'A' and 'B'* at Rs. 28-2. *Midnapore Zemindary* were easier at Rs. 172 while *Humayan Properties* were steady at Rs. 60-4.

Among shipping shares, *I. G. N.* have risen by 4 points to Rs. 180 on special buying. *Bengal Assam Steamship* were Rs. 312 and *Fraser* Rs. 21-6. *Karapura Development* have risen further to Rs. 34-8.

(Continued from previous page).

offices still want a revision. A change in income-tax procedure referred to by *Rao Bahadur Desai* may claim notice. The real need to divert surplus funds to insurance has been mentioned as a reason for amending the rule regarding the rebate allowed for income-tax purposes. There is a limit to the relief given on premiums paid, and there is no need to discriminate against policies issued for short terms. The argument is certainly likely to commend itself to policyholders as well as companies who expect to share in the continuance of the benefits arising from war wealth. The tribute to *Mr. T. C. Kapur* who left Lahore for Bombay came before the announcement of a bonus to the staff.

WATCH-DOG.

THE CENTRAL BANK OF INDIA

NOTICE is hereby given that the Transfer Books of the above bank will be closed from Friday the 7th July, 1944 to Saturday the 29th July, 1944, (both days inclusive).

By order of the Board,
H. C. CAPTAIN,
Managing Director.

N.B.—Warrants for ad-interim dividend for the half-year ending 30th June, 1944, will be posted to the shareholders on and after the 14th August, 1944. Intimation of any change of address should be given to the bank immediately.

ALUMINIUM PRODUCTION COMPANY OF INDIA, LIMITED

NOTICE is hereby given that with the consent of the Registrar of Joint Stock Companies, Bengal, the name of this Company will be changed to **INDIAN ALUMINUM COMPANY, LIMITED** with effect from the 1st July, 1944.

The constitution of the Company, and all obligations, agreements, contracts etc. pertaining thereto, will remain unaffected, the change being one of name only.

ALUMINIUM PRODUCTION COMPANY OF INDIA LIMITED

Kenneth Hall,
Director and General Manager.

(Half-yearly General Meeting on 12th July, 1944 at 4 p.m.
Transfer books closed from 5th to 19th July, 1944).

Audited accounts for the half-year ended 31st March, 1944:—

The Revenue Account after deduction of Insurance, Commission and other expenditure, shows a profit of Rs. 7,49,313-11-6 and Adding the amount carried forward from last half-year Rs. 35,320-4-6. The Total is Rs. 7,84,634-0-0.

From this the following sums are deducted: Depreciation for the half-year from 1st October, 1943 to 31st March, 1944, Rs. 76,765-13-0; Reserve for Taxation Rs. 5,00,000-0-0; Leaving an available balance of Rs. 2,07,868-3-0.

The Directors recommend that this should be dealt with as follows: To paying the dividend on the 7½ per cent Cumulative Preference Shares for the half-year ended 31st March, 1944 at Rs. 3-12-0 per share (free of income-tax) Rs. 43,875-0-0. To paying a dividend on the Ordinary Shares at Rs. 0-8-0 per share for the half-year ended 31st March, 1944 (free of income-tax) Rs. 1,50,000 and to carry forward Rs. 13,993-0-0. Total Rs. 2,07,868-3-0.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked with full complement of looms for 54 hours per week with the exception of the calendar weeks ending 2nd October, 9th October, 27th November and 25th December, 1943, which were declared closed weeks to alleviate the position resulting from shortage of coal supplies. Additionally the mill was closed on account of Labour strikes for two weeks in December, 1943 and January, 1944. Permission to recover the lost hours due to strikes has been obtained from the Association.

Managing Agents.—Messrs. Adamjee Haiee Dawood & Co., Ltd.

Authorised Capital—Rs. 80,00,000. Issued—Rs. 45,00,000. Subscribed—Rs. 41,70,000 in 3,00,000 Ordy. shares of Rs. 10 each and 11,700, 7½ per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

(Half-yearly General Meeting on 14th July, 1944 at 3-20 p.m.
Transfer books closed from 7th to 14th July, 1944).

Audited accounts for the half-year ended 31st December, 1943:—

The Trading Account shows that a profit of Rs. 8,686-7-7 was earned and after allowing all charges and writing off Rs. 15,000 for depreciation, there was a debit of Rs. 7,272-13-9 which was transferred to Profit and Loss Account. The amount standing at debit of this account, viz., Rs. 5,18,036-11-7, is carried forward to current half-year.

In February 1944, the Directors were informed by the present Managing Agents that having regard to the financial position of the Company they wished to be relieved of the Managing Agency on payment to them of their dues. The Directors accordingly convened an Extraordinary General Meeting of the Shareholders to consider the future management of the Company. This meeting was held on the 8th April, 1944 and a resolution was passed thereat authorising the Directors to negotiate with suitable parties and to select the most suitable candidate for the Managing Agency and to take all necessary steps preliminary to the new Managing Agent being appointed by the Shareholders. The minutes of the Extraordinary General Meeting were circulated to the Shareholders for the purpose of informing them in case any of them were interested in the Managing Agency. As a result of this the Directors have received a few offers which they are considering at the moment and as soon as any decision is reached by them it will be placed before the Shareholders for approval.

Managing Agents.—Messrs. Martin & Co.

Authorised, Issued and Subscribed Capital—Rs. 8,00,000 in 80,000 shares of Rs. 10 each, fully paid up.

LAKSHMI MILLS COMPANY, LIMITED

Audited accounts for the year ending 31st March, 1944:—
After meeting all expenses, taxes and depreciation on buildings and machinery to the extent of Rs. 1,74,085 the result of this year's working shows a net profit of Rs. 73,22,708-13-7 and together with Rs. 9,656-6-3, carried forward from last year's profits, the total sum available for distribution amounts to Rs. 73,32,365-3-10 which the Directors propose to distribute by paying (a) Dividend to shareholders at 24 per cent per annum, free of income-tax Rs. 4,27,692-0-0; (b) Reserve for taxes (E. P. T., I. T., and C. T.), Rs. 55,68,000-0-0; (c) General reserve (out of which the E. P. T. compulsory deposit will be paid) Rs. 13,40,020-18-4 and the balance of Rs. 1,652-8-6, to be carried forward to next year.

In view of the reduction in the ceiling rates, and taxes, E. P. T. compulsory deposits to be paid to the Government, it is not possible to declare higher dividends. The progress of the mills has been well maintained, and record results have been achieved this year. The Directors trust that with the high standard profits of the mills, shall be able to maintain a fair distribution of dividends of the shareholders even in future.

A sum of Rs. 8,05,339 has been deposited with the Government under the compulsory deposit system, and a further sum of about Rs. 13,40,000 has been provided for under this item this year. When these amounts are returned after the cessation of war with a proportionate amount from the Government, a huge reserve will be available for the post war reconstructions and remodelling of the mills.

Managing Agents.—Messrs. G. Kuppaswamy Naidu & Co.

Authorised Capital—Rs. 50,00,000. Issued—Rs. 24,00,000. Subscribed—Rs. 17,82,050 in 24,000 shares of Rs. 50 each, and 23,282 shares of Rs. 50 each of which Rs. 25 have been paid up.

Synopsis of the balance sheet as at 31st March, 1944.

(Half-yearly General Meeting on 7th July, 1944 at 11 a.m.
Transfer books closed from 1st to 7th July, 1944).

Audited accounts for the half-year ended 31st December, 1943:—

After charging all expenses including depreciation amounting to Rs. 43,972-0-0 and reserving Rs. 2,40,000-0-0 against taxation, there is a net profit for the half-year of Rs. 1,88,819-5-8, from which is deducted the sum of Rs. 74,826-14-11 standing at debit of Profit and Loss Account at the 30th June, 1943, leaving an available balance of Rs. 1,11,992-6-9.

The entire property of the Company has been maintained in good order and repair throughout the period and the Works continued to be fully engaged on repair and new construction work.

The Directors desire to draw attention to the restricted liquid resources available to the Company. Due to the increased financial requirements consequent upon increased trading, coupled with the heavy incidence of taxation including the compulsory deposit for E. P. T. and payment of tax in advance for 1945-46, which taxation payments alone, it is estimated, will exceed Rs. 10,00,000 during the current year, it is essential to conserve the cash resources of the Company. Shareholders will appreciate that these demands are exceptional and that the present position arises out of circumstances over which the management has no control. It is with regret therefore that the Directors have to intimate their inability to recommend payment of any dividend for the half-year and propose that the entire balance of Rs. 1,11,992-6-9 be carried forward.

(Half-yearly General Meeting on 13th July, 1944 at 12 noon.
Transfer books closed from 30th June to 13th July, 1944).

Audited accounts for the half-year ended 30th April, 1944:—

After providing for depreciation, and taxation, including Excess Profit Tax, placing Rs. 30,000 to Reserve against Depreciation of Stocks and Investments and Rs. 20,000 to Special Reserve, and having brought in the balance from the last half-year, there remains a balance of Rs. 73,790-0-3 which the Directors recommend payment of a Dividend of Twelve Annas per share Rs. 45,000 and to be carried forward Rs. 28,790.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 6,00,000 in 60,000 shares of Rs. 10 each, fully paid up.

Synopsis of the balance sheet as at 30th April, 1944.

Dividend per cent ..	25	25	18½	18½

Audited Accounts for the year ended 31st March, 1944:—

The results for the period, after providing for taxation, show a profit of Rs. 1,88,862 from which has been deducted: Depreciation Rs. 30,000, General Reserve Rs. 44,612, Renewals and Improvements Reserve Rs. 15,000 to which has to be added the Carry Forward from the previous year Rs. 31,532 leaving at credit of Profit & Loss Account Rs. 1,10,782. This balance it is recommended should be disposed of in payment of a dividend of 8 annas per share for the year ended 31st March, 1944 Rs. 75,000 and Carry Forward Rs. 35,782.

The amount reserved for Excess Profits, Income and Corporation Taxes is considered adequate and the current rates of taxation have been taken in making the calculations. Further, it has been estimated that the adjusted Standard Profits for the period of trading are Rs. 2,85,887 and, in arriving at this figure, account has been taken of a deficiency from a previous year amounting to Rs. 1,03,110.

It has also been estimated that Rs. 17,714 will be due in respect of these profits as a Compulsory Excess Profits Deposit under Section 10 of the Finance Act, 1942.

Managing Agents.—Messrs. Begg Sutherland & Co., Ltd.

(Half-yearly General Meeting on 22nd June, 1944).

Audited Accounts for the half-year ended 31st March, 1944:—
The results for the period, after providing for taxation, show a profit of Rs. 12,41,818 from which has been deducted:—

Depreciation Rs. 2,50,000, General Reserve, Rs. 8,49,945. To which has to be added the Carry Forward from the previous half-year Rs. 3,41,521 leaving at credit of Profit and Loss Account Rs. 4,83,394. This balance it is recommended should be disposed of in payment of a dividend on the Preference Shares of 8% per annum for the half year ended 31st March, 1944 Rs. 44,000, in payment or a dividend on the "B" Preference Shares of 5% per annum, free of Income Tax, for the half-year ended 31st March, 1944 Rs. 10,500. In payment of a dividend at the rate of Rs. 1-8 per share for the half year ended 31st March, 1944, on the Vendor and Ordinary Shares Rs. 3,15,000 and Carry Forward Rs. 1,13,894.

The large transfer to General Reserve is necessitated in order to meet the payment of Compulsory Deposit. This deposit is refundable, after hostilities cease, with interest at 2% per annum and bonus equal to 1/10th of the Excess Profits Tax paid.

The Excess Profits have now been entirely absorbed to Government account, either by way of taxation or freezing. While this position continues, the payment of profits to Shareholders by way of Taxes is considered adequate on the basis of the current rates of taxes.

The amount reserved for Excess Profits, Income and Corporation of dividends must be limited.

Authorised Capital—Rs. 56,00,000. Issued and Subscribed—Rs. 36,20,000 in 11,000. 8 per cent Cum. Pref. shares of Rs. 100 each, 42,000 'B' Cum. Pref. shares of Rs. 10 each and 2,10,000 ordinary shares of Rs. 10 each, all fully paid up.
