price and that there would be no difficulty in getting adequate supplies. With the introduction of smaller bars in a larger number of centres it remains to be seen whether the authorities would place any restriction on the quantity of gold that can be purchased at any time. Only last week the Reserve Bank commenced sales of gold in small bars of one and five tolas in five centres. Early in the week there was a shortlived rise in prices in the Bombay market in the hope that the

Reserve Bank would not be able to offer gold in large quantities. The continued selling at the fixed price has brought down quotations and the closing prices are slightly lower than the Reserve Bank's selling rate.

If it were possible to sell gold on such a large scale the question is naturally asked as to why the same policy should not be adopted in the case of silver. The use of silver as a wartime metal and the larger

shipping space needed for the purpose are cited against interference but if it is recognised that the value of silver sales as an effective anti-inflationary measure is greater something should be done in this respect. There were rumours earlier in the week that American silver was on the way or has reached India but no announcement has been made in this respect so far. The Finance Member's Budget speech is keenly awaited.

A Morning's Entertainment

JAPANESE STYLE

Shortly after Hong Kong fell the Japanese embarked upon a course of cruelty the like of which has never been known in history. Every morning, some 400 defenceless Chinese were herded into King's Park and there beheaded by Japanese officers, with swords. This was considered good practice for the officers and first class entertainment for the watching soldiers. Such brutality, such blood lust, such inhuman cruelty is not exceptional in

Japan. It is quite normal. The average Japanese considers it quite impossible to be actually cruel to a man or woman of another race since, to him, all other races are inferior.

How can India deal with a nation like that? There is only one answer. The Japanese must be crushed. Their power for evil must be paralysed for all time. Nothing less than unconditional surrender is enough!

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, February 24.

At the Annual General Meeting of the Indian Jute Mills Association last week, the Chairman gave in his speech a pretty comprehensive review of the various difficulties with which the Industry had been confronted, particularly during the past six months. During the first half of the year the most notable feature was the placing of large orders for hessian cloth by the U.S.A. Government, by consent of the industry, at prices much below those ruling on the open market. To ensure that mills should be able to cover these orders without loss, maximum prices were fixed by the I.J.M.A. for the purchase of loose jute, and though this step was subject to much ill-informed criticism at the time, the Chairman emphasised that the profit margin on the American order, calculated at the fixed maximum jute prices, was an extremely modest one, and that the profit margin on the subsequent maximum price schedule for jute goods was under 20 per cent.

It is perhaps not generally known that, about six months ago, the Jute Industry was threatened with having the appointment of a Jute Commissioner thrust upon it, with a view to the control of the industry on behalf of Government. Fortunately the Jute Mill Committee were able to impress Government with their unity and organisation so successfully that the proposal for a Jute Commissioner was dropped and the counter-proposals put up by the Mills Association for meeting all Government requirements were accepted instead.

The Chairman also touched on the recent arrangements arrived at with regard to the extent of the coming jute crop acreage and the fixation of a minimum price at which Government will, if necessary, step in to buy. At the same time it was agreed that the existing maximum price schedules for both raw jute and jute goods should remain in force and be given statutory authority, and that Government are empowered to requisition either raw jute or jute goods at these maximum prices. The Chairman expressed his dislike of the statutory fixation of prices, but considered that in the circumstances there was no other course open. At the same time he particularly warned the Bengal Government that he considered a minimum price of Rs. 5 per maund for Jat Middles to be dangerously liberal, and that it should not be forgotten that the prosperity of the Industry, and consequently the prosperity of Bengal, depended on the ability to supply a cheap article at a price which will easily compete with any possible alternative fabric. While the prices now fixed were not unreasonable compared with other competitive fabrics at the moment, the time would undoubtedly come when these prices would have to be modified. The Chairman was very emphatic in expressing the hope that the statutory fixation of prices would have the effect of stamping out the "Black Market" and repeated that Government would not hesitate to resort to requisitioning to achieve this end. The Bazar should therefore take warning that persistence in such "Black

Market" dealings would have but one result, their own destruction!

The Chairman described the shortage of coal as the most gloomy feature of the situation. Despite the rationing programme which had been introduced as from 1st November, only during four weeks since that date had full coal supplies been received. A fresh scheme for coal distribution is to be introduced in March and he could only hope that the mills would thereunder have a fairer deal than had been meted out to them so far. He particularly sympathised with those mills which depended on steam for their motive power as they had been much the hardest hit by the shortage. At the same time he emphasised that the attempt to achieve equality of sacrifice had not been attained, and could no longer be contemplated, by enforced closing down where production can still be easily maintained.

The Chairman touched upon the ever increasing demands for storage space for military requirements and regretted that the jute industry, by reason of its extent, organisation and compactness, was at a disadvantage inasmuch as everyone looked to it to satisfy their endless demands. Whilst theoretically the production of 100 per cent at 54 hours could be doubled up in half the space, this was far from being the case in practice, and the industry could not contemplate without grave concern the release at the utmost of more than 25 per cent of their capacity.

The Chairman fairly claimed that the working policy of the Committee during the year had been fully justified by the despatch into consumption of 1,043,668 tons of jute goods against a production of 1,012,711 tons, stocks thus showing a reduction by over 30,000 tons over the year. Of the total production, 114,000 tons had been on Government account. Orders placed through the Adviser on Jute Supplies (the Chairman of the Association during the year) amounted in value to 12.37 crores of rupees bringing the total since the beginning of the war to 54.67 crores of rupees. The mills during the year had subscribed some 7 lakhs of rupees to Famine Relief and Red Cross Funds.

The Chairman attributed the freedom from labour disputes to the arrangements made to supply the labour force with foodstuffs at controlled rates, and further to the granting of an amenity allowance of Rs. 4-4 per week to all hands during enforced stoppages. These factors kept the workers generally contented, despite the efforts of labour agitators which, he regretted, the local Government made no effort to stop. The work of Labour Officers and the A.R.P. organisation was briefly referred to.

It was announced that the Research Department, which had done much valuable work for the mills, was in the course of being formed into a separate entity.

The Chairman wisely did not attempt to prophesy much about the future. Granted that sufficient supplies of coal and jute were forthcoming and that transport facilities were not further curtailed, the evident demand for jute goods was ample to keep all mills run-

ning 54 hours per week throughout the year. Postwar problems were under consideration by a Special Sub-Committee who had already had informed talks with the recently appointed Indian Trade Commissioner to the U.S.A. Finally the Chairman reiterated his warning that the basic principle on which the prosperity of the industry was founded was the cheapness of its products.

Mr. Walker's reappointment for another term as Chairman of the Jute Mills Association is an appropriate tribute to and recognition of the unsparing work he has put in for the good of the industry.

A new technique is revealed in the U.S.A. Hessian Stock and Consumption figures issued for January, so far as the afloat stocks are concerned. Instead of an obviously false return of "Nil", as has been the case for some months, it is now admitted that the position is not known. This is at least candid, though difficult of belief. Spot stocks are returned as 750 lakhs yards compared with 760 in December and only 300 last January. Consumption is returned as 280 lakhs yards against 290 in December and 220 last January.

Not a great deal falls to be reported from the Export Jute Market during the past week. Some Short Group Daisee 2/3 sold at Rs. 83-8, while Long Group sold at Rs. 74 for assortment and at Rs. 66 for 4s. Shippers bought N.C. Cuttings at Rs. 47 and M.C. at Rs. 46, prices with which mills cannot compete. In the end of last week mills bought Lightnings at Rs. 77 and Hearts at Rs. 70 and Rs. 71. Straight morahed Rejections were taken at Rs. 60 and Habi-jabi at Rs. 57 and these low grades are now held for higher prices, being in very short supply.

Loose jute has been less active this week but transactions have been reported in European packing at Rs. 16-4 and Rs. 13-4 for Middles and Bottoms. Supervised Jat sold at Rs. 15-8 and Rs. 12-8 with Bottoms alone at Rs. 12-12. With this basis later paid for assortment. Supervised District was reported at Rs. 15-4 and Rs. 12-4 with Bottoms alone at Rs. 12-8. Later both Bengali and Marwarri Jat were reported at Rs. 15-12 and Rs. 12-12, Middles and Bottoms, with Indian District Bottoms alone done at Rs. 12-8 and Northern Bengal and Assam Bottoms at Rs. 12-4. The general tone of the market is steady. Mofussil markets are quite firm and no concession in prices is acceptable to holders. No sowings of jute are reported as yet though the ground is prepared and the time is ripe. Arrivals of jute into Calcutta during the first half of February are estimated at 1,27,000 bales against 2,27,000 bales for the same period last year. The comparative total arrivals for the season up to this point are 1943-44 32,74,000 bales. 1942-43, 42,07,000 bales.

The Fabrics market presents no new feature. There are buyers for practically all descriptions of goods up to the end of the year at maximum prices. This side of June there are no sellers visible—outside of the "Black Market". The U. K. Control has made considerable purchases, mainly hessian, for the July-September position, and amongst other sales reported are Cubans at Rs. 81 for May-September, June-September and July-December and Sydney Packs at Rs. 3-6-6 for May-September and for June.

JUTE

Calcutta, Feb. 24.

STEADIER conditions have been noticeable in the raw jute market and a larger amount of business has been reported. Owing to the freer selling by mills in the jute manufactures market and the booking of large forward contracts there has been greater buying of the raw material in the loose jute section. Prices, as a consequence, have improved though not appreciably. The general feeling is that with the continued buying by mills at the present rate, further higher levels will be touched. Mofussil markets are very firm and holders are not willing to offer freely. There is a disposition to wait for some weeks. It is generally felt that there may not be any appreciable increase in the acreage under the crop for the next season and that a good proportion of the land for 1943-44 will be diverted to other crops. Developments in the next few weeks are keenly awaited.

In the loose jute section, as pointed out above, a larger amount of business has been reported. There is good demand especially for lower grades and the disparity between Bottoms and Middle varieties has diminished. Indian Jat Middles and Bottoms were done at Rs. 15-8 and Rs. 12-8 respectively, Bottoms alone being done at Rs. 12-12 per maund. Supervised Jat were 8 annas higher.

In the pucca bales section, shippers have not been very active though they have continued to buy Cuttings N.C. and M.C. at Rs. 47 and Rs. 46 per bale. Some business was reported in Dundee Daisee 2/3 for February shipment at Rs. 74 per bale. Mills are reported to have purchased Firsts at Rs. 83 per bale, Lightnings at Rs. 77 and Hearts Rs. 70 per bale. Ropes and Habijabi were bought at Rs. 60 and Rs. 57 per bale.

JUTE MANUFACTURES

Calcutta, February 24.

The jute manufactures market has been very steady with very few sellers for near positions. Quotations have been steady around the maximum rates. Business reported has been done as far as March 1945 at Maximum rates. There were no sellers this side of June. A good amount of business has been transacted for July-December by mills in standard goods. It is generally felt that the level of production in the next few months will be maintained at a high rate and that as time passes there will not be any great scarcity of goods. 9 porters quoted Rs. 21-10 and 11 porters Rs. 28-8 for all positions.

In the heavy goods section, very steady conditions have been noticeable with practically no sellers for standard goods. B. twills ready are quoting Rs. 67-12, Liver-pool twills Rs. 75 and Cornsacks Rs. 67-12, nominally, with no sellers.

The American stock and consumption figures for the month of January show that consumption was lower at 26 million yards against 29 million yards in the previous month though higher than the figure of 22 million yards for the corresponding period in 1943. Stocks spot are 1 million yards lower at 75 million yards while stocks afloat are shown as unknown.

The figures are given below:

U.S.A. HESSIAN STOCK AND CONSUMPTION

	Excluding Pacific Coast Business					
	Millions of yards			Consumption		
	Stocks at the end of month		Spot	for month		1944
	1944	1943		1944	1943

December	...	76	...	Nil	...	29

N.B.—The stocks afloat position of January, 1944 is not known.

GOLD

Calcutta, February 17.

The gold market was inclined to be firmer earlier in the week on speculative buying and the quotation was above the Reserve Bank selling rate for some time on the belief that the Bank could not continue to offer gold on a large scale. The persistence of selling by the Bank at Rs. 71 per tola, however, caused liquidation and quotations are at the levels of last week.

Markets were closed yesterday in respect of the memory of Mrs. Kasturbhai Gandhi and on Tuesday on account of Sivarathri. Closing prices on Monday were Rs. 70-14-6 for ready and Rs. 70-14-6 forward.

In the Calcutta market, no important change in prices was recorded and the quotation was at Rs. 71-8 for the whole week. The Reserve Bank commenced sales of gold in small bars of one and five tolas and there has been good demand by private investors. The selling price is Rs. 71-4, against Rs. 71 in Bombay in the case of large bars.

SILVER

Calcutta, Feb. 24.

The silver market was steady but the reports regarding the possibility of imports on a large scale from the U. S. led to some selling. The easier tone of the gold market

COTTON

Calcutta, Feb. 24.

The Bombay raw cotton market has been quieter with the easier tone of the stock exchanges and the unsatisfactory advices from upcountry centres. It is reported that there is heavier movement of the crop in Guzerat and that there is a disposition on the part of holders to sell at lower rates. Reports about imports of Egyptian cotton on a large scale have also had a depressing effect. It is said that there may be a further downward revision of cloth prices at the next meeting of the Textile Control Board and there is no possibility of an appreciable rise in prices for cotton. Jharila March closed at Rs. 467-8 against Rs. 468 at the end of last week, May Rs. 460-8 against Rs. 459-12 and July Rs. 462-12 against Rs. 462-4.

PIECEGOODS

Calcutta, Feb. 24.

In the piecegoods market business passing has been on a larger scale and Bengal mills are reported to have been very busy. There is a disposition on the part of dealers in the several centres to enter into contracts with mills which are nearer to them as the recent arrangement regarding the disposal of cloth production by mills encourages purchase of goods from mills which are situated within 100 miles. In the case of Bombay and Ahmedabad Mills, so far as the Calcutta market is concerned, only 10 percent of the margin of profit is available for retailers; and there is no great inducement for wholesalers.

The fixation of maximum prices for imported yarn by the Government of India had a depressing effect on the yarn market and a decline in the quotation by as much as Rs. 2-8 per lb. was recorded for 40/2s. in the Bombay market. It is said that prices fixed by the Government of India have not taken into consideration the present high level of production costs and that there is disparity in the rates for the several varieties. It is reported that a deputation of yarn dealers will proceed to Delhi shortly. Whether there will be any upward revision of ceiling prices fixed for yarn cannot be said. There are persistent reports that at the next meeting of the Textile Control Board cloth prices will be further reduced. It is satisfactory to note that business passing is on a large scale in spite of the various adverse reports in the market and consumers are not waiting for further developments.

Stock Markets to-day and to-morrow:

MARKETS AWAIT BUDGET PROPOSALS

QUITE steady conditions were noticeable on the Calcutta Stock Exchange in the early part of the week and some gains were recorded on bear covering. The Bombay market also was inclined to be steadier. In the last two days, however, no decisive trend is noticeable in the Calcutta market. Operators are not prepared to take any independent view as the Bombay market has remained closed for the last three days and there is a tendency to await further developments.

The Coal section was better than the rest of the market. It is generally said that the new taxation proposals will not affect the coal industry. But it is pointed out by some that such proposals as are made by the Government for affording relief to mining industries will be aimed at increasing production and that the benefit, as a result of these concessions, will not be of any great advantage to the shareholders. Nothing can be said, however, at this stage.

In Friday's session there has been no important change in prices and fluctuations have been in very narrow limits. Before the budget there may not be any appreciable change in market conditions.

Madura Mills Company Limited has done very well in 1943. Owing to the acute shortage of yarn and the absence of control regarding prices for the major part of the accounting period the mills, as the biggest spinning unit in this country, have naturally derived great advantage from the conditions in the trade. In spite of the larger provision for taxation the net profit available for disposal is considerably higher. The provision for taxation is not separately given and has been included under the head "Other manufacturing and establishment charges." The net profit, after providing for taxation and before depreciation, for the twelve months ended December, 1943, is Rs. 97,93,027 against Rs. 41,36,437 for 1942. An idea of the increase in earnings capacity can be had from the jump in the total value of sales in 1943 to Rs. 14.12 crores from Rs. 4.50 crores in 1941. The charge on account of depreciation is unchanged at Rs. 5 lakhs. The allocation to Renewals and Replacements Reserve is the same at Rs. 15 lakhs but the General Reserve receives as much as Rs. 50 lakhs against only Rs. 2,97,493 on the last occasion. Even after these large allocations to funds the dividend on the ordi-

nary shares has been increased to 30 per cent from 20 per cent. The shares at Rs. 86 cum-dividend afford a return of less than four per cent tax-free. In view of the assured position of the Company in the industry and the extremely strong financial position the yield basis is lower.

India Paper Pulp Company Limited has done well in the half-year ended September, 1943 in spite of the difficult conditions in the industry. Output was maintained at a satisfactory level. Owing to the larger tax-provision in previous half-years it has been possible to increase the distribution to shareholders, even with the maintenance of earnings. The net profit, before providing for taxation and depreciation, for the half-year is Rs. 18,24,297 against Rs. 16,78,141 for the previous half-year. The charge on account of depreciation is lower at Rs. 2 lakhs (Rs. 2.25 lakhs). The provision for taxation is Rs. 11.5 lakhs (Rs. 12 lakhs). The dividend of six per cent for the half-year is perhaps the highest in the history of the Company. The dividend for the previous half-year is 5 per cent. The amount carried forward is Rs. 89,013 against Rs. 85,872 brought in.

Some more balance sheets of jute companies have been published. As the accounts relate to the latter half of 1943 in all cases the earnings have naturally been affected adversely. Most of the steam-driven units have worked at a loss. Of the five companies belonging to the Andrew Yule Group, whose balance sheets have been published during the week, four report a loss on trading account. Cheviot Mills has been able to report only a lower level of profits. All the accounts are for the half-year ended November, 1943. Thus, the Caledonian Jute Mills Company Limited is paying a dividend of Rs. 7-8 per share on the ordinary shares against Rs. 10 per share on the former occasion, Cheviot Rs. 4 per ordinary share against Rs. 6 per share, Delta Rs. 10 per share against Rs. 15 per share, Lothian Rs. 3 per share against Rs. 4 per share and Orient Rs. 3-8 per share against Rs. 5 per share. The payment of dividends has been possible only with the excess provision for taxation and the transfer from reserves.

The net profit of the Cheviot Mills Company Limited for the half-year is

Rs. 1,68,675 against Rs. 5,40,791 for the previous six months. The amount set aside to depreciation is unchanged at Rs. 50,000, but the provision for taxation is lower at Rs. 45,000 (Rs. 3,65,000). The Ordinary dividend, as given above, is lower at Rs. 4 per share. The amount carried forward is lower at Rs. 40,564 against Rs. 65,889 brought in.

Against the net profit of Rs. 3,30,857 for the previous six months there is a loss of Rs. 3,53,038 on trading account of the Caledonian Jute Mills Company, Limited. The estimated tax refund recoverable and the excess provision for taxation in previous accounts, with the income from other sources, have resulted in the reduction of the loss to Rs. 40,062 before providing for depreciation.

The charge on account of depreciation is unchanged at Rs. 50,000. After transferring Rs. 1.75 lakhs from Dividend Equalisation Reserve the dividend of Rs. 7-8 per share on the ordinary shares is paid. The amount carried forward is lower at Rs. 33,659 against Rs. 51,220 brought in.

Besides the closed week, the Company lost 377 hours of working owing to the lack of coal. Of these, 84 hours were made up during the closed weeks in the half-year and the Company is entitled to make up the balance as and when circumstances permit.

The loss on trading account of the Delta Jute Mills Company Limited is Rs. 2,54,775 for the same half-year against a net profit of Rs. 7,07,672 for the previous six months. Excess provision for taxation is Rs. 3,70,000. This, with the amount of Rs. 50,000 transferred from Dividend Equalisation Reserve, has resulted in a net credit balance of Rs. 65,060.

With this sum and the balance brought forward from the previous accounts the dividend of Rs. 10 per share against Rs. 15 per share on the ordinary shares is paid. The amount carried forward is lower at Rs. 83,245 against Rs. 1,23,186 brought in.

The number of working hours lost besides the closed weeks was 324 of which 84 hours were made up during the closed weeks.

(Continued on page 391)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February 25.

RATHER quiet conditions were noticeable on the Calcutta Stock Exchange at the end of last week. The quiet tone, however, did not persist for long. In the first two days of the period under report refinitedly firmer conditions were noticeable. Though business has not shown any signs of expansion some of the losses have been regained and quotations in almost all the sections are higher. The absence of any selling by genuine investors has led to some covering. The recovery in the Coal section, especially, has been most pronounced. The Budget proposals are due to be announced on Tuesday next week. There is naturally great anxiety to know the proposals. It is generally admitted that there will be an increase in direct taxation but it is pointed out that the worst prospects have been discounted and that if there are no surprises the upward trend will be resumed again. The undertone is steady. Markets were closed on Wednesday as a mark of respect for Srimathi Kasturibai Gandhi. On Tuesday markets closed at 2 p.m. on account of "Sivarathri".

Giltedged securities has been slightly easier and business has been on a rather restricted scale. 3½ per cent. Paper was quiet at Rs. 98-12 while 3 per cent. Government Paper was relatively steady at Rs. 89-8. Among terminable loans, 3 per cent. 1949-52 were Rs. 100-14, 3 per cent. 1951/54 Rs. 100-5, 3½ per cent. 1947/50 Rs. 103-4 and 5 per cent. 1963/65 Rs. 98-6. 4 per cent. 1960/70 were Rs. 112-6, 4½ per cent. 1955/60 Rs. 115-8 and 5 per cent. 1945/55 Rs. 105-5. No transactions have been recorded in provincial loans. There has been a slight hardening in money conditions and the average discount rate on treasury bills has gone up further to twelve annas and eleven pies per cent pr annum from twelve annas and six pies per cent last week.

Among public bodies debentures no transactions have been recorded. Business in first class jute mills preference shares is not possible owing to the scarcity of offers. Higher prices have been recorded during the week. *Craig* were Rs. 83-8, *Dalhousie* Rs. 182, *Lansdowne* Rs. 159, *National* Rs. 185, and *Reliance* Rs. 186. Among other sections, *Kumardhubi Engineering* preferences were Rs. 360, *Steel Corporation* Rs. 130 and *Shree Radheyshyam* Rs. 111.

Cotton shares were inclined to be steady and a slight gain in prices is to be recorded. *Kesoram*, however, were weak with the quotation at Rs. 14-15. But for the reports regarding the possibility of a further decline in prices for cloth quotations would perhaps have been higher. Reports of cotton mills published during the past two weeks have been very satisfactory. *Bengal-Nagpur* were Rs. 38-2, *Cawnpore Textiles* Rs. 15-5, *Dhakeswari* Rs. 31-12, *Elgin* Rs. 36-8 and *New Victoria* Rs. 9-12.

The Coal section registered a smart recovery in the early days of the period under review. The reports that specified industries

would get greater relief under E.P.T. were responsible for the improvement in prices. At the higher levels there has been some selling and closing prices are slightly lower than the best levels for the week though considerably higher on balance. Amalgamated were Rs. 46, *Bengal* Rs. 587, *Bhalgora* Rs. 16-7 and *Burra Dhemo* Rs. 10-14. *Burrakur* improved from Rs. 31-6 to Rs. 33 but are easier at the time writing at Rs. 32-8. *Central Kurkend* were easier at Rs. 24-10 but *Dhemo Main* are higher at Rs. 22-12 against Rs. 22 at the end of last week. *Equitable* improved suddenly from Rs. 51-10 to Rs. 55 but on some selling at higher levels the quotation is easier at Rs. 53-8. *Ghustick & Muslia* were Rs. 12, *Hurriadih* Rs. 25-13, *Katras Jherriah* Rs. 56-14 and *New Beerbhoom* Rs. 32-4. *Raneegunge* were unchanged at Rs. 41-4, *South Karanpura* were done up to Rs. 11-12 from Rs. 10-10 at the end of last week. *Talcher* were Rs. 6-4. *West Jamuria* have been in good request and done up to Rs. 50-12.

In the Jute section slightly firmer conditions are noticeable with the encouraging remarks made by the Chairman at the meeting of the members of the Indian Jute Mills Association held last week. *Agarpara* were Rs. 29, *Alliance* Rs. 460, *Anglo-India* Rs. 400, *Auckland* Rs. 298, and *Bally* Rs. 356. *Gourepore* improved by 15 points to Rs. 795 though they are now quoting Rs. 790, *Hukumchand* were Rs. 35-10; *Howrah* encountered some selling and are quieter at Rs. 68-12 against the highest level for the week of Rs. 68. *Kamarhatti* were Rs. 590, *Kankannarah* Rs. 500, *National* Rs. 28-12 ex-dividend. *Nuddea* Rs. 118 and *Presidency* Rs. 7-4. *Soorah* were quiet at Rs. 18-1 and *Standard* at Rs. 246.

In the Engineering section Indian Iron and Steel Corporation fluctuated in narrow limits. In Thursday's session there was a recession in prices and the quotation came down to Rs. 35-14 and Rs. 27-2 but in Friday's session a slightly firmer feeling is noticeable and the quotations are higher at Rs. 36-2 and Rs. 27-10 respectively. *Burn & Co.* were 10 points higher at Rs. 396, *Bhartia Electric Steel* Rs. 17-12, *Britannia Building* Rs. 19-12 and *Indian Standard Wagon* Rs. 71-4. *Indian Galvanising* were further higher at Rs. 47-12. *Jessop* were uninteresting at Rs. 23-4, *National Iron* Rs. 13-7, *Saran Engineering* Rs. 10-3 and *Steel Products* Rs. 7-14.

Sugar shares have remained unchanged with *Balrampore* at Rs. 18, *Belsund* at Rs. 12-8 and *Carew & Co.* at Rs. 30. *Cawnpore Sugar* were Rs. 41-4 cum-dividend, *Champaran* Rs. 40-12, *New Savan* Rs. 22-4, *Ramnugger Cane & Sugar* Rs. 14-4 while *U. P. Sugar* were sticky at Rs. 32-8.

Business in tea shares has been restricted though prices have been well maintained. *Bishnauth* were Rs. 41-4, *Hasimara* Rs. 75, *Patrakola* Rs. 1,010 ex-dividend *Tezpur* Rs. 18-10 and *Tukvar* Rs. 20-12.

In the miscellaneous section, *Burma Corporation* were Rs. 3-12 and *Indian Copper* Rs. 2-13. *Assam Bengal* were crossed at Rs. 15-14, *Dalmia Cement* ordinary were Rs. 18-12. *Indian National Airways* ordinary were Rs. 26-4. *B. I. Corporation* were quiet

at Rs. 6-4 and *Spencer & Co.* Rs. 13-2. In paper shares, *India Paper Pulp* were lower at Rs. 15-8 and *Orient Paper* at Rs. 32-12. *Mysore Paper* were steady at Rs. 31-12 and *Titaghur Paper* at Rs. 28-14. *Midnapore Lendindary* were Rs. 148 and *India General Navigation* Rs. 142-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, February 24.

The local stock exchange was open on only one day in the past four days. Budget fears noticed last week seemed to have lost their influence when the market opened on Monday. It may be remembered that though the market was generally irregular throughout last week the undertone was fairly steady. There was a slight improvement in prices on Monday and except for the Hydro-electric section, all other sections were steady. As there was no business in

INDIA'S FIFTH WAR BUDGET

SIR JEREMY LOOKS BEYOND THE WAR

MORE PROMISE OF POST-WAR PLANNING

NEW TAXATION FOR Rs. 23½ CRORES

In his speech introducing his fifth budget, Sir Jeremy Raisman has aimed at helping the country to see current economic and financial developments against the vista of future possibilities rather than attempt a censorious judgment of minor transactions. The speech, we are glad to note, is a help, as invaluable as it is necessary in some quarters, in getting the perspective in which to view all that is happening today in the economic and financial sphere. Four and a half years of the war have wrought revolutionary changes in India. And the changes are a mixed bag. India has wiped out her external debts and amassed foreign assets which might amount to as much as Rs. 1,000 crores by the time the war will be over. Though Government expenditure has gone up both in the Centre and the Provinces and the war has already added over Rs. 300 crores to our unproductive debt, both deficits and taxation could have been more serious, but for the increase in the yield of the Railways and other commercial undertakings of the Government. All over the country, while people are, doubtless, suffering from shortages of various kinds, much work of lasting value is being done thoroughly incidentally. Large numbers of technicians are being trained in various lines. Classes, which had been formerly ignorant and indigent, are experiencing a degree of enlightenment and prosperity which may well be an invaluable spur to progress. Inflation, too, has its soul of good. Not only our external debts, but also the blight of agricultural indebtedness has been removed to a great extent. Joint stock companies, which were started in the first flush of enthusiasm for Swadeshi and which had experienced nothing but what seemed a lingering death, have now been able to repay the debts of decades and to acquire a new hopefulness of outlook. But behind all this, there remains the vague fear of the future inseparable from consciousness of a sudden onset of riches. Big figures have a background of suffering, for which money located abroad is, for the present at least, no compensation.

The changes of the war period are, indeed, a strangely mixed bag. And this mixed character means that India has two problems on hand, one, of fighting the evils of the present and the other, of taking steps to ensure that the good that has flowed from war conditions will remain and will be utilised for more good. By the side of these two problems, the vicissitudes of revenue and expenditure, to which in normal times the budget statement primarily refers, pale into insignificance. Not that India is in a position to be indifferent to a crore or two

of public money or that the need for public vigilance can ever be obviated. But in assessing the record of Sir Jeremy Raisman as Finance Member, one has to consider how the whole fabric of our national finance and economy has fared during these years and whether he has made our tasks of future reconstruction heavier or lighter.

No one will deny that the budget speech of Sir Jeremy this time is the most heartening that the country has ever had; and that, whatever may be our disappointments in one or two respects, it holds out the promise that post-war reconstruction or planning is no longer a mere phrase but has every chance of being translated into a reality. Before examining this aspect of the budget, it would be well to note in passing the comparatively routine aspects of the budget. It may be admitted, in the first place, that the experiences of the last two years have turned out worse than they were expected to be a year ago. The actual deficit for 1942-43 was Rs. 112.17 crores against the revised estimate of Rs. 94.66 crores. The current year is expected to close with a revenue deficit of Rs. 92.43 crores, since in the revised estimates revenue shows an improvement only of Rs. 35.50 crores against an increase of Rs. 87.34 crores under expenditure charged to revenue. The reasons for these disappointments hardly need to be mentioned. 1942-43 saw defence expenditure exceeding estimates by Rs. 25 crores; and in the year following, various items of defence expenditure have gone up owing to such divergent causes as the rise in prices and revision of scales. For the year 1944-45 revenue on the old basis of taxation is put at Rs. 284.97 crores as compared with Rs. 254.50 crores in the revised estimates for the current year. In the case of expenditure, the revenue part of defence expenditure has gone up from Rs. 262.64 crores, to Rs. 276.61 crores, while the capital portion has declined from Rs. 38.80 crores to Rs. 24.60 crores. Civil estimates total Rs. 86.57 crores and the deficit for the new year is put at Rs. 78.21 crores. This deficit, Sir Jeremy proposes to reduce by measures of new taxation which he expects will yield Rs. 23½ crores. The uncovered deficits of the three years in question will, therefore, amount to Rs. 259.31 crores.

It is meaningless to suggest that such a huge deficit does not matter. But set by the side of the cost of a modern war, it is by no means staggeringly big. And the only question of practical importance is whether the scope for economy has been fully utilised. Economy, as it is understood in peace

time, is rendered more or less impossible by the hectic conditions of war time. Nevertheless, to us in India the allocation of military expenditure as between His Majesty's Government and the Government of India seems a fertile source of injustice to this country. For our part, we cannot help feeling that the difference between the budget estimates and the revised estimates of defence expenditure for the current year, represents to some extent the devolution of an unfair burden on India's finances. What was held in suspense has been finally debited to India. But we recognise that it is unfair to be dogmatic on the question of what is necessary for the defence of India. And considering that the terms of the financial settlement are adhered to, there is little point in exaggerating the significance of the details of its working. India has to be prepared for a considerable addition to her total unproductive debt as a result of the war.

It is more fruitful to turn to the methods adopted for financing war expenditure, to see whether more is not left on the shoulders of future generations than is necessary, whether the new taxes are equitable in their incidence and well-conceived in their relation to our public finance in the future and whether borrowings are on an adequate scale considered in relation to expenditure and in relation to the need to combat inflation. It must be generally agreed that the new taxes devised by Sir Jeremy at every stage have been such as to effect a proper reduction in the deficit while laying the new burdens on classes which cannot justly grumble against them. New taxation during the war period has generally followed the line of levying surcharges on existing sources of revenue, customs, excises and income tax. The E.P.T. stands on a separate footing; and the fact that the tax and the compulsory deposits together absorb the whole of the excess profits is a logical development of the need to expand revenue and combat inflation. But apart from the surcharges and the E.P.T., Sir Jeremy has also directed his attention to finding new sources of revenue. The process began with the levy of an excise on tobacco and vegetable ghee. Tobacco comes in the present budget for a higher rate of duty. But there are also new additions to the list, tea, coffee and betelnuts. That the scope of indirect taxation should be extended to what may be called the cheap luxuries of the poor, like tobacco and betelnuts, may be regretted by many. But the need of public finance in India is to devise taxes which will prove to be elastic and capable of yielding more and more revenue as the standard of living rises. When customs revenue has been sacrificed in the interests of industrial development, excises have naturally to step into the breach. And the Finance Ministers of the post-war period will remember with gratitude the services of Sir Jeremy in building up the organisation necessary for the collection of excises on such widely produced goods as tobacco, vegetable ghee and betelnuts.

The increase in indirect taxation has not for that reason made our tax system more regressive or retarded the change towards a more progressive basis. The rising surcharges on the income-tax has made our taxation comparatively more progressive. It is sometimes asked when a scaling down of taxes may be expected. For our part, we are certain that India has left behind for ever the period of low rates of direct taxation. For peace, when it comes, will make but little difference, since in our case the cost of winning peace may prove even more than the cost of winning the war. Considering that the period of heavy government expenditure is before us and not behind, it is futile to think of lower rates of taxation. Our thoughts have to be directed instead to the building up of a system of public finance which will yield sufficient revenue, whether at the Centre or in the Provinces, for financing the large programme of development which the Government will have to take on hand. Considering the question as it is at the moment, it is a matter for satisfaction that revenue is being increased judiciously and that the progressive character of the tax system is being enhanced. It is significant of Sir Jeremy's attitude to the whole question that he has exempted from taxation incomes ranging from Rs. 1,500 to Rs. 2,000 a year, which is a bare act of justice considering the present level of prices.

Concern for post-war public finance is perhaps even better expressed in the examination which Sir Jeremy has inaugurated into the prospects of death duties. Sir Jeremy proposes to introduce a bill which will authorise the collection of death

duties on non-agricultural property by the Centre for the benefit of the Provinces. Some months ago, we uttered the warning that the intrinsically unsatisfactory position of provincial finances was obscured by the increase in the divisible pool of the incometax. The latter is so much an incident of war finance that the long view of provincial finances requires the search for new sources. We are gratified, therefore, to find that the Finance Member has taken steps to tap death duties which is at once the most fruitful and the most handy. War expenditure has led to such fabulous profits and new fortunes that delay in the levy of death duties would be a serious injustice. The idea of making death duties a centrally collected tax is, it may be noted in passing, in accord with the findings of Sir Walter Layton.

Death duties, however, are in the future. For the present, it must be recognised that the purpose of taxation is not only to meet a fair share of current war expenditure with current revenue, but also to relieve, in so far as it may be possible, the pressure of inflation on prices. In India, taxation can perform this function to a far lesser extent than in other countries. And the brunt of this task necessarily falls on borrowing. The cloud that hung dark over the Government of India's borrowing has lifted in recent times, partly owing to the success that has attended Allied arms in the various theatres of war. The Finance Member has spoken with evident satisfaction on the increasingly gratifying results of the Government's borrowing programme. Without going into the details of the ways and means part of the budget, it should suffice to say here that the investments in the defence loans and the rupee counterparts of sterling loans and loans floated for repayment to the Centre, totalled Rs. 279 crores over the last twelve months, which compared with Rs. 93 crores for the same period last year, and an aggregate of Rs. 547 crores since the beginning of the war. In the field of small savings, the net withdrawals of Rs. 14 crores and Rs. 3½ crores of 1940-41 and 1942-43 have yielded place to a net incoming of Rs. 2½ crores per month and a persistent upward trend. The Government have also adopted special methods of coaxing small savings into the Treasury by paying commissions to authorised agents.

The success of the Government's borrowing programme is to be attributed in the main to the consistency with which the Finance Member has stuck to the policy of progressively lower yields. "Indian Finance," which waged a long and lone battle for this principle is, therefore, particularly gratified when the Finance Member affirms that "the Government are convinced that the further step suggested in certain quarters, namely an enhancement of the rates of interest, would be infructuous and is fraught with the risk of heavily mortgaging the future development of the country, apart from its immediate ill-effects on the balance sheets of institutional investors, who have for the last four years steadily supported the securities market." We may add at this stage that we should find it hard to agree with Sir Jeremy Raisman when he says that he "can see no advantage in the proposal that any other allied government should enter the field as a direct buyer."

The entry of Allied Governments as direct borrowers would at least bring home to the average Indian the change in India's status in international finance. It would serve to focus the attention alike of the Government and the people on the fact that the problem of inflation arises, not because of a difference between Government expenditure on the one hand and Government revenue and borrowing on the other, but because the Government's disbursements are not adequately roped in again. This "inflationary gap," as Sir Jeremy calls it, is sought to be bridged by monetary controls and physical controls which together exhaust the anti-inflationary measures of the Government. The introduction of gold sales on behalf of the allied governments is in itself an admission that the allied governments must solve the problem of paying for their expenditure in this country. The substitution of gold sales in place of an attempt at direct borrowing only adds to the feeling of inadequacy and injustice. For India has reason to feel aggrieved that the gold now sold to her at well over Rs. 70 a tola is the gold which she had parted with at less than half that price on the outbreak of war. That gold was sold to Britain instead of being retained by India, because the Reserve Bank was not in practice a fully autonomous national institution. But there can be no doubt that the gold

was given to Britain in a moment of great need and its resale at present prices is far from being a return for timely help. Our views on this question of gold sales are so well known that there is no need to reiterate them here, except to say that, whatever effects gold sales may have on inflation, they represent a kind of injustice that calls loudly for redress.

We may now turn to the consideration of the whole campaign against inflation. It will be generally agreed that, considering the immensity of the problem as it stood a year or more ago, creditable progress has been made in bringing the situation under control. The monetary controls exerted through taxation and borrowing and let us add gold sales, have been effective; and the physical controls have worked, though their creakings have often been painfully disheartening. But it would appear that between the two sets of measures, there are still gaps to be closed. The physical controls in the matter of cotton manufactures still leave loopholes for the flow of black money. It is a matter for Government's consideration how these leakages may be stopped. For in the present conditions, the evil of the inflationary gap is not scorched at its source, inasmuch as the Allied Governments are to finance their rupee expenditure only to the extent of their sales of gold in this country. The duty of fixing a ceiling to the note circulation has thus been repudiated more or less ostentatiously. And so long as India's dues continue to be paid in sterling, the disbursements will continue to be made and anti-inflationary measures will be much like letting go the reins and tugging the tail.

The Government have so far been unable—and inability always has a modicum of unwillingness attached to it—to close the inflationary gap to some extent with an addition to consumers' goods. The authorities are still in the stage of promise to increase the goods; and if conditions are favourable something will doubtless be done. But it is worthwhile examining whether the stimulus provided for the coal industry to increase its output cannot be extended to other industries.

The position, then, is that India has to be content with a patchwork of anti-inflationary measures on the one hand and, on the other, rising sterling securities which offer problems of their own. In this regard however, Sir Jeremy's present budget speech has more hopeful features than his last one. A year ago, the Finance Member gave us proposals for the commutation of pensions and other charges and the constitution of an Industrial Development Fund which looked like a sinister move to tie India down to the British market. This time, however, there is a heartening degree of response to the public demand that a part of our foreign securities should be held in dollars. We can hardly say more, since the relevant passage baffles our attempts at precise understanding. The passage runs:

The early implementation of these plans (postwar economic plans) will however, be dependent to no small extent on external finance. This aspect of India's postwar problem was discussed with H.M.G. in connection with the acceptance by India of the general principle of the extension of reciprocal aid to raw materials and food stuffs. H.M.G. fully sympathise with the desire of the Government of India to make such advance provision as may be practicable during the war for requirements of postwar development. The House will be gratified to know that H.M.G. have agreed in this connection, and as an integral part of the reciprocal aid arrangement, to set aside each year from now onwards a part of the dollars accruing from India's

exports to the U.S.A., apart from and in addition to our current dollar requirements which are met from the Empire dollar pool under the usual sterling area arrangements. These amounts will be held in a dollar account by the Reserve Bank of India with the Bank of England and will thus be immediately available for India's development purposes after the war.

It is not clear what is meant by this mixing up of dollars accruing from our exports—in this context one can only think of a balance of exports over imports—with the provision of current dollar requirements as if India has to draw on others' dollar balances. A similarly puzzling ambiguity is present in the Finance Member's reference to the relation between our sterling balances and international monetary regulation. Sir Jeremy says:

It is patent that one of the problems that will confront the world in the postwar period will be the orderly liquidation of balances acquired by various countries during the war and in considering whether India should lend her support to any scheme that may be put forward for international monetary regulation, one of the major considerations will naturally be the extent to which such a scheme assists in providing a solution for problems of this character.

Again, it is not clear which problems Sir Jeremy refers to in the last few words, ours or others'.

It may be said, therefore, that the provision of dollar balances, of what dimensions it remains to be seen, is the only gain we have made so far as the problem of our sterling balances is concerned. But we may freely confess that the spirit in which the objects of the Bombay plan have been accepted by the Finance Member far outweigh such cause as he may have given for dissatisfaction on specific issues. Lord Wavell's reference to the Bombay Plan in his address to both Houses of the Central Legislature has now been followed up by a full discussion by Sir Jeremy of the major issues involved. If one makes allowance for the weight sense of responsibility and need for caution which inevitably goes with office, there is hardly anything in Sir Jeremy's discussion of post-war planning to call for passionate demur. Emphasis on the inflationary effects of created money and the immediately unproductive character of expenditure on education and public health is only to be expected and cannot be quarrelled with. But in the conditions of India, particularly in the post-war period, we have no doubt in our mind that such expenditure, distributed as it necessarily will be over all parts of the country, will lead, without the usual time lag, to an increase in the production of consumers' goods. Sir Jeremy has the sense of fairness to credit the authors of the plan with awareness of the dangers and anxiety to provide against them. And when there is agreement on broad principles and differences are only differences in emphasis, we may reasonably regard post-war planning for raising the standard of living of the masses as the accepted policy of the Government, even as it is constituted to-day. When Sir Jeremy says that "it is by no means fantastic to visualise resources for purposes of reconstruction during the first effective quinquennium approximating to the 1,000 crores level", there is an assurance of Government support which changes the entire outlook of things. Sir Jeremy's measures in regard to the various specific questions that come up before him are conditioned by the needs of post-war development. And we feel it is opportune to insist that during this period of war finance there shall be no changing of horses in mid-stream.

BUDGET AND THE MARKETS

By "WATCH DOG"

THE Central Budget for 1944-45, it should be said, has been well received. The reaction, before the announcement of the budget proposals, was very favourable as the increase in the estimated deficit for the next financial year to Rs. 78.21 crores from the original estimate of deficit for 1943-44 of Rs. 60.29 crores was very much less than market expectations. As on the last occasion, however, some surprise has been expressed at the increase in deficit for the current year to Rs. 92.43 crores from the original estimate of Rs. 60.29 crores. There is no guarantee that the next financial year also will not reveal a greater deficit in actual working though there is a feeling that such an increase in deficit cannot be quite pronounced as capital expenditure has been fully provided for and no undue increase in military expenditure in the next year is expected.

The new tax proposals provide for a total yield of Rs. 23½ crores of which direct taxation is for Rs. 8½ crores. The market has welcomed the decision of the Government not to effect any change in the Excess Profits Tax. The increase in the surcharge by 4 pies to 24 pies over the basic rate of 30 pies is not considered unduly onerous. But the effect of the immobilisation proposals has not been correctly understood. The increase in the compulsory deposit, which is now payable along with the provisional assessment of Excess Profits Tax, from 1/5 of the tax amount to 19/64 of the tax is approximately 50 per cent more than the previous deposit amount and will leave practically little of the excess profits after payment of income-tax and super-tax on the balance. The increase in compulsory deposits is not

followed by any increase in the proportion of the tax to be refunded. It is said that the increase is designed to immobilise as deposits the whole of the excess profits remaining after E.P.T. has been paid thereon and income-tax and super-tax paid on the balance.

The position thus viewed comes to this. No excess profits will be available for purposes of distribution. That, 62/3 of the excess profits refundable plus 20 per cent of the profits left with the authorities as compulsory deposits will constitute a huge reserve for companies and which will be available to them in the postwar period. What is left to the company for disposal is only the profit for the standard period which is adjusted on the basis of the average capital employed during any particular accounting period. Of this, the usual provision for depreciation is to be made and income-tax and super-tax paid at the enhanced rates. Unless the provision for depreciation is omitted and the adjustments in the profit for the standard period in respect of the average capital employed, which must necessarily be higher with the increase in the activities of the company, compensate to a certain extent the heavier tax burden, it may not be possible to pay such dividends as to sustain present market values.

The position in regard to the increase in Corporation Tax is not clear. It is said that a rebate of 1 anna in the rupee will be given on so much of the company's total income as is not distributed in dividends other than the dividends payable at a fixed rate. It is not clear whether it is immediate or deferred. It

does not matter, however, much for the shareholder, who looks to immediate gains, as to how the rebate is offered as in the case of the Directors deciding on the increase in the dividends on ordinary shares, the higher rate of tax will have to be paid which means the net available sum for disposal will be smaller. It will be better to illustrate the position in the case of Muir Mills in the light of the new changes.

The Muir Mills Company, Limited made a net profit of Rs. 1.52 crores in the year ended December, 1943. Total provision for taxation was Rs. 1.15 crores. A sum estimated at Rs. 18 lakhs will be due for payment during 1944 as compulsory E.P.T. deposit under section 10 of the Finance Act of 1942. As compulsory deposit constitutes one-fifth of the total tax amount, it is thus reasonable to assume that provision for the payment of E.P.T., included in the total allocation under the head of taxation of Rs. 1.15 crores, is Rs. 90 lakhs. The amount payable by way of income-tax, super-tax and Corporation Tax will thus be approximately Rs. 25 lakhs. The increase in the surcharge of 4 pies per rupee on all incomes above Rs. 15,000 will necessitate an additional payment to the extent of Rs. 1.4 lakhs while the increase in the Corporation Tax by 1 anna in the rupee, on the amount paid by way of ordinary dividend, will be Rs. 66,000. The total sum available for distribution after providing for depreciation at Rs. 7 lakhs and payment of tax and compulsory deposit, as indicated above, is Rs. 12.42 lakhs. This sum will be reduced by nearly Rs. 5 lakhs to Rs. 7.42 lakhs as the result of the new taxation proposals. The total amount needed for payment of a 70 per cent dividend on the ordinary shares and on the preference shares at the usual rate, is Rs. 11.4 lakhs. It is very clear

therefore that the provision in regard to depreciation is to be omitted to maintain the ordinary dividend at the same level, not to speak of an increase. With the increase in the compulsory deposit by nearly Rs. 9 lakhs, it would be justifiable to expect, however, that the Directors will omit the provision for depreciation altogether, and pay the same ordinary dividend. It will thus be very clear that the new proposals definitely limit the payment of dividends to the amount of standard profit and that in the case of companies where a liberal policy has been

adopted in the payment of dividends, such dividend could be maintained only by a transfer from the reserves. It should not be taken, however, to mean that the budget is unfavourable to the market. The immobilisation of funds will further strengthen the financial position of companies. There may not be any great decrease in dividends in the postwar period and peace risks have been completely eliminated thereby. The present proposals also will tend to reduce the basis of yield further and result in the main-

tenance of stock exchange values at the present levels.

The gilt-edged securities market has not been in any way affected by the proposed increase in surcharge or super-tax. Such companies as have a good profit for the standard period and yield satisfactory returns at the present levels, should therefore be favoured.

The Coal section has been very steady. It is felt that substantial relief will be afforded to the industry by way of production bonuses which are free from Excess Profits Tax.

THE FOURTH DEFENCE LOAN 1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th July 1944 will be paid on the 15th July 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

TAXATION PROPOSALS FOR 1944-45

The following extract from Sir Jeremy Raisman's budget speech gives his exposition of the new taxation proposals; and we publish it in this supplement as this important portion of the speech did not appear in Wednesday's morning papers.

"Whether we approach the matter from the viewpoint of building the new India of our hopes, or from the viewpoint of mitigating the hardships and inequity of the immediate present, it is clearly our paramount duty to deal first with the menace of inflation. That danger cannot be said to be averted, nor can the upward movement of prices be regarded as securely arrested, so long as the total of our taxation and borrowing falls short of the total of rupee outgoings. The problem of closing this gap, or reducing it to innocuous proportions, has therefore to be tackled in a determined and systematic way. The Government's plan has three broad

aspects. In the first place, we must control and stabilise the net overall demand placed upon Indian resources, compensating as far as possible for any inevitable increases by imports of food, bullion or other capital and consumer goods. In the second place, we must step up in every way the rate of rupee incomings until it equals the rate of rupee outgoings. In the third place, we must maintain and extend our price controls. These three methods of attack must all be pursued concurrently, and experience has already shown that they are capable of yielding the desired results. Our calculations show that during the current year the gap between total incomings and total outgoings of rupees was of the order of Rs. 250 crores. In the light of the remedial measures which we have already taken, and assuming the continued operation of the favourable factors now at work, we hope for a substantial narrowing

of the gap in the coming year. The proposals which I have now to make are designed virtually to close the gap, and to check the insidious process which is capable of causing such unlimited misery to the people. It is an object worthy of sacrifice, and indeed without sacrifice greater hardships cannot be avoided.

The proposals are of two kinds, measures of ordinary taxation and measures of the nature of compulsory deposit. The most important of the latter is a provision for advance payments of tax on income from which tax is not now deducted at source. The income mainly affected will be income from property and from business, profession or vocation. The main outlines of the scheme, which is being put before the House in an Income-Tax Amendment Bill, are as follows:

An assessee will have the option to pay tax quarterly either on the basis of his last assessed income or on the basis of his own estimate of current earning. Government will pay 2 per cent interest on all sums paid in advance under the scheme, but if the assessee's own estimate, which can be revised during the year, falls short of 80 per cent of the tax determined on regular assessment, penal interest at 6 per cent on the difference will be payable. No penal interest will be payable where the assessee chooses to pay on the basis of his last assessed income. To secure compliance with the scheme, certain provisions of the penalties section of the Income-Tax Act—Section 28—are imported, and failure to make payments under the scheme will be treated as a default. Credit for tax paid under the scheme will be given to the assessee in the regular assessment. The sums collected will be treated not as revenue but as deposits to be taken to revenue when the regular assessments are made.

As regards Excess Profits Tax, our proposals make no change in the rate of tax, which remains at 66-2/3 per cent. Nor do they make any change in the proportion of the tax, namely one-tenth, which is to be repaid to the assessee. But the compulsory deposit of one-fifth of the tax which was prescribed in Ordinance No. XVI of 1943 is to be increased to 19/64 of the tax. The effect of this will be to immobilise as deposits the whole of the excess profits remaining after E.P.T. has been paid on them and Income-Tax and Super-Tax has been paid on the balance. This compulsory deposit has not hitherto been payable in connection with provisional E.P.T. assessments made under the provisions of the Ordinance. We now propose that at the time of the provisional assessment a compulsory deposit of 19/64 of the tax provisionally assessed shall be paid.

In regard to rates of Income-Tax, we propose to give relief at the bottom of the scale by raising the taxable minimum from Rs. 1,500 to Rs. 2,000. In regard to incomes up to Rs. 10,000 no change is made but on the slab of income from Rs. 10,000 to Rs. 15,000 the Central Surcharge is to be increased by 2 pies from 16 to 18 pies, in addition to the basic rate of 24 pies; and on the balance above Rs. 15,000 the surcharge will be increased by four pies from 20 to 24 pies, in addition to the basic 30 pies. This latter rate will, of course, apply to companies and in every case where the tax is to be charged at the maximum rate. As regards super-tax, there will be an increase of half-an-anna in the Central Surcharge on the slabs of income between Rs. 35,000 and Rs. 2 lakhs. Corporation Tax will also be raised by one anna to a rate of 3 annas in the rupee but a rebate of one anna in the rupee will be given on so much of a com-

pany's total income as is not distributed in dividends other than dividends payable at a fixed rate. A special provision is being made for life insurance business by which the combined rate of income-tax and super-tax is limited to 63 pies, which was the combined rate for companies fixed by the 1942 Finance Act. It is also proposed to give retrospective effect to this provision for 1943-44. From these changes in rates the additional revenue is estimated at Rs. 8½ crores.

In regard to Customs Duties, we propose to continue for a further period of one year the emergency surcharge on the import tariff which has been levied for the last two years. I need hardly repeat, in the present context, that this is purely a revenue measure. The rate of the surcharge will again be one-fifth of the basic duties except in the case of tobacco and spirits, where it will be one-half. The additional receipts from the increased surcharge on tobacco and spirits, which will come into effect at once, are roughly estimated at Rs. 1 crore.

In the field of Central Excises there are important changes. We propose to increase the rates of duty on unmanufactured tobacco and on cigars and cheroots and to introduce three new taxes. The Tobacco Excise is, in India as in other countries, an almost unrivalled means of raising revenue, and is destined to play an important role if the present modest rates of duty were adopted in the initial stage to allow of the building-up of the widespread organisation necessary for the operation of such an excise in so vast a country. Thanks for the efforts of the executive staff, the preliminary organisation has been completed more quickly than might have been expected and it is now possible to raise the duty to a more productive level. The opportunity has been taken to recast the scale of duties in a somewhat simpler form. The additional yield from the enhanced duties is estimated at Rs. 10 crores; they will take effect at once by virtue of a declaration under the Provisional Collection of Taxes Act.

The three new items which we propose to include in the Central Excise Tariff are betelnuts, coffee and tea and the rate of duty proposed in each case is 2 annas a pound. The arguments in favour of the excise on betelnuts are generally the same as in the case of tobacco: the total consumption is large and spread through all classes; it is not a necessity of life; and the average consumption per head is small, so that the impact of the tax on the individual will be slight. And since chewing tobacco is already taxed it is not unreasonable that a similar impost should be placed upon its rival. Betelnut has not been the subject of an agricultural marketing survey and full statistics of production are not therefore available, but on the data gathered by the Central Excise Staff the total annual yield from the rate of duty now proposed is roughly estimated at Rs. 2 crores. Like the tax on betelnuts those on coffee and tea have been introduced in order to broaden the basis of indirect taxation. Both are suitable subjects for an excise duty and the one could hardly be introduced without the other. At the rates now proposed the two excises are together expected to yield a total sum of approximately Rs. 2 crores in the coming year.

The total estimated yield of our ordinary taxation proposals thus amounts to Rs. 23-1/2 crores, reducing the prospective revenue deficit from Rs. 78.21 crores to Rs. 54.71 crores. But for anti-inflationary purposes we have to reckon the total effect of new measures of taxation and compulsory deposit,

including the addition to railway fares, and this approximates to Rs. 100 crores. Together with all the other measures which are currently being directed to the same end, this will, we have every hope, firmly check the inflationary trend and facilitate the maintenance of all our controls. At the same time this programme will assist the preparations for post-war development, by providing for the regular building-up by industry of the necessary reserves, as well as by fortifying permanently the revenue resources of the State.

In the last-named direction much still remains to be done. In particular the provinces, on whom so large a share of the building of the future inevitably falls, will need expanded resources. We have therefore under active consideration the possibility of an estate duty on non-agricultural property, which would be levied by the Centre, but of which the proceeds would be assigned to the Provinces. In spite of war-time taxation it is indisputable that enormous private fortunes have been made during the war, aggravat-

ing the great inequality which already existed. Even on a modest programme vast sums will be needed for the post-war development of the country, and there is manifest justification for a system of death duties whereby these large fortunes will be laid under contribution. We have encountered, as we expected, certain initial difficulties, but we hope to overcome these and to be in a position to place a carefully prepared measure before the Legislature at a subsequent session. I have no doubt that such a measure would not only fill a gap in the fiscal armoury of India, but could serve a great social end.

That brings me to the end of my story. The last five years have witnessed changes of a significance and magnitude which few indeed could have ventured to foretell, as India has been caught up even more irresistibly in the rapid stream of world events. Who can doubt that she is destined to play a momentous part in the years ahead, when the last great effort has been crowned with victory, and men turn again to the fruitful tasks of peace?

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, February 29. Total amount offered was Rs. 7,79,25,000. Tenders at Rs. 99-12.9 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 5,05,25,000; the average rate of accepted tenders being Re. 0-12-11 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, March 7 in Bombay up to 11 a.m. and up to the close of business on Monday, March 6 at other centres. Successful tenderers should make payment on Friday March 10 or on Thursday, March 9, where Friday is a holiday. Other conditions are as usual.

During the week ended February 25, Government of India Treasury Bills for Rs. 1,45,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Bengal

Tenders for Rs. 3,00,00,000 of three months' Bengal Government Treasury Bills were opened on March 2. Total amount offered was Rs. 5 crores and 17 lakhs. Tenders at Rs. 99-12-8 per cent were accepted in full and those at Rs. 99-12-3 per cent were allotted

ed approximately 44 per cent. Lower tenders were rejected. Total amount accepted was Rs. 3 crores, the average rate of accepted tenders being Re. 0-14-7 per cent per annum.

Finance Abroad

Thursday Morning.

EXCEPT for a moderate improvement in prices on Wall Street, the market reaction to Soviet successes on the northern front seems hazy. The rise on Wall Street is obviously connected with Mr. Dewey's probable candidacy rather than anything else. It appears unlikely that Mr. Dewey will stay on as Governor of New York for the full term and the election figures already as the biggest issue of the year. The President has apparently given up the New Deal for the Fourth Term, but the conflict with Congress remains after the Senate's own endorsement of the Lower House's action on the amended tax bill. It is true that \$8 billions more can be raised easily by borrowing and the U. S. budget itself would show no large change.

The peak of U. S. war production was reached towards the end of 1943 when Mr. Nelson indicated that secrecy was no longer necessary as to totals of output. The limited demands on manpower and supplies may help the Administration to deal with inflation. In two years of war, the U. S. A. while raising its war production substantially, declined to accept austerity, and the decision explains the Congressional view as to new taxation. Many things were demanded and official decrees as to liquor production for instance led to the payment of dividends to shareholders in the form of distilled liquor subject to the usual excise and the retailers' charges. The U. S. market's rating of the different Republican candidates' chances may not differ greatly from that obtained by a Gallup poll. But no vote has been taken as yet to the real strength of the Democratic split or the recent Republican revival. The election does not threaten to be an unsettling factor so far as other markets are concerned. Since stock market quotations show a rise on December the investor is not doing badly. This may assist private business to revive without deep calculation of postwar advantages, and from the point of Indian export trade alone the profit and price trends in the U. S. A. should be reckoned promising.

The more important political developments in Argentina can be hardly indicated. The crisis is certainly bad for railway stockholders. For many years there have been deficits and no dividends have been received on preference and ordinary shares of Argentine railways. The claim to raise rates and fares was not very sympathetically considered and a special mission left London for Buenos Aires. The renewed push of the Army for power suggests that foreign capital will have an uneasy time. The blocked balances and the reduced exports go together but the real question is regarding the Argentine attitude to the U. S. A. under a new President whose foreign policy must be influenced by local developments. The isolation of Argentina may be a good thing for the Indian linseed market, but political disturbances also mean less food for Britain, especially, when the Dominions have limited surpluses.

There has been no elucidation of the events in Buenos Aires and Spanish interest in the happenings is perhaps small though the Falange's dreams have been widely dreaded. The strength of the peso after the revolution of June was hardly shaken, but the changes of government within a year would certainly undermine credit status and affect the foreign trade reduced already by the war. September, according to the Indian Central Jute Committee's correspondent, was a good

GOVERNMENT IN FOREIGN TRADE

U. S. HOPES AND FEARS

SPECIAL FOR "INDIAN FINANCE"

Washington, March 1.

Foreign traders in the U. S. A. who have been planning for the resumption of normal world commerce under private auspices after the war found reason last week to fear that Government would not only continue present controls, but might even increase its surveillance of international trade. Several pronouncements made by leading officials here seemed to echo this proposal made by the executive committee of the Federation of British Industries for the organisation of an international economic council to direct post-war trade.

So far the Foreign Economic Administration has remained silent regarding post-war plans, but others connected with the Government have recently advocated Government's greater participation in foreign trade after the war. Such proposals made last week included first, that of Mr. William L. Batt, Vice-Chairman of the War Production Board who suggested a Government Agency to supervise the importation into the U. S. A. of metals, minerals and other critical materials for stock-piling purposes. Mr. Batt warned that foreign trade "must lean substantially on assistance from Government Agencies".

Secondly, the Attorney-General, Mr. Francis Biddle, said: "Assistance" should be given to American producers to gain access to foreign markets and such aid should reverse the pre-war drift towards monopoly by way of making public all private agreements concerning cartels and foreign trade restrictions.

Mr. William B. Heroy representing the War Petroleum Administration said that post-war control of overseas transportation of crude oil "could be made most effective" and said that Government could also exercise controls at the source, the point of shipment, manufacturing centres and the places where stocks are held.

Businessmen view these and similar comments as "trial balloons" designed to test public sentiment toward an extension of Government authority into the channels of foreign commerce after the war. Meanwhile, they are frankly worried that this may constitute a deathblow to international free trade. Their only reassurance was the statement of Mr. Leo T. Crowley, Foreign Economic Administrator, that the free flow of commerce between nations is essential for world security and prosperity.

The same businessmen, however, often have been victims of self-imposed fear. Thus there was much recent agitation over charges that British control in wartime of the Middle East's trade indicated, that United States exporters could no longer market goods in that area. That illusion was dispelled last week when Mr. Francis Winant, the State Department's Adviser for the Western Hemisphere told a New York meeting of foreign traders that United Kingdom exports to the Middle East had shown proportionately greater reduction compared with peacetime levels than those from the United States. Foreign traders breathed easier when Mr. Winant said "during the past year or so civilian goods imported into that area have been predominantly of U. S. origin."

BRONZE COINS FOR INDIAN HOARDS!

AND SILVER FOR GOLD

Special for "Indian Finance"

London, March 2.

The Financial News takes a serious view of the hoarding situation in India regarding which it makes two suggestions.

One is that Indian authorities who apparently hesitate to intervene in the silver market—presumably because there is not sufficient supply of silver—should do their utmost to secure silver from the United States, giving, if necessary, gold in exchange.

The other suggestion which is more novel is that the authorities should seriously consider stimulating the popular demand for bronze coins. It is admitted that bronze coins would be less attractive than gold and silver but at any rate they would be safer for hoarding purposes than paper rupees which can be attacked and destroyed by white ants. The main thing is to divert widespread hoarding demand into channels other than food and clothing which are in short supply.

Banks in the Future

Banking circles are considerably astonished by the suggestions regarding their post-war functions made by Mr. Geoffrey Crowther, the Editor of the Economist, in a paper read before the Manchester Statistical Society.

Mr. Crowther dismisses as pointless the Labour Party's demand for nationalisation of banks. The important thing he says is the bank's policy and not who owns bank shares. Regarding policy he says that the function of banks after the war will be entirely different from their function before the war. He contends that they will never fully recover their old-time function, accumulating deposits from the public which they re-loan to firms and individuals. But, in any case, he thinks that their loans both to government and industry should be entirely divorced from their profits. The rate of interest he suggests should be fixed in accordance with general economic policy and should contribute little or nothing to bank profits. But since "banks must live" he suggests that they should turn their earnings away from their assets and towards their liabilities. Otherwise, they should charge the depositors for the services they render them and make no attempt to derive a profit from loans. He argues that depositors even if they resent paying for services, now given gratis, will scarcely find it convenient to withdraw from the banking system.

Another Beveridge Report

There is considerable curiosity and some anxiety regarding Sir W. H. Beveridge's forthcoming private report on "Full Employment" which it is now understood will be published early in the month of May. Informants say that it is simply and persuasively written and inevitably has its political repercussions even if the public is mainly absorbed at this time in the Second Front. Enough is known regarding Sir William Beveridge's general mentality to make certain that his approach to the problem will not be freakish—he is considered to be the last man in Britain to attach importance to any currency

panaceas—but if he follows current economic thinking and argues that full employment can be assured if Government keeps the fullest control of the investment of the country's savings, then the City of London whose main job is to control the country's savings may read his report with some dismay.

(Continued from page 403)

We take it that Sir Jeremy's estimate of Rs. 279 crores must be the correct one; and this means that the Government succeeded in attracting, by various forms of public borrowing, a sum nearly three times as much as the total of the previous year, a sum which is little more than half the total amount raised since the beginning of the war, the total loan subscribed since September 1, 1939 being Rs. 547 crores. The Finance Member and the Governor of the Reserve Bank are to be congratulated on an achievement far more outstanding than they themselves could have hoped for. But the target aimed at for the coming months is even more ambitious. As Sir Jeremy points out, while we may take comfort from the encouraging response to the efforts which have continued throughout the year to attract support to public loans, it must be recognised that we have still a long way

to go to achieve our purpose; the aim of Government borrowing is not merely to meet the budget deficit but also to bridge the inflationary gap. It may well be that the target for 1944-45 is Rs. 300 crores. Nor is Sir Jeremy diffident of the success of the measures taken to attain this target.

It was not to be expected that the Finance Member would disclose the new loan secrets. In the planning of further measures in this regard, the object to be kept in view is that what attracts new money is less the yield on the new loan than the confidence inspired by the premium materialising on the earlier loans. In simple terms, each new loan should be slightly less favourable than its predecessor. The importance of this simple but often-forgotten secret of success for new loans is fully recognised by Sir Jeremy whose planning of the fourth defence loan and other loans may be described as an exemplification of this principle. Sir Jeremy has done well in making his position clear in this respect: "The Government are convinced that the further step suggested in certain quarters, namely an enhancement of the rates of interest would be infructuous and is fraught with the risk of heavily mortgaging the future development of the country, apart from its immediate ill-effects on the balance sheets of institutional investors who have for the last four years steadily supported the securities market." The meaning of this passage is clear. The fourth defence loan will not have its list open for long. The fifth defence loan will definitely not be so favourable. So, our other advice to all investors is not only that they should save and lend but they should lend it as quickly as possible. Delay in lending means less favourable terms. The exchange market has been steady.

Second Thoughts on the Budget

In the Special Budget Supplement issued on Thursday last our principal aim was to help the public to see current financial and economic developments against the vista of future possibilities. We had little hesitation, therefore, in saying that, despite such cause for dissatisfaction as the Finance Member may have given on a few specific issues, Sir Jeremy's administration of our finances taken as a whole is such as to brighten, and not darken, the prospects of our economic development in the post-war period. The effects of inflation, if not inflation itself, have been brought under control. The borrowing programme is a resounding success. Foreign securities are garnered and diversified as well as possible in the present conditions. The burden of war expenditure is being kept within certain pre-conceived limits. And all the time the requirements not of mere post-war reconstruction but of post-war planning for doubling the national income are borne in mind. Ways of amplifying provincial revenue are being explored and a bill to authorise the collection of death duties by the Centre for the benefit of the provinces is promised. There is thus good ground for feeling that post-war planning, far from being sabotaged in advance, is being helped.

But the immediate tasks, too, demand attention. They are distinguishable into the routine questions of economy in current appropriations and those questions of broader economic significance which, if neglected or even under-rated, might render post-war problems more difficult of solution. This latter group may be said to be more or less fully covered by the problem of inflation. In our treatment of the problem of inflation which really dates back to the outbreak of war, we have always insisted that the solution of the problem of inflation lies in the separation of the problem of transfer from the problem of providing currency. We are glad to find the Finance Member using the term, "problem of transfer" for the first time. But the separation of the two problems has been carried out to our disadvantage. When we spoke of separation we meant that such increases in our sterling securities as may be found to be inevitable should not lead automatically to an expansion of currency circulation in India. But Sir Jeremy has separated the two issues only in the sense that the Finance Member should be prepared on the one hand to find out how the sterling securities which are allowed to rise should be utilised and on the other, how the equally unrestricted increase in rupee circulation should be prevented from having its effect on prices. While we are quite prepared to congratulate the Government on the degree of success which they have secured for their anti-inflationary measures, we cannot acquiesce in the refusal to put a limit to the expansion of rupee circulation. The Indian Government have got to say at some point that they can no longer add to rupee circulation for financing the expenditure of the Allied Governments in this country and that it is for the Allied Governments to find ways of finding their requirements of rupee finance. When Sir Jeremy makes it clear that there are no uncovered budgetary deficits of the Government of India and that, in spite of this fact, there is an inflationary gap calling for special measures to fill it, he makes it more clear than ever it was to the public that the country suffers the blighting effects of inflation for other nations' sake.

The cure for, as distinct from the antidote to, inflation lies in fixing the responsibility for rupee finance on the Allied Governments; and we made it clear in our Budget Supplement that the idea of Allied Governments coming on the Indian market as borrowers should not be disposed offhand. The only measure of a preventive nature so far adopted by

the Government is the sale of gold in this country on account of the Allied Governments. The mystery attaching to these sales has been lifted by Sir Jeremy's confirmation of the explanation afforded by "Indian Finance" when the gold sales began to be made. But the extent of the sales has not been made known and the extent to which they have provided us relief in inflationary pressure cannot be estimated. What is clear, however, is that the terms on which gold is now being sold in India constitute a serious injustice to this country. We have expressed the view before, and we may repeat it now, that the proper course would be for the Reserve Bank to repurchase this gold at the rate at which it was parted with, to all intents and purposes, under duress, so that our gold reserve could be increased against future needs instead of the public being encouraged in its none too economic habit of hoarding.

That India will have need for more gold as backing to her currency, Sir Jeremy has himself indicated in his discussion of the Bombay Plan. Post-war planning with a view to treble the national income in fifteen years will involve, it is now clear, the utilisation of a very large part of our foreign resources for imports of machinery and other equipment as also the expenditure of considerable amounts of created money on immediately non-productive objects like education and public health. There may be differences as to the extent to which either process may be carried or to which compensatory forces may be relied on. But there is no questioning the fact that both processes will affect the national currency adversely. When Sir Jeremy is so keenly conscious of the fact that "the first pre-requisite of reconstruction finance is a sound financial position", he ought to recognise that two of his most imperative tasks, as well in the far as in the near view, are firstly to help the Reserve Bank to expand its gold resources and secondly to put a ceiling to rupee circulation and positively to begin the process of contraction of currency.

But as things stand, no such policy is contemplated. Sterling securities and rupee circulation have alike to go up, limited only by sales of gold at high prices to the public. We have to be content with the concessions that may be made from time to time for our demand for security, mobility and diversification. The promise of allocation of dollars is the only net gain. While thus the problem of foreign securities is thus isolated, we have within the country to be content with a steady addition to the rupee circulation and a variety of measures to neutralise the inflationary effects. We have no desire, as we have said already, to detract from the success of the controls adopted by the Government. But controls, like all interference with free economic life, have to be extended, if they are to be effective. There are still too many loopholes through which producers and manufacturers can secure and segregate unaccounted profits. To prevent this swelling of black-money, more and more drastic measures may be necessary. Even if it should be necessary for Government to buy up in the first instance the whole output of, say, cotton mills, the measure should be tried rather than this leakage of black-money allowed to continue.

Physical controls and monetary controls in their present form must leave untouched the broad field of small incomes and small savings. We are gratified to find that the suggestion we made as long ago as 1940 that small savings should be encouraged by the offer of commissions to rural post masters has at last been adopted and that a system of authorised agents working for commission will before long be in force. The Government's borrowing programme cannot touch these classes. And special coaxing and lengthy personal explanations are needed if the rural classes are to part with their

surplus cash. The Government are well advised not to trust to routine methods to accomplish this result. And, here, too the advantage to post-war planning of developing habits of thrift and investment in classes which are utter strangers to them must not be overlooked.

There is one set of anti-inflationary measures which have received Government attention in inverse proportion to their importance. We refer to the increase of consumer's goods through stimulation of internal productive activity. Few can deny that the Government have all along been thinking only in terms of imported goods. Their eyes were almost glued to the shipping position and the availability of goods for

export to this country. All the earlier utterances referred only to such imports. The position has changed only to the extent of the perception that we cannot possibly have too much of foodstuffs in this country as also to the extent of the falling off of demand on war account for certain classes of goods. The grow-more-food campaign has gone past the stage of mere exhortations in the columns of urban newspapers. Larger allotments for civilian consumption are also envisaged. But the question fundamentally is one of helping the country to grow to a larger volume of currency. And the stimuli for increased production have to be provided in various ways and over all parts of the country.

FAMINE AND FINANCE

While the Budget presented on February 18 may sustain the conclusion that the revenue deficit is an established feature of Bengal's finances, it must be urged that the events of 1943 furnish their own commentary on the increase of expenditure and debt described by Bengal's Finance Minister. The speech introducing the estimates naturally opened up one field of discussion. Arguments in favour of a Central subvention have been the distinctive feature of the debates for over a week in both Houses, and the very limited assistance vouchsafed by the Centre (Rs. 4½ crores for two years) condition the previous tax proposals. Both important tax bills were framed in September in the height of the food crisis. The budgetary problem of 1944-45 is most readily indicated by reference to page 2 of the explanatory memorandum. The Revised Estimates point to a floating debt of over Rs. 66 crores and Deposits and Advances totalling Rs. 46.18 crores. The excess of Government's liabilities must be the sole cause of the deficits for the two years, put at Rs. 11.19 crores and Rs. 8.46 crores respectively. Expenditure on debt heads besides lowering the closing balance, would entail an increase in borrowing. But the borrowing, as may be noted, has resulted in the issue of Treasury Bills for Rs. 15½ crores and the immediate problem for Bengal admittedly is one of raising credit status by the appropriate measures including taxation. On the last count the budget proposals appear well balanced. In 1942 and 1943, the immediate fiscal problem arose from civil defence, and the justice of apportioning the new burden between the Centre and Bengal was duly recognised. The problem of 1943-45 appears to be mainly that of declaring Bengal, for some period or purposes, a deficit province entitled to a special grant. If it is urged that the grants allotted for two years exceed subventions hitherto given to other Provinces, the main effects on the Province of unproductive debt contracted in an emergency for which the responsibility is not merely that of one Province cannot be ignored.

It may be freely suggested that apart from the increased share in income-tax provided for by the Order-in-Council as amended in 1940, there is a claim on account of the ready acceptance of the jute acreage decision and the food policy prescribed. The financial reward must be, in any case, proportioned to the expenditure in Bengal of Rs. 5.65 crores plus Rs. 2.61 crores on famine relief alone. If the Central grants are proportioned to the outlay on test works and gratuitous relief described by Mr. Goswami, the financial obligations in regard to rehabilitation must also be shared. It is not likely that a decision reached would be altered; but the exclusive claim to the jute export duty for a term of years would be warranted as that item of revenue unlike land revenue or excise would be more or less stagnant.

The independent financing arrangements adopted in respect of crop purchases like the provision made for the repayment of Central advances made for civil defence expenditure and the rice and wheat purchase loans, strengthen the case for liberal allocation of expenditure on post-famine measures. Interest-free advances, as may be guessed, are strictly limited in comparison with the new short-term debt incurred at a cost of 1½ per cent and 11/8 per cent respectively during 1943-44. The case for Central assistance requires no buttressing now by reference to the size of the Famine Insurance Fund before and after the famine. The self-denial practised in regard to treasury bills borrowing in 1944-45 is conditioned perhaps by other circumstances than the 1943-44 excess of receipts over disbursements. The Bengal Government's food policy is not divorced from its fiscal policy and the co-operation given to general anti-inflationary methods should claim due notice.

The latter would clearly influence the profit and loss account of the Civil Supplies Department. Price stabilisation must be purchased if not through a straight subsidy, at a cost that can be calculated in relation to capital and turnover. The Finance Minister has exhibited appropriate caution in regard to carry-over and depreciation of food stocks. The loss will, in any event, help the consumer but the real question would be as to what part of the loss should be borne by the Centre for the whole food programme is based on the Central Government's directions, and losses arising from Government stores set up to satisfy the rationing scheme could not be ordinarily treated as part of the revenue deficit. If it is not a question of mere accountancy, the probable debit balance (put at Rs. 5 crores by Mr. Goswami) must be shared by other Provinces which report gains on trading account. The multiplication of Central excises, while it corresponds to the sales tax adopted by the Provinces, represents, in the main, a tax on the consumer as well as the agricultural producer in the provinces that produce tobacco or tea. Since most excises are Central and no formula of partition has been devised since the kind of development was not foreseen in 1933-35) the Provinces' readiness to tax liquor at a higher rate by adjustment of duty is independent of the claims that may be advanced in the future. Sugar control, too, has influenced budgetary provision as the grant of Rs. 16 lakhs for cane subsidy at 4 annas per maund shows. It would however be a mistake to regard the Bengal Budget as merely illustrative of the need to procure block grants now or in the future. The loss on food purchases is in its way a direct subsidy of the consumer. The consumer then should have little objection to the increase in the general sales tax and the introduction of the agricultural income-tax amended by the Select Committee so as to impose no burden on the smaller landlords should excite little criticism. The growth of expenditure in and through the famine justifies the tax programme.

If the influence of inflation is discernible on the expenditure in jails, the main claim that Bengal hopes to raise Rs. 10 crores more in revenue during 1943-45 finds support in the explanatory memorandum. Total revenue receipts in 1940-41 amounted to Rs. 13.545 crores and rose to Rs. 14.94 crores in 1941-42. Revenue in 1943-44 (according to the Revised Estimates) amounted to Rs. 21.34 crores and is expected to increase to Rs. 21.97 crores. The growth of revenue in the difficult conditions to which Mr. Goswami adverted is the effect rather than the cause of the extension of social service functions. Adapting Lord Wavell's recent dictum that "We must look forward" the Finance Minister prescribed an acceptable ideal for Bengal's citizens to-day. The enhanced provision for medical relief and public health, agriculture and education since 1941-42 may not mark a real departure in policy but indicates the third coalition Ministry's claim to be judged by performance even more than promises. The grand assault on the five Giants has begun in time to make the aftermath of famine something to be swept aside by the financial policy of the future. The increase of expenditure is forecast because the tasks are already assumed by the Ministry. An increase in expenditure from Rs. 25.8 crores in 1943-44 (the budget estimate) to Rs. 30.44 crores in 1944-45 merely reflects the resolution to pursue programmes framed in the light of experience. The programmes have been criticised in detail from various angles but their financial implications are not too onerous. If the main justification for taxation was provided through the supplementary estimates rather than the outline of proposals concerning rural medical relief, orphanages and agricultural improvement the budget looks beyond the distress to recovery. The yield of new taxes is not estimated but it cannot be large in relation to the draft on the closing balance

or the deficit of Rs. 8.46 crores on revenue account. If the Centre's grant of Rs. 1½ crores reduces the estimated debit balance of Rs. 10.64 crores directly, the debt will necessarily remain large. The mere fact that annual provision for interest in Bengal has risen from Rs. 36.54 lakhs to Rs. 57.59 lakhs in a year may be treated as strictly relevant in regard to the demand for additional revenue. The new tax by coming before the Budget emphasised the special importance of additional revenue over and above the normal growth which would raise receipts from Rs. 21.34 crores to Rs. 21.97 crores. The normal increase of Rs. 63 lakhs would be inadequate in the circumstances of Bengal. So the case for taxation was

presented independently in advance. It is to be viewed as inescapable in view of the unusual increase in debt. The protection of Bengal's credit admittedly demands a modicum of new taxation. Care has been taken to preserve that credit, and the new, special connection with the quasi-Central Bank proves that budgetary preparations, thorough and precise, have put the borrowing limit well beyond a year's income. The parallel with Great Britain in wartime need not be unduly stretched but the emphasis on what may be liberally interpreted as society security for Bengal is none the less a welcome anticipation of the large hopes and large efforts that have burgeoned in Britain in a single year.

THE FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th July 1944 will be paid on the 15th July 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

THE INDIAN BANK, LIMITED

DIRECTORS' REPORT

SEVENTY-FORTH REPORT

The Directors have pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1943. The Auditor's Report is also annexed.

The Net Profit of the Bank for the year amounts to Rs. 10,84,103-2-7 and together with the sum of Rs. 28,421-4-4 carried from the last year's account makes a total of Rs. 11,12,524-6-11. Out of this sum, the Directors have made the following interim appropriations:

Placed to Reserve Fund	Rs.	A. P.
An ad interim dividend at the rate of 10% per annum (free of income-tax) was paid for the half-year ended 30th June 1943, which absorbed	98,200	0 0
The Directors now recommend that the following further appropriations may be made:— To pay a final dividend at the rate of 10% per annum (free of income-tax) for the	1,29,604	13 3

half-year ended 31st December, 1943 and a bonus of 2% per annum for the year 1943 amounting to about	Rs.	A. P.
To provision for taxes	1,94,700	0 0
To transfer to Bank's Buildings Account	4,75,000	0 0
To place to Reserve Fund raising it to Rs. 30½ lakhs	17,076	15 0
To carry forward to next year's account	1,50,000	0 0
Total	47,942	10 8
	11,12,524	6 11

The Bank rate remained unchanged at 3% during the year. During the second half-year, branches of the Bank were opened at Tanjore, Vellore, Rajahmundry and Sub-Offices at Ernakulam, Guntur Bazaar, Narasaraopet and Tirunelveli Town.

We are glad to mention that the Bank has made good profit this year and we hope that the progress the Bank has made will be maintained in future also.

Of the Directors Messrs. Rao Bahadur C.V.C.T.V. Venkatachalam Chettiar, A.M.M. Murugappa Chettiar, Rao Bahadur K. V. Al. Rm. Ramanathan Chettiar and N. S. Sundaram retire this year by rotation and they, being eligible, offer themselves for re-election.

AUDITORS' REPORT

We have examined the above Balance Sheet and Profit and Loss Account with the Books of the Head Office and the certified Returns from the Branches and Sub-Offices, verified Cash at Madras and Securities of the Head Office and have obtained all the information and explanations we have required. We beg to report that the above Balance Sheet and Profit and Loss Account are, in our opinion drawn up in conformity with the law. The assets and liabilities of the Penang Branch are not included in the above Balance Sheet. Subject to the foregoing, the above Balance Sheet exhibits a true and correct view of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank and that, in our opinion, Books of Account have been kept by the Bank as required by Section 130, Indian Companies Act, 1913.

Factory Workers in 1942

Figures relating to factory employment give an indication of the demand for labour during the war. While the number of Government's industrial employees is explained by reference to the ordinance programme and the part played by its own workshops in the war effort so far, the steady increase in the number of factory workers since 1939 is a consequence of the development of industry. The number of workers rose from 2,156,000 in 1941 to 2,282,000 showing that in spite of various checks the increase in employment is continuous. If seasonal factories have made limited progress, the perennial factories have reported a continuous increase in workers since 1939. The total number of workers employed by Government and public authorities in 1942 was 305,000. The figure obviously excludes railway workers who totalled 763,984+10,336 substitutes in 1941-42. The increase in private employment during the war period may be placed at 462,000. Compared with the 1939 total of 1,618,000 the increase of over 26.8 per cent suggests that the addition of 160,000 to the number already employed in Government and local fund factories is less important because it is temporary. The figures furnished in the Indian Labour Gazette show that the increase is largest in the case of Army clothing factories. As to the increase in industrial employment, variations as between the Provinces are the consequence of previous industrial development. The increase of 18 per cent in the number of textile operatives alone, has raised the total to 965,000 in 1942. The increase of 51 per cent in the case of engineering and 49 per cent in the case of minerals and metals reflects the war demand. But only three industries had over 100,000 workers in 1942 and the increase in the number of miscellaneous workers shows clearly the nature of the stimulus to factory employment. Bombay reports a much greater increase in employment than other Provinces, but the statistics available exclude the factories in States. In the case of Baroda the increase in factory employment, especially in cotton mills, stands out and the higher rate of expansion in Indian States may show that the increase in 1939-42 exceeded 27.8 per cent. The largest increase in workers is recorded under hides and skins. Clearly leather manufacture rather than export underlies the increase in employment. So far as can be seen the increase in employment was least in the case of paper and printing trades, although paper and pulp mills reported an increase in workers. A fall in the numbers employed in silk mills and a mild increase in the number employed in jute mills are subordinate to the increase noted in the case of cotton mills. The numbers engaged in factories

Editorial Notes

producing chemicals and dyestuffs etc., have risen from 56,000 to 73,000 in spite of the decrease in the numbers employed in match factories. The trends recorded in the average numbers employed since 1939 show that private industry has always claimed more than Government factories. Where large industry has taken least for itself as in Sind the agricultural situation since 1942 has improved considerably and the limited demand for factory labour may lead to conjectures as to the displacement of mining or agricultural labour in other provinces. Statistics of employment in mines up to 1941 point to a steady increase in Bihar but the labour and coal shortage belong to 1943 so that no conclusions can be advanced as to the changes created by the addition of 19,400 more factory workers between 1939 and 1942 in Bihar.

Changes in Cloth Output

The textile industry's statistics for 1942-43 indicates clearly that yarn output fell away as compared with 1941-42 particularly in regard to counts above 20's. The decrease explains the rise in prices and intervention on behalf of the consumer after May 1943. The setback in cloth production recorded during 1942-43 also stands out in the official statistics but Bombay's output of coloured piecegoods actually increased. Attention may also be drawn to the large increase in hosiery. The experience of Ahmedabad was different as the output of coloured goods and hosiery in 1942-43 showed a substantial decrease. One of the distinctive features of 1942-43 was the very substantial reduction in the production of cotton goods mixed with silk or wool in the case of both Bombay and Ahmedabad. A point that requires notice in the analysis of wartime changes is the greater reduction in the output of chaddars than of dhoties, and the inconsiderable decline recorded in respect of drills and jeans, cambrics and lawns. The decline in the production of dhoties was most considerable in the case of Madras which reported an increase in the output of shirtings and longcloth, tablecloth, domestics and sheetings. The output of hosiery increased in Madras as well as Bengal while the slight fall in the output of mixtures in Bengal may be explained by reference to distinct factors.

It is noteworthy that in respect of hosiery Bengal is the most considerable producer at present, the contribution of the cottage industry also being very important. While the weight declined the numbers produced in 1942-43 showed only a small decline, indicating that lighter vests and socks were produced. Almost exceptional is the increase in the output of cloth in the U.P. especially in regard to coloured piecegoods. Roughly speak-

ing, the U.P. accounts for about 10 per cent of the total Indian output and the increase in 1942-43 when labour unrest was at a minimum in Cawnpore was a special factor in the increase in profits reported by Cawnpore mills. Another province in which textile output increased in 1942-43 was Ajmer-Merwara where the production of coarse goods showed unmistakable growth like the output of coloured goods. With such advantages as the Punjab holds at present, the increase in the output of coloured goods is not surprising but Punjab mills apparently increased their output of dhoties at the expense of other varieties, and even then the total yardage was lower. The increase in the output of coloured goods is not confined to either Bombay or the Punjab; Delhi also claimed an increase while the output of bleached and grey goods was lower than in 1941-42. The increase is satisfactorily explained by the fall in imports. Less important than Bengal is the C.P. and Berar where textile output showed the same increase as the U.P. The present partiality of investors generally for upcountry mills' shares is justified by the reference to the variations in production recorded in 1942-43. The measure of real improvement recorded in a difficult

INDIAN FINANCE

413

year in two provinces may not be apparent in the case of the States which produce over 20 per cent of the cloth. There was an increase in the hosiery produced in the States. The major influence as regards prices was the fall in imports from 181,539,000 yards to 12,544,000 yards even more than the fall in Indian output by over 384 million yards as compared with 1941-42. Allowing for the increased demands of war, the fall of over 500 million yards in cloth supplies in 1942-43 had a disturbing effect on prices though rapid adjustments in production took place.

implements would speed up the produce their success depends on the organisation of the agriculturists as well. Co-operative farming introduces rationalisation into agriculture and makes application of scientific methods to cultivation possible and profitable. Crop planning would be made easy and the vagaries of agriculture can be reduced to a minimum by co-operative effort. Those who despair of the extreme fragmentation of agricultural holdings and the excessive pressure of population on land would welcome collective farming system as an excellent solution which should be given a fair trial.

Collective Farming

While it is agreed on all hands that something drastic must be done to increase the productivity of Indian agriculture in view of the rapid increase in population all are not agreed as to the method to be applied. In his interesting article on "Collective Farming for India" contributed to the Mysindia 1943 Annual, Sir Colin Garbett, Regional Food Commissioner, Northern Area, pleads for the introduction of collective farming system to speed up the yield from land. He has taken inspiration from Soviet Russia where collective farms have accelerated the agricultural prosperity and the military strength of the State. Modifications to suit Indian conditions are however suggested. The optimum unit of a collective farm has to be bigger than a village and hence a market town near a railway station should be taken as the model for a start. An area of 50,000 acres of country side would be needed to feed the town. If 2,000 acres are deducted for the town and its green belt, 48,000 acres are available to be divided into 48 estates comprising 12 villages, 1,000 acres to an estate and 4,000 acres to a village. A Village Council would plan agricultural operations and decide how much of every crop should be apportioned for consumption and how much should be sold for the Co-operative Fund. Each household would be allotted 20 acres for cultivation and 1 acre for growing vegetable and garden produce. A Co-operative Motor Tractor Society maintained by a common fund would effect heavy ploughing in all the villages of the farming unit. In order to create a sort of interdependence between the town and the rural areas Sir Garbett proposes to make the town site the property of a corporation and give the villages a dominating interest therein by allotting 60% of the shares of the Corporation to be owned by the villages. The town with its factories and mills would be planned to the best convenience of all, and provision is made that all dividends above a reasonable fixed return would be diverted to the business concerns to cheapen water rate, the electricity and tram fares etc. A Co-operative Central Bank finances agricultural operations and the co-operative market of the town disposes the produce received from the villages. The success of the two small farms conducted on collective principles in the Rampur State are cited as proof that the system can be extended to other parts of this country as well. While the Russian collectivisation is obviously unsuited to this country at present any scheme which does not prejudice the private property can be successfully popularised if the Provincial Governments decide to give their support. The major problem of Indian agriculture is partly technical and partly organisational. While mechanisation, better fertilisers and

Famine Survey

The sample survey of the ten famine-stricken districts of Bengal, carried out by the Anthropology Department of the Calcutta University, is an eye-opener in several respects. The tragedy of scarcity which overtook Bengal last year has shaken the very foundations of the social and economic fabric of this province. The enormity of the suffering has been almost unbelievable and, in the absence of any organised attempt by the Government of Bengal to collect full and reliable data as to the incidence of famine, public spirited men like Mr. Santhanam and Mr. Kunzru toured the affected areas and published heartrending accounts of the devastation. But no one could exactly estimate the toll of lives taken by the scourge. Prof. K. P. Chattopadhyaya, Head of the Department of Anthropology, Calcutta University, has conducted extensive surveys in representative villages and has reported his findings. He has rightly discarded the method of collecting statistics from the vague statements of Choukidars and has employed the genealogical method in which each family unit has its genealogy drawn up and details are recorded on its basis. The survey covering 816 family units with a total membership of 3,840 reveals that in these groups 386, or a little over 10 per cent, died during the six months between July to December 1943. The proportion of mortality of children below 5 varied from 30 per cent to 50 per cent and among adults more men have died than women.

Regarding the total mortality for Bengal the learned Professor says "It will probably be an under-estimate of the famine to say that two-thirds of the total population were affected more or less by it. On this basis, the probable total number of deaths above the normal comes to well over 3½ millions." The figures are indeed staggering and, while the controversy regarding who has been responsible for this calamity is now futile, the lessons to be learnt for future are many. The aftermath of the evil is hardly over and in view of the enormous casualties among children the necessity of opening more relief centres and milk centres is clear. Peasantry has been uprooted and the expropriation of land under abnormal conditions has been rapid. Apart from the shortage of labour and the heavy loss of village weavers and handicraftsmen, the tendency to swell the ranks of the landless proletariat on the verge of economic collapse presents an urgent problem. It is gratifying to note that the latest Bengal Budget realises the urgency of the task and we hope that the drive for rehabilitation would be based on reliable and comprehensive statistics collected for the purpose.

Cotton Outlook

Cotton remains the most important fibre in the world but world consumption has been checked by the war. The U.S. Bureau of Agricultural Economics in reviewing the outlook urged that the upturn will be slow owing to the lack of purchasing power and the necessity for reconditioning machinery. Not only will mills destroyed or damaged require replacement, but mills in all countries will require reconditioning. It is urged therefore that considerable time will elapse before the pre-war level in regard to quantity and efficiency is attained. Rayon and staple fibre certainly will reduce the consumption of cotton after the war. The bearish note is struck also in regard to estimates of the carry-over after the war.

The world's cotton surplus has increased as important importers are out of the market. It is also assumed that the increase in U.S. stocks will be less important than the increase in foreign cotton supplies. The overseas surplus made available at lower prices may encourage the present revival of consumption, but in the U.S.A. the farm subsidy and loan programme would make prices resist the general downward trend. The U.S. cotton crop of 1943 was put in the third Bureau estimate at 11,478,000 bales considerably lower than the 1942 crop of 12.82 million bales. The reduction is conditioned by a fall in domestic consumption to 10.3 million bales this year as compared with 11.1 million bales in 1942-43. The higher average outturn of 1942 was not maintained, but since October American cotton prices have moved up and the fears as to price control have certainly passed. The main wartime development in the U.S.A., the growing of cotton not as an export crop, but as raw material for the mill industry at home, naturally claims more attention in view of the fear that overseas demand for U.S. cotton after the war may not revive. The same development in foreign trade has influenced cotton-growing in India rather than the need for more food. Producers of cotton after the war may depend less on exports than on the home market, and the level of mill profits during the war even more than the tariff on raw cotton imported, would determine the future of cotton prices. For the U.S.A. exports are always less important than for India, and it is not unlikely that the principal exporters of cotton after the war may be China and Brazil which have not a well developed textile industry rather than the U.S.A. where restriction is now independent of soil conservation or the food plans. The decline and fall of one commercial crop in the U.S.A. during the war certainly indicates the need to keep up the crop restriction programme accepted in 1942 especially as the post-war export revival would be contingent on the re-equipment of mills. In any case, the Indian mill industry should be prepared for textile exports than for cotton exports and the U.S.A. Bureau's view as to the post-war demand for machinery etc., may not affect the growth of Indian cloth exports in return for cotton because production has been expanded on the basis of reserve capacity.

Fishponds and Farming

Freshwater fish from ponds to supplement the food supply finds an advocate in Dr. S. L. Hora whose third article in

Indian Farming on the subject of pisciculture dwells on the Bengal Government's plan to improve old and derelict tanks in West Bengal for irrigation purposes. He notes that pisciculture is permanent and fishponds should be regarded like fields in view of the differences in conditions and yield. Shallow water also can be used to advantage as the growth of fish is comparatively rapid. Tanks that dry up occasionally with the bed fallow for some time are not less productive than perennial tanks. The productivity of a tank depends not on size but chiefly on its nourishing power, for a tank yields the best results when it is stocked according to the natural food or the artificial food that can be supplied from time to time. The newly-excavated or desilted tank is regarded as more or less sterile. Dr. Hora points out that the water is usually of a dirty colour and devoid of aquatic vegetation. Their plankton fauna and flora are poor. In short, they lack fish food, and for this reason the growth of fish is stunted. The deficiency of food for fish can be remedied by proper manuring with cowdung, cheap oilcake and other inexpensive material used for manuring fields. Permanent dry tanks with steep banks are not regarded as inherently superior, because the tank bed must be firm and organic debris must be limited. Epidemics affecting the health of fish have been noted, and the occasional drying up, partial desilting, and fallow of the bed are recommended. Water that is kept free of aquatic vegetation and the flow of surface drainage from adjacent ground is of little value for fish because the proper food does not enter the tank. Precautions against the breeding of mosquitoes can be adopted by putting in certain fish. In the case of tanks overgrown with water-hyacinth or other weeds, the fish suffer, and only certain types can thrive in such tanks. As to the stock that can be preserved in ponds successfully, the caution is against

overstocking. Proper food, artificial if need be, must assist the fish to grow. Productivity is increased if different varieties of fish are stocked as the fish feed at different levels and select their own food. The full value of a supplementary occupation like fishing can be ascertained without reference to the equipment required. Tanks may not give great scope to the angler looking for game fish but the close season is inescapable in any case. Something like rotation may be secured by variety, though the established preference is for carp. What can be done for riverine fish by hatcheries cannot be guessed since the rivers rise and fall and the problem of pollution is present in certain cases.

Strain in Japan

The Prefectural Governors' meeting in January and the warning given in advance to the Diet indicated that Japan's home front was not so strong as imagined. Though the accent is still laid on victory Tojo's position has weakened with the tightening of mobilisation. Decrees from the departments did not lead either to the cutting down of consumption or the increase of war production. Mention was made last year of plans ranging from manpower to wooden ships and Tojo's programme in 1943 arising from the decisions of Prince Konoye in 1940 created the impression that all-out effort was less likely than ever. If General Tojo has enjoyed a longer term than other Japanese Premiers, his difficulties are not less acute. Plans for home defence have given an edge to the impression produced by a U.S. submarine's feat in the Straits of Tushima. Japan's perpetual farm crisis has not changed greatly by the war and price control was no more perfect than in India. Japan, in spite of the spoils of distant war, has experienced famine continuously from 1939 and the Government has undeniably shifted its ground. In September 1943, the Cabinet decided that private industry be returned to its former status. The decision implies the failure of totalitarianism and may even presage a new attitude to the European ally. The Cabinet that launched State socialism failed, and the late admission of failure is reinforced by the warnings in January as to the means of defence.

Strain at home led to an unexpected revival of individualism. Big business asserted itself though the politicians had lost importance. The whole system of zoning and directives had stood its trial and failed and the most recent indications are unpropitious for the projected increase in taxation. A large-scale dispersal of population or de-concentration of industry now exposes Japan's economic weakness to the full and opportunities for defeating Government decisions undeniably exist for Big Business, traditionally Liberal and averse to the excesses of militarism. Shipping and aircraft needs will determine war effort in the near future but shortages of steel and skilled labour will have a direct effect on the plans to reduce vulnerability. The last conditions neutrality in the Far East even more than the armed vigilance of the Soviet Union. In three years total war effort desperately publicised yielded not very impressive results. Dissatisfaction led to complaints of official slackness from the Tokio Mainichi which said bluntly that the people were tired of speeches; they wanted results. The home front had weakened before the external danger appeared. The strain of war from

July, 1937, was telling, and the centre of co-prosperity had no share in prosperity last year. When mention is made of the addition to Japan's resources in 1942, it is proper to remember that it has been without any effect on Japan's impaired standards of life and popular dissatisfaction was coming to a head.

Cartels on Trial

Enquiry in the U.S.A. as to the working of international cartels has led to a critical assessment of their working. Cartels, generally regarded as a projection of trusts, are largely defended as a means of economic recovery. The European steel industry flourished only after the cartel consolidated its position, and the main justification for cartels may still be sought from Chile's nitrate industry to the electric lamp Ring in Britain. The cartel is a consequence of competition reflected in price-cutting and takes many forms from liner conferences offering rebates to agreements regarding sub-contracting work. The theory of economic stabilisation receives its main support from the working of cartels. Prices and quality are guaranteed and the marginal form is given a chance to survive the mergers that anticipate cartels. The whole scheme of quotas under wartime controls contains a guarantee as to the efficacy of cartels. Industrial concentration on the basis of nucleus factories is equivalent to a recognition of cartelisation. Cartel agreements are as effective as tariffs, for the home market usually is secured by independent arrangements. As for the producers progress is ensured by stability of profits and the most progressive concerns naturally are those functioning under cartel arrangements at home. International agreements do not prejudice competition or technical progress and the main advantage to the consumer has been certainty of supplies and maintenance of quality. The main objection to cartels has been the secrecy enveloping

the agreements reached usually in a small neutral capital. Mrs. Joan Robinson has lately urged that cartels do not go with democracy and there is no point in the reference to the conscience developed by industrial cartels. Cartels are never perfect monopolies and the independents are always able to carry on. In regard to industrial research, cartels have fully justified themselves in the past. Lord McGowan has advanced also the plea that in regard to working conditions and labour welfare cartelised industries can claim to

WAXING MUSICAL

There is much comfort in the lilting music of the home country; it helps prisoners of war to chase away the gloom of long hours spent in captivity.

The Indian Red Cross announce that a number of cases of gramophone records have recently been despatched to Indian Prisoners of War, while another large consignment will shortly be sent off.

This is only small channel through which we strive to alleviate the suffering of our fighting men.

The very numerous branches of our work are all entirely dependant on your support.

Please send a regular donation to the Hon'y. Treasurer, Indian Red Cross Appeal, C/o Imperial Bank of India, Strand Road, Calcutta.

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94-A. It must be understood that the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinion expressed with regard to them.

A copy of this prospectus has been filed with the Registrar of Joint Stock Companies, Travancore, Trivandrum, and a copy has been delivered to the Registrar of Companies in Madras. The subscription list will open at 10 a.m. on Thursday, 9th March, 1944, and close on as it is estimated that the capital offered for subscription has been taken up.

PROSPECTUS TEEKOY RUBBERS (INDIA), LIMITED

(Incorporated in Travancore under the Travancore Companies Act IX of 1114 with Liability of Members Limited.)

REGISTERED IN THE 1ST MARCH, 1944.

The Company has its office of business in British India.

AUTHORISED & ISSUED CAPITAL Rs. 16,00,000

Divided into 1,00,000 Ordinary Shares of Rs. 10 each AND

60,000, 6% Travancore Tax-free Preference Shares of Rs. 10 each

PAYABLE:

Ordinary Shares	Rs. 5 on Application
	Rs. 5 on Allotment
Preference Shares	Rs. 5 on Application
	Rs. 5 on Allotment

The Company also offers for Subscription 6,000 Five and a half per cent Travancore Tax-free Debentures of Rs. 100 each ... Rs. 6,00,000

The full value of the Debentures applied for must be paid on application.

The signatories to the Memorandum of Association, the Directors and their friends have agreed to subscribe for 15,000 Ordinary Shares of Rs. 10 each, 10,000 Preference Shares of Rs. 10 each and 1,500 Debentures of Rs. 100 each. The balance of the Issued Capital and Debentures, viz., 85,000 Ordinary Shares of Rs. 10 each, 50,000 Preference Shares of Rs. 10 each and 4,500 Debentures of Rs. 100 each are offered for public subscription.

Preference will be given at the time of allotment to applicants for both Ordinary and Preference Shares.

PREFERENCE SHARES

The Preference Shares confer on the holder, from the date the Company commences business, a right to a fixed Cumulative Preferential Dividend at the rate of 6 per cent per annum, free of Travancore Income-tax, on the capital for the time being paid-up thereon, and the right in winding up to the repayment of capital and arrears of dividend whether declared or not, in priority to the Ordinary Shares, but do not confer any further right to participate in the profits or assets.

DEBENTURES

The Debentures form a first mortgage on the immovable properties of the Company. They carry interest at 5½ per cent per annum, free of Travancore Income-tax, the interest being payable half-yearly. The first payment of interest will be made on the 30th September, 1944, calculated from the date of allotment. The Debentures are redeemable at par on the 31st March, 1959. The Company, however, reserves the right to redeem annually by lots up to 10 per cent of the debenture debt outstanding for the time being, after the 31st March, 1949.

DIRECTORS

1. KHAN BAHADUR ADAM HAJEE MAHOMED SAIT, Merchant, Madras; Director, The Reserve Bank of India, The Cochin State Power and Light Corporation, Ltd., Rane (Madras), Ltd., Mysore Plantations, Ltd., and the Vanguard Fire and General Insurance Co., Ltd.
2. RAO BAHADUR C. GOPAL MENON, President, Southern India Chamber of Commerce, Madras; Director, Madras Co-operative Central Land Mortgage Bank, Ltd.; and Local Member, Reserve Bank of India (Southern Area); Director, Mysore Plantations, Ltd.; Dubash, M/s. Wilson & Co., Ltd., Madras.
3. W. L. KNOPP, Esq., Partner, M/s. Maconochie & Co., Stock, Share, Exchange and Freight Brokers, Madras; Director, McDowell & Co., Ltd., Madras.
4. MR. J. THOMAS, KAYALACKKOM, Planter, Palai, Travancore; Proprietor, Valakam Tea Estate, and Mannankandam Estates.
5. MR. K. G. JOSEPH, Banker, 362, Esplanade, Madras; Joint Proprietor, Karikode Rubber Estate, Konthalvally Rubber Estate; and Director, Palai Central Bank, Ltd. (Trustee for Debenture Holders).
6. MR. K. M. AUGUSTINE, B.A., B.Com., Banker, Palai.
7. MR. K. GEORGE THOMAS, Planter, Palai; Director, Palai Central Bank, Ltd.; The Mysore Plantations, Ltd.; and Proprietor, Chimeni and Timiri Estates, Pilicode, South Kanara; Managing Director, East India Agencies, Ltd. (Ex-Officio Director).

REGISTERED OFFICE

PALAI, TRAVANCORE.

OBJECTS OF THE COMPANY

The Company has been formed for the purposes set forth in the Memorandum of Association and primarily with the object of acquiring from the Teekoy Rubber Estates, Ltd., 5 & 7, East Cheap, London, the Rubber Estates known as the Teekoy Estate in the Kottayam Division in Travancore (recognised as one of the finest sterling-owned Rubber properties in India), with the Crepe Factory Buildings, Machinery, etc., thereon and working and developing the same.

The Estate

This large property of 1,871.96 acres in extent, lies in the rich fertile valley of the Meenachil River. The river flows right through the estate. Suspension Bridges connect the blocks on either side. It is near Palai and Mundakayam, two well-known Rubber centres, and is 28 miles from Kottayam, the Headquarters of the Indian Rubber Production Board and the chief market for rubber in India. The Kottayam-Poonjar Government Road, on which there is an hourly bus service, runs close to the Estate. Right down from the Estate to Cochin Harbour, there is continuous water communication.

The Tenure

The tenure of the land is non-redeemable perpetual lease.

Budded and Un-budded Rubber

The Estate has a planted area of 1,454 acres, of which an area of 1,178 acres is mature un-budded rubber and an area of 276 acres is budded rubber, which commenced yielding two years ago. Further, there are 416 acres of first class virgin forest, fit for cultivation of rubber, hill-paddy, coconut palms, etc.

Maintenance

This Estate has been cultivated on scientific lines and worked, maintained and tapped with the utmost care. The trees are healthy and the bark thick and even. Spraying and manuring have been done systematically although, in such rich soil, little manuring is necessary. The net-work of motorable roads and the bridges on the Estate facilitates supervision and the easy movement of labour.

Crepe Factory

The Estate has a well-built Crepe Factory with up-to-date machinery, such as only a few other Estates own. The factory is equipped with one 80-H.P. engine and one 42 H.P. engine, rollers, scrap washer, washing mill, water pumps, electricity generating plants, etc. Practically all latex is manufactured into lace crepe which invariably fetches a higher price than smoked sheets. All the No. 1 crepe is being sold as standard.

Buildings

There are two spacious bungalows used by the European Superintendents, 32 buildings for staff quarters, store-houses, etc., and 18 sets of cooly lines, all in excellent condition.

General

The Estate is in a region closely populated by prosperous, middle-class peasants, where land is fruitful and difficult to obtain and changes hands from anything between Rs. 1,000 to Rs. 1,250 per acre. Other considerations apart, the basic value of land in this region may be expected to remain more or less constant. During the course of the worst depression, tapping was interfered with on this estate for a year only, which fact may be attributed to its consistent yield and economic productivity.

Estimate of Crop and System of Tapping

The Crop estimated by Mr. A. W. R. Bertrand, well-known in Ceylon Planting Circles, for the confidential information of the Directors of the Company in England, during November, 1942 was

550,000 lbs. But from the figures obtained from the Estate, the actual crop harvested during the financial year 1942-43 exceeded the estimate by some 12,800 lbs. This crop is obtained by tapping half spiral on alternate days with a long rest during the months of June and July. Mr. Bertrand observes, "there has obviously been no pressing for crop at the expense of bark which is abundant".

Profits

The estimated net profits and dividends payable have been worked out as under, for a crop of 550,000 lbs. only, though the actual crop for 1942-43 was 562,800 lbs.:—
Net Sale Proceeds:—

	Rs.	Rs.
1. 452,000 lbs. first quality crepe at 77 cents per lb.	3,48,040	
2. 98,000 lbs. of other quality crepe and scrap at 65 cents per lb.	63,700	4,11,740

Less—

A. Production cost for a total of 550,000 lbs. (including all overhead charges and Managign Agency Commission of 7½ per cent) computed at 30 cents per lb.	1,65,000
B. Interest on Debentures	33,000
C. Dividend on Preference Shares	36,000
D. Provision for Taxation	25,000
	2,59,000
	1,52,740

The sum of Rs. 1,52,740 thus available for distribution works out to over 15 per cent on the ordinary paid-up capital. The Directors will, from time to time, set apart such sums as they deem advisable towards debenture amortization.

On this estate where labour is plentiful and cheap, where there is a crepe factory, fully capable of manufacturing the entire output of rubber and where the work is not handicapped by intermittent malarial attacks, the cost of production can be kept lower than 30 cents per lb., liberally estimated above.

Payment to Vendors and Disposal of Capital Moneys

The option to purchase the estate was taken by Messrs. The Travancore Agencies, Kottayam, subject to the sanction of the British Treasury and the Government of India, for a consideration of £150,000 approximately Rs. 20,05,000. The Travancore Agencies subsequently assigned their rights to Mr. K. George Thomas, a Director of the Company, for an all-inclusive consideration of Rs. 75,000 by an agreement, dated 8th September, 1943. Mr. Thomas has transferred the benefits under the above agreement to the Company free of consideration. A sum of Rs. 22,00,000 will be required for the purchase of the Estate, for preliminary expenses, etc., as under:—

	Rs.	Rs.
Purchase Price	20,05,000	
Option Money	75,000	
Preliminary expenses	25,000	
Brokerage	40,000	
Conveyance, Interest, Stamp Duty and Working Capital	55,000	22,00,000

Valuation and Capitalization

The total issued capital inclusive of Debenture Stock is Rs. 22,00,000 which may be distributed as follows:—
1,178 acres of un-budded rubber at Rs. 1,089

	Rs.	Rs.
per acre	12,82,842	
276 acres of budded rubber at Rs. 1,750 per acre	4,83,000	
Crepe Factory, Buildings, Machinery, etc. 416 acres of virgin forest fit for cultivating rubber, hill-paddy, coconut, palms, etc., at about Rs. 383 per acre	1,59,158	22,00,000

With the redemption of Debentures the price per planted acre of Teekoy will be reduced to Rs. 784 for un-budded rubber and Rs. 1,260 for budded rubber.

Bearing in mind the suitability of the soil, agreeable climatic conditions, extent and yield, coupled with labour and communication facilities, Teekoy may be reckoned among the pre-eminently sound rubber concerns in India.

Minimum Subscription

The minimum subscription on which the Directors will proceed to allotment is shares of the face value of Rs. 16,00,000. The balance of money required will be provided for by raising a sum of Rs. 6,00,000 by way of Debentures as stated previously.

Motors and Goodwill

No amount has been or is intended to be paid to anybody for promoting the Company or in the way of goodwill.

Founders, Management or Deferred Shares

There are no Founders, Management or Deferred Shares.

Directors' Qualification and Remuneration

The qualification of a Director is the holding in his own right of ordinary and/or preference shares for the face value of Rs. 2,500. The remuneration of a Director including the Ex-Officio Director is Rs. 50 for every meeting of the Board or its Committees, attended by him. The Directors may also allow and pay to any Director such remuneration as they may consider fair and reasonable for extra services rendered by him, in addition to his specified remuneration.

Underwriting and Brokerage

The Preference and Ordinary Capital amounting Rs. 16,00,000 have been underwritten by Messrs. Maconochie & Co., Stock and Share Brokers, Madras, and M/s. Batlivala and Karani, Stock and Share Brokers, Bombay, for a consideration of 2½ per cent. The Directors are of opinion that the resources of the abovementioned Underwriters are sufficient to discharge their underwriting obligation. The Underwriters may at their discretion pay out of their commission a brokerage of 1 per cent to recognised Brokers in respect of allotment on ordinary and preference shares only, on applications bearing their stamp. No brokerage or commission will be paid on applications for Debentures.

Preliminary Expenses

The preliminary expenses (excluding brokerage) are estimated at Rs. 25,000 and are payable by the Company.

Contracts

The following contracts have been or are intended to be entered into (1) Between Mr. Gopala Pillai of the Travancore Agencies, Kottayam, and Mr. Chandhy Itty of Kottayam and Mr. K. George Thomas, as described elsewhere in this prospectus. (2) Between Messrs. Darragh Smal & Co., Ltd., Alleppey, Attorneys for the Teekoy Rubber Estates, Ltd., East Cheap, London and Mr. K. George Thomas for the purchase of the Teekoy Estate for a consideration of £150,000 (approximately Rs. 20,05,000). (3) Between Mr. K. George Thomas and this Company assigning Mr. Thomas' rights as aforesaid. (4) Between this Company and Messrs. East India Agencies, Ltd., appointing the latter as Managing Agents as hereinafter mentioned. (5) Underwriting Agreement between this Company and Messrs. Maconochie & Co. (6) Underwriting Agreement between this Company and Messrs. Batlivala and Karani.

Inspection of Documents and Contracts

A copy of the Travancore Companies Act IX of 1114, a copy of the Memorandum and Articles of Association of the Company, the Title Deeds of the Property, the Agreement with the Vendors, the Agreement with the Option Purchasers, Agreement with Mr. K. George Thomas, Draft of the Trust Deed in respect of the Debentures and the Agreements with the Managing Agents and the two Underwriting Agreements can be inspected during business hours at the Registered Office of the Company at Palai, Travancore, and certified copies of the same at the Office of the Legal Adviser of the Company at Kottayam and Madras.

Voting

The Articles provide that on a show of hands every member present in person shall have one vote, and on a poll every member present in person or by proxy shall have one vote for every Ordinary Share and one vote for every Preference Share held by him.

Transfer of Shares

The Directors may decline to register any transfer of shares without assigning any reason therefor and they may also decline to register any share on which the Company has a lien.

Administration

The Directors intend to retain the services of Mr. N. B. Hartley, the present Superintendent of the Estate, so that his long experi-

be better than less advanced industries. Cartels incidentally remove or modify industrial fluctuations, and he indicated in a letter to the Times in October that like patent agreements, cartel agreements could be registered and the charge of secrecy could be met. Current dislike of the cartel as a German invention lies behind the theory as to the peril from armaments or other cartels. It is however proved that cartels have no real influence on government policy, and enquiry into their merits must not be tempered by a belief that synthetic rubber development was held up in one country by a secret understanding as to use of patents while it made progress in another. Cartels brought internationalism into play and got over obstacles reared by economic nationalism in the past everywhere. Producers' agreements in respect of primary commodities are hardly distinguishable from manufacturers' agreements, and cartels, trusts and monopolies are, in the main, the fruits of economic progress.

The Sind Budget

Vital changes in the finances of Sind are indicated in the budget for 1944-45 presented by Sir Ghulam Hussain Hidayatullah. The autonomy of this province had till now been prejudiced by the heavy Barrage

Debt and the dependence on subventions from the Centre. The Budget proposals reveal that wartime developments have proved a blessing in disguise. Bright future is indicated for the finances of Sind as the two important handicaps, viz., debt and insecurity of post-war years, are successfully tackled in the Budget. The revised estimates of revenue for 1943-44 come to Rs. 865 lakhs and the expenditure during the same period is Rs. 622 lakhs. For 1944-45 the revenues are estimated at Rs. 797.27 lakhs and the expenditure at Rs. 797.04 lakhs, leaving a surplus of Rs. 23,000. The grain export policy and the price-control policy of the Sind Government have yielded a huge profit of Rs. 2½ crores out of which Rs. 189 lakhs for a Land Revenue Equalisation Fund and Rs. 50 lakhs for a Post-war Development Fund are provided for. The Land Revenue Equalisation Fund is formed to meet any failure in any year as a result of the sliding scale basis of assessment. The other fund is evidently intended for the development schemes to be put through just after the cessation of hostilities. The provision for the above funds would certainly add to the financial strength and stability of Sind and enable the Sind Government to execute bold plans of development without being bothered about the current revenues. Criticism is heard that the windfall profits

from the grain sales should have been spent for the present amelioration of the ryot, as previously promised by the Premier, and not blocked for future utilisation. The most important feature of the Budget is the proposal to capitalise the subventions to Sind and pay off the Barrage Debt. The Government of India have agreed to capitalisation at the rate of 4½ per cent, which would mean a 'present value' of the subvention on April 1, 1944 of approximately Rs. 1,470 lakhs. The Barrage Debt at present stands at Rs. 2,040 lakhs. The difference viz., Rs. 570 lakhs, will be paid in one lump sum when H. M. G. approve the scheme. Out of the free balance of Rs. 754 lakhs at the end of the current year the above sum of Rs. 570 lakhs would be paid and a net balance of Rs. 184 lakhs would be left over. If the dead-weight of the debt is removed Sind would have achieved financial freedom from the Centre and her borrowing capacity would be greatly enhanced. She would emerge from the war fully capable of launching ambitious schemes of social and economic development. Those who criticise the Budget estimates should remember that the galloping currency inflation in the country is making accurate estimates a well-nigh impossible task in other provinces as well. The abolition of the electricity duty is sure to be welcomed but a reduction in the

entertainment tax would have pleased many. Nation-building departments have suffered mainly owing to shortage of personnel.

Value of Rural Roads

Last year the I.R.T.D.A. undertook a special investigation for a special purpose. The economic value, present and future, of roads was established in two pilots surveys where the main consideration was to prove that the road held a pivotal position in rural economic developments. The two talukas in the Kolaba district chosen for certain distinctive reasons were different from the dry taluka in the Satara District. The two surveys in Bombay were carried out with the help of officials and local boards, and interesting conclusions as to the net profit of roads as an investment are furnished on the assumption that the capital requires a twenty-year loan borrowed at 3½ per cent with the yearly provision of 5 per cent for repayment. The economic benefits of roads are held to be substantial, and an agricultural authority is cited to show that more money crops would be grown and well irrigation extended if access to markets through road development was guaranteed. The investigation was not meant merely to support the view that every village with 300 inhabitants requires a road or that a special ratio between square area and road mileage should be preserved.

The pilot survey was primarily a task for road engineers and the economic data collected as to crops and prices, freight and markets was ancillary to the investigation of siting, routing and available road material. Prospects in the future for fruit-growers and market gardeners must be related to the road development schemes. A minor purpose of road building is as a check on erosion. It is noted that available irrigation facilities have not been fully utilised owing to lack of roads. The forest products, too, command a limited market and the distant issue of popular approval was settled by an offer by villagers of manual labour during their free time for construction of access roads. Only a part of cost would fall on Government and employment for pioneer companies may be found after the war according to the sponsors. Since the enquiry was meant to show that a few railway stations are not enough for a whole taluka, the estimates as to saving in cart hire, time saved and new markets have a special meaning. With poor surfaces and no bridges, existing roads, in comparison with roads built according to a plan, may appear a poor starting-point for the limit of .925 miles per square mile of agricultural area. It must be remembered that the pilot surveys treated only selected rural areas in relation to their known requirements. For the three areas (one vulnerable to famine) the road development schemes would cost Rs. 61.30 lakhs but the net annual gain less the debt service, is put at Rs. 7,64,987. The existing ratio of roads to cultivated area in British India is 0.16 mile per square mile so that the pilot survey readily gives the average to work up to in the future. In this connexion the I.R.T.D.A. urged that road construction should work outwards from areas nearest to big towns and the full economic value of good roads would be demonstrated to those ill-served by roads. Direct return in the form of taxes and tolls may not be considerable, but the value of roads for agricultural development must be very considerable, and the administration

also would gain in many ways, apart from its putting men and machines to work after the war. While the post-war communications plan is getting ready, the value of pilot surveys requires no proof, but the direction to prepare plans and estimates on the lines suggested in the survey cannot be lost on those for whom roads are more important than capital goods imports.

Indian Bank's Progress

Confirming anticipations expressed last year the increase in deposits and profits reported by the Indian Bank Ltd., stands out in the balance-sheet and profit and loss account for 1943. In a single year deposits have risen from Rs. 5.23 crores to over Rs. 8.13 crores. The increase in the bank's capital has been followed by a further recovery, far beyond the point noted in 1941-42 and the substantial increase in Advances reflects the prosperity that has supported the rise in net profit from Rs. 2.02 lakhs to Rs. 10.84 lakhs. On any showing, this is remarkable proof of the bank's growth (attested by the opening of three branches and five sub-offices last year). The Directors record due satisfaction with

the results and look forward to the maintenance of profits at a high level. Only part of the increase in Deposits is accounted for by Advances, and more than half the deposit liabilities are covered by investments totalling Rs. 4.19 crores in the balance-sheet as on 31st December, 1943. The cash balances totalling Rs. 159.93 lakhs point to a fully liquid position. The increase in Advances from Rs. 212.4 lakhs lies behind the increase in profits last year and the distribution of 2 per cent bonus to shareholders indicates that the appreciation in the value of the shares is supported by an increase in earning power.

The remarkable increase in profits accounts for the increased provision for taxation as well as the enhanced appropriation for the Reserve Fund raising it to Rs. 30.5 lakhs against the paid-up capital of Rs. 28.9 lakhs. From the first half-year's profits Rs. 98,200 was allocated to Reserve Fund, and the increased provision now made is of special interest. The main feature in the balancesheet, in the view of many, would be the increase in Invest-

TEEKOY RUBBERS (INDIA), LIMITED, PROSPECTUS—(Contd.)

ence and knowledge may be available to the Company. Subject to the control and supervision of the Board of Directors the General Management of the Company will be in the hands of Messrs. East India Agencies, Limited, as Managing Agents for a period of ten years from the incorporation of the Company. The Managing Agency agreement will provide that the Managing Agents be remunerated by a commission of 7½ per cent of the net profits of the Company as defined in the Travancore Companies Act with a minimum of Rs. 250 per month, that the Managing Agents shall be entitled to nominate one Director to the Board and to receive an office allowance of Rs. 750 per month which shall be exclusive of salary of staff employed on the business of the Company and all expenditure on behalf of the Company including expenditure on postages, stationery, telegrams, and the like which shall be reimbursed by the Company to the Managing Agents. The Director nominated by the Managing Agents will be deemed an Ex-Officio Director.

Interest of Directors

Mr. K. George Thomas is interested as member and Director of the Managing Agency Firm. He is also interested to the extent of his agreement with the Option-holders and the Vendors. The sum of Rs. 1,00,173-14-7 paid by Mr. Thomas as advance to the Vendors and Rs. 75,000 paid by him to the Option-holders shall be made good to Mr. Thomas by the Company with interest at 5 per cent. Mr. W. L. Knopp is interested to the extent of the underwriting commission as a partner of one of the underwriting firms. No other Director is interested in the promotion of the Company save to the extent of his holding of shares, and the sitting fees he may receive.

Application for Shares and Debentures

The Application for shares or Debentures may be made on the form accompanying this Prospectus or written up or typed and sent to the Company's Brokers, Bankers or the Registered Office of the Company at Palai, Travancore, together with a remittance for the amount payable on application. The Directors reserve to themselves the right to reject any application without assigning reasons therefor. Where no allotment is made the deposit will be returned in full.

Dated, this 1st day of March, 1944.

1. (Sd.) ADAM HAJEE MAHOMED SAIT.
2. (") C. GOPAL MENON.
3. (") W. L. KNOPP.
4. (") J. THOMAS KAYALACKAKOM.
5. (") K. G. JOSEPH.
6. (") K. M. AUGUSTINE.
7. (") K. GEORGE THOMAS.

Directors.

Application and remittances will be received at the Offices of:—

UNTOLD SERVICES By CANVAS & TARPAULIN

There are ever so many things which are in daily use and which give you so much valuable service in the day-to-day life. Yet we seldom care to speak of them. The comfort we so eagerly desire after a day's tedious work, the convenience we want, the rural river transport, the motor transport by land, the entertainments we so often seek for, etc., etc., are all obtained by the use of Canvas and Tarpaulin.

It has now become an essential commodity for War services too. Just as the QUALITY of equipment is indispensable for winning the war, so also the QUALITY of CANVAS AND TARPAULIN is indispensable to offer the needed comfort or rest both in peacetime or wartime.

And the fact that HARTON'S Canvas and Tarpaulins are so much in demand is in itself a proof of their superior quality.

61, HARRISON ROAD, CALCUTTA.

It is easy to earn
But difficult to save
We can help you to create a substantial fund by
regular monthly payment of Rs 2/8/- to Rs. 10/-.
The deposits look negligible but, after ten years,
it will yield you One Thousand Six Hundred
and Thirty Rupees
Let us initiate and guide you in the saving habit.
Money saved is the only money earned.

Few people in India, big or small, seem to have taken note of the fact that the retirement of Sir William Lamond, the Managing Director of the Imperial Bank of India, is drawing near. Doubtless, when he lays down his office, the Press will notice it and there will be paragraphs, editorial and other, with tributes to Sir William. But what I mean, however, is that hardly any of the big men in our public or business life seems to have recognised that it will be anachronistic, to say the least of it, to allow the appointment of Sir William's successor to be done in the old routine way. I have nothing to say personally against the few top men in the Imperial Bank who could, in the old conditions, rightly aspire to succeed their present Chief. I may claim to know a good few of the senior officers of the Bank in each of the three circles. They are all keen men who have given of their best to the Bank. If matters of high policy were not involved, it could certainly constitute a serious injustice to baulk the best of them of this prized job. But no. Matters of high policy are involved in the choice of Sir William's successor. The Imperial Bank is not an ordinary commercial bank built up by the sacrifices of the shareholders and the business acumen of their nominees on the executive. It is the result of the amalgamation of the three Presidency Banks which owed their prestige and strength to their position as bankers to the Government.

The Imperial Bank was formed under a special act of the Central Legislature and was intended at the time to grow into India's central banking institution. Special privileges were conferred on it for that reason, privileges which the establishment of the Reserve Bank of India has not affected. On the other hand, the coming of the Reserve Bank, while it has not affected the prestige of the Imperial Bank with the depositing public or its command of resources for investment and advances, has removed the restrictions on its activities in commercial banking. The character of the Imperial Bank as in essence a public institution has not been affected. When the Imperial Bank of India Act was passed and later modified in order to accord with the provisions of the Reserve Bank of India Act, this aspect was borne in mind. The obligation to open new branches and to Indianise the administration was laid on the Bank; and nothing has happened to detract from the claim of the State to interfere in the Bank in the interest of the country. On the other hand, the manner and spirit in which Indianisation has been carried out may well be said to have strengthened such claim. And as for the way the Bank

Clive Street Gossip

Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like it)

has functioned, even the authorities would think it an extravagant claim in their behalf that the Imperial Bank has borne the brunt of India's industrial and economic development. That is good reason, surely, why public interest in the Imperial Bank should be revived and routine promotions made to give way to the appointment of a suitable Indian as the Managing Director.

As I have said before, the demand that the Imperial Bank should have an Indian at its head is in no sense a reflection on those who may legitimately look forward to succeeding Sir William. Nor is the zeal for a change an index of my feelings towards Sir William. I have been privileged to know Sir William fairly intimately for near two decades. He was marked out at quite an early stage for a distinguished career. When the Banking Committee was appointed he was the obvious and undisputed choice for representing the Bank. And when the Committee functioned Mr. (as he was then) Lamond had always his contribution to make to the deliberations. If I may let out a secret, it was while Mr. Lamond and I were returning from Poona to Bombay on the Deccan Queen, that I mentioned to him that Sir Osborne had more or less made up his mind on Mr. Lamond being promoted to managing Governorship. At that time Mr. Lamond's permanent job was Deputy Secretary in Bombay. He was Managing Governor of the Imperial jointly

with Sir Osborne Smith and when the latter went over to the Reserve Bank, Sir William enjoyed undivided authority over the Imperial, though under the less grandiloquent style of Managing Director. Sir William's regime has been characterised by a vast expansion in the resources of the Bank.

But Indianisation, I am sorry to say, has languished all along. It was more than two decades ago that the policy of Indianisation was enjoined on the Bank and a beginning was made. Indians, well-educated, well-connected, were recruited as Probationary Assistants on terms which held out to them the prospects of jobs as lucrative and important as those open to the European members of the Bank's Staff. But for a long time, what was called the Staff Officers' Cadre was in effect the exclusive preserve of Europeans. Only a small infiltration of Indians was allowed. Even they were denied the scope allowed to the average European member of the Service. Though Indianisation is more than two decades old, not one Indian has been appointed to the place of the Chief Accountant or the Secretary and Treasurer of any of the three circles. I doubt if an Indian is the agent in any of the bigger branches. Surely, no one can have the temerity to suggest that Indians have not the capacity necessary for filling these jobs. Indians have filled far higher, far more momentous and far more exacting jobs than those which are found in the Imperial. Why, when you remember

that the Governor of the Reserve Bank is an Indian and only Indians have built up and are running such institutions as the Central Bank of India, you can't but feel that Indians in the Imperial Bank have been just kept down.

Of Indian staff officers in the Imperial Bank, I said they have fared none too well. I remember what difficulties my friend, the late Mr. V. A. N. Iyer, encountered when he sought to avail of the privileges of his position to spend his furlough period abroad and broaden his knowledge and outlook. The rules applying to staff officers had been drawn up to suit European recruits, at a time when the intrusion of Indians was not apprehended. They provided, therefore, for six months leave and free passage to London. And when Iyer sought to make use of this provision, he was told the matter was under consideration. Well, the matter was considered and consideration led to a revision of the rules which substituted "the place of birth or domicile" in place of "London". So that the British members of the Service got passage money to take them farther than London, while the Indians could only proceed to some place within the country. To Durga Charan Bhattacharjee, it meant no more than a first class tram ticket from Strand Road to Shambazar. But new rules cannot

affect old recruits and Mr. Iyer fought and won his point. His place in the Bank was thereafter no bed of roses. Of the pin-pricks of enraged officialdom, he had plenty. He was sent from the Bengal to the Madras Circle, for a premature death.

The lower cadres of probationary assistants have fared even worse. Their original terms promised increments and promotions which the authorities have not felt called upon to stick to. The Depression, I believe, furnished a pretext for throwing those promises to the winds. But better times have not brought them better conditions. Though the Probationary Assistants were meant to be the seed bed for the higher grades of officers, they were themselves divided into three grades; and their aspirations were limited to promotions from a lower to a higher grade. But they have been handy in developing the new branches, which were a dead loss under the costly management of European agents, and getting them on to the right side of the books.

The Probationary Assistants were not men of lesser calibre. The majority of them could certainly have done better in life if they had not allowed themselves to be lured by big promises into taking service with the Bank. They had given evidence of ability even in the restricted scope which was afforded to them. They were availed of therefore to strengthen the weak spots of the Bank, the new branches which the Bank had to open in accordance with obligations imposed on it by the Legislature. But what is the return for such work? The prospects of Indians seemed at one stage to be bright, that is, when Mr. Bunbury declared in Bombay in the time of Sir Osborne Smith that recruitment of foreigners for service in the Bank had been stopped. I am not sure that is the position to-day. Indians are as far as ever from positions of importance.

One might think that I have made large assumptions about the ability of the Indians in the Bank's service. But it is within the knowledge of everyone that the Bank has recently lost some of its able and talented members of the lower cadres to new banks. When old hands leave their institutions for new ones, I believe it is a serious reflection on the way they had been treated. I cannot believe the difference of a few tens or even a hundred in salary can adequately explain the change. Perhaps, in the case of the top men of a new bank, there is the prestige and importance of a high position. But in other cases, there is a case against the former employer. The truth is that in the Imperial Bank, Indianisation was never seriously thought of. The great steel works at Jamshedpur was thoroughly Indianised in less than two decades. And the ability required is far higher in quality more diverse and more difficult to secure or train. If the Imperial has such a poor record in this matter of indisputably national importance, it is time that the Central Board of the Imperial sat up and considered what should be done.

I maintain that without an Indian at the head of the Bank, Indianisation is next to impossible, whether of the personnel of the institution or of the spirit of its work.

ing. It is up to the public and the Central Board to ensure that Sir William is succeeded by an eminent Indian who can be accepted by the senior men who are now in the Bank as their chief and who will thus secure their co-operation.

It is not alone a question of rendering justice to the Indians on the staff of the Bank. By all tokens, we are living on the eve of planned economy. Sooner or later, the war will be over. And Government and people are alike in the mood to put their shoulder to the wheel of econo-

GOVERNMENT OF INDIA

Department of Supply, Calcutta

In pursuance of the decision to canalise all industrial demands for imported non-ferrous semi-manufactures and non-ferrous alloys through specified importing agents, the Government of India have decided to appoint the following firms as importing and distributing agents:—

- In the Calcutta area.**
- (1) Messrs. Jeewanlal (1929), Ltd.
 - (2) " Shaw Wallace & Co.
 - (3) " Volkart Brothers.
 - (4) " Pragdas Girdhardas.
 - (5) " Parsotamdas
- Narsingdas.**
- (6) " Pragdas Mathurdas.
- In the Bombay area.**
- (1) Messrs. Greaves Cotton & Co., Ltd.
 - (2) " Salem & Co.
 - (3) " Fulabhai & Co.
 - (4) " Soorchand Kewaldas.
 - (5) " The Indian Standard Metal Co., Ltd.
 - (6) " M. Gulamaly Abdulhasien & Co.
 - (7) " Shalebhoy Tyabjee & Sons.
 - (8) " Pragdas Mathuradas.
 - (9) " H. S. Mahomed.

In the Madras area.

- (1) Messrs. William Jacks & Co., Ltd.

In the Hyderabad State.

- (1) Messrs. R. M. Trivedi & Sons.

In the Delhi area.

- (1) Messrs. R. Wright & Partners Ltd.

In the Lahore area.

- (1) Messrs. Ashok Brothers.

All consumers, except Government Department and Railway administrations, requiring the following types of non-ferrous semi-manufactures are advised to apply to these agents, on prescribed forms (to be obtained from them), attaching to their application a certificate from a certifying authority that the demand is essential. A list of the certifying authorities will be found on the reverse of the prescribed form. No application from consumers for imported material will, in future, be accepted direct by the Non-Ferrous Metals Controller.

Non-Ferrous semi-manufactures, such as:

- Rolled and extruded shapes (other than produced in India);
- Rods and bars (other than produced in India);
- Pipe and tubing.

mic progress long stuck in the bogs of mental and physical inertia. Progress in planning is unthinkable without the country's foremost banking institution pulling its weight. Without an Indian at its head, the Imperial will be no great aid in doubling the per capita income.

I know, this suggestion involves the obligation to suggest suitable names. I would rather not suggest names, if only because I do not accept the implication that there are only a few people in India fit for the job. Let us have no exaggerated idea of the ability needed to run a bank which gets the biggest deposits and the cream of business in every locality more or less automatically and can dig its hands deep into currency chests as occasion requires.

Big institutions have a momentum of their own; and no uncommon activity is needed to run them on what are called safe lines. It is the instinct of hero worship that exaggerates the value of particular individuals. When Sir Osborne was called to take charge of the Reserve Bank, the Central Board of the Imperial was jittery and would not readily part with him. When Sir Sorabji Pochkhanwalla died, many saw in it the death of the Central Bank as well. But both institutions have had the biggest expansion under their new Chiefs. The myth of individual indispensability dies hard in many minds. But it is exploded by events. Where big institutions are concerned, the need is, not to cling to old names in sheer deference to prestige, but to secure the ability needed to give new policy, new direction, consistently with soundness and stability.

We have no dearth of such ability in this country and, as I have said already, to mention any name or names specifically is to admit that the field of choice is more narrow than in fact it is.

But if I must mention a few names, why not Sir Shanmukham Chetty or A. D. Shroff or Dr. John Matthai? To none of them is the job a preferment. Any of them will fill the place with distinction. The importance of a timely move in this matter, I feel, it is impossible to exaggerate.

I trust that my plea for an Indian Managing Director of the Imperial Bank will not be mistaken for a manifestation of racialism. Neither I personally, nor this journal has been known to give room for such suspicion. In fact, in our endeavour to lift questions of policy above the low plane of racial feeling, we have sometimes run the risk of losing credit for genuine nationalism without improving the chances of sympathetic understanding on the other side. This risk is removed only in course of time. When Mr. Burder referred the other day in his speech to the Bengal Chamber of Commerce to the more responsible elements in the Press which dispense with exaggeration and give consideration to the other side of the case, I have no doubt "Indian Finance" can justly share in the compliment. In saying this as in other respects, Mr. Burder sounded a new note. Mr. Burder struck the note first at the annual session of the Associated Chambers of Commerce. And since then evidence of the desire for a keener perception of the Indian standpoint and greater readiness to sympathise with it is growing. Mr. Burder's speech at the Bengal Chamber of Commerce encourages the hope that in the economic develop-

ment which is surely ahead of us, British and Indian business can come nearer together. I, however, see in the speech the pains of a new approach. There is bitterness in the regret that—

Not sufficiently is credit given for the early enterprises financed by British capital. Not sufficiently is it appreciated or admitted that others have since succeeded because the field had been cleared for them long ago, and the losses of pioneer industrialism borne for them by British capitalists.

Mr. Burder also makes a charge of unfair competition against those whose standards of labour welfare are lower than those stuck to by British business in India. And his plea for equality of treatment addressed as it is to those who have not yet secured it for themselves, not to speak of their being able to turn the tables, cannot have an exactly soothing effect. The regret that not sufficient credit is

given to British enterprise is natural enough. But I am certain in my mind that when India becomes free, she will not be guilty either of ingratitude or of unfair discrimination. British business, for its part, has not only to reconsider, revise and state in fresh terms its attitude to the problems which affect India, but also look within itself for the shortcomings which call for remedy. Mr. Burder has done both. He is able to sympathise with the Bombay Plan. He appreciates the need for a National Government. He is aware of the need to meet in deeds not words the charge that Britons take out of the country and put little in. Mr. Burder's speech is a model for the spokesmen of British commerce for courtesy in controversy and statesmanship, in matters of policy. All this denotes a new development which I shall discuss in a later issue.

(From Our Correspondent)

New Delhi, February, 28.

THE united opposition to the increased fares proposal resulted in the formation of a temporary coalition between the Congress, League, Nationalist and other groups in the Assembly last week. And on Thursday the Government suffered their biggest defeat of the session when the Congress Party's motion to reduce the Railway Reserve Fund by Rs. 10 crores—the yield expected from the 25 per cent increase in fares—was carried by 51 votes to 46. Though the division came as something of a shock to the Government and the situation appears to have been reviewed at a meeting of the Executive Council later in the week, it is not yet clear how the Government will respond to the Assembly verdict. As a matter of fact it is generally feared that the Government will persist in increasing the fares. Sir Edward Benthall has been silent on the point so far, and when repeatedly asked in the Assembly as to what the Government proposed to do, only pleaded that he was not in a position to give a reply. If one is to judge by the past records of the Government, this big 'cut' is likely to be restored by the Viceroy. Apart from this the budget proposed was lashed in other ways. There were successful token 'cuts' asking for extension of compulsory provident fund facilities to all employees and increased dearness allowance, censuring the policy of giving extensions to superannuated personnel and the stoppage of a large number of passenger trains.

The European Group throughout voted with the Government and were afraid to see even their own 'cut' motion to discuss the railway finances, with particular reference to the post-war plans, carried. A 'general guide' to the plans for the post-war improvement of India's railways was provided by the Transport Member in his reply to the debate on this 'cut' motion when he announced that the Government proposed to spend Rs. 319 crores in seven years on such development. This will include Rs. 125 crores on rehabilitation; Rs. 48 crores on staff welfare including a large housing scheme; Rs. 45 crores on amenities for 'lower class' passengers and Rs. 56 crores on construction every year of 500 miles of new lines. A greater part of the expenditure will be unremunerative and will be met by drawing largely on the Depreciation and Reserve Funds.

A helpful suggestion put forward by Mr. M. N. Dalal in the Council of State last week to appoint a consultative Committee of non-official representatives of the Legislature and representatives of financial and commercial interests to advise Government to rehabilitate the economic structure of the country was summarily rejected by the Government without any adequate reason. There was bitter criticism of the Government's inflationary policies during the debate. It was pointed out that "industrially backward, the country was asked to swallow a 500 per cent expansion in currency without any safeguard of increase in production or service, while even in England the net circulation in November last was only double the pre-war figure." Another speaker condemned the Reserve Bank's policy of purchasing sterling at market rates instead of statutory prices and said if anyone wanted to sell sterling he was

bound to come to us. The Government's policy was aptly described thus: "Enormous rise in public expenditure, steep increase in taxation, soaring prices unrelated to the purchasing power of the people, and upheavals in the economic life of the majority of the people are the more important features of the day."

The Government's plans regarding post-war civil aviation were outlined by Sir Gurnath Bewoor in the Assembly last week. The post-war plan, he said, contemplated the establishment of daily air services on the main trunk air routes covering India north to south and east to west with link routes connecting the trunk routes at suitable points, and with extensions to the capitals of adjacent countries. These contemplated services would cover an air route mileage of 10,500 with an annual flying mileage of seven and a half million and with aircraft of the class contemplated the total transport effected would amount to twelve and a half million ton miles a year. It was intended to extend air services to places like Rangoon, Colombo, Kabul, Chungking and possibly places in the Persian Gulf. The Government of India's plans embraced ground organization and night flying facilities.

Mr. Hossain Imam's resolution in the Council of State recommending that price control and adequate supply of the requirements of agriculturists be taken into consideration brought an assurance that Government were "doing all they could" in the matter. Arrangements were being made for manufacture of agricultural and other rural requirements. The Government had entered into a contract with the Bata Shoe Company for the manufacture of six million pair of shoes; roughly about 50 per cent of the woollen goods produced would be available for civilian needs; additional manufacturing capacity was also being secured for other consumers' goods such as paper, cutlery and crockery; and the possibilities of increasing the present available supplies of kerosene oil was also being considered.

It is learnt that 39,000 tons of steel has been released for civilian consumption during the first quarter of 1944. The Government are doing all they can to release a greater quantity of steel for civilian use this year. It is stated that a "sudden improvement" recently occurred in the shipping situation and the Government of India accordingly made arrangements to increase the scale at which licenses for the import of consumer goods are issued. As the effect of such an expansion in licensing takes a rather long time to be felt, the Government made arrangements with the India Office that consumer goods would be supplied from Britain without an import licence being previously obtained in India, and the import licence would be granted on the receipt of advices of shipment. Shipping space for civilian imports is allocated for each half-year by the shipping authorities in Britain on the basis of a programme of requirements drawn up by the Government of India.

It is officially stated here that at the time of the occupation of Burma her outstanding debt to India stood at 48.14 crores. The debt is the outcome of a financial settlement between the Governments of India and Burma at the time of the separation. Burma's debt to India then stood at Rs. 50.79 crores and in addition the Government of Burma were liable for 7½ per cent of the

actual payments made each year in respect of central pensions in issue on the date of separation. The periodical payments due by the Government of Burma to the India Government are suspended at present due to the Japanese occupation. The realization of the outstanding amount will be considered at the appropriate time."

The dramatic improvement in Sind's finances—with a budgeted surplus of 189 lakhs for 1944-45 'aided by a windfall' of Rs. 2½ crores by the trading-in-grains policy' has made it possible for the province to wipe off the Lloyd Barrage debt. Negotiations for a new financial deal between Sind and New Delhi have been almost concluded amending the Niemeyer Award. The Central Government have accepted the Sind Ministry's proposal for the repayment of the barrage debt and the capitalization of subvention in one transaction. Under the Niemeyer arrangement, Sind was to receive Rs. 105 lakhs a year till 1947-48 and Rs. 80 lakhs after that till 1968-69 and a subvention on a decreasing scale till 1968-87. Capitalization is to be effected at a rate of 4½ per cent which works out to be about Rs. 14.70 lakhs. The difference between this capitalization amount and the barrage debt which at present stands at Rs. 20.40 lakhs, namely Rs. 570 lakhs, is proposed to be paid in one lump sum.

It is learnt here that the functions of the Coal Commissioner will be to co-ordinate "(1) the purchase of coal; (2) the distribution in accordance with any rationing scheme in existence; (3) production of coal, including questions of supply of colliery stores, labour and the amenities, and food for labour. Up to now the production, labour, purchase and distribution of coal fell within the purview of three different departments. He will also enquire into the possibilities of fuel economy. It is stated that although labour has undoubtedly been the principal factor for recent coal shortage, the demand for coal is now in excess of the previous maximum production. Cash wages in the majority of collieries have recently been increased by 50 per cent above pre-war cash wages. In addition the miner and his family get food at concessional rate. Other welfare measures will also be undertaken and a coal mines welfare fund has recently been constituted for this purpose. Women labourers are paid the same rates of wages and draw the same rations as men.

It is learnt as a result of negotiations recently concluded India will import a certain amount of cotton from East Africa and the Sudan. The conference was held to fix the prices of cotton to be marketed in 1944 by the Sudan and East African Government. The Indian delegation included representatives of the cotton trade and the textile industry, while a representative of the Education, Health and Lands Department was present to look after the interests of the Indian cotton grower. The imported cotton will be supplied to cotton textile mills for the manufacture of textiles both for war orders and civilian consumption.

It is understood that in accordance with the proposals to appoint development officers who would be entrusted with the work of evolving post-war plans of construction, the Government have decided to appoint one officer each for Electrical development, Industries, Irrigation, Roads and Road Transport, and Agriculture at present. Others may be appointed later. These officers will work under the appropriate departments of the Government of India.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, February 26.

THE cloth trade given time to work off stocks up to the end of June has won at long last one of its battles with Control. Transport difficulties caused stocks to mount and prices eased for the obvious reason. Last week the demand was as disappointing as ever. Without a special rule as to immediate disposal cloth markets should be steadier and the recovery has not been without effect on cotton prices. Stamped goods bearing mill and retail prices, etc., are distinguished from unstamped goods which were seized under the control order. Reorganisation and improvement of transport in wartime is reckoned impossible, but the trade wants more help from the cotton mills and is ready to discipline itself. After the conference of the past year the cloth trade has again asked that it should be shown consideration because its aid as much as that of the mills was wanted for the standard cloth scheme. The Textile Control Board provides for the representation of consumers, but the mills have an assured position in relation to the Civil Supplies Department and the raw cotton market as well. Middlemen's earnings have inevitably suffered. There has been a question as to the numbers engaged in selling cloth to the public. Too many agents and brokers clutter up the trade in cotton and cloth here and efficiency experts would certainly propound a solution different from what may be expected.

The questions asked in the Assembly about dates and extension show that the local pressure group is not inactive. The promise of stable prices and the removal of handicaps as to mill and market stocks will assist in the post-budget revival of textile shares. Since prices for all grades are fixed cotton prices are firmer.

Apart from the messages and meetings reported there is a proposal to hold a Sheriff's meeting to offer the condolence of the citizens of Bombay to Gandhiji. Sir Shantidas Askuran has been informed of the public's desire and there is also a proposal to set up a memorial. Messages from Indians overseas have poured in and the Corporation committee last week did not transact its business. The city markets were closed on Friday last but Saturday was not a holiday for stockbrokers here.

Another shipping officer for Government has been secured from the Bombay Steam Navigation Company. The earlier appointment made in the Commerce Department was reputedly in connexion with claims concerning requisitioning, etc. Special encouragement to Indian shipping seems highly unlikely and the more important lessons to be drawn from the U. K. Shipping Chamber's demand that the merchant navy must be adequate and prosperous after the war certainly offset all calculations as to the appointment of a new Controller of Shipping, in addition to the British Ministry's representative in India. The absolute increase in postwar tonnage will be a bigger factor than the reduced quantum of world trade. And special measures that would be desired by shipowners here are impossible when the services of Norwegian and Greek tonnage in war have to be duly recognised. The creation of an intermediary to deal with questions as to losses and compensation does not affect the market view as to shipping shares but river Navigation Companies apparently

have advantages of another kind and Bombay investors for a year have been more eager for shipping shares listed in Calcutta.

Information and Broadcasting (I.S.B.) films are severely criticised by someone who was bored stiff by the compulsory addition to the bill. The Services certainly know their mind and are not afraid to speak it if local committies are discreet. Since Indian language versions of the same short appear the audience reaction is always unfavourable. Indian News Parade is regarded as dull beyond description. People who go for a change from the sights and sounds of the city get no relief. A recent film showed the commentator lavishing praise on a racehorse from the Gwalior stable. It seems wholly undesirable to crack up any horse or stable and in the hot weather shorter Indian films (of 11,000 ft. only) don't need supporting programmes, compulsory and gratuitous. Cinemas have not yet learnt to show the main feature first and run off the rest after the advertisements. Anyway somebody has protested and cinema owners will take care not to offend. Donald Duck is prized and the admirable new Disney Saludos Amigos does more for the Good neighbour doctrine than the famous March of Time short with that name. Disney's managerie now includes a pert Brazilian parrot that puts the Duck's beak out of joint. The letter in the local paper rubs in the fact that Donald is popular and I. and B. stuff too poor to be suffered in silence today.

A big donation for the Parsi Panchayat was announced last week. Lady Ratan Tata

gave Rs. 1 lakh for relief of distress in the community. Previously Lady Tata gave Rs. 75,000 and the trustees are authorised to use the money at their discretion. Mr. Kauasjee Sett, a trustee since 1916 has resigned owing to old age but the Panchayat sets an example of organised charity that cannot be matched in India. The demands of rehabilitation in Bengal account for an appeal from the Ramakrishna Mission for funds. Relief work continues in Bengal and Bombay is asked for donations.

The Federation of Indian Chambers will give the once-over to the 15-year plan at the annual meeting in Delhi this week-end. A resolution offering full support is prepared. Perhaps the real interest lies in the criticism of taxation. The Associated Chambers asked for a review of the system of taxes, excises and tariffs in India. Big changes so as to improve the competitive ability of Indian industry after the war are wanted by the Federation. Reference is made to the resolution approved by the House of Commons in favour of an investigation so as to prevent undue strain. The defence of the 10,000 crore plan goes on. Sir P. Thakurdas spoke at Surat last week in favour of industrialisation. A supreme economic advisory council set up by statute is wanted. Some would think the Reconstruction Committee is enough for all purposes. Sir P. Thakurdas defined the need for a National Government in possession of fiscal freedom. The last phrase appears to suggest that India is not free to tax or spend at present. If freedom means that all trade treaties should be scrapped and lavish subsidies ordered, the measure of support from the Provinces may not be great.

South India

(From Our Correspondent)

Madras, February 27, 1944.

QUESTIONS like establishing more sugar mills in South India in view of the area being a deficit one, the erection of more power-alcohol plants in India and removal of restrictions on the movement of jaggery from one province to another, came up for discussion between the Southern India Chamber of Commerce, and Mr. N. C. Mehta, Sugar Controller for India during the latter's visit to this place recently. The opinion of Government in the matter of exports either from one Province to another or abroad, for instance to Ceylon, is clear. The Government find no reason for disturbing the present arrangements. The question of setting up more sugar mills in the South is neither practicable nor necessary at this juncture as the existing mills are not able to procure enough cane. Further, this year's cane crop is expected to yield 8,000 tons of sugar more than the previous year and the Government may be in a position to increase the quota for the deficit areas.

It may be remembered that a hydro-electric scheme on the borders of this Province and Orissa was proposed some time ago. Negotiations were going on between the two provincial Governments and the Jeypore Estate within whose limits the river Machakand flows. While the scheme will be financed and worked by the Government the two other parties concerned have expressed a wish to participate in the scheme. To discuss the exact terms a conference has been convened here and both the Maharaja of Parlakimedi, the Premier of Orissa, and the Maharaja of Jeypore along with their experts have already arrived. The meeting is to be held today and the public is eagerly awaiting results of the talks. The scheme is estimated to cost about Rs. 4 crores and when completed will be a great boon to the districts in the remote north.

News from Chicacole is still heart-rending. The aftermath of the October cyclone has not yet been fully realised by outside people and the Provincial Government's estimate of the damage to the crops varies widely from eyewitness account. The distress and misery prevalent in the sub-division is graphically described by Mr. K. S. Gupta, M.L.A. (Central) in a statement to the press. Mr. Gupta who visited the affected areas last month says that hundreds of houses are still roofless. He disputes the Madras Government's estimate of the loss to crops and says that the loss is nowhere less than 50 per cent. Epidemics are on the increase and thousands of people are dying from malaria as quinine is not available. Water scarcity now threatens to destroy standing crops. Mr. Gupta thinks that famine conditions prevail in these parts and if effective measures are not taken without loss of time the country will witness something like the Bengal famine. Mr. Gupta has interviewed the Food Member with the Government of India and acquainted him with the situation in Chicacole sub-division.

The quantity of unstamped cloth seized by the local government amounted to 136 lakhs yards. Out of this, 16 lakhs yards have been already stamped by the authorities and are being released. Administrative blunders have nullified the hardwon exemption by holders of stocks of 5,000 yards of cloth and less and the Government's reason for the

denial is not convincing. They say that they have proceeded too far either to turn back or altogether stop taking action. The small holders who earned a good name by submitting returns before the last date are thus deprived of their legitimate claim. It is common knowledge that this province is still dependent on Bombay mills to a certain extent for its cloth supply. But due to the transport difficulties the local traders are in a jam. The stringent measures adopted by the authorities here have worsened the position still further. Mills which are placed in an advantageous position are, on the other hand, selling cloth at well below the ceiling prices. While the action is highly laudable it has put the retailers and some wholesalers in an unenviable position.

While the food front is quite satisfactory as far as rationing is concerned—the fuel crisis is spreading fast across the length and breadth of the province. In the City the position is far from satisfactory and complaints are numerous. Women rightly condemn the authorities for the arbitrary manner in which the quota was fixed and it is also pointed out that if one lady were on the committee no mistake would have been perpetrated. The rationing authorities admit their error and have given assurances that the system would be amended in the light of experience gained.

It has been a longstanding grievance of people here that Madras was classified as a non-martial tract. The recruiting programme of the Government has removed the slur to a certain extent. By resolving to include military science in the curriculum the Academic Council of the Madras University has clearly shown a determination to eradicate any trace of the past. In this connection the suggestion of Sir C. R. Reddi in a speech at Tirupati that educated youths of the province should join the army is worth notice.

Dr. Tirumurti speaking to the Madras Medical Association the other day emphasised the need for a rapid increase in the number of doctors in India. A country of 368 millions has only 40,000 doctors to cater for its needs, in other words, there is only one doctor for every 9,000 persons. Dr. Tirumurti drew attention to the deplorable state of affairs in regard to public health. He wanted at least 400,000 doctors or 10 times the present number. At the same time he was not at all sure of success if it were not accompanied or preceded by a rapid increase in the per capita income of the nation. The cause of the majority of diseases among villagers, is invariably malnutrition and steps should

be taken to provide the average villager with at least two square meals. Hence self-sufficiency in food is a pre-requisite for other reforms and Dr. Tirumurti urged that government and the people should work in that direction. While public health is very important it can wait, for what can doctors do when tens of thousands of people are dying for want of food? Dr. Tirumurti was right in laying emphasis on the economic aspect. Answering the criticism that doctors in India lack missionary zeal for humanitarian work he said that absence of any organised missions has made it impossible for doctors to go to the villages. A doctor also has to live and it must be possible for him to migrate to the villages. If the minimum income is guaranteed doctors may be able to go back to the villages.

The need for harnessing every waterfall in South India for the generation of power was advocated by Mr. J. Mohamed Imam, Minister for Public Works in Mysore at the inaugural address at the annual joint session of the Mysore Engineers' Association and the Mysore Centre of the Institute of Engineers (India) last week. The delay in taking up the projects across the Tungabhadra was greatly responsible for the food shortage and famine in the Bellary and the Ceded districts. The failure or the delay in coming to an agreement between the various interests concerned in any proposed scheme should not stand in the way of completing such schemes. Mr. Imam agreed with Sir C. P. Ramaswami Iyer, Dewan of Travancore, who pointed out the necessity for expediting hydro-electric schemes in the South in view of the fact that India might very soon be at the end of its coal supply. If Indian industries want to avert the ugly prospect of stoppage of work for want of coal there must not be any delay in implementing the schemes already worked out. Referring to the coal shortage in Mysore State the minister said that the Government were seriously thinking of electrifying State Railways, and this problem is sure to occupy an important position in reconstruction measures. Electrical Engineering has largely contributed to the prosperity of the State and Mr. Imam was of the opinion that Mysore Electric Works would soon occupy a pre-eminent position in the whole of India. The Jog Hydro electric Works when completed would generate 150,000 h.p. and there is scope for another 150,000 h.p. at the same place.

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, Feb. 25.

The Budget session of the Sind Assembly has begun. Sind Government's trading policy has brought in a huge windfall. The budget estimates for 1944-45 presented by the Premier, Sir Ghulam Hussain Hidayatullah on the opening day of the Assembly disclosed a picture of "astonishing prosperity" as the Finance Secretary in his budget note put it. The Revenue Equalisation Fund has been set up from the excess in income from land revenue and is intended to meet the fall of income from land revenue in lean years arising from low prices for agricultural products. The post-war development fund has similarly been built up from excess income from other revenue departments and is to be utilised for reconstruction purposes.

According to an explanatory memorandum appended to the budget estimates by the Finance Secretary, Mr. J. C. Bolton, the budget speaks of the "astonishing inflation" which was noticed during the part of the period under review, and which explains the great variations between the budgeted and the revised estimates for 1943-44. This period, says the memorandum, saw the largest expenditure on public works ever known in one year in Sind on strategic roads, on aerodromes and other military works and on the Karachi waterworks.

The current year's revised and the next year's budget estimates presents a picture of apparently astonishing prosperity, with receipts in excess of current expenditure by the amounts set aside in the Land Revenue Equalisation Fund and Post-war Development Fund in addition to the revenue surplus. It would, however, be most illusory to assume that this would be a permanent feature of the budget. After the introduction of sliding scales of assessment, the revenue side of the budget is liable to the most violent fluctuations, varying by crores rather than lakhs. Moreover, the receipts from the land sales which could more properly be treated as capital receipts are bound to fall rapidly as land is taken up and finally paid for, and this should have a most serious effect on the revenue side if the present accounting procedure continues.

Sind has utilised this exceptional windfall in a very skilful way. By a lump sum payment of Rs. 570 lakhs, this province will square up its accounts with the Government of India on the Barrage debt on the basis of "No debt and no subvention". This announcement was made by Sir Ghulam Hussain Hidayatullah, Premier and Finance Member when presenting the budget in the Assembly. Giving details of the negotiations that Sind Government had with the Central Government on the subject, the Premier stated that the Barrage debt stood on April 1, 1943 at Rs. 20.40 crores after deducting the payment of Rs. 75 lakhs due for that year. The subvention has been capitalised at Rs. 14.70 lakhs on a basis of an interest rate of 4½ percent and it was proposed to pay the balance of Rs. 570 lakhs from the free balances of the Government. This arrangement now only awaits the sanction of his Majesty's Government. The payment of Rs. 570 lakhs for this settlement would still leave a balance of Rs. 184 lakhs in the free

balance at the end of the current financial year.

Sind's new-found financial strength will be kept safe for post-war plans. Among them are two mammoth barrages, one for Lower, and the other for Upper Sind. With the waters of the Indus reaching Karachi, there is bound to be a great industrial spurt. So far, it has been the tragedy of this small province to limp behind the rest of India in the industrial sphere, in spite of the fact that it produces an appreciable amount of the total cotton grown in India. During the budget debate, Mr. Nihchaldas Wazirani pleaded for the establishment of a giant textile mill by the government and wanted the authorities to indent for the machinery forthwith so that the conclusion of hostilities will find us on safe foundations. The agriculture of the province will also be revolutionised with the completion of two more barrages and Sind, the unhappy valley, will take her place among Indian provinces. In view of the development of the airport and the harbour, Karachi will play a great part in the future commercial map of India and captains of industry in Marwar, Guzerat and the Punjab are already prospecting possible sites. Rid

of the heavy Barrage debt, Sind starts on an even keel in the matter of her land revenue policy and the complete control of her provincial budget, without any special responsibility attached to the Governor for certain matters connected with the management of the Barrage and its revenues.

According to reports from Delhi, the Niemeyer Award will shortly be amended for the purpose of giving effect to the new deal with the Government of Sind under which, in consideration of a specified sum in cash, the Central Government would cancel the Sukkur Barrage debt and the Sind Government would also forego subvention paid to that province by the Centre.

(Continued from previous page)

nal aim seems to be the extraction of sulphur from pyrites ore and incidentally it has been found that the ore contained gold as well. One ton of the ore yielded 1½ ounces of gold and it is claimed that a method has now been evolved for the extraction of both Sulphur and gold from the ore. However it is stated that the work is still in the preliminary stage and much work has to be done before the extraction of gold from the ore can be undertaken on a commercial basis.

PAPER PRICES

GOVERNMENT CONTROLLED QUALITIES

The following are the maximum selling prices (ex Distributors' Godowns) for Titaghur paper, as per BENGAL Government Notification No. 76-O.C. D.C.S. of January 6th, 1944:—

ments by over Rs. 2 crores. That treasury bills account for only a small proportion of the total may surprise those who noted the separate entry made for the first time last year. The increase in investments is accompanied by only a small rise in cash balances. The proportionate growth of Advances in a period of limited demand (as shown by the drop under Bills) should therefore be regarded as eminently satisfactory. The setback noted in 1942 was overcome quickly, and the succeeding year has been marked by real progress in every direction.

To-day's Prospectus

Since advance press comment on the acquisition of the Teekoy Rubber Estates by an Indian group has appeared, the appearance of the prospectus may be regarded as the coping-stone of the project under which a large, flourishing estate will pass into the hands of a new rupee company. Underwriting was arranged so that preliminary comment is explained. The ordinary and preference shares are offered for subscription (the list opens on March 9) along with the 5½ per cent debenture issue of Rs. 6 lakhs. The complete property is taken over by the new Travancore Company and there is a reserve area in addition to 276 acres bearing budded rubber. The crop estimate is for 550,000 lbs. less than the actual crop of 1942-43. The estimate of net profit appearing in the prospectus suggests that a dividend of 15 per cent would be earned on the ordinary capital. The capitalisation per acre in North Travancore is naturally high in relation to land values in the region, but it will be certainly lower when the debentures are paid off. Perhaps the main advantage for the investor lies in the proportion of prior charges to ordinary capital in the case of this company.

Since the rubber outlook is considered very promising for some years to come and synthetics will have little or no effect on the restoration of consumption, Indian rubber companies can count on a greater degree of security than was offered by the international regulation agreement. Recent upgrading of rubber prices like the assurance of a home market immune from Burmese competition may well suggest that planting issues have other attractions besides a relatively high yield. The purchase price settled by negotiation was Rs. 20½ lakhs and the additional capital required is only Rs. 1½ lakhs. The prospectus is fully informative as to the condition of the property, capital cost, and the

continuity of management on the estate. The thorough and complete arrangements point to the success of an issue that has the merit of furthering the repatriation of British capital and raising the preponderance of Indian capital in the rubber planting industry. These considerations must influence the investor as much as the profitability of the investment for which the deal made with the London company was the beginning. Good rubber plantation shares are standing at a high premium. Interest in rubber shares is not limited to South India and Teekoy Rubbers would probably attract the attention of all investors for the reason that a big issue at par is not common.

(Continued from page 405)

obvious than ever. The proposed increases in taxation should have little effect on the ultimate earning power of industries, and when the increase of the National Debt by about £4000 millions in a year passes unnoticed there is no place for doubt as to borrowing.

The victory in Arakan has apparently been without effect on Burma Corporation shares though a small rise has been noted locally. The important event of the week which is the Indian Budget is of very little interest to foreign markets, and the improvement in sterling tea shares certainly suggests that the new Indian excise does not count in the British investor's eyes. The question whether India's tea exports would be exempt from the excise of 2 as. per lb. need not be asked at all, and the revival in tea shares

predicted last week should take place. Since the surcharge stays silver prices in India are wholly unaffected by the late surmise as to the abolition of the import duty. The small rise in silver while gold prices have been flat, points to the original connection between cotton and silver prices in Bombay.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, March 2.

THE Printer's Devil has been at his games again. Last week he made us quote the Chairman of the I.J.M.A. as having said that he considered the minimum price for Jat Middle Jute as being dangerously generous at Rs. 5. The figure ought, of course, to have been Rs. 15. In this connection it is expected that the Ordinance, or whatever form the legislation may take, will be promulgated to bring in the statutory maximum and minimum prices for jute as from 15th March. Maximum rates for manufactured goods will be fixed by statute at the same time, and it is reported that slight modifications may be found in the current schedule of rates, for instance that "B" twills will be priced at one rupee lower than eight porter bags of the same weight such as Cornsacks. It would be appropriate if Heavy Cee bags were similarly marked down.

Arrivals of coal have been in more ample quantity for the past week of so and most mills who rely on steam for their motive power have been able to keep going. A report was current that the coal quota for jute mills was to be reduced. A small reduction would not leave the mills any worse off if the full authorised quantity were regularly delivered and the quality were combustible.

Two further mills have been requisitioned by the military authorities and it is feared that their demands are not going to end there. The trouble is, of course, is that the impounding of ready-made jute mill premises is just too easy—the line of least resistance requiring the exercise of no foresight. The current issue of the Central Jute Committee Bulletin quotes what is being done in Australia where there are no jute mills to requisition. There they have prefabricated for the U. S. Army thirteen and a half million square feet of weather-board buildings, huts and warehouses and hospitals, which placed end to end would extend for more than 120 miles. A standard hut is 54 by 20 feet and a warehouse 293 by 88 feet and by mass production methods the complete framework for a hut can be prefabricated in six minutes. Such delirious speed could scarcely be expected in India, but it just shows how similar problems have been differently tackled in different circumstances. And there is little doubt that these Australian structures are designed to stand up to as severe climatic conditions as might be expected in India.

The Bulletin contains many other items of interest. The shortage of jute bags in the Argentine is so acute that the total cargoes of four steamers from Calcutta were expropriated by the Government, amounting to some 428 lakhs of bags and 108 lakhs of yards of cloth. This action was taken to ensure that all jute bags should be reserved for handling grain, and to encourage the use of cotton bags for other purposes, the import of such is permitted free of duty. The equivalent of over 50 lakhs of rupees has been allotted for the construction of underground Silos in the cereal zones for the storage of grain to a capacity of a million tons. Ceiling rates for burlap in the U.S.A. have been slightly increased, but only to equalise in-

land freight charges due to many cargos being discharged at ports far removed from their normal port of entry. To meet the requirements of the Cuban sugar crop, some 53 lakhs of bags were released by the War Production Board for direct shipment from Calcutta. The recent establishment of a Central Burlap Office in the States has resulted in better distribution of material to the bag manufacturers, relieving an acute situation and giving satisfaction to trade interests. The revised estimate of the U.S.A. Cotton crop was just under 11½ million bales, a reduction of over 10 per cent from the previous year. But the requirements of the manufacturing trade were also estimated to be lower by nearly 10 per cent owing to shortage of labour available at cotton mills. An interesting article is quoted from the "Statist" reviewing the economic position of some lesser industrial fibres which is a matter of interest to all connected with the jute industry, but on the whole none of these seems likely to be a serious competitor with jute in normal conditions, provided always, of course, that the price of jute is permitted to revert to normal levels after the war and not artificially boosted.

In this connection some figures were recently furnished to us in regard to claims set up for the successful growing of jute in the Argentine from acclimatised seed. The protagonists of the scheme claimed that yields of as much as 6 bales to the acre could be expected as compared with less than 3 bales under normally favourable conditions in Bengal. A decorticating system is also claimed to have been evolved which does away with the ordinary retting process. Other more dispassionate views, however, discount these claims to some extent and while admitting that yields such as the above may be attained, do not place the average at more than one-third of that, and state that the mechanical decortication process yields poor results. The monetary yields claimed are, of course, based on inflated war time prices when imported jute was not available, and can scarcely be taken as a fair reflection of value at from Rs. 250 to Rs. 300 per acre, the highest ever recorded locally for any agricultural crop. What is admitted is that the jute crop withstood a drought and gave some sort of a yield when every other crop was destroyed. That in itself may offer some encouragement to persevere with jute, but much will depend on the future development of the mechanical decortication process, for there is apparently neither sufficient labour, nor can an adequate supply of water be relied on, for the ordinary retting process.

Sometime ago we mentioned that complaint was being made of consignments of jute being that when an upcountry shipper was allotted a waggon, he frequently found that booking to the mill to which he wished to despatch was closed. He was, in fact, much in the position of the reveller who turned up at the station booking office and demanded a first class single. "To what station, Sir?" asked the booking clerk. "What stations have you got?" countered the inebriated one. In any case, the I.J.M.A. have now announced that strong action will be taken to suppress this malpractice to the extent of deleting the offending seller and his marks from the Register, after due warning, if the practice

is persisted in. Actually, sellers deserve some sympathy, for the system (?) whereby Railway bookings are open to some distinctions and not open to others is often, to put it mildly, inscrutable.

JUTE

Calcutta, March 2.

THE raw jute market has continued firm though towards the close a slightly easier feeling is noticeable with the withdrawal of mills from the market. There is no tendency to push up prices further and there is a disposition at the present moment both on the part of sellers and buyers to await the trend of sowings. As has been pointed out on former occasions, the recent buying by mills allows for the payment of charges in connection with delayed deliveries and godown space in up-country centres and the accumulated orders will take a long time to be completed. There is, therefore, no tendency to hurry up purchases unless there is a substantial improvement in transport facilities. Coal supplies are reported to be more satisfactory and it is expected that it will be possible to keep mills fully engaged 54 hours per week. Developments during the next few weeks should be interesting for the jute market.

In the loose jute section, business passing was on a fairly large scale in the early days of the period under review. Indian Jat Middles and Bottoms were done at Rs. 15-12 and Rs. 13-4 respectively with Supervised Jat and European packings 8 annas higher. There has been more enquiry for Tossa and Bottom grades with not many sellers. Supervised bottoms alone were done at Rs. 13 and Indian District Bottoms at Rs. 12-8. Indian Jat Tossa Middles were Rs. 17-4.

In the pucca bales section not much of business has been done for export but quotations are steady. Dundee Daisee 2/3 being done at Rs. 74 and Dundee Tossa 4's Rs. 78. Mills are reported to have purchased Firsts at Rs. 73 and Lightnings at Rs. 77 per bale. There were no sellers of cuttings at the maximum rates. Shippers are prepared to buy at the rates demanded by sellers.

JUTE MANUFACTURES

Calcutta, March 2.

In the jute manufactures market firm conditions continued to prevail and quotations were fully firm at maximum rates with very few sellers for positions between June and December. There are no sellers for near positions, and consumer's demands can be satisfied only from the black markets. A good amount of business has been done in heavy goods for deliveries in the latter half of the year and mills are reported to have sold rather freely on the hopes of a further improvement in the coal situation and an increase in production. 9 porters were done at Rs. 21-10 and Rs. 11 porters at Rs. 28-8 for all positions.

In the heavy goods section firmer conditions continue to prevail and quotations are nominally at the maximum rates. No actual business has been reported owing to lack of sellers.

GOLD

Calcutta, March 2.

THE Bombay gold market has been uninteresting and quotations have been fluctuating in narrow limits. A slightly firmer tendency was noticeable earlier in the period but with the weakness of the Reserve Bank and slight decline in prices was recorded. The position regarding gold sales has not been in any way clarified by the Finance Member's Budget speech and it appears that the Reserve Bank will sell gold at the present fixed rates for some time to come. Investment demand has not been quite satisfactory. Sovereigns quoted Rs. 49-12. Daily offtake is estimated at 100 bars.

In the Calcutta market, quotation has been unchanged around Rs. 71-8. The Reserve Bank has continued sales in small bars.

SILVER

Calcutta, March 2.

THE silver market has not been in any way affected by the weakness of the raw cotton market and the easier tone of gold prices. In fact, the Finance Member's speech should be considered rather bullish for silver as

there is no reference to the possibility of Government sales. After remaining steady at Rs. 127 for most part of the week, however, the close is slightly easier at Rs. 125-13. There has been a narrowing in the discount for forward over ready to two rupees from three rupees earlier in the period. It is said that even if there is no official selling the provision of adequate transport facilities, will result in a great improvement in the supply position.

COTTON

Calcutta, March 2.

THE raw cotton market was rather quiet and on tired liquidation quite a substantial decline in prices was recorded in the early part of the week. Reports regarding a further reduction in ceiling prices for cloth and yarn and the lifting of the restrictions in regard to booking of cotton were mainly responsible for the easier feeling. It was also feared that the budget might have something bad for the cotton market. In the last two days, however, a steadier feeling is noticeable on short covering for the nearer positions. The decision of the East India Cotton Association to admit the appeal against higher premiums of other tenderable growths has resulted in an improvement in prices by 2 to 3 points. Conditions in upcountry centres also are reported to be more satisfactory. In the spot market not much of business is reported as mills were inclined to await the announcement of a fresh reduction in rates for cloth and yarn. Jharilla March closed at Rs. 456-12, May Rs. 456-12 and July Rs. 457-8 against Rs. 467-8, Rs. 468-8 and Rs. 462-12 respectively. It will be noticed that the decrease in prices for forward positions is not so pronounced as for the near positions.

PIECEGOODS

Calcutta, March 2.

THE piecegoods market has continued firm and consumer buying is reported to be satis-

factory. The extension of the time limit for the sale of August-September 'text'-marked goods to the end of June and for the unbalancing of November texmarked goods to the end of March has had an encouraging effect. The report that the Industrial Committee of the Textile Control Board has recommended a reduction in ceiling prices by 1½ annas and 2 annas in the rupee for cloth and yarn from the present levels has not had any effect on the market. Unless supplies improve to a great extent, consumers will not be able to dictate their terms to the dealers.

Stock Markets to-day and to-morrow:

MIXED RECEPTION TO THE BUDGET

On the eve of the Budget quite steady conditions were noticeable on the Calcutta and Bombay stock exchanges. There was even a feeling that the budget would not have any surprise for the markets and that, soon after the budget proposals were announced, there would be an upward rise in prices. As a matter of fact, when it was known that the deficit for the next financial year was to be only Rs. 78.21 crores many were inclined to the view that new taxation would not be unduly heavy and that stock exchange prices would be favourably affected.

Market expectations in regard to new taxation proposals, it should be said, have been correct for direct taxation now proposed is lower than many expected but the provisions for compulsory deposits and the increase in the Corporation Tax, on such portion of the profits as is not paid by way of dividends other than those at a fixed rate, are more severe than they seem to be at first sight.

As was pointed out in the midweek Supplement, the profits available for distribution purposes would be very small and there might even be difficulty in maintaining previous dividends.

The new taxes that affect mainly the stock markets are: (1) the increase in the surcharge on incomes above Rs. 15,000 by 4 pies to 24 pies over the basic rate of 30 pies, and (2) the increase in the Corporation Tax from 2 annas to 3 annas in the rupee. There is no change in the rate of Excess Profits Tax nor in the proportion of the tax to be refunded, but the compulsory deposit has been increased from 1/5 to 19/64 of the tax which is approximately 50 per cent more than the amount paid on former occasions. At the same time, the compulsory deposit is payable along with E.P.T. at the time of the provisional assessment.

With the increase in the surcharge, the Corporation Tax and the compulsory deposit, only a small portion of the standard profits of the companies will be available for distribution. The whole of the excess profits will be immobilised by compulsory deposits. Even the increase in the Corporation Tax should be said to affect only that portion of standard profits which is available for distribution as

compulsory deposit under E.P.T. will not be liable for payment of Corporation Tax at the increased rate though it is not clear whether the tax on this portion of the company's earnings is to be paid first and a rebate obtained later. Whatever it may be, the tendency clearly is to discourage the payment of dividends even out of the small portion of the company's earnings available at the disposal of the directors. The Finance Member has thus found a very clever formula for the limitation of dividends. While it will not be possible to increase dividends in future, the tendency is clearly for a reduction in the distributions to shareholders on ordinary, deferred shares or the like excepting those which are at a fixed rate. It is not surprising therefore that the initial favourable reaction to the budget proposals has given way to a feeling of cautious optimism with a resultant slight decline in prices.

One important factor, however, cannot be overlooked. The immobilised funds form a substantial portion of the company's earnings and might constitute a huge reserve in times of depression and enable companies to distribute the same dividends as at present. If only the general tendency towards a lower yield basis is achieved this way share prices would be fully maintained and even improved.

The tea excise duty of 2 annas per lb. will naturally result in a slight decrease in earnings though it could be expected that a portion of the duty would be passed on to the consumer.

The position regarding the new taxation proposals has been analysed by an eminent auditor. We give it below for the benefit of our readers:

"The burden of taxes on income as indicated in the budget proposals cannot be said to be too heavy. The effect on the incomes of three typical companies is indicated below:—

1. A company of small size earns net profits amounting to Rs. 20,000, out of which tax-free dividend on ordinary shares absorbs Rs. 10,000.

2. A middle-sized company earns net profits of Rs. 96,000 and has minimum standard of Rs. 36,000, the tax-free dividend on ordinary shares absorbs Rs. 16,000.

3. A company earns net profits of Rs. 12,00,000 and has standard profits of Rs. 3,00,000, the tax-free dividend on ordinary shares absorbs Rs. 1,55,000.

Total Tax to be paid on net Present New Scale Increase % net profits.

	Rs.	Rs.	Rs.	Rs.	
20,000	7,708	8,750	1,042	13½	
96,000	61,583	63,750	2,167	3½	
12,00,000	8,31,250	8,53,437	22,187	2½	

Deposit to be made—

	Rs.	Rs.	Rs.
20,000	8,000	11,875	3,875
96,000	1,20,000	1,78,125	58,125

Deposit to be received back—

	Rs.	Rs.	Rs.
20,000	12,000	15,875	3,875
96,000	1,80,000	2,38,125	58,125

It would be clear from the above that the amounts available in the above three cases after meeting taxes and deposits requirements are Rs. 11,250 out of Rs. 20,000, Rs. 20,375 out of Rs. 96,000 and Rs. 1,68,433 out of Rs. 12,00,000 as compared to Rs. 12,292, Rs. 28,417 and Rs. 2,48,750 respectively. The severity of hardship will be experienced where the standard profits as compared to current profits are extremely low as the only profits which can be at the disposal of the shareholders will be the standard profits. Even then such standard profits will have to bear the income-tax and Corporation tax and also the compulsory deposits. It could be easily seen that a company earning net profits of Rs. 12,00,000, but having minimum standard will be required to pay Rs. 7,76,000 as Excess Profits Tax and Rs. 1,72,250 as income and Corporation taxes. Out of the balance compulsory deposit of Rs. 2,30,375 will have to be made. This will leave a balance of Rs. 21,375 at the disposal of the company.

The effect of the increase in tax rates will be to deprive the company of its liquid

(Continued on page 451)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 4.

RATHER uninteresting conditions were noticeable on the Calcutta Stock Exchange in the early days of the period under review pending the announcement of the budget proposals. On the eve of the Budget, however, there was actually a bullish tendency in evidence and with the disclosing of a deficit of Rs. 78.21 crores for the next financial year, operators were inclined to adopt a more bullish view of the future. The actual budget proposals, however, resulted in a slight marking down in values as it is generally felt that, even though there is no great increase in the real tax burden, the immobilisation of funds will result only in the maintenance of dividends which will minimise the scope for increase in prices. That is the reason why the improvement in prices during the week has not been well held and quotations are, at the time of writing, slightly lower. The under-tone in several sections continues steady.

The gilt-edged securities section has not been in any way affected by the new taxation proposals. As a matter of fact, a better tendency is noticeable and 3½ per cent Paper is quoting higher at Rs. 99-1. Among terminable loans, 3 per cent 1953-55 were Rs. 99-12, and 3½ per cent 1954-59 Rs. 104-2. 3 per cent 1949-52 were Rs. 100-14, 3 per cent 1951-54 Rs. 100-2, 3 per cent 1946 Rs. 102-3, 3 per cent 1966-68 Rs. 98-1, 3½ per cent 1947-50 Rs. 103-2, 4 per cent 1960-70 Rs. 112-2 and 5 per cent 1945-55 Rs. 105-3. No business has been reported in Provincial loans owing to the scarcity of sellers. Easy conditions continue to prevail in the money market and the average discount rate on treasury bills remains unchanged at 12 annas and 11 pies per cent per annum.

Bank shares have remained unchanged with Bharat Bank at Rs. 122-8, Calcutta National Bank at Rs. 14 and Hind Bank at Rs. 56-8. Imperial Bank fully paid Rs. 1,985 and contributories Rs. 514. Reserve Bank were lower for a time at Rs. 126 but have recovered to Rs. 130 towards the close. United Commercial Bank have been fluctuating around Rs. 27-8 premium.

In spite of the uncertain tone of the Bombay market, Cotton shares have been rather steady in the local market. Cawnpore Textiles were not very much changed at Rs. 15-10, while Elgin were easier at Rs. 85-8, Kesoram were Rs. 18-6 and New Victoria Rs. 9-15. Pravati Textiles were fluctuating around Rs. 11-12 and Sree Radheyshyam Rs. 23-9.

The Coal section has continued active and the gains have been fully maintained. It is generally felt that the coal industry will stand to gain by the relief in regard to depreciation on mechanisation equipment and production bonuses. But for the quieter feeling in the other sections, higher prices would perhaps have been recorded. Amalgamated were Rs. 46-6, Bengal Rs. 593 and Bhagora Rs. 16-4. Burrakur were marked higher at Rs. 33-12 though they are quieter now at Rs. 32-10. After being higher at Rs. 55, Equitable are now quoting Rs. 54, New Beerbhoom were Rs. 32-12 and Ranee-gunge Rs. 41-6. South Karanpura have been in good request and done up to Rs. 13-6. The quotation is now Rs. 12-9. Talcher were

Rs. 7-2, West Jamuria were well held and there are not many sellers at Rs. 55-14.

The Jute section has been slightly better though there is not much business to be reported. Adamjee were Rs. 35-10, Anglo-India Rs. 40-4, Champdany Rs. 22-7. Howrah have completely recovered the lost ground and are now quoting Rs. 69-6 while Hukumchand are unchanged at Rs. 36-2. Kankannarrah and Kamarhatty were unchanged at Rs. 585 and Rs. 508 respectively while Megna were Rs. 96-12 and National Rs. 29-6. Presidency were higher at Rs. 7-5 and Soorah at Rs. 18-2. Nuddea improved by 5 points to Rs. 123.

In the Engineering section, Indian Iron and Steel Corporation were done up to Rs. 37-10 nad Rs. 28-4 respectively prior to the announcement of the Budget proposals but on some selling quotations are easier at Rs. 36-14 and Rs. 27-12 ex-dividend. Arthur Butler were uninteresting at Rs. 20 while Britannia Building and Iron were very firm at Rs. 19-13. Jessop & Co. were higher at Rs. 23-10 as also Marshalls at Rs. 5-3. National Iron and Steel were quiet at Rs. 13-6 while Saran Engineering were Rs. 10-5.

Among Sugar shares, Belsund have come in for some buying and the quotation is now Rs. 13. Carew & Co., fluctuated around Rs. 30-6 while Champaran registered a rise of one point to Rs. 42-3. U. P. Sugar also were higher at Rs. 34 and Ramnugger Cane and Sugar at Rs. 14-12. Samastipur Central were Rs. 22-7.

The decision to levy an excise duty of 2 annas per lb. on tea has resulted in a slight decline in prices in the tea section but there are not many sellers and the popular counters are not very much lower on balance. Hattikhira were Rs. 30-9 as against Rs. 31 at the end of last week, Tezpur Rs. 17-12 against Rs. 18-6 and Sipoor Rs. 21-4 as against Rs. 22-8. Central Cachar were Rs. 98, East India Rs. 15-2 and Rutema Rs. 16-6.

In the Miscellaneous section, Burma Corporation have been neglected while Indian Copper were done at Rs. 2-14. Karanpura Development were steady at Rs. 13-4. Assam Bengal Cement were higher at Rs. 19-1 as also Dalmia Cement at Rs. 19. Ruby General improved further to Rs. 24-4, Indian Wood Products to Rs. 35-2, Midnapore Zemindary to Rs. 147-4 and New Asiatic Insurance to Rs. 14-4 from Rs. 13-8 earlier in the week. British India Corporation were quiet at Rs. 6-8 cum dividend while Balmer Lawrie were higher at Rs. 450. Bengal Assam Steamship were done up to Rs. 315. Among Paper shares, India Paper Pulp were higher at Rs. 230 earlier in the period though the quotation is now Rs. 224, Orient Paper were Rs. 33 while Titagur have sharply recovered to Rs. 29 from Rs. 27-8. Assam Saw were Rs. 6 and Bengal Timber Rs. 218. India General Navigation were Rs. 144-8 and Port Shipping Rs. 25-10.

There has been greater enquiry for preference shares but business passing has been difficult of execution owing to lack of sellers. Dalhousie were Rs. 182, Birla Rs. 141 and Hastings Rs. 156, Lansdowne were higher by 4 points at Rs. 159 as also Reliance at Rs. 186. Associated Hotels were Rs. 115-8 and National Insulated Cables Rs. 112. Steel Corporation were unchanged at Rs. 130 and Kumardhubi Engineering Rs. 360. No transactions have been recorded in public bodies debentures.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, March 2.

WITH the publication of the Finance Member's speech to the Central Assembly introducing the budget for 1944-45 speculation as regards taxation in the coming financial year has given place to misgiving. Considering the fact that direct taxation is proposed to the tune of Rs. 8½ crores only out of a total deficit of Rs. 78.2 crores and the total taxation proposal is for Rs. 23½ crores, it must be said that industries have been let off lightly. The first reactions were favourable. But that part of the budget relating to the compulsory deposit of excess profits of companies together with the increase in Corporation Tax and Super-tax have depressed the market when their implications were fully comprehended. The net result of the new measures will leave very little for the companies to distribute to ordinary shareholders in the form of dividends. Established companies can only manage to maintain their war time dividends in the coming year.

*After transferring Rs. 1,75,000 from Dividend Equalisation Reserve and taking credit Rs. 3,70,000 being excess provision of taxation in previous accounts and estimated tax refund recoverable.

(Half-yearly General Meeting on 23rd March, 1943 at 11-40 A.M.)

Audited accounts for the half-year ending 30th November, 1943:

After adjusting the provision made for taxation in the first half of the Companies Income Tax Year, allowing for estimated refund of tax and bringing forward the balance from the last account there is a balance at the debit of Profit and Loss Account of Rs. 38,841-5-8. After transferring Rs. 1,75,000-0-0 from Dividend Equalisation Reserve there is a balance available for distribution of Rs. 1,36,158-10-4. From this the directors recommend payment as follows:—

	Rs.	A. P.
Dividends on Preference shares at Rs. 3-8 per share	35,000	0 0
and on Ordinary shares at Rs. 7-8 per share	67,500	0 0
thus absorbing Rs. 1,02,500-0-0 and leaving Rs. 33,658-10-4 to be carried forward.		

During the half-year the Industry was gravely affected by coal shortage resulting from transport difficulties aggravated by breaches of the Railway due to floods.

In order to assist the wagon situation the Indian Jute Mills association agreed to take delivery of coal in bulk at Central depots, thereby enabling the Railways to deliver in train loads instead of to individual mills in separate wagons.

Unfortunately coal arrivals at the depots were disappointing and the depot set up by the Association to supply mills in the Budge-Budge area failed to operate successfully and had eventually to be closed down. As a result the mill remained closed for lack of coal for a considerable period of time when most of the Industry was working.

During the half-year the weekly hours of working under the Indian Jute Mills Association Working Time Agreement were 54 with 10% of the total looms being silent up to 14th June. This represents a total of 1,090 hours for the half-year, after deducting 324 hours lost in the six emergency closed weeks fixed by the Association for the whole Industry. These 324 hours cannot be made up in future. In addition, however, a further 377 hours of hours were made up during the closed weeks in the half-year, and the Company is entitled to make up the balance as and when circumstances permit. For the reason explained above the total time lost is considerably more than the average for steam driven mills, while electric mills have not been appreciably affected except for the six weeks in which the whole Industry was closed.

Since it was necessary to pay allowances and provide food at very heavily subsidised rates for the labour throughout the period, and since all costs are rising, very little economy in expenditure was possible so that the loss of production resulting from a total reduction of 617 working hours (equal to 43% of those authorised under the Working Time Agreement) has increased production costs enormously.

While however the Company has suffered more heavily this half-year than the majority of the Industry it is nevertheless entitled to recover a large proportion of the time lost as and when circumstances permit.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 19,00,000 in 9,000 Ordinary and 10,000, 7 per cent. Cum. Pref. shares, both of Rs. 100 each fully paid up.

Synopsis of the balance sheet as at 30th September, 1943.

*Does not include a sum of Rs. 28,000 transferred from War Risk Insurance Reserve to General Reserve.

(Half-yearly General Meeting on 23rd March, 1944 at 11-50 A.M.)

Audited accounts for the half-year ending 30th November, 1943: After transferring Rs. 3,660 to Insurance Fund, providing Rs. 50,000 for Depreciation Rs. 45,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 73,675-14. After bringing forward the balance from the last account there is a balance at the credit of the Profit and Loss Account of Rs. 1,39,364-1-2. From this the directors recommend payment as follows:—

	Rs.	A. P.
Dividends on Preference shares at Rs. 3-8 per share	35,000	0 0
and on Ordinary shares at Rs. 4 per share	63,800	0 0
thus absorbing Rs. 98,800 leaving Rs. 40,564-1-2 to be carried forward		

During the half-year the weekly hours of working under the Indian Jute Mills Association Working Time Agreement were 54 with 10% of the total looms being silent up to 14th June. This represents a total of 1,090 hours for the half-year, after deducting 324 hours lost in the above six emergency closed weeks fixed by the Association. These 324 hours cannot be made up in the future.

Taxation	Nil	2,60,000	3,20,000	3,04,558
Reserve funds	Nil	Nil	24,000*	26,000
Other funds	2,590	3,624	2,947	3,256
Dividend amount	87,185	1,24,550	1,49,460	1,49,460
Carry forward	86,208	1,19,153	1,49,445	1,43,800
Dividend % Ord.	3½	5	6	6

*Does not include the sum of Rs. 26,000 transferred from War Risk Insurance Reserve to General Reserve.

†After transferring Rs. 75,000 from General Reserve and taking into credit a sum of Rs. 3,18,215 being excess provision for taxation in previous accounts and estimated excess profit tax recoverable.

(Half-yearly General Meeting on 23rd March, 1944 at 12-20 P.M.)

Audited Accounts for the half-year ending 30th November, 1943: After adjusting the provision made for taxation in the first half of the Companies Income Tax Year, allowing for estimated refund of tax and bringing forward the balance from the last account there is a balance at the credit of Profit and Loss Account of Rs. 98,393-1-8. After transferring Rs. 75,000-0-0 from General Reserve there is a balance available for distribution of Rs. 1,73,393-1-8. From this the directors recommend payment of a dividend of Rs. 3-8 per share on Ordinary Shares absorbing Rs. 87,185-0-0 and leaving Rs. 86,208-1-8 to be carried forward.

During the half-year the weekly hours of working under the Indian Jute Mills Association Working Time Agreement were 54 with 10% of the total looms being silent up to 14th June. This represents a total of 1,090 hours for the half-year, after deducting 324 hours lost in the six emergency closed weeks fixed by the Association for the whole Industry. These 324 hours cannot be made up in the future. In addition, however, a further 358 hours of working were lost by your mill for lack of coal. Of these, 84 hours

were made up during the closed weeks in the half-year, and the Company is entitled to make up the balance as and when circumstances permit. For the reason explained above the total time lost is considerably more than the average for steam driven mills, while electric mills have not been appreciably affected except for the six weeks in which the whole Industry was closed.

Since it was necessary to pay allowances and provide food at very heavily subsidised rates for the labour throughout the period, and since all costs are rising, very little economy in expenditure was possible so that the loss of production resulting from a total reduction of 598 working hours (equal to 42% of those authorised under the Working Time Agreement) has increased production costs enormously.

	61,500	0 0

Leaving a balance at credit of .. 14,322 15 3 to be carried forward to next account.

The stock of jute has been valued at or under cost price, materials in process of manufacture at cost and finished goods at contract rates or cost price at 31st December, 1943.

In accordance with the Indian Jute Mills Association Supplementary Working Time Agreements the mill closed down for one week in each month during July, August, September, November and December and for two weeks during October. This compulsory closing scheme was introduced by the Association as a result of deficient coal supplies. In addition to the compulsorily closed weeks the shortage of supplies of coal of good quality necessitated the closing down of the mill for further intermittent periods. The mill is allowed to make up the hours lost during the latter stoppages when circumstances permit.

THE EDWARD SASSOON MILLS, LIMITED

NOTICE is hereby given that the Thirty-fifth Ordinary General Meeting of the Shareholders of the above-named Company will be held at the Registered Office of the Company at E. D. Sassoon Building, Dougall Road, Ballard Estate, Bombay, on Friday the 31st March, 1944 at 3-30 p.m. (N. T.), to transact the following business:—

- (1) To receive and adopt the Directors' Report and the audited Statements of Account upto 31st December, 1943.
- (2) To declare a dividend.
- (3) To elect two Directors in place of those, who retire by rotation but are eligible for re-election.
- (4) To confirm the appointment of a Director, who retires under Article 111 of the Company's Articles of Association but is eligible for re-election.
- (5) To appoint Auditors and fix their remuneration.

The Transfer Books of the Company will be closed from Friday the 3rd March, 1944 to Friday the 31st March, 1944, both days inclusive.

By Order of the Board.
E. D. SASSOON & CO., LTD.,
Agents.

Bombay, 24th February, 1944.

Note:—The Dividend, if sanctioned at the General Meeting will be payable from Tuesday the 18th April 1944, to the Shareholders whose names stand on the Register of the Company on the 31st March 1944, and Dividend Warrants will be posted to the Registered addresses of such Shareholders.

THE EDWARD SASSOON MILLS, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of The Edward Sassoon Mills, Limited will be held at the Registered Office of the Company at E. D. Sassoon Building, Dougall Road, Ballard Estate, Bombay, on Friday the 31st day of March 1944, at 3-45 p.m. (N. T.) or so soon thereafter as the proceedings of the Annual General Meeting of the Company convened at 3-30 p.m. (N. T.) on the same day have been concluded to consider and if thought fit to pass the following resolution as a Special Resolution:—

Special Resolution

'That the name of the Company be changed from "The Edward Sassoon Mills, Limited" to "The Edward Textiles, Limited".'

By Order of the Board.
M. P. MEHTA,
Secretary.

Dated this 24th day of February, 1944.

BENGAL JUTE MILL COMPANY LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS

FOR THE

Period ended 30th June 1943

Gentlemen,

We beg to submit herewith the Balance Sheet and the audited statement of accounts of your Company for the period ended 30th June 1943 showing a Gross Profit of Rs. 5,83,844-14-6. After providing Rs. 87,746-5-3 for depreciation and Rs. 1,02,892-12-5 for Interest, Commission, Allowance and other expenses, there is an available balance at credit

of Profit and Loss Account of	Rs.	a. p.
	3,98,205	12 10

To this should be added the amount brought forward from the previous half-year

Making a total of	4,11,443	7 4
-------------------	----------	-----

It is proposed to set aside as a Reserve for Taxation (Income Super & Excess Profits Taxes)

	2,40,000	0 0
--	----------	-----

Leaving an available balance of

	1,71,443	7 4
--	----------	-----

We recommend that this should be dealt with as follows:—

In paying a Dividend on 5½% per annum Redeemable Cumulative Preference Shares for the half-year ended 30th June 1943 (free of Income Tax)

	27,500	0 0
--	--------	-----

In paying a dividend on the Ordinary Shares of annas -8/- per share (i.e., 10% per annum) free of Income Tax

	75,000	0 0
--	--------	-----

Transfer to Reserve	50,000	0 0
---------------------	--------	-----

	1,52,500	0 0
--	----------	-----

To be carried forward to next half-year	18,943	7 4
---	--------	-----

	1,71,443	7 4
--	----------	-----

Mr. S. N. Banerjee in terms of Articles of the Association of the Company retires this year from the Board of Directors and being eligible offers himself for re-election.

Messrs. S. R. Batliboi & Co., Auditors of the Company, retire this time and being eligible offer themselves for re-appointment.

Mr. Jugmohan Prasad Goenka being out of Calcutta has not signed the Report and the Accounts.

A letter in accordance with the Article No. 132 of the Articles of Association of the Company from Mr. C. L. Bajoria proposing Mr. N. R. Sircar as a Director of the Company will be placed before the 6th Ordinary General Meeting for its approval.

During the period under review, your Mills have worked in accordance with the working agreement of the Indian Jute Mills Association.

We are, Gentlemen,
Yours faithfully,

J. S. KER
M. L. JALAN
C. L. BAJORIA
S. N. BANERJEE

Directors.

INDIAN RE-ROLLING MILLS ASSOCIATION

Mr. BHATTAR EXPLAINS THE INDUSTRY'S DIFFICULTIES

The First Annual General Meeting of the Indian Re-Rolling Mills Association was held on 7th March, 1944, at the premises of the Association at 102-A, Clive Street, Calcutta. Mr. S. K. Bhattar, the Vice-President, was in the chair and opened the proceedings by apologising for the absence of Mr. B. Bajoria, the President, who was attending the Assembly session at Delhi, and to whose able services to the Association he paid a tribute. Before presenting the Annual Report with the statement of accounts he made the following observations on some of the outstanding questions affecting the Association and the Re-Rolling Mills Industry:—

It may not be out of place to recall here the circumstances under which this Association was formed. In fact, it is well known to all of us that this Association was formed because the Steel Re-Rolling Mills Association was not willing to enlist new members. In August, 1942, an informal conference of re-rollers was held to discuss measures and means to promote and safeguard the interests of re-rollers in India, and thus the Association came into existence. It is to the credit of the Association that the Government of India then came forward with a Press Note on the 14th October, 1942, announcing that they had decided that all the Re-Rolling Mills which had started before September, 1941, should become members of the Steel Re-Rolling Mills Association of India and they were invited accordingly. It was further stated in the communique that the decision had been arrived at for giving equal opportunities to all mills which were started before September, 1941, and to safeguard the interest of the established mills as far as possible and to protect them against failure of supplies of raw materials and other necessities as well as to avoid profitless competition.

But to the utter disappointment of the industry, though practically all the mills have become members of the Association, matters have not improved materially. Discrimination both in regard to supply of raw materials as well as planning on individual mills still continue as a result of which most of the mills are lying closed and it will be a surprise to many to learn that even efficient mills having ample resources and other necessities required for efficient working have been ignored while preference appears to have been given to others.

Gentlemen, you are all aware of the Government control over this industry, which is being exercised in three different ways:—

1. Raw material such as scrap and billet.
2. Coal and other necessary implements.
3. Disposal of finished materials.

Now allow me to discuss these points separately.

The capacity of the Rolling Mills was assessed by a high official of Government (though in some cases the same is disputable) and I do not understand what is the hindrance to Government making allocations to the Rolling Mills on the principle already laid down by them. It is up to the Government to enquire into the matter and to set up an enquiry committee to find out why and how such discrimination occurred and is continuing.

It is well known to you that some steam driven mills are being provided with raw materials to their fullest capacity while some electrical driven mills have been ignored. When the problem of coal is so very acute, the steps taken by the I.S.C. officials are most deplorable.

Further, it is disappointing that though the mills joined the Steel Re-rolling Mills Association between October and November, 1942, the actual allocation was started only from February, 1943. Then again, though raw materials were allocated to some mills as far back as in February, 1943, no coal has been allocated to them till now, although more than 12 months have passed and the money they paid is lying blocked. Is it not

sufficient to prove the failure of Government in the matter?

The details of discrimination made by the Iron & Steel Controller have been embodied in the memorandum submitted by the Steel Re-Rolling Mills Association, from which it will be evident how inefficiently the matter has been handled. In some cases raw materials have been allocated only 11 per cent of the capacity of the mills, while in some other cases the allotment was as much as 300 per cent.

Gentlemen, insufficiency in the coal supply to the mills has lately created a formidable difficulty, which in turn has resulted in closing down of several mills. Shortage of coal has particularly been felt after August, 1943, when there occurred a breach in the railway lines. It was natural that the breach should have affected the coal position in Bengal, but conditions were no better even up-country as no advantage seems to have been taken of the wagons set apart for Bengal which were then lying idle due to the breach. Now the coal allowed to the re-rollers is only 5,000 tons per month. Thus, to meet the situation arising out of the coal shortage and transport difficulties, the Iron & Steel Controller has introduced a coal rationalisation scheme. This scheme is based on the assumption that the total monthly capacity of all the 'A', 'B' and 'C' class mills is 16,350 tons, which is far in excess of the demand of only 10,000 tons per month. Therefore, it contemplates a compulsory closure of 'C' class and some of the 'B' class mills to bring down their total production to 10,000 tons per month and monthly consumption of coal to only 5,000 tons. In this connection, I should like to point out that the Controller does not appear to be in possession of correct statistics, both in regard to the production capacity of the mills and the consumption of coal by them. According to my information, the monthly output of the mills has never exceeded 6,244 tons and the average monthly production for the period January, 1943, to August, 1943, was only 4,825 tons. Therefore, there seems to be no justification for closing down the 'C' class and some of the 'B' class mills even if the Controller wants a total production of only 10,000 tons per month. Moreover, the proposed scheme of the Controller will result in a closure of 60 per cent of the Re-Rolling Mills and the capital of about 1 crore employed in them will be practically lost. The people who will suffer are mostly middle class people who have put at stake in the mills all that they possessed and in some cases have even incurred debts. On the other hand, the bigger mills would be given double the work they have been doing in the past. It would only mean overfeeding for some at the cost of starvation for others.

Here I should like to invite your attention to a scheme proposed by our worthy President, Mr. B. Bajoria, who suggested that the 'A' and 'B' class mills which had been working properly in the past should be allowed to work to the maximum production they had ever attained in any month in 1942 or 1943, and that the balance of 10,000 tons should be distributed *pro-rata* amongst those mills of 'B' 'C' class who had no opportunity to function and which it is proposed to close down. I consider this scheme of Mr. Bajoria fair to all classes of re-rollers and I trust the same will receive the careful consideration of the authorities. It will be very unfortunate if it is pigeon-holed like all other proposals, as this would have serious repercussions on the future of our industry.

The scheme in question was forwarded to the Controller in the month of January. It is surprising to learn that the Control Office is hesitating to put this scheme into operation, and I am at a loss to understand why the Iron & Steel Controller is not taking any action on the scheme.

Since the above scheme of Mr. Bajoria and the Memorandum prepared by the Steel Re-

Rolling Mills Association have been before the Iron & Steel Controller for quite a long time, the members of this Association are entitled to know what steps have been taken to implement them. I consider it essential that the Chairman of the Steel Re-Rolling Mills Association should take all possible steps to see that there is no further delay in the matter and if the papers are held up at any intermediary office for some reason or other, he should personally take up the question with the higher authorities and, if necessary, he should even lead a deputation both to the Supply Member and the Steel Commissioner.

From what has been stated above and what is going on, it is evident that the Iron and Steel Control Office has failed in the matter and I can say boldly that where they have failed, a Trade Association can very efficiently work.

The fundamental principle of industry is that production should have its circulation, but it is regrettable that in this particular industry the matter has been handled so recklessly that some mills have their entire year's production lying in their mills while others are able to dispose of their production as soon as it is ready.

As already stated above, this has been possible because the sweet will of the officers is the only guiding factor and no one else has got a say in the matter. Moreover the control has been worked in a manner prejudicial to the interests of the re-rollers because of the influence of interested parties who have been anxious to see them eliminated during war time, when each and every industry has flourished and made new extension in plant and machinery to withstand competition in peace time.

It has also been noticed for some time past that releases are being given to the main producers for the same kind of articles which the re-rollers are producing and are lying in their stock. With the help of the Government the main producers have established their Depots through their dealers at all important centres where they can easily transfer materials. These Depots will have their post-war value and would be utilised in the interest of the main-producers only. As these Depots are being recognised by the Government, the main producer should not be the only party whose production should be released but similar arrangements should also be made for the production of the re-rollers as well.

In this connection I should also like to suggest that if at any stage the production exceeds the Government demand the Controller should take steps to increase the releases for civilian consumption. Also, if at any time it is found difficult to move the production of the mills due to lack of transport facilities, the same should be released for civilian consumption instead of being allowed to remain unused for a considerable period. Such a policy will prove helpful both to the industry and the public, and incidentally it will also implement the declared policy of the Government to make consumers' goods increasingly available to the public.

Thus, it is evident, Gentlemen, that the operation of controls in respect of the Re-Rolling Mills industry has been a serious obstacle in our way. In my opinion the fault lies not so much with the control as with the mechanism through which it is exercised. No control can ever succeed without taking the trade into confidence, and it is high time that the Iron & Steel Controller recognised this elementary principle of economic control. He should come forward with a plan for both the distribution of raw materials to the Re-Rolling mills and placing of Government orders on them, which is not discriminating and is just to all classes of the mills. In formulating such a plan he will stand

(Continued on page 478)

Finance Abroad

Thursday Morning.

The calm of markets is unbroken by the controversy over the pipeline scheme. Mr. Stettinius' forthcoming mission to London provokes no surmise or suspicion. The oil share market in London has registered nothing like the effects to be apprehended from a quarrel between the U.S. oil industry and the Petroleum Coordinator. The ready calculation as to the basis of oil diplomacy or its ulterior aims finds no support at all in market movements. Reference is made to the Dutch and their interest in developments in the S.W. Pacific. The Canberra declaration notwithstanding, it is deduced in Washington that the Netherlands have a claim to compensation for losses in Sumatra and Borneo. Royal Dutch is steady and unchanged at £29½ but any definite indication of Allied readiness to pass on benefits should lead to a rise in the stock. The U.S. Government invites other nations to formulate claims when the U.S.A. gets more oil out of Saudi Arabia. The Saudi Arabian development plans call for a loan to two U.S. companies—others perhaps do not like the loan arrangement meant merely to create a right of pre-emption. The Senate is said to be ignorant of details; hence the objection, but no treaty with Arabia is involved, only a loan to native companies is proposed, and the objections are likely to fail.

The small improvement in gilt-edged this week in London follows the abundance of credit reported last week. Treasury deposit takings are again larger than usual, but clearing banks continue to keep large balances and the volume of applications for Treasury Bills every week remains high. There has been no mention so far of any savings drive before the budget. The Argentine payment of £25 million should have helped the gilt-edged market. The Australian debt repayments have admittedly created interest in the 5 per cent loan, optionally repayable in 1945. There are half a dozen of these loans for a total of over £100 million, but material assistance in this case should be provided by the Commonwealth Bank's sterling balances totalling £86 millions on September 27; there must have been an increase since. The increase in Australia's own debt by £150 millions in the form of 2½ per cent and 3½ per cent loans would, of course, be considerable, but the Commonwealth is fully secure through the operations in New Britain and the wool exports at better prices should strengthen the farmer's position.

The London banker's view of sterling balances as afforded by Lord Wardington's assessment of the situation indicates in references to blocked crucisco balances and the lack of payments for Argentine exports. Liquidation of new short-term debts in goods is expected. British trade with South America is expected to flourish because the importing countries have a reservoir of foreign exchange to pay for reserved exports from the sterling area. The fact that many Latin American countries have in the past borrowed money and British investments remain large has been cited repeatedly in connection with the blocked balances. The arguments *mutatis mutandis* may be applied in regard to India and the discharge by Britain of short-term obligations over a long period and linked to some extent with special projects

of expenditure is the most than can be expected. Comment on the subject has been anticipated in the 1943-44 budget by the Finance Member and the Latin American balances will probably be dealt with in much the same way though the Chairman of the Bank of London and South America laid due emphasis on the co-operation of Government with exporters on a realistic basis.

The rise in Home Industrials this year is slow and slight as compared with the rapid improvement in September-October 1943. The slackening undoubtedly favours gilt-edged securities, but the prospect of profits not liable to special wartime tax has receded though the point certainly requires notice here after the increase in taxation prescribed in the budget. Rating of post-war prospects for Indian industry after the removal of E.P.T. may modify present calculations of investors as to yields and reserves. If leading industrials offer the British investor today barely 4 per cent in most cases, the main advantages of War Loan now at £104 require no description. The Treasury is likely to capture more attention than private enterprise but it is possible that post-war trade controls would favour established enterprises and motor and aircraft shares should respond readily to Sir Stafford Cripps' description of opportunities in China for British manufacturers.

The more important development of the week, the South Wales strike seems a surprise after the acceptance of the pit bonus scheme and additional interest in coal utilisation. Regional planning to extend the use of coal and make it the basis for new industry received encouragement though the workers' argument in favour of nationalisation was overruled in deference to owners. The latest definite terms on wages like the U.S. coal strike which went in favour of the miners. What is obvious is that coal shortage would be serious even more than in the past and the big South

Wales strike may have effects on other things like textile exports this year. The cotton industry's outlook is called obscure. In any case, industrial shares generally are likely to fall back as shown by the decline on Tuesday if the intransigence of miners does not affect the labour party's support to Mr. Churchill. Markets have shown no indication of being taken by surprise.

The Soviet advance towards Rumania would encourage free speculation as to the immediate course of the war although Turkey's disinclination to look beyond strict neutrality may lead to a change of opinion as to immediate prospects. There is perhaps no tangible guidance in the refusal of Mr. Eden to say anything. The most that can be hoped for is the rapid dejection of the satellite states in which case, Rumanian rather than other oil shares would capture the speculator's attention. The prospects must, however, be called obscure for Rumania has experienced severe inflation in addition to air raids on Ploesti. The Curenul regime has not been made popular by free spending.

National defence expenditure rose rapidly 1942 and the budget receipts did not cover the expenditure. The Soviet advance towards the Carpathians implies no direct threat to the Danube valley but Rumania's flank is exposed and Bulgaria is credited with the intention to negotiate for herself. A revival of special interest in foreign bonds since the attitude of Chile and Brazil to British bondholders nipped the small revival noted three months ago. There is little positive news about Finland; the armistice, however, appears likely and the finmark may be linked with sterling more readily if Swedish interest in Finland grows. The other Northern currencies may not gravitate readily towards sterling, but it must be recognised that an Oslo group when it emerges would look as in the past to sterling not the dollar area. The position is inferable from the transfer of Norway's gold to London like that of Belgium which was placed at Britain's disposal for all approved purpose. The singular independence of the rouble would survive the war because all trade and finance is under control and profits are viewed only as a means to saving under planned economy—closed in the future as in the past.

The Argentine medley is more confusing after the recognition of General Farrell's Government by Bolivia, Chile and Paraguay through the maintenance of diplomatic relations. Mr. Stettinius' decision has been supported in a roundabout fashion by Mr. Eden, but the statement in the Commons suggests that the change of Presidents is enveloped in legality. S.E. reactions have not been indicated and the maintenance of purely formal relations with the de jure regime is not a bull point for Argentine rails. General Farrell has indicated that there is no intention to set up a dictatorship but previous indications were that General Ramirez aimed at totalitarian control. The major change in Argentine, foreign policy, however, supports optimism as to the clarification of the Anglo-American attitude and last week the signs were promising as the intervention of the armed forces in politics miscarried and the devolution of powers to the Vice-President was accomplished directly by General Ramirez affirming his retirement. That the U.S.A. adopted the precaution previously adopted in connection with Bolivia may not be a final indication as General Farrell emphasised that a return to constitutionalism is the real goal.

Indian Commerce & Post War Planning

The annual session of the Federation of Indian Chambers was characterised this time by the recognition that with the end of the war drawing near, the problem of India's economic development after the war overshadows all other problems. The Bombay Plan, with its emphasis on such conditions precedent as the establishment of a strong national Government at the Centre, has had within a few weeks of its publication the effect of turning men's minds from contemplation of the distressing and distracted conditions of the present to a serious consideration of the efforts needed to reach a high level of general prosperity. Though the Federation, as representing Indian trade and commerce cannot but ventilate such grievances as particular sections of its members may have or express its views strongly or decisively on the important specific problems now before the country, the Federation has definitely shifted the emphasis of its articulation from the grouses of the moment to the demands of the country as a whole for the future. Economic developments or rather the deterioration of economic conditions in the whole country, as well as the nature of the economic and financial issues now before the Government have made it necessary for us all to think in terms of comprehensive development over a period. Neither the food situation nor inflation nor sterling balances, nor even, for the matter of that, the rates and kinds of taxes levied to reduce wartime deficits, can be considered in the narrow terms of old established academic principles or along the lines of political partisanship. If for the present we have problems of procurement and distribution of food, we have for the future, the far more important problem of adequacy of nutrition for the teeming millions of this country. Likewise, inflation will be seen before long to call for an expression of productive activity within the country which will have to be properly related to the economic development of the post-war period. And, if inflation is related to production at home, sterling balances are related to our command of external resources necessary for importing from abroad what we cannot produce at home. All our problems of the present have a way of shading off and merging into the larger problems of the future. And economic problems, considered in the long view, only enhance, and not detract from, the importance of the major political problem.

It should be no surprise, therefore, that in spite of his close association with a non-Congress party, Sir Muthiah Chettiar, the outgoing President of the Federation, has been able to line up with his predecessors in their political demand. The release of nationalist leaders now in detention has long ceased to be a mere party issue. With post-war problems already making their impact on current discussions and plans, the need for accredited popular leaders joining in the present deliberations and putting the stamp of the Congress on proposals concerning the people as a whole cannot be gainsaid by any one. Indeed, the Viceroy himself regards it as axiomatic, though he has not seen his way to bring about the release of people, who in the nature of things cannot take the initiative for new developments. Sir Muthiah Chettiar has joined in the demand, though the non-Congress background of his mind is evident in an over wrought emphasis on Government being representative of all parties.

Sir Muthiah naturally speaks with greater freedom and authority on issues which are the more direct concern of the commercial and business community. An allegation that Indians are being squeezed out of the export trade, coming from one like him, demands immediate and careful attention

and speedy redress from the Government. The U.K.C.C., Sir Muthiah Chettiar describes, as an Avatar of the East India Company. Neither the historical precedent nor current reports are quite reassuring. We are aware that, quite apart from what it may or may not portend to India, the U.K.C.C. will prove to be something more than a war time expedient to be scrapped as soon as peace is signed. The machinery of international trade is bound to be overhauled after this war, because the special measures of the present are not easily dispensed with and, what is more, they will be seen to be more in accord with the changed conditions of national economy and world trade. Our London and Washington Correspondents have more than once referred to the fact that both in Britain and the U.S.A., the regulation of foreign trade through such associations is under contemplation. All that India can insist is that the U.K.C.C. should not involve any sacrifice of Indian interests; for it is only legitimate for Britain to seek to organise her foreign trade in the manner best suited to her requirements. Sir Muthiah Chettiar has urged that India should be able to treat with the U.K.C.C., on the same lines as Australia. Another point which may develop more or less serious friction between Indian and foreign interests is civil aviation in the post-war period. The Federation rightly insists that India shall not give to foreign concerns more rights than are conceded to her in foreign countries. It demands, too, that the development of civil aviation should be in the hands of Indian Companies. In this and in his protest against the increased import of consumer's goods in preference to the means of increased indigenous production, the President of the Federation has only voiced the opinion of the whole country. Fuller treatment of specific issues have naturally been left to those who moved the relevant resolution. Sir Purshotamdas spoke on the food question and gave expression to the well-considered views which he embodied in his minute of dissent to the report of the Food Committee.

But, as we have said already, post-war planning has well-nigh pushed all questions into the background. Sir Muthiah's approach to the Bombay Plan and his appraisal of its significance are specially noteworthy:

We in India are willing to make all possible sacrifice in our economy if only well-considered plans for vitalising our national life and bettering the lot of the common man are placed before the people of this country so as to capture their imagination and inspire their faith. Such a plan for the building up of the India of tomorrow is the long term plan of economic development for India which was recently published over the signatures of Sir Purshotamdas Thakurdas and others. On behalf of the Federation and on my own I wish to say how deeply they have laid the country in debt to them by their masterly plan of economic reconstruction. It is noteworthy that in this speech to the Indian Legislature the other day, H.E. the Viceroy said that the Government were examining the plan with interest. To think that the plan contains a fully-hatched practical scheme complete in every detail, is to miss the point of its importance. It gives rather a vision, an inspiration. It is a mine of suggestions based on a mass of facts carefully marshalled and weighed. It is a scheme which contains within it flexible basic principles of reconstruction, which, if wisely followed and firmly put into practice will, I have no doubt, assure the happiness and welfare of the India of to-morrow. It is in this light therefore that I welcome the publication of this plan and congratulate the authors on the great and timely service they have rendered to the country.

Mr. Nalini Ranjan Sarker who moved the resolution relating to the Plan was, however, characteristically cautious. He emphasised, even as did the text of the resolution, that only the basic principles can have universal acceptance and that on crucial questions like the allocation of spheres between the State and private enterprise, the authors of the Bombay Plan are yet to work out the details. This emphasis, which ap-

parently reflects the state of opinion in the Federation serves to bring out the importance of the work which the authors of the Bombay Plan have yet to finish. For our part, we are convinced that on this question of apportioning to the State and to private enterprise their respective spheres of activity, it would be wrong for any body of people, even if it be the Federation of Indian Chambers, to set themselves up as final arbiters. For this question has both an emotional or sentimental aspect and an administrative or technical one. Soviet Russia, which set out for the abolition of private enterprise,

root and branch, had to mark out increasingly larger spheres for it, while Britain and the U.S.A. are gravitating to some form of State monopoly of foreign trade. The emotional preferences of large masses of men and the practical requirements of immense social tasks have an interplay, the dynamics of which nobody can foresee in detail. And if the Federation of Indian Chambers speaks hesitantly and with mental reservations about the Bombay Plan with too obvious concern for its own interests it will only condemn itself in the eyes of the public.

EXPORTS AND EMPIRE

In view of the very broad claim made by Lord Woolton that British export trade must be preserved by all means to sustain the standard of living at home there is the usual ready inference that economic imperialism would survive the war. Yet the countervailing arguments too claim notice immediately. The condition that full employment is dependent as much on export industries as domestic construction projects, also that social security plans turn on the ability of industry to pay for imports are implicit in every discussion of Britain's future. What is made plain by Lord Woolton's reference to exports after the loss of Britain's overseas assets is the need of Great Britain for imports on the pre-war scale. To link that with the need for export revival is admittedly easy. It is easy to relate the increase in India's cotton imports with India's own exports of cotton manufactures in the war period. The same need for cotton imports would manifest itself in Britain and the anxiety over markets is part and parcel of the desire to get rid of short-term liabilities gradually by fostering both invisible exports and overseas investment.

Our own interest in British export revival is conditioned directly by the desire to use sterling balances according to plan and to real advantage. Britain's new external debt is now placed at £1,200 millions. Payment of debt must not distort post-war economy according to current doctrine, and the procedure adopted towards Britain's own former debtors who have turned creditors may reflect past policy rather than any special views as to what is required under the notion of equal access (denied by Lord Woolton only obliquely). If certain raw materials are made available without difficulty the U.S.A. would presumably raise no objection to the pattern to which present-day thought is working up. Projects for colonial development through special advisers are, in the main, the result of increased production for which payment must be made later in goods and inter-Imperial trade has to be promoted for that reason. In the past the trade of British Colonies and Mandated territories with Britain was considerable compared with the share of the U.S.A. in the trade of her own dependencies including the semi-independent Philippines. Indian trade returns while indicating the post-Ottawa diversion have made it singularly clear that so far as exports are concerned the post-war burden would fall on Britain more than any other country. A reasoned adjustment of interests as between Britain and other exporters in Colonial markets is not difficult. If the U.S.A. were to recapture its position as the leading exporter of cotton the outlook for Indian cotton (there always will be a surplus even under restriction plans) would be worse than in 1941. Since the main market for the U.S.A. is Europe, and Europe after the war must for some time be treated as a broken reed the competition for markets in Africa and Latin America might be intense. To advance trade interests by measures to raise the standard of living seems expedient to Britain: it is the logical consequence of measures contemplated by the plans for colonial development. It is strange that it should provoke old apprehensions as to Imperialism. A study of the pre-war trade of the U.S.A. would lead to the conclusion that the shrinkage of markets in Europe and Latin America (now being industrialised through the shortage of imports) would compel

her to devote more attention to Africa and Asia. The problem of British recovery when it was examined by the Foreign Policy Association in a special study led to recognition of Britain's need to regain and expand export trade. It was duly recognised that the U.S.A. too would be hit if Britain travelled on the narrow road of bilateralism. And nothing that has been said against controls by others conceals the fact that in new markets won by arms only last year the U.S. exporter has not been specially handicapped.

The unmistakable shift of U.S. opinion in recent months after the modification of lease-lend would suggest that Britain's new problem forced by the reduction in overseas income would be solved without interference. As noted generally the major U.S. interest lies in the regular supply of raw materials like rubber and tin. There is no desire to limit tariffs at home because the question of employment is involved. There is admittedly no desire in Britain to create unusual advantages for home industry after the war. The Import Duties Act in 1932 did not mark a prompt or decisive return to Protection and except perhaps for agriculture (substantially expanded for the war at Government's instance) there is no specific claim for protection. The point requires notice here in view of the reciprocity and quota doctrine peculiar to the Indo-British trade treaty (renewed for the duration). The export drive postulates an increase in exports and if the U.S.A. is engrossed in the reconversion of war economy the Indian supplier of cotton, other fibres, minerals, tobacco and food well may reckon upon important advantages. As to the validity of the belief that Indian manufactures could win a market reference may be made to the exports of matches to Britain. The protected Indian industry indeed won a market abroad, and would not probably get it elsewhere as State monopolies are the rule.

While accepting the need for export revival it is not necessary to examine the possible dangers arising from the retention of the U.K.C.C. That is an instrument of import trade as well and is above all an instrument of economic warfare concerned with neutral or semi-neutral countries. The authoritative view was given by the U.K. Public Accounts Committee when it said that the functions and objects of the U.K.C.C. "cannot now be correctly described as commercial." The direct relation between overseas markets and British manufacturer is through firms with an interest in export trade as well as imports and that alone may have its own effect on the growth of industry in less developed parts of the world.

The main problem for British trade is not that created by the war but by barriers to migration of population, capital and enterprise. The scope for migration is smaller while the resources too are smaller; and the present anxiety to make the most of advantages inherent in the international division of labour arises from fears as to costs and prices. These can be maintained at a relatively low level only on the basis of full employment. The latter is the initial condition for reconstruction and Lord Woolton as Minister for Reconstruction emphasised therefore the need for markets to support in the first place taxation for the social services.

The post-war burden in terms of debt and taxation can be calculated. To offset it there must be a growth of income

and hence the renewed emphasis on the service that England can perform to satisfaction. A little volume issued last year indicated how well-established trade led to oversea affiliates and mentioned the boiler plant of Babcock and Wilcox at Genoa and the Neuilly factory of Huntley and Palmer as desirable results of the unhurried expansion of international trade based on London. If a return to the status quo ante is reckoned impossible public attention must be directed to the real concern of the Minister of Reconstruction with post-war trade rather than pressing home problems dealt with already. It is necessary to insist that concentration on repairing war damage would leave Britain no means of paying for

imports, particularly, of food and industry could not function without the raw materials drawn from abroad. The statement of Lord Woolton was certainly anticipated by Mr. Ralph Assheton who remarked on the erosion of investments, the piling up of debts and the loss of shipping. According to Mr. Assheton the pre-war balance of trade showed a deficit of some £50 millions and 'it would be vital to our standard of life to make good our losses by expanding exports. The means would have to be found as rapidly as possible after the war to turn war industry to the manufacture of goods to meet world demands and meet the deficit in the balance of trade'.

THE FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th July 1944 will be paid on the 15th July 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

The Re-Rollers' Case

While the control orders in general have left many things to be desired the steel control order seems to have done some positive harm to several steel mills in this country. It may be remembered that several Indian re-rolling mills had to struggle hard to get admitted to the Steel Re-Rolling Mills Association. Having won recognition they are now faced with a serious crisis, the question to be faced being not less than to be, or not to be. In a Press Note issued on the 14th October, 1942, the Government of India held out the promise to safeguard the interest of the mills established before September 1941 as far as possible and also protect them from lack of raw materials and other necessities. But the actual working of the Steel Control Order has raised the doubt whether the assurance was ever seriously meant. The recent coal crisis has, it is said, given an opportunity to the Government to reduce raw material supplies to the re-rollers. While economy in coal is inescapable the discriminatory treatment meted out against a few re-rollers can be avoided. The allocation of scrap and billet has been irrational in scheme in as much as some steam-driven mills were provided with raw materials while some electricity-driven mills were starved. Mr. S. K. Bhat, Vice-President of the Indian Re-Rolling Mills' Association, in a speech delivered at the First Annual General Meeting of the Association held here on the 7th instant, pointed out that "in some cases raw materials have been allocated only 11% of the capacity of the mills while in some other cases the allotment was as much as 30%". The coal rationalisation scheme introduced by the Iron and Steel Controller, contemplates a compulsory closure of all 'C' class mills and some of the 'B' class mills in order to bring down the coal consumption to 5000 tons. Mr. Bhat contends that the Iron and Steel Controller's statistics are incorrect and that there is no need or justification to close down mills. National interest lies in preventing the collapse of 60% of the re-rolling mills which have absorbed a crore of rupees and which give employment to thousands of skilled and unskilled labourers. Suspicion is increasing amongst the re-rollers that the Government is showing undue preference to the bigger units. In ordinary peacetime, one can be critical of the walls of industries as there is a fair presumption that those who set up the wall are not the fittest for survival. But when official controls press

unequally the Government can ill-afford to be indifferent to charges of invidious treatment.

New Claim

The really important resolution adopted by the Federation of Indian Chambers at its annual meeting, related to new industries. The assurance given in 1940 as to wartime infants is obviously due for renewal because there is a fear that, in deference to plans for post-war economic co-operation, the claims of new industries for tariff assistance would be overlooked. In the resolution moved by Mr. G. L. Mehta reference was made to the industries set up to meet war necessities as well as the essential civil needs of the public in India. Selective assurances regarding individual enterprises have been given during the war period, but the new claim is for protection without recourse to an enquiry by the Tariff Board. No reference was made to the desirability of retaining the 20 per cent surcharge on import duties after the war. That may not be welcomed as a substitute for the special assistance demanded today. What industries are eligible for special treatment was not indicated in the resolution. Wartime expansion has led to the growth of new industries. As safeguarding, not subsidies are recommended, the appropriate method of dealing with claims for protection may be found in a committee of the legislature. Tariff legislation may be simplified greatly by prompt endorsement of a select committee's opinion and even the right of audience for British or Dominion manufacturers may be retained. What industries should be retained in relation to post-war development seems primarily a matter for the legislature and a committee of super-civil servants is clearly out of place. There may be some risks in committing tariffs to the legislature but they would not be greater than in the past.

Control of capital issues during the war period may not strengthen the general claim of any industry to make good under appropriate conditions. Departures in industrial production secured by Government can be listed at length though it may be hard to describe any particular case as a key industry entitled to special treatment. The problem of post-war tariffs is simplified by the increase in direct taxation. If the need for customs revenue is less acute than in the past, the case for a high tariff on certain goods manufactured in wartime locally is to be taken as proved. E.P.T. refund would not help recently established enterprises, but where other forms of assistance in regard to patents or processes has been afforded, the case for safeguarding

Editorial Notes

duties is not less clear. While it is easy to cite the British dyestuffs industry as the supremely successful result of safeguarding, the point that an industry of equal importance may not arise should not pass unnoticed. The exercise of fiscal freedom, however, covers the imposition of duties that are demanded in special cases. What is perhaps required is the exclusion of the former tests applied to industries in India asking for tariff assistance and the resolution passed last Saturday is, in effect the statement of claim for an ad hoc tariff policy.

Big Reforms

Before the last war ended, there was a new Education Act on the Statute Book. It looks as if history would repeat itself for Mr. Butler's bill appeared in December and the ready verdict was that it is the most memorable educational measure brought before a British Parliament. The most important feature is the conversion of a Board into a Ministry which would direct all local authorities to use their power for the effective discharge of duties. The not less important feature is the integration of the secondary school with the primary school. Smaller classes in better schools are desired definitely. The new system is expected to be ready in April 1945. Larger grants for technical and adult education are promised in the measure which was regarded as better than the White Paper. The Bill submitted in December empowered the Minister to secure educational development and give equal access to educational benefits to every child. Two advisory councils in place of the consultative committee to advise on educational theory and practice are contemplated. The difficult question of denominational religious instruction is met by provision for the continuance of the dual systems. Aided schools are also entitled to grants for construction. County Councils and Borough Councils have to get ready schemes to be worked out by divisional education executives. Freedom to borrow money or raise a rate is reserved to the local authorities. In the case of both primary and secondary schools, attendance will be obligatory unless the parent can prove that a child is receiving efficient, fulltime education suitable to age, ability and aptitude. The penalties for non-compliance are enhanced. For handicapped children the special facilities will be enlarged; the age limit is lowered to 5 and the attendance at special schools beyond the age of 16 is permitted. All types of secondary schools would be under

supervision, eligible for grants, if they choose, from the local education authority and receive 50 percent of the cost of improvement and repairs to premises from the Ministry. The raising of the school-leaving age to 15 after April 1945 is left to the Minister and in the year after all local authorities are called upon to prepare for reform and expansion. These schemes are to have statutory force by authorisation. An innovation promised in the bill is the college to be set up for young people by local authorities. The additional cost of educational reform in 1945-46 is put at £5½ million but the provision for further advance is reflected in the estimate of £47 million in 1951-52 and the stabilisation of expenditure finally at £80 millions. The increase in expenditure marks the advance from the White Paper of July. The main lines of reform were settled then and the higher school-leaving age of 16 was mentioned along with the provision for compulsory secondary education. The novelty does not lie only in the introduction of compulsory part time education for all up to 18. Inspection of all private schools is to be tightened up by the administrative action promised. Reform of teaching methods and reorganisation of the teaching profession was promised then and afterwards in the plan for varied and comprehensive facilities.

Central Excises

Except for the number of amendments tabled by a single Member, the debate on the Central Excises Bill, repealing 17 previous enactments, invited little attention. The official bill, a consolidating rather than amending measure, was circulated, and attempts to delay its passage inevitably miscarried for it was not a revenue measure but one seeking administrative improvements. The Act naturally invited reference to the salt concessions offered in 1930 but the full text of the measure which received the Governor-General's assent on February 24 indicates that the Act which applies to the whole of British India apart from authorising Government to fix tariff values for the many excisable articles, and vary them by notification looks to effective collection. The Act empowers the Government to levy customs duty on excisable articles other than salt imported from the States. In relation to excises landholders have new duties; they have to report any infringement of the excise laws, and punishment for connivance is prescribed. The provision for punishment of Excise officers for vexatious search or seizure is obviously new like the punishment laid down for the failure to perform duties. A new set of penalties for carriage by sea, without permit or pass, includes the confiscation of vessel and cargo. Chapter V accords permission to carry on private manufacture of salt and the renewal of license is ensured by a separate section unless the license is cancelled for any breach of the excise laws. In case of punishment for offences there is provision for appeal to the Central Board of Revenue and for the revision of sentence by the Central Government.

A new schedule of license fees for the manufacture and refining of saltpetre, sulphate of soda and saline substances is provided for in the Act. In the case of the duty on steel ingots levied at Rs. 4 per ton there is provision for drawback on exports. The first schedule indicates the rates of duty levied under the previous enactments. In the case of kerosene it is the same as the customs duty and in the case of petrol

it is 15 annas per gallon. In the case of safety matches the duty varies from Rs. 2 to Rs. 4 per gross of matchboxes but a slightly lower rate is levied on the output of factories whose daily output does not exceed one hundred gross. The duty on mechanical lighters is Rs. 3 per lighter. The new excise on Vanaspati is Rs. 5 per cwt. and the excise on cigarettes and bidies is levied by weight not on the numbers in the packages. Sugar made from Palmyra juice is exempt from excise duty. For tobacco stalks used as manure there is no excise. In view of the increase in the tobacco excise a part of the schedule would undergo modification very soon.

New Plans for Labour

The shortage of labour on the coalfields entailed the creation of a special labour corps of 10,000 to supplement available labour supply. But labour shortage is not limited to the coalfields, and the new plan to deal with shortage is to set up committees, provincial or regional, to control the supply of labour. The committees dealing with unskilled labour will lay down standards as regards wages and hours, temporary housing, sanitation, grain shops and medical relief. Provincial governments will draw on the committees for advice as to labour supply, probable variations, and wage rates. Uniformity should be within reach as regards wages and working conditions. The formation of committees representing governments as well as employers should indicate at any rate the nature of the labour 'reserve'. The creation of depots similar to that already set up in Gorakhpur is a part of the scheme. Two committees, one at Jubbulpore and the other at Dhanbad for augmenting the supply of workers to the collieries have been set up.

The recruitment of seasonal labour on certain conditions may not impinge on the supply of farm labour, but the movement of large bodies of men from one area to another, will certainly present new problems. Inter-provincial labour movements in the past have been very limited, except for emigrant labour for the tea industry, but the new scheme is meant to create a pool of unskilled labour for essential work in every Province. Though con-

scription is impossible at present, the contractors may receive great support while competition may be avoided. Difficulties regarding the school-leaving age or insurance, would not arise in India, but the committees would have to provide continuous employment for all labour recruited and sent by direction. It is, however, clear that the jobbers—always a disturbing factor—will be dispensed with by the labour supply committees set up at

the instance of Governments. Wage rates should be stable from season to season, and from district to district, though the effect on total employment may be small. Fluctuations in the supply of labour are admittedly independent of the growth of population or the wage level in relation to the cost of living. In retrospect one may relate the shortage to the rise in food prices, and the success of the new labour scheme is to a certain extent dependent on the success of food policy in the deficit Provinces. The demand for agricultural labour this year should follow the extension of cultivation rather than the improved prospects outlined for those workers drawn off for special purposes. If the improvement assists the landless labouring class to obtain better terms for casual work, its value will be great for a late measure of redress for those compelled to sell their fragments of land will have then been secured.

Limits To Food Supply

In the address of Sir Digby Drake-Brockman to the Upper India Chamber of Commerce is to be found an argument on the hoarding of foodgrains that cuts at the familiar theory. He pointed out "It is a well-known fact, though it does not seem to have been fully appreciated till at least half the year had passed, that there are definite tracts where owing to climatic ecological and other advantages, there is always a surplus of foodgrains and others where there is a deficit or if not a deficit no surplus even on the low consumption level that obtains therein. In the first the bulk of the cultivators have varying amounts of surplus; in the second, only landholders who have farms; petty proprietors and tenants enjoying some sort of privilege have it. The rest have holdings about 3½ acres and the produce does not as a rule leave any surplus after necessary claims have been met. In fact, a great many of these cultivators have not enough grain to carry them till the next harvest and have to borrow money to keep themselves going. Even if they had some surplus, it is not obvious why they should part with it unless their needs were so insistent that they could not do without what they want to buy. Their needs, however, are few. At any rate, the claims of deficit areas were not likely to appeal to those circumstanced." The argument in favour of more consumer goods for the grower received support in the Gregory Committee's report, which propounded a whole series of remedies for the food shortage.

In regard to post-war schemes, Sir Digby put public health before roads because better communications are less important than good health. As regards the Bombay plan, a caution was administered by reference to the absolute difference in conditions obtaining in India and those in Russia. He therefore suggests that the beginning should be made with another object of converting hovels into homes. His main plea was that special efforts should be made to instruct and assist women. He asked also for rural housing through building societies.

In view of the little that is known about the woollen industry of India special importance attaches to the figures cited by Sir Digby. Wool production in the world remains satisfactory with prices touching a record level. Large stocks and the emergence of substitutes however complicate the post-war wool outlook, but the position of the woollen industry in India is not touch-

ed by the woolgrower's fears. In the nine months ended September 1943 wool imports from the Dominions rose from 48,000 bales in 1942 to 68,781 bales valued at Rs. 312 lakhs. As some difficulties were experienced considerable use of Tibetan types mixed with Dominion wool was made in the manufacture of certain classes of garments and Fast Indian coloured wools suitable for blankets and coarser types of clothing were taken up in considerable quantities both by mills and the cottage industry. All woollen mills were completely occupied in supplying goods for the armed forces and worked to capacity. During 1944 it is anticipated that a certain amount of standard woollen and worsted fabrics will be available to the public, said Sir Digby on February 25. The increase in raw wool imports into India and the decline in exports

supports the observations of Sir Digby as to the activity of India's woollen mills.

Forecasts

Crop forecasts issued to date describe an increase in the production in the case of rice, cotton and groundnuts in India. In the case of cotton, the fourth forecast puts the acreage as 2 percent more than that of 1943 and the yield as 10 percent more as a crop of 4,934,000 bales is looked for. But the shortage of local supplies and transport difficulties have led to a late rise in cotton prices and the forecast is not viewed as bearish. The increase noted under Bengals and Oomras would certainly have depressed prices, while the increase in Americans may check imports. The most important conclusion relates to the stability of cotton prices for the year.

This is only an announcement and not a Prospectus. Copies of Prospectus and the Memorandum and Articles of Association can be inspected at the Registered Office of the Company at 5, Royal Exchange Place, Calcutta.

(Consent of the Central Government has been obtained to this Issue under the Defence of India Rules—Rule 94A. It may be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness or any scheme or for the correctness of any statements made or opinion expressed with regard to them.)

AUDITORS: Messrs. Price, Waterhouse, Peat & Co., Calcutta.

BANKERS: The Punjab National Bank Ltd., Calcutta. The Hindustan Commercial Bank Ltd., Cawnpore.

GENERAL MANAGER: Mr. T. M. Sturgess.

REGISTERED OFFICE: 5, Royal Exchange Place, Calcutta.

The Company has been formed and registered for the purposes set out in the Memorandum of Association of the Company, and particularly to carry on fire, marine, accident, workmen's compensation, re-insurance, counter-insurance and all other kinds of miscellaneous insurance business.

It is well-known that although fairly good progress has been achieved in India in so far as life insurance business is concerned, the fire, marine and other general insurance business has not made much headway. So far there are hardly 25

Indian Insurance Companies doing general insurance business and they only write about one-third of the total Indian general insurance business. The India Industries have made record progress in the recent years, thus offering a very great prospect for India Insurance Companies. There is thus an ample room for well-managed and sound Indian Insurance Companies, who have further object to transact fire, marine and other general insurance business. This Company may be expected to write a substantial volume of business from the very start.

Cloth and yarn prices may follow cotton prices to a greater degree than in the past. The recovery in groundnut exports has stimulated cultivation as the final forecast puts the year's total supplies at 3.32 million tons as against 2.85 million tons in 1942-43. The increase in acreage and the higher average yield per acre leads to an increase of 16 percent in supplies. Increase in Indian supplies may not lower the London price abruptly since the Bombay crop is not up to normal. The decrease in castor-seed and the increase under groundnut in Hyderabad may well call for notice but the Hyderabad crop is not likely to be very large. Groundnut exports in 1942-43 were below the quinquennial average. Recovery took place in 1943 to judge by the trade figures and may be therefore expected to continue as the 1944 crop is larger.

The Navy's Job

The two-year old alliance with China receives direct support from the assurance provided by Mr. Alexander in his speech on the Navy Estimates this week. The

defeat of Japan is not the concern of the U.S. fleet alone; the British Navy, too, is assigned a big role, and there has been a demand for a big naval station in the Far East. The expansion of the Fleet Air Arm should favour the use of the Royal Navy in the Pacific. If most naval victories have been gained in the Bay of Biscay and the Mediterranean, the effective command of the Indian Ocean is still undisputed after the precautions adopted in relation to Madagascar. The U.S. President and the Prime Minister in a joint statement supplied the assurance that the attacks on merchant shipping have fallen off. There is, however, Mr. Alexander's mention of the enemy's replacement of U-boats and a possible come-back by Doenitz. In the light of the First Lord's assurances as to naval tonnage and shipbuilding at the end of January, it may be inferred that the position at sea would continue to improve. The German Navy's strength after the sinking of the "Scharnhorst" must be very small except in respect of submarines. That peril should end abruptly with the invasion of Western Europe and precau-

tions employed at Ostend suggest that the Germans expect the Allies to act soon. Surprisingly there was no reference to the navy's part in the Second Front. The traditional silence has been preserved, but the future tasks in the Pacific have been assumed even as they were outlined. The assault on Occupied China demanded by American admirals is promised at the same time as an assurance has been given to eager enquirers about the Navy's role. Mr. Alexander said little about the naval side of the South-east Asia Command but it must not be concluded that the Royal Navy would not assist in the reconquest of Burma. The declaration against Japan has gone forth almost as soon as a conjecture as to the Japanese fleet's use of Singapore as the base in place of battered Truk appeared. More than once last year it was considered necessary to state that battle squadrons are beyond the Red Sea ready to meet any attack. Their role in the offensive has been indicated and the full weight of the naval alliance—the basis of Anglo-American co-operation for a century—should be felt by Japan.

STAY AT THE

GRAND HOTEL

The Leading Hotel of Calcutta

"Here is an English cigarette"—offered an R.A.F. officer who travelled with me on my week-end journey to Cooch Behar where I had to attend a Board meeting as well as a meeting of a Planning Committee. Among the valuable contents of the parcel sent from home to the fighting forces in India, the tin of British made cigarettes is, perhaps, the most precious. Each of the fifty cigarettes is smoked with a fervency bordering on a solemn rite; and the gift of one of such cigarettes is a flattering compliment. As, at Sealdah station, I was standing beside my compartment, I was accosted by an officer who said: "Will you let me travel in your compartment? I shall spread out my bed on the floor." "Nothing of the kind", I replied, "we shall give you one of our berths." He pointed out that he was seeking accommodation for himself and his companion. "Okay", I said, "I shall give you two berths. We are changing trains at Parbatipur while you are proceeding direct to Siliguri. I shall sleep on the floor." The boys were thrilled at the prospect of comfortable sleep; for, they had been travelling in discomfort during the previous day. As we set down to our dinner, I asked the boys if they had ever tasted chapattis. They said they would love to taste them. And they did like the home-made bread I gave them. After dinner, we had much to talk about on topics ranging from books to food in the mess. And as we parted, they promised they would look me up on their return from their holiday.

Among topics of discussion was the question Britons versus Americans in India. The boys couldn't conceal their soreness that the Yankees were better paid and more richly equipped and could spend more freely. "This is bad manners"—they complained. "Have you thought of this," I asked them, "the Britons have been paid far more than Indians in the land of the Indians. The Britons have flaunted their superior status and larger purse for decades. What Americans are doing to you today is just what Britons have been doing to Indians for years and years."

The reply of the R.A.F. men was characteristic. "We are grateful to you for showing the other point of view. We do not get much chance to know the other point of view."

I am mentioning this episode firstly to stress that the calibre of the conscripted fighting forces in this war is far higher and many of the men are educated and have a background of study, observation and introspection; secondly that this

Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it)

accounts for more marked urbanity; and that, in this war, the men in the services mix much better with the civilian population. This is in contrast to the last war when, as private secretary to the Maharaja of Darbhanga who was most times on the move, I had to do a great deal of railway travel. In those days, the men in Khaki affected a superior air, would keep out Indians from compartments occupied by them and, if forced to travel with Indians, would complete the journey in you-are-not-good-enough-to-talk-to spirit. In this regard, my experience in the present war is definitely pleasant. I have not had one unpleasant episode. On the other hand, it strikes me that the British officers of this war are singularly free from the British trait of insularity and of a reserve which is almost akin to shyness. I am, therefore, pained at incidents such as the following and have no doubt that, for one reported case of bad manners, there are tens of unreported incidents of cordiality between fellow-travellers comprising men of the fighting forces and men from the civilian population.

Finding two Indian civilian passengers in the same compartment with him in the Up Frontier Mail at Rawalpindi railway station, a member of the R.A.F. pulled the alarm chain when the train was about to depart and when the Station Master arrived, told him, "I will not allow the train to move till my companions are ousted from this compartment." The Station Master could not comply with this un-

reasonable demand and ordered the train to start. The alarm chain was pulled again and the train was stopped. Finding no other alternative, the Station Master disconnected the alarm signal from the chain of the compartment and again ordered the train to start. The grumbling R. A. F. man was heard to say that when the train stopped at the next station he would go to another compartment and pull the chain and have the train stopped until the two Indian passengers were ousted from that compartment.—Amrita Bazar Patrika.

That, in his own Island home, the insularity of the Briton is yielding place to camaraderie, was the opinion expressed by Sir Renwick Haddow who has just returned after a four months' stay in Britain. He said that aloofness was a thing of the past. People going in the same direction share a taxi. The old spirit of what Douglas Reed would call "enclosure" and "exclusiveness" is dying faster than Reed could believe. The present way of life in England is responsible for levelling out differences and for inducing a sense of common joys and common hardships. "Utility" garments have decimated the class consciousness which used to be fostered and sustained by the cut and style of clothes. If anybody were too well-dressed now, he is not so much an object of distinction as one of ridicule. A similar reformation was effected in clothes in India when the Mahatma issued

his writ to the nation to wear khaddar and don the Gandhi cap. Up to 1920, the Indian National Congress in its annual session presented a museum of clothes and headwear. There were the aristocrats like Mr. Jinnah and Dr. M. R. Jayakar who preened themselves on their immacu-

late dress and who, by that very factor, created an aloofness for them and their kind. Soon after khaddar and Gandhi cap came into vogue, all members attending the Congress presented a spectacle of unification which was nothing less than a marvellous transformation. There was no

longer any sense of distinction of any kind, provincial, financial or otherwise.

The effect of "utility" garments in the establishment of a feeling of commonness, has been further helped by what one may describe as "utility" menu. Sir Renwick, who was talking to the English Speaking Union last Monday—it will be more appropriate to say that he was participating in a conversazione—had much to say about the food problem in Britain and how competently it had been solved. He described the rationing as not only strict but severe; but, he added, no economic housewife need have any difficulty in providing substantial and nutritive food. Vegetables were available in plenty; and the progress made with regard to the utilisation of every inch of available ground for the growth of vegetables is amazing. The development in this regard is of far-reaching significance to the balancing of the British diet and the improvement of Britain's health. Eggs are a most difficult thing, only one fresh egg being available for six weeks. Powdered eggs, available in plenty, are unrationed. The ration of butter is 2 ozs. a week; but this is supplemented by 4 ozs. of margarine of good quality. As Sir Renwick pointed out, all that it means is that you must spread your butter not with a spade but with a blade. Fish is not rationed but available only in limited quantity. Meat is not plentiful but adequate. Above all, the housewife could supplement her rations by prepared food such as haggis, black pudding and sausages which are all unrationed and available fairly freely. The conclusion of Sir Renwick confirms the view advanced in this column sometime ago, that the most efficient department in wartime Britain is the food department under Lord Woolton and that the problem of food scarcity has been so handled as to result in a great opportunity for country-wide dietary reform. In spite of less-

ONE, THREE TIMES DAILY

THE patient of to-day takes his medicine in tablet or capsule. Gone are the unpleasant draughts and decoctions with which his grandparents dosed his father and mother. This together with the fact that healing specifics have now a far wider range and efficacy, is largely the work of the organic chemist and those associated with him. From earliest times man has known that remedies for many of his ailments were to be found in the roots, bark, leaves and berries of trees and plants. The curative principles of these became the subject of study and experiment by the alchemist, being mixed with searches for the elixir of life, the philosopher's stone, love-potions and poisons, much superstition and more quackery. Science recognised that these old herbal remedies were complicated mixtures in which small quantities of what mattered were swallowed together with large quantities of what did not! To the chemist fell the task first of purifying and dividing them into their constituents. Quinine (from cinchona bark), strychnine (from nux vomica seeds), morphine (from poppy capsules), cocaine (from coca leaves) and atropine (from deadly nightshade) are drugs isolated in pure form from plant sources. The chemist's second task was to find out the exact nature of each drug, and then to make or synthesise them in the laboratory, modifying them and improving them in collaboration with the pharmacologist. His third task was to chart and develop the enormous field of new healing drugs opened up by organic chemical research. This is the great field in which he is working to-day. The organic chemist is to-day the armorer of the medical profession, and through the pharmacist continues to provide our doctors with more and better weapons with which to fight disease.

foodstuffs, the Britons have better balanced food to eat and are now better fed and more nutritively fed. This is an experience from which India has to learn much. I have repeatedly stressed that the very calamity of Bengal could have been utilised as an opportunity for a new consciousness in dietetics and for better planned diet for everyone. India's achievement in regard to the food problem stands out in miserable contrast to Lord Woolton's remarkable triumph over food scarcity.

The alerts and the long hours in shelters have also contributed to the process of levelling down differences among class-conscious Britons. I asked Sir Renwick how his first impression of London compared with the mental picture which he should have formed from the press reports of bombings that he had read while in India. Sir Renwick replied: "I should say my first impression was one of agreeable surprise. There were but few signs of ravages caused by bombs; and the spirit of the population was unbroken. Such buildings as were destroyed by enemy bombs had been razed to the ground; and there is no evidence left of damage that can depress the onlooker". Sir Renwick also referred to the behaviour of the people after a siren. "There is no panic, not even excitement. Utmost orderliness prevails everywhere." All this experience has created a new sense of identity among all sections of the population. Sir Renwick summed up the new Britain in the old phrase: "Jack is as good as his master".

In my gossip of a fortnight ago, I suggested that, as part of the grow-more-food campaign, the land lying on both sides of India's railroads should be brought under cultivation. When I first thought of it, I confess, I had not the temerity to put it forward as a serious proposal in these columns. But one grows to be fond of one's ideas; and when you are more or less infatuated with the idea, it is difficult not to give expression to it. I worked out the figures as the reader knows; and the result is not unattractive. I find now that far from being a chimerical idea, it has been actually given a trial in the far south; and the results are heartening. Here is a letter from one of those actually engaged in the experiment. The writer is a member of the Servindia Rural Centre at Mayanoor:

"I read your Clive Street Gossip article. I feel that your suggestion regarding the utilisation of waste railway lands has a lot of significance to the growing of more food. I say this in all humility on the basis of experience gained in the Agricultural and Industrial School Farm belonging to this Centre.

The Superintendent of the School took the initiative this year and got nearly four acres of waste land from the Revenue authorities, to whom some of these lands have been transferred by the Railway authorities. This plot, now under cultivation, is not free of any rent—the land tax has to be paid. Three months back, the plot was a pool of water. By the end of December, the superfluous water had evaporated, and then it was quite easy to prepare the land for cultivation. The weeds, too, were easily removed. The area was sown to paddy in the beginning of January this year. The mud contains all fertile

ingredients; hence no manure, not even green manure, was used. The paddy is of the short duration variety (three months). The transplanted seedlings are growing to maturity and are now dark green in colour, healthy and vigorous. It is expected that a very good crop will be harvested in the first week of April. It is, of course, a little difficult to irrigate the fields now; but somehow the requisite water is being found for it. The soil is of the A-1 kind. The efforts of Mr. Sambasivam, the Superintendent, have been crowned with success so far. He and some of us who are working in the Rural Centre are all eagerly looking forward to the first week of April. There is no doubt as to the success of this little project.

The South Indian Railway authorities have already transferred some of these lands to the Revenue authorities (temporarily, I am told) in furtherance of the Grow More-Food Campaign.

But in the actual utilization of such lands experienced cultivators are rather the

exception than the rule. Since in the beginning it is a little costly to reclaim them, it would be a great help to the cultivator if such lands are exempted from land tax. Wherever water is taken from irrigation channels, the usual water cess could be levied. The exemption from land tax will itself be a sort of reclamation subsidy to encourage experienced agriculturists to take up the land for cultivation.

Wherever there is well irrigation, it will cost more to raise the crop. If landless agricultural families are allowed to utilize these lands for temporary periods of say, one year or two or three years, it will be a great blessing to them in these hard days.

In the Madras Presidency, the waste railway lands can be cultivated after the northeast monsoon comes to a close, say, in December or January. The timing of cultivation is most important in this connection. It would be almost impossible to sow such lands to paddy before the mon-

Olympus

(From Our Correspondent)

New Delhi, Mar. 6.

Sir Jeremy Raisman's fifth war budget has been on the whole better received than expected. Despite the additional tax burden of 23½ crores, there was a general feeling of relief. Perhaps the pleasant surprise of the raising of the taxable minimum to Rs. 2,000 was responsible for this feeling. The main criticism centres round the wide interpretation of the financial settlement with the British Government by which India is being forced to bear a larger share of the defence expenditure burden than she should or can. There is also general resentment that the position as regards sterling and dollar assets is still somewhat vague as also the allocation of lend-lease benefits as between Britain and India. The industrialists, as is natural, take great objection to the increased burden on industry, including the total immobilization of excess profits, depriving production of all stimulus and incentive. There is some reason in the general complaint voiced by the Federation of Indian Chambers of Commerce that "the importance of increasing production to meet the scarcity of consumer goods through an energetic production drive, including import of capital goods, plant and machinery, has not been adequately recognised, especially when shipping facilities could have been equally made available for import of capital goods for indigenous manufactures. Priority, however, is given to haphazard controls without having an efficient machinery for enforcing such controls. Numerous 'cut motions' have been tabled already including one in the name of the Muslim League party for "refusal of supplies" to the Executive Council. Other economic questions to be discussed through 'cut' motions include the utilization of sterling assets, the industrialists' 15-year plan, the coal crisis and the financial settlement with the British Government regarding allocation of defence expenditure.

The numerous economic issues facing the country were reviewed at a two-day annual session of the Federation of Indian Chambers of Commerce and Industry held last week. Post-war reconstruction problems figured a good deal in the discussions and the Federation, while welcoming the industrialists' 15-year 'master' plan, expressed its disappointment with the machinery set up by the Government to evolve reconstruction schemes and the little progress made so far. The general view of the members about the targets for industrial and agricultural production proposed in the Bombay plan was expressed by Mr. A. D. Shroff, one of the authors of the plan, in the words 'it can be done'. Nobody expected the present Government to implement such an ambitious plan. What Mr. Shroff pleaded for was that the Government would do nothing to make it more difficult for them to carry out the plan in future and that it would strengthen the official statistical organization so that sufficient data could be available for the future National Government. Mr. G. D. Birla, in a detailed reply to the critics of the scheme, explained that if agricultural production were to be higher than 130% (assumed by the plan), it would not be consumed at home; and should foreign markets also fail to absorb the surplus, there would be depression

and curtailment of production. Answering the Finance Member's criticism of what would happen to the backing of the currency if sterling resources were used for reconstruction, Mr. Birla said that today the Bank of England held only 0.1% gold backing for its note issue, while Indian currency had gold backing of 10%. Surely in respect of gold backing, the rupee was in a much stronger position than sterling. But according to the Finance Member's logic, sterling had no solvency. Mr. Birla wanted the sterling securities to be liquidated according to our needs "and be replaced by our own credit." The Federation also demanded the establishment of suitable machinery on the lines of the *ad hoc* committee under the Safeguarding of Industries Act in the United Kingdom to consider the claims of the new industries, which had grown up during the war, for adequate protection—when necessary—without recourse to a reference to the Tariff Board. The need for a comprehensive programme for post-war utilization of war plants was also emphasized. Another resolution criticised the taxation policy from the point of view of the post-war competitive power of Indian industries and recommended that industries should be allowed to build adequate reserves for the difficult future.

A resolution on food policy suggested to the Government that it should evolve and implement an all-India policy for the production, procurement and distribution of foodgrains and direct the Provincial Governments to carry out effectively and efficiently

the all India policy that may be laid down; stop exports and increase imports of foodgrains from abroad with a view to building up and maintaining an adequate quantity of reserves. As regards the coal crisis the Federation asked the Government to make arrangements to procure the necessary stores, plant and machinery for use in coal mines and to take steps to encourage the opening of new mines. The constitution of an independent coal research board was also suggested. Other resolutions demanded that all financial liabilities in respect of the operations of the South-East Asia Command should be subject to the approval of the Central Legislature. It is demanded that the sterling credits should first be utilized to repatriate British commercial investments in India and the Reserve Bank compensated for any depreciation in the value of sterling in terms of gold. It was suggested that the Reserve Bank should also be enabled to hold dollar balances.

The Assembly passed last week Mr. Govind Deshmukh's resolution recommending that 'as an anti-inflationary measure, a loan of 10 crores of rupees earmarked for purposes of subsidising agriculturists to grow more food and increase milk products be now floated. The Finance Member, while agreeing with the general objects of the resolution, pointed out that the question of earmarking a particular purpose was difficult.

(FROM OUR CORRESPONDENT)

Bombay, March 7.

THE Bombay Government, whatever may be their shortcomings, cannot be accused of having been negligent in the matter of procuring foodgrains for the citizens in the capital or for people throughout the province. There might have been numerous loopholes in the distributing machinery or the quality of the foodgrains supplied might not have been up to the mark. But, on the whole, the Government have acquitted themselves creditably and the tributes they have earned both in the province and outside are well deserved. That the government have not let themselves to be lulled but have kept their eyes open is unmistakably shown by the announcement of a new scheme for the procurement of foodgrains in the Province. A government procurement plan of sorts is already in force. But under the new scheme a radical change has been effected. The kharif crop procurement scheme of the Government had no compulsion about it. The cultivator and the big landowners had been requested to sell their excess grains to the government. In practice no such voluntary surrender of grains took place. On the contrary corruption increased and the government found themselves helpless.

It would appear that the government have come to the conclusion that if the province were to escape famine conditions in the coming year far-reaching steps have to be taken immediately in order that the food position of the province is made fairly satisfactory. Bombay is a deficit province and to ensure enough food for all the people it is estimated that 15 per cent of the total output in foodgrains of the province has to be imported. With the foodshortage coupled with the avarice of unscrupulous traders and hoarders the government have realised the difficulty of getting their quota from the central pool in time, and in sufficient quantity. It has been decided to make the province self-sufficient in food as far as possible and the government have drawn up a new scheme under which they will be buying all surplus foodgrains from cultivators and landowners who will be called upon to sell a certain specified part of the produce. The government have also decided to set up a monopoly in the foodgrains trade in order to annihilate the black market.

The government plan of procurement and monopoly naturally involves certain responsibilities. They have to ensure foodgrains to the entire population throughout the year at reasonable prices. Food rationing will be introduced in all towns in the Presidency and a plan of putting up controlled shops for a group of villages has also been drawn up. Extension of rationing to other towns, introduction of a new type of rationing suitable for villages and compulsory procurement and monopoly are expected to solve the food problem in the Province.

The compulsory grain levy will be proportional to revenue assessment. All cultivators or landowners whose annual outturn is at or below 27½ maunds will not be required to sell anything to the Government. On higher outturns the levy will be a percent-

age increasing with the assessment. There will surely be some irregularities in the levy which must either be rectified in the light of experience or should be endured as an inevitable sacrifice in the larger interests of the Province. At this point of the scheme enters the element of willing co-operation between the government and the people. If that is forthcoming, the scheme is bound to be a success. The new measures will be introduced immediately in the rabi talukas in the Sholapur, Bijapur and Ahmednagar Districts. In the other districts the existing scheme suitably modified will continue in force and the Government propose to extend the new scheme to all talukas in the province for next year's crop.

Malpractices in the textile trade continue unabated. In spite of the cloth and yarn control order and the additions and alterations in the original ordinance cloth prices show no substantial change. No doubt cloth in the bazars is on offer with the ex-mill and retail price stamped on them. But purchasing cloth at the stamped price whether retail or wholesale is still not easy. Ingenious devices are being adopted by big and small merchants alike with the result the ordinary consumer is in no way benefited by the control measures. There have been innumerable protests and the consumer always had to give way in the end. It seems the Textile Commissioner's office has been overflowing with these complaints for some time past and now the position is viewed with grave concern. The Textile Commissioner has sounded a note of warning to the guilty and has drawn their attention to the relevant portion in the ordinance and has made it plain to whom

An important item in the Postwar Reconstruction Scheme of the Government is the

cheap supply of power for irrigation and lighting in the rural areas and cheap power for small industries. The problem is not new and the Government had realised the need for developing the power potential of the province as early as 1938. A committee had also been appointed to go into the question. Now the Government have taken the first step towards implementing the recommenda-

tions of the committee and the former Director of Industries, Bombay, has been appointed to examine the project in detail. It is understood the Government are in favour of the Grid system which has proved successful in England. A network of generating stations will be built at suitable places and generation of power will be by turbine system.

TRACTOR OR TANK ?

What is the ultimate destiny of this glowing plate, wending its way through the multiple processes required of flawless steel ?

Will it in time emerge to the world as a tank, conserving water in a torrid desert ; will it go into the making of a tractor to till the fertile soil of the Gangetic Valley ?

Whatever be its final mission, it will contribute to the growth of indigenous industry now, and in the days to come.

South India

(From Our Correspondent)

Madras, March 6.

India's Economists from the very beginning of the war, and the Government for some months past, are crying themselves hoarse on the need for stopping inflation which is said to have put excess money into the hands of every Indian. But school teachers in the Presidency—though they know the significance of inflation better than the layman—have not found any improvement in their financial position. While prices are going up salaries show no sign of movement at all. Mr. T. Austin who presided over the College Day Celebrations at the Teachers' College, Saidapet, admitted that present economic conditions had unfortunately hit teachers hard. Nevertheless it was gratifying to note that the Madras Government have not forgotten the school teachers. Dearness allowance, Mr. Austin, said, has been granted to teachers and District Boards have been advised to pay dearness allowance to teachers on the same scale as the Government. In 1944 the Government would be spending Rs. 27½ lakhs on dearness allowance for teachers of elementary schools alone.

According to Mr. Austin the Madras Government realise the role of teachers in the welfare of the province. A satisfactory scale of pay for teachers in the future is under consideration of the Government. The restoration of stipends to men candidates undergoing secondary grade training is also likely in the near future.

Ignorance, poverty and disunion are the root causes of the present position of India, said Dr. B. V. Narayanaswami Naidu, Principal, Pachaiyappa's College, Madras, presiding over the Voorhees College Day Celebration at Vellore. He made a fervent appeal to the students to put the country first and give other considerations as caste, creed etc. only secondary importance. The country has suffered in the past by the sectional bickerings and narrow jealousies, and they are still the obstacle in the onward march of the country to its proper place in the comity of nations.

Dr. Naidu however admitted that the root cause of ignorance, disease and superstition of our people was poverty. Only 19 out of 200 people could read in this great country of ours. An all-out effort for complete liquidation of illiteracy, therefore, should be one of the foremost aims of our national reconstruction plans.

Travancore is shortly having its general elections. H. H. the Maharaja of Travancore has dissolved the Sri Mulam Assembly, and the Sri Chitra State Council with effect from 1st March. Sachivotama Sir C. P. Ramaswami Ayer, Dewan of Travancore, explaining the reasons which weighed with the Government in deciding upon dissolution of the legislatures, stated that further postponement of the general elections in the State is neither necessary nor advisable. War conditions were so long the obstacle in the way. At the time of last extension—which was, by the way, the third consecutive extension,—it was perhaps hoped that the situation would be radically altered soon. But as the Dewan explained the war with Japan is not likely to terminate for at least a couple of years more. Petrol shortage can no more be a proper excuse and the demand for general elections must be conceded. The fact that such an experienced and able statesman as

Sir C. P. Ramaswami Ayer has decided upon general elections even in the midst of a war demonstrates the paramount importance of periodical elections without undue delay if the representative character of the legislatures is to be preserved.

That the two schools of medicine—Indian & Allopathic—were different, but were not contradictory was the central theme of the presidential address of Dr. G. Srinivasamurti to the Academy of Indian Medicine last week-end. It is often forgotten that the number of doctors in our country and the amount of medicine available are not in proportion to our needs and the existing service does not even touch the fringe of the problem, and the part played by the Indian system of medicine is at once important and compels attention. Dr. Srinivasamurti's estimate is that 80 to 90 per cent of India's population receive medical relief from the Indian system. But what one finds is a stepmotherly treatment of the system as a whole. The methods adopted for research in Indian Medicine are imperfect and more often than not the testing staff are quite ignorant of the rudiments of medicine. Better status, pay and dignity for practitioners in Indian Medicine would go a long way in regaining for the indigenous practitioner his proper place in the medical world. There should not be any antagonism between one system and the other, but there should be more co-operation between the two.

A biochemical study of Indian curds, a comparative study of the nutritive value of the ordinary oils, vegetable ghee or vanaspati and body fats, a scheme to evolve a simple method of detecting adulteration of milk and the manufacture of

casein for edible and industrial purposes are the four new schemes sanctioned by the Government. All these schemes will be worked out at the Imperial Dairy Institute (Bangalore) which has been recently amalgamated with the Imperial Dairy Research Institute.

Vanaspatti has become very popular in this country and the attention of the Government has been drawn to the claim put forward by some manufacturers that Vanaspatti is as good if not better than ghee prepared from pure butter. The new scheme includes also an examination of this claim. An authoritative decision based on researches will be given, and people may go in for Vanaspatti with complete satisfaction if the manufacturers' claim is borne out by research.

It would appear that Bus owners have decided that they would not be in the wrong if they also increased bus fares especially when the Government themselves thought that the recent increase in railway fares including 3rd class tickets was quite justified. Bus fares in the mofussil are keeping pace with the rising level of prices and the familiar argument one used to hear was that bus owners found no other way of meeting the situation created by war. The poor traveller could not grumble for buses have become his only means of transport nowadays. The sudden rise in bus fares in the city seemed to have opened the eyes of the Government and power under Defence of India Rule 89(2)(e) has been given to the Road Traffic Board in order that no increase in bus fares is effected without prior sanction.

Indian Cotton Annual

The year 1943 was important in more than one respect for the Indian Cotton Textile Industry. While cotton mills will long remember this year as the best in the war period and as the one that enabled the Indian producer to strengthen his position and look forward to the future with confidence the consumer will have reason for thankfulness as it was in the latter half of the year effective control of prices and production was achieved by the Government of India in cooperation with the members of the industry. The Indian Cotton Annual 1943 (published by Messrs. Gandhi & Co., Bombay) gives a complete record of developments relating to the cotton textile industry in recent years.

(Continued from page 469)

soon begins, for many of these areas, being in a low level, take the excess water that is drained from the cultivated fields nearby.

But the soil of these waste lands is bound to be extraordinarily fertile for another reason also; the human and vegetable wastes that have been washed down the railway tracks through all these years must now be a precious part of the organic matter in the soil. For that reason, the humus of this soil must have a rich and balanced content of carbon and nitrogen. No artificial fertilizer is required; if it is used in this kind of soil, it will destroy more than what it gives. As far as I know, these lands are the only ones to which all possible decayed matter, however small has been returned without being wasted. That great service has been generously and freely done by rain.

Reclamation of these lands will certainly give a better result than the conversion of dry land into wet land, though the latter also has its own place in the drive for more food."

I feel heartened in pressing the matter further on the authorities concerned. Surely, no one can suggest that in all India only four acres of land near Mayanoor are cultivable. My calculations which I believe erred on the side of too big a deduction for uncultivable waste, showed that an area of 74,240 acres could be brought under some food crop or other. And on this question of food we are certainly not out of the wood. Even if peace were to be signed to-night between all the warring nations, the morrow will not dawn on a plenitude of food. There is therefore good reason why the authorities should not allow the grass to grow where there should be corn. On the best means of cultivating these lands, I am not inclined to be dogmatic, especially in the light of my correspondent's observations on attracting experienced cultivators by freedom from land tax and similar inducements. If there is a place for limited companies, I have no doubt such enterprise will not be lacking.

Fulfilling the old definition of the barrister as a scholar and gentleman the late Mr. S. N. Banerjee (to whose memory many have accorded the tribute to unmeasured success and talent) deserved

more than the plaudits of the profession. For him large gifts were vouchsafed and he spent his life giving late and early. A career crowned with exceptional success led to blameless political activity and active support of good causes. His interest in the Ramakrishna Mission's work was deep and pervading. It was thus that he brought to all relief work the humanity and sensitiveness that always distinguished him. Free of handicaps he won the professional race easily enough, but his interests extended far beyond Law, as I discovered when thrown into contact with him for a study of the conventional documents of company finance. It was easy to see that a seasoned intelligence could take in all points of finance readily and a more appreciative auditor at once sympathetic and subtle could hardly be found. It seems necessary to set this down for many will remember that Mr. Banerjee was a valued colleague of managing agents' nominees on company directorates. The

distinction that he won in his profession was exceptional, but the urbanity that protected it was even more exceptional. The Bench like the profession has expressed its sincere regret. The public bodies with which he was associated have recorded expression of grief. For the public which knew him as a politician of constant attachments with a perennial interest in charity the loss is none the less real. To many he represented the last of the titans that the Calcutta Bar threw up but to most he stood for a blend of ancient and modern culture that sweetened life. He touched life at many points and spanned education, municipal politics and sport from his professional pinnacle. He had many contacts, not least with unmixed philanthropy, as I noted, and public spirit combined with so many private graces and virtues made admirers of acquaintances and worshippers of friends.

Are the Japanese guilty?

"Of course", you say, "look what they have done in Korea and Formosa—in China and more recently in Malaya and Burma!" And, indeed, history will condemn them, as they deserve! There will be no mercy for a nation responsible for so many massacres, so much suffering, such deliberate cruelty, such abandoned treachery and so little good.

But what do you expect?

What can you expect from a nation which thinks it can do no wrong. Yes, each and every Japanese believes that

it is his country's rightful destiny to rule the world! He really believes that all other people are inferior and intended only as his slaves. Us, he calls Korumbas!

The Japanese are guilty all right. But they are something worse—something more dangerous. They are something strange and slightly mad. There is only one way to deal with them—they must be stripped of all their power. They must be rendered harmless once and for all. Unconditional surrender—nothing less!

Resume of Commodity Markets

There are no interesting developments in the commodity markets during the week. The jute market has remained steady while the jute manufactures market has been firm in the absence of sellers. There was a slump in cotton prices and the close was barely steady on buying for the distant positions. The piecegoods market has remained quietly steady while the bullion markets have been uninteresting.

The jute market has been very firm and a slight improvement in prices has been recorded. The strength of the jute market is in contrast to the fears expressed a few weeks back following the announcement regarding the quota for the next season. It was then pointed out that the fixation of the quota at eight annas of the basic acreage of 1940 was high and that with the difficulties in respect of coal supplies mills might not be able to consume the whole of the new crop. It now appears, however, that the actual area sown to jute may not be equal to the quota and that with the possibility of regular supplies of coal, mills might be able to report a higher level of production. Also, export prospects for the current season seem to be brighter. It may very well be that the total exports for the current year are very nearly 25 lakhs bales. That is perhaps the reason why mills are anxious to cover their sales of jute goods with purchases of jute. There is a fear that as the months go by mills would be forced to buy at the maximum rates. If all jute supplies are to be moved in time it should be made sure that proper arrangements are made from now and available transport space is more efficiently utilised.

The position in the jute manufactures market does not call for any further comment. The present conditions in the market are bound to continue till such time as mills are able to produce goods on a large scale and sell freely. At the present moment there is a shortage of goods of all kinds and there are no sellers for any position before June.

The raw cotton market has recorded a sharp drop in prices in the last two weeks. The reason for the decline in prices is said to be the prospect of plentiful supplies of the new crop and the unwillingness of mills to lay in stocks. Raw cotton prices are now nearer the minima than the maxima fixed by the Government of India. It is reported that the decline in prices for Broach and Surti is more pronounced than for Jarilla. Both Karachi and Bombay operators have taken a bearish view of the future and it is feared that there may not be any appreciable rise in prices for sometime. It is quite likely that mills will not afford any great support to the market and would try to depress prices. The quarterly revision of cloth and yarn prices is said to be the reason for the unwillingness of mills to buy cotton on a large scale. The recent tightening of restrictions regarding the disposal of mill output has also been the source of grievance to some units in the industry. It was reported that there were cases of evasion by mills of the terms of the Cotton Cloth and Yarn Order by selling to their own agencies and disregarding the trade. It cannot, however, be expected that mills would press for a revision of cotton prices in the face of the demand by the East India Cotton Association for an increase in the minimum price. It would be remembered that there

was a feeling in the earlier stages that cotton prices had been fixed too low in relation to cloth and yarn prices.

The gold market has been uninteresting and prices have been fluctuating around the Reserve Bank's selling rate. Earlier in the week prices were appreciably below Rs. 71 but with the slight recovery in silver and share prices the close is steady. Referring to the gold sales which the Reserve Bank has been conducting for the last six months the Finance Member said, "These sales afford an age-long alternative to those who do not for one reason or another, wish to invest in Government securities notwithstanding the advantage of the latter over investment in gold." The gold has been provided by H.M.G. and the U.S.A. Government from their own resources. The sale proceeds have been used by them towards their war expenditure in India. There is no indication thus of the arrangement between the Government of India and the British and U. S. Governments regarding the sales of gold. The fear that the Reserve Bank is only the selling agent of the foreign governments has thus been fully confirmed. Whether the Government of India is aware of its responsibility to maintain gold

prices is not clear. For with the extension of official sales of gold to various centres and the reports regarding mofussil absorption the Government has an obligation to prevent capital depreciation in the value of holdings of the poor ryot. The "Economist" recently

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

Jute and Jute Manufactures

(By Our Jute Correspondent)
Special To "Indian Finance"

Calcutta, 9th March.

With two days virtually closed for holidays, the period to be reported on this week is a short one. The most notable feature has been some easing in the very firm tone which has recently characterised the fabrics market. At the end of February, the settling rate for the illicit Fatka hessian counter was Rs. 31 for eleven porters against the official maximum rate of Rs. 28-8. The Fatka price has since been quoted back to Rs. 29. This weakening is probably due to more than one factor. Instability in the political situation in the Argentine has had some effect, but there is also some uneasiness amongst Bazar dealers that definite steps are being, or about to be taken to counteract the "Black Market" in manufactured goods. The stock returns at the end of February show that 1747 lakhs of yards of Hessians were held by mills on commercial account, a very large proportion of which would be goods held on Delivery Orders. These Delivery Orders pass from hand to hand so frequently and rapidly that it is practically impossible for a mill to state with any confidence to whom such goods may belong at any particular moment. Only when Delivery Orders are sent in for registration, or to have the renewal of the insurance endorsed, does a mill know who is the owner, and that ownership may not continue for longer than an hour thereafter. That fact however need offer no obstacle if authority deems it desirable to requisition goods. The mill would only be responsible for notifying the last known owner of the goods to send in the Delivery Order for cancellation against payment of the value at maximum price. Or advertisement in the public press to the effect that certain specific Delivery Orders were to be surrendered under a requisitioning ordinance against payment, would be sufficient notification. Anyhow, the mere prospect of something of the sort being in the wind is sufficient to shake the confidence of the operators and a few concrete instances would very soon abolish the Black Market. The rush to unload would be hectic. Another factor which has probably tended to ease the tone has been the rather better supplies of coal, though this would have to continue for a much longer period to have any tangible effect.

The return of stocks of goods in mill godowns at the end of February shows that these have declined by 20,298 tons since the end of the previous month. Let it be said at once that this reduction will almost certainly prove to be illusory when the monthly production figures become available, for it is well known that most of the steam driven mills had a very poor production in February owing to short and irregular coal supplies. To return to an examination of the stock figures, Commercial Hessians show a decline of 14,150 tons or 545 lakhs of yds. Commercial Sackings show a reduction of 4174 tons, or 117 lakhs yards. Hessians held on Government account show a decline of over 3000 tons but Sacking on the same account is up by just over 1000 tons. In the aggregate therefore, as compared with the end of January, Hessians

stocks at the end of February were 17,217 tons or 663 lakhs yards less, while Sacking goods were 3081 tons or 92 lakhs yards less. As noted above, the total hessian cloth and bags held in stock on commercial account was 1747 lakhs yards and it is of interest that the quantity held on Government account was more than half as much again at 2835 lakhs of yards. Heavy Goods of course are small by comparison, only 204 lakhs yards.

Due to circumstances arising out of damage to gunnies in boats alongside export vessels at the time of the December Air Raid, it has been deemed necessary that the War risk on export goods should be assumed by mills till such time as goods are actually ON the export vessel. The normal terms of contract are "free alongside export vessel" and the ordinary marine risk on all such goods comes under the policy covering the voyage overseas as soon as the goods enter the Port limits. But the differing relationships of the contracting parties, the mill with the shipper and the shipper with his overseas buyer, necessitate this assumption of the War risk by the mill till the goods are actually on board the vessel. The position now is that, in respect of P.D.O. goods which may be lost alongside by enemy action, the mills would claim and retain the money under the war risk policy and replace the goods, the shipper claiming extension of delivery time from his overseas buyer under "force majeure". In respect of due date shipment goods mills would have their bills met by shippers (mills having implemented their contract to the extent of placing the goods alongside the export vessel) and mills would also claim and retain the value of the goods lost, under the war risk policy, and would replace the goods, the shippers again claiming from their overseas buyers extension of delivery time under "force majeure". This clarifies the position of the respective parties, which previously was not of alignment, the mills being in a position to claim "frustration" while the shipper could not so claim, but would be forced to secure similar goods in the open market to fulfil his obligations to his overseas buyer.

While on the subject of War Risk Insurance, it might be suggested that the time has come when the incidence of this additional tax on industry and commerce might be very much lightened. The amount already collected by Government in premiums must be colossal and the ratio of claims infinitesimal, infinitely less than anything ever thought of by an Insurance Actuary in his delirious dreams. It must be remembered that this is a compulsory imposition, not voluntary, and though it may be claimed that anything saved in this respect would in most cases go in E.P.T. anyway, that is not the point. The scheme was introduced as an insurance measure and as such should conform to insurance principles, that is, the rate of premium should bear some relation to the experienced losses. If, on the other hand the current rate is to be maintained merely as another antiinflation measure, that should be openly admitted. With the potential risk steadily receding, the present position of War Risk Insurance amounts to little short of highway robbery.

(Continued from previous page)

suggested that there should be a depreciation in the value of the rupee to minimise the gap between Indian prices and the British Treasury's prices. It is too much to expect that the Government of India has got clear ideas in this regard when there is so much confusion regarding the future of the rupee in the post-war period.

At the sales of tea held this week, for consumption in India, a better feeling was noticeable. The announcement of the levy of an excise duty of two annas per pound was perhaps responsible for the firmer tone in the market this week. There was a brisk demand and all offerings were taken up at higher rates. Medium and better liquoring brokens improved by as much as three annas. Green teas sold readily at dearer rates.

(Continued from page 456)

in need of the co-operation of the trade, which I am sure will be forth-coming. It is on this that the future of this industry will depend.

Before I close, I consider it my duty to thank my colleagues on the Committee and all Members of the Association for the valuable assistance and co-operation they have extended to me. I now also take the opportunity to accord our sincere thanks to the President and the Committee of the Indian Chamber of Commerce for helping us with the services of their competent officers, especially Dr. B. R. Misra, Officiating Secretary, and Mr. J. S. Mehta, Assistant Secretary, and their able staff.

I also offer my sincere thanks to you all, Gentlemen, for the trouble you have taken and for sparing your valuable time to attend the Annual Session of the Association.

With these few words I propose that the Annual Report and the Accounts be adopted.

NO MATTER WHAT..

We shall see that the men who have paid the price of freedom in order that we may be free—who now bear the discomfort, loneliness and dull monotony of a restricted life in prison camps—receive our gifts and greetings regularly.

The Indian Red Cross announce that in order to provide against any accident befalling a ship on its way to foreign countries with supplies, a special reserve stock of parcels is maintained in Geneva.

In this way, no matter what happens, our prisoners of war do not suffer the loss of their regular parcels. Please help us to make sure that these men are never disappointed.

Your regular contribution will keep the parcels in constant readiness if and when the occasion arises.

Send a donation now to the Honorary Treasurer, Indian Red Cross Appeal, C/o Imperial Bank of India, Strand Road, Calcutta.

JUTE

Calcutta, March 8.

The slightly easier feeling noticeable at the end of last week has been short-lived. The raw jute market has remained very firm during the short period it has remained open as the reports regarding the progress of sowings have been unsatisfactory. With the generally improved outlook for the jute industry it is feared that there might be a shortage of supplies even with the decision of the Government of Bengal to fix the quota for the next season at eight annas of the basic acreage for 1940. The shipping position is definitely easier and it is felt that total exports would be considerably higher. Every effort would be made, therefore, to buy as much jute as possible to keep up production consistent with transport facilities as continued buying without any prospect of early delivery would only result in a forced rise in prices. Coal supplies are reported to be coming in more regularly.

In the loose jute section business has been on a fairly large scale. Sellers have not been anxious to do business as mofussil markets are very firm and there is no tendency to part with holdings pending further developments. There is demand for tossa varieties from balers while mills are reported to be interested mostly in bottom grades. Quotations are four annas higher, Indian Jat Middles and Bottoms being Rs. 16 and Rs. 13 per maund respectively. Supervised Jat were eight annas higher.

In the pucca bales section, firm conditions have been noticeable. Mills have been eager to purchase jute. Sellers took advantage of the situation and asked for an increase in rates. Mills purchased Lightnings at Rs. 77 per per bale and Dundee Daisee 2/3 at Rs. 79 per bale. Shippers bought Dundee Tossa 4's for April shipment at Rs. 80 per bale and Dacca Tossa Fours at Rs. 104 per bale.

JUTE MANUFACTURES

Calcutta, March 8.

There is nothing of importance in the jute manufactures market. Firm conditions continue to prevail in the absence of sellers. Owing to the shortage of goods for near positions no business of importance is to be reported and quotations are nominally at maximum rates. Some business has again been reported for forward positions after June. 9 Porters and 11 Porters are quoting Rs. 21-10 and Rs. 28-8 respectively for all positions.

In the heavy goods section firm conditions have been noticeable and there are no sellers at maximum rates. B Twills, however, are available at Rs. 67-12 for ready delivery and Rs. 67-8 April/June.

After a long time the local stock figures make satisfactory showing. There has been a large increase in the offtake with a substantial decline in stocks both hessian and sacking. Hessian, cloth and bags, on civil account, were 45.83 crores yards against 52.46 crores yards at the end of the previous month and, on military account, 28.36 crores yards against 29.54 crores yards. Total stocks were 45.83 crores yards against 52.46 crores yards. Sacking, civil account, were lower at 21.87 crores yards against 23.04 crores but on, military account, were higher at 2.04 crores yards against 1.79 crores yards. Total stocks were 23.92 crores yards against 24.83 crores yards. The figures are given below:—

N.B.—February stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Calcutta Jute, Kedarnath Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of January, 1944.

COTTON

Calcutta, March 8.

The Bombay raw cotton market was inclined to be steadier earlier in the week on the admission of the appeal against premiums of other tenderable growths and the resumption of railway booking from the Broach and Surti districts. Buying on a large scale and the improvement in upcountry prices resulted in a slight rally but the publication of a discouraging forecast and the sparse buying by mills have resulted in a further decline in prices. Upcountry centres have been rather quiet in the last three days. The absence of any unfavourable features in the budget did not have, therefore, any effect on cotton values. With the arrangements for imports of foreign cotton on a large scale and the prospects of a larger cotton crop for the next season there is no great anxiety on the part

of mills to lay in stocks. The fear of a quarterly revision of cotton cloth and yarn prices is said to be the main reason for the poor support to the ready market in recent weeks. But for the straddling operations and the buying by longs for distant positions prices would have perhaps been further lower. Jharilla March closed at Rs. 443-12, May at Rs. 443-4 and July at Rs. 444-12. The quotations at the end of last week were Rs. 456-12, Rs. 456-12 and Rs. 457-8 respectively. It will be noted that there is actually a premium for the forward positions.

The area under Indian cotton during 1943-44 season is estimated at 19,261,000 acres presenting an increase of two per cent over the revised estimate on the corresponding date of last year. The estimated outturn is 4,934,000 bales, showing an increase of 10 per cent. The forecast relates to the entire cotton area of India and deals with both the early and late crops of the season excepting the very late crop in Madras, Bombay and Hyderabad.

The table below shows the present estimates of area and yield classified according to the recognised trade descriptions of cotton:—

Trade descriptions	Area (in acres)	Yield (in bales of 400 lbs. net)
Bengals ..	1,829,000	624,000
Americans ..	3,543,000	1,509,000
Omras ..	5,175,000	1,014,000
Broach ..	669,000	194,000
Surti ..	482,000	126,000
Dholeras ..	1,382,000	284,000
Others ..	6,181,000	1,183,000
Total ..	19,261,000	4,934,000

GOLD

Calcutta, March 8.

The Bombay gold market was inclined to be easier in the week in sympathy with the quiet tone of the raw cotton market, the stock exchange and the silver market. But with the continued selling by the Reserve Bank at Rs. 71 per tola and no prospect of an early reduction in prices there has been a slight recovery. Investment buying is rather small and no great improvement in demand is expected in the coming weeks. After being lower at Rs. 70-11-8 gold forward are now Rs. 70-14. Gold ready were Rs. 71 after being lower at Rs. 70-14. Sovereigns were a shade easier at Rs. 49.

There is no change in prices in the Calcutta market and quotations are around Rs. 71-6. Sovereigns were Rs. 49-4.

SILVER

Calcutta, March 8.

The silver market was inclined to be rather quiet early in the week on the sharp decline in prices for cotton. Some buying at the lower levels and the recovery in the stock exchange, however, has resulted in a late rally and some of the losses have been regained. Silver ready came down to Rs. 124. The close is higher at Rs. 126-3. Forward quoted Rs. 122-11 against Rs. 123-13 at the end of last week. There has been a widening in the discount for the forward positions. In the Calcutta market, the quotation was unchanged at Rs. 126-4.

Stock Markets to-day and to-morrow:

B. I. CORPORATION MAINTAINS DIVIDEND

The Calcutta Stock Exchange has remained closed for the last three days on account of the Holi festival though in the Bombay market business has been transacted and a steadier tendency has been noticeable. Even in the Calcutta market before the holidays a definitely better feeling was in evidence. Only the turnover was not on a large scale owing to the poor attendance of operators and the holiday feeling. The publication of satisfactory earnings reports and the declaration of good dividends by cotton mills in the Western Presidency have had an encouraging effect and it is now generally felt that the budget will not have any great restraining influence and that the upward tendency will again assert itself. The depressing effect of the budget might thus prove to be shortlived.

British India Corporation Limited is perhaps the only case of a large industrial unit which has not paid a higher dividend to shareholders in the war period. The ordinary dividend has been maintained over several years at 25 per cent. The absence of any increase in the ordinary dividend, however, cannot be taken to mean that the Corporation has not in any way benefited by the improved conditions in the industry on account of the war. As a matter of fact, thanks to the large war orders, total sales have increased from Rs. 2.28 crores in 1938 to as much as Rs. 10.75 crores in 1943. There has been a progressive increase in sales in the last six years. The net profit has improved in the same period from Rs. 15.81 lakhs to Rs. 1.9 crores. Naturally, the bulk of the increase in earnings has been taken up by taxation but even then there is scope for increased payment to ordinary shareholders. For some reason or other, the directors have preferred to maintain it at 4 annas per share.

Having regard to the improvement in the financial position of the Company, in the war period, and the sacrifices undergone by shareholders in the earlier stages, it might very well be that the directors decide on the distribution of bonus shares in the postwar period. The payment of the same dividend on an increased capital would ensure the maintenance of satisfactory prices for ordinary shares.

The net profit, before providing for taxation and depreciation for the year ended December, 1943 is Rs. 1,90,33,804 against

Rs. 1,15,72,952 for 1942. The amount set aside to depreciation is Rs. 9 lakhs against Rs. 8 lakhs while the allocation to reserves is Rs. 30 lakhs against Rs. 15 lakhs. The provision for taxation is as much as Rs. 1.35 crores against Rs. 75 lakhs. After maintaining the dividend on the ordinary shares at

Year ended December	Sales Rs.	Net Profit Rs.	Deprecia- tion Rs.	Allocation to Reserves Rs.	Taxation Rs.	Dividend % Ord. Pref.
1943	10,74,72,546	1,90,33,804	9,00,000	80,00,000	1,85,00,000	25 8
1942	8,28,94,868	1,15,72,952	8,00,000	15,00,000	75,00,000	25 8
1941	6,92,80,896	88,71,479	7,00,000	12,00,000	50,00,000	25 8
1940	5,56,82,809	69,07,079	7,00,000	8,00,000	42,00,000	25 8
1939	2,58,58,081	27,65,688	8,50,000	...	6,50,000	25 8
1938	2,28,57,412	15,80,800	2,75,000	...	1,00,000	25 8

A study of the balance-sheets for 1938 and 1943 shows that there has been an increase in the net liquid assets by over Rs. 66 lakhs. The paid-up capital at the end of 1938 was Rs. 125.15 lakhs and it stood at the same level at the end of 1943. Reserves

TAX QUERIES

Arrangement has been made with a Tax Consultant to answer a limited number of tax questions. These, with the relevant answers, will be published in "Indian Finance" which does not, however, take any responsibility for questions or answers. Readers are welcome to refer any practical problems or difficulties which they may experience and otherwise make such use of these facilities as they may.—Editor, I.F.

were only Rs. 33.91 lakhs in 1938. They had increased to Rs. 94.62 lakhs at the end of 1943. The increase in sundry liabilities, including dividends, and taxation, from Rs. 77,17,040 to Rs. 3,41,63,711 is mainly due to the increase in stores and spares and stock-in-trade; stores and spares on these two dates being Rs. 11.56 lakhs and Rs. 36.33 lakhs respectively and stock-in-trade Rs. 94.31 lakhs and Rs. 2,81.18 lakhs respectively. Total investments are higher at Rs. 66.17 lakhs against Rs. 27.21 lakhs and cash balances at Rs. 9.34 lakhs against Rs. 1.56 lakhs.

If it is remembered that no credit has been taken for the refund of taxes under E.P.T. which, even at the present moment, is as much as Rs. 20 lakhs, it will be readily admitted that the shares have scope for further appreciation.

4 annas per share and paying the preference dividend, the amount carried forward is lower at Rs. 2,65,093 against Rs. 3,83,039 brought in.

The rapid progress made by the Corporation in the last six years will be evident from the table given below:

Increased costs of production have resulted in a slight decrease in earnings of the Bengal Jute Mills Company Limited, for the half-year ended June, 1943. Sales are actually higher at Rs. 39.94 lakhs against Rs. 34.19 lakhs but the net profit shows a decline to Rs. 4,87,946 from Rs. 5,25,566. The amount set aside to depreciation is Rs. 87,746 (Rs. 88,302) while the provision for taxation is not very much lower at Rs. 2.4 lakhs (Rs. 2.6 lakhs). The transfer to reserve is unchanged at Rs. 50,000. The ordinary dividend has, therefore, to be reduced to 8 annas per share from 12 annas per share on the former occasion. The amount carried forward is higher at Rs. 18,943 against Rs. 12,238 brought in.

It has been announced that the Central Bank of India will be issuing new ordinary shares on bonus terms to shareholders. There were some reports to this effect several months back and the quotation for the ordinary shares jumped to Rs. 95. The new proposals have not, therefore, had any effect on the market. The authorised capital of the Bank is to be increased from Rs. 3.5 crores to Rs. 5.25 crores by the creation of Rs. 3.5 lakhs of new shares of Rs. 50 each. The paid-up capital will be increased to Rs. 2,625 crores. Out of the new 377,472 shares 336,284 shares will, in the first instance, be offered to members of the Bank in the proportion of one new share to every two existing shares. The new shares will be Rs. 25 paid up and issued at a premium of Rs. 25 per share. Our proposals for an increase in the Bank's capital are therefore substantially correct.

It is interesting to note that the sum of Rs. 25 per share remaining unpaid in res—
(Continued on page 503)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 9.

MARKETS have remained closed from Tuesday on account of the Holi festival and will not reopen for business before Saturday. There are thus only three working days to be covered. During the short period markets have remained open a firm tendency has been noticeable and business transacted would have been on larger but for the holiday feeling in the markets. The initial reaction to the budget was rather favourable. On second thoughts there was some selling as it was pointed out that the immobilisation proposals would result in a reduction in dividends. The recovery in the Bombay market and the hopes that investment buying would force up prices have resulted in a recovery and the close is definitely firmer. Coal shares continued steady throughout the week while there was good buying of Jute shares in the last two days. The better prospects for the jute industry and the fairly high level of profit for the standard period have been responsible for the improvement in jute share prices. Indian Irons and Steel Corporation also have recovered the lost ground and are quoting around the highest levels touched last week. The undertone is very steady and it is expected that the reopening after the long holidays will be satisfactory.

The gilt-edged securities section was firmer. With a larger amount of business passing 3½ per cent. Paper was done up to Rs. 99-8. There was some selling at the higher levels and the quotation was at the close at Rs. 99-4. Among terminable loans, 3 per cent, 1953/55 were rather quiet at Rs. 99-8 while 3 per cent, 1951-54 were Rs. 100-4, 3 per cent, 1949/52 Rs. 100-11 and 3 per cent, 1963/65 Rs. 98-7. 3½ per cent, 1954/59 were Rs. 104-2 and 5 per cent, 1945/55 Rs. 105. There was no business in provincial loans owing to the scarcity of sellers. There has been no change in money conditions and the average discount on treasury bills has remained unchanged at twelve annas and eleven ples per cent. per annum.

The only transaction in public bodies' debentures was in 5½ per cent, 1956/88 Calcutta Port Trust debentures at Rs. 124-4. Among preference shares, Clive 'A' preferences were done at Rs. 158, Hooghly at Rs. 22-2, and Lawrence at Rs. 160. Equitable changed hands at Rs. 160, Aluminium Corporation new preference at Rs. 129 and Humayan Properties at Rs. 12-12. Steel Corporation were unchanged at Rs. 130.

Bank shares have remained steady. The announcement of the new issue of capital by the Central Bank has not had any effect on the market as it has been for some time expected that the Bank would be issuing fresh capital on bonus terms to shareholders and a rise in prices for the shares had already taken place. Bharat Bank were rather quiet at Rs. 118-8 while Calcutta National Bank were unchanged at Rs. 14. Imperial Bank fully paid were Rs. 1,955 and contributories Rs. 505. A small lot of Central Bank was put through at Rs. 96.

Coal shares have remained steady throughout the week though no important change in prices is to be recorded. Prices are a shade better in certain places. South Karanpura

provided the feature of this section with a rise in the quotation to Rs. 14. Bengal were Rs. 590, Bhalgora Rs. 18-14 and Burrakur Rs. 33-3. Bokaro and Ramgur were quiet at Rs. 31-12 and Burra Dhemo at Rs. 10-10. Dhemo Main were Rs. 22-12, Equitable Rs. 53-12 and Hurriladih Rs. 25-12. New Beerbhoom were steady at Rs. 32-14 and Talcher at Rs. 6-13. West Jamuria were well held at Rs. 55. South Karanpura have suddenly improved to Rs. 14 from Rs. 12-2.

The Jute section has been firmer on good buying by investors. The expectations that jute mills would do better during the current year and that the standard profits for many companies admit of the payment of satisfactory dividends have been mainly responsible for the buying in the latter half of the period under report. Howrah have recorded a sharp rise to Rs. 72 from Rs. 69. Albion were twelve points higher at Rs. 267 as also Anglo-India at Rs. 414. Auckland registered a rise by four points to Rs. 309 while Bally were unchanged at Rs. 360. Champdany were Rs. 230 against Rs. 221 while Clive were steady at Rs. 36-2. Kamarhatti were twelve points higher at Rs. 584 and Kankannarrah fifteen points higher at Rs. 522. National were dealt in at Rs. 29-4, Nellimarla at Rs. 27-4 and Presidency at Rs. 7-4. Soorah were quiet at Rs. 18-5 and Waverley at Rs. 7.

Cotton shares were not active though Cawnpore Textiles were slightly higher at Rs. 16-1. Basanti were Rs. 14-11, Dhakeswari Rs. 32-7, Kesoram Rs. 18-8 and New Victoria Rs. 10-1. Muir Mills were lower at Rs. 469 cum-dividend. Shree Radheyshyam were noted at Rs. 23-12 and Pravati Textiles at Rs. 11-12.

In the Engineering section, firmer conditions have been noticeable with Indian Irons and Steel Corporations at Rs. 37-4 and Rs. 28-2 respectively. Bhartia Electric Steel were better at Rs. 18-6 while Arthur Butler were unchanged at Rs. 20. Burn & Co. were Rs. 384, Jessop & Co. Rs. 23-10, Britannia Building and Iron Rs. 19-13 and Indian Galvanizing Rs. 46-12. Saran Engineering were sticky at Rs. 10-4.

There was no activity in the Sugar section and quotations were fluctuating around last levels. Balrampore were Rs. 18-4, Carew Rs. 80-4 and Cawnpore Rs. 39 ex-dividend. Champarun were Rs. 41-12 and Ramnugger Cane and Sugar Rs. 14-10. U. P. Sugar were a shade easier at Rs. 33-10. New Savan were Rs. 22-7 and Darbhanga Rs. 30-12.

Tea shares were quiet and fewer transactions have been recorded. Bishnauth were Rs. 39-14, Dessai and Parbutia Rs. 403, Hasimara Rs. 73 and New Samanbagh Rs. 35-12. Patrakola were Rs. 1,112 and Sapoi Rs. 21. Tezapore were quiet Rs. 17-12.

In the Miscellaneous section, Burma Corporation were Rs. 3-14 and Indian Copper Rs. 2-14. Karanpura Development have been marked further higher at Rs. 31-12. Alkali and Chemical were Rs. 31 and Assam Bengal Cement Rs. 16-0. B. I. Corporation were unchanged at Rs. 6-8 cum-dividend while Dalmia Cement ordinaries were Rs. 19-2. Midnapore Zemindary were Rs. 146-8, and Rohtas Industries Rs. 33-3. Among Paper shares, India Paper Pulp have receded to Rs. 22-8 but Titaghar Paper have improved to Rs. 28-12. Orient Paper were Rs. 32-8 and Sree Gopal Paper Rs. 24-9.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, March 9.

Irregular conditions continue to prevail in the market. The situation is somewhat confused and it seems both operators and investors have not yet come to any definite conclusion. It is now admitted that the Finance Member had put the entire poison in the tail of the Budget thus springing a surprise on the market. The compulsory deposit clause and the corporation tax leave no room for any extra emolument for the shareholders. The belief that any further increase in prices of equities is palpably speculative and hence risky is gaining ground.

Two factors may, however, contribute towards higher prices on the stock exchange—satisfactory dividend declarations and the pressure of surplus funds seeking investment. The first may be ruled out as it is problematical whether the majority of the companies will be able to maintain their war level of distribution. With regard to the second it must be anticipated that the anti-inflationary measures of the Government will effect a substantial reduction in the surplus funds in the country. The future outlook for the market is therefore steady conditions with prices moving within narrow limits. The gilt-edged market was fully steady. 3½% Government Paper were done at Rs. 99-2.

Mill shares were active and prices made some advance. Century ailer being lower at Rs. 975 has advanced by nearly 25 points to quote at Rs. 1,000. It is somewhat steady at this level. Bombay Dyeing do not show much change at Rs. 2,085 though there has been a good demand. Other shares also have made slight improvement. Central India were Rs. 428; Colaba Land Rs. 242; Gokak Rs. 364; Kohinoor Rs. 699 and Sqadeshhi Rs. 594.

Though the market is outwardly buoyant there is still some hesitancy and weak holders have shown their anxiety to collect their gains more than once. And this tendency still persists.

In the Steel section there has been some improvement in the past 24 hours. But the price is by no means high. The latest quotation of Tata Deferreds at Rs. 2,102-8 though better on balance shows no substantial change from the quotation a week ago. Tata Ordinary were Rs. 415 and Indian Iron and Steel Rs. 37.

After early weakness the miscellaneous section displayed a better tendency to day in sympathy with the other sections and on renewed inquiry. Alcock Ashdown were Rs. 617-8. ACC were better up Rs. 220-8, while Shivrajpur after the big fall last week are slowly making headway; the present quotation is around Rs. 67. Premier Construction have remained neglected at Rs. 212.

MADRAS STOCK EXCHANGE

Madras, March 7.

The Central Budget has been a bolt from the blue for the local stock exchange. For the repercussions that followed none but the operators and the investors were responsible. In spite of the rumours about the taxation proposals caution was thrown to the winds. There was barely any sign of an impending Budget even on the eve its publication. The operators have reaped the consequences of the head-strong manner in which they behaved. The hectic activity that was in evidence

(Continued on page 503)

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 2nd March, to 7th March, 1944 both days inclusive)

Audited accounts for the year ended 31st December, 1943:—

The Accounts show a profit for the year after deducting depreciation amounting to Rs. 5,41,117 based on the Income Tax statutory allow-

ances of	Rs.	1,69,47,750
From this amount the Directors have set aside	Rs.	2,50,000
For Special Depreciation	Rs.	1,30,00,000
As provision for Taxation	Rs.	1,30,00,000
To cover the estimated Compulsory Deposit payable to the Government of India under Section 10 of the Finance Act, 1942 by transfers:—	Rs.	11,00,000

BENGAL BHATDEE COAL CO.

Audited Accounts for the half-year ended 31st December, 1943: After making sundry adjustments the result of the half-year's trading is a profit of Rs. 5,530-7-0 which reduces the debit balance brought forward from the previous half-year to Rs. 23,078-4-11. Raisings and Despatches were lower than the previous half-year due to labour difficulties.

Managing Agents—Messrs. Andrew Yule & Co., Ltd.
Authorised Capital—Rs. 4,50,000. Issued and Subscribed—Rs. 4,49,350 in 44,935 shares of Rs. 10 each, fully paid up.

Synopsis of the balance sheet as at 31st December, 1943.

To the Shareholders of the Presidency Jute Mills Company, Limited, and in particular to:—

Lt. Col. H. E. Macfarlane, Capt. P. R. M. Mundy, Revd. C. O. W. Birch, Col. J. W. Sandilands, Messrs. P. Fiske, G. E. Milne, G. Ogilvie, A. F. Dawson, E. B. Lobb, E. J. Halpern, R. H. A. Morton, E. F. McKenzie, T. E. Samson, W. M. Brown, W. Hecquet, J. Ross, E. L. Lacey, C. J. Mackay, K. Watt, J. P. Ireland, H. S. Spouncer, A. M. Cameron, B. K. Hutton, D. Millar, H. S. Mia, M. A. Paruk, M. I. Akhalwaya, W. C. Colbeck, Mesdames A. Wilkinson, B. M. Ross, E. L. Glascock, K. Arnfield, M. E. Allwood, G. L. Chaplin, Bai Ansabu and Miss M. Gubbay.

(Continued from page 482)

dence on the last day of last month was unique especially as both Bombay and Calcutta showed more respect to the Budget than local operators.

The effect of the Budget proposals was seen better in the Textile section than in the other sections. The compulsory deposit of a portion of excess profits, corporation tax and the increase in the supertax—all put together will leave precious little for the companies to distribute to their shareholders in the form of ordinary dividends. The 50% and 60% dividends which have become the rule rather than the exception cannot be continued and the market was very quick in grasping this point. Cambodia after a short period of glory again descended to its previous level of Rs. 42. All shares that went up to giddy levels came tumbling down and in some cases the decline was very steep. *Mettur Industries* are Rs. 310. *Buckingham* Rs. 350 c.d., *Rangavilas* Rs. 227; *Pankaj* Rs. 330 c.d., *Vasantas* Rs. 365 c.d.

The tax on tea, coffee and betel nuts had an adverse effect on Planting shares. However, the tax is in no way going to affect companies' earnings as the tax will be passed on to the consumer.

Midlands were Rs. 16-7; *Chembra Peak* were Rs. 12 c.d., *Nilgiri Neerugudi* Rs. 12-8, *Cochin Malabar* Rs. 18-1 and *Thirumbudis* Rs. 4-9.

(Continued from page 481)

pect of each of the new shares, like the existing shares, shall not be capable of being called up except in the event of and for the purpose of the Company being wound up. Which means, that if at any future date it is proposed to raise further capital the Bank authorities would be obliged to issue fresh new shares perhaps on bonus terms. At the present level of Rs. 92 cum-dividend cum-right, the shares offer a return of nearly 4 percent taxfree.

The accounts of the *Bucking & Carnatic Company Limited*, for the latter half of 1943 do not make satisfactory showing as there was a complete cessation of manufacture for a long period following the extensive floods in October 1943. By reducing the allocation to depreciation account and reducing the amount carried forward it has been possible to maintain the ordinary dividend at Rs. 6½ per cent.

Kohinoor Mills Company Limited, has done very well in the last year and the earnings, perhaps, constitute a record in the history of the company. The net profit, before providing for taxation and depreciation, is Rs. 1,74,83,248 against Rs. 96,69,053 for 1942. The amount set aside for depreciation including special depreciation is Rs. 7,91,117 against Rs. 7,74,717 while the transfer to general reserve is Rs. 11 lakhs (nil) and to Machinery Reserve Rs. 10 lakhs (same). Provision for taxation is as much as Rs. 1.3 crores (Rs. 64,11,676). The transfer to the general reserve and machinery reserve of Rs. 21 lakhs is expected to cover the estimated compulsory deposit payable under section 10 of the Finance Act, 1942. There is an allocation of Rs. 2 lakhs (nil) to Equalisation Dividend Fund. The final dividend and bonus on these shares have been maintained at Rs. 13 and Rs. 15 per share respectively. The total distribution for the last two years is thus 40 percent per annum. The final dividend and bonus for 1943 is payable on a capital increased by the new issue in May 1943. The authorised capital of the Company was then increased from Rs. 30 to Rs. 50 lakhs and 15,000 new ordinary shares of Rs. 100 each were issued at Rs. 100 premium to the shareholders. This issue has now been fully subscribed. According to the terms upon which the consent to the new issue was granted by the Government of India a sum of Rs. 30 lakhs has been invested in defence loan 1953-55 in the joint names of the Company and the Secretary, Finance Department and have been deposited with the Chartered Bank of India, Australia & China. These sums will be made available when required for the purchase of machinery.

The Company's liability to E.P.T. for the period up to 31st December, 1942 has been agreed and an optional deposit of Rs. 12,70,567 was made with the Government of India during the year in respect of that period. A further sum of approximately Rs. 21,00,000 will be payable as compulsory deposit from the profits of the year 1943 when the Company's liability to E.P.T. for this year has been agreed and amounts have been set aside to the General and Machinery Reserve Accounts to an equivalent extent.

Under the provisions of Section 10 of the Finance Act 1942, not only the deposits with interest at 2 percent per annum but also Postwar Refunds of E.P.T. will be receivable in due course. No credit has been taken in the accounts for the latter refunds, the gross amount of which in respect of *Excise* is estimated at Rs. 16,50,000.

THE SOORAH JUTE MILLS COMPANY, LIMITED.

The One Hundred and Third Ordinary General Meeting of the Shareholders of THE SOORAH JUTE MILLS COMPANY, LIMITED, will be held at McLEOD HOUSE, No. 28, Dalhousie Square, Calcutta, the Registered Office of the Company, on Friday, the 31st March, 1944, at noon, for the following purposes:—

- (1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1943.
- (2) To declare a Dividend on the Preference Shares for the half-year ended 31st December, 1942.
- (3) To elect a Director.
- (4) To elect Auditors.
- (5) To transact any other business that may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from 17th to 31st March, 1944, both days inclusive.

To facilitate the issue of the Dividend Warrants, the shareholders are requested to insert the distinctive numbers of the Preference Shares held by them in their applications.

By Order of the Board,
McLEOD & CO. LTD.,
 Managing Agents.

28, Dalhousie Square,
 Calcutta, 7th March, 1944.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 14th March, 1944. Total amount offered was Rs. 5,41,25,000 (Rupees five

crores, forty-one lakhs and twenty-five thousand). Tenders at Rs. 99-12-9 per cent and were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 4,56,25,000 (Rupees four crores, fifty-six lakhs and twenty-five thousand), the average rate of accepted tenders being Re. 0-13-0 (Annas thirteen only) per cent per annum.

Tenders for Rs. 4,00,00,000 (Rupees four crores) of three months' Government of India Treasury Bills will be received on Wednesday, the 22nd March, 1944 in Bombay upto 11 a.m. (Standard Time) and upto the close of business on Tuesday, the 21st March, 1944 at other centres including Karachi. Successful tenderers should make payment on Friday, the 24th March, 1944. Other conditions are as usual.

During the week ended the 10th March, 1944, Government of India Treasury Bills for Rs. 3,49,50,000 (Rupees three crores, forty-nine lakhs and fifty thousand only) were sold in favour of the Issue Department of the Reserve Bank of India.

Bengal

Tenders for Rs. 3,00,00,000 of three months' Bengal Government Treasury Bills were opened on March 16, 1944. Total amount offered was Rs. 3 crores and 49 lakhs. Tenders at Rs. 99-12-6 per cent were accepted in full and those at Rs. 99-12-3 per cent were allotted approximately 90 per cent. Lower tenders were rejected. Total amount accepted was Rs. 3 crores, the average rate of accepted tenders being Re. 0-14-11 per cent per annum.

Finance Abroad

Thursday, March 16.

The recent increase in short-term borrowing in London has been without any effect on rates. The Treasury deposit offer this week exceeds maturities and the main conclusion must be that the 1 1/8 per cent paid is sufficiently encouraging to the banks which are short of bills and have to compete with the market for both business and the usual treasury bill issue. The bank return showing a reduction in Clearing Banks' balances augurs increased demand for money, and the reduced support for gilt-edged of late is also an indicator of a slight change from abundance. The end of the financial year has brought no queeries as to new taxation in Britain but industrials are apparently becoming less attractive to investors at the higher prices. War news does not seem to lift prices as it has done on Wall Street recently, but the explanation may be found in the sustained rise for six months. The Russian advance in the south and official estimates as to reverse lease-lend aid have not been without effect on Anglo-Iranian oil shares which have gone ahead. The rest of the market is good only in patches, and over all hangs a question mark as to the time and spacing of the E.P.T. refunds. No adequate assurance has been given last year as to the way the Inland Revenue will meet its liabilities. And industrialists in India might do well to take note of the conflict of opinion in Britain. The possible delay makes the E.P.T. deposit a rather liquid asset for joint-stock companies generally, and if Government controls remain after the war the renewals and replacement programme financed by the refund may be a slow process. The actual amount repayable when E.P.T. comes to an end is undetermined and how far E.P.T. refunds would augment credit available to industry is still the subject of conjecture.

There may be a greater demand for bank advances when war ends and that may sustain faith in banks. Mr. Edwin Fisher's speech to Barclays shareholders in January laid stress on the bank's role in a free economy. In a closed economy the bank only collects subscriptions for Government loans as German experience in 1942-43 shows.

The progress of savings bonds and savings certificates is established but the pre-budget savings drive has not been reported from London. Since the gilt-edged market is listless, the drive is not perhaps contemplated. Actually sterling balances of other countries may be large enough to remove anxiety as to the future supply of funds for short-term borrowing and institutional support might be enough. The curious coal strike is nearly out of the way. Parliament has avoided discussion and miners' leaders have shown great restraint so that the strike has ended quickly. Canada's anti-strike legislation may not be copied in Britain since the wages award has not been annulled by the demonstration. What effect the strike would have on the heavy industries or on the export trade has not been indicated. U.S. war production was not checked seriously by the more serious stoppage in coal-mining last year and Britain may not suffer much though royalty-owners whose interests have been annexed may feel that they have not

done too badly after all. The effect on rail traffic figures may be altogether small and railway stock-holders who have found standard revenue doubled by the war and unified control have no reason to grouse. In fact, railway stocks for a week show no change and the South Wales strike for the S.E. alone looked as remote as the New South Wales strike.

The success of the fourth war bond drive in netting over \$14 billion for the U.S. Treasury was mentioned by Mr. Bell of the U.S. Treasury but there has been no sign of an Administration victory over the Tax Bill. The few messages that deal with the Election merely refer to Mr. Dewey's popularity with the Republicans and do not canvas the chances of a Fourth Term for Mr. Roosevelt. While Rumanian and Finnish intentions are fairly clear of late, the next fillip for U.S. markets need not necessarily be an abrupt armistice. The future of Lease-Lend (due for legislative renewal) is not ensured by the publication of the President's report to Congress. That the public debt is not even two years' war expenditure or less than two years' national income is perhaps enough to remove fears as to spending. The military situation still changing rapidly may have its own effects on Congress and Mr. Stettinius during his visit may get at intentions relating to the future of Germany. Allied experts have plans for economic disarmament and the removal of any chance for the aggressor to revive. But the experts who drew up the plans have noted the Jekyll as well as the Hyde in Nazi Germany. European unity requires the survival of Germany because other countries are dependent on Germany. "The Times" has asked lately that German economic capacity must be welded formally into a European system established and maintained with a backing of a force which will preclude its misuse for aggression. Since M. Stalin

IRISH SHIPPING PLANS

ECONOMISTS SCARCE

SPECIAL FOR "INDIAN FINANCE"

London, March 14.

Reports from Eire over an extended period reveal that the Irish Free State is laying plans to convert itself after the war into another Norway with an active mercantile marine plying on the Seven Seas and augmenting the national income by receiving for her shipping service.

When the Irish Government discovered in 1941 that supplies from overseas were dwindling a company was formed called the Irish Shipping Company, Limited, which purchased several ships at rather high prices and helped to relieve the shortage of overseas food and other supplies. The total tonnage at the end of 1943 was still modest, only 34,207 net tons. But the Irish Government recently announced that the Company would be supported after the war and given facilities for purchase of some United States surplus shipping at prices which should bring down the average cost of the Irish fleet. It is stated that the same facilities will be extended to other companies. Meantime, a dry dock for the repair of shipping has been established near Dublin, a wholly Irish marine insurance market has developed, and finally, the Board of Education has established a scholarship scheme for training both deck and engineering officers. Ample personnel has thus far been drawn for the ranks of fishermen. Since the outbreak of war six ships and 135 men have been lost, presumably owing to German submarine action.

This is the second newcomer to the post-war shipping battle, the first one being Argentina which now owns a fairly large fleet purchased mainly from Italy two years ago.

Many complain there is an acute shortage of trained economists in Britain which is likely to increase rather than diminish. It is widely believed that Government would maintain after the war an economic staff of the highest grade for the Cabinet as well as the Central statistical Office. Politicians in the Cabinet have learnt in the past few years how to utilize tip-top economists—men of such calibre as Prof. Lionel Robbins of the London School of Economics—and are reported to be determined to have similar assistance for post-war problems.

The new fashion has played havoc with the Economics faculties of various Universities. The Chair of Political Economy at Oxford will be vacant this year with the retirement of Prof. D. H. Macgregor while Prof. C. Pigou's retirement from a similar post at Cambridge which has been filled by the appointment of Mr. D. H. Robertson leaves a vacancy in the London School of Economics. London University has two vacancies in Economic History and Commerce while the Adam Smith Chair of Political Economy at Glasgow University is also vacant.

Some of the larger trade associations have been grabbing able economists and statisticians until the shortage is now severe. But only a few years before the War trained economists were so little esteemed that they were forced to emigrate to academic posts in various Dominions.

Agriculture under the Bombay Plan

It is a happy augury for the future of India's national economy that the Bombay Plan in its broad principles has met with the acceptance of factors as different as the Government of India, the Federation of Indian Chambers and the Associated Chambers. The wisdom of its authors in publishing the Plan in this form and postponing questions of detail to a later stage has thus been proved in the event. It is, indeed, too much to expect such support, if even in the first instance highly controversial questions had been dragged into premature consideration. To raise the standard of living to a level which will leave a margin over the minimum requirements of decent living is an aim to which none can take exception. And if some deductions, which are more or less of the purely arithmetical kind, are also made therefrom they have also to be subscribed to. A degree of unanimity has thus been achieved, though only on points which do not form the core of the practical problems which have to be tackled. But it is a great gain that economic planning is accepted without serious discussions. The authors of the Bombay Plan have won signal success in winning the whole country over to the side of planning. And there is now no fear that the Government of India in the post-war period will have to face a barrage of academic or interested criticism of the basic principle of planning.

It would appear, however, that the same thing cannot be said of opinion abroad. The Bombay Plan has provoked somewhat unhealthy reactions in the London Press. The "Economist" has for the moment laid aside the balanced judgment for which it is famous and dealt a strange mixture of sermons and innuendos which is irritating to say the least of it. According to a cabled despatch, the comment runs:

This industrial plan invites economic as well as political objections. It is a plan for big industry and high protection. Indian agriculture, which has suffered during the war as much as or more than Indian industry has gained and on which depends the very existence of the vast majority of India's millions, surely has the first claim on postwar resources. Agricultural mechanization, improvement of transport and development of public works will for some time require the lion's share of capital investment; local industries can only be expanded correspondingly. Pittsburghs, Birminghams and Magnitogorsks cannot be built overnight isolatedly.

India's grinding dependence upon soil poorly and inadequately tilled cannot simply be brushed aside to make way for an industrial India. Recognising industry as the basis of modern power and national independence these planners have naively decided that large-scale industrialization can make India into a Great Power by 1960.

Similarly they are led into an economic chauvinism that would throw away most of the benefits of foreign investment in Indian development in order to cap political with economic independence. They propose an autarchy that would compel India to progress by her own resources and restrict her income accordingly.

India is told that "shortcuts to national independence and greatness are mostly blind alleys" and that we must "learn to walk" before we run. Such language from a British journal is perhaps a reassurance—and we are not quite above need for it—that the Plan is practicable and that there is less doubt abroad about its success than at home. One wonders how the writer of the article came to the conclusion that "it is a plan for big industry" or that "our dependence on our soil is brushed aside to make way for an industrial India". If Pittsburghs and Birminghams were not built overnight, Magnitogorsks certainly did not take as long as their American and British counterparts. To sketch the real development of Jamshedpur, you require a different time scale; and time may be found to have shrunk further when other steel centres will be esta-

blished in India. The authors of the Bombay Plan do not need to take lessons from abroad on the priorities of agriculture and industry in any plan for India. It is strange that they should be charged in the same breath with partiality for autarchy and indifference to agriculture.

The "Economist's" criticism could be brushed aside, if some sections in India, too, had not voiced a similar opinion. "Industry" and "big business" have for some time been the clichés of certain sections in India. It is urged that the Plan is one for making the rich richer and the poor poorer. The fact that the starting point of the Plan is to raise the standard of living over the minimum necessary for decent living is conveniently overlooked. What opportunities this rise in the standard of living should give for making huge fortunes is a question which had not been considered. When the Plan is elaborated, and if one should find that it favours the rich more than the poor, criticism of this kind would not only be valid but necessary in the public interest. But a vague feeling that industry necessarily means the rich and only agriculture stands for the poor masses can hardly form the basis of the criticisms that have been made against the Bombay Plan. The relation between agriculture and industry in a country like India is such that hasty or hazy thinking leads to many a mistake. The conflict between the two is possible only when they are taken to represent two different classes, almost two different nations, between whom the terms of trade must be subjected to constant scrutiny. Such conflict may indeed be said to have obtained during the period, when economic development was thought of only in terms of the establishment of consumer's goods industries by the grant of high protective tariffs. But it must vanish in a regime in which public policy is directed to ensuring every individual an income which will leave a margin over the minimum requirements of decent living. This policy cannot succeed, unless it develops industry and agriculture alike, aims at adequate production in both spheres and evolves a system of distribution which will ensure minimum needs for all alike. Whether the practical plan will be such as to serve these ends or not is an altogether different question. Here, again, criticism is at the least, premature.

It may be said that the allocation of capital in the Bombay Plan under different heads indicates partiality for industry. Such a feeling must also be traced to the inability of many to visualise the processes by which Indian agriculture is to be helped to increase its output. The increase in yield per acre is not obviously attained by the same methods as increase in the output of a modern factory or even increase in the output per manhour. If the yield of Indian agriculture is low compared to that of other countries or even the yield in this country at some stage in the past, it is the result not of one or two causes, but to a whole nexus of social forces which have to be tackled together or in some reasonable order. Exploitation, whether by Indian or foreign industry, ultimate consumer or middleman, can explain but a small part of the massive poverty which the country is suffering from. The factors which are adverse to our agriculture range from the sheer age of the soil to the whims of our climate or of the officers in charge of irrigation. They range, too, from our laws of inheritance to our refusal to conserve our manurial resources. The cure must necessarily be as complicated as the disease. Education of the cultivator, collective farming, new forest laws and model farms are not more important than the manufacture of artificial manures and the establishment of the basic industries that can supply large tractors and small agricultural implements alike. To cut the national economy into two halves with a view to a microscopic examination of their differential advantages under a planned economy is the surest way of perpetuating present poverty.

It is not as a problem of distribution that the relation between agriculture and industry should be thought of. It is the way that agriculture and industry will move forward hand in hand that is really the difficult part of planning. There is enough in the memorandum to show that a big step forward in Indian agriculture is the first aim of planning and that further industrial development is to come thereafter. If capital appropriation for industrial development is more than that for agriculture, it is to be traced, not to a conscious or unconscious partiality for industry, but to the inherent differences between

industry and agriculture. The latter requires for its improvement, not so much money capital, as a refinement of men, material and methods. This applies also to cottage industries. Indeed, for our part, we cannot help feeling that the capital requirements of the plan have been made to loom too large, by the method adopted viz., of assessing progress in terms of increased income and then estimating the capital required to secure such increase. On this question, we propose to comment at length in a later issue.

TRANSPORT : ADJUSTMENT TO NEEDS

If there is reluctance to discuss the encouragement of road transport by other means than road construction on a large scale, the special place given to transport as an item of postwar reconstruction serves to focus interest on the problems arising from superfluous drivers and motor vehicles after the war. The number of military transport drivers for whom provision has to be made by way of employment runs to thousands. Recruitment figures cited by Sir Feroz Khan Noon last month included 9,500 drivers from Bombay and 33,000 drivers from Madras. The scope for employment must, however, be limited by the number of vehicles that may be available or by the form that road competition with railways may take. There is the Central Government's interest now and for ever in railways being profitable. But the Provinces have admittedly submitted to direction as regards road transport before and during the war and their interest in the future may diverge from those of the Railways. Compromise, of course, remains an admirable method and experts now favour compromise. Since the general condition that road transport pays its proper share of taxation is satisfied, the compromise must naturally be in the form of a sharing of road services with the Railways.

Existing shortage of transport does not by itself throw into relief the need for the development of road services. A technical committee reporting to the Reconstruction Committee presented a rather optimistic picture. "India at the end of 1944 will have a larger number of civil transport vehicles on the road than in 1939 and it is understood that releases of Army trucks available for disposal in India may amount to a number not less than the number of civil vehicles on the roads at the end of the war." The increase, therefore, would be in excess of 100 percent and the excess capacity of vehicles would emerge as a problem comparable to the deterioration of the roads. Avoidance of conflict with the railways for both passenger and freight is desired. The contribution of road transport to the Central revenues is regarded as the overriding reason for a fair deal to road transport but more important is the indirect economic benefit of road development. In connection with its pilot surveys in Bombay last year the Indian Roads and Transport Development Association outlined the possible benefits to agriculture and the net gain arising from village and feeder roads as compared with the maintenance and amortisation charges.

Since road development turns entirely on the development of road transport, the assumption of responsibility by the Centre for civil communications also is indicated. While the claim that Indian railways' charges for passengers and goods are lower than in any country save Japan may be well-grounded in statistics, a sudden increase in the number of vehicles must be faced. Essentially the increase would be welcome not only for deferred journeys but for the effects on revenue and employment. A surplus of vehicles of the kind envisaged in the years after the war would naturally justify planning on the grand scale. The most recent expert estimate for national highways is 22,000 miles including the 5,000 miles in existence already apart from the clearance of arrears in regard to the maintenance. Large expenditure on the official postwar road plan put at Rs. 450 crores (against Rs. 940 crores in the private plan) could only be justified by unrestrained expansion of road transport though, the claims of co-ordination with railway transport would not go by the board. The annual maintenance charge of Rs. 16 crores would fall on both the Provinces and the Centre, if administration of transport were unified. These figures would suggest that expansion of road mileage in the future would create the demand for the vehicles though such an increase would not limit the possible future demand for imported vehicles it would create for the engineering, oil and rubber manufacturing industries optimum conditions—the need for 3,000 road rollers alone has been indicated. Two, at any rate, are paying in excises and their future is unquestionably dependent on the orderly evolution of transport for which the conditions have been presented for the consideration of the Reconstruction Committee. Production and trade when

they increase under a system of economic planning would entail a large increase in transport to points of distribution.

The technical aspects of road development have been conclusively examined in December, when the arguments for planning and loans were formally reviewed. The precise interest of the Railways was left unexamined because that must be subordinated to the country's needs. Appropriate conditions for road transport must not prejudice the chance to develop independently while the new roads are in the making. The lowering of operating costs by the use of charcoal gas may favour road transport for some time. The use of producer gas in Sweden, Germany, France and other countries during the war has stimulated imitation. Many vehicles have been adapted to charcoal producer gas and the fuel research necessary has been undertaken to extend the adaptation of more vehicles to the new fuel. The preference for producer gas is conditioned less by rationing and the higher cost of petrol than by the ability to manufacture gas plants. As to the future the conclusions are still mainly in favour of producer gas. Onerous taxation of producer gas vehicles has been deprecated in advance, and notice has been taken of the possibility of using coke as fuel. The connection between producer gas and the war effort has been explained as a national necessity. It has been insisted that producer gas is an efficient and suitable fuel for buses and trucks operating on the majority of roads and that except on steep gradients and on loose, sandy soil, gas plant vehicles can operate with normal loads over any sort of road in this country at speeds up to 30 miles per hour. The wartime saving of 20 million gallons of petrol required for 8,500 buses, 3,500 lorries and 1,500 cars has been instanced to justify encouragement to convert vehicles to producer gas. The hope that 10,000 more vehicles would be adapted to the use of producer gas by the end of 1944 thereby saving 17 million gallons of petrol which would have to be imported by sea was expressed by Dr. Dunnington. The total number may be over 20,000 at the end of the year and whatever be the loss in motor spirit excise the net gain from producer gas in regard to lower operating costs cannot be treated as an exceptional profit which must be taxed separately.

The positive expression of opinion in favour of producer gas contained in the technical subcommittee's report follows the tests and trials, the special directions to fit equipment for Lease-Lend vehicles and the fuel research. Where supplies of suitable timber are plentiful, it is logical to use gas and the most recent estimate is that over 4,000 vehicles are converted in Madras and over 4,000 in Travancore State. Neither a subsidy nor special taxation to offset the loss of petrol revenue is required and a progressive increase in the use of producer gas may hold important advantages for others besides the manufacturers of producer gas plant. Efforts to improve the performance by the imposition of the dust test and the ascertainment of power delivered by the fitting of a dynamometer have been mentioned at the Indian Science Congress in January. In view of the fact that about half the 55 different types have passed the test already the need to develop the new type of vehicle and the new fuel may be accepted without question. Correct fuel and servicing as well as moderate speed have been described as necessary for effective performance.

But maintenance of the new producer gas plant industry on a stable basis is but one part of the road transport development promised. The withdrawal of restrictions and regulation only for development are presupposed in the compromise propounded. Road planning postulates a large scale development of road transport in all forms. The expansion of motor service is assured; but in regard to animal transport, the most useful suggestion so far advanced is in favour of pneumatic tyres. Postwar salvage and disposals are expected to create an ample supply. For development of road services generally after the war the most favourable condition is the closure of branch lines and the probable closure of unremunerative branch lines. If no strict demand for restoration of dismantled lines is made, the benefit will naturally go to road transport.

The provision of combined bridges for road and railway services has been advocated but more important is the new proposal for integration. Public authorities may not be equipped to operate road services but the new conditions must favour the large scale haulier. The most definite indication in favour of the substantial concern as against the small operator is based, in the main, on the admission that improvement in service and cooperation with the rival transport agency can only follow the preference for the large operator who need keep only a small reserve fleet and can carry out running repairs etc., by himself. The plea for a uniform transport policy is meant to bring the States into line with the Provinces in

regard to taxation, transport regulations and road planning alike. Administrative changes and improvements are to be viewed merely as the effects of the policy advocated. What was framed as the minimum by Sir Kenneth Mitchell and his colleagues is meant to be 'a live and let live' plan. Since two Provinces alone have road plans ready for adoption and others are less qualified in resources and experience the levelling up of transport plans appear overdue. Wartime experience inculcates the lesson that in transport a second string is always important and how to twist and stretch it is an essential piece of the routine reconstruction that follows war.

THE FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th July 1944 will be paid on the 15th July 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Editorial Notes

Cottage Industries

While talks of big plans for the economic reconstruction of India are in the air, it is but fitting that the well-wishers of the ryots come out to emphasise the importance of cottage industries for national welfare. In a booklet entitled "Cottage Industries And Their Role In National Economy" (Vora & Co., 3, Round Building, Bombay. Rs. 1) Prof. R. V. Rao draws pointed attention to the confused thinking that prevails at present regarding the ability of cottage industries to thrive and serve the village economic progress. In a land of villages where poverty has perhaps gone beyond tolerable limits the easiest and best way of infusing life into the national body politic is reviving village industries. While no one can question the urgency of key industries and large-scale manufacturing industries for India one should not forget that industrialisation mainly based on urban foundations would be quite unsuited to Indian conditions at present. The chief features of Indian economic life are excessive pressure on land and extremely low per capita income of the people. A planned resuscitation of village industries would relieve the pressure on agriculture and augment the meagre resources of the ryot. Besides solving rural unemployment village handicrafts would enable the exploitation of local resources and talent for local needs. If the full benefits of localisation of industries are to be reaped from an economic plan for India village handicrafts cannot be neglected. Cottage industries, Prof. Rao points out, can stand the competition of large-scale industries if facilities are given for marketing, research and organisation. He suggests that district surveys must be conducted in every province to explore the ways of reviving the dying industries and starting new ones. On the basis of information gathered the Provincial Governments should outline their own plans for restoring the village handicrafts to their proper role in provincial economic activities. Local taxation is now very heavy and should be reduced to facilitate the growth of rural industries. If the railway authorities co-operate in giving certain concessions to village products the work will be much easier. The author urges that the Gandhian view of Indian economics should be duly appreciated if the evils of capitalism and state socialism are to be avoided in India.

Mines Welfare

The four annas cess leviable under the Mines Welfare Ordinance is expected to give Rs. 80 lakhs to be devoted to special expenditure. The text of the Ordinance

issued on January 31 for immediate adoption refers to a new advisory committee presided over by an official chairman. Section 3 prescribes the collection as cess on all coal and soft coke despatched from collieries a duty of excise at such rate not less than one anna nor more than four annas per ton as may from time to time be fixed by notification. Provision to exempt is reserved to the Central Government. The Welfare Fund is to be applied not only for labour welfare. The cost of administration, the fees for the advisory committee and the salaries of inspectors appointed to supervise welfare work are also to be charged to the fund. The major objects of expenditure are duly detailed. The fund is to meet the cost of measures for the benefit of labour employed in the coal-mining industry towards the improvement of public health and sanitation, the prevention and treatment of disease and improvement of medical facilities, the provision of water supply and the improvement of existing facilities, the provision and improvement of educational facilities, the improvement of standards of living including housing and nutrition, the amelioration of social conditions and provision of recreational facilities, the provision of transport to and from work, as well as the making of grants to a local government, a local board or the owner, agent or manager of a mine in aid of any scheme for an approved purpose, the last on condition that the advisory committee is consulted.

The new advisory committee set up under the Ordinance is to be appointed by Government provided that the committee shall include an equal number of members representing owners and workmen engaged in the industry and that at least one member shall be a woman. The welfare officers, inspectors and administrators appointed to carry out the work financed by the Fund are to be regarded as public officers so that the right of entry to any place is vested in the officers. Power to make rules regarding the collection of the cess, the making of grants and the employment of officers and the annual statement of receipts and expenditure is vested in the Central Government which is empowered to call from owners, agents or managers for statistical or other information and to punish by fine the non-compliance with instructions. The statistics relating to despatches certainly are necessary for the levy of the cess. The sand-stowing board looks generally after safety measures and its authority to make advances and offer advice is derived from statute. The Welfare Ordinance is different in scope and purpose. The financial relief that may be obtained by the Mines Board of

Health or any other authority may be small as compared with the grants made to employers already engaged on welfare work. The welfare work is limited to coal mines but it should be possible to use the same means to advance labour welfare in other mining industries. Dr. Ambedkar has promised to review the actual working of the welfare rules.

Difficult Year

At the Indian Tea Association's Annual Meeting, the increase of production to 453 million lbs in 1943 was described as the principal feature of the year. Production in 1940 was higher at 463.88 million lbs but the export quota then was lower, and the increase, if it is large in relation to the export quota prescribed at 315 million lbs for the U.K. and 106 million lbs for other countries, secured for the Indian market a quantity above the estimated total of 130 million lbs for internal consumption. The trend of tea prices for internal sales has reflected the increase in the 1943 crop. The sustained offtake ensured by the war explains the rise in tea production. South Indian production would certainly have raised the 1943 total put unofficially at 100 million lbs. in 1943.

to over 555 million lbs (the estimate of production made in October 1942) and the achievement described followed previous increases. In the previous year, there were transport difficulties, shortage of packing materials, particularly plywood chests, and rising costs of production. These difficulties were overshadowed in 1943 by labour shortage. What was performed in spite of displacement of labour therefore stands out. Handsome tributes to managers and estate labour followed the description of the difficulties experienced. Food supply was a problem, so was health, according to the Chairman. The more recent increase in costs may have more effect than the new excise on prices paid by the consumer for Indian tea. The excise is, indeed, less important than the recovery in prices demanded for growers. The averages realised in the 1943-44 sales at Calcutta show that while the quantity disposed of has been smaller, the average prices (for Dusts too) have been substantially lower as compared with 1942-43. It was pointed out by Mr. Jones that in some cases estates had to dispose of a considerable proportion of their crop at prices which not only failed to yield a profit but were below the production costs. The coal and other shortages have raised costs of tea production, and the favourable experience of 1942 in regard to profits and dividends to shareholders alike may not be repeated. Caution as regards tea shares in view of the impaired outlook has been given by others already but the authoritative description of various difficulties has been awaited. The 1944 season is not regarded as quite encouraging, and the higher price secured for exports from the Ministry of Food is not sufficient compensation as may be noted from the difficulties reviewed. The industry is reconciled to control, but the claim for prices fully in line with costs has been stated. This might probably sustain the faith of investors though the sudden ebb of interest in tea shares may be interpreted as a consequence of the market's appreciation of the many difficulties which have not been apparently limited to any district.

Changes in Export Trade

The feature of the October trade returns was the increase in India's exports. There was an exceptional increase in re-exports though the value of imports was lower than in the two preceding months. The increase on the totals for 1942-43 may suggest that the fall in imports has been without effect on the export trade but the general level of prices must be considered though it may be argued that the increase under jute manufactures is not due to any considerable rise in prices. The most interesting feature of the export trade in October, was the sharp recovery in tea exports and shipments of oilseeds and hides and skins. On the import side, the increase under liquors and provisions and oilmanstoes stands out like the increase under takings of raw wool. The increase in exports of Indian manufactures was not limited to cotton and jute textiles. Increase under woollen goods as well as chemicals was noted in October. The import total for seven months ended October point to an increase under tobacco and oils as well as raw cotton and raw wool. It may be guessed that Indian industry has deserved real support from the increase in imports of raw materials last year although the reduction in imports of machinery, electrical goods and iron and

RED LETTER DAYS

To those fighting men who are far from home, alone and miserable behind the barbed wire of enemy camps, the expression "no news is good news" cannot possibly carry much weight.

Messages from these men, taken prisoners of war, are likewise anxiously awaited by their families and friends in India.

The Indian Red Cross arranges for the sending of these precious letters; this service has been in operation for over three years.

It is indeed a red letter day when the mail arrives bringing the much longed for news.

We cannot keep this service going without your constant support.

Please help us to help those who have fought for us by sending your donations to the Hon'y. Treasurer, Indian Red Cross Appeal, C/o The Imperial Bank of India, Strand Road, Calcutta.

steel may suggest that the fall in imports has been disadvantageous.

The most remarkable development is the fall in imports of textiles while India's takings of dyes and colours have increased. The simultaneous increase in exports of all Indian manufactures excepting cotton goods will suggest that export trade has favoured Indian industries though it will be conceded that the main advantage last year went to the jute mills as will be inferred from the growth of Indian exports to the U.S.A. by over Rs. 6 crores in value. Exports of raw jute in April-October were lower in comparison with 1942 and the increase under cotton was illusory. Only under tea was the increase significant of higher production in India in line with larger export demand.

The import trade figures show an increase under precious stones and pearls. The increase may be proof of prosperity sustaining the demand for gems. The increase under copper does not offset the decline recorded under other metals. The most arresting changes on the export side is the fall under linseed and the increase under manganese ore. Both can be explained satisfactorily like the decrease under gums, resins and lac. The further increase under coffee is proof of the rise in prices. The direction of trade during the seven months was influenced only to some extent by the decline under exports of raw materials. In spite of the prevailing impression more than two-thirds of exports went to Britain and the Empire while their share in import trade was less than in 1942. Though imports from Australia increased, the share of Britain in India's trade was reduced. As may be expected the countries to which Indian exports increased did not increase their own exports to India. The U.S.A. sent less. The increasing importance of Iran as an oil producer accounts for the fact that she accounts for a bigger portion of the import trade. Since imports from the U.S.A. fell and the margin between Indian exports and U.S. exports to India widened the current balance of trade should favour the creation of a dollar reserve for India to be used after the war. The recent changes in taxation may affect the increase in tobacco imports but little else. The trade figures indicate that the place of cotton as India's chief export has been taken by cotton manufactures, and the increase in India's imports of cotton has supported the change which has displaced jute manufactures from the first place though it is quite likely that tea and jute manufactures have a permanent position in export markets such as may not be available to cotton manufactures after the war.

After The War

In an address to the Reconstruction Committee on resettlement and re-employment, Sir Feroze Khan Noon gave last week plans for soldiers' colonies in addition to figures as to the Indian Army and Navy. According to the Defence Member the strength of the Indian Army is approximately 1½ million and is increasing at the rate of about 30,000 a month. The strength of the R.I.N. is roughly 20,000 and that of the I.A.F. approximately 30,000 including non-combatants. The Navy and the Air Force are not likely to present serious difficulty. It is legitimate to assume that neither Service will be reduced to anything like its pre-war strength. The naval cadres in 1939 were in the vicinity of 1500 and the I.A.F. was still in its infancy according to

Sir Feroz Khan Noon. Moreover, the majority of the rank and file of both services have professional and technical qualifications. Ratings of the Indian Navy are expected to return to the merchant service and comparatively few will experience difficulty in finding employment. As for airmen, civil aviation will afford scope when it develops after the war. As regards the Army the problem is one of dealing with 1½ to 1½ million men.

The main problem for the soldier is that raised by the higher standard of living which they have enjoyed for the duration. The Punjab is said to have sent up 600,000 men for the Army. The majority, probably 80 per cent, are agriculturists though not more than 30 to 40 percent own land. Many, however, have learnt trades and of 333,000 whose card indexes are ready, nearly 64,000 are M.T. drivers and 14,000 are fitters. The N.W.F.P. accounts for over 70,000 men sent to the Army and the new soldiers have an agricultural background. It is only in Garhwal and Kumaon that resettlement of soldiers would be a problem as in the north Punjab. From Madras 260,000 have been recruited but the re-absorption in the large districts should be easy.

State subjects in the Army number about quarter of a million but demobilisation is likely to have a marked economic effect on the Rajputana State, Kashmir and to a somewhat lesser extent on Travancore and Patiala. The new soldier is invariably a villager and land settlement is more important than industrial employment. The creation of large-scale transportation companies would help a proportion of motor drivers released from the Army. Reliance for the future is placed on the Welfare Fund of Rs. 5 crores which is rising by Rs. 30 to Rs. 40 lakhs a month. The disposal of the Fund through outlay on vocational training, agricultural institutes and demonstration farms was explained as part of the extra benefits to be given over and above what the Governments provide. The main proposal made last week related to the purchase of 90,000 acres of land irrigated by the Thal Canal from general revenues. The promise that each Province's manpower contribution would determine the scale of Central grants for ex-soldiers' settlements was made so that Sind and Orissa would have little use for them though their own liability to the demobilised would be very small.

Shrunk Imports

Until special encouragement for imports of consumer goods was decided upon after the complaints of scarcity, seaborne imports continued to fall. Up to October, the increases under imports were confined to liquors, mineral oils, raw cotton and raw wool which are needed for industries. Imports of consumers' goods like wearing apparel, glassware and earthenware, cutlery and hardware, paper and stationery were substantially lower than in 1942. The modest increase noted under cotton yarns and piecegoods in October is probably due to higher prices over a long period takings have fallen substantially. The fall under textile imports as compared with 1941 is very substantial. Steps taken to increase the supply of yellow metal for civilian purposes receive their sanction from the substantial decline in imports of metals and manufactures up to October though the increase under wrought copper claims notice. Since Lease-Lend supplies are excluded from the trade returns, the

abnormal decline under motor vehicles may be ignored. The increase in the value of textile machinery for cotton mills may be a consequence of the measures to increase mill output in India rather than the eagerness of oversea suppliers.

The only article of consumption of which increased takings has been recorded is tobacco. It may be difficult to reconcile the recent shortage of salt in Bengal with the increase in imports from Rs. 32.03 lakhs in 1942 to Rs. 94.27 lakhs in the seven months ended October 1943 though the rise in prices must be allowed for. From the import statistics available up to October, there stands out the large decrease in the supply of foreign cigarettes. The fall noted under

cloves and the rise under betelnuts is in contrast to what was noted in 1942. It is not known if the import duty on betelnuts is to be raised to offset the new excise but that is likely in view of the increase in the excise on tobacco. The increase in the import of wines is smaller than the decline under beer and spirits imported in 1943. Indian distilleries' production must have received a special fillip from the further decline in imports. In spite of restrictions in force, the import of raw cotton increased like the imports of alizarine and coal-tar dyes and textile machinery. Scarcity of medicines is indicated by the decline recorded under chemicals, drugs and medicines imported into India up to October. Whether price control under the anti-

GOVERNMENT OF INDIA, DEPARTMENT OF SUPPLY

(Munitions Production Branch)

MACHINE TOOLS

The Government of India have decided to revert to the use of trade channels for the acquisition in future of new machine tools to be manufactured in India, but at the same time to preserve the basis of the rationalisation measures that are now in force through a licensing system. Under present arrangements orders for the manufacture of machine tools in India, whether required on Government account or for industrial users, are aggregated and contracted for by Government and Government arranges for the re-sale and distribution of the machine tools required by industrial users. With effect from 1st of April, 1944, the following brought into effect:

- (1) On application to the Machine Tool Controller, Directorate General, Munitions Production, Calcutta, manufacturing licences will be issued to Indian machine tool manufacturers to cover their forward production programmes.
- (2) Industrial users desirous of acquiring Indian-made machine tools will apply in the same manner as hitherto, through the appropriate Regional Representative of the Machine Tool Controller located at Calcutta, Bombay, Madras, Cawnpore and Lahore, for an authorisation to acquire. Having received his authorisation the industrial user will be at liberty to enter into direct purchase negotiations with any individual machine tool manufacturer and/or his agents or recognised dealers.
- (3) Statutory maxima prices will from time to time be published for new machine tools in future to be manufactured in India. These statutory prices, whilst imposing a limit on the price at which newly manufactured Indian machine tools can be sold, will not debar sales at a lower cost.

- (4) To assist industrial users in their negotiations with Indian manufacturers and/or their agents or recognised dealers, a list of manufacturers, showing the types and grades of machine tools they are licensed to manufacture, will be furnished on application to the Machine Tool Controller. Industrial users are advised to deal only with those manufacturers and/or their agents or authorised dealers, in accordance with the Machine Tool Controller's list, who are capable of supplying the grade they require. In placing orders on manufacturers in India and/or on their agents or authorised dealers, care should be taken to specify the precise grade of machine tool required.

- (5) Manufacturers holding manufacturing licences from the Machine Tool Controller should obtain their requirements of steel and other raw materials through the Industries and Civil Supplies Department of the Central Government. These will be available at commercial rates. For any other assistance, manufacturers should apply to the Machine Tool Controller. The same technical assistance as hitherto will be available to manufacturers.

- (6) Industrial users who require machine tools of classes or grades that cannot be made in India and can only be secured from overseas, should continue to apply as hitherto to the Machine Tool Controller for an import licence. The grant of import licences for machine tool for which Indian production is established will be authorised in exceptional circumstances and for special and sufficient reason in each case.

CALCUTTA:
10th March, 1944.

S. A. VENKATARAMAN,
Joint Secretary to the Govt. of India.

profiteering ordinance leads actually to larger imports remains to be seen. The changes in imports can be related to the advance in home production in the case of molasses only. The fall of Rs. 6.16 crores in the total value of imports as compared with April-October 1942 may be contrasted with the rise of Rs. 6.48 crores under imports of raw materials. Only some industries in India have been favoured by the increase in imports and the decrease in the supply of machinery, instruments and electrical goods is another aspect of scarcity. While the production of paper, rubber manufacture or leather can be stimulated by special control measures in addition to those in force, the substantial decrease in miscellaneous imports could be met only by relaxation of import control. No tariff adjustments were made and the immediate recovery in Indian sea customs revenue has followed the decisions as to larger imports of other things besides wheat after October. Since exports of Indian manufactures rose by Rs. 6.39 crores as against the increase of Rs. 5.53 crores in the value of Indian exports from April to October 1943 it seems necessary to stress that as well as the fall of Rs. 11.83 crores in the value of manufactures imported into India. The decision to increase imports was grounded in undeniable scarcity and the fall in the prices of imported consumers' goods has had its own effect on the price-level.

Work and Wealth

A cable in January from London as to the Conservative party's views as to the future of British industry revealed not merely a decision against nationalisation in favour of private enterprise but a strong desire to win and keep export markets. The Conservative party's committee on post-war problems included industrialists like Sir Walter Benton Jones and Sir Alexander Roger. There

were four M.P.'s in the committee over which Sir Henry Brooke presided, and the report was submitted to Mr. Churchill as leader of the party. The report pronounced in favour of an economic system responsible to the community and responsive to the individual's needs. State intervention is not deprecated but the report insisted that initiative and elasticity must be preserved at all costs. In regard to post-war collaboration with other nations, the report claimed that Britain must be free to retain preferential tariffs and also that she has to face the reality of a huge adverse balance.

Industry in Britain must satisfy four main aims according to the report which declared that industry must supply people with what they need and want (2) provide steady employment for all who depend on jobs for their daily bread, (3) be more than a colourless means of livelihood to those for whom industry is a large part of life and (4) produce the wherewithal to exchange for the imports we cannot do without. The younger Tory's view is crystallised in the third condition while the Prime Minister's outline of work and food is reflected in the fourth condition. But the Conservatives demand technical progress and a higher quality of workmen. For this purpose, the co-operation of workers is sought, and the experience of joint production committees is cited. The retention of existing controls during the transition to peace is favoured but the peacetime pattern must be different. It is urged that "as soon as special conditions disappear, the case for controls dwindles. They have no intrinsic virtue in themselves." It is interesting to find the committee declaring itself against the abuses of monopoly. The committee which asks that industry must grow healthily is lined up with the independents who asked for an enquiry into the incidence of direct taxation on industry

so as to improve its capacity. Of energetic desire to preserve the profit motive the report gave proof but it also indicated that the younger Conservatives' view of the place of private enterprise in the new society has spread to the whole party. The Conservative sub-committee argued that the real task is to create plenty. In the listed aims, the emphasis is on plenty, not at all on planning which is in the committee's view inferior to the profit motive as a spur to industrial progress.

The committee's main aim was to make plain the connection between expanding export markets and full employment. Its subsidiary aim was to limit the future encroachment of authority in the industrial field except in restraint of unfair practices. The point of view is not different from that of Captain Quintin Hogg who declared that "if public control is not a single form, private enterprise is not a religion. It is a variable human force which can be controlled without necessarily being stifled." The Conservative party incidentally accept the views as to location of industry found in the pre-war Barlow report and the more recent Scott report. The points of resemblance between the old demand for protection to support high wages at home and the new demand for unfettered opportunity for workers as well as employers may not be conspicuous, but the anxiety to win working class support for the Tory party is obvious in the language adopted to define the desirability of the status quo ante.

Turnover Tax

Those who favour a federal sales turnover tax in America or plead for a purchase tax in place of direct taxation in Britain, are impressed most by the Russian experience. The main source of Soviet Russia's revenue is the turnover tax which yielded 105.8 milliard roubles out of the total revenue of 178.1 milliard roubles in 1941. The turnover tax reserves purchasing power for the use of the State. The State also borrows regularly since national investment is the function of the State and State loans rather than savings deposits constitute an index of the growth of capital. Since private incomes are limited and the exemption limit varies, as between different callings and trades in Russia, the turnover tax is the main source of revenue. The tax has been called a technical device for the readjustment of the difference between the producing cost of the aggregate of consumer goods and the aggregate spending power of the population. When production lags behind purchasing power, the turnover tax covers the gap and redistributes the purchasing capacity. The principal item of expenditure in the Soviet budget is the investment in old and new enterprises. Part of the capital is provided by the earnings of State enterprise and by borrowing but the turnover tax always remained important. Soviet peasants deliver produce out at fixed prices and urban consumers pay higher prices which include the turnover tax. The peasant, however, gets back in tractor stations, fertilisers and scientific services the difference in price. Though defence has become important than investment in the Soviet budget since 1938 the turnover tax has probably been as effective against inflation as the expansion of State borrowing.

Additional Aluminium Supplies

The growth of the U.S. aluminium industry in respect of production is to be measured by the increase in power output. New hydro-electric projects have stimulated aluminium production and four new plants are now responsible for 30 percent of U.S. pig aluminium output. The U.S. aluminium industry like aircraft manufacture has moved westwards but the future is regarded as uncertain as it is believed that two plants run for the U.S. Government may go out of use after the war. It may be said that others would continue as a new alumina refinery is to be set up in Oregon at the instance of the War Production Board. Aluminium from clay will be the net result of the plan meant to give the U.S.A. new sources after the bauxite deposits of Arkansas are exhausted and to offset dependence on imports from British and Dutch Guiana. The capital to be invested in the reduction plant at Salem (Ore) is put at \$4 millions and the sponsor is the Columbus Metal Works Corporation. A possible disadvantage is the higher cost of the alumina produced by the new plant as compared with the existing plants. The Aluminium Corporation was expected to deal with the threat to its supremacy by getting control of a shipping company to carry alumina from Alabama to the West Coast and to exploit clay deposits near Castle Rock (Wash.), whence it will be advantageous to get the material for its rolling mill.

The West Coast's desire to get a new essential industry was attributed to fears of what may follow the peace and the use that may be made of the powers wielded by the largest enterprise in the field. As to the state of demand when aircraft production plunges downwards no conjecture is possible. The development of U.S. aluminium production however should offset the fears as to overseas supplies provoked by destruction of European and Japanese plants in air raids. The existing world surplus if enlarged may bring down the price of aluminium to the point at which it begins to displace copper. That problem may not arise in the U.S.A. which is the world's biggest producer of copper at present but it may compel reconsideration of the old restriction plans of other producers. The challenge of aluminium to other metals may be insistent. The U.S.A. is credited with a surplus of aluminium over and above existing needs in spite of the projected increase of 20 per cent in war production during 1944. The increase after the war in U.S. production may compel U.S. producers of aluminium as well as steel to reach for export markets. Not many will overlook the fact that reconversion of defence plants will quicken the desire for overseas trade, but maintenance of costs and prices at the wartime level, may hamper the plans of those like the Vice-President who look upon the Orient as the natural market for U.S. manufactures.

Partial Success

One of the most important results of the war is the fall since 1942 in the U.S. Treasury holding of gold and silver. Contrary to popular belief there was a steady decline in gold holdings in 1943 while countries which sent out essential exports to the U.S.A. for example, Bolivia, obtained gold as well as dollar exchange. Figures available up to the

middle of 1943 suggest that the repatriation of foreign gold reduced the U.S. stocks. But an increase in gold holdings at any time does not appear to be a certain cure for inflation. There was a big increase in both gold and foreign exchange reserves while the peso was quite steady in the exchanges but Mexico experienced all the rigours of inflation although the federal revenue in 1943-44 was raised to meet the increase in expenditure. There was an increase in savings of all kinds in Mexico after 1941 but the problem of scarcity and high prices certainly appeared in a country formally at war. In fact, it may be suggested that inflation was only due to the increase in note circulation but the last is a symptom rather than a cause. A balanced budget any more than the state of reserves is no sign that all is well with the currency. What really matters is price control and rationing, and those countries where the administration is unequal to the demands of war economy show the price disorganisation most. It is known that the public debt, especially, the short-term debt has risen continuously in Sweden and industrial production has been stagnant (the important paper industry showing a decline in 1943) but equilibrium has been preserved and the index for wholesale prices was practically unchanged for months. Like other neutrals (Turkey being the exception) Sweden has gained gold further after the repatriation of capital, and the drop in foreign assets is merely a measure of the reduction in exports to Germany, reflected also in the decline in merchandise exports. The problem of an import surplus is, however, unimportant for Sweden when trade and exchange are fully under control. The substantial increase in New Zealand's imports after 1943 may suggest that control after a point ceases to have value, and experience recorded so far would indicate that larger

imports, allowed in order to assist essential consumption, have their own value. The departures in policy noted in India certainly have precedents, and the supply-price problem in India must be attacked from the end of production.

Forty-ninth Report of the Board of Directors.

GENTLEMEN,
 The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1943.

The Net Profit for the year, including the sum of Rs. 10,08,061-5-0 brought forward from the previous year's account, amounts to

Rs. A. P.
 1,17,19,703 7 3

The following amounts have been appropriated to the undermentioned purposes:—

An *ad-interim* Dividend was paid for the half-year ended 30th June, 1943 at the rate of 10 per cent per annum, free of income-tax on 672,528 shares absorbing

Amount transferred to Reserve and Contingency Fund

Amount transferred to Bank's Investments in Government and other Securities

Amount transferred to Sinking Fund in respect of Lands and Buildings

Amount provided for Taxation

Amount provided for Bonus to Staff

8,40,660 0 0
 12,00,000 0 0
 5,00,000 0 0
 3,00,000 0 0
 60,00,000 0 0
 6,60,000 0 0
 Rs. 95,00,660 0 0

BALANCE SHEET AS AT 31st DECEMBER, 1943

LIABILITIES.

CAPITAL:—

Authorised—7,00,000 Shares of Rs. 50 each

Issued—6,72,528 Shares of Rs. 50 each

Rs. A. P.
 3,50,00,000 0 0
 3,36,26,400 0 0

(1) 4,72,528 Shares of Rs. 50 each, issued as paid up to the extent of Rs. 25 without payment in cash in exchange for 9,45,056 Shares of the Tata Industrial Bank, Ltd.

(2) 2,00,000 Shares of Rs. 50 each issued for payment in cash

Rs. A. P.
 2,36,26,400 0 0
 1,00,00,000 0 0
 Rs. 3,36,26,400 0 0

Subscribed—6,72,528 Shares of Rs. 50 each

Amount called up at Rs. 25 per Share

Note.—The above number includes 563 Shares of the Central Bank of India, Limited, which remain to be given against 1,126 Coupons issued by the Central Bank of India, Limited, for a like number of Shares of the Tata Industrial Bank, Limited, which have not yet been submitted for conversion.

1,68,13,200 0 0

Reserve Liability of Shareholders:—

Rs. 25 per Share on 6,72,528 Shares Issued

1,68,13,200 0 0

It is not often that I seek personal contact with literary luminaries. Nor do I feel drawn to foreigners who advertise their friendship for India much ahead of their visit to this country. But there is something in Lin Yu-Tang, both as a man of letters and as a thinker of our time, which sets a special value on a meeting with him. I have often said to myself reading his works, "Here is the first Asiatic who has caught the spirit of Western culture and fused it to the spirit of the East, leaving the latter the dominant element." This is not what you can say of any other great man of the East. A Gandhi or a Tagore, in spite of their close acquaintance with the West, retain something of our cultural insularity. But Lin Yu-Tang is different. His Chinese Philosophy is shot through with a lively interest in the present world war and all that it may mean for the peoples of the world. His Eastern mysticism does not rule out the tears and laughter that the tragedy and folly of the present must cause in a normally sensitive mind. This type is not common; and that is why I seized with alacrity the opportunity to meet him. I was not disappointed. Lin Yu-Tang has an eye both for the dreary vision of the distant future and the wall that closes the blind alley we are treading now. But his purpose, as I found within a few minutes of my joining the small, homely party at G. L. Mehta's, was not to expatiate on either, but to know more of the position in India, firsthand. Brilliant talker as he is, his purpose on that occasion was to listen. Talk on politics, in India, often degenerates into a catalogue of grievances against the British Government.

"What would you do," asked Mr. Lin Yu-Tang with unfeigned patience, "if you had all the power?"

"I would get on with the Bombay Plan," I answered.

That was not the answer Lin expected. "But what would you do to Mr. Jinnah?" he persisted.

"The Bombay Plan would get over any kind of obstruction," I said, "even Mr. Churchills".

But what the Chinese literature was after was a political plan. And I could only pour out the bitter disillusionment I have for some time been feeling about political leadership in India. The grousing mood was on. I groused to Lin against Gandhi and Jinnah, against Roosevelt and Willkie. I am not sorry I groused so. For that gave me the occasion to see the faith that is in all great men and is often denied to lesser folk, the faith that was more forcibly expressed the next day in Lin Yu-Tang's speech at the University. Lin Yu-Tang is quite un-

different regional spheres within which none who is an outsider may intrude. The answer to that is that the modern world is not and cannot be constituted like that—that what affects one part of the world affects all."

Such intelligent observation may either be neglected or distorted. Those who imagine a post-war world ordered to their racial advantage neglect to observe the growing unity of the world, while others feel that the world is being unified by the ponderous forces of a world war only to be laid at their feet. The world order that must emerge out of the present turmoil has to embrace, in some harmonious combination, many of the elements that have been, or are now, in deadly conflict. It is easy to exaggerate one factor or another. But the future cannot be read either in terms of standing armies or of demographic trends. It can be glimpsed only by a correct appraisal of the factors and forces now at work.

It is this appraisal which seemed to me to be the strong point of Mr. Lin Yu-Tang. He comes from a country where more or less mere human flesh has stood up against the armed might of a great power. He has seen in its actual progress, the process by which a growing national consciousness seizes a whole people and galvanises them into action. He knows at fairly close range the involutions of international diplomacy, the vantage that situations often give to the

helpless. I had a feeling in all the talk we had that Lin Yu-Tang has confidence in China and India helping one another in the post-war period to establish the equality of Asia with Europe and bringing about that crossing of the ancient and the modern cultures, which is the hope of the future.

That the world is fast becoming one, and a pretty small one at that, is a fact which all who have eyes to see can see. But the perception of even concrete facts seems to be conditioned by one's likes and dislikes. What Lin Yu-Tang can see clear as crystal, escapes the eyes of many others and catches others' only to be vehemently denied. The "one world" thesis is obvious to Lin Yu-Tang. Wendell Willkie rubs his eyes to make sure that it is one world. Roosevelt allows it to be borne in on him by events, while Churchill frowns on the world around as if his frown is a cosmic ray which can cause a metamorphosis more acceptable to him. The tragedy of the world is the unequal apprehension of changing circumstances. And that is why the human race owes a special debt of gratitude to those who seize the scope and nature of a change, when the process is just afoot, and proclaim it and all that it signifies loudly to the whole world. Dull minds are enabled to grasp the nature of the change, while those whose disability is emotional and not intellectual are duly advised of the strength of what they are up against. Such prophetic pronouncements are not made without their authors having to pay a heavy price for the honour. It is no surprise to me that Wendell Willkie's stocks have slumped of late in the electoral market. The Gallup polls show his position to be steadily worsening. And the more it worsens, the more Mr. Willkie will feel strengthened in his resolve not to placate party or public in any way. And vice versa.

The truth of the "one world" was, so to say, revealed to him as he spun round the world in a short period of forty-nine days. His book is no ponderous thesis, with a new truth carefully argued or elaborated. The circumstances and the experiences of his flight themselves form the thesis. If you fly round the world, visit all theatres of war, with all the prestige of the leader of the opposition and none of the weight of office to drag you, if you can talk freely to high and low, you must find that this is a world war and not a war of a few rival powers, and that the war is, so to say, clearing the deck for a fight for a better world. This war is a cosmic insistence that the world shall be treated as one.

To see this aspect of the game, one must not be either too much or too little in it. Roosevelt, Churchill and Stalin are too much in it and Gandhiji too little. But Willkie, Chiang Kai-shek and Lin Yu-Tang are differently placed. As rival candidate for the Presidency of the U.S.A., Willkie has that combination of vital interest and mental detachment to see current happenings from new angles. Likewise, the Chinese Generalissimo cannot think in terms of a world in which he and his countrymen can dictate as they choose. The Chinese cannot possibly see the end of their problems with the defeat of Japan by America and Britain, while we in India cannot even see the beginning of the end. For Willkie,

the problem is not to end this war, but to end war. For, the threat to America lies, not in this aggressor or that, but in aggression as such and the conditions which breed it. Wherever and however the war may start, it will draw America and its men and money into its vortex. And for America, war does not pay, though it certainly paid huge dividends to other nations. That is why, while Roosevelt is pre-occupied with the immediate tasks, as they are called, Willkie sees ahead. His reading as it concerns America and the world is simple:

America must choose one of three courses after this war: narrow nationalism, which inevitably means the ultimate loss of our own liberty; international imperialism, which means the sacrifice of some other nation's liberty; or the creation of a world in which there shall be an equality of opportunity for every race and every nation. I am convinced the American people will choose, by overwhelming majority, the last of these courses. To make this choice effective, we must win

not only the war, but also the peace, and we must start winning it now.

To win this peace three things seem to me necessary—first, we must plan now for peace on a world basis, second, the world must be free, politically and economically, for nations and for men, that peace may exist in it; third, America must play an active, constructive part in freeing and keeping its peace.

This cannot be accomplished by mere declaration of our leaders, as in an Atlantic Charter.

Our Western world and our presumed supremacy are now on trial. Our boasting and our big talk leave Asia cold. Men and women in Russia and China and in the Middle East are conscious now of their own potential strength. They are coming to know that many of the decisions about the future of the world lie in their hands. And they intend that these decisions shall leave the peoples of each nation free from foreign domination, free for economic, social and spiritual growth.

This reading is what every one outside the ruling classes in the great powers will readily agree to. A sense of power is always a disability for seeing facts. And that is why there is a bond between the oppressed peoples of the world and the leaders of the opposition whose chances of office are dwindling every day. But in the case of India, even this bond snapped when Willkie agreed, at Roosevelt's personal request, not to include India in his world tour. India is still not part of this increasingly unitary world! After all, the company of other nations is not so flattering that we must feel the exclusion as an insult.

The retirement from Lakshmi Insurance Company of Mr. T. C. Kapur leaves Pandit K. Santanam as the only one of the trinity who founded Lakshmi and guided its destiny in its exceptionally prosperous career. Santanam, Amarnath and Kapur were welded and forged together in the furnace of gaol life; and the two Punjabee lads came to regard and cherish the domiciled Punjabee as their leader not only in nationalism but in life's career. Pandit Santanam was the head and chief of Lakshmi; and Amarnath and Kapur took charge of two important departments. They made a perfect team, with their affection and devotion engaged each to the other, and all to the company. Fervour which comes easy to one touched by the fire of nationalism, and skilled stewardship which their education fitted them for, were responsible for such heady progress from the start that, reviewing the first year's balance-sheet in 1926, I described the Lakshmi, as the "infant prodigy". I have the authority of Kapur for the assurance that this review made further progress even more phenomenal. I have watched Lakshmi from the time the original plan was laid; and it was a personal loss, no less than Lakshmi's, when Amarnath died some time ago in a motor accident. Kapur, after 20 years' service, has now resigned; and it is a matter of regret for the many friends and constituents of Lakshmi. We are told that no man is indispensable; but this trite saying cannot apply where one of Kapur's calibre and capacity leaves the institution in whose building he has played a great part.

Badly shot up, a U.S. flyer was slinking along the coast to the home base. Suddenly, a British voice came over his earphones: "Cheer up, chicken, we have

you." He looked around, saw two Spitfires mothering him back to the home field.

A British Captain in Cairo ripped open a cablegram from England, goggled in mute horror at the message: "Son born."

Frantic inquiries at the cable office disclosed that Form Message 185 had been substituted for No. 85 ("Receiving letters occasionally"). The error made a difference to the Captain: he had not seen his wife in two years. ("Time")

**MORALE**

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

HARTONS
 61, HARRISON ROAD, CALCUTTA.

Olympus

(From Our Correspondent)

New Delhi, March 13.

The first main cut motion on the budget discussed today, after the long 'Holi' recess again found the major Opposition groups united and the Assembly 'refused supplies' to the Executive Council by 50 votes to 48. This was the second major defeat of the session for the Government after the dramatic 10 crore cut in the Railway budget. Most of the arguments of the Opposition were political. As Mr. Abdul Qaiyum, humourously remarked the present Government was a 'hybrid monster born of the illicit union of British imperialism and Indian vested interests.' The Government had flouted the decision of the House and not even abided by their own assurances on such a matter as the propaganda which was being done by the Sarma delegation in Britain and U.S.A. against the Indian political parties. Sir Jeremy Raisman's reply to the general two-day budget debate last week was as unrepentant as ever. He gave a sharp and pointed replies to his numerous critics none of whom seemed to have convinced him of their point of view. Sir Jeremy particularly referred to the political arguments and asserted that the mere formation of a National Government would not be a cure for inflation. He cited the cases of China, Egypt and Turkey where worse inflationary conditions existed than in India. He however grudgingly conceded that the co-operation of the public was necessary for the success of any anti-inflationary measures and refused to say how the present Government could obtain such co-operation. As regards increase in indigenous production of consumer goods, he agreed with the Opposition that as far as it was possible to import machinery and plant for the production of goods that this country required, it should be done. He defended the sale of gold, declaring that it ranked as an important anti-inflationary measure. He also pointed out that gold at the present moment was one of the cheaper commodities in India; the farmer got more gold for his wheat now than he could have done at any time in the last 20 years.

As regards the mounting defence expenditure and the general criticism that India was being made to foot a larger than fair share of the defence burden, Sir Jeremy pointed out that the charges with which India was debited were not the full cost of India's defence, not even the local defence of India. The fact was that India bore no part of the cost of operations beyond her frontiers. He explained that the cost of all troops serving in Burma was being borne by the British Government. The distribution of total forces available to the United Nations was governed entirely by operational needs and availability of shipping, and the desirability from various points of view of bringing back to India troops at present serving abroad was fully realized and constantly borne in mind; but its feasibility was conditioned by the exigencies of the war situation.

It was officially announced in the Assembly today that the Government have not yet taken a decision on the 10 crore cut in the Railway appropriation grant for Reserve Fund. They will review the whole situation on the conclusion of the budget debate and announce their decision at the end of the session.

The 450 crore programme of road development recommended recently by the Chief Engineers' Conference was explained by Sir Mohammed Usman at a press conference last week. Sir Mohammed said that the reports of both the Engineers' Conference and the Technical Sub-Committee on Road Transport and Rail-Road relations are being published shortly for public discussion. According to the Technical Sub-Committee's plans, India should have 400,000 miles of additional roads in another twenty years comprising a network of national and provincial highways and district and village roads. The new highways, it is estimated, would cost about Rs. 120 crores, the district and village programmes costing an equivalent amount while bridging and land acquisition would absorb another 95 crores. The cost, it is claimed, has been calculated at 50 per cent above pre-war figures. It is also pointed out that as a result of the war, India will have some five new roads on her eastern frontier and these would be a valuable asset to the national road system. All

provinces and States are expected to prepare their own tentative projects of road development and submit them to the Centre which will act as a co-ordinating agency, within the next six months. The Technical Sub-Committee envisages post-war rural India as one "in which motor transport will penetrate to the remotest villages connecting them with the main transport system." The Committee wants a start to be made just now to develop motor transport on sound lines. Explaining the implications of the proposal that railways should develop closer co-operation with motor transport ultimately acquiring a commanding interest, Sir Mohammed said that what was envisaged was a semi-nationalization of the main road transport system of the country. The transport companies would be private, but it was proposed that the railways should own more than half the capital invested in these companies.

All the reports regarding further Indianisation of the Viceroy's Executive Council have proved to be wrong. It has now been announced that Mr. F. Mudie is to succeed Sir Reginald Maxwell as Home Member while Sir Jeremy Raisman's term has been extended by another year. Sir Ramaswami Mudaliar's tenure of office has also been indefinitely extended. As the new Home Member will be able to take up his new job only in July, while Sir Reginald quits office on April 4, Sir John Thorne has been appointed to act as Home Member for the intervening period. There is general regret here that the new Viceroy has not been able to give the Home portfolio to an Indian.

HILL-BIRD.

(Continued from page 509)

has not defined his requirements as to peace, it is clear that Europe's interests rather than the victors' would determine eventually the terms imposed on a Germany beaten by Russia with the assistance of the Allies. One might infer that the claim for reparations from Germany might not stand though justice may take its course at Kiev as at Kharkov. Surmise as to the effects of the New Order and the degree of collaboration secured since 1940 may regulate the view as to the future.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, March 15.

Tapioca, the source of starch for cotton mills, has special importance today as the first All-India Textile Conference was reminded. Mr. C. S. Tyabjee presided over the conference which listened to papers on cotton, dyes and chemicals. Mr. Tyabjee declared that in the post-war world, the textile industry would expand, and its immediate problem would be the acquisition of machinery. Great attention also would be required in regard to supervision of personnel so as to get the most out of machinery.

Tapioca starch has been the standby when foodgrains are not available for making starch. The process yielded a paste for light sizing, light assisted finish specially for prints and dyed cloth according to Mr. T. V. Puimose. It is not recommended for back frilling or as an adhesive for weighing materials. A paper dealing with the manufacture of doubled and cabled yarns drew attention to the change in taste. Folded yarns were wanted and Indian mills had their opportunity. Experience in the manufacture of sewing yarns and of type yarns had been favourable and the outlook is regarded as promising. Discussions on textile chemistry revealed the need for standardisation of processes. Stores policy required amendment and financiers were reminded of the consumer's interests and preferences.

In the past Tattersall's review was diligently studied in Bombay and Manchester weeklies were scanned attentively for many things. Spinners' profits in Lancashire last year, therefore, claim notice. The average per mill for 1943 is slightly lower than that for 1942, but the rate of dividend is better though ten mills failed to pay dividends on their ordinary capital. The average dividend of 12 concerns which combine spinning and weaving has been 6.98 per cent as against 6.87 per cent in the previous year. For the entire industry the average dividend paid in 1943 was 10.29 per cent as compared with 9.87 per cent. The drop in profits has not led to any reduction in dividends. Liquid assets at the disposal of Lancashire mills have increased slightly while companies that have not yet recovered have duly reported a reduction in debit balances. These figures point to a revival in Lancashire but the record is not very striking as compared with that of Bombay. Since the Bombay Dyeing Company announced that the dividend is again 40 per cent for the year and the raw cotton market moved downwards despite the assurance as to Government purchase of cotton, investors have duly revised their opinion of mill shares. The budget of course is regarded as not favourable to the textile industry, and caution is the keynote of brokers' circulars. The cloth market is dull and dejected as consuming centres send in few orders. Transport difficulties and rising stocks exert the usual influence and current rates are below ceiling prices.

The Brabourne stadium has been in request for wrestling matches. The revival of interest in wrestling is due to the promoter's enterprise but the big fight has not come off. There is little doubt that wrestling kept up by herid-

tary enterprise is more popular in India than boxing but the sport has too much of professionalism and the violence peculiar to it repels many. The promoter took his choice of both native and foreign talent. The Red Cross Fund benefits and the Governor is likely to be pleased when the target of Rs. 60 lakhs is reached.

Land development plans for Bijapur at a cost of Rs. 75 lakhs have been undertaken as a result of the famine that followed two lean years. There is a chance for demobilised soldiers to settle in the District when conditions are improved. A training centre for farmers bent on using land reclaimed has been set up. Irrigation is regarded as less important than bunding against soil erosion. Soil conservation is the chief object of contour bunding. There are five rivers in the dry district. Vegetation for saving moisture in waste land is regarded as necessary and Men of the Trees are to make their appearance. Mr. Sausman of the Forest Service knows much about erosion and he has been put in charge of the Bijapur development scheme. Foresters in India drew attention to the main peril of erosion years ago and forestry now seems the salvation for agriculture as in Africa where wind-breaks have been the chief factor in countering the locust peril. There is a scheme to put in trained laymen for rural medical relief during an emergency. It is a novel experiment and professional opinion may not be adverse because epidemics are common and doctors have been scarce. The D.P.H. is willing to use rival development staff for inoculation and vaccination at Belgaum.

Surplus grain must be sold willy-nilly according to the Government plan. Mr. J. Booth has said that requisitioning will not be drastic in practice but Government

had to put in compulsion because response to the former offer to buy grain was poor. The crop procurement dovetails with price control. Cultivators have been asked to grow more food crops so that the surplus for sale is larger in the next harvest. The plan launched in the three Districts is to be applied to all the districts as regards the kharif harvest. Because officials have no discretion and sale of excess over 27½ maunds of grain is ordered there is no place for the abuses that creep in. Prompt notification of the rules as to sales has been desired by the Rural Development Board which urged that public support for storage, redistribution and detection of evasion must be secured. The agriculturists, however, stand in need of cattle and working capital. Credit facilities must be re-organised if the moneylender is shut out of the grain business where co-operative credit societies are wanting the difficulties would be many. In the C.P. too, Government crop purchase plans have been outlined and the price of jowar is fixed at Rs. 7 per maund. Those cultivating more than ten acres under jowar are called upon to sell grain to Government but those with larger areas have to provide more.

Plans for Gandhiji's Seventy-Fifth birthday anniversary take the form of a scheme for the welfare and education of women. A trust fund of Rs. 75 lakhs is required and the appeal has been issued by a committee headed by Pandit Malaviya—leading businessmen included in the committee are Mr. J. K. Birla, Mr. N. R. Sarker, Sir A. R. Dalal and Seth Pranlal Devkaran Nanjee. The fund has to be collected before October 2, and the trustees have been chosen. Lady Thackersey who has created a university for women finds a place with Sir S. Radhakrishnan, Mrs. Naidu and Mr. G. D. Birla with Mr. A. V. Thakkar as Secretary. The

FOR Quality TOOLS

The letters BATU. on tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers, B.T. Taps, Reamers, Dies, Milling Cutters, Slitting Saws etc. are unexcelled in quality and precision.

All B.T. Tools are treated by modern scientific thermal processes and their accuracy is guaranteed to conform to British Industrial Standard.

education welfare fund will, of course, be at the disposal of the trustees but the schools, maternity welfare schemes etc. must be made to fit in with available centres. If Rs. 75 lakhs are raised in 6 months, the actual scheme may not take long to take shape. The sponsors of the appeal would probably leave many things to Gandhiji's decision as the fund is associated with his wife's name. The appeal mentions basic education and it would be proper to answer the Government's withdrawal of support by a new, voluntary scheme to resurrect and extend it.

The V. J. T. Institute must be developed into a textile research institute in the opinion of Sir Victor Sassoon who drew attention to the Jute Institute and the Matunga Laboratory of the Cotton Committee. Other fibres too require attention and a new textile institute is required. The export trade in textiles must be built upon the basis of quality and after the war branches of the textile industry must be developed to hold their own against rivals abroad. The most interesting prediction was that power-loom weaving helped by cheap electricity has a far

better chance of survival than the hand-loom industry. Expansion in separate segments as in Lancashire is envisaged by Sir Victor. For post-war development, mills will have the benefit of reserves built out of war profits according to Sir S. D. Saklatwalla. Textile supplies for the world must come from the U.S.A., U.K., India and Latin America. Sir Sorabji outlined requirements in regard to machinery and spares, and indicated that industrialists were examining the possibilities of local manufacture.

You have heard of Japanese cruelty in occupied countries. Here is an authentic example of it. In Harbin, North China, for the most trifling offences, three Chinese were taken out and hanged to a quickly erected gallows. Their bodies were then cut down, and their skulls left dangling, grim reminders of the resounding emptiness of all Japanese pretences at kindness and good naturedness.

This is but one example amongst a thousand. It is not a single episode of momentary ferocity, but a true

indication of how the Japanese mind works. Yet he is not without cunning. Beware of the soft and enticing promises of the Japanese! Judge these brutes by what they are; not what they say. For these barbarians are treacherous, lustful, cruel; they believe themselves to be a superior race whose right it is to dominate, subject and maltreat.

India can have no dealings with a nation like that! There is only one way to treat them—that is to BEAT them. Only unconditional surrender will secure for India and the whole world absolute safety from this menace.

South India

(From Our Correspondent)

Madras, March 15.

THE Madras Government have published a bill to further amend the Madras General Sales Tax Act of 1939 to elicit public opinion. The statement of the objects and reasons of the amending bill states that there are certain disparities in the scale of tax payable by dealers whose turnovers are below and above Rs. 20,000. The former are paying at a flat rate of Rs. 5 per month or Rs. 60 per year and the latter are paying one per cent of their turnover as tax. While dealers whose turnovers are Rs. 20,000 are paying only Rs. 60 those whose turnovers are just above the level, say Rs. 20,001, have to pay Rs. 200. The disparity is quite obvious and the new bill proposes to remove it by adopting a graduated basis, viz., dealers whose turnovers are between Rs. 10,000 and Rs. 15,000 should pay sales tax at the rate of Rs. 8 per month or Rs. 96 per year and dealers whose turnovers are between Rs. 15,000 and Rs. 20,000, should pay tax at the rate of Rs. 12 per month or Rs. 144 per year. No change is proposed for turnovers above Rs. 20,000. Another proposal contained in the bill is the withdrawal of exemption for sales of bullion and specie from the operation of the Sales Tax Act.

While there is a prima facie case for revising the scale of taxation on turnovers, there is hardly a point in favour of the second proposal. That is perhaps, the reason why the bill which itself is very short merely states that "under the Act as it stands sales of bullion and specie are exempted from tax. It is considered that this exemption should be withdrawn". Local bullion dealers say that the proposal is nothing short of a death knell to the bullion trade in the province. There is absolutely no necessity for revising the existing arrangements which were arrived at after a thorough enquiry into the question by the Government. If the Government are under the impression that bullion dealers are getting huge profits from the sale of bullion and specie, they are mistaken. The percentage of profit, it is understood, is very low in this trade and the withdrawal of exemption will have serious repercussions on the local bullion market. Even supposing the additional tax is passed on to the consumer, the fact that no such tax is levied in the adjoining provinces and states may result in a rapid dwindling away of business within the province.

In dealing with the question of removing the disparities in tax collections, the Government seem to have followed a unique method. It is clear that the object of the new amending bill is merely setting right a previous wrong. But the manner in which justice is going to be meted out to the affected interests makes one come to the conclusion that the Government's object is something more than revision of the existing scale. Instead of giving relief to the dealers whose turnover is above Rs. 20,000, it is proposed to lay down two different scales by bifurcating turnovers below Rs. 20,000 and above Rs. 10,000 into two classes each having a different scale and each of which is higher than the existing rate, thus further increasing the tax burden of the small dealers. If the Government take note of the drawbacks in the proposed amending bill, they will find no necessity for the new clauses and if they really want to remove the disparities, a better process would be to reduce the tax burden on

turnovers above Rs. 20,000 and bring it in proportion to the lower levels.

The demand for silk for urgent war purposes coupled with the concessions granted by the Government of Madras, has led to considerable development of sericulture in the Province. The acreage under mulberry has nearly doubled during the year 1942-43. As against 8,479 acres in the previous year, there are 14,568 acres now. According to the administration report of the Department of Industries and Commerce for the year 1942-43 propaganda had played a useful part in the increase in the acreage under mulberry tree apart from the demand and the higher price.

The geological survey party detailed for work in the Presidency has completed a portion of the work included in the field programme. As a result of the survey it has been found that in the Shevaroyis, there are several million tons of bauxite, which can be used for the production of aluminium. For a proper utilisation of the ore for metallur-

gical and chemical industries an aerial ropeway, connecting the ore deposits and the nearest railway, it is stated, is necessary. The war has given a fillip to investigations leading to the designing of lamps and burners using vegetable oils as a substitute for kerosene, and the Government after a series of tests on various lamps and burners have found that 3 varieties, viz., Rama Deep, the Tumbler lamp and the G.S.T. burner, can be manufactured on a large scale.

The Madras Government in a Press Note have explained the process by which tamarind seed powder can be used as a sizing material. The shortage of foodstuffs like rice, wheat, tapioca, sago, etc. has precluded their use as a sizing material and tamarind seed which is available in large quantities in the province can be used with advantage. The total production of tamarind seed powder in the province is nearly 50,000 tons of which only 5,000 tons are required for consumption for power and handlooms in the Madras Province. After cleaning the seeds the outer

cover is removed by parching in hot sand taking care not to char the seeds. The seeds after the removal of the outer cover must be soaked in water for about 8 to 10 hours and should be washed in flowing water and should be sun-dried whence they will be fit for powdering, which can be done in flour mills or in a disintegrator. It is an essential precaution that the powder does not lose its original colour in the process.

Travancore has decided to follow British India in the matter of control of capital issues. By an amendment to the Defence of Travancore rules, the Government have issued a notification which says that subject to certain exemptions no company, whether incorporated in Travancore or not, shall, except with the consent of the Government, make an issue of capital in Travancore, make in Travancore any public offer of securities for sale or renewal or postpone the date of maturity of repayment of any security maturing for payment in Travancore.

The Sargent scheme of education received attention at the hands of Dr. A. Lakshmanaswami Mudaliar, Vice-Chancellor, Madras University, when he spoke to the Madras Cultural League on postwar reconstruction. The recommendations to the effect that pupils who have passed through the first two stages of elementary education should be classified into two classes, viz., those who are fit for higher education and those who are not, was according to Dr. Mudaliar not perfect. The capacity of the pupils for prosecuting higher studies largely depend on their environment. In conformity with the object of the scheme of giving higher education to as many pupils as possible, special efforts should be made to remove the social injustice prevalent among certain groups of people. The Grants Committee as contemplated in the scheme will prove to be definitely injurious in the end and the Vice-Chancellor preferred to be poor rather than be rich and enslaved. He recalled the working of a similar Grants Committee in Great Britain where the universities were given in 1941, £6½ million from the Treasury. But the Great Britain Grants Committee never interfered with the working of the universities. The Grants Committee proposed by the Sargent Scheme will inspect, lay down certain conditions and evolve standards for universities. It is one thing to give advice to universities and it is entirely a different thing to have power to interfere with the autonomy of the universities.

The plight of evacuees from Burma is still a difficult problem both for the Government of India and the non-official relief committee. Though the Government have done much to these unfortunate people they are still unable to settle down in this country in spite of the fact they are sons of the soil to which they have been driven back by force of circumstances. Some colonies, meant for the sole use of these evacuees seemed to be an imperative need and the Government spokesman, who was present at the meeting of Burma Indian Evacuees held at the Ripon Buildings the other day, was not averse to the idea. If adequate number of evacuees come forward the Government may house them in the evacuation camps around the city of Madras and in other places.

(Continued from page 507)

tween March 3 and March 10, provincial deposits show a shrinkage of Rs. 6.95 crores. The deposits of member banks with the Reserve Bank are lower by Rs. 7.64 crores as compared with a week ago and by Rs. 2.95 crores as compared with a fortnight ago. Miscellaneous

deposits are down by Rs. 2.87 crores as compared with March 3, and by Rs. 2.16 crores as compared with February 25. Foreign balances held in the banking department show an increase of Rs. 15.27 crores as compared with a fortnight ago. Considering that, during the same period, sterling securities in the issue department are higher by Rs. 13 crores, the net increase in sterling assets of the Reserve Bank between February 25 and March 10 is about Rs. 28½ crores.

The exchange market has been steady without much business.

Impressive Record

Returning a net profit more than double that of 1942 the preliminary statement of the Central Bank was a decisive index of banking progress. Interest in the full report and accounts was whetted by the larger provision for Reserve as well as the allocation of Rs. 60 lakhs for taxation. In the balance-sheet published today are recorded the main changes of the year as

well as a striking outline of prospects for this year. The accelerated rise in profit to an increase in resources and operations (measured easily by the addition of two sub-branches and eight pay-offices) that make 1943 the 33rd year of the Bank's career remarkable in every way. The slight increase in dividend is of course one indication for the future, but more important is the result recorded in the 49th report of the Board for the proposed issue of new shares. The increase in total assets by Rs. 24 crores in a year is the largest so far recorded in the case of the Central Bank and the strengthening of paid-up capital while adding to some extent to resources is meant mainly to put paid-up capital in the case of a bank with over 100 branches at present on a basis equal to that of the other larger banks. The most important changes of 1943 are the increase in deposits to over Rs. 81.63 crores from Rs. 59.64 crores at the end of 1942. The increase of nearly Rs. 22 crores

DECLINE IN U. S. GOLD STOCK

WARNINGS AND PREDICTIONS AGAIN

SPECIAL FOR "INDIAN FINANCE"

Washington, March 15.

Although the United States still has two-thirds of the World's gold stocks some economists here are worrying because the nation has lost almost one milliard dollars' worth of gold last year. Last week opponents of American participation in post-war monetary stabilization agreements used that argument to bolster up the contention that the United States should guard its present reserves of the yellow metal and not contribute toward the International Stabilization Fund.

Foreign-owned dollar balances have increased steadily since the United States entered the war despite substantial sums converted into gold. Between the end of 1941 and the end of 1943 the total foreign deposits in the United States rose from 1,006½ million dollars to 2,300 million dollars while ear-marked gold stocks advanced from 2,300 million dollars to 3,400 million dollars. Meanwhile however the total value of United States' gold stocks declined from 22,700 million dollars to approximately 22,000 million dollars.

The National City Bank of New York analysing these statistics added "due to domestic production of some 170 million dollars of gold and net import of about 380 million dollars those two years' actual gold loss was but 732 millions. However, during the first seven weeks of 1944 the Treasury's monetary gold stock declined by another 200 million dollars to 21.8 milliard dollars".

Illustrative of the anxiety that the trend is arousing in some quarters is the view of the correspondent of the "Wall Street Journal" who wrote "We have enough gold, if prudently managed, to meet any probable requirement, but it is easily possible by the end of the current calendar year that our reserve ratio may be down close to fifty . . . One thing can be stated categorically. We have no idle gold we can afford to sell to Asia. And Asia has nothing to pay us for our gold." Mr. Spahr, the Executive Secretary of Economists' National Committee on Monetary Policy expressed the same fear when he warned last week that "when the Federal reserve credit structure reached cracking-point in May 1920, the ratio of reserves against both Federal Reserve notes and deposits in Federal Reserve Banks stood at 42.2. On February 23, 1944, the reserve ratio stood at 62.4. If the decline continues for another sixteen months at the same rate as in the past sixteen months we will be down to the 42 per cent reached in May 1920".

"If the downward trend in this reserve ratio continues at anything like the rate of the past sixteen months all talk and agitation regarding putting up several milliards of our gold at the disposal of other countries will become academic indeed, unless members of Congress fail to notice the danger signals in these declining reserve ratios as the risks of recent experience calls for great prudence now. From here on we should regard the declining reserve ratios as the red flag's warning".

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, Mar. 10.

Contrary to expectations, the budget session of the Sind Assembly did not provide any political sensation and the present Ministry survived all threats to upplant it. With the Congress members in detention, the Independent Hindu party formed the spearhead of the opposition but this group was not able to make appreciable breach in the Muslim ranks. The Premier by a policy of appeasement has been able to overcome the symptoms of revolt in the Mir and the Baluchi groups, who have been promised some emendments in the Jagirdari Act, piloted by the late Mr. Allah Baksh. Shaikh Abdul Majid who recently resigned from the League moved a one-rupee cut motion but it was declared lost and never pressed to a division. In some quarters, the possibility of a reconstruction of the Cabinet after the budget session is envisaged. The name of one prominent Hindu member is freely mentioned as a certain-y in the reconstructed Cabinet.

Several plans for the agricultural and industrial advancement of Sind were mentioned in the course of the budget debate in the Assembly. We have the advantage of having plenty of funds and after the war, because of the strategic and geographical importance of this city, enough capital will be attracted.

I learn that as an anti-inflationary measure, the Government of Sind have advised the local bodies to levy an additional tax for the period of the war and some-time thereafter, which might be called improvement tax, or the 'post-war fund tax,' for utilising the same for post-war improvements. It has been suggested that the proceeds of the tax may for the present be invested in Government interest-bearing loans. It is pointed out that the advantage of the suggestion lies in that the proposed tax would have the effect of compulsory saving and would provide the local bodies with a fund at a time when money is plentiful but most works are stopped owing to high prices and lack of materials.

The activities of the Sind Industries Department are on the increase. Several new sections, like industrial investigation and research section, with laboratory facilities at the local college and a small workshop for women at Sukkur have been started. Demonstration parties are doing good work for pottery, lacquerware, bee keeping, wool spinning and weaving and organisation of a weavers' association for Upper Sind. Selected demonstrators were deputed to Wardha for training in the art of hand-made paper industry and Dr. Dubey of the Benares Hindu University carried out a survey of the raw materials for a glass factory in Sind. The chemical section carried out an analytical work in connection with the various white and red clays, flint stone etc., with a view to examine their suitability for the pottery industry. Formulas were evolved for making sealing wax of various kinds and experiments on the manufacture of cosmetics, disinfecting fluids, fruit juices, perfume blends and glue for tanners' fleshing. The

glue so prepared was found suitable by the Supply Department. The industrial engineering section attended to the preparation of various devices to manufacture implements, improved types of lathe and chuck and investigated the preparation of articles such as paint brushes and card-board toys. All these schemes go to show that Sind will receive a decisive industrial spurt after the war.

When the forward cotton market in Karachi started functioning in February, there was rejoicing among the brokers and unattached merchants who had been deprived of their speculative trade for a long time. With the opening of the market, the bears came pounding and by their heavy pressure the market had lost Rs. 4 per maund during a fortnight. At the same time, the Bombay market had lost only Rs. 10 per candy or Re. 1 per maund. Due to hammering of the speculative bears, the market in hedge has recorded a fall of Rs. 4 and the business in ready has come to standstill. The turnover at present is hardly a few hundred bales daily and the market in ready, which was practically steady when there was no hedge, is today witnessing downward fluctuations. Cotton merchants here are pleading for a review of the whole situation. Direct protection to growers and dealers is demanded. It is urged that the Cotton Textile Control Board and the Indian Central Cotton Committee should approach the government to raise the floor price by Rs. 5 per maund of all varieties of cotton comparing with the price of other commodities and manufactured goods.

For the last fortnight the Civil Supplies Department of the Government of India

at Karachi has successfully tackled the colour and dye market to such an extent that speculation is completely at a standstill and the prices have come lower than any other market in India. Inspectors of Civil Supplies have not only traced undeclared dyes but seized the documents of one of the leading dye brokers in India and thus threw light on the evil of speculation in dyes.

A tree-planting campaign has been started in Sind. Its objects are to beautify the rural areas, to produce more fuel and timber and to make the soil richer and better. It would be necessary for the province to have more trees on roads along the canal paths and in private residences after the two barrages were constructed and more land came under cultivation. Sir Ghulam Hussain Hidayatullah, the Premier of Sind, inaugurating the campaign at Karachi planted two trees in the compound of the Sind Secretariat before a large gathering of officials and non-officials.

Mr. Nihchaldas Wazirani, leader of Opposition in the Sind Assembly has submitted a memorandum to the Governor, requesting him to withhold his assent to the Moneylenders' Bill, passed by the Assembly. Mr. Nihchaldas maintains that Section 13 of the Bill frustrates the very purpose of the legislation.

Dr. J. C. Fidler and Mr. T. C. Crawhall of the British Ministry of Food and members of the United Kingdom Dehydration Mission, who are touring important towns in this country engaged in the manufacture of dehydrated food stuffs with a view to advising the Government on such matters, paid a visit to Karachi. During their stay here they inspected the Food Products Supply Company's factory. This factory is mainly engaged in the dehydration of fish.

Resume of Commodity Markets

Firm conditions have been noticeable in almost all the markets during the past week. The jute market has steadied up further on encouraging upcountry advices and the reports that sowing operations were rather slow for this time of the year. The jute manufactures market continued firm without any large volume of business passing while the raw cotton market staged a slight recovery on reports that the Government would implement their promise of purchasing cotton if there was a decline in prices to below the minima fixed. The gold market has been uninteresting while the silver market has improved on firmer advices from Kathiawar.

The present conditions in the raw jute market will continue to be in evidence until such time as it is possible to take a clearer view of the size of the jute crop for the next season. At present there is considerable speculation about the extent of sowings for the new crop and the relative merits of growing paddy and rice are being discussed. The possibility of a further reduction in the statutory prices for rice might encourage the wavering ryots to grow jute. The absence of adequate rainfall also has delayed the sowings for the next season.

Mills are anxious to cover their requirements of jute but if prices are forced up to the maxima even now, greater difficulty might be experienced at a later stage and business in the raw jute market might come to a standstill. Developments in the next few weeks are, therefore, very important from the point of view of both the ryot and the industry.

There is nothing of importance in the jute manufactures market and quotations are nominally at maximum rates. The fears regarding requisitioning have led to a slight decline in prices in the black market. Mills also seem to take a more hopeful view of the future and a slight decline in prices is offered for certain lines for forward positions.

The cotton market has staged a recovery thanks to the assurance that the Government of India have every intention of putting their scheme into operation, whenever it is necessary. It is understood from enquiries made in Bombay that the Government of India have every intention of putting into operation, whenever it is necessary, in order to prevent price manipulation and to maintain cotton prices in relation to the floor rates for hedge contracts, their previously announced policy for the purchase of cotton; thus, when the Indian Cotton Contract is quoted at Rs. 400 per candy Government will buy basic Jarilla at that price ex-godown Bombay or its equivalent elsewhere and other descriptions at floor prices or market rates for those descriptions whichever are lower. At Government's discretion buying may begin even when the Indian Cotton Contract is Rs. 412 or Rs. 420. In addition, when the 4-F hedge contract in Karachi is quoted Rs. 46 per maund, Government will buy basic 4-F hedge at the price ex-godown or at the equivalent prices elsewhere and other American seed descriptions at market rates or the floor prices for those descriptions whichever are lower, and this programme may also be brought into operation when 4-F hedge contract is three to five per cent above its floor price of Rs. 46.

It was pointed out last week that it was very unlikely that the Government of India

would effect a downward revision in prices and that support would be extended to the cotton market to maintain prices if it was found necessary.

Efforts are being made to improve the cultivation of long staple cotton in Bengal and to urge the extension of financial assistance by the Government to long staple cultivation scheme in the province a deputation on behalf of the Bengal Cotton Sub-Committee will wait on the Bengal Government. The scheme is already in operation and is being jointly financed by the Indian Central Cotton Committee and the Bengal Millowners' Association.

Total area sown under wheat in India in 1943-44 is estimated at 22,361,000 acres as against 33,709,000 acres (revised) at this time last year, or a decrease of 4 per cent according to the first Wheat Forecast 1943-44. The forecast is based on reports received from Provinces and States which comprise 98 per cent of the total wheat acreage in India. The Punjab tops the list of wheat growing Provinces and States, recording 31.8 per cent of the total acreage. The area sown up to end of December last is estimated at 11,077,000 acres (1,391,000 acres being in Indian States), which is 6 per cent below the corresponding area last year. Among

the Provinces, Orissa records the lowest acreage of 7,000 against 4,000 at the corresponding period last year.

On the recommendation of the appropriate committee of the Textile Control Board, it has been decided to appropriate as follows the 15 per cent distribution margin on sales of yarn recently announced by the Textile Commissioner. A dealer shall not buy or sell except to a consumer, yarn, either ex-godown or storage, or for any station of despatch if a godown or station is within 100 miles of the manufacturer's premises, at a price which exceeds by more than 3 per cent or in the case of a godown or station not within 100 miles of the manufacturer's premises, at a price which exceeds by more than 7½ per cent the ex-mill contract price or the ex-mill contract price whichever is less.

A survey of the sugar position of all areas in India for the week ended February 22, 1944 discloses that the total production was 7,07,244 tons representing an increase of 63,222 tons over the previous week. Despatches during the week were 24,383 tons against 27,433 tons. Progressive despatches up to February 22, were 19,092 tons. Physical stock was higher at 5,17,224 tons. Balance of physical stock of 1941-42 and 1942-43 sugar as at the end of the week was 9,150 tons or 736 tons higher.

Issued by
THE TITAGHUR PAPER MILLS CO., LTD.

THE MILLS THAT ADVERTISE THEIR PRICES

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 16th March.

The Mill Production figures just published for the month of February are better than were expected, considering the number of days which were lost by steam-driven mills owing to irregular and short coal supplies. The total production is returned as 80,991 tons, a reduction of only 5,211 tons, or 6 per cent, from the previous month. The total Hessian produced was 1185 lakhs yards or 32,836 tons of which 1111 lakhs yards or 29,965 tons were on commercial account and 74 lakhs yards or 2,871 tons on Government account. The total production of Sacking goods was 44,096 tons or 1075 lakhs yards of which 960 lakhs yards or 39,099 tons were on commercial account and 115 lakhs yards or 4,977 tons on Government account. The total production on Government account was thus 7,868 tons or 9.71 per cent of the gross production.

For the eight months from the beginning of the current jute season Mills have produced 568,741 tons of goods, an average of 71,092 tons per month, so that last month, though conditions were not altogether favourable on account of the coal supplies, was well above the average for the seasonal year so far. This total production from July to February represents a consumption of jute to the extent of 32,36,737 bales during that period.

With Stocks in godowns reduced at the end of February by 20,298 tons, and a production during the month of February of 80,991 tons, it is apparent that despatches of goods by mills during that month must have totalled 101,289 tons, the most satisfactory figure which has been presented for several months past. In January the apparent despatches were 75,398 tons, or 25 per cent less, and in December they were no more than 68,000 tons. Even so there have been reports of shipping space going away empty because goods to fill it were not available. With the quantity of goods in stock, it is improbable that goods could not have been found to fill the total shipping space offering and the conclusion is that holders were not willing to sell. Hence the suggestions which are current that steps may be taken by the authorities to requisition goods lying in mill godowns if necessary, so that freight space may not be wasted. If there is trepidation in the "Black Market" over this possibility, the operators in that illicit emporium have only themselves to blame and no sympathy will be wasted on them by genuine trading interests.

Analysis of the jute arrival figures for February show that while the River transport companies have kept up a relatively satisfactory level, transport by rail again shows a deplorable falling off, being no more than 486,777 maunds as compared with 696,417 maunds in January and 992,971 maunds in February a year ago. It was just about this time last year that steps were taken by the trade to stir up the railways to a greater activity with the result that the quantity carried by this means of transport jumped from under 7½ lakhs of maunds in January 1943 to 12½ lakhs of maunds in March and almost

14 lakhs of maunds in April of last year. Returns show that the railways have carried little more than 23 lakhs of maunds of jute in the past four months of this season, and while owing to the lighter crop, the accumulation of jute at rail stations is not perhaps so embarrassing as it was last year, still the service, where no other means of transport is available, has been so inadequate of recent months, that another loud protest seems to be indicated to rouse the railway authorities to the exercise of greater activity and efficiency in the handling of the available transport, which there seems little doubt is at the root of the present difficulties.

Although the 15th of March has passed, which was the date by which it was expected that the Ordinance fixing the maximum and minimum prices for jute and the maximum prices for jute goods should come into force, there has not been up-to-date any further pronouncement on the matter. Nothing in fact since the bald announcement some weeks ago that a decision on the above lines had been taken. Surprise was expressed the other day by a high official that the trade had not offered their views on the subject and greater surprise was evinced when the official was informed that the trade had no information on which to express their views beyond the bald communique referred to above. It is understood that certain individual members of the trade have been called into consultation, but on what particular aspect of the proposals it is impossible to say as these consultations were extremely confidential. No approach has been made officially to the Trade Associations mainly concerned who would be in a position to express the considered views of those likely to most concerned with the working of any scheme for the equitable adjustment of prices between the Calcutta market and those of the mofussil. We have remarked before that such adjustment will not be an easy matter—in fact it will be an extremely complicated problem, and it might be imagined that the Special Officer, Jute or whatever other officials may be involved in the problem would welcome all the accumulated experience available in solving it. Such however seems not to be the case and it is regrettable, because co-operation will undoubtedly be called for in working any scheme which may be evolved, and it would have been more likely that such co-operation would be forthcoming if it had been preceded by consultation. Moreover, the hole and corner procedure which is all that appears to have transpired so far, tends to arouse suspicion as to the intentions of Government. It was remarked at the time of the first and only pronouncement on the subject that the basis specified was "Indian Jat Middles". Officially, according to the specifications laid down by the I.J.M.A. which it was believed were to be followed, there is no distinction between an "Indian Middle" and any other kind of Middle. But it is now understood that this apparent oversight was nothing of the sort but was intentionally made so that a margin might be provided for higher maximum prices for such types of packing as ordinarily command higher rates than "Indian Middles". Again, it is credibly suggested

that the I.J.M.A. schedule of maximum prices was accepted because it had worked successfully since it had been introduced. The truth is of course that the I.J.M.A. schedule so far as Loose Jute is concerned had never really been tested out under pressure. First transactions thereunder were put through in "Supervised" packing and very soon "European" packing became available at the maximum rates. Since then, until the past few days, all descriptions of jute have been freely available in the market at under, sometimes well under, maximum rates and there is no experience to act as a guide as to what may happen when, as now, it is no longer possible to land European standard packing from many upcountry stations at the maximum rates laid down in the schedule. Curiously enough, "District" stations were the first to go beyond the ceiling rates and the position now is that except from places where freight is not available, there are few stations whence jute can be landed in Calcutta save at a loss.

(Continued from page 530)

accounts for the increase in Investments by Rs. 10.6 crores to Rs. 44.33 crores and the increase in cash and other assets by Rs. 3.4 crores to Rs. 17.35 crores. If the holding of British Treasury Bills is small, the increase under preference and ordinary shares is significant for many reasons. Even the increase under non-terminable securities may be taken as suggestive of a small hidden reserve but that change is of limited significance as compared with the increase noted under both Advances and Bills. The increase in a year by as much as Rs. 10.57 crores to Rs. 26.58 crores accounts for the increase in the Bank's profit. The substantial increase in deposits is accompanied by the maintenance of a cash ratio of over 20 per cent and sharing of the increase in resources as between advances and investments in a way that is calculated to expand earning power has exceptional value. The profit and loss account for 1943 indicates that receipts from interest and discounts rose from Rs. 116.86 lakhs in 1942 to Rs. 193.46 lakhs. Interest paid on deposits and administrative expenses rose only to a slight extent while the increase under rent, taxes etc. may be ascribed to the expansion of business. The increase in deposits and advances is surpassed by the increase in net profit (Rs. 107.11 lakhs for 1943 against Rs. 48.41 lakhs for 1942) reported. While the balance-sheet changes show that the Central Bank has derived as much or corresponding advantage from war prosperity as other banks in India they also confirm the view taken as to the advantages that would follow the Board's decision as to an increase in capital. Preparing for post-war expansion betimes is certainly justified by the progressive increase in profit and reserve funds in the last two years. The familiar comparisons only confirm the conclusion that the Central Bank has found in war all the opportunities that capable and progressive management can create and use.

**BUY
DEFENCE LOANS**

JUTE

Calcutta, March 16.

The jute market has continued very firm. In the absence of encouraging reports regarding sowings in jute districts, mills have been obliged to concede the increase in rates asked for. Quite a large amount of business has been done but in the last two days there has been a tendency to await further developments. Prices for certain varieties have very nearly reached the maxima and it will not be in the interest of mills to push up prices for the remaining varieties further. While it is generally believed that sowings would not come up to the licensed area, recent reports regarding the slow progress in respect of sowings should not be viewed with alarm. More rain is needed for sowings and it is only after the land has been satisfactorily prepared that any definite view can be taken. Sellers are anxious to do business at maximum rates, but are not prepared to offer even a small discount to tempt mills.

In the loose jute section mills bought bottoms at higher rates while balers were very active for Tossa varieties and paid prices which are even higher than the maximum fixed by the Indian Jute Mills Association. European Jat Middles and Bottoms were done at Rs. 17 and Rs. 14 per maund while Supervised Jat Middles and Bottoms were Rs. 16-12 and Rs. 13-12 respectively per maund. Indian Jat Tossa Middles and Bottoms were Rs. 17-8 and Rs. 14-8 per maund.

In the pucca bales section, shippers were not very active but some business has been done at higher rates. Short group Dundee Daisee 2/3 being done at Rs. 87-8 per bale. Mills bought Dundee Tossa 4's at Rs. 88, Firsts at Rs. 88 and Lightnings at Rs. 82 per bale. For certain varieties quotations are at maximum rates.

JUTE MANUFACTURES

Calcutta, March 16.

The jute manufactures market has continued firm and there is nothing of importance to be reported. With the hopes regarding an

GOVERNMENT OF INDIA WAR TRANSPORT DEPARTMENT.

NOTICE.

The Government of India in the War Transport Department are contemplating the appointment of additional registered dealers, under the Motor Vehicle Spare Parts Control Order, 1943. Dealers wishing to be so appointed, who have been in the spare parts business from 1938 or earlier, and whose monthly imports or purchases amounted together to not less than Rs. 5,000 on the average during the three years 1938-40, should apply to the undersigned furnishing purchase figures for each of the three years 1938-40, and information as to makes and kinds of parts mainly dealt in. If any applicant had purchased genuine Chevrolet or Ford parts from the authorised General Motors and Fords dealers during these years, the value of such purchases each year and names of authorised dealers from whom purchased should also be furnished.

Last date of receiving the application—15th April, 1944.

Controller or Road Transport,
War Transport Department,
New Delhi.

NEW DELHI,
the 9th March, 1944.

increase in production, it is reported that mills are prepared to offer certain varieties at slightly below maximum rates though standard goods are still at the maxima fixed by the Indian Jute Mills Association for all positions up to March, 1945. It is believed that the scarcity in respect of jute goods will not continue for long and that in another two or three months time the position will get under control. 9 porters are quoting Rs. 21-10 and 11 porters Rs. 28-8 for all positions.

In the Heavy Goods section, also firm conditions have been noticeable and there are not many sellers. "B" twills are the only exception and are available at Rs. 67-8 for April-June.

COTTON

Calcutta, March 16.

The report that the Government of India were determined to put through their purchasing scheme if there was a decline in prices to below the minima fixed have been responsible for the recovery in prices in the raw cotton market during the past few days. Upcountry advices have been more satisfactory and the improvement in the quotations for surti styles is as much as ten points. In the steady market there has been more business though mills are still inclined to await further developments. The improvement in prices for Jharilla, however, does not reflect in full the accession of strength to the cotton market, especially in upcountry areas, as it will be remembered that the decrease in prices for inferior varieties was more pronounced than for Jharilla. In Tuesday's session there was some selling but the close is firmer at the highest levels for the week. Jharilla March quoted Rs. 449, May Rs. 449, July Rs. 454 and September Rs. 456-12. Quotations at the end of last week were Rs. 443-12, Rs. 443-4 and Rs. 444-12 respectively for the first three positions. It will be noticed that there has been a firming up in prices for forward positions after May.

GOLD

Calcutta, March 16.

The gold market has been uninteresting and quotations have been fluctuating in very narrow limits. The firmer tone of the silver market in the latter half of the week and the sharp rise in share prices have not been of any help to speculators. The continued selling by the Reserve Bank at the fixed price of Rs. 71 per tola has put a ceiling on prices. Gold ready closed at Rs. 71 and forward at Rs. 70-15-6. Sovereigns were Rs. 49-2. In the Calcutta market, the quotation was Rs. 71-5 for gold ready and Rs. 49-4 for sovereigns.

SILVER

Calcutta, March 16.

The silver market was uninteresting for the most part of the week, but towards the close a sharp rise in prices has been recorded and quotations are at the highest levels for some time. The recovery in the raw cotton market and the improvement on the stock exchange have been mainly responsible for the increase in speculative activity. The supply position has not improved even with the larger arrivals from upcountry centres. Silver ready closed at Rs. 129-4 and forward at Rs. 125-4 against Rs. 126-3 and Rs. 122-11 respectively. There has been a further widening in the discount for forward over ready. In the Calcutta market, silver ready quoted Rs. 128. In the London market there has been no change in rates and both Spot and Forward is quoting 23½d.

PIECEGOODS

Calcutta, March 16.

The piecegoods market has remained steady and business has been on a fairly satisfactory scale. Lighter styles are in greater demand but they are not much in supply. Not much of business has been reported with Bombay and Ahmedabad mills; there is still considerable difficulty in respect of supplies from these two centres.

Discount

allowed at reasonable rate on all bills drawn on Government, and hundies makes transactions easy, quickens turnover, and multiplies finance.

If it is a bill on Government, get the advance from us.

SATURDAY, MARCH 18, 1944

Price Re. 1

Stock Markets to-day and to-morrow:

JUTE & COAL SHARES ACTIVE

QUITE firm conditions were noticeable on the stock markets both in Calcutta and Bombay. With an increase in the volume of business, a substantial improvement in prices has been recorded for almost all the shares. The firmer tone of the markets, after the quiet feeling that was noticeable when the budget proposals were announced, is said to be due to the feeling that the immobilisation proposals may not affect to any great extent dividend distributions and that, with the problem of reinvestment, investors would rather reconcile themselves to a lower yield basis than liquidate their holdings and be in a difficult position to reinvest their sale proceeds. It is also pointed out that the continued investment in shares disclosing a profit on present market values is a successful method of evasion of tax payments. If these profits were realised, they would have to be disclosed and tax paid thereon.

It was on this reasoning that there was a resumption of buying in both the markets. While the rise in prices in the Calcutta market has been rather sustained with Coal and Jute shares in the forefront, the upward trend in the Bombay market has been less pronounced and has been punctuated with bouts of profit-taking especially in textile shares. The easier feeling noticeable on Friday afternoon in Calcutta is due to profit-taking. The undertone, however, is fully steady and investment enquiry continues to be in evidence. The reports from the war fronts are very satisfactory. If the Allies continue to be successful on the Arakan front, there might be a further rise in prices.

That the tendency is definitely towards a lower yield basis has been amply proved by the developments in the past two weeks. The gilt-edged market is very strong and even a small rise in prices has been recorded for 3½ per cent Paper and some near-dated loans. There is a search for shares which afford a relatively higher yield. In this method of selective buying some of the popular shares have been marked higher, *Cawnpore Textiles* being done up to Rs. 18, *Amalgamated* to Rs. 49-8, *Howrah* to Rs. 74-8 and *Indian Iron* to Rs. 38-12. It would perhaps be correct to assume that the general yield basis will stabilise itself around 4 per cent for first-class equities. If that were the case, there

is scope for a further rise in shares like *Indian Irons*, *Howrahs*, *Elgins*, *Champaruns*, *Cawnpore Sugars* and most of the tea shares. The markets are in a transitional stage. It will be interesting to watch the progress of prices in the next few weeks.

The accounts of the *Reliance Firebrick Company, Limited* for the half-year ended August, 1943, reveal that there has been a slight decline in earnings on account of the increase in expenses mainly due to the grant of cheap food and dearness allowance to labour and to the increase in the cost of stores, coal and raw materials. The net profit, before providing for taxation and depreciation, is Rs. 1,61,419 against Rs. 1,77,785 for the previous half-year. The amount set aside to depreciation is slightly lower at Rs. 25,000 (Rs. 28,000). The provision for taxation is higher at Rs. 1 lakh (Rs. 95,000). The transfer to reserve is Rs. 10,000 (Rs. 18,000). The dividend has been maintained at 8 annas per share. The amount carried forward is lower at Rs. 15,298 against Rs. 18,873 brought in.

The balance-sheet of *Indian Wood Products Company, Limited* for the year ended September, 1943, has been published. But for the difficulty in regard to transport facilities, earnings for the year would perhaps have made better showing. Total sales, however, were higher at Rs. 12.87 lakhs against Rs. 10.63 lakhs. The profit, before providing for taxation and depreciation, is Rs. 7,78,288 against Rs. 5,76,067 for 1941-42. The amount set aside to depreciation is Rs. 14,784 (Rs. 16,925) while the transfer to reserve is Rs. 68,376 (nil). The provision for taxation is as much as Rs. 5,49,230 (Rs. 3,97,760). The dividend has been maintained at 13 per cent.

Vasanta Mills Limited, one of the best cotton mills in South India, has done well in the year ended December, 1943. Earnings would have made better showing but for the curtailment in production following the outbreak of plague in the Coimbatore area. Earnings, as pointed out above, have made impressive showing. The net profit, before providing for taxation and depreciation is Rs. 42,50,197 against Rs. 21,49,907 for 1942. The provision for depreciation is higher at

Rs. 2,25,935 (Rs. 1,64,205) while that for taxation is as much as Rs. 20.4 lakhs (Rs. 15,01,836). The transfer to reserve is Rs. 5.4 lakhs which is approximately the amount of compulsory deposit payable to the Government under Excess Profits Tax against the total allocation to funds of Rs. 2.65 lakhs in 1942. Even after these substantial allocations, it has been possible to increase the dividend to 30 per cent from 25 per cent. The amount carried forward is Rs. 5,236 against Rs. 4,474 brought in.

Orient Paper Mills, Limited has made further progress in the half-year ended September, 1943. Sales have increased to Rs. 69.08 lakhs from Rs. 58.57 lakhs, but an increase in costs of production has prevented any appreciable improvement in earnings. The net profit, before providing for taxation and depreciation, for the half-year is Rs. 21,59,820 against Rs. 21,08,469 for the previous six months. The amount set aside to depreciation is Rs. 2 lakhs (Rs. 2.5 lakhs) while the provision for taxation is higher at Rs. 14 lakhs (Rs. 13.75 lakhs). After placing Rs. 2 lakhs (same) to General Reserve the dividend has been maintained at twelve annas per share. The amount carried forward is higher Rs. 3,62,764 against Rs. 2,17,257 brought in.

The position in regard to the supply of raw materials and wagons has considerably worsened and the future outlook, in the opinion of the directors, is uncertain.

In recent months Bank shares have been in great demand and a good premium is now obtainable on shares of the new big banks that were floated sometime back. *Hind Bank* are, however, relatively undervalued. It is confidently expected that there will be a substantial rise in prices before long.

Discussing the results of *Madura Mills Company, Limited* for the year ended December, 1943 in the issue of February 26, 1944, it was stated that the amounts allocated to the Renewal and Replacement Reserve and General Reserve were Rs. 15 lakhs and Rs. 50 lakhs respectively. The allocation to Renewals and Replacement Reserve, however, is Rs. 50 lakhs and the General Reserve Rs. 15 lakhs and not as stated above.

WATCH DOG...

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 16.

VERY firm conditions have been noticeable on the Calcutta Stock Exchange during the past week. The reopening after the holidays was marked by active trading and with a larger list of transactions an all-round increase in prices has been recorded. The strength of the Bombay market and the more hopeful view regarding the future of Jute and Coal shares have been mainly responsible for the strength of the several sections. The encouraging progress on the Arakan Front and the belief that it would be possible to maintain dividends even with the immobilisation proposals have led to general buying. In a market short of scrips there has naturally been a rise in prices with motuissal buying. The general undertone is very steady. Present conditions point to the continuance of the upward movement for some time.

The gilt-edged securities section also has been very steady though business passing has been restricted. There were sellers for one or two loans. 3½ per cent Paper was well held at Rs. 99-5 while 3 per cent Paper was 8 annas higher at Rs. 90-4.

Among Terminable loans, 3 per cent 1963-65 were quiet at Rs. 98-8 and 3 per cent Defence Loan 1949-52 at Rs. 100-14. 4 percent 1960-70 were Rs. 112-11 and 5 per cent 1945-55 Rs. 105-4. 3½ per cent 1947-50 changed hands at Rs. 103-4 and 4½ per cent 1955-60 at Rs. 115-12. No business has been recorded in Provincial loans. There is no change in the conditions in the money market, but considerable difficulty is still being experienced by the Government in respect of their requirements of treasury bills and there has been a slight increase in the rate to 13 annas per cent per annum.

Among Bank shares, Imperial Bank fully paid were sticky at Rs. 1,912 and contributions at Rs. 505. Reserve Bank were Rs. 131 and United Commercial Bank Rs. 27-3 premium. Bharat Bank were a shade better at Rs. 121.

The only transaction recorded in industrial debentures was in India General Navigation 5 per cent debentures 1915-45 at Rs. 101-4. There is no business in public bodies debentures.

Preference shares were in good request and a further small rise in prices was recorded. Belvedere were Rs. 184, Birla Rs. 143, Howrah 'A' Rs. 171 and Clive 6 per cent Rs. 148. Steel Corporation were Rs. 132, Dalmia Cement 6 per cent Rs. 144 and Humayan Properties Rs. 13.

In sympathy with the strength of the Bombay market, cotton textiles moved higher and the quotations for some of the counters are at the highest levels for some time. The feature of the week has been provided by Cawnpore Textiles with a rise in the quotation to over Rs. 18 on expectations of a good dividend for the current half-year. The yield on these shares is relatively higher. There has been some slight profit-taking at the higher levels and the quotation is now Rs. 17-8 against Rs. 16 at the end of last week. Basanti were a shade better at Rs. 15 while Bengal Nagpur were 1½ points higher at Rs. 40. Dunbar were Rs. 303; Kesoram were suddenly active in Thursday's session and there was a slight rise in the quotation to Rs. 19-15 from Rs. 18-8 at the end of last

week. New Victoria were sticky at Rs. 10-7 as also Elgin at Rs. 86-8. Sree Radheyshyam improved on reports of a good final dividend to Rs. 25-12.

The coal section has continued active and

there has been some selective buying. Popular shares have recorded a rise of two to three points, Amalgamated Equitable, Ranee-gunge and West Jamuria being in the fore-front. Amalgamated are now quoting Rs. 49-8 against Rs. 45-12 at the end of last week while Bengal were Rs. 620 against Rs. 601. Bhalgora were not very much

chisel & hammer cannot make safes

Adequate equipment and long experience are essential to make safe Safes. Hardly anything is wanted to make metal boxes, and name them "safes." Godrej alone in the East have the equipment and the experience—a complete machine-tool plant and patented processes manned by hundreds of skilled hands, plus nearly 50 years' experience in Security Engineering—for making safes which are best not merely on paper, but which have proved the Best against actual fires and determined burglars.

Thousands upon thousands of Godrej Safes, worth many lacs of rupees, have been bought in wartime by Governments, Banks and Institutions for safe-custody of their valuables. Besides meeting the country's requirements for reliable security equipment, Godrej are now engaged on other more important and urgent war demands.

* Reserve against compulsory E.P.T. deposit.

(Annual General Meeting on 25th March, 1944 at 9 a.m. at Calcutta. Transfer books closed from 18th to 29th March, 1944).

Audited Accounts for the year ended 31st December, 1943:—

The profit for the year after making all the usual allowances (including the sum of Rs. 9,00,000-0-0 for Depreciation), including Income from Investments, providing for a Bonus to Employees, and setting aside Rs. 1,35,00,000-0-0 for estimated Taxation and Rs. 30,00,000-0-0 to meet the compulsory E.P.T. Deposit, amounts to Rs. 16,33,803-11-5, to which has to be added the amount brought forward from last year namely Rs. 3,83,039-13-6, making the total sum of available Rs. 20,16,842-8-11. The Directors recommend that this sum should be disposed of in the following manner:—

Dividend for the year to 31st December, 1943, on the Cumulative Preference Shares (8% per annum), free of Income Tax .. 6,48,00 0 0

Dividend for the year to 31st December, 1943, on the Ordinary Shares at 4 annas per Share, free of Income Tax .. 11,03,750 0 0

Carry Forward to next Account .. 2,65,092 8 11

20,16,842 8 11

In 1943, the Sales effected by the Branches of the Corporation again show an improvement, once more setting up a record turnover for the Corporation.

The Labour employed by the Corporation continued to work throughout the year 1943 in an apparently contented manner. Arrangements were made for the supply of food grains by all Branches of the Corporation and, in many instances, these have been provided at rates considerably below ruling Government controlled rates. The Accounts again make provision for the payment of a bonus to workers in respect of the year 1943.

In the course of the year 1943, the Government orders regarding the maintenance of A.R.P. measures, for the protection of Labour and Property, were withdrawn.

The Directors estimate that the sum of Rs. 30,00,000, or thereby, will be payable during 1944 as a compulsory Excess Profits Tax Deposits. This amount has therefore as above indicated been set aside, thus obviating further allocations on this occasion to the Rehabilitation and Obsolescence Reserve Accounts, which have previously been set up in the Corporation's Books.

Secretary.—Mr. F. G. Brightman.

Authorised Capital—Rs. 3,65,00,000. Issued and Subscribed—Rs. 1,25,15,000 in 81,000, 8 per cent Cum. Pref. Shares of Rs. 100 and 44,15,000 Ord. Shares of Rs. 1 each, fully paid up.

*Compulsory E.P.T. deposit.

(Annual General Meeting on 3rd March, 1944 at 4-15 p.m. Transfer books closed from 20th to 31st March, 1944).

Audited Accounts for the year ended 30th September, 1943:—

General.—The Plant has been maintained in good condition throughout the year and only minor stoppages occurred. The Factory was shut down for seven days in April for the usual annual overhaul. The demand for the Company's products continues to be keen but great difficulty is being experienced in securing Rail Freight both for Timber from the Forests and for finished products. This has necessitated production being cut down to some extent in order to conserve Timber Stocks at the Factory and also to prevent undue

accumulation of Cutch and Katha in the Godowns. Unless conditions improve rapidly the Company's Sales during the current year will show a considerable falling off.

Accounts.—The Gross Profit of Rs. 8,73,519-7-9 is an increase of Rs. 2,21,255-13-6 compared with the previous year. After providing Rs. 5,49,213-10-0 for Taxation, compared with Rs. 3,97,760-5-0 last year the net Profit is Rs. 2,14,290-7-11, making the balance available on Profit and Loss Account Rs. 2,24,862-10-0. We recommend that the balance available for distribution be disposed of as follows:—

	Rs.	A. P.
By payment of a Dividend of 13 per cent, without any deduction in respect of Income Tax payable by the Company, on 1,20,000 Ordinary Shares of Rs. 10 each ..	1,56,000	0 0
By Reserve for Compulsory Excess Profits Tax Deposit ..	58,376	0 0
To be carried forward ..	10,486	10 0
	2,24,862	10 0

Managing Agents.—Messrs. Gillanders Arbuthnot & Co.

Authorised Capital—Rs. 15,00,000. Issued and Subscribed Rs. 12,00,000 in 120,000 Ordinary Shares of Rs. 10 each fully paid up.

The Share Transfer Books of the Company will be closed from the 10th of April to the 25th of April, 1944, both days inclusive, and it is notified that dividend warrants will be issued and posted to registered Shareholders only. Persons holding shares under blank transfer are advised to effect registration of scrip in their name before the 10th of April, 1944.

By Order of the Directors,
J. W. ROSS.
Manager.

Calcutta, the 7th March, 1944.

ORIENT PAPER MILLS, LIMITED.

NOTICE is hereby given that the Thirteenth Ordinary General Meeting of Orient Paper Mills, Limited, will be held at the Registered Office of the Company, No. 8, Royal Exchange Place, Calcutta, on Thursday, the 30th March 1944, at 3 P.M.

(a) To receive and pass the Directors' Report and the Audited Accounts for the half-year ended 30th September 1943.

(b) To declare Dividend on Preference Shares, which is payable, on application, to the Shareholders, when declared.

(c) To declare Dividend on Ordinary Shares, which is payable, on application, to the Shareholders when declared,

and

(d) To transact any other business that may be brought forward.

The Share Transfer Register will be closed from 15th to 30th March, 1944, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS, LTD.
Managing Agents.
Calcutta, 13th March, 1944.

REPORT OF DIRECTORS OF THE ORIENT PAPER MILLS, LIMITED

For the half-year ended 30th September, 1943.

To
The SHAREHOLDERS.

GENTLEMEN,
Your Directors beg to submit the report for the half-year ended 30th September 1943 together with the Audited Statements of Accounts.

After payment of interest, Debenture interest, Managing Agents' remuneration and commission, Directors' remuneration, setting aside depreciation on Block, providing for taxation and taking into account the balance of the previous half-year, the combined Revenue and Profit & Loss Account shows a net surplus of Rs. 775076-10-10 which your Directors propose to dispose of as under:—

General Reserve	Rs. 2,00,000 0 0
Dividend on 20,000 Preference Shares at 5½% per annum free of tax	55,000 0 0
Dividend on 2,09,750 Ordinary Shares each fully paid at Rs. 0-12-0 per share free of tax	1,57,312 8 0
Balance to be carried forward	3,62,764 2 10

Your Directors are glad to be able to report satisfactory working of the mills in spite of the increasing difficulties with regard to supply of raw materials and wagons. The position in regard to the latter has considerably worsened and the outlook for future remains clouded with uncertainty.

Yours faithfully,

G. PRASAD,
K. L. PODDAR,
RAMKUMAR SOMANY.

For ORIENT PAPER MILLS, LTD.
Per Pro. BIRLA BROTHERS, LTD.,
G. PRASAD,
Managing Agents.

8, Royal Exchange Place,
CALCUTTA, 7th March, 1944.

Mr. N. R. Sarker, Rai Bahadur Radhakrishna Jalan and Mr. A. L. Ojha being away could not sign the Report and the Accounts.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Markets have been affected by the events in the Indo-Burma border. So far as the money market is concerned, the state of glut of short credits continues; and inter-bank call money is quoting nominally at $\frac{1}{4}$ per cent in Calcutta and $\frac{1}{2}$ per cent in Bombay. There has been nothing like any panicky withdrawal of funds from banks. But, in the bullion market, there has been a firmer tendency, as is always the case after every news of what the market construes as adverse war developments. By the same token, prices in the gilt-edged market have given way; and $\frac{3}{4}$ per cent Rupee Paper, which, at one time, touched nearly Rs. 99-8, has receded to near Rs. 98-8. Stock exchanges all over India were similarly depressed. There has been considerable selling pressure in jute shares, steel shares, cotton shares and miscellaneous shares. Market circles seem to read bad news in the announcement that the Japanese forces have crossed the river Chindwin at three points and are within 30 miles of Imphal. It is, however, necessary to draw attention to the fact that, simultaneously with the news of this Japanese advance, there appeared the press report of a daring landing of the Allied troops in North Burma. It is also to be remembered that, judging by the vast preparations made on the Assam Frontier and judging by the admitted superiority which the Allies now enjoy in the air, the advance now reported of Japanese forces will before long be turned into a retreat. All authoritative interpretations of war developments agree that the chances of enemy attack on India either by land or air are now practically nil. This fact needs to be appreciated by the Indian public, and particularly market circles more widely and more intelligently. Market circles will also do well to remember that all markets not only in India but in the world have, during the present war, established and sustained the pressure of being shock proof. Adverse political developments have immediate adverse effects on markets; but the past teaches us that these reverses have only been transitory and that the subsequent gains have more than made up the earlier losses. Holding these views, we consider that the setback in the last two days is bound to prove shortlived; and that the lower prices ruling since mid-week afford an unique opportunity for shrewd operators to pick up good bargains.

Against Rs. 4 crores of Central treasury bills offered by tender, applications came to Rs. 7.33 crores; and, after four weeks of partial allotment, the Reserve Bank was able to secure this week the full quota of Rs. 4 crores. The average rate of accepted tenders is 3 pies lower at 12 annas and 9 pies per cent per annum. The offer for next week remains unchanged at Rs. 4 crores. We expected to see keener bidding and a consequent decline in the average discount rate. The total outstanding of treasury bills in the hands of the public is now Rs. 78 crores.

The returns of the Reserve Bank for the week ended March 17, show an increase of Rs. 1.94 crores in active note circulation. There has been currency expansion for Rs. 3 crores against sterling securities. Foreign assets held in the banking department show an increase of Rs. 4.23 crores. It may, therefore, be inferred that the net addition to the Reserve Bank's stock of sterling assets is Rs. 7 $\frac{1}{2}$ crores during the week. Deposits maintained by the Central Government with the Reserve Bank as

well as those of the Provincial Governments are up by Rs. 3.28 crores and Rs. 2.54 crores respectively. Deposits of member banks are slightly higher at Rs. 55.44 crores. The current returns of the Reserve Bank provide further proof of the exceptionally comfortable cash balance now possessed by the Central Government, the Provincial Governments and the Scheduled Banks.

The return of the Imperial Bank for the week ended March 17, maintains the declining tendency of recent weeks in deposits. The latest figure is Rs. 212.95 crores. As was pointed out in last week's number, the Imperial Bank has now been able to find substantial remunerative employment for funds through the financing of grain purchases under governmental agency. The statement of March 17, shows a considerable expansion in the bill portfolio from Rs. 4.81 crores to Rs. 7.27 crores. This big rise in bills must be due, to some manner of rediscounting of bills; and it may therefore be expected that the total of bills held by the Imperial Bank will be restored to normal level in a week or two. As a result of the increase in advances Imperial Bank's cash has come down from Rs. 24.17 crores to Rs. 20.78 crores.

Nearly two months ago, it was pointed in this column, on the basis of our special cable from New York, that the international monetary discussions which were then taking place between Britain, America and Canada would be considerably affected by the startling announcement of Russia—we described this as a bolt from the blue—that the Soviet was all in favour of gold in international transactions so far as she was concerned. We also then opined that this announcement from Russia would go a long way to strengthen the White Plan as against the Keynes Plan. At the same time, we could not help expressing our apprehension that this greater emphasis on gold might make compromise between America and Britain more difficult. New York reports received last week-end suggest that an agreement has now been reached as among the United States, Britain, Russia and Canada; and that only a few minor details remain to be settled. Further information has not been vouchsafed so far. But London seems to be mystified by this report as no official confirmation is available. It is also not unlikely that Britain's amor propre is hurt by the kind of development which

GOVERNMENT OF INDIA

3 PER CENT. VICTORY LOAN 1957

UNLIMITED AS TO AMOUNT

Subscriptions in cash will be received from 1st April 1944, until further notice.

Issue Price Rs. 100/-. As interest accrues from 1st March 1944, recovery on account of net interest will be made at the rate of Rs. 0-2-8 per cent. from 1st April to 8th April 1944 thereafter increasing by 8 pies per week.

Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras, at branches of the Imperial Bank of India at other places and at all Government Treasuries.

For full particulars and Application Forms apply to any of these offices, branches or treasuries.

Finance Abroad

Thursday, March 16.

The progressive improvement in Wall Street has not passed unnoticed in India where bills until recently drew real encouragement from the Republican revival and the improving business prospects to which a declaration in favour of reconversion of industry by the Truman Committee gave support. The episode on the Eastern border of India has been scarcely noticed in London where tea shares have held up well and the only change to record is a drop in Burma Corporation shares, corresponding to the fall noticed in India. The rather obscure report last week from Washington as to an international currency agreement on the basis of restoration of the gold standard has been without any effect on the Kaffir market to judge by prices, though it will be agreed that the only material factor for Kaffirs was the South African budget and that did not raise the taxation paid by the gold-mining industry whose full prosperity can be established only in peace when equipment is better and newly developed properties will make their own contribution. Contrary to general belief, the mining industries in Africa except copper have not been encouraged to go in for full production and dividends paid on 1943 were lower than in 1942 owing to the rise in costs generally.

The U.S.A. may be getting nearer Russia in regard to currency doctrine, but the recognition of Badoglio has created an impression of real difference. The Rumanian Government as an exporter of gold may be interested in the enlargement of demand, but it had to be instructed specially in 1937, that the gold scare was bad for the U.S.A. as well as the Soviet Union and it should adopt a business-like view for its own good. The Russian delegation may not, however, ignore the interest shown by South Africa in the Canadian currency agreement plan. The reference of General J. L. Smuts to South Africa's interest in the negotiations in progress does not suggest that everything is ready including the agenda. The U.S.A. is anxious to draw gold from abroad and the main question now is whether others could give gold instead of goods to the U.S.A. Soviet Russia lacking goods after three years of war may choose an unusual though familiar policy because such imports as grain, timber and oil are superfluous, so far as Russia is concerned. But Britain cannot ignore the trade aspect and the delay in putting the Cunliffe Committee's recommendations into effect after the last war indicates that Mr. Churchill would let many years pass before prescribing a return to gold.

The familiar view that sterling would be independent of gold after the war, and blocked balances would be gradually cleared in goods has not been disregarded in the U.S.A. for the "American Metal Market" in its review of the gold position reviewed possible changes in the U.S. attitude to trade and finance. The U.S.A. is a creditor but to demand gold is recognised as impolitic. If synthetic rubber limits imports and the American marine carries both outward and inward cargoes, the demand for U.S. exports would inevitably shrink. The U.S.A. cannot expect gold in return for goods because gold exports were a symptom of the depression which every country wants to avoid. To expect Britain to convert any part of her

short-term liability into debt protected by a gold clause, would be contrary to both experience and expectation, and the most hopeful line of approach appears to be an Anglo-American pact on the lines of the Belgo-Dutch pact providing for a clearing union and fixed parity. Other nations might then choose to clear through London or New York as they liked and London's financial mechanism would be preserved for the future. This possibility is underlined by the Indian plan for a dollar reserve. Since this is election year, the Administration's intentions are obscure and there is some doubt as to lease-lend as well as price stabilisation. The F.B.I. examining trade policy after the war thinks that the right remedy is an increase in world trade. The currency agreement of 1936 certainly led to accelerated recovery. Experience may be upheld and the F.B.I.'s view (as recorded by Mr. Norman Crump) was that full information must be secured by an international economic council on the question of international payments. The Federation insists that any new exchange scheme must be bound up with a proper functioning of the machinery of world trade and commerce. It envisages the continuance of certain exchange restrictions and import control and it is clear that no commitments on international exchange problems should be allowed to conflict with a policy of full employment.

The Premier's outline of a savings drive bigger than the wings for victory campaign followed the revised estimate of the daily cost of the war for Britain. During recent weeks, the daily cost is £15 million, but for the fiscal year the daily cost is £13½ million. That means, with revenue coming up well to estimates, the deficit would be smaller than anticipated last year. There may be increased borrowing but no new taxation next month and Home Industrials generally should therefore brighten up. About the end of last week gilt-edged stocks rallied rather

suddenly and rises were noted in the case of both war loan and conversion loan which offer better yields than dated stocks at present. The improvement was not attributed entirely to the abundance of money in London, but to the prospect of increased savings.

(Continued from page 559)

exalts the White Plan over the Keynes Plan. We have to await further developments but, meantime, we draw pointed attention to our American cable, dated March 15, which appeared in last week's issue. U.S.A. circles are now worrying because the nation lost almost one milliard dollars worth of gold last year. Our cable contains the following information: "Foreign-owned dollar balances have increased steadily since the United States entered the war despite substantial sums converted into gold. Between the end of 1941 and the end of 1943 the total foreign deposits in the United States rose from \$1,006½ millions to \$2,300 millions while car-marked gold stocks advanced from \$2,300 millions to \$3,400 millions. Meanwhile, however, the total value of United States' gold stocks declined from \$22,700 millions to approximately \$22,000 millions.

The National City Bank of New York analysing these statistics added "due to domestic production of some \$170 millions of gold and net import of about \$300 millions, those two years' actual gold loss was but \$732 millions. However, during the first seven weeks of 1944 the Treasury's monetary gold stock declined by another \$200 millions to \$21.8 milliards". The feeling is steadily growing in America that the present policy of paying in gold for part of America's war expenditure in other countries needs to be carefully watched.

As we go to press the terms of a new Government of India Loan have been announced. It is to be a 3 per cent Victory Loan issued at par and repayable at par in 1957. Subscriptions will be received in cash, unlimited as to amount, from April 1, 1944 until further notice. There is no announcement regarding the closing of the lists for 1933-35 Fourth Defence Loan which is still available on tap at par. It is to be expected that the subscriptions for the Fourth Defence Loan will not be received after the end of this month and that, with a better return offering on the existing loan, there will be a rush for subscriptions. The new Loan is on more advantageous terms to the borrower as the period of the loan is longer. The effect of the announcement should prove to be bullish for the gilt-edged market though, one might say that immediately there is greater pre-occupation with the developments in the war situation on the Eastern frontier. By the time the list for the new Loan is opened, one can expect that things would have taken a turn for the better.

The Finance Member is to be congratulated on the planning of the new Loan. From a period of four years for the 3 per cent Defence Bonds 1946, which are redeemable at a premium of 1 per cent, there has been an increase in the duration of the loan period to twelve years. The new loans are to be redeemed at par and not at a premium. If the fresh increase in taxation is taken into consideration, the real advantage to the borrower is something very much more.

The exchange market has been dull, inactive but steady except for some remittance enquiry.

Britain and India's Sterling Assets

The last one week has witnessed another spate of disgruntled comment in the British Press on India's sterling balances and the problems and developments connected therewith. The prospect of India having a credit of £1,000 million at the end of the war is one, which many Britons are apparently unable to contemplate with indifference or equanimity. The striking contrast it affords to the decline of Britain's foreign investments is not helpful to composure. And what is more, the publication of the Bombay Plan, with its emphasis on imports of capital goods on the strength of our foreign reserves, if not the favourable trade balances of the future, and large-scale industrialisation, has enlivened the age-old fear of loss of foreign markets and decline of Britain's export trade. All this, no doubt, explains why the British Press should return now to the problem of India's sterling balances. But one would expect that, during the last one year and more during which these problems have been in the forefront, the British Press would have clarified its views and made up its mind on the issues on hand. While the general reaction to these riches of India in a foreign land is only to be expected, especially as they are seen without reference to the price at which this country has acquired them, it is surprising that the comments should so largely be a jumble of regrets for the past and fears for the future. India's sterling reserves are both an epitome of past history and an index of what may be done for world trade and world economy, if there were in Britain and among the great powers, less of selfish pre-occupation with national interests and a modicum of zeal for a better world order.

But the interest of London dailies and periodicals would seem to be to harp on the same old string of unfair allocation of military expenditure and to make out that the goods with which these sterling credits will be liquidated will be but free gifts made to this country out of Britain's bounty. Both the "News Chronicle" and the "Financial Times" have repeated, without fear either of monotony or of untruth, that India's sterling accumulation is made possible only by a financial settlement which is partial towards India. The latter hugs to its heart the unctuous thought that Britain's financial treatment of India has been undeniably generous; while the "News Chronicle" claims credit not only for British generosity but also for "the hard and shrewd bargaining . . . conducted by Englishmen working in the service of India." "Indian Finance" has never grudged Sir Jeremy Raisman and his associates the praise that is due to them for the conclusion of the Financial Settlement. But it is hard to imagine the British Treasury officials and the officials of the Indian Finance Department haggling between them without consciousness of their common origin and purpose. At any rate, there is no question of bargaining involved, since the limiting factor is India's ability to bear the burden of war expenditure. Sir Jeremy has more than once stated this as the guiding principle. There is no reason to suggest that this ability has been assessed too generously.

It is time that the British Press and public learned to separate India's sterling balances from the allocation of war expenditure between India and Britain. The two questions are as a matter of objective fact different; and any suggestion that India's share of war expenditure should have been put higher is only a betrayal of the author's eagerness to use Britain's political power to repudiate a large part, if not the whole, of her obligation to India. One of the criticisms advanced in India against the Bombay Plan is on the score of the simple faith of its authors in India being able to realise her sterling reserves in goods and services. This scepticism is to be traced directly to the kind of comment which the British Press indulges in

only too often on this question. Neither the assurance which Sir Jeremy Raisman has given that the Financial Settlement will be adhered to, nor the patent fact that its provisions are so elastic that H.M.G. can gain its purposes without the reproach of revising the settlement has sufficed to infuse confidence in the Indian public that Britain's indebtedness will not be written off in some more or less subtle or naive manner. On the one hand, there are the difficulties inherent in the problem of settling what are called abnormal war balances, as also the opportunities which reconstruction of international finance, in the post-war world will afford for playing with our foreign balances. On the other, there is the constant grousing against the allocation of military expenditure which may well signify chances of a revision with retrospective effect. And the latter is a contingency which this country is more or less utterly powerless to prevent. The British Press should be aware in these circumstances of the harm they cause to Britain's name by dragging in the question of allocation every time the question of sterling balances is considered.

If the reference to the allocation signifies a regret that India is not in a position to shoulder a heavier burden, Indians would no doubt readily share the regret. After all, there is no conceivable criterion of equity in this regard except ability to produce or pay for the goods required for the war. The division of responsibilities between Britain and the U.S.A. too, is not on any different basis. And it is not a proposition of hypothetical or speculative importance that, if the British Government had not effectively curbed India's industrial development, India might have lessened Britain's burden of war expenditure in the East. The Financial Settlement was made with the position as it was and not as it could have been. The three-fold classification of war measures as Indian, British and Joint represents the best bargain that Britain could have made. The boot is on the other leg.

Persistence in this irrelevance has so far stood in the way of suitable solutions being found on the British side for the problem of sterling balances. And what is worse, it has hindered the solution which the course of natural forces may provide and has prevented the public in Britain from seeing the problem for what it is. Few will deny that with the balance of payments as it is between India and Britain, the most natural course would be for British investments in India to pass to the hands of Indians. That course was adopted willingly by the authorities in the case of the sterling loans of the Government of India. But its extension to private investments was not countenanced. It was possible to draw the line only because the political relations between India and Britain enabled the latter to make payments in this country in rupee notes and allow sterling to be accumulated to India's credit. But the inflation so caused must not only increase the rupee price of British interests in this country but also drive the wealthy classes to seek investment in real property, if necessary, at exorbitant prices, as a hedge against inflation. Forces are thus set up for transfer of interests which are too strong to be combatted by mere official displeasure. It is no surprise, therefore, that the movement is already afoot, though it is still in an incipient stage and confined to certain fringes of the broad expanse of British business in India. Large acreages of plantation land under rubber and tea and some agencies which had started shaking off the dust of the Indian soil even earlier than the war have indeed changed hands. If inflation should proceed still farther, the movement should certainly gain momentum.

It is possible that the Bombay Plan has made more concrete the fear long present in Britain that India's sterling will have to be paid in ways not acceptable to the great export industries. Such fear, when it is revived precipitately, induces the most

unreflective and uncritical reactions. For our part, we find it difficult to convince ourselves that, when she realises the objectives of the Bombay Plan, India will be a less valuable market than she has been till now. We can well envisage conditions in which India's offtake of luxury goods from abroad will be far more in value and far more productive of employment than her imports of necessities on the present meagre scale. But writers in the British Press love not only to dwell on the immediate adverse effects but also to discount the immediate advantages, not to speak of those in the long run. The "Financial Times" comment is revealing:

At first sight there is consolation that these sterling resources will assist full employment in certain British export industries, but unfortunately Britain would profit little or nothing from such employment. Undeniably Britain's financial treatment of India has been most generous but those who contend that India can in future retake in import of goods the price of a substantial part of her present war expenditure should remember that Britain cannot afford unlimited gratuitous exports.

The "News Chronicle" starts from the inflation end in this country, only to finish with the same note:

This heavy expenditure of external Governments may have had certain unfortunate repercussions on Indian finances since they have encouraged inflation of currency and rise of prices.

THE FUTURE IN THE AIR

Three separate news items in the last few days point to civil aviation being the subject of new, engrossing desire in countries as differently placed as Britain and the U.S.A. and India. A bill in the Senate introduced by the Democrat, Mr. Patrick McCarran asks for a chartered company with a capital of \$250 millions to operate an air line round the world. The tradition of independent enterprise is given up seemingly in the plan to confront the one big British company with its opposite American number. The broadcast of Lord Knollys at Melbourne referred to Britain's determination to provide the best airlines after the war with lightning expresses landing every 2,000 miles. Lord Knollys referred to the Tudor transport plane capable of flying non-stop from Sydney to Darwin or from Sydney to Perth to indicate that inter-Australian services could be provided by the same British company that runs the overseas mail service.

The Indian trunk air service plans figuring in a memorandum submitted to the Reconstruction Policy Committee provide for a route mileage of 10,500 and flying mileage of 75,00,000. The trunk air services are to be organised by the Government, but local air services are left to local and private enterprises. Sir G. V. Bewoor's speech on the new Indian aircraft bill contained a promise of official plans for civil aviation which would limit the scope of private enterprise but would certainly satisfy requirements in regard to links with neighbouring countries. The Senate Bill is a private bill. It is not the result of the conferences from which British interests held aloof, because Empire air policy was formally reviewed in October; and there is no point of similarity between the U.S. airlines' desire to integrate and expand, and the plan for Imperial self-sufficiency in the air. Estimates as to capital and running costs have been given so as to suggest that, after five years of working, the Indian air services would be self-supporting. Planning and initiative in India are reserved to the Government. Lord Beaverbrook in October declined to describe the conclusions reached at the Empire Air Conference and said that an international air conference would be necessary. The three statements as to intentions (two are semi-official) precede the air conference where Dominion views may be presented independently. The careful dissociation of U.S. air plans from the united effort in the air for which the Empire, including India, is apparently working, might suggest that U.S. air lines are more hopeful of getting their desires satisfied by the Democrats' new bill than by close consultation with the British. The rift may or may not be due to the launching of air services by certain British shipping companies or to the obvious desire of Canada, on the basis of her own experience, to start trans-Continental services. In the new bill there is, however, the plain indication of the Five Senators' professed desire to secure supremacy in the air for the U.S.A. The implications are not necessarily adverse for the U.S.A. with its experience of the air transport command girdling both South America and Africa, and its informed control of private enterprise in wartime has a special position. Apart from its desire to reserve some work after the war for aircraft manu-

But they have also, on the other hand, brought about very solid advantages. These will manifest themselves in years to come when India is able to convert her huge sterling credits into imports of machinery and other manufactures from this country. These goods will go to India without any corresponding expenditure in India which this country incurred during the war.

The confused sequence in the last sentence betrays confused thought and emotions. It is not by such confusion that the problem can be solved, nor by longing, lingering looks at the ways by which India's profits in the last war were wiped out. If India's sterling balances epitomise on the one side India's industrial backwardness, national poverty and untold suffering of the masses they signify also on the other, the enormous possibilities not only of reconstructing India's national economy but of rationalising Britain's economic organisation and putting world economy and international trade on a sounder and more stable basis. It is not alone by export trade in consumer's goods tainted by varying degrees of exploitation that the British standard of living can be preserved. It is not by standing between India and her prosperity that Britain must maintain herself. And yet nearly all comments in the British Press on this question of our sterling assets show no other line of thought.

facturers at home, U.S. shipping interests have manifested the same desire as British to start and run air services. To avoid conflict a chartered corporation may appear a satisfactory solution. Congress may vote the funds readily and the Administration, free of international obligations, may choose the line of least resistance at home.

What is most clear at present is that the efforts to interest U.S. citizens in the enormous significance of air services in the future has borne fruit. Aviation was linked up with Geopolitics and the familiar claim that Britain by having bases in Newfoundland is bound to dominate the Atlantic has been denied by implication in the plan for an all-American route. There is an all-American route across Asia to China and one from the Pacific Coast to Australia passing through Noumea in New Caledonia. There may be one from Alaska to Japan after the war ends. The desire to make the most of existing opportunities (though British rivalry in the trans-African and South Atlantic route may be close) may well be based on the desire to let geography decide the future in the air. Aircraft manufacturers and aluminium companies too showed last year a desire to project achievement on to the plane of new ambitions.

The industry's publicity was not lost on Mr. Martin, the leader of the Republicans in Congress, who argued that "America must rule the air, and to do this, it is necessary for the Congress to plan intelligently for this, air supremacy following the war". The interlocking rights with Canadian aviation companies may serve U.S. air companies to build up new trans-Atlantic services. It is, of course, in South America, after the complete eclipse of the German-dominated airlines, that pickings are reckoned best. The support that aviation might give to commerce there is not inconsiderable, and South America gives also the opportunities for services to West Africa and beyond. There may be difficulties in regard to bases, but aviation developments in neutral Egypt may create an unusual opening. No doubt, the Arctic may be left exclusively to the Soviet Union but the U.S.A. having retained air communications with Europe during the war, as films (California's other product) continually remind the world, has exceptional advantages in regard to passenger services. Apart from the desire shown in Washington, to secure a return for lease-lend in the form of air bases, there was the agreement with Britain over two Pacific islands before the war.

While Russia appears to be a non-starter in the race, it is quite easy for the U.S. air lines to define the conditions for their own growth. While the large civil air lines have altogether no fear as to competition at home, it is understandable that protection (for such it is) again gives birth to a trust; the chartered corporation would not be different in nature or purpose. British example in regard to civil aviation after the Cadman Committee reported may indicate the value of combination as much as the value of one big united line.

drawing the subsidy that may be made available. Political winds as much as the straws have favoured the air lines, and the bill certainly points to the emergence of a new lobby in Washington.

The significance of the bill may be easily exaggerated in the light of bold claims and bolder achievements. As for India alone, the Posts and Air Department has indicated not only that internal development will match the outside projects in regard to scope or efficiency, but that prospective inter-

national competition would not touch India. The dangers of a foreign monopoly certainly appear more remote than in the past, and if it is going to be a peaceful struggle between American and British enterprise—both aim to 'keep 'em flying'—this country will not be the scene of contest. The provisions for regulation of air transport after the war convey as much an assurance of immunity from direct competition as a promise of regular mail and passenger services run by the Government with private enterprise, as in the case of light railways, fulfilling minor purposes.

TRACTOR OR TANK?

What is the ultimate destiny of this glowing plate, wending its way through the multiple processes required of flawless steel?

Will it in time emerge to the world as a tank, conserving water in a torrid desert; will it go into the making of a tractor to till the fertile soil of the Gangetic Valley?

Whatever be its final mission, it will contribute to the growth of indigenous industry now, and in the days to come.

Always, everywhere **STEEL** for strength

Issued by the Tata Iron & Steel Company, Ltd.

PROSPECTUS

OF

Hindusthan Mercantile Bank Ltd.

(Incorporated under the Indian Companies Act, VII of 1913)

Authorised Capital - - Rs. 2,00,00,000

Divided into 2,00,000 Ordinary Shares of Rs. 100 each.

Of the above Shares the Directors have decided to issue at par 1,00,000 Shares of Rs. 100/- each. Of these, the Directors and their friends have agreed to take up 75,000 Shares of the face value of Rs. 75,00,000/- (Rupees Seventyfive Lacs). Applications are invited for the balance. Such applications should be made in minimum unit of 5 Shares or any multiple thereof. An application for an odd number will be treated as an application for a number equal to the multiple of five not exceeding the Shares applied for.

It is intended to call Rs. 50/- per Share only for the present, Rs. 25/- per Share on application and Rs. 25/- on allotment; the balance of Rs. 50/- on calls to be made by the Directors if and when necessary. Such calls when made will be uniform and at uniform intervals. It is however, not intended to make any further calls for the present.

HINDUSTHAN MERCANTILE BANK LIMITED—(Prospectus Contd.)

The Company has been formed for transacting banking business of all kinds and generally for the several objects set out in the Memorandum of Association (which forms part hereof and is printed herewith).

DIRECTORS' QUALIFICATION:

Holding of at least 500 shares of the face value of Rs. 50,000/- has been fixed by the Articles of Association as the qualification of a Director.

DIRECTORS' REMUNERATION:

The Articles provide that each Director shall receive by way of remuneration a sum not exceeding Rs. 100/- per Meeting attended by him. The Directors shall also be paid any travelling and other expenses for attending Meetings of the Board. The Directors may also be remunerated for any extra service performed by them outside their ordinary duties as Directors, but no such remuneration will be paid in shape of shares in, or commission on the profits of the Company. The Directors, however, shall not charge any remuneration for attending Central Board Meetings until a dividend is declared.

INTEREST OF DIRECTORS:

No Director of the Company has any interest in the promotion of the Company except as a Director or Share-holder.

There are no restrictions on the Directors of the Company in respect of their powers of management, except such as are provided for in the Indian Companies Act.

VOTING RIGHTS:

On a show of hands every Member present in person holding at least five Shares shall have one vote and upon a poll every Member present in person or by a proxy shall have one vote for every five Shares held by him.

RESTRICTION UPON MEMBERS AS TO VOTING, ETC.

No Member shall be entitled to be present or to vote on any question either personally or by proxy for another Member at any General Meeting or upon a poll or be reckoned at a quorum whilst any call or other sum shall be due and payable to the Company in respect of such a member.

RESTRICTION OF TRANSFER OF SHARES:

The Directors may decline to register any transfer of shares on which the Company has a lien and in case of shares not fully paid, may refuse to register a transfer to a transferee of whom they do not approve. Directors may also refuse to register transfer of any shares to any person whom it shall in their opinion, be not desirable in the interest of the Company to admit to Membership.

MINIMUM SUBSCRIPTION:

The minimum subscription on which the Directors may proceed to allotment is fixed at Rs. 50,00,000/- i.e., 50,000 Shares of Rs. 100/- each.

PRELIMINARY EXPENSES:

The preliminary expenses, including registration fee, printing and other incidental expenses (but excluding brokerage) are estimated not to exceed Rs. 25,000/-.

BROKERAGE OR COMMISSION:

The Directors have decided to pay brokerage of Re. 1/- per share for all shares allotted, applications whereof shall be received through Brokers or Banks or Investment Companies.

INSPECTION OF MEMORANDUM AND ARTICLES:

A copy of the Memorandum of Association of the Company, which forms part of this prospectus and the Articles of Association can be inspected at the Registered Office of the Company in Calcutta during office hours.

The Registered Office of the Bank will be in Calcutta which will be the Head Office. The Directors intend to open a Branch immediately at Bombay and in other important Cities as and when considered necessary by the Directors.

Application will be made to the Calcutta Stock Exchange and the Bombay Stock Exchange (The Native Share & Stock Brokers' Association) for official quotation.

APPLICATION FOR SHARES:

Application for shares may be made upon the form accompanying the Prospectus or a similar form and application money may

be paid at the following places. Cash or Cheques and Drafts on any place in India will be accepted without any banking charges.

- Registered Office in Calcutta.
- Imperial Bank of India at any of its principal branches and offices.
- Central Bank of India Ltd., at any of its principal branches.
- Bank of India Ltd., at any of its principal branches.
- United Commercial Bank Ltd., at any of its principal branches.
- Bharat Bank Ltd., at any of its principal branches.

Where no allotment is made the deposit will be returned in full and when the number of Shares allotted is less than the number applied for, the balance of the deposit will be utilised against allotment amount and the surplus, if any, will be refunded.

OBJECTS OF THE COMPANY

1. The Company has been formed for the purposes of carrying on all or any of the objects set out in its Memorandum of Association and in particular to carry on the business of manufacturers of high speed cutting tools such as milling cutters, reamers, taps and dies, precision tools, steel files, hacksaw blades, etc., and all measuring and marking

instruments as required in the engineering, munition and workshop trade.

It is needless to mention the enormous demand existing at present for tools due to the war by all Railway workshops, Government Ordnance factories and all the Engineering, Machinery and Metal Industries throughout India, having regard to the present scarcity of such materials abroad and to the restric-

tions on imports into India due to war conditions. The present shortage of and paramount necessity for high speed tools and measuring instruments were also stressed in the report of the Grady Technical Mission from U.S.A.

Leaving aside, however, the present war conditions, postwar possibilities of the industry too are enormous. India has un-

THE PRAGA TOOLS CORPORATION, LIMITED—(Prospectus Contd.)

heavy expansion particularly in the Engineering and Metal industry both due to the manufacture of munitions and armaments and to the increased and partly newly started production of a large variety of iron, steel and metal utility items, machine tools, general industrial machinery, agricultural machinery, cycles, etc. necessitated by the lack of imports and internal needs of the country. There is not a single mill, factory, engineering establishment or workshop, whether big or small, throughout the country that does not require the tools and instruments proposed to be manufactured by the Company. Sir M. Visweswarayya in a message to the promoters has expressed his opinion that there is much need for the manufacture of tools in India and that with the expansion of industries in the postwar period there should be great demand for the products of the Company both in Hyderabad State and all over India. The requirements hitherto have been largely met by imports from U.S.A. and U.K. It could be said with confidence that there is no large scale unit in India producing a wide range of tools and measuring instruments and this factory would be the first of its kind and will command an almost unexploited field which is big enough for several factories of this size. It is expected that for the duration of the war the Company's production will have to be utilised mostly towards Government requirements.

PRODUCTION PROGRAMME

2. The Company proposes to start and concentrate on the manufacture of only such items as are most urgently required. The Company would in the course of time develop and extend its programme to different items. The entire programme has been drawn up by European experts of repute employing the latest planning and mass production methods in Western countries. The production programme has been drawn up on the figures of all-India requirements supplied by the Director-General of Munition Production, Department of Supply, Government of India.

RAW MATERIALS

3. The bulk of raw materials required for this industry are being manufactured by two of the major steel producing units in India, of a quality equivalent to any foreign standard, and the entire requirements of alloy steels will be met with in India.

PLANT AND MACHINERY

4. The entire plant layout has been designed and specified to be a complete and self-sufficient unit, and the complete plant will be most modern and up-to-date, suitable for very economic and large scale serial production. The requirements of plant have been negotiated for and submitted to the Director-General of Munition Production and the import of the same is receiving consideration of the Government of India under a special indent. Favourable support with regard to imports, priorities, etc., is anticipated from the Director-General, Munition Production, Department of Supply, Government of India. The prospects of delivery of plant and machinery are brighter today due to improved shipping position and the recent machine tool rationalisation scheme in U.K.

TECHNICAL EXPERTS

5. The Company has already employed in its services some of the best European experts and arrangements have been made to obtain immediately the entire requirements of European technical staff and specialists, who are now in India owing to war in Europe.

SITE

6. A suitable site for the factory buildings very close to Railway station and other utility services in Secunderabad has already been selected and negotiations for the purchase of the same are going on.

SPECIAL ADVANTAGES

7. With the resources at its disposal, the Company expects to produce an output of about Rs. 7 lacs per month as soon as the necessary plant and machinery is installed. The Promoters of the Company have already negotiated with one of the largest tool and alloy steel manufacturing concern in England for collaboration on the basis of reciprocal advantage in the postwar period. Further point of importance to note is the fact that according to the existing laws in Secunderabad (Deccan) no Income tax and Excess Profits Tax are payable on any earnings of the Company. Taking all these facts into consideration the Directors estimate that the net profits of the Company will be sufficient to declare attractive dividends from the very commencement.

ESTIMATED CAPITAL EXPENDITURE

8. The following is a general account of the estimated expenditure, under various heads showing how the issued capital of Rs. 50 lacs will be appropriated:

	Rs.
Land and land development ..	50,000
Buildings ..	4,50,000
Plant and machinery ..	25,00,000
Small tools and electrical equipment, etc. ..	5,00,000
Working capital ..	15,00,000

PRELIMINARY EXPENSES

9. The estimated amount of preliminary expenses (excluding brokerage) will not exceed in the aggregate Rs. 25,000.

The Managing Agents have hitherto borne and paid all the expenses of and incidental to the formation and registration of the Company and also towards preparation of technical preparatory work, salaries of the technical staff, purchase of tools and equipments and otherwise. They are entitled to and will be reimbursed and indemnified against the whole of the expenditure and any liabilities incurred by them on behalf of the Company until the Company is entitled to commence business.

AGREEMENTS

10. The following agreements have been entered into:—

- (a) The Managing Agency Agreement dated, the 31st day of May, 1943, between the Company of the one part and Messrs. United Industrial Corporation of the other part appointing the latter their successors and assigns as Managing Agents of the Company. The said agreement, *inter alia*, provides that the period of the same shall be 20 years commencing from the date of incorporation of the Company. The Managing Agents are entitled under the said agreement to a monthly allowance of B.G. Rs. 2,000 and a commission of 10 per cent on the annual net profits of the Company. The said allowance and commission is exclusive of all other expenses incurred for and on behalf of the Company. The Managing Agents are required to hold during the tenure of their office either in their name or jointly with others at least 2,000 shares in the share capital of the Company of the nominal value of Rs. 1 lac.
- (b) An Agreement dated, the 28th day of October, 1943 between the Company of the one part and Mr. Rudolf Husicka of the other part appointing the latter as the Technical Director of the Company for the term of 5 years on a monthly remuneration of B.G. Rs. 1,500 rising upto Rs. 2,000.

Copies of the said agreements may be inspected at the Registered Office of the Company at Secunderabad, at any time during business hours on working days.

INTEREST OF DIRECTORS

11. Messrs. H. C. Asthana and S. M. Hosain are partners in the firm of the Managing

Agents and as such they are interested in the Managing Agents' remuneration payable to them by the Company. Mr. Rudolf Husicka as a technical Director is interested in the remuneration payable to him under the aforesaid agreement. Mr. Ali Mohamed Mecklai is interested as a Broker.

DIRECTORS' QUALIFICATION AND REMUNERATION

12. The Directors' qualification other than an Ex-officio Director, Debenture Director, Technical Director or alternate Director shall be the holding of shares of the nominal value of B.G. Rs. 10,000 at least registered in his name solely or jointly with any person or persons.

The following are the provisions for remuneration of Directors:

The remuneration of the Directors shall be such amount as the Directors may from time to time fix for every meeting of the Board attended by him.

If any Director being willing shall be called upon to perform extra services (which expression shall include work done by a Director, as a member of any Committee formed by the Directors) or to make any special exertions in going or residing abroad, or otherwise for any of the purposes of the Company, the Directors may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise, as may be determined by the Directors, and such remuneration may be either in addition to or in substitution for his remuneration above provided. The Directors shall also be entitled to be repaid any travelling or other expenses incurred in connection with the business of the Company.

The Directors may allow and pay to any Director who is not a bona fide resident of Secunderabad or Hyderabad (Deccan) and who shall come to Secunderabad or Hyderabad for the purpose of attending a meeting, such sum as the Directors may consider fair compensation for his travelling expenses, in addition to his fee for attending such a meeting as above specified, and the Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a Committee appointed by the Directors and may pay the same.

VOTING AND RESTRICTIONS

13. The following are the articles relating to voting and restrictions thereof:

Upon a show of hands every member holding ordinary shares present in person or in the case of a corporation by a proxy or attorney or representative under Section 80 of the Indian Companies Act, 1913 shall be one vote and upon a Poll every member present in person or by proxy or attorney or by representative under Section 80 of the said Act shall have one vote for every ordinary share held by such member.

No person shall be entitled to be present or to vote on any question either personally or by proxy for another member at any general meeting, or upon a poll, or be reckoned in a quorum whilst any call or other sums, shall be due and payable to the Company in respect of any of the shares of such member.

The articles provide that the Directors may decline to register any transfer of shares to a person of whom they do not approve and they may also decline to register any transfer of shares on which the Company has a lien. No restrictions are imposed in the Articles of Association upon the Directors of the Company in respect of their power of management except such as are imposed upon them by the provisions of law.

MINIMUM SUBSCRIPTION

14. The minimum subscription upon which the Directors proceed to allotment and which in the opinion of the Directors must be raised out of the proceeds of this issue in order to provide for the matter referred to under Section 101 of the Indian Companies Act, including the working capital is 40,000 shares of the nominal value of B.G. Rs. 20 lacs.

THE PRAGA TOOLS CORPORATION LIMITED, PROSPECTUS—Contd.

PLACING OF SHARES AND DEBENTURES

15. The Articles of Association provide that the Company may at any time pay a commission for subscribing or agreeing to subscribe (whether absolutely or conditionally) for any shares, debentures or debenture stock of the Company or procuring or agreeing to procure subscriptions (whether absolute or conditional) for any shares, debentures or debenture stock of the Company, but so that if the commission shall be paid or payable out of the capital the statutory conditions or requisitions shall be observed and complied with and the rate of commission shall not exceed 5 per cent of the price at which the shares are issued or 5 per cent of the nominal value of the debenture or debenture stock in each case subscribed or to be subscribed.

BROKERAGE

16. Brokerage at the rate Rs. 12 per each share will be paid by the Company to a recognised broker or firm of brokers on allotment made in respect of applications bearing the stamp of such broker or firm of brokers.

NO BENEFIT TO PROMOTERS

17. Except the remuneration and commission receivable by the Managing Agents, no other benefit has been or will be made by any of the Promoters for their services.

APPLICATION FOR SHARES

18. Applications for shares should be made on the form accompanying this Prospectus which may be obtained at the registered office of the Company and at the offices of the Company's bankers (at all their branches) and authorised brokers and sent in accordance with the directions contained therein with a remittance of the amount payable on application.

Where no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than the number applied for, the balance of the deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. Failure to pay any amounts due on shares allotted when due will render previous payments liable to forfeiture.

GENERAL

19. Attached to this Prospectus and forming part of it is a copy of the Memorandum of Association of the Company.

Receipt to be retained by Applicant and to be exchanged for Share Certificate.

Editorial Notes

Central Functions

The Government of India, according to Dr. Ambedkar in his reply to Mr. N. M. Joshi in last week's debate, has taken upon itself the responsibilities which it did never before, of fixing the conditions on which a labourer may be employed. According to Dr. Ambedkar, this is altogether a new principle which had no place in labour legislation so far and I am sure that this principle which has found its place in wartime legislation will be given a permanent place in the labour legislation of this country. The second principle mentioned by Dr. Ambedkar is that of compulsory conciliation. It was claimed that Rule 81 of the Defence of India Rules leading to summary intervention in trade disputes has been a matter of the greatest benefit to labour. The right to strike is necessarily abridged by the Rule, but Labour has gained thereby. But the argument that Rule 81 should be invoked when a trade union sent notice of a strike to the employer was rejected. Whether grievances were genuine has to be ascertained before compulsory arbitration is applied. Mr. Joshi's plea in favour of extending the scope of Rule 81 was turned down.

The wartime expansion of the Labour Department, a separate and independent department at present, has made it more powerful than the provincial labour departments. The two principles could be really adopted to ensure uniformity in British India while the Tripartite Conference could possibly be used to bring the States into line. The importance of the Central Government, as the authority most concerned with labour, springs from its own position as employer, and secondly is based on the new Ordinances like the war injuries ordinance which are not merely extensions of previous legislation. Since the mines are not under Provincial control, and most important measures relating to payment of wages and small factories have been adopted only by the Central Legislature after Provincial Autonomy was introduced, the consideration that Labour should be wholly a central subject requires mention. The Tripartite Conference but the provincial maintained, by the Central Government while exemption from the provision of the Factories Act in wartime, for any reason, has been given only by the Central Government. The improvement in industrial relations in wartime may be sufficient reason for the retention of the Tripartite Conference but the Provincial governments, in regard to trade unions, inspection of factories and conciliation, should not enjoy the same measure of freedom as in the past. The record of en-

quiries and intervention notwithstanding, uniformity has to be imposed (not secured by other means) and the efforts made in regard to technical training, industrial welfare, employment exchanges by the centre generally suggest that concentration of authority and function need not be limited to the war period.

Increased Sugarcane Supplies

The presumed increase in India's sugar production in 1942-43 receives support from the final memorandum on the sugarcane crop of 1943-44 issued lately. The last season was very good as company reports agree in describing but the present season, in spite of higher cane prices and the competition of gur manufactures, may not be greatly different. An increase of 14 percent in the area under cane and an increase of 12 percent in the estimated yield of raw sugar is cited in the memorandum which deals with 96 percent of the area under cane. Half the cane and sugar supplies come from the U.P. Progress of cane cultivation in the Punjab appears a striking feature, as Bihar has fallen back. The high yield in Bombay does not create a surplus for export, so that the increase in the U.P. and Bihar crop alone has relevance for the market. In the U.P. there was an increase of cane cultivation and the crop there was favoured by clear weather. The yield is recently estimated at 91 percent of the normal. In Bihar, too, there was an increase in the area under cane, and the crop is believed to be 97 percent of the decimal average in regard to outturn. The Bengal figures are belied by reports as to the difficulties of mills and the need for larger imports. The recovery in sugarcane cultivation and sugar production noted in

India since 1938-39 continued into 1943-44 as may be inferred from the increase noted in the forecast under Provinces and States along with favourable crop conditions. The estimated yield of 5,696,000 tons however does not apply to factories which take up only a part of the crop since sugarcane is required for chewing, cattle-feeding and gur manufacture. The fall in the average yield per acre is of less interest than the proportion reserved for the mills. Apprehension in regard to the future has been voiced by mills this season. There has been no special estimate as to the effect of supply on prices or of rationing on demand but the effects may be small. If refinery production has been small, the increase in production direct from cane has not been lost sight of by investors who show of late renewed faith in sugar shares especially in those of U.P. companies since it is known that 1,954,000 acres were planted on improved varieties and the average yield of 2,855 lbs. per acre was not far below the estimated All-India average of 1,102 lbs. per acre, and the five-year average in regard to outturn in the U.P. was surpassed by 20.5 percent in 1943-44. The effects of war on Indian sugar production have been mainly favourable, and the comparative decay of beet sugar production outside Europe has a long-term significance which must not be overlooked.

Deaths from Famine

A press note issued recently set out total deaths in 1943 and indicated the divergence from normal arising from epidemics etc. The increase of 58 per cent in recorded deaths in Bengal led to an increase by 688,846 to over 1.87 million deaths. The Public Health Department

assisted by local boards compiled the statistics. If deaths due to the famine are well under a million, the value of relief operations begun in August is proved. Previous estimates are certainly challenged by the press note which gives separate figures as to the abnormal mortality from malaria, small-pox and cholera. The total deaths may even exceed the number of births but the decline in Bengal's population may be small. It is not likely that the returns during famine furnished were accurate, but the adequacy of labour for agriculture is not doubted. The decline in Bengal's working population may not be really large since the old and the very young may have died in larger numbers than those with greater powers of resistance.

If the press note strikes at the theory as to mortality from destitution caused by the premature death of the breadwinner, it marks also the completion of local enquiry as to famine deaths. Mr. Amery's estimate as to famine mortality derived from official sources in Bengal was questioned, but his estimate is now shown to be generous. If deaths in the city of Calcutta are included, the percentage variation as compared with the five-year normal cannot be over 60 per cent. The birth-rate this year may be influenced by debilitation rather than the good harvest and familiar conclusions drawn from Indian vital statistics may not be supported by experience this year. The figures published may indicate only a death rate of 31 per mile in Bengal where the normal death rate is as high as that in Roumania which reports the highest death rate among European countries. The normal death rate alone is sufficient cause for extension of medical facilities and prevention of famine. The five-year average rather than the late increase over normal appears a cause for anxiety and the most satisfactory feature of rehabilitation plans is the concern with public health and medical relief. Next year's figures (assuming that machinery and procedure alike are unchanged in the interval) would indicate the decisive swing backwards of the death rate. While a higher rate of natural increase may be ruled out by the change in age distribution and the sex ratio it is not impossible that in the years after the population of Bengal may grow and the inter-censal growth by 1951 may be as large as 20.3 per cent (the increase between 1931-41). While much has been said about the mortality little is said about the appearance of a positive check to numbers. The positive check was not unexpected by expert investigators of the 1931 census tables but the surprise has been provided only by the locale of the 1943 famine. Though the totals appearing in the press note may yield the conclusion that less than a quarter million perished of starvation, it has not been urged that all deaths due to famine are completely covered by the registration ordered.

Taxes on Profits

In his address to the Federation of Indian Employers last week, Lala Karamchand Thapar dwelt more on the burden of taxation than the question of industrial peace. He entered a plea for the introduction (only on an All-India basis) for a scheme of sickness insurance, and that on a contributory basis. That industry could not pay at present for various proposals advanced on behalf of workers was not the only point made in the speech. The Indian Chambers of Commerce in criticism

ing the Budget proposals pointed out that the yield of direct taxation has risen from Rs. 19 to Rs. 182 crores in five years. The post-war position of Indian industry is regarded as all-important and the employer referred only to the inescapable demands for renewals and replacements in view of increased wear and tear. Special treatment of undistributed profits by the Central Board of Revenue has been asked for. This is, of course, not a novel plea, and building up of undistributed profits may prevent the demand for additional working capital envisaged by Lala Karamchand. It is however difficult to believe that both working capital and fixed capital would have declined in value after the war. The assumption is contrary to the general belief that where block has been written down, and the margin between current liabilities and liquid assets is large, the demand for fresh capital may not arise at all. What may be said properly of sundry new entrants into Indian industry cannot apply to major well-established units. This repugnance to higher taxation is based on the resolution adopted by the other organisation at Delhi. Sir Badridas Goenka objected to a 20th century pattern of taxation being imposed on a country with a 19th century economic structure. Fresh taxation for reconstruction, too, was deprecated, but the argument used against import duties on raw materials and spares required for Indian industries could be turned into one in favour of excises or income-tax. Given the present scale of war expenditure and the limit to borrowing, the increases in Central taxation cannot be avoided. Whether industry would suffer from the shrinkage of Indian exports after the war and whether employment would be affected was left unexamined though the general belief that the transition will be long-drawn out and controls could be kept up for various purposes may be cited always to offset other conclusions. The employers' spokesman ignored the possibility of a lowering of wage rates after the war though the earliest inference today is that post-war demand for labour will be reduced and no legislation to stabilise wages at the wartime level has been attempted. The employer's main concern (to judge from Lala Karamchand's speech) is with profits. The quantum is reduced by new taxation but the trend of industrial earnings is far more favourable in India than the U.S.A. where war production was soaring last year. The probable growth of production and ergo of profits was left undiscussed because the draft of grievances in connection with coal, tariff and relaxed import control left no place for that.

The desirability of leaving appropriations to reserves from the scheme of taxation should, however, be conceded. As between industries and units with large reserves and those with reserves yet to be built up the burden is unequal. The distinction between unearned and earned incomes imposed for purposes of taxation may be extended usefully and a tax on profits in ratio to capital employed may be tried as a variant of the system of graduated income-tax. The total burden on organised industry on the basis of incomes and taxation has to be determined only by an expert enquiry, but the claims lately voiced on behalf of enterprise by Lala Karamchand were mentioned last year in connection with the maintenance of competitive power by Indian industry. The various estimates of the prospective

tax burden on corporate profits have not provoked what is called tax selling, and there is optimism in the spring to go only by post-budget market movements.

The Provinces which have raised the General Sales Tax to augment revenue are not unmindful of the anti-inflationary effects. Last year it was suggested by Mr. Halford Reddish that the Purchase Tax in Britain should be treated as far more important than income-tax because private expenditure would be curtailed and saving directly stimulated. The Soviet Union, of course, does not regulate consumption or foster saving by direct means because more than 50 per cent of the capital required for industry is provided directly by the State. The turnover tax in the Soviet Union is meant to impart elasticity to demand. Tax is reduced so as to lower the price and the turnover tax distinguished from planned profit goes to the State. I. Narodny in a recent book states that the tax is calculated as a percentage on the wholesale price and is automatically transferred to the State Budget when goods are delivered to the retail trade organisations. The State as trader deserves its profit in the form of the turnover tax. The monopoly of trade adequately explains the dominance of the turnover tax in the fiscal system. Departures in indirect taxation in India may not be at present justified by reference to the British purchase tax or the Russian turnover tax, but it is noteworthy that foreign experience is essentially in favour of straight doses of indirect taxation.

No Agreement

Mr. Hull's references to the State Department's interest in the closure of the Axis legations in Dublin followed the correspondence with the Prime Minister of Eire. The refusal of the U.S. request to sever diplomatic relations with Germany and Japan was not unexpected. Mr. de Valera recalled that the policy of

neutrality was endorsed by the Irish electorate in June last and made use of the partition as a talking point. The published correspondence refers to the request (made in February 1942 and turned down by Mr. de Valera). Why the request was revived in the same form need not be asked because the State Department emphasised the need for scrupulous secrecy in regard to Allied preparations for invasion. That Britain made no approach and left the U.S.A. to make the request may provoke some surprise in view of the continuance of trade between Britain and Eire in the war period, trade from which Eire has received real benefits. These benefits may not be withdrawn but the U.S. ban on oil supplies

and the cessation of wheat imports are freely predicted. The new Central Bank of Eire may find its sterling balances blocked after the enforcement of the transit restrictions. Power to exempt is reserved but Southern Ireland is detached for security reasons by the restrictions on transit. Financial regulations relaxed for film royalties may not be imposed in respect of remittances by Irish workers to the home country.

When Mr. de Valera amended the constitution of Eire in 1938 he left undefined the position of the Irish citizen as a British subject and he also left undefined the limits to external association. His lack of precision may explain the difficulties which have arisen. Eire's import trade is certain to shrink if the need for Irish

cattle and dairy products persists the export trade may not suffer, but Irish industry must be handicapped. The great brewing industry must suffer, but the loss will be shared by British shareholders. The more important conclusion as to Eire's absolute autarchy after the war must also be indicated. If tobacco, tea and oil are unobtainable for Ireland steps would be taken to develop local sources or substitutes and Irish agriculture may be more and more based on arable farming on the basis of small farms. Eire's budget deficit this year may be larger if imports are drastically reduced by outside intervention. There is little doubt that the economic policy pursued during the depression in the course of the trade war following the refusal of land annuities will be resurrect-

ed. The effectiveness of the oil or mineral sanction may not be doubted in view of Spain being forced to modify her non-belligerency but the opposition to Mr. de Valera has been quelled, and the only loophole for further negotiations is provided by the U.S. assurances as to non-interference. If an appeal to Dr. Hyde from President Roosevelt follows the refusal of Mr. Curtin to be a friend at court some turn of fortune may be awaited. The Prime Minister of Eire as her Foreign Minister may be induced to see the value of Argentina's recent example in modifying her neutrality and accept the absolute minimum for the removal of Axis diplomats and consuls. The same demand has not been made of any other neutral by the Allies but Ireland is part of the British Isles and was ruled until 1922 by a Viceroy and Chief Secretary responsible only to Parliament.

Trade of India

The resumption of normal international commercial intercourse after the war is bound to create stupendous problems for India. It is well known that owing to the unfriendly attitude of the Government Indian economy had not been strengthened by intelligent planning usually necessitated by wartime factors. Four years of war have failed to improve the agricultural potential of India and the hostile attitude shown by the Government to the organisation of key industries has left Indian economy unbalanced and weak as before and absolutely powerless to meet India's post-war aspirations. The internal trade, the value of which has not yet been satisfactorily estimated, has been directed mostly to military requirements while the faulty price control policy of the Government introduced speculation and profiteering. Production could not come up to required levels owing to controls, transport bottleneck, scarcity of labour, etc. Foreign trade has been allowed to grow only according to the convenience of the Allied Powers. The U.K.C.C., for example, has operated against India's present and future interests. While several countries would emerge after this war strong and powerful economically Indian economy is bound to remain excessively agricultural, and her trade, internal and foreign, would reveal the unfilled gaps in her industrial structure. Every one should learn what is wrong with Indian trade and why. To those who wish to have a factual account the nature and organisation of Indian foreign trade and the wartime trends Prof. Palekar's book on "Trade of India" (Vincent Chambers, Vincent Road, Dadar (G.I.P.), Bombay. Rs. 6-8) should be a useful guide. The author has presented the recent trends of India's foreign trade against the background of historical growth. Students of commerce would find all relevant information regarding the intermediaries in Indian trade, technique of trade, mercantile houses, the trade policies, trade agreements etc. The book contains a good account of India's exports and imports and coastal and transfrontier trades, and it is particularly useful to students as the author has presented controversies without a bias. Though a few statistical errors have crept in here and there the author has succeeded in presenting to the student and the laymen all details necessary to understand the discussions on the future of India's foreign trade development. However, in a book entitled "Trade of India" one expected the author to deal with the present day problems of internal trade as well. The value of the

work would have been enhanced if greater attention had been paid to internal trade which is several times greater than the foreign trade in value and volume and which is of paramount national importance.

Help to Bengal

In the budget debate the Finance Member dealt rather casually with the claim made for a subvention to Bengal. The general impression that the grant made in two years is inadequate is not removed by analysis of the nature and degree of inflation. Sir Henry Richardson and others raised the question of assistance to Bengal. An assurance of sympathy for difficulties arising out of the war was given. The Finance Member stated that "Bengal more than any other Province has suffered from the disadvantages of war just as the Centre has, and for that reason, in view of her own financial difficulties I can appreciate that the Bengal Government are faced with problems of a peculiarly difficult kind. At the same time, we should not exaggerate the extent of the harm which has so far been done to the finances of the Province. It is true that Bengal at the moment is passing through a very bad time; but Bengal's financial position is not so desperate as has been suggested. At one stage, the estimated deficits were Rs. 11.2 crores in the Revised Estimates for this year and Rs. 8.46 crores in the budget of the next year. Since then, there have been certain additions to the revenue. Bengal is likely to get more by way of income-tax from the distributable pool than they estimated at that time—Rs. 110 lakhs in each year—and the Central Government had decided to assist to the extent indicated in the budget speech".

In reply to the question of Dr. P. N. Banerjee as to new taxation in Bengal, the Finance Member declared that "he had no sympathy for any Finance Minister who will not face up to his obligations and levy taxation when he faces deficits. The Finance Member, however, outlined the kind of help and the probable increase in the same speech as he said, "We now estimate that the deficits in the current and next year will be more likely about Rs. 7 crores and Rs. 42/3 or a total deficit of less than Rs. 12 crores, and as I have said, the amounts indicated in my speech by no means indicate the full share of Central assistance to Bengal. In addition, we have provided for outright grants totalling Rs. 4½ crores in the current year and Rs. 3½ crores in the budget year by way of Central assistance on account of civil defence and camouflage, additional police, necessitated by war conditions, civic guards, additional staff for Civil duties, grant to the Red Cross for tinned milk and grants for the Grow-More-Food Campaign. All these grants to Bengal have to be taken into account". He argued that a sense of financial responsibility must be maintained. He pointed out that by the Niemeyer settlement, Bengal was relieved of her debt and at the end of two very trying years she is, as far as can be seen at present, unlikely to be in debt to a greater extent than something of the order of Rs. 12-14 crores or so. At the present moment revenue receipts are of the order of Rs. 22 crores. He concluded by saying that a government whose debt is less than a year's revenue, cannot be said to be hopelessly in debt. He added "Bengal's total debt even by the end of next year will be quite modest in

relation to her revenue and the service of that debt will not be an intolerable burden on the Provinces. In these circumstances, we do feel that the assistance which we have offered to Bengal, having regard to our own difficulties, cannot be said to be inadequate."

Labour After The War

While the I.L.O. is dormant and denied a place in regard to post-war relief plans generally the labour movement is not idle. Sir Walter Citrine in his half-yearly report to the T.U.C. has asked for support to the plan of rebuilding the international movement by the conference method supplemented by other methods. There is a proposal to hold a conference for two weeks in June, and 71 organisations in 31 countries have been invited to attend. The contribution of the working class to post-war reconstruction cannot be large as compared with that of governments, but the working class has to define its peace aims for others to under-

stand and execute. The invitation given to all bonafide and representative organisations may be rejected in some cases, but the conference has to take place though neutral delegates will not be called upon to deal with the question of furtherance of war effort. Gordon Schafer describing the T.U.C. plans said that colonial labour trade unions and the Latin American confederation of labour were being requested to send delegates. What part India would play with two organisations or what part the U.S.A. (where Labour still lacks strength in national politics) with two major organisations could do about internationalising the movement seems difficult to prescribe. Since the Labour party follows the T.U.C. only generally the new effort may be meant to increase T.U.C. influence at home rather than to nourish contacts with the Russian movement. Variations as between country and country in regard to labour welfare should survive the war but the new approach is made towards lift-

and 1,70,000 Ordinary Shares of Rs. 10 each.

PRESENT ISSUE Rs. 7,50,000
20,000 Preference Shares of Rs. 10 each, and
55,000 Ordinary Shares of Rs. 10 each.

Payable as follows:

On Application Rs. 5 per share.
On Allotment Rs. 5 per share.

The Directors and their friends and the Vendor will take 5000 Preference Shares of Rs. 10/- each and 21,000 Ordinary Shares of Rs. 10/- each and the balance Preference Shares and Ordinary Shares are available for public subscription.

RIGHTS OF SHARES

The Preference Shares confer the right to a fixed cumulative preferential dividend of six per cent per annum, free of Travancore Income Tax, and in the event of winding up, liquidation or amalgamation with any other company to preferential repayment of paid up capital and all arrears of dividend, if any, whether declared or not, but not to participation in further profits or assets of the Company. On a show of hands every shareholder present in person shall have one vote; and on a poll every shareholder present in person or by proxy shall have one vote for every share held by him. No restrictions have been imposed upon the members in respect of the right to transfer shares, except such as are provided by Table A of the First Schedule to the Travancore Companies Act.

OBJECTS

The Company has been formed for the purposes generally set forth in the Memorandum of Association (a true copy of which with the names of the signatories is annexed hereto and forms part of this Prospectus) and in particular to acquire the lands, buildings, machinery, equipment and accessories, stock-in-trade, interest in outstanding contracts, and Goodwill of the Travancore Wood Works, Mundakayam, a going concern at present engaged in the business of manufacturing Wood and Metal articles of various descriptions.

TRAVANCORE WOOD WORKS

1. *Situation of the Factory.*—The Factory is established at Mundakayam on the banks of the Manimala River. There is a Government motor road running past the Factory. The South Indian Railway Out-Agency at Kottayam is only 35 miles away from Mundakayam. Cheap water transport is available to the ports of Alleppey and Cochin and to the Railway terminus at Ernakulam. This concern was started in June 1938 for large scale manufacture with the aid of machinery, of household and office furniture, tea chests, packing cases, panellings, art frames, slate frames, sign boards, indeed articles of every description in wood. The products of the Factory range from bed-room and drawing-room suits of exquisite workmanship and exclusive design to units of standard "Utility" furniture such as would come within meagre resources. The Factory has further specialised in camp furniture and fancy household articles like lamp-stands, fruit bowls, trays, &c.

There are post and telegraph offices at Mundakayam and the Factory is on the Indian Trunk Telephone. The Factory buildings and quarters are now situated on premises covering about 5 acres of land. There is every facility for extension of the Factory. Buildings and premises. Labour, intelligent, efficient, contented and dependable, is available in large numbers throughout the year and at very reasonable wage levels. By far the greatest advantage of the situation of the Factory is its proximity to the most notable sources of timber supply in the country. The districts surrounding Mundakayam are famous for the surprising variety and abundance of timber. Raw material for the Factory is thus available in unlimited quantities at very reasonable prices. In this respect few places are better served than Mundakayam.

2. *Description of the Factory and Equipments.*—The Factory has a floor area of 30000 sq. ft., laid out under expert direction with a view to secure the maximum efficiency of working. It has electric lights, fans and all modern amenities for staff and labour. The plant and machinery have been described as an installation unique in the whole of India. The mass production plants of the Factory have cut down the cost of production considerably and this enables marketing of the products at keenly competitive prices.

In all, there are about a thousand skilled men employed in the different departments of the Factory, among whom are some of the most talented and celebrated cabinet makers and carpenters of Kerala.

Judicious employment of machinery at the different stages of production increases efficiency and ensures accurate production.

The Factory is particularly well-equipped for manufacture of textile and jute mills requirements such as bobbins, pen-tree rollers, &c., for which those industries were till recently entirely depending on foreign countries. A comprehensive library of technical books on wood and metal industries is by no means a small asset of the Factory.

3. *War Production.*—The products of the Factory found from the very beginning excellent market all over India. They were steadily increasing in popularity and the Factory had come to be the foremost production centre for articles in its lines when hostilities broke out in 1939. Almost immediately, the Factory was switched on to war production. Since then, it has been mostly devoted to the production on very extensive scale to the various wood and metal stores required for the army in India and overseas, namely, mallets, helves, skids, bomb crates, packing cases, camp furniture, &c. The Factory has been expanded and additional machinery installed to cope with new demands. The manufacture of metal articles such as tools, and implements, brass and iron screws is a new feature which is decidedly capable of very great expansion and will doubtless be a part with the other departments of the Factory.

The Factory, is however, continuing the manufacture of packing cases, crates, chests, &c., for the planting and industrial trades. This is a line which could be developed to any extent after the war. Mention may also be made of a standing arrangement with a tea manufacturing concern under which packing cases to the value of nearly a lakh of rupees is being supplied per annum. The indication of profit in this connection is over Rs. 15,000/-.

It is proposed to take up the manufacture of ply-wood in the near future.

APPENDIX

A few extracts from the Visitors' Diary

"....It is a high class Swadeshi enterprise in every sense..... the factory accords an example of the proper type of mass production."

Sachivottama Sir C. P. Ramaswami Iyer, K.C.S.I., K.C.I.E., LL.D.,
Dewan of Travancore.

C. P. Skrine,
Resident for the Madras States.

"An enterprising attempt to provide really good furniture at a cheap price, that is sure to succeed....."

S. Jepson,
Editor, Times of India, Illustrated Weekly.

"Mr. K. V. Thomas, the Managing Proprietor, has a head for industrial planning..... He has done a great pioneering work....."

Dr. P. J. Thomas,
University Professor of Economics, Madras.

".....I was trained in my youth as a wood worker and I have never seen such a collection of very ingeniously constructed wood working machines."

W. Fybe,
Madras Industries Service.

"I must heartily congratulate Mr. Thomas on the excellent layout of his factory, on the neatness and system that are in evidence throughout the plant....."

S. Kamesam,
Formerly Director of Development, Travancore.

"My visit to Mr. Thomas' Travancore Wood Works, Mundakayam, on 20th November, 1942 has shown me that this firm has worked hard and cleverly to establish a very special line of war supplies namely mallet and maul heads. They are excellently served with a choice of local timber which must be unique in India, so that they have a variety of hard woods available. The setting up of machinery has shown great ingenuity and the power unit burning charcoal is one of the cleanest and most efficient I have seen in India....."

Dr. R. M. Gowri,
Timber Adviser to M. G. O., G. H. O., New Delhi.

VALUATION

At the request of the promoters of the Company, the Factory buildings and fixtures of the Travancore Wood Works have been inspected and a valuation report made by P. M. Mani, Esq., B.E. (Madras), the well known Constructional Engineer and business man who has been associated with many of the major construction works on the West Coast, such as the Trivandrum Water Works, Pallivasal Hydro-Electric Works, Alwaye Aluminium Factory, etc., and who is an expert in the line. The following extracts from Mr. Mani's Valuation Report will be read with interest:—

"From my long experience of business enterprise in the District and particularly of the building trades and other industrial ventures, I am glad to be able to state that Mr. K. V. Thomas, the Managing Proprietor, has done very substantial work with sound and intelligent adaptations of local materials using the ingenious craftsmen of the coast. The valuations are

not based on the present high prices. My valuation in detail may be listed as follows:—

	Rs.
1. The site of 5 acres with improvement of granite retaining walls, roads, masonry drains, etc.	25,000
2. Buildings and Fixtures:—	
(a) Main Factory Building	50,000
(b) Metal working and other works buildings	21,000
(c) Office and School	13,500
(d) Managing Proprietor's Bungalow	13,000
(e) Staff Quarters	12,500
(f) Fixtures of Shafts, pulleys, etc., and spares	47,000
3. Machinery:—	
(a) 4 Engines and Dynamo	23,000
(b) Lathes, saws, drillers, moulders, etc.	60,000
4. Furniture and equipments	10,000
Total Rs.	2,75,000

"The stock-in-trade has not been valued by me but the valuation at cost as certified by the Managing Proprietor for furnishing to the Auditor and certified by him at the time required, has been suggested to be added on.

The experience gained by Mr. Thomas at his best age for work and study, especially as the sole proprietor who built it up in over five years, coupled with the experience and the loyalty of a large number of intelligent and hardworking men who take a pride in their craftsmanship, should be taken as the guarantee for the bright prospects of this large scale pioneer industry. The goodwill of the concern adds considerably to the above material valuation. I have no manner of doubt that the business, with the vision of and under the sole management of Mr. Thomas, paced on the constitutional basis of a Joint-Stock Company should yield steadier and more lasting results, even after the present war boom is over."

The stock of ironware, timber and the stock-in-trade and goodwill have been valued as on 1st February, 1944, as aforesaid as follows:—

	Rs.
Stock of ironware	55,000
Stock of timber in various sizes	35,000
Stock-in-trade	1,47,000
Rolling Stock (Lorry and Cars)	10,500
Goodwill	50,000
Total Rs.	2,97,500

The total valuation of the entire assets of the Travancore Wood Works (that would be taken over by the company) will accordingly be Rs. 5,72,500.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDING WITH DECEMBER 1941.

For a Capital of Rs. 1,27,628-0-11, the Profit was Rs. 16,620-14-4, which works out at 13 per cent.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDING WITH DECEMBER 1942.

The Profit for the year was Rs. 45,076-9-3, and the Capital was Rs. 2,26,584-7-7, which works out at about 20 per cent.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDING WITH DECEMBER 1943.

	Rs.	A. P.		Rs.	A. P.
Opening Stock	50,000	0 0	Sales	3,48,536	9 5

			Sundry Debtors		
			(Considered		
			Good)	1,699	11 9
			Cash with Banks	6,240	7 3
Total	5,71,929	15 0	Total	5,71,929	15 0

The Profit of Rs. 98,272-0-5, works out to about 36 per cent on the Capital of Rs. 2,71,661-0-10.

PROSPECTS

At the moment the turnover per mensem is about Rs. 2,00,000 of which 7½% is clear net profit. The yearly net profits accordingly works out to Rs. 1,80,000. In the circumstances the Company can easily pay a dividend of more than 25 per cent on the ordinary share capital, after providing for all Managing Agency commission, remuneration, preference capital dividend, etc.

With the addition of further capital investment, the turnover can easily be raised to 3 to 4 lakhs of rupees, with a corresponding increase in the yearly output and net profit. Therefore a dividend of 30 to 40 per cent can be very well anticipated on a very conservative estimate.

Previous to the war, the factory was making a profit of 15 per cent to 20 per cent on civil production. There are pending orders to the value of about 6 lakhs of rupees which are to be executed in the next two months. The net profit on these will be about Rs. 50,000 which will enable the Company in around two or three months to give an interim dividend of about 10 per cent.

VENDOR AND PURCHASE PRICE

Under agreement, dated 15th February, 1944, made between Mr. K. V. Thomas and Mr. Joseph Koottiparambil on behalf of the Company, Mr. K. V. Thomas has agreed to sell to the Company, the Factory and buildings with all the machinery and other fixtures and all stock of iron and timber and the stock-in-trade and the goodwill of the business of the Travancore Wood Works, as on and from 1st February, 1944 for a total consideration of Rs. 5,72,500, payable as follows:—

	Rs.
In Cash	3,22,500
In Preference Shares	50,000
In Ordinary Shares	2,00,000
Total	5,72,500

PRELIMINARY EXPENSES

The preliminary expenses including brokerage and commission are estimated at Rs. 30,000 which will be met by the Company. No promotion money is payable to anyone.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors may proceed to allotment is Rs. 5,00,000 which is calculated as follows:—

	Rs.
Purchase price payable in cash	3,22,500
Estimated Preliminary Expenses	10,000
Brokerage and Commission	20,000
Estimated working capital	1,47,500
Total	5,00,000

DIRECTORS' QUALIFICATION AND REMUNERATION

The qualification of a Director other than the Ex-officio Director shall be the holding in his own right of shares, whether preference or ordinary, of the aggregate nominal value of not less than Rs. 1,000. Every Director shall be entitled to a sitting fee of Rs. 50 for every meeting of the Board or Committee of the Board attended by him in addition to the reasonable travelling and other expenses incurred by him for such attendance or in connection with the work of the Company.

EX-OFFICIO DIRECTOR

The Managing Agents shall be entitled to appoint any one person, whether holding qualification shares or not as Ex-officio Director who shall have the same powers and be entitled to the

same remuneration as other Directors, but shall not be liable to retirement by rotation or to removal by an extraordinary resolution of the Company.

DIRECTORS' INTERESTS

As aforesaid, Mr. K. V. Thomas is the sole Proprietor of the Travancore Wood Works, which is to be acquired by the Company. He and Mr. Joseph Koottiparambil are also Directors of the Managing Agency Company. Messrs. M. C. Mathew and A. V. George are Directors of the Investment Corporation Ltd., who are the underwriters. No other Director is interested in the promotion of or in the properties proposed to be acquired by the Company except to the extent of their holding of shares in the Company.

MANAGEMENT

Subject to the control and supervision of the Directors, the general management of the affairs of the Company will be in the hands of Messrs. Thomas and Joseph Ltd., who will act as Managing Agents for a period of ten years. The Company will enter into a Managing Agency Agreement with them in terms of the draft Agreement, which for purpose of identification has been subscribed by Messrs. V. J. Joseph and Markos, Lawyers, Kottayam.

The remuneration of the Managing Agents shall be:—

- From the date of incorporation of the Company, an office allowance of Rs. 1,000 per mensem payable monthly.
- Five per cent of the net profits of the Company.

The above mentioned office allowance of Rs. 1,000 per mensem payable to the Managing Agents shall be exclusive of all salaries, wages of the staff, workmen or other employees engaged for the Company's business and all remuneration and wages which shall be payable to Solicitors, Accountants, Auditors, Bankers, Engineers, Experts, Commission Agents, Dealers, Brokers, or Official Servants or workmen who may be employed in by the Managing Agents as authorised by the Directors and on behalf of the Company.

Net Profits shall have the meaning given to it in Section 106(3) of the Travancore Companies Act.

UNDERWRITING AND BROKERAGE

The whole issue has been underwritten by the Investment Corporation Ltd., Kottayam. The Directors are of the opinion that the resources of the underwriters are sufficient to discharge their underwriting obligations.

PARTICULARS OF AGREEMENT

- Agreements, dated 15th February, 1944, between Mr. K. V. Thomas of the one part and Mr. Joseph Koottiparambil on behalf of the Company (referred to above).
- Draft Managing Agency Agreement referred to above.
- Underwriting Agreement, dated 1st March, 1944 by the Investment Corporation Limited.

INSPECTION OF DOCUMENTS

Originals or true copies of the said Agreements, copies of the Memorandum and Articles of Association of the Company defining the constitution thereof, the Travancore Companies Act IX of 114 with Table A attached, are available for inspection at the Registered Office of the Company at Mundakayam and at the office of the Travancore Forward Bank, Ltd., Oppanagar Street, Coimbatore. The Company has not established any place of business in British India.

GENERAL

Applications for shares are to be made in the Form attached hereto or in the Forms that may be cut out of the advertisements relating to this issue, and forwarded with a remittance of the amount payable on application, to any of the office of the Company's Bankers. The Central Bank of India, Ltd., Alleppey, and the Travancore Forward Bank, Ltd., Kottayam, Trivandrum, Alleppey, Ernakulam, Coimbatore and Tirupur. The Mundakayam Bank, Mundakayam, to the Company's brokers, to the Registered Office of the Company and to the Managing Agents.

The Directors reserve to themselves the right to reject any application without assigning reasons therefor. Where no allotment is made the deposit will be returned in full; and where the number of shares allotted is less than the number of shares applied for, the surplus amount paid on application will be credited towards the amount payable on allotment, and any further surplus remaining thereafter will be refunded to the applicant from the Registered Office of the Company.

Copies of the Prospectus and application form can be had from the Registered Office of the Company, from any of the said branches of the Company's Bankers and from the office of the Managing Agents.

Directors.

Dated the 17th day of March, 1944.

ing the trade unions in Occupied Europe from their humiliating subjection. The weakness of labour is reflected in the interchange of labour by order but the degree of mobility in evidence during the war is of interest to those who plan for orderly development, common aims and common aspirations beyond the peace are obvious but industrialisation in the East has created a problem for European labour as well as capital. The enquiry into working and living conditions in India undertaken by the I.L.O. revealed the weakness of trade unions as much as the lack direction for uniformity. If the international conference anxious to uphold the 40-hour week or the transport workers' convention after the war, lays down conditions that the effect on employment etc should not be great. World textile and other conferences in the past duly revealed both the differences and the need for upgrading. Outside the field of shipping, there is no real demand for uniformity, but the trade unionists who want to meet after the I.L.O.'s meeting in Philadelphia intend to define attitude to peace and reconstruction as well as the future of trade unionism. Demobilisation of trade unionists may even bring fresh responsibilities to the movement but the exact scope for trade unions' co-operation has not been indicated. Uniformity is not within reach, but minima are possible. If reconversion of war industry in the U.S.A. for any reason precedes that in Britain, the effects on trade unionists may not be inconsiderable especially if they go back to export industries. Present desires may be linked to potential anxiety but the new plan to get Colonial labour's views may be of great value for the gaps in the African colonies have been large, and in the event of reconquest, the unions in Asiatic colonies may have to be set going by outside assistance only.

Prosperity Budget for the Punjab

That the war has not been an unmixed evil is clearly brought out by the trend of provincial finances during the past three years. The upward swing of prices and the comparative economic prosperity of certain sections of the agricultural population, who form the main block of taxpayers feeding the revenues of the provincial governments, have added strength to provincial finances. The sources of revenue have increased, deficits could be averted and precautionary funds for the possible post-war depression could be built up. The budget estimates for the Punjab for the year 1944-45 reveal that the province is forging ahead under the financial stewardship of Sir Manohar Lal, the Finance Minister for the Punjab. The growing strength of Punjab's finances is shown in the table below:—

	1942-43 Actual	1943-44 Budget	Revised	1944-45 Budget
Revenue	18.45	15.19	20.04	19.64
Expenditure	15.11	14.69	17.25	15.78
Surplus	1.34	50	2.79	3.86

The anticipated surplus of Rs. 386 lakhs is greatly ahead of the revised surplus of Rs. 279 lakhs for 1943-44. Unprecedented prosperity in the Punjab agriculture partly explains the difference between the budgeted surplus of Rs. 50 lakhs and the re-

vised surplus of Rs. 279 lakhs for 1943-44. Owing to higher prices land revenue has swelled up to unexpected levels and the yield from registration fees, forests, etc., had also come up very well. Sale of undeveloped lands and the town sites in the colonies was effected at favourable prices and the temporary cultivation of leased lands had yielded good revenue. Receipts from the sale of proprietary rights to tenants have also yielded satisfactory results. The productivity of the general sales tax and the urban immovable property tax has been excellent. The Haveli Project continued to add its quota to provincial exchequer while the share of the Punjab from the income-tax pool has grown to an unexpected degree. Forces governing agricultural production have proved excellent and this combination of favourable factors has falsified the doubts and fears reflected in the budget estimates of 1943-44. But conditions may not remain as rosy as they were before. Unstable conditions and uncertain factors still govern the sources of revenue and the avenues of expenditure. Hence the estimates for 1944-45 are rightly based on a modest basis.

The Punjab continues to enjoy control over adequate resources to plan for provincial development. The Special Development Fund created in 1937-38 with a sum of Rs. 55 lakhs now stands at Rs. 158 lakhs while the Peasants' Welfare Fund created in 1941-42 with Rs. 30 lakhs now makes an aggregate of Rs. 150 lakhs. Beneficent departments like Education, Medical, Public Health, Co-operation and Industries have been allotted Rs. 45 lakhs. The repayment of Rs. 10 crores towards the unconsolidated debt has resulted in a fall of Rs. 35 lakhs under interest. The Famine Fund has been restored to its full size of Rs. 20 lakhs, and the early establishment of two cotton mills is promised. No fresh taxation is resorted to just to do something by way of anti-inflationary

drive. Sir Manohar Lal's budget for 1944-45 marks another year of growing prosperity and greater preparation for the problems of peace.

"Though not entirely a stranger to this Legislature, I have till lately served India as a soldier. As a soldier, in the positions which I have held during this war, I know better perhaps than anyone what the United Nations owe to India for our success in the struggle against Nazism and Fascism and the barbarous ambitions of Japan. I shall do my best to see that the debt is acknowledged and paid, not only with tributes of words but with practical aid. I will also try to pay my personal debt to the Indian soldier for his gallant and enduring service by doing my best to further the welfare of the Indian peoples of whom the Indian soldier is the fitting representative. Though the soldier stands in the limelight, it is not only to the soldier that the United Nations owe gratitude; the Indian worker also, and many others in India, have made a very great and vital contribution to the war effort".

The
BOMBAY MUTUAL

LIFE ASSURANCE SOCIETY LTD

THE OLDEST LIFE OFFICE IN INDIA

Machine Tools for India

Notable industrial developments in Hyderabad admittedly must embrace the formation of a company for the manufacture of machine tools. In the prospectus of Praga Tools Corporation, Limited, reference is made to the constant demand in India for tools and instruments, the difficulty of imports and the official support promised as regards imports of plant. Foreign assistance now, and after the war, is available to the company which will start with a working capital of Rs. 15 lakhs out of the proposed issue of Rs. 50 lakhs. The manufacturing programme is comprehensive. Both hand and machine tools as well as machinery parts required by a variety of consumers are to be manufactured by the new company which calls for Rs. 35 lakhs from the public, at present, the balance having been secured by the promoters. The brilliant prospects are confirmed by a note as to raw materials as well as the production programme. Exemption from income-tax and E.P.T. is described as one of the special advantages. It is calculated that dividends would be paid on the Rs. 50 shares from the inception of the company.

The prospect of further industrialisation of India cannot be ignored in assessing the future for Praga Tools. To the Board contains many well-known names like that of Lala Desraj Narang and Mr. Badrul Islam, and the strong infusion of local interest is noteworthy. Since Hyderabad industrial concerns have acquired real esteem among Bombay investors already full confidence as to the success of the new issue is warranted. The remarkable success of existing manufacturers, and the steady expansion by order, afford an indication of the success awaiting a new company embarking on the manufacture of tools and instruments in India. It is certainly known that the plans of the promoters excited great attention earlier this year, and the appearance of the prospectus last week-end was the climax of arrangements perfected by the promoters. It is noteworthy that in Hyderabad the specialised machine tool (as distinguished from the composite engineering concern peculiar to the ports) has been launched because it is believed that the demand in the State would be large enough in the future to sustain the operations of the tool manufacturer.

A New Bank

The appearance of the prospectus of a new, large bank (the list opens on March 27) may be treated as proof of the opportunities still available to Indian joint-stock banks. The Hindusthan Mercantile Bank, Ltd., has a directorate of seasoned businessmen representative of many cities and interests. It is understood that the greater part of the capital has been secured for the flotation associated with the Jaipuria family—one of the most famous names in Calcutta's business community. Attention may also be drawn to the singular simplicity of the new issue (in ordinary shares only) and the retention of unpaid liability as a reserve for future use. The important business connections and the high standing of the directors convey an assurance as to real, early success in the field of banking.

The prospects on the basis of 1943 experience must be still regarded as exceptionally good for Indian banks while the general expansion of home trade and industry favours the financial institutions

which the Hindusthan Mercantile Bank would be a notable addition by any test. The important advantages held by Calcutta relation to the net amount of new investment at all times can be duly cited in favour of the addition to well-planned, all-run banks. The confidence of the board and their friends (which take up three-fourths of the capital) is perhaps the most striking feature of the new issue. In view of new bank shares quoting a premium and the unsatisfied demand for safe investments at present the success of the issue is a foregone conclusion. There is no need to outline the degree of security provided for the shareholder or the assured yield on bank shares in regard to what may be described as a solid, conservative institution, founded in the pioneering tradition. The merits of the new issue can be summed up without reference to recent examples, and local investors should, in any case, be ready to grasp the opportunity now available.

Travancore Wood and Metal Works

Conversion of a well-established business producing both wooden and metal articles such as furniture and tools into a public company is followed by the issue of both ordinary and preference shares for subscription. The Travancore Wood and Metal Works has a factory at Munda-kayam (well served by transport facilities) and its products have found favour all over India. Visitors have pronounced favourably on the furniture and the machinery used for turning it out, and the company is well protected in regard to materials and markets at present. For the future the most important factor is the supply of timber from the vicinity and the prospectus is informative as to that and the new lines of production. The present issue of Rs. 7½ lakhs is meant for taking over the factory and all its interests. Estimate of profit as to a contract for packing cases is furnished, but the most promising line, plywood is apparently re-

served for future. The planting groups interested in the company are likely to furnish great support. The margin of profit on furniture for a pioneer enterprise must be substantial. It was over 10 per cent in 1941 and in the next year was about 20 per cent. A note as to valuation of premises, stocks, etc., indicates that the goodwill item is small. Over Rs. 5 lakhs is given as value of assets share in the balance-sheet and the progressive increase in profits conveys an assurance as to prospects. Better prospects based on the order-book are likely to be reflected in the profit and loss account, and reference is thus made to the possibility of an interim dividend of 10 per cent in this case. The main advantages held by the new company are clearly indicated in the prospectus and the continuity of management is ensured by a managing agency agreement. Details given in the published prospectus afford guidance as to the

YEARS OF RESEARCH

IN THE PROGRESS OF TEXTILES

ARROWTEX

Quality fabrics owe their lustre, smoothness and charm to their superfine finish, and after considerable scientific research, a thin Boiling Sarch, especially suitable for Sizing and Finishing, has been evolved. It is of considerable advantage to the Textile Industry, as it replaces Maize, Farina and Dextrine.

Mr. Minoo Masani, the well-known author of "Our India", has brought out a little booklet entitled "Socialism Reconsidered". The title of the book and the reputation of the author alike demand careful consideration of its contents, though one can also guess to a nicety, the gist of his arguments. Mr. Masani is not one when he asks for a reconsideration of the established tenets of the socialist creed. Nor can one regard all the developments of recent years as not calling for a fresh scrutiny of the bases of one's social faith. Socialism, which is really as old as civilisation, has both an emotional and an intellectual side. The intellectual side is only a recent development. While men of fine sensibilities have yearned through the ages for economic equality, Marx rescued socialism from the stigma of lumpy sentimentality by presenting it as a logical development of historical forces. And his historical dialectic was supplemented by a plan of action intended to give history the shove. While Marxism, considered as the rational basis of socialism, is itself a late development, the actual try out of his plan of action is even more recent. The practical experiment with communism has not been carried out in ideal laboratory conditions. With Russia, the compulsions of a troubled world of international affairs have necessarily weighed far more than the preferences of communist ideology. At home, guns, not butter, had to be her primary production. Abroad, she had to flirt in alternation with all her political enemies, and she never had friends. Russia's record and experiences may be such as to make socialists pause and reflect. But it would hardly be reconsideration, if its scope and extent are more than the data can be held to warrant.

Mr. Masani, I am afraid, sets no such limits. His book is divided into two parts, the first dealing with the crimes of Stalin and Soviet Russia's feet of clay, Stakhanovism and the like, and the other with the suitability of the Gandhian cult as a substitute for that part of Marxism which, according to him, experience has shown to be unsound. Mr. Masani is in regard to socialism almost like the ardent young lover who finds his love has false teeth, false hair and an altogether made up physique. He looks with fierce scorn on the treacherous allurements!

But the question is not whether Stalin or his Russia has lived up to Socialist standards, but whether their crimes and lapses point to something inherently unsound in socialist theories and doctrines. Till Stalin came forth as the saviour of the world from the Nazi menace, he had few admirers outside Russia and perhaps none at home. If Soviet Russia had to

encourage piece work or if it had, not only to wink at, but even glorify inequalities of income up to a point, the reason may be found in one or more of a hundred circumstances of no assured permanence. Stalin's tepid devotion to socialism or the stark necessities of an impending world war may with equal likelihood be the real cause of the shortcomings of socialism in Russia. In which case, what is wrong with the socialist faith may well be its under-estimation of the time factor involved in the transformation of human nature rather than an oversight of the ugly potentialities of force or of the selfish instincts of the working classes. Those who wake up to the charms of the Gandhian cult are certainly at liberty to yield to them and even justify their leanings to themselves and to others by providing as rational a basis as they can. That liberty cannot be denied to some, merely because of their early socialist professions or affiliations. It seems to me somewhat beside the point for Mr. Masani to set out the crimes of Stalin and provide a weak duplicate of some of Trotsky's writings. You cannot cover your retreat from communism by aiming Parthian shots at Stalin and Soviet Russia.

Mr. Masani however does not shirk a clear statement of the points on which Marxism seems to him to call for revision. He states four Marxist assumptions: one, that the abolition of private property and its nationalisation will automatically

bring in economic democracy; two, that the dictatorship of the proletariat (that is, of the Communist Party, on behalf of the proletariat) is a possible and indeed a necessary transition stage to socialism; three, that socialism can be achieved by appealing to the collective selfishness of the working class and its collective hatred for the property-owning classes; and four, that with the destruction of capitalism, socialism will dawn, as night follows day. I wonder if it is quite correct to call these, Marxist assumptions; for these are the assumptions of the communist parties, who are more ready to take up the plan of action as Marx chalked it out in broad outlines than to imbibe his modes of thought and adopt his sociological reasoning. Marx employed his dialectical method for two purposes; one, for the understanding of past history and two, for a glimpse of the main trends of the future. He saw how capitalism would of itself work out its doom, how the collective selfishness of the proletariat will draw them together, first within each country and then over the whole world. On this basis, he envisaged the classless State. The plan of action which he formulated for hastening the establishment of the classless State is not an integral part of Marx's thought, but if I may put it so, a by-product of it. That Marx himself was an active revolutionary in his time should not prevent us from differentiating between his system of thought and his plan of action. That differentiation is important, because without it we are apt

to rate his deeds higher than his thought and, taking our stand on his plan of action, to repudiate our obligation to think out and understand for ourselves all social developments since Marx's death.

The four assumptions which Mr. Masani has stated as calling for revision are assumptions behind the plan of action—Marxist thought has no assumptions, it is based on facts. Now, the danger nearly in every assumption, whether in the world of thought or in that of action, is that it represents conscious or unconscious shirking. In thought, you are apt to assume what you cannot ascertain or prove. In action, you assume what may require hard work for actual accomplishment. The last two decades may be held to show that it is not just one step from capitalism to socialism, that all the have-nots in a country are not one, that the workers of the world do not unite, that abolition of private property does not necessarily mean economic equality and that, above all, the dictatorship of the communist party is not a clean or efficient instrument of social good. We may not demur to these. But these facts need to be explained. And I ask, how can they be satisfactorily explained except with the help of the dialectic devised by Marx himself? Marx's eagerness for the solidarity of the international proletariat somewhat dimmed his perception of the phenomenon of world wars, of which we have seen two, and disabled him for taking his technique of dialectical thought to the international sphere. Socialists in countries like Britain and France have been swept off their feet by this impact of a world which they had ignored, so far as their socialist thought was concerned, while for capitalists and conservatives, the obvious course was to flirt with the fascist.

Much that is so disconcerting in our recent experiences may be attributed to this interplay of social forces in the international sphere, the foremost manifesta-

tion of which is the compulsions of war, current or imminent. I for one cannot dismiss offhand the idea that but for the threat of a war, and very unequal war at that, and the tremendous privations which it necessitated, the course of socialism in the Soviets might have run comparatively smooth. Stalin might have been less sinister and the bogey of Stakhanovism less forbidding. But that is mere speculation. What can rank as a fact is that for Soviet Russia, the graces of a genuine socialism have been but a prohibitive luxury which Stalin peremptorily forbade. From this, it is not valid to jump to the conclusion that a classless State is impossible, that the working classes of the world have no manner of effective link and that force is more harmful to the ends of socialism than to other ends of civilised societies and must therefore be completely eschewed.

Inserted by the British War Savings Committee, P. O. Box 625, Calcutta.

Mr. Masani argues firstly that common human intelligence cannot cope with and control the large scale machines of advanced industrialism; that with collectivism must go a degree of totalitarianism; secondly, that the employment of violence generates a habit of violence and that it is utopian to expect the dictatorship in a communist society to liquidate itself. He urges therefore the rejection of socialism as the only alternative to capitalism and the acceptance of the Gandhian ideas of non-violence and trusteeship of the wealthy classes in the interests of the poor. Gandhism may be excellent ethics; it may even be good politics. But how it can provide a substitute for Marxist sociology, I am completely at a loss to see.

The transformation of human nature required for good socialism is certainly not more than the transformation required for the effective practice of non-violence. Stalin's failings must be attributed either to the requirements of the international situation or to the habit of violence which the communist technique engendered in him. But would non-violence have created a better record? To me, the only possible consequence of a Gandhiji in place of Lenin is that there would now be nothing over which Mr. Masani and I could hold half-academic disputations of this kind. There would have been no revolution at all! Let us not overlook one remarkable similarity in the fortunes of Marxian communism and Gandhian non-violence. Both have been exposed at about the same time to the fierce gales of a world war which neither had realistically reckoned with. But the difference is that while Russian communism still keeps a

firm hand on the wheel, Gandhian non-violence looks to Providence.

The truth is, it is impossible to make non-violence an integral part of any system of sociological thought. For, non-violence is incapable of ensuring that increase and concentration of power in the hands of the good, or that progressive enfeeblement of evil, which is a guarantee of stable human happiness. To me, it is easier to humanise power than to invest the good with power. To speak as if the choice is between violence and non-violence is to pose the problem in a misleading manner. Ideals cannot be formulated in reference to the mental and moral calibre of one generation; and from this standpoint, Marxian socialism and Gandhian Ramraj are alike utopian. But the road to the former is visible though dirty in parts.

Extensions of term for officials in India rarely meet with warm response from the public. But Sir Ramaswami Mudaliar or

Sir Jeremy Raisman are obvious exceptions. The Supply Member's term was resumed after a break in London. His accession to Sir Homi Mody's post last year had an air of inevitability; for none could gainsay his competent handling of the Commerce Department in the war. The connection with the War Cabinet reinforced his claims for he had experience of a Cabinet which is still the pattern for all others and he retained very limited contacts with his old party. So that he was, so to say, a non-party man brought to give the ballast that the Indian ship of state needs more than ever. The Finance Member's continuance in office was both desired and approved by many for self-evident reasons. In a period so full of bitterness in Indo-British relations, Sir Jeremy's administration has enjoyed unique appreciation from the Indian public. To "Indian Finance", the extension of Sir Jeremy's term is particularly gratifying, as it was specially asked for in our Budget supplement.

(From Our Correspondent)

New Delhi, March 20.

The voting on demands for grants in the Assembly concluded last Thursday. The Government has suffered many reverses. The cut motion moved by the European group to discuss the supply of consumer goods was negatived, the mover being reluctant to take it to a division. Mr. Inskip who moved the cut pleaded that the present inefficient controls only encouraged the black market practices. He suggested that a Price of Goods Act on the British model should replace the ineffective provisions of the Anti-Hoarding and Profiteering Ordinance. The Indian members blamed the Government for flitting away the valuable sterling and dollar assets in importing consumer goods instead of encouraging production here by importing machinery. The Industries Member in his reply agreed that the time had come when we must look to Indian industries to produce more consumer goods. He referred to the recent release of increased consumer goods for civilian use, particularly woollen, boots and shoes, cement and paper. Mr. Joshi on a separate cut motion condemned the Government policy which has resulted in a worsening of the labour conditions. He spoke of the hardships caused to industrial workers by occasional unemployment due to coal shortage and asked why the Dearness Allowance Committee's report had not been published yet. He wanted relief for Indian labour on the lines of Beveridge plan. Dr. Ambedkar, the Labour member, merely pleaded helplessness due to the Government's lack of control over industrial development which entirely governed working class conditions in the country.

A resolution asking for the appointment of an Industrial Commission with a non-official Indian as a Chairman and a majority of non-official members to review the existing industrial situation and to recommend measures for the rapid industrialisation in the country and to indicate the lines along which state ownership and control of industry should be extended was moved in the Council of State last week by Pandit Kunzru. Mr. G. S. Motilal in another resolution urged the Government to import chemical fertilizers in sufficient quantity and distribute them preferably among the farmers growing foodgrains.

The Standing Finance Committee at its meeting last week is reported to have approved of a proposal to pay India's contribution towards the administrative expenses of the Inter-Governmental Relief Committee, an organization set up in 1939 for helping refugees during hostilities. India's share of these expenses is estimated at Rs. 36,000 a year, though for the first sixteen months, September 1943 to December 1944, these will only come to Rs. 15,000. It is understood that the invitation to India to become member-Government has been accepted subject to the vote of the Central Legislature. At present the work of the organization in the case of India affects only refugees

from Russia, Turkey and the Balkans. India can hardly take an active interest in the Committee's work till the scope of its co-operation is extended to areas where there has been a great influx of India's nationals in recent years. The Committee is expected to work in collaboration with the U.N.R.R.A., India's proposed participation in which will shortly be discussed by the Assembly. The Standing Finance Committee also approved of the supplementary demands of the various departments which will be soon placed before the Assembly.

Rationing plans for the Delhi urban areas are almost complete now and the cards are expected to be issued in about a fortnight. It is estimated that non-recurring rationing expenditure for 1944-45 is expected to be Rs. 5,45,000, the recurrent expenditure estimates being Rs. 58,000 and Rs. 13,08,200 for 1943-44 and 1944-45 respectively.

The Posts and Air Department have submitted a five-year plan of civil aviation to the Postwar Reconstruction Policy Committee. The plan envisages a net work of air connections between the main industrial, commercial and political centres with extensions to China, Burma and Afghanistan. A fleet of 35 aircrafts are expected to operate the services with a capital cost of 150 lakhs. The annual cost of operations will be just over 2.5 crores during the first year falling to 1.9 crores in the fifth-year. An initial loss of 160 lakhs is expected in the first year, but the services, it is hoped, will show a profit of 13 lakhs in the fifth-year. The trunk and essential route services will constitute a mileage of 10,500 miles with a frequency of 1 return service daily. The general criticism against the Government's obviously modest plan is that without a basic aircraft industry there can be no rapid development of aviation and it will be almost impossible for this country to compete with other nations with success and that the Government has so far prac-

tically done nothing to encourage the establishment of such an industry despite insistent public demand.

I understand that the Indo-British financial settlement regarding the allocation of defence expenditure may shortly be reviewed. Certain points regarding the settlement, particularly as regards the vast expenditure incurred by the South-East Asia Command, still requires some clarifications. It is reported that Sir Jeremy Raisman may go to London soon after the Budget Session of the Assembly to review the whole situation. It is also possible that Sir Jeremy may proceed to Washington to attend the Allied Monetary Conference if this fits with his time table. Sir C. D. Deshmukh, Governor of the Reserve Bank, and Sir Theodore Gregory, Economic Adviser to the Government of India, may also participate in the Washington currency discussion. Sir Theodore is shortly going to Cairo to attend the anti-inflation conference.

It is officially stated here that the U.S. Government are already defraying such expenditure as they have to meet in this country from the proceeds of sales of gold and dollars through the Reserve Bank of India. Part of the expenditure on behalf of His Majesty's Government in this country is likewise met with the proceeds of sales of gold belonging to His Majesty's Government. It would, however, have been unreasonable to demand that 60 per cent of that expenditure should be met in gold. In the first place, His Majesty's Government had already early in the war mobilised their gold stocks for the purchase from outside the sterling area of goods essential to the prosecution of the war. Secondly, India, unlike Iran, lies within the sterling area and, lastly, the magnitude of His Majesty's Government's expenditure in this country is of a different order altogether from their expenditure in Iran.

(FROM OUR CORRESPONDENT)

Bombay, March 23, 1944.

The cultural mission from Iran has been busy for three days in Bombay where officials and educational authorities have shown hospitality on a grand scale. Indo-Iranian connections in the past have been again explained carefully to show that new contacts have a proper foundation. Elsewhere ancient monuments have been visited and foundations inspected. But Bombay received them on the eve of Jamshedi Navroz and indeed there is nothing elsewhere like the Cama Oriental Institute to give the Iranian mission an idea of India's interest in Iran's past. There was a reception by the Iran League and the Irani, Anjuman at the C. J. Hall on Sunday. Sir Homi Mehta in welcoming the visitors declared that ancient Iran had shaped to some extent the world's history. The leader of the mission thanked Parsis for their interest in their old homeland. Each member of the mission was presented with a copy of the Dinshaw Irani Memorial volume. The great increase in Indo-Iranian trade in recent years, like the political changes recorded since 1941, make the mission's success a certainty.

There is reference to another economic plan sponsored by Mr. M. N. Roy. The Indian Federation of Labour is more anxious to develop agriculture. A book on postwar reconstruction revealed the anti-capitalist bias of Mr. Roy; but Mr. Roy wants a total investment of Rs. 15,000 crores for India's development and he also wants that agricultural production should be expanded to raise output by 400 per cent. Nationalisation of land and the immediate abolition of rural debt is proposed, for Mr. Roy believes in the Russian experiment, and he thinks that the State should look after the pace of outlay and the proportion of investment. By increasing agricultural production for export, it is believed that India can get the money for investment. The State trusts would, probably, look after trade, exchange and banking and the idea of compromise with private enterprise is rejected. By comparison with Mr. Roy's plan, the Nagpur discussions of Indian manufacturers seem rather tame. Sir M. Visvesvaraya wants private projects to anticipate State schemes. Possibilities in the C. P. have been described with special reference to minerals and forest products. The A.I.M.O. has accepted the resolution for the development of industries in the C. P. and Berar, but Labour leaders added a rider as to improved conditions for labour in C. P. industries.

The cotton market is criticised for letting cotton prices go down. The promise of Government purchase came, but only two firms acted on their own initiative and invested in cotton. Recovery, followed by a break, came after the 'communiqué' as to possible intervention. The swings in prices apparently restrained mills from adopting their usual policy, when arrivals tended to be large. Reference has been made to the prices of stores and spares, chemicals and dyes to suggest that mills are unable to support the cotton market when it falls. Doubts as to quality of the present crop may also explain the backwardness of mills which are aware of mixtures in bales. The decline in the

quality of Jarilla this year has led to the guess that Oomra growths have been mixed. The adverse implications for the cotton grower have not been overlooked.

The land reclamation experiments in Bijapur have begun and the unemployed are put on to a job better than breaking road metal. Last year, afforestation began and saplings have taken root on the old barren soil. Mr. Susman, the Development Officer, expects the young trees to grow to a height of 5 feet in the next few months. To prevent evaporation of moisture in the strong wind that sweeps over the district is the chief purpose of the planting. The species of trees chosen are hardy and grow to a fair height. The leaves of anjan serve as fodder and the bark can be used for rope-making. Variation in ploughing practice is recommended and 6,000 acres sown according to the method approved for contour bunding will serve to show cultivators how and why

they should break with custom. An experiment in dry farming in 1943 has shown the value of new methods as the outturn was four times that secured by the cultivators. An Australian journalist has been greatly impressed by the experiments begun in Bijapur.

There was a meeting on Sunday at which the demand for a Food Council emerged. It was a non-party gathering with the Mayor of Bombay in the chair. The main demand related to a study of the effects of rationing and other measures on nutrition. For four hours there was speech-making about procurement and distribution; but the opinion reached was for a place for a non-official organisation to advise and object if need be. The Government has its own plan for an advisory committee but the meeting wanted more than that. Municipal elections will not be held as the City Corporation's term has been extended by two years. The decision regarding adult franchise taken by the Congress Ministry in 1938 has been shelved. The electoral roll was not prepared and the Municipal Act was not amended though, a draft was ready in

UNTOLD SERVICES By CANVAS & TARPAULIN.

There are ever so many things which are in daily use and which give you so much valuable service in the day-to-day life. Yet we seldom care to speak of them. The comfort we so eagerly desire after a day's tedious work, the convenience we want, the rural river transport, the motor transport by land, the entertainments we so often seek for, etc., etc., are all obtained by the use of Canvas and Tarpaulin.

It has now become an essential commodity for War services too. Just as the QUALITY of equipment is indispensable for winning the war, so also the QUALITY of CANVAS AND TARPAULIN is indispensable to offer the needed comfort or rest both in peacetime or wartime.

And the fact that HARTON'S Canvas and Tarpaulins are so much in demand is in itself a proof of their superior quality.

61, HARRISON ROAD, CALCUTTA.

December, it was objected to by minorities. Owing to the increase in population during wartime elections would be in the opinion of some difficult. The corporation is expected to work as usual if there are no elections this time. One extension was given last year, and the term has been doubled. Electioneering has been obviated, and communal electorates remain. The whole business has been dealt with in a rough and ready fashion but the City Council will take things as it finds them. The Central legislature is nine years old, and gets on; so will other public elected authorities in India.

The Muslim League's President has asked financiers to take a hand in economic planning for Pakistan. His view is that economic conditions in Muslim India are deplorable and must be improved. His reference to the planning committee set up at Karachi was followed by a hint as to what it would produce. The committee would not produce schemes for Rs. 10,000 crores which would depend on the release of Mr. Gandhi and the establishment of a national government. But he admitted that practical economists and financiers were wanted for the committee. He has

not been able to announce the personal of the committee owing to the lack of scientists and financiers among Muslims.

The Sheriff's meeting arranged by Sir S. A. Shah to record Bombay citizens' grief took place on Thursday last with the Mayor in the chair. An appeal to subscribe to the memorial fund was made by the Sheriff, who bridged the gulf between the Government and people on this occasion. Sir P. Thakurdas moved the condolence resolution which was supported by Seth Devkaran Nanji and Sir Rustom Masani.

THE FOURTH DEFENCE LOAN 1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th July 1944 will be paid on the 15th July 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

South India

(From Our Correspondent)

Madras, March 22.

THE fifth wartime budget of the Madras Province was made available to the public after a week of waiting. It is estimated the net surplus will be Rs. 644.41 lakhs; Revenue is estimated at Rs. 30,20.38 lakhs and expenditure at Rs. 23,75.97 lakhs. But the net available surplus comes to only Rs. 77,000 as it is proposed to transfer Rs. 554 lakhs to Revenue Reserve Fund and a sum of Rs. 89.64 lakhs has been allotted for schemes to be taken up in the coming year. There is a proposal to repeal the Madras Tobacco (Taxation and Licensing) Act, as the Central Government had imposed an excise duty on tobacco. The Government have made it clear that there will not be any reduction in taxation as long as the war lasts, and the reason for such a policy has to be found in the anxiety of the Government to "have considerable funds in hand for undertaking large development schemes after the war." Under the Motor Vehicles Act, the Government have to pay local bodies compensation for loss of revenue from tolls and the Government had not paid wholly, the amounts due. Provision has been made in the budget to pay the arrears as also the amount which is due in the coming year in full. It is stated that the Government have taken this decision in view of the unsatisfactory financial position of local bodies.

New schemes of the Educational Department such as grants to the Madras University for new technological courses; the opening of Honours courses in Islamic History and culture and Natural Science Group in the Government Muhammedan College as also the revival of stipends for men undergoing secondary teachers' training and grants for the management of elementary schools and panchayats for payment of dearness allowance per month to teachers at Rs. 4 instead of Rs. 3, account for Rs. 12 lakhs. Supplementary provision for the Medical Department, and the Agricultural Department is Rs. 83,000 and 2.91 lakhs respectively. A sum of Rs. 19,000 is allotted for the appointment of additional staff for co-operative training Institutes.

According to the revised estimates as to the provincial share of income-tax receipts, Madras will get Rs. 85.35 lakhs more than the amount shown in the budget. Against this increase in revenue there is the possibility of a large decrease under receipts from the General Sales Tax in case the Privy Council decides against the Madras Government in the appeal preferred against the Federal Court judgment. Though there is a proposal to repeal the Tobacco Act, the budget estimate takes credit for a revenue of Rs. 22 lakhs under the act, as the Government of India is likely to pay adequate compensation. Additional expenditure of about Rs. 7½ lakhs for which provision has not been made in the budget, has to be incurred by the Government as a result of the increase in railway fares. The amount to be actually transferred to the Revenue Reserve Fund, will therefore depend on the actual surplus in the revenue account for 1944-45 after meeting all urgent expenditure in the course of the year.

The Government will not be forced to raise open market loans during 1944-45 as they can manage to meet their expenditure if at

any time of the year, it is over receipts, by issuing as usual Treasury bills and taking ways and means advances from the Reserve Bank. It is also anticipated that all these temporary borrowings will be discharged before the close of the year.

How the Government intend to use the balances in the Revenue Fund to finance schemes of post-war reconstruction is also indicated. Improvements of roads and other

communications, building schemes and water supply and drainage schemes which have been held up by the war, land colonisation schemes, expansion of the activities of the agricultural, veterinary, co-operative and industrial departments, development of public health and medical services, improvement and increases of educational facilities, irrigation, exploitation of minerals and other schemes

(Continued on page 592)

Greater output, and still greater, is the urgent need not only of India but of the United Nations. To meet this need factories throughout India are producing at a level far in excess of what, in peace time, was thought possible. Many factors contribute to this success, not the least important being the ability of the worker to maintain a steady high level of effort. It is here that Indian Tea plays a valuable part. Tea served to the worker, on the job, has been proved in many hundreds of factories to be a wonderful reviver of failing concentration.

(FROM OUR CORRESPONDENT)

Karachi, March 17.

The budget session of the Sind Assembly which concluded on last Monday was a tame affair. It was expected at one time that a serious effort would be made to overthrow the present Ministry. But the Independent Hindu party which bore the brunt of the opposition in the absence of the Congress bloc was divided and it was in vain that a mandate was sought to withdraw altogether from the Ministry, as the two Hindu Ministers were not prepared to quit. Though some internal changes in the Ministry including the addition of one more Hindu Minister who might probably replace one of the present Ministers are freely talked about, nothing can be said for certain. Notice was given of a motion of no-confidence against one of the Ministers, but before the notice period was over the session was prorogued and the Minister survives. The next session of the Sind Assembly is likely to meet in July by which time it is hoped that the existing differences in the Muslim ranks would be patched up. It is likely that Mr. Jinnah would have the last word to say about the reconstruction of the Ministry and a meeting of some prominent Muslim members of the Sind Assembly with Mr. Jinnah at Lahore has been arranged.

The Viceroy was on a two-day visit to the province of Sind. Excepting at Sukkur where he visited the Barrage and an adjoining village which was devastated by the floods of last year, Lord Wavell confined his attention to barracks and naval schools. He invested some heroes of the Wingate expedition with military honours. In honour of the Viceroy's visit, Sir Hugh Dow, the Governor of Sind, gave a garden party at the Government House where two hundred leading citizens of the place were invited. They were all presented to the Viceroy.

Some of the leading financiers of the Punjab and Gujarat are prospecting the possibilities of starting big industries in Sind after the war. The city of Karachi would occupy a pivotal position. Bombay is congested and cannot expand. Here the harbour can expand to any extent and nearby are open spaces where any number of godowns could be built. Karachi is both an exporting and importing centre. It is the entry port for goods to the Punjab and North India. Aviation is bound to be expanded beyond recognition after the war and when this happens, Karachi will play a great part, as it is the nearest city for trans-Continental communications. With an abundant supply of water, any industry can thrive here and there is already a move afoot to construct one of the biggest textile mills in India in Karachi. Orders for machinery are being placed so that when the war ends, the plans would be complete for the starting of the mill. The whole of Sind would also be linked with a network of roads. As it is, our chief handicap is the paucity of roads but of late, big road construction plans for the use of the military are proceeding apace and when they are completed, they could be given over to the province for the flow of goods. Suggestions for postwar road construction have been invited from leading commercial bodies here.

One of the leading members of the commercial community told me that he had doubts about the 15-year plan of the Indian industrialists. He drew my attention to Lord Woolton's remark that Britain would have to continue to export her goods to keep up her standard of living after the war. The U.K.C.C. is not going to relax its efforts after the war. Big industrialists would not come forward with schemes unless they are promised immunity from foreign competition along with State aid. Monopolies and control might be established and taxation might become heavier. The only way to avoid all these fears is to have a national government but it remains to be seen whether Britain would part with power at the end of the war. The best way out of the existing difficulties is to start small scale industries in the provinces and appeal to the sentiments of the masses. Exploitation should stop and there should be only a reasonable margin of profits.

The Sind Government have issued an order called the Sind Cotton Cloth Dealers' Licensing Order, 1944. The order has been applied in the first instance to the city and cantonment limits of Karachi. Under the notifications issued, no cloth dealer, whether he is a retailer, a wholesaler, a broker, a commission agent or a hawker can carry on business on and after April 15, without a license.

Sind has tremendous possibilities, both agricultural and industrial. Sind has everything that bounteous nature can give. Many things lie unexplored and untapped. Whether in agriculture, industry, banking or insurance, Sind can set about an era of expansion. There is scope for pottery industry, paper industry and food products industry, said Mr. T. B. Dalal, addressing the Rotary Club of Karachi.

He emphasised the need for setting up an Economic Council in Sind and boldly embarking upon a well-conceived plan for industrial and agricultural expansion. He requested that the province should give up its narrow sectional outlook and import talent from outside. He further suggested that all provinces should immediately formulate plans for the country's economic development keeping in view a comprehensive scheme for the whole of India.

Resume of Commodity Markets

Rather uninteresting conditions have been noticeable in the commodity markets in the past week. The jute market has been quieter in the latter half of the period while the jute manufactures market has continued firm. The raw cotton market has been rather irregular, but the piecegoods market has remained steady and business passing has been restricted only by the availability of ready goods. The gold market has been uninteresting but the silver market has firmed up towards the close and quotations are substantially higher on balances.

The slightly easier tone of the jute market is due to the reports of rain in the jute districts and the lack of adequate mill support. Holders also have shown some anxiety to dispose of their holdings in order to take advantage of the recent improvement in prices. The general sentiment has been effected to a certain extent by the unfavourable news from the Arakan front. The decline in prices, however, has not been anything appreciable; and, as pointed out last week, it cannot be possibly expected that there will be any appreciable drop in values pending a definite idea of the size of the crop for the next season. Mills have to effect large purchases if production is to be maintained at the present levels, granting, of course, that coal supplies are assured. Arrivals during the last few months have been behind production and some of the mills have been obliged to eat into their stocks in spite of the interruption due to the lack of coal supplies.

The continued selling by mills in the jute manufactures market for forward positions had a slightly discouraging effect on black market activity. It was felt that larger supplies after June might relieve the scarcity of ready goods and that, with the maintenance of production at high levels, it would not be difficult to meet all the demand.

Reports that there has again been a decrease in coal supplies during the past week, however, compelled mills to adopt a reserved attitude and not much of business has been reported during the week for forward positions.

The raw cotton market has been irregular. Earlier in the period a sharp rise in prices was recorded on buying by prominent operators of Broach and Surti styles. The rumour got round that the Government had actually entered the market, but it was later realised that there was no official buying and that mills were not prepared to follow up the rise. There was some selling. There is no doubt, however, regarding the ability of the Government to effect purchases of cotton at the minimum prices if ever there was a break in values to below the minimum fixed.

At the auctions of tea for consumption in India 10,000 packages of dusts were offered. The market was irregular and prices fetched were from 6 pies to 1 anna per lb. easier. For leaf grades also easier conditions were noticeable and a similar decline in prices was recorded. Fannings were generally firm.

The second All-India Wheat Forecast issued this week reveals a decrease of 3 per cent in the acreage of wheat crop in India for 1943-44 season. The area under cultivation is 33,275,000 as against 34,324,000 acres.

feared that with the scarcity of yarn black market activity would be encouraged.

There might be a meeting of the Textile Control Board in the first week of April. The introduction of a quota system whereby mills will be compelled to apportion their products to established and recognised dealers is one of the subjects likely to be discussed by the Distribution Subcommittee.

The Madras Province is urging for an increase in the quota of exports to Ceylon. There has been great demand for handloom cloth from Ceylon and the quota of 5½ million yards per quarter is not enough to meet the demand. It is reported that owing to the closure of the Far Eastern markets there is a good supply of handloom products available for export. The scarcity in Ceylon is such that a system of rationing has been found necessary. Ceylon is the only country in the British Empire other than Britain to resort to rationing of cloth supplies.

(Continued from page 581)

past as well as the future of the company. Additional capital secured in this instance would boost earning power and in the week that the lists are open the response should be good since a successful specialised concern of this type seldom gives a chance for the investor's participation.

Indian Trade and General Insurance

There appeared recently in this Journal an announcement relating to the Indian Trade and General Insurance Company and its issue of capital in 100-rupee shares (Rs. 40 paid-up). A very important group of Northern Indian businessmen is associated with the flotation that was an assured success. The capital required was obtained easily as the bulk of the issue was taken up by Directors and friends while a part was underwritten by Messrs. Bangur & Co. The formation of another composite Indian insurance company under powerful auspices cannot pass unnoticed for it is certain that business will be placed with the new company. The Board includes Sir Padampat Singhania and Lala Shankarlal of Delhi. The Company's registered office is in Calcutta. The prospects for Indian insurance offices are not limited by the war and

the Indian Trade and General's connections are such as to promise complete and early success.

(Continued from page 589)

that will provide employment for demobilised soldiers and technicians are mentioned. It is stated that the Government will select as far as possible longrange schemes which cannot be financed from current revenues.

The Bengal Famine and the food shortage in the country have opened the eyes of the Government to the need for an all-out effort to increase the production of foodgrains. That the Central Government have made arrangements with the United States to import 100 motor-tractors with full equipment was disclosed by the Food Member in the Assembly. The Madras Government are purchasing 4 of these tractors at a cost of Rs. 28,000 for the use of the Agricultural Department. This may be said to be the first step towards the mechanisation of agriculture in this country. The aim of the Government in putting the tractors at the disposal of the Agricultural Departments seems to be that land-owners and cultivators will be persuaded to follow the Government's example after seeing the great improvement the tractors are sure to effect when they are employed by the agricultural Department.

GENERAL BANKING BUSINESS TRANSACTED

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, March 23.

THE news from the Manipur frontier has had a somewhat dampening effect on all markets without causing anything resembling a break. Holders of goods, however, show more inclination to clear their hands and generally sellers predominate at the moment, with buyers showing reserve and awaiting developments. One point which emerges is that the Indian community apparently pay fairly close attention to Japanese broadcasts which naturally are making the most of their "invasion" of India. How much credence listeners attach to the Japanese radio claims, it is difficult to say though one must presume that experience should soon teach them to discount a good deal of what is broadcast. There seems to be little doubt that the present movement, while capable of creating no little nuisance, may be more of a face-saving expedient to counter ill-successes in other sectors, rather than a serious attempt to penetrate into India. And even the usually timorous Marwarri does not yet show any very serious concern at the situation.

There is little of interest to comment on with regard to markets during the past week. Coal supplies are still running short of requirements and a number of mills have been unable to make a start this week. But generally speaking, quality seems to show some improvement. It may be that all the rubbish which had been lying unsaleable at pit heads for years has now been got rid of on to the long suffering mills and collieries have now no option but to despatch more respectable stuff.

A contemporary publishes tables of figures purporting to show the comparative costs of Jute and Paddy cultivation at a number of the principal Jute centres in Bengal. The figures vary so widely that it would seem that local factors, of possibly only a temporary nature, must have affected the situation. From the data it would appear that Jute cultivation hired labour varied in cost from Rs. 7-8 to Rs. 15-12 per maund according to the district. The latter figure is, of course, difficult of belief considering that the maximum price for a 50/50 assortment of white jute is no more than Rs. 15-8 landed Calcutta. The statistician allows Rs. 12 as the price accruing to the cultivator for his crop of jute, which appears to err on the side of generosity. But even this full figure works out the return to the cultivator as varying from a profit of Rs. 4-8 per maund to a loss of Rs. 3-12 per maund, according to the district, with an overhead average profit of Rs. 2 per maund. On the other hand paddy, cultivated by hired labour costs, according to the figures quoted, from Rs. 3 to Rs. 7 per maund to produce. The current official maximum price which the cultivator may demand for his paddy is from Rs. 7-12 to Rs. 8-4 per maund, so taking Rs. 8 as the average, the figures adduced show the cultivator a profit of from Re. 1 to Rs. 5 per maund according to the district, with an overhead average of Rs. 3-13 per maund. If the intention is to demonstrate that at current relative prices, paddy is a more attractive proposition to the cultivator than is jute, we are not prepared to join issue on the question, as we think it very definitely is so. Whether, of course, the same relation of

prices may subsist at the time of harvest is another matter. But the very wide variation in costs to which we have drawn attention would seem to call for some elucidation as it seems unlikely that such marked differences could exist in comparatively adjacent districts without the presence of some abnormal local factor of a more or less temporary nature, which the normal law of supply and demand would tend to level out.

Sowings for the new jute crop do not appear to be making very much progress so far. Apart from the question of the relative probable return between jute and paddy to which we have just referred above, weather has not been particularly favourable for getting the seed down. Rain has been scarce and only scattered showers have been recorded up to the past day or two. Rather more stormy conditions, however, now prevail and if rain proves to have been at all general in the districts, we shall soon be in a better position to judge to what extent the cultivator is likely to take advantage of his eight anna quota. At this date a year ago sowings were reported to the extent of from one to four annas compared with a generally negligible figure this year. But weather conditions last year had been more favourable than they have been so far this year.

Another week has gone by and still there is no official news of the statutory fixation of prices for raw jute and manufactured goods which was forecast some considerable time ago. It is notorious that in most cases the mills of Government grind exceedingly slow but it is suggested that representations have been made to the Centre by the Bengal Government for some modification of the original proposals, presumably with a view to securing an increase either in the minimum raw jute price or in the maximum price, perhaps in both. Meanwhile, so far as can be ascertained, no official approach has been made by either Government, Bengal or Central, to any of the Associations which represent the interests of the raw jute sections of the trade. We mentioned last week certain consultations which were reported to have taken place between the Special Officer, Jute to the Government of Bengal and individual members of the jute trade specially invited by him. What particular aspects of the situation were discussed we do not pretend to know as the consultations were supposed to be extremely secret and confidential, though the reason for all this mystery is in itself a minor mystery. But it seems surprising, to say the least, if none of the associations representing genuine trading interests in raw jute should have been called into consultation if and when matters intimately concerning them were under discussion. One at least of such associations recorded its dissent from certain aspects of the I.J.M.A. schedule of prices when these were originally promulgated last July, though without effective result. It is improbable that their views have materially altered in the interim. Could it be that the fact that they were known not to be in entire agreement with the more or less "domestic" scheme of the I.J.M.A., was good and sufficient reason for not calling for their views when that scheme, or something very similar, was about to be given statutory effect?

Export jute has been in little demand during the past week and even mills have shown only slight interest. Mills bought Firsts at Rs. 89 and Rs. 90 and Dundee Tossa 4s at Rs. 89. Special Cuttings have been in some request. It may be of interest to record that business was reported lately in Tossa 5s, though scrutiny of the Book of Marks fails to show the registration of any such number! Exports of baled jute during February amounted to 109,074 bales against only 51,600 bales last February. The total quantity exported during the current season since July now totals 6,98,000 bales against 9,17,400 bales for the same period last season. For purposes of academic comparison, exports for the same period in the 1938-39 season totalled 28,22,000 bales.

Only a moderate turnover has been recorded in Loose Jute. European packing has been offered sparingly, and mainly for storage, at Rs. 17 and Rs. 14 for Middles and Bottoms. Supervised Jat was reported at Rs. 17 and Rs. 14 and also at four annas less, while Middles alone sold latterly at Rs. 16-8. Supervised District sold at Rs. 16-4 and Rs. 13-4 and Indian Northern Tossa at Rs. 16-12 and Rs. 13-12. Baler buyers are still prepared to pay full rates for Jat and hard District Tossa. Arrivals of jute into Calcutta for the first half of March are estimated at 1,68,000 bales against 2,00,000 bales during the same period last year. To that date the relative arrivals total 37,88,000 bales this season against 46,34,000 bales last season.

The Fabrics market has ruled unchanged with maximum rates quoted for all descriptions with the exception of forward "B" twills. Mills sold small quantities of hesians up to next March at maximum rates and amongst the sales of Heavy Goods reported were Liverpools, Cornsacks, 5 lb. Grains and Flour bags, all at ceiling prices and for forward shipment. At the close all markets are somewhat easier in tone with sellers more in evidence.

JUTE

Calcutta, March 23.

The raw jute market was rather firm in the early days of the period under review though a slightly smaller volume of business was passing and mills were inclined to await further developments. As pointed out last week, there is a tendency on the part of buyers to avoid an undue rise in prices as already quotations are very near the maximum rates and for Tossa varieties prices have been even higher than the maxima fixed by the Indian Jute Mills Association. The smaller buying by mills, however, did not cause any anxiety on the part of sellers to do more business. With the firmness of upcountry centres and the uncertain outlook for the new crop there was no disposition to discount prices. In the latter half of the week, however, reports regarding rain in the jute districts and the anxiety over the situation on the Arakan front, have resulted in a slight decline in prices. Quotations are on balance 4 annas to 8 annas lower per maund. Arrivals in mofussil centres also are reported to be on a larger scale as the recent rise in prices has encouraged holders to part with their stocks.

In the loose jute section business passing has been on a smaller scale. Quotations are lower towards the close. Earlier in the week prices were fully maintained and sellers showed no anxiety to do business. In the last two days, however, Supervised Jat Middles and Bottoms were done at Rs. 16-8 and Rs. 13-8 per maund with Indian Jat Middles and Bottoms 4 annas lower. In the puoca bales section also not much business has been done. Shippers bought Dundee Daisee 2/3 at Rs. 88 per bale. Mills are reported to have done some business in Firsts at Rs. 89, Dundee Daisee 2/3 at Rs. 85 and Dundee Tossa 4's at Rs. 89 per bale. Shippers are reported to be interested in cuttings M.C. & T.C.'s up to Rs. 47 per bale.

JUTE MANUFACTURES

Calcutta, March 23.

The Jute manufactures market was steady with quotations fluctuating nominally around maximum rates. There is no important business to be reported as with the drop in coal arrivals and the reserved attitude showed by mills for forward positions, black market activity has been encouraged and quotations are again at the former levels. Production figures for the month of February are certainly encouraging but in view of the large offtake and the unsatisfied demand the higher rate of output has perhaps no meaning for the market. 9 porters quoted Rs. 21-10 and 11 porters Rs. 28-8 for all positions.

In the heavy goods section firmer conditions have continued to prevail in spite of the larger output of sacking in February. The position in regard to ready goods is still unrelieved and there are no sellers at maximum rates except for B. twills at Rs. 67-8 for April-June.

Production figures for the month of February show that of the total output of 80,991 tons, hessian cloth and bags on civilian account were 29,965 tons and on military account 2,871 tons. Sacking, on civilian account, were 39,099 tons and on military account 4,997 tons. Other manufactures were 4,059 tons.

GOLD

Calcutta, March 23.

The gold market is uninteresting and there is very little fluctuation in prices, the Reserve Bank continuing sales freely at Rs. 71 per tola. Earlier in the week slightly easier conditions were noticeable on reports of large arrivals from upcountry centres but resumption of buying and the steadier tone of the silver market has resulted in an improvement in prices to the Reserve Bank's selling rate. Gold ready closed at Rs. 71-0-8 and forward at the same level. The quotation for forward earlier in the week was at a discount over spot. Sovereigns were unchanged at Rs. 49-2. In the Calcutta market, the quotation was Rs. 71-4 per tola and sovereigns Rs. 49-4.

SILVER

Calcutta, March 23.

The silver market also was uninteresting in the early part of the period under review but with the unfavourable news from the Arakan front in the latter half of the week there has been some speculative buying and quotations are at the highest levels for some time. The spot position is tight and there is great difficulty in regard to ready deliveries. Silver ready closed at Rs. 131 and forward at Rs. 128-2 against Rs. 129-4 and Rs. 125-4 at the end of last week. It will be noted that there is a narrowing in the premium for ready over forward. In the Calcutta market silver quoted Rs. 129-4 against Rs. 128 last week.

In the London market silver remained unchanged at 23½d for both spot and forward.

COTTON

Calcutta, Mar 23.

The smaller movement of cotton and the larger buying by mills resulted in a recovery in the Bombay raw cotton market. But for the easier tone of the stock exchanges closing quotations would have been around the highest levels for the week. There has been some covering for March position while the premium for forward positions has been fully maintained. There is a feeling that the lowest levels are left behind. Jharilla March closed at Rs. 449-4, May at Rs. 447-4, July at Rs. 453-12 and September at Rs. 456.

PIECEGOODS

The unsealing of unstamped varieties and a stricter supervision regarding the marketing of Texmarked goods have resulted in the reduction in malpractices of piecegoods dealers but as there is considerable difficulty in regard to transport and there is a shortage of ready goods in the Calcutta market, black market activity cannot altogether be avoided. Business passing has been on a smaller scale and there is a tendency to await March Texmarked goods as a lower ceiling price has been fixed for all varieties. It is doubtful, however, whether dealers will put these goods on the market before the earlier production has been fully absorbed.

WROTH THEIR SALT

Sons, husbands and brothers who left their Indian homes to join in the long battle for peace, are sacrificing their freedom every day, in order that we may be free.

Our prisoners of war in Italy and Germany look forward to the parcels they receive each week through the Indian Red Cross, the contents of which are specially planned to supply some of the necessities which are lacking in camp rations. They contain biscuits, chocolate, salmon, fruit margarine, dried milk, sugar, tea, salt and soap as well as atta, dhal, rice and curry powder.

These men are worth their salt - they deserve the best we can give them.

We are only able to send these parcels while your generous support continues.

Please help us to see that they receive their parcels regularly by sending regular donations to The Hony. Treasurer, Indian Red Cross Appeal, C/o The Imperial Bank of India, Strand Road, Calcutta.

Indian Finance Investor's Supplement

Vol. XXXIII. No. 13

SATURDAY, MARCH 25, 1944

Price Re. 1

Stock Markets to-day and to-morrow:

MARKETS QUIET ON ADVERSE WAR NEWS

After the sharp improvement in values on the Calcutta Stock Exchange in the past week a rather quiet tendency was noticeable in the early days of this week. There was a feeling that prices for some counters had been marked unduly higher and that the higher levels could be sustained only with a larger volume of buying from the investing public. As the rise in prices was not followed up by investors and as there was an over-sold position in respect of some of the counters bears wanted to push down prices. Cawnpore Textiles, Indian Irons and Howrah were marked down. The news regarding the Japanese entry into India, in mid-week, naturally had a depressing effect even though it was generally pointed out that the enemy could not mean serious business and that the Allied Command would be able to stage a counter-offensive. In Thursday's session there was some selling and an appreciable decline in prices was recorded for the leading counters. Cawnpore Textiles were as low as Rs. 15-4, Indian Irons Rs. 35-12, Howrah Rs. 70-12, Steel Corporations Rs. 26-12 and B. I. Corporation Rs. 6-4. The absence of any further reports regarding the activities of the Japs on the Chindwin front led to bear covering and quotations towards the close of Friday are appreciably higher than the levels that were ruling in the previous evening.

It cannot be said yet that the downward trend has been completely arrested; but the technical position of the markets appears to be satisfactory and there is no reason why anyone should entertain exaggerated fears regarding the enemy's ability to break through the Allied defences. If there are no untoward developments during the next three or four days, it can be expected that the upward trend will be resumed though any fresh rise in prices would be rather slow and operators would be very cautious in entering into any fresh commitments.

Details of the coal scheme are now available. They had been substantially anticipated and as such have no great significance for the market. It is interesting, however, to give here in brief the main details. The new target of production is 27½ million tons per annum of which 22½ million tons is expected to be directly handled by the Government of India. Bonuses will be paid to the

collieries according to the basis given below. The larger collieries will stand to benefit to a greater extent by this scheme. The bonus to collieries, which effected raisings in excess of their allotted quota, are to be paid out of a cess on coal which has been fixed at 4 annas per ton in the first instance. On the basis of this cess total bonuses might amount to nearly Rs. 60 lakhs. Having regard to the fact that the total earnings of the coal industry cannot be very much more than Rs. 3 crores, the payment of bonuses to the extent of Rs. 60 lakhs, free of E.P.T., to the more efficient members of the industry will prove to be a substantial inducement and should enable them to distribute considerably larger dividends. The details are given below:

(a) Estimation of the monthly output of each colliery to be furnished to the Coal Commissioner by the 5th of every month;

(b) Formation of Coal Control Board to advise the Government regarding the working of the scheme. The board will consist of ten members including two nominees of the Indian Mining Association, one each of the Mining Federation, Colliery Owners' Association, C. P. Mining Association, Federation of Indian Chambers of Commerce;

(c) Distribution of all output by the Government at fixed prices from April 1, 1944. The Government will, as soon as arrangements can be made, issue to each colliery an order in regard to the distribution of its estimated output during the ensuing months;

(d) Encouragement of production by grant of bonuses on increased output free of excess profits-tax. The bonuses will be paid six monthly to each colliery undertaking on the excess of the tonnage disposed of under the orders of the Government over the target tonnage for the colliery undertaking. The bonus will be calculated by adding together; (1) 10 per cent to the price of the first 10 per cent of the excess coal; (2) 20 per cent to the price of excess coal over 10 per cent but not over 20 per cent. (3) 25 per cent on the price of excess coal exceeding 20 per cent. A fund will be created by a cess on all coal and coke despatched under the orders of the Government to meet the estimated cost of such bonuses. The cess for the first six months (April 1 to September 30) is proposed to be fixed at 4 annas a ton;

(e) Control of mining operations including the grant of *ex gratia* payments where it is established that such orders cause loss to the mine-owner.

The accounts of the Dunlop Rubber Company (India), Limited for the year ended December, 1943 are now available. Again, they make satisfactory showing. Due to restrictions on imports overseas, tyre rationing and other government controls and the steady increase in manufacture against Government orders which have reduced the profit margin both the turnover and profits show a decrease as compared with 1942. Total sales amounted to Rs. 3.62 crores in 1943 against Rs. 3.69 crores in 1942. In spite of the smaller volume of sales manufacturing expenses were higher. The amount spent on the purchase of raw materials and other things were Rs. 2.69 crores against Rs. 2.82 crores. After setting aside to depreciation Rs. 7,85,218 (Rs. 6,31,993) the net profit is Rs. 66,28,170 against Rs. 80,70,173 for 1942. The provision for taxation is lower at Rs. 46,83,207 (Rs. 52,14,926) while the provision for special depreciation on plant and machinery is Rs. 1 lakh (Rs. 2.75 lakhs). The transfer to reserve for contingencies is lower at Rs. 2.5 lakhs (Rs. 5 lakhs) while the allocation to General Reserve is nil (Rs. 3 lakhs). The ordinary dividend has been maintained at 25 per cent. The amount carried forward is Rs. 4,54,402 against Rs. 4,64,940 brought in.

United Provinces Sugar Company, Limited has done well in the year ended September, 1943. Thanks to the larger supplies of cane and the higher earnings on zemindari account the net profit, before providing for taxation and depreciation for the year is as much as Rs. 13,52,951 against Rs. 3,59,202 for 1941-42. The amount set aside to depreciation is Rs. 1,21,707 against Rs. 1,21,184 while the provision for taxation including deposits is Rs. 9 lakhs against Rs. 50,000. The allocation to funds in 1941-42 amounted to Rs. 25,000. The final dividend of Re. 1 per share with a similar interim dividend already paid, makes 20 per cent for the whole year against 10 per cent for 1941-42. The amount carried forward is higher at Rs. 37,145 against Rs. 25,091 brought in.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 24.

VERY quiet conditions have been noticeable on the Calcutta Stock Exchange in the past week. In the latter half of the week especially there has been some selling with a smaller volume of business passing on reports that the Japs had crossed the Indian frontier. Even in the early days of the week under review, quieter conditions were noticeable as there was a feeling that the recent rise in prices was overdone and there was some profit-taking and selling. Cotton shares were the worst sufferers. The news of the token invasion of India, though not unexpected by the Allied Command, was enough to push down values. In Thursday's session some nervousness was in evidence and an appreciable decline in prices was recorded for the speculative counters. In Friday's trading, a slightly better feeling is noticeable and quotations are a shade higher than the lowest levels for the week. There is a tendency to await further developments.

The gilt-edged securities section also has been affected by the weakness of the other sections, 3½ per cent Paper being lower at Rs. 98-8. Other terminable loans also are a few annas lower, 3 per cent defence loan 1949-52 being Rs. 100-8, 3 per cent 1951-54 Rs. 100, 3 per cent 1953-55 Rs. 99-6, 3½ per cent 1947-50 Rs. 103-2 and 5 per cent 1945-55 Rs. 104-14. There has been no selling of Provincial loans and no business has again been recorded. Conditions in the money market have remained unchanged and the Central Government has been able to get its requirements of treasury bills at the slightly lower rate of 12 annas and nine pies per cent per annum against 13 annas per cent last week.

Among Bank shares, there is nothing of importance to be recorded. Hind Bank being uninteresting around Rs. 57. Imperial Bank fully paid was Rs. 1,918 and contributories Rs. 505. Reserve Bank were Rs. 130-8 and United Commercial Bank Rs. 28. There was no business in Thursday's session.

The sharp rise in prices noticeable last week in the Cotton section was not maintained even in the early days of the week. Closing quotations are substantially lower than the highest levels of last week. Cawnpore Textiles were Rs. 15-4 against the peak of Rs. 18 last week; Dunbar Rs. 287 against Rs. 309; Kesoram Rs. 17-14 against Rs. 19-8; and New Victoria Rs. 9-6 against Rs. 10-7. Sri Radheyshyam were Rs. 23-8, Elgin Rs. 82 and Basanti Rs. 14-8.

In the Coal section the announcement of the proposals of the new Government scheme did not have any effect on prices. In the general selling in the last two days, lower prices have been recorded. The undertone, however, is steady. Amalgamated were Rs. 46-14 against Rs. 48-8, Bengal Rs. 597 against Rs. 615, Bokaro and Ramgur Rs. 31-8 against Rs. 32-5, Dhemo Main Rs. 22-2 against Rs. 23-10, Mundulpur Rs. 20-8 against Rs. 21-8, Ondal Rs. 23-8 against Rs. 25, Equitable Rs. 55 against Rs. 58 and Raneeunge Rs. 43-6 against Rs. 45-8. Satpukuria and Asansol were Rs. 3-8, South Karanpura

Rs. 12-14, Talcher Rs. 6-8 and West Jamuria Rs. 52-12.

The Jute section also has been affected though prices are not very much lower. Agarpara were Rs. 30-14, Anglo-India Rs. 406, Clive Rs. 35-4, India Rs. 587. Howrah were Rs. 71 against Rs. 73-8. Kankarrah were noted at Rs. 518, National at Rs. 30-4 and Nuddea at Rs. 117-8. Soorah were relatively steady at Rs. 19 and Standard at Rs. 263. Presidency were Rs. 6-10 and Rameshwara Rs. 16-12.

In the Engineering section, there was heavy selling of Indian Irons and Steel Corporations. The drop in Indian Irons is pronounced. Against the highest levels touched last week of Rs. 38-12, there was a decline in the quotation to Rs. 35-14 on Thursday. The quotation is slightly higher at Rs. 36-4 at the time of writing. It is reported that bears were forced to cover their positions as there was a heavily oversold position. Steel Corporation came down to Rs. 28-14 from Rs. 28-4, Kumardhubi Engineering have completely lost the recent gains and are now quoting Rs. 9-14 against Rs. 11-4. Jessop & Co., were steady at Rs. 23-4 while National Iron & Steel were Rs. 12-13 and Braithwaite Rs. 11-4. Saran Engineering were steady at Rs. 11-2 and Steel Products Rs. 8.

In the Sugar section, Belsund have gone down to Rs. 13-4 from Rs. 13-12 while Carew & Co., were 2 points lower at Rs. 29-6. Ramnugger Cane & Sugar were one point lower to Rs. 13-9 while U. P. Sugar on the declaration of a final dividend of Re. 1 per share came down to Rs. 32-7, Buland & Raza were in good request earlier in the week and were done up to Rs. 42-8. New Savan were Rs. 22, Balrampur Rs. 18-8.

A smaller amount of business has naturally been put through in the Tea section, there being exaggerated fears about production affected by the desertion of labour. The decline in prices, however, is not pronounced, sellers being inclined to await developments. Hattikhira were Rs. 32-4, Telapara Rs. 572, Bishnauth Rs. 41, Hasimara Rs. 75, Tezpur Rs. 19-10 and Tumsong Rs. 21-4.

In the Miscellaneous section, Burma Corporation were easier at Rs. 3-11 and Indian

Copper at Rs. 2-10. Karanpura Development were 2 points lower at Rs. 28-10. There was some selling of Assam shares, Assam Bengal being Rs. 16-11 and Assam Saw Rs. 5. B. I. Corporation were Rs. 6-4 cum-dividend and Aluminium Corporation Rs. 20-2. Among Paper shares, Bengal Paper were Rs. 235 and Orient Paper Rs. 35-8, Titagur Paper A & B were sharply lower at Rs. 28-7. Midnapore Zemindary were not very much lower at Rs. 144 as also Humayan Properties ordinary at Rs. 65-10.

No business has been recorded in Public Bodies Debentures and Industrial Debentures. There are no sellers of preference shares. Anglo-India were Rs. 181, Belvedere Rs. 185, Hastings Rs. 153, Lawrence Rs. 165, National Rs. 186, Steel Corporation Rs. 131 and Sri Radheyshyam Rs. 112.

BOMBAY STOCK EXCHANGE

Bombay, March 23

News from the Indo-Burma Frontier was mainly responsible for the prevailing weakness on the local Stock Exchange. Strictly speaking the market could not be said to have developed weak conditions all of a sudden. The buoyancy noticed in the middle of last week proved to be rather shortlived, and somehow the market managed to keep up steady conditions on Monday this week only to show signs of weakness on Wednesday, there being no business on the market on Tuesday on account of a holiday. It is too early to say anything definite about the trend of the market in the immediate future. The weakness of the market is partly due to the precautionary marking down by cautious operators and a certain amount of nervous selling.

Bombay Dyeing though weak do not show any steep fall in prices as much of the ground lost in the past two days has been regained on short covering. Compared to the price a week ago (Rs. 2,147) the latest quotation at Rs. 2,116-4 is not very much lower. Centuries were 35 points lower at Rs. 1,035. Gokak were Rs. 354; Kohinoor Rs. 676 and Svadeshi Rs. 600.

Steel shares were the worst sufferers this time. Tata Steel Deferreds have lost more

†After taking into credit Rs. 4,75,000 being excess provision for taxation in previous accounts.

(Half-yearly General Extraordinary Meeting on 14th April, 1944 at 12-10 p.m. Transfer books closed from 1st to 14th April, 1944).

Audited accounts for the half-year ended 31st December, 1943:—

After adjusting the provision made for taxation in the first half of the Company's Income-tax year and bringing forward the balance from the last account there is a balance available for distribution of Rs. 2,45,680-4-2. From this the directors recommend payment as follows:—

	Rs.	A. P.
Dividends on Preference shares at Rs. 3-8 per share ..	24,500	0 0
And on Ordinary shares at Rs. 10 per share ..	1,40,000	0 0
thus absorbing Rs. 1,64,500-0-0 and leaving Rs. 81,180-4-2 to be carried forward.		

During the half-year the Industry was gravely affected by coal shortage resulting from transport difficulties aggravated by breaches of the Railway due to floods.

In order to assist the wagon situation the Indian Jute Mills Association agreed to take delivery of coal in bulk at central depots, thereby enabling the Railways to deliver in train loads instead of to individual mills in separate wagons.

Unfortunately coal arrivals at the depots were disappointing and the depot set up by the Association to supply mills in the Budge Budge area failed to operate successfully and had eventually to be closed down. As a result the mill remained closed for lack of coal for a considerable period at a time when most of the Industry was working.

During the half-year the weekly hours of working under the Indian Jute Mills Association Working Time Agreement were 54 with full complement of looms. This represents a total of 1,046 hours for the half-year, after deducting 378 hours lost in the seven emergency closed weeks fixed by the Association for the whole Industry. These 378 hours cannot be made up in the future. In addition, however, a further 432 hours of working were lost by the mill for lack of coal. Of these, 138 hours were made up during the closed weeks in the half-year and the Company is entitled to make up the balance as and when circumstances permit. For the reason explained above the total time lost is considerably more than the average for steam driven mills, while electric mills have not been appreciably affected except for the seven weeks in which the whole Industry was closed.

Since it was necessary to pay allowances and provide food at very heavily subsidised rates for the labour throughout the period and since all costs are rising, very little economy in expenditure was possible so that the loss of production resulting from a total reduction of 672 working hours (equal to 47 per cent of those authorised under the Working Time Agreement) has increased production costs enormously.

While, however, the Company has suffered more heavily this half-year than the majority of the Industry it is nevertheless entitled to recover a large proportion of the time lost as and when circumstances permit.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

(Half-yearly General Meeting held, 29th March, 1944)

Audited accounts for the half-year ended 31st August, 1943:—

After providing Rs. 25,000 for Depreciation, Rs. 1,00,000 for Taxation and placing Rs. 10,000 to Reserve, there is a balance of Rs. 45,291-15-8 at the credit of Profit and Loss Account. The Directors recommend payment of a dividend of annas eight per share, absorbing Rs. 30,000 leaving a balance of Rs. 15,291-15-8 to be carried forward.

Sales during the half-year were satisfactory, but expenses increased considerably due to the grant of cheap food and dearness allowances to the labour, and to the increased cost of coal, stores, and raw materials.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised Issued and Subscribed Capital—Rs. 6,00,000 in 60,000 shares of Rs. 10 each

*After taking into credit Rs. 1,00,000 from Dividend Equalisation Reserves and Rs. 2,75,000 being excess provision for taxation in previous account and estimated tax refund recoverable.

(Half-yearly Meeting on 14th April, 1944 at 12-20 p.m. Transfer books closed from 1st to 14th April, 1944).

Audited accounts for the half-year ended 31st December, 1943:—
After adjusting the provision made for taxation in the first half of the Company's Income-tax year, allowing for estimated refund of tax and bringing forward the balance from the last account there is a balance at the credit of Profit and Loss Account of Rs. 82,207-12-4. After transferring Rs. 1,00,000-0-0 from Dividend Equalisation Reserve there is a balance available for distribution of Rs. 1,82,207-12-4. From this the directors recommend payment as follows:—

	Rs.	A. P.
Dividends on Preference shares at Rs. 3-8 per share	49,000	0 0
And on Ordinary shares at Rs. 7-8 per share	78,750	0 0

thus absorbing Rs. 1,27,750-0-0 and leaving Rs. 54,457-12-4 to be carried forward.

During the half-year the Industry was gravely affected by coal shortage resulting from transport difficulties aggravated by breaches of the Railway due to floods.

In order to assist the wagon situation the Indian Jute Mills Association agreed to take delivery of coal in bulk at central depots, thereby enabling the Railways to deliver in train loads instead of to individual mills in separate wagons.

Unfortunately coal arrivals at the Depots were disappointing and the mill remained closed for lack of coal for considerable periods.

During the half-year the weekly hours of working under the Indian Jute Mills Association Working Time Agreement were 54 hours with full complement of the total looms. This represents a total of 1,046 hours for the half-year, after deducting 378 hours lost in the seven emergency closed weeks fixed by the Association for the whole Industry. These 378 hours cannot be made up in the future. In addition, however, a further 324 hours of working were lost by the mill for lack of coal. Of these, 138 hours were made up during the closed weeks in the half-year, and the Company is entitled to make up the balance as and when circumstances permit.

Since it was necessary to pay allowances and provide food at very heavily subsidised rates for the labour throughout the period and since all costs are rising, very little economy in expenditure was possible, so that the loss of production resulting from a total reduction of 564 working hours (equal to 40 per cent of those authorised under the Working Time Agreement) has increased production costs enormously.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

(Annual General Meeting on 30th March, 1944).

Audited accounts for the year ended 30th November, 1943:—

	Rs.	A. P.
The Accounts show that the profit for the year after deducting depreciation of Rs. 21,485-2-7 was	7,17,235	9 3
From this amount the Directors have set aside:—		
For provision for Taxation	5,26,500	0 0
To Equalisation of Dividends		
Reserve Account	20,000	0 0
" Staff Welfare Reserve Account	5,000	0 0
	5,51,500	0 0
Add—Balance brought forward from last year	1,65,735	9 3
	7,878	4 7
Making a balance available for disposal of	1,73,613	13 10
From this sum the Directors recommend:—		
Payment of a Dividend for the year ended 30th November, 1943 at the rate of Rs. 3-4 per share, free of income-tax	1,70,625	0 0
Leaving to be carried forward to next year's accounts	2,988	13 10

The demand for the Company's ore emanating from America was maintained during the year under review. Shipments of all grades of ore were only 1,342 tons less than during the previous year.

The policy adopted last year of selling Shivrampur ore in conjunction with C.P. ore was continued during the year under review and a slightly larger quantity of the latter ore was purchased this year than last. The bulk of this was railed and shipped during the year. It is doubtful, however, whether it will be feasible to continue this business.

Production at Shivrampur was reasonably satisfactory throughout the year but the above heavy shipments, made in response to the demand arising from urgent War requirements, have resulted in a further reduction of stocks, over and above that to which reference was made in the last Report.

In common with all Industrial and Mining Concerns throughout the country, the cost of production of the Mines has risen considerably on account of increased wages, dearness allowances and the provision of cheap food, clothing, etc., to labour.

The previous year's Accounts benefitted by the payment of £14,000 "on account" for the shipment of ore by the s.s. *Archangelos* in 1940, and in this connection reference was made in the last year's Report to an additional outstanding claim of £1,751-1-11 due from the French Mission in London in respect of this shipment. The Company's London Agents have continued to keep in touch with the French Mission and while the assurances they have obtained are satisfactory, it is still uncertain when payment may be received. The position of the settlement of this matter thus remains unchanged from that reported last year and it has been necessary again to include a note on the face of the Balance Sheet in respect of the remote contingent liabilities in consequence of the indemnities given to the French Mission in consideration of the payments previously made by them.

The Company's liability to E.P.T., Income-tax and Super-tax on the profits of the year ended 30th November, 1942 has not yet been finally agreed, but a provisional assessment of Rs. 2 lacs against the E.P.T. liability to that date has been paid. Rs. 2,84,321-2-2 has therefore been carried forward in respect of the estimated liability for Taxation for the period upto 30th November, 1942. A further provision of Rs. 5,26,500 being the estimated taxation, including E.P.T., on the profits of the year has been made and is considered adequate on the basis of all known factors. Deposits estimated at Rs. 1,34,700 will be payable to the Government of India under Section 10 of the Finance Act, 1942 on agreement of the Company's liability for E.P.T. to 30th November, 1943. No credit has been taken into the accounts for Postwar Refunds of E.P.T., which in addition to the E.P.T. deposits yet to be made, with interest at 2 per cent per annum, will be receivable in due course. Rs. 20,000 has, however, been set aside to Equalisation of Dividends Reserve Account as a partial balancing factor until such refunds are made.

Having regard to the purposes for which it is more likely to be employed, the Directors have decided to redesignate the "Bonus Reserve Account" as the "Staff Welfare Reserve Account" with the intention that the proceeds hereafter should be more specifically utilised for the welfare of the Mines Staff and, where necessary, that of their dependents.

Managing Agents.—Messrs. Killick Nixon & Co.

Authorised Capital.—Rs. 7,50,000. **Issued and Subscribed.**—Rs. 5,25,000 in 52,500 shares of Rs. 10 each, fully paid up.

CAMBODIA MILLS, LIMITED

(Annual Meeting, 28th March, 1944 at Coimbatore. Transfer Books closed from 19th to 28th March, 1944).

Audited accounts for the year ended 31st December, 1943:—

After bearing all operating expenses and writing off depreciation amounting to Rs. 1,17,026-12-2, the Accounts show a profit of Rs. 50,47,180-10-5. The Directors' recommendations for the distribution of the above mentioned profit are as follows:—

	Rs.	A. P.
Amount brought forward from the previous year	10,369	5 1
Add profit for the year	50,47,180	10 5
Total available for disposal	50,57,549	15 6
Less Dividend paid on Preference Shares at 7 per cent, free of income-tax for the year ended 31st December, 1943	7,000	0 0
" Provision for Taxation	39,30,000	0 0
	11,20,549	15 6
" Interim Dividend on the Ordinary Shares at the rate of 10 per cent, free of income-tax (paid on 1st June, 1943)	1,00,000	0 0
	10,20,549	15 6
" Second Interim Dividend on the Ordinary Shares at the rate of 10 per cent, free of Income-tax (paid on 30th October, 1943)	1,00,000	0 0
	9,20,549	15 6
" Transfer to General Reserve	2,25,000	0 0
	1,15,000	0 0
" Transfer to Dividend Equalisation Reserve	5,00,000	0 0
" Final Dividend to be paid on the Ordinary Shares in the books of the Company 28th March, 1944 at the rate of 50 per cent, free of Income-tax (making 70 per cent dividend for the year)	5,00,000	0 0
Balance to be carried forward	80,549	15 6

For the major part of the year under review exceptionally good trading conditions existed and the Company was able to market its full production at very favourable prices. In September 1943 a scheme of Government Control of Cloth and Yarn came into operation which, among other things, laid down fixed ceiling prices at which these commodities can be sold.

In addition to taxation consisting of Excess Profits Tax, Super-tax and Income-tax for which provision in the Accounts has been made the Company will in due course be disbursing an amount of approximately Rs. 6½ lakhs as an interest bearing compulsory Excess Profits Tax deposit.

During the year the Company continued to receive orders for War purposes from Government Departments and from the Madras Handloom Weavers' Provincial Co-operative Society Ltd., and these were executed in full.

Managing Agents.—Messrs. Peirce, Leslie & Co., Ltd.

Authorised Capital.—Rs. 12,00,000. **Issued and Subscribed.**—Rs. 11,00,000 in 1,000, 7 per cent Cum. Pref. shares of Rs. 100 each, and 1,00,000 Ord. shares of Rs. 10 each, fully paid up.

Synopsis of the balance sheet as at 31st December, 1943.

Liabilities.	Rs.	Assets.	Rs.

SITALPORE SUGAR WORKS, LIMITED

Audited accounts for the year ended 30th June, 1943:—

	Rs.	A. P.
The result for the period shows a profit of	1,81,583	0 0
Carry forward from previous year and income-tax adjustment	8,243	8 2
From which has to be deducted:—		
Depreciation	76,480	0 0
	1,13,346	8 2
Leaving to the credit of Profit and Loss Account for the year which the Directors recommend to dispose of as under:—		
Payment of dividend at As. 10 per share, free of tax	56,331	14 0
Reserve Fund	10,000	0 0
For Taxation	42,000	0 0
Balance to be carried forward	5,014	10 2

Supply of Cane in 1942-43 was not adequate. The quality of Cane, however, improved considerably and the recovery was satisfactory. Vigorous effort was made during this year to increase the area under sugar cane cultivation. As a result of intense propaganda it is expected that in the current crushing season more cane will be available.

The price of Cane has increased from 10 annas to 12 annas per maund and the corresponding price of sugar has been increased by 13 annas per maund. The Central Government is continuing its control on the production and distribution of Sugar.

The company has paid off the Directors Loan of four lacs on the 29th February, 1944. The money due from the purchaser of Java Machineries has been realised in time for the payment of Debenture Loan.

The prospect of the current season appears to be fairly good. The quality of Cane is satisfactory and the recovery is fairly high. The factory will continue crushing till the middle of March.

Managing Directors.—T. N. Dutt and H. K. Ghosh.

Authorised Capital.—Rs. 15,00,000. **Issued**—Rs. 10,00,000. **Subscribed** Rs. 9,01,310 in 90,131 shares of Rs. 10 each, fully paid up.

Total	3,59,121	0 7

Jute in Stock and Process and Goods in Process have been taken into Account of cost price and Manufactured Goods at contract rates or market values.

In accordance with the Indian Jute Mills Association Working Time Agreement the Mills was permitted to work 54 hours per week but owing to shortage of Coal the average was only 52 hours per week. It is hoped that when coal supplies are more plentiful the time lost will be made up.

Agents.—Messrs. Gillanders Arbuthnot & Co.

(a) Issued at Rs 50 in 1934, repayable in 1944 at par or at the option of the Company at any time on six months' notice. Debenture holders have the option to subscribe at any time for an allotment of ordinary shares of the aggregate nominal value of Rs 90, payable in cash and this option expires at the end of 3 months from the date of notice of repayment by the Company. (b) Issued at par 1st July 1932 repayable at par in July 1937. Rs 1,25,000 worth of debentures were issued on 1st July 1937 and the remaining debentures for Rs 1,25,000 were continued at the reduced rate of interest 4 1/2 per cent repayable at the option of the Company to pay off or any part of the debentures at any time after 1st July 1938, on two months' notice. Interest payable on 1st July. (c) Preference shares are entitled to a cumulative dividend of 7 per cent per annum and thereafter rank *par passu* for any profits after a dividend of 10 per cent on the ordinary shares. (d) Issued in 1937 and 1941, redeemable at 110 per cent at the option of the Company on 6 months' notice or in the event of the security becoming enforceable only the application of a sinking fund to operate by annual drawings of Rs 10 lakhs for repayment in January or by purchase under 110 % (e) Issued at par in August, 1934, repayable at par on 3rd December, 1944, but liable for redemption in whole or part at par at the option of the Company on or at any time after December, 1938. (f) Issued at par on 15th November, 1928, and repayable at par on 15th November, 1948 (g) Issued at par on 1st October, 1935, repayable at par on 1st October, 1955, with option to repay at a premium of 3 per cent on 1st October, 1945, or any subsequent 1st October, before, 1st October, 1955, on 3 months' notice. If the whole amount is intended to be redeemed, it is not drawings will be made at least one month before the date of redemption and ten days' notice of such drawings will be given. (h) Issued between June and November, 1936, repayable at par on 31st October, 1946, option repayment at 3 per cent premium any time before 31st October, 1943 on 3 months' notice. (i) Issued at par in September, 1943, with option to redeem at any time after 10 years from date of issue. (j) Participating preference shares carry right to a cumulative preferential (tax-free) dividend of 7 per cent and after the ordinary shares have been provided with a similar dividend the preference shares are entitled to a further 5 per cent. (Continued from page 598)

than 100 points to quote Rs. 2,120. But for the short covering the price would have been still lower. Tata ordinaries were Rs. 411-8 as against Rs. 430 a week ago. There has been a drop of more than Rs. 2 in the quotation for Indian Iron and Steel at Rs. 36-8.

The Miscellaneous section was also easy in sympathy with Steels and Textiles. Alcock Ashdown are nearly 18 points lower at Rs. 612-8 as against Rs. 630 last Thursday. Shivrajpur which have been rather irregular are definitely easier around Rs. 68 on rumours of a lower dividend. Belapur Sugar are 8 points lower at Rs. 242-8.

Premier Construction have recorded a loss of 6 points from Rs. 225 to Rs. 219. There has been some enquiry for A.C.C. and the price is higher at Rs. 226. Burma Corporation and Indian Copper were dull at Rs. 3-12 and Rs. 2-12-6 respectively.

The gilt-edged market was also easy with a drop of more than 10 as. in the quotation for 3½ per cent Govt. Paper at Rs. 98-8. 3% (1949-52) were Rs. 100-8; 3% (1951-54) Rs. 99-15; 4% (1960-70) Rs. 112-8.

Bank shares were quiet. Central Bank Rs. 93-12. Imperial Bank fully paid were Rs. 1,932-8 while the partly paid are quoting Rs. 504-4. Bank of India were Rs. 184-8 and Reserve Bank Rs. 134-4.

MADRAS STOCK EXCHANGE

Madras, March 22.

The Stock Exchange remained dull and uninteresting with the principal counter recording further fall in prices. Though more than three weeks have elapsed since the budget proposals were made available and in spite of buoyant conditions elsewhere the textile counter in the local market has not shown any signs of recovery. On the contrary the downward trend is still continuing. The second important counter after a brief period in which prices were marked higher on rumours of a higher price for rubber, remained more or less steady. Other sections also were steady. Even though the reactionary tendency is mainly limited to textiles, there is no likelihood of the market showing a better tendency so long as the principal counter does not firm up.

The Gilt-edged market was steady with 3½% Government paper quoting around Rs. 99-5. There has been a slight improvement in the quotation for 3% Loan (1953-55) at Rs. 99-9.

Bank shares were in good demand. Reserve Bank improved to Rs. 131. Indian Bank (Rs. 50) were wanted up to Rs. 193-8 cum dividend. Indian Overseas Bank were Rs. 102-8, Bank of Mysore were Rs. 513 x.d.; and Travancore Forward Rs. 10-1.

Among Mill shares Mettur Industries were easy at Rs. 305-8 and Coimbatore Spinning and Weaving at Rs. 228. Cambodias were almost unchanged at Rs. 42-12 cum-dividend. The turnover in this section was on a reduced scale during the week under review.

The Planting section continues to be active with some of the leading scrips showing some slight improvement. The turnover in this section is also considerable. Cochin Malabars are better at Rs. 18-10. Pullangodes were Rs. 3-2-6 Thirumbadis were Rs. 5-3-6; Nilgiri Neerugundis Rs. 11-2; and Ochterkony Valley Rs. 16-4 cum dividend.

In the Miscellaneous section Mettur chemicals (New ord.) were unchanged at Rs. 24-8. Mysore Papers were Rs. 35-8; Spencer (ord.) Rs. 13-2 and Andhra Cements Rs. 90.

(Continued from page 597)

As regards the prospects for the current year, the directors are optimistic though they point out that there has been a considerable diversion of cane supplies for gur manufacture even with the operation of the Gur Control Scheme.

Cambodia Mills Limited also has done very well in the year ended December, 1943. Total sales of yarn were as much as Rs. 1.19 crores against Rs. 64.64 lakhs in 1942. The net profit, before providing for taxation and depreciation, is Rs. 51,64,208 against Rs. 25,69,432 for the previous year. The provision for depreciation is Rs. 1,17,027 against Rs. 1,17,465. The provision for taxation is as much as Rs. 39.3 lakhs (Rs. 4,10,369). The amount transferred to general reserve is Rs. 2.25 lakhs (Rs. 1.5 lakhs) while the additional sum of Rs. 1.15 lakhs is placed to Dividend Equalisation Reserve. The final dividend of 50 per cent with the two interim dividends of 10 per cent each, already paid, makes 70 per cent for the whole year against 35 per cent for 1942. The amount carried forward is very much higher at Rs. 80,550 against Rs. 10,369 brought in.

The recent issue of fresh capital by the United Iron and Engineering Works Limited has, we understand, been oversubscribed. The new issue was for Rs. 7½ lakhs in ordinary shares of Rs. 10 each at par. Subscribers to the new issue should be satisfied with their investment as the market quotation is considerably higher at Rs. 11-6.

It was announced on Friday evening that there was to be a new Government of India Loan. For sometime past markets have been expecting an early announcement of the terms of the new loan issue and 3½ per cent Paper was higher at Rs. 99-8. It is only this week that there has been a slight setback in the quotation to Rs. 98-8. The announcement of the terms of the new Loan at the present moment indicates fully the confidence of the authorities in the success of the issue.

The new Loan is a 3 per cent 1957 Victory Loan and is issued at par and repayable at par. Thus it has a longer period of maturity than the 1953-55 Fourth Defence Loan. The effect of a new 3 per cent Loan for a longer period should be bullish on the gilt-edged market. Before long the Fourth Defence Loan should be quoting above par.

Shivrajpur Syndicate, Limited has had another year of successful working. Ore shipments in the twelve months ended November, 1943 were satisfactory but the net profit before providing for taxation and depreciation was lower at Rs. 6,96,721 against Rs. 8,24,688 as the sum of £14,000 was received in 1941-42 "on account" for the shipment of ore in 1940. As the provision for taxation had to be at the same level, Rs. 5,26,500 against Rs. 5,03,308, the dividend is lower at 32½ per cent against 47½ per cent. The charge on account of depreciation was Rs. 21,485 (Rs. 25,030) while the allocation to funds was Rs. 25,000 (Rs. 43,051).

The Company's liability to E.P.T., Income-tax and Super-tax on the profits of the year

ended 30th November, 1942 has not yet been finally agreed, but a provisional assessment of Rs. 2 lacs against the E.P.T. liability to that date has been paid. Rs. 2,84,321-2-2 has therefore been carried forward in respect of the estimated liability for Taxation for the period up to 30th November, 1942. A further provision of Rs. 5,26,500 being the estimated taxation, including E.P.T., on the profits of the year has been made and is considered adequate on the basis of all known factors. Deposits estimated at Rs. 1,34,700 will be payable to the Government of India under Section 10 of the Finance Act, 1942 on agreement of the Company's liability for E.P.T. to 30th November, 1943. No credit has been taken into the accounts for Postwar Refunds of E.P.T., which in addition to the E.P.T. deposits yet to be made, with interest at 2 per cent per annum, will be receivable in due course. Rs. 20,000 has, however, been set aside to Equalisation of Dividends Reserve Account as a partial balancing factor until such refunds are made.

TREASURY BILLS

India

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on March 28. Total amount offered was Rs. 5,94,75,000. Tenders at Rs. 99-13 per cent and above were accepted in full and those at Rs. 99-12-9 per cent were allotted approximately 61 per cent. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-12-9 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on April 4, in Bombay up to 11 a.m. and up to the close of business on April 3 at other centres. Successful tenderers should make payment on April 6. Other conditions are as usual.

During the week ended March 24, Government of India Treasury Bills for Rs. 2,31,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday, March 30.

The beginning of the Salute the Soldier campaign in order to increase and attract savings has been without any distinct effect on gilt-edged prices in London except for a rise in the Funding Loan. There is not much to suggest that the Premier's broadcast encouraged the London market at once but the test as to confidence in the National Government may lead to a thaw before the Budget. Estimates as to revenue and expenditure in 1944-45 have not appeared so far, but British example in regard to the war effort has been upheld by Mr. Curtin when commending the new Australian loan. Few cables as to the fate of lease-lend (due for renewal) have appeared but the British statement as to reciprocal aid was presented well in time. The President is still faced with a hostile Congress; there are no signs of his five-point programme for new taxes, price control and subsidies having gone home. The anti-trust case goes on, and baiting Big Business abroad is become a habit. In this period, Wall Street has lacked real confidence and the only mention of money talks at Miami brought the comment in London that nothing can be settled without Parliamentary sanction. The final judge always is Parliament: hence Mr. Churchill's desire to make the most out of the token defeat on the Education Bill before the Commons gets on to the Budget.

If the stock exchange has been steady and tea shares show recovery, it is due largely to hopes of the Second Front. The railway market has weakened but London Transport issues are firmer. That may not be significant but the fear that passenger traffic would end abruptly cannot affect stockholders as the Government's revenue guarantee has been given; and railway stocks are now like gilt-edged. The most important feature of the oil share market is the rise in Anglo-Iranian stock. Cabinet crisis in Teheran does not affect London's view as to the ultimate prospects for the big oil shares. Since the Prime Minister refused to give a date for the return of peace textile issues which have been called "peace" stocks have mostly lost ground. The negotiation of mutual aid pacts by Canada indicate that Dominion will make a further gift and not buy out British interests. Having had experience Canada is not likely to take over the C.P.R. which has known long spells of prosperity and adversity.

Financial news items as to new taxation in Palestine and a trade pact with Lebanon under consideration in Iraq are of little importance as compared with the assurance of Australia's interest in Indian trade. There is a very large balance of trade in India's favour and what Australia does with her sterling assets can be guessed from the active balance of trade arising from the war. All this must be cleared through London for India may not care for the Australian currency and would stick to sterling. The increase in Empire trade is presumably an element in the growth of sterling balances and India's heavy liability to Iran is also discharged in sterling since Iran gets gold from Russia (not from this country) and is ready to part with silver for others. While much of the export trade with America is financed through London total dollar receipts cannot be large

By Special Cable

U.S. Government's Plan for B.O.T.

SPECIAL FOR "INDIAN FINANCE".

Washington, March 29. United States foreign traders revealed last week that they are receding at least slightly from their historic position of hostility to Government participation in their own international commercial activities. This attitude is of utmost importance not only as far as foreign trade itself is concerned, but as indicating that American "Big Business" is prepared to accept closer official controls after the war in all directions. The foreign traders' sentiment was disclosed at New York meeting of one thousand export managers where several Government spokesmen said that official controls over international trade will not be completely relaxed once the war is over. The proposal to establish a United States Board of Trade, which it is understood would be akin to the powerful British Board of Trade, was generally favourably received by exporters, while concurrently the National Council of American Importers endorsed the proposed Senate resolution to establish the Foreign Economic Commission to study means of expanding foreign trade.

These two incidents alone would not be convincing proof that United States industry is anxious to operate under Government regulations but they were accompanied by somewhat grudging expressions of approval from the Conservative press. Thus the New York Journal of Commerce stated: "There is urgent need for a Government Agency to provide the same active support for our foreign commerce as the British Board of Trade furnishes." Nevertheless, the same editorial concluded "what other Governments do to restrict or control their trade with us should not cause this country to abandon our reliance on free enterprise, as the most desirable and most effective way to conduct business activity."

The more orthodox viewpoint is formulated by the New York Herald Tribune which said "if one thing was abundantly demonstrated in the Thirties it is the fact when Governments themselves begin to compete for world markets through subsidies, exchange manipulation and similar devices at the end, the result is that no one is a gainer because such subsidies inevitably invite retaliatory measures sooner or later which effectively defeat their purpose."

Despite such contentions it is believed here that a more realistic approach to post-war trade problems may cause U.S. foreign traders to modify their free trade ideals and realize that political rather than economic considerations may dominate post-war trade influences.

A case in point is the much-debated Saudi Arabian pipeline for which the Government proposes to subsidise to the extent perhaps of a hundred million dollars. The natural reaction, except for the three United States petroleum companies directly involved, has been hostility to the plan whereby the Government enters another field of private enterprise. Yet only recently, almost two months after the proposal was first advanced, has it been widely appreciated that the result thereof would be British and United States industrial and political unity in a section of the world where other foreign oil interests years hence could cause a potential upheaval. Such political backgrounds so far are only whispers which will later become open reasons for the Government's interest in to-day's world trade picture.

LLOYDS BANK

LIMITED

(Incorporated in England)

Saving Made Easy

You can help to bring prices down by curtailing your spending and increasing your savings.

Five Rupees will open a Savings Bank Account at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

Interest is allowed, and withdrawals can be made by cheque.

(Continued from previous page).

1945 the debt is expected to be about \$200 billions—not large in relation either to Britain's debt or the U.S. national income. But the whole Roosevelt era has been one of deficits and piled-up debt and businessmen with doubts about the Fourth Term are developing views independent of the administration. There is anxiety over gold though the U.S. stock at the end of June 1943 amounted to 13223 millions of old gold dollars even though home-mined output fell in 1942. The U.S. stocks at the end of June (according to the League of Nations statistical bulletin, amounted to about two-thirds of the world's holdings (U.S.S.R. excluded). Japan's holding of gold is shown as constant in the war period like India's. The League of

Nations bulletin also shows that the E.E.A. lost heavily between 1939 and 1941 when the demand for dollars was acute. That was before Lease-Lend and after the transfer of the currency reserve to the E.E.A. The stability of sterling before and after the changes noted finds support in the general assumption that the cross-rate under any new arrangement will be between 4 and 5 dollars to the £. That appears to settle the question of the future value of the rupee in the exchange and the depreciation of the rupee in war-time in relation to gold (70 percent) appears small.

The war in Italy has brought about a national socialist revolution. Mussolini has gone back to socialism and Farinacci has

set up factory councils on his own. Big estates in Northern Italy have been broken up; management has been displaced in favour of workers' control in some cases. But industrial unrest in the north persists and wages raised by order are insufficient to meet the 200 to 700 percent rise in prices. The Germans create the scarcity that is combined with inflation and removal of rice, sulphur and artificial silk to Germany in November showed how the New Order is working. Expropriation was common and the fascists' new claim to deal strictly with private property was anticipated by the Germans. The encouragement of Socialism of course creates difficulties for the old King whose only promise is in regard to the people's verdict on the monarchy.

THE CRY OF DISTRESS

Despite the very great efforts of the Railways; despite the co-operation of the agriculturists, of townspeople and of business men alike, there are still people in this country whose very lives are in peril.

Some of them suffer from food shortage, some from lack of other necessities of life. Mercifully, their number is getting less and less, but there are still many and their cry must not go unanswered. The Railways' first obligation is to them. The distribution of food and civil supplies must take precedence

over passenger travel. So, if your accommodation is crowded—if tickets are difficult to buy—if travelling is uncomfortable, bear in mind those poor people. Appreciate the Railways' difficulties, and if you want to do your bit, stay at home and travel only when you must.

Gold and Silver Sales

The week's developments in the bullion market have brought out in an arresting fashion the dangers of a lack of policy in this country in regard to gold and silver. Neither the Government of India or the Reserve Bank nor the public at large seems prepared to suit its actions in regard to the precious metals to the larger national interest properly conceived in the light of the present position and possible future trends. The propensity of the Indian public to acquire gold and silver whenever possible has again made itself manifest. The crossing of the Indo-Burmese frontier by the Japanese in an action, which expert opinion still regards as in essence a diversion, has been the occasion for indulging a primeval instinct, which the Indian public should have outgrown by now. In so far as the buying of metals is prompted by the fear of insecurity of an inflated currency, the responsibility for formulating and executing a sound policy in regard to the precious metals must fall solely on the Government and the Reserve Bank of India. Every time, this question has come up before the public as a topical one, we have, for our part, made it clear that the governing considerations are that (1) the Reserve Bank's gold reserves are still far from the point of saturation, (2) that the price at which gold is sold to India should not be more than the price at which she was forced to part with it in the past and (3) that nothing should be done to encourage the hoarding habit, and that therefore gold should be made available to private buyers only at prices which are in consonance with the prevalent price level. These three principles apply to silver as well, except that silver would not need to be brought for the reserve requirements of the central bank.

The Government's action, however, are governed by the convenience of the Allied Governments and some apparent expediences of the internal situation. So long as higher prices in India seemed less forbidding than a decline in their gold reserves, the Allied Governments were content to pay in sterling in London. And gold sales in the East were resorted to only when the position changed. The Government of India have not only been content to have the currency policy of this country determined by others, but have also been eager to find arguments of their own in support of this policy. Their eyes were, as it were, suddenly opened to the anti-inflationary value of gold. They remembered, too, as suddenly that, if gold meets only the needs and resources of the wealthy, it is silver that suits the requirements of the masses. But from the point of view of the public in India, gold and silver are alike an encouragement of an undesirable hoarding habit, though the classes pandered to may be different. And both have been sold by India in the past at prices which are very much less than the prices at which the Indian public is now being stampeded into buying them. The fact that sales of gold and silver will have the effect of reducing redundant money in the country or that the Allied Governments find it convenient to meet a part of their expenditure in India by selling gold is no argument that, from the individual or the national point of view, we ought to be indifferent to the question of price. From the point of view of the nation, the loss that is suffered by selling gold at a low price, when we had no need to sell and buying at a high price, when such buying is not indispensable, is altogether iniquitous. It is no less iniquitous to encourage the public to buy gold and silver without any thought for the future course of prices or even to their stability in a short period. While the Reserve Bank cannot by itself control the course of prices in the future it is certainly in its hands to secure short-term stability. Even that has not been vouchsafed to the Indian buyer.

The prices at which the Bank has sold gold during the last few months show clearly the absence of any policy even in matters which are susceptible to its control. In the initial stages of this policy of gold sales, it seemed as though the Bank was eager to make gold available to the Indian public and that the authorities even favoured a gradual fall in prices. There was thus a decline in the rate from Rs. 78 to Rs. 71 per tola. A further decline did not materialise. And as if to meet a possible objection that gold was taken up only by wealthy men, whose funds would not in any case have added to the inflationary pressure on prices, arrangements were made for the sale of gold in small bars in different centres in the country. It was only a few weeks back that gold was offered in one and five tola bars at Rs. 71-4 per tola in centres like Calcutta, Madras, Nagpur, Delhi and others and the small investor was encouraged to put in his money. The offer of gold in small lots has been followed soon after by the developments on the North Eastern frontier; and the combination perhaps accounts in reality for the hectic rise in prices. Whatever the cause may be, one can hardly expect the Reserve Bank to accept this rise in prices when, not long ago, its policy seemed to favour a decline, in the price of gold. That the Bank should have invited tenders, thus allowing the rise to continue according to the innate strength of the demand is even more indefensible. Particularly, since by doing so the Bank is only driving a bargain with the public for its foreign principals and abetting and increasing the unjust deprivation of the Indian public. The hesitation of the authorities to reduce the price of the selling rate to below Rs. 71 per tola was, perhaps, due to fear that it would not be possible for them to offer gold in sufficiently large quantities to satisfy the public demand and that it was no use attempting the impossible. In that case, what is called for is a revision of the policy of gold sales.

The failure of the gold policy is attributed to the handling by the authorities of a unilateral method of action. It is said that a decline in gold prices would bring about a decline in silver prices too, if not proportionately. But the experience of the last few months has been definitely against such expectations; for, the silver market has been moving independently of the gold market. Apart from the slight hesitant feeling noticeable in the pre-budget days, fully firm conditions have been noticeable throughout and in mid-week silver prices were ruling at the highest levels for all time. It was the continued upward movement in silver prices, it is pointed out in certain quarters, that has nullified the effect of the Reserve Bank's sales of gold. On Friday last nearly £1.4 million worth of gold were sold by the Reserve Bank at Rs. 71 per tola. The continued selling kept down prices for a time; but on Monday and Tuesday even in the face of continued selling, there was a rise in the quotation to above the Reserve Bank's selling rate. When the Bank temporarily suspended gold sales the price jumped up from Rs. 72-8 to Rs. 80-12. The Reserve Bank has, as on former occasions, followed the market and gold was offered on the basis of tenders at Rs. 78 and Rs. 79 per tola. There has been a setback from the highest levels to Rs. 77-4; but the improvement on balance is substantial. It is well that till Wednesday last the Bank continued its sales of gold in small bars in Calcutta at Rs. 71-4 per tola, though in other centres gold stocks, it is reported, had run out and sales had to be discontinued. On Thursday, however, there was an increase in the rate to Rs. 74 per tola with a limit on the amount of gold that could be purchased by anyone individual. There has been an increase to Rs. 80 per tola on Friday.

If it is valid to argue on the basis of the movements of gold and silver prices, then it is clear that the Reserve Bank has to be ready with fairly large supplies of both gold and silver

to be able to keep the bullion market in hand. The authorities probably have made a similar reading of the situation, as they are reported to have acquired 500 tons of silver, which are to be sold at rates considerably less than the prevailing market rates. This report led to a slight decline in prices in Thursday's session, but operators do not seem to be worried about any active interference by the authorities as the quantity mentioned is only small. Sales have to be continuous and effective, if prices are to be brought down appreciably. Even at the present market prices for gold at Rs. 77 per tola, silver is considerably overvalued, the peacetime ratio being one tola of

gold to 70 tolas of silver. On this basis any quotation for silver above Rs. 115 would be unjustifiable. To the extent that there is a real desire for security, it would be inequitable to offer gold and not silver. But it is well not to attach too much importance to price movements, which may be due more to machinations of a syndicate than to a nervousness genuinely felt by the masses. While sudden spurts in prices or demand may be tackled by special measures, the need to formulate a policy in accordance with the principles we have cited, has increased, not decreased, during the last few months.

THE END AND THE MEANS

The inordinately heavy tasks of further industrial development for which a total outlay of Rs. 4,480 crores is required under the Eight Industrialists' Plan have not led to any real questions as to trade policy but only as to the resources that could be employed. It is noteworthy that power development schemes figure independently, and except for the Government's acceptance of power development as a necessity, there is not any sign of agreement as to the objectives listed. Why industry should develop and not agriculture, assuming that full utilisation of resources would break down the economic paradox, can only be answered by a reference to economic history. It is fortunate that American students of India's economic development are able to glimpse the need for a diversity of occupations. The Famine Commission in 1880 noted that undue dependence of the population on agriculture was a mark of economic vulnerability. Population increased, and the soil though it continued to respond to human effort, became less reliable. While industrial development in the first phase reflected the inflow of external capital in India the really substantial industries developed on account of the war. The same development in wartime may not be obscured by the growth of the Indian tariff and what the tariff has done to further Indian enterprise, and British interests to a continuous extent, can be inferred from the dealings with the steel and cotton textile industries.

Reviews of fiscal policy in India dwell on the backwardness manifest until fiscal autonomy—the real fruit of the Montagu-Chelmsford declaration—was conferred. What followed the acceptance of the Joint Select Committee of the condition prescribed as to the use of the tariff when the Indian Government and legislature were in agreement, can be inferred less from the rise of secondary industry than from the expansion of pre-Protection industries like steel and cotton. While the advantages created for indigenous industry by wartime restrictions on imports and the surcharge on import duties are manifest, questions urgently asked about the policy of encouraging import of consumer goods as a cure for scarcity make it necessary to indicate the place of tariffs. The latest Oxford pamphlet makes it clear that during the depression Indian industries continued to progress because the principle of Protection was unchallenged. Dr. John Matthai concludes that the increased output of steel, cotton manufactures, sugar, matches and paper was attributable solely to Protection and the immediate success of Protection deserves general recognition. The burden of the tariff has been borne by the more well-to-do classes in the country. That, too, is a welcome indication of the merits of the policy adopted for the self-sufficient reason that Central revenues before the war depended to a large extent on tariffs, and when the latter began to yield less, Central excises became common. The

balancing of protection by new taxation does not however receive sufficient notice in the more or less general review of fiscal policy, for Dr. Matthai is concerned most with indicating both the need and the scope for industrialisation. His argument turns on the need for a balanced economy and the associated need to relieve the pressure on land of which fragmentation is a symptom. That industrialisation would help to improve and modernise agriculture seems sufficient answer to the sceptics who think that the cart is put by our planners before the horse.

The points in favour of industrial progress are summed up afresh. Industrialisation would stimulate both investment and saving. "The formation of well-organised industries by joint-stock companies under reputed management, would afford facilities for people of limited resources to invest in industrial shares." The practice of hoarding would be checked, and agriculture, too, would benefit from additional investment. An increase of investment would help also to bring down rates of interest. These advantages are certainly underlined by experience. The pace of investment in joint-stock enterprise explains the reduction in yield which is related directly to the cheap money conditions maintained since the Bank rate was reduced to 3 percent. The Bombay Plan emphasises the urgent need to alter the proportion of national income from industry. The physical handicaps to industrial development are not so important as imagined. The major change in regard to mental outlook as distinguished from the facile fatalism produced by agriculture is regarded as desirable as the growth of investment and income, of taxable capacity and the resources for welfare.

Since unanimity obtains as regards the end of the discussion as to the means need not be laboured. The increase of machinery imports long before the war showed that the use of the tariff had altered both the content and direction of India's foreign trade. Dr. Matthai outlines the results of industrialisation on trade in his argument. "The additional income produced by industrial enterprise must either be saved or be spent. If it is saved, then it induces further investment in industries and further expenditure on products essential to industrial development which cannot be obtained locally. If the surplus wealth is spent and not saved then it often happens that the demand for many articles, especially luxury articles, will increase and these will be imported from other countries, thus helping to maintain the import trade." The current view that foreign trade cannot be static is cited to show that tariffs cannot affect substantially the quantum of foreign trade.

Whether protection is necessary for the future is debated not only by those who plead vigorously for an 'ad hoc' tariff policy or a Two-Part tariff, the first aiming at revenue and the second at quota regulations, but by those who think that major

industries can dispense with Protection. It is not likely that imports would revive in substantial volume after the war in spite of a recent warning as to the powers for recovery inherent in Germany or Japan after military defeat. Dr. Matthai's opinion is that for a period of approximately five to ten years from now the demand for consumable as well as capital goods will outstrip supply and existing industries in all countries will be kept more or less fully occupied. A large home market and fairly high prices will be retained as advantages by Indian industries. Since tariffs are regarded as unimportant for the future, direct assistance for industry acquires great importance. Whether assistance will entail internal reorganisation such as Dr. Matthai regards as probable may be doubted by many. The structural features imposed by the presence of foreign capital—the influx of British capital after the last war certainly deserves notice—may not alter, but the changes engendered by wartime control would favour reorganisation. More than one unprotected industry is exposed at present to a degree of regulation absent in the secondary industries that owe their success to the tariff. The reorganisation would certainly favour a return to free trade since Dr. Matthai holds that it would be impolitic for India to stand out from measures adopted for the sake of an expansionist world economy. Freedom of action must be reserved (in Dr. Matthai's opinion) in respect of key industries in India. Industrial planning should call for import control but industries producing consumer goods would be independent of protection and trade policy would inevitably be guided by consolidations as to foreign exchange resources. Before the war bilateral pacts

had ceased to be important as compared with clearing agreements and the main issue as to tariffs is easily disposed of in regard to planning. When capital goods industries develop encouragement will have to be given in other ways than import duties. This propitious conclusion will call for notice if the three-cornered struggle for the Indian market develops at any time.

Doctrines of free access and unimpeded flow have admitted less importance for the immediate future than the adoption of measures for India's economic salvation. When the measures are pitched so as to raise the part of income derived from industry to 40 per cent of the total national income the question as to tariffs is answered. The general view that industrialisation in the East was an element in the great depression has been discarded since industrialisation in the East, or that part saved from Japanese invasion, has been an essential ingredient in the superiority in resources claimed by the Allies. If the connection between the war effort and protection has not been overlooked at all times, the present dependence of the countries near India on India's own industries appears sufficient cause for the programme of expansion. Indian tariff history, in the main, illustrates the advantages of regulated growth and of rapid adjustments in relation to wider purposes. The essential need for continuity stands out in the examination of tariffs and industry undertaken by Dr. Matthai. The immediate conclusion is against a narrow economic nationalism, but it is weighted in favour of industrialisation though the tariff instrument is less favoured for reasons that are unexceptionable.

Editorial Notes

Oil in the Middle East

In the background of a world war which is yet to reach its crisis, the great powers are taking significant moves for the control and conservation of the world's oil resources. Though the U.S. project of a pipeline from Saudi Arabia has been in the news for more than a month, the period in which oil has provided the dominant motive of international diplomacy dates back to a far earlier time. Excepting the oilfields, which are within the territory of the United States, the world's oil resources have been situated in areas exposed to varying degrees of foreign domination and exploitation. The Far East, inclusive of Burma and Borneo, the Middle East, comprising Arabia, Iraq, Iran, regions inhabited by Muslims, the oilfields of Russia, Roumania and Latin America, all have been subject at one stage or another to foreign domination. While Roumania fell under German domination, Soviet Russia and Mexico braved the odium of expropriation in achieving the freedom of their oil industry from foreign domination. The Middle East and the Far East still afford a free field for power politics. While Japan helps herself to the fruits of Dutch enterprise in the N.E.I. and British enterprise in Burma, the position in the Middle East is sought to be rendered more secure for the future. The initiative is taken by the U.S. for reasons which will be recognised to be sound and forcible. For one thing, far too much of the weight of the present war has fallen on American oil resources. It is estimated that 85 to 90 per cent of allied oil needs is being met from American sources. And the U.S.A. has to face the prospect of mere self-sufficiency in oil, or perhaps something less than that. Foreign concessions in which America has considerable interest have not for various reasons been worked to their full capacity. And since the strategic importance of oil-bearing regions of the Middle East is unquestionable, it is natural that the U.S. should take up the question and push forward with force and vigour.

The present position in the Middle East may be said to be lacking in simplicity. There are four major interests with something of the interlocking characteristic of the world's oil industry. There is in the first place, the Arabian American Oil Company which is wholly American, being owned in equal halves by the Standard Oil of California and by the Texas Company. There is then the Anglo-American Oil Company, and all British concerns with a 56 per cent government interest. The Anglo-Iranian owns also half of the third unit, the Kuwait Oil Company, the other half being owned by the Gulf Oil. Lastly there is the Iraq Petroleum Com-

pany a combine which is British controlled but in which the U.S. and France have each a 23½ per cent interest. Though the oil bearing areas extend over a large part of the Middle East, the oil has mostly lain under the ground. Only Northern Iraq has been well developed in addition to Iranian oil, in which British interest is paramount. Oil from these regions has outlets to the Mediterranean through the pipelines that lead to Haifa and Tripoli. Besides, the price agreements have been unfavourable to development of Southern Iraq. The position, then, is that, though America has concessions in half the oil bearing areas of the Middle East, their development is yet to be taken on hand.

It is this task that the U.S. has now undertaken without being deterred by some of the difficulties in the way. Not the least of these difficulties is that of arriving at an understanding between the oil industry and the Government. For, the former has many to whom State interest is anathema and there are some at least in the Government who never had any love for the oil magnates. But the threat of America being left with insufficient oil for her own needs, not to speak of exports, has helped to minimise the differences. But nothing can take away from oil its quality as a war material, though it is reported to calm troubled waters. Colonel Frank Knox frankly stated that the oil deals in America are a "primarily military project". And though he pointed out that U.S. policy in opening up new sources of supply is dictated solely by declining oil reserves in the U.S.A., he emphasised also that "this is one of the first indications of a genuine foreign policy of this country."

The foreign relations involved are, indeed, of the widest scope. Not only King Ibn Saud and the Sheikdoms of South-eastern Arabia, but Britain with her interest in the oil of the Middle East and Soviet Russia have also to be consulted. It is to be presumed that all ticklish questions have for the present been settled, inasmuch as the pipeline is decided on. The payments to King Ibn Saud have been made through British channels; and Russian acquiescence is understandable. But there is no mistaking the immense potentialities of the latest move of the American Government. The New York Times comment expresses the apprehensions forcibly:

If we go still further the question of extra-territorial rights will inevitably be raised and we may be faced with a problem of so many Hongkongs. Better than this would be some form of international control of the world's oil and just allocation in accordance with individual national needs. If discussions between Britain and the United States result in something

better than the old imperialism, the way may be paved for an amicable settlement of the question of access to all essential materials.

The new-found American interest in Zionist demands is perhaps not unconnected with oil in the Middle East.

Coal Industry's Problems

At the annual meeting of the Indian Mining Association Mr. E. A. Paterson described the antecedents and implications of the coal problem. The efforts made to increase coal output were reviewed and the Mining Association's view as to female labour underground was stated. Long before the legal prohibition the Mining Association's members dispensed with female labour and the temporary expedient of voluntary labour sanctioned by legislation is frigidly approved. At the Bengal Coal Company's meeting misgivings as to the introduction of female labour were certainly expressed and that sand-stowing or other work might suffer and according to the Chairman the company itself expected no direct benefits. It may be concluded that Government, not the employers, are responsible for the recent breach of custom. The labour situation on the fields was described. Wages have been

raised by 50 per cent over the rates in force in 1939 but the real problem is one of giving goods in return for the money earned by miners. Mr. Paterson deprecated the immediate increase in wages when the goods promised have not appeared in four months. Excessive official interference was mentioned along with the lack of response from miners to the stimulus of increased wages. There was mention also of a dwindling labour force and the competition of the Army for food supplies available in the coalfields. Mr. Paterson, therefore, has doubts about the whole series of decisions relating to Control for the sake of production but Mr. Young's appointment was not condemned. In view of the fears as to coal, or rather the coke shortage in Calcutta, the explanation as to wagon shortage given by Mr. Paterson will be convincing. The use of covered wagons entails difficulties but the railways have not been blame-free since mention was made of hundreds of wagons standing idle for hours, if not days at a time, in the large marshalling yards. In regard to coal control through a Commissioner and a Board drawn from the industry, the quarterly revision of prices was described as necessary. It was pointed out that basic prices should show a fair and reasonable profit "if they are put too high the margin of profit will be too great as to remove the incentive to increase raisings on what is a wasting asset, particularly will this apply to privately-owned collieries; again if the price is fixed at too low a figure, the incentive will be absent for converse reasons." The Association's members account for 70 per cent of commercial coal production. The review of labour welfare arrangements in force before the Ordinance relating to the welfare fund is valuable. The centenary hospital at Sanctoria and the setting up of new schools for miners' children were described by Mr. Mealing at the Bengal Coal Company's meeting. The Mining Association's members have appreciably extended amenities and benefits without outside direction. Essentials including food at concession rates, free dispensaries and hospitals have been made available by every large colliery of repute according to Mr. Paterson. Indian colliery-owners are not opposed to control though cautious in assessing its merits for the situation that has arisen may be traced to the deliberate pushing down of prices for the Railways' coal. The legacy of depression was not overlooked by Mr. Paterson in the review of difficulties. Changes in grain supply which, apparently, do not meet with the Association's approval are mentioned. If output flags, the reason will be understood.

Emergency Housing Plans

In the Prime Minister's review of events in 1943 the war naturally took the first place. Refusal to predict the date of victory will certainly be noted in markets which will be reassured by the affirmation of united purposes contained in Mr. Churchill's broadcast. The battle of the Atlantic has been won; the battle of the Pacific is about to be won for the Japanese fleet is inactive, and Japan's weakness in shipping especially tankers and the attrition of the airforce constitute dangers that will have grave consequences. As to the war in Burma, the broadcast was not very illuminating except as to the individual superiority of British and Indian soldiers. From the

assurance as to the battle fleet in Indian waters, encouraging inferences will, doubtless, be drawn as well as from the Prime Minister's mention of the narrowing of the interval between the defeat of Germany and the defeat of Japan.

The Prime Minister's defence of the Coalition converged on the post-war housing and employment questions. The war effort takes precedence over housing at present. Britain was and is better off in regard to housing than many parts of the world. Repairs and reconditioning of damaged houses are promised this year. For the future, pre-fabricated or emergency houses appears the first instalment. Private industry will work out the plan for 500,000 new houses put under the Office of Works. The new houses are likely to make heavy demand upon the steel industry. Furniture would be built-in and rents would be moderate. Sites for 200,000 to 300,000 new houses under the re-building programme have been chosen. Land values have been pegged and transfer to public ownership has been arranged for. For the building trades especially, the Prime Minister's review contains encouragement but not for building societies which have been in suspended animation, sought mergers, and reduced resources voluntarily. Stabilisation of employment in the seasonal trade is described as a condition for progress. The twelve-year plan attributed to Lord Portal is meant to guarantee continuous employment and increased rewards for increased efforts and skill. There was no reference to the administration of town and country planning for building is treated as part of the first stage of reconstruction. Municipal obligations in the future will be lighter for the Ministry of Health or other national authority will undertake the work after the interval referred to by Mr. Churchill. With a stationary or declining population in Britain the housing problem appears to be mastered, and the Scott and Withwatt reports by-passed by legislation for fixing land values and compulsory acquisition for public purposes and the housing plans will have no determinate effect on the location of industry since the plans will attempt to disturb as little as possible and make no distinction between the special and the normal areas.

British Banking Trends

The Bank Chairman's advises to shareholders followed the publication of results. There was a rise in profits but no increase in the yearly dividends. Banks lent more to the State and Deposit receipts had certainly attained the first place among the banks' assets at the end of 1943. A new item Tax Reserve Certificates had appeared in 1942. The improvement in profits was not wholly absorbed by taxation for a part went to strengthen reserves or enhance the carry forward and all contingencies have been guarded against. Advances have been made almost exclusively for war production and sometimes a Government guarantee was available. The bill of bad debts is negligible as loans are safer. This made Advances secure and any change after the war may be gradual as controls over production, investment and spending are likely to survive the war. Except for the Midland Bank whose profit fell by less than 1 per cent, all British banks reported an increase in profits in 1943. In the case of Lloyds

Bank, profits rose by 12 per cent and in the case of the National Provincial profits rose by 11 per cent. The over all experience certainly was favourable and British bankers in January struck a confident note. The views of Mr. Edwin Fisher as to national effort and international collaboration reflect the preference for regulated enterprise. He asked for efficiency. Static conditions cannot be accepted and warned against "avoidable rigidity in all forms." Mr. Stanley Christopherson, the new Chairman of the Midland Bank described mainly the need to put the small trader back in his place. He promised banking assistance for "promising enterprises under good auspices" with equal weight for personal character as for material resources. As to future monetary policy, Mr. Christopherson urged that the maintenance of cheap money is a primary essential. He takes it "as certain that this time there will be no misguided attempt to enforce a decline in prices through the measures of deflation." In regard to the post-war abundance of bank credit and the avoidance of deflation Mr. Rupert Beckett was in agreement and his new plea was in favour of a flexible gold standard so as to secure American co-operation for attaining trade equilibrium after the war. As to the domestic prospects he was decidedly cautious, though he referred to Britain's relatively favourable position in regard to manpower, industrial equipment, and scientific achievements. He predicted economic recovery on the basis of full employment in peacetime but feared the general effect of easy phases and pleasant prognostications. The contraction of Advances and the increase in liquid assets are inseparable from wartime banking development. But the extreme liquidity is a useful reserve of power to lend freely and promptly to industry and trade when peace returns according to Mr. F. A. Bates, the Chairman of Martin's Bank. The substantial increase in new accounts when banks have closed branches owing to shortage of staff was regarded as proof of the fact that a growing number of people with small incomes and formerly small incomes are taking to the banking habit. A similar development has been noted in India, though branch expansion is the main factor in the growth of deposits.

The U. P. Finances

The U. P. Budget estimates for 1944-45 reveal the general trend of financial prosperity experienced almost in all provinces excepting the N.W.F. and Bengal. Revenues have swelled up falsifying previous expectations and the expenditure also have followed the upward move. The essentially strong financial position of the province is well indicated in the figures for the surplus which increased from Rs. 88 lakhs in 1940-41 to Rs. 164 lakhs in 1942-43 and stood at Rs. 223 lakhs for 1943-44. The coming year is expected to yield a surplus of Rs. 438 lakhs. The reduction in civil defence is not peculiar to the U. P. as the general improvement in war situation has resulted in lower expenditure on A.R.P. and other measures connected with civil defence in most of the provinces. The commercial operations of the U. P. Government have widened as shown in the increase of capital expenditure from Rs. 50 lakhs in the original budget to Rs. 857 in the revised. The total outlay in the current year on the commercial operations covering standard cloth, purchase of food-

grains and the export of gur, oil and oil-seeds to other provinces, amounted to Rs. 37 crores of which 29 crores is expected to be recovered within the year, while a carryover of Rs. 8 crores will be left. Up to the end of February the U. P. has exported grains to the value of Rs. 5 crores to other provinces of which more than half went to relieve starving Bengal. While operations in foodgrains and standard cloth resulted in loss to Government, those connected with gur, oil and oilseeds have yielded good profit. The future, as the Budget Note points out, cannot be foreseen at present and the U. P. Government is preparing for substantial losses by strengthening the Supply Schemes Stabilisation Fund. The expected surplus of Rs. 438 lakhs for the year ahead is utilised for strengthening the different funds, while a sum of Rs. 35 lakhs has been granted to local boards for road maintenance. The Revenue Reserve Fund which stood at Rs. 358 lakhs in 1943-44 has come up to Rs. 549 lakhs, recording an increase of 50% in a year. Correspondingly the Supply Schemes Stabilisation Fund mounted up from 100 lakhs to 225 lakhs and there has been an increase of 16% under the Road Fund and 40% under the Hospital Fund. By way of anti-inflationary measure the excise duties are to be increased. The price of opium will be increased from Rs. 140 to Rs. 180 per seer, that of ganja from Rs. 120 to Rs. 160 and the duties on country liquor and spiced liquor will be pushed up by 15% and 10% respectively. On the side of expenditure the creation of a Provincial Fire Service (with brigades in Agra, Allahabad, Benares, Cawnpore and Lucknow), the organisation of a Provincial Nursing Service, the provincialisation of certain sadar hospitals and the establishment of a new Department of Animal Husbandry deserve notice. The debt position does not record any appreciable change and though the huge outlay of Rs. 10 crores on Supply Schemes present difficulties in the Ways and Means position the enormous reserve funds built up in recent years go to show that if the wartime responsibilities weigh heavily on the U. P. Government, the financial resources have also grown to satisfactory levels.

Dutch Plans for Restoration

While the U. S. postwar plans from the conversion of war industry to the veteran's bonus are familiar, the intentions of minor governments are hardly known. Those who left Nazi-occupied countries have their own plans to take over at once and run the government. Plans for the restoration in Holland are said to be complete and the Government in exile wants to get normal democratic machinery back to work after the state of siege in which a local military government assisting Allied armies would be at work. But civilian control is postulated. The diplomatic correspondent of the Manchester Guardian said that elected bodies and officials in office at the time of invasion would be reinstated but the quislings would be out and soon tried for war guilt by special tribunals. The main problem for the Dutch Government would be the re-settlement of the population dispersed by the Nazi occupation. Dutch workers have been taken off to Germany and Germans sent in for safety from the Ruhr and Rhineland. It is estimated that about 600,000 people including 120,000 Jews have been removed from their homes by orders. There is a plan to raise

an army in Holland for service in the Colonies to fight against Japan. It is believed that conscription (adopted in 1922 partially) will have to be applied and compulsory labour will also have to be enforced. While the U.N.R.R.A. will discharge its responsibility to Holland, the Dutch Government intends to ask and receive reparation for German looting. Art treasures, machinery and cattle are to be recovered but the Dutch Government is averse to financial reparations of the old sort. Lost assets in some cases cannot be easily traced and Germans who got stocks and shares may even be in a position to keep them. There is, however, a great difference as compared with Yugoslavia or France and the plan to restore the constitution, based on universal suffrage and proportional representation, immediately on reoccupation shows that the history of the Netherlands will be continuous and party conflicts between Protestants and Catholics, Anti-Revolutionists and Social Democrats in the past will have no more effect than the unhappy interlude of invasion.

Hyderabad's Electric Supply

There is an account of electricity in Hyderabad in the State Information bulletin that reveals how far electricity statistics can be readily treated as an index of industrial progress. Extensions to plant are contemplated and the difficulties described in Hyderabad are indicative of current experience in most places. When war broke out the Hyderabad Electricity Department was providing 19½ kilowatts per year to 12,000 consumers in Hyderabad and Secunderabad and met a peakload of 3,800 kw. The capacity of the three turbo-generators using steam was 9,750 kilowatts. More than normal growth of demand in the war period raised the output to 27 million kilowatts and the peakload was nearing 6000 kw. Order for a new turbo-generator was placed and is expected to be in service next year. Besides, two new boiler units were procured and one was ready in January. Additional sources of supply were however needed as the peakload was up to rated capacity. An emergency generating station with secondhand diesel plant was planned. It is not quite ready for use but is expected to help in the event of breakdown or unexpected increase in demand. To reduce consumption of power generally, the Hyderabad Government introduced the blackout; the system of daylight saving, and restrictions on consumption when the coal shortage appeared. The cut in coal supply proved decisive, and the rationing of electricity came in. Both Hyderabad and Secunderabad were called upon to reduce the use of electricity for domestic purposes. The Hyderabad Electricity Department set up its own workshop to deal with running repairs independently and soon was called upon to war work and train technicians. Since steam plant requires water, the Department set about building a large concrete spray-pond and for a year the situation is regarded as satisfactory. The electric supply and distribution work accounts for about 2,000 employees for whom amenities of the ordinary type are provided by the Department.

The Post-war Car

The view of most American automobile manufacturers, it is authoritatively learned, is that the first post-war production of

cars and trucks will be very similar to 1942 models.

Prices in the U.S.A. may be as much as 30% above pre-war levels, a reflection chiefly of increased labour costs. The public demand, it is anticipated, will be for the low-cost efficient car since taxation will leave little margin for the average owner to indulge in luxury or semi-luxury models.

The first new models which the automobile industry will offer are expected to be lighter in weight and easier to handle and cheaper to operate compared with pre-war models.

Although at least three new manufacturers are expected to enter the industry, it is the view of knowledgeable judges that for some time after the war the demand will be big enough to provide capacity business for all. One prediction is that for the three years after the war the annual demand in the United States alone will reach six million vehicles annually.

General Motors, it is understood, plan to spend fifty million dollars for reconversion of its plants from war to peacetime automobile production, technological improvements, and retooling for new cars.

Bonus Claim

The dispute relating to workers' bonus in the case of two oil companies recorded in the Bombay Labour Gazette for December is of some interest in view of the Central Government's intention to limit bonuses, allowances and commissions. The adjudicator noted that the National Oil Workers Union demanded two months' wages as bonus for 1942. The previous award following a reference to the same adjudicator led to the payment of one month's pay as bonus for 1941. The subsequent demand was refused by the company on the ground that bonus is a free and voluntary gift that cannot be claimed as of right. Reference was also

"There are also great commercial possibilities in India. There are mineral resources still undeveloped; there is abundant labour, a portion of which has now attained a considerable degree of technical skill. India has many experienced and able men of business. Her financial position at the end of this war should be a good one. There are almost unlimited markets, internal and external, for her produce.

Such are her main economic assets. She has, however, also many economic difficulties and disabilities. The pressure of increasing population, the small percentage of educated persons, the low standard of health services, the poor conditions in which the greater part both of agricultural and labouring populations live, the flagrant contrast between wealth and poverty, the inadequacy of communications, all mark the immensity of the problem which confronts India in raising the standard of living. Our task is to use rightly and to best advantage her great economic assets; not to increase the wealth of the few, but to raise the many from poverty to a decent standard of comfort. A hard task indeed, but a noble task, which calls from all for a spirit of co-operation, a spirit of hope and a spirit of sacrifice".

made to the excellent terms of service, the enhancement of wages, the various amenities, and the guarantee of 26 days' wages in each month available to the workmen. Since a bonus was paid in January 1943, a further claim for the next year would not lie in the opinion of the company. The increase in profits during the war was not denied, but the General Manager of the Standard Vacuum Company adduced several reasons for his opinion that a bonus was superfluous. He mentioned that the company had invested in its business in India, since the war started, a large amount of additional capital which could only be justified by a corresponding increase in earnings. The selling price of its products were controlled by Government. As regards Excess Profits, if any, the greater part was payable to the Central Government as tax. Payment of a bonus to workmen would either reduce tax paid or raise cost payable by consumers, and workmen enjoying increased advantages could not make a claim for bonus. The Central Government's concern over bonus as a factor in inflation was cited, and the final point made was that bonus is, by its nature, a voluntary payment by the employer. The last point was overruled as well as that relating to the previous payment having reduced the profits for 1941 since the former payment fell on 1940 profits. The adjudicator took the view that profits earned in 1941 were unusually large and the claim for a bonus certainly could be sustained. It was also decided that price control of products sold and additional investment did not bar the workers' claim to share in the increase in profits. The adjudicator dwelt on the Bombay cotton mill industry's bonus payment in cash which is not disapproved by the Government. The main finding as to the growth of profits directly led to a decision in favour of the workers. But the award of one month's pay as bonus, made on September 30, was varied by a direction to the effect that clerks also were eligible for the benefit. The same benefit was extended to the employees of another oil company despite the argument that no trade dispute was threatened by clerks. It was stated in the award that the bonus should be given as a matter of enlightened self-interest to workmen furthering the war effort. It was agreed that a bonus is an exceptional and not a recurring benefit, but the Bombay award made under Rule 81 of the Defence Rules went against the companies in favour of the claimants.

American Example

Sir P. M. Kharegat who saw the Federal Agricultural Department at work in the U.S.A. records in Indian Farming the impressions left by Washington's directorates and bureaux. The Secretary for Agriculture is responsible for experimental stations because the schemes of the States are examined and reported on by the federal staff, subject to the approval of Director of Experimental Stations. Pest control, soil conservation and the AAA in turn account for branches of the Department. The research bureaux use the farm at Beltsville with an area of 3500 acres for much of the work. There are however special regional stations. In addition to federal expenditure of \$23 million the Department distributes \$7 million in grants to States. The steady and gradual extension of federal activity in regard to agriculture has resulted in the U.S. Department of Agriculture swiftly setting up

more stations for more schemes. It is the opinion of Sir P. M. Kharegat that the I.C.A.R. will be driven to imitate the U.S. Department in its own way though with less staff and at less cost. Soil conservation is perhaps the most recent item in the U.S. Department's work and in this case, the individual farmer is brought into line with crop planning. Soil conservation is essential in India, south of the Jumna and in the Deccan. Demonstration appears essential for educating the agriculturist and the I.C.A.R.'s survey of one watershed should produce the kind of results indicated. Expert guidance may be available only from the U.S.A. In regard to irrigation and power too, the federal government has been active in recent years. The T. V. A. is the monument of the New Deal and agriculture in seven States has been modified by the manufacture of fertilisers.

Increase in Cotton Supplies

In the fourth cotton forecast, issued last month the increase in area and outturn as compared with last year stands out and the cotton market has apparently put the usual interpretation on the figures. A crop of 49,34,000 bales will be 10 per cent higher than the 1942-43 crop and except for the increase in Americans, the forecast cannot be said to support firmness in the cotton market. Mills which have been reluctant to buy cotton in March owing to the erratic fluctuations in prices, looked at the forecast figures as well as the offer of the Government to buy cotton at minimum prices. The increase in cotton cultivation in the Punjab, with Americans predominating over Bengals will, certainly, favour mills in Upper India. The U. P. accounts for only 2.2 per cent of the area under cotton in India though here the area under cotton has increased from 317,000 to 371,000 acres. Next to Bombay only as a cotton growing area today is the Punjab. The extension of American varieties in the Punjab as well as Sind promises advantages to Indian mills. The subnormal crop in Hyderabad may help to prevent a slump in Oomras but the forecast which points to a decline in cotton cultivation in India since 1941 makes it clear that the decline corresponds to the decline noted in the U.S.A. and Egypt. The main advantage in regard to imports obviously lies in the recovery in the cotton crop in Uganda this year. The drought last year reduced supplies, but this year supplies should be large. This too will have its effect as price control extends to foreign growths and the import restrictions have been modified.

An increase of half a million bales in the home supply is likely to press on the market. Exports have fallen away considerably since 1941 and the total for ten months ended June was 149,000 bales only and exports in July totalled 5,600 bales

FOR EFFECTIVE ADVERTISING

NATIONAL ADVERTISING SERVICE

People's Building, Sir Phiroze Shah Mehta Road, Bombay. Telephone 23023

only. The upward revision of the acreage figures since the first forecast, which showed a drop in the area under cotton, is the chief factor in the erratic course of prices. Mill consumption in 1942-43 rose to over 3.98 million bales and the total for two months September-October is indicative of further increase in the offtake by mills. Since mill consumption would be over 4.2 million bales on 1943-44 the increase in supplies may be justified but the drop in the carryover in December is too small to justify the familiar view that the floor price should be Rs. 500 not Rs. 400. The forecast may be said to constitute a late vindication of the official schedule of prices. And the trade view as to prices for Indian cotton this year has changed rapidly though buying at the decline is not attributed wholly to official encouragement.

One More Revolution

The refusal of the U.S.A. to take note of the change in government following the revolution in Bolivia conditioned the Pan-American Union's own attitude to what took place early this year. The revolution in Bolivia found the neighbouring countries unwilling to take note of what looked like an ordinary South American palace revolution. The Bolivian army hardly resisted but the Movement which started it professed intolerance of the foreign policy of the U.S.A. The President soon went into exile in Chile; demonstrations in La Paz included the stoning of the U.S. Embassy. The leaders of the Bolivian tin-mining industry did not record satisfaction in any manner when a revolutionary regime under a young major took office. The main anxiety in Washington was over Bolivia's tin exports rather than anything else. The reluctance of all governments except Argentina's to recognise the new regime followed the initial hesitation of the U.S.A. to accord recognition. The most recent revolution soon declared itself hostile to foreign interests in Bolivia. The Army group wanted to copy the Argentine example while the civilians affirming faith in democracy asked for strict control of foreign capital largely because a strike in the tin mines last year led to the use of troops against the strikers. The issue which arose in Cardenas' time as to the place of foreign capital and outside interest, certainly appeared in Bolivia. Developments since January suggest that the State Department has made up its mind as to what it wants. The record of Bolivian Governments is bad; yet the promise of the national revolutionary movement that it is against the Axis has not led to ready acceptance of what it said about allegiance to the cause of the United Nations. It is quite possible that the falling off in tin supplies to the U.S.A. would be met by larger exports from African colonies, but the new regime in Bolivia has not been seriously shaken by the doctrine of non-recognition. The alliance between the foreign tin mining interests and the biggest of Bolivia's neighbours was not acceptable to the revolutionaries who ejected General Penaranda; but the U.S.A. was certainly taken by surprise as the Ambassador Mr. Boal never described the possibility. The possible reduction of tin imports may lead to increased use of silver in the U.S.A. and the Bolivian revolution is cer-

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

61, HARRISON ROAD, CALCUTTA.

A Copy of this Prospectus has been filed with the Registrar Joint Stock Companies, Bengal.

(Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them).

LISTER ANTISEPTICS & DRESSINGS CO. (1928) LIMITED

PRESENT ISSUE :

The present issue consists of 1,000 Preference Shares issued at Rs. 110 per share, Rs. 55 being payable on application and Rs. 55 on allotment; and 1,000 Ordinary Shares issued at Rs. 100 per share, Rs. 50 being payable on application and Rs. 50 on allotment, on the basis of one new Preference Share and one new Ordinary Share for every eight shares held by a shareholder irrespective of class. Shareholders whose names appear on the Register of Company's Shareholders as on March 20th may apply for shares, Ordinary and Preference on this basis; they may also apply in excess of their quota. Such application will be considered after allotting the regular quota.

Those who are not at present shareholders may also apply for the present issue. Such applications will be considered in respect of that portion of the present issue which is not subscribed for by the existing shareholders at such price and on such terms as the Directors may think fit.

DIRECTORS :

DR. SIVA PADA BHATTACHARJEE, M.D. (Cal.), Physician, 41B, Kailas Bose Street, Calcutta.

MANAGING AGENTS :

MESSRS. CHAKRAVERTI BROTHERS.

BROKERS :

NARAYANDAS KHANDELWAL & CO.,
25, Swallow Lane, Calcutta.

PROSPECTS :

The object of the present issue of additional capital is to provide for the larger finance necessitated by rapid increase in sales and by the larger volume of orders from Government, to Government increased from Rs. 4.54 lakhs to Rs. 12.19 lakhs.

Total sales which were only Rs. 13.69 lakhs in 1940-41 rose to Rs. 20.14 lakhs in 1942-43. By the same token, supplies made

These figures would have made much bigger showing if it were not the policy of the Company to adhere to Government control rates.

The Company was started in 1928 to take over a concern of similar nature; and, under the new auspices, the progress has been steady. After payment of preference dividend, the Ordinary Shares received six per cent in 1941-42. The ordinary dividend for 1942-43 is six per cent free of tax. The prospects for the current year are encouraging.

AUTHORISED CAPITAL :

5,000 six per cent (tax-free) cumulative preference shares of Rs. 100 each	-	Rs. 5,00,000
5,000 Ordinary shares of Rs. 100 each	-	" 5,00,000
		Rs. 10,00,000

ISSUED AND PAID-UP CAPITAL:

4,000 Preference Shares	-	Rs. 4,00,000
4,000 Ordinary Shares	-	" 4,00,000
		Rs. 8,00,000

These features of the Company are reflected in the present quotations of its shares on the Calcutta Stock Exchange, the Preference and Ordinary Shares quoting round about Rs. 130. The principal products manufactured by the Company are: Surgical dressings, coal tar products, antiseptics, spirituous products, bio-chemical and biological products (chemical injectules, sera, vaccine, etc.).

REMUNERATION AND APPOINTMENT OF MANAGING AGENTS :

Messrs. Chakraverti Bros., are the Managing Agents of the Company from 13th April, 1943 for 20 years, their remuneration being (a) a monthly allowance of Rs. 1,000; and (b) a commission of 12½ per cent on the net annual profits of the Company.

They are entitled to nominate ex-officio directors not exceeding one-third of the total number of the directors and their nominee shall at all times be the Chairman of the Board.

DIRECTORS :

The number of directors shall not be less than three nor more than seven including ex-officio directors.

The qualification of a Director shall be the holding in his own right alone and jointly with any other person of 50 ordinary shares and this qualification shall be acquired within two months after appointment.

Each Director shall be paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 32 for each meeting of the Board of Directors attended by him. The Directors shall also be entitled to receive in each financial year of the Company such further sum or commission as may be equal to 2 per cent on the net profits of the Company in that year to be divided among the Directors equally. Such commission shall be calculated on the profits of the Company in such year before deducting therefrom the interest payable on any debentures issued by the Company or the Commission payable to the Managing Agents and before making good any depreciation or diminution in value of any of the assets of the Company or setting aside any sums as Reserve or other similar fund.

The Board may from time to time sanction such remuneration to any Director or Directors, in addition to the remuneration provided in Clause above either by way of consolidated allowance or commission or royalty or a combination of any of them or of all, as they may think expedient in the interest of the Company including travelling and other expenses of attending meeting of the Board or undertaking special work.

INTEREST OF DIRECTORS :

Messrs. J. Chakraverti and G. Chakraverti are interested as members of the Managing Agency firm; Mr. G. S. Mukherjee as partner of the Company's firm of Solicitors and Rai Bahadur K. N. Khandelwal as partner of the Company's firm of brokers.

COMMISSION :

During the two preceding years, commission paid for subscribing to the shares was Rs. 2,310 and Rs. 1,117-8. Payment made to the Managing Agents in this respect was nil.

The brokerage for the present issue has been fixed at Rs. 2-8-0 for the preference or ordinary share and shall be payable on applications received from those who are not at present shareholders.

No shares were issued during the two preceding years nor were any issued for consideration either in whole or in part other than a cash nor was anything paid or will be paid to any promoter.

No underwriting contract has been entered into.

No property is to be purchased out of the proceeds of this issue.

RIGHTS OF PREFERENCE SHARES :

The Preference Shares shall carry cumulative income-tax free dividend at 6 per cent per annum and shall be preferential as to capital as well as to this dividend alone up to the date of winding up and no more.

RIGHT OF VOTING :

On a show of hands every member shall have one vote. In case of a poll every member shall have one vote for every ordinary share of which he is the holder.

If any member be a lunatic, idiot or 'non-compos mentis' he may vote by his committee, Receiver, 'curator bonis' or other legal curator and such last mentioned persons may give their votes either personally or by proxy.

RESTRICTIONS :

Save as herein expressly provided no person other than a member duly registered and who shall have paid everything for the time being due from him and payable to the Company in respect of his shares shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member or to be reckoned in a quorum at any General Meeting.

If two or more persons are jointly entitled to a share then in voting upon any question the vote of senior who tenders a vote whether in person or by proxy shall be accepted to the exclusion of the votes of the other registered holders of the share and for this purpose seniority shall be determined by the order in which the names stand in the Register of members the one prior being senior to those that follow.

The Directors may decline to register any transfer of shares, not being fully paid shares, to a person of whom they do not approve, and may also decline to register any transfer of share on which the Company has a lien. The Directors may also suspend the registration of transfers during the

fourteen days immediately preceding the Ordinary General Meeting each year. The Directors may decline to recognise an instrument of transfer unless—

- a fee not exceeding two rupees is paid to the Company in respect thereof; and
- the instrument of transfer is accompanied by the certificate of the shares to which it relates, and such other evidence as the directors may reasonably require to show the right of the transferor to make the transfer.

The directors are only restricted from exercising any power or doing any act which under the Articles of Association of the Company or by law expressly is directed or required to be exercised or done by the Company in General Meetings.

Minimum subscription was fixed at Rs. 1,95,000 which was subscribed in full.

MATERIAL CONTRACTS :

The agreement with the Managing Agents may be inspected at the Registered Office of the Company during business hours.

Auditors' certificates under Section 93 (1A) and (1B) are appended hereto.

GENERAL :

Applications for shares on prescribed forms are to be sent with remittance to any branch of the Company's Bankers or to the Managing Agents or to the Company's brokers.

tainly advantageous to the U.S. silver interests which may find the Treasury more ready to buy silver to replace that lent to defence plants. Other minerals are also obtained from Bolivia but it is as the really important source of tin after the loss of Malaya and the N.E.I. that Bolivia interests the U.S.A. Relations with Paraguay and Brazil improved during the previous regime but the new revolution by exhibiting special distrust of the U.S.A. influenced directly the attitude of all South American republics which are more developed than Bolivia and more tolerant of foreign capital and enterprise at present.

Australia's Wheat Production

The latest Australian newsletter states that wheatgrowers have received up to the end of the 1942-43 season the sum of

£95 millions. The current season's deliveries are fixed at 90 million bushels as against 143 million bushels for 1942-43. The reduction in the quantity sold to the Board may therefore have no effect on farm income. Subsidy per bushel is payable to the grower and last year the higher subsidy influenced the sales to the Board. One result was that sales of wheat and flour were larger. Provided adequate labour is available at the mills, substantial overseas sales in the 1943-44 season also are expected. India's interest in overseas wheat supplies should remain strong in view of the reduction in area and yield shown in the recent Indian crop forecast. The increase in wheat supplies led also to larger sales for stock and poultry feed. The crop estimate in Australia has been revised and the 1943 crop is lately placed at 97 million bushels. The anticipated yield in Victoria is 17 million bushels; in

New South Wales 42½ million bushels; in South Australia 17 million bushels; in West Australia 16 million bushels and in Queensland 4½ million bushels. The most pronounced increase is reported by New South Wales owing to late teful rains and favourable ripening conditions. The explanation for the reduction in 1943-44 supplies is contained in the statement that the area under fallow for this year's sowing is small, and as the superphosphate ration is only 25 per cent of normal requirements, the prospects for the 1944 crop are poor, irrespective of whether seasonal conditions are favourable. The only favourable factor is the increased supply of farm implements. The Commerce Department in Australia has issued orders for 243,044 separate items including irrigation outfits and milking machines.

The attainment of security from Japanese invasion has not limited the demand

for men and money just as the new Victory loan of £150 million is to be used for the war, the manpower has to be distributed as carefully as in 1942 and 1943. The problem has been set out thus. Australia's Government has to run a continent nearly as large as Europe, supply food to five million people in addition to her 7 millions and find munitions for the Indian front as well as her own. In this connection it is noted that Canada is bigger than Australia but has 60 per cent more people. Women have been used for factory work and more recently the Employment Board expressed the view that women could take men's place if the work were not beyond their physical capacity. The Board approved of women being employed in moulding shops at 66.6 per cent of the male wage for one month's probation and thereafter at 90 per cent of the male wage. Weights to be lifted were restricted to a maximum of 35 lbs. Work in forests were approved at 80 per cent of male rates and wool-sorting and scouring and the preparation of lambs for export at full male rates. The fall in prices led to a reduction of basic wage rates in February. The basic wage in many cities will be reduced by one shilling but the basic rate will be as high as £4/16 for the commonwealth.

Protection for Workers

The Prime Minister's broadcast on Sunday contained a reference in demobilisation. After the last war in six months nearly three million men were brought back from military service when the formula of 'first out, first home' was adopted. The same formula finds favour, and the Bill prepared for reinstatement in civil employment in January defined the conditions of past demobilisation procedure. The bill applies to both women and men, to civil defence forces as well as the Services. The employer has to take back at the first opportunity anyone available for employment. But the Bill provided also for giving preference to seniority. Reinstatement carries with it a guarantee of employment for 26 weeks at least or for such period as is reasonable and practicable. Volunteers are also eligible for the benefits of reinstatement but service with the Home Guards does not count as a whole-time service. Those discharged from the forces and wishing to be re-employed have to apply within the fifth Monday after the end of war service, and must give the date of coming back which must not be later than the ninth Monday, though provision is made for exemption in case of sickness. If the employer is unable to provide a job there is provision for the renewal of the application. The job given to the applicant for reinstatement must be the same and the terms and conditions not less favourable than those which would have been his if he had not joined up. If the job is given after an interval, the terms must be the same. The employer's duty to reinstate is defined when there are changes in ownership or control the duty remains with the successor, but the duty is limited to six months. In no case will a former employer be obliged to reinstate an employee six months after the end of the present emergency. In case of dispute an employer must get a joint committee to decide, and there is a provision for appeals. Punishment for non-compliance by fine up to £50 and compensation for the aggrieved employee is provided in

the Bill. No reference is made to the level of wages, but the reinstatement procedure makes out-of-work donation as in 1918-19 unnecessary. The temporary regulation of wages act passed in 1918 was meant to prevent wages from going down when additional labour was available. That may not be necessary as the Ministry of Labour is authorised to make regulations for re-employment on terms "reasonable and practicable". Special provision for the disabled has been made by a new bill though preference for ex-Servicemen as such in rehabilitation schemes was not promised. The other bill was meant to prevent a vain search for employment or the increase of mere casual labour for any reason. While the promise of homes has been duly described by reference to the Bevin-Portal plans the other promise of work has been implemented by the reinstatement provisions.

Ladco's New Issue

The Lister Antiseptics and Dressings Co. (1928), Ltd., is making an issue of both preference and ordinary shares not wholly limited to existing shareholders so that the outside investor may be able to obtain either the preference or ordinary shares in a company whose record is progressive in every sense. The Company is a well-established, dividend-paying concern, and the object of the new issue is to procure additional working capital. As the range of chemicals and medicines produced increases and orders too increase the Company's prospects are improving; and the statement of audited profits shows that six

STAY AT THE
GRAND HOTEL

The Leading Hotel of Calcutta

With respect to the poser "State enterprise versus Private enterprise", I have always supported State enterprise; and this attitude is inevitable in one who, for fifteen years, has dreamed of and been propagandising for economic planning. At the same time, in all fairness, I must set down some recent experiences shaking one's complacency over the virtues of State enterprise. Till two years ago, the telephone system in Calcutta did not occasion much cause for complaint. To put through a call or receive a call today is, most times, a sore trial of one's temper and patience. If someone is speaking to you, not infrequently the line is cut off in the midst of your conversation: an altercation more or less on the following pattern must now be a familiar experience to a good many users of the Calcutta telephone service.

A—"Eavesdropper speaking."
B—"Hallo, Hallo, Halloooo."
A—"Yes. Eavesdropper speeeking."
B—"Hallo, Hallo, H-a-l-l-o."
A—"Hallo, H-a-l-l-o, is that you B speaking?"
B—"Where have you been all this morning? I have tried to get you so many times. And the operator's reply has been 'no reply'."
A—"Impossible. I have been here—and, what is more, I have been in the immediate vicinity of the telephone. I did not hear any ring."
B—"Strange. But I wished to talk to you on a most impo....."
Operator—"Number please."
A—"I was talking, miss."
Operator—"Cut off and ring again."
A—"But it was B.B. 863 that was talking to me."
Operator—"I tell you, ring off."

If your turn is to be the sender of a call, you pass through an experience no less intriguing than as the recipient. The latest edition of the Calcutta Telephone Directory is the one issued exactly a year ago. Your first hurdle is in respect of any friend who might have installed a telephone in the past twelvemonth. If his number has escaped your memory and you wish to ascertain it, the information will be vouchsafed you after you have spent the best part of a half hour reciting the name and spelling it and respelling it, reciting the address and lettering it and relettering it. For the life of me, I cannot understand why a quarterly Supplementary List is not issued. This will be a via media between paper economy and satisfactory service. Now, this

Clive Street Gossip

"I must have liberty

Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like it)

Directory contains on page XIII "Some Suggestions". The chapter begins as follows:

"There are three parties to a telephone call:—

Yourself,

The Exchange,

The distant Subscriber."

By way of stressing my addition to "Some suggestions", may I say that there are four parties to a telephone call? The fourth and the last and the most important is the Operator. In relation to this important factor, let me propound the following suggestion:

"Fit up a comfortable chair next to the telephone. When you are putting through a call, settle yourself in the chair with a good long cigar, ready and prepared for a slow and majestic execution of the whole performance. The use of a telephone is not for those fellows who are in a hurry—it is intended for men and women of leisure and of calm, composed nature."

I suppose you wish to make a call and, preparatory thereto, you have fixed yourself up in accordance with the tip I have outlined. You may then take up the receiver and adjust it to your ear. The subsequent developments may not be unlike the following:— (Let me, dear reader, revert to A vs. B style of narration).

A (receiver to his ear)—"Hallo, H-a-l-l-o."

GRAND HOTEL

We cater for all functions and place our Band and Cabaret at your disposal.

CHAMPAGNES, WINES
AND SCOTCH WHISKY
ALWAYS AVAILABLE

Noises of giggling and more giggling in the first sixty seconds. In the next few seconds, A learns that Frank is taking your operator to the flicks that evening. Thereafter, he learns further that her neighbour in the exchange room is looking forward to a "burst up" as her "best boy" is bringing some more boys at dinner time. More giggling and mutual expressions of Oh, how wonderful! Then comes your turn for the attention of the

Operator—"Number please".

A—"B.B. 863".

Operator—"B.B. 86...".

A—"Hallo, Hallo, Keshab".

C—"There is no Keshab here. What number do you want?"

A—"B.B. 863".

C—"This is B.B. 865. Wrong number. Cut off."

A rings off, waits a minute or two and takes up the receiver again.

A—"Hullo, Hullo."

C—"B.B. 865 speaking."

A—"Please cut off."

C—"I say, you cut off."

Another wait. Next attempt of

A—"Hallo, hallo, Miss, you gave me wrong number. I want B.B. 863."

Operator—"I gave you B.B. 863".

A—"You did not".

Operator—"Number engaged".

A few more minutes and A's cigar has by this time been reduced to a stump. But he must put through his call. So, again,

A—"Hallo, hullo".

Operator—"Number please".

A—"B.B. 863".

Operator—(after a very short interval) "No reply".

While I am composing this description, I had two further 'phone experiences. In answer to a particularly imperative ring, I rushed to the telephone and took up the receiver to learn that Bombay wished to speak to me. The ear-piece imparted various kinds of sounds as of machinery creaking, jamming etc. Then came a voice "Patna, P-a-t-n-a. This is Bombay call for Ramaswami". More ear-splitting sounds. Finally, I was informed: "I shall ring you again." Some time later, I was ressumoned by the ring and passed through the beckoning Patna-words and machinery-creaking exercises. Finally I was again pulled up and, on taking up the receiver, was asked in a gruff voice, "What is your number".

"Cal. 3624"—I replied.

"Wrong number",—in an accusing voice as though I was the criminal who was responsible for the wrong number.

I began by saying that the telephone service in Calcutta until two years ago was not unworthy of the second City in the Empire. What could have happened during this period to account for this serious deterioration? The most significant change in this period is the transfer of the Calcutta telephone system from the status of a private enterprise to that of a Government enterprise. The telephone company here is largely manned—by Britons and predominantly womanned—by Britons and Anglo-Indians. It may be said that, as a rule, British preference is for private enterprise and most Britons are definitely opposed to the transformation of company-management into State-management. Can it be that there is an implicit understanding among the British servants of the telephone company and the Anglo-Indian servants—Anglo-Indians are usually more loyal than the British themselves—to the effect that the telephone service must be so run as to foster and accentuate the impression that everything was all right when it was company-managed and all the present evils are attributable to the State stepping in into this field?

I suppose there is no harm in my admitting that I know a few telephone girls; and, though most of them have only very elementary education, they express themselves strongly on the merits of company administration. They seem to feel that they cannot have everything their own way in the new regime of Government control. This matter needs looking into at it may well lead to evidence of sabotage of an important experiment in nationalisation. The plain fact of the matter is this: Until the Government took over the telephone system, the operators were prompt, courteous and nippy. The girls today, on the other hand, are saucy, even cheeky and do not say so much as "sorry" when they answer you after a long interval or put you on to a number you did not want.

On further enquiry in this matter it may well be, I admit, that the explanation for this change in the efficiency and

demeanour of the operators is nothing more than that the girls now-a-days are not so keen on jobs and therefore feel they can afford to be impudent, thanks to the larger employment available and the enormous attention which anything in petticoats receives in Calcutta on all hands in the present circumstances.

This telephone episode is not calculated to lend support to my advocacy of nationalisation. On the other hand, the efficiency of the three other public utilities in Calcutta, trams, electricity and gas, is a circumstance which tilts the scale in favour of the claims of private enterprise. Newspaper readers notice, frequently in the press, various kinds of complaints against the tram service. Let me say at once that I am not a grouser in this regard. For over twenty years, I had no occasion to use the tram. The severity of petrol rationing drove me, in August 1942, to the use of tram as my main method of locomotion. How much I rely on trams for keeping my unusually large card of engagements, can be realised when I say that I have spent hardly Rs. 200 on taxis in these twenty months. I spend 8 annas to 12 annas a day on tram fare; and this certainly connotes a great deal of moving about. Trams packed to suffocation are my constant experience. Many a time, I have had to see two or three tramcars pass before I can catch one in which I could squeeze myself. But, then, when you and I are in London, do not we have to queue up for the bus or stand the whole length of the journey in the tube? Do we send letters to the London press complaining of over-crowding? Over-crowding there is taken as part of the general state of things. To me, the proper attitude of the citizens of Calcutta in regard to trams is that, with many owners of cars unable to use their cars and with restricted bus services, the heaviest burden has fallen on the trams and that over-crowding must be accepted as inevitable in the present state of things. From my place near Sealdah up to Esplanade junction, I have, out of curiosity, taken account of the tramcars plying in the opposite direction bound for Califf Street via Dhurrumtallah. On some occasions, I have noticed as many as ten cars crossing us between Sealdah and Esplanade. This does not show that the Tramway Company does not run an adequate number of cars. The fact is that the traffic to be carried is so heavy that, whatever the number of cars in certain routes at certain hours, there is bound to be over-crowding. I, for one, enjoy my tram ride because I know it could have been worse. The one important suggestion I would like to make to the Tramway Company is that it might be worthwhile to experiment if short-run service as from Esplanade and Kalighat and Sealdah and Dalhousie Square may have the effect of accelerating service on the short run and reducing congestion for passengers taking the longer routes. In sum, mine is the "unsolicited" testimonial for the Tramway Company that its officials, faced with a phenomenal increase in the load to be carried, have succeeded in giving service almost as adequate and as equal to the need.

The question will be shortly coming up, with regard to countrywide electrification, whether it should be under State auspices or it should be by private enterprise under suitable State control. The three hydro-electric schemes under Tata mana-

gement in the Western Presidency and the universally acknowledged efficiency and economic service of the Calcutta Electric Supply will be the two strong arguments in favour of private enterprise while the example of Madras, Mysore, Travancore, the Punjab and United Provinces will be cited as unchallengeable evidence for nationalisation. Be this as it may, the citizens of this city have much cause to be grateful to the Calcutta Electric Supply Company for the ease and success with which the considerably increased demand has been met.

Equally are we fortunate in our experience of the Oriental Gas Company. There was a threat of rationing and a short-run operation of rationing for gas two months ago. The Company has now announced that satisfactory supplies of coal have removed the necessity for rationing. Among the many commodities in which scarcity had reached famine point, coal occupies a high place. Where the housewife was paying 12 annas for a maund of coal, she has had some times to pay as much as Rs. 5 or Rs. 6. Even at this price, she could get coal only in lots of 5 seers and 10 seers. Lucky is the household that is run on gas. The supply has been adequate and the cost unchanged.

My remarks on these gas, electricity and tramway undertakings are topical in an important sense, as they are sterling companies, and it may well be that they are included in the next stage of sterling debt repatriation. Their past services emphasise the need to maintain their present organisation intact in any future plans that may be made. Ranking as essential utilities, they lend themselves to a scheme of combine, with capital in rupees instead of sterling. The ordinary capital may be kept at a small figure; and the bulk of the money required should be raised in the form of debentures analogous to, say, the Howrah Bridge Loan. In that case, the return expected on the capital will be no more than 3 to 3½ per cent. The financing of the merger I have suggested will, thus, result in much saving, being the difference between 3 or 3½ per cent and the present dividend scales. (I must add that it will not be fully equal to the difference). It may be useful and necessary to set up an independent and autonomous body to be named "Calcutta Utilities" on lines similar to the Improvement Trust.

While I am dilating on sterling capital versus rupee capital, I must refer to the canards recurrently aired in Clive Street and Burra Bazar that some change in the proprietorship of British firms is impending. As these rumours have grown wilder and headier than rumours proverbially do, it were best to state the substance of such reports in plain terms and rebut them in the plainest language. Nearly three weeks ago, the gossips got busy with the story that some concerns of Balmer Lawries are being bought over by Birlas. Two weeks ago, Birlas were credited with the intention of buying the entire business of Balmer Lawries. A week ago, the busybodies extended the list to include more firms than Balmer Lawries. Why should, I ask, Balmer Lawries sell out their business? Their financial position is impregnable. Their concerns have been doing surpassingly well. The capital is held, in part, among Indian investors. There is no question of sterling capital being converted into rupee capital. The people who have been running and who

run the business of the firm have succeeded in leading it from strength to strength and in broadbasing its growing strength on intrinsic financial stability, industrial efficiency and enterprise suited to the opportunities available from time to time. By the same token, I must ask another question: "Why should Birlas want to take business built up by some other firm?" Have they not enough business of their own already? Have they not the personnel and organisation to plan new ventures in accord with new and newer possibilities, to finance them and to put them into execution? Except for Kesoram Cotton Mills, everyone of the concerns in Birla group is, I believe, planned, promoted and worked by Birlas themselves. Their development department has, I know, quite a bunch of plans for new enterprises; and they stand in no need of extraneous reinforcement. While the whole body of busybodies have signed, sealed and delivered the documents effecting the sale of Balmer Lawries to Birlas, Birlas themselves have not uttered a word or taken a move or evinced the slightest interest in respect of what the court reporter would describe as "alleged" purchase.

Finally, let me ask: "Do we desire that British interest and stake as such in all business in India must be completely eliminated?" Apart from historical factors, which definitely prove that, in industrial pioneering, Britons have done far more for India than Indians, there is, even in relation to present and future requirements, a definite and significant place for British business and British businessmen in the country. It is not necessarily a reflection on Indian industrial leaders if I say, as a student of balance-sheets and a careful appraiser of company affairs, that concerns under British management have generally set a pattern and model for the shrewd husbanding of resources, correct financial policy, long-term planning, maintenance of plant and property in the highest state of efficiency, sound manufacturing methods and apt sales organisation. The presence of well-managed companies has exercised a most wholesome influence on subsequent entrants; and joint stock enterprises in India have thus to conduct their business so as to live up to the high standard that is at once their inspiration and mentor. In the various stages of sterling debt repatriation, I can

(From Our Correspondent)

NEW DELHI, March 26.

THE terrible gap between all the elected Indian groups and the irresponsible executive was again emphasised today when the Assembly decided to throw out the Finance Bill by 56 votes to 55. The reason for this total rejection of all taxation proposals were as usual political and though numerous economic grievances were touched on during the five-day debate, the vote was entirely in the nature of a protest against the perpetuation of the political deadlock and the Government's utter refusal to end it. All the party leaders who spoke today only casually referred to the Government's taxation policy and confined themselves to the political issues. Hopes of minor amendments to the Finance Bill failed to induce them to modify their decision to reject the bill outright. And as matters stand at present whatever little hope there was of any relief to the tax-payers has disappeared. There is little chance of even the proposed 25 per cent increase in railway fares being reduced. The Government will as usual on such occasions use their stock argument in certifying the Finance Bill. The main criticism against the Government's taxation policy earlier in the debate was on two grounds—the increased burden it put on the poorer sections of the community whose standard of living already verged on starvation by taxing such commodities as tea and tobacco and the impediment it put in the way of the country's industrial progress.

Several assurances regarding the Government's trade policy were given by the Commerce Member, Sir Azizul Haque, in course of the debate on the Finance Bill in the Assembly. Regarding export trade control he revealed that the Government proposed to reconstitute the Export Advisory Council and consultations with trading interests were already in progress. He vigorously denied the charge that 90 percent of the export licenses were granted to European firms and promised to further allay Indian suspicions regarding the activities of the U.K.C.C. in discussions with representatives of Indian Commerce Chambers. As regards imports he reiterated the Government's intention to import larger quantities of essential consumer goods as well as encourage the import of plant and machinery. Licenses had been granted for the import of sugar, textile, jute and other machinery during the last six months. The Government had no intention to constitute an Import Advisory Council at present but were utilising the different advisory panels. The question of constituting a Consumers' Council to which all questions affecting consumers might be brought was also being considered. Sir Azizul Haque however failed to assure the house that he had any say in the allocation of shipping space for exports instead of leaving it to foreign agents like the U.K.C.C. and did not reply to the concrete charge that the Corporation was allowed to make huge profits in export, of such goods as tea to Africa and the Middle East.

Together with the proposed cultivation of more intimate relations with the Empire countries, the Indian Overseas Department is being renamed the Commonwealth Relations Department though it is doubtful whether the new nomenclature will in any way improve the lot of Indian nationals abroad. Australia which has consistently refused to receive even a token quota of Indian immigrants has

already sent a High Commissioner to this country who set up his office here only day before yesterday. The Government too intend to send a prominent Indian public man to Australia shortly though the final choice has not yet been made. I understand that a definite offer was made to Sir B. P. Singh Roy for the job and that even Pandit Hriday Nath Kunzru was sounded but both are reported to have said 'no'. Other names mentioned in this connection are those of Sir R. P. Masani and Sir R. P. Prajapaye though it is not known whether either of these two will be prepared to leave India just now. The Government also intend to exchange High Commissioners with Canada and appoint an agent in Trinidad.

While India's fight against the recent discriminatory legislation in South Africa continues with little hope of success—even the proposed retaliatory measures by New Delhi having proved a flop—her nationals have to face a big threat from a new quarter. East Africa by an ordinance has banned the entry of Indians who have been away from the colony for more than two years. The ban is reported to affect about 10,000 persons representing the most enterprising section of the Indian community in East Africa. The matter has already been discussed by the Standing Emigration Committee of the Central Legislature and a deputation led by Mr. D. H. Nassur and Mr. Hossainbhoj Laljee has explained the sinister implications of the ordinance to the Overseas Member. It is being pointed that unlike the South African case, the British Government cannot plead helplessness here and that the Colonial Office should be able to intervene effectively in the matter if it wishes. The Ordinance is an undisguised attempt to squeeze out Indian traders from the colony and the deputation recalled Mr. Churchill's observation in his book, 'My African Journey' in this connection: "Is it possible for any Government with a scrap of respect for honest dealing between man and man to embark on a policy of deliberately squeezing out the native of

India from regions in which he has established himself under every security of public faith." It is further pointed out that as East Africa is wholly dependent on India for many of her vital imports, this country can retaliate most effectively to bring back the East African Government to reason. The shippers' representatives have assumed the deputation of their full co-operation if the Government decide to retaliate. Dr. Khare is reported to have promised to pursue the matter vigorously.

I understand that statutory price control of foodgrains may be soon introduced in India—possibly within a fortnight. The Price Control Advisory Panel at a recent meeting under the Chairmanship of Sir Theodore Gregory is understood to have recommended to fix a statutory price for wheat at about Rs. 10 a maund and gram and barley prices at about Rs. 8-8 per maund. Rice prices were also discussed by the Panel and it was decided to suggest to the Punjab Government to fix the price of rice at about Rs. 12 a maund. The Provincial and State Government are expected to consider the recommendations within the next few days and appraise the Central Government of their views in this matter which will form the basis of the Centre's final decision.

I understand that a revision of the Capital Issue Control policy with regard to the long-term industrial development of India is under consideration. The control up till now has worked to prevent investments in concerns which do not directly or indirectly help the war effort. It is generally feared that such rigid control, if continued for long, may seriously compromise India's post-war industrial expansion. As a result of the proposed revision there may be early relaxation of control in favour of concerns considered vital for long-range industrial development. The control may continue in the post-war period in another form to protect the unwary investing public from putting their money in fraudulent concerns.

(FROM OUR CORRESPONDENT)

Bombay, March 29.

Parliament has accepted the bill to attach small States to two larger States. Bombay's view as to the merits of liquidation was not determined by the Jam Sahab's refusal to comment on the Ajmer Court's decision but by the interest of experienced M.P.'s in the bill for joining small States to larger ones. Mawanagar and Porbunder gain territory and influence. Benefits to other States are not obvious but the new procedure may be employed against even feudatory States in Indian States. Some more States are to be merged but the proposed merger has created anxiety in Kathiawar. If attachment by the Crown is exercise of paramountcy, special legislation is unnecessary, but it has not been said so far that merger will be unconditional. It is suggested that where princely administration is good, merger will be avoided. Since the Western India States are directly concerned, official elucidation is desired at once. The Labour Members alone spoke of the States' subjects' interest in the matter. Their arguments have been overruled, but latterly mention is made of the chances of survival for States with popular assemblies and limited Civil Lists. Salute States without either symbol of progress may have no anxiety but one result of the merger ordered is a rapid improvement in administration. The results of the attachment process may also be studied by the Princes but the Chamber has not pronounced on the merits of the procedure. No list of attached States has so far appeared and the second list has to be worked off. But post-war consolidation of States in relation to a future Federation has not been examined in regard to basis or results and Parliament's prompt approval without questions in part of the Constitution Act generalities some doubt as to accession as to federation.

The Indian Exporters Association is afraid of both the Government and of well-organised competition abroad according to Mr. Naranji L. Kara. He complained about the ways of the U.K.C.C. and expressed alarm over the interest now shown by foreign exporters in the Indian market. He fears that the U.K.C.C. would survive the war. Indian shippers are perturbed by the facility given to representatives of foreign governments to purchase directly in India. They are also perturbed by the giving of quotas to foreign refugees. He came out as a critic of the scheme for allotting textile quotas for export markets, and that for the maintenance of higher prices for cloth exported since this would lead to black markets. He asked that export trade should be put on a sound basis so that industries with a surplus would have no difficulty in selling abroad after the war.

References to the home market not to the export trade figured in the Governor's speech at the annual meeting of the Bombay Chamber. Prospects, according to Sir John Colville, are illimitable if the income of the agriculturist is raised. The scope for development is enormous and plans must raise the efficiency of agriculture and raise the standard of living of the agriculturist. He described the improvement of agriculture as the only foundation for industrial prosperity. Mr. Halsall in his review of the year dwelt on the increase of controls so that prices or distribution is invariably subject to Government orders. He assumed that scarcity

would remain after the war and controls must remain to prevent a boom followed by a slump. He declined to think of post-war reconstruction but only of post-war development. He wanted that raw materials not industry should receive most attention and the balance as between agriculture and industry preserved. He endorsed the plea for improving the agriculturists' income and standards of consumption. He objected to a race for markets and wanted international co-operation to limit the scope for competition. The hopes and fears expressed will not be passed over since the two plans for India have appeared to have distinctive purposes. The speeches on Wednesday suggest that a via media is desired but the old or present lack of balance must not be ignored when the appeal to India is made to industrialise.

Land reclamation in the Konkan is regarded as essential for increasing rice supplies for this deficit province. A Special Officer of the Government investigated the possibilities and concludes that in Thana Mahal alone there are 2,400 acres able to give Rs. 3 lakhs worth of rice which could be reclaimed. It is believed that land development schemes, which do not call for plant or capital, can go on now and the districts near Bombay will be served by rivers which are regarded as promising. The hope that superior rice can be raised from new land brought under the plough should stimulate private effort; and if much land is assigned to ex-soldier the main inducement may be exemption from land revenue. The Bijapur scheme is a long-term experiment against erosion. In the districts where the monsoon is plentiful and regular, it is merely a matter of laying out the fields. The implements and seed may have to be lent and recovered for this year's Grow-More-Food drive. Action rather than argument is required but co-operative societies have to take up much of the work. It is not known if the movement is looking beyond rural credit at present.

Pakistan Day arranged by the League led to a big meeting at Kaiser Baug. There was a resolution against negotiations for unity. Mr. Chundrigar wanted the four-year-old resolution to go through. Self-determination not partition, was required then, but partition is inescapable for creating a Muslim State. Flags were sold by volunteers and

Pakistan though it is distant from Bombay and the present, was commended to Muslim citizens in many ways. There was no reference to the duty to build up economic strength. Mr. Jinnah explained the main handicaps but faith is expected to triumph over economic and financial difficulties. The Bombay meeting was not told of the League's disapproval of the Viceroy's speech but only of the inevitability of Partition. The Congress League agreement in the Assembly was ignored and the only call was for complete unswerving faith in Mr. Jinnah whose message spoke of Deliverance and Destiny.

The cloth trade has not had its big conference. There are plans to increase textile supplies and accelerate distribution. These plans were accepted by delegates from Provinces and States. The standard cloth scheme is to be released to the market. Last week's conference recorded faith in the control scheme. There is to be another concerning transport and distribution with the industry next month. A scheme for the regulation of supplies from textile centres is got ready. Delegates admitted shortage in several areas and reliance is mostly placed on the working of the cotton cloth control order.

At the Tata School of Social Work Professor Vakil lectured on the fifteen-year plan on Wednesday. His opinion that the plan guaranteed a national minimum is interesting for it meets the point as to planners having failed to provide for control of distribution. The rich may grow richer, but the poor also would be richer. Economic development would guarantee a minimum income, but the guarantee must be given along with the execution of the plan to evoke the effort needed. Being fearful of inflation Professor Vakil objects to money created for the plan. His apprehension is familiar, as official critics develop the same view, but he said that there would be no need to resort to creation of money if the planners hastened it slowly. The device of work-creation bills produced and returned is familiar to the Nazis but very little attention is paid to Germany's economic recovery because excessive control has made it suspect. There was mention of social security arrangements which means that along with the plan Social Services (under the Provinces naturally) must develop. So far as can be seen, the constitutional implications are left unexamined because reconstruction and development are merged in the big plan. A letter in the morning paper asks for

(From Our Correspondent)

Madras, March 27.

THERE is an acute shortage of mill cloth in the presidency for the past few months. Though there is no dearth of handloom cloth, consumers are finding it rather difficult to get what they like in mill-made varieties. Both the wholesale dealers and retailers expressed their inability to supply their needs on account of depletion of stocks. The complaint that consignments ordered months ago have not yet arrived became vociferous recently. The main obstacle in the continuous flow of goods from the production centres to the various places in this presidency seems to be transport and all knew that unless the Government did something to speed up arrivals there would not be much improvement in the situation. No wonder, therefore, the decisions of Textile Conference held at Bombay were eagerly awaited. It is now reported that the Madras Government representative had impressed upon the authorities the necessity for urgent measures to relieve the acute shortage and had succeeded in persuading them to consider the possibility of sending consignments by special trains to Madras.

Infantile cirrhosis or enlargement of liver and spleen is almost an exclusive disease of the South. It is common knowledge that the disease which afflicts children below the age of 5 saps the vitality and proves fatal in the majority of the cases. So far no definite cure except some patent medicines whose efficacy is rather disputed has been found. Even renowned doctors were unable to diagnose the cause of and prescribe the cure for this peculiar disease. Now news comes from the Indian Institute of Science that researches carried out in the Bio-Chemistry Department indicate that infantile cirrhosis is due to a disorder resulting from the inadequate secretion of digestive juices and a deficiency of calcium. It is said that many early cases have been cured as a result of experiments with supplementing juices. The supplementary juices prepared in the laboratory are now being administered to infants suffering from infantile cirrhosis in the local hospitals. If these experiments yield the expected results, a more scientific cure would have been obtained.

The condition of Indians overseas has always been unenviable and the Ceylon labourer is perhaps the worst sufferer in this respect being often persecuted by both the Ceylonese and the European planters. Even after the dependence of Ceylon on India for many of her daily necessities has been proved unmistakably by this war, reports received from the country do not show any marked change in the attitude of the Ceylon Government towards Indians in their country. A graphic description of the seven lakhs of Indians in Ceylon was given by Mr. Sivasanmugam Pillai, M.L.A., here recently. Most of this seven lakhs of people were scavengers, rickshaw pullers and plantation coolies. Mr. Pillai said that out of 2,700 rickshaw pullers in Ceylon 2,500 were Indians. Though the labourers were mainly responsible for the prosperity of the estates in which they work, they are not given foodgrains and other essentials in sufficient quantities with the result they had to get things from the black market. Mr. Aney has taken up the question of increasing dearness allowance to labourers with the Government

of Ceylon and the decision of the Government is eagerly awaited by the labourers. Regarding the question of franchise for the Indian labourers Mr. Senanayake had informed Mr. Pillai that the question would be taken up after the war. Unlike India there is no reservation of seats for minorities in Ceylon and the Indians stand a good chance of securing some 10 seats in the Kandy district. But by a clever manipulation in dividing the constituencies the Indians may be deprived of their seats in the legislature. Mr. Pillai appealed to the Government of India to be vigilant and see that no such thing happened.

A special scheme has been sanctioned by the Government to the Kurnool, Cuddapah, Ananthapur and Chittoor districts. In addition to tuccavi loans for sinking wells, the Government have agreed to bear the cost of unsuccessful trial pits dug with a view to constructing wells. The Government have also decided to grant subsidies up to a total of Rs. 1 lakh. Out of this Rs. 1 lakh the Madras Government's contribution comes to Rs. 60,000, while the remainder is given by the Central Government. Each of the four districts gets Rs. 25,000. If, even after the grant of tuccavi loans the ryot is found unable to construct a well, he will be given a subsidy which will not exceed 25 per cent of the cost of construction of the well, subject to certain conditions. The well has to be completed within 6 months of the grant, and only food grain crops should be grown in the area served by the well for a period of three years after the completion of the well. It is expected that about 500 wells for irrigation purposes would be completed in these districts under this scheme.

Some of the charges levelled against the Government by the Chairman of the Employers' Federation in his speech at the annual meeting will bear repetition. It is a well-known fact that price control has been in a large measure ineffective. The Government should take the responsibility for any trouble consequent on their failure to enforce

strict control of prices. While cost of living index has been steadily rising, the Government have not given any guidance to employers on the question of dearness allowance. The Government have been very slow in applying the appropriate remedies to serious deteriorations in the life of the community. The cost of living index has continued to rise from 161 in January 1943 to 202 at the present moment. The absence of control for certain items in the food group has led to the growth of black markets in them. Prices of some vegetables for instance had gone up by as much as 500 per cent. Rationing and control should go hand in hand and all items in the food group should be brought under the control scheme. The Anti-Hoarding and Profiteering Ordinance despite its numerous defects is a step in the right direction.

Gripex (India) Ltd.

Branded stationery goods and allied products are manufactured by Gripex (India) Ltd. which offers for subscription its Rs. 50 ordinary shares (Rs. 25 on application with admission fee of Re. 1 and Rs. 25 on allotment). This offer is one permitted under Defence Rule 94A and the announcement appearing to-day on page 629 states that prospectus and application forms can be had of the Managing Agents or the brokers, G. D. Loyalka & Co. The proposal to extend the range of production after the acquisition of an established business turning out stationery and other goods with a reputation throughout India explains the new issue for Rs. 2½ lakhs. Investment interest may be stimulated by reference to the experience of Indian manufacturers as well as the proclaimed shortage of highly necessary goods. The Company's prospectus in its chosen line may be regarded as very encouraging indeed; and investors should note that the class of new smaller, specialist enterprise has real advantages as compared with entrants into old industries.

Boomlet in Steel Shares

FRESH CHECK TO SILVER SPECULATION

SPECIAL FOR "INDIAN FINANCE".

London, March 28.

Speculators in the Bombay silver market will be soon taught a costly lesson by the authorities according to the money market Editor of the Financial News who forecasts that the Indian authorities will have soon acquired a large amount of silver enabling them to intervene in the Bombay market and summarily terminate speculation there.

He remarks 'it is possible, even probable, that the price at which silver will be then held will be substantially below the inflated price. Speculators are in a highly vulnerable position and are likely to be taught a costly lesson, sooner or later.'

It is reported that leaders of the British steel industry are considerably alarmed over the rising price of coal. Since August, 1939 the price of Durham gas coal has risen by 65 per cent while the price of steel rails which is greatly affected by the price of coal has risen by 51 per cent. Leading steelmen fear that post-war competition will be most difficult unless something is done to lower the price of coal or alternatively the steel industry must learn to utilise a smaller amount of coal per ton of steel.

Between 1926 and 1935 the steel industry by technological research reduced by 43 per cent, the consumption of fuel per ton of steel. It is believed there has been further progress since but no figures are disclosed.

In any case, the Iron and Steel Federation has decided in the past week to form a research association with an initial budget of £250,000 per annum to reduce still further the industry's vulnerability to high coal prices. The new association will draw scientists from outside the steel industry in the hope that revolutionary improvements in fuel technology may be made.

Mr. Churchill's speech wherein he forecast large scale construction of steel houses after the war caused a boomlet in steel shares on the Stock Exchange since this means a large domestic order perhaps lasting for several years available. Nevertheless the problem of foreign competition faces the industry since the principal customers such as machinery-makers and motorcar manufacturers need cheap steel.

The coal industry has always resented the popular charge that it is technologically backward. The position seems to be that some larger collieries are extremely efficient, but British consumers get no benefit from their efficiency since the price of coal is fixed by Districts, and at levels giving a profit to inefficient high-cost mines.

(Continued from page 639).

per cent tax-free was paid on the ordinary shares out of the profits earned in two years; earnings cover being large in relation to the sum distributed. The growth of profits since 1941 is fully reflected in the sales and stock figures while the increased charge for depreciation is also a measure of the prosperity in evidence from 1941. The present issue is

meant to raise the paid-up capital to the authorised limit. In view of the company's proved success the merits of the shares, offering a fairly high return, require no description. The Board has the requisite professional element, and the investment in propaganda over three years is, in many ways, a guarantee of continued success. The preference shares offered at 110 are very moderately priced in relation to current quotations for all preference shares and the ordinary shares (available at par in the proportion of one new share to eight held) are also offered at a price below that established in dealings on the Stock Exchange. Reference to dividends and quotations at premium is necessary to show that shareholders are at an advantage.

elucidation by the sponsors in the light of criticism. Detailed exposition so that the country can judge has been requested though

the sponsors did all the explaining needed at the annual session of the Federation of Indian Chambers not long ago.

The new Maharajah of Gondal, educated at Eton and Balliol, is old in years. He has rich administrative experience derived in the State under the late Maharaja. His accession to the *gadi* resulted in a 25 per cent remission of revenue for 1945, donations to colleges and schools and a month's pay as bonus to State servants. The Maharaja's reign has, therefore, started well for his subjects but Gondal has always been ahead of Western India and the present Maharaja indeed governed the State in 1907 when the late Maharaja went to England. For years the Maharaja was private secretary to his father and later took over one department after another. Gondal's administrative traditions have been high and irrigation and electricity have been developed successfully. Education is free and Gondal's taxation is so light as to tempt Kathiawar people to think that railways, etc., can earn the revenue wanted by any Government.

MRS. ANOPHELES—PUBLIC ENEMY NO. 1

Malaria, one of the most dreaded, and yet most common diseases in our country, causes over 3 million deaths every year. Various complications, resulting from repeated attacks, render miserable even a larger number of people.

Yet the cause of Malaria is attributed exclusively to one type of mosquito—the Anopheles—and what is more, to the female species only. This pest, after sucking the blood of malarial persons, conveys the germs to others, and thus spreads the disease.

These mosquitoes breed in stagnant pools; to exterminate them, the first attack must be launched here. Fill up, drain away, or disinfect these water haunts. Circumvent Mrs. Anopheles by sleeping under a mosquito net whenever possible.

If, even then, you fall a victim to Malaria, consult a qualified doctor immediately, both for your own sake, and to prevent the spread of infection.

claim to have anticipated—and, many a time, forced developments; but, when it

comes to wholesale repatriation of all British capital in businesses in India, I must cry "Halt." I look forward, on the

other hand, to the materialising of plans in which British interests and Indian interests are so blended as to enable each section to contribute its specialities. But this is a major theme; and I shall revert to it in a later issue.

AT YOUR SERVICE

IMPROVEMENTS in our daily life follow one another so swiftly that we tend to accept them as a matter of course. We note advances in the colour, finish and texture of our dress materials or the fabrics which go to furnish our houses. We even use without surprise entirely new types of textiles and other materials. We read with only a passing wonder of the strides being made in the prevention and cure of disease among men and animals, and for our protection, in the detection of crime. We have ceased to be astonished at the developments which make our daily round and common task, in kitchen, work-room and garden, simpler or more enjoyable. We accept without comment the progressive advance in quality of such entertainments as the cinema and radio. Even in a world at war we seldom pause to inquire how it is that we are still able to enjoy efficient substitutes for the articles which are temporarily no longer obtainable. Or how it comes about that the evils of undernourishment and the scourge of epidemic disease have been kept so firmly in control. We shall do better to remind ourselves occasionally that none of these things come of their own accord. In each one of them we shall, if we trouble to inquire, find the hand of the research chemist and of the chemical industry—and not least of the British chemical industry. The record of history shows that British chemists have always been in the van of invention and discovery. It is not the least of Britain's justifications for the regard of other nations that, even stretched on the rack of war though she is, her sons and daughters, fleets and armies scattered all over the globe, her chemists have stood to their task. Today, as in peacetime, British laboratories and chemical factories are working with undiminished resource and energy to see that the benefits of science are increasingly applied in our daily life.

No. 1 in the "Services of an Industry" series
issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

The New Delhi correspondent of "Indian Finance" writes that, while the regulation of capital issues as now functioning is mainly from the point of view of inflation, the Government are now considering what changes in their attitude and in general procedure are needed in relation to the various industrial plans which are now being made ready for execution soon after the war is over. In the case of such proposals, the promoters will like, now and here, to inaugurate the companies, issue the shares, get specifications for building and machinery, register orders for machinery and for supply of experts, and, after retaining 10 to 15 per cent of the total funds for these expenses, invest the balance in Defence Loan to be held in the joint names of the Government and the Company. This is a procedure to which no objection can be raised and which, definitely, has value as an anti-inflationary measure. In fact, companies formed with this purpose will serve as so many feeders for the Defence Loan. Another type of cases which merits similar consideration is those concerns which are now uneconomic units and which seek to raise capital for the additional machinery (secondhand if now available or new if to be ordered for delivery after the war) required to make them complete and self-sufficient units.

"EAVESDROPPER".

On account of the Easter holidays the next issue of "Indian Finance" will appear on April 6, 1944.—Ed. I.F.

(Continued from page 623)

it should be possible, to issue one new share for every old share on the basis of 200 percent premium. This will increase the paid-up capital to Rs. 63 lakhs and the Reserve Fund to Rs. 94½ lakhs. The paid-up capital and reserve will, in that case, exceed Rs. 1½ crores. With the capital plan thus reinforced, the Punjab National should be able to make further headway with greater self-assurance. But, at the rate at which progress has been maintained in the past few months, and if this pace of progress is sustained, the bank may well have to think of further strengthening the capital structure by the end of the year.

The exchange market has remained unchanged, with a steady undertone.

Banks are sellers of T.T. at 1s. 5 11/32d. for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Resume of Commodity Markets

The feature of the week is the abrupt rise in prices, both gold and silver. The rise in prices for gold is more pronounced than for silver. The firmer tone of the bullion markets has been naturally due to the larger demand for funds with the Jap thrust into India and the increase in speculative activity. The strength of the bullion market resulted in an improvement in prices in the cotton market but the rise in prices was short-lived and closing quotations are lower on balance. The jute market has been firm on hopes of a larger demand while the jute manufactures has remained strong with the continued scarcity of ready goods. The piecegoods market was quietly steady.

The raw jute market has been steadier. The activity of balers and the reserve of holders have been mainly responsible for the improved conditions in the market. The report received during the week that the U.S. Production Board has concluded the negotiations for the purchase of jute from Calcutta for reselling to Cuba and Puerto Rico to be used as sugar sacks is not clear. It is said that fifty per cent of the supply needed will be bought now and the rest after the sugar crop in May or June, at which time the amount needed for the next year can be estimated. The reference is perhaps to the recent suggestions that fresh large orders would be placed by the U.S. with Indian jute mills. Obviously, the negotiations must be for the purchase of containers. For, the purchase of large quantities of jute at this part of the season would have an upsetting influence on the market. Besides, it would be cheaper to buy bags from Calcutta. The orders for heavy goods mean necessarily larger consumption of jute. Even last month the production of sacking was in excess of hessian. The demand for heavy goods is so great that narrow hessian looms are being pressed into the production of heavy goods. It is unfortunate that there should still be anxiety regarding coal supplies and that recently there has been a drop in coal arrivals.

The stock and consumption figures for the United States for the month of February are satisfactory in more than one respect. Stocks afloat are again shown as unknown but there is a big jump in stocks spot to 101 million yards. Consumption is very satisfactory at 39 million yards against 32 million yards in the previous month and 22 million yards in the corresponding month last year. The figure of consumption is the highest for several months. With the increase in offtake recently the higher level of consumption points to the maintenance of a high level of exports.

The reports regarding the possibility of a reduction in standard cloth output and the heavy movement of the cotton crop have prevented any appreciable improvement in cotton prices. There was a sympathetic rise in prices earlier in the week but jobbers selling and the lack of mill support have resulted in a decline in prices in spite of the continued strength of the bullion market.

By a recent notification in the Gazette the Government of India have extended the schedule of the foreign cotton control order, 1944 to include cotton from Sudan, Kenya, Uganda and Tanganyika as well as Egyptian cotton. This means that no sales of foreign cotton of the descriptions named may be made from stocks already in this country,

except under a license issued under the foreign Cotton Control Order, 1944. Hitherto, such licenses were necessary only for Egyptian cotton; now they are necessary for Sudan, Kenya, Uganda and Tanganyika cotton as well as Egyptian.

Further, for the guidance of the trade it is explained that in order to ensure a fair distribution of the available East African and Sudan cotton sales to mills by importers will only be allowed according to the allocations which will be made with due regard to mills requirements, their consumption, stocks, etc., over the calendar years 1940, 1941 and 1942, cognizance being taken of mills needs for priority war orders. Details of such arrangements will be announced later.

There has been a sensational rise in prices in the bullion markets. While there has been an uninterrupted rise in the quotation for silver gold prices have shot up suddenly and quotations are at the highest levels since the bombing of Madras some months back. Very heavy selling by the Reserve Bank was reported earlier in the week but demand was unsatisfied and in the early days of this week quotations were higher than the Reserve Bank's selling rate. The Reserve Bank, as on former occasions, followed the rise in prices. The suspension of selling for a time resulted in the rise in the quotation from Rs. 72 to Rs. 80-12. Having regard to the absence of panic in the share markets the rise in prices for bullion appears to be very much exaggerated. Nobody seems to be happier than the Reserve Bank for it is reported that the authorities have called for tenders and that gold would be sold to the highest bidder. This will naturally bring in larger sums of money to the Reserve Bank.

The silver market is very strong and quotations are at a record high level. It is reported that 500 tons of silver or 16 million ozs. have been purchased by the Government of India through the Iran National Bank. It is not disclosed as to whether the acquired metal is for coinage purposes or for sale in the market. So far the report of this acquisition has not had any effect on prices.

Various problems relating to cotton textile control were discussed and decisions taken at a conference of representatives of provincial governments and States and the Textile Commissioner held in Bombay last week. Representatives from all provinces except Assam and Orissa were present. The chief subject of discussion seems to have been the standard cloth scheme. There has been recently considerable difference of opinion regarding the utility of the standard cloth scheme and with the cancellation of orders by some Provincial Governments it was debated whether at all it was useful to continue the production of standard cloth. The Central Government has naturally insisted on the continuance of the scheme. It is reported that quantities of standard cloth produced might be reduced to suit the circumstances of each province. Grey saris have not been popular in the Madras market and a very large proportion of unsold stocks of standard cloth is on account of saris. It is accordingly proposed to have these saris printed or dyed and the cost of dyeing or printing would be added to the cost of the cloth. It is said that coloured saris would be popular as there was a good sale when handloom dyed standard cloth saris were offered.

Regarding the disposal of unstamped varieties greater powers have been given to the provincial governments to fix prices as it was the delay in fixing ceiling prices that stood in the way of the disposal of these goods.

ALUMINIUM IN ALL FORMS

CROWN Brand represents the best in ALUMINIUM
Castings of every description and variety.

While we are essentially engaged in War effort, we still continue to serve all industrial needs for Aluminium in reasonable quantities at fair prices. Our determination is to continue to serve the industries, so long as we can, with the resources and experience at our disposal.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, March 30.

The coal position, so far as the Jute Mills are concerned, is somewhat disquieting. Arrivals for the past two weeks have been far short of requirements with the result that much lost and broken time has been recorded amongst the coal consuming mills and the limitations which the present agreement for making up time impose, means that this time is a total loss. It is understood that consideration is being given to some alteration of these limitations so that, if the position did improve, the mills who are at present suffering would have some chance to make up lost ground. Meantime, from 1st April, the new Government scheme, which concerns both coal production and its distribution, comes into effect. On the production side, six-monthly targets of production are to be set up, quotas allotted to each colliery in proportion to its recent raisings, and a bonus paid on production beyond this target quota. This bonus, as an additional inducement to production and as a palliative to complaints of "wasting assets", is to be immune from E. P. T. but not from income-tax. There seems, however, to be considerable doubt whether efficiently managed collieries will be able to show much increase in raisings or to benefit much by the bonus system as their optimum production is already high and only a guaranteed full labour supply can maintain it. And this, in present circumstances, is not always available. The collieries likely to benefit most by the system are those small concerns whose efficiency is susceptible of considerable improvement, and it is to be doubted if the aggregate production is likely to be greatly affected by the contributions of such concerns. On the distribution side, there is bound to be the usual tug-of-war between conflicting interests, for the visible supply definitely falls short of total requirements. Then again there is, on this side, the question of transport, which to any unbiased observer does not appear to be handled with the maximum efficiency, or anything approaching it. Far too many waggons are constantly to be seen immobilised in sidings for this to be the case, and when one reads of the astonishing loads handled by the Railways in England with enormously depleted staffs, it is difficult to say that the Indian Railways who have not been handicapped in this way deserve any encomiums for the manner in which they have dealt with traffic under emergency war conditions. Jute mills certainly have not been the least sufferers in the matter of adequate coal supplies and it is to be hoped that they will, under the new regime, at least get a fairer deal than has been meted out to them in the last few months.

While on the subject of transport, the restrictions imposed by the Railways on many sections regarding the shipment of jute to mills, continues to offer a severe handicap to business. It is difficult to understand why booking to one mill should be open while booking to another, next door, is not. It seems to be the rule rather than the exception that when a shipper's turn comes round on the roster for the supply of waggons, or more usually, for one waggon, booking for the mill to which he wants to ship is closed. It would almost seem that the primary idea is to put as many obstacles in the way of jute shipments as possible while keeping up the

fiction that waggons are available and are offered to the shipper who is unable to take advantage of them. It is reported that the number of waggons to be made available for jute shipments from the Mymensingh district, where there are thousands of bales awaiting despatch, has been reduced to one-third of the previous entirely inadequate supplies. The prospects of getting jute out of this section before the rains make shipment by country boat possible, appear to be almost nil.

The Ordinance or Statute for the fixation of prices for jute and jute goods still tarries on the way and it now seems unlikely that it will be promulgated even by what was suggested might be an appropriate date, the 1st of April. With regard to the very secret and confidential discussions which were recently reported to be taking place in Calcutta in this regard, we are assured that we have been doing the Special Officer (Jute), a grave injustice. This officer, we are informed, was not present at any of these discussions. Professor J. A. Todd was present, but not in his capacity as Special Officer (Jute). This distinction is, however, we fear, a trifle too subtle and disingenuous to cut much ice. It may reasonably be asked in what capacity, other than that of Special Officer (Jute), was Professor Todd competent to enter into any discussions regarding the Bengal Jute Crop. As we have said before, we do not know the tenor of the discussions, but this assumption of the role of Dr. Jekyll and Mr. Hyde only serves to render the whole aspect of the proceedings more suspicious. The statutory working of any scheme on the lines of that inaugurated by the I.J.M.A. last July is fraught with difficulties and if the Bengal Government, or the Central Government if it comes to that, by studiously ignoring the Trade Associations who will be expected to co-operate in the working of the scheme and whose constructive advice would certainly have been invaluable, if, we say, the Government find themselves in a morass as a result of foisting any half-backed scheme on the market, and find it to be unworkable, they will only have themselves to blame. There is the most distinction of what constitutes Jat jute and what constitutes district. When the I.J.M.A. scheme was promulgated, a list of Jat stations was incorporated, which list was at first designated as final and binding on all purchase operations. The list, however, while including a number of stations which are scarcely worked in these days, either because the trade has moved to larger stations or because of transport difficulties, was also far from complete or exhaustive, omitting as it did many important stations which are generally recognised as Jat. When this was pointed out, it was admitted that the compilation of an exhaustive list of Jat and District stations was a physical impossibility, or at least was impracticable, and that the list published was merely for the "guidance" of buyers. It was suggested then that the soundest method would be to fix only one price and let the relative parity of Jat and District adjust itself to that price, as demand dictated. Actually this is what really happened during practically the whole currency of the I.J.M.A. scheme when market values invariably ruled below the maxima fixed. In different circumstances very different results may be looked for and it is in this respect that anything but a very well

considered scheme may well be shipwrecked. And the lack of confidence in approaching those Trade Associations, competent with their accumulated experience to tender sound advice, tends to suggest that the idea is to spring upon the trade a *fait accompli* which may do little but add to the many difficulties with which the Industry already has to grapple. Perhaps we are doing the Special Officer (Jute), or Professor Hyde-Todd another injustice, but we shall be agreeably surprised if, when the Ordinance is ultimately produced, it will not prove a Pandora's box.

Export jute has been in little demand during the past week. Shippers continue to outbid Mills for Cuttings at up to Rs. 47 for M.Cs, but cheap resale business was reported in Dundee Daisee at Rs. 76-8. Mills on the other hand have paid up to Rs. 82 and Rs. 83 for Daisee, Rs. 88 for Dundee Tossa 4s, Rs. 87 for Firsts and Rs. 81 for Lightnings and are also buyers of special Cuttings.

There has been a fair interest shown in Loose Jute. European Middles and Bottoms have sold at Rs. 17 and Rs. 14, but not much is on offer. Balers have paid Rs. 18-8 for European Tops. Mills bought Supervised Jat at Rs. 16-12 and Rs. 13-12 also buying Middles alone at Rs. 16-8 and Bottoms alone at Rs. 14. Supervised District was taken at Rs. 16-4 and Rs. 13-4 with up to Rs. 13-8 paid for Bottoms alone. Indian Northern low assortment was done at Rs. 16 and Rs. 13 Middles and Bottoms with Rs. 13-4 paid for Bottoms alone. Some District Tossa was also reported at Rs. 16-12 and Rs. 13-12. Holders of stock are willing enough to sell but the rates quoted above are generally below replacement values upcountry. Fairly general rain has fallen in the jute growing districts and a little more sowing is reported but it is yet scarcely possible to determine to what extent cultivators are going to take advantage of their quota. Up to date sowings only amount to about one anna compared with around four annas at this time last season.

There is little room for comment on the Fabrics market where buyers continue to predominate and anything mills can offer is promptly taken up at full ceiling prices for any description. The only exception is "B" twills which can still be bought at some discount in forward positions.

Ofcourse, you need
LALIMLI
PURE WOOL
FABRICS

But the ARMY
fighting for you
must come first.

...and so until the war is won all our output must be for the Troops. Then you will have entirely new ranges of the famous LALIMLI Pure wool Fabrics to choose from.

JUTE

Calcutta, March 30.

The raw jute market has been quite steady during the past week. The slightly easier feeling noticeable last week has given place to steadier conditions as the reports regarding the progress of sowings even with the reports regarding satisfactory rainfall in the jute districts have not been satisfactory and it was reported during the week that the United States Government might place further large orders with the jute industry. The production figures for the month of February also were satisfactory though the irregular coal supplies should modify any optimistic expectations of a large increase in production. The possibility of large production of heavy goods has been firm on the basis for bottom grades. It is confidently felt that the coal situation will not in any way affect the rate of production after one or two months and that jute might not be available in large quantities. There is no anxiety therefore to dispose of holdings. Nearer the maximum prices, however, there is freer selling.

In the mofussil centres firm conditions have prevailed and arrivals have not been coming in so freely as last week. Any small decline in prices chokes up arrivals. Good rain is reported in some districts but owing to the scarcity of labour sowings are not proceeding as rapidly as one would wish. Trade estimates of the crop for the next season are rather low.

In the loose jute section mills have not been keen buyers though some small business has been reported on their account. Balers have been keen buyers of Tossa varieties and Indian Jat Tossa Middles and Bottoms were done at Rs. 18-4 and Rs. 15-4 per maund. Indian Jat Middles and Bottoms were done at Rs. 16-8 and Rs. 13-8 per maund.

In the pucca bales section shippers have not been active. A small business was reported in Dundee Daisee 2-3 at Rs. 81 per bale. Mills are reported to have purchased Dundee Daisee 2-3 at Rs. 85 per bale and Tossa fours at Rs. 88 per bale.

JUTE MANUFACTURES

Calcutta, March 30.

The jute manufactures market has been very steady and quotations have been nominally around maximum rates. The encouraging American and stock consumption figures and the report that the United States had concluded negotiations for the purchase of jute from Calcutta to be used as sacks for resale to Cuba were mainly responsible for the firmer tone of the market. There were very few sellers and mills were rather reserved. Hitherto orders from the United States Government have been mostly for hessian. The new order might prove to be the first big order for heavy goods. Already the production of heavy goods is larger than hessian and this might continue to be the feature for some

time. 9 Porters are quoting Rs. 21-10 for all positions and 11 Porters Rs. 28-8 for all positions.

Very firm conditions are noticeable in the heavy goods section. Even B Twills are not available at a small discount for forward deliveries. Mills are, however, reported to have concluded some small business at the maximum rates for standard goods.

GOLD

Calcutta, March 30.

Any slight disturbance in the war situation affecting India is enough to cause a wild fluctuation in prices in the bullion market. Even at the time of last writing quotations were slightly higher than the Reserve Bank's selling rate. It is reported that as much as £1.4 million worth gold was sold in the Bombay market on Friday last at the rate of Rs. 71 per tola by the Reserve Bank but buying was unsatisfied and there was a heavy speculative demand following the reports that the Japanese had entered India. Continued selling by the Reserve Bank could not keep down prices and by Wednesday morning the quotation had improved to Rs. 72-6. The suspension of official selling for a time resulted in a sharp rise in prices and towards the close on Wednesday the quotation was as high as Rs. 80-12. It is reported that the Reserve Bank is prepared to sell to the highest bidder and is calling for tenders.

In the Calcutta market quotations have improved in sympathy with the Bombay market and gold ready quoted Rs. 78-8. Sovereigns improved in the Bombay market to Rs. 54-8 from Rs. 49-2. In the Calcutta market the quotation was relatively lower at Rs. 53-4 on Wednesday.

SILVER

Calcutta, March 30.

The silver market has continued firm. For the past few weeks the general tendency has been upward. There was naturally greater speculative activity in the silver market. Even before the sharp rise in gold prices came about silver prices had improved. While gold prices are still below the high levels touched last year silver prices are at the highest levels for all time. The quotation is Rs. 141-4 for ready and Rs. 138-4 for forward. The quotations at the end of last week were Rs. 131-8 and Rs. 129-8 respectively.

In the Calcutta market firmer conditions have been noticeable in sympathy with Bombay and the quotation for ready was Rs. 142-4 against Rs. 131-4.

COTTON

Calcutta, March 30.

The Bombay raw cotton market was inclined to be firmer earlier in the week in

sympathy with the strength of the bullion market and quite a sharp rise in prices was recorded on speculative buying. Karachi advices also were favourable. But the smaller buying by mills and the favourable reports regarding the crop resulted in heavy hedge-selling at the highest levels and the gains have been completely lost. It is said that arrangements for the import of foreign cotton are very satisfactory and that with the efforts of the Textile Control Board to bring down prices further there will be no great inducement for cotton mills to lay in stocks. Also, the surplus funds at the hands of mills may not be as large as in the last year. Jharilla May closed at Rs. 436-12 against Rs. 442 at the time of last writing, July at Rs. 445-4 against Rs. 448-12 and September at Rs. 449-4 against Rs. 451-4. It will be noticed that the decline in the quotation is more pronounced for the near positions.

PIECEGOODS

Calcutta, March 30.

Steady conditions have continued to prevail in the piecegoods market. There has not been any panicky selling or movement of stocks to outside the city as was noticeable on the last occasion when there was a series of raids. Business is satisfactory and there is still a shortage of ready goods. It is hoped that as a result of the recent conference there will be a greater flow of supplies. It cannot be expected however that with the intensification of activity in North-east India it would be possible to find all the transport facilities to Bengal. Bengal mills are very busy and taking the maximum advantage under the present conditions.

TEST OF TIME

The Pyramids, standing through the centuries in spite of natural disintegration, are enduring monuments to the unflinching workmanship of the ancient Egyptians.

Our lives should be built up with the same pride of accomplishment—built to withstand the ravages of time and adversity. Such permanency can only rise on a foundation of financial solidity.

MARKETS AWAIT FURTHER DEVELOPMENTS

QUIETLY steady conditions have been noticeable in the stock markets in both Calcutta and Bombay. In fact, definitely steadier conditions have been noticeable in the Bombay market in sympathy with the strength of the bullion markets. The behaviour of the Calcutta market should, under the existing circumstances, be considered extremely satisfactory. In the absence of any large selling pressure there is a tendency to await further developments. The improvement in prices for the speculative leaders earlier in the week was not held as the expected improvement in the situation on the Assam Burma border did not come about. In the last three days, however, there has been no fresh selling pressure and prices have been fluctuating in narrow limits. It is now generally expected that enemy activity on the Eastern frontier cannot develop into any serious threat to this country and that it cannot have any great significance for the stock markets. This view, apparently, explains the relative strength of the Bombay market. The C-in-C's statement in the Central Assembly on Friday afternoon should dispel any fears in the minds of the Indian public regarding the ability of the Japanese to stage a major offensive in that part of the country and at this time of the year. There is complete confidence regarding the success of the Allied operations that are now going on. It can be expected that in the next two or three weeks the position will become clearer.

The rise in prices in the Bombay bullion market in midweek seems to be rather exaggerated. Before the sharp rise in prices in Bombay, there was not much of activity in other markets. It was only after the sudden rise in prices to Rs. 80 on Wednesday that there has been a rush for buying gold in Nagpur, Calcutta and other centres. As on other occasions when there was discouraging news from the war fronts, there was greater demand for the precious metal but it appears that on the present occasion speculative activity has been more successful and prices were pushed up rather abruptly. There has thus been a reaction towards the close and with the continued selling by the Reserve Bank it can be expected that values will come down further. The absence of any panic in stock markets is in itself an unfavourable factor for the bullion market. For, it will be remembered that in May 1940 there was

heavy selling of export commodities and shares and frantic buying of bullion.

The net profit before providing for taxation and after depreciation of the *Ochterlony Valley Estates (1938) Ltd.*, for the year ended October 1943 should be considered rather satisfactory. But for the unusually small coffee crop harvested earnings for the year would have been very much higher as tea and coffee prices were very attractive. The net profit before providing for taxation and depreciation is Rs. 312,547 against Rs. 347,282. After providing Rs. 60,000 for taxation and Rs. 1 lakh to Debenture Reserve, the dividend has been increased to 50 per cent from 20. The directors are optimistic regarding the prospects for the new year. The coffee crop being estimated at 411 tons against the actual crop for 1942-43 of 4,056 cwts.

Earnings of jute mills in the latter half of 1943, as is well-known, have been affected by the coal shortage and the decrease in earnings for that period is pronounced especially in the case of steam-driven units. The net profit of the *Soorah Jute Mills Company, Ltd.*, for the half-year ended December 1943 is Rs. 21,272 against Rs. 1,19,060 for the previous half-year. No provision has been made for taxation against Rs. 97,500 before while the amount set aside for depreciation is Rs. 60,000 (same). After the transfer of Rs. 12,500 from the reserve for E.P.T. to profit and loss account the arrear of preference dividend for the half-year ended December 1942 is to be paid. The arrears of preference dividend for the two half-years ending June 1942 was paid on the former occasion. The amount carried forward is lower at Rs. 37,978 against Rs. 47,106 brought in.

The figures for the *Chitaval Sah Jute Mills Ltd.* make very satisfactory showing. The net profit before providing for taxation and depreciation is Rs. 12,38,387 against Rs. 12,41,305 for the previous half-year. The amount set aside for taxation and E.P.T. deposits is Rs. 8.95 lakhs (Rs. 9.2 lakhs) while provision for depreciation is Rs. 1.5 lakhs (Rs. 1.4 lakhs). Ordinary dividend has been maintained at 5 per cent. The amount carried forward is higher at Rs. 32,583 against Rs. 26,947 brought in.

Sir Robert Menzies always with an eye for figures with a meaning gave details of

the financial side of B.I.C.'s operations. Sales in the four years of war amounted to Rs. 32 crores out of which the Government's share was Rs. 25 crores. The total Tax provision for 1943 is Rs. 163 lakhs and he reminded shareholders at the meeting on March 25th that over Rs. 3¼ crores have been paid in taxes by the Corporation. Since taxation mounts up, the dividend rate is stabilised, and reasons were given for the policy pursued in relation to the future demand for renewals and replacements. The Corporation's reserves were assuming material dimensions according to Sir Robert who reminded shareholders that the average return on the ordinary shares was equal to and better than that derived from trustee securities for those who held on to the shares from 1920. That argument covers the point as to the gilded status of the shares at present rather neatly, if any reminder as to the market rating were at all necessary. Except for the mention of the coal trouble which affects Dhariwal the review of conditions last year was wholly encouraging. The labour position is regarded as very good owing to the scheme for food supply, the annual bonus, and if it were not for directions as to allowances and bonus, should continue to be so. The picture that he drew of war industry with B.I.C. in the van is not the less remarkable for his asides as to fiscal burdens and official interference, actual and prospective.

Shareholders of *Kohinoor Mills* will be duly encouraged to hope for prompt restoration of plant and replacements through the addition of Rs. 30 lakhs to capital made last year which supports the machinery reserve of Rs. 20 lakhs. Mr. Lowndes dwelt on cloth control, the tax burden and the question of enhanced depreciation—matters of real importance to the textile industry in wartime. The setting up of a Dividend Equalisation Fund is not as striking as the investment of the new capital in the 3 per cent 1953-55 loan. A point that recurs in Chairman's speeches is the effects of the quarterly draft on liquid assets. More funds may be needed, and the high level of manufacturing costs is a material factor always. The special attention that is to be paid to sewing threads in regard to advertising appears justified in view of the commanding position held by the company. As to prospects Mr. Lowndes was not too cautious, and the assurance as to satisfactory results for 1944 is admittedly welcome.

WARREN DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 31.

Quiet conditions continue to prevail on the Calcutta Stock Exchange and business passing is on a very much smaller scale. The continued uncertainty regarding the war situation on the Indo-Burma frontier has been mainly responsible for the quieter feeling in the markets. Earlier in the period under review, a slightly better tendency was noticeable but, at the higher levels, there was renewed selling and quotations at the time of writing are not very much changed on balance. It is satisfactory, however, to note that there has not been any undue selling pressure and that only in the cotton and tea sections a fresh decline in prices has been recorded. The easier tone of the cotton section was due to the feeling that cotton shares were relatively overvalued while the appearance of some sellers in the tea section was due to the fears that several of the tea gardens were close to the fighting area and that even if there was no possibility of damage to the tea gardens, the question of labour was bound to prove difficult. Both operators and investors confidently expect that in the next week or two there will be encouraging developments, and that there will not be any appreciable decline in prices.

There are no features in the gilt-edged securities section and prices are fluctuating around last week's levels. The announcement of the new loan has not had any effect on this section and 3½ per cent Paper is slightly higher at Rs. 98-8. Among terminable loans 3 per cent Defence Bonds 1949-52 were Rs. 100-8, 3 per cent 1951-54 Rs. 99-15, 3 per cent 1953-55 Rs. 99-10, 3½ per cent 1947-50 Rs. 103, 4 per cent 1960-70 Rs. 112-10 and 5 per cent 1945-55 Rs. 104-10. There are again no transactions in provincial loans.

No transactions have also been recorded in public bodies debenture while preference shares have been in greater demand. Cheviot were Rs. 177 ex-dividend, Hukumchand Rs. 170, Kinnison Rs. 186 and Delta Rs. 146. Alkali and Chemical were Rs. 133, Steel Corporation Rs. 132 and Sree Gopal Rs. 165-8. Among Bank shares, Hind Bank were a shade lower at Rs. 56 as also Reserve Bank at Rs. 120. United Commercial Bank were Rs. 27 premium and Bharat Bank deferreds Rs. 3-14.

In the Coal section, there was no important change in prices till Wednesday. In Thursday's session, however, a slight decline in prices was recorded Bengal quiting Rs. 583 against Rs. 605 at the end of last week, Amalgamated Rs. 46 against Rs. 46-8 and Burrakur Rs. 31-2 against Rs. 32. Dhemo Main were Rs. 29-10, Equitable Rs. 53-8 against Rs. 54-8, New Beerbhoom Rs. 31-2, Samla Rs. 5-10, South Karanpura Rs. 12-5 and Talcher Rs. 6-7. West Jamuria were Rs. 53 and Union Rs. 43-4.

In the Cotton section, there was a drop in prices in Monday's session. Elgin were marked down to Rs. 77 and Dunbar to Rs. 284. There has been a slight recovery towards the close. Closing quotations, however, are lower on balance. Benares were Rs. 13-11, Bengal-Nagpur Rs. 38-12, Cawnpore Textiles Rs. 15-6, Elgin Rs. 79-8, Kesoram Rs. 17-12 and New Victoria Rs. 9-7.

In the Jute section, there is no important change in prices though quotations are in places easier in sympathy with the other sections. Howrah quoted Rs. 71 against

Rs. 71-10 at the end of last week. Reports regarding the drop in coal supplies have been discouraging. Anglo-India were higher at Rs. 416 while Auckland were unchanged at Rs. 292. Bally were Rs. 360 against Rs. 358 and Champdany Rs. 222-8 against Rs. 219. There are reports that fresh orders will be placed with the Calcutta jute mills by the U. S. Government but no details are available yet. Hukumchand quoted Rs. 36, India Rs. 585, Kamarhaty Rs. 575, Megna Rs. 93-8, Nellimaria Rs. 28-14, Nuddea Rs. 117, Soorah Rs. 16-11 and Standard Rs. 261.

In the Engineering section, Indian Iron improved earlier in the week to Rs. 37 and Steel Corporation to Rs. 27-8 but some selling at the higher levels resulted in a recession in prices to Rs. 36-2 and Rs. 27-2 respectively. The quotations at the time of writing are quietly steady at Rs. 36-6 and Rs. 27-4. Braithwaite were Rs. 11-2 ex-dividend, Kumardhubi Rs. 10, National Iron and Steel Rs. 13, Saran Engineering Rs. 11 and United Iron Rs. 11-2.

Sugar shares have been featureless with Belsund at Rs. 13, Corew & Co. at Rs. 29-3, Cawnpore at Rs. 41, Champaran at Rs. 41-2 and Ramnugger Cane and Sugar at Rs. 13-5. U. P. Sugar were steady at Rs. 33-10.

Business passing in the Tea section is smaller. There were sellers earlier in the week but steadier conditions are noticeable in the latter half of the period though buyers are not forthcoming freely. Banarhat quoted Rs. 870, New Terai Rs. 29, Hattikhira Rs. 30-6 and Tezpur Rs. 17-12.

In the Miscellaneous section, Burma Corporation were Rs. 2-9 and Indian Copper Rs. 2-11 while Karanpura Development were 2 points lower at Rs. 29. B. I. Corporation were Rs. 6-1 ex-dividend, British Ceylon Corporation Rs. 19-8 ex-dividend, Aluminium Corporation Rs. 20 and Assam Bengal Cement Rs. 16-4. Among Paper shares, Bengal were Rs. 256-8, India Paper Pulp Rs. 16-8 and Titagur Paper Rs. 28-10, Midnapore Zemindary were Rs. 150.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, March 30.

DURING the period under review the trend of the stock exchange has been to a large extent determined by the commodity markets, especially the bullion market. The token invasion of Manipur by Japan led to a scramble for the purchase of the yellow and the white metals and prices in the bullion market ruled high. In sympathy with the bullion market prices on the stock exchange also were marked higher. Share values which were somewhat sticky began to move up steadily though profit-taking operations reduced gains considerably. Till today the market was somewhat buoyant with almost all shares taking part in the general upward movement. But the rather easy conditions prevailing in the bullion market from last evening induced a sympathetic trend on the stock exchange with both textiles and steels losing much of the ground gained in the past three days. The loss in steels was, however, more marked than in textiles. Prices at the time of writing are somewhat easy and there was a sizeable decline in the volume of business passing.

The gilt-edged market remained generally steady with 3½ per cent Government Paper quoting around Rs. 98-8. 3 per cent (1946) Defence Bonds were Rs. 101-14, while 3 per cent (1949-52) were Rs. 100-8; 3 per cent (1951-54) Rs. 99-15; 3 per cent (1953-55) Rs. 99-10. 3½ per cent Loan (1947-50) were quoting at Rs. 103 and 4 per cent (1960-70) were done at Rs. 112-8.

Mill shares were somewhat firm for the past three days. But at close of transactions today prices began to decline. Bombay Dyeing after being higher at Rs. 2,137 closed easy at Rs. 2,127-8, while Century remained unchanged at Rs. 1,035. Kohinoor were easy at Rs. 680 as against Rs. 685 the previous day. Svadeshi registered a loss of 5 points at Rs. 601 as also Gokak at Rs. 354.

The Steel section went through an identical course as Textiles with the exception that

COMPANY MEETING

KOHINOOR MILLS CO., LIMITED

GREATLY IMPROVED FINANCIAL POSITION

CHAIRMAN ON THE FUTURE OUTLOOK

At the Annual General Meeting of the Shareholders of the Company held on March 15th, 1944, the Chairman Mr. R. C. Lowndes said:

GENTLEMEN,

The Directors' Report and the Audited Accounts of the Company for the financial year which ended on the 31st December 1943, having been in your possession for the required period, I will, with your permission, take them as read.

The war news has been kept very prominently before us during the past year so I will not refer to it except to say that it has been a year of unbroken success for the United Nations and sees them far nearer that ultimate victory which, I am sure, everyone hopes will come before long.

The year has also been an eventful and strenuous one for the Textile Industry in India. The main feature was of course the control of the whole output of the Industry by Government, in consultation with the Textile Control Board which was inaugurated as an Advisory Body. This control was necessitated by the unprecedented heights to which cloth and yarn prices rose as a result of the shortage brought about by various factors. Whilst control is undoubtedly irksome and possibly the Control Order has operated harshly in some cases, I think most of you will agree that it was a most necessary measure. Cloth and yarn prices had risen out of all proportion to the price of cotton or to the cost of manufacture generally and reached levels which it was impossible for the vast bulk of consumers to pay.

As you are no doubt aware two anti-inflationary measures were introduced by Government during the year. One was a new Defence of India Rule No. 94A—prohibiting Capital Issues, amongst other things, except with the consent of the Government of India. The consent of Government was obtained to the issue by your Company of 15,000 New Ordinary Shares of Rs. 100 each at Rs. 100 premium. The necessity for this issue was fully explained by my predecessor at the Extraordinary General Meeting of Shareholders held on the 27th of May 1943 and I am sure the Company will be greatly benefited by having this money readily available for the purchase of new machinery when the time comes. At present, according to the terms upon which consent was granted, this sum is deposited in the form of Defence Loan with the Company's Bankers, in the joint names of the Company and the Secretary, Finance Department, Government of India.

The second measure, one which affects you as Shareholders very materially, was Ordinance No. 43 of 1943. I shall refer to this in some detail because the Finance Member's recent Budget proposals have again changed the position and it is necessary to have a complete picture of the recent taxation proposals if we are to appreciate the position clearly. The main feature of this Ordinance passed in May last was to draw into Government coffers all but 62/3% of the excess profits by making compulsory the previous system of optional deposits under which an assessee could after he had been assessed to E.P.T. deposit a sum not exceeding one-fifth of that E.P.T. repayable after the termination of hostilities. To this Government agreed to add as a post-war refund of E.P.T. a sum equal to one-tenth of the tax. Of the 93 1/3% which was to be taken by Government 20% would be held for the benefit of the Assessee 13 1/3% being his own money which could be withdrawn within twelve months of the end of the war or two years from the payment of the deposit whichever is later and on which 2% interest is payable and the balance which Government was refunding from E.P.T. and which was to be released in accordance with rules which were framed in consultation with the Reconstruction Committee. The purport of these rules

is that Government's contribution will be released within three years of the end of the war or earlier if the Assessee is able to establish a claim for advantageous use of the money at an earlier stage. The recent Budget proposals are, of course, intended to immobilise further sums of money up to 100% of excess profits and you will understand therefore that the 62/3% of excess profits which was available under the 1943 Ordinance is now no longer available for distribution as dividend. I would like to add that in point of fact the Company's 1943 results are only affected by the recent Budget proposals in respect of the higher taxation. The higher compulsory deposit from excess profits will not affect the Company until the assessment of the profits of 1944 is made. The Company is affected on the 1943 results to the extent of about Rs. 1,77,000 on account of the higher Income and Super Tax but this can be met to a considerable extent by the carry forward of just over Rs. 1,00,000.

Having, I hope, made these important points clear, let us now turn to the Directors' Report and Balance Sheet. You will notice from the Report that the Directors have again set aside extra depreciation to the extent of Rs. 2,50,000. This sum has all been allocated to machinery as the major portion of these assets, apart from having run double shift since 1932, has now been running two ten-hours shifts for four years under war-time conditions. The Committee appointed by Government to look into the adequacy or otherwise of the present Statutory rates of Depreciation has not yet arrived at any conclusions but I am not sure that we should count on any favourable results being reached.

I feel sure you will agree with the policy of the Directors in setting aside to the General and Machinery Reserves the amount covered by the Compulsory Deposit. The total amount now specifically placed to Machinery Reserve, i.e., Rs. 20,00,000 together with the Rs. 30,00,000 received by way of new capital will go a long way towards bringing your machinery to that state of progressiveness and efficiency envisaged by my predecessor and for which he worked so hard.

The round figure of Rs. 1,30,00,000 set aside as provision for taxation is split up into the following approximate amounts:—E.P.T. Rs. 1,01,82,000. Income-tax and Super-tax Rs. 26,77,000 and an adjustment of the latter to cover a short provision for 1942 of Rs. 1,11,000. In order to meet a point raised by a Shareholder at the last General Meeting, the Directors decided to make a start in a small way by putting Rs. 2,00,000 to an Equalisation of Dividend Fund leaving the current year's profits and the carry forward of Rs. 1,04,000 to look after any short-falls in the provision made for increased taxation as a result of the recent Budget, which incidentally did not come out until sometime after the Directors' Report was issued.

An analysis of the Balance Sheet shows the Company's greatly improved financial position. In addition to the 2% Deposit of Rs. 12,71,000 with Government and Rs. 30 lacs New Share Capital invested in the 3% Defence Loan 1953/55, the Liquid Assets at Rs. 2,16,36,300 exceed the current liabilities by Rs. 51,32,700 though this latter figure will be reduced by Rs. 33,89,842 when the proposed distributions from the profits and the further Compulsory Deposit payable to Government have been made. Unsecured loans at Rs. 4,83,000 are Rs. 5,37,000 lower than last year. Under liabilities the amount due for goods supplied has increased by Rs. 64,000 which is again due chiefly to certain lots of cotton having been received but not paid for on the last day of the year. The item for expenses shows a fairly large increase of Rs. 5,07,000 and this is due almost entirely to the larger amount of wages and bonus due

to Mill employees and to the increase in the amount due by way of Agents' Commission. On the assets side of the Balance Sheet the value of stores, fuel and grain on hand at Rs. 32,10,000 is Rs. 3,58,000 higher than last year but this is due to the higher values of stores held, the quantity being much about the same as at the close of the previous year. The value of cotton stocks is up by Rs. 21,77,000. This is partly due to the fact that stocks of cotton were 3,000 bales greater than at the end of the previous year and partly due to higher prices. Larger stocks as well as higher prices are responsible for the increase of Rs. 2,17,000 under the head of silk and other yarn. There is a small decrease of Rs. 54,000 under the head 'Advances' and this is due to the fact that there were no payments for machinery in course of shipment. In regard to investments you will see that these stood at the substantial figure of Rs. 71,86,000 as at the close of the year.

It will be evident to you, I am sure, that the liquid position of the Company's finances must shortly undergo a considerable change as the result of Government's fiscal policy and more particularly the recent declared intention of the Finance Member with regard to the advance payments of taxation by quarterly instalments and enhanced deposits from excess profits. Cash balances are some Rs. 7,41,000 higher and this is due to the fact that a larger amount was expected to be required for cotton payments.

I now have to refer to the loss your Company has sustained by the retirement in June last of your late Chairman, Mr. F. F. Stileman, and the death of Mr. H. A. H. Payne which took place last month. Mr. Stileman, during his 20 years' connection, worked wholeheartedly for the advancement of the Company and it is largely due to his initiative and untiring energy that your Mills gained the reputation which they undoubtedly hold to-day. I cannot do better than read out to you the Resolution passed by the Board at the time of Mr. Stileman's retirement:—

"The Board have learned with great regret of the decision of Mr. F. F. Stileman, Chairman of the Board, to retire from the Agents' Firm of Killick, Nixon & Co., and wish to place on record their sincere appreciation of and thanks for the valuable services rendered by Mr. Stileman during a period of 20 years in bringing the Kohinoor Mills to the present commanding position which this Company occupies amongst the textile manufacturing concerns in all India. On behalf of the Shareholders of the Kohinoor Mills the Board wish to convey to Mr. Stileman their very sincere appreciation of these devoted efforts of his and, as a token thereof, they resolve that a suitable souvenir be presented to Mr. Stileman at early convenience for and on behalf of the Kohinoor Mills Company, Limited. The Board assures Mr. Stileman that he carries with him in his retirement the best wishes of the Board and of the Shareholders of the Kohinoor Mills for long life and complete health in the rest which he has so well earned. The Board feel that the loss to the Kohinoor Mills by Mr. Stileman's retirement will be felt for a long time."

Mr. Payne, who died at the age of 82, had been a Director of the Company for 43 years ever since its inception in 1896 and, although latterly not in the best of health, had continued to take the greatest interest in its affairs. The loss of Mr. Payne's sound advice based on his wide legal knowledge and by the Company and his tact and kindly personality will be greatly missed by his colleagues on the Board. To fill the vacancy the Directors invited Mr. Dinsha K. Daji to a seat on the Board. Under Article 98 of the Company's Articles of Association Mr. Daji holds office only until this Meeting but is eligible for re-election.

This brief review would not be complete without paying a tribute to the excellent work done by the Mill Manager and the Technical and Clerical Staff both at the Mills and at the Head Office. To the executive and clerical staff the war has brought much added work owing to all manner of controls and regulations of great complexity. These have been tackled with determination and efficiency. Your Selling Agents have again given their loyal and efficient co-operation

(Continued on page 672).

(Annual General Meeting on 5th April, 1944 at 3-30 p.m.)

Audited Accounts for the year ended 31st December, 1943.

Adding to the 1943 net profit of Rs. 66,28,170 the sum of Rs. 4,64,940-6 brought forward from the previous year the total profits now available for appropriation amount to Rs. 70,93,110-8 and the Directors' recommendations are as follows:—

	Rs.	A. P.
Transfer to Taxation Reserve	46,83,207	9 0
Dividend for the year 1943 on the Guaranteed Preference Shares at 6% free of tax, absorbing	1,30,000	0 0
Dividend for the year 1943 on the Second Preference Shares at 6% less income tax, absorbing	1,72,500	0 0
Dividend for the year 1943 on the Ordinary Shares at 25% free of tax, absorbing	12,50,000	0 0
Special depreciation provision on Plant and Machinery	1,00,000	0 0
Transfer to Reserve for Contingencies	2,50,000	0 0
Balance carried forward to next account	4,57,402	15 0
Total	70,93,110	8 0

The provision for taxation represents a decrease of Rs. 5,31,718 compared with the preceding year, due to the reduction in profits. The total profits earned. No credit has been taken for the portion. The estimated tax liability on the 1943 results represents 71 per cent of the profits earned. No credit has been taken for the portion of the Excess Profits Tax liability which is refundable within three years of the termination of hostilities, estimated at Rs. 3,09,000.

The Directors feel justified in maintaining the rate of dividend on the Ordinary Shares at 25%.

The Directors consider it prudent to continue to strengthen the Company's reserves and finances and therefore recommend the transfers of Rs. 1,00,000 to Special Depreciation and Rs. 2,50,000 to Reserve for Contingencies.

Inventories have been conservatively valued, all raw materials having been taken at the lower of cost or market prices at 31st December last. Ample provision has been made for bad and doubtful debts and every known loss has been provided for in the accounts.

During the year under review the Company's plant was again fully occupied. Owing, however, to restrictions on imports from overseas, tyre rationing and other Government controls, and the steadily increasing proportion of manufacture against Government orders at reduced profit margins, both turnover and profits show a decrease compared with 1942.

Secretary.—Mr. A. W. Gillespie.

Authorised Capital—Rs. 2,00,00,000. Issued and Subscribed—Rs. 1,20,00,000 in 30,000, 6 per cent (tax free) Guaranteed Cum. Pref. shares of Rs. 100 each, 40,000, 6 per cent 2nd Cum. Pref. shares of Rs. 100 each and 5,00,000 Ordinary shares of Rs. 10 each, all fully paid up.

Synopsis of the balance sheet as at 31st December, 1943:—

Liabilities.		Assets.	
	Rs.		Rs.

ENGINEERINGS:
Bhartia Elec. Steel:—(24th) 17-12; (28th) 17-14, 17-9; (29th) 17-8.
Braithwaite & Co.:—(23rd) 11-4, 11-5; (24th) 11-3; (25th) 11-4; (27th) 11-6 c.t., 11; (28th) 10-14.
Britannia:—(27th) 16-12.
Burn & Co.:—(24th) 392; (27th) 383 s.o.l.; (29th) 390.
Indian Iron & Steel:—(23rd) 36-15, 36-12, 36-11, 36-10, 36-9, 36-8, 36-7, 36-6, 36-5, 36-4, 36-3, 36-2, 36-1, 35-15, 35-6; (24th) 37-4, 37-12 s.o.s., 37-4 s.l., 36-11 c.t., 36-10, 36-9, 36-8, 36-7, 36-6, 36-3; (25th) 36-12, 36-13, 36-15, 36-14, 37-1, 37; (27th) 36-11, 36-10 (37 s.l.), 36-9, 36-8, 36-7, 36-4, 36-5; (28th) 36-8, 36-5, 36-4, 36-3, 36-2, 36-1; (29th) 36-9, 36-10, 36-8, 36-7, 36-6, 36-5.
Indian Steel & Wire Products:—(24th) 55-4, 55-2; (25th) 53-12; (27th) 55-13, 55-14.
Indian Steel & Wire Products (Defd.):—(27th) 36-7, 36-5, 36-4; (29th) 36-2, 36-4.
Jessop & Co.:—(23rd) 23, 23-1, 23-4, 23-4 c.t.; (24th) 23-4, 23-6, 23-7; (25th) 23-8; (27th) 23-2; (28th) 22-14, 22-15, 23-1, 23-2, 23; (29th) 23-1, 23-2, 23-4.
Kumardhubi:—(23rd) 10-7, 10-6, 10-5, 10-4, 10-2, 10-1, 9-14; (24th) 10-8, 10-7, 10-6, 10-5, 10-4, 10-3; (25th) 10-4, 10-5, 10-6, 10-7, 10-8, 11; (27th) 10-4, 10-3, 9-14; (28th) 10-1, 10-2; (29th) 10-3, 10-2, 10, 10-1.
Marshall & Co.:—(24th) 4-12, 4-10, 4-8; (25th) 4-12; (27th) 4-10, 4-9; (28th) 4-6, 4-7, 4-8.
National Iron & Steel:—(23rd) 13-12 c.t., 13-3, 13-1, 12-13; (28th) 12-15; (29th) 13-3, 13-2.
Saran:—(23rd) 10-14, 10-15, 10-12, 11, 11-1, 11-2, 11-3; (24th) 11-8 c.t.; (27th) 11-1, 11-2, 11-4; (28th) 10-15, 11.
Steel Corpn.:—(23rd) 27-10, 27-4, 27-2, 27, 26-14; (24th) 27-7, 27-6, 27-5, 27-4, 27-3; (25th) 27-8; (27th) 27-8, 27-6, 27-5, 27-4, 27-3, 27-2, 27-1; (28th) 26-14, 27-1; (29th) 27-7, 27-6, 27-3.
Steel Corpn. (Pref.):—(24th) 131-8, 132.
Steel Products:—(23rd) 8; (24th) 8, 8-1; (25th) 8, 8-2; (27th) 8-1; (28th) 8, 8-1.
Textile Machinery (Pref.):—(24th) 127-8.

MININGS:
Burma Corpn.:—(23rd) 3-10, 3-11; (24th) 3-10; (25th) 3-10; (27th) 3-11, 3-10, 3-9; (28th) 3-9, 3-10.
Consolidated Tin:—(27th) 2-4; (28th) 2-2.
Indian Copper:—(23rd) 2-11, 2-10; (24th) 2-11, 2-12; (27th) 2-10, 2-11; (28th) 2-10, 2-11, 2-12; (29th) 2-10.
Karanpura Development:—(23rd) 29-8, 29-10; (24th) 29-11, 29-10, 29-6, 29-8; (25th) 29-5, 29-6; (28th) 29-11, 29-8, 29, 29-2; (29th) 29-14.
Rhodesia Copper:—(24th) 2-3; (25th) 2-2 c.t.; (27th) 2-3; (28th) 2-3; (29th) 2-3.

REAL PROPERTIES:
Humayan Properties:—(23rd) 15-6, 15-10; (27th) 16-4, 15-10.
Humayan Properties (Defd.):—(28th) 4-7, 4-8; (29th) 4-7, 4-8.
Jagadishpur Zemindary (Pref.):—(29th) 125.
Jagadishpur Zemindary (Ord.):—(29th) 13.
Midnapore Zemindary:—(23rd) 146, 145-8, 144; (24th) 147, 146, 145-8, 145; (25th) 146-8, 146, 147; (27th) 146-8, 147, 147-4, 147-8; (28th) 147, 147-8, 149; (29th) 148-8 (150 s.l.), 150-8, 150-12, 151, 151-8.

SHIPPINGS:
Bengal Assam Steam:—(25th) 304.
India General Navign.:—(24th) 138-8 s.l.; (27th) 136 c.t.; (28th) 138, 135.
Port Shipping:—(25th) 25-4, 25, 25-5; (28th) 25-4.

INSURANCE:
New Asiatic Insurance:—(23rd) 14-3, 14, 14-1, 14-2; (24th) 14, 13-12; (25th) 14-2; (27th) 13-13, 13-8, 13-5; (28th) 13-8, 13-5; (29th) 13-5, 13-7.
Ruby General Insurance:—(23rd) 24-4, 23-8, 23-5, 23-4; (27th) 23-4.

CEMENTS:
Assam Bengal Cement:—(23rd) 16-12, 16-11, 16-10, 16-9; (24th) 16-10; (25th) 16-11, 16-12, 16-13, 16-14; (27th) 16-13, 16-11, 16-10; (28th) 16-11, 16-10, 16-9, 16-7, 16-6, 16-4; (29th) 16-2, 16-4.
Assam Bengal Cement (Defd.):—(23rd) 3-13; (24th) 3-11; (28th) 3-12, 3-14.
Bengal Potteries:—(24th) 22-8.
Dalmia Cement (Pref.):—(29th) 146.

OIL:
Indo-Burma Petrol:—(28th) 66-12 s.l., 65 o.l., 66-8.
Northern India Oil:—(25th) 22-14, 22-15, 23; (27th) 23-5, 23-6; (29th) 23-5.
Tide Water Oil:—(23rd) 26-13, 26-14.

CHEMICALS:
Bengal Chemical:—(29th) 474.
Frank Ross:—(24th) 8-1.
Smith Stanistreet:—(28th) 5-2.

SAW MILLS:
Assam Saws:—(23rd) 5-12, 5-9, 5-4, 5-2, 5; (24th) 5-11, 5-10, 5-8, 5-7, 5-6, 5-5, 5-4, 5-6; (25th) 5-8, 5-9, 5-11; (27th) 5-8, 5-7, 5-4, 5-6; (28th) 5-6, 5-5, 5-3; (29th) 5-4, 5-6, 5-8.

PAPER MILLS:
Bengal:—(23rd) 235; (24th) 234.
Bengal ("A" Pref.):—(23rd) 182-8, 183.
India Paper Pulp:—(24th) 209 s.l., 207-8; (25th) 210 s.l., 211; (27th) 210, 207, 208-8; (28th) 207-8, 210, 209-8, 211, 214, 215, 216; (29th) 215 s.l., 215-8, 216, 217.
Mysore:—(28th) 33-7.

MADRAS STOCK EXCHANGE

(FROM OUR CORRESPONDENT)

Madras, March 28.

EASY conditions continued to prevail on the stock exchange with prices in the Textile section steadily giving way under pressure of liquidation. The news of the Jap attack on Manipur unsettled the market which was just then showing signs of recovery from the bearish tendency imparted by the Central Budget. It will be sometime before the market shows definite signs of recovery as both operators and investors are pre-occupied with the war situation on the Burma front. It may, however, be safely predicted that normal conditions will be restored in a couple of weeks as latest reports are encouraging and there is no ground to look upon the Jap attack as anything more than a defensive action.

The gilt-edged market is rather easy. 3½ per cent Government Paper is quoting at Rs. 98-8.

In the Textile section, the turnover has been small and there has been a further fall in prices of equities. Mettur Industries have lost nearly five points to quote at Rs. 300. Cambodia's are sticky around Rs. 42-8 cum-dividend, Maduras were Rs. 78-8 c.d., Ranga Vilas were Rs. 212-8 c.d., Sitarams Rs. 200; and Saradas Rs. 217-8.

Steady conditions were noticed in the Planting section and the turnover is fairly good. In the absence of any fresh developments affecting the prices of Tea, Coffee and Rubber, scrip values have been well maintained. Midlands were Rs. 16-12; Chembra Peaks Rs. 12; Cochin Malabars Rs. 18-10 c.d., Consolidated Coffee Rs. 12-4; Pullangodes Rs. 3-4; Ouchterlony Valley Rs. 16-4 cum-dividend and Thirumbadis Rs. 5-1.

Among Miscellaneous shares Mysore paper were done at Rs. 33-6; Spencer & Co. at Rs. 13; United Breweries at Rs. 150; and Mettur Chemical (Ord.) at Rs. 24.

THE CALCUTTA STEAM NAVIGATION CO., LTD.

DIVIDEND NOTICE

A dividend of Rs. 7-8 per share for the half-year ending 31st December, 1943 has been declared payable at once.

HOARE MILLER & CO., LTD.,

Managing Agents.

5, Fairlie Place,
Calcutta, 31st March, 1944.

(Continued from page 655).

and this has played its part in producing the excellent results you see before you.

I now have pleasure in proposing that the Report of the Directors together with the Audited Statement of Accounts made up to the 31st December 1943 and now taken as read be and are hereby approved, adopted and confirmed.

In the Profit and Loss Account you will see increases in the majority of items on the expenditure side. These do not call for much comment because most of the items pertaining to the manufacture of Cotton Textiles have gone up in price. It is true that a number of prices of textile stores have been controlled but these controlled prices are generally above those at which we had purchased the majority of stores which were consumed in 1942. Dearness allowance again shows a substantial increase of Rs. 17,79,000. The monthly allowance based on the Bombay Cost of Living Index has been in the neighbourhood of Rs. 33 for some time and I do not think this amount should be grudged to the workpeople looking to the undoubtedly high cost of living and the profits earned by the Company during the past year. There is one item I would however particularly like to bring to your attention and that is under the heading of "Advertising, Printing and Stationery" on which expenditure has risen by about Rs. 37,000. This increase, although not entirely, is mostly due to an advertising campaign we have recently started in connection with one of our most important lines, I refer, of course, to sewing threads. You will no doubt have noticed in the local press that certain Mills have been specifically advertising that they are manufacturers of the most superlative kinds of sewing threads. Government have encouraged a number of manufacturers to produce sewing threads to make up for the acute shortage which prevailed and, in the circumstances, there is little doubt but that competition in sewing threads not only exists but is likely to increase and, in order to keep the Company's name prominently before consumers, it is necessary to advertise in all the leading markets and distributing centres in India. I have thought it proper to bring this point to your special notice because expenditure on advertising will be heavier during the current year but in my view this expenditure is essential.

On the income side of the Profit and Loss Account, receipts from the sale of cloth, yarn and waste again show a substantial increase. This of course reflects the high prices reached during the year and is not due to an increase in production which was very much the same as in 1942. This year the income from chawls rent more or less balances the cost of upkeep instead of being some Rs. 10,000 more. This is due to the cost of upkeep having increased as well as to more repairs having been carried out.

I know you will wish me to say something about the future prospects of the Company but I find it extremely difficult to arrive at any conclusions in these days when the ordinary laws of supply and demand do not apply and the industry is controlled to the extent of 100%. I can say this however that there seems to be a tendency on the part of Government to decrease their war and standard cloth orders which means that there is a greater productive capacity available for bazaar qualities on which margins of profit are higher. On the other hand, I think Government will press for a progressive reduction in the price of bazaar qualities and, as you know, prices have already again been reduced to the extent of 1½ annas in the Rupee as and from the 1st March. Your Mills again find themselves favourably placed at the start of the year in regard to cotton purchases but I would like to point out that the advantage which your Mills have gained during the last 3 years or so has been due to the fact that, broadly speaking, cotton has been a rising market. This does not appear to be the case any longer and it looks therefore that sometime during the latter part of this year this extra advantage which your Mills have enjoyed may be neutralised. On the whole, however, I think we can look to the future with confidence. That the demand for cloth and yarn will be maintained I think there is little doubt and, even if margins are somewhat reduced, I think they will be such as to show quite satisfactory results at the end of the year.

Editorial Comments

Provincial Finances

Not the least exciting of the abnormal experiences of war finances is the boom in provincial budgets. While a few years ago one would have thought that provincial Finance members and ministers should be content to mark time during the war period, it would now appear that they are now suffering from an embarrass de richesse. The former expectation is attributable to the fact that provincial Governments do not participate to any considerable extent in the increase of public revenue which war economy makes possible. For the provinces have no share either in the excess profits tax or in the contribution of the railways to the general budget, which are the two major sources of the increased revenue for the Government of India. The increase in the income-tax and, as a consequence, in the divisible pool of it are the only means by which the provincial budgets derive a direct benefit from conditions of war economy. One could not count on the various items of provincial revenue responding in any considerable measure to the stimulus of war conditions. Likewise, on the expenditure side the war was not expected to entail any heavy expenditure for the Provinces. If the present war is different from the last in that it throws on the Provincial Governments the responsibility for civil defence, it could be assumed that these additional burdens would be met by proper contributions from the Centre. This, broadly speaking, forms the picture of provincial finances as one could conjure it up on the outbreak of the war or even a year or two thereafter. The fifth war budget of the various Provinces in India shows, however, that provincial finances are affected as radically as the Central, though in the case of the Provinces the net effect is to leave in the hands of the local Governments nest eggs which they expect to come handy in the conceivably different conditions of the postwar period. In the famished conditions, which had been the lot of provincial finances till two or three years ago, the appearance of surplus by itself raises important problems as to the best way of utilising them. And these are complicated by the paramount need of the present to avoid expenditure that is calculated to have an inflationary effect on the economic life of the country. To the extent that recent increases in the rates of provincial taxation have gone to increase the total revenue, it is not ludicrous to suggest that the repeal of some of the new impositions should also be carefully considered.

But it is well to note at the outset that revenue in the case of the Provinces has shown remarkable expansion, though the increase varies from over 80 per cent in the case of Bombay, Sind and Madras to as low as 37 per cent in the case of Orissa. Though the effect of war economy on the revenues

of the Provinces is by no means uniform, there is no doubt that the budgets as a whole have risen to a distinctly higher level of revenue and expenditure. From about Rs. 90.83 crores at which it stood in 1939-40, the total revenue of the Provinces in India has gone up in the budget for 1944-45 to as high as Rs. 153.92 crores. On the side of expenditure the rise is from Rs. 89.22 crores to Rs. 149.65 crores. We regret we are unable to furnish here a detailed analysis of provincial budgets, as some of the provincial Governments have not yet learned to respect the privileges of the financial Press and furnish us with copies of the budget papers. The idea with some of these Governments seems to be that only the Press in their own territory is entitled to such privileges, and our efforts to persuade them to recognise the financial Press as all-India in virtue of its functions, have so far failed. Nor has it been easier to procure these papers in time by other means. We are obliged to digress on this matter as this disability, so heedlessly imposed on us is particularly irritating in this context, when we feel the urge to a more thorough analysis of the new trends in provincial finances, but cannot satisfy it. We trust that the Finance Member of the Government of India, who, more than any one else, has recognised the value of comments in this journal and in the financial Press as a whole will take steps to remove what we are content to call a grievance, though a few other words would form a more accurate description of what it is.

In the present position, however, we are obliged to glean details of provincial finances from the reports in the daily press, except in the case of Bombay, U.P., Punjab and Bengal to whose Governments we are obliged for timely and full supply of budget papers. From the data thus collected, it would appear that Bombay, as we have mentioned already, has had the largest percentage increase in revenue and Orissa the least, as compared with the figures for 1939-40. The increase in expenditure has also an unequal incidence. Bengal heads the list in expenditure and forms a sad contrast to the general picture of affluence in the Provinces. Her deficit is huge. And it is certain that, if she were left to her own resources entirely, she will enter the postwar period with a heavy deficit, while other Provinces will have considerable surpluses on hand with which to meet the problems of reconstruction or the possible deficits of that time. While it is possible to argue that Bengal is yet to line up with other Provinces in regard to taxation, the injustice of leaving Bengal to face unaided the financial aftermath of famine is unquestionable. For the causes of that famine are not local ones. Indeed, the whole world must share the responsibility. But so far as India is concerned, the fact that Bengal is an operational base and the famine was caused to a large extent by the strain on transport should be sufficient

ACCIDENT

case for the financial inequality between Bengal and other Provinces being redressed before the end of the war.

For, an impoverished Government in Bengal would mean a rift in Indian unity. So far as we have been able to ascertain facts, other Provinces have either a large unallocated Revenue Reserve Fund or have earmarked considerable amounts for particular purposes. The U.P. has set apart in addition to a Revenue Reserve Fund of about Rs. 2 crores, a sum of Rs. 1.25 crores for a Supply Schemes Stabilisation Fund, Rs. 50 lakhs in its Road Fund and Rs. 15 lakhs as a Hospital Fund. Madras makes a revenue reserve of over Rs. 5½ crores, though at the expense of the development departments which, as it seems to us, have been most unreasonably starved. There is no prospect of these Governments undertaking, either under pressure of public opinion, or of their own accord, to spend these amounts before the end of the war, if only because the avoidance of inflationary pressure is deemed to be the paramount consideration which overrides all others.

Though few would favour a heedless accentuation of inflationary effects, the wisdom of postponing all measures for the postwar period is not quite obvious. Remission of taxation cannot find favour with the authorities in the Provinces, since they may well take their cue from the Centre and think that it is for them to help the anti-inflationary fight by adding to taxes, if possible, and not to leave more money in the pockets of the taxpayer. But there is no case for such a small appropriation for development as has been made in Madras, a matter of 30 and odd lakhs in a budget which has doubled itself in the last few years. It is well to remember that the Adviser

regimes, whose function legitimately, and avowedly is to act as a stop gap till the restoration of representative government, have both retained new taxes and recovered the revenues which the Congress Governments agreed to forego. And what is more, the rates of taxation have been increased during the last few years. Such actions are not in accord with a do-nothing financial policy. For our part, we have expressed the view that, notwithstanding the little cloud in the North-East frontier, it would be well for our Government to make a small start in postwar reconstruction, at least so far the development departments are concerned.

Doubtless, it is necessary from the point of view of financial prudence to look into the nature of revenue expansion before making any additions to normal recurring expenditure. Though we are unable to trace in detail the sources of increased revenue in the case of every province, there is reason to think that the increase is well distributed over the various items of Provincial revenue, so that we have to conclude that the expansion is the result of the general conditions of war economy. Forests and stamps have been in many cases the best contributors to revenue; and these sources will be comparatively dry when peace comes. But it should not be forgotten that in the postwar period, expenditure on nation-building will in any case have but a loose relation to public revenue, so that the source of increased revenue is not a consideration of any importance in deciding whether the outlay on nation building should or should not be increased. Anti-inflationary considerations will, however, remain; but such increased outlay as the Provinces may be able to make will be but a drop in the ocean of inflationary finance today.

MONEY AND BANKING IN 1943

Expansion remains the keynote of money and banking in 1943. Without such acceptable aids as the world monetary review or the B. I. S. annual report, it may be difficult to outline the positive conclusions as to established trends or outstanding developments in regard to money or banking. But such data as is embodied in the statistical bulletin of the League of Nations possesses singular interest, for it indicates that the experience of belligerents was shared by neutrals in regard to other things than the index for wholesale prices or the cost of living. If Germany is, statistically speaking, an upholder of stupendous stability, the upward movement of commodity price indices during 1943 (for which the war is sufficient explanation), stands out as the direct cause of the many other changes that call for notice. The abundance of money favoured the changes although the singular ineffectiveness of the Bank rate in Iran (7 per cent from November 4, 1939) in preventing inflation there may be regarded as damaging to the received opinion while fluctuations in exchange rates in New

York and London were so slight as to suggest that only Dominion and certain Latin American currencies appreciated during 1943. The more important change in regard to foreign assets of the Central Bank should be cited as illustrative of what is happening in regard to balances of payments and debtor-creditor relations. Not wide variations in exchange rates, but a steady addition to foreign assets or withdrawal of capital, in one case at any rate, may be viewed as the effect of exchange control although, it is obvious that the scope for divergencies in rates or the variations in the balance of trade has been limited by the single development of lease-lend.

The gradual but perceptible decline in the U. S. Treasury's holding of gold and silver last year, is paralleled by the contemporaneous increase in the holdings of gold and foreign exchange reported by Latin American countries. Before Brazil embarked on the change in her currency in October, there was an increase in both gold and foreign assets. That

such accumulation leads to monetary expansion with repercussions on the price level is a commonplace, but Indian experience is by no means unique as every study of wartime prices reveals. Even in Australia and Canada where price control acquired a greater degree of effectiveness last year, the increase in note circulation was not avoided. Figures available up to October 1943, point to successive additions to currency in all countries including Germany where the gap between the Budget receipts for 1943-44 placed at 35,000 million reichsmarks and the estimated expenditure of 90,607 millions indicated the organic connection between inflation and deficits in the most precise manner. The astonishing increase in French note circulation is a direct consequence of the indemnity extracted under the armistice, but the steady increase observable in Sweden and Switzerland as a result of defence expenditure had a very mild effect on the cost of living in 1943.

The symptoms of monetary expansion under the pressure of increased State outlay, are naturally inseparable from the increase in public debt reported by all countries including Germany and Japan. The National Debt in Britain rose between March and September by £1,580 millions; in the U.S.A. the internal federal debt rose by \$43 billions to \$162.3 billions. Such large additions to debt created very easy conditions in the money market. Though discount rates in London showed no change since 1941, the yield on bonds fell gradually. The long-term trend of interest rates in war has been downward, indicating the difference as between the last war and this in regard to the cost of borrowing. It is noteworthy that the hardening in rates for commercial loans in the U.S.A. (noted in some months of 1943), had no distinctive effect on the supply of funds or on the yield on Government or industrial bonds. The actual spread between the two widened to some extent but the differential remained; the percentage yield on Government bonds was 1.81 per cent, that on industrial bonds was 2.82 per cent in September 1943. If the highest yields are shown by countries like France and occupied Denmark, which had distinctive difficulties the gradual decline in rates recorded by most belligerents was not discernible in three neutral countries, Sweden, Switzerland and Argentina though it will be observed that in the case of the last the relatively high rates stimulated the influx of foreign capital.

The measurable effects of plenitude of money and the grounding of interest rates are nearly always the same in regard to value of industrial shares. Though rigorous steps to limit both dealings and the appreciation in values were adopted in Germany, the course of values was certainly upward in Germany as in Sweden where a turn given to monetary policy did not prevent an improvement in values. Where control succeeded in checking the rise, as in Australia, the forces were all the same at work as has been made clear this year. Where the improve-

ment has been very small, as in the case of Japan, it may be attributed wholly to the course of the war. The increase of private investments during a period, when the value and the price of money are changing is a familiar phenomenon. The conclusion is certainly supported by experience in India where the index for industrial shares rose from 147 in August 1942 to 204 in June 1943. If the same consistent improvement is absent in Portugal or Switzerland, it may be explained by other circumstances such as enlargement of oversea trade or new investment in enterprise.

The main effects of increased emission of currency appears to be nearly always the same. Banking expansion is the rule in wartime. Though equally increased taxation has limited the growth of deposits, the distribution of bank assets with investments absolutely large in relation to other items suggests that the trends ascertained in 1941 are unchanged in two years.

If changes as between sight and time deposits are noted in Canada where the total continued to rise steadily in 1943, the previous trend was unchanged in both India and Japan where time liabilities of banks exceeded the demand liabilities. A consequence of the disturbed conditions in Palestine is the ratio of time to demand liabilities namely 3-35. The growth of bank deposits was, however, not continuous in the U.S.A. where a sharp decline was recorded in September, and recovery to the high level of August was not certainly observed in October. There is, however, little doubt as to the increase in savings deposits in the U.S.A. in the war period. Similar increase was reported by Mexico and Peru though the former was in the grip of acute inflation. The identity of experience in regard to savings deposits and savings bonds in the U.S.A. and France may be explained by the real scarcity that developed with the German occupation rather than a revival of the peasants' confidence either in the State or in the currency since it is known that the budgetary deficit for 1943-44 is twice the revenue of the year even without any liability for war expenditure. The essential correspondence in wartime experience in regard to money prices, the additions to capital or their use may be adduced to support an outline of postwar requirements. They come out in favour of stability after the war by agreement. It may also be used to neutralise criticisms heard in regard to the applications of measures to check expenditure and stimulate saving and lending in India. The expansionary influences at work for years in regard to credit may be viewed as generally favourable to a return to prosperity, for Lord Wardington told Lloyds Bank shareholders that "some departure from strict principles would seem to be justified in the conditions which are likely to confront us after the war". That banks already possess the means to assist the changeover to the pursuits of peace is to be inferred from the circumstances and course of expansion; and the possibility of deflation is admittedly offset by the growth of public debt in every country.

FOR Quality TOOLS

The letters BATU, on tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers, B.T. Taps, Reamers, Dies, Milling Cutters, Slitting Saws etc. are unexcelled in quality and precision.

All B.T. Tools are treated by modern scientific thermal processes and their accuracy is guaranteed to conform to British Industrial Standard.

Editorial Notes**The Other Plan.**

Agriculture rather than industry claims the first position in the Indian Federation of Labour's plan for India's development. The outline given by Mr. M. N. Roy last month suggested that there were differences as between Industrialists and Labour apart from the outlay (Rs. 15,000 crores) and the time (10 years). It was claimed that the Indian Federation of Labour looked only to Russian example, and the plan was meant to bring about revolutionary changes in Indian economy because the goal was increased consumption, not an increasing rate of profit on invested capital. The Bombay plan also provides for increased production, but the purpose is not prescribed. The more important difference lies in the emphasis on our export trade in primary commodities. Capital for industrialisation has to be drawn from the balance of trade duly applied for the import of capital goods. This may or may not be a divergence from Russian example, but it certainly makes the key industries less important than agriculture though the distinction drawn between a higher standard of living and increased purchasing power may strike some as an excessive refinement of theory. The plan took more than a year in the making, and it is therefore insisted that it is an independent affair, not an alternative to the Bombay plan.

Since the National Planning Committee has not recorded its views as to the Delhi plan, the features may be summarised as features co-incident with nationalisation. There is a place for expansion of industry and all financing is to be carried out by the State which will control the industries created by public funds. The novelty of the scheme lies really in the limitation of profit from private enterprise to 3 per cent, the State giving a guarantee when curtailment of profits. Initial outlay for the agricultural expansion and industrial development is put at Rs. 2,000 crores, to be drawn from sterling balances and nationalised land. In view of constitutional difficulties, it looks as if the estate duty and inheritance tax alone in the Provinces can be relied upon to give the money for development. Since Russian example has been cited, a place is found for co-operative societies which will be concerned with distribution as well as the production of commodities. The scheme lets go the idea of modernisation of Indian agriculture. In any case Provincial policy under planning becomes more important but the idea of independent plans for the Provinces, harmonised by a Central Executive, finds no place in the summary delivered to the press by Mr. M. N. Roy. The variations on the Russian example are interesting and the priority claimed for agriculture so as to keep up exports is certainly in line

with certain criticisms of the Bombay plan. The plan puts public works for development on the same footing as expansion of industry, but public works would obviously call for large supplies of industrial goods, and borrowing for public works, if generally approved as the means to prosperity, may have the inflationary effects to which planning gives rise.

Fewer Strikes.

One of the main features of 1943 was a gradual and appreciable decline in the number of strikes in India. Statistics appearing in the Indian Labour Gazette for March point to a continuous decline from April and the further improvement in January 1944, when only 23 disputes arose out of demands for higher wages, must be studied in comparison with the figures for January 1943, when 119 disputes involving 141,880 workers arose as compared with 48 disputes involving 48,029 workers in January 1944. The number of man-days lost has fallen sharply over the last few months ended January and the main effect of the Defence of India Rule 81A in regard to industrial peace last year, will be appreciated. Only six strikes were recorded as in progress at the end of January 1944 as compared with 50 at the end of May 1943. The total number of strikes in 1942 was 654 and 98 were in progress at the end of 1942. The great change since then is indicated both by the reduction in the

total man-days lost and the smaller numbers involved. There was a reduction in the duration of the average strike in 1943, while the proportion of successful strikes varied from month to month. There were less than 100,000 days lost in most months owing to stoppage of work and the feature noted in 1943, the reduction of disputes in large-scale establishments, was observable in January, when only 10 disputes involving more than 1,000 workers were reported. As may be expected, there were more disputes in Bombay than in any Province and four Provinces, including Bihar, reported no strikes in January 1944. The textile industry reported 18 stoppages of work of the total reported in January and the only interesting item relates to the partially successful strike of coalminers at one colliery in C.P. and Berar for an increase in dearness allowance, bonus, and cheap grain. To support hope of further improvement in industrial relations in the year, the drop in the cost of living in January in Bombay, Sholapur and Cawnpore may be cited. From July last the index for Cawnpore has declined continuously and Sir R. Menzies in his address to the British India Corporation's shareholders dwelt on the efforts made to provide food at cheap rates, the increase in amenities and the retention of the annual bonus as factors in improvement. Unsuccessful strikes in jute mills in December and January indicated the emergence of a peculiar desire in certain cases for full pay for short-time but appearance of strikes developing out of dissatisfaction of workers over irregular working hours due to shortage of coal, points to the need for solving the industry's major problem by all and every means. That coal shortage should disturb industrial peace must be generally regretted, and the caution that modifies optimism in regard to coal control arrangements makes it difficult to predict non-recurrence of trade disputes in Bengal.

North-East Frontier.

Arakan was conquered late in the 18th century by the King of Burma and the East India Company was soon faced with a frontier problem. Rebels from Arakan moved into Chittagong, and relations between the Court of Ava and the Company were strained. On the Assam frontier too there were difficulties. The new pamphlet on Burma Background by Mr. Pearn states that Manipur owed allegiance to Ava and in 1812 Bodaw-paya intervened to settle a quarrel over the succession to the throne and as a reward took the Kabaw valley which lies between Kalemyo and Tamu, close to the Chindwin River. Using Manipur as a base, King Bodawpaya intervened also in the affairs of the Ahom Kingdom of Assam. Overland invasion of India from Burma is cer-

THAT'S ONLY THE START

True, railway fares have risen since the war started. But it is the other things, the extras which make rail travel so expensive. The cost of your ticket is only the start!

Transportation to and from the station, it used to cost a few annas—now it costs several rupees. Food during the journey used to be cheap and plentiful, now it is scarce and not so cheap. And what do you get for all this? Trouble and anxiety—discomfort during the journey, and the crowding at stations and in carriages increases the risk of infection.

There is no pleasure left in it.

Cut out travel during wartime.

Travel only when you must.

tainly not unknown as a Burmese force crossed the Chittagong frontier in 1824, while another invaded Cachar, a State under the Company's protection. The first Burmese war resulted in the expulsion of the Burmese from Cachar, Assam and Manipur and the capture of Arakan and Tenasserim. The King of Burma gave up all claims to Manipur, Assam and Cachar by the Treaty of Yandabo, February 1826, while the agreement to cede Arakan and Tenasserim and pay £1 million as indemnity was another result.

Since the Western Hills became the frontier separating India from Burma, their defence since the Japanese occupation is a matter of concern to the Allies. Mr. Spate remarks that the Western Hills consist of numerous north-south ridges whose extreme parallelism is very striking from the air. The highest point is the sometimes snow-clad Saramati (12,663 feet), but the Naga and Chin Hills reach only 6-8,000 feet and further south the Arakan Yoma is much lower. Since routes and trails have acquired importance only since 1942, the Japanese choice of a relatively easy route from the Middle Chindwin through Kalemvo and Tamu and the Indian State of Manipur is explained by previous examples. The Hukawng Valley route in the far north is called more than usually malarious. Since the C-in-C spoke of token invasion of wild tracts, the hills lying athwart rain-bearing monsoon winds, having a heavy rainfall—80 to 200 ins. and more on the western slopes in the Assam pocket—one of the wettest regions on earth are India's main defence. In the Tropics heavy rainfall means development of dense jungle and often extremely malarious conditions. The hills are sparsely peopled by tribes such as the Chins and Nagas, who grow rice and maize in small, burnt-over clearings, abandoned when fertility decreases. This practice is destructive of forest cover which is replaced by scrub and bamboo jungle still, however, a great obstacle to communications.

Changes in Output.

In August 1943, when imports of paper from abroad rose to some extent, Indian production also showed no improvement. The effects of the control order were indeed not discernible for three months as production in the first quarter of 1943 was lower than that noted in the final quarter of 1942, though in December 1942 a striking improvement attested the success of efforts to increase production under control. Why bonus payment and other methods have not been adopted may be explained readily by reference to the quota conditions and the periodical revision of prices for paper, controlled before any other manufactured article was subject to control. The fall in production as well as imports led to the application of control, but production, which rose to a marked degree in May 1943, when the total output was 148,780 cwts. as against 132,940 cwts. in April fell away to 121,000 cwts. in August. Though the monthly output for 1943 was above the 1942 average, the available statistics point to disturbing influences. That control has not procured optimum conditions for the paper mill industry has been made obvious by company reports this year. Coal is the mills' chief problem but transport, raw material supply and distribution arrangements have to be considered important when the industry's chief or obstructive customer is the Government. Whether control is the return extracted for tariff protection in the past

may be asked by some but others would dwell rather on the damaging effects of coal rationing on paper production. In the year 1942-43 production totalled about 65,000 tons, but the variations from month to month were wide, and this feature described in relation to the decline noted in August naturally will excite some doubt as to the active and prosperous conditions in an industry, as important in peace as in war. It is disturbing to find that improvement in output under control was not continuous though it is widely known that home production falls short of normal demand in India. The jute industry, of course, reported even more disturbing variations in production after May 1943 and the only case of continuous im-

provement in production is limited to the cotton mill industry, the feature of June immediately after the control order came being an increase in production and a fall in exports. There is another industry in which control has apparently hampered production though the rise in wheat prices is a material factor. Flour mill output rose substantially in May, when indications of famine were obvious but output figures after May pointed to a substantial decline as compared with 1942. It is certainly true that flagging output was noted from December 1942, but output could, and should, have risen had conditions been satisfactory for flour production. The only inference to be drawn is that high prices for flour were a consequence of reduced output and the guaranteed margin for flour mills was an admission of difficulties created by the Foodgrains Control Order and much else.

The Beveridge Plan.

The Beveridge Plan was big news last year though its proposals are varied by the Coalition in one way or another. What the Plan stands for and how it links up the future with the past is explained by Mr. Cole. Sir William Beveridge and his Committee accepted the national minimum and sex equality. The principle of contribution for all-in insurance under a brand-new Ministry was invoked and applied. The report's findings and recommendations are summarised ably by Mr. Cole in his little volume of 73 pages (published by Vora & Co., Bombay, Re. 1). Social security has ceased to be a party issue, and its attainment is now only a question of means. Full employment is one; and the methods used during the transition to peace in order to create the capacity to pay for social security will have their lesson for other countries. Mr. Cole stands by the report, the whole report and nothing but the report and the reprint should be certainly welcome to those who wait to know why or how industrial insurance companies are affected or what family allowances are meant for. The spreading of benefits by social insurance is hardly known in India though earnest enquiries for limited application have already begun. With service more than thirty years old

Britain could be asked to get on with the search for security. And one thing at least is made plain, the adequacy of insurance of any kind is always symptom of real progress.

400,000 Farmers Help.

Mr. Easterbrook's summing up of the achievements of British farming is supplemented by very satisfying illustrations. The handsome half-crown publication is one of which the Pilot Press may be really proud. In Mr. Easterbrook's account his opinions do not obtrude. He records the facts as he finds them now. Bigger production has been the rule in war and the main change in food supply has favoured farming for which the claim is now for full tariff protection after the war. In the admirably compact narrative nothing has been missed though some might hope for a novel of Mr. A. G. Street to give us the real story of the English farmer's experience of this war. Apart from a vast increase in arable farming, the reclamation of fens and the draining of marshes belong to this war, but no outstanding figure in British farming comparable to Mr. Gerald Strutt has emerged. The revival of livestock has been undertaken and the country committees are to direct the new like the old plan. Mr. Easterbrook feels that the farmer has done a great job in the crisis for Britain and the story is well told with pictures that are well chosen and well displayed. The agricultural revolution of the 20th century is not less significant than that of the 18th century when the work was undertaken by landlords of whom Coke of Holkham is the best remembered.

Rubber from Wheat.

If the war has brought about many strange transformations of mental attitudes, the transformations wrought in the world of matter by the ingenuity of scientists is no less surprising, and may in their effect lead to remarkable changes in international trade. While the capture of Malaya and its rubber plantations by the Japanese, forced the production of synthetic rubber from petroleum products in the U.S.A., a development so long held in

to the joint Legislatures on 17th February 1944.

AAA 940

check by vested interests, the same cause left the Japanese with a surplus of rubber on their hands which they are utilizing for manufacturing petrol.

Now comes the news from Canada, that Scientists of the National Research Council have developed processes for manufacturing rubber out of wheat. To us here in India, living under the shadow of a permanent shortage of essential foodstuffs, the process is at no time likely to be of more than academic interest, except perhaps to owners of rubber plantations. But Canada with wheat production of nearly 800 million bushels a year, not all of which she can eat or export at a profit, is differently situated. She can easily spare 20 million bushels a year for rubber manufacture, and this will meet all her requirements of rubber and rubber products.

Two different processes are described. While the difference must be obvious to experts, to the layman they look very much alike.

In both the processes wheat is converted by bacterial fermentation into glycol. The glycol thus produced is used to make butadiene and finally Buna-S Rubber. In the first process, a strain of bacteria which thrives in the soil and glories in the sonorous name of 'Aerobacter' is used to bring about fermentation.

In this process the wheat is first converted to sugar, and then the bacteria is put on the job to ferment the sugar to produce meso-glycol a liquid which freezes at about -60 degrees-F. In the second process there is no need to convert the wheat into sugar. The "Aero-bacillus" which is the organism used for bringing about fermentation acts directly on the wheat, if it is cooked, to produce l-glycol. The first method gives a greater yield of glycol, and the admixture of alcohol is considerably less than in the second.

Glycol which is an intermediate product in the manufacture of rubber from wheat can also be directly used as an anti-freeze. Mixed in suitable proportions with water, l-glycol lowers the freezing point by 72 degrees-F.

The development of the production of synthetic substitutes for the products of tropical countries, may lead to a revised attitude to the problems of colonial administration. Freed from dependence on colonies to keep their economy in running order, the advanced industrial nations should find it profitable to retire from the race for colonies and a potent source of international strife would be removed in the postwar period, if the statesmen who decide the shape of things to come, keep their eyes open to the possibilities unfolded by Science.

Bombay Budget

Provincial finances reveal adherence to the principle of making hay while the sun shines. Thanks to boom conditions Bombay enjoyed striking financial prosperity during the current year and the Budget for 1944-45 has been framed with a view to swelling the funds for future prosperity without unduly starving the necessities of to-day. The budget figures for the coming year are as follows:

	(In Rs. Lakhs)		
	1942-43	1943-44	1944-45
	(Actuals)	(Revised)	(Budget)
Receipts	1970	2388	2490
Expenses	1779	2224	2489
Surplus	191	163	0.86

The surplus figure of Rs. 0.86 lakhs does not include the huge transfer of Rs. 4

CHEVROLET TRUCKS

NOW AVAILABLE

CHEVROLET TRUCKS (with and without bodies built by General Motors India Limited) are now available in limited quantities for essential civil requirements only, under special arrangements with the Government of India.

Government make a special appeal to truck owners and drivers to conserve petrol — so vital to ensure victory.

Special consideration will be given to those who are prepared to operate with an approved charcoal gas plant.

Address your demands to The Provincial Motor Transport Controller of your Province.

GENERAL MOTORS INDIA LIMITED

CHEVROLET • PONTIAC • OLDSMOBILE • BUICK • CADILLAC • VAUXHALL • BEDFORD • G.M.C.

nary etc. have increased from Rs. 439 lakhs to Rs. 516 lakhs. Industries get Rs. 19 lakhs for the year 1944-45. Provision for roads and for amenities for industrial labour are disappointing. Yet, on the whole, Bombay has done well in conserving the revenues of the present for ensuring future progress.

No Second Famine

Mr. Casey in his first broadcast countered pessimism as to a second famine in Bengal by propounding his views as to the results of food policy based on the temporary removal of Calcutta from Bengal. The saving of 640,000 tons of food imported from the surplus provinces is the cardinal factor in the price situation though the increase in 'aman' crop supplies leading to a holding back of stocks is the more important factor so far as the future is concerned. Confidence in the administration after the improvement noted after October is underlined by the Governor's reference to large organisation, substantial

quantities in reserve and improved transport arrangements. The main points in food policy have been explained by the Minister for Publicity and others already. What is important is that the Governor shares the opinion of the Ministry as to the measures enforced. Through the warning against interested propaganda the Governor has made it clear that fears provoked by a dispatch from Delhi to a London paper have no foundation.

The contrast drawn with 1943 is instructive as supporting the charge of maladministration in the past. But it is only a confident assurance as to the future that is needed when the war has come nearer to India. The undertaking that rehabilitation measures would continue follows the acceptance of the budget proposals by the Assembly and the certificate of expenditure by the Governor. The favourable conclusions drawn when the budget appeared in February require no proof other than that contained as to the alleviation of suffering and the promise of greater achievement by administration. The broadcast on April 1, dwelt on the direct

results of famine relief and the post-famine programme. But the assurance against a second famine was based on the survey of resources now available in Bengal. If there is no finality in judgment there is, however, the accepted distinction between conditions last August recorded in an official report. It said "Rainfall in Bengal was generally widespread but was in defect of the normal in most of the districts. Harvesting of autumn crops and transplantation of winter paddy was in progress. The condition of standing crops was reported to be generally fair and the prospects were favourable. Insufficiency of fodder was felt in parts of certain districts. During the second fortnight of the month, the retail prices of common rice of the cheapest quality rose in ten districts, fell in 9 and remained stationary in the rest of the province. The prices ranged from 1½ seers per rupee in Burdwan, Dinajpur, Bogra and Dacca districts to 1½ seers per rupee at Nadia and Murshidabad. The condition of the agricultural population was not satisfactory and relief measures were in operation in the distressed areas". The situation has changed since greatly to sustain the hope of real improvement this year. The Governor's forecast that there would be no famine in Bengal in 1944 did not overlook the continuance of high prices independently of hoarding but reference to requisitioning was avoided like any reference to the land system and its weakness. Supply and distribution arrangements are trusted to reproduce their known effects.

Easy Prey.

The complete occupation of Hungary and Rumania by the Nazis in advance of the Russian march towards the Carpathians may be taken as a result of limited co-operation by the satellites in the emergency. In the past allegiance was offered readily enough, and benefits were duly secured in return. Those benefits, particularly, for Rumania are endangered by Russian victories. Appeals have been made notably in January by the ex-Premier Count Karolyi to Hungary to renounce co-operation with the Nazis and look upon occupation as a lesser evil. Armistice prospects in Rumania and Bulgaria alike have receded completely in view of the developments in Hungary. The Russian advance has made it difficult for Bulgaria to turn round, and if it were not for Nazi control of the Black Sea Coast, the Turkish attitude to the war might soon undergo a change. Before the war German trade with Central and S.E. Europe was growing and the blockade has evidently raised proportions. As the Horthy regime has been rapidly displaced with the Admiral's approval, the plan to develop Hungary into a reserve for materials, etc., behind the Eastern line appears obvious. For Manstein's forced withdrawal the need for prepared positions is even more obvious than the need to keep Rumania which provides one-third of the oil fuel required by Germany.

Though Odessa has not been taken, the Red Army as yet the threat to Rumanian oilfields is patent. It is to guard Rumania that Hungary has been occupied but the isolation in the Crimea and the thrust from the North-West may make the defence of Rumania difficult. An explanation that Rumanian troops may be taken off from the Transylvanian border to defend the Dneister has been advanced, but anxiety over Slovakia and Rumania (both exposed to invasion) lies at the root

of the hurried transfer of the Commander of the Balkans and the late merger of the Balkans and Central Europe. Since Hungarian independence is lost, the control of both armies passes to Germany which expects a Russian advance across the Carpathians. The state of war proclaimed in 1941, makes the changes of no consequence to the Allies who expect that the previous failure in the Eastern Mediterranean is offset by the Nazis grip over peoples not reconciled to the variations of the New Order. To the Central European line Yugoslav insurgents constitute a real threat, and the Three Powers' readiness to cultivate Marshal Tito appears understandable. Air and naval support across the Adriatic has been made available to Marshal Tito but the real value of Allied intervention would appear only when Serb claims are reconciled with those of the two other nations and the quasi-federal solution of 1939 reinstated by agreement. Events in Central Europe may bring about Yugoslav, Austro-Hungarian or Czechoslovak unity for the memory of common oppression should unite those countries which were separated, divided and maltreated by Germany.

Inventions and Substitutes.

Changes in productive methods in wartime have been as important as the expansion in volume and the use of substitutes. From the Prime Minister's description of pre-fabricated dwellings with furniture built in for the postwar housing plan, a conclusion as to what sort of changes may be expected in foreign trade is possible. An exhibition arranged in London to illustrate the changes in materials and methods used showed how time was saved along with materials. Concrete has replaced timber; paper has replaced metal and alloys. Aircraft petrol pipes formerly made of copper are now made of vulcanised fibre. A paper petrol tank, which is thrown out when empty, saves both metal and space. Landing wheel fairings made formerly of light alloys are now made of fibre, made from paper materials. The extra use to which paper is put is surprising since Britain's consumption has been reduced by two-thirds, the newspapers taking most of the strain. In regard to paper the main cause for economy is the decline in Britain's imports of pulp, paper and esparto grass. Before the war, Britain imported 82 per cent of the paper-making materials needed; the proportion is reduced to 24 per cent by the war. And the results are that straw is used instead of esparto grass and homegrown timber is used for pulp while rags and waste paper are energetically saved. Saving in timber has led to interesting economy in the making of industrial bobbins. In textile rollers too timber is displaced by waste paper. Smaller cotton reels with the grooves cut deeper have appeared in order to save 6,000 tons of wood per year. Timber has been replaced by concrete in the making of huts, barns, factories and a Ctesiphon arch built of hessian cloth supported by tubular steel scaffolding was shown. When the concrete is set the technique can be taken and used again. Holt in reviewing these changes said that wartime invention will help in postwar construction. Conservation of rubber has led to new uses for cellophane and fabric for use in aircraft is common, U.S. example

in regard to use of sea-water for getting magnesium oxide has been noted and used. These changes are of importance from the viewpoint of employment and trade. If more is produced from less imported the postwar pattern of British trade may be dissimilar in regard to raw materials as well as foodstuffs. The whole field of plastics developed rapidly may limit imports of non-ferrous metals and the conditions of oversea demand may change for

that reason. The reduction in the use of Colonial raw materials at home may create sources of additional exports and that possibility must be reckoned important in relation to the new development plans for the future of Anglo-American trade.

Up to the end of December 1943 total subscriptions to defence loans, savings

DEPENDING ON CHEMICALS

There's hardly any industry that is not dependent on the accurately controlled use of Chemicals. At almost every stage of production the manufacturer depends on his chemist for good results.

D. C. M. Chemicals have learnt from their years of experience in Chemical Engineering exactly what grades of Chemicals give the best results. Therefore the two DCM Chemical Plants are able to produce, with the most modern equipment, exactly the right products for industrial processes and factory-maintenance. The control which checks each DCM product before it is issued for use makes it certain that the user gets none but standard Chemicals.

THE FLOATING FORTRESS

In 1943 an unusual monsoon caused floods, devastated rich fields and drove the people to destitution in the various parts of India. Even dry regions like Ajmer did not escape this calamity. Bengal and South India are frequent scenes of such visitations.

While science and engineering can prevent a recurrence of this terrible havoc only an Insurance policy on an established company can mitigate the suffering of the individual and his family. In times of flood the Insurance policy is a floating fortress for the policy-holder.

When you buy Insurance from Ruby General you assure yourself of all these advantages and in addition the unique benefits this company offers its clients.

certificates, etc., amounted to Rs. 242.84 crores. The progressive totals contained in the last communique indicate that Rs. 226.43 crores had been obtained through the four defence loans issued by the Government while interest-free bonds accounted for Rs. 3.41 crores in spite of the provision for the renewal of bonds originally issued in 1940. In respect of interest-free bonds, Bombay's share amounted to Rs. 1.47 crores and the total obtained through States and Central treasuries was Rs. 91.58 lakhs. That means, that other areas provided little. The main feature was the increase in subscriptions to defence loans from the Punjab, Bihar and Madras. While Bengal's share has fallen away for ascertainable reasons the Save-Lend campaign in the provinces influenced subscriptions to a marked degree in December in four Provinces, if the U.P. also is included. In regard to defence savings certificates, the most notable improvement was recorded

again in this case of the U.P. which accounted for Rs. 133.94 lakhs out of the total of Rs. 7.22 crores collected up to December 1943.

The real popularity of the new savings certificates, giving a better yield for the investor, is indicated by the fact that in three months over Rs. 3.25 crores was realised by sales, and in December alone the total sales of 15-year savings certificates amounted to Rs. 152.94 lakhs. As compared with defence savings bank (progressive total is shown as Rs. 251.92 lakhs) and defence savings certificates (total for over three years' subscriptions was Rs. 7.22 crores) the new medium has proved more popular with the small investor, and the decision to retire the defence savings certificates, in favour of national savings certificates, finds support in the figures relating to subscriptions in a quarter. That subscriptions from the States and other Central treasuries in over three years of war account for only Rs. 11.33 crores out of the total of Rs. 242.84 crores should not be reckoned

surprising in view of the established trend, as well as the decision of most States to invest in either Bombay or Calcutta. This accounts for the fact that Bombay's share of defence loan subscriptions was Rs. 91.67 crores up to December 31 while Bengal's share was Rs. 66.21 crores. The financial effort of the two Provinces should, therefore, be smaller than may be inferred from the proportion to totals cited.

Last week, I raised the question, whether it is desirable that British interest and stake in business in India should be completely eliminated; and I mentioned certain considerations which suggest that the question should be answered in the negative. Obviously, it calls for more detailed examination. For one thing, a negative answer is not in accord with the general state of public opinion which has been feeling that the control which British commercial interests have had over Indian economy is the most harmful aspect of British rule in India. From the earliest days of unrest against British domination, the people have cherished the ideal of Swadeshi not less passionately than the ideal of Swaraj—in fact, one is impossible without the other. And now that there is, for the first time in our history, a setting in which British interests can be eliminated, it would seem to be folly not to utilise the opportunity. As for Indian business, it suits its sectional interests and flatters its instincts of patriotism to strengthen the agitation for Swadeshi, while holding off at a discreet distance from the agitation for Swaraj. The withdrawal or elimination of British business interests from the Indian scene will certainly widen opportunities and avenues for Indian businessmen; and it would be too much to expect the latter not to open their mouth for as big a bite as possible of the luscious fruits of foreign enterprise. Apart from all these circumstances, there is the belief, which is not wholly unreasonable as I shall endeavour to show presently, that British business, even more than the British officials in India, directly accounts for the most powerful forces of economic regress in this country—the drain of wealth, the veto on new industries, the brake on the development of an agricultural system which supplies raw material for foreign industries, located here or abroad. At the present moment when rallying round the Bombay Plan for an attempt at a comprehensive economic development on a planned basis, foreign interests may well seem to be the wooden horse in the epic war that is before us against our poverty and ignorance.

There is thus a strong *prima facie* case, based alike on past developments and present feeling in the country, for the elimination at the earliest opportunity of British interests from our business life. But all the considerations I have mentioned—and I believe I have not omitted any important point—however need to be thought out again, if our policies of the present are to be truly wise. For no wise policy can be framed only on the basis of the sentiments of decades ago. In modern

times, conditions change more or less radically within less than a decade. And in our case, though the leading Congressmen of a half-century ago showed a sound instinct when they placed Swaraj and Swadeshi as mutually complementary ideals before the Indian public, we should be lacking in practical judgment, if we overlook the simple fact that neither the content of each ideal nor the relation between the two has remained the same during these years. Swaraj is certainly qualified by some degree of deference to a new internationalism. Likewise, Swadeshi has to heed to the call for international co-operation for the regulation of world trade and world economy. After all, Swadeshi was always a negative ideal, implying boycott of foreign cloth more than anything positive in the matter of economic reconstruction. Of economic relations with other countries, we knew what we did not want, more than what we did. "Hewers of wood and drawers of water" was one of the favourite expressions of the Congressmen of earlier days; and all that they meant by it was that we should not agree to export raw cotton to get our clothes made elsewhere than at home.

As for the relation between Swadeshi and Swaraj, the dominant idea seems to have been that economic vitality was necessary for the fight for Swaraj. It was realised, too, that Swaraj without Swadeshi would be an empty sentiment. But after nearly five years of the present

world war, we should have better ideas on the relation between the two than our leaders of half a century ago. We know now that economic self-sufficiency in cotton goods and sugar and salt is no guarantee of national integrity; that, if there is any relation between Swadeshi and Swaraj, it is based on the command of war potential, which is far different from spinning and weaving your cloth and making sugar and salt at home. That war potential is a matter of developing your own heavy industries and being independent of foreign sources for the essentials of modern warfare. The link between Swaraj and Swadeshi is no longer one of cotton yarn, but of steel and many other things which did not engage the attention of our leaders then, nor for the matter of that, do even today. This difference is vital to our attitude to foreign business in the post-war period.

Before I show how it is vital to this question, let us see how the Indian business community stands in relation to this problem. It will be truthful and at the same time, let me add, not harmful to the Indian case to own that the industrial antecedents of the Indian business community do not reach to any distant past, that up to quite recent times it had little of genuine entrepreneurial ability and that even today it has to depend on foreign sources for technical ability of any high order. All these create a position in which Indian business is obliged to look

K. N. DALAL, Managing Director.

somewhat wistfully at what British business is able to make for itself in India.

This is not to say that the Indian case lacks strength. It is as easy to exaggerate as to underrate the achievements of British business in India. Large sections of politically minded Indians think of the profits of British enterprise as hardly different from the exactions which foreign rulers can extract from a subject country. That is manifestly scant justice to a community, which in the early years certainly did a great deal for the development of the country's trade and industry, though in retrospect we may think that Indian economy could conceivably have taken more healthy lines of development than supplying raw material to industries abroad. This consideration, however, cannot in fairness be set against British business in India. It were only fair and graceful to acknowledge the pioneering effort of early British industrialists in India without adding railways and posts and telegraphs and the minimum amenities and attributes of modern civilisation to swell our debt of gratitude to the foreigner. But for British business, it would have been a long time before the jute and plantation industries took their place in our national economy; and it is rather glib talk to accuse British business in India of wholesale exploitation.

However, this is not to say that British business in India today can justly assume an attitude of self-righteousness or injured innocence towards Indian business. For the fact remains that, for more than three decades, British business in India has no record of pioneering effort to show to the country. They have inherited the created wealth, and not the creative zeal of their forebears. They have been content to hold on to what they got and, what is worse, to show themselves unhelpful and obstructionist where Indian aspirations are concerned. Years ago, this journal published an article from one of the most brilliant industrialists India has produced, in which he said that the development of subsidiary industries was wilfully blocked by the managing agency firms who looked more to the commissions on the purchases by their home offices than to the economies which the establishment of such industries in India would have made possible. The article drew from one of the big Clive Street agency firms a prompt protest. But it was just a plea that they may not be tarred with the same brush as others. Whatever the merits of particular cases, the fact remains that, even when this war was made certain by the unmistakable portent of a Hitler more than a decade ago, there was no attempt at development of subsidiary industries. The whole attitude was one of unreflective fear that what is good for India may spell ruin to themselves.

The last ten or twelve years in which the Indian National Congress became a factor to reckon with were marked by further deterioration in the attitude of British business towards India and India's claims and aspirations. The campaign of boycott and picketing which the Congress launched with such resounding success had serious and momentous consequences. It gave the Congress a new sense of power over the economic destinies of the nation. It opened the eyes of ambitious Indian businessmen to the role which the Congress may be made to play in the Indian business world. And by the same

token, it instilled into British business a feeling of insecurity and an anxiety to secure all manner of safeguards for its interests in India. The consequences of these developments, I shall trace in some detail. But it is necessary to note that the earlier period was marked by a comparatively just and reasonable attitude to the needs of India's economic development. The External Capital Committee, which included men of the stamp of Sir Basil Blackett and Sir Charles Innes, could see the justice of the Indian claim to adequate control of key industries. In regard to protection, too, Sir Charles stated more than once on the floor of the Legislature that companies which lay claim to protection must be Indian in proprietary interest and executive control. No one then was jittery about a regime in which Indian industry would be under Indian control.

The position changed for the worse from the time of the Round Table Con-

ferences. There was about the R. T. C. a sinister "behind the scenes", the history of which will probably be revealed to the public in full at some future date. British business, which had taken fright at the success of the Congress campaign, started hatching the plot regarding the infamous safeguards. Not a little point was given to it by the agitation regarding coastal shipping. But the bogey of expropriation was raised as a counter-blast to the cry of exploitation. And soon the two words were thought to exhaust all that there was to be said on the subject.

In the wake of the safeguards, however, came the attempt of British interests, as to say, to drape their companies in Indian costume. The change meant no more than the addition of the word, India, in brackets, to the name of the Company, registration under the Indian Companies Act with a rupee capital and the addition of one dummy director from prominent Indian businessmen. The Indian

director has no more voice in the management of the Company than a member of the junior staff. And it is a common joke that what one Indian business magnate got out of a directorship of this kind was a police haul-up for profiteering immediately after the outbreak of war in Europe. The experience of Indian Directors in companies under British control is not such as to foster goodwill between Indian and British business. It is one thing to be outvoted in the meetings of the Board. It is quite another to be treated as a dummy and denied any kind of share in the management of the Company. To my knowledge, Sir David Yule was the only British magnate in India who accorded importance to his Indian colleagues and after his time his example was ineffective, even in his own firm. It may also be mentioned here that at one stage in the career of Titagur Paper, the Indian shareholders asserted themselves; but I don't think a repetition of that feat is possible now. The truth then is that Indo-British co-operation has been rendered impossible, because British businessmen in India would not think of any kind of Indo-British partnership.

is set all the recent controversy and embitterment caused by commercial safeguards.

In this setting, it is no wonder that the prevailing sentiment is in favour of British business leaving this country for good. But these ideas, as I began by pointing out, are derived from the past and not determined by careful consideration of the present position or of future possibilities. The problem of the future of British business is not one that can be solved only in terms of the past or of the wounded feelings of Indian business. The latter are important only in so far as they have a bearing on the question whether British business will be a help or a hindrance to our economic development. In the past, the stage in which it was a help was a short-lived one. Thereafter, there was exploitation only in the sense in which it is spoken of in political agitation. The theory that the drain of wealth caused by British business was the principal obstacle to India's economic progress, was not lacking in substance. But, here again, we must not look at the present or into the future through the spectacles of the past. The drain theory had perhaps some substance when the total population was well below the 300 million level. It had some substance, too, when we had a large volume of foreign indebtedness swollen by the cost of indefensible wars of others' making against our neighbours. But the position has changed substantially. The foreign debts are gone. The volume of poverty, if I may speak of it as such, is far more. What I mean is that the drain should be a flea-bite. The ratio of British business to Indian business has changed in our favour. Not only in insurance but also in banking, in industry, Indian business has forged ahead. The harm which foreign commercial houses are believed to have done to our agriculture is to be attributed less to their malevolence than our chronic inability to organise our marketing and educate the agriculturist to dispose of his produce in more efficient ways. Even provincial autonomy, such as it is, has to some extent improved the bargaining power of the growers of raw materials. The great jute industry bows sometimes to the wishes of a Ministry which seeks to befriend the jute-growers. Whatever may have been the truth of the matter in the past, the idea of British traders as a wooden horse in our post-war planning is a case of overwrought fear.

But what is the positive advantage to be derived from the retention of British business even in the conditions of the post-war period when, on the strength of large sterling balances, we can contrive to get British interests more or less wholly eliminated? And if there is some positive advantage to be derived from the British, on what basis of co-operation can we hope to derive these benefits without running the risk of some at least of the bitter experiences of the past being repeated in the future? In the first place, there are the considerations which I mentioned in my last week's gossip, the advantage of having in our midst, in concrete form, the wholesome traditions of British joint-stock enterprise, its freedom from get-rich-quick cravings, its readiness to build patiently and solidly, its eagerness to recruit talent from a wider field than the relatives of the powers that be and lastly, its anxiety to invest even commercial companies with the character of a public

institution sure of celebrating centenaries instead of having at best a meteoric existence. To illustrate these points, would involve invidious mention of names. And I do not like to suggest for a moment that these qualities of British enterprise can be learned only at the price of our economic serfdom. But in conditions in which as I have said already, the power and importance of British business in India will be much less than in the past, I would not deem it wise to throw away these advantages.

But this is by no means the determining factor. For the extreme nationalist wings, at any rate, the paramount consideration would be the effect that the continuance of British business interests in India will have on the economic development of this country. This has both a positive and a negative aspect. We have to see firstly, whether it is calculated to retard our primary objective of doubling the per capita income in fifteen years and secondly, whether the British will provide us positive help in realising our aims, help which we cannot secure by more economic means. The first question I have already answered, when I dealt with the drain theory of India's poverty. The drain of

wealth in the future should be far less than in the past. It should be an even smaller proportion of the total national income. A part of it at least is to be attributed to Britain's standing in international trade and it would be idle to think that is in our gift. The drain theory may be dismissed as of little importance in the context of the future.

There is then the fear that British interests may be obstructionist and may put obstacles in the way of our economic reconstruction. This fear would be just an index of inferiority complex and incompetence in the conditions of political freedom which we envisage for the future. And let it be remembered that only in such conditions of political freedom will it be at all worthwhile to consider our policy regarding British enterprise in India—for policy implies freedom of choice and ability to act on it. If, after the attainment of Swaraj, we should still be incapable of keeping foreign interests in their proper place, these discussions would be just school-boy debates, perhaps even more futile and meaningless.

As for the positive advantages, let me say at once that in this war against our

poverty we shall need powerful allies; and allies are not got without negotiation or without "quid pro quo". And the weaker you are, the greater the need for allies. This simple fact has not been sufficiently recognised by the Indian public, because it has not been taught to think of our political freedom in terms of the ability to keep it. Nor has it thought of economic prosperity as the trophy of a triumphant war against poverty, in which other weapons beside three million pairs of human hands are required. Soviet Russia realised this fact, and she neither flouted it nor succumbed to it. She secured foreign help in her industrial development in due course and on terms which she carefully varied to suit the changing circumstances. She realised quite early in her career that industrial development was the sheet anchor of her freedom; and today, she is able to wage the war against the Nazis virtually single-handed. No one can, therefore, mistake or underrate the place of foreign technicians and other kinds of foreign help in the industrial development of India. There are some at least in India who believe that by some ingenious move they will be able to obviate the need for such foreign help or that, once the British have been ousted

out of India, they can call on the advanced industrial nations to tender for the privilege of affording technical assistance to this country. I take it that no responsible person would agree to dwell for a moment in this unflattering paradise. Indian businessmen have shown themselves ready on every occasion to secure and profit by technical experts from abroad. Only they are rather reluctant to give nation-wide scope to their personal experience and consider whether British interests in India cannot be made to play this role for the whole nation, to their own advantage and to the advantage of this country.

I do not see any reason why Britain and India should not learn to think of their future economic relations in terms of a partnership in the vast enterprise of developing the economic resources of this undeveloped sub-continent. The main advantages of this orientation in economic thought would be the removal of the mutual suspicions that have given rise to the rival cries of "expropriation" and "exploitation"; the mitigation of the fear entertained in Britain of insecurity of the standard of living and the provision of a solid basis on which both countries can make their plans for the economic development of the post-war period. Britain would be sure of adequate employment for many of her export industries and India could forge ahead in industry in the confidence that an advanced industrial nation is fully behind her in her attempt to develop her national economy.

The price of such partnership on our side would be a readiness to forget old scores and assure British business of a profitable and honoured place in the economic life of this country. On her side, Britain must be prepared to give up her old idea of Indians as "hewers of wood and drawers of water". She must cease to think of India as a market for consumer's goods, which she must be disabled, by hook or by crook, for making for herself. She must bind herself to supply all the machinery and other capital goods and provide the technical skill and direction necessary for the execution of the 15-year plan; and, it need hardly be added, the price of this service must be on a truly competitive basis. And, last but not least, she must agree so to change the whole system of administration of her commercial concerns in India, that Indians and British can work together both at the top and in every rung of the ladder in true and harmonious comradeship.

To concretise these ideas, a great mass of detail has to be tackled; and in an article which has already far exceeded the usual length, I should be content with

stating a few broad principles. To start with, the hateful principle of commercial safeguards must go for good. The Chippis proposals, while they gave it a burial, also contained a hint of its resurrection in the contemplated Treaty arrangements between Britain and the new Dominion. Well, commercial safeguards did not die on the cross with a crown of thorns that they must be so resurrected. India cannot tolerate any restraint on her sovereignty other than what is required by a genuine world order. That is the beginning of any Indo-British partnership. Secondly, everything must be done to remove the irritating aloofness of British commercial interests. In companies in which there is a substantial Indian interest, that interest must be given its share in the management and control. And it should be up to all foreign companies in India to incorporate in themselves a strong and respectable Indian element and to break down the barriers which have so far marked them off as exclusively foreign. To the extent that managing agencies are an imperium in imperio which the proprietary rights of the general body of shareholders cannot touch, their agreements must be modified. An autonomous executive is a tyrannical executive; and must not be countenanced. It is also a question for consideration whether some of the established industries should not be called on to have a Director to represent the Government, whose task it will be to ensure that the company's policy is in accord with the general public interest. In this respect, Mysore has a useful example for others to copy. The South Indian State has worked out a system of partnership between the State and Industry which must prove very useful to us in designing many of our enterprises in the regime of post-war economic planning.

Specific changes apart, there is truth in that overworked proverb, "where there is a will, there is a way". What is necessary is that British business should get over its aloofness, its sense of power that cannot be called to account and its fear, not untended by contempt, for an autonomous Indian Government and for the interests which must necessarily be dear to the heart of such a government. Indians, too, must recover from their natural exaggerations of British exploitation and the bitterness engendered by commercial safeguards. We must remember that, if sterling balances seem at first sight an opportunity for eliminating British interests, they can, on closer scrutiny, be better utilised for enlisting Britain as a powerful ally in our war against India's poverty.

UNTOLD SERVICES By CANVAS & TARPULIN

There are ever so many things which are in daily use and which give you so much valuable service in the day-to-day life. Yet we seldom care to speak of them. The comfort we so eagerly desire after a day's tedious work, the convenience we want, the rural river transport, the motor transport by land, the entertainments we so often seek for, etc., etc., are all obtained by the use of Canvas and Tarpaulin.

It has now become an essential commodity for War services too. Just as the QUALITY of equipment is indispensable for winning the war, so also the QUALITY of CANVAS AND TARPULIN is indispensable to offer the needed comfort or rest both in peacetime or wartime.

And the fact that HARTON'S Canvas and Tarpaulins are so much in demand is in itself a proof of their superior quality.

Resume of Commodity Markets

There are no important developments to be recorded in the commodity markets during the past week. The feature of the week is again provided by the bullion markets. On the present occasion, however, there has been a sharp downward movement and the whole of the gains recorded last week have been lost. The drying up of investment demand at the higher levels and the free selling of the Reserve Bank have checked speculative activity. Prices have come down to very near the levels ruling ten days back. The silver market also has been quieter. The raw jute market has continued steady while the jute manufactures market has remained firm. The raw cotton market struck a bad patch but the reports regarding the possibility of early Government buying brought about a steadier tone towards the close. The piecegoods market has been featureless.

Business in the raw jute market has been on a limited scale. In the absence of any reports regarding satisfactory progress of sowings there is no anxiety on the part of balers to do business. With the irregular supply of coal, mills, on the other hand are not anxious to enter into any large commitments. Developments on the Indo-Burma border have no effect on prices in upcountry centres and there is a tendency to await further news. Upcountry values are still above Calcutta parity prices. Quotations in the Calcutta market towards the close are higher on balance. Indian Jat Middles and Bottoms were done at Rs. 18-12 and Rs. 13-12, Bottoms alone being done at Rs. 14 per maund.

In the pucca bales section there is not much of activity. Export business has been on a small scale. Mills are reported to have purchased Firsts at Rs. 87 per bale and Dundee Daisee 2/3 at Rs. 83 per bale. There are still buyers for cuttings with not many sellers.

The jute manufactures market has been firm and quotations are nominally around maximum prices. Mills are rather reserved. In the heavy goods section sellers are scarce with only B. twills available freely at maximum prices for May-June delivery.

The Bombay raw cotton market was very quiet in the earlier days of the week under review. Upcountry advices were very discouraging and there was anxiety on the part of sellers to dispose of their stocks. It was reported that prices for many styles were below the minima fixed by the Government. Sind cultivators are expressing concern at the movement of prices in the Bombay Presidency. The seriousness of the situation can be judged by the remarks made by Mr. Kathurbhai Lalbhai. Cotton is selling below

bottom prices. As prices have slumped beyond economic levels there is need for immediate help from the Government. It is understood that the Government will buy certain styles of cotton without delay in the Bombay market. There has been a slight recovery in prices towards the close. Jharilla March quoted Rs. 436 against the lowest level for the week of Rs. 430.

It has been announced during the week that the Government of India would undertake to purchase wheat in the main assembling markets of the Punjab, U. P. and Sind at Rs. 7-8 per maund should prices fall. This decision of the Government has been made to safeguard producers' interests while enforcing a strict statutory price control in the interests of consumers. All wheat offered for sale will be accepted at the minimum prices mentioned above.

The U. P. Government has announced its maximum prices for wheat. It is unfortunate that at a time when the Government wishes to control effectively wheat prices and bring about uniformity in prices in the wheat producing areas considerable damage has been done to the Rabi crop by the untimely hailstorm and rains in the Punjab and U. P. Damage to standing crop is estimated at 10 percent in the U. P. and there is an increase in prices to Rs. 15 per maund in certain places. The maximum wholesale price of wheat of fair average quality has been fixed at Rs. 9-8 per maund in Gujranwala, Sheikhupura, Shahpur, Montgomery and Muzaffargarh and in all places at Lyallpur and Multan where it will be Rs. 9-10. Prices fixed for other districts in the Punjab range between Rs. 9-10 and Rs. 10-10. The wholesale maximum price of coarse rice has been fixed at Rs. 13-8 per maund in Kangra, Hoshiarpur, Gurdaspur, Montgomery, Sialkot, Gujranwala, Sheikhupura, Muzaffargarh, garh, Dera Gazi Khan and Kasur while prices at other places in the province shall range between Rs. 13-10 and Rs. 14-12.

The drop in prices for both gold and silver during the past few days has been as rapid as the rise in prices last week. As it was very clear that the abrupt rise in prices for both gold and silver last week was due to ex-

cessive speculative activity, there was not much investment buying. The large selling of gold by the Reserve Bank at varying prices also brought about heavy bull liquidation. Reports that the Government might effect sales of silver have also been a contributory factor. Gold ready closed at Rs. 71-12 against Rs. 80-12, the highest level touched last week and silver ready closed at Rs. 133-8 against Rs. 140-8 last week.

In the silver market there has been some covering towards the close and closing quotations are slightly higher than the lowest levels for the week.

At the sales of tea in India there is greater demand and higher prices were fetched. Medium and better liquoring broken and leaf grades advanced in prices by 6 pils to 1 anna. Other grades also were firm. Only the stockier sorts were allowed for sale. Green teas were sold at higher rates.

A Press issued from the Cotton Textiles Directorate says that the Textile Control Board has approved of the recommendations of its Distribution Committee to the Government that sales tax, octroi duties and such other local cesses should be excluded from the margin of profits. The Board also approved of the recommendation of its Industry's Committee that an extra margin over the standard retail price should be allowed to the dealers who have their place of business in hilly and remote tracts to cover additional transport charges.

The Board discussed other subjects like coal shortage, standard cloth, setting up of a handloom board and compensation to workers in case of stoppage of work in mills due to coal shortage, and made its recommendations to government.

Another Press note issued from the Cotton Textiles Directorate states that the Textile Control Board has agreed to confer additional powers on the Textile Commissioner to call for information about stocks etc. from mills and wholesalers, and also to issue directions to them to sell their stocks to specific merchants. This action has been taken to deal effectively with mills and dealers, who indulge in trading in the black market.

Foodgrains Control.

At a conference of representatives of the Provincial Governments and the Government of India held sometime back, it was decided to formulate a uniform policy in respect of the statutory control of prices for foodgrains. The question of adjusting prices for rice in the various producing areas, with due adjustments for the difference in quality, was considered and certain tentative conclusions were reached. After further consultation with the Centre and the Provincial Governments it was announced early this week that the Government of India would purchase wheat of fair average quality offered for sale in the main assembling markets of Punjab, U. P. and Sind at Rs. 7-8 per maund should prices fall. This announcement was made "in order to safeguard producers' interests while enforcing a strict statutory price control in the interests of the consumers". This decision anticipates the publication by the Governments of the main producing areas, after consultation with the Government of India, of notifications under the Defence of India Rules, announcing the statutory maximum prices, above which it will be an offence to buy or sell wheat in wholesale markets for the next twelve months. The statutory maximum prices so fixed follow the recommendations of the Price Advisory Committee. The Government of India's offer holds good until further notice, and, in any case for a period of not less than twelve months from the date of this announcement.

Since this announcement was made, the U. P. Government is reported to have fixed maximum wholesale prices for wheat, barley, gram and rice. The maximum wholesale price of wheat of fair average quality will be Rs. 10-4 per maund in the assembling markets of surplus districts of the provinces and those of gram and barley in such markets will be 8/10ths and 7/10ths respectively of those for wheat. The maximum price of coarse rice in such markets will be Rs. 13-8 per maund. These prices will apply only up to March 31, 1945.

The maximum wholesale price of wheat of fair average quality in the Punjab has been fixed at Rs. 9-8 per maund in Gujranwala, Sheikhupura, Shahpur, Montgomery and Muzaffargarh and in all places at Lyallpur and Multan where it will be Rs. 9-10. Prices fixed for other districts in the Punjab range between Rs. 9-10 and Rs. 10-10. The wholesale maximum price of coarse rice has been fixed at Rs. 13-8 per maund in Kangra, Hoshiarpur, Gurdaspur, Montgomery, Sialkot, Gujranwala, Sheikhupura, Muzaffargarh, Dera Gazi Khan and Kasur while prices at other places in the provinces shall range between Rs. 13-10 and Rs. 14-12.

It is rather unfortunate that at a time when the Government is trying to evolve a uniform policy in respect of statutory control of prices of foodgrains, its plans should be threatened by unexpected adverse developments. Extensive damage has been done to the wheat crop in the Punjab and hailstorm and rains and it is said that in certain places the quotation for wheat is as much as Rs. 15 per maund against the maximum price in the U. P. of Rs. 10-4 per maund and Punjab of Rs. 9-8 per maund.

Our special enquiries have elicited the following telegraphic reply from our Delhi Correspondent, dated April 4:

The condition of the wheat crop in the Punjab and the U. P. after the recent

untimely hailstorm and rains have spoiled the prospects of a bumper Rabi crop. The Food Department have addressed and enquired of the Provinces regarding the extent of the damage but no replies have been received yet. Present reports indicate that damage is most widespread in the Eastern districts of U. P. The crop in some places is entirely blasted away. In some affected areas wheat prices have already shot up to Rs. 15 per maund. It

is too early yet to assess the total damage to the crop but it may amount to 10 per cent of the bumper yield which was expected earlier.

The Punjab Finance Minister is reported as saying that the provincial exchequer is losing Rs. 1,50,000 with every daily shower. If there are no more rains Punjab would still have a crop big enough for her requirements and to spare for deficit areas.

Road improvement is a factor of signal importance in all schemes pertaining to village development.

Creteways or concrete wheel tracks consisting of two parallel strips of concrete are the first requisite of an improved village. By connecting the village with the nearest market place and town they provide the villagers with the most economical road serviceable even during the monsoon; heavy bullock-cart traffic can move with ease and speed. Along the single track a bicycle can cover large distances with the greatest safety.

Creteway design lends itself to a certain extent for progressive improvements to roads. During the first stage a set of tracks can be laid on one side of the road carrying the greater intensity of traffic to which another set of tracks may be added on the other side at a later date when traffic increases and funds permit.

In the first stage an approaching vehicle can very easily get off the creteway to make room for one having the right of way.

For further information and a complete list of pamphlets on Roads write to Dept. The Concrete Association of India, Victoria House, Calcutta.

Stock Markets to-day and to-morrow:

WAR NEWS STILL DOMINATES MARKETS

QUIET conditions have been noticeable in the markets both in Bombay and Calcutta. The absence of any definite improvement in the war situation on the Assam-Burma border has resulted in a further weakness in the markets in the last two days. The Bombay market has turned easier with a sharp drop in prices for bullion. With all the markets in a rather depressed condition, even Bombay operators have preferred to await further developments. There has been no appreciable selling pressure but quotations have been marked down all round as a precautionary measure. There is no panic but there is great anxiety to await the outcome of the fighting that is now going on between Allied troops and the Japanese. Repeated assurances given by the C-in-C are a satisfactory market pointer but pending actual developments, no important improvement in prices can be expected.

Indian Irons and Steel Corporations are quoting at the lowest levels for the week while coal shares are one or two points lower in places. Cotton shares were definitely weaker as also Jute shares. Tea shares had some sellers earlier in the period. It was pointed out last week that the proximity of certain tea gardens to the fighting area and the difficulty on account of labour might affect adversely tea companies' earnings in have actually come down.

Reports for the year ended December 1943 of one or two companies published during the week do not make satisfactory showing. The increase in the cost of production has not been fully compensated by the higher average prices realised on the sales of tea.

The net profit of the Dessai & Parbutia Tea Company Limited for the year 1943, before providing for taxation and depreciation, is lower at Rs. 3,11,042 against Rs. 4,26,489. The output of tea was smaller at 11,22,489 lbs. against 11,61,799 lbs. for 1942 as also the average selling price at annas 13 & pies 5 per lb. against annas 13 & pies 9. The amount set aside to depreciation is lower at Rs. 25,000 (Rs. 35,000) while the allocation to other funds is Rs. 15,000 (Rs. 25,000). The provision for taxation is naturally lower at Rs. 95,000 (Rs. 1,50,000). The dividend has been reduced to 30 percent from 35 percent. The amount carried forward is Rs. 44,510 against Rs. 48,868 brought in.

The net profit of the Gelle Tea Company Limited before providing for taxation and depreciation, is Rs. 51,829 against Rs. 55,820

for 1942. The reserve for renewals and additions is unchanged at Rs. 10,000 while the provision for taxation is slightly higher at Rs. 7,049 against Rs. 6,854. No amount has been transferred to Reserve Account against Rs. 4,950 previously. The dividend on ordinary shares is maintained at 10 percent. The amount carried forward is higher at Rs. 20,187 against Rs. 17,407 brought in. The average price realised on sale of teas is 15.48 annas against 15.34 annas in the previous year, while the working cost per lb. of tea produced increased to 11.77 annas from 10.5 annas. The crop outturned from the estates was considerable at 238,132 lbs. against 198,648 lbs. in 1942. It will, therefore, be clear that the increased costs of production have cut into earnings of the company.

In common with other jute companies the Alliance Jute Mills Company Limited has experienced difficult conditions in the six months ending January 31, 1944. The Company was, however, able to maintain production at a fairly satisfactory level and total sales amounted to Rs. 80 lakhs against Rs. 81.31 lakhs. The higher level of working expenses, however, has been responsible for a lower level of profits the amount, before providing for taxation and depreciation, being Rs. 11,41,356 against Rs. 18,78,436 for the previous six months. The amount set aside to depreciation is Rs. 1 lakh (Rs. 1.25 lakhs) while the transfer to reserve and other funds is Rs. 46,918 (Rs. 48,080). The provision for taxation is very much lower at

Rs. 7,62,112 (Rs. 13,20,000). The ordinary dividend has been maintained at Rs. 12-8 per share.

The issued capital of Praga Tools Corporation Limited has been oversubscribed and the Directors have closed the share list.

The additional issue of Rs. 1 lakh ordinary shares and Rs. 1 lakh 6 percent taxfree preference shares of Lister Antiseptics & Dressings Company (1928) Ltd., made last week has also been oversubscribed. The preference shares were issued at Rs. 10 premium and the ordinary shares at par. Having regard to the fact that good-class preference shares are quoting at a considerable premium and the ordinary shares are already earning a dividend it is not surprising that the recent issue has been oversubscribed.

Comprehending all the principal developments of 1943 the speech of Sir H. P. Mody at the 33rd Annual Meeting of the Central Bank of India is probably the first clear-cut review of banking progress in India that distinguishes sharply the relation between an expansive economy and the multiplication (combined with progress) of our financial institutions. No criticism was offered as to controls imposed in regard to capital issues, bank advances and dealings in commodity markets. Nor was there criticism as to new legislative provisions concerning the capital structure of banks. The increase in branches

(Continued on next page).

LISTER ANTISEPTICS & DRESSINGS CO. (1928) LTD.

Additional Issue of 6% Tax-free Preference Shares for Rs. 1,00,000 and Ordinary Shares for Rs. 1,00,000

This is to notify that the above issue has been over-subscribed. Allotment has been made; and allotment letters are being issued.

5th April, 1944

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 5.

In the short period under review rather weak conditions have been noticeable on the Calcutta Stock Exchange and business passing was on a very much smaller scale. The continued anxiety regarding the situation on the Assam-Burma border has been mainly responsible for the further quietness in the markets. There has been some speculative selling but investors are still inclined to await further developments. In spite of the slight progress made by the enemy, it is still believed that the Allies would be able to deal effectively with the Japanese troops and that they would be eventually pushed back. Fluctuation in prices in the next two weeks will have to be carefully watched.

In the gilt-edged securities section, 3½ percent Paper has been marked down further to Rs. 97-12. But there has been a slight recovery towards the close to Rs. 97-12. Other terminable loans also are easier, 3 percent 1951-54 being Rs. 99-8, 3 percent 1953-55 Rs. 99-3 percent 1963-65 Rs. 98-1, 4½ percent 1955-60 Rs. 115-10 and 5 percent 1945-55 Rs. 104-4.

Easy conditions continue to prevail in the money market though at the auctions of treasury bills this week the rate was higher at 12 annas and 10 pies percent per annum and the amount of accepted tenders was only Rs. 80.25 lakhs against the offer of Rs. 4 crores.

Among preference shares, *Bengal Jute* were Rs. 142-8, *Calcutta Jute* Rs. 152-8, *Champdany* Rs. 178, *Howrah "A"* Rs. 182, *Steel Corporation* Rs. 131-8, *Carew & Co.*, Rs. 149, and *Dunlop 2nd pref.* Rs. 123.

Coal shares are quieter in sympathy with the other sections, *Bengal* being Rs. 570 against Rs. 583 last week. *Amalgamated* were one point lower at Rs. 45 while *Burrakur* were Rs. 29-14 against Rs. 31-2. *Dhemo Main* were Rs. 20-10, *Equitable* Rs. 52-4, *New Beerboom* Rs. 29-4 and *South Karanpura* Rs. 11-4. *Talcher* were not very much lower at Rs. 5-15.

Cotton shares also have been very much easier with *Cawnpore Textiles* 8 annas lower at Rs. 14-12 and *Elgin* 4 points lower at Rs. 75. *Kesoram* were Rs. 17-6 against Rs. 18-2, *New Victoria* Rs. 8-15 against Rs. 9-7, *Sri Radheshyam* Rs. 23-6, *Bowreah* Rs. 533 and *Dunbar* Rs. 271.

15 to 20 points decline is common in the case of bigger denomination jute shares. The continued difficulty in respect of coal supplies has been a further discouraging factor, *Anglo-India* being Rs. 398 against Rs. 416, *Barnagore* Rs. 175-8 against Rs. 184, *Delta* Rs. 494 against Rs. 505, *India* Rs. 576 against Rs. 588, *Kanknarrak* Rs. 497-8 against Rs. 520 and *Lawrence* Rs. 318 against Rs. 323. *Howrah* were Rs. 69-12 against Rs. 71-8, *Clive* Rs. 34-8 against Rs. 35-12, *Nellimarla* Rs. 27 against Rs. 28-4 and *Presidency* Rs. 6-3 against Rs. 6-10.

In the Engineering section there was a slight increase in the quotation for Indian Irons and Steel Corporations to Rs. 36-6 and Rs. 27-4 respectively but the higher levels were not held and there has been a drop in prices towards the close to the lowest levels for the week. *Indian Iron* are quoting at the time of writing Rs. 35-7 and *Steel Corporation* Rs. 26-10. *Arthur Butler* were Rs. 16-14, *Jessop & Co.*, Rs. 22-10, *Kumar-*

dhubi Engineering Rs. 9-7, *Braithwaite* Rs. 10-4 ex-dividend and *National Iron and Steel* Rs. 12-2.

Sugar shares were quiet with *Balrampur* at Rs. 17-10, *Carew & Co.*, Rs. 28-10, *Belsund* Rs. 12-8 and *Ramnugger Cane & Sugar* Rs. 12-6. *Samastipur Central* were steady at Rs. 21 and *U. P. Sugar* at Rs. 23.

There were sellers for tea shares and business passing was on a very small scale. *East India* changed hands at Rs. 13-10, *Tezpur* at Rs. 16-8, *Hattikhira* at Rs. 29-4, *Central Cachar* at Rs. 94 and *Bishnauth* at Rs. 38-4.

In the Miscellaneous section, *B. I. Corporation* were quiet at Rs. 6 ex-dividend and *Aluminium Corporation* at Rs. 18-13. *Assam Saw* were 8 annas lower at Rs. 4-14 while *Calcutta Landing and Shipping* were Rs. 29-8, *Humayan Properties* ordy. Rs. 15 and *Midnapore Zemindary* Rs. 141-8. *Burma Corp.* adn *Indian Copper* were Rs. 3-8 and Rs. 2-9 respectively. There is a further decline in *Karanpura Development* to Rs. 27-4, *Assam Bengal Cement* and *Dalmia Cement* were Rs. 15-6 and Rs. 18-12 respectively. Among paper shares, *Titaghur Paper* were relatively steady at Rs. 28 and *India Paper Pulp* at Rs. 212 and *Sri Gopal* at Rs. 23-6.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 4.

It was noted at the time of last writing that the market was just then developing signs of weakness. The market on Friday was indeed very narrow and there was an allround drop in prices. The weakness in the steel section continued to be pronounced with *Textiles* also losing further ground. There is no substantial improvement in the tone of the market since then though at the time of writing prices in the principal counters are slightly better. After the warning issued to speculators bullion prices were somewhat quiet and there was a sympathetic reaction on the stock exchange. The C-in-C's assurance as to the ultimate fate of the invading Japs has no doubt restored confidence. But it seems both operators and investors prefer to wait for some time more before entering into fresh commitments. In the meantime profit-taking operations continue at intervals. The market is somewhat better today with a slight improvement in prices.

The gilt-edged market was weak and a loss of nearly one rupee was recorded in 3½ percent Government Paper at Rs. 97-10 3% Defence Bonds (1946) were Rs. 101-12. 3% (1949-52) were Rs. 100-7. 3% (1953-55) were Rs. 99-4 as against Rs. 99-10.

Mill shares were generally weak with prices recording further decline. *Bombay Dyeing* were Rs. 2,115 as against Rs. 2,127-8. *Century* were further easy at Rs. 1,005. *Kohinoor* were Rs. 678 (680). *Swadeshi* were Rs. 604. Steel share are still the worst sufferer. *Tata Steel Defds.* were considerably lower at Rs. 2,078-12 as against Rs. 2,122-8 last Thursday. *Tata Ordinary* were further lower at Rs. 401 while *Indian Iron* were 10 annas lower at Rs. 35-10.

In sympathy with the principal counters the miscellaneous section also was weak. *Alcock Ashdown* were 10 points lower at Rs. 615. *Bombay Steam* were further easy for Rs. 665. *Scindia Steam* were Rs. 34-12. *Shivrajpur* was again lower at Rs. 68-8 while *A.C.C.* were almost unchanged at Rs. 223-12 and *Premier Construction* were Rs. 219.

(Continued from previous page)

of scheduled banks, the accretion to deposits, especially, current deposits, and the moderate increase in advances are duly reflected in the Central Bank's balancesheet described previously as testimony to impressive progress. The Chairman described the increase of Rs. 22 crores in Deposits in relation to the increase in advances to Rs. 26½ crores and emphasised that in regard to the use of money flowing into the Bank, the Bank is concerned to see that proper security is obtained in all cases. A point that was specially described in relation to prospects was the self-supporting nature of the new branches opened last year.

Commentators are certainly obliged to the Chairman for drawing attention to a feature in the balancesheet. The aggregate total of reserve and other funds including the sinking fund in respect of lands and buildings stands at over Rs. 168,22,000 and the Central Bank's reserves therefore exceed the paid-up capital. As to the decision to increase the Bank's capital by the issue of new shares the Chairman refrained from saying anything apart from a reference to possible increase in the capital of British banks after the war. For the stock exchange there are certainly points of exceptional interest in the address. Consistent improvement in share values last year, with the general index rising from 171 to 215 makes it clear that recent swings can hardly be viewed as coming under cyclical fluctuation and Sir Homi Mody's insistence that the condition of Indian industries is healthy can be regarded as an adequate assurance against drastic changes in market trends. Of a similar import is the reference to the interest of India's Banks in gilt-edged stocks. With investments amounting to 50 per cent 'the independent banking system comes to be vitally interested in the maintenance of capital assets'. This may well mean that in regard to open market operations others besides the Reserve Bank would be interested in the future. That temperate assurance of stability signifies much when it is known that Rupee Paper dropped by two points on news from the N.E. frontier and indeed the timely and proper assurance that has been provided by Sir Homi Mody is of direct consequence to the borrower as well as the holders of securities.

WATCH-DOG.

THE MUNDULPOOR COAL COMPANY LIMITED.

NOTICE is hereby given that the Fifty eighth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta on Thursday, the 27th day of April, 1944 at 3-05 p.m. for the purpose of receiving the Directors' Report, passing the Account for the half-year ended 31st December 1943, re-electing Directors, appointing Auditors and transacting any other ordinary business that may be brought forward.

The Share Transfer Books of the Company will be closed from 14th to 27th April 1944, both days inclusive.

By Order of the Board,

MACNEILL & CO.,
Managing Agent

Calcutta, 31st March, 1944.

COMPANY MEETING

THE CENTRAL BANK OF INDIA, LTD.

RECORD RESULTS FOR 1943

GREATLY STRENGTHENED FINANCIAL POSITION

Speech Delivered by Sir Homi Mody at the 33rd Annual General Meeting of the Shareholders of the Central Bank of India, Limited, held on Wednesday, 29th March, 1944.

Gentlemen,

I have pleasure in presenting to you the Directors' Report, the audited Balance Sheet and a statement of accounts for the year ended December, 1943.

The year was full of fateful events and saw a supreme struggle for mastery in many theatres of war. With the intensification of the struggle, production was geared up to the war effort to an increasing degree in most of the Allied countries. In Great Britain, the whole economic life of the people was brought under control in a matter as complete as any that could be achieved even in a totalitarian country. The result was that the Nation stood the strains and stresses of the fourth year of the war without questioning and without faltering.

India had problems of her own during this trying and difficult period. Apart from acute scarcity and distress in several parts of the country inflation reared its head and created severe hardships amongst the fixed wage-earners and the poorer sections of the population. The position was one of "omnipresent and cumulative shortages" to use the words of the Finance Member, and it compelled recognition of the urgent need for the provision of consumer goods as was the case in other countries, such as Egypt and Iran, where also inflation had made its appearance.

In India, owing to increasing economic activity and the continued purchases of goods by the governments of the Allied Nations, there was an abundance of funds, and monetary conditions remained easy throughout the year. At the end of December, the note circulation expanded sharply and stood at over Rs. 840 crores, based almost entirely on sterling securities accumulating in England.

Against this background of expanding economy, a large increase in the volume of deposits with banks was not surprising. It was a feature common to most banking systems. In Great Britain, the Deposits of clearing banks increased by about £1,500 million since the outbreak of the war. A feature of particular note in India was the heavy increase in the volume of demand liabilities of Scheduled Banks which, since September 1939, went up by something like 275 per cent, whereas time liabilities increased by a little over 50 per cent.

With such large funds at the disposal of banks, it was to be expected that advances and bills discounted would show a considerable upward trend; neither was it surprising that cash in hand and balances with the Reserve Bank were also considerably higher. Both in the matter of cash resources and advances, the trend of Indian Banking was different from that in the United Kingdom, where a further contraction of industrial activity on private, as distinguished from State, account and the system of financing of working capital of war industries led to a drop in advances.

Another distinguishing feature of Indian Banking during the year was the establishment of several new banks, some of which established a net work of branches throughout the country. The total number of offices of the Scheduled Banks rose by over 400, of which 115 offices were accounted for by the new concerns. This expansion presents a striking contrast to the conditions in other countries, notably Great Britain and some of the Dominions where the conditions created by the war led to the closure of a large number of branches and the consequent release of personnel for war work. The growth in the number of new floatations in India and the unsound capital structure of some of them compelled the Reserve Bank to address Government for an amendment of the Companies Act with a view to ensure that the subscribed capital should not be less than half the authorised capital, and the paid-up capital should not be less than half the subscribed capital. It was also recommended that banking companies should issue only Ordinary Shares. An Act embodying these suggestions has recently been passed by Central Legislature.

During the year, a large number of control measures were instituted, mostly in the field of civil supplies. In the domain of finance, the control of capital issues and restrictions on advances against commodities and bullion were the most notable. These measures were timely, and the way in which they have been operated calls for no criticism.

In the course of the year, another rise took place in the index number relating to Stocks and Shares, which standing at 171 in January (August 1939=100) rose to 215 at the end of the year. While speculative activity must be held responsible for this to a certain extent, it must not be forgotten that there was a plethora of funds in the market seeking an outlet for investment, and the position of most industries appeared to be very healthy.

Only one other feature of Indian Banking I shall notice, and that refers to the continued rise in Banks' holdings of Government securities during the year. It is estimated that these investments now amount to nearly 50 per cent of deposits, while in cases like that of the Imperial Bank, the portfolio shows a much higher percentage. These large investments in Government securities may, in time to come, have a far reaching influence on banking policy in this country. Not only are closer relations established between Banks and Government through the Reserve Bank but the independent banking system comes to be vitally interested in the maintenance of the value of their capital assets.

You will have, after the conclusion of this meeting, a proposal submitted to you for increasing the capital of the Company. I do not propose in this place to go into the merits of the question. All I would like to do here is to point out that the disproportion between the capital resources and total liabilities of banking concerns became particularly marked in Great Britain and invited some public discussion. While there are, particularly

during the war, certain marked differences between the British banking system and ours, I have no doubt that this lack of balance in the United Kingdom will be rectified in a greater or better degree as soon as controls over the capital market have been lifted.

I shall turn now to the Balance Sheet and the Profit and Loss Account which have been presented to you. I trust the shareholders are satisfied with the results which have been achieved and which easily constitute a record so far as the Bank is concerned. Throughout the year, deposit figures were mounting up, and you will see from the Liabilities side of the Balance Sheet that the total Deposits at the end of the year stood at over Rs. 81½ crores, as compared with a little over Rs. 59½ crores at the end of 1942. With these enormous funds at the disposal of the Bank, fresh avenues for employment of funds had to be explored, and as you will find from the Directors' Report a number of new Offices were opened during the year. I may assure you that these Offices have been opened after a thorough inquiry as to business prospects and trading conditions, and you will be glad to know that all the new Offices are on a self-supporting basis, and some of them have returned good profits within the short period of their existence. The result of this Branch expansion is reflected in the figure of Advances, and a glance at the Assets' side of the Balance Sheet will show that the Advances which stood at just over Rs. 16 crores at the end of 1942, rose to more than Rs. 26½ crores at the end of 1943. The figure at one time had gone up to over Rs. 29 crores. I need hardly assure you that though advances have gone up to this extent, the factor of safety has always been kept in mind. Every proposal is thoroughly scrutinized, and the Management are vigilant to see that proper security is obtained in all cases.

This year, taking advantage of the increased figure of profits we have added to our Reserve and Contingency Fund a sum of Rs. 12 lacs bringing the total to Rs. 1 crore and 20 lacs. The aggregate total of Reserve and other Funds, including the Sinking Fund in respect of Lands and Buildings, now stands at over Rs. 1,68,22,000 and for the first time we have got the figure of our Reserves working out to more than our Paid-up Capital.

The Bank has greatly strengthened its position in recent years. It enjoys in an even greater degree than before the confidence and regard of the commercial community. This position has been achieved, apart from the policy consistently pursued by the Board of Directors, by the whole-hearted exertions of a large and capable staff whose loyalty to the Institution has been particularly tried during the past year or two. I would like to take this opportunity of publicly recording the Board's appreciation of the services they have rendered. As for the Managing Director Mr. Captain, his health gave way under the strain imposed on him and it was a matter of great pleasure and relief to his friends in the Board and outside that he completely recovered from his ailment. I am sure you will all join me in hoping that there are before him years of active and fruitful service in an Institution to whose interests he has so capably and so wholeheartedly devoted himself. During Mr. Captain's absence, Mr. Balsekar was in charge of the Bank's affairs and he discharged his duties to the satisfaction of everyone concerned.

		Total Liquid Assets	7,97,244

GIELLE TEA COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1943.

Profit and Loss Account.—The gross profit for the year is Rs. 52,216-11-10, and after allowing for the reserves shown, there is a nett profit of Rs. 34,779-14-10 and a final balance on this Account of Rs. 52,187-13-5, which the Directors propose to deal with as follows:—

	Rs.	As.	P.
Pay the Preference Dividend for 1943	12,000	0	0
Pay a Dividend of 10 per cent. on the Ordinary Shares	20,000	0	0
Carry forward to 1944	20,187	13	5
Total	52,187	13	5

Crop.—Weather conditions were again favourable and a crop of 238,132 lbs. was made. The estate contracted to supply 176,700 lbs. of tea to the Tea Controller for India on account of the Government of the United Kingdom.

	1943.	1942.
Gross average export sale price	16.55	15.43
Gross average internal sale price	13.27	15.58
Total net average sale price	15.48	15.34
Total working cost per pound of tea produced	11.77	10.50

Allowances to labour and establishment necessitated by the increased cost of living, mostly incurred in the issue of rice and cloth at concession rates, amounted to Rs. 33,068. Other costs continued to rise and the allowance received for this purpose on the Government Contract was increased to 3½ pence a pound.

Estimates for 1944 have been based on a crop of 2,800 maunds at a total cost of Rs. 1,85,635.

Secretaries:—M/s. Davenport & Co. Ltd.

Authorised, Issued and Subscribed Capital.—Rs. 4,00,000 in 20,000 ordinary shares of Rs. 10 each and 2,000, 6 per cent pref. shares of Rs. 100, all fully paid up.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

In our last money market review, which appeared a fortnight ago, it was pointed out that nothing could be said definitely at the time about the effect on money rates of the purchases of gold by the public; and that, however, credits might well become more usable. This anticipation has been fulfilled; and interbank call money which has been quoting nominally $\frac{1}{2}$ per cent in Bombay for months and months, rose to $\frac{1}{4}$ per cent this week, with borrowers just able to satisfy their requirements. There has been no increase in interbank call rate in Calcutta. But monetary conditions are definitely steadier. Madras reports a strengthening demand and a higher rate. It is now obvious that quite considerable sums are locked up in tullion. To the extent that purchases of gold have been in upcountry centres, there is no direct effect on the money market as such. The firmer money conditions in Bombay suggest that a considerable proportion of the gold recently bought is still held in the hands of market interests.

As was to be expected in a period through which all short credits could be remuneratively employed in bullion, interest in the weekly treasury bill tender sales has been lukewarm. The amount of tender bills on offer on April 4 was Rs. 4 crores; but applications amounted to a paltry Rs. 80½ lakhs. The amount allotted was Rs. 80½ lakhs. The average rate of accepted tenders being 12 annas and pies 10 per cent per annum. These results provided clear ground for the reduction in the amount of tender bills offered. Such reduction was also warranted by the comfortable cash position of the Central Government. The communique of April 4 contained the announcement that treasury bill tenders would be reduced to Rs. 2 crores. It was on March 14, that the offer of tender bills was reduced from Rs. 6 crores to Rs. 4 crores. On February 23, the weekly offer was reduced from Rs. 8 crores to Rs. 6 crores. Thus, between February 23 and April 4, the weekly tender bills have been brought down from Rs. 8 crores to Rs. 2

crores. The results of the treasury bill auctions on April 11 raised the further query whether the offer of tender bills be further reduced to Rs. 1 crore or whether, for the time being, the Central Government retire altogether from the treasury bill market. Against Rs. 2 crores on offer on April 11, applications came only to Rs. 1.18 crores. The average rate of accepted tenders rose by 2 pies over the week, but the amount allotted was short of the amount on offer by as much as Rs. 87 lakhs. The offer for next week remains unchanged at Rs. 2 crores.

The statement of the Imperial Bank as on April 7 shows considerable demand for money in the preceding fortnight. Loans and advances, which stood at Rs. 55.06 crores on March 24, rose to Rs. 63.67 crores on March 31 and Rs. 68.36 crores on April 7. Thus, the Imperial Bank has had to provide finance to the extent of Rs. 13½ crores for trading interests. This is the biggest jump known for some time in the advances of the Imperial Bank. As a result, Imperial Bank's cash has declined from Rs. 30.89 crores on March 24 to Rs. 17.75 crores on April 7. With the cash position thus attenuated, the Imperial Bank must have been content to keep uninvested the funds accruing from retiring bills in the week ended April 7. The result is that the Bank's investments have declined from Rs. 141.93 crores to Rs. 136.22 crores. Deposits of the Bank rose from Rs. 215.59 crores on March 24 to Rs. 217.22 crores on March 31. By April 7, however, deposits declined to Rs. 212.50 crores, thanks to the usual month-early disbursements.

That the disbursements of the Central Government at the beginning of April have been exceptionally heavy, is further borne out by the Reserve Bank returns for the week ended April 7, which show that the Central Government's deposits with the Reserve Bank have declined from Rs. 76.40 crores on March 31 to Rs. 61.32 crores on April 7. The decline is thus Rs. 15 crores. The actual decline must be much more

than is indicated by this figure, as, during the week, the Central Government must have received Rs. 4 crores to Rs. 5 crores for delivery of rupee coin to the Reserve Bank. Rupee coin in the issue department of the Reserve Bank shows an increase from Rs. 12.26 crores on March 31 to Rs. 16.15 crores on April 7. Such a large rise can be explained only by the assumption that, to make up for the continued outgo of rupee coin, the Reserve Bank must have called upon the Government to reimburse their coin position. Sterling securities in the issue department show an increase of Rs. 5 crores to Rs. 784.84 crores. Rupee securities are unchanged. In the result, active note circulation shows an expansion from Rs. 882.49 crores to Rs. 893.64 crores. Deposits of provincial governments have risen from Rs. 24.72 crores on March 31 to Rs. 26.73 crores on April 7, and those of member banks from Rs. 49.92 crores to Rs. 51.26 crores. Miscellaneous deposits, which were only Rs. 7.28 crores on March 17, now stand at Rs. 20.32 crores. Sharp variations under this head have been noticeable in recent months; and one wonders whether they reflected the large transactions on such accounts as Tea Control Board and United Kingdom Commercial Corporation.

The exchange market has been steady, with some dollar bills and a few sterling bills. Remittance enquiry has been moderate.

Banks are sellers of T.T. at 1s. 53½/32d. for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 69½/32d., and four months bills at 1s. 61½/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 332½.

TREASURY BILLS

India
Tenders for Rs. 2,00,00,000 (Rupees two crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 11th April, 1944. Total amount offered was Rs. 1,18,00,000 (Rupees one crore and eighteen lakhs). Tenders at Rs. 99-12-9 per cent were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 1,13,00,000 (Rupees one crore and thirteen lakhs), the average rate of accepted tenders being As. 13 (Annas thirteen only) per cent per annum. Tenders for Rs. 2,00,00,000 (Rupees two crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 18th April, 1944 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, the 17th April, 1944 at other centres. Successful tenderers should make payment on Friday, the 21st April, 1944. Other conditions are as usual.

During the week ended the 7th April, 1944, Government of India Treasury Bills for Rs. 7,27,50,000 (Rupees seven crores twenty-seven lakhs and fifty thousand only) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday, April 13.

The Easter holidays caused no change in money conditions for Treasury Bills applications were large being supported by the volume of Clearing banks' balances with the Bank of England. The expansion in short-term borrowing continues into the new fiscal year as the Treasury this week seeks £100 million for six months' deposits. It has been noted that deposits have become more important than bills for Banks, and the end of the war will bring no change in the form of borrowing. For reconstruction too, banks rather than the public, will be the principal lenders. If London's response to the new savings drive exceeded the prescribed estimate, there was little or no disturbance either to interest rates or security values in March. Settled and steady conditions in gilt-edged mark out the London market from the Indian markets which interpret the war news in their own fashion. Up to Thursday, London quotations for gilt-edged signified complete confidence. The Industrial share market has developed no features unless it be the rise in Distiller's £1 stock to 90 sh. Debates in South Africa's parliament as to the proper price of home-mined gold or the need to give mines a chance to get on may be regarded as without effect on mining shares. Report that a deep-level mining does not pay except in India where the Kolar fields can sell all their output in Bombay. The decline in tea shares in London may be treated as a remote effect of the war in the East. But the fall is moderate as compared with the precipitous decline in tea shares in Calcutta.

The estimates of British treasury expenditure show that expenditure rose by £60 million and revenue by £43 million as compared with Budget estimates. The actuals shown in the Exchequer Returns are better as revenue rose by £13 millions and expenditure was larger. Mr. Walter Hull concludes that the year was uneventful for the Treasury for prices and wages are held by control and Britain financed the war to a greater degree by taxation. New borrowing amounted to £2,780 millions. Half the year's expenditure came from tax revenue and the growth of E.P.T. in 1943-44 means that refunds would be larger. Britain got 64.5 per cent of the year's revenue from direct taxation though more money than in the past was got from the excises on beer and tobacco. It is known that roughly a third of the national income is absorbed by taxation and a third by savings leaving Britain free to spend only a third. When war ends and taxation is lowered the proportions may be changed, but it is clear that next week Sir John Anderson will have no surprises as regards taxes or loans. Income-tax at 10sh. in the £ may be retained after the war to finance social expenditure and reconstruction; and relief to industry may be given only by the disappearance of N.D.C. and E.P.T. The stabilisation of wages for four years in the coal industry in accordance with Lord Porter's award has lately been decided upon. That means high-cost producers will determine free prices and British industry's powers of recovery may suffer. Examination of this point as well as the distant possibility of world costs and prices being adjusted in order to promote exchange stability may not occur to many,

but the point which really requires notice is that British exports, limited by home demand in regard to volume, will not be cheap for overseas customers, and questions asked in India as to postwar competition seem rather pointless. The fact is that jute, cement paper and cotton would be self-sufficient industries while the future growth of home demand would be the principal factor in further industrial progress. Such progress may stimulate demand for imports and the Baltimore Sun commenting on the Bombay Plan agrees that India has the means to buy on a big scale to take up development programme.

The U. S. naval appropriation bill, the biggest ever providing for 6,629 self-propelled vessels and 19,085 naval planes excluding trainers, is not the only sign of Administration and Congress meeting each other's wishes. Mr. Hull's broadcast proclaimed the intention to get two representatives from the two parties in Congress to help the Administration frame its foreign policy. The broadcast dwelt on the need to keep together with the Allies now, and after the war, and made it clear that the isolationism of normality is impossible for the U.S.A. The Atlantic Charter needs to be worked out in full and the present alliances have to be kept up. The broadcast might suggest that as regards trade and currency, the U.S.A. is ready for negotiated agreement with the major allies, and for that reason rather than the U.N.R.R.A. plans, the British Government may look upon the plans for a world bank with favour at present.

Mr. Hull gave the hint as to how relief expenditure would be allotted before frontiers will be delimited. Finance hardly figures in

the Czech Committee's plans for liberation. The Soviet army is expected to receive sufficient support and reunion of Bohemia and Moravia with Slovakia and Ruthenia is desired and expected. It is not necessary to examine the future relations of the Czech Crown with the Rouble, but the Czech currency which was based on an exchange standard was the outstanding example of a managed currency twenty years ago. When others wallowed in distress Czechoslovakia had everything in order. When liberation gets going, the military administration may have few difficulties, and the break between the Republic and the Western Powers may produce no changes of consequence in regard to trade matters.

The U. S. Navy Secretary's disclosures regarding Arabian oil may provoke fresh conjecture as to the political basis of the pipeline project. What is now clear is that the U. S. Government took up the Arabian case not merely because the Saudi Arabian Government was encouraged by Britain with loans. Adjustments are pending and the U. S. Navy is committed to its own plan for oil supply. The pipeline appropriation will be small in relation to the Navy estimates provided for. Internal political development like Mr. Willkie's refusal to become a candidate and the new move to draft Mr. Roosevelt as the Democrats' string are without much effect on markets. Price stabilisation, now one year old, is still the main issue; and very little progress has been reported in regard to new taxation.

U. S. commodity markets are directly influenced by crop news but the U.S.A. has at call the surplus of Latin America in regard to cotton, wool or grain. Since the warning to neutrals to stop trading with Germany affects Spain particularly expropriation at Tangier is now the subject of diplomatic negotiations like the Turkish export of chrome ore to Germany. The foreign trade with Allied countries may show large changes and Turkish inflation may be aggravated by Allied refusal to help Indian exports to Asi

By Special Cable

DISCUSSION OVER GOLD PRICES

TREASURY AGAINST INCREASE

SPECIAL FOR "INDIAN FINANCE".

Washington, By Cable.

Foreign nations will not be enabled to make easier payments for debts and purchases to the United States after this war through an increase in the Treasury's price for gold if all recent indications here can be believed. There has been a sustained agitation to raise the United States Treasury's purchasing price for gold, but an authoritative Treasury spokesman smothered that rumour last week by categorically denying any Administration plans in that direction. The spokesman not only pointed out that the price for over twentyone milliard dollars' worth of gold assets held by the United States could not be increased without additional Congressional legislation, but also said that the Treasury itself has no desire to change the price of gold from 35 dollars per ounce, which is the rate effective since 1934.

Wall Streeters recently propounded the view that the price of gold might be increased to aid other countries to make payments to the United States. The arguments therefore included firstly that a higher gold price would increase the number of dollars which other countries would obtain by shipping gold to the United States, secondly, action would provide the Government with another "profit" also that it would increase bank reserves by way of the Treasury's deposit with Federal Reserve banks and expenditure proceeds, thus providing a broader base for a greatly enlarged deposit structure.

The Treasury's emphatic denials that such procedure is contemplated has apparently disposed of suggestions at least temporarily, but financiers argue that they will be reborn sporadically. One cause is the view widely prevalent that in Britain and elsewhere that United States pre-war economic policies created serious balance of payment problems for other nations. The Federal Reserve Bank of New York discussed that contention last week in its annual report when it urged that the "Residue of truth in foreigners' beliefs regarding our international purchases and sales of goods, and services is that our foreign purchases did not exceed our sales abroad by a sufficient margin to offset the outside world's needs in dollars for interest and dividend payments and Governmental debt transfers. In the years 1930 to 1936 our excess purchases of foreign goods and service amounted nearly 80% of interest and dividend and Government transfer items payable to us".

The New York Journal of Commerce in an editorial apparently clinching the argument added "a higher gold price would provide more dollars only to countries that produce or hold large amounts of the metal." In the main, these are not the nations which are in greatest need of dollars to pay for imports for reconstruction from this country. South Africa is

the largest gold producer; she has repatriated to a large extent the shares of gold-mining companies formerly held in London and she will not need more dol-

lars after the war. Much gold is held outside the United States; it belongs to Latin American and neutral European countries which do not require special assistance.

Control of New Capital Issues

Notwithstanding Japanese intrusions in the North-eastern frontier, "Indian Finance" has more than once expressed the view that the beginnings of postwar economic reconstruction can and should be made from now. Nearly all the general economic problems which the conditions and exigencies of the war period have thrown up can be tackled only in reference to long-term trends and comparatively distant objectives. Till recently, it used to be assumed without question, that the problems of war economy have an episodic significance, and that, just as the change from peace economy to war had to be effected by sudden and specially devised measures, the reverse process, too, when peace comes, will have to be attended by a sudden break with the immediate past. There is, indeed, no really useful analogy between the two. While the declaration of war necessitates an abrupt break with the past leaving the Government and people of a country no choice in respect of the time taken for the change, there is no similar force majeure in the change over to peace time economy. Besides, the changes effected by the conditions of war time are not such as can be swept away by a stroke of the pen. By the time the war will be over, some of them will have been woven too deeply in the fabric of the national economic life.

While this is the case with other belligerents whose governments have retained severe control of the economic life of the country, in India, not only has the change from war time to peace economy to be a smooth transition, but war economy has to be viewed almost as a phase in the development of India's national economy to a new basis of structure and organisation. The forces of war economy, for one thing, have been subject to but feeble control. While inflation in Britain, for instance, boils down to a system of debits and credits between the State and the individual to be adjusted after the signing of peace by taxation and interest payments on war bonds and reliefs of various kinds, in India, inflation has inundated the country like a tide that knows no ebb. Even if one makes allowance for large static pools of purchasing power which are a sort of refugee funds exerting no pressure on the current price level, the effect of inflation on the structure of prices and costs and of debtor-creditor relations is substantial. The cure for inflation, which one would normally prescribe in terms of taxation and Government borrowing and of the transfer of foreign assets to within our borders, will probably have to be thought of in relation to a new level of normal currency circulation, and to measures which will enable the country to grow to the new currency circulation. As for our foreign balances, it is significant that they are no longer regarded as a problem of war economy, but only as one of postwar reconstruction. Even the various controls which have been instituted to help the war effort, bid fair to last beyond their original purpose. The authors of the Bombay Plan envisage a system of controls to avoid certain dangers to the working of the fifteen-year plan. There is thus need to do a great deal of hard thinking as to how some of the features of wartime economy can be modified to serve more or less different aims in the era of peace ahead.

Of these war time features, the control of new capital issues seems to lend itself most to useful and effective adaptation for the purposes of postwar reconstruction. This view may seem strange to those who know only the unfavourable public reactions to this measure when it was first announced. The control of new capital issues has so far given little cause for general dissatisfaction. Though the nature of the work is altogether new to the officials concerned, and though they

cannot claim the expert knowledge essential for judging industrial projects, the administration has succeeded in formulating certain guiding principles. And judging by what has come within our knowledge, the system of control has worked well enough to make it useful to consider how it can be made to serve the purposes of postwar reconstruction. It will be remembered that when the control was instituted, the primary purpose was to avoid the inflationary effects which an unregulated boom in new floatations was certain to cause in the national economic life. Other purposes such as giving the investor some degree of protection from unscrupulous company promoters were only ancillary to the main aim of fighting the effects of inflation. There was, however, a general apprehension in the minds of the public that the control might be utilised by the Government to prevent the flow of savings into channels which do not command their approval. It was thought that one of the unstated aims of the control was to prevent the transfer of British investments into Indian hands. The actual working of the control has shown that there is no room for such misapprehensions. And what is more, it is now seen that the new floatations generally are such that official sanction thereto helps, rather than hinders, the fight against inflation. Since the conditions of the war period do not allow the immediate execution of new projects, the sanction of the government for a new issue only means in practice the pooling of individual savings and their investment for the duration of the war in government securities. The authorities, though they may have conceivably foreseen this effect, are now able to appreciate it more keenly and more accurately. Only in the case of minor projects, which are distributive more than genuinely productive, is a new issue followed by expenditure which is of the undesirable inflationary kind. And if the control should decide against such issues, the country should welcome, rather than regret, such decision.

New capital issues today are, generally speaking, either for some productive enterprise, which cannot be taken on hand, or for the financial reconstruction of old companies which find themselves in a materially better position in the conditions of wartime economy. It is well-known that many industrial enterprises, which were almost derelict as a result of the depression of the 'thirties and the none too healthy conditions of earlier times, are now in positively affluent circumstances. Though big turnovers and large profits are now the rule, they cannot overlook either the heavy debentures of former lean times or the certain instability of good times. It is indeed heartening that the present run of good fortune has not turned the heads of company managements and there is a strong and widespread movement for financial reconstruction. New issues are therefore made for the purposes of such sound reconstruction. It is within our direct knowledge that the control has favoured such measures and accorded sanction to them. The result of these floatations is that the share money flows into government loans directly or indirectly. The effect of new issues which contemplate the inauguration of new productive activity is not different. Since these projects invariably involve imports of machinery which cannot be made till after the war, subscriptions have necessarily to be invested in government loans till the advent of favourable conditions.

It will thus be seen that to sanction new issues is not to compromise the anti-inflationary fight, that, on the other hand, new issues can be trusted to mobilise savings for the ultimate benefit of the Government's borrowing programme more effectively than the loans of the Government; and that by far the bigger part of these new issues refer to post-war projects rather than projects for immediate execution.

These experiences of the control during the short period of its working clearly suggest that the scope and functions of the present control may be usefully reconsidered. If it is seen that sanctions to new issues do not involve sacrifice of anti-inflationary aims and that new projects are as a rule for execution in the post-war period, the present control of new capital issues is an instrument admirably suited to the achievement of immediate purposes and distant objectives. The control may well be made to function as an aid to post-war planning at least so far as the sector represented by new capital issues is concerned. If it is made known that sound schemes for actual execution in post-war times will find favour with the authorities, provided the funds will be left with the Government for the duration of the war, the entrepreneurial classes will certainly get more busy than they have been till now. The capital requirements of such projects will be found before conditions cease, as sooner or later they must, to be favourable. Plans will be made ready, requirements of machinery and other things ascertained well ahead of actual execution. Even orders for machinery could be placed while the war is on for delivery after a specific number of months after the signing of peace. The advantages of such a change in policy will be reaped by all concerned. The Government will have the satisfaction of seeing more and more of idle funds mobilised for the fight against inflation. Company promoters who still look on the control as an extraneous authority in possession of a more or less arbitrary veto on their plans, would learn to scour the country more thoroughly than they have been disposed to do till now for new and bigger opportunities of exploitation. The urge to make every new

project shipshape and work it out in detail to the point of placing orders for plant and machinery, will be keenly felt and enthusiastically responded to. And when in the course of a few months, the effects of the change will have been fully felt, we shall have the means of knowing what the general landscape of productive activity in the country will be like in the post-war period. To foreign manufacturers, the advantage of turning to orders booked well ahead of the signing of peace will be invaluable.

To effect such a change, it would, however, be necessary for the Control to revise the criteria it has so far laid itself for judging the applications made for the sanction of new issues. Since these criteria have till now referred more or less wholly to present conditions, it would be necessary to clarify some principles of judging projects for the post-war period. For, after all, control of capital issues is only an indirect way of canalising the flow of investment; and this presupposes definite ideas about the requirements and possibilities of particular lines of production. A consultative committee, representative of banks and industry, will be found useful by the controller of capital issues; and this committee may well prove to be the nucleus of a Board of National Investment. We would take this opportunity to suggest that the Commerce Department should publish from time to time appropriately classified statistics of new issues for which sanction was sought and those for which sanction was accorded. It is to the advantage of all that the control, which has so successfully belied the apprehensions of many, should now aim at the regulation of joint-stock enterprise and industrial development in the post-war period.

POST-WAR PROSPECTS

Whether India's economic history will take a sudden swerve after the war is not a question readily answered. But all manifestations of outside interest in the economic prospects of India make it necessary to examine the conditions of the transition. The occurrence of neither boom nor slump is postulated by the mixed experience of the war years. In every summing up of economic disturbances in India, there is allusion to scarcity, making it clear that development of production is the only effectual remedy. Whether conditions in the transition to peace would favour the increase in production can only be ascertained by experience but conditions appear to be better as regards major industries. So far as war finance has made for complications it is only to be expected that greater reliance should be placed on sterling balances for future development than on future savings, though much recent accumulation of gold may be counted upon to assist in the national investment programme. Changes in progress for three years admittedly militate against undue optimism when Allied war expenditure comes to an end. To describe probable results when the Government withdraws from the market may be premature when the end of the war only in 1946 is forecast by an Australian minister. In the average view the more important consideration would be as to what may follow the end of borrowing. But it should be remembered that the official reconstruction committees have set out programmes and large-scale extension of transport facilities and health services have been promised. Post-war Reconstruction Funds have been set up in most provinces and enquiries as to development have been undertaken.

All this advance calculation rests on the assumption that new use must be found for men and material when the war ends. Indeed, the fear of a post-war boom is absent from the minds of all including those who think that an influx of imports would engender depression in Indian industry. Yet industry's main problem is the shortage of essential imports for raising production and changes in output in 1943 point only to the circumstance that far from excess capacity persisting, the available plant like the production is insufficient for war and peace demands in conjunction. The modification of one or both may give real relief; and what may be readily inferred from the advocacy of planning for the development is the need for creating plenty. That plenty could be secured without vast structural changes is the fundamental assumption of planners who argue that simultaneous development of India's agriculture and industry would create the conditions for complete autarky. The view is not to be accepted readily in view of the dissonance between plenty and autarky and, whatever may be said as to labour's rewards and conditions for improvement, may detract from confidence in any combination of state capitalism with private capitalism. If one were to discard recent prescriptions for development, and look only to the gradual changes in wartime trends, it should be easier to picture the transition to peace. From experience alone it would be deduced that

it will not be long or awkward. The retention of controls in regard to exchange and trade is desired for many reasons. The controls may stabilise production at the wartime level in Indian industry; at the same time, they may create an export surplus when the war ends. Since gradual liquidation of overseas assets is desired and the growth of foreign trade by international agreement as to exchange and tariffs is also desired, the changes in foreign trade may be inconsiderable as compared with the changes in domestic trade.

These changes would largely spring from the restoration of standards of public and private spending while the changes in foreign trade would reflect mostly the need for capital goods imports. In the war period much of the increase in exports of Indian manufactures has been secured at the cost of the local consumer. Later redress must inevitably be secured only through the increase in India's exports of food and raw materials. This might be unwelcome to those who propound the doctrine that scarcity or inflation is a consequence of the increase in exports and urge that demand at home perhaps is more important than pent-up demand abroad. How far the export drive preparing in other countries would influence Indian policy can only be answered in the future, for a rise in the standards of consumption in India is one of the results of the war, and planners, like the critics of plans, ask mostly for a steady increase in the purchasing power of the agriculturist. If crop-planning in regard to cotton, oilseeds and jute has reduced the fear as to a surplus without a market the consequence of Europe's temporary backwardness must be important for both agriculture and industry for some years. Impoverishment in Europe would lever up the demand for U.S. exports of goods and capital and in spite of immediate pre-occupation with exports in other lands, it is unlikely that imports into India will be other than essential. This should stabilise conditions in agriculture and industry and create also the conditions for larger investment when war expenditure falls away.

A promise of complete harmony in regard to foreign policy may imply harmony in regard to economic policy and international agreement should have the useful effect of ironing out the changes in trade and investment. This may limit the scope for changes in tariff policy but the power of recovery in agriculture and industry may be influenced directly by the growth of population every year, orderly maintenance of wages at the higher level established by the war, and the guaranteed minimum for agricultural commodities. The last may be independent of fiscal policy as well as price control in relation to food policy, and regarded merely as a consequence of undertaking damage and reconstruction arising from the war are small in India the main recovery on the basis of reserves, deposits etc. appear more favourable than imagined. Whatever be the additions to the tax system, the reduction of the State's claim on industrial profits is as certain as the return of E.P.T. deposits

Any suggestion that foreign competition may be formidable may be countered by reference to plans for the economic disarmament of Germany and Japan. If the new concert of world powers leaves India to her own devices, what may be expected readily is the continuance of prosperity without strain, for difficulties as to capital and capital goods would disappear and emergent conditions in regard to coal would pass off. New industries developed in wartime would be favoured largely by the probable reduction in taxes and the opportunity for raising fresh capital. Since the addition to internal debt is not large by current reckoning there is not likely to be any claim for monopoly and deferred projects are likely to materialise rapidly in order to absorb trained men displaced from employment. Actually the numbers involved may be small and demobilisation, reconstruction etc. may be altogether problems outside the scope of consideration of private interests. This comforting conclusion may cut across standard conceptions as to the responsibilities and opportunities. More important will be the task of adjusting costs and price to the correct level. Wartime depreciation would call for an equalisation of prices and wages, the assertion of competitive equality, and the acceptance of rationalisation. Investigation and advice obtained in advance should help our major industries to produce their own methods of lowering costs and raising efficiency.

What may be expected of a sustaining programme of public works can hardly be measured by reference to current discussion. The scale of demand may be progressively raised, and in any event, it would be impossible to predict the kind or degree of nourishment that is suitable for depression when no depression appears. It appears important to indicate that plans prepared against the disposal of stores and labour and the superfluous materials are radically different from plans connected with depression when the bulk of plans relate to employment. Such a problem hardly has ever been noted in India and slack spells in agriculture are always distinguishable from short time. If short time has been worked in the war period like an excess over the statutory working hours in Indian factories it may be noted that any break in tension would not prejudice production in industries, once the latter have no difficulties regarding fuel, transport or materials. The disappearance of handicaps would be deemed more important than the probable reduction in Government buying. Assuming that further development is at the wartime pace (there is no special plan or programme) what may be expected in regard to industries is the expansion of production for the home market, given the condition as to

essential raw materials and market. Even unprotected industries may develop rapidly and their progress must influence other industry. Progress in chemicals must react on all industries like any shortfall in coal-mining output. Stability in India's mineral output can only be derived from a continuance of control; a modicum of prosperity in coal-mining based on fair prices must be the first condition for successfully weathering the transition. In regard to plant and spares etc., the energetic competition of overseas suppliers may be trusted to work out to advantage. How far deferred consumption and wartime saving would inure to the advantages of industries cannot be indicated when there is some conflict of opinion over the nature or extent of savings in India. It is, however, proper to regard the postponement of purchases as a factor in favour of unprotected industries like the woollen and leather industries. Whether moderate additions to supply of consumer goods would be more appropriate than large-scale diversions of supply is a debatable point at present. As to certain advantages largely based on the war in regard to technical labour, scientific research and training schemes, there is little need to speak here since the advantages are duly paid for; they are not peculiar to India in any sense. If the maintenance of profits were to be the only criterion, it is certain that prosperity will be in evidence after the war for every evaluation of peace risks has brought out the increased importance of Indian manufactures for the world's markets. The continuance of export quotas etc., in regard to textiles should be balanced by the disappearance of imports. In spite of the possible effects of further industrialisation on import trade, the stage is well set for the growth of many secondary industries. If conscious guidance is absent, the relaxation of control after the war, with costs and prices alike responsive to the facts of growth and change, may be deemed a great advantage. Not many will overlook the fact that secondary industries, whether protected or not, and exposed to excises, have inherent advantages in regard to neutral markets and the postwar trade problem may be one of organisation rather than lack of demand either at home or abroad. A summary view of industry's achievements must be related to the capacity to withstand competition. Old evils like dumping and currency devaluation are no more likely to occur than any efforts here to answer subsidy by subsidy, quota by quota. For any approximation to freedom of trade would throw into relief the improved competitive capacity of the majority of Indian industries. It is noteworthy that there is already increased confidence in the cotton mill industry's power to stand up to strenuous peace conditions.

India And Java Compared

Sir Gerald Hodgson in his recent article in Indian Sugar calls attention to the differences between India and Java as producers of sugar. He endorses Mr. D.H. Peel Yates' opinion as to the need for raising the efficiency of the Indian industry so that it could stand on its own feet against Java. He declines to make comparisons between the recovery percentages of any year in the countries and makes his argument rest on history. The Indian industry protected since 1932 had developed from 31 mills in 1932 to 127 mills in 1936. In Java the number fell from 166 in 1932 to 39. But the mills which survived in Java were the most efficient and most advantageously placed in regard to cane, so that it is not really correct to compare the average Indian sugar mill with the mill in Java. If sugar imports are expected from Java at any time it means that less efficient mills will have to resume working there. The fact that recovery percentage went down when more mills started work in Java, suggests that there is need to work up to the high level recorded in 1935. In 1930 the average recovery for Java's 179 mills was 14.36 percent and the gap between India and

Java is small having regard to the fact the season here is shorter. Since India's recovery percentage has improved from 9.77 to 10.67 (on the basis of a comparison between 86 factories in both countries) the mills have only to raise the percentage by 10 to 15 percent not by 33 1/3 percent. Sir Gerald concludes that Indian mills' efficiency can be raised in 6 or 7 years to the Java average. But the main factor is the better quality of cane. The Java producer has to allot only 37 percent of the cost of sugar to cane whereas the Indian sugar producer must provide 67 percent. Lower cost of cane or alternatively a higher yield per acre is demanded. The canegrower's part in the improvement is, therefore, important. Java with 250,000 acres under cane, had an average yield of 52 tons per acre while the Indian average was 15 tons. But the averages obscure the fact that there are areas in India where the average yield is 25 to 30 tons and selected areas with an average yield of 60 tons and over, while the average output for 500,000 acres in Java must be lower. An increased tonnage of cane per acre is however required here and Sir Gerald puts the optimum at 26.52 tons per acre along with higher increase content. He thinks that improvement will follow improved methods of cultivation and better quality of cane. His programme for improvement covers the improvement of transport so that quality does not deteriorate between field and mill; improvement of mills so that recovery is higher. Two other suggestions, that mills operate in areas where the best yielding canes can be grown, and the operation of only units of economic size and situation from the point of the rationalisation recommended to the industry are placed for consideration. The Government has to co-operate for the purpose with the industry in agreement. But agriculture rather than the manufacturer must help India to stand or withstand comparison with Java, and how far better prices for cane support the improvement required must be judged by a small planning committee set up within the industry.

Government's Films

In Sir Sultan Ahmed's address on March 11 to the Publicity Advisory Committee, reference was made to the working of the scheme for compulsory exhibition of films of war interest. The order issued last year to exhibitors to show a certain footage of approved films of Government origin was attributed to a desire to bring a part of the film industry under control. If satisfaction with the films produced and exhibited is not general Sir Sultan Ahmed dwelt on the progress made by the I. & B.

films. He claimed that the Government had increased film production "and I think I can say without boasting that our standards have risen too. The film world has notably changed its attitude and has begun to welcome instead of criticising our shorts, our distribution of Information. Films shorts now extend to 1,050 Indian cinemas and 130 English cinemas. These constitute the bulk of the theatres in this country. In addition, 787 theatres now take Indian News Parade Films." Distribution is complete and the committee was asked to look for films on Indian Handicrafts, India's Heritage, the tale of the Shirt and Gold. The absolute improvement in quality was mentioned as making the films interesting and important. Sir Sultan Ahmed did not ignore the complaint as to the same film being shown in many cinemas in one town. The new plan is to provide two short films to each cinema in a week so that the man who goes four times a week only has to see the same film twice. The official newsreel is also said to be improving though there is difficulty in securing sufficient variety. Increase in the number of cameramen so as to increase the interest of the newsreel is expected. The figures as to cinemas indicate that entertainment in India has become an industry. The familiar claims by producers as to capital and employment find support in the reference to 1180 cinemas using Government's own films. What this branch costs in regard to footage made in a year was not made known though the figures will help independent producers to frame estimates when trade depression calls for a drastic cut in costs. Whether rivals in making shorts would appear in the future or not, the place for independent producers, if need be subsidised, appears clear. Documenting of private origin have been made with success and their appeal was independent of the immediate purpose of the producer.

Improved Cotton

The introduction of Perso-American cotton in the U.P. was influenced by the limited progress made in improvement of cotton. Two officers of the U. P. agricultural department state that the trade variety known as Bengals has been displaced to some extent by improved types. Four types of American cotton and C520 and Perso-American have been evolved. The last two have proved hardy, high yielding and superior in quality to local varieties all over the Province. It is noted that C520 is a single-line strain brought into use after 1919-20 and growing it means a profit of Rs. 11 to Rs. 20 more per acre than can be got by growing desi cotton. The profit on Perso-Ameri-

can cotton is greater but the latter demands irrigation although the crop is ready in four months. Experiments conducted by the Department indicated clearly that desi types have limited value. Local cultivators have recognised the value of the improved strain as C520 is grown in 33,231 acres while Perso-American cotton is grown on 12,000 acres. In view of the former being short-staple preference is given to the latter alone. Millowners have shown greater interest in Perso-American than in Mixtures like C520 since the staple is .88 inch in the case of the former. The Economic Botanist distributes seed to growers and builds up a supply. In the Western U.P. the marketing of Perso-American cotton is undertaken by a co-operative society, and the premium already established has been supported by spinning mills' subsidy to growers of Perso-American cotton. Before the I.C.C.C. began its work for extending cultivation of Perso-American cotton from 1942 certain mills in the U.P. encouraged the growing of the better types by giving cultivators better prices for all Perso-American cotton offered.

Increase In Employment

In all countries at war employment increased during 1942 and 1943 and one consequence of labour shortage was an increase in the hours of employment. The movement of index numbers listed in the Geneva statistical bulletin shows that in agriculture, too, employment increased in the U.S.A. along with hours worked. Against the 1941 average of 114 the U.S. index in May 1943 was 142 indicating a continuous rise in two years of war. Since the base is the index for June 1939 the effects of war on employment in such countries as Japan (though the base is not June 1939) can be noted. Total mobilisation raised the index to 192 in Japan's manufacturing industries. The available figures suggest that employment has risen more in Australia than in South Africa while the real increase in Canada began earlier. In Canada especially a continuous fall in unemployment exchange figures is a result of the expansion in employment with the index rising to 207 in May 1943. The statistics of establishments point to irregular fluctuations in Denmark where employment suffered in 1942. Hungary's development for German purposes is indicated by the increase in employment and working hours since 1941. The increase in U. S. war production in 1941 and after is duly reflected in the rise in the index from 138 to 159 in two years and since to 175 in May 1943. The National Industrial Conference left out the emergency labour force in the estimate but took the armed forces into account so that the growth in industrial employment in three years is less in the U.S.A. calculated by percentage alone than in Canada.

The mixed experience of neutrals is illustrated by the drop in employment in Sweden in 1940-42. Recovery certainly followed, but Sweden's industry and trade, affected by the war, provided less work though the drop in the number of unemployed trade unionists since 1941 right up to June 1943 indicates that the country was making adjustments. The growth of secondary industry in Argentina explains the rise in employment though the peak was apparently passed

in June 1942. The draft of French and Dutch workers for German factories accounts for the continuous decrease in unemployment reported by both countries. Admittedly, the happiest experience has been that of New Zealand where the 'labour reserve' is far lower than before the war. Moderate improvement in the labour situation is a characteristic of countries like Spain and Switzerland; the reduction in the number of workers was greater in Spain than in the other country. In the U.S.A. the official estimates cover agricultural labour and the fall in the number of workless from 2800 to 900 (thousands) between June 1942 and May 1943 throws light on the increase in the country's war production, the general index rising in this period from 163 to 186. The same change was recorded in Britain where employment exchange figures pointed to a steady decline in the rates of unemployment.

New Industrial Survey

Tax revenue statistics have been frequently employed to calculate national income and wealth, but in the view of the A.I.M.O. the figures can be used to assess industrial progress. Before the war and now too the incometax yield in Bombay and Bengal exceeded the yield of other provinces. The explanation is found in the relative proportion of employment in industry. Major industries have developed in Bombay where 203 cotton mills, five woollen mills and 50 silk and art-silk mills have been set up. Industrial progress in Bombay is reflected also in the development of heavy chemicals. Three establishments produce sulphuric acids and the production of alkalis has begun in Western India. Suitability of the Province for various other industries including shipbuilding is indicated. There are ten factories producing sugar and reference is made to an aircraft plant under construction. If Bengal's industries provide employment for only 9 percent of the population the 96 jute mills and 40 presses must loom large in any survey of industry. Bengal accounts for 30 percent of coal produced and a considerable part of India's iron and steel. Three well-equipped and large paper mills with one producing pulp indicate the growth of another protected industry. Secondary industry has developed to the same extent as in Bombay. The distribution of factories in the U.P. is examined so as to bring out the familiar preponderance in the sugar and leather production. Though the U.P. has only three woollen mills, it is known that the woollen textile industry there is more important than in the Punjab which has six woollen mills.

The beginnings of chemical manufacture in the Punjab are recorded along with the departure in Bihar where bleaching powder and sulphuric acid are produced. The most important industry of Bihar is coalmining and the export industries are mica mining and lac culture. The outline of plans for industrially backward provinces like the C.P. and Berar includes cement though Katni is the first home of the Indian industry. In the bulletin Sind's principal industry is described as salt manufacture which has been nourished by the additional import duty levied from 1932 and renewed periodically. Assam's chief industry is tea growing with 1126 tea gardens and 638 estates

recorded in 1939. Reference is made to one factory producing paper at Silchar. Development of the N.W.F.P. with the help of the Malakand hydro-electric scheme is recommended. The suggestions made as regards Orissa are in favour of sugar, paper and pulp (both have already taken root) and fish canning and manure. The industrial survey though limited to British India does not overlook the setting up of an aluminium reduction plant at Alwaye. The survey covers all industries, in existence. The A.I.M.O. thinks that two major industries are absolutely necessary for each province

FOR QUALITY TOOLS

The letters BATU on tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers, B.T. Taps, Reamers, Dies, Milling Cutters, Slitting Saws etc. are unsurpassed in quality and precision.

All B.T. Tools are treated by modern scientific thermal processes and their accuracy is guaranteed to conform to British Industrial Standard.

and only four out of eleven, fulfil the test. The survey describes industries in various stages of development and refers to the establishment of new companies in Bengal for the manufacture of organic and inorganic chemicals.

Essential Services

How essential labour is held together in the war period was described in a note on the working of the 1941 ordinance. The ordinance applies to other employment than that under the Crown and its application in most cases is really left to the Provincial Government. There has been no declaration as to non-Government employment in the C.P., the Punjab, N.W.F.P. and Orissa. In the case of Delhi and British Baluchistan, the declaration is limited to employees of the local bodies and public utility companies. Among the Provinces, Bengal and Assam have made most use of the Ordinance. The Central Government has declared all employment on the railways to be essential; and transport and communications in Assam, Bombay and Bihar are covered by the declaration as Essential of the Provincial Governments. Very few factories have come under the Ordinance and the numbers of those in Essential services have not been calculated for the application of the Ordinance has not been very extensive. Rules framed under the Ordinance cover both wages and conditions of service. Labour Commissioners in Bengal and the U.P. are empowered to regulate wages. In Assam the Controller of Emigrant labour and Labour Commissioner has been authorised to regulate wages and conditions of work. Officers are authorised under the Ordinance to prohibit departure from certain areas. How far the power has been used to check freedom of movement is not known. Various officers including District Magistrates have the right to make complaints in case of infringement and 2601 prosecutions have been launched. The large majority of cases were in regard to Government servants. Out of 1973 cases against Government servants more than 1160 were disposed of and only 42 were acquitted. The working of the ordinance for two years has led to few complaints though essential services have been affected by trade disputes in certain places showing that wages and conditions of work were not prescribed carefully for those declared to be essential.

Chinese Progress

Transport in Free China has made marked progress in 1943 according to the China Information Bulletin which gave a summary of the Communications Minister's survey. China's railway mileage increased by 350 and the total length of highways rose by 3,200 miles in the South-east and Southwest. A greater increase in the mileage in the Northwest was reported as almost half of the newly-projected roads have been completed. China claims an addition of more than 10,000 miles of new telegraph lines. Mail services have been extended by the establishment of 2,000 new post offices and the building of 30,000 mail lines. In spite of wartime handicaps the railways in China have stood up to the strain of increased traffic. The Minister stated that traffic records were broken in 1943 when the

railways carried more than 15.6 million passengers and 2.86 million tons of freight. The reduction in imports led to no decline in traffic as home production increased. Traffic on roads did not increase but water and air transport made marked progress last year. New roadbuilding in mountainous regions was described. The Minister said that shortage of conveyances and material and the scarcity of experienced men constituted real difficulties. He cited the constant fluctuations in commodity prices as another source of trouble because it occasions the frequent revision of estimates. He declared that the Chinese communications programme aiming at the development of communications for defence would proceed. He assured that facilities would be increased this year for the purpose of building up economic power in Free China.

Fewer Houses

Building suffers generally in wartime and the continuous decline is attributed to shortage of manpower and materials. Canadian experience certainly suggests that in 1943 also there was a shrinkage in building as war plant construction and extensions to factories tapered off. But new features certainly emerged in the increase in residential and engineering construction particularly, the increase in highway construction. The main feature appears to be the increase as compared with the 1930-39 averages in regard to the total value of construction. Though the rise in prices must be allowed for in the case of building activity in the war period, it was 13 percent below that of the prosperous years 1920 to 1929 and the maintenance at the 1937 level in wartime has been possible on account of Government outlay. Factory extension has been financed mostly by Government as part of the war programme and it is believed that 75 percent of building or other work is of a public nature. Subsidies for housing (accepted in 1935 in Canada) have been used for wartime housing. But loans made for low-cost housing to companies engaged in war contracts have not been enough. The Dominion set up a company called Wartime Housing, Limited, to undertake the construction of workers' dwellings and hostels and one-fourth of the housing outlay amounting to \$70 millions has been attributed to the emergency housing programme. Canada like the U.S.A. and Britain duly reports a shortage of housing; and additions to houses in congested areas represent no real contribution to the solving of a problem. It is believed in Canada that Government will have to concentrate on post-war public works and residential building must be developed by private enterprise from savings. The increase in national income is likely to support the post-war housing programme according to an authoritative survey which does not however indicate what the Provinces have to do in respect of slum clearance or public housing schemes. Established credit agencies including insurance companies are expected to help Canada's private builders to put up more homes after the war. No programme similar to that of Britain's Prime Minister has been mentioned, though it is admitted that war-time house construction has very limited value for the future. In the war period, more than half the money, as compared with a third before the war, has gone into

construction for business and industrial purposes. A reversal of proportions is certainly expected in Canada but private effort, not public outlay, is forecast, though Canada's natural increase of population and the revival of immigration make for a careful consideration of problems and possibilities.

Forest Development Policy

Addressing the Forest Rangers' Convocation held at Dehra Dun recently Sir Jogendra Singh, Member for Education, Health and Lands, laid emphasis on the need for an all-India forest development policy. The three most important problems before the planners are firstly, to bring the existing reserved forests back to their pre-war position, secondly, to control run-offs, floods and erosion and thirdly, bringing forests to the aid of agriculturists. It is well known that owing to

very heavy demands for timber and fuel over-felling of trees in Indian forests has gone on for the past four years in almost all provinces. Acute shortages of fuel have been felt everywhere but forests have been pressed to the maximum extent to aid war effort. Heavy war demands necessitated unplanned destruction of forests and today the area of forests in India has dwindled to levels far below the optimum. Only 13.3% of the area in British India come under forests and Sir Jogendra Singh rightly pointed out that forests are inadequate for national requirement and that another 100,000 square miles of forests in India should be developed to attain the correct percentage of forest for this country. In European countries the area covered by forests is 26% of the total while in the U.S.A. forest land was about the same as farm land in 1929 and still the Research Commission on Social Plan advocated for the extension of forests. Sir Herbert Howard, Inspector-General of

"We welcome constructive suggestions; and my Government is examining with interest the plan recently propounded by seven prominent business men. The views of the authors of this plan on the objects to be achieved are in principle the same as those of my Government—we must work for a substantial increase in standards of living and social welfare. We may on examination differ on the methods to be employed; their relative importance in the plan as a whole, the part to be played by the State and by private enterprise, and the financial practicability of development on the scale contemplated within the time suggested by the authors; but our aim is similar and we welcome any sincere contribution to the problem that sets people thinking and makes them realise both the possibilities and the pitfalls ahead of us".

W A V E L L

Extract from His Excellency the Viceroy's speech
to the joint Legislatures on 17th February 1944.

Forests. In a special note submitted to the Government of India on Post-war Forest Policy for India suggests that the present 13.3 per cent should be raised to 20% to 25% of the total area. Villagers have for long been suffering owing to lack of cheap fuel and the scarcity of firewood resulted in a large scale waste of cowdung, a valuable manure, for burning. Sir Jogendra Singh believes that if the quantity of cowdung now used as fuel by poor peasants are utilised for manuring the total food production of the country would increase by 50%. Recent events have underlined the urgency of speeding up the production of foodgrains and in a country where 185 million acres are wasted, there should be vast scope for a comprehensive afforestation policy. If India's economic progress is dependent on the improvements in agricultural operations surely a suitable forest policy aiming at providing the villager wood for fuel and housing and grass lands for his cattle is absolutely essential. Though the Government of India laid down the principle of utilising forests for

people's benefits as early as 1894 in actual practice the aim has been honoured more in the breach. Forests, it should be recognised, are depositories of a very wide variety of valuable resources like timber, rubber, herbs, medicinal oils, lac, fibres, grass for paper manufacture etc. They prevent soil erosion, regulate floods condense the clouds and lower the temperature. They yield fruits, roots, and fodder and hence a valuable asset during famine times. Both agriculture and industry would be immensely benefited by a progressive forest development policy which aims at maximising the benefits of forests and forest products for comfortable living. A Forest Act to control the utilisation of forests, to prevent reckless over-felling, to provide for acquisition of lands for afforestation, etc. would be needed and if the provinces and States now evolve their own plans of forest development the formulation of an all-India post-war forest policy would be made easy.

A NEW JOB—WITH A FUTURE

Nature has bestowed upon you her richest gift—your heart's desire, your child is on its way.

Every father-to-be naturally wants a healthy happy baby; you should take steps now to ensure its safe delivery. Your wife, after seeing a doctor early, should attend a pre-natal clinic regularly. In addition, make sure that every weapon known to medical science is fighting on your side, in the great battle against infant mortality.

When you see your baby, chubby and contented, sleeping peacefully in his cot, consider for a moment your big new job—that of being a father. This job has a future—a very important one.

Now is the time to make sure that, no matter what happens in the years to come, your child's education and career will not suffer. Our Agent will gladly advise you in these matters.

Surplus for C. P. and Berar

The Budget estimates of the C. P., and Berar for 1944-45 reveal one more year of surplus funds. The following statement indicates the financial position:—

	(In Lakhs of Rupees).		
	1942-43	1943-44	1944-45
Revenue	6.69	8.27	8.08
Expenditure	6.47	8.23	8.05
Surplus	22	4	3

As in most other provinces the revenues as well as the expenses have increased phenomenally and a surplus of Rs. 3 lakhs at the beginning of the Provincial Autonomy regarding the working balance has improved quite satisfactorily. While at the beginning of the Provincial Autonomy on 1st April, 1937 C. P. and Berar had hardly Rs. 28 lakhs, at the end of 1944 she hopes to enjoy more than ten times the amount, viz., Rs. 292 lakhs. A sum of Rs. 121 lakhs during 1943-44 and Rs. 141 lakhs during 1944-45 will be allotted to the Postwar Reconstruction Fund started in 1942-43. At the end of the coming year this Fund would stand at Rs. 290.33 lakhs. The revised estimates for 1943-44 reveal that there has been an improvement of Rs. 188 lakhs in revenue of which Rs. 64 lakhs are accounted for by the increase under forests. The receipts from the distributable surplus of income-tax have come up to Rs. 97.5 lakhs as against Rs. 60.5 lakhs estimated in the budget. Consumption of country spirit has yielded an increase of Rs. 25.4 lakhs but the Government have decided to raise the issue prices with effect from 20th March, 1944. Land revenue showed an improvement of Rs. 20 lakhs including the contribution of Rs. 14 lakhs from the centre for payment of subsidy to cultivators. On the side of expenditure there has been an increase of Rs. 80.25 lakhs of which Rs. 38 lakhs are incurred as result of exploitation of forests. Operations connected with the procurement of food grains and standard cloth have expanded during the current year and for the year 1944-45 288,000 tons of rice, 50,000 tons of wheat and 100,000 tons of jute are expected to be procured for disposal. A sum of Rs. 35 lakhs has been sanctioned for Grow More Drive and it is expected that an additional area of 7 lakhs acres would be brought under cultivation.

The estimates of revenue for Rs. 1944-45 are framed with due caution necessitated by the uncertainties of the year. It is assumed that the taxation measures due to expire during 1944-45 would be renewed from 1st April, 1944. The anti-inflationary measures recently adopted would continue and augment the development funds. While increased revenues are expected from income-tax share, excise and stamps, forest is expected to show a decrease of Rs. 53 lakhs owing to the smaller demand for timber and other forest produce. The budget for 1944-45 provides for new expenditure aggregating only Rs. 11 lakhs of which Rs. 8 lakhs have been allotted to the nation building departments. While revenues have increased from the normal figure of 5 crores to 8 crores today the growth of expenditure on development departments from Rs. 97 lakhs in 1938-39 to Rs. 124 lakhs in 1944-45 reveals how the financial administration of the province has been unduly conservative. It is no doubt true that

provinces today have more money than supplies but one cannot escape the impression that the present has been neglected in the anxiety for preparing for post-war stability. The Government of C. P. and Berar are even today following the policy laid down in 1941 of not undertaking fresh activities unless permanent improvements in revenue are visible. As the Press Communique states "the present government has resisted all temptations to embark on big schemes of permanent expenditure." The budget proposals for 1944-45 are quite cautious and devoid of features which would rouse the enthusiasm of the public today.

Diplomatic Triumph?

The agreement over North Saghalien completing the partition—the south to Japan which prizes the coal and gold like the herring fisheries of Karafuto and the north to Russia exclusive—is regarded as a bargain in which Russia has got the better of Japan. The agreement is an appendix to the five-year neutrality pact of April 1941 and the probable effect on the coal and oil situation in Japan cannot be indicated at all when Japan has acquired very substantial resources through conquest. The conditional renewal of the fishing concessions (to be in abeyance during the war) may bring the Pacific coast of the U.S.A. nearer to Siberia since Vladivostok will be avoided by Japanese shipping. The fact that Japan has accepted renewal of the fisheries convention subject to conditions will be interpreted as proof of anxiety to avoid complications with Russia, the neighbour of Manchukuo. The 'Izvestia' of Moscow commenting on the new arrangements for oil supply to Japan after the war and the lease of fisheries said that it proved the right course of foreign policy and mutual understanding with Russia's allies in the Pacific. The withdrawal from North Saghalien is defended in Japan as the removal of causes of past misunderstandings. The arrangement, however, means that the demand (mentioned in connection with the Five Senators' visit to the war fronts) for Siberian bases for use against Japan has been shelved by Russia merely for the sake of recovering property in the Far East from Japan. The Japanese when they took Manchuria found Russia ready to sell a railway or two, and most breaches of peace on the border were dismissed by Moscow as incidents. The absolute willingness to exact retribution from Japan may not be apparent from an assurance in an article that Japan has lost faith in Hitler. That the treaty of April 1941 is regarded as the essential, binding agreement, has repeatedly led to a query as regards Lease the war. The U.S.A. is said to have asked for an undertaking that Russia will co-operate fully with the Western Powers in waging war against Japan.

The main result of the arrangement is to underline the difference between Russia and the Allies after the Moscow Conference brought China and Russia together. Admittedly, local considerations of security prevailed in regard to Saghalien. Russia's obvious desire to limit her commitments in Asia may be explained by reference to losses in war and the preservation of interests in the Pacific when those of other European Powers have been wiped out. The abrogation of the Japanese conces-

sions follows the treaty provision and makes it clear that North Saghalien's resources are exclusively meant for the Far East while accepting Japan's occupation of South Saghalien as inescapable. The closure of Consulates like the withdrawal of Japanese craft from Russian waters may even be greeted with relief by a country that is said to have become sober according to the 'Izvestia'. As the point relating to lease-lend may lead to the whole question regarding relief to Russia in the future, it is clear that Russian respect for the status quo may not accord with U.S. expectations, and Russian gains will not be at present regarded as necessarily gains to the Allies.

Punjab National Bank, Ltd.

If the year's results correspond fully to anticipations in the case of the Punjab National Bank the balance sheet published to-day requires special notice because 1943 was admittedly a memorable year when 40 new branches were opened and the Bank's organisation in the Punjab and the United Provinces was perfected. The very considerable progress made with the help of a competent and contented staff formed the subject of Lala Yodhraj's address on April 6th when he dwelt on the increase in profit to Rs. 24.38 lakhs and increased

allocation to reserve. If the Bank is not going to increase its paid-up capital, as some were disposed to believe, the grounds for leaving well alone were fully explained at the meeting at Lahore on Thursday last. The main movements in deposits and advances supported the growth of business and profits last year. Against total deposits of Rs. 26.3 crores there appear investments and cash totalling Rs. 182 crores. The cash balances alone totalling Rs. 4.29 crores on December 31 indicate a ratio above the average in this case. In regard to the increase in deposits, advances, and appreciation of investments the Bank's position is accounted more favourable than any derived from a consideration of averages for scheduled banks. The increase of Rs. 10.97 crores in deposits in a single year is as striking as the excess provision for bad debts noted in the balance sheet. While investments have increased in a year by Rs. 4.29 crores the cash items and advances have increased to a greater extent. Though the increase in cash balances is not unusual having regard to the slackness reported, the rise in the ratio when business has improved substantially to judge by the list of branches opened like the increase in the Reserve Fund to the level of the paid-up capital is a symptom of the uniformity that is a mark of Indian banking progress in the war years.

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends of the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Balloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Harlons play the leading role in these supplies. Whatever the kind of quality in ropes may be Harlons have the variety to choose from.

AUDITORS' REPORT.

We have verified the Balance Sheet of Punjab National Bank Limited, as at 31st December, 1943, along with the Profit and Loss Account for the year ended that date, as above set forth, with the books and accounts as kept at the Head Office and the Returns received from the several branches, and have obtained all the information and explanations we have required. In our opinion, such Balance Sheet and Profit and Loss Account is drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the Bank's affairs according to the best of our information and explanations given to us and as shown by the branches' Returns and Head Office books which have been kept as required by Section 130 of the Indian Companies Act.

The maintenance of the dividend at 6 per cent for the year leaves a larger carry-forward. The changes in direction have led to a striking growth of business which

is reflected in the doubling of the Reserve Fund in eighteen months along with a similar increase in Deposits, both current and fixed. To compress the growth of

over four decades in three half-years only must be reckoned a very considerable achievement though circumstances have largely favoured the expansion which helped Lala Yodhraj to take a cheerful view of the Bank's future as well as the country's economic future. That the older banks in India have more than held their own in 1943 is fully established by figures cited, and some inference as to dividends in the future appears possible from the reference of Lala Yodhraj to dividend policy between 1921 and 1927 and the conservation of resources in the war period.

Collieries' Difficulties

The defence of the decision to employ women underground in mines was undertaken by the Chairman of the Indian Mining Federation who said that the arrangement was meant to bring back labour attracted elsewhere by high rates of pay. His own acceptance of the control scheme was qualified by reference to the precarious future of smaller collieries and the need for a united front. The main difficulty for colliery-owners is still the workers' food supply and official interference has not mitigated scarcity. Mr. Amritlal Ojha declared that on the Jharia field the order as to rice procured from Purnea had occasioned difficulties. There is difficulty in maintaining the labour force and colliery-owners conscious of the pooling arrangements in force ask in effect that orders regarding food supply for the coalfields should be precise and fair. References made to the cost of mining equipment, difficulties over repairs and renewals, and the non-supply of iron and steel promised to collieries indicate how far coal-mining still is from prosperity.

Certain figures given by Mr. Ojha are of special interest as the seaborne trade figures relating to coal imports and exports alone can give no picture of changing conditions in the coal-mining industry. He stated that the coal rationalisation scheme framed in October last provided for allocation of 25,644,900 tons per annum or 2,137,075 tons per month from all the coalfields in India excepting Assam and the Punjab. Out of this quantity the total quantity available for Indian industries and Provincial quotas excluding railways, inland navigation and bunker and shipment coal was placed at 10,24,587 tons per month. The quota for bunkering was 1,10,000 tons per month and approximately 1,08,000 tons for export (the tonnage exported in May 1943, being 62,340 tons the highest since Jan. '42 was well below the quota) and the Controller of Coal Distribution fixed the allocation on the assumption of 2,700 wagons daily for Bengal and Bihar fields. Shipping space for 80,000 tons to Madras and 30,000 tons to Bombay was provided for but the drop in raisings produced by shortage of labour interfered with the whole scheme. Labour was affected by cholera epidemic between June and October and the situation that justified rationing developed. As to the effect of recent tax concessions Mr. Ojha declared that the benefit to collieries would be very limited and the main claim advanced was that collieries having been treated badly in the past should have a chance to work without undue restrictions. Objection is taken to the control scheme and the powers vested in the Coal Commissioner, and the later plan for a representative Board is accepted not without argument as to the need for a promise against postwar depression. Since the figures as to monthly output are lacking, the coal target for 1944 may be higher than 24 million tons per annum.

BETTER TAKE A MAC

IN using the word "Mac" to mean waterproof, we pay tribute to the Scot, Charles Macintosh (not Mackintosh as the dictionaries usually say!) who in 1823 produced a waterproof material by impregnating fabric with a solution of rubber in naphtha. How to make clothes withstand water is still a major problem for the chemist, for modern standards demand something more than heavy proofs against heavy weather. Rubberised garments and oilskins are certainly proof against water, but they are also proof against air and in the absence of special ventilating arrangements are apt to be heavy and hot. Your rain-coat today must be light in weight as well as keep out the wet. It must be water-repellent: that is, water must not cling to it. The difficulty is to treat textile fabrics so as to combine protection with ventilation, but a number of methods have now been perfected, some of which can be applied to the most delicate materials. The latest achievement of British chemists is a waterproof finish which will stand up to laundering. Today there are also the special needs of engineers, fitters and others in the fighting services and in Industry. Their working dress must be both light enough to give freedom of movement and strong enough for protection against weather. It is to the credit of the chemist that he has enabled the British textile manufacturer to combine these qualities.

GRAND HOTEL

FOR AN

UNRIVALLED STANDARD
 OF COMFORT

STAY AT THE
GRAND HOTEL

The Leading Hotel of Calcutta

I spent the last week-end in Cooch Behar; and what struck me very forcibly was the enormous activity of various kinds in a part of the world which, till recently, was even more humdrum than is usually the case in India. It is not for me to speak of the preparations in connection with the equipping of East Bengal and Assam both for defence and as the base for offensive operations. I may, however, refer to the talks I had with some of the officers who had lately been right near the Burma border. I attach much importance to my discussions with them as they have up-to-date knowledge with regard to an area, developments in which are exciting concern all over the country. There was ample confirmation available with regard to the complete preparedness of Manipur and the adjacent districts of Assam, for dealing with the infiltration of Japanese forces. Men and equipment in full strength are ready and available in the right places to give proper answer to the enemy at the proper time and in the proper setting. To my enquiry as to why the Japs are making any progress at all, the answer was direct and simple: "It is all jungle trekking so far. No kind of offensive can be launched while the enemy forces are threading their way through the jungle pass. They are bound to come into the plain. And the Allied engine of fire and destruction is ready and keen to smite them and smite them fatally". I am almost using the very words of the friends I met in Cooch Behar. For, I think, it is of the utmost importance that the public in India should regain a correct perspective of the relative strength of the enemy and of the Allies in the imminent clash on the Assam-Burma border.

The stock exchanges in particular have been prone to be unduly jittery. Most shares have declined steeply in price. The worst to suffer is the gilt-edged section. After ruling persistently strong at Rs. 99-8, 3½ per cent Paper declined to as low as Rs. 96-4. The fourth defence loan, the list for which closed at the beginning of this month, is quoting nearly Rs. 1½ discount. I have, again and again, stressed that the gilt-edged market in this war not only in India but in other countries is so skilfully guided and directed that it is proof to all political news. There have been quite a few occasions in the past when adverse political developments in this front or the other, caused a landslide in gilt-edged values. On every one of those occasions, I had pointed out that the setback was only temporary, and that subsequent developments would not only account for the complete wiping off of the losses, but for some further gains. The events near Manipur have been the cause for a com-

Clive Street

"I must have liberty
 Withal, as large a charter as the wind
 To blow on whom I please."
 —(As You Like it)

plete cessation of buying pressure in the gilt-edged market and for the emergence of some selling. On the present occasion also, I cannot but feel that this weakness will prove transitory, and that those who are shrewd enough to buy at the fall stand to make good profits.

Another point which is worthy of mention in connection with my stay in Cooch Bihar is the interest which the State is now exciting among industrialists as an area full of rich potentialities. There is no doubt that a significant circumstance in this regard is the freedom in some of the Indian States from the imposition of Excess Profits Tax. This is, doubtless, a powerful inducement. All the same, it cannot be gainsaid that Indian Rulers are now taking a liberal view about the facilities to be given to industrialists for converting the potential wealth of the States into actual wealth. Among the States which have thus been helped forward in industrial progress by capital from British India, Rampur, Bhopal, Travancore, Gwalior and Dhrangdhara may be cited as recent instances. Mysore and Baroda have long been famous as profitable fields for industries. It is quite likely that Cooch Behar will figure in the future as a field worthy of attention for new enterprises. One leading Marwari firm is opening a plywood factory. There was already a plywood factory in operation, the management and proprietorship belonging to a Czech and a Dutchman. Another rich Marwari house is engaged in rice milling

and oil milling. I understand there is a proposal for the manufacture of boards from wastepaper and straw. The possibilities of the manufacture of paper are also being investigated. A Bengalee syndicate has got concession for growing sugarcane and for manufacturing sugar. The Maharaja of Cooch Behar takes an intelligent and sympathetic interest in the industrial development now planned; and he is ably assisted by his Chief Minister who has a versatility of administrative experience.

Meantime, the State is fortunate in having escaped the ravages of the recent rice famine. The Government of the State took a strong attitude in this matter and took all possible steps to ensure proper supply to its subjects. The State is fortunate secondly in the booming conditions that prevail for tobacco. Cooch Behar grows a special kind of tobacco which is particularly strong in flavour. What used to be sold in the old days as Burma cheroots were no doubt made in Burma; but they were made out of the tobacco grown in Cooch Behar and imported from Cooch Behar into Burma. Since the invasion of Burma by the enemy, the Cooch Behar tobacco-grower has had no outlet for his crop. But the State has been exploring various avenues for finding a market for this tobacco, and the present position is that demand for Cooch Behar tobacco especially for products in which tobacco with strong flavour is required, is so great that the price has gone up a thousand per cent. This has meant great

prosperity to agriculture in Cooch Behar. At the same time, the Central Government will also be sharing in this prosperity as most of the excise duty levied by the State on tobacco is to be passed on to the Centre.

Looking at the heady growth of new concerns and the phenomenal prosperity of old concerns in States, one comes to the conclusion that this kind of anomaly cannot continue for long. For my part, I am fully in agreement with Sir Jeremy Raisman when he asks for uniformity of fiscal policy between British India and Indian India. But this problem is too complicated to be dealt with easily in the difficult conditions of war. Meantime, whatever may be done or may not be done, it is certainly necessary, from the point of view of inflation, to take all measures, however drastic they may be, to prevent the machinery of Indian States being used for tax evasion purposes. The Indian States are as much interested as British India in the controlling and checking of inflation. It is, therefore, incumbent upon States to co-operate with British India in all steps designed to check tax evasion. In this connection, I would like to make a suggestion. It is only a man of the calibre and experience of Mr. K. M. Panikkar who can study this question in all its facets in the shortest time and propose remedies of the most effective kind. It is urgent and imperative to deal with the problem of inflation not only in British India but also in the States, and also in relation to the question of British India vis-a-vis Indian States. The services of Mr. Panikkar must be requisitioned for tackling the anti-inflationary measures from the point of view of Indian States.

The Budget session of the Central Legislative Assembly has had more than one heartening feature, not the least being the combination of the Congress and the Muslim League Parties to throw out the Finance Bill. Not that the Finance Bill deserved to be thrown out; but in the special conditions of our political life today, one has to take the apparently meaningless position that the merits of the Finance Bill are utterly irrelevant to the Assembly's verdict on it. Why, even Sir Jeremy Raisman, who is directly concerned with the fate of the Finance Bill, almost welcomed the Assembly's action; for, he preferred to regard the 'ad hoc' union of the League and the Congress as the precursor of a permanent union between the two parties and his being relieved, as a result, of his none too pleasant duties. Sir Jeremy's speech on the Assembly's vote was exemplary in its tone, and the sentiments underlying it. And if one is stung by his emphasis on the negative purposes of the union, one should also note the ring of sincerity in Sir Jeremy's wish that the Congress and the League will follow up this almost fortuitous and sterile combination with a deliberate and fruitful one. I know there are some who believe that all senior British officials in India are anti-Indian and Sir Jeremy is far from being an exception to that rule. If financial policy and actual achievements in the financial sphere are the true test of the Finance Member's feelings to India, then Sir Jeremy's record leaves no room for notable difference of opinion. In fact, I have challenged one, who has been very adversely critical of Sir Jeremy's actions,

to send this journal a contribution entitled, "If I were the Finance Member." Of course, I insisted, the circumstances in which Sir Jeremy is placed should be fully taken into account—there is nothing gained by drafting the edicts of a dictatorship in finance. With me, agreement with the Finance Member of the Government of India is the exception and by no means the rule; and in the case of Sir Jeremy's administration, too, instances of disagreement are not lacking. But if I were asked whether any one else could have done better or whether Sir Jeremy was ever lacking in ability or passion in the advocacy of the Indian case before H.M.G., I should unhesitatingly say, "No."

It is somewhat distressing to me, therefore, to find Sir Jeremy's composure somewhat shaken in the later stages of this session. It is distressing in more than one way. For one thing, I would not like one who is capable of the reply Sir Jeremy gave to the vote on the Finance Bill to be said to have become agitated or have lost his temper. For another, I am not happy that the Assembly has shown no sign of appreciation of the good that Sir Jeremy has succeeded, against odds, in doing to this country. Neither the Financial Settlement, which allows the accumulation of our sterling reserves, nor the promise of our having a biggish dollar account would have been possible with a Finance Member less devoted to this country than Sir Jeremy. Opposition members, trained only in tirades against all government officials, forget the acts of justice due to individual personalities. Is Sir Jeremy embittered by this omission? I like to think that his self composure is too stable to be easily affected.

The appointment of Lord Catto to the Governorship of the Bank of England should tickle Calcutta's pride. Mr. Montagu Norman's rule over the Bank and the City has been so long and so eventful that people shied at the very question of finding a suitable successor for him. In the days of the tripartite pact between France and Britain and the U.S.A. about the stabilisation of international currencies, Mr. Montagu Norman had become even more mystic and mighty in the eyes of people than formerly; and he was deemed to be irreplaceable. That the successor should be found in a former denizen of Clive Street is something that evokes pardonable feelings of parochial pride. Lord Catto was associated with Sir David Yule when Pierpont Morgans first acquired the Andrew Yule interests but stipulated that Sir David should make periodical visits to Calcutta to see all was well. The association has its advantages in that Mr. Catto (as he was then) imbibed the Yule tradition in business. His rise since has been phenomenal. And Calcutta can pride itself that it has made its contribution to the great arbiters of international finance.

Indeed, when one comes to think of it, the increasing domination of the Anglo-Indian element in the British Government and government circles is now a feature of British public life. At the very head of the Government is Mr. Churchill, who has seen service at Bangalore. Mr. Amery, the Secretary of State for India, was born in India. Not the least valuable part of

the experience of Sir John Anderson, who is to-day considered the ablest administrator in Britain, is his Governorship of Bengal. Another valued member of the Government is Sir James Grigg whom India will not easily forget. And now Lord Catto is the Governor of the Bank of England. Did it take two centuries to forge the link between India and Britain? I fancy—and "fancy" is another word for thinking which is not only wishful but also imaginative—that this link between India and Britain, which is now detrimental to the former, would soon change to some thing which will be vastly advantageous to both countries. I am thinking of the link which the Bombay Plan, when it gets into stride will form between the two countries. At present, it is not a little advantage that so many leaders of public opinion in Britain have fairly accurate ideas of economic conditions in India and the lines on which her betterment can be sought. Time was when there was hardly any one in Britain who could claim to have studied India's problems with any care or attention. Vague generalisations passed for accurate appraisement. Ideas on economic questions were, so to say, deducted from political prejudices and predilections. If the Bombay Plan had been published but ten years ago, there would have been in Britain a chorus of contemptuous disapproval. There would have been hardly any one even among those who had worked in India, who could judge the proposals in relation to our economic needs and aspirations. And in this matter, there was little or no difference between officials and non-officials. The non-officials had their offices in Clive Street and the offices in Writers' Buildings—that was all. Even to-day, the first reactions of the British press to the publication of the Bombay Plan were, so to say, the conditioned reflexes of olden times. "The Economist", of all papers, poured scorn on the idea of industrialisation at the expense, as it thought of agriculture. The comment was both surprising and distressing. For, I have always had the greatest respect for this London journal. It has always been well-informed, open-minded and, though somewhat austere in its adherence to economic theory, is capable of a broad empiricism which is the only sound basis of worth while economic thought. Reading those comments of "The Economist", I was inclined to dub them almost malevolent. But "The Economist" quickly went back on its comments, after receipt of the full text, and more than made amends. "The New Statesman and Nation", though it is sceptic of our ability to avoid foreign borrowing, describes the Plan as workmanlike and wishes it godspeed. The London correspondent of the Hindu has followed up these comments in the British press with a bunch of interviews with a number of British economists. G.D.H. Cole, Maurice Dobb, Vera Anstey and Dr. Mann have been interviewed and there is a heartening evidence of goodwill for the Bombay Plan. There is thus a parallel movement in Britain and India towards making the Bombay Plan the basis of a policy enjoying the support of both countries and their governments. Sir George Schuster whose understanding of the Indian problem has a few special streaks of insight has cited the need to work the Bombay Plan as another argument for the establishment of a National Government. Talk of National Government sends me racing up another broad boulevard of wishful thinking. I check my naturally buoyant optimism when I read in some of

the Delhi papers that C. R. was behind the adhoc union of the Congress and the League parties over the Finance Bill, that he is pressing his gains to score another point over Jinnah and that Gandhiji is to be brought in touch with the Working

Committee. That is the means by which beggars become riders. But the growing support for the Bombay Plan is a comparatively hard fact. British industry, I believe, is not likely to despise the tangi-

(From Our Correspondent)

New Delhi, April 10.

AUTHORITATIVE preliminary estimates indicate that the damage to the rabi crop by the recent unseasonal hailstorm and rains will affect the total yield to the extent feared earlier and that even now the expected harvest should see the country through if there is no further unforeseen damage to the crop. The U. P. Governor has most emphatically allayed the fears of famine conditions entertained in some of the worst hit areas. A severe hailstorm did terrible damage at certain places, but "the areas concerned were so restricted in comparison to the vast area that escaped that it could be said with safety that the effect on the total foodgrain supply was infinitesimal, well under half of one per cent". Surveying the total damage, the Governor expected that the wheat crop would not be more than two annas below a normal of a 16-anna crop. The barley crop which was most important in the east of the province and which was reaped earlier, had suffered more damage, and in this case the crop might be four annas or so below a normal crop. Gram had suffered more severely, and in this case the damage might be taken at six annas below a normal crop. Exact figures of area were not yet available, and increases in area under gram, barley and mixed crops might reduce the deficit. The total wheat crop for the Punjab and the United Provinces is, however, still expected to be larger than in 1941-42. The Delhi province has comparatively suffered less than some areas of Eastern U. P. and Western Punjab. The rains have benefited the sugar crop but damaged the mango crop.

As expected the Government at the last moment decided to drop the bitterly resented proposal to increase the railway fares. The announcement of the decision on the last day of the budget session was greeted with cheers in the Assembly. The total impression of the session was the Opposition's complete disapproval of the Government's political and economic policies. The Government suffered reverse after reverse and lost as many as 11 divisions. The temporary Congress-League coalition inside the House which worked fairly smoothly throughout the session gave some cause for real concern to the Government and showed the large measure of agreement between the two largest political groups in the country. The Council of State concluded its budget session last Thursday. Mr. P. N. Saprú's resolution recommending immediate steps to secure the withdrawal of regulations restricting the entry of Indian immigrants into East Africa, elicited assurances from the Government that it would pursue the matter with "the utmost vigour and vigilance". The Government had not accepted the matter as a 'fait accompli'. The Government also promised to consider the proposal to appoint an agent in East Africa to look after the interests of Indian nationals there. The Government had already obtained an assurance that the provision regarding two year's absence would be administered with due regard to the merits of each case and to the fact that war conditions and shipping difficulties made delay in return to the colonies inevitable. The Council also approved of the U.N.R.R.A. Agreement. The Commerce Member did not agree

to the suggestion that India's representatives should be elected by the legislature. There was a marked feeling in the house that discrimination between whites and browns' was being practised under the guise of the agreement. As Mr. Hossain Imam pointed out; whereas even small countries like New Zealand found a place on the Supply Council, India had no place there. In the Financial Control Committee countries like Greece and Mexico had a place, but not India".

I understand that the Government of India intend to extend the textile price control to exports to the Middle East and African countries. At present the export prices are much higher than those prevailing in the home market. The Government's plea, of course, is that they want to control export prices and prevent excessive profiteering in order to preserve these markets for Indian textiles in the postwar period, though it is not exactly known how far the Middle East Supply Organisation is responsible in persuading the Indian Government to institute such control. As far as is known here the Export Advisory Council of the Commerce Department and the Export Committee of the Textile Control Board do not agree on the issue. The Indian Textile Industry's view seems to be that India should not be prevented from making monopoly profits in foreign markets now and build up adequate reserves for postwar competition to capture these markets. Their plea is that by merely selling cheap now these markets won't be guaranteed to India in the postwar period. It is understood that the Government will keep the Industry's view point before it while fixing export prices which are likely to be higher than the retail prices in the home market. Moreover as the purpose of control would be lost if middlemen are allowed to indulge in profiteering in the importing countries, the Middle East Supply Organisation is contemplating internal price control measures in the countries

concerned. India's annual exports at present amount to 500 million yards.

Details are now available of the preliminary survey so far undertaken by the Bhoré Health Survey and Development Committee. The Committee has already received replies to its comprehensive questionnaire that the Provincial Government through them has so far been little response from individuals. War-time conditions prevent the Committee from investigating on the spot what has been achieved in this sphere by other more advanced countries like Russia and the United States. The Committee is now splitting up into four groups to tour the various parts of the country, including one group to know all industrial centres. Several ad hoc committees of experts have already been at work and collected valuable data.

There is a proposal here to rename the Education, Health and Lands Department as Agriculture and Development Department. It is also intended to create a separate department of Agriculture and to devote greater attention to agricultural development in the postwar places now under consideration.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, April 12.

LAST week's event was the 17th session of the All-India Women's Conference meeting in Bombay after 14 years. There were spirited speeches but singularly enough Mrs. Sarojini Naidu made none. The President spoke on the food crisis, legal reforms, sex equality, and the re-employment of women underground in mines. The last was described as an act perpetrated against intense national feeling in violation of an international agreement. Mining interests will certainly find the summary judgment disturbing after the explanations advanced by many. The All-India Women's Conference has many interests, and its political views to-day are fairly precise. Mrs. Chattopadhyaya, the new President, is conscious of its politics and desirous of freedom for both men and women. Male visitors to the conference made speeches about women's role now and afterwards. Mr. B. J. Wadia spoke of the limited progress of female education, and Sir S. S. Patkar said that female uplift would follow the attainment of communal unity. All want the women's movement to go on, and its work during the famine received honourable mention in both the report and the speeches made. There has been no desire to challenge men and the All-India Women's Conference spoke little about votes or taking office when it is known that all this has been secured in advance of the biggest reforms to come.

A marked improvement in the cloth market before the conference about textile supplies and distribution may create the impression that difficulties are at an end. Cotton is in a bad way but buyers of cloth are keener on supplies. Prices are at the controlled level, and buying before the New Year in fair volume has created the feeling that war news from Burma has not got much effect. Control arrangements are not encountering difficulty and the suppression of the black market promised at present has encouraged upcountry demand. Stocks of fancy goods are said to be small and business restricted but better farm income in 1942-43 especially in the Punjab must help mills to sell goods easily. Sir Victor Sassoon was decidedly optimistic about the future of the Bombay industry when he said on March 29 that in spite of higher taxation and a reduced gross profit, a steady dividend policy is to be pursued by mills and the reduction in profit would only lead to a reduction in amount placed to reserve. The assurance that mill shares would be less speculative and taxation lighter during the post-war boom has not helped the share market to fight the depression that spread from Calcutta.

New banks are shaping well and the Exchange Bank of India and Africa attracted Rs. 123 lakhs of deposits in its first year. It has set up seven branches and the loss in the first year on the operations is so small as to sustain optimism. Mr. F. C. Sajun addressing the shareholders said that in East Africa the Bank had been promised the help of Barclays D.C.O. and in Ceylon the Bank of Ceylon was to be Agent. More branches including one at Calcutta are promised. Progress made since the statutory report is to be

reckoned by the increase in accounts from 911 to 1410 and the increase in deposits from Rs. 47 lakhs to Rs. 123 lakhs subscribed and paid-up capital has risen steadily since July last and the ten months' progress is substantial in every direction.

From price control and compulsory purchase the Government of Bombay has moved on to control of crops and compulsory directions to agriculturists. This is all connected with food policy for Bombay remains a deficit area and it is necessary to check growing of cash crops. This decision may create confidence in oilseeds markets and in the cotton market where prices have been raised by intervention. Encouragement to the farmer now takes several forms. Remission of irrigation dues as well as revenue is probable, and guarantee of purchase at fair prices has been given. The limitation of U. S. agricultural policy should not be overlooked in assessing the changeover to compulsion. The Defence Rules cover agriculture and distribution of seed, crop procurement etc, put Government in the food business from start to finish. There are other promises of rewards for teachers helping in the food drive, but the main idea is to bring in the best land under non-food crops for food crops. Regional self-sufficiency has taken long in coming but Bombay's example when copied widely means that scarcity and high prices would vanish together and export crops because of restrictions would command better prices. All this means much for linseed and groundnuts markets in the future.

A letter from Sir Purshottamdas Thakurdas to the paper suggests that more should be done to fight inflation. The Finance Member said that more staff is wanted for the Income-tax Department for price control and for changes in jurisdiction. The frankness is commended at the same time as it is suggested that the Government is not justified in carrying on price control which puts temptation in the way of many. Reference is made to the States' part in the fight against inflation. The Nawab of Bhopal has corrected the Finance Member as to the help given by the States in preventing profiteering, hoard-

ing and other symptoms of inflation. But more is expected of the Indian States and the Viceroy is expected to demand full assistance from the Princes for the purposes of counter inflation. The Finance Member defined the conditions for effective control and means must be found for securing them according to Sir Purshottamdas Thakurdas.

Cotton prices still bumping near the bottom created doubts and defeatism. Government buying at the decline has been welcomed but spot cotton is in poor demand whereas eagerness for East African cotton is in evidence. Millowners are perturbed by the slump which is different from the recovery in bullion. What is promised in regard to jute is required for cotton. There is price control for manufactures of cotton as well as jute but the increase in cotton cultivation this year is the real cause. The fourth crop forecast indicated that in spite of mills taking over four million bales a year there would be a surplus and the decline beginning in March led to pleas that the trade could not handle the situation when transport was better and the crop came on the market.

MANAGING DIRECTOR H. DATTA

CALCUTTA COMMERCIAL BANK LTD

15, CLIVE STREET, CALCUTTA

South India

(From Our Correspondent)

Madras, April 12.

Short rationing in most places, and starvation in other places with the inevitable consequence of a high death rate and epidemics, a small minority reaping the benefit of the Government's price control policy, lack of a constructive industrial policy, a low labour standard and lack of transport facilities on the one side and sound financial position in the Province on the other were features of the 5th year of a most destructive war which has now crossed the Eastern frontier of India. This is the gist of Rao Bahadur C. Gopal Menon's presidential address to the 34th Annual General Meeting of the Southern India Chamber of Commerce held in the first week of this month. The food situation would not at all have become uncontrollable and famine would not have stalked the land if the Government had not neglected Indian agriculture in the years after world war I. Various projects that were awaiting execution were postponed and measures calculated to throw cultivation of food crops into disavowal were allowed to have free play. A price control policy which helps consumers in the United Kingdom, America and the Middle East countries was harmful and a great injustice to Indian producers. The Government's industrial policy was indeed deplorable. Neither the large scale industries nor the cottage industries received any encouragement from the Government. Another factor closely connected with the economic life of a nation is transport and the situation in this sphere is far from satisfactory. The war has further curtailed the amenities available and the Government's contribution was in the form of dismantling of hundreds of miles of railways and cancellation of many passenger, and goods trains. The absence of indigenous industries for the production of locomotives and automobiles and ships has made the country helpless. The Budget estimates recently published by the Madras Government disclosed a huge surplus of Rs. 6½ crores and the President said the tax payer should receive some benefit. The financial relations of local bodies in the province with the Provincial Government needs revision as the position is pretty bad. Rao Bahadur Gopal Menon welcomed the 15 year plan and made a fervent plea for the heartiest cooperation of the people and Government. India will have to join an international monetary system and she should have the utmost freedom to utilise her foreign credit in the best possible manner and in the best interest of India.

The report on the administration of the Madras Fisheries Department for 1942-43 is now available. Refined shark liver oil amounting to 18,642 gallons was produced at the Government oil factory, Calicut, last year. The fresh-water biological station established at Chetput, Madras under the Rural Pisciculture subsidised by the Imperial Council of Agricultural Research continued to work satisfactorily under the research officer recruited for the purpose. Valuable observations of the breeding habits and developments of Gourami were made during the year. A special officer has been appointed to organise and supervise deep-sea fishing operations, and a scheme for developing fisheries in the deltaic portion of the Kistna District was also sanctioned during the year.

Recently there had been much talk about the plans for the postwar development of roads in the presidency. The local branch of the Indian Roads and Transport Development Association had made some recommendations to the Madras Government. Sir Hugh Hood, Advisor to the Governor, in a talk here referred to the plan for road development that was being worked out and said the plan when ready would cost the government a pretty good sum.

It seems the proposal to levy a tax on agricultural income has been shelved for the present. It may be mentioned here that there had been talks of bringing agricultural incomes also under the operation of the tax system, and the Government had not come to a decision for a long time. It is now said the Government have come to the conclusion that a tax on agricultural incomes will put the agriculturists and farmers to undue hardships as the land revenue as levied at present is more than a tax.

An amendment to the general sales tax published for eliciting public opinion has become law with a slight change as regards the levy of tax on bullion and specie. The proposal to withdraw exemption on sales of bullion and specie did not meet with support from the public, and bullion merchants complained that the proposed measure if enforced would deal a deathblow to the entire trade in the province. A press note says that the Government are still considering the criticisms as regards the levy of tax on sales of bullion and specie and hence have not made any change affecting them. With regard to the changes proposed for the levy of tax on turnovers the Government state they have noted the criticisms and find no valid grounds for changing the original proposal.

Speakers at the annual educational conference of the Madras Teachers' Guild characterised the Sargent Scheme of educational reconstruction as truly national and exhorted the people to study and examine the scheme and clarify their attitude to it. The President of the Guild said that for the first time in the history of Indo-British connection an educational scheme aimed at universal, compulsory and free education for all between the ages of 6 and 14 has been evolved. With a few improvements such as speeding up the pace of progress envisaged the scheme can be made really national. The scheme deserves the support of the teaching profession and steps should be taken to implement the scheme without loss of time. Another speaker said the Sargent scheme provided the foundation upon which an efficient system of public instruction suited to the needs and circumstances of this country could effectively be erected.

Pilgrims to the famous Balaji shrine on the Tirumalai Hill need not take the trouble of negotiating the long, steep and arduous steps that were the only means of reaching the temple as a pucca metalled road has been opened, last week. There have been many proposals in the past for opening a motorable road, a funicular or rope railway but all schemes fell through. But in 1940 a scheme to construct a road was taken up and after obtaining the necessary sanctions in 1942 the work started. Now the road is completed at a cost of Rs. 6 lakhs. The road is 11 miles and 3 furlongs long and is 27 feet wide with a 18 foot metal strip in the middle. The Committee of the Devasthanam propose to run a motor service for the convenience of pilgrims. The road connects Tirupathi which is at the foot of the hills with the shrine which is about 2,800 ft. high and is a great boon to the tens of thousands of pilgrims who visit the temple all the year round.

EAST INDIA FUND

Receipts for week ending 6th April - Rs. 14,591
Total to date - Rs. 1,14,67,569

Contributions may be sent for the general purposes of the fund or earmarked for the following specific charities:—

1. H. E. The Governor of Bengal's War Purposes Fund for Amenities for Troops.
2. King George's Fund for Sailors.

(FROM OUR CORRESPONDENT)

Karachi, April 7.

To talk about the future of Sind has become not only a fashion but also a fad. We had recently a glut of speeches about the glorious vista of industrial and agricultural prosperity that looms before this once-blighted province and from the Premier down to an ordinary broker, everyone has had his say. To that orchestra has been added the weighty utterance of H. E. Sir Hugh Dow who knows this province and its problems better than a Cook's guide.

First His Excellency dispelled the prevalent illusion that Sukkur Barrage debt was hanging like millstone round the neck of this province, in his address to the Karachi Chamber of Commerce. "While I am entirely in accord with the satisfaction that you have expressed and which my government feel, at the arrangement under which Sind will, by the payment of a lump sum and the surrender of its annual subsidy, free itself from the Sukkur Barrage debt, I cannot allow to pass altogether without comment, your statement that Sind had hitherto been handicapped by the price she had to pay for the Sukkur Barrage. The plain truth is that from the moment the construction of Lloyd Barrage and its canals was decided upon, it has brought nothing but increasing prosperity to Sind. Practically none of the money spent on this scheme came from the pockets of the people of Sind or from the pockets in the Bombay presidency. Almost the whole of the capital cost of the scheme was advanced by the Government of India. Repayment of this amount has been made only out of the assets which the scheme has produced. The land revenue in the Barrage command rose from 57 lakhs before 1932 to 171 lakhs in 1941-42. The repayment programme worked out by Sir Otto Niemeyer which was due to start in 1942-43 has never in fact operated because the net receipts of the system, even in a year affected by floods, have been so large that far more than the fixed instalment of 75 lakhs due under the Award have been repaid; in fact, the receipts have been so large this year that, together with the use of part of the other monies at the disposal of the Sind Government, it has been possible to repay the entire difference of £9 lakhs between the outstanding debt and the capitalised value of the subvention."

Sir Hugh Dow also referred to the ambitious road construction programme for the post-war period in Sind. The authorities had in mind the construction of 4,000 miles of metalled or cement concrete roads and about 6,000 miles of improved earth roads, as against the present mileage of 669 miles of metalled roads and 690 miles of improved earth roads.

His excellency further said that Karachi would not lose its importance as the aerial gateway of India for air transport from the west. The plans for post-war civil aviation include international air services which will cross India west to east from Karachi to Calcutta and from north to the south from Karachi to Colombo.

Mr. J. H. Blackwell, Chairman of the Karachi Chamber of Commerce, in his address to the Chamber referred to several problems which Sind has to face in the post-war

period. He said: "In few provinces is there more scope for the beneficent work of reconstruction than in Sind with its large desert areas and backward rural population."

Referring to the price control plans, Mr. Blackwell criticised the working of the anti-hoarding and anti-profiteering ordinance and hopes that it would be suitably amended.

Prices of wheat and wheat products were increased throughout Sind with effect from April 3. Wholesale price of wheat which had been Rs. 8 per maund for the whole of the year has been raised by government to Rs. 9-8 per maund (Rs. 9-13 per maund with "bordana"), throughout the province except in the rationed area in Karachi. This marks an increase of Rs. 1-8 per maund. Government have also fixed the maximum selling price of gram at Rs. 7-10 per maund in producing areas with effect from April 3, 1944. There has been a corresponding rise in the wholesale price of barley also, which now sells at Rs. 7-11 per maund.

It is believed that with considerable stocks, added to which will be the new crop, Sind will be able to spare 15 to 20 lakh bags of wheat for export during the year. At the prices now fixed for wheat, the cost value of the new crop would be of the order of Rs. 8 crores or thereabouts.

There is considerable commotion among the consumers at this steep rise in prices. The pre-war price of wheat used to be Rs. 2 per maund in the Punjab and Sind, but this was considered to be remunerative, the adequate price being Rs. 2-8 as per maund. Taking into consideration the increased cost of production, the cost of wheat should be Rs. 3 per maund the government can double the price and fix it at Rs. 6 per maund. This

increase of Rs. 3 per maund means Rs. 75 crores of rupees to the agriculturist for wheat alone. The Sind Government by increasing the price has thrown a sop to the zamindars and their move is a pawn in the political chessboard, designed to placate opposition.

Mr. Sukhdev Udhasdas, the newly elected President of the Indian Merchants' Association, has made a statement making spirited protest against the revised prices fixed for wheat and certain other food grains by the Sind Government. He says: "The announcement of revised prices for the new 1943-1944 crop has come like a bolt from the blue, and is one more instance of the vacillating control policy of the government and shows why the people are losing faith in it. On the one hand, government have been proclaiming from every platform that they want to keep down the prices of all the essential commodities and on the other, they have increased the prices, at least so far as this province goes, by as much as Rs. 2-8 per maund, without any ostensible justification. The government generally blames the middle man for fleecing the poor consumer and in order to save him, they have assumed the traders' role without their responsibility and the usual risk of loss. The government are for all practical purposes the sole buyers of wheat and other food grains through their agents. Private trading is severely restricted. It is, therefore, quite likely that the price of harvested wheat may go down and remain round about floor rate fixed by Government at Rs. 7-8 per maund, Rs. 9-8 being the statutory control rate in all consuming places except Karachi.

Recently, the Government of Sind wanted large stocks of wheat at the control rate of Rs. 7 in the mofussil and Rs. 8 at Karachi. Large quantities of such requisitioned wheat are still remaining with them. Now that the prices have been revised with effect from

(Continued from page 727)
ble advantage of a predetermined plan of economic development in India, a plan which can lead to concrete orders being booked even while the war is on for delivery within a year or so of the signing of the peace. That will be a definite advantage which British manufacturers can have over their rivals in the extremely competitive conditions that will follow soon after the armistice. I look to this as much as to other factors to turn the Bombay Plan from the aspiration which it is to a concrete endeavour. Such a link between Britain and India will prove far stronger than the links provided in the Statute of Westminster.

As usual, I end the week's gossip on a personal note, this time to wish Mr. T. C. Kapur well in his new job with the Bom-

bay Mutual. Kapur is one of those tried workers in insurance who cannot change their profession, even if they wish to. I know he considered a number of propositions, as soon as his severance from Lakshmi was a certainty. From starting a new business all on his own to management of new banks or old, he ran his mind over a number of alternatives. Kapur should have known that former rivals are better judges of one's worth. Congrats to Bombay Mutual.

Mr. K. M. Naik's speech at the Indian Life Offices Association was just a little too late for notice in the last week's issue of 'Indian Finance'. Rather, 'Indian Finance' was early, as last week's issue was brought out on Thursday instead of Saturday. On the calendar now-a-days, red

figures are a little too sparse. Easter comes and goes without any relief to honest workers; and a fortunate slip had the effect of adding to our slack days. But I have digressed. Mr. Naik's address is just the authoritative summing up of the views of Indian insurance which one would expect from one of his standing in the field. A quiet and competent worker and a good student of public affairs, Mr. Naik has afforded a plain and forceful statement of the special problems of Indian insurance in the present phase of its development. As one may expect, some of the unexpected and disappointing results of the Insurance Act are cited in full. And Mr. Naik justly urges that not all amendments can be made to wait on the full retreat of the Jap and the Nazi.

"EAVESDROPPER."

maybe you know this already

If you have been on a journey by train recently, you need not read this announcement. You will find it only an unhappy history of your own experiences. You will know what it is like trying to get a conveyance to any of the main stations. You know how booking office windows are crowded these days, and what a struggle it is to get tickets. And you

Travel Less

will have argued with porters who demand exorbitant payment for their work. And you remember how difficult it was to find space in the crowded train, and having found space, to KEEP IT! Even food at Railway stations is not what it used to be. These difficulties made your journey full of trouble and discomfort. It was hardly worth it, was it? For women especially, travel is unpleasant because of the congestion.

Remember next time you travel—it isn't the Railways' fault. They have important work to do. They have to transport huge quantities of food-grains, fuel, cloth and other civil supplies. Be wise—stay at home.

ISSUED BY THE RAILWAY BOARD

AAA 999

British Export Trade : Banker's Criticism

Special for "Indian Finance"

London, By Cable.

Commercial and Banking circles are shocked by the outspoken letter appearing in the Glasgow Herald signed "Former Overseas British Banker" severely criticising Britain's export trade which he predicts cannot recover until four outstanding mistakes are remedied.

Firstly, he charges that between two wars "the quality of many British exports deteriorated. This was specially noticeable in cloth where gradual deterioration began in 1919 until by the thirties there were mills in eastern Europe producing cloth as good as anything exported from Britain. By 1938 it was difficult to point out any British-made article in general demand which was definitely superior to similar articles made in other countries."

Second complaint was the refusal of British manufacturers to study the wishes of foreign buyers alleging as a striking example the refusal of motorcar manufacturers to make cars suitable for Continental roads wherefore British cars after 20 years' efforts are still unsaleable in the big Continental market.

Thirdly, the author deploras as pig-headed obstinacy, Britain's refusal to adopt a decimal currency, and the metric system for weights and measures and distances, declaring that foreign importers increasingly resent the labour involved in converting British invoices into terms of weights and measures almost universally used abroad.

Finally, the banker charges that the clerical work of exporting firms shows a severe deterioration in efficiency. Mistakes in documents are now common whereas upto 1914 such mistakes were most rare. He suggests that while some may be due to deterioration in the education available to clerks the main cause is that executives now-a-days refuse to bother themselves with checking up export documents. "Many men in responsible positions refuse to work hard enough—some work only four full days out of seven".

The letter promises to cause a stormy controversy in commercial circles.

The appointment of Lord Catto as Governor of the Bank of England is well received in the press and financial circles. He is regarded as an able businessman, especially familiar, firstly, with problems

of export trade, secondly, with the Treasury's long-term financial policies inasmuch as the middle of 1940 he has been one of the Treasury's financial advisers along with Lord Keynes. On the whole, the appointment is regarded as evidence that

the authorities in selecting Lord Catto are thinking more about the Bank's policy in connection with export trade than about the policy of domestic full employment which is associated with the name of Lord Keynes.

Resume of Commodity Markets

The fixation of export price for both jute and jute manufactures by a Control Order issued last week has been without any striking effect as the I.J.M.A. schedule is not departed from. Jute and jute manufactures for a week show no signs of being influenced directly by war news. A steadier feeling is manifest in all commodity markets except cotton, and a minor consequence of Assam news has been a fairly pronounced rise in the average prices of tea sold for internal consumption. Before and after Easter commodity markets showed distinctly the reflex effects of the bullion boom in the making. There was considerable diversion of funds into the bullion markets as will be noted from the curtailment of the Treasury bill offer to Rs. 2 crores.

There has been little activity in oilseeds and scanty arrivals at the ports support firm if idle markets in linseed and groundnuts alike.

There is evidence of better feeling in regard to piecegoods with seasonal upcountry demand creating conditions satisfactory to the mills as well as Control authorities. Export quotas for textile centres and improved transport and distribution arrangements have been promised by a meeting of the Textile Control Board which reviewed malpractices and decided that the cure for the most disturbing features is prompt enlargement of cloth supply. More cloth for Bengal where agriculturists are reluctant to sell surplus paddy to Government has been offered, and the drop in prices of both cotton and cotton manufactures compared with prices a year ago shows that price control has succeeded in one sphere.

An announcement concerning paddy and rice prices in Bengal as from April 15th is meant to ease the position of the consumer and encourage the agriculturist with stocks to sell out before a further decline in prices takes place. Prices fixed in September last have been lowered more than once to bring about a free market with stable prices. Food grain prices in force from April in the Punjab show that wheat now is quoted over double the rate fixed in the first period of control.

The crisis in the cotton market passed with the intervention of the Government as a buyer of Broach. The moral effect of purchases at or around the floor prices is reckoned considerable, and if mills have the assurance as to coal supplies demanded by Sir V. N. Chandvarkar on the score of cloth being essential for war and peace requirements there may be a prompt revival of buying by mills of spot cotton. This occasioned the difficulty noted at the beginning of March in the market. The trade helped in a way for the futures contract was held and the conventional premium for July delivery was preserved. The general sentiment in the trade has improved since and the continuous decline has been arrested partly on reports of crop damage in the Punjab and partly on reports of a steady market in Karachi.

Consignment of hides in the country hereafter cannot move consignments of hides by

rail without securing a permit as the Hides Movement (by rail) Control order 1944 came into force on April 10. It is said the restriction will stimulate the production of better types of leather in India by canalising the movement of hides towards centres equipped with modern methods of tanning and it will enable departmental officers concerned to plan the issue of permits so that unnecessary and double transport of hides could be avoided. For administrative convenience India has been divided into six zones namely, Lahore, Agra, Cawnpore, Bombay, Calcutta and Madras. The last named zone has been exempted from the operation of the order and no permit is necessary for the export of hides from Madras to any place in India. With regard to the other zones, zonal officers have been appointed. In these five zones while movement of hides from any place within the zone to the zonal centre will be free, permits have to be obtained for the movement of hides to any place either within the zone or outside it. There will be no difficulty in obtaining permits for the export of such varieties of hides, the export of which outside India is not prohibited.

April 3, such requisitioned wheat will evidently be disposed of at a profit of Rs. 2-8 per maund.

Seth Sukhdev concludes: "I feel that the government owe it to the public to explain as to how this policy of increasing the prices of essential food grains conforms to the anti-inflationary policy of the government and how it will help them in keeping down the prices and the cost of living and with what justification the government can brush aside the clamour for increased wages."

The beautiful valley of Kashmir claimed the life of the whole Bolton family. Mr. J. C. Bolton, the Finance Secretary of Sind, was a very able and conscientious officer and much of the credit for the successful working of commodity control was due to his initiative and drive. At the Food Conferences held at Delhi, he created a great impression and he was recently appointed to the Centre as Adviser for Postwar Reconstruction. While proceeding on a holiday to Kashmir prior to taking up his new job he met with tragedy, his car plunging into the river. Besides Mr. Bolton, his three children also died. Mrs. Bolton was injured and she is admitted into a Srinagar hospital.

JUTE

Calcutta, April 13.

Weather news and war news have like the previous report as to cultivators' indifference to jute kept the jute market fairly firm. The Central Government's interest in the acreage decision extending to minimum and maximum prices for both jute and jute manufactures is attested by the issue of an Order fixing prices for export. The order has been without effect on the market on Wednesday for it is known that prices for the home market are to be fixed separately. The price schedules in force from July last are, in the main, kept unchanged, but prices for pucca bales varying from Rs. 63 to 125 will let the exporter have his choice of grades.

Business this week has been very restricted. Mills retain interest in loose jute to some extent and are looking beyond the present supply to the new crop. The maximum prices have been maintained for Middles and Bottoms. Export business was small and the only business reported on Saturday was in Dundee Daisee 2/3 at Rs. 76 for ready shipment. Since mottusil prices are high, and new crop prospects are obscure the raw jute market looks steadier than before. Arrivals have been small in the last two months, and that too helps to keep prices steady without sellers showing eagerness. In the past week business has been somewhat sparse with jute manufactures firm, and that has helped jute to remain steady if idle.

Whether the war on the order would affect crop prospects in Assam and East Bengal is hardly obvious at present, and if mill consumption for some months must be regulated by the coal position, there is one factor to cancel out another. Rates in the week past show hardly any change, but loose jute quotations are lower by 4 annas per maund for certain descriptions. Report of limited savings in the Eastern districts should keep prices at levels previously noted, though any variation in control prices for the internal market might lead to a small rise in view of the fact that rice and paddy prices in the Province are still above the rates fixed by the Bengal Government.

JUTE MANUFACTURES

Since the control order leaves prices of jute manufactures more or less unchanged except for 10½ oz hessian and B Twills, and the I.J.M.A.'s own price list stands the course of prices for export goods is determined for one whole year. Since home consumption accounts for only a minor proportion of production the price schedule to be issued may have no visible effect on the level of prices. While production difficulties owing to fuel shortage are obvious the increase in mill stocks during March may limit improvement. The mills' stock of goods held on Government account was reduced in March but the increase recorded in the Association's sales for the last week of March points to the continuance of favourable conditions.

The daily market reports spoke of rates held at the ceiling, restricted business, sellers' reserve, and mills' unwillingness to sell ahead. The reported cutting into Dundee stocks of jute may help the hessian market here in the future, but export prices for sacking, hessian and heavy goods are announced though the port will remain disturbing factors for both the hessian and hessian market.

During Easter 11 porters quoted at Rs. 28-8 and 9 porters at Rs. 21-10 and rates for heavy goods are unchanged on the week. With mills still engaged on the big American order, the local free supply of manufactures will be limited and apprehension as to market tendency in jute may manifest. The firmer the delay in fixing control prices for the internal market. Main factor remains the acceptance of the I.J.M.A. schedule proving itself to help out the U.S.A. after the big order gave consideration to all factors, and prices ruling now are certainly higher than a year ago in respect of jute.

COTTON

Calcutta, April 13.

The cotton market reports irregular fluctuations though rates for the hedge contract from day to day show no striking change in

Bombay. Steadiness in bullion has not helped cotton as mill demand is noted to be poor in Bombay and except for improvement based on Government intervention, the market has been vulnerable to war news like the stock exchange. Bombay reports frequent selling after early and limited recovery on most days, and if Karachi cotton prices give no help it is because of mills developing great caution as regards cotton. The Textile Control Board's meeting promises improvement in the cloth trade and improved distribution and supply on the basis of quotas for importing provinces, but this has been without effect on the cotton market this week. On Wednesday the rate for Jarilla May stood at Rs. 436 against Rs. 439 on Tuesday. Though arguments as to quality and condition of the 1944 crop recur it is not deemed surprising that prices are at the official minimum when the year's supplies have increased and export trade has diminished.

GOLD

Calcutta, April 13.

Speculative interest is not dormant in the bullion market even after the official threat to deal strictly with bullion operators. War news stimulates buying of gold and the unusual spread between Calcutta and Bombay prices again requires some notice. Between Saturday and Wednesday prices have been unaltered owing to fears of official intervention. Offtake is moderately large owing to the scarce. Calcutta prices for both gold and silver are higher than Bombay though the special activity reported two weeks ago disappeared quickly. The New Year holiday may even encourage buying of bullion as Bombay prices look like hardening. Gold sales have apparently been suspended and profit-taking after the rise has also ended. London and New York report no change on rates but U.S. discussion about the Treasury and gold prices may lead to a revival of bullish fervour, supported by independent interpretation of war news.

SILVER

Calcutta, April 13.

Silver has been very steady though free selling in Bombay was noted at the weekend. Since the bullion boom has been explained and described there is little to say except that investors are partial to bullion which has appreciated quickly in an uncertain period.

The setback in commodity and share markets is favourable to bullion and though reference has been made to the possible suspension of the import duty in order to push silver prices down and encourage imports the U.S. opinion as to lease-lend supply of silver to India has undergone no real change in a year.

The complete isolation of the Indian bullion market accounts for the sudden rise, and the renewed firmness noted up to Wednesday in Bombay. Prices have risen slightly since Saturday in the case of silver, and Calcutta has followed Bombay as usual. Bombay closed steady at 136-12 and Calcutta quoted 137 per 100 tolas.

FOODGRAINS

Calcutta, April 13.

Reduction of rice and paddy prices as from April 15 has been ordered by the Bengal Government which has fixed new ceiling for the trade agriculturists and rice mills. Variations as between surplus and deficit districts remain. Further reduction at a later date is promised in a press note issued this week.

The fixation of wheat prices in the Punjab along with the offer of a guaranteed minimum shared prices fall for any reason has been reported along with damage to the wheat crop in the U.P. Rice prices in the Punjab are fixed at the level ruling in Bengal and food grain prices fixed in the U.P. correspond to the wholesale rates fixed in the two other provinces.

Wheat prices in Sind will be the same as in the Punjab and this should encourage export from the former province to deficit areas. The establishment of uniform maxima is meant to bring scarcity to an end and encourage the Provincial Governments to enforce the Control Order in the interests of a common policy.

Stock Markets to-day and to-morrow:

MACNEILL COAL GROUP RESULTS

CAUTION has been the keynote on most days and operators marked down all active securities on their own interpretation of war news from day to day. The Calcutta market has drawn no encouragement from Bombay sentiment which caused a generally adverse movement in cotton and jute mill shares also. Wide fluctuations restrained buying at the decline up to Friday, but the New Year holiday brought about a reversal of market opinion. Still on the tiptoe for the interim dividend announcement, the market witnessed a brisk rise in Indian Iron and Steel on Friday. The rumours have been checked by more careful reading of news and Mr. Bardoloi's appeal to Assam like Sir P. Joubert's account of what is happening on the border has been examined by bulls, not willing to let bears have their own way for too long. The damage done is likely to be repaired quickly when confidence revives, and there is little to give rise to the belief that the market is sagging since panic is absent. Recovery in jute shares definitely points to a firmer market next week; and meanwhile the news about S.E.A.C. is something to cause an upturn.

While commenting on the results of the coal companies under the Managing Agency of Messrs. Macneill & Co., six months ago, doubts were expressed in these columns as to the development of labour difficulties. Sufficient labour to keep up the raisings in spite of the very great demand for Indian coal has been hard to get. Steps are duly taken by the Government to attract labour to the collieries and inducement is given to the collieries for raising output. Earlier doubts are justified by the latest reports, just received, for the period ended 31st December, 1943. A further fall in labour attendance occurred during the last quarter of 1943, the fall being principally due to the harvesting of a bumper crop. The effect of this has been a relatively low raisings; with the high colliery costs the net profits have been seriously affected. The dividends have all been maintained on the basis of the previous half-year's level with the exception of Dhemo Main Collieries Ltd., where no dividend has been possible, and for the first time in many years a debit balance has been carried forward. Raisings for the whole group in the six months ended December 1943, show a great reduction from 10,62,358 tons to 7,85,100 tons. Despatches have followed the drop being nearly 2 lakhs tons this time to 8,01,275 tons. Stocks too, have come down.

The net profit of the Equitable Coal Company, Limited has dropped considerably to Rs. 3,57,966 from Rs. 6,77,277 in the previous six months ended 30th June, 1943. As the present reserve is sufficient to meet the estimated liability on account of taxation no further amount have been provided for. A sum of Rs. 1,88,702 has been set aside to depreciation against Rs. 1,63,152 while the General Development Reserve is credited only with Rs. 1,00,000 against Rs. 1,50,000 on the last occasion. The dividend has been maintained at Rs. 5 per cent on the ordinary shares and the amount carried forward is Rs. 1,00,288 against Rs. 1,71,212 brought in.

The Mundulpoor Coal Company, Limited has earned a net profit of Rs. 26,744 (after transferring Rs. 15,000 from taxation accounts) against Rs. 23,473 in the previous half-year. A sum of Rs. 11,186 against Rs. 10,362 has been provided for depreciation. The dividend has been maintained at 2½ per cent for the half-year. The amount carried forward is Rs. 12,824 against Rs. 11,400 brought in.

The Hurriladih Coal Company, Limited also has been greatly affected by the labour short-

TAX QUERIES

Arrangement has been made with a Tax Consultant to answer a limited number of tax questions. These, with the relevant answers, will be published in "Indian Finance" which does not, however, take any responsibility for questions or answers. Readers are welcome to refer any practical problems or difficulties which they may experience and otherwise make such use of these facilities as they may. —Editor, I. F.

age, the net profit for the half-year being Rs. 23,178 against Rs. 65,268. For Depreciation a sum of Rs. 20,837 against Rs. 23,213 has been provided while nothing is set aside for taxation against Rs. 18,000 previously. The dividend has been maintained at 2½ per cent and the amount carried forward is Rs. 3,715 against Rs. 21,374 brought in.

In the case of the West Jamuria Coal Company, Limited, the net profit is only Rs. 3,01,966 out of which provision for taxation at Rs. 2,30,000 has been made. The

amount set aside to depreciation is Rs. 12,501 and Rs. 31,337 has been carried forward after meeting the dividend of 7½ per cent recommended by the Directors.

A spectacular expansion in turnover, leading to strengthening of the Reserve position by huge allocations supporting also a higher distribution to shareholders stands out as the feature of the latest balance sheet of the Svadeshi Mills Company, Limited, Bombay. The report covers a period of twelve months ending 31st December, 1943. The figures surpass any recorded so far if the prosperity is no doubt derived from the advantageous conditions prevailing in the cotton textile industry. Sales of cloth, yarn and waste last year, reached a very high level at Rs. 3.14 crores as against Rs. 1.58 crores in 1942 and only Rs. 1.01 crores in 1941. The net profit for 1943, before providing for taxation and depreciation, etc., is Rs. 1,13,70,697 against Rs. 45,17,967 in the previous year representing an increase of more than 250 per cent. The net profit calculated on this basis for the years 1941 and 1940 was Rs. 23,01,941 and Rs. 3,18,412 respectively. More than 70 per cent of the net profit has, however, to be paid by way of taxation at Rs. 84,00,000 against Rs. 30,25,000 previously. The Depreciation Fund has been enhanced by Rs. 5,00,000 against Rs. 4,00,000 while the Reserve Fund has been strengthened by the transfer of a substantial sum of Rs. 13,43,000 against only Rs. 2,50,478 in 1942. After meeting the tax-free cumulative preference dividend at 5 per cent per annum, there has been enough to declare a dividend of Rs. 20 per ordinary share. A bonus of Rs. 15 per share on the ordinary shares in addition has been declared making in all a distribution of Rs. 35 per share against Rs. 25 per share in 1942. The total dividend distribution costs the company Rs. 11,25,000 against Rs. 8,25,000. The amount carried forward is Rs. 55,230 against Rs. 52,533 brought in.

The balance sheet discloses a sound position. Against the paid up capital of Rs. 45 lakhs total Reserve and other Funds stand at Rs. 59 lakhs. There is provision of Rs. 54 lakhs, on the Depreciation Fund against the capital expenditure of Rs. 1.04 crores. Total liquid assets are Rs. 2.19 crores against the balance sheet total of Rs. 3.23 crores.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 14.

UNTIL Friday the Stock Exchange was influenced more by Assam-Burma news than by the intelligence from other theatres of war. Considerable selling was noted in all sections, and buying was limited even after the decline in quotations. Some easiness was caused by the sharp fall in Government securities and the indifferent reports of coal companies issued during the week. As usual, the speculative leaders fluctuated sharply, and the bottom was touched on Monday, when business was transacted up to 2 p.m. only. Indian Iron was as low as Rs. 34-10 and Steel Corporation receded to Rs. 25-12. All jute and coal shares were sharply lower and the bearish sentiment was aggravated by rumours. On Tuesday a steadier feeling was noted with Indian Iron improving to Rs. 35-4. Turnover was limited on most days and the wide fluctuations noted in the case of both investment and speculative counters showed that the holidays had produced a weaker market.
