NOTICE is hereby given that the 7th Ordinary General Meeting of the members of the Company will be held at the Registered Office of the Company, at 61, Harrison Road, Calcutta, on Tuesday, the 5th September, 1944 at 3-30 p.m., for the purposes of receiving the Directors' Report, passing the Audited Accounts and declaring the dividends recommended by the Directors for the half year ended 31st December, 1943, and for transacting any other business of the Company that may be transacted thereat.

The share Transfer Register of the Company will remain closed from 23rd August, 1944 to 5th, September, 1944 both days inclusive.

By order of the Board,
For and on behalf of
BENGAL JUTE MILL CO., LTD.
Soorajmull Nagarmull
Managing Agents.
61, Harrison Road,
Calcutta, 2nd August, 1944.

THIS IS NOT A PROSPECTUS NOR AN INVITATION TO THE PUBLIC FOR SUBSCRIBING TO SHARES, BUT MERELY AN ANNOUNCEMENT.

Consent of the Central Government has been obtained to this issue under Defence of India Rules 94-A. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

NEW CHURULIA COAL CO., LTD.

Authorised Capital - - Rs. 15,00,000
Capital permitted to be issued „ 10,00,000
Issued and Subscribed Capital „ 5,00,000
in 50,000 Ordinary shares of Rs. 10 each fully paid-up

Directors:
1. LALA RAMRATAN GUPTA, M.L.A. (Central) of Cawnpore.
2. G. K. KHEMKA, Esq., of Calcutta.
3. L. R. JOSSE, Esq., of Calcutta.
4. SAMPAT KUMAR MAJEJI, Esq., of Calcutta.

Bankers:
1. THE IMPERIAL BANK OF INDIA
2. THE CENTRAL BANK OF INDIA, LTD.

Registered Office: P-6, KALAKAR STREET, CALCUTTA

The Company has acquired the Colliery properties belonging to the Churulia Coal Co., Ltd., which were worked by Messrs. F. W. Heilgers & Co. The present management have increased the raisings over 2,600 tons per month and steps are being taken to increase raisings substantially in the near future.

ALL THE ISSUED ORDINARY SHARES HAVE BEEN TAKEN UP BY THE DIRECTORS, MANAGING AGENTS AND THEIR FRIENDS.

to Rs. 38-4 and Rs. 32-10 respectively. The quotations at the time of writing, however, are higher at Rs. 39-2 and Rs. 33. *Arthur Butler* improved further to Rs. 25-4, *Braithwaite* changed hands around Rs. 11-8 and *Burn & Co.*, Rs. 403. *Jessop* were rather quiet at Rs. 23-4.

Sugar shares have continued weak with *Balrampur* at Rs. 10, *Carew & Co.*, at Rs. 29-4, *Champdany* at Rs. 43-7 and *Dharbanga Sugar* at Rs. 32-14. *Ramnugger Cane & Sugar* were Rs. 14-4.

In the miscellaneous section, *Burma Corporation* have been sticky at Rs. 4-6 with *Indian Copper* at Rs. 3-3. *B. B. P.* were firm at Rs. 4-9, *Dalmia Cement* were relatively steady at Rs. 18-8 as also *Aluminium Corporation* at Rs. 21-4. *Calcutta Ice* were crossed at Rs. 29 while *Calcutta Tram* improved by 2 points to Rs. 46-14. *Indian National Airways* ordy., were very firm at Rs. 40-6, *Rohtas Industries* at Rs. 38 and *National Rolling Mills* at Rs. 13-4.

(*Continued from page* 314)

which the company has specialised in recent years. The higher production in toilet soaps was mainly due to the Sewri plant which operated throughout the year instead of only a few months as in 1942-43. Sales would have perhaps been higher but for the difficulty in obtaining containers and other packing materials.

The net profit, before providing for taxation and depreciation, for the year is very much higher at Rs. 37,60,159 against Rs. 19,39,388 for 1942-43. A good portion of the increase in earnings, however, is taken up by the provision for taxation which was Rs. 20 lakhs against Rs. 12,89,388. The amount set aside to depreciation is Rs. 5.5 lakhs (Rs. 5 lakhs) while the transfer to the Reserve Fund, being approximately the amount required for compulsory E.P.T. deposit, is Rs. 4.46 lakhs against Rs. 4 lakhs. The dividend is higher at Rs. 3 per share against Rs. 1 per share previously. The amount carried forward is lower at Rs. 31,980 against Rs. 1,76,705 brought in.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. "Whilst no shortage of raw materials was erperienced during the year, periodic shortages of incoming supplies of coal were encountered from time to time, necessitating the lifting of quantities from ground stocks. Labour continued to work satisfactorily, but a shortage did exist until Government commenced to control commodities towards the end of the year, when the position improved. The sale of the Corporation's products continues to come under the Iron & Steel (Control of Distributio) order, 1941."

Uneasy lies
THE HEAD .....

If you are the head of the family, you must be feeling uneasy for the future. There will be so many problems to face and solve. You can at least solve your financial problems by saving while you are earning. Do it now through INSURANCE.

EAST INDIAN RAILWAY

TENDER NOTICE.

Annual Contract Item Costing Over Rs. 8,000 Class I.

Sealed tenders are invited for the following and will be received in the General Manager's Office, E. I. Railway, 105, Clive Street, Calcutta, on 4th October, 1944 at 12 noon.

Tender No. GB10/RI/68 for supply of 1,06,455 Nos. Basket Jhanker or Bamboo or Cane.

Tender form with full particulars can be had from the Controller of Stores' Office, E. I. Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, E. I. Railway, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores direct by money order.

No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's office and then put into the Tender Box outside Deputy General Manager's (Works) room by the tenderer or his representative.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Money has been easy, with interbank call rate being 1/2 percent in Calcutta and ¼ percent in Bombay, nominal. Against Rs. 6 crores of Central treasury bills on offer, applications came to Rs. 14.53 crores. Applications were larger this week and bidding also has been slightly keener. The result is that the average discount rate has declined by 3 pies to 7 annas 7 pies percent per annum. The offer for next week remains unchanged at Rs. 6 crores. The Bengal Government, who came on the market for Rs. 4 crores of three months bills on August 24, excited the interest of bankers to a greater extent than hitherto. Applications came to Rs. 8 crores The average rate at 9 annas per cent per annum was higher than the Central treasury rate by 1 anna 2 pies percent. The Bengal Government were again in the market yesterday for Rs. 5 crores but the results are not available at the time of writing. Assam Treasury Bills for Rs. 1-1/2 crores will be open for tender on September 6.

The returns of the Reserve Bank for the week ended August 25 shows a reduction in active note circulation of Rs. 2.34 crores to Rs. 927 crores. Rupee coin in circulation, however, has increased by Rs. 76.61 lakhs. In the result, notes held in the banking department have risen by Rs. 3.11 crores. Deposits of the Central Government continue the upward trend, the latest figure being Rs. 139.17 crores. Deposits of provincial governments show a sharp jump of Rs. 4.13 crores to Rs. 15.54 crores. Equally sharp is the rise in the deposits of member banks, which stand at Rs. 102.39 crores as against Rs. 93.05 crores. Foreign balances held in the banking department have increased by Rs. 6.87 crores to Rs. 248.79 crores.

The statement of the Imperial Bank for the week ended August 25 shows a rise of nearly Rs. 4½ crores in deposits to Rs. 229.94 crores. There is a slight increase in the investment portfolio and a slight decrease in advances. Cash has risen from Rs. 40.94 crores to Rs. 45.23 crores.

With the approach of the end of the war, the financial problems of the post-war period assume larger importance. The return of the Indian delegates from the Bretton Woods Conference has also served to focus attention on India's financial relations with the rest of the world in general, and Great Britain in particular. Both Sir Shanmukham Chetty and Mr. A. D. Shroff have placed the results of their visit to the U.S.A. plainly before the people. They have not minced words. Mr. Shroff has stated that India has been treated "shabbily" at the Bretton woods Conference. Neither of the two amendments proposed by the Indian Delegation met with any serious consideration. While it is understandable that Britain's obligations of the war period are too big to be included within the scope of the international monetary fund, the same thing cannot be said of the failure of the other delegations to sympathise with the Indian standpoint and the light-hearted obstructionism of some of them. India's lot in the constitution of the Bank is even worse. Her quota has been fixed, not in relation to her industrial and commercial importance, but with an eye to her exclusion from a permanent seat on the Executive. The U.S.A., it is clear now, would not agree to the assignment of two permanent seats to the British Empire. The result is that the Indian delegation returns home with a deep sense of humiliation and unfair treatment alround. The only bright spot, if it can be characterised as such, is the assurance of Lord Keynes that there will be no repudiation of India's sterling assets and that these obligations, scrupulously and honourably made, will be met scrupulously and honourably.

It is to be noted, however, that their experiences at Bretton Woods have not turned the Indian delegation into bitter opponents of India's cooperation with the Monetary Fund. Sir Shanmukham said that the Fund might still have advantages to confer on its members. But the Bretton Woods Conference is not, however, the arbiter of the fate of the Fund. The Indian delegates are of the opinion that the U.S. Congress may not readily ratify the arrangements made at Brettonwoods. And no delegation is committed by reason of its signature to anything more than the correctness of the proceedings. Doubtless, a process of scrutiny by each national legislature has to be gone through. And some significant changes in relative bargaining power or even the merits of the various questions may well occur.

For India, however, the questions relating to the Bank fade into insignificance by the side of the sterling balances which the Bretton Woods Conference refused to consider. Sir Shanmukham and Mr. Shroff have stated that a delegation may be called to London to discuss the question. In fact, the Indian delegation to the U.S.A. was to have proceeded to London for the purpose, except that Lord Keynes would not be present at that time. The country is waiting impatiently for straight talks between India and Britain on this question. Much bad blood has been created by hasty and unwise comments in the British Press. And the Indian public naturally asks why this accommodation should be continued to a country whose respect for obligations is not as it should be. Mr. Shroff raises this question, but confines it to accumulation of sterling in the immediate post-war years. The stage has arrived when the conference between British and Indian delegations cannot be postponed, whatever the duration of the war in Europe.

The exchange market has been steady with some export T.T.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

BOMBAY, Aug. 31.

It has been a comparatively quiet week, for the silver market was firm on Monday only as a result of bear covering. The short position is estimated at 2,000 bars. Forward is quoting Rs. 132. The Reserve Bank sold 200 bars at Rs. 132-5 and above. Tuesday saw heavy profit taking by shroffs in ready caused by poor offtake and forward sagged to Rs. 129-8 influenced by difficulties in railing silver upcountry and German withdrawals. A slightly hardening tendency was noticed at the lower levels, owing to shortage of stock in ready. On Wednesday a strong bull party unloaded 200 bars in the ready market bringing premium down to one rupee. The Reserve Bank sold at Rs. 131 and above. Thanks to resumption of railway traffic in silver offtake is better to-day and the market staged a sudden recovery to Rs. 132 for ready and Rs. 131 for forward. The Reserve Bank sold bars at Rs. 131-12 and above. The undertone was easy.

Forward gold after earlier firmness on Monday as a result of bear covering was freely offered and declined to Rs. 74-13 on Tuesday. The bazar put in no tenders on Monday and Wednesday, but 50.000 tolas at Rs 75-4 were obtained on Tuesday and Thursday. The market is steady at Rs. 75-2 today, the premium on ready being four annas. The average daily offtake is 25,000 tolas.

COTTON

The East India Cotton Association arrived at no conclusion at the meeting held to-day, the Chairman being detained elsewhere. Radical changes in the structure and basis of contract appear to have been proposed. Market circles expect that trading in new crop may not start till another fortnight. The stalemate continues.

Banking During the War

To the survey of industrial profits which was recently attempted in these columns, a review of Indian banking during the period of the war is an apt complement. The former showed that the financial position of Indian industry has been greatly strengthened as a result of its operation during the conditions of the war period. A similar conclusion, were it borne out by facts, in regard to Indian banking will enable an attitude of robust confidence towards the tasks, and the possible trials, of the post-war period. Judging by the figures published by the Reserve Bank in regard to the Scheduled banks and by the balance sheets of a number of important banks, there is little reason to doubt the progress made by Indian banking during the war period, though the conditions in which such progress was made call for a careful scrutiny of its exact significance.

During the war, total deposits of scheduled banks have increased by over Rs. 525 crores, demand and time liabilities on August 18, 1944 being Rs. 765.1 crores against Rs. 236.6 crores on September 1, 1939. In the first two years of the war period, the increase in deposits was not anything spectacular, as expansion of currency was not on a large scale and the impact of the war had not begun to be felt. On August 15 1941, demand liabilities were Rs. 195.17 crores and time liabilities Rs. 104.24 crores. There was a jump to Rs. 296.22 crores in the case of demand liabilities on August 21, 1942 but time liabilities showed a decrease of nearly Rs. 8 crores to Rs. 96.88 crores. It was only after 1942, that is, in the fourth year of the war, that money started to flow into the banks on a large scale and both demand and time liabilities increased at a rate faster than at any time in the history of Indian banking. There is still no sign of a slackening in the rate of increase in deposits of scheduled banks. The following table shows the changes in the resources and position of schedued banks:—

	(in crores) 18.8.44	20.8.43	21.8.42	15.8.41	23.8.40
	Rs.	Rs.	Rs.	Rs.	Rs.
Demand liabilities ..	578.14	438 31	296.22	195.17	151.12
Time liabilities ..	186.96	136.53	96.88	104.24	99.72
Total cash ..	25.69	19.29	11.64	8.93	7.72
Balance with the Reserve Bank ..	92.74	62.02	66.40	36.57	37.07
Advances ..	207.35	143.87	82.81	115.16	120.64
Bills ..	9.48	3.61	1.59	4.39	2.02

The same forces that made for a giddy rise in deposits also made for an increase in the number of banks. While the middle and upper classes increased their deposits with the banks, the big businessmen, whose profits ran into tens of lakhs, turned their minds to the establishment of new banking institutions. New banks under influential and inspiring auspices began to make their appearance and there is still no reason to think that the process is run out. Between 1937 and 1939 there was an increase in the number of scheduled banks from 54 to 61. During the war period the number has increased by 15 to 76. It might be said that the total number of scheduled banks would have been higher but for the war with Japan and the disappearance of Japanese banks from the schedule. One or two leading banks also closed down their business in this country. In the last twelve months 13 banks were included in the schedule of the Reserve Bank, so that the progress in the war period is entirely confined to one year which, may be regarded as the turning point in Indian banking.

Scheduled banks are coming to occupy a more important position as a result of the amalgamation of units among non-scheduled banks and their increase in the paid-up capital to the required minimum. Some of the non-scheduled banks have thus taken advantage of the cheap conditions in the money market. Their ranks have steadily swollen. The Indian banking world is no longer made up of a big five surrounded by a much larger number of pigmies. Average stature has gone up a great deal.

Figures, however, should not be allowed to hide the realities of the position. The progress of banking is to be judged less by the figures of deposits or even profits than by the efficiency with which banks discharge their functions in the national economic life. In the conditions created by war time inflation, it is possible for banking to have all the semblance and none of the reality of progress; and it is necessary to draw attention to some essential qualifications of the tale told by the figures. In the first place, it is necessary to stress that the larger profits are not derived from expansion of the service to industry and trade. As a matter of fact, advances were at a low level during the first four years of the war period. They stood at Rs. 82.81 crores on August 21, 1942 as against Rs. 101.51 crores on September 1, 1939. It was only in 1943 that there was a large increase in advances due in the main, to the higher level of prices. In the latter half of 1944 there was again a greater trade demand; but at no stage was any difficulty experienced in finding the necessary funds. The increase in working capital of banks more than offset the increase in the borrowing programme of either the Central or Provincial Governments or the increase in trade advances and bills.

The following table shows the amounts which banks had for investment in government loans:

	(In crores). 11.8.44	6.8.43	1.9.39
	Rs.	Rs.	Rs.
Deposits ..	764.37	574.16	236.60
Less total cash ..	127.68	73.21	31.87
Less advances & bills	216.21	148.19	105.09
Investments ..	420.48	352.76	99.64

It will be clear from the table above that most of the war finance has been found by inflation and that the large-scale disbursements of the Government on war account came back to the banks to be invested in Government securities. The main source of income of banks was, therefore, the yield of such investments. Total investments of scheduled banks were approximately Rs. 100 crores on September 1, 1939. They had increased to Rs. 350 crores in the middle of 1943 and to Rs. 420 crores in August 1944. It would appear that there has been a slowing down in the rate of increase on investments, because of the large cash balances kept on hand and with the Reserve Bank and the tendency to await further developments. It would not perhaps be wrong to say that at the present moment there is no inclination to put money in long-term loans as in anticipation of a large demand for post-war reconstruction purposes and a likely withdrawal of deposits, banks are very keen to keep a high ratio of cash to deposits. Nevertheless the low rates or no rates allowed to depositors keep bank profits at high levels.

Turning to profits, as remarked above, the main source of income of banks was interest on investments and the place of advances and investments had been reversed. Usually, in peace time advances were twice the amount of investments. At the present moment, however, investments are more than twice the total amount of advances. It is not surprising, therefore, that the increase in profits of banks is not in proportion to the total increase in working capital. The return available on treasury bills, in the last two years especially, has been very low, and it has been necessary to keep a large cash position as the increase was mostly on account of liabilities on current account. The only satisfactory feature to note is that the position of banks have been strengthened to a great extent and that some of the leading institutions recently issued fresh capital on bonus terms to shareholders.

Once the necessary qualifications are made, there is little harm in recognising that the effect of the war on Indian Banking has been on the whole to strengthen it. It is, after all, no reflection on Indian banks that, in the war period with its control over every market and the undue domination of government over trade and industry, they have failed to effect any genuine increase in the volume of advance. It is sufficient that they have made the most of the large inflow of funds and have increased the soundness of their position. Another favourable development of this period is that the Reserve Bank has slowly improved the quality of its supervision over Scheduled banks. The weak units, which in less favourable circumstances might prove the starting point of runs and other disasters, are being eliminated. The larger resources of banks may also be expected to lead to an improvement in the quality of banking personnel commensurate with the bigger responsibilities they will have to bear in the post war period. It is reasonable to expect that efforts will be made, as soon as the war will be over, to secure for Indian banks their proper place in exchange banking.

Death Duties and Tax Reform

Interest in death duties has once again been revived by the judgment of the Federal Court. It started, so far as the present period is concerned, with the statement by the Finance Member in his Budget speech that the Government of India had "under active consideration the possibility of an estate duty on non-agricultural property" and that proposals would be brought before the legislature shortly. Whether the Federal Legislature under the present constitution is competent to levy an estate duty had to be settled; and, though under section 104 of the Government of India Act, the Governor-General possesses powers to issue a notification to include an item in the lists of the Seventh Schedule to the Government of India Act, the matter was refered to the Federal Court, since the Joint Parliamentary Committee recommended that the opinion of the Federal Court should be secured. By a majority consisting of the Chief Justice and Justice Varadachariar the Court has

Better living

Better education

Better physique

NEW RICHES

for all to share

More education, better health and physique are the first essentials to the people of India in order that our nation may claim the respect due to its 40 crores of population. These benefits are the first fruits of a a better standard of living which must be achieved through Indian Industry.

We are at the beginning of the new age of prosperity. Our industries have created new employment directly by wages paid to workers in factories and indirectly by their increasing demand for power, water and transport – the means to equip the masses with new and increased buying power. Coal mines, hydro-electric schemes, water works, roads and railways have to be improved as the industrial development advances and these should absorb a good proportion of India's millions, thereby giving India a higher purchasing power.

J. K. Industries with their interests spread through so many different fields of manufacturing are a powerful driving force within the wheel of progress. It is the daily work of this group to develop the producing and the earning power of their countrymen gradually towards higher and higher levels.

J. K. INDUSTRIES

INDIA'S RECONSTRUCTION BY PRODUCTION IN INDIA

JK. 84. A.

now decided that the Federal Legislature cannot pass a law levying estate duty, while Justice Zafrulla has declined to give his opinion.

While the constitutional aspect of the duty may present some difficulties, the economic and political implications of levying death duties in this country have to be studied carefully. That all progressive countries favour the duties and that theoretically the levy is justified on the principles of ability, certainty and even convenience cannot be doubted. As the responsibility of the State increases it has to seek fresh sources of revenue and the demands of democracy require that the tax system should be so constructed as to enable the state to meet the obligations which a democratic society imposes on it. In its search for the best method of squeezing the tax-payer the Government should not go by the single test of ability, viz. incomes, but should also recognise capital, savings and even expenditure as criteria for taxation. Income-tax, however progressively devised, cannot achieve what taxes on capital can do. After all there is a limit beyond which income-tax cannot be pushed without defeating its purpose. In the case of death duties not only are they more fruitful, but their effects on the motive power of earning and acquisition are far less. The need for greater revenues felt by the Provinces was sought to be met by an imposition of death duties in 1938. Sir Allan Lloyd was appointed as a Special Officer to investigate the problem; but the opposition from the provinces was so severe that the idea was dropped for the time being. Now the Finance Member has taken up the question on the ground that conditions created by the war justify the imposition of an estate duty. Enormous private fortunes have been made not always legitimately and a Government committed to huge schemes of post-war planning have a right to take a share from them. It is also urged that the Indian tax system which was regressive before the war should no longer be allowed to continue without some overhauling; and since inflation and war effort have accelerated the tendency of the rich becoming richer the fiscal armoury of India should be strengthened with an effective weapon like Death Duties. Development services have been woefully neglected in the Provinces and since the slump the position was indeed very unsatisfactory. Civilian requirements have been further starved for the past five years under war exigencies and the Provinces require enormous resources to get on with their prosperity drives. It is pointed out, therefore, that, more than ever before, the death duties are now justified by circumstances and fiscal needs. It may be recalled that the Taxation Enquiry Committee which studied the question of applying death duties to Indian conditions stated that the inheritance laws of the Hindus and the Muslims rendered impossible other forms of death duties than the estate duty. The estate duty now proposed covers only non-agricultural property and as such is considered feasible.

But those who are enthusiastic about the productivity of death duties in India are apt to overlook certain complications besides what is suggested by the view that only a national Government can get the people to agree to pay new taxes on a large scale. That, however, unduly widens the scope of discussion. What is important is that if enormous fortunes have been made during the war the upper strata of the agricultural classes are no exception. Inequality of incomes in the agricultural setting is as glaring, if not more, than the gap that exists among other classes. The question must be raised whether it is fair to exempt agricultural property, though only on grounds of legal complications. The exemption of agricultural property would be tantamount to perpetuating inequality of incomes in one sector of national economy, while disallowing it in another; and such a policy would be a sure incentive for a flight of capital into agricultural property. While the flow of capital to industries may be arrested by the duties, they would at the same stroke enhance land values and this would precisely accelerate the concentration of land in the hands of the bigger landowners—a tendency which no one would welcome. Further, are we sure that the exemption of agricultural property would be relished by the provinces predominantly industrial? While the need for expanding resources is urgent in all provinces, the death duties will fall unequally on the different areas in India and this would add new complication when the receipts from this tax measure are sought to be equitably distributed among the Provinces. Then again, the Indian States which constitute a major problem in constitutional questions are no less vital in the matters relating to tax reform. The proposed estate duty may or may not be adopted by the States and if they do not fall in line with British India, the levy would be a special hardship on the people of British India and as the duties would increase the flow of capital into the States for purposes of evasion. It is also feared in some circles that, if the Government discriminate in favour of agricultural property, a premium would be placed on the instinct of hoarding at a time when it should be discouraged by all possible means. If the incidence of the tax on the different communities is studied, it would be seen to be extremely likely that opposition would be encountered from quarters politically well entrenched at present.

All this can only go to show the need for extreme circumspection in devising death duties and, what is more, the need for prompt achievement of certain measures of reform both in the constitution and in the social life of the country. If certain undesirable consequences are to be avoided, the imposition of death duties must be preceded by understanding between the Centre and the Provinces and British India and the States. It is also clear that increase of public revenue without a corresponding increase of popular control over the Government will lead to innumerable difficulties and complications. Inheritance laws, and customs, even sentiments, have to undergo a marked change; and this depends, to some extent at least, on the advent of a national Government. But it is necessary to recognise that the absence of ideal conditions for the levy of death duties is no argument for their indefinite postponement. Death duties, long recognised to be practicable and desirable, are now urgent. Their urgency is not less on grounds of sentimental regard for social justice than on the need for larger revenue in a period of colossal state expenditure on schemes of national development.

Editorial Notes

Aid to Industry

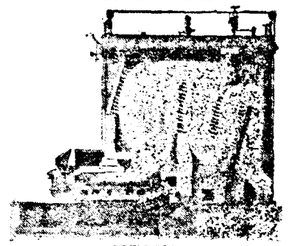
Plans to extend the scope of State aid to industry are apparently limited to Madras but the attempt to get beyond the old State aid to industry programme there is significant. Provision of guarantees, and even of capital is contemplated by the Government which is ready to associate private enterprise with it in plans for factories. The creation of a separate financing agency is apparently ruled out though the placing of debentures on behalf of any new enterprise receiving State aid will certainly call for more than a formal guarantee such as is offered to a co-operative land mortgage bank. Where the plans published differ is in regard to the announcement that even in cases where capital is provided by the State the management may be private. Obviously certain safeguards are required in such cases in the public interest, and managing agency conditions must be cast in a different mould. The encouragement of private investment by State guarantee would not differ in principle from the provision of subsidies but subsidies and tariffs lie outside the Provincial sphere. When and where the encouragement will begin can only be guessed at present but Madras has set aside funds for reconstruction and a future Ministry might examine prospects relating to agriculture and industry. Direct participation in regard to capital and management as in the Indian States appears also probable, and one consequence of such intervention might be the improvement of labour conditions. Though rationalisation would be difficult to secure, if Provincial development plans run their own course, the assurance of support in other forms than small loans strictly repayable in a fixed term is of interest to those who stand by planning from above. The use of State funds for setting up new factories certainly has precedents but it may be noted that the Madras Government accepts the view that there are limits to nationalisation. The new policy might be easily linked up with the advice from the Centre made available to industrialists and the control of capital issues, should the latter survive the war.

Distress in Bihar

North Bihar's misfortunes form the subject of conferences and notices so that a request that its condition should receive particular attention as in 1934 is not unexpected. The Bihar Government's admission that epidemics in four districts are being dealt with has been preceded by reports as to the lack of earning power caused by disease. Relief measures apart from the despatch of doctors have been accepted as an imperative obligation by others besides officials already. Mortality running into thousands has already been recorded. What Bihar's Government is doing against cholera and malaria at present as in regard to enforcement of price control has been described. Nothing has been said this year as to the vagaries of the rivers though the early onset of malaria is clearly connected with the rivers rather than the monsoon. How far Bihar's principal industry, sugar, will suffer from the distress prevailing cannot be indicated though shortage of cane or labour is *prima facie* a depressant for the sugar mills in North Bihar in the coming season. Bihar has prohibited export of grain and the Province, according to official accounts, has enough food. But Bihar even more than Bengal has a surplus of field labourers and overpopulation in Bihar was noticed in the very first statistical account. Though it would be far-fetched to call the epidemics, the late or drastic remedy, for what may be called the precarious balance between the soil and the population, it is clear that the conditions require special reforms at some time. The provision of medicines and doctors for the emergency has been undertaken by the Government as well as various committees. But a first-hand account of what has come or is going to come has not been offered though the main threat to India has disappeared. If Tirhut becomes a deficit area, the Gangetic plain will cease to be self-sufficient, and the only important rural industry might suffer. But fairly quick recovery in the past militates against natural pessimism in this case.

Wasted Wheat

Reference to Argentina as the obvious source of wheat imports this year finds support in the report that U. S. shortage of food grain was met by imports from the Argentine. In May world wheat prospects seemed worse than obscure while demand particularly in liberated Europe was expected to expand. The course of war certainly increases the strain on Canadian supplies and the current year will leave the U.S.A. with little surplus. Distillers have no grain and the U.S.A. forced to manufacture synthetic rubber for war purposes is compelled to use wheat for alcohol. These facts again deserve notice in the light of requests for wheat imports into India on the recommended scale. Reports of another cargo being landed in India are admittedly of less importance than the report of the Imperial Economic Committee's correspondent about the Argentine surplus and its disposal in recent months. Reluctance to trade with Argentina can only be attributed to the Anglo-American declaration against the Farrell Government. But ideology has no place in business; and Argentina is apparently committed to the purchase of British railway undertakings. That rail receipts would go up, if Argentine grain finds a market abroad is a legitimate inference and British stockholders as well as Indian consumers would benefit. Argentine wheat prices though decreed in advance incidentally are lower than Canadian and U. S. prices this year. The big shipping difficulty will, however, remain but return cargoes are assured, and the benefits to the jute mill industry here would be considerable in case wheat is taken from the Grain Board. The problem of blocked balances will perhaps however modify Argentine willingness to export wheat or maize to countries other than South Africa. But the part of the dollar pool that India still commands could be applied to draw essential imports. Whatever encouragement the UNRRA draws from the Argentine need not limit Indian purchases as this year's wheat supply in India is shorter than expected. The use of wheat spoilt for want of a market for fuel in Argentina will be generally deplored though India cannot conceivably offer coal in return for wheat.



Security and its Price

From currency to defence is a natural transition but only three Powers are represented at the great house in Dumbarton Oaks. Mr. Hull alone has outlined both means and ends for making peace permanent. The choice, as in the past, is between marching and rotting. And the Soviet Union by accepting the need for an organisation for collective security has gone back on its own withdrawal from the League along with earlier rebels like Germany and Italy. The only points to examine are whether the smaller, simpler League of Nations would organise an international force and, at the same time, find a use for the I.L.O. and the organisations attached to the old League of Nations. There are specialist agencies that can look after disarmament, postwar relief, and carry out arbitration in the event of dispute between Governments or persons. All the machinery is perforce idle, and how and when they are to be adapted, is perhaps the biggest issue connected with the peace settlement. That security is merely connected with the disposal of assets lost and regained is a general presumption to which support is again lent by declarations against future aggressors.

Small nations are not greatly excited by the prospect of the addition to U. S. island bases which is demanded by Senators anxious to see that America gets something out of the war. The small nations found the League rule as to unanimity enough to help them to limit their liabilities. The great nations going in for an organisation with unlimited

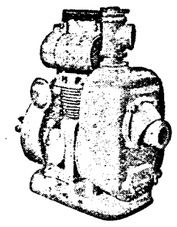
liability, have naturally thought of their own interests as successfully reconciled as in the guarantee to Iran last year. The projected organisation does not promise permanent neutrality to such nations as may seek it, nor does it seek to underwrite the peace settlement, new frontiers and all. It is clear that Colonial claims like those of Italy, and distinct regional problems, e.g., in the Balkans, will have to be settled by negotiation at some other stage. A small permanent peace Congress in session for years may not be unwelcome since the Versailles settlement was made in a hurry. The obligations of a permanent peace organisation can be guessed, but organisation implies that. Defence expenditure in the States directly concerned would remain high. Beneficiaries may decline to contribute though well aware of the advantages. Whether the organisation would follow the Oslo Pact in regard to future economic arrangements cannot be indicated, but it is evident that China would gain distinctly from the latest conference's acceptance of something more than the principle of the 'Open Door'. Restitution of lost territory was promised last year, but Russian neutrality in the Far East still marks off Soviet policy from the Anglo-American attitude to Japan. Should the conference produce any surprise, it may be limited to the Maritime provinces of Siberia. Imperial concern over Japan's emergency is the appropriate reaction to the tripartite talks.

Landlord Claims

Landlords in India do not lack organisation and a conference in Calcutta last week dwelt on their rights and privileges. The defence of landlordism did not go beyond the usual claim for a reward for landlord's loyalty. How far Indian agriculture can progress without changes in tenure was left unexamined though arguments against the agricultural income-tax introduced in Bengal left out the rehabilitation programme in hand. Since the Floud Commission advised that the existing proprietors can be bought out the claim for a declaration of policy as to State purchase and compensation appears logical. Since the Bengal Assembly discussed this year the position of landlords, in and after the famine, the question as to non-representation of either Bengal or her landlords on the Famine Enquiry Commission appears superfluous. Little was said during the conference as to the landlords' own part in providing and distributing food through resolutions against laws and ordinances were accepted.

The fear of agrarian socialism that was voiced in more than one resolution appears to be closely related to the arguments for immediate constitutional changes in India. It is noteworthy that energetic defence of landlordism appears at the time of the Congress-League pourparlers. Though taxes and cesses have been criticised in detail, famine relief policy attacked, and changes in personal law deprecated, the keynote of the conference was the insistence on rights bestowed by the Permanent Settlement, not on the possibility of landlords co-operating in the plan for increasing agricultural production. When and where cultivation extends, the division of the unearned increment is simple, but how landlords would advance the interests of agriculture was not indicated either at the conference or in the earlier proceedings of the Food Advisory Council though estate farming in India, developed on the right lines, offers possibilities, just as landlords' co-operation in regard to irrigation and afforestation.



Co-belligerent's Claim

Though Rumania has not signed on as one of the United Nations the co-belligerent's status essential for working the passage out has been quickly acquired. Russia's offer has been accepted by the Government that broke Marshal Antonescu. The recovery of Transylvania from Hungary is the only war aim of Rumania's new coalition cabinet.

IRC.3752

Monarchy however has struck deeper roots than in other countries and King Michael's second reign has begun well in the midst of air battles. That Germany will lose valuable oilfields and lose control of the Danube is not the only conclusion to be drawn. Germany has nothing to export at present and if her trade supremacy belongs to the past, the Rumanians in deep distress for four years have little to offer to their Allies, past or present. The experience of inflation and indebtedness during the dictatorship may not be different from what many other countries have known but the essential point is that the trouble mostly began when Transylvania was ceded to Hungary under protest. Revolution means more than a Magyar minority problem, for, Germans are found in some strength in Transylvania. The armistice ensures Russian support against Hungary's former revisionist ambitions which was probably the only object of Prince Stirbey's mission to Cairo. The return of Rumania to the Russian side may mean that the former Little Entente when revived in any form might turn to Russia instead of France. It looks as if Balkan federation plans would be quickly dismissed and this may not be quite in accord with Turkish expectations. The German hold on the Balkans weakened by Russian entry into Rumania which becomes precarious after Bulgaria's own effort to get out of the war. How much of Germany's foreign investments are lost and how much by way of blocked balances are lost are not known but the collapse of the New Order means that trade through the Berlin clearing belongs to history. The arrangements devised by Dr. Funk in 1940 cannot continue owing to *force majeure*. The successful Rumanian rebellion against the New Order was a bull point for most markets though not for the Indian bullion market. As a confirmed borrower abroad Rumania's record was very indifferent, but leading oil issues have responded to Bucharest announcements because of the hope that compensation may be available. And the recent Anglo-American agreement over past and present concessions may be the means of rehabilitating Europe's second largest producer, who happens to be the world's sixth producer of oil.

Seeds of Plenty

Price control applies to seedsmen for anti-hoarding and anti-profiteering measures apply to seeds of European vegetables grown in India. The Industries and Civil Supplies Department fixed prices last month for seeds per lb and per ounce in the case of eighteen vegetables. In the list of acclimatised vegetables published last month the lordly asparagus has no place but the more valuable carrot gets in. A note to the familiar schedule adds that for a quantity exceeding ½ lb the purchase price would be calculated per lb. In the case of cabbage seed the authorised maximum price is Rs. 50 per lb or Rs. 3/8 per ounce. Market garden reactions are not known but the remedy applied through seedsmen is an indirect and long-range remedy, though wholly conventional. From the last it appears as if Brussels sprouts (the political vegetable) rates higher than its near relative, the cabbage or the excluded or unscheduled cauliflour. In point of price peas and beans take the lowest place in the list apparently provided for dealers and gardeners too. To suggest that control of seeds is meant to promote kitchen gardens is superfluous. Cold weather results are to be looked for, not in the front page but in the backyard, though seedsmen exhorting amateurs to dig for victory do not put controlled prices before the public

Strikes in America

Strikes still occur in the U.S.A. in spite of the Smith-Connally Act and the Philadelphia transport dispute now ended was, in its main features, similar to those reported in 1943. An official review of disputes stresses the fact that hardly two million workers were involved in the 3,752 strikes reported in the U.S.A. Only, 15 percent of the working time available was lost through the loss of 13½ million man-days. Owing to the claim for higher wages against the War Labour Board's concessions the coal mining industry suffered most. Congress intervened late but the miners certainly won. The strikes certainly grew fewer, and federal intervention grew more effective, after the War Labour Disputes Act was passed. Other U.S. industries besides iron and steel suffered from enforced idleness in 1943. The only industry in which production materially suffered was coal-mining in which 4.25 percent of the available working time was lost. The principal issue was the increase in wages and in 31 percent of the strikes in 1943 the workers were successful and in 26 percent of the strikes were partially successful. Not many strikes turned on recognition of the Labour Unions. The effective intervention of the Federal agencies in labour disputes distinguished 1943 from 1937—a year in which the political ambitions of American labour were in the forefront. The support of Labour for the Fourth Term may affect the number and duration of strikes but re-conversion is apparently causing unexpected friction in places

Referendum Result

The rejection of the Government's proposals by the Australian electorate on August 17-18 has been reported. Mr. Curtin asked that the Commonwealth Government should retain its emergency powers for five years after the war to deal with Australia's post-war problems. Outside South Australia and Victoria, the majority of voters dissented from the proposal. Actually, the electorate was asked to vote the whole ticket, and the wartime referendum was not limited as in Canada to a specific issue like conscription for oversea service. The Leader of the Opposition has assumed that the Labour Government's wartime controls are not relished by the majority of electors, but one must dwell rather on the constitutional aspect. Suspicion of further federal aggrandisement at the expense of the States underlies the verdict. If the Labour Party in its conferences accepted the referendum proposals the majority of electors in four States apparently out-numbered the loyal Labour voters. It is doubtful if the New South Wales coal strikes influenced the result for, what was really sought was peremptory amendment of the Australian constitution in favour of the party in power.

Commonwealth-State relations are not to be disturbed though the power to amend the Commonwealth constitution is not reserved to the Imperial Parliament at present. The failure of Mr. Curtin to secure the States' total support in advance for the post-war programme does not imply that the plans themselves will suffer any change, for the same issue might figure in the next general election. If the States have lost taxing powers by arrangement, they have been freed of liability for debt. What is however the dominant issue was not the right to interfere, but the preservation of the States' residuary powers under the Constitution. Better than a decision of the highest court of law is the electoral decision as to the limits of federal authority. States' rights under a written constitution have figured this year in the discussion as to the soldiers' ballot and the poll tax payment that is a qualification for Negro voters in the U.S.A.; and the States' rights were not modified. The other conclusion to be drawn is that the States expect to carry out their own plans for post-war stabilisation on the basis of the political balance of power so that Tasmania, for instance, would not adopt the same measures as Queensland.

The Burden of Defence

The Viceroy in his letter to Mahatma Gandhi indicated that the Indo-British financial settlement cannot be disturbed at present as the agreement reached in 1940 was truly negotiated. After the conclusion of the operations on the N. E. frontier this month it may be asked what bearing the settlement has on the current year's defence charges since the apportionment of expenditure for the defence of Assam and the tributary State of Manipur is unlikely. The earlier war in the Arakan was certainly distinguishable as an expeditionary force entered enemy-occupied territory both in 1942 and 1943 and the cost of victory as in Tunisia fell on the British-taxpayer. Since British war expenditure this year remains more or less stationary despite the wider range of military activity in Europe and Asia, it looks as if the joint war measures formula alone will be applied to India. Whether India can stand a defence budget of Rs. 300 crores per annum is perhaps not the only relevant issue apart from the denial of control of military affairs to Indian politicians. The case for the war gift to Britain on the part of India has not been formally presented. That quite a large proportion of Indian troops are serving abroad while importation of foreign forces continues cannot, however, be turned into an argument for undue

CCB

economy. What is perhaps relevant is the modification of ceilings fixed for the expanded defence forces. A bigger air force and navy are probably inescapable consequences of the war but how far civil aviation and ship-building capacity should be diverted to the ends of peace is highly important. Since a demand that commercial and other opportunities in reconquered Burma should be strictly limited, it is perhaps necessary to adopt the view that the fourth or fifth Burmese war should be treated as exclusively a British operation in regard to its financing. But British naval protection for India from April 1942 is an offsetting consideration. That protection has clearly been helpful to the maintenance of export trade here in 1943-44 at the level of the preceding year. If the Indian contribution to the Navy Estimates is a trifle the average argument as to the scrupulous observance of the formula does not seem very secure.

Shipping Progress

Countrycraft have come back into favour for carriage of goods on the west coast and to a lesser degree on the east coast. On the west coast sailing vessels are laid up during the monsoon months. Details as to the craft in use and crews are available. The majority of lascars are Muslims from the west coast, from Malabar to Kathiawar, though profit-sharing is known the crew usually get pay plus food and a bonus for the safe landing of goods. There were about 500 country vessels in 1942 on the west coast but 100 were lost in the storm of May 1943. The losses have been made good by new craft built in 1942-43. Over 200 new sailing vessels were built on the West Coast and the Supply Department took over 5 dhows and 3 brigs with a capacity of 2000 tons to carry timber from Malabar to Bombay. Shipping agents deal with the cargo offered by traders also to look after trading and also the provisioning of vessels for the voyage. Insurance is also arranged for. The procedure as to recognition of agents was settled last year and country craft organisation under the Controller of Shipping took a definite form last year. Priorities are settled by the Controller as also timings and routes. Delay was avoided at ports by the new organisation which arranged for the transport of cotton, foodgrains, salt, timber, cement and tiles. There are at present a score of recognised agents who deal with the tenders of native sailing vessels for the loading and carriage of cargoes. The Bombay Steam Navigation Company tendered for the transport of foodgrains on the West Coast and it is expected that the company will carry by countrycraft 30,000 tons. Port committees to handle the freight are contemplated. Through booking for ports on railways is also in vogue, and Punjab cotton is drawn by Bombay from Karachi either by countrycraft or steamers arranged for by the Bombay Steam Navigation Company. The limit for coastal voyages on the east coast is Vizagapatam. Coastal craft have been used as an alternative means of transport. Rice consigned from Masulipatam to Madras is to be carried by countrycraft according to an agreement reached with boat-owners.

THE CRY OF DISTRESS

Despite the very great efforts of the Railways; despite the co-operation of the agriculturists, of townspeople and of business men alike, there are still people in this country whose very lives are in peril.

Some of them suffer from food shortage, some from lack of other necessities of life. Mercifully, their number is getting less and less, but there are still many and their cry must not go unanswered. The Railways' first obligation is to them. The distribution of food and civil supplies must take precedence over passenger travel. So, if your accommodation is crowded—if tickets are difficult to buy—if travelling is uncomfortable, bear in mind those poor people. Appreciate the Railways' difficulties, and if you want to do your bit, stay at home and travel only when you must.

Travel Less

ISSUED BY THE RAILWAY BOARD

AAA 672

Application will be made in due course to the Calcutta Stock Exchange Association for quotation of the Company's shares.

(A copy of this prospectus has been filed with the Registrar of Joint-stosk Companies, Bengal).

The subscription list opens on 4th September, 1944 and closes on 11th September, 1944.

"Consent of the Central Government has been obtained to this Issue under Defence of India Rule 94-A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them".

PROSPECTUS OF

INDIA COLLECTIVE FARMS LTD.

(Incorporated under the Indian Companies Act).

AUTHORISED AND ISSUED CAPITAL - Rs. 25,00,000

Divided into :—

10,000 six percent tax-free Cumulative Participating Preference shares of Rs. 100 each - - - - Rs. 10,00,000

1,50,000 Ordinary Shares of Rs. 10 each - - - ,, 15,00,000

In respect of Preference shares Rs. 50 per share is payable on application and Rs. 50 on allotment. In respect of Ordinary shares, Rs. 5 is payable on application, and Rs. 5 on allotment. Applications for less than 5 Preference or 50 Ordinary shares will not be entertained.

The Preference shares, are in the first instance, entitled to a dividend of 6 per cent free of tax. Thereafter, dividend upto 16 per cent free of tax, is payable on Ordinary shares. Such portion of the balance, if any, as is available for dividend after the aforesaid declaration is distributable as to one-fourth to Preference shares and three-fourths to Ordinary shares.

PRESENT ISSUE.

50,000 fully paid-up Ordinary shares will be allotted to the Vendor as part consideration; the directors and their friends have agreed to take up 25,000 Ordinary and 5,000 Preference shares. Applications are now invited from the public for 5,000 Preference shares and 75,000 Ordinary shares.

This Company has been formed to carry out the objects set out in detail in the Memorandum of Association (which is attached hereto and forms part hereof), and, in particular, to purchase and develop a large tract of agricultural land and to found colonies for settlers who desire to dwell in environs which combine modern amenities of urban life with the peace and health-giving conditions of rural life and to promote agriculture and agricultural produce.

The Company has been fortunate in securing a plot of land in one block situated within 66 miles from Calcutta measuring approximately 7,500 bighas or 2,500 acres and it will be developing the first large-scale undertaking in collective farming in India. The present conditions with regard to the nation's diet stress the importance of the undertaking in connection not only with "Grow More Food" campaign but with the need for more nutritive and better balanced food for all times.

To carry out these objectives of more food and better food, the India Collective Farms, Ltd., proposes to develop, on scientific lines, (*a*) fishery, (*b*) paddy, (*c*) vegetables, (*d*) sugarcane, (*e*) fruits, (*f*) dairy, (*g*) poultry and (*h*) canning industry. There is also scope for timber growing and forest produce.

As the farm contains 1,000 bighas (or 330 acres) of Beels (Canal), the problem of irrigation does not present any difficulty.

This Farm has been appointed one of the five agencies to grow and supply vegetables to the Military. In respect of this contract, the conditions on which the Farm will supply the vegetables provide for priorities being available for tractors, trucks, artificial manure, imported seeds, etc., at controlled rates. The Company, therefore, starts with intiial advantages of considerable importance.

The immediate development will, therefore, be connected with vegetable cultivation so as to cater not only for the Military contract but also for civilian consumption for which demand during the last two years has been insistent.

On the basis that 2,000 bighas or 650 acres will be so prepared as to make a vegetables supply available from this cold weather, the preparation on a conservative basis, (i.e., on the assumption of sale-prices of vegetables being considerably less than those ruling now and in the last cold weather) show a net profit of over Rs. 6 lakhs. It will, therefore, be not necessary to wait for a distribution of dividend until the Farm is fully developed as it is hoped it will be possible, out of the profits arising from the contract in hand and from the sales in the open market, to consider payment of dividend after making provision for taxes and for dividend equalization fund at rates more than the minimum dividends prescribed of 6 and 16 per cent tax free on Preference and Ordinary shares respectively.

The prospects of peace-time are better as, with the all round development, the value of the property will appreciate and colonisation with development of agriculture will produce a satisfactory income.

The most important point to note is that the income of the Farm is not subject to Excess Profits Tax nor to Corporation Tax or Super-tax. The agricultural income-tax, when it becomes payable, will be only As. 2-6 in the rupee.

It may be added that, as the other aspects of farming are developed in addition to vegetables, the income of the Farm will be much greater.

In view of the present high prices of fish, milk, dairy products, paddy, fruits, poultry, eggs, etc., the Farm will, it may be noted, be starting its career in the most advantageous circumstances and under the most propitious conditions.

The Farm has been in particular, fortunate in securing a Military contract at the very beginning of its career, and, with the special priorities made available by this means, the Farm will place the most emphasis on mechanisation, which spells both efficiency and economy.

As illustrating the advantages of agriculture, it may be pointed out that the shares of the Midnapur Zemindaries which were quoting Rs. 90 are now quoting about Rs. 180.

The land has been visited and inspected elaborately by the Director of Agriculture, Bengal and officers of his department. The following is an extract from the report of the Agricultural Engineer

INDIA COLLECTIVE FARMS LIMITED, PROSPECTUS—Contd.

to the Government of Bengal: "The soil in general is clayey, loam and is retentive of moisture. Thus, Dattanagar Farm has all the potentialities to convert it into a first-class profitable Farm in Bengal".

The Director of Agriculture, Bengal said (in June, 1944) of this land:—

"I have visited your farm near Majdia on Monday, the 12th instant. There are large areas of high land and the soil, seen from superficial examination, appears to be fairly, rich one and capable of producing a good crop. It would seem to be quite suitable for English vegetables which are to be grown there this coming cold weather. There are big jheels and also a river, available both for fish and irrigation purposes, and the latter should prove valuable for raising all kinds of cold weather crops. Irrigation will also be available in the hot weather, and could be used with great advantages on Kharif crops.

Altogether, the area is well worth developing and, if careful cropping is followed, there is every chance of making it a success. There are also good possibilities of developing fish and poultry and also dairy cattle, there being plenty of land available for fodder crop for dairy animals".

The price payable for the land to be acquired by the Company is Rs. 200 per bigha, which compares with the average price of Rs. 300 to Rs. 350 per bigha for good agricultural land in areas reasonably adjacent to Calcutta.

The total amount payable to the vendor, Mr. Hemendranath Datta (of 34, Garcha 1st Lane, Calcutta), is Rs. 15.00,000, of which Rs. 10.00,000 is payable in cash and Rs. 5.00,000 in the form of fully paid-up Ordinary Shares.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the Directors will proceed to allotment and which is required to meet the provisions of Sec. 101 of the Indian Companies' Act is Rs. 17½ lakhs.

COMMISSION AND BROKERAGE.

The Articles of Association provide for the payment of underwriting commission not exceeding 2½ per cent of the nominal value of the shares but no underwriter has been appointed.

The Directors have decided to pay brokerage at the rate of Rs. 1¼ per Preference Share and four annas per Ordinary Share to brokers or bankers on allotment made in respect of applications through such brokers or bankers.

PRELIMINARY EXPENSES.

It is estimated that the preliminary expenses exclusive of brokerage or underwriting commission will not exceed, in the aggregate Rs. 30,000.

PROMOTION.

No promotion money is being paid by the Company nor is any business being taken over.

DIRECTORS' QUALIFICATION AND REMUNERATION.

The number of Directors shall not (other than an Ex-officio Director) be less than two and not more than nine. The qualification of a director shall be the holding in his own name or jointly with others of Ordinary Shares in the Company of nominal value of Rs. 5,000. Every Director shall be paid a fee not exceeding Rs. 50 for each meeting attended by him. Directors residing out of Calcutta shall also be entitled to be paid their reasonable travelling and hotel and other expenses, if any, incurred in consequence of their attending Board meetings and otherwise in the execution of their duty as Directors. If any Director, being willing, shall be called upon to perform extra services the Company shall remunerate such Director either by a fixed sum or by a percentage of profits.

The Directors shall also receive a commission of 2½ per cent on the net yearly profits of the Company after deducting interest on debentures or other moneys borrowed and such sum as may be placed to depreciation, but before placing anything to reserve or other special account and before deducting the commission payable to the Managing Agents if any. The commission mentioned above shall be divided among the Directors equally. Such Directors as are also members of the Managing Agency firm shall not participate in the commission.

MATERIAL CONTRACT.

An agreement has been entered into between the Company and the Vendor under which the Vendor has bound himself to sell to the Company all his right, title and interest in land measuring approximately 7,500 bighas.

MANAGING DIRECTOR.

The Articles of Association provide that Directors may appoint Managing Agents and/or Managing Director(s). The remuneration of a Managing Director or Managing Agents shall, from time to time, be fixed by the Directors. A Managing Director shall not, while he continues to hold that office, be subject to retirement by rotation nor shall be taken into account in determining the rotation of retirement of Directors or the number of Directors to retire.

RIGHTS, VOTING AND RESTRICTIONS.

On a show of hands every member holding Ordinary shares and present in person shall have one vote and upon a poll every member holding Ordinary shares present in person or by proxy or by attorney shall have one vote for every share held by him. No member shall be entitled to vote if any calls on the shares remain unpaid.

The Company shall have a first and paramount lien upon the shares other than fully paid-up shares registered in the name of each member, whether solely or jointly with others, and upon the proceeds of sale thereof, for his debts, liabilities and obligations solely or jointly with any other person to or with the Company.

The Directors may decline to register any transfer of shares on which the Company has a lien. The Directors may refuse to register the transfer of partly paid-up shares without assigning any reason therefor.

(a) The holders of Preference shares shall be entitled to be paid out of the Profits which the Directors shall determine to distribute by way of dividend a fixed cumulative preferential dividend at the rate of 6 per cent per annum, free of income-tax and to a quarter share of the surplus distributable profits of the Company of each year which shall remain after paying 6 per cent per annum, free of income tax on Pref. shares and 16 per cent per annum, free of income-tax on Ordy. shares. The holders of the Preference shares shall be entitled to a right on a winding up to be paid all arrears of the preferential dividend whether earned or declared or not down to the commencement of the winding up and also to be repaid the amount of capital paid up or credited as paid up on the Preference shares held by them in priority to any payment in respect of the Ordinary shares but shall not be entitled to any other rights in the profits or assets of the Company.

(b) Subject to the foregoing provision, the Ordinary shares shall confer on the holders thereof the right to a dividend at the rate of 16 per cent per annum, free of income-tax on the capital for the time being paid up thereon and also the right to three-quarter share of the surplus profits of the Company of each year which shall remain after paying or providing for payment out of such profits of the dividends on the Preference shares and on Ordinary shares.

INTEREST OF DIRECTORS.

Mr. N. C. Chunder is a partner of the firm of the Company's Solicitors and is interested as such.

APPLICATION FOR SHARES.

Application for shares should be made on the form accompanying this Prospectus which may be obtained at the Registered Office of the Company or from the Brokers of the Company or at all the offices of the Company's Bankers, and sent in accordance with the directions contained therein with a remittance of the amount payable on application.

Where no allotment is made the deposit will be returned and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. Failure to pay any amounts due on shares allotted when due will render previous payments liable to forfeiture.

INSPECTION OF DOCUMENTS.

Copies of the Memorandum and Articles of Association and the agreements referred to in the aforesaid paragraphs may be inspected at the Registered Office of the Company during the usual hours of business.

B. P. SINGH ROY, JNA BASU, SUSIL C. SEN, H. N. SAHGAL,	S. N. DUTT, N. C. CHUNDER, R. DATTA, S. DATTA,	Directors.

Calcutta, 22nd August, 1944.

THIS FORM SHOULD BE FILLED UP (ALONG WITH TWO SPECIMEN SIGNATURES AS REQUIRED) AND FORWARDED ENTIRE WITH CHEQUE OR BANKER'S DRAFT OR CASH TO THE COMPANY'S REGISTERED OFFICE OR TO ANY OFFICE OF THE COMPANY'S BANKERS OR THE COMPANY'S BROKERS. COLLECTION CHARGES AT AS. 6 FOR EVERY RS. 100 TO BE PAID BY THE APPLICANT FOR CHEQUES DRAWN ON BANKS OTHER THAN IN CALCUTTA.

Clive Street Gossip

If the end of the war had not hove in sight before the end of its fifth year, the beginning of the sixth would have occasioned not a little anxiety about the future. Four years were a long enough period for the war of twenty-five years ago, when the scale and scope of suffering were alike much less than now. And now when the war is truly global and flying bombs and long range bombers make targets of civilian populations and cause colossal havoc, five years is fifty. Patience may set limits where passions will have none of them. Luckily, there is no need to think of the war in terms of human endurance. What was thought to be a war of attrition, when opposing armies sat idle behind the Maginot and the Siegfried Lines, is now seen to be one of lightning movements across oceans and continents. Armies bestride the narrow world like a Colossus. The Reds are in Warsaw and Ploesti. The Americans are ubiquitous, in Northern France, in Assam, in Saipan and Guam. France, which lay prostrate under the Nazi heel, promises to rise to her full height and hurl her weight again at the historic enemy. Britain brushes aside the flying bombs as if they were a flea-bite, however big, and grapples with the foe on the Continent. Germany loses allies at a faster rate than even conquered territory. The signs of crumbling within and without are increasingly reassuring. The army plot is no episode. While disaffection spreads, the enemy is advancing. The Siegfried Line will be attacked nearly three years after the Maginot and must expect a worse fate. Only a miracle can save Germany; and miracles have no place now even in the most superstitious minds. And when Germany falls, she will doubtless bring Japan down with her. It is no wonder, therefore, that the sixth year of the war shows not war-weariness, so much as mere impatience to reach the peace that is round the corner.

* * * *

My last week's instalment of gossip was wired from Shillong; and I learnt from the telegraph office that messages to Calcutta were liable to serious delay. In such circumstances, I had hardly any time to edit my notes with the care which I usually bestow on them. I concluded my gossip with this promise: "Of the post-war world as arising from the present, I shall give a sketch in my next instalment of gossip." On reading the last week's number after my return to Calcutta, I find that my description of Britain under war conditions contains a number of features which really belong to the blue-print of post-war Britain. In a sense, this was inevitable in the light of my contention that no dark valley shall separate the present war from the imminent postwar period; and that the one will lead to the other through a logical and orderly transition. In other words, the dividing line between war conditions and post-war conditions, as I see things, is but a thin one. But this is not the point that I set out to stress. I am under a promise to provide this week a blue-print of the postwar world; and, as I have anticipated quite a number of its features, some amount of repetition is unavoidable. The essential fact is that, unless we have as clear an idea as possible in regard to the likely trends and developments in international trade, finance, industry and economy, we will not be able to gauge the future of shares and commodities, of industries and business. From the reactions produced among my readers by the previous articles in this series, I have reasons to think that my refutation of the theory of postwar slump has provoked widespread thought and aroused general curiosity as regards the shape of things to come in peace time. It is also realised that, in the absence of such a clear vision of the post-war world, any estimate of this aspect or that or the other of future economic activity will, at best, be only "guestimate." Let me now deal with the salient features of postwar economy:

1. State control, which, in war conditions, is being exercised in various ways and over most aspects of economic activity will be equally a feature of the postwar world. Some of the vested interests are already agitating against the continuance of State control in peace conditions. It may be taken as certain that this agitation on the part of vested interests will be intensified in the early months after the war. It may be taken as no less certain that such agitation will not make much difference to governmental policy. Popular opinion will insist on the maintenance of adequate and necessary State control. Russia and Germany are examples of totalitarian methods; and the fullest efficiency in war production was reached in Britain and the United States only after they had assimilated and incorporated many of the features of totalitarian technique. There is an effectiveness and efficiency in this technique which will be found to be as necessary in ensuring the smooth functioning of a world at peace as it was for successful mobilisation for war. Whether our vested interests like it or not, with their cooperation if possible and in spite of them if necessary, State control in various ways will be the guiding principle in the post-war world.

2. The State will have, in the future, to be the inspiration and instrument for a variety of social services; and the nature and extent of social services will increase and not decrease with time. This means that every Government will hereafter have to be prepared to spend increasing amounts on what are generally described as nation-building departments and social services.

3. The State will thus take a direct and continuing interest in the education of the people, their health, the nutritive value of their food, the amenities for utilising leisure to the best advantage, the conditions that will as far as possible provide suitable opportunities for one and all.

4. The postwar budget of every government will thus be an altogether different budget from the prewar budget. The appropriations that will hereafter have to be made for social services will be many times the appropriations made before the war.

5. In another respect also, the budget of the future will be a more hefty affair than

Applications for Chief Agencies are invited from respectable parties.

its prewar predecessor. It is futile to expect any movement in favour of progressive disarmament. On the other hand, postwar expenditures on defence services in the case of all important countries will be considerably greater than they were in the inter-war years.

6. That is to say, the budget of each State will have to provide for expenditure equivalent to, say, double of the normal prewar expenditure.

7. As a corollary, each state will find itself obliged to raise anything like double the prewar revenue.

8. If this line of reasoning be correct, not much relief in regard to war taxation measures is to be looked for. Excess Profits Tax is generally considered as a purely wartime measure; and there is popular expectation that, with the end of war, this tax will disappear. I cannot help feeling that Excess Profits Tax may disappear, but its place will be taken by some other tax bearing perhaps a different name but serving a more or less similar purpose. I may also add that it is not altogether correct to regard Excess Profits Tax as a purely wartime tax measure. So far as India was concerned. E.P.T. was levied not during the last war but after that war concluded.

9. The exigencies of war have made it possible to understand and appreciate the place of taxation as an instrument to be utilised for a more equitable distribution of wealth. Prewar taxation systems all over the world were growths without any high purpose or any special design. The future taxation systems will be based upon a correct understanding of the purpose and design of taxation.

10. While the State will thus be called upon to shoulder greater responsibilities and to incur heavier expenditure and, therefore, to raise more revenue, its liability for capital expenditure in postwar years will be far greater than in prewar years. The whole Continent of Europe will need an enormous amount of capital outlay for repair of damages and resuscitation of assets. The reconstruction of war-devastated buildings will be the most urgent problem in this regard. Equally important will be the rehabilitation of industrial plant and machinery. If a country has been used, in prewar years, to spend one hundred million on capital works, the postwar capital expenditure may well work out to an average of five hundred million.

11. This five-fold increase in capital outlay need not, however, discourage the Finance Minister: it will not certainly deter the general population from demanding that the State shall incur all such capital expenditure. For, the capital market of the future is not going to be governed by the whims, caprices and hauteur of the lenders. So long as the financial authorities guiding the State have correct monetary knowledge, adopt correct monetary technique and pursue enlightened economic policies, the domestic capital market will hereafter be in a position to put up all the capital that may be required for the satisfaction and fulfiiment of national economic projects. No State need any longer apprehend dear money. The days of dear money have been left with the 'twenties. The 'thirties have seen the fashioning and perfection of the technique of cheap money. Even the costliest war known in history has not interfered with the pursuit of cheap money in the 'forties. It may be said that cheap money is now established for aye and for ever.

Olympus

(FROM OUR CORRESPONDENT)

NEW DELHI, Aug. 28.

A strange dullness has descended upon the turbulent Indian political scene. People here are getting impatient about the Gandhi-Jinnah meeting which has'nt materialised yet. Meanwhile both the Pakistani and anti-Pakistani factions have been carrying on ceaseless propaganda in the papers to press their points of view. On one point there seems to be general agreement here. If a division is to take place, the separating units must be communally more homogeneous than the present provinces. As "C.R." says: "Provincial boundaries have no doubt to be readjusted so as to produce more homogeneous units wherein Provincial Governments can be run on a democratic basis with majorities that ensure stability and continuity of policies, and policies not generated by prejudices and communal slogans among a population of equally balanced communal groups." It is learnt that Mahatma Gandhi has asked certain no-party leaders including Sir Tej Bahadur Sapru to be present in Bombay when his talks with Mr. Jinnah take place.

An analysis of the latest Central Exchequer returns shows that while revenue receipts under every head have jumped up appreciably during the first two months (April and May) of the current financial year, the defence expenditure has been mounting at a greater speed than ever. It has touched dizzy heights never reached before in the history of Inia's war finance. While, for the first two months, revenue increased by about 9½ crores compared to the corresponding period last year (30.16 crores as against 20.79 crores), the defence services absorbed 47.60 crores compared to 31.71 crores last year—an increase of almost 16 crores or 8 crores a month. The deficit for the period has increased by 6 crores to 29.5 crores. Among the revenue items the biggest increase is recorded by customs.

The Federal Court's opinion that the Federal Legislature has no power to levy an 'estate duty' on the British model hasn't come as a surprise here. Those acquainted with the intricacies and complexities of personal law governing succession in India knew the difficulties in the way. The Governor-General of course has the necessary powers to amend the legislative schedule in the Government of India Act to include 'estate duty' but it is another question whether such a step should be taken without adequate consideration. The feeling here is that the Government will not now be in a hurry to introduce estate duty. There is of course general appreciation of the Finance Member's view and any taxation scheme which not only tends to expand the rigid and inelastic provincial revenues (particularly in view of the proposed expansion of social services after the war) but also to equalise the tax burden on the community is doubly welcome. But it is held that it will be easier for a popular government to introduce such a measure without meeting stiff opposition from vested interests. The main difficulty of amending the personal laws should be first removed. Then there is the problem of "devising the machinery for the assessment mad Zafrullah pointed out, might present and collection of duty" which, as Sir Moham- "insurmountable difficulties." "The vast bulk of the people of this country," he justly remarked "are governed in matters of inheritance and succession by their personal laws and have not the remotest conception of letters of administration, probate and the like." The Government would do well, it is felt here, to publish the draft of the intended bill together with details of the proposed machinery to enforce its provisions and invite public opinion. There is little difference on the principle of the proposed legislation. But in a matter like this it is the details and not the fundamental principles that arouse bitter controversy.

The exceptional powers assumed by the Central Government "to bring to book defrauding of Government during the war and prevent the disposal or concealment of their accummulated gains" has occasioned some surprise. The powers are to attach or freeze such assets and their exercise has been entrusted to courts with adequate provision for appeals. The surprise is that the existing powers were not considered enough and that till now (after four years of war) the Government could not effectively check the abuses mentioned. The detailed procedure to be adopted in concrete cases has not been fully explained and there are grave doubts as to whether the wide discretionary powers will not be grossly abused. Anyway the test of the new ordinance will be in its application. If it puts an end to unlawful 'profiteering' at the expense of the state without subjecting innocent persons to harassment, it would be wholly justified. If it leads to discrimination on political grounds, it would defeat the ends of justice. The application of the Code of Civil Procedure to attachment proceeding will to some extent mitigate the harsh provisions of the ordinance.

Great concern has been caused by recent reports from Bengal and Bihar of the heavy toll taken by famine and malaria and cholera epidemics that have followed in its wake. According to one non-official estimate, two crores of persons are in the grip of epidemics in Bengal alone. There are also alarming reports about attempts by local governments to minimise the intensity of the crisis. The view here is that the Government of India should take drastic action to check the disaster while there is yet time. Not only adequate quantities of food must be ensured, but also adequate quantities of necessary drugs and medical aid. Just as in the case of Bengal, last winter, the army can be made to share in the relief work in Bihar. As regards the food needs, it is considered rather preposterous that the estimates of this country's needs by the Foodgrains Policy Committee and the Food Department should have been considered unreliable and that British expert should have been despatched here at this late hour to report on the 'real' situation.

The constitution of a World Brain-Trust for Agriculture (Permanent Food and Agriculture Organisation) is recommended by the United Nations Interim Commission on Food and Agriculture which submitted its report to the various governments including India last week. The Commission was appointed by the Hotsprings Conference last year in which India participated. "No nation or group of nations dominated our discussions," says the report remembering what happens at most international economic conferences. The main functions of the F.A.O. will be not only to "collect, analyse, interpret and disseminate" information relating to nutrition, food and agriculture and furnish technical assistance to member goverments, but also to adopt "international policies" regarding agricultural credit and commodity arrangements. Missions will be undertaken to assist members to "fulfil the obligations arising from an acceptance of the Commission's recommendations" The main work of the F.A.O. will thus be advisory. The governing body of the F.A.O.—on which each member held will have one representative—will be a general conference which will meet—at least once a year. There will be an executive committee of 9 to 15 members and several standing advisory committees. The annual budget is estimated at only five million dollars as the F.A.O. "must seek to achieve its objective largely through action taken by the members nations." The U.S.A. will share 25 percent of the cost; Britain, 15 per cent; Russia, 8 per cent and the other nations smaller population' India's share will come to less their 5 per cent. The organisation, says the report, should lead in stimulating, promoting and, where appropriate, conducting research forcussed on the needs of the world in food, agriculture, forestry and fisheries.

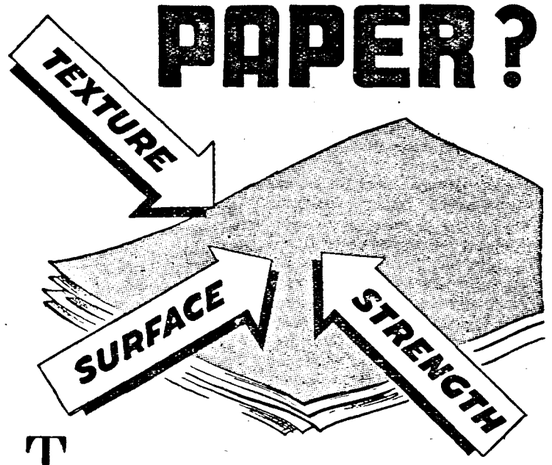
(From Our Correspondent)

BOMBAY, Aug. 29.

If Australia's satisfaction is any test, the Commerce Department scheme for the regulation of textile exports at controlled prices must be said to be working very well. The institution of import Procurement Division by the Australian Government has enabled it to maintain contact with the importer in Australia and to understand his requirements in respect of quality. The co-ordination of the licensing systems of the two countries goes far to ensure that only textiles of a reasonable price and satisfactory quality are imported into Australia. The demand from overseas markets has visibly improved as a result of the export control and there is no doubt that the fixing of export prices by the government is giving the necessary assurance to the importer abroad that he is no more being fleeced by the Indian exporter. The latter cannot be too scrupulous in the matter, and with competition from other textile manufacturers looming large after the war, the price realism now gained must be retained at all costs if not improved further. Courtaulds of England are reported to be setting up a textile factory in Australia at a cost of £6 million, and that forms the writing on the wall. In Africa and in the Middle East, the germs of the coming competition from British and American textile manufacturers may already be seen. It would be interesting to see how far this country is able to retain its exports to these places.

* * * *



The piecegoods market has been very active and the expectation of further reduction of ceiling prices of textiles by 10%, has not in any way affected demand. The provinces are obviously still experiencing acute shortages and supplies have not been sufficient to cater to the demand. The authorities are no doubt releasing large quantities from the frozen stocks and the output of the controlled mills. Purchasers from upcountry centres had been here to negotiate purchases at the best possible rates but could not obtain the desired supplies. The trouble still is to find the wagons to take the cloth upcountry. The Calcutta market requires a huge lot of cloth and the quantity it succeeds in getting is hardly sufficient to satisfy even a fraction of the demand. Nothing is more eloquent of the situation that had prevailed in the last two years than the long queues of consumers filling the cloth shops in the city. One is now able to get even the finer varieties though on a rationed basis. The opening of controlled shops is certainly a feather in the cap of the textile control authorities.

* * * *

The Bombay Yarn Exchange is getting ready with its scheme to ensure the supply of cotton yarn to weavers in the province at controlled rates. There is no doubt that as things are, the weaver is practically starved of supplies, but there are indications that the black market ogres will soon be caught napping when control of yarn starts. Naturally, the Bombay province will obtain its supplies of yarn on the basis that yarn manufactured in this Province will first be supplied to weavers here. With this end in view, restrictions have been placed on the movement of cotton yarn above 20 counts.

Both Mr. A. D. Shroff and Sir R. K. Shanmukham Chetty have, on their return from America, drawn pointed attention to two things. In the first place, apart from giving the first connected account of what actually transpired at Brettonwoods, they have stressed the lack of prestige which the delegation suffered from as a result of being led by an Englishman. Sir Jeremy Raisman was, of course, in no way an obstacle and did in fact allow the greatest freedom to the delegates to express their point of view. The question is really one of status. In future at least, delegations at such important palavers should be cent per cent Indian. Although the delegation succeeded in bringing forward before the conference the subject of India's sterling balances, it came up against Lord Keynes' obdurate refusal to agree to include the item in the operation of the International Fund. The second point on which the Indian delegates threw some light was that they had extracted a categorical declaration from Lord Keynes that the sterling obligations would be met scrupulously and honourably, and that there is no question of repudiation. This is the only consolation. Ominous suggestions have already appeared in the London Press that inasmuch as British purchases were made at rising price levels, the sterling balances must be proportionately scaled down when liquidation is taken up after the war. If the visit of the Indian delegation had no other result than that of stimulating public opinion in this country to an awareness of these machinations, the Indian delegation's trip would not entirely be trip to Canossa.

HOW DO YOU JUDGE PAPER?

The Master Printer knows how to select his paper for a particular job. Not so the layman and yet he needs good paper. Surface, Texture and Strength determine the Quality of paper. It is not true that a smooth surface is necessarily better than a rough one or that a particular texture is superior to another or that the stronger the paper the better it will be, under all circumstances. It all depends on the nature of the job for which the paper is required. It is possible to-day, with the highly developed modern machineries, to manufacture paper to suit every purpose.

Resume of Commodity Markets

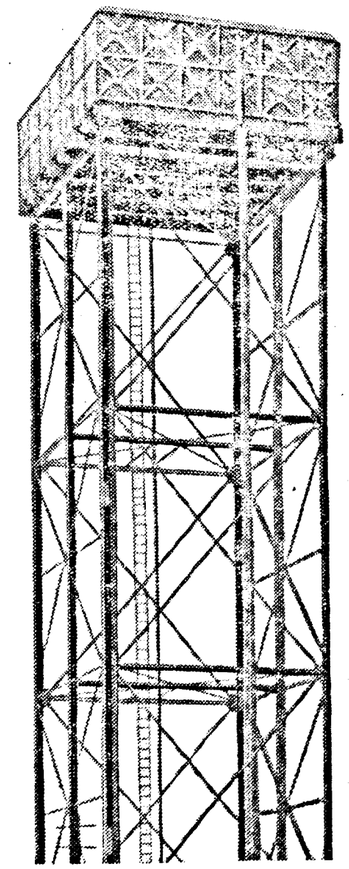
Steady conditions have been noticeable in the commodity markets during the past week. The raw jute market has been very steady in spite of the lack of buying support from mills while the jute manufactures market has made mixed showing. Raw cotton prices have been easier but the bullion market has remained very steady. The rapid developments in the war situation have had no effect on bullion prices. There has been good buying in the piecegoods market in all the centres. The Bombay market has been the scene of much activity as dealers from far and near have congregated there to make arrangements and enter into contracts for ready deliveries for as large quantities as are available.

The steadiness of the raw jute market has, it appears, surprised a certain section of the market. In the absence of any appreciable support from mills it was feared that jute prices would be marked down. But dealers have not been anxious to do business as there has been a great delay in harvesting the new crop. Unless there is a large increase in arrivals, there is no likelihood of a sizeable decline in prices. The difficulty is felt most in East Bengal. The level of the rivers is very much below normal for the time of the year. There will certainly be a famine for the higher grades of jute as the season progresses.

The market does not seem to be worried at the present moment regarding the prospects in the postwar period. Dundee might take more jute if more men were available for work. The state of the European markets cannot be reasonably anticipated now. There seems to be a feeling that release of Government production for other purposes might offset the increase in demand but with a growing internal market and the possibility of a higher rate of exports, it could be expected that demand for jute in 1945 would be on a larger scale.

The raw cotton market has been dull and prices have been fluctuating in narrow limits. Mills are not active in the ready market. The oft-repeated argument that peace prospects might result in a large increase in exports has not weighed with operators. There is the fear that the decline in war orders might not be offset by an increase in civilian consumption though the present state of the piecegoods market might not justify these fears.

The piecegoods market has been active in all the centres. In spite of the best efforts of the authorities to speed up despatches, demand is unsatisfied. The ban on the despatch of goods by postal parcels and the restriction on the movement of goods as personal luggage by rail, seem to have caused a hold-up in despatches. The finer qualities are very scarce and in view of the lack of cooperation from consumers, it would be difficult to eradicate black market trading. In Bengal, consumers especially in upcountry centres, are reported to be experiencing great difficulty and the personal attention of the Textile Commissioner to the conditions in the trade in this part of the country, could not perhaps have been more welcome at any time.



The reduction in ceiling prices for cloth and yarn does not appear to be in keeping with the conditions in the piecegoods market.

The Industry's Committee has recommended a reduction of one anna in the rupee on all cloth and certain kinds of yarn packed and despatched from September 1, 1944. Under normal conditions it could be expected that hoarded stocks would come on the market with the prospect of a progressive reduction in prices. But dealers do not seem to be worried. Instead, they are confident that it would be possible to market all supplies at the marked prices if they could be only secured. At an earlier stage of the control administration there was regular hoarding as there was no restriction on trading and some managing agents and wholesale dealers were the principal props of the black markets. The introduction of the quota system, the progressive reduction in ceiling rates and the ban on postal parcel despatches in general and the movement of goods to particular areas have discouraged hoarding but there has been an unconscious slowing down in the movement of goods which has to a great extent spoiled the good work achieved by the authorities. The middlemen would in the end prove to be the beneficiaries and the poor consumer, ignorant of the tricks of the trade, would be paying the prices asked for. After all there is no method of checking the street hawker when there is a willing buyer and no small business is done in this manner in piecegoods.

The bullion market has been very steady. The Reserve Bank seems to be more anxious to sell silver. Further sales have been effected at Rs. 132/8 and above. It is very surprising that the very encouraging war news has had no effect on prices. It is pointed out, however, that if there is a continued demand for gold and silver, exchange control might prevent any large movement and prices would be determined by the given amount of demand and supply at any one moment. It cahnot be denied, in any case that the ultimate tendency should be for prices to come down.

Insurance Mergers Rumour

LONDON, Aug. 30.

Alarmed by the numerous proposals for stiffening up Company Law and requiring greater publicity in company accounts the powerful Federation of British Industries has submitted to the Inter-Departmental Committee, now considering such proposals, a strong protest against any scheme "fettering Company directors." The F.B.I. is especially concerned over the strong movement to force private companies especially those belonging to public companies to disclose their affairs. The Federation contends that consolidated balance-sheeting, showing the position of the whole network including subsidiaries and parent companies should suffice.

This memorandum is in some way the most conservative among those which have so far been submitted to the Committee, and in view of the Federation's prestige and influence, it is likely to exert a restraining influence on those expert accountants and others who have displayed reforming zeal.

Perhaps the most interesting rumour in the City during recent weeks has been a report that Government will shortly begin to bring pressure on insurance companies to reduce their numbers and increase their strength by amalgamations. It is recalled that the Bank of England began several years ago a similar movement in order to induce Discount Houses to reduce their numbers and increase their strength by merging. A similar movement has been visible among building Societies. The basic idea seemingly is that after the war London should be equipped with a few very large, powerful financial houses instead of numerous smaller ones. This policy is already visible in several industries where amalgamations were encouraged such as the Iron and Steel, the Cement and the heavy chemical industries.

It is believed that the next war savings campaign will be called the Victory campaign. As soon as the "Salute the Soldier campaign" ceased, war savings declined showing what has frequently been observed that intensive savings campaigns tend to exhaust either the capacity or the willingness to save. For example, the sale of National Savings Certificates which in June totalled nearly £50 million amounted to £21 million in July and £15½ million in August.

The stock market has been full of conflicting currents in the past three weeks since top prices for leading Home industrials began to fall heavily on August 9 on good military news but when the Roumanian collapse and the seizure of Paris emerged, which is still better news, share prices rallied strongly. This contradictory performance still puzzles the pundits.

(*Continued from Page 336*)

12. It follows that every Government, whose steward of finance has knowledge, vision, skill and courage, will be able to raise as much money as is necessary for national projects at the cheapest possible rates.

13. What are the future money rates likely to be? If Britain has been able to get short-term accommodation at 1 per cent and defence loans at 3 per cent in the stress and strain of war conditions, may it not be safe to prophecy that postwar treasury bill rate will be nearer ½ per cent and the postwar rate of Government loans will be nearer 2 per cent than 3 per cent?

14. To sum up the financial features of post-war world. National budgets will provide for twice pre-war expenditure—therefore, twice pre-war revenue. Not much relief from present high taxation level can be expected. Governments will be raising large-scale loans for capital works. They will be able to sell treasury bills at ½ per cent and to issue loans at 2 per cent. Dear money will never recur. Cheap money is the settled official policy under the conditions. Giltedged will rule at high rates.

With the other aspects of the post-war world, I shall deal in my next.

* * * *

The Hindusthan Commercial Bank, of which the Chairman is Sir Padampat Singhania and whose Managing Director is Mr. K. C. Puri, had already opened a branch in Burrabazar and was waiting for its own premises in Clive Street to get ready, for the more important function of opening in the centre of Clive Street. The Bank has the large paid-up capital of Rs. 1½ crores; and the purchase of a valuable property in Clive Street is not only a guarantee of suitable accommodation in times when it is no easy matter to get good accommodation, but an investment yielding an attractive return. As was to be expected, the opening ceremony was attended by leading businessmen and bankers, and it was no matter for surprise that the accounts opened on the first day came to over Rs. 1 crore. The Calcutta office is in the capable hands of S. P. Puri, the son of Mr. N. L. Puri, the doyen of bankers in Calcutta. I know Shanti Puri intimately. He has a charm and pursuasiveness all his own, combined to the integrity and sweetness of his father. The local board consists of businessmen who should enable the Bank to make strong headway, and young Puri can be trusted to take full advantage of the possibilities.

* * * *

Mr. M. K. Vellodi, the Textile Commissioner, has rounded off his visit to Calcutta with a press conference. The Conference was badly needed, to remove misapprehensions about the responsibility of the Textile Commissioner for the yarn and cloth position in Bengal. Few will question that Mr. Vellodi has a resplendent achievement to preen himself on. The cloth position a year or two ago was in some respects far worse than the food position. But, as Mr. Vellodi himself said in the course of the chat last evening, there is an idea that clothing is not exactly a necessary of life. Perhaps not. But there is no mistaking the hardships caused by the use in cotton cloth prices and what was worse, the scarcity of goods. The control of cotton cloth and yarn was imposed only by stages. But once a grip was gained, the authorities have lost no time in bringing about successive reductions in the price of cotton yarn and cloth. Only last week was announced the fourth of such reductions; and the communique on the subject referred to it as a voluntary cut adopted by the cotton mill industry. Of course, the volition of the industry requires a powerful external force. For four long years, the cotton mills squeezed the consumer dry, not for their benefit so much as that of the Finance Member, as if the Government of India have a better claim on them than the consumers who have borne heavy protective duties in order to help the growth of this industry. I say this only to stress that the "voluntary" nature of these cuts should not be allowed to detract from the credit due to Mr. Vellodi and his colleagues. It is, as I said, a brilliant record. But Bengal seemed to be a dark spot therein. I say, "seemed", because Mr. Vellodi had no difficulty in convincing yesterday's conference that, if Bengal is short of cloth and yarn, she has only her own Government to thank for it. Not that the Commissioner contrived a plenitude supply or could undertake to remove shortage altogether. But Bengal had her fair share. Bengal's mills are not allowed to export. And from the surplus provinces the shortage was duly made up. There, the work of the Commissioner stops. Distribution is the provincial Government's job. As I said, Bengal's preoccupation with food may explain the short-comings to some extent. But not wholly. The Department, I understand, is sadly understaffed. And when we at the Conference asked whether Mr. Vellodi was satisfied that the Provincial Government was awakened to a sense of its responsibilities, he said he was hopeful of having done that. Was it courtesy or reasoned hope? It remains to be seen. Now that the Pujas are approaching, administrative short-comings cannot be easily hidden from the public view.

* * * *

The Indian Institute of Cost and Works Accountants, whose inauguration was noticed in this column some time ago, has not allowed the grass to grow under its feet. The prospectus promised "arrangements for holding classes for the purpose of training candidates for the intermediate and final examinations of the Institute" and we were assured that the training will be in the hands of "a distinguished staff of tutors". The class was inaugurated on Friday in the building next to the Currency Office with a full complement of staff and pupils. The original plan was to train 60 students in each session. Applications are so heavy that arrangement has to be immediately made for an additional batch of 30 students. It is a six months course; and one, already grounded in accounts, can greatly and directly improve his prospects by equipping himself as a cost accountant. The high recognition already secured for the Institute accounts for the Government sending thirty of their assistants for training in the class and paying their tuition fees of Rs. 300 for the six months course. And this recognition is largely due to the leadership given by Mr. Shoaib, the President, to the costing account movement in India.

* * * *

The Indian Insurance Society, headed by Mr. K. M. Naik as President with Messrs. Lalit Mitra and Kanoria as Vice-presidents and Mr. Ramabadran as Secretary, has, for its aim, the getting-together of officials connected with general insurance. When, in the early 'twenties, a few Indian general insurance companies were started, all their reinsurance treaties had to be fixed up with foreign agencies. In the last two years, over a score of companies have made their debut; and part of the reinsurance arrangements is now possible as amongst the Indian Companies. With this emergence of domestic reinsurance, there is need and occasion for more and more contacts among general insurance officials. The newly formed society can satisfy this need and provide this occasion.

"EAVESDROPPER".

Deepak Insurance

An announcement relating to the Deepak General Insurance Company, Limited refers to the progress already made by the Company in its General and Life Departments this year. The Company has a strong Board with exceptional connections in Ahmedabad. The issue of new ordinary shares (at par in this case) is meant to supplement the paid-up capital. The Company has made the statutory deposits and having regard to the prospects for Indian insurance, its shares certainly must command attention especially as it intends to set up offices in other cities besides Calcutta and Bombay. In respect of capital appreciation insurance shares offer special attractions to most conservative investors.

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance"

Calcutta, August 31.

IT is satisfactory to know that the Jute Mills' Industrial Pool scheme has now been accepted unanimously by all members and an Agreement is now in course of being drawn up embodying the terms, which show little modification in the final draft from the outlines already described in these columns. The Agreement will be for the term of not more than one year in the first instance, with the option of renewal for a further period of six months if members so approve. The income of the Pool will consist firstly of all monies payable by Government for requisitioned Mill premises as from 1st January this year. These monies will be paid into the Pool instead of directly to the Mills concerned; secondly of a cess not to exceed two annas per loom hour for every loom hour worked as from 1st July. The first call on the income of the Pool will be the payment to the labour force of idle mills—idle whether by requisitioning or for lack of coal—of their standard allowance plus the cost of their subsidised food supplies. The primary aim of the Pool is to extinguish the loom hours lost by idle mills and to avoid these accumulating to an extent that might become embarrassing to the industry at large. To this end, idle mills must sell their lost loom hours to the Pool, which will in turn resell them to such mills as can absorb them by working longer than the standard 54 hour week. Mills under the same Managing Agency may arrange transfer of loom hours between themselves without the intervention of the Pool. The value of a loom hour is provisionally fixed at twelve annas, and though the finances of the Pool may not permit of this amount being paid in full at once to the selling mill, any balance due will remain at the credit of that mill to be adjusted as soon as finances permit, or at the latest when the Pool is ultimately wound up. It is understood that certain electric mills are already arranging to increase their working hours to 60 or 64 per week so as to take up surplus loom hours from mills which have them for disposal. Coal supplies have been far from adequate during this past month and it is probable that there will be more loom hours on offer than can be immediately taken up. For quite a number of mills have been unable to keep going for more than about a week through the whole of August for lack of coal. But as the scheme gets under way it is hoped that income and expenditure will more or less balance one another. The scheme has the merit of comparative simplicity and provides for a sharing of the burden of times which are out of joint on account of war conditions, in a manner which is equitable to those whose misfortune it is to be unemployed through no fault of their own, and not too onerous to those who are in the happy position of keeping their wheels turning.

One of the disadvantages of being the most important and best organised industry in Bengal is that, whenever the military get themselves in a jam, it is to the Jute Industry they turn to get them out of it. On the one hand there is the Central Government and H.M.G. insisting that the target outturn of jute goods of one hundred thousand tons per month must be maintained at all costs. On the other there are serried ranks of authorities who demand that the Mills must either supply their requirements or do without their own as the case may be. If it is accommodation the military want, the mills must supply it. If it is coal the mills want they must do without it. If the military want extra transport it must be cut off the mills' quota. The last question is much to the fore at the moment and we have commented on several aspects of it in the past few weeks. But with every will in the world to co-operate and to lend every assistance to advancing the war effort, the industry has good cause to wonder if all the inefficiency is on their side and if the military authorities are utilising the transport at their disposal to the best advantage. After all the Jute Industry has been a good many years at their job and could hardly have survived if they had not evolved fairly efficient methods. Whereas many of those in positions of brief authority during war time have been pitchforked into jobs for which they have few, if any, qualifications, even if they may be doing their best. Mills are told that they must evolve means of reducing their demands on water transport, not only within the Port limits, but in regard to their imports of raw material from upcountry. Barges and lighters are insufficient to handle all the traffic coming through the port. The first and simplest solution would seem to be—more lighters. But though we have heard suggestions for the import of mechanical means of handling goods, we have heard no suggestion for the building of more lighters, or if such is attempted, no material is available. What a Kaiser would say on the subject might be worth enquiring. We imagine he would volunteer to have sufficient lighters fabricated within a fortnight to double the number available in the port of Calcutta. These could be shipped in sections and rivetted or welded up here with great speed and the shortage so relieved. But those who ought to have known or foreseen the extra demands on the port facilities have apparently failed to appreciate the position in good time. Hence the difficulties in which they now find themselves.

With regard to the demands on river transport space from upcountry, in the piping times of peace jute probably accounted for some 50 per cent of the cargo carried by the shipping companies. At present, with the insatiable demands of the military, it is doubtful if it represents one-fourth of that figure and the industry is asked to devise means of still further reducing the proportion. But it might reasonably be asked that, while the jute industry endeavours to remove any mote from its eye, the military might make sure that there is no beam in theirs. When one hears of 19 flats loaded with upward cargo and 15 towing steamers held up at what is certainly not a jute shipping station, there seems good cause for enquiry into the reason why. When one hears of a steamer taking 11 hours to load bunker coal, which operation should be done in under two hours, there is also cause for enquiry. When one hears of coolie labour handling less than one ton per head per day when the average should be nearer two tons, there is lack of efficient organisation somewhere. There is little to be gained by privation on the one hand if the results are to be frittered away by inefficiency elsewhere, and co-operation would be much more enthusiastic if it were known that the drive for more efficient utilisation of the transport available were not confined to the end of it which concerns the jute industry.

There is little of note to record regarding the Export Jute market. New Crop Dundee Daisee 2/3 was reported for Nov./Decr. shipment at Rs. 81 and Outport Daisee 2/3 at Rs. 75. Mills have been small buyers. Old Crop Daisee at Re. 81 Sept. having been reported and resale of Mill Firsts at Rs. 84-8, the latter for Decr. shipt.

In the Loose Jute market only intermittent interest has been shown. Indian Jat was reported in limited quantities at Rs. 16-8 and Rs. 15-8 for Mids. and Bots., with District Rs. 13 according to the quality. New Crop Indian District Tossa was reported at Rs. 16-12 and Rs. 13-12 for Mids. and Bots. with Old Crop done at four annas less. Mofussil markets continue very firm with imports insufficient to meet the demand. Rivers in many parts are far below normal and lack of steeping water is an almost universal complaint. It is feared that when imports do come along, the quality will be very inferior owing to over-maturity and poor colour due to lack of steeping water.

Coal SHORTAGE

No subject is of more vital importance to the prosecution of the war and India's industrial well being than that of coal raisings.

It is with justifiable pride therefore that members of the Calcutta Selected Coal Association announce that the collieries managed by them, despite all war-time difficulties, raised more coal during the period January to June 1944 than during the same period last year.

JUTE

(By Our Staff Correspondent).

Calcutta, August 31.

THE raw jute market has continued quietly steady though a small amount of business has been done. The absence of any large demand in the jute manufactures market had a slightly restricting influence on the raw jute market earlier in the period under review. The realisation that the end of the war might bring about a large increase in demand for both jute and jute manufactures, however, has made sellers reserved in the last two days. Harvesting is still delayed. Conditions now prevailing are rather contra-seasonal. With the buying policy of jute mills rather undecided there would naturally have been a decline in prices if the whole weight of the crop was felt before the Puja season. At the present moment, arrivals in upcountry centres are small and dealers have been eager to take up whatever is offering in order to fulfil earlier contracts.

In the loose jute section some business was reported in Supervised Jat Middles and Bottoms at Rs. 16-12 and Rs. 13-12 per md., with Indian 4 annas lower. European Packing are rather unchanged at Rs. 17 and Rs. 14 per maund.

In the pucca bales section shippers are reported to have done more business and Dundee Daisee 2/3 were sold at Rs. 73 per bale and Short Group Daisee at Rs. 83-8 per bale. Quotations are slightly easier. Balers have been obliged to offer a slight discount in rates in order to be able to complete orders. Mills are reported to have purchased Lightnings at Rs. 79-12 and Hearts at Rs. 76-12 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, August 31.

Steady conditions continue to prevail in the jute manufactures market though there is no great anxiety on the part of buyers to enter into fresh commitments for deliveries beyond March. There is a disposition to await further developments. It is generally recognised that no great advantage will be gained by postponing purchases; but there is a hope that the immediate cancellation of Government orders and the release of stocks held on Government account for civilian consumption might increase the total available supplies and that consumers who can find use for goods manufactured on Government account would be in a more advantageous position. Whether the hopes in this regard are justified remains to be seen. Meantime prices are nominally quoting at maximum rates with sellers not very keen for business.

In the heavy goods section firm conditions continue to prevail with few sellers though it is possible to do business in B. twills at a discount over maximum rates.

PIECEGOODS

(From Our Correspondent)

Calcutta. August 31.

The visit of the Textile Commissioner for India to Calcutta at this time of the year is to be welcomed. In spite of the large supplies of cloth and yarn from the Western Presidency to Bengal, there are still reports of acute scarcity of supplies. It will not be possible for many to purchase their requirements for the Id and Puja festivities.

The Industry's committee has recommended a further reduction in the ceiling rates to be effective from September 1, 1944. This will be the third reduction since the introduction of Government control, the last reduction being made in May. It is rather surprising that only small quantities of May texmarked goods are available in the market, and that too of the coarser varieties. On the representations of the various commercial bodies and prominent public men, arrangements are being made to expedite as far as possible despatch of goods to Bengal and also to make equitable distribution of all available supplies to the various classes of dealers. Steps also are being taken at the same time to check black market trading.

EAST INDIAN RAILWAY

TENDER NOTICE.

Annual Contract Items Costing Over Rs. 8,000 Class I.

Sealed Tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, on 4th October, 1944 at 12 noon.

Tender No. GB10/RI/Comp/45/C for the supply of Compound Case Hardening.

Tender forms with full particulars can be had from the office of the Controller of Stores, E. I. Railway. Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta, may however, remit the amount to the Controller of Stores direct by Money Order. No refund is permissible after payment.

Sealed tenders delivered by Hand should be presented for registration in the General Manager's office and then put into the tender Box outside the Deputy General Manager's (Works) Room, by the tenderer or his representative.

Vol. XXXIV. No. 9 SATURDAY, SEPTEMBER 2, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

BUCKINGHAM & CARNATIC RESULTS

Friday's morning's news that a meeting between Roosevelt and Churchill in Canada is imminent and that the "German desire for peace" might be one of the questions considered at the meeting has resulted in a decline in prices and closing pices are at the lowest levels for sometime. Earlier in the week steadier conditions were noticeable. Coal shares in particular improved on the announcement that a cess upto Rs. 1-4 per ton could be levied to give relief to coal mines and pay bonuses to those mines which were able to increase raisings to above the target level. The behaviour of the Calcutta market on Monday and Tuesday suggested that prices might be maintained at the higher levels. The continued weakness of the Bombay market, on the announcement of a further reduction in ceiling prices for cloth and yarn and the anxiety to await the Pope's speech, however, have induced a cautious mood in the local market also. Indian Irons have closed at Rs. 38/6 and Steel Corporations at Rs. 31/12. There was a rise in the quotation to Rs. 40 and Rs. 33/4 earlier.

* * * *

It is surprising, however, that the bullion market has not been affected by peace prospects and the Allied successes. There was a slight decline in prices in mid-week but it was due to the difficulties in sending bullion to up-country centres by rail. The resumption of railway traffic has resulted in a rally in prices. There is continued investment demand and the Reserve Bank does not appear to have any difficulty in selling silver at Rs. 132 and above. If, with the prospect of a definite depreciation in bullion prices, there should be such a large demand for both gold and silver in a market where supplies are augmented by the selling policy of the Reserve Bank it stands to reason that stock exchange securities, which are limited in supply and which are yielding an income, should continue to quote at present levels. Even the best war news has, therefore, only a slight discouraging effect on the market.

* * * *

The accounts of the *Buckingham and Carnatic Company Limited* for the half-year ended June, 1944 show that the net profit, before providing for taxation and depreciation, was slightly lower at Rs. 75,29,299 against Rs. 84,21,415 for the previous six months. The lower level of earnings was due to the reduction in ceiling prices twice during the half-year. The amount set aside to depreciation is Rs. 3,37,348 (Rs. 3,26,815). The provision for taxation is Rs. 52.5 lakhs (Rs. 65 lakhs). The sum of Rs. 13 lakhs has been set aside for E.P.T. compulsory deposit.

Sums amounting to Rs. 10,45,224 were transferred to other funds out of the earnings for the last half-year. The dividend on the ordinary shares has been maintained at Rs. 6/4 per share. The amount carried forward is Rs. 93,182 against Rs. 1,12,909 brought in.

It would thus appear that mills earnings would not be very much affected by the reduction in ceiling prices as there has been a decrease in working expenses at the same time. But it should be borne in mind that in the current half-year the average prices realised would be very much lower and that in the later stages the reduction in working expenses might not be proportionate to the decrease in ceiling prices. That is the reason why Bombay has taken a rather bearish view of the announcement this week regarding a reduction of 6¼ per cent in ceiling prices for all cloth and certain kinds of yarn as from the beginning of September.

* * * *

News from tite coal industry is good. The statements by the Select Coal Producers Association that the members were able to produce more coal in the first half of this year than in the corresponding period in 1943 should be encouraging to many. The promulgation of an ordinance early this week authorising the levy of a cess of upto Rs. 1/4 per ton has been taken to mean that the authorities are satisfied with the progress of raisings and are convinced that given further encouragement coal companies would increase production further.

* * * *

Northern India Oil Industries limited has done well in the year ended December, 1943. The higher price for vegetable oils have resulted in a large increase in earnings. In the last two years it has been possible to pay a dividend of 15 per cent. per annum. The net profit, before providing for taxation and depreciation for the year 1943 is Rs. 11,15,329 against Rs. 8,36,235 for 1942. The provision for taxation is Rs. 7,88,348 against the actual amount paid on the previous occasion of Rs. 4,93,666. The amount set aside to depreciation is Rs. 21,390 (Rs. 25,060). After transferring Rs. 1.5 lakhs (same) the dividend has been maintained at 15 per cent.

The Directors have submitted an application to the Government of India for the consent under Defence of India Rule 94A for the issue of unissued capital of Rs. 2 lakhs in ordinary shares with the intention to issue these shares at a premium of Rs. 5 per share.

* * *

The net profit for the year ended the 31st December, 1943, of the *Indian Copper Corporation Ltd.* is £65,871 after providing for depreciation and taxation. £75,000 has been provided for capital expenditure to be incurred for Shaft sinking and £46,997 credited in respect of estimated net recovery of Indian Taxation for previous years. Including £38,829 brought in from 1942, there is balance available of £104,700 against £105,204 last year.

At the forthcoming Annual General Meeting to be held on the 26th September, 1944, the Directors will recommend dividend No. 16 for the year ended the 31st December, 1943, of 10 per cent. i.e., 2.4d. per share less tax (after allowing 4s. 10.23d. Dominion Income Tax Relief) at 5s. 1.77d. in the £ equal to 1.17823d. net per share.

Subject to confirmation at the Annual General Meeting the dividend will become due to shareholders as on the 2nd September, 1944. and will be paid on the 10th October, 1944; payment from the Calcutta Office will be made by warrants sent to their registered addresses (or to their mandatees) in respect of their entire holdings in Indian currency calculated at the rate of exchange ruling on the 2nd September, 1944.

* * * *

Agriculture as the basic industry was bound to attract jointstock enterprise and the possibilities of estate farming on a new basis had always been kept in view of progressive planners of our rural economy. It is therefore doubly significant that agriculture in the vicinity of Calcutta is to receive special attention soon. The possibilities of a rich, deltaic soil are by no means exhausted by truck gardening for which the actual market today is larger than presumed, to judge merely by prices current. Investors therefore should pay more than usual attention to the offer of ordinary and preference shares by *India Collective Farms, Limited* today. In the prospectus appearing elsewhere the points to which attention must be directed are the acquisition of a compact, fertile area, commanding natural irrigation facilities, and the contract already made with the Army for the supply of vegetables. A net profit of Rs. 6 lakhs per annum is anticipated through the cultivation of vegetables alone and dividend estimates are correspondingly high. Stable prices offer a guarantee of a high return while agricultural income is not subject to anything more than the new Bengal income tax of 2½ annas per rupee. The further guarantee of sufficient operations with agriculture drastically modernised is available in this case, and hopes are entertained of even better results when the estate is developed in accordance with the Directors' intentions. It may be added that the preference dividend will be covered by ample earnings enough to pay the annual dividend many times over. An expert opinion as to soil and weather conditions offered in June, 1944 confers interest on the general portion and prospects of the estate near Majdia. Since the House of Datta sponsors the issue, the advantages of expert and experienced direction are vouchsafed to the company. In the West of India efforts have been made to transform agriculture by the application of both science and capital, and it is encouraging to note that example has provided an adequate stimulus. The results of the investors' support mean better food at lower prices, for which reason alone it is necessary to look for prompt and striking response to the issue.

Third Reduction in Ceiling Prices for Cloth and Yarn

BOMBAY DYEING PAYS LOWER INTERIM DIVIDEND

(By Analyst)

Bombay, August 31.

Encouraging war news has depressed the market further in Dalal Street. Even *Tata Steel* Defds. declined to Rs. 2,117-8 and Ordinaries to Rs. 397. I tried to obtain confirmation of the rumour whether Tata Steel Company issuing debentures has any foundation. My friends informed me that the company has no ideas of issuing debentures and that the management is still trying to bring round the deferred shareholders to agree to the conversion scheme and would, it seems, offer even six ordinary shares for every deferred share held. If the dissenting shareholders continue to be adamant Tatas might even start a separate subsidiary company to carry on with their postwar planning. Indian Irons and Steel Corporations are now weak at Rs. 38-12 and Rs. 32-10.

On the announcement of a reduction of 6¼ per cent in ceiling prices, as from September 1, 1944, Textiles evinced a further sagging tendency, *Bombay Dyeing* is paying a dividend of Rs. 25 as against Rs. 35 paid last year. The total dividend last year was Rs. 100 and for the current year I expect only Rs. 75 to Rs. 80, i.e., a final dividend of Rs. 50 or Rs. 55 per share. The shares, of course, dropped from Rs. 1,850 to Rs. 1,785 and are now steadier at Rs. 1,807-8 cum the interim dividend. Looking to the technical position of the market, *Dyeings might* decline further but I would recommend purchases around Rs. 1,750. Even a first-class scrip like *Azam Jahi* has declined to Rs. 500. Investors would not be far wrong if they commence purchase of Azam Jahis around current market price. *Gokak* have declined to Rs. 301 and can be considered attractive investment on a further decline of about 15 to 20 points. *Osmanshahi* were done as low as Rs. 297-8 today and I would suggest scale-down purchases. *Khatau Makanji* are quiet at Rs. 367-8. Around Rs. 350 they look attractive for investment.

In Madras, *Buckingham and Carnatic* have declined to Rs. 302 x.d. Around Rs. 300 the shares give an yield of over 4 per cent tax-free. For conservative investors Buckingham should be attractive. *Madura* is the only scrip that has been exceptionally steady at Rs. 69 and these shares merit the attention of investors even at the current market price. *Vasanta* were marked down from Rs. 320 to Rs. 290. Last year the dividend paid was Rs. 30 per share. Though this year there may be a cut in the dividend, I think Vasantas will be able to maintain a dividend of Rs. 18 per share in the coming few years. Around Rs. 280 I would recommend purchases.

Jute were quietly steady this week with *Howrah* at Rs. 80-12. On a slight reaction I would recommend investment purchases of Howrahs and Gourepores.

Coals have not declined much. I would therefore wait before making investment purchases.

Among Engineering shares, *Premier Construction* in Bombay were marked down to Rs. 190 from about Rs. 207 though closed better at Rs. 200. From the point of view of postwar prospects Premier Construction look quiet an attractive investment on a further decline.

There was good buying from Bombay for *Jessop* and they were done up to Rs. 24-8, but declined at the close to Rs. 23-12.

Associated Cement in Bombay were a little quiet at Rs. 233, but *Dalmia* were steady in Calcutta at Rs. 18-12. I think every investor should have these two scrips in their portfolio. In the Chemical group, *Tata Chemicals* were down by 3 points at Rs. 22-12. Below Rs. 20 they look a good buy.

In Madras, *Mettur Chemicals* Ordy. were done as low as Rs. 18 and deferred at Rs. 7-8. Looking to the technical position of the market, Mettur Chemicals might decline further, but I would suggest buying ordinary shares around Rs. 16. As for deferred shares I still continue to maintain they are a good sale.

In the Mysore group, *Chemical Fertilisers* were marked down to Rs. 28-12 and I would not be surprised if they touch Rs. 25. In the Paper group, *Titaghur* after declining to Rs. 26, are better again at Rs. 27. *Mysore Paper* are quiet at Rs. 26. Both these shares look attractive around Rs. 25. I would even suggest selling off all other paper shares and invest proceeds in Titaghur and Mysore Paper in a weak market.

Plantations in Madras, without much business passing have declined by about 30 per cent in the last one month. I, therefore, feel that the present fall has discounted most of the unfavourable factors. Genuine investors should try to commence purchases of select tea-cum-rubber and coffee scrips.

Bank shares were steady with the exception of *United Commercial* which declined to Rs. 80-12.

In the Insurance group, I had mentioned that *New Indias* look overvalued when they were quoting around Rs. 83. They have now dropped to Rs. 76-12. Below Rs. 70 I would recommend fresh commitments. In Madras, *United India Fire* declined to Rs. 10-6 whereas *Prithvi Insurance* shares were steady at Rs. 11-12. Prithvis deserve the attention of investors.

Mr. A. V. Thomas has bought a coffee estate belonging to *Kathlekhan Estates Ltd.*, in Mysore Estate and is floating the concern on the basis of a capital of Rs. 3 lakhs in 6 per cent preference shares and Rs. 2 lakhs in ordinary shares. Mr. A. V. Thomas and his friends have decided to take the entire ordinary capital and the preference capital of Rs. 3 lakhs will be issued to the public. Of course, the 6 per cent Mysore tax-free preference shares look exceedingly attractive to conservative investors since on the basis of the estimated profit the preference dividend of Rs. 18,000 is covered nearly four and a half times and the distributable surplus for the ordinary capital is estimated around 30 per cent. As for the management Mr. A. V. Thomas needs no introduction to the investing public.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 1.

After earlier steadiness rather quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing has been on a restricted scale. The earlier strength of the markets was due to covering by bears who had incompleted deliveries. The lack of buying support and spectacular developments in the war situation have naturally had a depressing effect in the last two days especially as Bombay advices were not quite encouraging. The whole of the gains have been lost by speculative counters and quotations are not very much changed on balance. With the expectations of an early peace and the holidays not very far off there may not be any appreciable change in prices, in the coming weeks.

The giltedged securities section has been quietly steady with only a limited amount of business passing. 3½ per cent Paper remained unchanged at Rs. 99-9. Among terminable loans, 3 per cent 1951-54 were Rs. 101-2. 3 per cent 1953-55 Rs. 100-5, 3 per cent 1963-65 Rs. 99-4, 5 per cent 1945-55 Rs. 103-8 and 3 per cent 1949-52 Rs. 101-7. Among Provincial loans, 3 per cent U. P. 1961-66 quoted Rs. 96-12.

Among Bank shares, quotations were slightly lower, *Bharat* ordy. were Rs. 115 and *United Commercial Bank* Rs. 30-8 premium. *Imperial Bank* fully paids were Rs. 1,977 and contributories Rs. 490.

Cotton shares were easier on the announcement that the Industry's Committee of the Textile Control Board had recommended a further reduction in ceiling rates by 6¼ per cent as from September 1, 1944. Earlier, *Cawnpore Textiles* quoted Rs. 14-4 and *Elgin* Rs. 72-8. At the time of writing. *Cawnpore Textiles* are Rs. 13-9. *Dunbar* Rs. 285, *Elgin* Rs. 71-12, *Kesoram* Rs. 17-8 ex-dividend and *New Victoria* Rs. 8-14.

In the Coal section, the promulgation of an Ordinance authorising the levy of a cess upto Rs. 1-4 per ton and the reports that raisings had considerably improved had an encouraging effect. *Burrakur* were done as high as Rs. 45-8 and *Bokaro and Ramgur* Rs. 42-4. In sympathy with the easier tone of the other sections, however, closing prices are lower. *Amalgamated* quoted Rs. 48 against Rs. 48-12, *Bengal* Rs. 648 against Rs. 660, *Bhalgora* Rs. 16-12 against Rs. 17-10 and *Bokaro and Ramgur* Rs. 40-4 against Rs. 42-4. *Equitable* were Rs. 62-8, *Hurriladih* Rs. 35-4 and *New Beerbhoom* Rs. 37. There was a sudden rise in the quotation for *Parasea* on heavy buying by a prominent operator by nearly 3 points to Rs. 12-6. *South Karanpura* improved to Rs. 24-6, but have receded to Rs. 22-14. *Talcher* were Rs. 10-6 and *West Jamuria* Rs. 58-4.

In the Jute section, quotations have remained steady on reports that the Industrial Pool Scheme has been completed and that the improvement in the coal situation might result in a higher level of production at the jute mills. *Adamjee* were Rs. 34-8, *Anglo-India* Rs. 449, *Clive* Rs. 50-4. *Champdany* Rs. 245, *Ganges* Rs. 530, and *Khardah* Rs. 660. *Howrah* improved to Rs. 82. but with selling at the higher levels the prices receded to Rs. 80-8. The quotation is now Rs. 80-12. *Megna* were Rs. 108 and *Nuddea* Rs. 130-8.

In the Engineering section, *Indian Iron* improved to Rs. 39-15 but have come down to Rs. 38-8. *Steel Corporation*, likewise, are now quoting Rs. 31-12 after being higher at Rs. 33-14. *Braithwaite* were better at Rs. 11-4, and *Burn & Co.* at Rs. 406. *Jessop* improved to Rs. 24-10 but have come down to Rs. 23-14. *Marshalls* were Rs. 4-12 and *Indian Standard Wagon* Rs. 85.

Sugar shares were quiet, *Balrampore* being Rs. 19-2 and *Belsund* Rs. 16-2, *Champaran* were a shade better at Rs. 44-8 while *Carew & Co.*, were unchanged at Rs. 29-14. *New Savan* were Rs. 22-3 and *Rammugger Cane & Sugar* Rs. 14-4.

Business in the tea shares has been very restricted, *Bishnauth* being Rs. 41-14, *Hattikhira* Rs. 33, *Sapoi* Rs. 22-4 and *Tezpore* Rs. 19-6.

Among Paper shares, *India Paper Pulp* were uninteresting at Rs. 215, *Titaghur* 'A' and 'B' at Rs. 27-10, *Orient* at Rs. 30-5 and *Star* at Rs. 17-8.

In the Miscellaneous section, *Burma Corporation* were better at Rs. 4-14 while *British Ceylon Corporation* were lower at Rs. 19-13. *Bararee Coke* were Rs. 31-2. *Calcutta Trams* are easier at Rs. 46-2 and *Indian Cable* at Rs. 28-6. *Rohtas Industries* were Rs. 37-14 and *B. B. P.* Rs. 4-8. *Assam Saw* were unchanged at Rs. 5-4 and *India General Navigation* Rs. 161. *Midnapore Zemindary* were Rs. 176.

PRICES ARE STILL FALLING
don't be caught by unwise buying

As the last year has shown, investments in goods, property, land and commodities have turned out badly. Prices have fallen and money invested in these things has visibly *SHRUNK!*

Lucky, indeed, the wise people who invested in sound securities. Their savings have grown. Their money has become more valuable. Assisted by price controls and increased manufactures, they are defeating the profiteers and hoarders. They have rendered both India and themselves a great service.

Keep on with the good work. Prices are still falling and will continue to do so as long as people spend less and save more. Now, as many people have found out, money investments are the best. Any of these is absolutely secure:—Co-operative Societies, Insurance, Savings Bank Account, Post-Office Savings Bank, Government Loans, National Savings Certificates.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Avoid all unnecessary expenditure on clothes, furniture, crockery, cycles, motor cars, and other things which you will be able to buy much more cheaply after the war. For the duration, do without luxuries. This is the true path to personal and National prosperity.

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

(Annual General Meeting on 6-9-1944 *at* 4-30 *p.m. Transfer books closed from* 11*th August to* 6*th September*, 1944).

The Company's operations during the year under report resulted in a substantial increase in gross profit, most of which, however, was absorbed by the necessary provisions for additional taxation and compulsory E. P. T. deposit.

The Shareholders should, however, bear in mind that the Depreciation Fund in still extremely inadequate, in view of the age of a large part of the Company's physical assets and the heavy wear and tear on plant during the war. It must, therefore, continue to be the policy of the Company to make substantial additions to the Fund each year, and also to build up the General Reserve Fund as profits will allow.

The sustained improvement in the Company's profits over those of the previous year have enabled the Directors to grant to all employees of the Company a larger bonus, equivalent to three months' salary or wages.

The sales of the Company's products during the year have again shown a marked improvement, creating a new record of about Rs. 2.5 crores, as compared with Rs. 1.8 crores in 1942-43. The improvement was due partly to an increase in production and partly to the higher prices prevailing in the market.

About the same quantities of copra, groundnut, mowrah and other seeds were crushed during the year as in 1942-43, and the cakes produced were again sold without any difficulty in the local market.

The production of laundry soaps, Cocogem, vegetable products and glycerine was maintained at the relatively high level of the preceding year, while there was a substantial increase in the output of toilet soap, Pakav, toilet articles, etc. In fact the production of toilet soap was almost doubled, mainly because the new soap plant at the Sewri Factory operated throughout the year instead of only for a few months as in 1942-43. The difficulty of obtaining containers, such as tins, bottles, etc., prevented a further increase in the manufacture of edible and toilet products.

Additional equipment was added to the laboratory for the distillation and fractionation of indigenous essential oils set up at the Sewri Factory in 1941-42. The gradual development of this department is making the Company increasingly capable of meeting its requirements of perfumes for soap, hair oils, etc., and, in fact, some of the products manufactured in it have also been sold in the market. It has been possible to place on the market a very high-grade perfume named Nirvan, the sale of which is hampered only by the difficulty of obtaining bottles of the superior quality required.

Authorised Capital—Rs. 75,00,000. *Issued—Rs.* 58,58.950. *Subscribed—Rs.* 57,90,700 *in* 2,31,628 *Ordinary shares of Rs.* 25 *each, fully paid-up.*

(Meeting on 4-9-44 *at* 3 *P.M. Books closed from* 21*st August to* 4*th Sept.*, 1944)

"Considerable difficulty was experienced by buyers in making arrangements for the transport of their goods to the main distributing centres upcountry and they therefore adopted a very cautious attitude with regard to purchases. Govt. has, in addition to the fixation of maximum prices, introduced a quota system designed to resrict the number of dealers in the trade and thus facilitate the elimination of the black market in textiles. The suplies of coal made available to the Mills were consistently below minimum requirements for single shift working. The outlook at the time of writing is not encouraging."

Registered No. C1646 (17th Year)

Indian Finance

ISSUED WEEKLY

Vol. XXXIV. No. 10 SATURDAY, SEPTEMBER 9, 1944 Price Re. 1

Uneasy lies
THE HEAD .....

If you are the head of the family, you must be feeling uneasy for the future. There will be so many problems to face and solve. You can at least solve your financial problems by saving while you are earning. Do it now through INSURANCE.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Interbank call money, as in previous weeks, is nominally quoting ½ per cent in Calcutta and ¼ per cent in Bombay. Against Rs. 6 crores of Central treasury bills offered on September 5 applications came to Rs. 14.57 crores. So far as the volume of applications is concerned, there is hardly any change as compared with last week. But bidding does not seem to be as keen; and the average rate of accepted tenders registers a rise of 3 pies to 7 annas 10 pies per cent per annum. The offer of Central treasury bills for next week is unchanged at Rs. 6 crores. Treasury bill maturities during September amount to Rs. 24 crores; and, on the basis of weekly tenders for Rs. 6 crores, the ways and means position from the point of view of treasury bills must be just about balanced in the course of the current month. Bengal treasury bills, the results for which did not reach us at the time of going to press last week, were for a total of Rs. 5 crores. Applications came to Rs. 8.25 crores and the average discount rate was 8 annas 10 pies per cent per annum, revealing a disparity of 1 anna as compared with the Central treasury rate. The Assam Government were in the market this week for Rs. 1½ crores; and they were also able to secure their three months accommodation at the same rate as the Bengal Government.

The returns of the Reserve Bank for the week ended September 1 disclose only minor changes except for a sharp increase of Rs. 7.68 crores in miscellaneous deposits and a rise of Rs. 9.88 crores in foreign balances held in the banking department. Active note circulation is higher by 1.27 crores; and rupee coin in circulation by Rs. 32.22 lakhs. In the result, notes held in the banking department have decreased by Rs. 1.59 crores. In the banking department, Central Government's deposits show a small decline of Rs. 16.85 lakhs to Rs. 139 crores; Provincial Governments' of Rs. 89.95 lakhs to Rs. 16.44 crores; and scheduled banks' of Rs. 1.64 crores to Rs. 100.75 crores. Deposits of the Burma Government stand at Rs. 1.83 crores, disclosing an increase of Rs. 44.47 lakhs.

From the point of view of the monetary situation in the country, July and August provide interesting data for measuring the success of the steps taken by the Government to combat inflation. On June 30, active note circulation was Rs. 931.37 crores. By September 1, this figure had come down to Rs. 928.28 crores. That is to say, in the course of July and August, active note circulation has come down by Rs. 3 crores. During this period, there appears to be also a slight reduction in the volume of rupee coin in circulation. Rupee coin in the issue department stood at Rs. 12.81 crores on June 30 and has risen to Rs. 14.68 crores on September 1. This means that rupee coin to the amount of Rs. 1.80 crores has returned from circulation. So far as we can make out, the Central Government do not appear to have delivered rupee coin to the Reserve Bank during these two months. Taking the circulation of notes and coin, it may, therefore, be said that, since July 1, there has been a contraction in circulation of the order of Rs. 5 crores. Both sterling securities and rupee securities in the issue department have remained unchanged in these two months. Yet, this was a period during which sterling payments received from the Allied Governments on account of war expenditure and war commitments continued to be considerable. Between June 30 and September 1, foreign balances held in the banking department have risen by Rs. 85 crores to Rs. 258.67 crores. This gives an average of Rs. 42½ crores per month for sterling receipts of the Central Government. In spite of such large receipts, no portion of this additional sterling was utilised for currency expansion. The main effect of sterling receipts has been to augment the Central Government's deposits with the Reserve Bank from Rs. 65.25 crores to Rs. 139 crores. What are the various monetary transactions which have thus neutralised the inflationary effect of sterling receipts for Rs. 85 crores? The policy of draining surplus cash from the money market has been effectively carried out. Through Central treasury bills, which have increased from Rs. 56 crores at the end of June to Rs. 72 crores in the beginning of September, the market has been denuded of Rs. 16 crores. In the same period, provincial treasury bills account for further depletion to the extent of over Rs. 12 crores. The Provincial Government loans absorbed Rs. 13 crores. Accurate figures for the sale of Victory Loan and other loans are not available; but, considering the state of the giltedged market, we may infer that subscriptions to the Central Government loans in July and August might have amounted to Rs. 30 crores. Advance payments of Excess Profit Tax and E. P. T. deposits and payment of income-tax on the basis of 'pay-as-you-earn' may well have accounted for an outflow from the market of, say, Rs. 30 crores. The total amount thus drained from the market comes to Rs. 101 crores. This should have been about equal to the extra disbursements of the Central Government in these two months. From the purely monetary point of view, it may, therefore, be said that full success was achieved for the anti-inflationary measures devised and executed during the last two months.

From other points of view also, there are reasons to think that the inflationary forces are being steadily and succesfully controlled. Rationing has now passed the stage of experiment; and, in the important cities rationing is functioning smoothly. Cloth control has already achieved notable success; and, though quite a substantial amount of work still remains to be done for the elimination of the black markets, the supply of cloth to the masses at reasonable rates has been put on a satisfactory basis in most provinces in India. Bengal

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay, September 7.

For the first time the bullion market is susceptible to peace prospects. The week has seen heavy liquidation in silver spot and forward. Seven days' delivery opened at Rs. 129-6 on Tuesday, but the news regarding the Finnish and Bulgarian peace and Allied entry into German territory unnerved operators and forward went down to Rs. 125-4 on Wednesday afternoon. Today the market was trifle steady at the beginning when the Reserve Bank sold 50 bars only at Rs. 128-12. But fresh unloading forced the price to Rs. 126, spot price being Rs. 2 higher. The undertone is nervous.

Gold, likewise, opened firm on Tuesday on bear covering, being quoted at Rs. 74-13 forward. But heavy offering in spot and forward depressed price to Rs. 71-10 on Wednesday. At this stage a prominent bear covered 40,000 tolas which caused market to open at Rs. 73-4 on Thursday morning. Later there was such a heavy rush to sell that business was sometimes difficult. The Reserve Bank sold nothing on Wednesday and Thursday. Forward is now quoting Rs. 71-10 with spot eight annas higher.

COTTON

Things are moving fast in the cotton market. It is stated that the Government of India has given permission for trading in March delivery only. Possibly. to avoid a squeeze which may develop in January delivery owing to the lateness of the crop. The East India Association is meeting on Monday to consider firstly, the advisability of trading in March delivery and also the proposal that last buyers may avoid taking delivery of cotton provided a penalty of Rs. 7-8 per candy is paid. Secondly, whether cotton description like Kalagin, Dholleras and Bijapaurs which are not covered by the official plan should be deleted from the list of tenderable varieties in contract, thereby removing anomalies. September quoted Rs. 402. Longs are squaring up position with difficulty. Many good grades are being bought by Government and a larger percentage of the cotton is approved by the *ad hoc* committee. But Forward price is unaffected by these or crop damage.

War and Peace

With the tempo of the war in Europe quickened beyond the hopes of a year ago, men's minds are ruled by the imminence of peace. Not a day passes withcut reports of peace feelers from Germany or unconvincing denials thereof. When France is liberated and Allied armies are on Dutch and Belgian soil, and even the soil of the Reich, doubters become suddenly dogmatic and affirm a speedier end of the war than consistent believers in allied victory. For the first time since the war broke out more than five years ago, the war fits into the framework of lay understanding. It is possible to think in terms of the basic strength of the nations involved in the struggle and mentally to map out the post-war world without heavy drafts on one's powers of imagination. An Axis victory would call for far more change than the ordinary human mind can visualise. And yet for a frightfully long period it seemed to be on the cards. Allied statesmen, while, no doubt, they infected their peoples with the will to resist, gave the average man no glimpse of the actual path to victory. For, Germany seemed so secure in her European fortress and so capable of guarding its approaches, that things looked none too bright even in the middle of the fifth year. True, the Axis powers had been bundled out of North Africa and Sicily had been conquered. But the landing in Italy showed that every inch of ground would have to be bought at a dear price in blood and treasure. The relentless rolling on of the Russian war machine, however, was dissipating the myth of German invincibility. But then, no one could overlook the simple fact that Russia could not go on at that rate indefinitely. The second front, which the Russians aptly defined as a front in Western Europe on a scale sufficient to draw a number of German divisions from the East, was imperatively needed. The actual opening of the second front was indeed a great achievement. But it was not till long after that confidence in the certainty of an onward march was induced and redoubled. Today the European fortress of Nazi Germany is being bombarded from all sides. The garrison is rushing to and fro; and the bastions fall, one by one.

It is time that the military aspect of the war was allowed to recede into the background. It never was very important. So long as Germany did not come up against superior armour, she had her way. The whole of the European Continent lay at her feet. But the moment Allied arms could flow into Europe, the position changed. Not much progress in the Italian beach-head was needed to bring about the overthrow of Mussolini and Italy's walkover to the Allied camp. The Russians had hardly approached the Roumanian frontier before Roumania asked for terms. Bulgaria was less prudent or foresighted but seems ready to make up for past blunders. Finland has done a bit of tight rope walking. But nowhere in Europe is Germany capable of holding up the tide of events. General Eisenhower, when he broadcasts to the people of the occupied countries, is more concerned to warn them against a premature rising than to ask for co-operation with his advancing armies. If the coup d' etat in Germany and the attempt on Hilter's life failed, Fate seems but to have played with its victims as a cat with mice. It were kinder to let the conspiracy succeed.

However, what matters more is that. whatever may be the German plan to defend the German soil, the weight of Allied arms will make itself felt. Germans seem to doubt it less than others. The military aspect has thus lost its importance. What is in store in the immediate future? Belief in the possibility of a negotiated peace is not easily disposed of. Mr. Churchill goes to Canada shortly to confer with Mr. Roosevelt. He was in Italy not long ago. The Germans' desire for peace is indubitable. They have nothing to lose and much to gain by securing some terms before unconditional surrender comes on them almost as a matter of course. In the bitterest of wars, there are stages when the warring nations can instinctively feel a concord of interests and react to it. A variety of circumstances can contribute to such a feeling. War weariness, the minimal uncertainties of the last lap, rifts among Allies, fear of possible embarrassments from a prostrate foe, all these may act at times in favour of a negotiated peace. Against all this, lies in the balance the enormity of Germany's crimes. She has fused her enemies together in one unbreakable phalanx; and though it is not difficult to see the interest of one allied nation or another in clemency to Germany, its risks to all are too patent to be overlooked. When Mr. Cordell Hull said that the Allied demand for unconditional surrender needs no reiteration, he spoke the literal truth.

But the difference from the practical point of view between unconditional surrender and surrender on terms may be easily exaggerated. The fact that the enemy may surrender without waiting to stipulate terms does not absolve the victor of responsibility for thinking out the problem of how to treat the fallen foe. When France surrendered to Germany, Hitler had his plans ready. In that sense at least, it is an urgent task of the Allies to agree among themselves as how Germany should be treated when she surrenders of her own accord or otherwise. Some indications are available of the Allied plans in this regard. Military occupation of Germany, one part of it by each of the Allied nations, total disarmament, return of looted property, German labour battalions for reconstruction work in Russia, punishment of war criminals and separation of Austria, and probably some parts of Germany too, from the Reich—these are said to be the principal ideas contained in the Allied plan, which, of course, is still in the making.

But to bring about the surrender of Germany is only part of the task of the U.S.A. and Britain. The war against Japan, though its progress has exceeded expectations, is nowhere near the critical phase that has been reached in Europe. Of the Allies banded together against Germany, Russia is still friendly to Japan. Liberated France will no doubt join in the fight in the East, if only to strengthen her claims to her lost Empire. The impact of peace in Europe on the war in Asia is not without its complexities. Mr. Phillips' letter on India to Mr. Roosevelt and his reference to Britain's part in the war against Japan as a token one has raised a storm which will blow over but will leave some damage in its trail. Japan, since she carved out for herself a vast territory, is both a land and a sea power. While Admiral Nimitz's strategy has robbed her of the greater part of the respite she expected to gain from Pearl Harbour, it is still doubtful whether the war can be won on the sea and in the air. But the Axis has had such an organic character that the defection of Italy affected Germany vitally. Likewise, the interval between the end of the war in Europe and the end of the war in the East may not be as long as a close study of maps and facts and figures might suggest.

Peace is round the corner. And Governments, peoples, business classes one and all have to give thought to its problems. It is indeed a pity that even the end of a devastating world war should seem to be no unmixed blessing. But peace has its problems, no less than war; and the oversight of the simple fact caused not a little suffering at the end of the last war. Those who think of peace with a shiver need to ponder over this difference. Anticipating a demand we are providing a series of articles which should help the public to see the post-war slump for what it is, a bogey. The question to-day is not whether the nations pay due regard to the economic problems of the post-war period but whether the plans are speeded up to keep pace with the progress of Allied arms in Europe.

Could the same thing be said of the politics of the post-war period? It is almost impossible to provide a heartening answer. The fact that the war will not stop all at once and that Japan will have to be fought for some time after Germany's surrender suggests that there will be time for a process of adjustment to peace time conditions. The realities of the problem in the East are still masked from the eyes of Western observers. Russia's relations with the English-speaking democracies may enter a phase of greater cordiality and less reservation in what will remain of the world war when Germany will have surrendered. Anglo-American relations, which subsist on a tacit silence on differences and concern for respectability, may gain from the new vogue of outspokenness initiated by Mr. Phillips and Senator Chandler. The war against Japan may yet give a new impetus to the social dynamic in the society of nations which the blitz and panzers of Hitler failed to impart to it.

Partners in Planning

The value of public works in staving off or alleviating economic depression is no longer in dispute. They occupy the first place among the means to full employment even if they are not an end in themselves. Though interest in India converges on raising standards of living rather than expansion of employment, the current emphasis on civilian technical training and the adoption of employment exchanges without their incorporation in any scheme of social insurance testifies to the ready acceptance of maintenance of employment. How private industry would develop under a programme of power development and agricultural expansion, and what methods can be properly applied to stimulate growth during the postwar period can scarcely be indicated from the existing plans to offer advice to industrialists as to openings and prospects. Here the emphasis appears to be to find uses for idle capital rather than to create or share work largely through the present ratio of wages to total national income. In India industrial employment is a

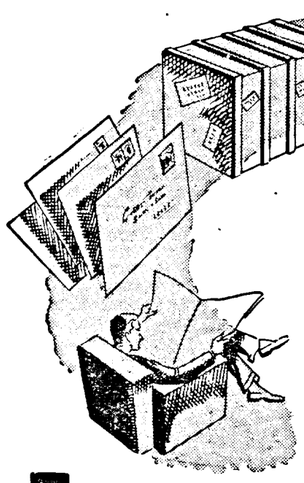
small fraction of the work and services performed. If safeguards against depression have been familiar to us no declaration of policy as to the future absorption of a non-statutory population has taken shape, although schemes for putting demobilised soldiers in the field or the factory have gained more than a footing. But no more than investigation into conditions of work and labour welfare has been ordered here. Preparations for the transition then are scarcely complete, because, in the general view, the planning is more important than the development.

Where circumstances differ as in Britain and the U.S.A. the entire conversion process is mostly viewed as one of contraction and the balance of payments occupies the pivotal position. Yet the maintenance of wages and incomes in order to sustain a higher level of social services appears a higher purpose. The promise of decontrol is a qualified promise; because a larger field is reserved for public action and enterprise in the future. Where totalitarian economics has influenced proposals against the trade cycle, it is not in respect of public works, to which monetary theory extends hearty support, but in the caution against a return to any 'labour reserve' of as much as eight percent as was noted between the wars. Not much importance is attached to the existence of large liquid resources in the banks of Britain or the continuance of low rates of interest, partly on account of the fact that the departure from gold did not afford much more help than the fiscal changes when social services were pared down. The decrease of taxes and contributions alike in the downward phase of the trade cycle is now a factor in unemployment policy.

The White Paper presented by Lord Woolton in June based on the facts of experience contains, so far as India is concerned, some welcome indications as to the line of development. Price control as a means to the maintenance of purchasing power may be regarded as a counsel of perfection, but how capital expenditure by private enterprise should be planned and timed is a matter of enduring interest. Against the common intention to replace in a rush all goods which have been in short supply must be set the direction to save more and spend less for some years after the war. Such a relatively harsh doctrine has a bearing on the utilisation of sterling balances as well as the preservation of the home market for our new, indigenous industries. To adapt the main principles of economic management is not easy, but just now it appears that the whole circle instead of segments of planning should be exposed to view at least to prove the familiar view that economics must take precedence in India over politics for some time. Where the maintenance of the National coalition in Britain after the defeat of proposals for electoral reform seems important, the entire post-war economic programme is based on appreciation of all current factors. But the State is not claiming exclusive rights at all and the place assigned to private enterprise even when public spending is at a high level is significant. The disposal of manpower may create fewer problems than either the quantum or direction of foreign trade. Yet the doctrine that industry must be resilient and flexible receives approval. Private enterprise, to judge by the remarks of Sir Malcolm Stewart at the annual meeting of Associated Portland Cement, pins its faith to restored efficiency and increase in output in spite of presumed delay whether in lowering prices or regaining export markets. The control of raw materials and the disposal of surplus stocks may afford advantages of a familiar kind. Some indication as to Government's intentions are available but the further promise to hold prices of manufactured products at the right level in relation to costs has not been made while the same liability has been accepted in the White Paper. There are more than local or temporary anxieties in regard to the future of wartime enterprises.

Since reconstruction involving saving at a high rate is given today a higher place than the production of consumption goods, it is clear that concentrated industries will receive less consideration than heavy industries, for instance, in regard to the acquisition of new capital. The division between essential and non-essential is to be carried forward into peace because of the experience with reference to special areas. This factor explains the forms of assistance to British industry. Industrial location too becomes the subject of conscious direction. To increase the mobility of labour is but one of the purposes of the White Paper. Regional planning is accepted as a necessity, and the future sale of munitions factories is to be determined with reference to licensing of new factories or extensions. Trading Estates are to remain, and in addition to Government contracts for new enterprises in development areas, special financial assistance, where prospects are proved, is to be made available. The provision of basic services including transport is accepted as a further duty of Government. British employers are, however, charged with a duty to train workers for new jobs if the old ones are not available. The provision of housing at moderate rents, when workers are moved, is not the limit of the State's assistance to enterprise.

Where the British plan breaks almost virgin ground is in regard to the encouragement of spending by local authorities. Fresh debt need not scare away Home Corporations from investment. It has been perhaps urged that an increase in rates would be of less consequence than increase either in taxes or an increase in public debt. To apply this principle in India might be doubly difficult when resources are strained and liabilities heavy. Yet it is possible to argue that local boards must augment revenue. Spending by local authorities represents the proper beginning in regard to the development of internal communications. Once the principle of grants-in-aid finds a place, public investment on the part of elected authorities can expand, and it is on this point that the White Paper confirms opinion as to planning from below. Local authorities, wherever functioning, can be empowered to put up plans either for public utility construction or public works of the ordinary type. How much India's constructional trades would benefit is not to be inferred from wartime experience but on the prospective surpluses in the steel, cement and other industries in India. In Britain elected local authorities will certainly go far beyond the construction authorised by the new Education Act since the promotion of immediate or non-commercial investment is assigned to them. Their eagerness to consider local interests and susceptibilities in the matter of spending may be qualified by control higher up, but it is necessary to remark that much depends on the power to service new debt. Where rates and cesses in relation to Central taxation doubled in wartime have lagged behind, a cogent case for stepping up can be put up without reference to the possibilities of local development. That schools, dispensaries and hospitals are essential appurtenances to higher standards of living cannot be gainsaid, but overhaul of local finance, more particularly of Union Boards and Panchayats is a primary condition of progress towards the extension of planned investment for local objects which would have the further merit of limiting urban concentrations of industry. What we might learn from British plans is not limited to the guidance as to future location of industry or the control of factory extensions but extends to the provision of civic amenities for industries.



The Japanese are not naturally religious or devout. They think nothing of embracing two or three religions at one time if it suits them. In modern times the only recognized religion in Japan is Shintoism—which is the worship of their Emperor. This is the religion they seek to impose on us.

IT IS EASY

not to travel

If you want to AVOID the discomfort and inconvenience of wartime travel, you can always think of an excuse.
If it's a marriage you should attend, you can send the rail fare as a practical present, but stay at home yourself.
If it's business, you can conduct it just as well by correspondence.
If it's a religious festival you can send an offering by money order.
If it's a holiday, no excuse is required.
Who wants to spend hard-earned leave, crushed into a railway compartment spending twice as much money as ever before on tongas, gharis and other incidentals? Spend your leave near home—get a real rest, and the maxmium benefit from those precious days.
But if you want an over-riding excuse, it is that the Railways are **busy**. They have to feed all the people of India, and assure the supplies of other necessities of life. So great is their task that passenger travel **must** be reduced.

Travel less.

ISSUED BY THE RAILWAY BOARD

Editorial Notes

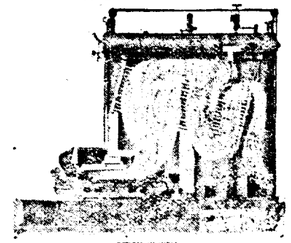
Help from India

Supplementing figures given in the President's last quarterly report to Congress on lease-lend a note on British help to U.S. forces in the task of invasion has been given. The ratio of roughly 9 to 1 apparent in the U.S. President's report in respect of U.S. expenditure on lease-lend and the immediate, direct return from the Allies probably stands, but the value of British help to soldiers, sailors and airmen in war cannot be measured. Knowledge was made available at the request to American forces in Britain along with airfields and aircraft and repair depots. What India provides under the 1942 agreement is provided for in the Budget. Up to the end of 1943 India spent Rs. 33 crores on works required for U. S. forces. Stores, rations, transport labour and other charges figure in the bill which is not complete or detailed. Compensation for requisitioning also is paid for by India. Petroleum appears to be the most considerable item in the list of lease-lend materials made available in India. The substantial increase in Indian oil imports is, however, paid for in other ways. Work at the ports has been speeded up to meet U.S. requirements while repairs to U.S. ships are carried out gratis. What India has derived in turn may be up to expectations though importers here may attach naturally greater importance to the removal of the veto on U.S. exports by Purchasing Missions functioning in Washington at present. The removal may not extend the scope and scale of Lease-Lend assistance to India or modify import restrictions here but the publication of details as to trade in raw materials like tea suggests that prices in India are duly pegged by official action so as to limit expenditure on reciprocal aid to the U.S.A. apart from the fact that Indian aid in relation to that received is larger than that available to the U.S.A. from the Dominions, Canada excepted.

Hyderabad's Improving Asset

In Hyderabad the Railway Budget shows that earnings respond to the increase of traffic. The State Railway operates road transport services as well and a proportionate increase of road traffic shows how the railway deals with the situation created by the war. Foodgrains handled by mobile convoys of lorries show how the distribution of necessaries depends on modifications in transport. The N. S. Railways have more than doubled since 1938-39 with proportionate benefits to the Depreciation Fund and the Railway Reserve. In the latest Railway Budget a small drop in earnings is forecast but the depreciation allowance is larger like the allocation to railway reserve. The contribution to Hyderabad's general revenues is fixed at Rs. 163.43 lakhs as compared with the pre-war payment of Rs. 115 lakhs (fixed as the minimum by a convention) but this is to be supplemented, as in previous years, by a further special contribution. The interest on the capital at charge paid to the Government, every year from the net earnings is 5 percent. This high return is in itself a full defence of the purchase of the Railway in the time of Sir Akbar Hydari. There is also the States' share in surplus earnings supplemented during the war period by payments from the Reserve Fund which stood at Rs. 191.27 lakhs on March 31, 1944. Depreciation Fund stood at Rs. 229.87 lakhs on March 31 and, after meeting charges for renewals and replacements from the current year's enhanced provision, would stand higher on March 31, 1945. The Reserve Fund is meant to finance railway extensions and improvements. The rise is prices accounts for the growth of working expenses but the operating ratio is fairly low as usual since the estimated gross revenue of Rs. 471.29 lakhs is likely to be exceeded by actuals for the year. Capital expenditure apart from the transfer of Rs. 27 lakhs from the Depreciation Fund, though allowed for, is problematic and surplus resources may thus be available to the Railway for post-war developments. The railway runs its own Air division for which separate accounts are kept. A small surplus is expected for the year and the useful beginning made there (through Air services under the Railway remains distinct) suggests that the future is hopeful. Large additions to the Reserve Fund and the significant increase in capital at charge can be pointed to in spite of the deteriorating travel conditions to which Col. E. W. Slaughter referred.

Limited Response



Figures as to Government borrowing since June 1940 are interesting only for showing repeatedly the differences between the Provinces' capacity and willingness in respect of subscriptions to loans. The tabulated statement issued last states that the total for subscriptions to the Victory Loan 1957 in May amounted to Rs. 732.82 lakhs of which Rs. 611.44 lakhs came from Bombay. Subscriptions from Bengal in April-May have been negligible. The contrast between the totals for Defence loans and the Victory loan is striking enough to provoke different explanations. Subscriptions from the Punjab and Bihar latterly have run at a satisfactory level. The general belief that Prize Bonds, on offer for months, did not excite much attention is certainly supported by the figures for May. Because a total of Rs. 13.04 lakhs, though good in relation to the April average, is disappointing, and only the recent draw and prizes paid out can create a market following for five-year interest-free bonds. The prohibition of all sweepstakes and raffles in order to create a monopolist's market for Prize Bonds is admittedly impossible at present. The total put into Prize Bonds in two months was Rs. 28.2 lakhs, but so far its success may have been at the expense of Savings Certificates. The sales of Savings Certificates in two months, April-May accounted for Rs. 11.97 lakhs only. The slackening of the rate of subscriptions to the Victory loans may be either due to the abnormal stock market activity engendered by war news or to the greatly increased short-term borrowing of the Government. As regards Prize Bonds the anti-inflationary effect is hardly in evidence after the vehement discussion as to its place in war finance as distinct from municipal borrowing plans. That sales of interest-free bonds would diminish when Prize Bonds appeared as a rival was only to be expected and the sales total for two months ended May 31, was Rs. 4.26 lakhs only, and most of it came from Madras.

The Congo

A Belgian Senator writing in the Belgian monthly review, *Message*, refers to colonial nationalism which in the Belgian Congo has definitely supported the war effort of Belgian Empire. That Empire declared war against Germany in 1940 and the economic development, paralleled by administrative progress in every direction, sustains the declaration that the Belgian Congo went to war as a free country to continue the fight against Germany. A British economic mission led by Lord Hailey visited the Congo in 1941 to settle what was to be done about essential production. The Congo was asked in 1942 to produce more tin, more rubber, more cobalt and more palm oil because the Dutch East Indies were lost. As compared with 1939 the production of minerals including manganese and zinc showed striking increase in 1942. Supplementary production in respect of cotton, coffee and industrial diamonds made real progress. A direct result was the growth of manufacturing industry in the Congo. Breweries, cement works and sugar refineries satisfied the demand in Africa. A beginning has also been noted in regard to tea planting and the Congo faced with a shortage of imports, has become self-sufficient in regard to tobacco manufactures, diary products and many other things.

The Belgian Government in London is dependent upon regular financial contributions from the Congo which in the past found it hard to get loans and while voluntary donations from a small community of 28,000 residents (8,000 women and children) have exceeded 150 millions. M. Ryckmans in a broadcast to Belgium pointed only to the

changes in production. Gold became unimportant as compared with tin and cultivated rubber, in place of wild rubber, acquired greater importance than palm oil. M. Godding refers to the prospects of further development of both mineral and vegetable resources. Immigration on a large scale is approved by others besides local Governors and the conditions for European settlement in the Congo are described as satisfactory Constitutional changes are regarded as essential to satisfy local aspirations partly because the Congo basin is international in certain respects and the problem of Black versus White has not appeared. The changes in production have made for an increase in native employment and an improvement in the standard of living. M. Ryckmans incidentally claimed that Belgium has confirmed her title to the possession of her Empire because she has been faithful in her civilising mission.

Australia and Her Wool

The high stability of wool prices is in part only due to the absence of large variations in the annual supply. Australia remains the chief wool producer and Britain remains the chief consumer. The spread between the return to the producer and the contract price (about 15½d. per lb. in the past three years) is about a penny per lb. but an improving tendency in Commonwealth exports accounts for the better return to the wool-grower in 1943-44. Since India's own imports of raw wool continue to increase, the very moderate lift in prices in the last two years is, in the main, a favourable circumstance. Australia's principal export has always had an expanding market, to which extent wool has differed from other commodities, although fluctuations in prices between the wars were the rule. In the export trade of Uruguay and South Africa alike wool holds an important place at present but only in the case of Australia has the method of bulk purchase at fixed contract prices answered correctly all questions arising from the previous changes in demand. To judge merely by the increased offtake of wool from Australia it may be said that natural fibres are not easily displaced by substitutes. A further conclusion is that when there is no carry-over from season to season, price stabilisation is easier to secure than presumed. Whether the future will witness a contraction in the offtake of Argentine and Uruguayan wool by Britain, throwing the supply on the U.S. or European market, is difficult to forecast. But the more important conclusion that wool rather than meat will be sought from New Zealand and the Australia in the future is supported by departures in British agricultural policy. In the war period raw wool prices have been held at a level that suggests local inflation has been without effect. From prices and quantities listed it is clear the loss of the Japanese market has made no material difference to the Australian wool-grower and the success of the marketing scheme is a vindication of price control. The close correspondence between 'free market' and controlled prices in the case of wool however has some lessons for those who argue that the return to the producer can be improved only by economies in production and the cultivation of an expanding market in the case of commodities like jute and cotton.

Finland's Exit

Finland has acquired freedom to negotiate an armistice by the fairly simple expedient of asking foreign troops to leave the country. The second German intervention in the defence of Finland, entrusted again to Baron Mannerheim, has come to nothing like the first. The military alliance hurriedly patched up by Ribbentrop this year has ended, and the armistice has been as expected, arranged from Stockholm. In the preliminary negotiations Swedish interest was considerable but it is doubtful whether Sweden showed any special interest because a larger German garrison in Norway does not represent an unmixed advantage. Finland's new President has probably assessed the military position beyond the Baltic States correctly in advance of events. After the capture of Viborg the Russo-Finnish war became a

form of shadow-boxing, and Soviet invasion therefore ended at the old frontier. The armistice terms provide for reparations payments. The heavy depreciation of the finnmark after 1940 makes it difficult to say if the demand can be met, particularly, if Finland's trade with Britain, the U.S.A. and Germany does not recover promptly. The harsh method of a capital levy can scarcely be tried again with success. Loans from Sweden for relief and rehabilitation represent a useful form of assistance since the proposed World Bank would ignore Finland and would not meet any request for paying a war indemnity. Minus Viborg and Petsamo, the Isthmus and the Aland islands Finland would be smaller state than ever but Sweden has obviously the resources and the will to help her former dependancy. A buffer between the Soviet Union and the Scandinavian countries is a necessity of which Sweden has long taken note, and the armistice may well find Sweden preparing (in the absence of the Oslo pact) for more intimate connections with Finland. External capital may prove more valuable to Finland. Swedish cartels may limit the competition for restoring the paper and pulp industries. known in the past, and it is not rash to assume that Finland would not return to the sterling bloc in the future, but would tie up with the Krone and Sweden. If monetary policy has promoted recovery in the past, Swedish example and help may put Finland too on the road to recovery after two wars while the more important position of a dyke against Communism may be shared with Poland in the event of the Baltic States not being allowed to recover independence.

Declaration Of War

There have been two declarations of war within a week, but the Russian declaration against Bulgaria is of less consequence than General de Gaulle's reminder that Japan has no right to incorporate Indo-China in her Empire. The provincial government has repudiated the agreement made by Vichy under duress in September 1940 and confirmed the promise contained in an earlier declaration of war against Japan that France would always retain her window on the Pacific. Japanese interest was manifest in Indo-China long before 1940 and the efforts to mediate between Indo-China and Thai were born of the desire to build up and keep the base against the British and Dutch Colonial Empires. Gen. de Gaulle's decision to liberate Indo-China from Japanese rule cuts across certain unofficial and vague proposals relating to the absorption of Indo-China as a subordinate federation in the Chinese republic. As a source of rice, rubber and tin in some quantity Indo-China added to the prestige and resources of France in the past and peremptory occupation of Saigon by the Japanese military mission under Nishihare in 1941 was challenged by the Free French declaration of hostilities in December 1941. In view of the tacit refusal of Britain to return Hongkong to China the French decision to resume possession of Indo-China is logical. For the present the declaration serves to underline the essential dependence of South-east Asia upon the military decisions of the United Nations. French action in respect of Indo-China might support the delay in respect of a declaration as the future of Burma though Thailand's future as a familiar buffer appears a little brighter in consequence of the French declaration. The Cairo talks excluded Indo-China from the agenda because the promise of restitution was limited to specified territories. Early liberation carried with it an assurance as to augmented supplies of rice, rubber, pepper and various minerals. Since the French Empire forcibly included in the Yen-bloc did not experience the scorched earth tactics adopted in Malaya and the Dutch East Indies. Full participation in future regulation schemes relating to tin or rubber is indicated and recovery, deferred in other places, might create the conditions of progress to which the promise of prosperity under the restoration of French rule point.

Higher Wages

The rise in wages in the U.S.A. is a symptom of the inflation always inseperable from full employment. Average weekly earnings of U. S. factory workers during the years 1941-42 rose substantially to a greater degree than the rise in the cost of living in large cities. An analysis of these wartime changes must not exclude taxes, insurance levies and the subscription of workers for war savings bonds. It is estimated that average weekly earnings in October 1943 amounted to 44.86 dollars per worker. Workers without dependants failed scarcely better than the family man through the rise in earnings the

higher cost of living and the compulsory deductions did not press so heavily on the addition to wages. The rise in wages was not uniform or equally spread. Wages rose most rapidly in certain industries and what were previously regarded as sheltered occupations, e.g., in the printing trades reported the smallest rise in wages during the war period. The greatest increase in wages was recorded in the fertiliser industry, while in industries like ship-building and locomotive manufacture wages rose more substantially than in less important consumer good industries. Since the working class pays both Victory Tax and income-tax the rise of 68.4 per cent in average wages as compared with 79 per cent in Britain meant a far more limited rise in real wages. In the majority of industries wages had risen by over 50 per cent by October 1st and the large increase in the number of women at work meant that family budgets bulged. The simplest and most authoritative conclusion derived from a study of movements in wages is that "prior to Pearl Harbour no prospect existed for even maintaining the living standards of the mass of workers in the event of a major war. In the case of most factory workers this has been done and more as a result of more intensive work for longer hours by a larger labour force". A direct result of the increase in earnings has been the expansion of working class savings since widespread deprivation and widespread inflationary spending could not be found among the factory population.

(*Continued from page* 355)

is not in this fortunate position; but it is the responsibility of the Bengal Government to put a stop to the black market traffic. In many other commodities, black markets are less rampant than before; and the wide gap between controlled rates and black market rates has rapidly narrowed down.

The bullion market was not affected very much till Wednesday this week by the encouraging news from the European war fronts. In Wednesday's session, however, there was a sudden decline in prices for both gold and silver. Gold ready being done as low as Rs. 71-8 and silver forward Rs. 125-4. There was some covering at the lower levels but the rally has been only short-lived. The close has been heavy. The Reserve Bank has not lowered its selling price for gold. It is reported, however, that silver was offered at Rs. 128-12 and there were not many buyers. That prices for both gold and silver are still artificially high need not be stressed. It would be pertinent to suggest that the Reserve Bank should come out as an aggressive seller and push down prices to nearer the parity levels as investment in the precious metals has, for a long time, been encouraged and big speculators have been able to unload their holdings in upcountry centres.

The exchange market has been steady with considerable amount of export T.T. Remittance enquiry has also been on a fair scale.

Clive Street Gossip

The Phillips affair is spiced to suit all tastes. I myself smack my lips at it and, not too reluctantly, accord precedence to it in these columns over the theme to which I stand committed, the economic consequences of peace. As the reader knows, but for the overpowering attractions of the Phillips affair, I should have continued the series which I began more than a fortnight ago. The Phillips' affair not only suits all tastes, but has come to possess in the Indian eye an importance which a weekly columnist like myself has to accept and act on, rather than question. The publication of Mr. Phillips' letter to his Chief on Britain's policy in India and intentions as regards the war against Japan provides a welcome diversion, when the course of the war is turning the anxieties of the earlier times into suspense regarding the imminent peace. No one seems to regret the leakage of an official report which normally would be considered regrettable. Even if the publication of the letter should lead to Mr. Phillip's resignation, he is more likely to feel relieved than experience a sense of discomfiture, for Mr. Phillips must have felt many a pinprick and annoyance ever since he came out to India as President's personal representative at New Delhi. To the Republicans, Mr. Phillips' letter and the treatment given to him by the British Government are welcome means of discrediting Mr. Roosevelt on the eve of the Presidential campaign. The stir that has been caused in America may not be without its use for Mr. Roosevelt himself, who will find in the present uproar an aid in tackling Mr. Churchill. A fierce campaign in the American press leading up to the formal introduction of a resolution in the House of representatives will enable Mr. Roosevelt to present the American view point to the British Premier with far greater force than he could have commanded otherwise. From the British side, Mr. Churchill is bound to prefer a precipated, to a smouldering crisis. There is at any rate the immediate advantage of getting Mr. Phillips out of the way. And Mr. Churchill is not the man to view with dismay or misgivings the prospect of a strained and acrimonious discussion with the American President.

As for us in India, the Phillips affair not only provides a welcome sensation but may also be used to build the most entrancing political castles in the air. To the more sober-minded, it may seem to hold out the prospect of India becoming the subject of straight business talks, free from all sentimentality, between the British Premier and the American President. I shall not say more of this at this stage since it should form the conclusion, rather than the beginning, of my examination of this matter.

* * * *

The question that really matters is, what will this affair ultimately lead up to, in American internal politics, in the relations between Britain and the U.S.A. and in the lot of India? That question is not readily answered. Not, at any rate, without being clear about its immediate effects. In the first place, it is not clear yet who engineered the publication of Mr. Phillips' letter to the President. I have said already that the publication benefits so many different and opposed interests. The usual question qui bono, will lead us nowhere. "Leakage" of official reports has come to stay as the initial move in the modern political game. If the Republican party is today making the most of it in the American Press, that hardly means that others do not derive an equal advantage from the disclosure. They do it with far less fuss. It is clear now that Mr. Phillips will go. He will take his place somewhere on the Continent and continue to tender advice to General Eisenhower. His office in India may be virtually closed, as, indeed, it has been ever since he left this country. All the nice questions about whether he was accredited to the British Government or whether he was part of the American forces stationed in Britain will make no difference; and therein lies the British gain.

* * * *

But, then, immediate success is often the enemy of later ones. Though Mr. Phillips' letter is concerned with the British policy towards India, it has a much larger significance for the American public. The mind in the States has never been easy about the basis or the nature of Anglo-American relations. It has always had the uneasy feeling that for all the aid America has given to Britain in this war, there never has been anything like a quid pro quo. What is worse, it suspects that the British have no thought of it either. And after the entry of Japan into the war, America feels she has been placed in a position of extreme disadvantage vis-a-vis Britain. And the more the British affirm their readiness, once the war in Europe is over, to throw themselves heart and soul into the war against Japan, the stronger is the suspicion that the brunt of the fight in the East will fall on the States. Mr. Phillips' letter derives its importance to America more from the reference to the token part of the British in the war against Japan than from its advocacy of Indian independence. The American public sees in the British attitude to Mr. Phillips a confimation of all these unexpressed suspicions. It fears that the position of donor and donee has been reversed. The question is naturally asked whether "our people are so stupid, our sovereignty so impaired....."; and so on. If Mr. Phillips can be asked to leave, why should not Sir Girija and the British ambassador be asked to pack up likewise?

Mr. Phillips' letter or the strain in the relations between the two foreign offices may not in itself be much. Foreign offices have their way of making mountains of molehills and reversing the process when necessary. But the publicity now afforded to these matters creates a different situation. There is first of all the position of the President himself. That in his dealings with Mr. Churchill, Mr. Roosevelt's knee has often sagged may not be doubted. It may be attributed to the kind of tact which is not incompatible with conscious strength. Or it may be that between the two, the older is, man for man, the stronger politician. Whatever it is, it is certain that Mr. Roosevelt has shown more than due respect for Mr. Churchill's susceptibilities on questions affecting the British Empire. What-

ever it may be, Mr. Roosevelt has gone out of his way to keep Mr. Churchill in good humour. Not only does he not tread on the grass, but tells others to keep off it. The result is that British conservatism is more hardened and self assured, if not self-righteous, too, than before the war. Some of the most pompous statements of the Premier are so many slaps for the President. The British apprehend no diplomatic complication in asking Mr. Phillips to go, or whittling down the Atlantic Charter.

* * * *

It is resentment against this position more than any particular grievance that has now come simmering up to the surface. In the forthcoming conference between Mr. Churchill and Mr. Roosevelt in Canada, the latter's affability must suffer a little. Not only has an offended public opinion to be placated, but there is also the concrete, massive interest of the U. S. in the war with Japan. Very probably, the Canada Conference may bring about formally the end of the war in Europe; and, though the problems of peace will be there on the table, American pre-occupation will be the war with Japan. Mr. Phillips has stated categorically that with freedom for India is linked up the paramount problem of minimising the loss of American life. Mr. Churchill may disabuse the American mind of this notion and push the Indian question down to the plane of allegiance to the Atlantic Charter or other pious professions. That is not so difficult as we Indians want to believe. Nevertheless, some sops to American pride and conscience and some reassurances where American interests are involved are clearly necessary. Mr. Churchill will find it hard not to concede them.

* * * *

What then will be the upshot of all this pother? I imagine that many hands and many motives lie behind this Phillips affair. Not the least of them is to give a shake up to the aggressive self confidence of the British Premier when he will go to Canada. But the primary aim is probably to keep alive American interest in India, the emphasis of which can be kept on the Japanese war for some time, shifted to democracy at another and then fused at a later stage with America's right to participate in the development of this economically backward country. Normally, no nation lightly interferes in the affairs of another's dependency, just as in the animal world, the strongest animal does not touch the young ones of another, for fear of the ferocity of the outraged mother. If American interest in India has been retained all along and displayed fitfully, one must not deduce that America is eaged to fight for India's cause; and this too, does not mean that the U. S. is playing for a share in the domination over India. It is significant that Mr. Morgenthau made it clear that India was not accorded a permanent seat in the Executive of the Monetary Fund, because she was a member of the British Empire. Is there in that statement a clue to American policy? Is America interested in an Indian Government which is not a department of the British Government?

* * * *

The Institute of Cost Accountants, to which I have often referred, has begun to function as from September 1. The Institute has now seventy men under training of which thirty are nominees of the Government. Good going, for a start!

(FROM OUR CORRESPONDENT)

New Delhi, September 6.

The week-end brought the biggest political sensation of the year—the disclosure of Mr. Phillips' report to President Roosevelt on India (terribly damaging to British propaganda in the U.S.A.); the pending resolution in the U.S. Congressional Committee demanding the recall from the U.S.A. of certain diplomats including Sir Girja Shanker Bajpai and the leakage of a coded cable from Sir Olaf Caroe, Secretary to the External Affairs Department, to the India Office declaring Mr. Phillips to be *persona non grata* as far as New Delhi was concerned. These dramatic revelations have created something like consternation in the stolidly complacent atmosphere of the Secretariat. Political circles, however, are happy that the truth has come out at last. These circles are at the same time surprised at the U.S. President's studied silence on the issue, particularly, after receiving such an alarmist account of the Indian situation from his envoy. Mr. Phillips has been brutally frank in relating his impressions. He describes the Indian Army as "purely mercenary" and quotes General Stilwell on "the poor morale" of Indian Officers. He not only recommends intervention by the U.S.A. to end the political crisis but gives the clear warning that "If we do nothing and merely accept the British point of view that conditions in India are none of our business then we must be prepared for serious consequences in the internal situation in India which may develop as a result of despair and misery and anti-White sentiments of hundreds of millions of the subject people." He suggests a declaration as to a specific date for India's independence and the formation of a representative coalition government for the duration of war. It is learnt here that only a part of Mr. Phillips' report has yet appeared in the press. His keen analysis of Indian party politics and Britain's role in keeping the communal issue alive has not yet been disclosed. British and U.S. official denials about the circumstances attending Mr. Phillips' recall from London where he was acting as General Eisenhower's political adviser are considered irrelevant, for they do not disprove the truth of Sir Olaf's cable to London; though it is likely that the British may not have officially asked for Mr. Phillips' recall and that Mr. Phillips himself may have regarded his position in London untenable after the disclosure of his views on India.

* * * *

Nobody here expects any big result from these disclosures though for the first time during the war the Indian problem has become a political issue between Britain and the U.S.A. Mr. Johnson's resolution is likely to be rejected though it is regarded as more than a mere Republican election stunt. Mr. Roosevelt is not likely to intervene now more vigorously than he did before—now that the war is all going in the Allies' favour. What it is likely to achieve is to disturb for some time British propaganda in the U.S.A. against the movement for Indian freedom.

* * * *

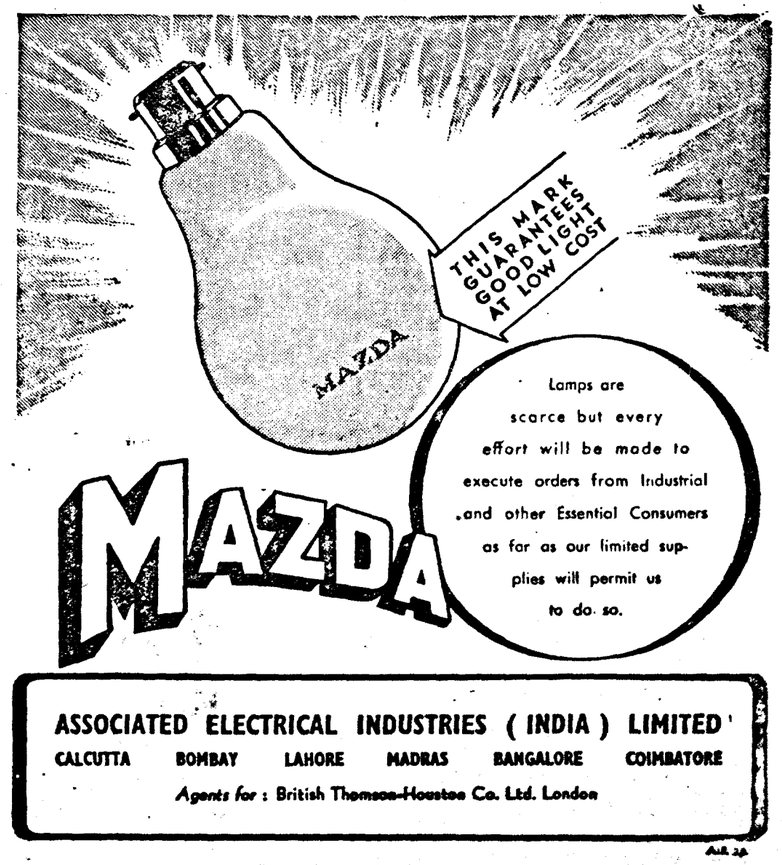
It is learnt here that for some time the U.S. Government has been pressing Britain to take energetic steps to check in its initial stages the threat of another famine in Bengal. Recent reports from this country regarding continued deaths from hunger and increased mortality due to epidemics has caused great apprehension in the U.S.A. which has always regarded India as her main base of operations against Japan. Mr. Lamton Berry, it is understood, wrote to Washington pleading that shipping facilities for food supplies be made immediately available to India. The U.S.A. is prepared to despatch the needed quantity of food (estimated at 400,000 tons) if Britain agrees to release the necessary shipping for the purpose. Apart from the mission of Sir Henry French, Britain has not yet taken any step to bring the required food to this country.

* * *

The proceedings of the two-day Governors' conference last week were kept a closely-guarded secret. Even the Honourable crowd was excluded from the conference. Though officially the conference was said to have discussed only food and post-war planning, it is believed that the political situation was thoroughly reviewed, particularly, the strategy, in case the Gandhi-Jinnah talks succeed. A definite decision was taken on the question of a war allowance which, it is learnt, will soon be sanctioned for all Government employees getting Rs. 1,000 a month or less. It is understood that the provinces were asked to coordinate their post-war plans with the Centre's scheme and help the new Department of Reconstruction and Planning by providing it with all the necessary data. Meanwhile, a new officer called the Reconstruction Finance Officer has been added to the Finance Department to deal with the financial side of post-war planning. Mr. V. Narahari Rao, till recently Crown Finance Officer and Joint Secretary to the Political Department, has been appointed to the new post. The services of a well-known American Hydraulic Engineer, Mr. William Voorduin, has been secured for advising on hydro-electric planning. Mr. Voorduin was the head of the Project Planning Division of the Tennessee Valley Authority.

* * * *

Sir Ardeshir Dalal is still busy building up his department. General Hutton will be the Secretary to the Planning Department. It is learnt that Mr. H. V. R. Ienger and Mr. Vesugar will also join the new department. The Government is planning to give publicity to the various schemes decided so far and thinks of bringing out a pamphlet summarising the conclusions.



* * * *

The policy of nationalisation of railway companies approved by the Central Legislature in 1925 would be completely realised on October 1, 1944 when the last of the main privately operated railway line—the B. N. R.—passes into Government hands. Together with this closure of contract, another step towards self-sufficiency is being taken. The Government are understood to have entered into a 20-years' contract with the Tatas for the manufacture of locomotives and boilers.

* * *

India has failed to receive an adequate hearing at the Monetary Conference and recent statements by some of the delegates have only increased the apprehensions in this country about the fate of sterling balances. What Britain's final attitude will be, and New Delhi's reaction to it, it is yet too early to say. But an idea of what Liberal circles in Britain think in this matter is obtained by recent comment in the *Manchester Guardian*. "Even assuming that we shall not deal with our financial obligation to India as if it were a commercial debt, the service of the debt and amortisation alone could hardly be less than £30,000,000 a year. In addition, we have lost the income from India's pre-war debt to us. In order to know our obligation we must, therefore, export to India in future twice as much as we did in the Thirties, and it is obvious that the Indian market could not absorb such a volume of British goods unless a great deal of it went into a planned expansion of capital equipment. Whatever the concrete Indian project that emerges, we shall be partners in it, and we must be ready to be helpful and efficient partners."

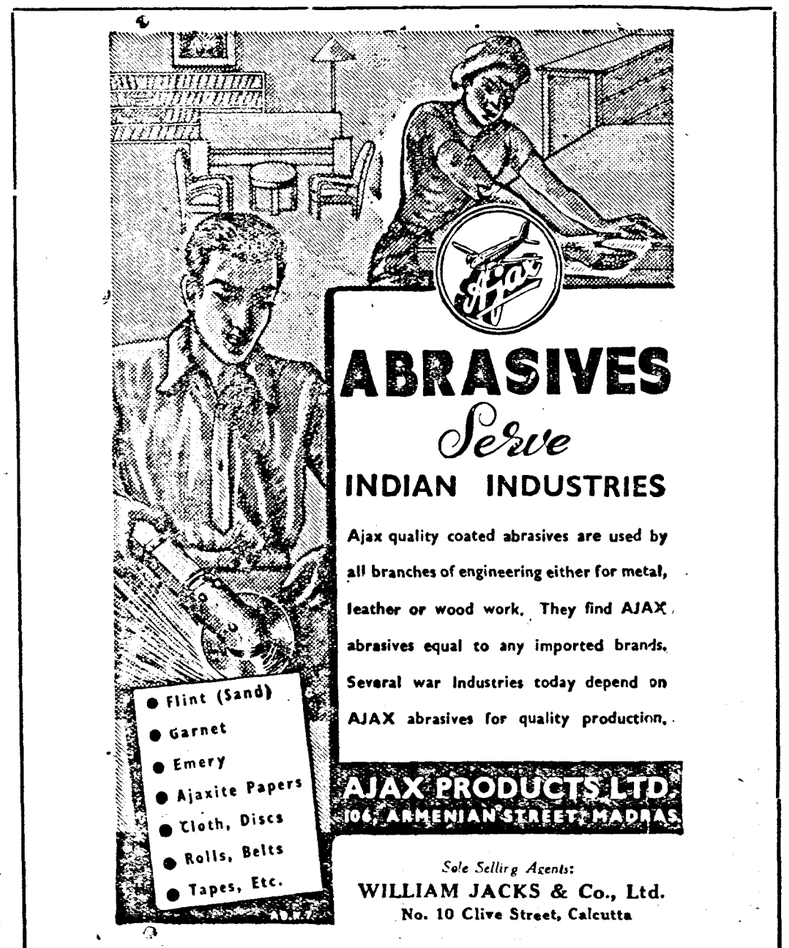
Gateway of India

(From Our Correspondent)

BOMBAY, Sept. 4.



The Industry Committee of the Textile Control Board decided on a further cut in cloth and yarn prices on Wednesday last, after surveying the textile situation. The maximum selling prices for cotton cloth have been lowered by 6¼ percent from the levels existing before September 1st, and the new cut will apply to all cloth manufactured on and after that date. The cut is *en rapport* with the policy of progressive price reduction to which the Board have now been consistently adhering, although expectations as to the size of the cut had been pitched higher by the public. The yarn position has now superseded that of cloth in importance, and yarn prices have been fixed with reference to a graduated scale. Yarn below 14 counts is reduced by three annas in a rupee, while yarn between 16 to 24 counts suffers a cut in price of one anna in the rupee. The ceiling prices for yarn of 26 to 40 counts remain as they are, but the price of 60s and 80s is raised by one anna. In deciding upon this discriminatory scale of prices, the Industry Committee was guided by the desire to demarcate the kind of goods which the mills and the handloom weavers should produce. The shortage of finer cloth is well-known and the obligation now enforced on the mills to weave all the finer group yarns produced by them will result in putting greater supplies of finer varieties on the market. This automatically means that the power and hand-looms will have to be content with the production of cloth below 80s, and superior varieties could only be manufactured from the existing supplies of finer yarns. As the handloom industry has always been making a fair quantity of cloth of finer varieties, this arrangement will probably entail hardship to them, but that cannot be helped. In a way, it is perhaps all to the good of the industry that the supplies of finer varieties of cloth are to come from the mills. There is no sense in the handloom and the mill competing for the same market. The Industry Committee must be congratulated on this happy idea. Certain handloom weaving centres enjoy a high reputation in the market, and it would probably be worth the while of the Committee to consider the desirability of making an exception in such cases, if only to see that the superior craftmanship, for which weavers are noted, is not extinguished.

The elections to the Board of the East India Cotton Association are over and Sir Purushotamdas Thakurdas of course continues to be the President, with Mr. Haridas Madhavdas as Vice-President. Meeting on Friday, the Board discussed the various questions regarding new crop trading and it appears that the Chairman held out expectations of receiving government's permission very soon for the commencement of forward trading. The absence of the Textile Commissioner from headquarters is probably responsible for the delay in the receipt of the official permission. It appears that important suggestions have been made to the government with regard to their purchase policy and are receiving the attention of the powers that be. It is stated that changes in the acceptance of varieties of cotton which has come up to the standard, and even with regard to the basis of the contract have been pressed upon government. The official response will be known shortly.

Dalal Street is thick with rumours of Tatas having decided to issue debentures to the tune of Rs. 4 crores in order to finance the expansion programme of the Tata Iron and Steel Co. The management has apparently despaired of good sense dawning upon the Deferred shareholders to agree to convert their holdings into Ordinaries. Even the reported offer of 5⅔ Ordinaries to one Deferred share has not brought any response. The prospects of the Deferred shareholders in the event of the issue of 4 percent debentures are being canvassed in market circles. There are two schools of thought on this question. Some believe that such issue of debentures will brighten the prospects of shareholders since the profits resulting from the expansion programme will be sufficient to pay a good dividend even after allowing for the interest on the debentures and the payment to the amortisation fund. There are others who believe that the Deferred shareholder by his obstinacy has failed to see on which side his bread is buttered.

Officials of the Central Board of Revenue have come down to Bombay to acquaint themselves with the viewpoints of the Indian and British commercial community. The Indian Merchants' Chamber, the Bombay Chamber of Commerce, the Bombay Millowners' Association, the Bombay Shareholders' Association have all met Sir John Sheehy and Mr. C. W. Ayres, and put forth their respective demands for changes in the system of taxation. Mr. Pranlal Devkaran Nanjee on behalf of the Indian Merchants' Chamber contrasted the solicitude shown to industries in the United Kingdom with the regressive taxation policy pursued in India towards industries. Mr. Pranlal made out a forceful case for reduction in direct taxation, so that indigenous industries may face the post-war period with greater confidence. It is certainly anomalous and unjust that the proportion of revenue from direct taxation to the total revenue from taxation should have increased from 23 per cent in 1938-39 to 69 per cent in 1944-45 in our country, whereas the increase has been from 55 to 65 per cent only in the case of the United Kingdom. Mr. Pranlal stressed the fact that this has resulted in Indian industries being unable to provide adequately for re-equipment and depreciation. The machinery in many cases has had to suffer great wear and tear thanks to the war effort, and the refund out of the E.P.T. would hardly recompense the industries for this abnormal wasting of assets. The question of revising the minimum standard from Rs. 36,000 to at least Rs. 48,000 on the lines of the recent concessions granted in Britain so as to benefit small business houses was also raised by the Income-tax Sub-committee of the Chamber. Here is an instance where relief is very necessary. The Shareholders' Association has pressed for a suitable clause in Section 49 of the Income Tax Act so that the present system of charging tax at the rate prevailing during the year of payment will not work out harshly for those getting their accumulated preference dividend in a year in which the scale of taxation was higher. Certain aspects relating to the recovery of double taxation in respect of dividends paid by joint stock companies were also raised by Mr. J. J. Kapadia, Secretary of the Association and by Mr. R. K. Dalal, Income Tax Adviser to the Association.

Dr. John Matthai in an address delivered at Poona stated that if the government were to fight economic depression after the war successfully, a change in budget policy was essential. The retrenchment measures and other expedients adopted after the last war would fail, he said, and it would be incumbent on government to borrow money and make provision for long-term expenditure on public works in order to maintain employment. The Rooseveltian concept of trade Cycle budgets received some blessings from Dr. Matthai.

South India

(From Our Correspondent)

Madras, September 6, 1944.

An examination of the problem of industrial backwardness of this province will bring out two important facts namely, general neglect and the absence of a detailed knowledge of the available mineral deposits. The first factor is common to all the provinces while the second is peculiar to Madras alone. Apart from the occasional survey done by the Geological Department during the past 30 years no systematic investigation has been undertaken.

Dr. M. S. Krishnan of the Geological survey of India speaking at the Anniversary Meeting of the Madras Industries Association made a fervent appeal to the industrialists of the province to come together and undertake a study of the mineral deposits and to carry on investigations regarding their characteristics as a first step towards the establishment of heavy industries in the province. From the surveys conducted by the Geological Department Dr. Krishnan was of the opinion that Madras possessed deposits of magnetic iron ore in easily accessible places, suitable for an iron and steel industry. Deposits of copper, zinc, and aluminium are also found in the Province. Non-metallic resources are also found in many parts of the province. Apart from these there are also other kinds of minerals which can be turned into fertilizers. While suitable raw materials for the establishment of major industries are available the province suffers from lack of fuel-coal and oil. This is a deficiency that has got to be made good if industrialists of the province are keen on utilising the raw materials that are easily available. With the inauguration of hydro-electric schemes the fuel problem may be satisfactorily solved But the province is still backward in many other aspects that are the pre-requisites for the establishment of industries. While the province is rich in mineral deposits there is no research institution for tackling the problem of minerals. It is high time, said Dr. Krishnan, that the industrialists of the province took steps to establish a central research organisation which will be in a position to analyse and test the materials and information collected by the various survey parties.

Investigations carried out by the Geological Survey of India have revealed iron ore deposits suitable for smelting in some parts of the Kurnool District. The ore in these parts is found to contain sufficient quantity of iron to warrant further investigations. The impurities contained in the ore can be easily separated and smelting operations can be begun if the fuel problem is satisfactorily solved. As coal is not available nearby, the dependence of the industry on electric power is obvious. If the Government schemes for embarking upon more and more hydro-electric schemes come through one can expect an iron smelting industry in these parts in no distant future. A Press Note issued by the Government refers to the presence of beryl in certain Mica pegmatites from Nellore. This was accidentally discovered by the Geological Department while investigating the Mica Belt. According to the Press Note this valuable mineral is at present thrown away. It is estimated that in a year about 5 tons could be collected without much effort from the mines in the area.

The Government of Madras have constituted a general advisory committee of officials and non-officials to make suggestions on postwar reconstruction plans that are being considered by the Government. The committee will consist of officials and non-officials. Sir R. K. Shanmukham Chettiar, Dewan Bahadur Ratnasabhapati Mudaliar, Kumararaja Sir M. A. Muthia Chettiar, Dewan Bahadur Dr. A. Lakshmanaswami Mudaliar and Sir C. R. Reddi are some of the prominent non-official members.

The newly constituted advisory committee was inaugurated last Monday by H. E. the Governor. In his address to the committee His Excellency dwelt at length on the various postwar reconstruction schemes the government had been working on for some time past. As the problem of postwar planning is vast and comprises of different aspects, His Excellency suggested that the advisory committee should be divided into various subcommittees to deal with subjects such as demobilised soldiers, industries, agriculture, fisheries, forests, veterinary and livestock, irrigation, communications, transport, public health and education. Speaking of the financial help the provincial governments would get from the Central Government, he said, rough figures would be available shortly. The argument that planning without knowing what form of government there would be after the war is futile, was true only up to a point. Any sensible scheme which is financially sound is sure to have the support of the future government whatever its complexion. Public opinion both among demobilised soldiers and the people is sure to insist on a better standard of living and the Government wanted the committee's help in every possible way. In reply to a question His Excellency said that all urgent schemes for the Industrial development of this province would have the approval of the Central Government and there would not be undue interference.

With the inauguration of the Papanasam hydro-electric station Madras has completed 3 big projects for the supply of power. The latest scheme to be completed within the last 12 years, the Papansasam station is calculated to serve the three southern districts namely Tinnevely, Madura and Ramnad and the west coast districts. At present the three southern districts will be immediately benefited and in a short time, the west coast districts also will be able to draw electric power from this station as soon as the necessary constructions, expenditure for which have been already sanctioned by the Government, are completed. With the opening of this station irrigation facilities are expected to be greatly improved as a result of the regulation of the flow of the waters of the Tambraparni while it will give a fillip to industrial development in the districts served by it.

In line with the general anxiety not to lag behind the vast developments that await the conclusion of hostilities, the Hyderabad Government have chalked out a 14-year plan for the advancement of Industries, education and public health in the State. The plan is estimated to cost Rs. 200 crores. Preliminary work in this direction will, it is said begin in October this year. Hyderabad will shortly have its own central laboratory for Industrial and Scientific Research. A non-recurring grant of Rs. 15 lakhs and a recurring grant of Rs. 2 lakhs have been sanctioned. The existing laboratory will merge into the new one when it is completed.

Experiments carried out in the Indian Institute of Science, Bangalore, on behalf of Tatas have proved that Insulin, an effective remedy for diabetes, can be produced in India on a commercial scale. It is said that the drug has been produced in India for the first time. As India is depending on foreign countries for this drug the cost is necessarily prohibitive and the drug is beyond the reach of the poorer section of the community. It is understood that Tatas have under consideration a "without profit" scheme for the production of the drug on a commercial basis.

Airway Port

(FROM OUR CORRESPONDENT)

KARACHI, Sept. 5.

The potentialities of Karachi in the post-war expansion of India are incalculable. Once a fishing village it has grown enormously and because of the twin advantages that Karachi enjoys both as an air and sea-port, it will be in the forefront of the Indian trade and commercial picture. In the course of a note submitted by him to the Sub-Committee of the Health Survey and Development Committee appointed by the Government of India, Mr. T. J. Bhojwani, Chief Officer of the Karachi Municipal Corporation predicts a great future for the city. He has outlined comprehensively the problems of industrial potentialities, town planning, housing, and slum clearance, of suburban development, electricity, transport and communications, the preventive side of public health, municipal dairy, finances and several other matters and has offered suggestions of far-reaching importance for the consideration of the Committee. Mr. Bhojwani is confident that Karachi as an important sea-port and as a war supply base for the Middle East, the Near East and even the Far East and as a city with pleasant climate and great industrial possibilities will occupy an important position. He adds that given unlimited water, no place could be found better suited for the development of the textile industry, and it is not unreasonable to expect a time when Karachi, with a huge cotton-growing tract nearby, may compete successfully with Ahmedabad and Bombay. Besides textiles, chemical industries, iron factories, rolling mills, leather tanning and manufacturing, glass factories, paper mills and several other large and small industrial concerns can be established. He observes: "The vision of Karachi as a beehive of industries, handling an enormous export and import trade and as a show-place for the world tourists, bringing increased prosperity to itself and the Province, though distant, is visible on the horizon, and seen by many. Behind this there is another portentous vision to which we cannot shut our eyes. The establishment of industries will mean tall chimneys, smoke soot, poverty and squalor, overcrowding, disease and death. It is therefore necessary to be prepared in advance and take precautions. Karachi is fortunate inasmuch as it can learn from the lessons of other industrial cities of India and outside."

Mr. Bhojwani emphasises the need for reservation of sites for industries some distance away from the city proper, regulated working of factories, provision of housing for labour, and reveals that the Karachi Municipal Corporation has already reserved some sites for industries and for smaller workshops, and factories. Concluding, he says: "Cheap transport, good trunk roads leading out of the city are as essential for the development of the city as for advancing public health." The sources of income of the Corporation being limited, Mr. Bhojwani suggests a financial readjustment between the Centre and the Provinces and the Corporation in order to enable the Corporation to carry out its statutory duties.

The Industrial Health Survey Committee appointed by the Government of India is at present taking local evidence. Mr. P. N. Sapru and others from outside did not arrive with the result that only Dr. Hemandas R. Wadhwani, Minister and Dr. Rochiram are in the Local Committee. Yesterday they examined Mr. Hoshang N. Dinshaw, who represented the Buyers and Shippers' Chamber. Taking of evidence will proceed up to September 11, after which the members of the Committee will proceed on tour to study conditions in the factories.

There has been a veritable storm in the local press against the Foodgrains Syndicate and the monopolist system prevailing in this Province. Though the Premier gave an assurance that the Syndicate would be abolished it is still functioning. I will just take one article to show the absurdity of the present system of distribution. When the floor price for wheat was fixed at Rs. 7/8 there was an assurance that if the price of wheat went down, then the Government would come forward and purchase all the wheat offered at the floor rate. In the beginning, Sind Government wholly with a view to favour zemindars who counted the purchased wheat at the ceiling rate of Rs. 9/8. Now they have stopped buying and there being no other large buyer, huge stocks of wheat are lying in the mofussil assembling mills and prices have gone down below the ceiling rates. Zemindars and petty merchants are now in a fix as to how to dispose of the goods and to realise money for meeting their obligations.

THE KITCHEN FRONT

NEVER was the kitchen front more important. We are today learning the supreme art of the cook, how to make a little go a long way, how to make something tasty and nourishing out of whatever may be available. Our food is increasingly a matter for thought and study — as it should be. Do we recognise what our kitchen front owes to the British chemist and the chemical industry? Look where you will — at your electric iron, for example. Electricity in all its uses is the achievement as much of the chemist as of the physicist and electrical engineer, involving the combination of metallic alloys, the preparation of insulating materials, the synthesis of chemicals to form the working liquids in refrigerators, and the plastics for switches, adaptors and plug-sockets. The hand of the chemist is found at every turn — in our washing-soda, our bicarbonate of soda, baking powder, soap, salt and vegetable ghee. The tinned and dried foods that form our emergency reserve or give us quickly-prepared meals depend for their purity, their keeping powers and even their containers upon processes discovered by chemical investigation. Every discovery that makes work on the kitchen front cleaner and easier, which helps to bring food to us in better condition and renders its preparation and preservation easier is due at some stage or other to the work of the research chemist and its development by the chemical industry.

No. 12 in the "Services of an Industry" series issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Resume of Commodity Markets

The important feature of the week is the sharp decline in prices for bullion towards the close of the week. The definitely encouraging war news has had its influence on the several markets. At the present moment operators are discussing the prospects in the post-war period for the various raw materials produced in this country. The raw jute market has not been affected to any great extent though in the last two days a slightly easier feeling is noticeable on reports that harvesting of the new crop is progressing satisfactorily and arrivals into up-country markets are coming in on a large scale. The jute manufactures market is rather quiet, there being a tendency to await further developments. The existence of large stocks on Government account of both hessian and sacking has had a depressing effect on the market. It is pointed out that the Government might agree to release these stocks for civilian consumption if there should be a sudden increase in the demand following the cessation of hostilities. There is also the fear that with the completion of the Industrial Pool Scheme production might increase at the mills. Developments during the next few weeks will have to be carefully watched.

The bullion market remained steady till Wednesday this week and the quotations for both gold and silver were around last week's levels. However, on the reports that Anglo-American troops had invaded German territory there was heavy selling. In spite of the fact that the Reserve Bank is not prepared to lower its selling price, values have been pushed down, gold ready is now quoting Rs. 71/8 and silver Rs. 126. The Reserve Bank was able to sell only a few bars of silver at Rs. 128/12 on Wednesday. Having regard to the sentiment in the market at the present moment the Reserve Bank should come out as an aggressive seller if they are keen on pushing down prices to nearer their parity levels. It appears, however, that the authorities are more keen on getting profits for the Allied powers than on bringing down prices for the precious metals and discourage any large investment by the public at the inflated levels.

The maximum selling prices for cotton cloth will be lowered by 6¼ percent from the existing levels in the case of all cotton goods packed and delivered by mills on and after September 1.

The decision was taken by the Industry Committee of the Textile Control Board on Wednesday last week. The Committee met for two days and reviewed the question of prices as well as the distribution of cloth and yarn.

It is understood that the Committee decided to enforce a reduction of 3 annas per rupee in the case of yarn below 14 counts and of 1 anna in the rupee of yarn between 16 and 24 counts. It was agreed that the ceiling prices for yarn between 26s. and 40s. should be continued for the next quarter. Ceiling prices of yarns between 60s. and 80s. will be increased slightly while yarn above 80s. will be 1 anna in the rupee higher.

In view of the shortage of finer mill cloth, the Industry Committee, it is learnt, decided to direct the cotton mills in the country not to sell yarn above 80s. for civil consumption. In view of this decision the power loom and handloom industry spread all over the country will have to depend on existing supplies of finer yarns in the market and would not be able to produce hereafter finer cloth for civilian consumption. On the other hand, since it would be obligatory on the mills to weave all the finer yarns produced by them, the output of mill-made cloth of superior quality is expected to show a big increase after December.

A reasonable control of export prices for hand-loom products from the Madras Province is necessary to ensure that there is no room for any criticism that the exporters are exploiting the Ceylon market, and to prevent profiteering in respect of goods produced for consumption within the province. In respect of handloom goods going to Ceylon the Provincial Textile Commissioner has accordingly settled a scheme of control in consultation with Mr. C. W. Wood, the Textile Export Coordinator for Ceylon in India, and the Handloom Expert Market Price Advisory Committee, Madras, which includes among its members most of the leading exporters of such goods.

Under this scheme, the Provincial Textile Commissioner will notify the maximum prices for the export varieties. The prices thus notified are the maximum ex-godown prices at any place of despatch from this Province to Ceylon. These prices have now been fixed for 30 of the more important export varieties and additions to the list will be made from time to time, to the extent found necessary. It is expected that the prices of varieties for which these maximum prices have not been notified by the Provincial Textile Commissioner will adjust themselves to levels which will be in parity with those fixed for the varieties in the published list. The price lists, copies of which will be communicated to all Textile Control Officers, Piecegoods Merchants' Associations and Chambers of Commerce in the Province, will give the full description and specifications for each variety. As far as the notified varieties are concerned, the exports should be confined to cloth which answers correctly to the description and specifications given in the published list.

In fixing these maximum prices the Provincial Textile Commissioner has allowed for the following:—(1) Cost of production inclusive of good wages for the actual weavers; (2) A reasonable return for the masterweaver who produces the cloth. (3) Reasonable re-

munerations for the persons who are necessary links of distribution up to and inclusive of the actual exporter; (4) Packing charges.

The Ceylon Government have undertaken to relate their price control scheme to the maximum prices notified by the Provincial Textile Commissioner as stated above. The Textile Export Coordinator for Ceylon in India will notify the margins that will be allowed over and above the maximum prices fixed by the Provincial Textile Commissioner in order to cover all charges inclusive of railway and steamer freight for moving the goods from the exporter's godown in this province to the Port of entry in Ceylon.

This scheme will come into force from September 15.

The Provincial Textile Commissioner will review the maximum prices notified by him at intervals of three months, but he may review them earlier for any exceptional reasons warranting such action.

It should be well-known by now that no person can export cloth to Ceylon or sell cloth for such export unless he has obtained a license to deal in handloom cloth in this province under the Madras Cloth Dealers Control Order 1944. The license of any person who does not comply strictly with these instructions will be cancelled and he will not be allowed to do any further business in any kind of cloth.

Compliance with these directions will be checked by inspecting staff both here and in Ceylon and the authorities in Ceylon also will not hesitate to take disciplinary action against those who have contravened any of the directions relating to the import of cloth from this province to Ceylon.

The maximum prices notified by the Provincial Textile Commissioner will apply equally to cloth exported from any place in this province to any area other than Ceylon situated outside this Province.

For the Nation's Granary..

Obtaining an increased yield of crops from the land is a major item in the plans for the economic development of India.

By furnishing the essential modern implements of agriculture, transport communication and irrigation services the steel industry will help to transform arid deserts into smiling wheat and rice fields.

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance"

CALCUTTA, Sept. 7.

The reduction in stocks of jute goods held by Mills at the end of August, while not so spectacular as those recorded at the end of the previous two months, is nevertheless substantial, amounting to 5,163 tons, though it may prove later on, when the production figures for August are available, that the drop is due more to idle hours than to heavy despatches. The figures are rather up and down this month. Commercial hessians show an increase of 64 lakhs of yards, or 1148 tons. Military hessians show a drop of 200 lakhs of yards, or 4,679 tons. On the Sacking side the balance is the other way. Commercial goods are lower by 65 lakhs of yards, or 3,696 tons, while Military goods have risen by 50 lakhs of yards, or 2,063 tons. In the aggregate, Hessians show a net decline of 136 lakhs yards, or 3.530 tons and Sackings a net decline of 15 lakhs yards, or 1,633 tons, together a total drop of 5,163 tons. Hessian stocks stand at 2,771 lakhs yards, or 69,810 tons, rather more than half being on military account, while Sacking stocks amount to 2,516 lakhs yards, or 104,286 tons, nine-tenths of which are for commercial account. The reduction in stocks recorded at the end of July was 17,000 tons and at the end of June was 25,000 tons, so that in three months, stocks of goods have been reduced by no less than 47,442 tons, practically half a months production. In yardage, this tonnage represents 895 lakhs of hessian and 574 lakhs of Sacking. Of the reduction in Military hessians, no less than 3,420 tons represented Sandbags.

The Jute Mills have published the figures of their consumption and purchases of jute during the season ended 30th June. Consumption is returned as 2.62,53,461 maunds, the equivalent of 53,36.000 Bales which confirms the estimate of 53,40,000 Bales arrived at from the year's production returns. With the figure of purchases however we are not in agreement. This is published as 3,71,51,791 maunds, the equivalent of 75,51,000 Bales, or about 5 lakhs of bales more than the total yield of last season's crop. Manifestly there must be some mistake here and we anticipate that the figure will be corrected to 271 lakhs of maunds instead of 371 lakhs. This would bring the purchases to nearer the 55 or 56 lakhs of bales which was the estimate of the trade. As it is, we have already pointed out that the total arrivals of jute into Calcutta during the season just closed, only exceeded by a lakh of bales the actual consumption of the local jute mills, and as 9,71,000 bales were exported overseas, mill stocks of jute in godowns must have been reduced by somewhere around 8 lakhs of bales, though the figures published in the Final Review of the 1943 Crop do not bear this out.

The Final Review does not produce any startling revelations, unless that the Assam crop was underestimated in the Final Forecast by 64,900 bales. Adjustments in the out-turn figures result in a Final estimate of just over 70 lakhs of bales. Figures of Supply and Distribution are also tabulated, and while some of these are checkable and reasonably accurate, others are no more than rather vague estimates and may or may not be accurate to within several lakhs of bales. But the general outcome shows that, with a reasonable yield from the current crop, which there is every hope will produce quantity if not quality, there is sufficient jute in sight for immediate requirements, but not enough to justify any experimenting in reducing the acreage of the next crop. It is announced that the Final Forecast of the 1944 Crop will be issued in groups of district returns from 19th to 23rd September and the Final consolidated Forecast on 29th September. It is to be hoped that this issue will be somewhat more informative than the so-called Preliminary Forecast issued in July, which, so far at least as Bengal was concerned, forecast nothing.

An unfortunate feature of the regimentation under which we suffer in these days of war is the reluctance of those in authority to admit that they have made a mistake. None of us is infallible and mistakes could be easily forgiven if they were promptly rectified, though they might often be avoided altogether if the authorities would only deign to ask advice, or to consult trade interests concerned. We recently instanced the promulgation of an order whereby the minimum quantity of jute for shipment by river transport was fixed at 1,750 maunds and quantities beyond the minimum to advance in stages of multiples of 875 maunds. It was obvious that these figures had been based on the unit of 3½ maund bales, a size which has become almost extinct of late years in the main shipping stations. It was immediately pointed out that the vast majority of bales offering for transport were 4 maund bales and that these did not fit conveniently into the progressive figures laid down in the order. The first response to this was characteristic—that the number of 4 maund bales acceptable for shipment could be arrived at by dividing the maundage laid down by 4. Such ineffable superiority deserved the riposte that neither 1,750 nor 875 were divisible by 4 without a resulting fraction! The object to be achieved however was the minimisation of interference with regular business practice, and authority ultimately tacitly admitted that the trade proposal for the quantities to be based on bales, whatever their weight, was the more practical method. The original regulation was promulgated on 10th August. The necessity for change was pointed out immediately and was reluctantly admitted within a week. Yet it was not till 31st August that the necessary official correction was published, and it was till 5th September that the correction reached up-country shipping stations. Meanwhile the original order still held and had to be put into force from 1st September. The result is that quite a number of 2,000 maund consignments (500 x 4 maund bales) have been broken up because, in terms of the original order, no quantity between 1,750 maunds and 2,625 maunds could be accepted for shipment. 1,752 maunds out of these 2,000 maund parcels have been shipped and old balances of 248 maunds left over, which balances are not acceptable for shipment at all because the minimum for a fill-up lot is 125 bales. Moreover, these small balances, if ever shipped, will be liable to extra boating charges—a dead loss to the shipper. All this, and much unnecessary inconvenience to everyone concerned in the transaction, which could have been easily avoided except for what can only be described as the pig-headedness of the authority responsible.

There has been slightly more activity in the Export Jute market, partly because Dundee has raised its prices and made business more possible. Several sales of private marks for that port have been reported at fairly full rates. New Crop Dundee Daisee was done for December shipment at Rs. 81-8 but there are sellers over at the rate. November Dundee Daisee was reported at Rs. 79-8 but on Seller's measurement terms. New Crop Firsts were recorded for September at Rs. 84. Some business was reported in Out-port grade Firsts for Iran, the price suggested being around Rs. 76. Mills paid Rs. 76-12 for old Lightnings.

JUTE

(By Our Staff Correspondent).

Calcutta, September 7.

THE raw jute market has been rather quiet during the past week with a smaller volume of business passing. The weakness of the goods market and the reports that harvesting is proceeding satisfactorily have been responsible for the reserved attitude shown by mills. Sellers have been rather keen for business but are not inclined to offer any discount in rates as they are still of the opinion that it would be possible to market all the crop and that exports might improve to a great extent after the cessation of hostilities. There might, however, be a seasonal decline in prices with the increase in arrivals in upcountry centres. The recent rains have enabled cutting in those districts where growers depend on rain for steeping water. In the Brahmaputra area the rivers have been rising rapidly and there will be no difficulty in harvesting. Upcountry centres have remained steady as there is considerable delay in transport.

In the loose jute section only a small amount of business has been reported, European packing Middles and Bottoms being sold at Rs. 17 and Rs. 14 per maund with Supervised 4 annas lower. Indian District Bottoms alone were done at Rs. 13-4 per maund.

In the pucca bales section, a large amount of business was reported earlier in the week with balers inclined to offer a slight discount in rates. Dundee Daisee 2/3 were done at Rs. 73 per bale and Short Group Daisee at Rs. 83 per bale. Outport Tossa 4's were sold at Rs. 70 per bale. Mills are reported to have purchased Firsts at Rs. 83 and Lightnings at Rs. 76-12.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, September 7.

THE jute manufactures market has been easier with prices in the heavy goods section especially being marked lower. There has not been much enquiry from overseas countries. Also the position in regard to Government stocks is not quite clear. It is felt that the release of stocks held on Government account might satisfy immediate demands and that there will be no need for any large increase in production soon after the cessation of hostilities. A certain section of the bazar, however, is not inclined to this view. It is said that with the reopening of continental markets, there will be a large increase in demand for both hessian and sacking. Hessian prices are quoting barely at maximum rates but a substantial decline in prices has been offered for Heavy Goods especially "B" twills. "B" twills for September-March were done as low as Rs. 63. The closing price was slightly higher.

Stock figures at the end of August show a decrease in hessian cloth and bags by 2.36 yards to 27.72 crore yards over the figures for the month of July. Sacking cloth and bags were only slightly lower at 25.16 crore yards against 25.31 crore yards. The decrease in stocks is mostly on military account, Hessian stocks being 15.69 crore yards at the end of August against 17.69 crore yards at the end of July. Sacking stocks, on the other hand, have increased from 2.11 crore yards to 2.6 crore yards. Figures are given below:—

Total reported stocks of manufactured goods exclusive of Government Orders.

N.B.—August stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Kedarnath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of July 1944.

PIECEGOODS

(From Our Correspondent)

Calcutta, September 7.

IN spite of the assurances given by Mr. Vellodi, Textile Commissioner for India, there has not been any decrease in black market trading and great difficulty is being experienced by buyers in respect of their requirements for *Id* and *Puja* festivities. It is satisfactory to note that the Textile Commissioner has agreed to look into the question of increase in the quota for Bengal as the total consumption is very much higher on account of the arrivals of large number of persons from other provinces and the increase in demand from the defence services.

The Government of India has decided to release 25 per cent of the total production of woollen goods as the capacity of Indian mills has greatly increased during the war period and there has recently been a decline in the requirements for the Military. The woollen goods released by the Government will be sold by approved dealers under the Government supervision. It is hoped that during the coming cold season it will be possible for consumers to get their requirements in larger quantities and at lower prices.

CANCER CAN BE CURED

Medical science is slowly, but surely, winning the great battle against Cancer. The usual sites of this dread disease are the stomach and breast; any organ, however, and even the bones and skin, may be attacked.

There is no pain and little warning in the early stages. Be on the safe side and have yourself examined periodically; don't neglect even the smallest symptoms of ill-health, especially if you are over 40.

Some of the commonest symptoms are an unusual lump or thickening, especially in the breast; any noticeable change in the size or colour of a wart; a sore that will not heal; and persistent indigestion.

If you suffer from any of these consult a qualified doctor immediately—the chances of cure depend entirely upon how *early* Cancer is recognised and treated.

* * *

This warning is issued in the interests of Public Health in India. These interests and those of the signatories of this advertisement are identical.

FRIEND OR FOE ?

There has never been a time when thrift was more important, more vital to India's future. During these war days there is a surplus of purchasing power in the country, and by "purchasing power" we mean money, cash, rupees. Thrift can make this surplus a blessed friend—for you and for the nation. Careless spending can turn it into the deadliest of foes—inflation.

There is a shortage of goods in wartime India and unless the demand for them is reduced the prices remain high. Control measures have checked the upward trend of prices, but in this fight against inflation we need all the help *you* can give.

Invest wisely: Do not invest in jewels, land, buildings, manufactured goods or commodities. Today's best and safest investments are Insurance, Co-operative Societies, a Savings Bank Account or the Post-Office Savings Bank. Best of all invest in Government Loans or National Savings Certificates.

Every time you go into a shop ask yourself this question. "Do I really need it?" By self-denial now you help keep prices down and the value of money up. And you save money too.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Prize Bonds

Prize Bonds are absolutely secure, yet owners have a chance of winning large cash prizes. Rs. 100 can win as much as Rs. 50,000 and the chance to win persists twice a year for the currency of the issue. Meanwhile the capital retains its full value and is repayable at par on or after 15th January, 1949.

You can get either a Rs. 10 or Rs. 100 Bond. There is no limit as to holdings.

Prizes are drawn half-yearly, on 15th January and 15th July. All bonds purchased before the 17th December 1944 will participate in the next draw on the 15th January 1945.

PRIZES ARE

☆

All prize money will be free of Income-tax, Super tax, Excess Profits tax and Corporation tax.

☆

Each series of 1 lakh pieces of Rs. 100 Bonds		
1 Prize of Rs. 50,000	Rs.	50,000
2 Prizes of Rs. 20,000	Rs.	40,000
2 Prizes of Rs. 5,000	Rs.	10,000
Total amount of prize money half-yearly in each series of 1 lakh pieces	Rs.	1,00,000
Each series of 1 lakh pieces of Rs. 10 Bonds		
1 Prize of Rs. 2,500	Rs.	2,500
2 Prizes of Rs. 1,250	Rs.	2,500
5 Prizes of Rs. 500	Rs.	2,500
10 Prizes of Rs. 250	Rs.	2,500
Total amount of Prize money half-yearly in each series of 1 lakh pieces	Rs.	10,000

Available at:—Any Indian Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury Business.
Prizes will be paid at all the above mentioned places and also at sub-Treasuries on or after the 15th August or 15th February following the date of the draw. Every Bond remains eligible for prizes at all drawings up to 15th January 1949. Payment of Prize money of the Rs.10 series will be made in cash; of the Rs. 100 series, half in cash and the balance in Government Loans.
Winning numbers will be published in the Gazette of India and the Press, before 15th August and 15th February following the date of the draw.

Stock Markets to-day and to-morrow:

A SHARP REACTION AND A FEEBLE RALLY

WHILE the controversy regarding the effect of peace on stock exchange values is still going on there has been a sudden decline in prices in the Calcutta market. On Wednesday this week on the rumours that Germany had capitulated and that the war had come to an end bear operators took advantage of the situation. With Bombay turning out as a heavy seller prices were pushed down by 2 to 3 points all round. At the lower levels, however, there was some buying. In Friday's session a good portion of the lost ground was regained, Indian Irons quoting Rs. 37-3 against Rs. 36-4 and Steel Corporations Rs. 30-6 against Rs. 29-4. Thhre has been, however, renewed selling at the higher levels.

The Committee of the Calcutta Stock Exchange has notified all members that as from Monday next week deliveries in respect of fresh transactions will have to be completed on the third working day. This decision of the Committee will, it is believed, prevent undue selling pressure and help the bulls to maintain the present level of prices. There seems to be a feeling that even if there were peace in the next one or two weeks, prices will not be marked down appreciably and that the reopening after the Puja holidays would be firm. The changes in the quotations in the last three weeks will be evident from the tables given below:—

	7.9.44 Rs.	A.	4.9.44 Rs.	A.	28.8.44 Rs.	A.

As for postwar prospects I have pointed out on more than one occasion that there is no fear of a slump and that with the continuance of cheap money conditions there can not be any decline in prices. As a matter of fact, with the assured postwar prospects for many of the industries, there could even be a boom in prices. *Analyst* in his column has taken up this question in greater detail.

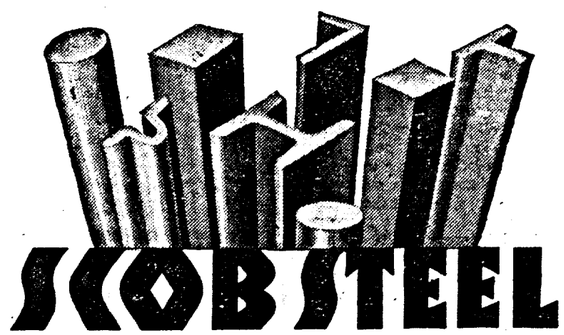
* * * *

Alexandra Jute Mills Limited, has done very well in the half-year ended June, 1944. The larger number of working days during the half-year has been mainly responsible for the higher level of earnings. It would have made even better showing but for the continued difficulty in regard to coal supplies. The net profit, before providing for taxation and depreciation, is Rs. 5,07,933 against the loss on manufacture of Rs. 1,12 849 in the previous half-year. The amount set aside to depreciation is Rs. 50,000 (nil) while the provision for taxation is Rs. 3,72,999 (nil). A sum of Rs. 25,000 (nil) is transferred to reserve. The dividend on ordinary shares has been maintained at Rs. 5 per share. The ordinary dividend for the previous half-year was paid after the transfer of Rs. 1.8 lakhs from taxation reserve and Rs. 25,000 from the reserve fund.

* * * *

Kothari Textiles Limited, has done very well in the year ended June 1944. In spite of the reduction in ceiling prices on two occasions the net profit after providing for taxation and depreciation is not very much lower, being Rs. 19,39,251 against Rs. 27,80,784. After providing for taxation Rs. 15,91,337 (Rs. 17 21,500) the amount set aside to depreciation is Rs. 1 lakh (Rs. 1,18,279). A sum of Rs. 1,49,750 (Rs. 5,48,380) has been transferred to Reserve Fund. The dividend has been maintained at 15 per cent. The amount carried forward is slightly higher at Rs. 42,200 against Rs. 37,036 brought in.

The Company has already paid the Optional Excess Profit Tax Deposit for the year 1941-42 of Rs. 38,634 and also the compulsory Excess Profits Tax Deposit for the year 1942-43 of Rs. 2,97,946. Over and above the payment of the above deposits, the Company paid during the year under review an advance of Rs. 20,00,000 against Excess Profit Tax and this will be more than sufficient for income-tax for the year 1945-46 and also for part of 1946-47. The Company's liability in respect of taxes for 1945-46 is estimated at Rs. 15,91,337 only at the present scale of taxation. In view of the large reserves built up in the past, the Compulsory Deposit will be paid from the amount of the Reserve Fund.



* * * *

A sharp increase in working expenses and a smaller crop have resulted in a lower level of earnings for the *Gairkhata Tea Company, Limited*, in the year ended December, 1943. Crop harvested was 10,419 maunds in 1943 compared with 11,557 maunds in 1942. The net profit, before providing for taxation and depreciation, is Rs. 2,25,545 against Rs. 3,65,272 for 1942. The provision for taxation is Rs. 80,934 against Rs. 97,580. The amount set aside to depreciation is Rs. 31,741 (Rs. 8,262) while Rs. 25,000 has been transferred to Reserves against Rs. 75,000 previously. Even the reduced dividend of 30 per cent (35 per cent) is to be paid only after drawing on the large sum carried forward from the previous accounts.

* * * *

Last week the dividend of *Northern Oil Industries* for 1943 was wrongly given as 15 per cent instead of 20 per cent.

Post-War Prospects and Stock Markets

NEED FOR SELECTIVE BUYING

(By Analyst)

BOMBAY, Sept. 7.

Now that markets are panicky all over India an intelligent speculator stepped into my office and wanted to know whether he should buy shares. Since the conversation was an interesting one I am giving below his questions and my answers to them.

Q: In your last week's review you had predicted a decline of about 10 per cent in Bombay, 10 per cent in Calcutta and 5 per cent in Madras. This has more or less come true this week itself. Shall we commence buying?

A.: Looking to the relief that the European war will come to a close this month and the technical position of the market I expect a further decline of about 5 per cent in Dalal Street, ten per cent in Clive Street, and about five per cent in Madras. Madras has fallen rather sharply in the last two days. You are aware that Madras is usually more panicky than Bombay and Calcutta, though today Calcutta quotations have been marked down. Comparatively speaking, Calcutta has not declined and still shares look overvalued. Despite rosy post-war prospects I would, therefore, put down the above general rule and start investment in select equities on a decline probably next week.

Q: Even Dr. John Mattahi has predicted a period of depression from six to seven months whereas you are confidently recommending me to go in for select equities next week on a decline.

A: I think I had discussed in great detail some months ago and have come to the conclusion that there are very little chances of a post-war slump. I expect only a market reaction of 25 to 30 per cent. I still stick to my opinion and as for the reasons I do not want to repeat them since "Eavesdropper" in his last few gossips has discussed them in a much better fashion and more convincing manner and I would like you to read those articles.

Q: I shall take it for granted that there will be no slump and that next week would be the best time to buy select equities. What about buying fixed interest equities like debentures and preference shares?

A.: Money is bound to continue cheap but fixed interest equities in the Bombay and Calcutta market are on a very low yielding basis i.e., 3 per cent in the case of debentures and 4 per cent in the case of preference shares. Whereas South Indian plantation debentures and preference shares give a tax free yield of 5 to 6 per cent. A careful selection, consistent with safety of capital, can be made in weak markets like the present but I would not invest entire spare funds in fixed interest equities since I feel that in a very short time we would get excellent opportunity for putting money in firstclass industrial equities with post-war prospects.

Q: Can you then give me suggestions for one lakh of rupees with limits around which shares should be bought in a weak market next week?

A: I would like to put Rs. 25,000, that is one-fourth of the capital, in South Indian plantation debentures and preference shares. Since Steels have rosy prospects I would suggest your buying two Tata deferreds around Rs. 1,950 and 100 Steel Corporations at Rs. 25. 10 Associated Cements around Rs. 220 and Jessop around Rs. 20. In the Jute section I would like you to invest about Rs. 7,000 by a purchase of 100 Howrahs around 70. Despite the heavy incidence of taxation, the Textile industry would also do well in the post-war period but one should be very careful in selecting equities. A scrip like Bombay Dyeing in Bombay around Rs. 1,650 as against the present price of Rs. 1,717-8 should prove an attractive investment. I would like you to buy one Bombay Dyeing and 5 Azamjahis around Rs. 475. In Madras I would like you to buy 50 Maduras around Rs. 68, 5 Vasantas around Rs. 250 and 5 Buckingham around Rs. 300.

Since I feel that the Russian market will be open for the tea industry in the post-war period Teas also should find a place in the investment portfolio of the type you are in need. I suggest purchases of 50 Hasimaras around Rs. 65 against the current price of Rs. 75, 50 Peermades around Rs. 50 and 100 Kalpettas around Rs. 40. The last one is a tea-cum-rubber Estate. I would like you to buy also 200 Ouchterloney Valleys around 9-8. This is a coffee share.

In the Chemical group, 100 Tata Chemicals around Rs. 18, 100 Mettur Chemicals around Rs. 15 and 100 Mysore Fertilisers below Rs. 22 should be profitable in the long run.

In the Insurance group, New Indias are now weak at Rs. 75. I would recommend purchase of 50 shares around Rs. 65. In Madras, Prithvi Insurance shares at the current price of Rs. 10-12 may be bought. This is also a composite Insurance Company like New India with a good directorate. You can put in a sum of Rs. 2,000 in these shares. 100 United India Fire around Rs. 10 also may be bought.

In view of the fact that the Coal industry also has excellent prospects, I would like you to buy 100 Amalgamated Coalfields below Rs. 40,100 and Mahakali Coals around Rs. 16 as against the present price of Rs. 17.

In the Sugar section whenever Mysore Sugars decline to Rs. 50 as against current price of Rs. 60 I think you should pick up 100 shares.

Thus my suggestions would mean a total investment of about one lakh and give an average yield of 5¾ per cent tax-free.

Q: You have, of course, given me an interesting investment portfolio but it is just possible that the markets might decline further after I buy?

A: No investor or speculator can expect to buy at the bottom of a declining market nor sell at the top of a rising market. If anybody has been able to do so it might have been only by pure chance but you can on investments made always follow the *stop loss* theory and you will never regret your action.

Q: Will you give me a concrete example since I am unable to follow your statement "*stop loss* theory"?

A: I have asked you to buy Tata Steel deferreds around Rs. 1,950. As soon as you buy these shares you note down in your diary that you will sell out your investment, if by any chance, the shares should decline by

THE INDIAN GLOBE INSURANCE COMPANY, LIMITED

Thirteenth Annual General Meeting

Presidential Speech by Sir Mathuradas Vissonji delivered by Sheth Vithaldas Kanji at the 23th Annual General Meeting of the Indian Globe Insurance Co., Ltd.

Gentlemen,

The Directors' Report, along with the Balance Sheet, Profit & Loss Account and various Revenue Accounts of your Company for the year 1943 are already in your hands and I presume that you have gone through the same with due care and with your permission I will take them as read.

You will have observed that now our premium portfolio has increased to Rs. 28,00,000 as against our paid-up capital of Rs. 7,00,000 and our Funds, including special and other reserves, stand at a figure of Rs. 16,00,000. This gives an adequate stability for our policyholders and good future for you, the shareholders, and the progress during our short career should be considered as very satisfactory.

Another important point which has occurred after the closing up of accounts is the unfortunate explosion on the 14th of April this year. This has resulted in loss of life and property on the Dock side and neighbouring area. Our normal Fire Policy conditions specifically exclude any loss occasioned by explosion and the Insurance Companies under their policy conditions were not responsible for these losses. The Government also took a similar attitude as regards their War Risk Insurance, as such a happening was never contemplated by them and hence was not covered under their conditions of War Risk policy. But with a view that the mercantile community who have been very heavily affected by these explosions should not suffer, the Insurance Companies carried on lengthy negotiations with the Government for finding some way to secure compensation for the victims of the unfortunate incident, and I am glad that the Government considered the whole question sympathetically and eventually agreed to assume the main responsibility for the loss of life and property. The Insurance Companies also agreed to make a token contribution towards the compensation that would be assessed on the properties insured under their policies.

In the initial stages, the loss reports were very exaggerated and it was difficult to ascertain the real position, but it now appears that after all the losses have not been as heavy as apprehended in the beginning. It is estimated that your Company will not be called upon to contribute heavily, and inspite of any such contribution, I am glad to inform you that our loss ratio so far does not exceed 20% which is very little over our normal experience of loss ratio and we have every hope that this explosion contributions will not have any adverse effects on our accounts for the current year.

Looking a little ahead, I believe one important factor which all those interested in the progress of Indian Insurance must start seriously thinking about is, the problem of post-war adjustments. During these years of war, the inflated values of commodities and war transports have resulted in increased portfolios of premiums which have tempted many new Underwriters into the market. We welcome them all as there is a large field for Indian Underwriters in Indian market, but I also want to utter a word of warning to all the new companies in the field as well as the old Underwriters that they must look ahead to the factors that are likely to face them immediately on cessation of hostilities. The deflation is bound to create a big reduction in our premium portfolios and our expenses will not be reduced in equal proportion. The important factor then will be the adjustment of the expenses of management with the reduced portfolios of insurance held by each Underwriter.

Another factor which we must also look to from now is the possibility of the entry of many more non-Indian Underwriters in the Indian field. The continental companies which are at present absent from this market will again enter the field. The American Insurance may also take greater interest in the Indian market. Thus, the market is likely to be flooded by new-comers on the one side and faced with a reduced portfolio on the other side. In view of this position, I believe it would be wise for good Indian Insurers to try to secure markets in undeveloped fields. The Far East, Middle East, China, etc., would offer such new fields and the best method of successfully operating in such markets would be to have a combined institution working on behalf of such Indian Insurers. I hope this question will engage the attention of the management of various Indian Insurers now so that they may be ready with their plans for expansion after the war.

The relations between the industrial development of the country and the Insurance service are very close ones, and in the post-war world the industrial development of the country is bound to progress rapidly and we all must be ready to assume the responsibilities that may arise out of such industrialisation so that there should be no need for indigenous industries to look to foreign concerns for their requirements. If we want an all-round development of Indian Insurance, it will be necessary for us to look much ahead and plan things from now onwards.

Gentlemen, I now take the opportunity of thanking the Officers and staff of the Company for their strenuous work and our thanks are in no less degree due to our well-wishers, Agents and Patrons of the Company whose valued co-operation has helped the Company to show better results.

Now I beg to move formally:—

"That the Directors' Report together with the audited revenue account, balance sheet and profit and loss account of the Company made up to 31st December, 1943, which have been circulated to the shareholders and taken as read are hereby adopted".

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN that the FIFTY-FIRST ORDINARY GENERAL MEETING of the SHAREHOLDERS of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Ferbes Street, Fort, Bombay, on MONDAY, the 9th October, 1944 at 4-30 p.m. (S.T.), (1) To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 29th February, 1944, (2) To declare a Dividend and Bonus, (3) To re-elct Mr. V. D. Sirur, who retires under Article 100 of the Articles of Association, as a Director of the Company, (4) To elect Directors in place of those who retire by rotation but who are eligible for re-election, and (5) To appoint Auditors for the current year and to fix their remuneration.

The TRANSFER Books of the Company will be CLOSED from Friday 22nd September, 1944, to Monday the 9th October, 1944, both days inclusive.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 8.

THERE has been a sudden decline in prices on the Calcutta Stock Exchange in the past week, the certainty of an early peace bringing about heavy selling pressure. In Wednesday's session especially Bombay operators were prominent sellers and all the speculative counters were marked down by two to three points. As a matter of fact even in the earlier days of the week under review a quieter tone was in evidence and it was generally feared that there would be a further decline in prices especially with the Puja holidays drawing near. There has been some covering towards the close and prices are slightly higher than the lowest levels for the week. The undertone, however, is still weak.

There has been no important change in the giltedged securities section and the continuance of easy money conditions has helped to maintain prices. 3½ per cent Rupee Paper was quoting Rs. 99-8. Among terminable loans 3 per cent 1953-55 were quoting Rs. 100-4, 3 per cent 1963-65 Rs. 99-6 and 3 per cent 1951-54 Rs. 100-12. 3 per cent 1966-68 were Rs. 98-4.

Bank shares were a shade easier with *Imperial Bank* fully paids at Rs. 1,990 and Contributories at Rs. 492. *Reserve Bank* were unchanged at Rs. 131 as also *Calcutta National Bank* at Rs. 14-4. *United Commercial Bank* were sharply lower at Rs. 22-8 premium on reports that new issue of shares will not be made at par. *Bharat Bank* also were easier at Rs. 111.

Cotton shares have struck a bad patch *Cawnpore Textiles* dropped 2 points to Rs. 12 and *Elgins* 8 points to Rs. 63. A rate as low as Rs. 60 was touched. *New Victoria* were more than a point lower at Rs. 7.

Coal shares have naturally come in for heavy selling. Bengal dropped by nearly 50 points to Rs. 600; *Amalgamated* were Rs. 44, *Bhalgora* Rs. 14-4 against Rs. 16-12 and *Bokaro* and *Ramgur* Rs. 36 against Rs. 40-4. *Burrakur* are 4 points lower at Rs. 38-14 and *New Beerbhoom* 3 points at Rs. 33. *South Karanpura* were Rs. 19 against Rs. 22 and *Talcher* Rs. 8-12 against 10-6.

Jute shares resisted selling pressure but quotations are lower in sympathy. *Howrah* being 3 points lower at Rs. 76-14. But there has been a recovery to Rs. 78 at the time of writing *Anglo-India* were Rs. 432 against Rs. 449, and *India* Rs. 660 against Rs. 690. *Clive* were steady at Rs. 50-10 and *Presidency* at Rs. 9-14. *Nuddea* were 10 points lower at Rs. 120 and *National* 2 points lower at Rs. 30-2.

In the Engineering section, *Indian Iron* were pushed down to Rs. 36-14 from Rs. 38-4 at the end of last week. The quotation is now Rs. 37. *Steel Corporation* likewise are lower at Rs. 39-6 against Rs. 32 last week, but the close is slightly better at Rs. 30. *Burn & Co.* were Rs. 375 and *Kumardhubi Engineering* Rs. 10-14. *Marshalls* were more than 3 points lower at Rs. 4-1 and *National Iron & Steel* at Rs. 12-12. *Braithwaite* shed a point to Rs. 11-2.

Sugar shares have been neglected, *Balrampore* quoting Rs. 16-8 against Rs. 18-12 and *Carew & Co.*, Rs. 27-4 against Rs. 29-12. *Cawnpore* were Rs. 37-12 against Rs. 40-12 and *New Savan* Rs. 19-2 against Rs. 22-8 *Ramnugger Cane & Sugar* were quieter at Rs. 12-8.

Business in Tea shares was restricted though quotations are not lower appreciably. *Bishnauth* were crossed at Rs. 41-9. *East India* changed hands at Rs. 16-2 and *Hasimara* at Rs. 72-6.

In the Miscellaneous section, *Burma Corporation* were quieter at Rs. 4-7 while *Indian Copper* were Rs. 2-13 ex-dividend. *Assam-Bengal* came down by 3 points to Rs. 15-12 while *Alkali & Chemical* were Rs. 31-2. *B. I. C.* receded to Rs. 5-8 from Rs. 6-8, but the close is better at Rs. 5-14. *Calcutta Trams* were relatively steady at Rs. 45-10 and *Indian Cables* at Rs. 27-6. *B. B. P.* were Rs. 4-1 against Rs. 4-8. *Titaghur Paper* were lower at Rs. 25-2 against Rs. 27 and *India Paper Pulp* Rs. 205 against Rs. 215. *Star Paper* were hammered down to Rs. 16. In Real Properties, *Midnapore Zemindary* were Rs. 160, the quotation at the end of last week being Rs. 176. *Humayan Properties* ordy. were Rs. 14. *Assam Saw* were steady at Rs. 4-15.

(Continued from page 378)

a further 10 per cent. That is, nearly a drop of 195 points. If at any time the shares should break Rs. 1,760 you should instruct your broker to stop your loss by selling the shares at the best market rate available. This order you must give as soon as you make a purchase and must give definite instructions that the broker should execute the order as soon as the market breaks the particular point mentioned so that you need not worry about your investment even if you are not carefully watching the ups and downs in a speculative market like the present. If, however, you prove lucky and the market begins to move up you can raise the stop loss by 10%. Suppose deferreds moved upto Rs: 2,000 you can immediately send a telegram to your broker to raise your stop loss to about Rs. 1,980. If again you continue to be lucky and the market moves up go on raising your stop loss and I am sure you will get the cream of the rising market. Always follow the policy, allow your profits to run and cut your loss. If every investor should follow this stop loss theory like a mathematical automaton I do not see whey an investor should lose at all.

NEW DELHI,
28th August, 1944.

CONTROLLER OF ROAD TRANSPORT

Indian Globe Insurance

Improved results in both the General and Life branches distinguish the Indian Globe's experience in 1943. The Fire branch's net premiums for 1943, amounting to Rs. 4.89 lakhs were supplemented by investment receipts. Claims took Rs. 54,062 only and the Fund for unexpired risks in higher on the year. In the motor insurance branch also premiums received showed an increase and the Fund is higher owing to the surplus. In the Accident branch the year's claims took Rs. 4,834 out of net premiums totalling Rs. 9,250 and the Profit and Loss Account receives Rs. 8,270. The net marine premiums totalling Rs. 3,31,595 were supplemented by a transfer from profit and loss account. The 1943 cyclone affecting country craft explains the high loss ratio for the year as a result of which claims paid and due almost balanced the revenue in the branch. The Directors regard the results as exceptional and unlikely to recur. In the Life branch new business resulted in the issue of 1,113 policies assuring Rs. 25.79 lakhs. Total premiums amounted to Rs. 3.89 lakhs nearly showing a rise of over Rs. 1.11 lokhs on 1942. The recent addition to the Life Fund of Rs. 2.3 lakhs from the General Department was supplemented by addition of Rs. 2.29 lakhs from the Revenue account. For the General department as a whole the loss ratio of 44.9 per cent for 1943 is regarded as satisfactory and a slight drop in the cost of acquisition is described as encouraging. The burden of a high expense ratio in the Life branch is attributed largely to Chief Agency terms. The yield on the Life Fund at 4.67 per cent is viewed as satisfactory. More important, in the view of many, will be the declaration of a dividend of 4½ per cent as the third dividend payable to the Indian Globe's shareholders this month. In the classified summary of assets house property is absent and mortgages hardly count while dead stock has been written down. The observations at the 13th annual general meeting call attention to general prospects as well as particular progress.

VICTORY
LOAN 1957
3%
NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras, at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

*Includes Rs. 53,000 being excess provided for E.P.T. deposit and Rs. 1,03,000 excess provided for taxation.

"In accordance with the Indian Jute Mills Association's Working Time Agreement, the Mills, during the period under review, worked 54 hours per week.

On June 18th, the Managing Agents received from Government a requisitioning order directing them to hand over 'A' Mill and 2,000,000 sq. ft. of the Company's vacant land on July 8th. The Directors and/Managing Agents at once proceeded to make arrangements for transferring the production of this unit to 'B' Mill, and double-shift working in the latter Mill, which will utilise fully the loom hours of 'A' Mill, commenced on June 26. Since this date, double shift working has proceeded smoothly.

The question of compensation for 'A' Mill and the requisitioned land is being dealt with by a special Sub-Committee of the Indian Jute Mills Association which is carrying negotiations with Government on behalf of all requisitioned jute mills. When the details of compensation are settled, a further report will be made to the Shareholders".

Authorised, Issued and Subscribed Capital —Rs. 40,00,000 in 24,000 Ordy. and 16,000, 6 per cent Cum. Pref. shares, both of Rs. 100 each, fully paid up.

THE SECRET OF BEING CHEERFUL

A person can remain cheerful even in these days of scarcity of articles of daily use if he is confident that whatever happens he and his family will have financial protection and security. A Life Insurance Policy alone can guarantee such financial independence.

You can buy insurance protection from Ruby General Insurance Company to suit your individual requirements. Your nearest Agent will be glad to help you in this respect.

RUBY GENERAL INSURANCE CO., LTD.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Short credits continue to be in abundant supply, interbank call money nominally quoting ½ percent in Calcutta and ¼ percent in Bombay. There is every reason to believe that substantial payments have been made to the Government on account of Excess Profits Tax and E. P. T. deposits: these payments must have been particularly heavy in the first half of the current fiscal year during which, it may also be presumed, tax arrears have been cleared up much more expeditiously than hitherto. Large as these tax payments must have been, it has made no difference in the plethoric conditions ruling in the money market. Nor have the deposits of scheduled banks been adversely affected. In fact, deposits of member banks with the Reserve Bank have risen from Rs. 49.92 crores on March 31 to Rs. 105.61 crores on September 8. During the same period, deposits of the Central Government with the Reserve Bank have advanced from Rs. 76.40 crores to Rs. 144.56 crores. It is not unlikely that some portion of the tax payments has been met from the amounts kept in the form of cash in the hands of the assessees. To that extent, there may be said to be a reduction in the fund which ordinarily is utilisable for black market transactions. As is to be expected, the treasury bill results this week are more or less on the same pattern as last week's. Applications came to Rs. 14.61 crores, and the average rate of accepted tenders was annas 7 pies 10 percent per annum. The offer of Central treasury bills for next week remains unchanged at Rs. 6 crores.

The returns of the Reserve Bank for the week ended September 8 show an increase of Rs. 8.80 crores in active note circulation. There has been an expansion of currency for Rs. 3 crores by the transfer of sterling securities for a corresponding amount to the issue department. The latest figure of sterling securities held in the issue department is Rs. 831.33 crores. Rupee coin has gone down by Rs. 88.53 lakhs. In the result, notes held in the banking department are less by Rs. 6.68 crores. In the banking department, deposits of the Central Government, Provincial Governments and Scheduled banks are higher by Rs. 5.56 crores, Rs. 80.03 lakhs and Rs. 4.85 crores respectively. Miscellaneous deposits have gone down by Rs. 1.97 crores. Foreign balances in the banking department have increased by Rs. 16.80 crores to Rs. 275.47 crores. As the sterling securities in the issue department are higher by Rs. 3 crores and foreign balances in the banking department by Rs. 16.80 crores, it may be presumed that net sterling receipt in the week from the British Government on account of Allied war expenditure in India is of the order of Rs. 20 crores. With the latest addition to sterling assets, the total of these assets, taking the banking and issue departments together, exceeds Rs. 1,100 crores.

Our pre-occupation that the ultimate destiny of the vast pile of sterling assets that have been accruing in favour of India has blinded us to some of the immediate problems is whether the investment of our sterling balances is being effected in a manner that will ensure for us the most advantageous current interest return. The details of the sterling securities held against our sterling resources for Rs. 1,100 crores are not known to us. But, we believe, it will not be far wrong if we assume that, perhaps 90 percent of these securities are in the form of British treasury bills. That is to say, the Reserve Bank may not be getting more than 1 percent on about Rs. 1,000 crores of its sterling investment. Is it not advisable that a far larger proportion of our sterling balances be invested in a way that will give a better return than 1 percent? Investment in British loans for large amounts may not appear satisfactory in view of the past experience of the Reserve Bank, which, on some occasions, had to provide substantial depreciation for the decline in the market value of sterling securities. Besides, the categories of British securities in which the Reserve Bank may invest are strictly prescribed in the Reserve Bank Act. In these circumstances, our suggestion is that the Indian Government should negotiate with the British Government for a special arrangement whereby our sterling balances will be treated as a deposit earning interest at, say, 2½ percent. The accumulation of sterling in India's favour is a matter in which India has no say. It is the political suzerainty of the British Government that is at the basis of transactions which enable Britain to pay India in any way she chooses and to invest the proceeds of such payment in the manner prescribed by her. The effect of these arrangements, which have to be accepted by India whether she likes it or not, is that Britain has hardly any pressing financial conundrums with regard to the colossal expenditures incurred in India on her behalf and on behalf of the Allies; that the main financial conundrums are left to be solved by India; that the adverse effects of these conundrums have been mostly felt by India in the form of currency inflation and other forms of inflation; and that, for the time being, Britain has no more financial strain than paying 1 percent interest on this piling debt (this, too, a book entry). The proper course would have been for England to have directly raised this money in the Indian market. If so, what would have been the interest charges for the loans so raised? It is this question that has to be kept in mind while determining the rate of interest which our sterling balances in London must earn.

(Continued from previous page)

In relation to this question, our view is that the fair interest rate should be 2½ per cent.

We understand that Sir Jeremy Raisman has returned to India. We have no news yet as to whether Sir Chintamen Deshmukh has also come back. Our London Correspondent provides the information that there has been a preliminary discussion between representatives of India and the representatives of the British Treasury with regard to India's sterling balances; and that a statement may shortly be issued both from London and New Delhi in this regard.

The exchange market has been steady with some showing of export T.T. and bills.

The closing rates are:—Bank's buying 90 days/st at 1s. 6¼d., for 1 and 2 months; Bank's buying 90 day/st at 1s. 6 9/32d., for 3 and 4 months.

B. C. rates T. T. 1s. 5 31/32d., Bank's selling T. T. 1s. 5 31/32d., Bank's selling D. D. 1s. 5 31/32d., Bank's buying T. T. 1s. 6 1/32d., Bank's buying D. D. 1s. 6 1/8d.

London-New York:—X'Rates $4.20/12/3½; Bank's selling T. T. Rs. 332⅜; Bank's selling D. D. Rs. 332⅛; Bank buying D. D. Rs. 326¾.

London-Montreal:—X'Rates $4.43/47; Bank's selling T. T. Rs. 302½; Bank's selling D. D. Rs. 302½; Bank's buying T. T. Rs. 297⅜; Bank's buying D. D. Rs. 294¾.

Call money quoted ½ percent in Calcutta and ¼ percent in Bombay; for 3 to 5 months deposits ½ percent; for 6 to 11 months ¾ percent for 12 months 1¼ percent.

GOODS SHIPPED

to any part of the world, whether by ocean-going vessels or coastal steamers, are insured by the Society against all risks and at lowest tariff rates.

Other forms of transit insurance—such as goods despatched by rail, trucks and lorries; parcels sent by post consigned by any of these transport services—are also undertaken by the Society.

Rates and particulars can be ascertained from any of the Society's Offices or Agencies. While consultation costs you nothing, it may often prove of advantage.

The Beginning of the End

The Quebec Conference between Mr. Roosevelt and Mr. Churchill is a signal to the world that the end of the war has begun and that the war will yield place to peace as the source of our worries and our perplexities. The agenda of the conference must necessarily include a wide variety of problems ranging from the immediate tactical and strategic problems to the economic and political ordering of the postwar world. It is, no doubt, too early for even the representatives of the two Anglo-Saxon powers to give shape to the settlement that must follow peace. Soviet-Russia is not represented at the conference, though, as on former occasions, the world has been assured that invitations were sent out to Stalin and that Stalin could not attend because of the preoccupations created by the advance of Russian armies. But it is also to be remembered that, Russia being a neutral in the war against Japan, the presence of Russian representatives is more often an embarrassment than an aid in the deliberations. In the conference which took place some time ago in Dumbarton Oaks, the Chinese Vice-Minister of Foreign Affairs did not speak except in the absence of Gromyko, the Russian representative. While thus Stalin's absence at Quebec has its advantages, it also puts oft complete allied understanding on the immediate problems of war and peace. What is worse, it lends colour to the general suspicion that as victory over Germany is in sight, the war has relaxed the pressure towards unity and that the differences in the attitude and interests of the powers in the problems of peace have begun to make themselves felt.

When Mr. Cordell Hull returned from the Moscow Conference, he proudly claimed that the agreement would rule out the need for "spheres of influence, alliances and balances of power, systems of the unhappy past." That optimism would appear to have been grievously undermined in the months that followed. At the time the Atlantic Charter was proclaimed, its authors meant it to be a means of weaning the German and other Axis peoples from the Axis war effort. The terms of the Charter referred to "the peoples of the world." But it has been made clear that they are not to apply to Germany, though moderate sections of opinion in all countries still continue to stress the dangers of a Carthaginian peace. It may be conceded that the treatment of the German people after the war will depend a great deal on the conditions that will obtain at the time, not the least important of which will be the mentality of the people themselves. A sullen resentment against their fate, such as will look only for another opportunity to rearm and start the war again with the odds more in their favour than ever before will only be a powerful and unanswerable argument for measures that will permanently disable Germany for another war. Whether such measures can be devised and whether those measures can be made effective by a group of powers, who will be increasingly divided among themselves as the present war will recede into the past, are questions which are not easily settled except in the light of all the relevant facts.

But the general weakening of the will to clemency towards Germany is but an index of the fact that the war, as it draws towards its close, is becoming less and less an ideological war. The spirit of international rivalry has raised its ugly head again. The game was started when Mr. Churchill announced that the Atlantic Charter was not to apply to India. While Mr. Roosevelt is believed to dislike Mr. Churchill's caveat, there is evidence in the American magazines that America does not contemplate the return of Hongkong to China after the war. The Dutch may expect to gain by Britain's firm stand on the question of Empire in the East. And now de Gaulle has voiced his demand for the return of French possessions to France.

The stratifications of peoples, states and powers in the postwar world is sufficiently complex to damp all hopes of a stable world peace after this war. The lowest stratum may be said to be formed by the vast colonial populations of the world, particularly in Southeast Asia, whose possession will shift from one nation to another as if they were mere chattel. Higher in the scale, but with no great difference in power or living conditions, comes India with its vast population and natural resources. China, should have shared a not dissimilar lot, except for her special position in the war against Japan. Political power increases as one moves towards the West. The Muslim states of the Middle East, the nationalities of Central Europe, the smaller powers like Italy and Spain—the differences in status and pull are minute, but significant. Between the States which are sovereign and equal only in the eye of international law and the Big Three who will find the world as a whole like clay in their hands, if they will only agree on how to shape it, there will stand France, which needs resuscitation, and Germany and Japan as the defeated foes. At the top of this complex stratification are the United States, Britain and Soviet-Russia; and the differences in their respective positions and interests and aspirations are such as to add to, and not reduce, the complications of international politics in the postwar years.

The differences among the Big Three and the different problems pertaining to the various strata of the Society of Nations may well serve to defeat the higher purposes which were in the foreground at the beginning of the war and strengthen the forces which will lead to World War III. Already, great intellectuals like Bernard Shaw have expressed such apprehensions. It is necessary, therefore, to study the situation as it obtains today when the end of the war is in sight only in Europe. If the interwar period has taught us anything, it is only the ultimate futility of mere sentiment in the sphere of international politics, sentiment which is not strengthened by more or less imperative needs of the objective situation. For such sentiment, however loudly and widely it may have been expressed, is apt to be cynically forgotten if the pressure of events is not towards its adoption in practical policies.

It hardly needs any elaborate enquiry in the first place to recognise that, once the critical phases of the war are left behind, the mind of each nation turns to its own special interests in the post-war settlement. There is not such a perfect concord of interests between the United Nations or between the Big Three, as alone will prevent a deterioration in the fraternal spirit of the Allies. The three powers did not enter the war at the same time. Even today Russia is at peace with Japan. And even the two English-speaking nations have not equal stakes in the war in the East. There is then the ideological gulf yawning ominously between Soviet Russia and the Anglo-Saxon democracies. The relations between the two democracies have not been free from occasional bickerings or a more lasting undercurrent of bitterness. Britain's position in the present war and her needs and requirements during the post-war period do not permit her the luxury of sentimental internationalism; while America is still at a loss to know which of the two alternatives which alone are open to her is the more costly and dangerous, isolationism or internationalism. While no nation which has entered the war can contemplate with equanimity the likelihood of a similar war in the next two, three decades, no nation will lightly take on itself the obligation to war for vague world ideals or agree to jeopardise its vital interests for fear of war or love of peace. In the years which preceded the present war, both these dangers were only too apparent. On the one hand, there were nations which were prepared to resort to war in the furtherance of what they considered to be their national interests. On the other, the great powers were unwilling to start a war merely to prevent a problematical war at a later stage.

The cause of world peace has different sources of strength and debility. Its sources of strength are, in the political sphere, the obviously evil character of war, especially in modern times, the necessity for the Allied nations to work together to achieve victory, its continuance during the enforcement of the peace settlement and, last but not least, the need after a devastating world war for a readjustment of national plans and ambitions to suit an altogether new situation. In the economic sphere, a great war acts as a force for integration of world economy. For it alters the relative economic strength of the various nations, through new handicaps on

THE ALUMINIUM CORPORATION OF INDIA LTD.

9, CLIVE STREET, CALCUTTA

The Capital of the Corporation at an Extraordinary General Metting held on the 31st August. 1944, has been increased from Rs. 50,00,000 dvided into—

20.000 6% Cumulative Preference Shares of Rs. 100 each, free of tax.

2.75.000 Ordinary Shares of Rs. 10 each.

1.00.000 Deferred Shares of Re. 1 each.

to Rs. 1.50,00,000 by creation of—

50.000 5% Cumulative Preference Shares (Redeemable) of Rs. 100 each, free of tax. These shares shall rank as regards dividends at the specified rate and return of capital and other rights and privileges 'pari passu' with the existing preference shares.

4.25.000 Ordinary Shares of Rs. 10 each, ranking in all respects 'pari-passu' with the existing Ordinary shares.

3.00.000 Deferred Shares of Rs. 2-8 each, ranking in all respects 'pari-passu' with the existing Deferred Shares.

Out of this increased capital the Directors have decided to issue the following shares:—

30 000 5% Cumulative Preference Shares (Redeemable) of Rs. 100 each —at par.

2.00,000 Ordinary Shares of Rs. 10 each at a premium of Rs. 2-8 per share.

to the existing shareholders whose names appear on the Register of Members of the Corporation as on 1st September, 1944 in proportion, as nearly as possible (fractions being ignored), to the existing number of shares of all classes—Preference, Ordinary and Deferred—which works out as under:—

(1) For every 13.1 shares of any class or classes Preference, Ordinary and/or Deferred—*One Preference Share.*

(2) For every 1.96 shares of any class or classes Preference, Ordinary and/or Deferred—*One Ordinary Share.*

Requisite application forms have been posted to the registered addresses of the existing shareholders and they have been requested to put in their application for their quota together with the requisite amounts so as to reach the Registered Office of the Corporation, 9, Clive Street, Calcutta or Kamla Tower, Cawnpore on or before the 21st September, 1944.

The Directors have also advised the existing shareholders to apply for any ADDITIONAL SHARES so that in case certain members entitled to shares do not avail of the opportunity, the Directors might be in a position to allot them additional shares. But it has been made very clear that the allotment of the additional shares rests entirely at the discretion of the Directors who may or may not allot the additional shares either in full or part.

the national finances of the belligerent nations, redistribution of production and markets, changes in productive technique through new inventions and, most of all, through the creation of a general set of conditions which necessitate closer international co-operation. The forces of debilitation, too, are easily summed up. First and foremost is the onset of post-war cynicism in those whom the new ideals may affect more adversely than others. There is then, warning of the enthusiasm for world peace and the ideals of the period of mobilisation on the home front and for the fronts abroad. Concern for the balance of power, which is necessarily gravely tilted by the defeat of the enemy, interest in reparations or some variant of them, consciousness of differences in the respective contributions to victory and the desire for adjustment of accounts, anxiety for provision against another war which cannot be wholly ruled out. all these make the array of forces against a world peace.

The cause of world peace can gain in strength, only if the development of events from now is such as to weaken the latter set of forces and strengthen the former. Taking our stand at the present moment we may say that the tasks that the Big Three will have to tackle together from now are firstly, the formulation of the settlement to be offered to Germany. the treatment to be accorded to the small nationalities in Europe and with it a rough mental demarcation of spheres of influence. the framework of the organisation needed to enforce the settlement. which will work ostensibly under, but really independent of, another organisation for world security and at later stages the tackling of the tasks in the sphere of world economy and international trade. All these, it must be remembered. will. in all probability, have to be essayed while the war with Japan will continue; and if the war will bring out in an arresting fashion the links between the problems in the West and the problems in the East. one may look forward to a gain in strength for the cause of world peace.

Much will depend on the approach of the Big Three to the problems of international trade and of world economy. The results of the Quebec Conference, when they become known. however scrappily, may serve as starting point of further enquiry into these momentous questions.

Roads and National Welfare

A well-conceived national transport system is a primary requisite of social and economic progress reaching to every class of the population. The details regarding India's future requirements of roads, railways, waterways and airways are widely discussed both in official committees and outside; and credit is particularly due to the Indian Roads and Transport Development Association for educating the public on the value of good roads and submitting workable schemes of road development for the Government to consider and profit by. At the recent annual meeting of the Association Mr. T. R. S. Kynnersley spoke of the roads as a valuable agent for quickening the pulse of Indian agriculture and recommended the example of the United States in the matter of conceiving the road plan and also in financing the programme of roads. There is no doubt that India has neglected her transport system to the detriment of her rural economy; in the matter of roads, she is centuries behind other progressive countries. The heavy strain imposed by the war on Indian transport has revealed the utter inefficiency and inadequacy of our roads. The food crisis has already demonstrated how dearly the nation has had to pay for neglecting her vital transport system. The increasing tempo of inflation served well to point out that, if the widely divergent price-levels in different parts of India are to be equalised and distribution improved, the transport system should be thoroughly and immediately overhauled. That roads can tap vast agricultural resources is brought out in an arresting way by the Hon. Mr. R. H. Parker:—

> In India there are today huge areas totally devoid of any lines of communication. There are areas with tremendous agricultural possibilities for the growing of all sorts of crops, which are now lying fallow except for the bare cultivation necessary for the needs of the people living there. India is thus being held back while the rest of the world progresses. How appallingly few are the roads in some of the areas served by the great waterways will be evident from a brief study of India's road map. For hundreds of miles do rivers like the Godaveri flow through rich soil, the produce of which cannot reach the market it deserves for lack of road facilities.

The urgency for a correct road plan increases as the war is coming to a close; because the demobilised soldier has to be provided with work, thousands of military lorries should be engaged in peace work, and numerous technicians, now in war work, would have to be profitably employed. The Government of India have given the go-by to their laissez-faire notions and are actively engaged in planning for national prosperity and therefore of roads too. They are now contemplating a 20-year road programme envisaging the building of 400,000 miles of road at a capital cost of Rs. 450 crores. If this target is reached it would mean an increase of 65% over the existing mileage. The Bombay Plan aimed at a target of 600,000 miles and the Peoples' Plan recommended 450,000 miles of new roads to be constructed and 220,000 miles should be improved at a total cost of Rs. 550 crores. The Chief Engineer's recommendation is the most modest of the plans and for that reason seems to have been preferred by the Central Government.

The present road programme of the Government, though considered as irreducible minimum for this country, has to overcome some difficulties before it is translated into practice. As. Mr. Kynnersley pointed out. a Central Authority is necessary to deal with administrative and technical problems. Road plan has to be fitted into a master plan for Indian Transport System wherein the exact role of airways, railways and waterways has to be clearly marked. Further, the tempo of road construction, engineering problems connected with construction, road research and traffic studies are subjects which cannot be left to the Provinces. India has to be treated as one unit and road development has to be conceived against the perspective of a postwar world to maximise the advantage. Mr. Kennersley rightly cited an example of the U.S.A. where Federal participation was found to be essential for speedy progress in road plans. The need for the formation of a Road Board for implementing the postwar road programme is undisputed and the creation of this body cannot wait for the war to end, because preliminaries such as land acquisition should be completed before the termination of hostilities. so that road schemes may not delay the initiation of a bold public works policy contemplated by the Government of India.

Financing of the road plan, it would appear, would not offer insuperable difficulties. Even as a revenue-yielding proposition, the roads programme would not be disappointing in the long run. As Mr. Kennersley pointed out, "Expenditure on Roads is an investment no less remunerative than in the case of the Railways." At present, the public needs to be educated on the fact that road is almost the only public utility service wholly maintained by the Government and that the taxes paid by the people for the use of roads, the motor-tax and the petrol-tax, do not form even a small percentage in the cost of the upkeep of the roads. The justification for tapping non-Governmental sources need not be emphasised. The responsibility of not utilising the Central Road Fund for road construction rests with the Provinces; and it has been calculated that the annual savings in operating costs that would accrue to the users of bullock carts in India, if India had adequate roads, would be in the neighbourhood of Rs. 55 crores. With the increase in traffic, particularly the motor traffic, the receipts from petrol tax and motar-tax would swell. Roads would help in opening up the agricultural and mineral resources of the country and aid marketing a good deal. They would enhance the value of lands and buildings and thus add to the taxable capacity of the people. A tax on vehicles, including the bullock cart, is suggested by some as a fertile source of income. Others demand that the accumulated sterling balances of India should be drawn upon for financing road plan. Mr. Kennersly favours loans and the floatation of 'road bonds' as in U.S.; and it is possible to persuade the chief exporters of motor vehicles to India the U. K. and the U.S.A., to take a good lot of the bond issue. Since road development yields greater income to other agencies of transport like the railways, a case has been made for a contribution from the railways also. The general exchequer and the revenue from road transport can, within a few years of the beginning of the road programme, successfully share the costs.

Enthusiasm for an extensive network of roads should not blind us to the implications of giving the road programme a first priority, while the agricultural and industrial development of the country lag behind. True, the present agricultural stagnation has been to a great extent caused by the neglect of a transport service intended to serve the villages. It is also to be remembered, as Sir Manilal Nanavati has recently stated, that historically continuous de-industrialisation of the countryside for over hundred years has reduced the earning power and vitality of the ryot. At a time when agricultural activities are being made unprofitable owing to the lack of village handicrafts and excessive surplus population pressing on already badly fragmented holdings, a sudden gearing up of transport may weaken the small farmer and the bullock cart users. It may merely accelerate the tendency of flooding this country with imported articles and help in accelerating the export of raw materials to foreign countries. Already, there is a suspicion that the special interest shown by the Government in road plans may be actuated by a desire to prepare a market for outworn road-rollers and motor-cars produced by the U. K. This suspicion is no doubt baseless; but it serves to underline the need for fitting the road programme in a master plan for India. if Indian rural economy should be safeguarded from the lag in transport development.

By Special Cable.

ROOSEVELT'S EYES ON CARTELS

BOTH AT HOME AND ABROAD

SPECIAL FOR "INDIAN FINANCE".

Washington, Sept. 13.

In Washington last week, President Roosevelt listed International Cartels as one of the principal enemies of a prosperous world trade and pledged the United States to seek their elimination as far as possible. Through the medium of letters to Mr. Cordell Hull, the President has been working in this direction for the last several months. He asked Mr. Hull, "Keep your eye on this whole subject, International Cartels", because international discussions thereon will soon arise. There is considerable speculation regarding the President's purpose in raising the question in the manner he did and in the time he did. It was regarded as significant that he addressed Mr. Cordell Hull to whom he certainly said nothing that the latter did not know—just before the meeting with Mr. Churchill. Five months ago, Mr. Hull set up a special committee to investigate into the affairs of Cartels and appointed only recently a Director for that study, Mr. Harry O. Hawkins, to go to London as Embassy Counsel on Long-range Economic Problems. Mr. Hull, who has all his life sought to free trade from artificial impediments, hardly needs to be told to keep his eye on Cartels.

The most logical explanation here is that President Roosevelt wanted to get on record his views before beginning the discussions with the British leaders on the continuation of lend-lease arrangements, the re-establishment of Britain's trade and destruction of Germany's war-making machinery. Officials here concede that Britain will, probably, be only lukewarmly responsive to President Roosevelt's expressed policy on Cartels. But it was felt by many that, whereas the President placed himself in a bargaining position on the whole question of international trade after the war, there could be no doubt that President Roosevelt had British Cartel practices in mind in his letter to Mr. Hull.

The President referred to the United States' traditional opposition to monopolies and Mr. Hull's liberal trade philosophy and then said "More than the elimination of the political activities of German Cartels will be required!" Cartel practices which restrict free flow of goods in foreign commerce will have to be curbed. With international trade involved, this can only be achieved through collaborative action between the United Nations.

President Roosevelt's letter followed the statement by Attorney General Biddle to the Congressional Committee that "peace with Germany which leaves these companies (Cartels) intact will be peace to ensure another war against us". The State Inter-Departmental Committee also has been studying Cartels and their connection with postwar commercial policy. The Government is expected to defend its position strongly in the forthcoming international commercial policy discussions, probably using the United States' wartime contributions and postwar creditor nation status as bargaining instruments.

IDEA FOR

wedding present!

Instead of travelling long distances to attend weddings, why not send the cost of your railway tickets as a present!

However much the young couple missed your presence, they would realise that rail travel in wartime, is difficult and uncomfortable; and they would applaud your practical gesture. It would help the Railways to maintain a constant and even flow of civil supplies including food-grains, fuel, clothing and other necessities of life; to keep our troops well supplied with weapons of war. These factors alone, dictate that passenger traffic must be reduced.

So, in saving yourself an inconvenient and uncomfortable journey, you will please both those you love, and those who serve you!

Travel less

ISSUED BY THE RAILWAY BOARD

Editorial Notes

Bombay Disaster

The Committee appointed to enquire into the Bombay fire and explosions deserves the thanks and gratitude of the public and the Government for the patient unravelling of the events that led up to the grave tragedy of April last. The nature of the tragedy is a serious impediment in the way of full enquiry into its causes. Of those who were directly involved, few have survived; and the survivors' recollections may be hazy and confused. There is above all the difficulty, which the members appreciate more keenly than others, "that the actions which it has been our duty to submit to searching scrutiny, were taken either under the stresses of every day affairs or in the heat and turmoil of a desperate situation." Nevertheless, the Committee have succeeded in sifting all the available evidence to pick up the primary causes of the fire that broke out on S.S. "Fort Stikine" and what they call the inadequacies of action on account of which the position got out of control and the tragedy became inevitable and large scale. Ignoring negligencies on the part of individuals, the absence of which may, conceivably, have done little to avert or to reduce the scale of the disaster, the fire and the explosions must be traced to the shortcomings of a system which is being rapidly adjusted to the needs of war time. Administrative lacunae, lowering of standards, uncertainties about responsibilities of particular organisations and officers—these to some extent are inevitable and hide dangerous potentialities which come to view only after serious crises. The war leads to shortage of shipping space and to the need to make the most of available space for speeding up the despatch of goods according to priorities. Considerations of safety, which would have been paramount in peacetime count for less during war. In this case, "Fort Stikine" was allowed to come into the docks, despite the explosives she carried, because war time regulations permitted such entry. And what is more, her cargo was almost an ideal combination for the fire and explosions that occurred.

The Committee have proved that such stowage would have been impossible in peace- time and should not have been allowed even during a war emergency. Some of their findings on the issues connected with this make harsh verdict on the persons directly concerned. But it would appear that the general milieu of war conditions, rather than the particular individuals, is to blame, though nothing can condone the failure to fly the red flag over 'Fort Stikine' or to realise the obvious danger of sandwiching explosives between bales of cotton and Karachi cotton which had proved to be possessed of qualities of spontaneous combustion. In their general estimate of the causes leading to the fire, the Committee emphasise that rules and regulations have gone by the board owing to mistaken notions of wartime emergency, for which the Ministry of War Transport is allotted a share of the blame. The Government of India in their resolution on the report stress the fact that it is common ground between the Ministry of War Transport and themselves that "maintenance of the civil economy of India is an essential part of the war effort". Our London Correspondent in his cable published in this issue refers to the reactions of insurance circles to this observation; for this may well lead to a dimunition of the discrimination exercised by ship masters in the choice and stowage of cargo. It seems certain that the Master of 'Fort Stikine' was most uneasy about the cargo his ship carried, an uneasiness which forebode the disaster which ultimately overtook him. Causes similar to what brought about the fire also prevented its extinction before it ignited the explosives. The Committee's analysis brings out the weak spots, which, no doubt, have since then been strengthened.

Employers' View

Food shortage has been a source of worry to labour and employers alike. Regular wages and satisfactory distribution of essential commodities reduce strikes and absenteeism, increase the efficiency of factory labour, and reduce the cost of production for the industrialists. While the employers have endeavoured to evolve food purchase schemes for the benefit of labour, the co-operation of the Government has not always been forthcoming in full measure. In his speech at the seventh annual general meeting of the Employers' Association of Northern India, the President, Mr. J. Tinker, revealed that the Association purchased foodstuffs on behalf of members for Rs. 102 lakhs but expressed his disappointment at the working of rationing at present. Faulty storage, he said, has led to a wastage of 15 per cent of the stocks; and when big cities like Cawnpore are to go without storage facilities, wastage of valuable foodgrains is the result. 'Silos' should be opened and the mill shops should be retained even after the war as they reduce the worries of labourers in purchasing their requirements. Controls do not operate favourably on the stock position. Mr. Tinker suggested that the Government should relax the controls and allow the members of the Association to purchase grain from villagers at controlled rates giving them in return cloth, yarn, iron and steel etc. He argues if the villager knows he can get his requisities, he will be tempted to release grain for the market. The government have not as yet evinced sufficient interest in this scheme or the storage facilities demanded. The Association had no troubles from labour for sometime past and Mr. Tinker, while welcoming labour legislation, expressed his view that the authorities are moving too fast and the need for co-ordination is growing urgent. The absence of a thoroughly representative Textile Trade Union is regretted and the lack of Labour leaders technically or practically endowed with the necessary knowledge of the subjects to be discussed raises special problems. Referring to the Control measures and their reaction on the different concerns, the President said that instead of trying to escape Government Notifications the trading community would do well to expand trade ensure better distribution and reduce black markets. Merchants are advised that their long-term interests are served if they realise that the best market for Indian goods is in India and black market operators would only forfeit the goodwill of the consumers.

Molasses and Land Reclamation

The menace of food shortage has not yet passed and the need to keep up the tempo of the grow-more-food drive remains as urgent as ever. Every atempt at increasing the yield from land is valuable and any practicable scheme of extending the area under active cultivation would be welcome. Dr. N. R. Dhar, Deputy Director of Public Instruction, U. P., has done a distinct service to the sugar interests and the grow-more planners when he pointed out in the course of a lecture delivered by him recently at the Agricultural College that vast regions of alkali lands in India, at present wasted, can be reclaimed by utilising molasses or mix-

THERE'S MORE TO IT...

Perhaps you do not realise the amount of work and careful planning involved in the sending of parcels by the Indian Red Cross to prisoners of war. There's much more to it than meets the eye.

Special care is taken to ensure variety in these parcels which fall into two categories. Food, clothing and toilet requisites come under the heading "Material", while books, musical instruments and instructional matter are included under "Intellectual".

All nationalities, classes and creeds are catered for, and delegates visit the prison camps regularly to determine the needs of those in captivity.

Sent to neutral bases and distributed at regular intervals, these parcels help to ease the monotony of camp life and give our men something to look forward to.

We depend on your help to continue this vital service.

Please send your donation to the Hony. Treasurer, Indian Red Cross Appeal, Government House, Calcutta.

ture of molasses and press-mud available in India. The chief defects of alkali land are deficiency in nitrogen content, low carbon content, impermeability to water and lack of bacterial activity. Dr. Dhar has pointed out that all the above defects can be happily overcome by the addition of molasses and press-mud. We have in India six lakh tons of molasses containing 60 percent calcium salts, potash, phosphates and some free acids and four lakh tons of press-mud containing calcium compounds, carbo-hydrates and nitrogenous compounds. The calcium salts in the molasses and press-mud can convert sodium soil into calcium soil, with permanent results. Nitrogen and carbon contents of the reclaimed land improve as a direct result of the application of molasses and press-mud and, what is more remarkable, while gypsum or powdered sulphur used in Europe for reclaiming alkali lands take three to four years to show results, molasses and press-mud do the work within three months. In Mysore the application of one ton of molasses per acre yielded 1200 to 1800 lbs. of rice grains per acre of reclaimed alkali land where crops have failed in previous years. Experiments conducted in two or three other centres also proved a great success. While the sugar industry which has been trying its best to find lucrative uses for molasses would find that, besides the manufacturing of power alcohol, molasses have a direct value for the cultivator. The sugarcane grower can also understand that the market for his cane is expanding for his profit. We hope that the sugarcane producing provinces would give a lead in the matter of effective use of molasses and those areas which suffered bitterly owing to scarcity of foodgrains, would also do well to profit by the potentialities of this valuable material.

Fish For Bengal

Last year's famine has cut at the root of Bengal's fisheries in more than one way. Fishermen perished in great numbers and many were obliged to migrate to the interior. The denial policy made the use of thousands of boats impossible at a particular period. Scarcity of ice and salt prevented preservation and wide distribution. In an address before the Royal Asiatic Society Dr. S. L. Hora, Director of Fisheries, Bengal, referred to the slight but temporary improvement in the supply of Hilsa but prices are still far from satisfactory. While the Government claim that the improvements made in the rationing of commodities to fishermen resulted in increased output, Dr. Hora revealed that the recent floods were responsible for the good catch. The fuure is not rosy particularly because facilities for satisfactory marketing are absent. It is indeed a pity that "considerable amount of fish had to be thrown back in the river at Goalundo as there was neither enough ice for preservation in fresh condition nor salt for salting". Scarcity of ice resulted in a thirty percent wastage of the catch. The strain on supplies increases because of the military demands, transport difficulties, restriction of fishing areas in the Sunderbans, and the extreme hardship felt by the fishing communities. Bengal's chief problem with regard to fish supplies lies in taking immediate steps to deal with these difficulties. Postwar fishery development plans are in preparation and mere expansion of the staff of the Department of Fisheries may mitigate unemployment but will not affect the supply situation. Special attention should be given to the development of prawn fisheries for which there is great scope in this province. In Khulna and Bakarganj there is already a thriving prawn industry. And as Dr. B. N. Chopra has pointed out in his article on "Prawn Fisheries of India" (vide Indian Farming, February 1944) the profits are substantial as one maund of dry prawn fetches from Rs. 5 to Rs. 25. That the poor fisherman is today compelled to sell at Rs. 1 per maund at the fishing centre while in the Calcutta market the ruling price ranges between Rs. 10 and Rs. 20 is a proof that marketing has been woefully neglected. Dr. Chopra recommends the abandonment of sun drying for prawns and the adoption of the system followed at Tanur Experimental Station in the West Coast. The prime requisites are quick freezing refrigerators, cold storage, and speedy transport. Canning should be taken up in right earnest and fishing craft and fishing gear are to be improved. Above all, an economic drive for the prosperity of the fisherman is needed to revitalise the fish industry and retain the progress made.

Planning of Bombay's Countryside

The Bombay Government deserves congratulations on a bold and well-conceived development plan for the province outlined in the publication entitled "Planning for the Future of Bombay's Countryside". A fifteen-year plan of rural rehabilitation at an initial cost of Rs. 50 crores, to be put into effect immediately after the war, has been envisaged and raising the economic level of the rural areas has received special emphasis. The attractive feature of the scheme lies in the fact that provision is made for four categories of development schemes viz., (1) Special Priority Schemes to meet the existing and postwar demands for trained personnel; (2) All-Province Scheme to cater to

Greater output, and still greater, is the urgent need not only of India but of the United Nations. To meet this need factories throughout India are producing at a level far in excess of what, in peace time, was thought possible. Many factors contribute to this success, not the least important being the ability of the worker to maintain a steady high level of effort. It is here that Indian Tea plays a valuable part. Tea served to the worker, on the job, has been proved in many hundreds of factories to be a wonderful reviver of failing concentration.

the basic needs of all parts of the province for intensive development; (3) Particular Area Schemes to be introduced in some chosen places and (4) Concentrated Area Schemes for all-round improvement of selected areas. The Plan provides for development services like education, public health, workers' welfare, rural roads, livestock improvement, co-operative movement etc. Experiments in collective farming are promised though details as to their nature and scope are not indicated. Attempts will be made to tackle the problem of fragmentation and consolidation of agricultural holdings but here again we are not aware whether merely persuasive methods by the Cooperative Department are envisaged or suitable legislative measures are to be taken. An electric grid system is contemplated and hydro-electric and thermal stations would soon be set up in different parts of the province. Bombay will have at the close of 1944-45 a Post-war Reconstruction Fund of Rs. 7 crores but it is a poor nucleus for the work ahead. Hence taxes, loans and help from the Centre are the way out. But apart from merely referring to these three ways of raising money, the Bombay Government have not given details of the financing of their Plan. Further, while the cost of the initial stage of the plan is indicated no estimates of the total cost for the whole period of fifteen years is given.

The chief merit of the Plan lies in the shift of emphasis from merely budgetary considerations to an altogether new anxiety to raise the purchasing power of the masses and to speed up rural welfare. But the public would feel disappointed that the provincial government scrupulously avoided any reference to large-scale industries. No agricultural plan for a province can be a success unless it is related to its industrial development schemes as well. No doubt Government of India experts like Mr. Vesugar and Dr. P. J. Thomas are now engaged in surveying the industrial needs of India as a whole, and of the different regions too. Bu the provincial Governments would not have done anything out of the way if they have outlined their ambitions regarding large-scale industries. While help for small scale and rural industries is promised, no clear-cut plans are made known. The Bombay Government's plan has also been exposed to criticism on the way in which the "concentrated" areas are to be selected. The Government have declared that they would be influenced by three factors in choosing areas for intensive all-round development drive: First, they must be well distributed over various parts of the province; secondly, special attention would be paid to areas frequently exposed to famines and, thirdly, the areas should, as far as possible, correspond with the best recruiting areas. Sir P. Thakurdas has taken objection to the third on the ground that the contribution of the civilian factory worker is not less important than that of the soldiers It is needless to point out that this third factor has political implications and, if agreed to by the Central Government also, would lead to preferential treatment of certain provinces at the expense of others. Anyway, it is to be hoped that, in actual administration, the Government would not neglect the famine stricken but the unrecruited villagers in their enthusiasm to offer good life to the demobilised soldier. The Plan is welcome as an excellent beginning and would surely pave the way for rapid economic advancement of the Province.

Egyptian Cotton During War

The woes of the Egyptian cotton-grower are not very much different from those of his Indian confrere. The stoppage of European and Japanese markets have hit him hard and the internal consumption of cotton, though on the increase, has been insufficient. Global war results in global shortage of food and the cotton-growing countries have all felt the necessity of discouraging commercial crops in favour of food crops. Grow-

more-food campaigns are not peculiar to India and Egyptian legislation has imposed on all cotton-growers a minimum acreage for wheat and a maximum acreage for cotton. Scarcity of fertilisers has set the upper limit to agricultural production and, in spite of the powerful incentives for greater outturn, viz., higher prices, greater demand and more attractive profit margin, the response from agriculture has on the whole been disappointing. While the yield of cotton per acre has been satisfactory, wheat has fallen short of expectations. This has been explained as a direct result of unbalanced agricultural rotation necessitated by the legislative measures supporting Egypt's food policy. The acreage under cotton in Egypt is less than half of the prewar level. The total stocks in the country were estimated at 10 million kantars (1 kantar—100 lbs) in August 1943 and during the current year the present requirements of U. S., U. K., and India viz., 3 o 4 million kantars, will be met. The Egyptian cotton industry has increased its consumption of local cotton by 70 percent over the prewar figures and, as liberated countries would demand Egypt's high quality cotton, hopes are running high. Cotton has offered excellent scope for speculative investment and since Egypt could claim good quality cotton and highest yields per acre, the peace-time prospects are considered very bright.

Critical Position

The invasion of Western Germany brings to the forefront other issues besides de Gaulle's claim to the Rhineland. The loss of both Lorraine and Luxumburg like the liberation of Belgium threatens a shortage of steel. The permanent housing crisis caused by the daily and nightly visits of Allied aircraft, is but one anxiety of the hour. There is the accentuated dependence on Swedish iron ore. Sweden has shown lately no inclination to ship ore unless German coal deliveries are maintained upto expectations. The difficulty over the trade negotiations, if they reveal the fundamental drawbacks of barter, show also Swedish production and trade may fall away making last year's recovery temporary. The major difficulty, as before, arises from the difficulty as to raw materials. Total mobilisation is impossible, given the situation arising from Rumania's defection and spread of the resistance movement in Czechoslovakia Germany's chief industrial assets appears to be Northern Italy which is threatened by the Allied advance up the Adriatic. The facts as to the blockade lighter after the Allied advance from the Atlantic ports, make it clear that Germany's foreign trade is at an end. Bulgaria's defection implies a drastic cut in tobacco imports while soyabeans from Rumania cannot feature a source of either oil or emergency rations. The estimates made in 1939 as to comparative resources regain relevance after the exhaustion of supplies from the Occupied countries.

New Asiatics Good Record

New Asiatic Insurance Company Limited, has a creditable record of progress in 1943. This year might prove to be a landmark in the history of the institution as life business nearly doubled to Rs. 1.05 crores and the Company extended its activities to fire and general insurance. Started under influential auspices, the progress achieved by the Company in the short period of its existence is not anything surprising.

During the year 5,271 proposals were received for a total insurance of Rs. 1.26 crores of which 4,121 proposals assuring Rs. 1.05 crores resulted in policies. In the previous year new business secured totalled Rs. 60.4 lakhs. It would appear that the average value per policy is rather high, being over Rs. 3000. Total income from premiums and interest on investments was Rs. 14,60,112 against Rs. 10,77,876 in the previous year. Almost the whole of the increase has been due to payments on account of premiums, the amount in respect of the first year's premium being Rs. 4,46,745 against Rs. 2,35,302 in 1942 and renewal premiums Rs. 8,26,

EAST INDIAN RAILWAY

TENDER NOTICE

Sealed tenders are invited for the following and will be received in General Manager's Office, 105 Clive Street, Calcutta, up to noon on the 23-10-44.

Tender No. SP/B/14/Ga for the supply of approx: 1,51,000 Nos. Wooden Handles of various types and sizes suitable for "Pick Axe," "Hammers (3 sizes" "Phowrahs", "Shovels" during the period from Now to 31-12-45.

Consideration will be given only to the tenders of firms who are well established and who are in touch with adequate sources of timber supplies, and who are equipped with proper facilities for seasoning of timber and fashioning of handles.

Tender Forms with full particulars can be had from the office of the Controller of Stores on payment of Rs. 2 per copy. Drawing No. 13867 from D.C.M.E., Lillooah at Rs. 1-8 per copy and the rest of the Drawings from the Chief Engineer, E. I. Railway, Calcutta, at Re. 1 per copy.

The above amounts should be deposited to the Treasurer, E. I. Rly., Calcutta and on production of his receipts, documents will be issued from the above offices.

Firms outside Calcutta, may however remit by Money Order the cost of tender forms and drawings to the respective offices direct.

Sealed tender delivered by hand should be presented for registration in the General Manager's office and then put into the Tender Box outside the Dy. General Manager's (Work) room by the tenderer or his representative.

EAST INDIAN RAILWAY

Annual Contract Item Costing Over Rs. 8,000 Class I Contract

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, before 12 noon on the 9th October, 1944.

Tender No. SP/B/Ga/2571 for the supply of Wrenches Double Pillar 12 ins.

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores, by Money Order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the Tender Box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

EAST INDIA RAILWAY

Annual Contract Item Costing Over Rs. 8,000 Class I Contract

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, before 12 noon on the 9th October, 1944.

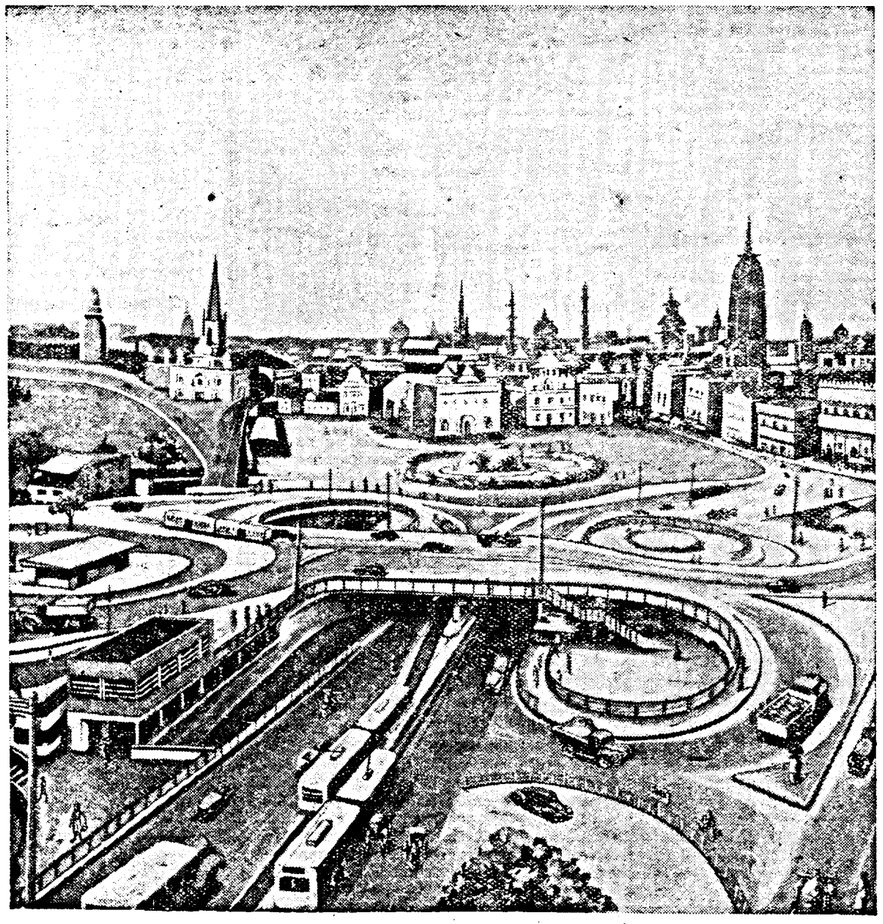
Tender No. S/F1/342/B for the supply of 2800 Nos. Screws Adjusting G. I. double ½ ins. to I.R.S(s) Drg. No. SA-3070 Alt.1.

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores, direct by Money Order. No refund is permissible after payment.

Tenders delivered by hand should be presented in the General Manager's Office for registration and put into the tender box outside the Deputy General Manager (Works), Calcutta, by the tenderer or his representative.

904 against Rs. 6,87,677. After providing for expenses of management there is a surplus of Rs. 7,14,147 which is added to the Life Fund. The Life Fund at the end of 1943 was Rs. 21,71,833 against Rs. 14,57,686.



Experience in regard to the Fire Department is very encouraging. The gross fire premium less refund amounted to Rs. 9,03,410 and after reducting re-insurance the net fire premium was Rs. 3,94,849. Claims paid and outstanding amounted to Rs. 24,172 and represented a loss ratio of only 6.12 percent. After providing for unexpired risks being 40 per cent of the premium income for the year Rs. 1,57, 940, a surplus of Rs. 46,755 has been transferred to the profit and loss account.

The balance-sheet total shows a substantial increase, thanks to the large addition to the Life Fund, the newly-created Fire Fund and the large amount of paid-up capital. The paid-up capital at the end of 1943 was Rs. 13,90,470 against Rs. 6,01,930. Almost the whole of the increase in the fund has been invested in Government securities, holdings of Central Government securities being Rs. 19.16 lakhs against Rs. 8.89 lakhs. Investment in ordinary shares have increased by Rs. 2.6 lakhs to Rs. 8.32 lakhs. Income from interest and dividends less income-tax was as high as Rs. 95,533 and the rate of interest earned on mean life fund was approximately 5.4 percent which should be considered very satisfactory under these conditions. Large additions of Government securities to the investment portfolio has naturally resulted in a decrease in the average interest from 6.4 percent.

Ruby General

Speaking at the Eighth Ordinary General Meeting of the Shareholders of the Ruby General Assurance Company Limited, Mr. B. M. Birla was naturally enthusiastic about the achievements of Ruby General in 1943. Good progress has been reported all round and the results could have made better showing but for the larger claims on account of fire in respect of cotton and the loss of Burma business. The Japanese invasion of that

(Continued on Page 403)

A symphony in safety first..

This type of road junction is already in use in the U.S.A. and Europe. Built of reinforced concrete and supported by bastions of steel, its smooth curves and steady gradients drastically reduce road accidents. No form of traffic can ever possibly meet head on.

The Economic Development of India will require many more thousand miles of highways of trade, linking the villages with industrial centres.

In bridges and in metalled roads steel will proudly play its part.

Clive Street Gossip

This is the fifth article in the series "If Peace comes tomorrow"; and I have to complete the picture of the postwar world. In the issue of September 2, I dealt with the financial features of the postwar world and summed up as follows: "National budgets will provide for twice the prewar expenditure—therefore, twice the prewar revenue. Not much relief from the present high taxation levels can be expected. Governments will be raising large-scale loans for capital works. They will be able to sell treasury bills at ½ per cent and to issue loans at 2 per cent. Dear money will never recur. Cheap money is the settled financial policy under all conditions. Giltedged will rule at high rates." The relevance of these financial features to agriculture and industries is that this war has emphasised the fact that what is physically possible is financially possible. If ways and means can be found for increasing physical production, there will be no need to worry much about money. The question, therefore, is: Has the world given thought to the fixing of targets of production; and will there be enough determination and ability on the part of the population to achieve these targets of production? Whether in the field of industry or agriculture, the colossal demands for war requirements have had the effect of vastly increasing productive capacity. In the case of earlier wars the policies pursued by governments thereafter were deflationary and contractionist. Such policies were responsible for drastic curtailment of production. In the imminent postwar period, however, there is no need to apprehend that any Government will commit the folly of pursuing contractionist policies. It was as a corrective to war inflation that postwar deflationary measures were adopted in the 'twenties. In the case of the present war, however, the governments of the leading countries have successfully tackled the problems arising from inflation; and it may be said that, in most respects, inflation has been effectively kept in check.

* * * *

To the extent that there have been no violent manifestations of inflation during the war, there will be no need for any policy of deflation after the war. The peace must lead to a sudden and drastic assumption, made in several quarters, that deflation with all the attendent consequences of lower prices, narrow or vanishing profit margins, non-employment and the like, is due to mistaken ideas of (1) the nature of the present wartime inflation; (2) the actual effects of that inflation on the economic machinery, particularly prices; and (3) the volume of circulation that will be needed in postwar years. In the countries of the west, inflation, as it is understood by those to whom it is a nightmare, is simply non-existent. We must not think of inflation in an isolated way. To understand it aright, we must take it with price and wage control, compulsory and voluntary, savings and similar measures. Taken in conjunction with these related measures, inflation is just a way of swelling the entries in the account books of individuals and states. There is no serious disorganisation of the structure of costs and prices which alone matters. Mark you, even during the war, India has been able to get imports from abroad at prices which bear no trace of wartime inflation. I wish to underline and emphasise this fact that war inflation has not been allowed seriously to alter the structure of costs and prices, inflation being merely a way of accounting in terms of big figures. We may, then, rule out deflation as a postwar policy in any sensible state.

* * * *

On the other hand, discussions in the recent international conferences go to show that every state will rather like to have some kind of free hand to pursue an inflationary policy on what may be described as a slower but healthier basis. This financial policy of re-flation rather than de-flation and this monetary policy of maintaining cheap money under all conditions will be the two most important factors in stimulating and expanding production in every sphere. For five years and more, the civilian population have been going short with regard to many categories of manufactured goods. Having been parched up for so long a period, it will be quite a long while before world industries working at the highest pitch can produce anything like satiety. And it may be said that a state of satiety is well nigh impossible as the various plans which have been devised and thought out by the leading governments of the world are calculated to sustain full employment and to maintain purchasing power at the highest level. It must not be forgotten that the compulsory savings of this war will release considerable purchasing power during the postwar period. My contention is that the industrial machinery of the world is now capable of much vaster production, that the financial, monetary and economic policies of the governments will be directed toward facilitating such increased production; and that such increased production will be in consonance with the emergence of postponed demand and ever-widening demand.

* * * *

As I have already remarked, the fiscal and taxation systems of the governments will conduce to more equitable distribution of wealth. Which is another way of saying that purchasing power will be well-spread among the population. The main fault of prewar economics has been that it is the economics of scarcity. The technique adopted for ensuring a good margin of profit for production was to contrive things in such a way that supply was to be always less than demand. When this was overdone, and supply far exceeded demand, restriction plans of various kinds were the vogue; and even the burning of wheat and coffee was, sometimes, found necessary. It was not that the population of the world were able to get whatever they could consume. Owing to the defective distribution system, there were large masses of the population who could not buy the goods they wanted, even though the goods were so plentiful that some portion of it had to be destroyed. This economics of scarcity will yield place to the Economics of Prosperity. A good deal of the Economics of Prosperity has already been learnt under the stress of war. With laissez-faire dead, with social good taking

the place of profit motive, the stage is set for conditions in which the world must produce at the highest pitch and the world's population will be assured of an equitable share in the expanding world output.

* * *

If monetary policy is towards cheap money, and if no limit to production is set by fear of overproduction, it follows that the generally prevalent fear of prices crashing after the war will be happily falsified. In general terms, it may be said that postwar prices will be midway between wartime prices and prewar prices. Prewar prices did not furnish any incentive to production. Wartime prices have certainly helped some amount of profiteering. Postwar prices as I visualise them will be fair alike to the producer and the consumer—they will be designed in the best interests of the greatest number of the population.

From this general description of the postwar world, I shall, in my next, attempt an outline of India in postwar conditions.

"EAVESDROPPER".

Insurance Problems.

The Insurance Advisory Committee has this week discussed with the Commerce Member at Bombay the proposals for amendment of the Insurance Act. A number of amendments, major and minor, are proposed, but the amendment to Section 10(3) must be specially mentioned. The intention behind the Section viz, that life insurance policyholders' interests be safeguarded by insisting on the insurers to keep the assets corresponding to life insurance fund separately from other assets, has not been given effect to under the Act as it stands. The amendment now proposed will make it obligatory on insurers to keep the two sets of assests distinct. It is also proposed to ensure that insurers carrying on life business only but with life fund deficient should increase the life fund so as to make it equal to the liabilities under life policies, before registration is sought for other classes of business. There is a proposal under Section 16(2)(b) to make it obligatory on non-British Indian insurers to prepare the revenue account in respect of the business transacted in India in accordance with the regulations of Part I of Schedule III. Further, the existing Section 28 does not explicitly authorise the Superintendent of Insurance to require an insurer to supply the deficiency or correct the discrepancies in the statements submitted to him. Difficulties are felt in verifying whether the provisions of Sec. 27 are complied with or not. The new proposal is to apply provisions like those of Sec. 21(1) & (2) to these statements. Mention may be made of the proposal under Sec. 85(1) to substitute the words "approved securities" for the words "government securities", so that the field of compulsory investment for provident societies may be widened. This is a very wise proposal. On all these points, there was general agreement with the official view, but differences centred largely round the new proposals for restricting the payment of commission to employers or agents, for prohibiting insurance agents from becoming or continuing as directors and for prohibiting insurers and provident societies from paying or agreeing to pay the remuneration of any of their officers in part or whole on a commission or premium basis or on the basis of a share in the profits of surplus. Insurers were also against the proposed cancellation of registration in the case of a company or society which fails to pay the claim in respect of a policy within two months after the final judgment in a court of law. The meeting was also opposed to the proposal which seeks to exclude assets representing uncalled liability in assessing the solvency of a provident society.

(FROM OUR CORRESPONDENT)

New Delhi, September 11.

POLITICAL circles as well as men in the street here await anxiously the result of the Gandhi-Jinnah talks. Though everybody is hoping for the best, there is a perceptible under-current of pessimism. The Congress cricles who have suddenly grown friendly to the "C.R." formula, feel uneasy as they regard that the maximum has already been conceded by agreeing to the principle of partition. Any concessions on details—for example inclusion of any Hindu majority areas or districts in *Pakistan*—will defeat the very principle of self-determination on the basis of which Mr. Jinnah has half-won his battle. It is also feared that when it comes to the question of applying the self-determination principle, the League Leader may after all realize that what he will get this way will be much less than what Muslims already have paramount influence over a much larger area. Moreover any attempt to enforce partition, without a people's vote, will be stubbornly resisted all over the country Gandhiji's categorical assurance that he will not compromise a single interest is taken to mean that he will not yield on the fundamentals of firstly, separation only by plebisicite and secondly, no creation of fresh irredenta. The prospects appear to be rather gloomy though everybody here realises the vital importance of a communal settlement—this being the only way of forging effective sanctions against the British. If the talks fail (by the time this goes into final, the result would have been known) political settlement would be postponed indefinitely. If they succeed half the battle for freedom would have been won.

* * * *

The mounting scale of the reverse lend-lease aid provided by India to the United States is clear from the latest approximate figures released in Washington last week. The reciprocal aid already amounts to 145 million dollars. The actual value is really far greater as a number of items including the cost of several valuable raw materials have not been included in the estimate. It is expected that the total aid envisaged by Sir Jeremy Raisman in his last budget speech (243 million dollars) may be exceeded. The three main categories of reciprocal lease-lend are: supplies and facilities to the American armed forces in India; supplies to the numerous American vessels in Indian ports and precious raw materials supplied to the U. S. Government. The aid to the armed forces here includes rice, facilities such as stores, building of airfields, water, electricity and labour facilities and telegram and telephone facilities. Approximate figures for certain major items of reciprocal aid upto March 31, 1944 are: works, 99 millions dollars; labour, 5.5 million dollars; petroleum products, 17 million dollars and harbour facilities 3 million dollars.

* * * *

A strong plan for large-scale and co-ordinated agricultural and industrial research was made by Sir Shanti Swarup Bhatnagar, Director of Industrial Research, Government of India, in the course of a speech here. "One of greatest weakness of our present political constitution which has adversely affected our industrial development is that as a subject, industry is relegated to Provincial Governments. But industrial development and planning occupy a wider sphere and need a much larger scope than what the provinces can probably afford. Sir Shanti Swarup pleaded that industries comprising power, food, fuel, clothing, housing, transport and drugs in relation to health must be developed by India immediately to a target figure which can be fixed on the basis of how far we will be able to raise the standard of living in India. He stressed the paramount necessity of developing chief power production without which neither agriculture nor industry can thrive. Sir Shanti Swarup did not sufficiently emphasise that no large-scale planning or industrialisation was possible without a national Government having the confidence of the people. Russia's example ought to have convinced him of this supreme necessity. He did not make quite clear why he did not share the people's apprehensions regarding Government's intentions. As regards agriculture, Sir Shanti Swarup's remark that the official and non-official objectives were similar was not quite correct. For whereas the official plan envisages a small increase of 20 per cent in agricultural production, the Bombay industrialists want to plan for a 130 per cent increase.

HILL-BIRD.

Co-operative Marketing in U. P.

Conditions created by the war have offered great scope for the co-operative societies to justify their existence and to claim better attention in future. The scarcity of essential commodities and the rising prices breed black marketing and the suffering to the civilian population is particularly severe if Government controls are not instituted at the proper time. Traders try to exploit the ignorance and the lack of organisation for consumers and thus speculation, profiteering and hoarding thrive while the poor suffer hardships. In India co-operation was till now considered as a banking service to the villager to prevent further accumulation of rural indebtedness. Consumers co-operation has not been actively encouraged by the Government and the public would not have forgotten that many consumers stores which developed during the last war were allowed to close down when peace returned. The Report on the Co-operative Marketing of Agricultural Produce and Distribution of essential Commodities in the U. P. during 1942-43 show excellent progress of non-credit societies in that province. Marketing unions have increased from 25 in 1939-40 to 130 in 1942-43 and the quantity of produce handled has gone up from 2.28 lakh mds. in 1938-39 to 5.9 lakh maunds in 1942-43. The value of the produce handled had swelled up from Rs. 7 lakhs to Rs. 46.46 lakhs. The Provincial Marketing Federation, registered in 1943 'to look after the marketing of agricultural produce, the co-ordination of the activities of the marketing unions, dissemination of marketing intelligence and other connected matters" reports good progress. The Federation distributed during the ear 1942-43 essential commodities worth Rs. 28.54 lakhs including surgar worth Rs. 21.7 lakhs. A profit of one lakh has been made. During the current year 9 new branches were opened and the depots increased to 125. It is gratifying to note that the Federation for some time sold sugar at a loss and opened depots for selling potatoes to bring down the prices. The district collectors entrusted the job of distributing the standard cloth and other commodities and the Federation played an effective part in fighting black marketing in U. P. It has already trebled its business and the future is bright. 90 sugar cane unions, 34 poultry societies, 727 ghee unions, 2 milk unions, 2 fruits and vegetable marketing unions and two societies for purchasing. P. A. Cotton are also recording good progress and useful work. Co-operative purchase and sales have also resulted in minimising the malpractice of the mandis. The experience of the U. P. trading unions therefore go to support the demand of the recent Co-operators' conference at Bombay that post-war plan for the development of co-operative societies should be evolved if satisfactory distribution of consumers' goods is to be ensured for the public in future.

(*continued from page* 404)

Another notable amendment is in regard to bye-law 65A, which seeks to help the last buyers in taking delivery when the Contract is at the floor price. He is now to be given the right of invoicing back the Contract to the first seller under certain conditions, of which the chief is that he shall pay to the first seller the difference between the contract price and the floor price *plus* a penalty of Rs. 7-8 per candy. The right given by this will apply to all new crop contracts for the season 1944-45. By the new amendment the buyer is given the same right as the seller who now pays a penalty of Rs. 7-8 for failure to take delivery. The amendment to 65A owes its origin to the fact that government who were approached are unable to take delivery of stock from the last buyer owing to storage difficulties, and it is one of the conditions of the government purchasing plan that anyone who sells to government should also undertake the responsibility for storing the cotton so purchased. The right of invoicing back the Contract will therefore present no godown problems for the last buyer who will be free to get on with his business. The amendment will also be useful in preventing the emergence of black market when the price touches the floor. Bye-law 37A is also to be revised in a way that provision is made for a refund of half the sum of Rs. 250 which an appellant has now to deposit, in case the appeal is upheld by the Appeal Committees.

BOMBAY FIRE REPORT

London Insurance circles perturbed by India Government's resolution.

Continued fall in Stock Markets

SPECIAL FOR "INDAN FINANCE"

LONDON, September 13.

12,190 Lloyds and Insurance Companies are reported to be most disconcerted at the sweeping resolution of the Government of India, in reply to the severe criticisms passed by the Commission upon the operations of the Ministry of War Transport in connection with the Bombay disaster in April last.

It is recalled that the resolution firstly denied *in toto* the charge that the shipmasters, with the alleged connivance of the Ministry of War Transport, have been constrained to carry dangerous cargo, such as cotton, with explosives, under the erroneous impression that such cargo was essential to the war effort. This denial is accepted. What staggered insurance circles was the next sentence: "Furthermore, it is common ground between His Majesty's Government and Government of India that maintenance of the civil economy in India is essential part of the war effort".

This seemingly means that anything going under India's manufacturing effort, for example, shipment of cotton for private firms' account, is just as much part of the war effort as cotton purchased by the Government for direct manufacture of war materials. This is certainly blanket coverage for the Ministry War Transport, but leaves insurers gasping, since it seemingly discards discrimination between cargoes which has hitherto been most useful. A well-informed member of Lloyds said that underwriters are engaged in the most careful study of the text of the commission's report and Government's rejoinder. "But I doubt if there is anything that can be done about it. The Government has absolute power and can make its own rules."

Shipping dailies carried the text of the report *in extenso*, but the daily papers only briefly. Of these, only one paper carried the Commission's criticisms of Mr. Knott. Queries from the Ministry of War Transport regarding Mr. Knott's status have brought the reply that he has not resigned. It is reported that several members of parliament intend to raise questions in the next session of the Commons regarding the outcome of the Bombay affair.

Private insurance interests, Lloyds, English companies and Indian insurance companies stand to lose about two million sterling as a result of the Bombay disaster; but this is negligible in view of their enormuos resources.

* * * *

The stock market is now seemingly gripped by a longterm decline. Prices of leading industrials have been sagging steadily since August 11th. In the past four weeks, there has been a loss of about seven per cent over the then market values. There have been similar "corrections" each year, 1941, 1942 and 1943; but on those occasions it took two to three months to lose as much ground as has now been lost in four weeks.

The Current decline is nicknamed "Mrs. Millar's Bear Market". This is a tribute to the popular woman forecaster of stockmarket movements Mrs. Mary A. Millar, who is the wife of a well-to-do physician living in the provinces. She has a considerable following among investors. A few months ago, in the teeth of widespread optimism regarding postwar full employment and rising national income, Mrs. Millar said, "sell". And from August 11 market has been falling and her prestige is rising.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay, September, 14.

Sharp fluctuations in bullion prices have been noticeable this week. Silver delivery rate improved from Rs. 125-12 to Rs. 127-14 on Monday when bears covered oversold positions on approach of settlement. The Reserve Bank sold 20 bars at Rs. 130. Market broke badly on Tuesday and Wednesday under pressure of war news. When the Reserve Bank sold 20 bars on Wednesday at Rs. 129-12 the price slumped to Rs. 123. The Reserve Bank's refusal to sell today caused a rally to Rs. 125 despite the reports regarding the breach of the Siegfried Line. The undertone is very uncertain but demand shows a sharp fall. Local stocks are estimated at 400 bars. The offtake is 135 bars. Spot is quoting at a premium of Rs. 2-8.

Gold, after early improvement from Rs. 70-12 to Rs. 72 in settlement rate, owing to approach of settlement, has sharply declined. Arrivals average 40,000 tolas daily and on Wednesday the lowest price of Rs. 67-12 was touched. The Reserve Bank has discontinued tenders from Tuesday. Demand of about 25,000 tolas has been met from dishoarding and arrivals of American and Durban gold. Spot quoted Rs. 69-8. The market is expected to decline.

COTTON

Bmbay, September 14.

September cotton contract quoted Rs. 409, Total bales tendered so far being 15,430. Mills are active purchasers in the ready market while official purchases were fewer this week. The Government have partly responded to the representations of the cotton trade by revising towards direction of bottom and ceiling prices, which were announced earlier, to the extent of ten to forty rupees. The styles affected are M.G. Western Upland, 4-F, Punjab, Sind American Lss and 280-F Punjab and Sind American, all staples at and over 3/4 inch. A ceiling of Rs. 400 has been fixed for Sind Deshi. New crop trading is expected to begin from Tuesday.

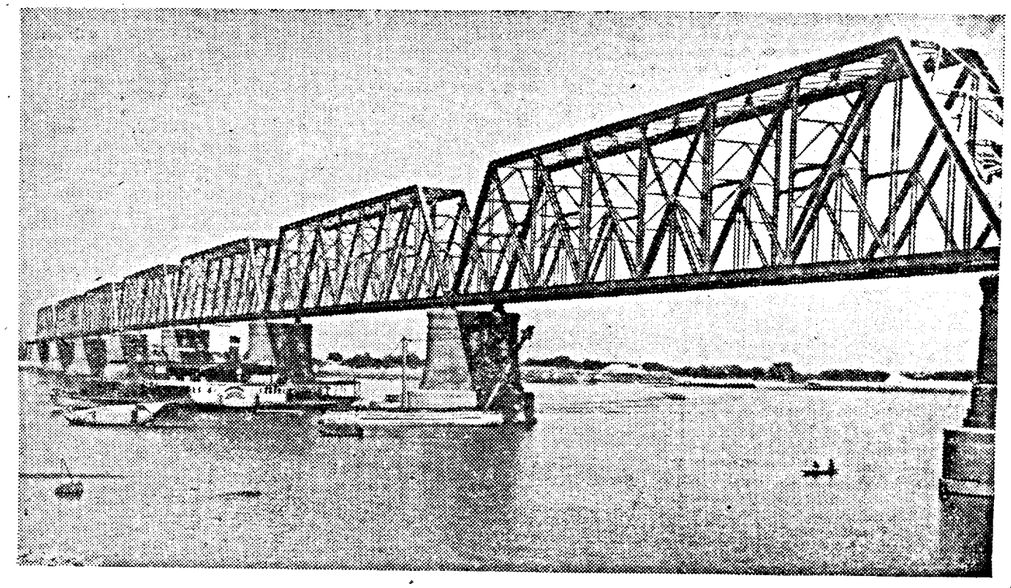
CONTROLLER OF ROAD TRANSPORT

(*Continued from Page* 398)



country came at a time when the Company was pursuing an expansionist policy and things were looking bright. Even so, the additions to funds is impressive and the active policy of the management ensures a bright future for the Company.

In the fire department, net premiums after reinsurance rose from Rs. 5.23 lakhs to Rs. 11.48 lakhs. The total gross Fire Premia increased from Rs. 28,72,937 to Rs. 40,28,325, that for Marine Insurance from Rs. 6,90,717 to Rs. 11,81,963 and for Accident from Rs. 3,06,394 to Rs. 4,54,740. The addition to the Life Fund was very nearly Rs. 9 lakhs.

The experience of the Life Department has been very satisfactory, 3,156 proposals for insurance amounting to Rs. 1.21 crores being received during the year. Out of these and out of the business received previously but pending consideration 2,712 policies amounting to Rs. 1.02 crores were assured The total premium income after deducting all reinsurances amounted to Rs. 14.58 lakhs of which Rs. 4.43 lakhs were on account of first year's premiums, Rs. 3.89 lakhs on account of renewal premiums and Rs. 6.25 lakhs in respect of single premiums. This item appears to be rather large and perhaps explains the high average value of policies issued during the year. The Company has been fortunate enough to realise a profit of Rs. 2.05 lakhs on realisation of investments in bullion. This must be due to the rather liberal policy adopted by the authorities in respect of investments outside gilt-edged securities which have to be in accordance with the statutory percentage, 55 percent of the total life fund. While this policy may yield satisfactory results, it need not be emphasised that great caution should be exercised in regard to disposition of funds.

Of the balance-sheet total of Rs. 67.35 lakhs, investments in Government securities, central and provincial, total Rs. 20.84 lakhs while holdings in ordinary shares amounted to Rs. 7.27 lakhs. Outstanding premiums were rather large at Rs. 13.92 lakhs but the directors point out that a good portion of these investments has since been collected and that the figure is not more than the normal carry-over which is usual with a company whose total premia are large.

Resume of Commodity Markets

The bullion market is again in the news this week. With the continued improvement in the war situaton there has been heavy selling and prices for both gold and silver have been marked appreciably lower. The Reserve Bank has not been a big seller at any time during this week. The raw jute market has continued steady while the jute manufactures market has steadied up after being easier in the first two days. There is practically nothing of interest in the raw cotton market while in the piecegoods market the difficulty, as ever before, is one of getting adequate supplies. The Textile Commissioner is endeavouring to effect a better distribution of all the available supplies of cloth and yarn at the same time tightening up restrictions regarding trading and penalising black market dealers.

It was discussed on an earlier occasion that the cessation of hostilities in the West would result in a large increase in the demand for raw jute and that even if the size of the crop turned out to be larger than trade demand it would be possible to market all supplies. It is interesting to note, therefore, that jute dealers also are now inclined to be of the same opinion. At the present moment there is no anxiety on the part of growers to dispose of their holdings even with a slight decline in prices for jute goods. Mill consumption also is expected to improve as from this month. As for jute manufactures there is no doubt that the total of local stocks is not large even taking into consideration the possibility of stocks on Government account being released for civil consumption. It can be expected that with the improvement in international trade consumption of jute goods also would improve. There will be greater need for a larger reserve of stocks. In the absence of any appreciable decline in prices for jute, hessian prices also would be maintained at satisfactory levels.

It was said at the beginning that the bullion market has again been in the headlines and a substantial decline in prices has been recorded for both the precious metals. The drop in values could not have come as a surprise to the market as it was generally recognised that with the conclusion of peace, prices should come nearer to the parity levels and investment buying would not continue to be so large. The decrease in gold prices during the week has been pronounced, Gold ready being quoted as low as Rs. 68. The quotation at the end of last week was Rs. 71/4. The silver market also has moved lower in sympathy. But for the oversold position still existing in the market the decline in prices would have been more pronounced. There has been a slight increase in the premium for ready over forward. Once the technical position gets adjusted, it can be expected that the downward movement will gain momentum.

While there is complaint regarding regional shortages in cloth and yarn and great difficulty is being experienced in Bengal in connection with the purchases for 'Id' and 'Puja' festivities, the Textile Commissioner is busy evolving a comprehensive scheme of distribution of cloth and yarn control, to ensure that each consuming area gets its fair share of supplies. The position in respect of yarn however is not very reassuring and it seems necessary to sound a note of warning in order to discourage a too-optimistic estimate of allotments.

In the prewar days India used to import a substantial quantity of fine yarn from abroad. These imports have totally ceased ever since Japan entered the war. Against this shortage of yarn has to be considered the enormous increase in the production of cloth in the country both by mills and the handloom weavers, and also the various other demands for yarn for the production of articles other than cloth. In these circumstances, it appears necessary to emphasise that further extension of production by handlooms is out of the question and that it may even be necessary to restrict such production somewhat in the near future. In order to meet the shortage of yarn in Surat District, 900 bales of yarn of different counts are being sent to Surat.

The All-India Final Wheat Forecast for 1943-44 published during the week shows a decrease in the area under crop to 33,740,000 from 34,417,000 or a decline of 2 percent. The yield is estimated at 9,690,000 against 11,032,000 tons or a decrease of 12 percent.

The stage is being set for the resumption of forward trading in the new crop contracts in cotton. Both the government and the trade are wise in deciding that trading in hedge contract shall start only with regard to the March delivery. Trading in January Contract is out of the question since the crop will move late and there might develop later an unsalutary squeeze in tendering cotton. The East India Cotton Association has in the last few weeks prepared a set of draft amendments to the bye-laws of the Association with the object, it may be said, of ensuring that the hedge contract accords with the declared purchase policy of the government and of removing certain anomalies in the contract which became apparent during last season's trading. The proposed changes in the bye-laws were put before the general body by the Chairman at an extraordinary general meeting held on Monday. The more important of the proposed amendments may be briefly noticed here. Firstly, bye-law 53 para 1 is to be amended by the addition of this clause: "the descriptions of cotton and their respective minimum staple lengths tenderable under the Indian Cotton Contract shall be as specified in column 2 of the Schedule". The latter now includes N.T. 7/8 in., 289F 7/8 in., Less 13/16 in., M.G. Surti 7/8 in. This revision of the staple varieties tenderable against the contract is to be welcomed in view of the fact that last season's government purchases were effected only in cottons of more than ¾ in. staple. It would also stop the malpractice of mixing. Bye-law 55A is to be revised by the addition of a new bye-law 55AA:—(a) Where premium (i.e., 'on') cotton is tendered, 12½ per cent of the premium fixed for the particular variety tendered shall be deducted therefrom and the seller shall be entitled only to the balance". At the meeting several members were at first against the reduction in weightage from 18/ per cent to 12½ per cent in respect of tenders of 'on' and 'off' cotton tenderable, but the proposal was endorsed after the Board had agreed to drop the proviso that the premium over the basic Jharilla Cotton available to the seller should not be less than the premium representing the difference between the floor prices fixed by the government for basic Jharilla and for other varieties. In short, the new bye-law aims at providing the seller with the right to realise the official floor price for cotton of that description. There are those who believe that the discount should even be reduced to 6¼ per cent, but this proposal does not find favour with many members.

The 5th Annual
ART
in Industry
Exhibition

The support of India's leading industrialists has made possible the rapid growth of the 'Art in Industry' movement. After a brief life of four years, Art in Industry Exhibitions, which embrace commercial art and industrial design, are now a well established event in India's annual diary, and there is every likelihood that they will play an important part in India's post-war industrial development.

Copies of the prospectus of the 1945 exhibition are now available on request at all main Burmah-Shell offices.

ORGANISED BY BURMAH-SHELL

BSK 116

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance"

CALCUTTA, Sept. 14.

Figures for the production of jute goods during August have now been published and turn out to be better than expected considering the fact that many of the single shift coal burning mills only worked one week during the month. Total production is recorded at 91,439 tons, an increase of 12,478 tons or 16 per cent over the previous month, and practically back to the level of the month of June. Of the total production, 8893 tons, or 9.7 per cent was on Military account. Hessian production amounted to 1348 lakhs of yards, or 37,344 tons, 1264 lakhs being on Civil account and 84 lakhs on Military account. Of the total Sacking production of 1184 lakhs yards, or 50,752 tons, 1047 lakhs was on Civil account and 137 lakhs on Military account. It is to be noted that the manufacture of Sandbags for Government has entirely stopped.

These production figures with the reduction in stocks reported last week added, give the total despatches of goods by mills as 96,602 tons during August, practically the same as during July, though appreciably less than the high level of 119,000 tons reached in June.

Of the making of new regulations there seems to be no end and if the jute trade survives the regimentation to which it is being increasingly subjected, it will be a tribute to its toughness and powers of endurance. We had occasion to make a few remarks last week on the subject of water transport. This week it is to new Railway rules that we turn. If the object is to stop the transport of jute by rail entirely, these rules seem admirably adapted to the purpose. At least any merchant endeavouring to comply with them all is liable to be driven crazy if he endeavours to keep his business going in face of the interference to which it is proposed to be subjected by local station masters and other railway authorities. No merchant may register for space unless he has the requisite goods actually in stock. That is reasonable enough. But if his stock is not stacked in such a manner as to please the stationmaster or what-ever officials comes to check it, all his registrations are liable to be accepted from him for two months, This seems an unduly wide latitude to be allowed to any minor official and the opportunities for corruption are too obvious to be stressed. Moreover, not only are no New Crop registrations to be accepted till 15th September, but it is not permitted that any New Crop jute should be loaded while there is any Old Crop jute in the station to be shipped. What concern it can be of the Railway Company whether Old Crop or New Crop jute is despatched, we utterly fail to comprehend. The main object surely is to utilise all available freight space to the best advantage. It is known that there are very considerable stocks of Old Crop jute still held upcountry *unsold*. Is the movement of New Crop jute to be held up indefinitly till all the Old Crop is disposed of? This appears to be utterly unwarranted interference with the course of business. Merchants are required to show their stocks of White jute and Tossa jute separately. Again what concern of the railway is it whether white or tossa jute is moved? Their concern is to supply wagon space and to see that it is fully utilised. A bale of Tossa jute is of the same dimensions and it must be immaterial to the railway which type is transported.

Again, a merchant is required to indent for the number of wagons he requires, not for the number of bales he requires carried. Attached to the new rules we have seen a schedule of no less than 33 different types of wagons of capacities varying from 42 bales to 141 bales. How can a merchant possibly foretell what type of wagon will be supplied to him so that he can gauge how many wagons he will require for a named quantity of jute?

Only the name of the *Owner* of a Press is permitted to be registered. In a great many cases merchants work in hired premises so that it is quite unreasonable that this rule should be rigidly enforced. Surely the *lessee* of the premises who is actually working there is the right and proper person to be authorised to register for freight space. Authority appears to be vested in the Railway inspecting officer to cancel registration if a Press is found not to be working. Here again is great latitude for abuse. Most Presses are not worked continuously, particularly when, as at present, assorting space has to be encroached on for storing space owing to the difficulty in getting goods regularly despatched. Moreover, Presses, like any other mechanical contrivance, are liable to temporary breakdown. If an inspecting officer calls at an unfortunate time when a Press is under repair, apparently the Merchant's total registrations are liable to cancellation, though the Press may be in work-order again an hour later. In many respects the rules appear to leave a dangerous amount of latitude in the hands of minor officials and it is extremely doubtful if greater efficiency in working of the railway and its stock is likely to be achieved thereby.

A marked change has come over the aspect of the Gunny market within the past two weeks. Up to that time there was a keen demand for goods of all kinds, both Hessians and Heavies, well into next year. Certainly the demand was almost entirely canalised into official channels, but the potential offtake was there, and mills could more or less choose their own time to sell, influenced only by their rate of production and what they had to undertake on Government account on orders from the Controller. Price did not enter into the question—everything was at maximum levels. Then came the simultaneous withdrawal of the principal Heavy Goods buying agency and cessation of demand from the Punjab. Immediately the Bazar saw their opportunity and started to hammer prices. They had probably made some sales to shippers at maximum rates which were still uncovered, and they saw their opportunity to turn an honest rupee or two by depressing rates with a view to profit-making. A highly praiseworthy intention no doubt, provided the Central Government were to get their share of the profit in taxation! That however is by the way. The tussle is now on between the Bazar and Mills. So far mills have declined to break their rates and the Bazar are fairly heavily "bear", and the market is at the moment in a stalemate. Mills, or certain of them, would like to make further sales of Heavies, though they had unlimited opportunity not long ago and have only themselves to blame if they did not take it. Hessians are still saleable up to well into next year at maximum rates, but some mills are only willing to sell Hessians in combination with Heavy Goods, using the Hessians as bait. This is perhaps workable to a limited extent if shippers are prepared to discount their commission, but it has its definite limits. Meantime the position makes for stagnation in all departments, for with very limited demand for goods, there is no inducement for mills to buy jute. "B" Twills are the weakest feature, being quoted in the region of Rs. 2/8, having been as low as Rs. 1/-, but second-hand quotations for other descriptions of Heavy Goods are also from Rs. 1/8 to Rs. 2/- below maximum levels. There was a reported enquiry from UNRRA some little time ago but nothing more has been heard of it. It would be imagined that this institution would have an enormous absorptive capacity for all descriptions of bags in the very near future and their entry into the market might be an important factor in restoring the position.

It is announced that the Indian Jute Mills Association has made a contribution of Rs. 2,50,000/- to the Bengal Red Cross Appeal and that a further contribution of Rs. 1,50,000/- will be made, making 4 lakhs of rupees in all, truly a very handsome donation.

Little falls to be reported in the Export Jute market and the tone is easier. Old Crop Dundee Daisee for ready shipment is reported done at Rs. 77/8 while covering of New Crop Mill Lightnings is recorded at Rs. 80/4. Mills are also reported to have bought Old Crop Lightnings and Hearts at Rs. 77/- and Rs. 73/-, also some business in Rejections and Cuttings.

Turnover in Loose jute has again been small, influenced by the slack Goods market. There is more pressure on the part of Sellers to get orders on their books in view of the impending Pujas and increasing imports upcountry. European Jat was done at maximum rates and Indian Dsitrict Tossa at Rs. 16/8 and Rs. 13/8 for Mids and Bots. Rivers are still rising and immediate anxiety regarding sufficiency of steeping water in the districts is allayed.

JUTE

(By Our Staff Correspondent).

Calcutta, September, 14.

In spite of the fact that larger imports are coming into mofussil centres and harvesting is proceeding smoothly in the districts, steady conditions have continued to prevail in the raw jute market during the past week. The weakness of the hessian market has not had any effect on jute prices. As a matter of fact, the goods market has derived some strength in the latter half of the period under review with the continued firmness of jute prices. It was expected that the approach of the *Id* and *Puja* festivities would have a depressing influence on jute prices, but the majority of jute dealers seem to be of the opinion that an early termination of hostilities will have a favourable effect on the raw jute market. The removal of restrictions in regard to export trade and the reopening of markets would considerably improve the prospects of an increase in jute exports in the next year. Mills have been buying on a fairly large scale but business put through is still restricted.

In the loose jute section a moderate amount of business has been reported and quotations have remained steady around last levels. European packing Middles and Bottoms were Rs 17 and and Rs. 14 per maund while Indian District Middles and Bottoms were done at Rs. 16-4 and Rs. 13-4 per maund respectively. Imports are arriving into mofussil centres on a larger scale, but are being readily absorbed. Dealers are anxious to complete their deliveries against earlier contracts.

In the pucca bales section shippers have purchased small quantities of Dundee Daisee 2/3 at Rs. 79-8 per bale and Short Group Daisee at Rs. 83 per bale. Mills purchased Firsts at Rs. 84 and Lightnings at Rs. 76-12 per bale. Some inter-baler business was reoprted in old crop Lightnings at the same rate.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, September, 14.

The jute manufactures market was inclined to be easier earlier in he period under report. Second-hand dealers have been offering a slight discount in rates. Millls, however, have not been anxious to do business. In the latter half of the week steady conditions are noticeable and there are no second-hand sellers. It is now said that even with the release of Government stocks. mill production will have to be maintained at a high level and that with the possibility of a larger volume of international trade demand for jute goods will continue to be appreciable.

In the heavy goods section there has been a slight improvement in rates though "B" twills are still a drug on the market with the quotation at Rs. 62 for 100 bags. Mills have not been anxious sellers though a slight discount is still available for other varieties.

PIECEGOODS

(From Our Correspondent)

Calcutta, September, 14.

On the eve of the *Id* and *Puja* festivities great difficulty is being experienced in respect of cloth supplies by consumers in Bengal. In the mofussil areas especially. The authorities are trying their best to improve the position and shipments are being made to despatch larger quantities of cloth at an early date. Meanwhile the Marwari Chmber of Commerce has issued a press *communique* saying that a warning has been issued to all quota-holders and importers of Indian mill cloth by the Textile Controller, Bengal, for releasing immediately to the market 15,000 bales of cloth. Otherwise drastic action will be taken against them.

The *communique* reads thus:—"The Textile Controller and the Assistant Textile Controller met the quota-holders and importers of Indian mill cloth at the premises of the Marwari Chamber of Commerce today (Wednesday) at 5-30 p.m. The Textile Controller, in his vehement speech, stressed the neeed of supplying cloth goods to the general public in Calcutta and other districts of Bengal in view of the *Puja* and *Id* festivals. He estimated the total immediate requirement at 15,000 bales of various qualities. He sought co-operation of all the cloth merchants to help him in this dire and anxious moment by meeting the needs of the general public. He, therefore appealed to all the traders to declare their stocks whether ready or in transit and thus complete the figure of 15,000 bales. He also held out a warning that if the requisite quantity of 15,000 bales is not forthcoming, he will take drastic action in either acquisitioning or requisitioning the stocks without giving compensation and a case may also be started against the defaulters from the 15th inst."

Yet, this is exactly what happens every time you make an unnecessary purchase. The prices of most things are abnormally high and you lose money every time you buy something you do not really need. Be wise. Do not buy unless you must. Wartime prices are *bad* value for money.

You risk your money if you buy jewels, land, buildings, commodities or manufactured goods. Their prices are subject to fluctuations and make no mistake, the trend of prices is now *downward* and not upward.

These investments are both safe and profitable:

★ Insurance,
★ Co-operative Societies,
★ Savings Bank,
★ Post-Office Savings Bank.
★ Government Loans and
★ National Savings Certificates.

The returns on a safe investment may be smaller, but the capital is secure - and that is what counts during wartime.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

AAA 1112

HERE ARE THE ANSWERS TO YOUR QUESTIONS ABOUT Prize Bonds

"How much do they cost?" There are two denominations—Rs. 10 and Rs. 100.

"Where can I buy them?" At any Indian Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury business.

"What are the prizes?" The prizes are by series of 1 lakh pieces. For each series of Rs. 100 Bonds participating in a draw, 1st Prize Rs. 50,000, two 2nd Prizes of Rs. 20,000 each and two 3rd Prizes of Rs. 5,000 each. Total prize money, Rs. 1,00,000 for each drawing. For Rs. 10 Bonds, 1st Prize Rs. 2,500, two 2nd Prizes of Rs. 1,250 each, five 3rd Prizes of Rs. 500 each and ten 4th Prizes of Rs. 250 each. Total prize money Rs. 10,000 for each series.

"Once a Bond has won a prize I suppose it is withdrawn from all future draws?" Certainly not. Every Bond whether it has won a prize or not is included in all draws until 15th January 1949 and so can, if you are lucky, win more than one prize for you.

"Are prizes subject to a tax?" No. They are free of Income Tax, Super Tax, Excess Profits Tax or Corporation Tax.

"Where are prizes paid?" See question two. Prizes are paid at all the above mentioned offices and at Sub-treasuries also.

"Are Prize Bonds repayable?" Yes, at par on or after 15th January 1949. That is, you get absolute security for your money AND the chance to win one or more large cash Prizes.

Stock Markets to-day and to-morrow:

INDIAN IRON FINAL DIVIDEND FOR 1943-44

THE Calcutta Stock Exchange has been quietly steady during the past week in expectation of the final dividend of *Indian Iron and Steel Company, Limited* for the year ended March 1944. The steadiness of the Bombay market earlier in the week was not of any advantage to operators as with the weakness of bullion and the proximity of the holidays there was no inclination to enter into fresh commitments.

* * * *

The final dividend of Indian Iron and Steel Company, Limited for the year ended March 1944 has just been announced and it is better than market expectations. With the speculation regarding Indian Iron's final dividend set at rest, it will be interesting now to make a survey of the markets in the past four months and assess the prospects in the future. As the position in regard to deliveries has been very nearly adjusted and there are proposals for the institution of a clearing house arrangement, it should be said that prices for the important counters have very nearly grounded and that with any further improvement in the internal situation prices should again be on the upward trend. The behaviour of the London and New York markets cannot by any means be a guide to future stock exchange values in this country as the position is fundamentally different. It is generally felt that the end of the war in the West would result in a reduction in war orders and that Indian industries would not be able to make the same amount of profits as heretofore. Which means, that dividend prospects cannot be considered very rosy. With the Quebec conference still in session and the emphasis on the prosecution of the war against Japan, it should not, however, be forgotten that the end of the war in the West means the beginning of the war in the East in right earnest and that as an important base in the war against Japan this country will stand to benefit considerably. The prospect of a large increase in Allied war expenditure in India should result in an appreciable improvement in the purchasing power. With industries working in full swing and greater money floating about, the only conclusion that can drawn is that stock market prices should be quoting very much higher than at present. The decline in prices in the past four weeks has been mainly precautionary. Also the correction of the technical position has deflated prices to a certain extent. It would be interesting to note that there has not been a setback in prices to below the levels ruling in February this year. That is, before the token Japanese invasion of India. As a matter of fact, the quotation for some of the important counters are appreciably higher on balance, Burrakurs being Rs. 39 against Rs. 33-14, Howrahs Rs. 80 against Rs. 69-13 and Steel Corporations Rs. 30-4 against Rs. 28. This question will be examined in greater detail in a leading article in the main issue next week.

* * * *

It will be remembered that sometime back outstanding transactions in the four counters Indian Irons, Steel Corporations Howrahs and Burrakurs were adjusted at fixed rates and that all the contracts were carried over to be completed by actual deliveries. It is now proposed that a clearing house arrangement should be instituted in order to facilitate delivery of shares or adjustments in that connection. At the present moment deliveries have to be completed on the third working day; if for any reason members are not able to do likewise they will be asked to report to the Committee the reasons for any anticipated delay. In any case, deliveries have to be completed within seven days and in the absence of any permission from the committee buyers have the option to purchase in the market against the seller after the seventh day.

* * * *

It has just been announced that the directors of the *Indian Iron and Steel Company Limited* have decided on the payment of a final dividend of Re. 1-6 per share for the year ended March, 1944. Operators have been agreeably surprised. On the announcement of the dividend there has been a rise in the quotation to Rs. 38-12 (unofficial). If the decision had been made known during business hours there would perhaps have been a more pronounced rise in prices. It was generally expected that a dividend of Re. 1-2 per share only would be paid. The final dividend, with the interim dividend of six annas per share, makes Re. 1-12 per share for the whole year against Rs. 2 per share for 1942-43 and Rs. 2-4 per share for 1941-42. The reduction in the total distribution by four annas per share over the previous year must have been due to the higher level of taxation and the larger compulsory deposits.

* * * *

Aluminium Corporation of India, Limited is issuing fresh capital for Rs. 50 lakhs in 30,000 5 per cent cumulative preference shares of Rs. 100 each at par and Rs. 2 lakhs ordinary shares at Rs. 10 each at a premium of Rs. 2·8 per share to the existing shareholders in proportion as nearly as possible to the existing number of shares of all classes. For every 13.1 shares of any class or classes, one preference share will be issued to existing shareholders at par and for every 1.96 share of any class or classes one ordinary share will be issued at a premium of Rs. 2-8 per share. Shareholders can apply for additional shares in excess of their quota so that the directors might be in a position to allot the balance, if any, of the new issue not taken up by some of the members.

* * * *

Lackatoorah Tea Company, Limited has been able to report only a lower level of earnings for the year ended December, 1943, owing to the smaller crop and the increase in working expenses. The net profit, before providing for taxation and depreciation, is Rs. 1,10,473 against Rs. 1,87,819 for 1942. The provision for taxation is very much lower at Rs. 29,650 (Rs. 63,583) while the amount set aside to depreciation is Rs. 2,683 (Rs. 7,024). The allocation to funds is Rs. 15,000 (Rs. 25,000). The dividend has been reduced to 15 per cent from 22½ per cent on the former occasion. Even so, the amount carried forward is lower at Rs. 25,011 against Rs. 39,877 brought in.

Bombay Investors & Indian Stock Exchanges.

General Recovery in Prices

Investment Buying at Lower Levels

(By Analyst)

Bombay (By Wire).

Thanks to genuine investors, panicky feeling has disappeared and the closing quotations are very much better than the lowest touched last week and this week. In Bombay, Tata Steels led the show. There have been reports current in the market that a bull syndicate has been formed and the sudden rise in deferreds from Rs. 2,000 to Rs. 2,150 has been attributed to the continuous support by the syndicate. Deferreds look like moving up further but in the vicinity of Rs. 2,200 I expect profit taking. In Bombay, Textile also have been better. *Bombay Dyeing* were done upto Rs. 1,750 though closed at Rs. 1,727-8. There has been some knowledgeable buying of Bombay Dyeings in the last few days, based on the profit figures available for the current year. I suggested last week to wait for a further reaction but I feel that there is not much risk in Bombay Dyeing even around the current price of Rs. 1,700. Since even a purchase at Rs. 1,725 cum-dividend means only Rs. 1,710 to the buyer. Once an investor decides on buying he should later try to follow my stop--loss-theory and see whether he succeeds in the long run. The other textile shares in Bombay also were steadier. I am glad to note that some investors have made very good bargains in weak markets. In Madras also there was good enquiry for my scrips. *Madura* improved from Rs. 65-8 to Rs. 68-8; *Vasanta* were better around Rs. 273.

Chemical shares, which came into disfavour and declined sharply due to bear activity, are now slightly better. *Mettur Chemicals* changed hands as low as Rs. 15 but are now better around Rs. 16-4. I had suggested purchases around Rs. 15. Investment purchases may be made even around current levels for the year 31st March, 1944. *Mettur Chemicals* have declared a dividend of Rs. 1-4. Even if the dividend for the current year is only Re. 1, the shares give an yield of 6 percent. *Mysore Fertilisers* were done as low as Rs. 22 and are now better at Rs. 25. The Directors have declared a dividend of Re. 1, that is 10 percent, as against Rs. 1-4 in the previous year. The slight decline in profits is due to break-down of the power plant some time ago. Looking to the financial position of the concern, my readers are aware I had recommended these shares around Rs. 20, there is not much risk in buying at any price between Rs. 20 and Rs. 25. *Tata Chemicals* are better around Rs. 21-14. This also may be brought below Rs. 20.

THE INDIAN IRON & STEEL CO., LTD.

NOTICE

In view of the uncertainty of mails from and to the United Kingdom the publication of the Directors' Report and the Accounts of the Indian Iron and Steel Company, Limited, for the year ended 31st March, 1944, which are to be published simultaneously in India and England, will be delayed. All possible steps are, however, being taken to have matters expedited. In order to enable shareholders to obtain payment of their dividends as soon as possible, however, the Directors have sanctioned the payment by way of an adinterim dividend of Rs. 1-6-0 per share on the Ordinary shares of the Company ranking for dividend for the year ended 31st March, 1944, which shareholders must understand, will be the final dividend for the year. The Transfer Books of the Company will be closed from 10th to 24th October, 1944, both days inclusive. Payment will be made on and after 31st October, 1944, to those members or their mandatees whose names appear in the registers on the 9th October, 1944.

COMPANY MEETING

RUBY GENERAL INSURANCE COMPANY, LIMITED

Satisfactory Progress in All Departments

Presiding at the Eighth General Meeting of the Share-holders of the Ruby General Insurance Company Limited on the 15th September, 1944, Mr. B. M. Birla, the Chairman said:

Gentlemen.

The Report of the Directors and the Audited Accounts for the year 1943 are already with you and I trust you will permit me, as usual, to take them as read. I need refer here only to a few figures which will indicate the rapid progress your Company has made since its inception.

(Nett)	1937	1940	1943
Fire Premia ..	1,25,742	5,31,612	11,47,557
Marine ..	43,834	50,586	3,64,897
Accident ..	34,280	1,83,455	2,81,700
Life		1,54,032	14,57,511

The most significant features of the year's working are the growth of premia under Fire and Marine Insurance and the marked improvement in the Life Fund. The total Gross Fire Premia increased from Rs. 28,72,937 in 1942 to Rs. 40.28.325 that for Marine Insurance from Rs. 6,90,717 in 1942 to Rs. 11,81,963 and that for Accident from Rs. 3,08,394 in 1942 to Rs. 4,54,740. The growth of the Life Fund has been from Rs. 3,47,026 to Rs. 12,26,500.

I trust that you will consider these results satisfactory. The year has not been an easy one. In particular, I may refer to the rising claims paid on account of fire insurance on cotton. This has been due to a variety of causes, not the least of which has been the accumulation, owing to inadequate transp of cotton where proper stocking facilities did not exist. Apart from the general risks associated with the war, the Company was also affected by the loss of Burma where we were extending our activities at the time of the Japanese invasion. This accounts for an adverse balance of Rs. 1,55,153/- shown in the Auditor's Report, which has not been incorporated in the Balance Sheet as the account of these transactions is not closed and the liability has not been finally accepted. This amount will have to be kept in abeyance until the situation is further clarified.

We have raised the Reserve for unexpired risks for Fire and accidents to 50 per cent against 40 per cent of the previous year. This is a measure of caution which in the exceptional circumstances now prevailing must be considered necessary although it has led to substantial diminution in the amount shown as profits.

The results of the explosion in Bombay have reminded us that Insurance Companies in this country are exposed to exceptional and catastrophic risks for which special Reserves will have to be maintained. I had occasion to refer to this point last year before the occurance of the Bombay explosion afforded us a tragic indication of the urgency of this matter. It is unfortunate that the need for these special Reserves has not yet been adequately recognised by the Government of India. Since the passing of the Income Tax (Amendment) Act 1939 general Reserves in excess of 40 per cent have not ordinarily been exempted from taxation, with the result that at a time when it is essential in the interest of all that Reserves should be strengthened, the building up of such Reserves has been positively and actively discouraged. Very recently the Government have agreed to raise the figure to 50 per cent for unexpired risks for Fire and Accidents but this figure, as will be readily realised, still remains quite inadequate.

Insurance Companies are rendering to this country a great public service and they will have a still greater public function to fulfil in the future. Social security which is to be the foundation of the post-war reconstruction schemes of Great Britain, envisaged in the Beveridge Report, is still in this country a distant ideal. But valued services in a limited field have already been rendered by Insurance Companies which have won for themselves a high reputation for promptness and integrity of which we are justly proud. Indian Insurance Companies in this task have numerous common problems. One of the most important of these is the question of reinsurance in which we are greatly hampered at the present time by the inadequacy of reinsurance facilities. Given cooperation and goodwill amongst the Indian Insurance Companies we should be able to surmount these obstacles. We would then be able to develop insurance in this country without depending for accommodation on target risks in foreign Insurance markets.

We look forward, as does the whole country, to the period of re-construction which will follow the cessation of hostilities. There is, perhaps, no country in the world where ordered and planned development is more urgently required than in India. But no amount of planning can eliminate risks and it is certain that as reconstruction proceeds, the opprtunities for insurance will be considerably developed while the special risks attendant on War will disappear. I look forward, therefore, to a gradual growth of Insurance in India in the post-war period. We shall so plan the organisation of your Company that it may adequately fulfil the tasks that may await it in times of peace.

My last word should be one of apreciation to all those who have contributed to our success—our clients, our Staff, and Agents of the Company and all those who have assisted us in every branch of our work. I tender them our most cordial thanks. With their continued co-operation I have no doubt that even greater progress will be shown in the year which now lies ahead.

J. M. PYE,
Joint Controller.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 8.

QUIETLY steady conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing was on a restricted scale. The weakness of the bullion market had a depressing effect on values earlier in the period under review but the steadier advices from the Bombay Stock Exchange and covering at the lower levels have resulted in a mild recovery in the last two days. At the higher levels, however, there has been renewed selling and quotations are not very much changed on balance. There is considerable speculation regarding the final dividend of Indian Iron & Steel Co., which is due to be announced shortly. Market expectations are that distribution for the year ended March, 1944 will be lower than 1942-43. The possibility of a lower dividend has, therefore, been fully discounted. If it happens to be higher than market expectations there might be a rise in the quotation for both Indian Irons and Steel Corporations. With the holidays not very far off there is no tendency to enter into any large commitments. Markets will be closed from September 19 to October 2, both days inclusive, on account of *Id*, *Durga* and *Lakshmi* Puja fesivities.

The giltedged securities section has been steady with 3½ percent paper quoting Rs. 99-8. Among terminable loans, *Cawnpore Textiles* were nearly 1 point higher at Rs. 13-2 while *Elgin* were Rs. 64-8 against Rs. 62-8 and *New Victoria* Rs. 8-2 against Rs. 7-14. *Dunbar* were Rs. 269 and *Bengal-Nagpur* Rs. 35-4.

In Bank shares, *United Commercial* recovered to Rs. 28 premium from Rs. 22-8 while *Bharat Bank* ordys. were rather weak at Rs. 100. *Hind Bank* were steady at Rs. 57-4 and *Reserve Bank* at Rs. 132. *Imperial Bank* contributories were unchanged at Rs. 490. *Hindusthan Commercial Bank* came in for attention around Rs. 5-8 premium and *Nath Bank* at Rs. 31-4.

Coal shares have been a shade better, though business passing has been rather small. *Amalgamated* were quiet at Rs. 44-4 while *Bhalgora* were steady at Rs. 15-6 and *Bengal* at Rs. 620. *Burrakur* improved to Rs. 40-3 from Rs. 39-6 but have receded to the same level. *Equitable* were 2 points higher at Rs. 61-8 and *New Beerbhoom* a few annas higher at Rs. 34. *South Karanpura* were Rs. 19-10 and *Talcher* Rs. 8-12.

Jute shares have been uninteresting with the quotations fluctuating in narrow limits. *Howrah*, however, were more than a point higher at Rs. 79-15. *Anglo-India* improved by 5 points to Rs. 434 while *Champdany* dropped 5 points to Rs. 234. *Clive* jumped by 3 points to Rs. 53-12 while *Kamarhatty* were very steady at Rs. 630. *Nuddea* were firmer at Rs. 125-8 as also *Presidency* at Rs. 10. *Rameshwara* were quiet at Rs. 18-7.

In the Engineering section pending the announcement of the final dividend for 1943-44 Indian Irons have been fluctuating in narrow limits. The quotation has remained for the most part of the week around Rs. 37-4. *Kumardhubi Eng.* were sticky at Rs. 11-2 and *Steel Corporation* at Rs. 34. *Braithwaite* were lower at Rs. 10-8 and *Bhartia Electric Steel* at Rs. 17-4. *Marshalls* were weak at Rs. 4-2.

Sugar shares showed a tendency to improve. *Balrampore* were slightly higher at Rs. 17 and *Belsund* at Rs. 15-8. Carey after improving to Rs. 27-14 have receded to Rs. 26-14. *New Savan* were Rs. 20-12 and *Champaran* Rs. 41-4.

In the Tea section, busintss is rather restricted though prices have been maintained at the last levels. *Hasimara* were Rs. 72-6, *Sapoi* Rs. 22-2 and *Tezpore* Rs. 18-6.

In the Miscellaneous section, *Burma Corpn.* were firm at Rs. 4-11. *Dalmia Cement* came down to Rs. 16-11 but have recovered to Rs. 17-4, *Assam Bengal* were Rs. 16-12, *Alkali & Chemical* were easy at Rs. 29-14; *B. I. C.*, were steady at Rs. 6-1 and *Calcutta Trams* at Rs. 46-4.

The announcement in the press that the Government of Bengal have asked the Calcutta Corporation to furnish the former with the terms and other details of the Agent who will run the business in the event of the Calcutta Tramways being taken over by the Corporation, has given rise to the feeling that after all the Corporation might succeed in its efforts to take over the Tramways early next year.

Midnapore Zemindary improved to Rs. 180 on the announcement of a final dividend of Rs. 4 and a bonus of Rs. 2 per share making Rs. 10 per share for the whole year. The close is, however, lower at Rs. 176. *Assam Saw* were unchanged at Rs. 5. *Rohtas Industries* were quiet at Rs. 36.

THE CALCUTTA STEAM NAVIGATION CO., LTD.

DIVIDEND NOTICE

A dividend of Rs. 7-8 per share for the half-year ending 30th June, 1944 has been declared payable at once.

HOARE MILLER & CO., LTD.,

. . . and every day insurance is assisting reconstruction by settling losses on homes and offices; on shops, factories and godowns and other commercial and industrial establishments. Insurance has saved many an individual and undertaking from utter ruin, and thus forms a vital link in the nation's economic structure.

The General Assurance Society, with over 36 years of experience in effecting LIFE insurance, is now in an ideal position to provide Fire insurance, as well as all other forms of insurance cover. Prompt service and absolute security and safety are the distinguishing features of every General Assurance policy.

The Society is now stronger and more progressive than ever before under its new management, which is backed by a Board of Directors including Mr. E. N. Jalan (Chairman) and other leading members of the well-known house of Soorajmull Nagarmull, besides prominent personalities and businessmen of India.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits continue to be in plentiful supply. Holiday requirements have been met with exceptional ease, as the cash balances of banks plus their deposits with the Reserve Bank are for Rs. 160 crores. On the weekly treasury bill tender day, however, applications were definitely smaller than in recent weeks. The considerable reduction in tenders did not affect bidding. While applications against Rs. 6 crores on offer came to Rs. 11.24 crores as compared with Rs. 14.61 crores on September 12, the average discount rate rose only by 1 pie to annas 7 pies 11 per cent per annum. The offer for next week remains unchanged at Rs. 6 crores; the tender day is Tuesday for Bombay and Monday for other centres.

The returns of the Reserve Bank for the week ended September 15, show another sharp jump in Central Government's deposits which brings up the total to an all-time high. Notes in circulation have increased by Rs. 1.15 crores to Rs. 938.22 crores. But this is mainly connected with a reduction in the notes held in the banking department. In the banking department, deposits maintained by the Central Treasury have increased by Rs. 15.64 crores to Rs. 160.20 crores. Never before did the Central Government enjoy such affluence. The deposits of the Burma Government, Provincial Governments, Scheduled Banks and under miscellaneous heads have declined by Rs. 22.05 lakhs. Rs. 2.97 crores, Rs. 5.19 crores and Rs. 37.98 lakhs respectively. Foreign balances have increased by Rs. 7.18 crores to Rs. 282.66 crores, another record. Ways and means advances to governments have been made to the extent of Rs. 1.17 crores.

The statement of the Imperial Bank for the same week show a small reduction of Rs. 27.56 lakhs in deposits. While investments have risen by Rs. 2.71 crores, loans and advances have gone down by Rs. 4.22 crores. In the result, cash has increased by Rs. 1.41 crores to Rs. 49.28 crores.

The Reserve Bank's report on currency and finance for the year 1943-44, which has just been issued, shows that, while the larger political disabilities of the Bank continue, the administration is imbued more and more with the spirit which is appropriate to the central banking institution of a great industrial and trading country like India. The form of the report, which calls for lengthier notice in a later issue, is no longer governed by the old reports of the Controller of the Currency, which were content with laconic references to the events with which the Controller of the Currency was directly concerned. The Reserve Bank's report today is more akin to the World Economic Survey of the League of Nations. About India, too, the Bank has gathered and published statistics which formerly were not compiled at all or were not allowed to see the light of day. We look forward to fuller development on the present lines.

Even as it is, the report enables a clear understanding of the principal economic and financial developments in India during the war period and their comparison with similar developments in foreign countries. Without going into a detailed discussion of the topics covered and issues raised, it may be mentioned here that the report may go some way towards dispelling the general notion entertained by large sections of the public that the hardships of the war period are special to India. The rise in public expenditure in all countries, the steep increases in note circulation, the uneven results of price control and the consequent differences in the wartime increase in price levels, all these have been brought out with a wealth of statistics which would be valuable to the average student. The report is also a valuable review of the year 1943-44.

The exchange market has been steady with some showing of export T.T. and bills.

The closing rates are :—Bank's buying 90 days/st at 1s. 6¼d., for 1 and 2 months ; Bank's buying 90 day/st at 1s. 6 9/32d., for 3 and 4 months.

B. C. rates T. T. 1s. 5 31/32d., Bank's selling T. T. 1s. 5 31/32d., Bank's selling D. D. 1s. 5 31/32d., Bank's buying T. T. 1s. 6 1/32d., Bank's buying D. D. 1s. 6 1/8d.

London-New York :—X'Rates $4.20/12/3⅛; Bank's selling T. T. Rs. 332¾; Bank's selling D. D. Rs. 332¾; Bank buying D. D. Rs. 326¼.

London-Montreal :—X'Rates $4.43/47 ; Bank's selling T. T. Rs. 302½; Bank's selling D. D. Rs. 302½; Bank's buying T. T. Rs. 297¾; Bank's buying D. D. Rs. 294¾.

Call money rate quoted ½ per cent in Calcutta.

Call money rate in Bombay quoted ¼ per cent also for 1 and 2 months deposits; ½ per cent for 3 to 5 months; ¾ per cent for 6 to 11 months and 1¼ per cent for 12 months.

BOMBAY MARKETS

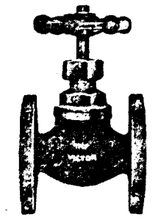
BULLION

(From Our Correspondent)

Bombay, Sept. 21.

The bullion market is demoralised owing to the liquidation by holders irrespective of prices while buyers are absolutely scared. The silver delivery rate opening at Rs. 125-8 on Monday, dropped to Rs. 122-12 the same evening but Tuesday witnessed bear covering on account of the high carryover charges the market recovering to Rs. 124-5. But since then, peace fears increased and upcountry dishoarding caused the price to slump to Rs. 117-4 this morning. The close was steadier at Rs. 118-12. Spot quoted Rs. 120-4.

Similar nervous liquidation was noticeable in gold delivery, but the price slumped to Rs. 62 this morning despite bear covering. Bulls are unloading at every fall. There was no offtake in sovereigns. Today's closing was a shade better at Rs. 63-9. and Spot Rs. 64-1.



COTTON

(From Our Correspondent)

Bombay, September 21.

The Cotton futures market opened only on Monday. March contract closed at Rs. 439 today and private quotation is Rs. 440 with May contract Rs. 8 higher. There are expectations of the market rising to Rs. 450 until the crop moves.

less luggage -

more comfort

If you MUST travel on India's crowded railways, take as little luggage as possible. The discomforts of travel are greatly increased when passengers take a considerable quantity of heavy luggage and several odds and ends. A small box and a bedding roll should be the limit. Particularly avoid taking baskets or bundles which carry little but take up a lot of space. Send your heavy luggage in the brake van. In co-operating over this, you can minimise your own discomfort and that of your fellow passengers.

IF YOU MUST TRAVEL - TRAVEL WITH

Less Luggage

AAA 978

Progress of Allied Solidarity

The last few days have done little to clear up the grave uncertainties attaching to the major problems of the progress of war and peace. While Mr. Churchill talked of a blaze of unity at Quebec, its immediate effect, as the public sees it, is a blackout of his own movements. The fact that Mr. Eden flew to Washington twice enhances the mystery that pervades international politics at this stage. Reports, that are by no means in accord with official statements about the Quebec Conference, meet with ready credence at the hands of the public, particularly because they fit so well into the framework of the present international situation, as the public at large can appraise it. These reports lay stress on the differences between Britain and the U.S.A. in the first instance, and secondly, between Soviet Russia on the one hand and Britain and the U.S.A. on the other. What Mr. Roosevelt and Mr. Churchill said at the Press Conference is more or less wholly discounted. Quite apart from the question of India to which the publication of the Phillips letter gave somewhat disproportionate importance, there are other points of disagreement between the President and the Premier. It is said that Britain and the U.S.A. do not agree on how Italy is to be treated between now and normal peacetime conditions; that, while America is eager to help Italian industry to get on to its feet as early as possible, Mr. Churchill favours the continuance of mere aid to Italy, leaving other questions to be tackled at a later stage. The merits of such a dispute are not difficult to appraise for the outsider. One can see clearly that, while the responsibility for continued provision of aid will fall on the U.S.A., the benefit of delayed industrial development in Italy will accrue to Britain. While in this case it is possible that the report caricatures the British view, it is typical of the difference in the respective viewpoints of the two allied nations. It is indicative, too, of the principal source of differences between Britain and the U.S.A. after the war will be over. As regards Soviet Russia, it is well known that on her side, she is particular about the territorial readjustments in Central Europe, while on the side of the other allied nations, their main interest is to get Soviet Russia interested in the war against Japan. The tasks of peace, as we indicated last week, may be listed according to their urgency. There are at first the terms to be offered to Germany, followed by the settlement of the affairs of the small nations of Europe. Then comes the task of speeding up the tempo of the war against Japan. And when the surrender of Japan will have been brought about, the Allied nations will have to put their hands to the delicate and complex task of establishing world peace for at least a reasonably long period.

It is not known what the Quebeq Conference has been able to achieve. It seems clear however that Britain has done her best to dispel the misgiving raised in the American mind by the Phillips letter, that Britain does not intend to play more than a token part in the fight against Japan. But what matters is whether America and Britain think alike of what is required of Britain to bring about a speedy end of the war with Japan. Mr. Churchill's anxiety to reassure the American public did not prevent him from emphasising that Britain's contribution to the war against Japan must be proportionate to her national strength. That, one would think, is either obvious and, therefore, does not require saying, or, if it does require saying, it points to differences yet unbridged. It is not impossible that the American public feels increasingly persuaded that a change in the political situation in India might do more to shorten the war in the East than the most generous supply of men and material directly from Britain. It is futile to be dogmatic upon this point. The Indian problem is more likely to be caught up in a kind of mental tangle in America than appraised by itself by the American public. It has come to have a definite bearing on the public attitude to the relations between Mr. Roosevelt and Mr. Churchill. Mr. Dewey does not despise tactical advantages in the presidential campaign which is now gathering momentum. Whatever his personal views on India may be, Mr. Roosevelt has to interest himself in India sufficiently to refute the charge that he toes the Churchill line too much. And Mr. Churchill, too, has to consider that for every point he scores over Mr. Roosevelt, Mr. Dewey may score two and that this may well have the effect of putting a far less accommodating individual in White House.

But the most serious differences between Britain and the U.S.A. refer to the international economic problems of the post-war period, rather than the questions which now monopolise the front page of daily news papers. Lend-lease has been a fruitful source of low brickerings. There have always been stray bits of news about the use of lend-lease material and Drew Pearson has added the grotesque instance of fitting King Ibn Saud's bath. The case of leather beltings for India is another instance of the inability of Britain and the U.S.A. to think alike in economic matters. With the approach of the recovery of the Philippines, American opinion is more strongly in favour of a better and more sincere version of the Atlantic Charter for the Pacific and the Indian Oceans. The economic problems of South and South-east Asia are such that two countries so differently placed as Britain and the U.S.A. cannot view them alike. Even the problem of peace in the next one or two decades may not conceivably, affect them in the same way.

What the Quebec Conference can have achieved is some final understanding as to how Germany is to be treated when her military defeat is complete. It is certain now that the Allies are not going to stop at the borders of the Reich, as they did last time, and make it possible for a future Hitler to suggest that Germany was never defeated in battle. Certain, too, that they will not feel any compunction in military occupation of German territory. In fact, if reports are to be believed agreement has already been reached on the way German territory is to be parceled, so that one area will be assigned to each of the Allies. Agreement may not have gone much further than the principles which ought to govern the administration during the period of the military occupation. It should suffice for the present that this is not a case of shouting before one is out of the wood and that the progress of allied arms, particularly since the landing of airborne troops in Holland, is quite satisfactory.

While Anglo-American relations may be said to be on a basis of well.defined agreement on certain points and shelving of troublesome questions by implicit agreement the relations of the Anglo-Saxon powers with Soviet Russia are yet to be freed from the element of mystery that has always attached to them. The mystery is by no means difficult to understand. Stalin's anxiety not to let Russian interests be mixed up unduly with the general interests and ideals of the Allied nations is the result of genuine historical causes. The opening of the second front has given him breathing time and space to divert his attention from the arch-enemy to his lieutenents and associates. And since Central Europe has been his main headache, he may be trusted to make the most of the present situation. One can perhaps discern in the recent activities of Russia, an anxiety to settle some of her vital interests ahead of the general peace settlement. This may have been done with the consent or prior acquiescence of the Allies. But all the same, it is significant that in concluding an armistice with Roumania and Finland, Russia has provided for reparations for herself. A similar bargain with Bulgaria is perhaps also on the cards. At the same time Russia has not proceeded far beyond that part of the Polish territory which she rightfully claims as hers. She has taken a definite stand on the Polish question and her strength, as much as the merits of the question, should lead to general international agreement about the Western frontiers of Soviet Russia after this war will be over. It is apposite to emphasise here that, should this principle of reparations for Russia be applied to a few more countries in Central Europe, Russia will be able to dominate the economic life of Central Europe to the same extent as Nazi Germany, though in an incomparably more equitable way.

Russia's care for her interests in Central Europe has not led to any differences so far; and one may expect that no serious friction will arise till the settlement with Germany. But the position in the East in relation to the war with Japan is in the nature of things, far more complicated. It is significant that, though the war with Japan is more than three years old, the first hint of Russia being not unwilling to join the Allies has been made only recently. A Press report refers to the annulment of some of the old treaties as a possible inducement to Russia to join the fight against Japan. Some have read into Mr. Churchill's complaint of lack of room for the available resources of men and material a veiled invitation to Russia to help to shorten the war in the East. Japan's domination of Korea and Manchuria is a threat to Russia as much as Germany's domination over Central Europe. But if the relations between Russia and the Anglo-American powers leave something to be desired in the matter of cordiality, then the requirements of Russian security would argue against a too drastic weakening of the two Axis powers. It is a moot question therefore, whether Russia is thinking in terms of a humbled, but not too weakened Germany and Japan or in terms of a belt of reasonably strong nations between herself and possible aggressors both on the East and on the West. Reports which have appeared in the Press of late seem to suggest that Russia is inclined to the latter policy rather than the former. If it is true, as is believed in some quarters, that Russia has drawn freely on her Far Eastern

army to strengthen her attack on the Nazi invaders, she should be more reluctant than formerly to have a state of war with Japan. But paradoxically enough, it may also kindle the desire to see the end of Japan, so that there may be none to fear in the East. The desire, if it can be accomplished by securing international agreement about Korea, Manchuria and other areas of the Asiatic seaboard, may well lead to substantial gains. The prospect of Russia joining the fight against Japan will be widely welcomed, when war weariness is setting in, not so much because the war will soon be six years old, as because the progress of allied arms has led to impatient expectations of peace.

Stock Markets and Peace Prospects

It is a truism that in the business world, no section feels the impact of major uncertainties so much as the Stock Exchanges. Brokers, operators and other classes associated with the Stock Exchanges are called upon to perform the miracle of sizing up, in an unconscionably short time, the ultimate significance of developments, ranging from the fate of the German armies in the European Continent and the strength of the American and the Japanese Navies in the Pacific, to the next budget of the Government of India or a new piece of legislation contemplated by a provincial government. Fortunately, the denizens of the stock markets are ordinarily gifted with an uncanny sixth sense with which to divine the shape of things to come. But this sense is not quite infallible. There are occasions when its powers are not equal to the strain imposed by the situation on hand. One such is the present. The variety and inconstancy of the factors that have to be appraised have no precedent whatsoever. The impact of the war and of the Governments' economic policies during wartime have been hard enough, in all conscience, to judge. The stock exchanges have outlined the jolts and jitters of the war period. Such breath-taking developments as the fall of France and the conquest of the Continent of Europe by Germany, the advance of German armies into the heart of Russia, the tragedy of Pearl Harbour and the loss of Burma, all these shocks have in their time been interpreted and translated into appropriate changes of prices and of outlook. Within the country, there has been many a change of direct importance to the stock exchanges, the imposition of the Excess Profits Tax and subsequent increase in rates and deposits, the formation of controls for various goods and the changes in financial policy.

The process of adjustment to these changes is of necessity a complicated one. While the sentiment engendered by the vicissitudes of the war sets them in proper perspective and proportion, adjustment to changes in internal government policy is helped not a little by the broad current of events in the economic sphere. If taxation and controls are **prima facie** of bearish significance to the stock markets, the general expansion of demand for goods, the plentitude of money consequent on inflation, the rise in profits and rates of dividends in the face of higher taxation and, last but most, the large volume of savings, black, brown and white seeking investment, these have helped not a little to take the markets up by stages and stabilise them at high levels. The low interest rates following from the Government policy of borrowing at very low rates, the wider profit margins and larger production made possible by the war and the larger volume of funds awaiting investment, these have prevailed against the factors that led to the temporary setbacks.

But judging by the tone and tenour of the stock markets during the last one month, it would appear that the significance of the peace which is believed to be round the corner has not been estimated with similar ease or confidence. During the last one month prices have, generally speaking, registered a decline of about 15 per cent. And what is more, the feeling that the present is the eve of striking developments and is, therefore, not the time to engage in normal, not to speak of longer, commitments or programmes seems to be widely shared. There is, of course no gainsaying the fact that the end of the war in Europe will be a great event. But that hardly means that its significance to the stock markets should be heedlessly exaggerated or that the importance of other relevant facts and factors should be overlooked or underrated.

To be clear about what has happened in the Stock markets so far, it is necessary to attempt a brief resume of their course during the last one year. As mentioned already, the persistence of cheap money conditions and the lack of scope for profitable investment, natually led to a boom in stock exchange values. Ideas regarding yields underwent a change according to the increase in surplus money and the shrinkage of the floating stock of securities. A gradual rise in prices therefore resulted in the last two years of the war period. Conditions in the stock markets last March were, indeed, very healthy and price fluctuations were on an yield basis of 3½ percent to 4 percent on giltedged industrials and 3 percent to 3½ percent on first-class taxfree preference issues. As the Second Front had not been opened when there was little attempt to speculate on the course of prices in the immediate postwar years. Operators and investors were generally inclined to believe that the end of the war was not quite near. The token Japanese invasion towards the end of March this year had a depressing effect, though at no time was there anything like panicky selling. After the end of May, however, with the defeat of the Japanese attempts at invasion of this country, the upward movement was resumed and in a short time the whole of the lost ground was regained. With special factors in operation June and July saw very active conditions. The attempt at cornering of shares like Soorah Jute, Chitavalsh Jute, Lothian Jute, North Damuda Coal and other counters caused a sharp rise in prices unrelated to the earning capacity of the Companies or the return on investments. The abrupt rise in prices for particular counters in a market, which was generally oversold induced a reserved attitude on the part of sellers; with the result that the bears were at a considerable disadvantage and there was a large volume of unadjusted transactions. The Committee of the Calcutta stock exchange had to interfere and restrict the hours of trading to prevent undue speculative activity. Outstanding transactions in popular speculative counters like Howrahs Steel Corporations, Indian Irons and Burrakurs were adjusted at fixed rates and all the differences had to be paid. The contracts were carried over at these rates to be settled by actual deliveries as early as possible. But for the spectacular successes of the Anglo-American forces in France and Italy, and Russia in the East European front, there is no knowing whether there would have been any appreciable slowing down in the upward movement. From the beginning of August, there has been a slight downward movement in prices and bears have been allowed an opportunity to cover their positions.

With the opening of the Second Front in Western Europe the outlook of the Stock Exchanges underwent a noticeable change. And the progress of allied armies from the second week of the fight in Northern France has brought about a considerable decline in prices. The following table gives the indices of leading groups for the relevant dates:

CALCUTTA

(Base 1935=100)

	13-9	30-8	31-7	27-6	31-5	29-4	29-3	1-3

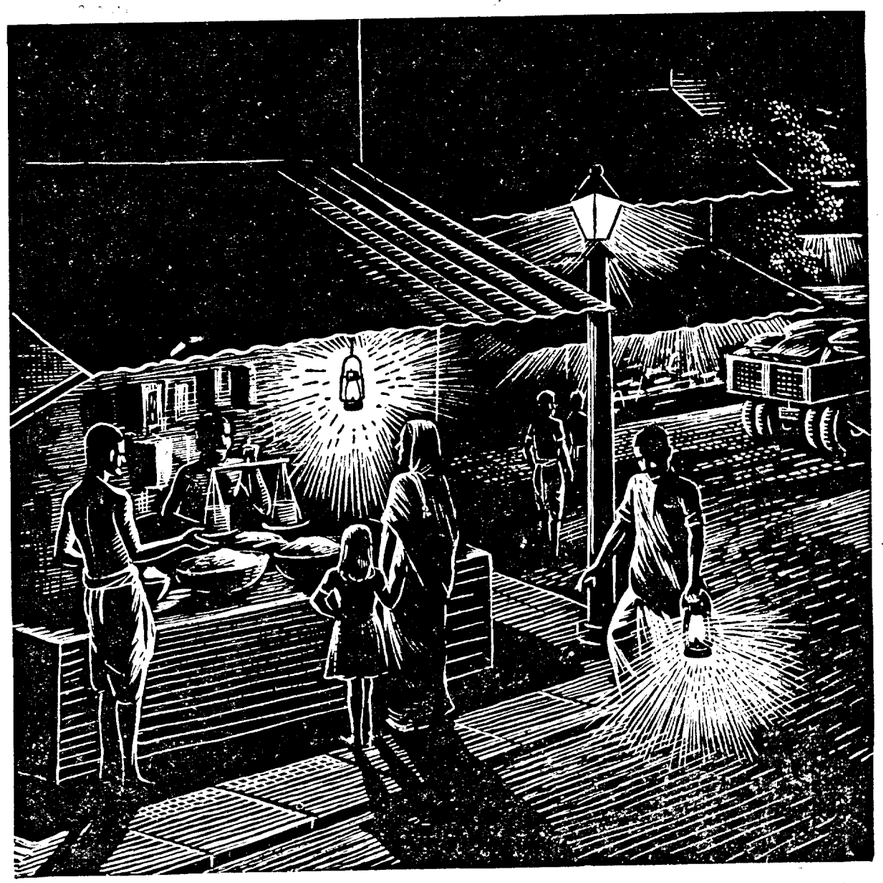
Shipping	180.37	183.25	183.96	185.88	169.27	168.00	170.98	162.62
Sugar	139.31	143.11	146.25	141.96	145.36	141.98	141.79	143.29
Tea	123.49	123.45	125.04	125.10	124.49	121.78	122.00	123.40



BOMBAY

	13-9	7-8	26-7	22-6	24-5	26-4	29-3	7-3
Cotton	205.32	228.07	226.39	228.03	232.65	258.98	253.61	251.94
Electric	108.90	112.20	111.63	111.31	110.97	109.11	111.36	113.53
Engineering	315.10	347.81	230.64	341.47	342.70	347.40	345.03	335.66
Miscellaneous	136.59	147.98	149.01	140.90	139.68	148.52	144.55	147.32

From the above table it will be seen that though the decline in prices is appreciable in comparison with the prices of a month ago, the present level is not such as to suggest serious undervaluation of shares. On the other hand, if it is remembered that special factors were in operation to take up prices above the levels suggested by their values, present and prospective, there is little reason to regret the decline of the last month taken by itself. But it would be regrettable to the extent that it is indicative of jitters, such as might incapacitate the markets for a rational estimate of future possibilities.

It is necessary therefore, to indicate those factors which, in an overwrought fear of the impact of peace, are apt to be overlooked. First and foremost, it is necessary to remember that Europe is not the only cockpit in this world and that the end of the war in Europe is not the end of this global war.

Secondly, war is no longer the only factor that can make for large scale public expenditure, big production programmes and maintenance of large volume of purchasing power, which are the distinctive characteristics of the war period. Taking the first point the end of war in Europe far from signifying the end of this world war, will only mean the beginning of the real war in the East. What was till now a minor side show will gain first rate importance. The movements of allied fleets and armies and air forces to the Eastern theatre and the speeding up of the tempo of the war would mean an increase in both the scale of government expenditure and in the volume of purchasing power within the country. The plenitude of war material in Britain and the U. S. A. may argue against an increase in war orders in India. But the scale of operations and the nature of the campaigns would not act against any reduction in the kind of work which is done for the war effort in India. As for the second point, that peace will be as productive as war of purchasing power, demand for goods and state expenditure one has only to look into the progress reports of the reconstruction committees to realise that peace will not be beaten by war in the matter of sending up government expenditure. It is remarkable how during the last few months, not only the Government of India but also provincial governments and the States, have come forward with their plans for industrial and economic development. It would be a queer pessimism indeed which refuses to recognise in these as good a substitute, if not a better one, for the forces which maintained industrial profits during the war period. While the decline of the last one month is to be welcomed for reasons we have stated, any further decline for fear of peace must be deprecated.

Tomorrow's hopes

Rural reconstruction plans of to-day will be realities tomorrow.

To bring to the villages and towns of India wealth and prosperity, the Iron and Steel industry will play its part.

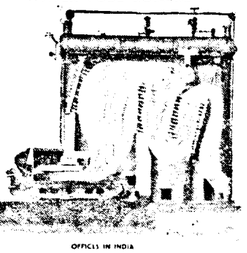
Editorial Notes

Sugar and postwar plans

The protection given by war to some of our big industries will come to an end when hostilities cease and every industry should take stock of wartime developments and prepare to face the problems of peace. The Indian sugar industry is fully alive to its responsibilities and, since the International Sugar Council is now busy surveying the world position to estimate the probable shortage in sugar supply, the need to organise the industry so as to enable it to play a creditable role in post-war trade has become very urgent. In his Presidential address at the seventh annual general meeting of the Indian Sugar Syndicate held in Cawnpore recently, Lala Karamchand Thapar reviewed the present position of the industry and urged that a post-war plan for sugar industry should be prepared without any more delay. Excepting Bihar, the provincial governments have not given adequate attention to the sugar industry. Wartime control in sugar is not operating in favour of producers and the Mollasses Control has too many anomalies and should be remedied without delay. The immediate need of the sugar industry is renewals and spare parts and Government of India should provide the required priority of shipping space to import the replacements. Per capita sugar consumption in India is very low and post-war development plans promise to increase the purchasing power of the masses. Thus the peacetime internal demand is rated high and the Middle East markets have also to be retained and cultivated. Java may take time to recover her prewar competitive capacity and, unless international sugar agreements block the way, the prospects of overseas markets are bright. Mr. Thapar stated that the Central Government has not been very helpful till now and suggested that control over the industry should take the form of rationalisation. Demand for all-India licensing of factories and regulation over the growth of industry and production of sugar, has been accepted by the National Planning Committee in 1939 and if the present-day control is not to help the industry for reorganisation and strengthening of its post-war prospects it stands condemned. Rationalisation on an all-India basis may not be agreeable to certain interests and hence Mr. Thapar thinks that each province should start ploughing its own lonely furrow in the post-war period. The Sugar Syndicate has suggested fixation of an all-India target for sugar production, allotment of Provincial quotas, the expansion of existing units to the limits of available cane supply and installation of new plants in areas not yet tapped by factories. Mr. Thapar urges that Government should take steps to implement the above suggestions. Ancilliary industries like manufacture of power alchohol, should be taken up immediately and rural roads should be extended to facilitate better marketing of cane.



Trend of Trade in 1943-44

Foreign trade of British India for the fifth financial year of the war records an improvement over the preceding year. 1942-43 marked the lowest ebb since 1939, the total foreign trade of British India being valued at Rs. 305 crores. During the year 1943-44 the figure rose to Rs. 329 crores, an increase of Rs. 9 crores over the prewar year 1938-39. The total exports of Indian merchandise on private account increased from Rs. 187.6 crores in 1942-43 to Rs. 199.2 crores in 1943-44 while the total imports of merchandise rose up from Rs. 110.4 crores to 118.8 crores. The balance of trade on private account remained in India's favour, the figure for 1943-44 being Rs. 91.4 crores as against Rs. 84.4 crores for the previous year. Exports of manufactured goods show the same upward trend the rise from Rs. 95,37 lakhs to Rs. 1,04,60 lakhs being interpreted as an indication of dependence of certain foreign countries on Indian goods. It should be noted however that cotton yarns and manufactures, hides and skins, and iron and steel marked a decline while jute manufactures, woollen manufactures, chemicals, machinery, rubber manufactures and metals other than iron and steel recorded an increase. Regarding the direction of trade the available figures reveal that there has been an expansion of import trade with non-Empire countries to the extent of Rs. 12,65 lakhs while the share of Empire countries actually declined by Rs. 424 lakhs. The increase of imports from non-Empire countries has been mainly due to higher receipts from Iran, Iraq and Egypt. On the side of exports also the non-Empire countries have claimed a marked expansion, the U. S. accounting for an increase of Rs. 12.49 lakhs over the previous year. U. K.'s offtake increased by Rs. 287 lakhs and she still remains the most important market in the Empire. Imports of grain, pulses and flour actually swelled up to mitigate the nationwide scarcity of foodstuffs. Industrialists would feel gratified to note that in 1943-44 there has been a decline in the relative importance of manufactured articles as compared with raw materials and articles partly or wholly unmanufactured in the import trade. There has also been a slight increase in the relative importance of manufactured articles on the export side. The published figures exclude trade on Defence account and the Lease-Lend transactions. It may be safely presumed that these items have also increased to a considerable extent.

Transport Co-ordination

Post-war planners are enthusiastic supporters of central agencies for evolving All-India schemes and the need for a centralised planning has nowhere been felt so acutely as in transport. The backwardness in Indian transport system is partly due to the fact that while roads are a provincial subject the railways remained a Central concern. His Excellency Sir Maurice Hallet, in his address at the annual session of the Council of the Indian Roads Congress held at Lucknow last week, referred to road-rail competition and pleaded for an All-India Transport Board 'to co-ordinate in development of railways, road transport and air lines, to deal also with the development of the Indian postal and telegram system, and in particular the improvement and extension of the telephone service' His Excellency evinced considerable interest in pilgrim centres and hoped that even places like Badrinath would soon be linked up by the roads leading to Tibet. He further asked the Road Congress to devote its attention to the task of improving communications round big towns and pointed out that Indian waterways have been comparatively neglected. A hundred years ago, large ships came up the Ganges as far at least as Allahabad and Cawnpore. Railway competition killed this highway on the Ganges but now that we find that the railways cannot adequately serve the public need, the waterways must be developed to the maximum

OBJECTS & PROSPECTS.

The company is acquiring the land, buildings, machinery, plant etc., of S. P. Chemical Works, Chheharata, an up to date and fully equipped Chemical Works carrying on the manufacture of Sulphuric Acid, Nitric and Hydrochloric Acids Mag. Sulph., Alum, Ferrous Sulphate and other heavy and fine chemicals and has been formed for such other objects as mentioned in the Memorandum of Association including manufacturing and dealing in chemicals of all descriptions and all other by-products, potash, salts and acids of all descriptions, ammonia compounds, liquid amonia, acetone, acetate of lime, acitic acid hypo salt Barrium compounds, gelatine and to refine manipulate and deal in the raw materials used in such manufactures and the products and by-products thereof.

The factory at present is producing 4.2 tons of sulphuric acid daily and is working for about the last 2 years. It is proposed to increase its capacity considerably. The Alumina ferric plant is under construction and for this necessary lead and other materials have been released by the Government. The factory is receiving all possible aid from the Chemical Directorate with regard to the supply of sulphur, coal and necessary priorities in the matters of transport.

The factory has fully established its products in the market and has sale depots at Lahore, Amritsar, Jullundur, Sialkote, Gujranwala, etc. The works are supplying large quantities of sulphuric, hydrochloric and nitric acids, Mag. Sulph., Alum and other chemicals to the Supply Department and the Director General of the Indian Medical Services.

The investment will not be as in a new industrial undertaking, where the return for capital is long delayed in setting up the machinery, plant and building, etc.

There is at present a greater shortage of supply of sulphuric acid in this country. The post war industrially and agriculturally developed India would offer a prosperous market for chemicals sulphuric acid being the major raw material for the fertilizers industry which is being established in India.

MANAGEMENT. Subject to the control and supervision of the Directors, the general management of the aflairs of the Company, will be in the hands of Messrs. Dhanpatmal Jawaladas, (of which firm Mr. Satya Paul Virmani is the Proprietor) who will act as Managing Agents of the Company, on terms detailed in the Articles of Association of the Company, and in the Agreement entered into with them.

BROKERAGE. Brokerage will be paid at annas 4 per share on allotment made in respect of application through approved brokers on ordinary shares only.

APPLICATIONS. Application should be submitted for ten or multiples of ten shares only, on the forms obtainable from the Comany's Registered office or their bankers. In alloting Preference Shares, preference will be given to applicants who apply for ordinary shares as well.

extent. The Government of India's plans for aerodrome construction have not satisfied the U. P. and His Excellency stated that the province would continue to press its claims for air lines from Cawnpore to Bombay, and from Cawnpore to Lucknow, Rampur and Delhi. While a co-ordinating agency would be needed to design Indian communications there are vital technical problems to be tackled. Research on roads and road materials have to be organised on scientific lines and in this respect the proposal, contemplated by the Board of Industrial and Scientific Research, to start a Road Research Laboratory is most welcome. Besides Indian industries the innumberable rural craftsmen are also vitally interested in knowing what materials and machinery are to be used for Indian roads and how they would answer the claims of indigenous industries and the needs of rural economy.

DOWN IN THE MOUTH

OF all the minor ills that the flesh is heir to few are more agonizing and depressing than toothache. Nowadays we realise the close bearing between teeth and health, and pay regular visits to our dentist. We may not look forward to these, but at least we have no grounds for the alarm which was excusable less than a century ago, when tooth-pulling was often the job of the local blacksmith! Dental surgery has made great strides since then, but the advances in professional skill and technique have been enormously assisted by the work of the chemist and the chemical industry. Where would the dentist be without anæsthetics? Gas — "laughing gas" — nitrous oxide — was first prepared nearly 170 years ago by an Englishman, Joseph Priestley, and its anæsthetic properties discovered in 1799 by another Englishman, Humphry Davy, who found that small doses stimulated his poetic muse! The next big advance came in the use of cocaine as a local anæsthetic. It remained the standard method for a long time, but has today been superseded by a variety of new synthetic compounds discovered and built up by the chemist to be safer and more effective. The chemist has found powerful but harmless antiseptics for sterilising the mouth, as well as styptics for stopping bleeding. He has produced amalgams for stoppings and fillings. Most recently he has discovered and made available new acrylic resins for dental plates and dentures—far superior to the old types incorporating rubber in the form of vulcanite. Look around your dentist's surgery. It is the most eloquent witness to the essential part played by the research chemist and the British chemical industry in the care of the nation's teeth.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Financial Administration in India

If eternal vigilance is the price of democracy there should be no slackening in educating the citizen and the legislator on the theory and practice of national finance. Control of the public purse is one of the most vital concerns of the legislature of a country and if the national revenues are to be spent well the legislature as well as the executive should consist of experts who understand the intricacies of financial administration. In India the electorate is poor and almost totally illiterate while the legislators who must vote the budget and evolve policies are often ignorant of the merits and de-merits of the financial practice governing Indian administration. Bureaucracy is all powerful and does what His Majesty's Government desire from Whitehall. The political subordination of the Government of India makes democratic protests powerless but the position may not remain like this even in future. Whether the Atlantic Charter is applicable to India or not India would surely emerge out of this war with greater constitutional status than ever before. Hence there is a supreme need for the average man and the legislators to understand the financial system followed in this country so that he can behave more intelligently at the polling booth and the legislative assemblies. Dr. P. J. J. Pintos' book "System of Financial Administration in India" (New Book Company, 188-90, Hornby Road, Bombay. Rs. 15) is an excellent analysis of Indian financial system and satisfies the long felt need for a suitable publication. In this study, modern financial systems in other countries are clearly explained and the principles governing the budgets are detailed. The book consists of three parts. In Part I the author deals with the theoretical aspects and the practices of budgetary administration abroad and explains the present system of Indian financial administration against the background of historical development. Part II deals with the preparation and execution of the Central and Provincial budgets and separate chapters are allotted to Ways and Means, Balances and Resources, Audits and Accounts. In Part III the author deals with the relations between the Centre, the Provinces and the Indian States, the Government and the Reserve Bank, Public Debt, and some Government Departments like the Railways, Post and Telegraphs, Defence Services and the Crown Representatives' Department. Dr. Pinto discusses the merits and weaknesses of the Indian financial system modelled on the British system and says, "The Indian system conduces to efficiency and economy. If our system is the costliest, it is due not to faults in the system but to extraneous factors." Owing to certain constitutional limitations, the author points out, the merits underlying the system are ignored. We are particularly fortunate in having a centralised system which, when India attains full self-government, would prove of immense value for national progress. He pleads for strengthening of the Finance Department and wants a deliberate attempt to maintain a sound system. The appointment of a Select Committee to go into the question of organisation and expenditure at not long intervals is favoured to secure maximum efficiency from the executive and to ensure more intimate co-operation between the Legislature, Finance Department and the Audit. The satisfactory working of any institution found useful abroad depends, in the last analysis, upon the political status of the country and Dr. Pinto, while keenly aware of the handicaps in India, has provided an able defence of British Financial system as applied to India. The books is fairly comprehensive and would be enthusiastically welcomed by students of economics, legislators and administrators in this country.

Baroda Experiment

While it is agreed on all hands that Indian agriculture is today in a mess all are not agreed on the best possible method of remedying the situation. Agriculture in India suffers from too much pressure from swelling population and hence many suggest that a powerful industrial drive is needed to absorb the 30% of surplus agricultural population in industries and to make way for reforms like consolidation of holdings. Those who look at agriculture from the point of view of productivity clamour for a correct manure policy and establishment of a chemical fertiliser industry. The problem of extracting the maximum out of the soil is partly technical. Since improvements have to be introduced only within the framework of tenancy systems, some urge a radical reform of agricultural tenancy. Under inspiration from Soviet Russia collective farming is gathering popularity. Legal troubles are often scaring and on this account cooperative farming has found favour in some quarters. Capitalist farming is also advocated as best suited for introducing mechanisation in some agricultural tracts. Every country has a few individuals pleading for peasant farming and we have ours. While a change in the existing tenancy systems in India is felt desirable no data are available to prove the relative worth of different systems. Foreign examples are bound to remain foreign. The need for accurate information regarding the relative advantages of different farming methods when applied to Indian conditions is sought to be satisfied by an interesting experiment undertaken by the Baroda Government. The scheme is as follows: The State proposes to purchase five villages and pay off the moneylenders. The field is thus kept clear of indebtedness. Five different ways of rehabilitating the cultivators would be tried in these five villages to find out the land tenure which yields best results. In one village a consolidated holding of 15 acres will be given to each family and arrangements are made for the cultivators to purchase the holdings ultimately. In the second village arrangements are the same as in the first but the cultivators would remain tenants of the state. In the third village consolidated cropping will be tried; all crops will be grown in block by the cultivators and the produce will be shared in proportion to the area of land and by each cultivator in the block. Collective farming will be introduced in the fourth village, where each villager will receive a share of the whole produce proportionate to the labour he and his cattle have put into the cultivation. The fifth village will be under State farming. The village as a whole owns the land and cultivators receive daily wages and a share of the profits at the end of the year. The Imperial Council of Agricultural Research have granted a handsome sum for the Baroda experiments as part of their development programme for 1945-46.

The results of the farming experiments would provide valuable data for planning Indian agriculture and would also reveal the suitability of different systems in this country. Results of Baroda experiments may not be fully applicable to other parts of this sub-continent and further experiments in other chosen localities may have to be undertaken on their model. Yet the Baroda Government deserves congratulation for giving a lead in experimenting with agrarian reforms.

Progress of Planning

An account of the progress of Government of India's post-war plans has been given by Sir Ardeshir Dalal when he addressed his first Press Conference a few days back. It is well-known that he joined the Department of Reconstruction and Development not because he believed that longterm Planning for India can be done by the present unpresentative Government, but because he felt that the groundwork for a planned India should be prepared before the end of hostilities and that economic planning cannot wait for political deadlock to end. Every Department of the Government has been collecting a lot of material and preparing its own ambitious plans for the future. Departmental planning, carried on without close association of the vital interests of the country, may not be well received and limited financial resources and lack of coordinated schemes were considered great handicaps blocking the way of early progress. Sir Ardeshir's main responsibility was coordination and the public would be satisfied to know that some progress in this direction has already been achieved. Planning proceeds on the basis of controlled capitalism and Sir Dalal said that the Government do not propose to make any fundamental change in the economic system of the country but the existing order would be "modified in a more socialistic way." Industrial development proceeds on the basis of the existing constitution and regionalisation and disposal of industries, subject to availability of natural resources such as fuel, power, water as well as markets, are stressed. It is proposed to form a separate committee for industries, as distinct from the present Policy Committee on commerce and industry, with prominent industrialists and representatives from the provinces and states. While the present committee would discuss policy matters the proposed body would deal with planning of different industries by a number of panels for different industries or groups of industries. Sir Dalal made it clear that industrial plans have been delayed partly for want of trained personnel but also because the industrialists have been too slow in providing the Government with the required information. Though the provinces have been encouraged to have their own postwar schemes, there is no doubt that Central control would be extended further. The proposed Central Irrigation Board to deal with such questions as river training, gravity irrigation, hydro-electric schemes, soil erosion etc., and also a Central Technical Power Board emphasise the same trend. The most essential preliminary for early success of postwar plans is the training of scientists, engineers, doctors, geologists, agriculturists and educationists. This necessitates an early educational drive. Particular attention has been drawn to the necessity of our universities providing for training of geologists and Sir Dalal would shortly deal with the geological survey to speed up the exploitation of the mineral resources.

Kamani Metals & Alloys Ltd.

Important progress has been made in this country during this war period in the manufacture of non-ferrous metals of all kinds including base metals for railways, phosper bronze, manganese bronze and the manufacture of sheets, foils of brass etc. The Kamani Refinery and Kamani Metal Industries at Bombay is one of the important producers in this country. The Kamani Metals and Alloys Limited will be taking over this business. The authorised capital is Rs. 1 crore of which Rs. 40 lakhs is issued in 10,000 5½ percent cumulative preference shares of Rs. 100 each and three lakhs ordinary shares of Rs. 10 each. Judging by the favourable response from the investing public the future for this new company seems to be bright. The whole of the issued capital has been taken by the managing agents, the directors and their friends and through the underwriters by Messrs. Adamjee Dawood & Company Ld.

The substantial interest of Messrs. Adamjee Hajee Dawood and Company Limited and the presence of prominent directors on the Board is a guarantee of the success of the undertaking.

S. P. Chemical Works.

The S. P. Chemical Works Ltd., has been formed to take over a company of the same name which has an up-to-date and fully equipped factory carrying on the manufacture of sulphuric acid, nitric and hydrocholic acids besides other heavy and fine chemicals.

The issued capital is Rs. 15 lakhs in 3,000 5½ percent Preference shares of Rs. 10 each and 1,20,000 ordinary shares of Rs. 10 each. The Directors and their friends have taken up seven lakhs worth of shares and the balance is now offered to the public. The factory is supplying large quantities of chemicals to the Supply Department, and the Director-General of the Indian Medical Services. In this connection it is receiving all possible aid from the Chemical Directorate with regard to the supply of sulphur, coal and the necessary priorities in respect of transport.

AUDITORS' REPORT.

We have audited the above Balance Sheet of the NEW BANK OF INDIA, LTD., Lahore, as on 30th June, 1944, and the Profit and Loss Account for the year ended that date with the books and accounts as kept at the Head Office and the returns received from the Branches, and have to report that:—

(*a*) We have obtained all the information and explanations we have required;
(*b*) In our opinion, the Balance Sheet and the Profit and Loss Account, above referred to, are drawn up in conformity with the law;
(*c*) Such Balance Sheet exhibits true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank; and
(*d*) In our opinion, books of accounts have been kept by the Bank as required by Section 130.

OBJECTS OF THE COMPANY.

The company has been formed for the purposes of carrying on all or any of the objects which are set out in the Memorandum & Articles of Association of the Company and in particular to carry on the business of refining and manufacturing of all kinds of non-ferrous metals and alloys including Bearing Metals for Railways, Phosphor Bronze, Manganese Bronze, etc., and the manufacture of Sheets Strips, Foils of Brass, Copper, Lead, Aluminium, Phosphor Bronze, etc., and Wires of various non-ferrous metals. The company has acquired a well-equipped and up-to-date Factory with the Land and Building from Messrs. Kamani Metal Refinery & Metal Industries at Kurla, Bombay.

Before the present war India's requirements of Non-ferrous Metals were very largely met by imports from foreign countries while at the same time Non-ferrous metal scrap was exported to Germany, Japan and other countries. Practically all the Bearing Metals for Railways, etc., were imported from abroad and there is a very wide scope for the manufacture of the same in India. There is a considerable production of brass Sheets in India, but even here the average annual imports for five years before the present War were 16,000 tons of Brass sheets worth Rs. 90 lakhs and about 10,000 tons of Copper sheets worth about Rs. 60,00,000. The local production was about 40 per cent of the requirements of the country in brass sheets before the war and it was very much less in copper sheets. It is also estimated that, after the war, India's requirements will be very much greater, on account of the rapid industrialisation of the country. The Non-ferrous Metals Industry is an essential industry and one among the key industries of the country, thus occupying a prominent place in the future economy of the country.

Clive Street Gossip.

Postwar conditions in India will be largely determined by the changes that have taken place during the war, by the policies that have had to be adopted in these years and by the various plans that have been prepared or are under preparation. The repercussions of war on this country have in some cases, been beneficial; and prudence and statesmanship demand that the fullest benefit should be derived for the future from the present repercussions. Some of the repercussions, however, have been most unfavourable; and experience gathered in regard to them must teach us how to avoid them in the plans for the morrow. Similarly, many of the policies adopted under the stress and strain of war have been partly wholesome. In deciding what should be retained and what eschewed there is also the world experience to guide us, as such policies in India have necessarily had much in common with policies tried and executed in other countries. Postwar plans in the case of India must also be considered as deriving significance and vitality from similar plans matured under authoritative auspices elsewhere in the world. Taken all in all, it may be said that there are quite a number of favourable features in the situation which wisely utilised, may lead to sunnier, fuller and happier life for India in the context of a sunnier and fuller life for every country in the world. With this prologue I may proceed to furnish a rough outline of post-war India:

1. Thanks to the enormous and controversial interest which the question of India's sterling balances has excited both at home and abroad, it is now a matter of universal knowledge that India has been transformed by this war from a debtor to a creditor country. That is to say a creditor status in the international sphere. There have been various categories of British investment in India such as sterling loans issued by the Indian Government on the London market, sums invested by British investors and investment institutions in Indian enterprise and rupee securities; loans and shares pertaining to sterling companies whose field of operations was in India, short-term investments mainly in the form of rupee treasury bills. In the last five years, all the sterling loans of the Government of India have been liquidated. The public utilities of an All-India character such as company-managed railways have also undergone repatriation. Railway annuities have been provided for. The funding of the pension liability in sterling is a proposal that has been receiving attention. The next turn for repatriation is that of local utilities such as tramway companies and electric supply companies with sterling capital. In the early 'thirties all the short-term capital that was invested in India on London account had taken wings and flown back. What now remains is the British stake in Indian business mainly in the form of managing agency, and investment on the part of such managing agents in shares belonging to their group. Even in this regard, recent months have witnessed a large-scale transfer of plantations from sterling to rupee capital. It will be a fairly correct estimate to say that the British stake in managing agency and allied interests left after this process of repatriation may be of the order of Rs. 200 crores. For my part, I will be truly sorry to see this stake reduced greatly. British business has a definite purpose and significance in the annals of the Indian business world. While it will be readily granted that British business must remain only if it relies upon nothing like political or extraneous factors there is every reason to welcome the continuance of the British element on a basis of greater co-operation between British and Indian elements. The repatriation of sterling capital effected since the war began will aggregate £400 million. In spite of this, sterling assets in favour of India have grown and are growing at such a pace that, on present indications, India may be holding balances for anything like £1 000 million at the end of the war. Whereas, before the war, India was a debtor in the international sphere for something like £700 million to £800 million, postwar India will be creditor with foreign balances aggregating to £1 000 million.

2. This change in the international status of India has been so startling and has raised so many concomitant problems and controversies that this issue has come to monopolise all attention and discussion. Another transformation not less revolutionary or less startling but even more significant, is the change that has taken place in the matter of agricultural indebtedness. For ages, Indian agriculturists have been steeped in debt. Speaking for myself, I may say that, whenever I had given thought to this question in prewar years, I had come to the hopeless conclusion that India's agricultural indebtedness was chronic and could never be removed. From the rough survey of some of the villages I have made, I have reasons to think that this problem, which at one time seemed absolutely insoluble has been solved by the war. Prewar agricultural indebtedness for India was estimated at Rs. 1,200 crores, my "guess-estimate" is that the present indebtedness of the agriculturists throughout this country cannot amount to more than Rs. 200 crores. So far as the debts of the agriculturists who still continue to hold land are concerned, it is certain that their demands have been completely redeemed. It is only the landless classes that have not been able to liquidate their debts completely. Even in their case higher wages have certainly helped to relieve their position considerably. In my opinion, this redemption of rural India from debt is the most important and far-reaching development in this war.

3. Another chronic malady from which India was suffering was unemployment. There was much unemployment among the educated middle classes as well as among the agricultural and industrial workers. It may be said confidently that there is now no unemployment of any kind in this country; and that fairly satisfactory wages and salaries are being paid for the various kinds of employment.

4. Another notable development in the case of India—this may be said to be almost a unique feature—is that, while the budgetary position of the Central Government though unbalanced, has been kept strictly under control. Most of the provincial Governments have enjoyed surplus budgets, many of them being in the fortunate position of setting apart suitable amounts for postwar reconstruction. Taking Provincial finance as a separate category, the budgetary position must be considered eminently satisfactory.

5. Both at the Centre and in the Provinces, such new taxes as were considered necessary have been levied; and central and provincial budgets have thus been pulled up to a higher level of resources. It is no less satisfactory that the possibilities of death duties as an important source of revenue for postwar plans are being actively and resolutely examined.

6. With the budgetary position balanced or under strict control and with the Indian financial authorities proving apt pupils of the great advances made in modern monetary technique, it is no matter for surprise that both the Central Government and the Provinces have been able to raise their loans at interest rates not exceeding 3 per cent and to issue their treasury bills at rates which are even cheaper than that paid by the British Government for their treasury bills.

7. In this connection, we have to take note not only of the cheap borrowing but of the facility and success with which the borrowing is done. It has now become the vogue for the new loans of the Provincial Governments to be open only for one day. As a result of this facility and success in borrowing, most of the provincial governments have been able to repay some of their debts to the Centre much earlier than the stipulated dates. Interest charges have thus been reduced; and provincial autonomy in finance has been fully vindicated. As for the Central Government, the problem confronting them was to raise, in these five years of war, total loans amounting to what they had previously raised in, say, three decades. At the time I am dictating these notes, I do not have near at hand the exact total of the loans raised by the Government of India since September 1, 1939. But I am sure I am not far wrong if I estimate that, taking the average of the last two years, the Government of India have proved their ability to mobilise an annual average of Rs. 200 crores from the market. Once upon a time, the capacity of the Indian giltedged market was something like Rs. 20 crores for new loans. This capacity has been increased tenfold as a result of the policies pursued and operations carried out during this war. As a result of the colossal sums disbursed by the Government on their own behalf and on behalf of other allied governments, the volume of currency in circulation has risen substantially in the war years. Taking paper notes as well as rupee coin into account, the extra currency in circulation is at least Rs. 850 crores. Total notes issued are now Rs. 950 crores. The present paper circulation is five times the pre-war circulation. In some circles, this expansion of currency is considered to be one of the main causes of general inflation. On more than one occasion I have stressed my view that the most direct and substantial cause of inflation is the enormous growth of what may be called "black money" that is to say, money which represents the accruals from tax dodging. All this black money could not be brought out into the open. It could be utilised in the purchase of only such goods as facilitate secrecy of ownership. This black money created the black markets in commodities. In the first thirty months of the war, there was quite a considerable currency expansion; but there was no kind of inflation in regard to commodities. Inflation as such can be certainly traced to the time when accumulations of black money assumed large dimensions. Be this as it may, even this currency inflation resulting in present paper note circulation being five times the prewar circulation is an evil with its soul of goodness. For one thing, it has familiarised us with big figures. It may now be taken as certain that the postwar currency circulation will not be a revision of the prewar state. The amount of currency that may be considered necessary and suitable for the conditions prevailing in postwar India may prove to be midway between prewar circulation and the peak war circulation. I visualise a paper note circulation of Rs. 600 crores in postwar India.

8. We cannot give full marks to the authorities in India for their handling the several problems that have been posed by inflation. Rationing was introduced in a belated, half-hearted faint-hearted fashion. Control measures have also suffered from the same defects. If the Indian authorities, had thought out in advance, as did their compeers in Britain, plans for rationing and control and set up machinery and organisation in a spirit of being forewarned, the country would have been spared much of the havoc that has been caused by inflationary forces. But the fact to take note of in relation to the future is that rationing in various parts of India has begun to function more and more smoothly; and that valuable experience has been acquired with regard to control measures and machinery.

Pressure on space compels me to be brief; and there are other aspects to which I shall refer in a later issue.

* * * *

Though India takes the tenth rank among the industrial nations of the world, we have not outgrown the stage when the founding of a new industrial enterprise must be reckoned an event. There is general recognition of this fact; and all those who attended the opening of the National Rolling Mills on Monday last by

(*Continued on page 438*)

Olympus

(FROM OUR CORRESPONDENT)

NEW DELHI, Sept. 18.

There is general optimism—though still subdued—here at the unexpected prolongation of the Gandhi-Jinnah talks. The too few cryptic remarks dropped by the two leaders have emphasised their determination to reach an agreement. They fully realise what a failure will mean this time. It will indefinitely put off the enforcement of the national will. "If we part without coming to an agreement," said Mr. Jinnah, "we shall proclaim bankruptcy of wisdom on our part." Gandhiji has also expressed the view that a failure would "dash to pieces" the hopes of millions of Indians. It is felt here that if there had been a difference on fundamentals, the talks would have broken down by now. Their prolongation day after day only shows that the first critical phase is over and that the two leaders have come down to grapple with the practical details. Nothing has been officially disclosed yet. As a matter of fact the press has been strongly advised against all speculation. As no third person has been present at the talks, there is not the slightest possibility of any leakage. The great alarm caused in British Tory circles at the possibility of a Congress-League settlement stresses, as nothing else could, the necessity for such an agreement.

* * * *

Both Sir Jeremy Raisman and Sir Chintaman Deshmukh have returned to India after preliminary discussions with British Treasury officials about the fate of the sterling balances. There has been so much widespread concern in this country about these huge credits that the final decision regarding their utilisation and liquidation may prove to be one of the vital factors in promoting smooth Indo-British trade relations after the war.

* * * *

The refusal of the Bretton Woods Conference to discuss the issue has only increased India's suspicions. There is almost a universal demand that this country should refuse to join the Monetary Fund under the present circumstances. Even if the sterling balances issue had not been there, the scandal about the poor quota allotted to India showed that political and military consideration dominated this conference—rather than economic. The Big Powers seem to be little concerned about a genuine development of backward regions. They are only anxious about ensuring their own post-war export trade. Sir Jeremy has gone away to Simla and there is not the slightest indication here about official London reaction to the Indian mission. It is learnt here that an official delegation will visit London sometime in winter to thrash out the issue—but that can hardly be before the end of the Assembly autumn session. It is strongly felt here that the Government should consult and take into confidence industrial and commercial opinion in this country before any definite commitment is made on India's behalf.

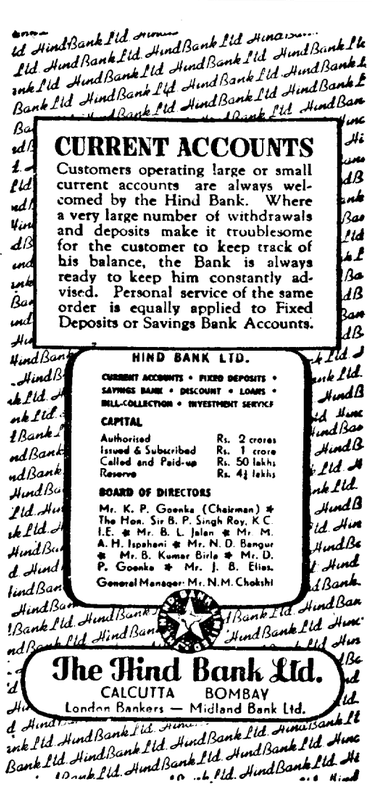
* * * *

The line taken up by a few papers like the *Manchester Guardian* that Britain can only pay back in goods is atleast more reasonable than that adopted by most of the Tory papers. "When India presents her draft on London, we shall ask her bank cashiers: "How will you take it?" Writes the *Manchester Guardian*. Nothing can alter the fact that the sterling claims can only be paid up in British goods and services. If any part of Indian balances is spent elsewhere, we shall simply have to export so much more than other countries... India's only real prospect of getting paid is to look upon these millions of pounds as thousands of orders to British industry, and any Indian who suggests that there is any unfairness in that is talking through his hat."

* * *

Nobody can quarrel with this attitude. Though it is pointed out here that the continuous British cry that India's sterling balances present an unbearable and unjustified burden on the British is unjustified. Britain's present debt to India (£1,000 millions) only represents a small percentage of Britain's annual income (£7,000 millions) and its liquidation should present no insurmountable difficulty if spread over ten or fifteen years.

* * *



Sir Ardeshir Dalal revealed something of the Government's mind about the general consideration guiding its post-war plans at his first press conference held last week. "We do not propose to make any fundamental change in the economic system of the country" he said, "though there is no doubt that the existing order should be modified in a more socialistic way." He proposed to form a new committee to discuss the policy for post-war industrial planning. This committee would, he said, consist of industrialists and representatives of states and provinces. There would be panels for different industries. The Government also intended to send a large number of Indians to Britain and the United States to be trained as scientists, engineers and agriculturists. These would form a pool of technical experts on which post-war industries could easily draw. He regretted the poor response from the various industries to the two questionnaires on post-war planning. He also complained about the lack of experienced personnel for the industrial branch of his department. Sir Ardeshir announced that a Central Technical Power Board and a Central Irrigation Board would be formed soon.

* * *

Sir Ardeshir stated that the Government wanted to guard the country against a post-war slump and had a social security plan under consideration. He emphasised that his department was only preparing the ground for the future. "There are certain things which only a National Government can do," he said.

* * * *

Sir Henry French, the British Ministry of Food expert, who has concluded his tour of Provincial capitals to study the food situation was put some searching questions at Lahore last week. Speaking about the Bengal famine Sir Henry remarked: "No one can imagine that sort of situation in my country." He said that in 1941 and 1942 not one man in India thought of making any provisions for a deficit Province like Bengal. He was not there, however, to post-mortem the dead past, he said. He was more concerned with the future and his anxiety was that the future should be bright and that surplus areas should serve the deficit regions. Sir Henry refused to give any hint about his conclusions as to whether he would recommend to the British Government to rush more wheat to India or not, but remarked: "The whole issue is of quantity but I have not the slightest doubt that in future India will need a larger share of the World's imports in wheat." It is expected that Sir Henry will soon submit his report to the British Government. Sir Henry refused to answer certain pertinent questions at Lahore saying he wished the issue of food to be kept separate from politics. Sir Henry's embarrassment can be easily imagined. But does he really imagine that the two things can be viewed apart from one another? Sir Henry spoke about the success of food controls and distribution in Britain but can he believe that a mere bureaucratic agency out of touch with the people of Britain could have succeeded in enforcing those controls? In India the Central Government refused to give any popular basis at all to their food plans. Even the occasional food conferences that were summoned contained few representatives of the people and many of them took a narrow party or administrative view of the whole problem. None can deny that in India at least—whatever may be true of countries like Britain—politics has a lot to do even with the food problem.

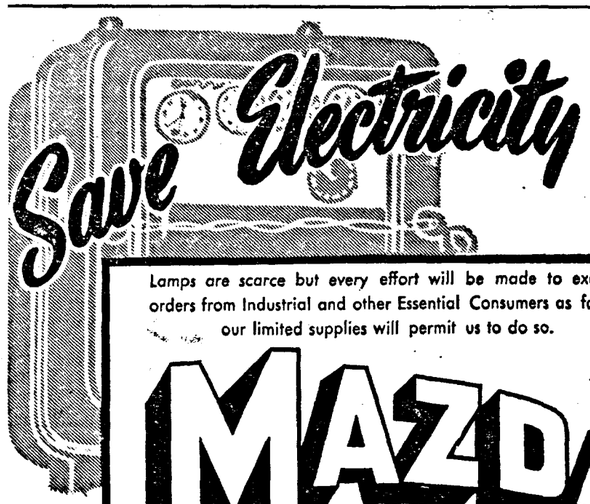
(From Our Correspondent)

Bombay, 19th September 1944.

The conference on the activities of the U.K.C.C. in this country served to clear up some wrong impressions. At any rate, the figures of the actual trade cleared by the U.K.C.C., as supplied by the Commerce Member, suggested that between January 1941 and March 1944, 90% of the activity of the U.K.C.C. only concerned exports to Russia valued at Rs. 13 crores. The Corporation had not handled any exports to the U.K. on private account or for H.M.G. or to the U.S.A. with small exceptions, the delegates were informed. It was sought to be made out that the share of the Corporation in the trade with Turkey and Middle East countries was small and that the complaint about exports of Indian sugar to Persia were based on exaggerated figures. The actual shipments to Persia, were, it seems, only 1,500 tons. Government spokesmen flatly denied the allegations that the supplies had been made to the U.K.C.C. without regard to the needs of the country. The official defence was not convincing, and in any case, it comes very late in the day to dispel apprehensions that institutions like the U.K.C.C. have come to stay and may play a large part in the foreign trade of this country. The representatives of Indian commerce were, in my opinion, right in insisting upon the resumption of normal trade without the aid of these agencies. Equally wise was the recommendation that the question of creating an Indian commercial corporation on the lines of the U.K.C.C. does not arise now, and could be considered later if similar organisations were set up in other countries.

Mr. Pranlal Devkaran Nanjee, President of the Indian Merchants' Chamber, devoted a considerable part of his address to the Commerce Member to the fears that powerful British vested interests might monopolise the foreign trade of this country, at the interview which the Committee of the Chamber had with him. All along export policy was causing concern; witness the exports of food-stuffs, cotton piecegoods, and coal (to mention only a few) which have been allowed to go on in spite of these being in terrible short supply within the country. It is now the turn of the import trade to be the source of acute anxiety. The disturbing trends are to be seen in the likelihood of unchecked competition of imported chemical goods. Recently, many common chemicals have been imported in substantial quantities, where the indigenous industry could well have supplied them. There is a real danger of the country being flooded with consumer's goods in the name of fighting inflation, thereby causing anxious moments to many new industries, to which assurances were given by Government two years ago that they will not be left in the cold. Mr. Pranlal enunciated the guiding principle that production in the country should be stepped up and the gaps in the industrial structure filled up by import of machinery, before imports are allowed indiscriminately. He pleaded for a purposive direction to the import trade. The coal supply and distribution is still anything but satisfactory. By far, the most notable point urged by him concerns the menace of foreign combines. He cited the widespread belief that the fertiliser industry may be handed over to Imperial Chemicals. The presentiments of the export and import trade being canalised with particular countries through the creation of powerful agencies *a la* U.K.C.C., were also voiced by him. Reports are current that exports to U.S.A. and Turkey will be handled by such agencies. This attempt to set up monopolistic agencies in place of usual trade channels deserves the most severe condemnation.



The existing system of controls, far from being helpful in obtaining supplies and effecting proper distribution, may easily be misused. Portents are not lacking. Thus, licences for the import of certain chemicals are now being given only to accredited representatives of foreign manufacturers, thereby granting a virtual monopoly in that trade to a few agencies. Indeed, the Indian commercial community has reason to view with positive alarm the tendencies now noticeable, particularly when government figures as a serious abettor in suppression of Indian participation in the foreign trade and throws overboard traditional methods. Read these trends in conjunction with the system of imperial preference, lack of shipping space and the present fiscal policy, and there you have enough ground for the anxiety that the Indian businessmen are sought to be ousted completely. Mr. Pranlal has done a great service by focussing attention on these aspects, which deserve to be taken up actively by the press and public.

The committee of the All India Manufacturers' Association also met the Commerce Member. Mr. Sankalchand Shah, the Vice-President of the A.I.M.O. made two points which deserve notice. He urged the setting up of advisory panels in each industry, since without controlling the process of acquisition and distribution of raw materials, the control over finished products cannot be a success. Mr. Shah also urged the Government to take over a portion of the stocks built up by military authorities and distribute them to the civilians. The problems of industry were also raised by him. The Exporters' Association in its memorandum to the Commerce Member pointed out how millowners were not supplying cloth for export on account of the inadequate margin of profit. Amendment of the Control Order was suggested as a remedy.

The Stone Committee's report on the Bombay Docks Explosions constitutes a formidable indictment against the authorities concerned in the disaster. The report, of which a good deal is stated to have not yet seen the light of day, shows the bungling there had been at every stage, since the ill-fated s.s FORT STIKINE discharged the first munitions consignment at Karachi. The causes for the disaster are now well known. These were primary and secondary. The absence of proper authority to direct the steps necessary to control the fire on the ship and to deal with the burning vessel was the immediate cause. But the pre-disposing cause was at least as important. The cotton loaded in at Karachi was the root cause of the whole trouble. The representatives of the Ministry of Transport and of the War Transport Department must be held to be the villains of the piece. The excuse that cotton and fish were high priority cargo will cut no ice. Nor can the plea hold water that Indian economy badly needed fish and manure,, as is now trotted out by the government. The report makes it clear that both H.M.G. and the Government of India must take the blame for the disaster. There has been an unpardonable degree of culpable negligence throughout. The Indian insurance companies were right, it seems, when April last they averred that they should not be called upon to pay the compensation or the claims. Finally, one cannot withold a word of unstinting praise for the manner in which Sir Leonard Stone and his colleagues have tackled the task entrusted to them. One had expected a white-washing enquiry. What one got was an illuminating and conscientious report, the tragedy of which is but partly relieved by the humour of the Government in an attempt to extenuate their responsibility for the occurrence.

The representations of the cotton panel of the Textile Control Board have not altogether been fruitless. The Government of India have amended the floor and ceiling prices of cotton of the following descriptions exgodown Bombay (New Mill Terms) for 1944-45 season. These prices cancel the limits

South India

(From Our Correspondent)

Madras, Sept. 20.

The food position in the Province is not what it should be. While the Government admit that stocks are below the prescribed level in many districts, arrangements are almost complete for the introduction of a district-wide rationing in Malabar. The numbering of houses and arrangements for the procurement of grains are also in progress. This is the first time rural rationing has been undertaken in India and the Madras Government are very anxious to make this experiment a success. But it is doubtful whether they will be able to achieve their task without unduly indenting upon the Central Government's resources. Already supply of rice quotas to deficit districts is in heavy arrears and procurement in surplus districts is becoming increasingly difficult. The prospects of a good harvest are also not bright. The southwest monsoon has not been normal this year in the three southern districts namely Ramnad, Madura and Tinnevely. In the Ceded Districts also the position is no better. Coimbatore district is threatened with a serious shortage while in Malabar the monsoon has been distinctly defective and the harvest is likely to be definitely below normal. In spite of the depleted stock and an uncertain harvest the Government are determined not to effect any reduction in the rate of ration now obtaining in rationed areas. The next month or two may be a very difficult period for the province as a whole, but a substantial improvement may be brought about when the impending harvest in some of the southern districts is finished.

The report for 1943 of the Department of Public Health shows that there was a further decrease in the birth rate from 33.81 in 1942 to 31.12 per mille in 1943. In 1936 the birth rate was 36.2 per mille and since then there has been a steady decline. The death rate increased from 22.49 per mille in 1942 to 25.25 in 1943. The infantile mortality rate also increased from 159.67 in 1942 to 172.29 during 1943.

In this connection the Government have called upon the Director of Public Health to make a special investigation into the question of the steady decline in the birth rate in the Presidency.

It may be remembered that the Government had under consideration a scheme for the preparation of crude rubber from *crypostegia grandiflora*, a species of vines which is found in plenty in many parts of the province. It is said the plant was first introduced into India some 30 years ago from Australia. So far no attempt has been made to utilise this wild plant which is available in abundant quantity particularly in the Kurnool district. Research workers had been carrying on experiments for more than a year now and first results were not encouraging as the cost of production worked out to be Rs. 15 or 20 per lb. In spite of the initial setback, further researches were proceeded with under the aegis of the Government. As a result of persistent efforts a new method was devised and the cost was brought down to Rs. 3 or 4 per lb. On the strength of the initial success the Government have decided to proceed with the scheme and have now appointed a botanist and a chemist with the necessary staff. A training centre for the training of maistries has been opened at Bannur village about 20 miles from Kurnool town. With the development of further research new methods could be devised and the cost of production further brought down. It is also believed that the industry can survive as a cottage industry even in the post-war period.

Ever since the fact that India is a deficit country in the matter of food was realised both the Government and the public have bestowed more attention on the country's food production. Almost all the provinces introduced the "Grow-More-Food" campaign. The emphasis shifted from cash crops to food crops and agriculture received greater attention. Naturally the poor yield of the soil came in for examination and the need for using a larger quantity of artificial fertilisers was universally accepted. Various schemes were formulated and perfected. The use of ammonium sulphate as a fertiliser was advocated by expert agriculturists. It is said this particular fertiliser will increase the yield by 30 per cent. Sir J. C. Ghosh speaking at the Indian Institute of Science on the prospects of the manufacturing of this fertiliser in India disclosed that the Government of India have decided to produce in the Mysore State factory 300,000 tons of ammonium sulphate per annum. This quantity by no means represents the total demand. Another 1,700,000 tons may be easily consumed and there is ample scope for private enterprise. He also made mention of a proposal for the establishment of factories under the auspices of the Central Government in the vicinity of the coal fields in north-east India. The Doctor was of the opinion that large synthetic fertiliser factories in the coal area can very well stand up to foreign competition.

Airway Port

(From Our Correspondent)

Karachi, Sept. 15.

The recent unprecedented rainfalls in Western India have not only affected Surat and Marwar but Sind as well. Great damage to foodgrains hoarded in the interior of the province and Karachi city was caused. Close on the heels of the rainfall or because of it, the river Indus was flooded. The damage caused by the floods is estimated to be about one crore. Crops in the affected area have been destroyed. Particularly distressing is the picture of ruin that comes from Dadu and Larkana. Latest reports indicate that water has subsided by a foot or a foot and a half in the stretch covered by the floods in Dadu district and it will not be before a month and a half that the area will be ready for cultivation again. The total crop acreage loss by floods is estimated at nearly 70,000. Government had sanctioned Rs. 20,000 for immediate relief for those affected by the floods but this amount was speedily exhausted and the cry for more funds is in the air.

A vigorous campaign to grow more vegetables in the province has been launched by the Government of Sind. A number of schemes have already been formulated, some of which are being executed. Even the military authorities have shown serious concern over this problem and a special deputation of three officers met and discussed the situation with the acting Director of Agriculture, Sind. As far as the present situation goes most of the quantity of vegetables, grown in Sind is consumed by the military and only meagre supplies enter the market for civilian consumption but the military authorities have now come forward to offer their assistance to ease the situation by encouraging the growers to cultivate more vegetables by supplying them improved seeds and fertilisers which they have received from America on lend and lease basis. It is also revealed that the military authorities are prepared to give advances to the growers, interest free, returnable in three years, provide transport facilities and also make direct purchases, thereby eliminating middleman's profits.

A bright future for Karachi as the supplier of shark liver oil to the world market and the vast scope for the development of fisheries and the manufacture of fish manure was emphasised by Dr. Ramaswami Naidu, Fisheries Expert to the Government of Sind in the course of an interview to the local press. Dr. Naidu has already started the survey of indigenous fishing craft and tackled various kinds of fish constituting normal catch in the waters of the surrounding coast of Karachi with a view to adopt improved methods for augmenting the supply of fresh fish. Adverting to private enterprise of the shark liver oil industry in Sind, Dr. Naidu said that the Government were examining the question whether they should encourage the existing enterprise by giving technical advice to produce the standard type of oil or undertake the manufacture of oil under Government auspices.

There appears to be a remote possibility of starting a fresh dehydration factory in Karachi under Government control. This is indicated in the course of an inquiry made by the provincial fisheries experts in connection with a query put up by the Central Government whether Karachi could own a separate factory for dehydrating fish in order to make available adequate quantities to the military.

With a view to form a Central Consumers' Co-operative Store, the Registrar of Co-operative Societies, Sind, has called a meeting of, all the co-operative primary stores in Karachi on September 18. I learn that there are 11 primary stores in Karachi, which are working on a co-operative basis to purchase and sell articles independently. It is proposed to organise a central organisation which would meet the requirements of these primary stores.

Very soon Karachi city too will have a coffee house. Plans are all ready for opening a coffee house but the trouble is about securing suitable premises and if they are secured, we too will fall in line with Delhi, Bombay and other leading cities.

With the possibility of European war coming to a speedy end, the bullion market is showing a bearish tendency. The price of silver and gold has come down appreciably. In this respect, Karachi reacts sharply to Bombay. Discouraging advices from Bombay always result in heavy speculative selling.

The ready cotton market is more or less steady.

Resume of Commodity Markets

Generally steady conditions have been noticeable in the commodity markets during the past week. The raw jute market was inclined to be slightly easier in the early days but following the publication of the final forecast figures a steadier tendency is noticeable. The Bombay raw cotton market has continued firm, business in new crop being allowed as from this week. There has been a further decline in prices for bullion and the indications are that there might be yet further decline in prices. In the piecegoods market steady conditions have prevailed but continued difficulty is being experienced by consumers in Bengal in purchasing their requirements for the Puja festivities.

The publication of the final forecast figures for the 1943-44 jute crop shows a decline in the estimated yield in nearly every important district. The consolidated figures might thus prove to be short of trade estimates. With the prospect of smaller supplies there is naturally a tendency to await further developments. Sellers have not been eager to dispose of their holdings though they are prepared to accept orders at current rates for forward deliveries. Imports have been coming in on a larger scale and there has been a further rise in the level of the rivers. The satisfactory progress of harvesting has knocked out the premium over Calcutta parity prices in certain districts but there has not been any appreciable 'give' in the market and rush for selling.

The jute manufactures market has continued uninteresting. Secondhand sellers have been offering a slight discount in rates but mills are not prepared to accept business at below maximum rates so that the tussle between the bazar and the mills is still going on. In the heavy goods section weak conditions have continued to prevail and a discount is available for most of the varieties. But for the anxiety of mills to do business in heavies, it will be possible to say that there is no chance of an appreciable decline in prices for hessian.

Following the recommendations made by the Cotton Committee of the Textile Control Board that futures (hedge) trading should be allowed in the interests of cotton-growers, the Government of India have sanctioned such trading during the 1944-45 season subject to certain conditions.

The conditions include that trading shall be permitted only in the official market of the East India Cotton Association, Bombay and that of the Karachi Cotton Association and that no trading shall take place in any futures contract stipulating delivery prior to March 1945.

The ceiling and floor prices for such trading will be: For the Indian cotton contract in Bombay—ceiling Rs. 550 and floor Rs. 350 per candy; for the 4f contract in Karachi ceiling Rs. 57-10 per md., and floor Rs. 37.

Trading in options continues to be prohibited.

It will thus be seen that there has been no change in the basis of contract in Bombay. The ready market has continued weak and the quotation for Jharilla was nominally around Rs. 400. As there is a possibility of old stocks being used up to a considerable extent owing to the late movement of the crop higher the quotation for March delivery is at Rs. 435. May was done up to Rs. 447-4.

There has been a further sharp decline in prices for gold, the lack of investment buying and the satisfactory progress of operations against Germany being mainly responsible for the drop in prices. As a matter of fact holders are afraid that there might be a further break in prices and that it would be advantageous for them to sell at the present levels. Gold ready closed at Rs. 66 and forward at Rs. 65-4. Quotations at the end of last week were Rs. 68-6 and Rs. 68-4 respectively. It will thus be seen that there has been a considerable widening in the discount for forward over ready.

The silver market also has been lower but the decline in prices has not been proportionate as silver stocks are still small and the oversold position has not been fully squared up. Silver ready closed at Rs. 124-8 and forward at Rs. 122 against at Rs. 127-8 and Rs. 125-2 respectively at the end of last week. As in the gold market there has been an increase in the premium for ready over forward.

In spite of the arrangements for the distribution of piecegoods to approved retail dealers in order to enable consumers get their requirements for the Puja festival, there is still considerable difficulty in effecting one's purchases. There has been some criticism of the arrangements made by the Provincial Government authorities for an equitable distribution of the available supplies. It is said that great difficulty is being experienced in mofussil centres especially. Dealers have been warned to take delivery of their consignments as soon as they arrive as there is great congestion at the railway stations. The object of additional despatches from the Western Presidency will be defeated if these consignments were not speedily distributed.

(*Continued from page* 434)

announced last July. For the American seed descriptions, adjustments have been for sawginned only. The floor and ceilings fixed earlier have been given in brackets.

Fine M. G. Western 13/16 in. Rs. 590 (570), Rs. 390 (370).

Fine M. G. Upland 13/16 in. Rs. 590 (570), Rs. 390 (370).

Fine S. G. 4F Punjab/American 3/4 in. Rs. 600 (590), Rs. 390 (390).

Fine S. G. L. S. S. Punjab/American 13/16 in. Rs. 635 (625), Rs. 425 (425).

Fine S. G. 289F Punjab/American 7/8 in. Rs. 715 (685), Rs. 500 (485).

Fine S. G. 4F Sind/American 3/4 in. Rs. 600 (590), Rs. 390 (390).

Fine S. G. L. S. S. Sind/American 13/16 in. Rs. 635 (625), Rs. 425 (425).

Fine S. G. N. T. Sind/American 7/8 in. Rs. 690 (670), Rs. 480 (470).

Fine S. G. 289F Sind/American 7/8 in. Rs. 700 (680), Rs. 490 (480).

A ceiling price for Fine Sind Deshi cotton has also been fixed at Rs. 400 per candy exgodown Bombay.

The revision does not amount to much, but one learns to be thankful for small mercies now-a-days. But one question suggests itself: if the war ends soon and export of cotton commences, will not the ceiling prices thwart the cotton grower from realising higher prices to which he would in all fairness be entitled? Will the Government's price policy apply to the whole of the 1944-45 season or only until the war ends even if in the case the latter comes off in the next few months.

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance"

CALCUTTA, Sept. 21

With holidays intervening, there is only a short week's business to report on and a very dull week at that. In the circumstances it might have been expected that the issue of the Final Forecast figures would have caused at least a flicker of interest, but there has been none perceptible. The avowed object of the Bengal Government being to keep up the price of jute, there is an understandable suspicion that no figures would be permitted which did not tend to support this objective. The Forecast is apparently to be somewhat more informative than the Preliminary was, and for what is may be worth, we offer an analysis of the figures so far issued, representing roughly two thirds of the jute area. Acreage under jute is returned at 22 per cent under last year and the yield from that area at 20 per cent less than last year. There is a good deal of variation in the position recorded from district to district. The important Dacca district return shows a drop in acreage of 32 per cent from last year and a drop in yield of 35 per cent. Mymensingh, the largest district of all, shows 23 per cent drop in acreage and 25 per cent decrease in yield. Another important district, Tipperah, while showing a reduction in acreage of 20 per cent is expected to yield only 7 per cent less than last year. The only notable variations in the other direction are Jalpaiguri, which records an increase both in area and yield, and Hooghly, a Daisee district, where an increase of 15 per cent yield is forecast from a smaller area than last year. That is about all that can be said of the information so far before us, and further comment must await the consolidated figures.

Requisitioning of jute Mill premises is not yet at an end and is being proceeded with in a manner not by any means calculated to help the I.J.M.A. to maintain their target production figure of 100,000 tons per month. Quite a number of coal consuming mills have been virtually idle for several months, working for perhaps one week out of the month owing to shortage of coal supplies. One would have imagined that the proper policy would be to requisition such "lame ducks" of the industry, so that production might be interfered with as little as possible. It is rather astonishing therefore to hear that half of one large electrically driven unit is to be taken over and that another electric concern which has two units in the same compound, has received notice that one is to be taken over. While there will be only a small loss in production by these requisitionings—in each case presumably double shift will be worked in the remaining space left, but experience has proved that 100 per cent efficiency cannot be obtained in this manner, indeed 80 per cent efficiency is about the maximum to be expected—this seizure of electrically driven units cuts right under the I.J.M.A. scheme whereby electric units could increase their working hours and absorb surplus loom-hours through the Pool from those concerns which could not keep going for want of coal. The whole scheme of the Pool was based on a system of rationalisation whereby the more efficient units could be kept working to their full capacity while the less efficient units received compensation for their enforced idleness. But it would appear that such consideration cut no ice with the military authorities. Lack of co-ordination again in high places seems likely to nullify the best efforts of the I.J.M.A. to meet war requirements both for accommodation and for goods production. We hear too that another unit which was under notice is to be permitted to retain its mill premises but must give up all its godowns. How it is to dispose of its raw material and finished products is nobody's business.

While on the subject of Coal, attention might again be drawn to the sheer folly of utilising freight space in present circumstances on anything but the best quality material. Supplies of Coke Breeze continue to be sent to mills. This in itself has little or no calorific value, but can be utilised to a limited extent along with high calorific value coal and a head of steam maintained with the mixture thus diluted. But with much of the coal being supplied, it is hard enough to keep steam on the coal alone, quite apart from any admixture of poor coal and coke breeze. Incidentally there has been little sign so far of the improved quantity of supplies forecast by the Supply Member some time ago, to take place in September and October.

Exports of Raw Jute during August were recorded as 50,000 bales against only half that quantity a year ago. The total quantity exported since the beginning of the new season in July is thus 1,27,000 bales. There has been little activity in the Export market.

The Loose Jute market has also been almost devoid of activity. The state of the Goods market certainly offers no inducement to mills to resume purchases, and in not a few cases, storing capacity is taxed to its utmost, while severe penalties in the way of demurrage are threatened by the Lighterage Pool for detention of barges beyond the very minimum time required for unloading. Incidentally, it seems anomalous that while kutcha bales ex Flats are subject to severe demurrage in the event of delayed unloading, no such provision seems to be made with regard to pucca bales consigned from a Presshouse to a Mill. Indian Mills distributed some Puja business, mainly in Indian Jat marks at Rs. 16/8 Mids and Rs. 13/8 Bots, and Indian District Tossa was reported at Rs. 16/4 and Rs. 3/4 for Mids and Bots, a reduction of four annas on the previously recorded price. Sellers show more anxiety for fresh business but want the proposal for a reduced rate to come from buyers, when it would probably be accepted. Stormy weather up country has rather checked the flow of imports for the moment, but these are definitely on the increase, while rivers are high and steady, enabling cutting to and steeping be proceeded with. Estimated arrivals of raw jute for the first half of September are 2,53,000 bales against 2,09,000 during the similar period last year. This brings total arrivals from the beginning of the season to mid-September to 12,65,000 bales this season compared with 13,56,000 last season.

The position of the Fabrics market shows little change from last week. The Bazars are strongly "Bear" and are hoping to force Mills into breaking their prices for Heavy Goods. So far Mills have resisted this movement but there may be chinks in their armour here and there and it is difficult to forecast how the tussle will result. "B" Twills are the principal "bear" counter and have been quoted as low as Rs. 59/8, though at the close they stand nominally at Rs. 60/8. Other descriptions of Heavy Goods are also quoted at under maximum rates though there are no Mill sellers at less. But the fact remains that actual demand for Heavy Goods is at the moment non-existent. There are persistent rumours put about by the Bazar day by day of Mills having broken the maximum prices, but these have all proved to be false up to now. Equally there are persistent rumours of a large Government order, perhaps for the U.N.R.R.A., pending, but this on the other hand may be another case of wishful thinking.

(*Continued from page* 432)

Sir Ramaswami Mudaliar were alive to it. And what is more, as Sir Ramaswami took care to point out, the Directorate of the National Rolling Mills was an anticipation not only of the success of the talks at Malabar Hill but also of the success of the talks which are yet to be initiated between Gandhiji and Mr. Jinnah on the one hand and Lord Wavell on the other. Mr. Khemka has done well to be so much ahead of the present as to make his Board take the shape of things to come.

Another function which, so to say, takes a big stride into the future is in connection with the Art in Industry Exhibition inaugurated by Mr. Born a few years ago with all the zeal and vision of a genuine pioneer. When it was first started, people were not wanting who looked on it as but an energetic fad. But it was not long before its potentialities for bringing about a happy union between Art and Industry began to be recognised. Those who stood aloof in a spirit of cautious incredulity have joined in the movement. Art in Industry is, indeed, a great movement—Ruskin and Morris talked a kind of language which we begin to understand only now. Thanks to Mr. Born's zeal, the movement will no longer be a matter of mere annual exhibitions. There is to be an Institute of Art in Industry, which will be worked on the basis of co-operation between artists and big business and which will work steadily towards the maintenance in industry of quality, utility and beauty.

EVERY RUPEE SAVED NOW...

will buy more when the war ends. With prices as high as they are today it is plain commonsense that you are getting bad value for your money. Besides, remember that prices are falling. Compare the prices of cloth, foodgrains, medicines etc. a year ago with prices today. The wise man saved his money and can now buy cheaper than before. The wisest thing of all however, is to save all you can now in order to get twice as much for your money when peace returns.

Be sure that the money you save is safely invested. Jewels, Land, buildings, manufactured goods and commodities are bad investments these days. Their prices are abnormally high and you will certainly find one day that they are coming down.

For security and fair return put your money into Government Loans, National Savings Certificates, Insurance, Co-operative Societies, Post-Office Savings Bank or a Savings Bank Account

Stock Markets to-day and to-morrow:

QUIET CLOSE FOR THE HOLI DAYS

The Calcutta Stock Exchange closed on Monday this week for the long Id and Puja holidays. As there was little activity the effect of the declaration of a good final dividend by the Indian Iron & Steel Company Limited for the year ended March 1944 was lost on the market. There was a rise in the quotation to Rs. 38-12 for Indian Irons on the announcement of the dividend but with realisation at the higher levels the gains were lost. In unofficial transactions the quotations for Indian Irons and Steel Corporations are reported to be about Rs. 38-4 and Rs. 30-4 though Bombay advices are easier and quotations in that centre have been marked lower in sympathy with other markets.

* * * *

The Bombay market has been rather quiet in the past few days with the encouraging news from the war fronts and the weakness of the bullion markets. There has been some fresh buying and covering at the lower levels but in view of the fact that *Moorat* is not far off it is unlikely that there will be any appreciable improvement in values. In the closing weeks of the financial year there will be general tax-selling While the decline in the bullion market has not been altogether unexpected, the drop of over ten points should have an unsettling effect and restrain business on the stock market. All indications, therefore, point to the resumption of the upward movement only after mid-October. In the last three years there has been a major recovery movement in the last quarter of the year and a similar recovery might take place this year. It might be said that the prospects of peace would have an unsetting effect on markets but in a leading article in the main issue we have pointed out that war or peace industries would continue to be busy and that earnings would be maintained at high levels. I have also pointed out on more than one occasion that there is no fear of any setback in prices. In fact, there might be a big rise in prices later in the year.

* * * *

The Madras market has been subject to special influences. The recent sharp decline in prices have unnerved many operators and investors. The whole structure of prices had been built up on expectations of a high level of earnings for both the cotton and plantation industries. The withdrawal of the Rubber Bonus Scheme and the frequent reductions in ceiling prices for cotton textiles, combined with the prospects of an early peace, gave rise to the fears that earnings of cotton mills and plantations would be affected considerably and that dividend payments would be very much lower. It is not perhaps correct to say that the earnings of cotton mills would be very much lower and that it would not be possible to pay reasonable dividends. The tax refunds in the case of many companies would enable the payment of good dividends for several years while in the case of rubber companies earnings can be expected to be at a high level for as long as the war against the Japanese lasts.

* * * *

In order to arrest the continuous decline in prices and restore confidence in the market the Council of Management of the Madras Stock Exchange recently fixed minimum prices for leading local shares. These minima have been fixed for textiles, plantations and miscellaneous shares which have suffered most during the past three or four weeks. Public utilities, banks and sugar shares have not been similiarly affected though there has been a sympathetic fall in prices. The fixation of minimum prices has had an encouraging effect on the market and there has been some fresh buying and covering at the lower levels. It might perhaps take some time for a sustained rally to be staged.

* * * *

The accounts of the *Midnapore Zemindary Company Limited* make very good showing. Rents and miscellaneous collections in both divisions due to large paddy crops, high prices and strong demand for land were better than they have been for many years. As a result the net profit before providing for taxation and depreciation for the year ended April 1944 is Rs. 11,27,441 against Rs. 7,46,048 for the previous twelve months. The provision for taxation is very much higher at Rs. 2.5 lakhs (Rs. 95,000). Full provision has been made for the Bengal Agricultural Income-tax in case it is assessed in respect of its income for the year. After transferring Rs. 2,25,000 from Reserve and allocating Rs. 7,73,314 to Premium Lease Reserve Account, the total distribution for the year is 10 percent against 5 percent. An interim dividend of Rs. 4 per share has been already paid. The final dividend now payable is Rs. 4 per share plus a bonus of Rs. 2 per share. The amount carried forward is Rs. 1,09,869 against Rs. 1,65,305 brought in.

* * * *

There has been a distinct improvement in the coal situation and many of the collieries have been able to report an appreciable increase in both raisings and despatches. Special allowances in regard to depreciation and hopes that large bonuses might be granted for raisings in excess of the target level have perhaps encouraged coal-miners to report higher raisings. Evidence of the improved conditions in the industry is provided by the *Khas Khajora Coal Company Limited* for the half-year ended June 30, 1944. There is an appreciable increase in both raisings and despatches for the previous half-year, thanks to the improved labour situation. Raisings, however, do not show any large increase over the figures for the corresponding period last year. The net profit, before providing for taxation and depreciation, for the six months is Rs. 1,57,802 and is the highest for several years. Provision for taxation, however, is as much as Rs. 1,14,830 (Rs. 7.715 in the corresponding period of 1943.) After providing for depreciation Rs. 6.000 (Rs. 5.600) and setting aside Rs. 22,000 as compulsory E.P.T. deposit, it has been possible to pay a dividend on the ordinary shares at 5 percent per annum after paying 8 percent per annum on the cumulative participating preference shares. In the half-year ended December 1943 a preference dividend of only 5 percent was paid. The amount carried forward is Rs. 3,809 against Rs. 915 brought in.

(By Analyst)

Bombay, September 22.

With the momentous Quebec Conference now over, the keen expectation of cessation of hostilities on the Continent and the beginning of the war in the East in right earnest is now occupying the minds of the public in general and market operators in particular. Some quarters believe that the end of the war in the West would mean a reduction in war orders and that Indian industries would not be able to make the same amount of profits as heretofore, due to organised competition of the highly advanced industrial nations of the West. Therefore dividend prospects are not so rosy. In this connection the announcement by the British Government of their plan for directing the re-establishment of the cotton industry in England will, I hope, not escape the attention of the industrialists in India who should also aim at improving technical efficiency in the postwar period. Looking at the following points of the plan, it is not beyond the resources of our industrialists to plan ahead in a like manner firstly to bring about such amalgamations, particularly in the spinning section, as are required to secure efficient and financially strong units; secondly to undertake the necessary re-equipment so that in respect of machinery, buildings and amenities the industry will be second to none; thirdly to overhaul the commercial organisations particularly with a view to enabling the producing sections to achieve the great economies of continuous runs and bulk production; fourthly to modify and simplify the wage structure of the industry and fifthly to extend doubleshift working without which the expense of installing modern machinery in many cases would not be justified. As mentioned in several of my previous gossips whilst it is true that a cut in the prospective dividends is certain the present decline in the share markets counterbalances most of the unfavourable factors and purchases of select equities on sharp declines I believe would prove profitable in the long run.

In iron and steel and engineering, the sentiment was rather firm in the beginning of the week under review but the closing quotations were easier. Due to sellers predominating *Tata Steel Defds.* opened this week at Rs. 2,080 and were done up to Rs. 2,125 only to decline again to Rs. 2,097-8. *Tata Steel Ordys.* also had a sympathetic fall to Rs. 371. As against a high of Rs. 38-8 touched last week on reports of a higher dividend of Re. 1-6, as against market expectation of only Re. 1-2, making the total for the year Re. 1-12, *Indian Irons* this week were marked down to Rs. 37-4, and *Steel Corporations* hovered around Rs. 30. In the engineering group, *Alcocks* were steady at Rs. 412-8, *Premier Construction* changed hands at Rs. 185, *Bruntons* in Madras were Rs. 11-4.

Textiles were steadier and selective investment buying was witnessed in this section during the week under review. *Bombay Dyeings* after fluctuating between Rs. 1,715 and Rs. 1,735 closed at Rs. 1,715, *Central India* were remarkably steady at Rs. 362, *Century* were neglected at Rs. 760, *Kohinoors* were slightly lower at Rs. 535 while *Swadeshis* after once being done at Rs. 484-8 closed steady at Rs. 477. My favourites *Azamjahis* and *Osmanshahis* met with keen investment enquiry at Rs. 472-8 and Rs. 265 respectively. Being recommended frequently I suggest investment purchases of *Azamjahis, Osmanshahis* and *Bombay Dyeings* on every decline. In Madras with the exception of *Sitarams* which shot up to Rs. 157 as compared to a low of Rs. 144 touched only ten days ago, all the other shares ruled rather steady. *Buckingham and Carnatic* met with good enquiry at Rs. 300, *Rajalakshmis* were done at Rs. 185, *Pankajas* at Rs. 258 and *Lakshmi* (old) and *Lakshmi* (new) at Rs. 140 and Rs. 71-12 respectively. *Coimbatore Spinning,* however, declined to Rs. 168-8.

BY INVESTING IN WAR LOANS ASK YOUR BANK

Impressive Progress:

The steady progress of the New Bank of India Limited since its inception inspires confidence in its constituents and has been helpful in getting new accounts every year in larger numbers. In 1937 total deposits were only Rs. 1,04,881. At the end of June 1943 they had increased to Rs. 1.91 crores. More impressive progress has been reported in 1943-44. Deposits have more than doubled to Rs. 4.07 crores.

The management has been careful in the disposition of funds. The cash ratio is very high at 20 per cent. Advances were Rs. 1.89 crores against Rs. 84.25 lakhs and investments Rs. 1.56 crores against Rs. 66 lakhs. Holdings in government and other approved securities were Rs. 1.39 crores against Rs. 62.03 lakhs.

The larger working capital has naturally resulted in an increase in net earnings, the net profit for 1943-44 being Rs. 1,81,533 against Rs. 69,770 for 1942-43. The directors, however, have decided to maintain the dividend only at 6 per cent and have added substantially to reserves.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Conditions in the money market are unchanged; and, while banks in Calcutta have experienced a considerable turnover botn on the eve of and after the holidays, there has been nothing like pressure. The general attitude in the eastern territory reflects the continuing holiday feeling. Markets are generally inactive; but it remains to be seen what effect Mr. Churchill's promise (or threat?) of the war in Europe extending to many months of 1945 will have on the outlook of operators in the stock exchanges and commodity markets. In any case, such peace "panic" as there was must be dispelled.

Short credits have been in abundant supply. The Central Government continues in its luck of weekly increasing affluence. The deposits of member banks continue to be at a high level. As was to be expected in a week marked by so many holidays in Bengal, there was poor bidding for the Central treasury bills on September 26. Though applications were smaller at Rs. 10 crores (against Rs. 6 crores on offer), the average rate of accepted tenders was unchanged at 7 annas 11 pies per cent per annum. The offer of Central treasury bills for next week is unchanged at Rs. 6 crores.

The returns of the Reserve Bank for the week ended September 22, disclose an expansion of currency for Rs. 3 crores against sterling securities. Active note circulation has gone up by Rs. 2.34 crores to Rs. 940.57 crores. In the banking department, Central Government's deposits have gone up by Rs. 8.50 crores to Rs. 168.70 crores; and deposits of member banks by Rs. 33.30 lakhs to Rs. 101.25 crores. Deposits of Provincial Governments are down by Rs. 1.48 crores. Foreign balances in the banking department are now Rs. 290.10 crores, recording an addition of Rs. 6.45 crores. Considering that sterling securities in the issue department have also gone down by Rs. 3 crores, it may be inferred that the net sterling receipt from the Allied Governments during the week is of the order of Rs. 6½ crores.

In our reference of last week to the report of the Reserve Bank for the year 1943-44 we observed that this publication is now tending to become a fullsome review of Indian and world economy for the year in question. Closer study only confirms first impression. The data that have been accumulated and the manner in which they have been set out are extremely helpful in understanding the many-sided developments of the last few years in their proper sequence and relation. It is only to be expected that the official report of the Central Banking Institution should keep clear of questions of current controversy. The reader will find little to satisfy his curiosity as to what the administration of the Bank has got to say on the problem of our sterling balances. But one should be able to make the best use of the objectivity of the bank report, however narrowly it might have been viewed by its authors. There is, indeed, in India no official or quasi-official publication which puts together in one connected account the facts relating to the various facets of our national economy and finance. While formerly the reports of the Controller of Currency were content with brief references to the foreign trade of India and to the budgets of the Central Government and dealt at some length only with matters of immediate concern to the Controller of Currency, the Reserve Bank report attempts to relate the picture of India's currency, credit and exchange to the changes in Government finances, in the foreign trade of the country and in the general economic life of the people. This comprehensive treatment notwithstanding the report gives an impression of economic affluence, which, even if it is not untrue, certainly suffers from exaggeration. This is inevitable since the approach is from the monetary side of the national economic life. In a period in which note circulation has gone up at a specially accelerated pace to new heights, the repurcussions on other spheres are bound to take on a too rosy hue.

The Reserve Bank report has in two important respects afforded the proper corrective to such an impression. The figures of foreign trade furnished in the report include estimates of the changes in the quantum of exports and imports. And it is pointed out specifically that, as the price level of imports remained practically unaltered the rise in the value of imports was accompanied by an increase of 6.1 per cent in their quantum, which had been showing a continuous decline since 1940-41. On the other hand, in respect of exports, the quantum further declined by 13.8 per cent and was about half of the 1938-39 level. Export prices with a maximum wartime increase of 23.2 per cent rose to more than two and a quarter times the pre-war level. Nevertheless, the increase in the balance of trade from Rs. 84.25 crores in 1942-43 to Rs. 91.32 crores in 1943-44 is to be welcomed. There is, however, the fact that a considerable portion of cargo arriving in India from the United States consists of war materials and goods supplied on lend-lease terms for which no payment is made, which are therefore excluded from the balance of trade.

The improvement in the balance of trade resulting in a larger increase of export has enabled the net purchases of sterling by the Reserve Bank to a new high level at £105.3 million as compared with the previous year's record figure of £91.7 million. The monthly purchases were more evenly distributed than the previous year and the rate continued to be at 1s. 6d. the level which remained unchanged since January 1940. It must be remembered that during the year under review allied war expenditure in India was met in part by the import of gold on official account and that but for this the sterling acquisitions of the Bank would have been larger. Though the Reserve Bank report does not devote a separate section to the problem of inflation, it has recorded in detail the changes in the price level and makes special mention of the fact that the Calcutta index of wholesale prices reveals that the rise in prices was arrested by about the middle of the year under review and that there has been since then a decline of 37 points from 248 in September 1943 to 211 in March 1944. The credit for such a result, however, goes not to the financial or credit policies of the Bank, but to the measures of price control instituted by the Government. Another fact, which is a reflection on the Reserve Bank, is that India is one of the few countries, the Central Banks of which failed to effect a substantial increase in gold holdings during the period of the war. While in the case of the United States gold holdings rose from 414.6 million ounces in 1938 to 626.8 million ounces in 1943, India's gold holdings remained unchanged at 7.3 million ounces.

The Bank has a bright record of achievements to show in the sphere of public debt and new borrowings. There has been an improvement in nearly every respect. In treasury bills, the total amount tendered in 1943-44 was Rs. 628.59 crores against an offer of Rs. 384 crores as compared with Rs. 527.44 crores and Rs. 317 crores in the previous year. The rate of discount for the year averaged 14 annas 5 pies per cent as against 13 annas 11 pies per cent for 1942-43. The average rate of .96 per cent per annum in the case of India compares with 1 per cent in the United Kingdom, 1.46 per cent in Australia, .48 per cent in Canada. Investments during 1943-44 in Government of India loans amounted to Rs. 341.49 crores and accounted for 57.6 per cent of the aggregate investments of Rs. 592.45 crores since the

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00.00,000 of three months' Government of India Treasury Bills were opened o nTuesday, Sept. 26, 1944. Total amount offered was Rs. 10.00.50,000. Tenders at Rs. 9-14-3% were accepted in full and those at Rs. 9-14-0% were allotted approximately 58%. Total amount accepted was Rs. 6,00,00,000, the average rate of accepted tenders being Rs. 0-7-11% per annum.

Tenders for Rs. 6.00.00,000 of three months' Government of India Treasury Bills will be received on Tuesday, October 3, 1944 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, Oct. 2, 194 at other centres. Successful tenderers should make payment on Friday, Oct. 6, 1944. Other conditions are as usual.

During the week Sept. 22, 1944 Government of India Treasury Bils for Rs. 1,15,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Economic Internationalism

Post-war problems, outside the comparatively small circle of practical tasks relating to the settlement with the defeated enemy nations, are generally regarded as falling into broad divisions, distinguishable as political, economic, and of the nature of immediate relief work. These distinctions have an appeal for the ordinary public as a much needed aid to understanding, and for the Governments of nations and the ruling classes, as a help in carrying out their diplomatic tasks. The Atlantic Charter was drawn up with a commendable sense of the essential unity of post-war tasks; and it is possible that the obviously irksome nature of such a combination of aims and ideals is not the least of the causes of its subsequent relegation to the limbo of discarded ideals. The old established mode of considering international problems in narrow range and within rigidly defined limits has re-asserted itself. Not only are problems divided into economic and political, but economic problems are further subdivided. Diplomacy, which sees in every manifestation of internationalism a challenge to itself, recovers its self-assurance, when the terms of reference to Committees and Conferences are narrowed and the orbit of their enquiry carefully circumscribed. For once such limits are stipulated, not only is the technique of shelving inconvenient issues easily and effectively brought into play, but "national interests" regain an air of respectability.

A notable instance of this in recent experience is the treatment of the problem of sterling balances at the Brettonwoods Conference. Even more revealing is the remark of Mr. Morgenthau, the American Secretary to the Treasury, that India could not be given a permanent seat on the Executive of the International Monetary Fund, because in that case the British Empire would have two seats on the Board. Likewise, the differences that are reported to have arisen between the American and the British Governments over the treatment to be given to Italy show the dangers of compartmentalising post-war problems. If the U.S.A. favours, and Britain is opposed to, helping Italian industry to get on to its feet, it shows that the two powers, who will have the most effective voice in the solution of post-war problems, have not yet agreed on some of the basic principles. While the U.S.A. looks at the problem as one of reducing the burden of relief work, Britain regards it from the point of her post-war markets.

There is little reason to hope that an attempt will be made in the near future to consider post-war problems in their interrelation, with a view to deduce some leading principles of general validity in all problems of an international character. The great Powers, for reasons which have been indicated, are bound to favour piecemeal consideration of problems in isolation. And of the results that may be expected in each sphere, the work of the Brettonwoods Conference provides an illuminating sample. Nevertheless, problems of an international character are so large in number and magnitude that the general cause of internationalism is bound to make steady progress, though the various international conferences will be doing their best to sabotage it. It is in this vital respect that the years ahead will differ most from the years that followed the last war. For, now, problems have an undeniable and inescapable international significance.

In the political sphere, the world has outgrown the stage of exclusive spheres of influence. Balance of power, which was a practicable principle so long as it applied only to the Continent of Europe, and could bear extension to the Atlantic, is not easily applied to the whole of the earth's surface, particularly when it becomes more difficult to brush aside the claims of weaker peoples. The German colonies, which were mandated to the various powers after the last war, are perhaps the first instance of a political problem which called for a truly international outlook. To the extent that a similar course of action is ruled out in this war, internationalism may be said to have gained ground. It is still premature to go deeper into this question; for, it is only when South-East Asia will have been liberated from Japan, that the true nature, significance and dimensions of this problem will be understood. But one may venture to say now that the problem, regarded with freedom from the viewpoints of every individual nation concerned, will be in the main to make these areas an asset to world peace in the first place, and world economy in the second.

In the economic sphere, relief to war ravaged areas may be regarded as being the first item on the agenda. The scope and volume of the relief are presumably being studied by the U.N.R.R.A. though the data may not be as trustworthy as is generally thought. But it is significant that nothing has been said till now of the relation between relief and reconstruction, such as concern the U.N.R.R.A., and the larger picture of development of world economy during the post-war years. Yet it is obvious that more relief can be provided by intelligent reconstruction than mere shipments of consumer's goods. Likewise, it is better to remodel national economies according to the new potentialities of production and the new prospects of marketing than merely to reconstruct industries which have been damaged or disorganised by the war. In the last post-war period, economic reconstruction was conceived as a matter of ensuring a return to the gold standard and to free trade. The whole mass of facts which argued against such a simple recipe were more or less completely overlooked. The result was that on the one hand, a ricketty gold standard was established and on the other, there was a system of protection and other trade barriers which was wholly incompatible with the preservation of the gold standard. Here, again the differences between the last post-war period and the one that is ahead are worthy of note. The Brettonwoods Conference could not possibly consider an agreement which tied the hands of the participating nations in the matter of exchange controls. The draft constitution provided for the utmost freedom in this and similar respects. But the great powers are yet to discard the old habit of swearing by the principle of adherence to free trade and opposition to trade barriers of all kinds.

In the 'twenties, respect for free trade was sought to be ensured by the offer of international loans. No similar means is open now of ensuring allegiance to free trade. For in the monetary sphere, the cause of free trade has been already sabotaged by the wide latitude given in matters of exchange and exchange control. Another nail in the coffin of international free trade is the findings of the International Food Conference. Nothing is more significant of the abandonment of laissez faire and free trade than the enthronement of adequacy of food supplies as the first and foremost aim of international economic endeavour. Of the four freedoms vouchsafed by the Atlantic Charter, freedom from want is the one that will disconcert the worst cynic. The International Food Conference had to be convened; and not only did it find that the world had to increase its production of food many times to provide sufficient food for the world's population, but it also found that to ensure adequate food for the people must be primarily a national responsibility. In other words, the International Food Conference found it impossible to subscribe to the article of faith of a few decades ago that economic progress was best served by international free trade. If adequate nutrition is a desirable end, then every nation must be free to take the necessary steps towards that end.

Free trade, which is connected with the economic domination of the weaker peoples by the strong, has thus been undermined firstly in the financial sphere by latitude in regard to exchange control and secondly, in the sphere of national economic policy, by the primacy given to food supplies. We have indicated already that as regards the vast colonial areas, which will be liberated from Japan, the old policy of mandates will be found to be unsuitable and that balance of power and spheres of influence will not be as practicable in the future as in the past.

The question, therefore, arises: What are the basic principles of economic policy which should govern the deliberations and the decisions of international conferences of an economic kind? In this connection, attention may be drawn to the scheme, of which only vague outlines are now available, prepared by the I.L.O. for giving practical shape to the ideal of freedom from want. If it is true that post-war cynicism in its worst phase cannot dispense with the ideal of freedom from want, in regard to food, if not any other, then the main principles that we seek ought to be determined by the practical requirements of a policy designed to ensure adequacy of food supplies. It is, perhaps, technologically possible to make one or two countries the granary of the whole world. But there is no doubt that it is not practical politics. Food, wherever and however produced, must be to some extent for own consumption, to some extent for consumption in the home market and only in part for export and exchange into other commodities. The proportion of the food producing population to the total population must vary from country to country. And the lesser this proportion, the graver must be the problem of finding employment for the non-agricultural classes, so as to invest them with the necessary purchasing power for buying food. To the extent that production of food in adequate quantities entails the employment of progressive methods of cultivation, the ratio of food producers to total population must fall rather than rise; and industrialisation will become a necessity from the side of distribution of food stocks.

The implications of the findings of the International Food Conference, if they are carefully examined, will be found to

lead up to the more or less complete abandonment of laissez faire and free trade, the adoption of scientific methods of cultivation in the backward countries and such a wide-spread industrialisation as must lead to international trade changing out of recognition. It is inconceivable that such a programme can take place in any country in the world without its Government having a reasonable amount of political freedom. If adequacy of food supplies in India or Indo-China or West Indies is one of the aims of international economic policy in the post-war period, then industrialisation of these countries and the political freedom of these countries should be equally the concern of international policy. Though relief in the occupied countries is imperative, once they are liberated, there is need to think of their economic reconstruction in relation to the picture of world economy and international trade as it will develop in the years to come. Post-war problems, which refuse to be considered from exclusive national standpoints, have thus an essential unity, which the great powers can ignore or even flout only for a time. We have expressed the view before and we may repeat it again in this context that the dialectic applicable to the society of nations is yet to enter its most dynamic phase.

Demand for an Indian Commercial Corporation

As the war is coming to a close, it is but natural that the foreign trade of India during the war should come in for close review and post-war prospects for clarification. The actual course of the war has caused several surprises and the impact of military events on Indian industries had neither been uniform or evenly distributed. But owing to the pre-occupation of European countries and Japan in wartime production, the chance for capturing some of the markets previously held by them, viz., Africa and Mid-East, presented itself to India. The necessity to carry on economic warfare against the Axis powers by pre-emptive purchase and competitive selling against them in the neutral countries could have been taken advantage of by the Government of India for organising a strong export drive to retain the existing markets and to establish contact in the new ones. Self-governing countries have, in the past, always sought to make the best of wartime factors to build a strong merchant marine, to speed up internal production, to increase the self-sufficiency of the country and to create necessary agencies for carrying the country's trade into foreign lands so that the ground could be prepared for further progress during peacetime. In India it is well-known that even in the organisation of industries for imperative war purposes, care was taken to minimise the extent and degree of industrialisation. The system of controls instituted in India aimed more at ensuring temporary supplies to the military than towards tapping the country's resources for laying the foundations of a strong industrial economy.

While the Government of India was apathetic for obvious reasons, the United Kingdom formed the United Kingdom Commercial Corporation, invested it with pre-emptive rights, made it a filiature of the British Treasury, gave all facilities to operate in about twentyfour countries and thus fashioned it as the spearhead of British commerce. In virtue of the fact that it had the diplomatic and financial backing of the British Government, and particularly because of the support of the British Ministries of Shipping and Food, this Corporation could forge ahead. Besides carrying on economic warfare against the Axis in the Mid-East and elsewhere, it has succeeded in establishing the necessary contact with several countries for the rehabilitation of British trade during the post-war period. Indian businessmen have been consistently agitating for control over this U.K.C.C. With the aid of the Supply Department this Corporation could not only annex part of the profits which should have gone to Indian traders, but its activities have made it difficult for Indian traders to establish foreign contacts and cultivate new markets. For some time, it was believed that the U.K.C.C. was a mere wartime emergency and, with the restoration of normal conditions, it would be ended. But in spite of continued demand for clarification on this issue, His Majesty's Government have not yet indicated that with peace this Corporation would cease to function. It is now fairly clear that it would operate for some more years and that Britain intends to utilise the experience and contacts of this Corporation for its peacetime export drive. Last year the ex-President of the Federation of Indian Chambers of Commerce and Industry, Kumararaja Sir Muthiaya Chettiar, discussed implications of U.K.C.C. for Indian Commerce and advocated the creation of an Indian Commercial Corporation "which will be solely responsible for the purchase of goods in this country and which would, if conditions prevent direct contacts between Indian merchants and overseas buyers for various political or financial reasons, hand those commodities at port to the U.K.C.C. at reasonable prices, the U.K.C.C. then taking charge of those commodities and delivering them to the Governments or the people of the other countries concerned".

Commercial opinion in this country demanded that the U.K.C.C. should not purchase commodities in India at controlled prices and sell them abroad for huge profits but should remain a mere carrier leaving the purchasing operations to Indians. The agitation against the U.K.C.C. has been so strong that the Government sought to explain the position to the representatives of the commercial interest in this country.

At a recent meeting between the representatives of the Government and the commercial interests convened by the Commerce Member and held at the Bombay Secretariat, the activities of the U.K.C.C. were reviewed and the Government furnished statistics to show that much of the agitation carried on against the U.K.C.C. has been based on an exaggerated idea of the scale of the Corporation's activities in India. It was shown that 90 percent of the activities of the Corporation in India represented exports to Russia and that it had been valued at Rs. 13 crores between January and March 1944. Assurance was given that the U.K.C.C. had not handled any exports to the United Kingdom on private account or for the H.M.G. or the U.S.A. Government. Its sphere of operations in Turkey was shown to be small and covered jute goods for packing, materials for ship repair, and goods supplied by the Government of India against indents from His Majesty's Government for which payment has been made by the Turkish representative in India. The U.K.C.C. acted as the clearing agent for the Middle East Supply Council and cloth and yarn were outside its purview. Exports of sugar to Persia through this Corporation were barely 1,500 tons and it was also stated that allegations that supplies had been made to the U.K.C.C. without due consideration for the country's urgent needs were baseless. The Government spokesmen stated emphatically that there had not been any sort of interference from this body with commercial shipments.

The data submitted and the assurance given by the Government representatives seem to have been effective as is indicated by the fact that the conference did not insist on the formation of an Indian Commercial Corporation. It has been decided that such a body is now unnecessary in view of the fact that with the return of normal conditions and withdrawal of wartime restrictions and controls the position would improve in favour of Indian exporters. Commercial representatives propose to take up the question of instituting the Indian Corporation, if other countries should choose to set up similar organisations.

The case for an Indian Commercial Organisation to safeguard the interests of Indian exports should rest on other grounds besides the necessity of checking the activities of the U.K.C.C. which is believed to discriminate against Indian traders, brokers or shippers. The constitutional handicaps of the Government of India and the absence of a large Indian mercantile marine are difficulties in the way of setting up an Indian corporation operating independently of the U.K.C.C. in foreign countries. Owing to exigencies of war effort and the shipping advantages which Britain possessed the utmost that Indian businessmen could have hoped for is the formation of the Corporation which would have served as the agent of the British counter-part. Sub-agency rights would certainly not have solved the main problems of Indian trade. To be the spearhead of Indian overseas trade in postwar years, India needs a body, fully supported by the Government and all the chief commercial and industrial interests of the country, which could undertake the organisation of commercial intelligence, publicity and museums in foreign centres, help in sending trade missions to explore the possibilities in foreign markets, to establish intimate contact between foreign and Indian exporters and importers and to devise a satisfactory system of grading and certifying consignments for export. These are vital even for retaining foreign markets cultivated during the recent years not to speak of further expansion in postwar years. It is useful to remember that owing to lack of a central organisation Indian trade had paid dearly in the past as is evidenced by Trade Commissioners' reports. An Indian Corporation can do yeoman service in peacetime and therefore should form part of our postwar planning for Indian trade. The constituted body may be predominantly non-official but what really counts is the full and active support of the Government. The formation of a central organisation for an export drive cannot be argued out on the ground that nothing can be gained for India when an irresponsive government interested in British industries will dominate it or when foreign vested interests now entrenched in India cannot but have a powerful voice in the contemplated organisation. The instance of an Indian bankers' association without the co-operation of the Imperial Bank does not prove that foreign traders would fare in the same way as our bankers have done. Far-sighted economic statesmanship demands that valuable agencies should be formed in spite of initial difficulties in the hope that, after all, the time will not be far off when Indian interests will have the final say in Indian commerce. The United States Commercial Corporation instituted after the U.K.C.C. and, willingly or unwillingly, developed by the latter, now operates as a powerful spearhead of U.S. commerce, purchasing commodities independently on behalf of the U. S. Government, and it is also reported that shortly U. S. goods would be flowing into India and the Mid-East countries through this U.S.C.C. A free country could achieve what India could not but the lesson should not be lost on the Government of India or the Indian exporters.

A Divali scene four years ago

The illuminations at Divali are normally a part and parcel of Indian life. Candles are a prominent feature of these celebrations. In the past their availability was taken for granted. But the modern candle is made from petroleum wax, which today is playing its part along with other products of petroleum in the war effort of the United Nations.

So for some time past, we have gone short of candles, plain and coloured, common and decorative, bought for everyday use or for special occasions like Divali. It is hoped shortly to make more candles available in certain sizes, and users can rest assured that as soon as possible Burmah-Shell will again put on sale its full range of candles to suit every need and occasion.

NETHERLANDS INDIA COMMERCIAL BANK, Calcutta.,
UNITED INDUSTRIAL BANK LTD., Calcutta.

SOLICITORS:

Messrs. KHAITAN & CO., 1-B, Old Post Office Street, Calcutta.

AUDITORS.

Messrs. H. P. KHANDELWAL & CO., Chartered Accountants, 6, Old Post Office Street, Calcutta.

GENERAL MANAGER:

P. G. BRADFORD Esq., B.A., B.Sc., (Eng.), M,I,Mech,E,

REGISTERED OFFICE:

184, JOGENDRANATH MUKHERJI ROAD, SALKIA, HOWRAH.

OBJECTS AND PROSPECTS:

The Company was formed in 1941 for the purpose of manufacture of modern machineries and tools such as Lathes, Drilling Machines, Milling Machines, Hydraulic Presses, Power Presses, Textile Machineries for Jute and Cotton Mills and various other machines that are not being manufactured in India hitherto and General Engineering Works and Structural Works, heavy castings such as Road Rollers, etc.

During the three years of its existence the Company which has a modern factory fitted with all kinds of modern machines and tools and heavy and light casting plants at Salkia, Howrah, has executed Government Orders for manufacturing and supplying modern Machine Tools and structural works and all types of castings. Although the Company's Workshop are at present employed entirely in meeting large orders from Government, after the War its products are expected to be in great demand on account of industrial expansion.

Owing to the continuous overworking of all Factories all over the world as soon as the War is over there will be a great demand for replacement orders for all kinds of machines, tools and textile machineries.

With the execution of the plans for post war industrialization of the Country and for replacement purposes it is expected that a great demand will crop up for the products of the Company.

The present issue of the Capital is being made for extending the Workshops of the Company, Land has already been purchased adjacent to the existing Workshops, and the work of extension will be completed at the earliest opportunity so that the same may be utilised for present increasing orders also. Orders for new machinery for the extension section have already been placed through proper authorities.

BROKERAGE & UNDERWRITING COMMISSION:

No brokerage or underwriting commission was paid in the previous issue of capital.

No underwriting agreement has been entered into but brokerage at 2% will be paid on applications received through recognised Brokers.

CONTRACTS:

Mr. Bhimsen Gupta is the Managing Director of the Company on the terms and conditions mentioned in the Articles of Association.

APPLICATION:

Applications should be submitted for 100 or multiples of 100 Shares with the deposit money of Re. 1/- per share in case of Ordinary Shares, and for 5 Shares or multiples of 5 Shares with the full amount of Rs. 1,000/- per share in case of Preference Shares.

Application forms can be had from the Company's Office.

Cheques drawn on Banks at places other than Calcutta should include the necessary amount to cover collection charges at the rate of ¼%. If no allotment of shares is made to an applicant the deposit money will be returned in full to the applicant by means of cheque and where the number of shares allotted is less, then the balance will be applied towards the amount payable on allotment and any excess will be returned to the applicant at his cost.

The Directors reserve the right to reject any application without assigning any reasons.

GENERAL:

Memorandum and Articles of Association can be had from the office of the Company on payment of Re. 1/- each.

By Special Cable.

Businessmen and Bretton Woods

International Commercial Policies before Monetary Stabilisation

Washington, Sept. 25.

There is increasing pressure throughout the Government, business and financial circles as war in Europe nears its end, to work out international commercial policies which will eliminate as far as possible the myriad trade barriers that hampered pre-war commerce. The conviction that precedence should have been given to these matters instead of to monetary stabilisation continues in banking quarters and among some prominent Congressmen. These quarters to date hold their original opinion that agreements should be negotiated to permit the freer flow of trade and to stabilise the dollar—sterling exchange rates whereafter, they contend, other currencies could be stabilised without much difficulty because of the gold and dollar or sterling holdings throughout the world.

The American Bankers' Association meeting in Chicago next week may make a significant declaration in respect of Bretton Woods proposals—a stand which has been indicated this week by Mr. Winthrop Aldrich, Chairman of the Board of the Chase National Bank of New York. Mr. Aldrich said: "Credit extension cannot serve as substitute for adoption of appropriate commercial policies" and advocated the view that the United States need not adopt Bretton Woods proposals, but negotiate instead trade agreements with Britain and aid Britain financially so that the dollar-pound rate can be stabilised. Various pre-war trade impediments such as tariffs, arbitrary import quotas, regional preferences, barter agreements, import monopolies, export subsidies may also be expected to be prominently discussed at the forthcoming international business conference to be held at Rye, New York, and attended by outstanding businessmen of all the United Nations (including India).

Businessmen in the United States are sceptical but are not quite as critical of Bretton Woods proposals as Mr. Aldrich; nevertheless they agree with him that freer trade arrangements and dollar-sterling stabilisation should be undertaken first. An important influence at the business conference, presumably, will be the President of the United States Chamber of Commerce, Mr. Eric Johnston, who is regarded especially as world-trade-minded. Mr. Johnston said last week that "international trade is conducted by businessmen. They know far better than any other group how it should be operated. The Government can do only so much. Business must be carried on from that point."

The Government in the meantime will press for Congressional approval of Bretton Woods proposals either after the election or soon after the Christmas recess. It is expected that much opposition will be encountered from those Congressmen who subsequently agree with Banking quarters. In the field of commercial policy, the first step that the Government is expected to take is a conference with Britain on cartels. It is indicated that the United States want to eliminate the possibility of German cartels rising again and, to curb all other cartels by making them subject to close Governmental regulation and as far as possible to make the necessary trade restrictions such as are indicated for certain commodities and means of transportation matters for inter-governmental negotiation.

Editorial Notes

Wartime Record And The Future

Ideas of economic planning are fast taking root in the minds of the public and the publication of the Government of India's postwar plans for agriculture, roads, aerodromes, forests, fisheries and railways only serve to increase people's anxiety to know what the Government have done for the industries big and small. In his speech at the Second Quarterly General Meeting of the Indian Chamber of Commerce, Calcutta, delivered a few days ago, Mr. B. M. Birla paid a tribute to the part played by Indian industries in reducing the general scarcity of consumers goods and criticised the Government for neglecting the future of vital industries. He said that industry never ranked sufficiently high on the Government's list of priorities. In one sense, it would be more correct to say that the Government have the least power to plan the future of the large-scale industries because industry is a matter where Britain has the final say. It is certainly not in the best interests of Britain to nurse key industries in India and hence the public are fed on promises of postwar agriculture but not on definite schemes of industrial advancement. However, it is hoped, that the industrial survey now being conducted by the Government would bear fruit and Sir Ardeshi would follow a vigorous policy for making up for the apathy and neglect in the past. In assessing the services of Indian industries to the war effort and civilian needs, some point out what wonders could have been done already had the Govt. taken bold and energetic action to organise key industries like the production of aircraft, automobiles, ships machine tools etc. They would attribute the shortcomings in Indian economy to what has not been done but Mr. Birla thinks on the positive side and instanced the case of cotton, sugar, paper and iron and steel industries to show that but for the excellent response of these industries, India would have suffered worse and she could not have served her neighbours as efficiently as she did for the past four years. Industry is indispensable for national defence and the economic progress of a nation and, looking into the future, Mr. Birla pointed out that while Indian industrialisation would have to be planned and speeded up to make up for the neglect of civilian needs during the war years, it has a great significance with reference to hemispherial defence also. He believed that had India possessed high industrial capacity, Japan could not have ventured on her military adventures. If Asiatic countries are to be liberated and their safety guaranteed against future aggressions, China and India must be industrialised. Indian industrial production during the war records only an increase by ten percent and this is a poor performance compared to other countries. New plants have been set up only in rare cases and shortage of essential goods have been felt in India as in Iran, Iraq, Turkey, Egypt, Arabia and China. What is essential is to maintain employment at a high level in postwar years and though in European countries the State services followed industrialisation, owing to our continued neglect in the past, the Government should be the prime mover of economic regeneration in this country. The immediate task before Indian industries is to produce, as far as possible, all consumers goods to ensure that people are not subjected to undue hardships incidental to planned development. For this, Mr. Birla pleads "industries producing consumer goods which we used to import in the prewar days should be given the first preference". Too much emphasis on key industries at the expense of consumer goods industries, is deprecated on the ground that it would only intensify the suffering of the masses. Foreign combines have to be faced in peace and since Indian industries are but pigmies compared to the industries of U. K. or U. S. A. the Goverment must extend their full backing if national progress is to be assured in future.

BEST OPPORTUNITY

Controlling interest of a progress Insurance Company with assets nearly half a Crore, can be had for a genuine financier who is prepared to invest up to 10 lakhs. Immense scope for further development.

War and Glass Industry

Owing to conditions created by the war Indian glass industry received a healthy stimulus for quick expansion. The stoppage of imports, which ran to the tune of Rs. 2 crores and more annually before 1929 and Rs. 1.5 crores during the slump, afforded a great chance and the military requirements of glass ware have increased in range and quantity. India's response is, on the whole, satisfactory since a number of new articles like scientific glassware, boiler gauge glass, signal glass etc. are now manufactured locally. Great attention has been focussed on the organised development of this industry and the Council of Scientific and Industrial Research have taken the necessary steps to establish a Central Glass and Silicate Research Institute for standardisation, research and training of personnel. In an article entitled "The Glass Industry in India" (in the August issue of the Journal of Scientific and Industrial Research) Mr. Atma Ram discusses the several factors governing the successful working of the glass industry in India and concludes that "spectacular development in glass production can be visualised." No proper survey of the basic raw materials for the production of bulk glass viz., sand, soda ash and lime has been undertaken yet. The Industrial Research Bu-

LEGAL ADVISERS

Messrs. V. J. JOSEPH & MARKOS, Kottayam.

REGISTERED OFFICE

Adam's Building, Mahadevpet, Mercara, Coorg.

OBJECTS

The Company has been started for the purpose of carrying on all or any of the objects set forth in the Memorandum of Association and in particular to acquire and develop the Closeburn and Hakathoor Estates in Mercaranad, Coorg.

PARTICULARS OF THE ESTATES

The Estates are situate 7 miles from Mercara, the Capital town of Coorg, the reputed Coffee District and is only a mile from the Sidapur-Mercara Trunk Road. The nearest Railway Station and port of shipment is Tellicherry.

ACREAGE.

Coffee (Arabica)	240	Acres
Cardamom	10	"
Oranges	15	"
Paddy (Wet lands)	50	"
Reserve lands	325	"
Total	640	"

BUILDINGS

The Estate is well-equipped with all the necessary Bungalows, Staff quarters, pulp houses, Cooly lines, granaries and other outhouses.

ELEVATION

4,500 ft. above Sea level. Excellent for Coffee cultivation.

VALUATION AND CAPITALISATION

The well-known European Planters of South India, viz., Mr. G. P. White of Coorg and Mr. P. F. H. Crowther of Alleppey visited, reported on and valued these Estates on 20th March 1944 and on 21st June 1944 respectively. The former has valued the plantations at Rs. 1,84,750 and the buildings, etc., at Rs. 20,000 aggregating to Rs. 2,04,750. Mr. Crowther who visited recently has valued the property at Rs. 2,04,350. It is undoubtedly a great advantage that the above estates (which have been valued by two well-known European Coffee Planters at a figure above Rupees Two Lakhs) are available to the Company for the price of Rs. 1,45,000. The price payable works out the capitalisation to a very low figure offering a first class investment.

CAPITALISATION

	Rs.
240 acres of Coffee at Rs. 500	1,20,000
Orange, Cardamoms and wet lands 75 acres at Rs. 300	22,500
325 acres of Reserve land at Rs. 85	27,625
Total	1,70,125

PROSPECTS

Both Mr. White and Mr. Crowther have estimated the 1944-45 Coffee crop to be around 40 tons. Mr. Crowther particularly gathered that the previous crop figures would justify this estimate. The crop which he has noticed on the bushes, he writes, will certainly justify the estimate, but for the purposes of calculation, we are taking into account only a basic standard of 30 tons.

	Rs.	Rs.
30 Tons Coffee at Pool price	60,000	
Cardamoms, Oranges and Paddy will bring in about	7,000	67,000
Less cost of production for Coffee at Rs. 800 per ton	24,000	
Cost of production for other crops	1,500	
Managing Agents' Commission	4,500	30,000
This leaves a net balance of		37,000
Out of this interest on Preference Shares would consume		5,100
Leaving an amount of		31,900

This is available for distribution among the holders of Ordinary Capital and works out to over 35% on it.

PAYMENT TO VENDORS AND DISPOSAL OF CAPITAL MONEYS

Consideration payable to M. N. Appanna and Mrs. M. K. Bopayya under the said Agreement of 1st March 1944 is Rs. 1,35,000. Option money payable to Ipe Oommen in Rs. 10,000. Mr. T. K. Alexander has agreed to transfer his rights under the latter Agreement to the Company without taking any consideration or profit.

	Rs.
Total consideration of the Estate	1,45,000
Estimated Preliminary expenses, Advertisement Charges, Conveyance and Legal Charges	3,200
Brokerage of 2½% estimated	4,000
Working Capital	12,800
Total	1,70,000

reau organised a survey of glass raw materials available in India but its report has not yet been published. However, it is definitely known that deposits of sands and quartz are scattered practically all over India, particularly near Allahabad, in Jaipur, Ennore (Madras), Jaijon, Mangalghat, Jubbulpore, Belgaum, Bilaspur and in the states of Baroda and Travancore. With the establishment of Alkali and Chemical Corporation of India the supply of soda ash will not cause difficulties particularly because felspar, which can replace a part of soda ash, is also found in different localities. India has large deposits of other materials required, viz., manganese oxide, barium carbonate, zinc oxide, lime etc. Refractories are available and fuel is not likely to cause a bottleneck. The market is rated extensive but the chief handicap at present is the lack of trained personnel. Labour is cheap and skilful. Though there has been progress quantitatively the quality of glass goods produced leaves much to be desired. Crude methods are followed by some small units and annealing has been neglected. These defects can and should be remedied. Postwar possibilities of the glass industry are bright because the uses of glass are widening. As a substitute for the metals it has tremendous scope. The Government should therefore come forward to give every possible help for this industry to stabilise the wartime achievements and undertake the production of high quality glassware.

Controls And Sugar

Wartime controls have come in for severe criticism at the hands of prominent industrialists not only because their activities are sought to be regulated but in India control operates without being coordinated to any scheme of production drive. Rationing scarcity and controlling with a view to suppressing the growth of this industry or that cannot be approved by those who are aiming at national progress instead of advancement. If there has been want of active co-operation between the industrialists and the Government it is to be partly explained by the fact that in actual administration several control orders have neither served the general public nor satisfied particular interests. That sugar is a case in point is well brought in the presidential address of Mr. Lalchand Hirachand at the 12th annual general meeting of the Indian Sugar Mills Asscciation. Reviewing the war time progress of the sugar industry he said an industry with Government controls at every step cannot visualise a future for it in an atmosphere of free competition. As a result of Gur Control Order and the fixation of minimum cane prices there is a shrinkage in acreage for the season 1944-45. Mr. Hirachand pointed out that in the past the Governments of the U. P. and Bihar fixed unreasonably high prices which inevitably lead to increase in sugar production and subsequent slump in prices, destruction of canes etc. The problem of fixing the correct price for cane has not been tackled successfully yet. Mere linking of cane prices to sugar prices do not work and a better method is suggested, viz., taking into consideration the actual cost of cultivation of cane in various parts of the country, the prices of other competitive crops and fair margin of profits to the growers. It is further to be remembered that the price fixed upon must be announced sufficiently in advance of the sowing of the Rabi crop, i.e., before October. The working of the Compulsory Savings Deposits experiment rigorously enforced in cane growing areas operate as a deterrent factor to production and already substantial decrease in sugar output for the coming season is feared. The sugar industry will have to reckon not only with decreasing acreage and uneconomic cane prices but there is also a fall in the yield of cane per acre. It is reported that Bihar officials are expecting a reduction of 25% to 30% in cane acreage and U. P. estimates a reduction of 7% in the reserved areas and 10% in the outstation areas. Transport restrictions on railborne sugar cane are so severe that cane supplies to factories are likely to be reduced further. Mr. Hirachand also instanced the U.P. and Bihar Molasses Control Orders and said that since there had been neither excessive price nor shortage in molasses the order was ill conceived. While there is excess capacity with the mills the scarcity of sugar has not been minimised. Postwar demand for sugar is bound to be considerable and wartime control has neither served the sugar industry with success nor prepared the industry to face peace time international competition when the tariff protection may be withdrawn. Schemes of postwar development of Indian sugar industry aiming at rationalisation must also seek to reduce the cost of production. Greater coordination between cultivation and manufacture is urgent and it is not a day too soon for the Government to review the whole situation and organise the industry on a rational basis.

Food Industry In Australia

Since Pearl Harbour Australia has been serving as an important food base for the United Nations in the South Pacific. The responsibility to provision McArthur's forces and those in New Zealand (to the extent that that Dominion could not supply) besides the heavy demands from Britain spurred the Australian food industry to perform creditable feats in production. The Federal Food Control organisation was set up but owing to the loss of Nauru and Ocean Island the scarcity of manpower and fertilisers has been felt as a formidable obstacle. The shipping position so much strained during the early years of this war made imports of phosphate rocks impossible. Reduction in the production capacity of the pasture lands and the loss in Australian flour export trade made matters worse. In spite of these numerous handicaps the Food control initiated an energetic drive for higher production. In an article entitled "Food Takes on New Significance" in "Australia Today" (39th issue) Mr. H. C. Mills, Director of Public Relations Food Control, gives details as to the progress made in the production

THE COORG PLANTATIONS LIMITED, PORSPECTUS—Contd.

EX-OFFICIO DIRECTOR

The Managing Agents shall be entitled to appoint any one person whether holding qualification shares or not as Ex-Officio Director who shall have the same powers and be entitled to the same remuneration as other Directors, but shall not be liable to retirement by rotation or to removal by an Extraordinary Resolution of the Company. Mr. T. K. Alexander is the Ex-Officio Director nominated by the Managing Agents.

DIRECTORS' INTEREST

None of the Directors is interested in the promotion of or in the properties proposed to be acquired by the Company except that the said Ex-Officio Director is the Governing Director of the Managing Agents and that Mr. P. O. Abraham is to receive Rs. 3,000 for preliminary expenses as hereinafter appearing.

PRELIMINARY EXPENSES

Mr. P. O. Abraham will meet all the preliminary expenses of the Company, exclusive, of course, of brokerage, advertising cost and conveyance and other legal charges and the Company will pay him a lump sum of Rs. 3,000 for such preliminary expenses. No other amount has been or intended to be paid to any body for promoting the Company or for good will.

Minimum Subscription .. .. Rs. 1,70,000.

MANAGEMENT

Subject to the control and supervision of the Board of Directors the general management of the affairs of the Company will be in the hands of Messrs. United Agencies Limited, who will act as the Managing Agents of the Company for a period of 15 years. The Company will enter into a Managing Agency Agreement with the said United Agencies Limited, in terms of the draft agreement which for purposes of identification is subscribed to by Messrs. V. J. Joseph & Markos, Lawyers, Kottayam. The remuneration of the Managing Agents shall be 10% of the nett Annual profits of the Company. "Net Profits" shall have the meaning given in Sec. 87C (3) of the Indian Companies Act 1913.

The Company is fortunate in securing the services of Messrs. United Agencies Limited, a reputed firm of Managing Agents, on very fair terms, since they have agreed to work on a commission on profit basis and are not charging any monthly allowance or any minimum amount payable in the event of no profit or inadequacy of profits.

BROKERAGE

No part of the present issue is being underwritten. Brokerage of 2½% on the paid-up amount of the shares will however be paid to recognised Brokers on allotments made in respect of applications bearing their stamps.

INSPECTION OF DOCUMENTS

Copies of the following documents are open inspection during the regular office hours at the Registered Office of the Company or at the office of Mr. P. R. Subramanyam, Stock, Share and Finance Broker, 61, Stock Exchange Building, Apollo Street, Fort, Bombay.

1. Memorandum and Articles of Association.
2. Agreement dated 1st March, 1944, between M. N. Appanna and Messrs. M. Kaveriamma Bopayya (Vendors) and Ipe Oommen (Purchaser).
3. Agreement dated 19th July, 1944 between Ipe Oommen, P. O. Abraham and T. K. Alexander.
4. India Companies Act.
5. Draft Managing Agency agreement.
6. Agreement dated 6th September, between P. O. Abraham and the Coorg Plantations Limited regarding preliminary expenses.

GENERAL

Applications for shares are to be made in the form attached hereto and forwarded with the remittance of the amount in full to the Company's Brokers or Managing Agents or Bankers. The Directors reserve the right to reject any applications without assigning reasons therefor. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the shares applied for the surplus amount paid in will be refunded to the applicant from the registered office of the Company.

Copies of the prospectus and application forms can be had from the Company's Managing Agents, Bankers and Brokers.

DIRECTORS.

of meat, vegetables, eggs and egg powder. In 1939-40 Australia slaughtered 8.6 million lambs but the figure for 1942-43 stood at 10.8 million. Canning capacity had to be increased and Australia's target for 1943 was 100,000 tons of meat from canneries as against 10,000 tons before the war. Shipping space had to be strictly rationed and hence attention was diverted to meat concentrates and dehydration. Dehydration was only in an experimental stage in 1941 but the progress has been so quick that by 1943 3,000 tons of dehydrated meat were shipped for Britain. Shortly this will be further increased to 5,000 tons involving a treatment of 2 million sheep annually for export alone. Increase in the slaughtering of cattle does not create any anxiety regarding the live-stock position because in spite of the invasion fear which resulted in mob migration of cattle from Central Australia and Western Queensland to southern areas, the cattle and sheep populations of Australia are today greater than ever before. Vegetable production has been stepped up from the pre-war acreage of 254,000 acres to 496,000 acres in 1943. Tractors, machines for power dusting, for pest control, potato diggers, green crop loaders and pea winers were imported from U.S.A. under Lease-Lend and one-third of the tractors was used for growing vegetables. Local manufactures have succeeded in supplying the equipment needed for vegetable industry including harvesters, transplanting machines, power driven mowers and power sprays. Fifteen plants for vegetable dehydration will be operating before this year will be out and they will treat 125,000 tons of fresh vegetables. Canned vegetables increased from 10 million lbs before the war to 50 million in 1942 and the target aimed is 112 million lbs. A drive for more eggs is carried on and the immediate aim is 100 million dozen. Eleven drying plants have been established already and dried eggs will shortly feature in the export schedule. Wheat areas have been found to be particularly suitable for poultry and pig raising and provision has been made for guaranteed prices. Production of milk has fallen by 8 percent and butter by 18 percent owing to shortage of manpower and fertilisers etc. but processed cheese increased by 100 percent, condensed milk by 60 percent and dried milk by 190 percent. Subsidy for milk production has been more than trebled to £6,500,000 and in October 1943 the War Cabinet decided to release 15,000 men from the army for the rural jobs. The Food Control Organisation has been efficient and energetic and already the Australian food industry has played a vital role in the war against the Axis powers.

Ambitious plans For Hyderabad

The objective of the Hyderabad post-war plans is not merely to switch over to peace-time industries or demobilisation of soldiers but an all-round industrial and agricultural development. Hyderabad's contribution to war effort is well-known and her preparation for the coming peace is as energetic and ambitious and based on targets to be reached in a definite period. The State aims at total mobilisation of the economic resources for the uplift of the people. A Post-war Planning Board under His Excellency the Nawab Saheb of Chhatari has been set up and thirteen committees are now investigating several problems with a view to evolving correct development plans. It is estimated that the various post-war schemes are estimated to cost Rs. 232 crores during the first ten years. Schemes involving an expenditure of Rs. 95 crores have already been prepared. Agriculture occupies a prominent place in the programme and a College of Agricology is to be set up for providing facilities to train personnel for agriculture and animal husbandry. Hydro-electric schemes being vitally connected with agriculture and industries receive special attention. An agreement has been reached with the Government of Madras on the question of apportionment of the Tungabadra waters and the Civil works of the Nizamsagar Hydro-electric scheme would be complete in a year. Industrial development can be correctly organised and regulated only if full data are available and for this purpose a comprehensive economic survey of Hyderabad in respect of small scale and cottage industries should be organised and the newly appointed Economic Adviser, it is believed, would conduct the necessary surveys and enquiries. In the matter of large scale industries the State has definite scope in the manufacture of ceramics, vegetable oils, rayon, electrical goods, plastics, agricultural implements and chemical fertilisers. Facilities for industrial research are assured as a result of the establishment of a Central Laboratory for Industrial and Scientific Research. The acquisition by Government of the assets of the Hyderabad (Deccan) Company assures adequate supplies of coal necessary for the proposed industrial drive. A memorandum on the industrial and agricultural development of the Godavari Valley details the potentialities and the Government are considering the recommendations. A fifteen year plan for medical relief and prevention of diseases is in preparation and the need to train Hakims and Vaids in a systematic manner is realised. Hyderabad has a 14-year plan for bringing the education in the state upto the standard laid down in the Sargent Scheme. Investigations are also being pursued for organising agricultural, commercial, industrial and savings banks. Since lack of personnel is the possible bottleneck in the programme steps are taken to establish training colleges and to increase the output of the Engineering and Medical Colleges. If Hyderabad should succeed in speeding up her production and raise the economic conditions in the State she would undoubtedly contribute a good deal towards the commercial progress of neighbouring states and provinces.

Clive Street Gossip

The purpose and aim of "Reconversion to Peace" plans throughout the world is to ensure that the transition from wartime to peacetime conditions is effected without any jar or friction. In the case of India, apart from this important consideration, there are special circumstances which should make it possible for the transition to take the shape and form of consolidating and improving upon the gains and achievements won during the war. It is for this reason that, in the last week's issue, I essayed a detailed inventory of the changes that have taken place in this country since September 1939. Due to pressure on space, I could not complete the list. Before I undertake the completion of this task, it will be useful, so as to make today's narrative self-contained, if I give, at the outset, a summary of the conclusions reached in the earlier number:

1. In the international sphere, India has been transformed from a debtor to a creditor.

2. Age-old agricultural indebtedness has been reduced appreciably.

3. The old chronic state of unemployment is a thing of the past.

4. The budgetary position at the Centre and in the Provinces must be considered eminently satisfactory.

5. Through new taxes, resources at the Centre and in the Provinces have been considerably augmented. For post-war needs, the possibilities of death duties are being examined.

6. A favourable budgetary position has enhanced the credit of the country and facilitated cheap borrowing.

7. What is remarkable is not only the fact of cheap borrowing, but the ease and facility with which new loans equal to many times the pre-war averages have been raised. Paper note circulation has expanded five-fold.

8. To combat the inflation, rationing has been introduced and has started functioning more or less smoothly; and various control measures have provided valuable experience.

Let me now proceed to the completion of the catalogue.

9. This experience is extremely valuable as the increasingly greater role which the State has been playing in national economy will definitely not be surrendered after the war. The mass of public opinion in the country is in favour of as effective an intervention and as fruitful a participation of the State as possible.

10. Due to a variety of reasons, Indian industries have enjoyed prosperous conditions during the war. The financial position of most of the joint-stock enterprises is exceptionally satisfactory. Through the E.P.T. deposits and other measures, provision for future requirements has also been made.

11. Under the stimulus of war, some new industries have been established; and the sense of enterprise has been sharpened. Owing to various restrictions, this spirit of enterprise could not find fulfilment. With the end of war removing such restrictions, there is great promise of successful pioneering of new enterprises.

12. At the same time, the disabilities and deficiencies of India's economic structure came vividly into view, the moment the strategic significance of India in this region was fully realised. This is the main impetus to the schemes for post-war plans. Though not for her own sake, at least for the safety and defence of the Eastern Group, it is of strategic importance that the potentialities of India should be converted fully into actualities.

13. This is the angle from which the Central Government approached the plans for post-war reconstruction. It was for tactical reasons that distinguished non-official members were associated in these studies. On parallel lines, the group of distinguished businessmen headed by Mr. J. R. D. Tata and advised by Dr. John Matthai have set out the objectives and targets of an All-India plan. These developments have given an unexpected drive and direction to reconstruction plans. It may now be said of post-war plans that the momentum given to them is such that even an unsympathetic or hostile Government of the future cannot arrest or impede the triumphant march of planning. It may also be said that non-officials will take a large part in the shaping and execution of the plans. The symbol and emblem of this changed aspect of post-war planning is Sir Ardeshir Dalal, one of the architects of the Tata plan, now the official Head and Chief of the Government of India's Department of Planning.

The earlier articles in this series "if peace comes to-morrow?" appeared in the issues of "Indian Finance" dated August 12, 19, 26, September 2, 16, and 23.

14. Price control measures have been only partially successful. But the main point to note is that the controlled prices as such have been arrived at so as to be fair alike to the producers and the consumers.

This may be said to be a fairly complete picture of India under war conditions. My contention is that India under peace conditions will be—at any rate, should be—a continuation and extension of India as I have outlined it. In this connection, I can well imagine my readers asking me what grounds I have to believe that the favourable features on which I have laid stress are bound to continue in peace conditions. The poser presented to me will be somewhat as follows: "At the outset, we may point out that you have concentrated your attention on the bright side of the shield: you have turned a blind eye to the dark side. Even if we do not quarrel with this over-emphasis on the favourable features, it remains for you to explain how most of these gains which can be directly attributed to the colossal sums spent by the Government on their behalf and on behalf of the Allied Governments can still be counted upon when the end of war will mean the drying up of the fountain of Government's war expenditure. In the case of industrial and business profits, the governing factor has been the shortage of supplies for civil consumption on account of war needs absorbing a good proportion of the output. If the various industrial concerns cannot get any more war orders and if they are to depend entirely upon the civilian markets, will their profits remain as high? Let us not forget that, in the years preceding the war, a stage of overproduction had nearly been reached in the cotton mill, cement, sugar and paper industries. The capacity of industrial concerns has been extended during the war. From this point of view, is it not more likely that post-war conditions will mean once again over-production? Or, take prices. With regard to agricultural, industrial and mineral products, the hefty prices now ruling are due to the Army taking up a lion's share of the products. When these products will become available in their entirety to the civilian population, there may well be a glut. Which is another way of saying that there may be a heavy slump in prices. With prices slumping and with the tempo of industry going down, the currency circulation must also shrink considerably. Will this not mean deflation?" The points raised by my imaginary correspondent would carry great weight and force if it were not for the fact that they do not take sufficient cognisance of this fundamental distinction between this war and the last: In due time and in terrific vividness, the authorities in the leading countries of the world have realised the necessity of thinking out and planning in advance the measures that come under the general description "post-war reconstruction". There is already a well-spread knowledge in this country of the details of some of the post-war reconstruction plans.

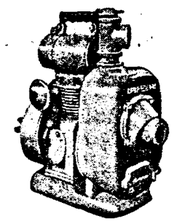
K. N. DALAL, *Managing Director.*

Whether the gains and achievements of this war period will be strengthened and consolidated in the post-war years depends upon the answer to the question whether this country will put through the several post-war schemes vigorously and effectively. For my part, I have no doubt about the answer. And the most impressive testimony in this regard is the merging of non-official and official planning as symbolised by the appointment of Sir Ardeshir Dalal. It is my conviction that the scale of expenditure incurred in connection with the several post-war plans will be of the order of Rs. 500 crores per annum for many years. It is this expenditure of Rs. 500 crores for planning that will be the most dominant factor of post-war India.



It was because, during all these war years, the Indian Government were spending an average of Rs. 500 crores per year in connection with war commitments and disbursements, agricultural indebtedness has been greatly relieved; unemployment has been completely banished; tax collections have been satisfactory; currency has expanded; prices have been at high levels; business profits have been on the large side; and, generally speaking, both individual income and national income have gone up. In the place of this war expenditure of Rs. 500 crores, we will have a peacetime expenditure of Rs. 500 crores per year on account of planning. Reconstruction plans will require such an army of clerical, administrative, supervisory and technical personnel, that such of the demobilised men as are eligible will be quickly absorbed. Those who are not fit for such work will be able to turn their hands to the large agricultural projects which are part and parcel of post-war planning. Agricultural development will be on such a stupendous scale that, so long as we can foresee, agricultural labour will be able to command full wages. Industrial expansion is also assured; and industrial labour can count upon continuous and satisfactory wages. If there is full employment for all classes, it may be taken as certain that the demand for civilian consumption in post-war years will be very much greater than used to be the case in inter-war years. Chronic unemployment before this war was one of the causes of low purchasing power among the general population. If the sugar output in India looked like over-production in some of the pre-war years, it did not mean that everyone did get an adequate supply of sugar; it only meant that large sections of the population could not afford to buy sufficient sugar. It will be more correct to describe pre-war conditions as one of under-consumption rather than of over-production. If my contention is right that the execution of the several projects connected with post-war reconstruction will mean full employment for all classes throughout the country, this single factor by itself will guarantee that there is no under-consumption. It follows that there is no need to apprehend any state of over-production. Our productive enterprises may, therefore, count upon a steadily strengthening and expanding domestic market. In addition, important trade contacts have been built up by India during this war. Trade with Russia is another interesting prospect. If our businessmen and authorities plan shrewdly and intelligently, India's production, whether of raw produce or manufactured goods, will enjoy an ever-widening home market and new and newer export markets.

Sixty Years' Service TO INDUSTRY

Our services to the Iron, Steel and other Indian Industries started sixty years ago at the growing port of Karachi, but today they spread all over India. As the largest engineering concern in North-West India, we have carried out many successful contracts both at home and abroad.

We manufacture:

Steel Doors and Windows; Pressed Steel Tanks; Equipment for Textile and Sugar Mills; Powerhouses and Factories; Garden Rollers; Water Supply Systems; Motor Launches; Plastiplug; Waterproofing, etc.

We stock:

Motor Trolleys; Marine Engines; Asphalt Boilers; Jenkins Clod Breakers; Structural and General Engineering Stores; Bitumastic, Pudlo and Solignum; Steel and other Metals; Cements, etc.

We can advise you on all your engineering and building problems; why not consult us without any obligation.

(*Continued from page 447*)

inception of the defence loan programme in 1940. As regards the repatriation of the sterling debt, out of a total debt of £356.05 million (including Railway Stocks, Debentures and Annuities) outstanding at the end of 1936-37, debt of the value of £307.26 million had been repaid by the end of 1942-43. The Chatfield debt amounting to £8½ million was also liquidated. The continued accumulations of sterling with the Reserve Bank enabled the Government of India to redeem during 1943-44 through repayments and open market purchases a further £13.92 million of the remaining sterling debt. In addition, on the 1st April 1944, Government effected the purchase of the Madras and Southern Mahratta Railway and the South Indian Railway at an aggregate cost of approximately £6.35 million. The total public debt of India as on March 31, 1944, amounted to Rs. 1,372.96 crores, of which the sterling debt accounted for Rs. 38.27 crores or 2.8 per cent as against Rs. 57.41 crores at the end of the preceding year. Other points of interest in the Reserve Bank report are the details in regard to the issue and absorption of small coins which, if properly interpreted, may throw some light on the distribution of war prosperity over the various parts of the country. With the end of the war drawing near, more interest may attach to the observations of the Reserve Bank:

"It has now been recognised that freedom of international trade is not inconsistent with the maintenance of a policy of full employment in all countries, although in the transitional period from war to peace a measure of trade and exchange control may be found necessary to facilitate the switch-over of labour and plant from military to civilian employment. With the progressive industrialisation of hitherto under-developed countries such as India, China and the South American Republics, a far reaching transformation in the composition of world trade must ensue as the traditional exchange of manufactures against primary products declines and is replaced by an interchange of specialised products."

Development Of Tobacco

Tobacco is an important cash crop and the possibilities of improving the quality as well as the quantity of the outturn are vast. It is grown in Bengal, Bihar, Bombay, Madras, Burma and in scattered areas elsewhere and there has not been a well co-ordinated and systematic attempt to raise the standard of its cultivation. It is therefore quite welcome that the Imperial Council of Agricultural Research has sanctioned Rs. 16 lakhs for a comprehensive scheme for the improvement and development of tobacco in this country. The Indian Central Tobacco Committee to be set up during the next winter is to take over the direction of this work and conduct research and arrange marketing facilities for all kinds of tobacco. The Government have already allotted Rs. 10 lakhs annually from the Tobacco Excise Fund for its finance. Nicotiana Tabacum is the most popular variety grown and the crop thrives particularly on deep and moist alluvium soils. To obtain good results manuring must be done liberally and in good proportions. Since close attention is required the crop is generally thought to be suited to small holdings where labour is plenty. In 1939-40 11,80,000 acres were under tobacco and the yield of dried leaf came up to 4,49,000 tons. Production of bright flue-cured tobacco has gained impetus and thousands of flue-curing barns have recently sprung up. The Virginia Cigarette tobacco grown in Guntur has attracted wide attention. The bulk of Indian production is intended for hookah while cigar and cigarette manufacture are also fast improving. Scope for export is considered attractive and in his report on the technological possibilities of Indian agricultural production Dr. Burns fixes a target of 150,000,000 lbs. of good flue-cured tobacco from 200,000 acres. He has suggested manurial trials and practices, training of experts for flue-curing, a system of uniform grading, a thorough study of correct manuring for tobacco and exploring the possibilities of hybrids too. We are sure that the committee would undertake these important tasks before them so that a profitable tobacco industry could be developed in India.

Coorg Plantations

The floatation of the *Coorg Plantations Ltd.*, the announcement appearing in this issue, is part of the general movement in South India which is transforming the basis of the plantations industry from one of private ownership to that of jointstock enterprise. The property acquired by the Company is situated in Mercara which is the centre of the coffee growing tracts in the South. The valuation has been done by two well-known planters of South India and the estimate of the crop leaves a big margin of convertism and caution. The constitution of the Company has been designed on quite progressive lines, the managing agents being entitled to nominate one Director on the Board and to 10 per cent commissions on profit without any monthly allowance or any minimum payment in the event of there being no profits. The issue is for Rs. 1,70,000 out of an authorised capital of Rs. 10 lakhs; and it is divided into 8,500 ordinary shares of Rs. 10 each and 8,500 Preference Shares of Rs. 10 each. Those connected with the venture have experience of long standing with the business; and the issue must have a wide basis of support.

PAPER economy

After five years of war it is hardly necessary to emphasise the importance of economising in the use of paper. But it is worth your while to know how best to economise paper. The first point is, of course, to use only just the amount of paper which is absolutely essential and no more. The second, and no less important point is to use paper of a good quality which will enable you to write or type on both sides without affecting legibility.

S. G. P.—9

Gateway of India

(From Our Correspondent)

Bombay, September 26.

A note of warning against unsound methods of underwriting insurance business was uttered by Mr. J. C. Setalvad, Chairman of the Indian Insurance Companys' Association at the 16th Annual Meeting. He emphasised, that the companies will be put on their mettle in the post-war years when the insuring public will be more claims-conscious than now when high earnings prevail. Out of evil cometh good, and the April explosions have underlined the necessity for building up adequate reserves. It is the duty of the companies to be prepared for like contingencies, but Mr. Setalvad rightly pointed out that, while the payment of the 12½ percent contribution towards the losses did go far to enhance the goodwill of policyholders, it was a blow to many companies whose additional reserves are nearly wiped out or depleted to the extent of 40 percent. It was heartening to hear that the Indian Companies are trying to reach a workable arrangement between themselves and foreign companies. The injustice of Rule 29 of the Indian Income Tax Act, which disallows the reserves for extraordinary risks as an item of expenditure (since 1939), becomes the more glaring in view of the greater risks prevailing since 1939. It will not do to adopt the British practice in this respect since Indian general insurance offices stand on an entirely different footing from their British confreres. Although companies are experiencing favourable conditions of business, they are unable to make the fullest use of them, since out of a profit of Rs. 100, they have to surrender Rs. 83 to government as tax. A good opportunity of enabling the companies to strengthen their special reserves is being lost, which is the more regrettable now in view of the heavy inroads into reserves caused by explosions. The Claims Committee has received only a fifth of the total claims in respect of the losses sustained during the explosions. This is surprising since after October 31, all claims will become time-barred.

The general increase in industrial activity has been of some benefit to municipal finances, and the Bombay Municipality realised a higher income (Rs. 403.98 lakhs) than was budgeted for, the year 1943-44. The year ended with a surplus of Rs. 13 lakhs as against Rs. 8.64 lakhs estimated. Naturally, the higher expenditure at Rs. 390.96 lakhs made a larger surplus impossible. Actually, during 1943-44 expenditure was up by Rs. 26.31 lakhs over 1942-43. This is, however a general feature of all budgets. The net unhypothecated surplus cash balance at the close of the year was Rs. 64 lakhs against Rs. 45.86 lakhs on March 31, 1943. On capital account, expenditure was only Rs. 19.13 lakhs against Rs. 38.53 lakhs in the revised estimate, owing to the non-availability of many materials. The roads of the city badly require mending, and the Standing Committee has sanctioned an additional Rs. 4.68 lakhs from the cash balance towards this end. The problem of finding money for the roads will be acute, and the Central Government ought to contribute something in view of the heavy wear and tear to city roads caused by military traffic. The financial position of the Corporation is none too comfortable in this respect, and loans had to be taken during the year from the Special Funds to finance expenditure on plant and machinery and for renewal of roads. The incidence of taxation per head for the year was Rs. 27-1-10 and the increase shows that the limits are being fast reached.

Mr. R. G. Saraiya put in a strong plea for the agriculturalist in the post-war period at the 33rd general meeting of the Bombay Provincial Co-operative Bank. A net profit of Rs. 2.45 lakhs was disclosed for the year ended June 30, and a dividend of 5 per cent was declared. Features of the Bank's working for the year are the rise in deposits, and the decline in the demand for loans from agricultural credit societies. Non-agricultural societies had, however, taken more loans. The Government have promised financial help to the co-operative central financing agencies to enable them to finance adjusted debtors at moderate rates of interest and also to extend the operation of the Agricultural Debtors' Relief Act, but the details are not yet known. The share capital of the Bank has been increased to Rs. 25 lakhs. Concern for the future of the Provincial Co-operative Land Mortgage Bank was voiced by Mr. N. M. Chinoy at the 9th meeting of shareholders. The high prices of produce and land brought about a fall in loans from Rs. 3,94,370 to Rs. 2,27,450 in the year ended June 30, 1944. Likewise, outstandings from primary banks were smaller at Rs. 28.93 lakhs against Rs. 31.34 lakhs. The current high prices and the likely extension of the operation of the Debtors' Relief Act are factors militating against demand for long-term loans from the rural populations.

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

Jute and Jute Manufactures

(*By Our Correspondent*)

Special to "Indian Finance"

Calcutta, September 28.

With only two and a half working days since our last report, there is little market news to comment on. We have now got the complete figures of the Final Jute Forecast which overhead show a decrease of 22 per cent in both average and outturn. In round figures, acreage is returned at only 20,60,000 this year against 26,40,000 last year, a reduction of 5,80,000 acres. Outturn is estimated at 55,00,000 bales against 70,00,000 bales last season, a reduction of 15,00,000 bales. The estimated outturn per acre is almost identical with last year, 2.66 bales per acre against 2.65 bales. This is scarcely in accord with reports of very well-grown, in fact over mature, jute. A good many Bengal districts are estimated to show a yield of 3 bales per acre and over, but the average is brought down steeply with estimated returns of only 1.5 bales per acre from Bihar and 1.7 bales from Assam. It remains to be seen whether the Director will have any comments to make when the consolidated figures are issued on Saturday.

The final shape of the Jute Mills Industrial Pool takes the form of an Agreement which will be submitted for ratification to a general meeting of the I.J.M.A. on 3rd October. The details have already been made known in these columns but may be summarised as follows. The Agreement will run from 1st July 1944 for one year and may be extended if three-fourths of the signatories so desire. The cess to be paid into the pool for every loom hour worked shall not exceed two annas, except in the case of mills with less than 220 looms, which will pay at the rate of Rs. 10 per loom per month, apparently whether the looms work or not. All rentals paid to mills by Government in respect of requisitioned property, subsequent to 1st January 1944, shall be paid into the Pool. Any mill idle through lack of coal (but not otherwise) shall sell their lost loom hours to the Pool to the extent that the funds of the Pool permit. Any loom hours which the Pool is unable to purchase will remain available to the mill concerned. The price per loom hour will be determined from time to time and is understood to be fixed at present at twelve annas. Loom hours so purchased will be resold to such mills as can use them at a rate not lower than the purchase price. Loom hours may be transferred between mills in the same group without going through the Pool. The first charge on the finances of the Pool shall be the reimbursement to idle mills of the Rs. 4-4 per head per week payable to the idle labour force, also all losses incurred in the sale to labour of subsidised food-stuffs. After these obligations are met, the funds will be directed to extinguishing such surplus loom hours as cannot be absorbed by other mills working increased hours.

Shipment of jute by rail from upcountry stations is going to become a most complicated problem. By new Goods Movement Rules which are to come into force from 1st November, all registrations of Jute must be in terms of wagon loads, not in terms of bales or weight. Practically all contracts are entered into in terms of so many thousands of maunds which can be very simply interpreted in terms of bales according to whether the baler packs 3½ or 4 maund bales. But to interpret any quantity whatever in terms of wagon loads will require the services of a clairvoyant. We instanced a schedule of 33 different types of wagons in service on the Mymensingh section of the railway, scarcely any two of which were alike in capacity, and capacities varying from 42 bales to 141 bales. No doubt similar conditions obtain on the broad gauge sections. In these circumstances how is the unfortunate merchant to say how many wagons he will require for a 250 bale contract? Mills are not likely to make contracts for wagon loads when the quantity liable to be delivered is so vague, 45 bales, and nearer than that a merchant cannot reasonably be expected to estimate. It will be virtually impossible to guarantee to deliver anything approaching a correct contract quantity by rail, for if, after despatching so many wagons, a merchant is still short of his contract quantity by less than a wagon load, he must either ask for the balance to be cancelled, or deliver excess by filling the wagon to its full capacity. Doubtless mills will be prepared to meet the situation within reasonable limits but it will mean endless dick and worry to all concerned and whether any benefit will accrue to the railway is problematic. It is no longer required that each actual forwarding note should be certified by the consignee as being against a contract, but a certificate must accompany each forwarding note (one per wagon); so in that respect nobody is a whit better off. It is laid down that not more than two wagons of jute shall be booked to any one mill or press house any one day by any station. This sounds of very doubtful value in speeding up traffic or turn-round of wagons, resulting as it will in almost the maximum breaking up of rakes

at destination. Various "offences" are scheduled, the first of which is, failure to load a wagon when supplied. No provision seems to be made for the contingency, a most probable one in most experience, of booking to the mill for which the merchant has a contract, being closed.

Relative to the above, railway authorities have issued a circular detailing their efforts to combat bribery and corruption on their systems. It would scarcely be an exaggeration to say that every new rule issued is a renewed invitation to further bribery and curruption and that the rules referred to above place local station masters in an almost dictatorial position vis-a-vis merchants. and if a merchant wishes to carry on his business at all he will have practically no option but to resort to bribery. In all circumstances, the appeal by the Railway authorities for cooperation from the public in putting down these evils has a strong flavour of casuistry.

Practically nothing has been reported in the Export Jute market. There has been a small business with Mills in Firsts at Rs. 82 and in Dundee Daisee at Rs. 80, also more Cutting business at Rs. 43 and Rs. 42 for N.C. and M.C. Some inter-baler business has also been reported in Firsts for September shipment at Rs. 82-8 and Rs. 83 and in Lightnings at Rs. 79.

Only a very limited business has been recorded in loose Jute, some Supervised Jat at Rs. 16-8 and Rs. 13-8 Mids and Bots and some ready shipment Bots alone at Rs. 14. Upcountry markets generally rule firm with imports not increasing as expected.

Fabrics market is very dull, even the Hessian demand having faded out. Bazar continues to play with "B" Twills, the quotation being around Rs. 62.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay, September 28.

The gold market is very steady with forward quotations at Rs. 67-5 and Ready at Rs. 88. Owing to the improvement in the offtake, 25,000 tolas was the daily average while upcountry arrivals are definitely lower at 10,000 tolas daily. On Monday, the market improved from Rs. 64-1 to Rs. 65-6 despite moderate selling of Abyssinian gold when bears covered on hearing of the formation of a strong bullion syndicate. The stiffening German resistance and the Syndicate buying took the price to Rs. 66-14 on Wednesday. The minor setback today was more than offset by the Russian quit order on British and American officers in Sofia, the market touching Rs. 67-7 immediately, closing steady. The offtake of sovereigns was 1,000.

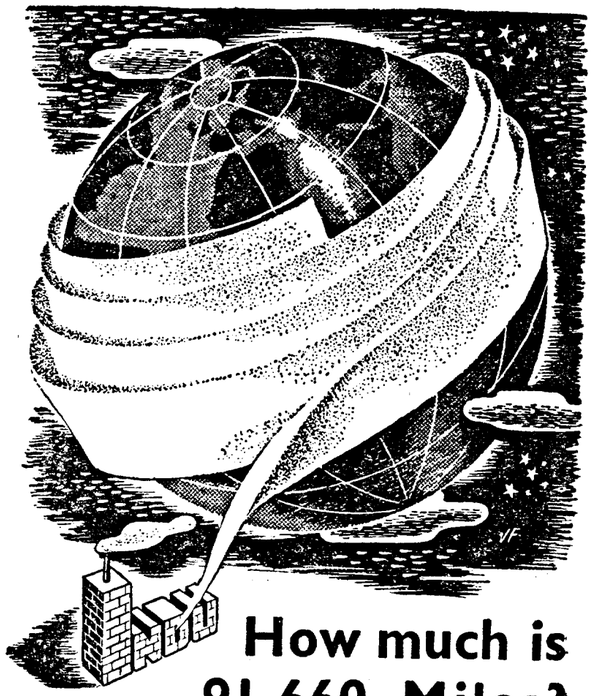
SILVER

(From Our Correspondent)

Bombay, September 28.

The silver market displayed a relatively more uncertain tendency. 7 days' settlement price opened at Rs. 118-12 on Monday and improved to Rs. 121-2 on bear covering but receded to Rs. 118-12 on Tuesday on heavy profittaking on account of upcountry arrivals. Since then, after Allied withdrawal on the Arnhem sector the market improved again to Rs. 120-12 on Wednesday. This morning, selling forced down the price to Rs. 118-12 but the Sofia message stimulated bulls and forwards quoted Rs. 121-4 thereafter slipping back to Rs. 120-10 with Spot Re. 1-8 higher. The market, however, is very jumpy.

COTTON



(From Our Correspondent)

Bombay, September 28.

Due to heavy selling pressure from Karachi interests March contract declined to Rs. 423 while May contract quoted Rs. 435½. Speculative buying was responsible for last week's rise. On reports of an increase of five lakhs bales of Punjab and Sind crop, profiteering ensued with trade and investment interests watching and utterly unimpressed by prospects.

Hind Machines Ltd.

Hind Machines, Ltd., formed in 1941 for manufacturing machineries and tools, some of them not manufactured in India before, possesses a modern factory fitted with all machines, tools and plants. The company's workshop has been for the past 3 years mainly engaged in heavy war work but has capacity to serve peace time requirements for different types of implements, castings and tools. As the war is coming to a close industries are to prepare for the coming peace and the demand for tools, machines and textile machineries is expected to be heavy owing to requirements of the much needed replacements for the existing factories and demand for equipment for new industries projected. As can be seen from an announcement appearing elsewhere in this issue The Hind Machines, Ltd., is preparing for peace time production and proposes to extend its workshops to meet the expected increase in demand for its products. Land adjacent to the workshops has already been purchased and orders for new machinery have been placed through proper channels. The company is now issuing Rs. 20 lakhs of capital (consisting of 1,50,000 ordinary shares of Rs. 10 each and 5,000 5½ per cent tax-free cumulative preference shares of Rs. 100 each). The Government of India, the Indian States and Provinces are preparing post-war plans for industries and agriculture and when the company secures the required machinery it can expect good business.

How much is 91,660 Miles?

It's nearly four times the earth's girth! To be exact, it is $2\frac{3}{4}$ times the circumference of the earth. All this tremendous length of cloth is produced annually by the India United Mills Limited—not to outdo the equator—but to clothe India's tinker, tailor, soldier, sailor, and all the teeming population.

Today, our mills are humming with war orders. The needs of the fighting services receive first consideration. As soon as Victory is won we shall go all out to meet civilian requirements. Remember, when better cloths are woven, "INDU" will take the lead.

SEEING IS BELIEVING

falling prices prove the wisdom of saving for the future

If no one had saved money last year and early this year; if Government had not introduced strict price controls and increased the manufacture of bazaar goods, prices would still be fantastically high, as they were last year.

But private savings and administrative action by Government have brought prices down. People who foolishly invested in jewels, property, commodities and goods have seen their investments shrink before their very eyes.

And this is not the end. The downward trend will persist. Be wise. Don't be caught by falling prices.

These, as before, are today's best investments: every time prices fall an anna, these investments improve in value: Co-operative Societies, Insurance, Savings Bank Account, Post-Office Savings Bank, Government Loans and National Savings Certificates.

Do without luxuries. There is plenty of time after the war for new clothes, new furniture, new houses, new cycles and motor cars. Save money now to spend it then

Prize Bonds

Prize Bonds are absolutely secure, yet owners have a chance of winning large cash prizes. Rs. 100 can win as much as Rs. 50,000 and the chance to win persists twice a year for the currency of the issue. Meanwhile the capital retains its full value and is repayable at par on or after 15th January, 1949.

You can get either a Rs. 10 or Rs. 100 Bond. There is no limit as to holdings.

Prizes are drawn half-yearly, on 15th January and 15th July. All bonds purchased before the 17th December 1944 will participate in the next draw on the 15th January 1945.

PRIZES ARE

All prize money will be free of Income-tax, Super tax, Excess Profits tax and Corporation tax.

Each series of 1 lakh pieces of Rs. 100 Bonds		
1 Prize of Rs. 50,000	Rs.	50,000
2 Prizes of Rs. 20,000	Rs.	40,000
2 Prizes of Rs. 5,000	Rs.	10,000
Total amount of prize money half-yearly in each series of 1 lakh pieces	Rs.	1,00,000

Each series of 1 lakh pieces of Rs. 10 Bonds		
1 Prize of Rs. 2,500	Rs.	2,500
2 Prizes of Rs. 1,250	Rs.	2,500
5 Prizes of Rs. 500	Rs.	2,500
10 Prizes of Rs. 250	Rs.	2,500
Total amount of Prize money half-yearly in each series of 1 lakh pieces	Rs.	10,000

Available at:—Any Indian Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury Business.
Prizes will be paid at all the above mentioned places and also at sub-Treasuries on or after the 15th August or 15th February following the date of the draw. Every Bond remains eligible for prizes at all drawings up to 15th January 1949. Payment of Prize money of the Rs.10 series will be made in cash; of the Rs. 100 series, half in cash and the balance in Government Loans.
Winning numbers will be published in the Gazette of India and the Press, before 15th August and 15th February following the date of the draw.

Stock Markets to-day and to-morrow:

BEGG SUTHERLAND GROUP SUGAR RESULTS

From our list, I find that there are over 500 subscribers who take only the "Investor's Supplement". And I feel it incumbent on me to apprise them that they will do well to "beg, borrow or steal" the issues of the main number which contain the series of Eavesdropper's articles on "If Peace comes Tomorrow?" In this series, the discussion centres on gauging of post-war prospects for India's economy and industries and markets. These articles have excited wide-spread interest; and they have, perhaps, played not a little part in nipping in the bud the panic in markets which prospects of early peace engendered on the opening of the Second-Front in Normandy. The main point to emphasise in the immediate context is that Mr. Churchill visualises many months of 1945 for the war in Europe. This circumstance apart, it is necessary to stress that the end of war in Europe means the real beginning of the war in India. Reinforcements on stupendous scale will start flowing in into this theatre, soon after Hitler has been routed. This means many times the present scale of war disbursements in the Eastern provinces. Currency notes may well fly in the air. Purchasing power will be vastly accelerated. It is definite that, with war ending in Europe, the stage is set, not for a slump, but for a boom in what will become the most dominant and concentrated theatre of war.

* * * *

Four sugar companies under the Managing Agency of Messrs. Begg Sutherland & Co. Ltd. having their trading period upto 30th June, 1944 have just published their balance sheets. The results of all the companies as disclosed by the figures are extremely disappointing. With the exception of the *Balrampur Sugar Co. Ltd.* which has been able to maintain the previous dividend, all the other three companies have drastically cut their distribution. While commenting on the results a year ago, I pointed out, that, with the prospects of larger cane supplies and the benefit of higher prices for sugar the prospects for the current year should be considered rather encouraging. The actual results, however, do not conform to my expectations as various factors have emerged resulting in the setback. Although the quantity of cane crushed for the four companies together has shown a small improvement, actual maunds crushed being 10,802,213 against 10,745,695 in the previous year, the sugar value of the cane treated was less than in the preceding season and the yield percentage of cane has been relatively lower. The quantity of sugar made during the period under review was 1,166,914 maunds against 1,225,410 maunds. Transport difficulties and coal shortage have also had adverse effect on the earnings, as on occasions during the season, there was acute anxiety over supplies of coal and consumable stores, stocks of which, had nearly reached exhaustion point. The Raw Material and Manufacturing expenses have greatly increased compared with the previous season, the increase being as much as 12 per cent against the quantity of cane crushed showing no big improvement. The management had also to bear a higher proportion in the establishment charges as the cost of the raw material had increased and also higher prices had to be paid for stores of all kinds in addition to the increase in labour charges due to a higher scale of dearness allowance. The Government which has allowed a basic price of Rs. 14-13 per maund for the sugar produced last season has not helped in any way to compensate manufacturers who had to incur very high charges. The Managing Agents also mention in their report, "Once again Government ignoring the repeated warnings which the industry had given of the necessity for declaring the price for cane not later than the end of September, delayed doing so until November, 1943, by which time growers had completed their crop programme for ensuing Rabbi season. As a result, very large areas of land were put down under other crops which, if a truly competitive price had been offered to growers might have been planted in cane for season 1944-45. As it is, a short season is in prospect and a large portion of the crop will be ratoons."

* * * *

Thus various factors have been responsible for the sharp decline in the net profits for the period which on comparison with the previous year show a drop of as much as 50 per cent. The aggregate net profit of the four companies before providing for taxation and depreciation is Rs. 19.94 lakhs against Rs. 37.94 lakhs. The liability in respect of taxation has followed the profit trend, the amount provided being Rs. 9.26 lakhs against 18.85 lakhs. With the provision for depreciation of Rs. 4.75 lakhs against Rs. 3.9 lakhs no amount has been transferred to General Reserves. Total dividend distribution cost the management a sum of Rs. 6.5 lakhs against Rs. 8.8 lakhs. It should also be said in this connection that the Excess profits have now been entirely absorbed to Government account either by way of taxation or freezing. While this position continues, payment of profits to shareholders by way of dividends must be limited.

Analysing the results individually, the *Balarampur Sugar Co. Ltd.* has done better in the group than others, the quantity of cane crushed and sugar made being 34,89,868 mds. and 3,51,179 maunds respectively against 26,74,587 maunds and 2,76,887 maunds. The net profit for the period is Rs. 3,96,793 against 4,90,412. A sum of Rs. 93,688 against nothing has been provided for taxation while the amount set aside to depreciation stands unaltered at Rs. 2,00,000. The dividend has been maintained at 5 per cent per annum equivalent to a distribution of Rs. 1,40,000. The amount carried forward is Rs. 30,042 against Rs. 66,937 brought in.

* * * *

Next to have fared better is the *Ryam Sugar Co. Ltd.* which has also reported a small rise in the quantity of cane crushed and sugar made. Cane crushed was 14.82.231 maunds (12,59,353 maunds) and sugar made being 1,67,872 maunds (1,50,140 maunds). The net profit is Rs. 2,63,604 (Rs. 3,78,553) out of which has been provided for taxation a sum of Rs. 1,47,000 (Rs. 1,75,000) and depreciation Rs. 50,000 (nil). The Debenture Sinking Fund receives as usual Rs. 18,750 but there has been no allocation to General Reserves this year against Rs. 97,160 made on the previous occasion. The dividend is cut to 15 per cent per annum against 20 per cent, the amount carried forward being Rs. 4,788 against Rs. 16,934 brought in.

* * * *

The *Champarun Sugar Co. Ltd.* has been the worst hit, suffering all-round. Cane crushed during the season fell to 38,41,482 maunds (45,59,396 maunds) Sugar made being 4,33,551 maunds (5,34,437 maunds). The net profit is down by more than half the previous season, standing at Rs. 9.28.116 against Rs. 20.72,440. The tax liability is only Rs. 4,20,000 against Rs. 11,30,000. A sum of Rs. 1,50,000 has been set aside to depreciation, the same amount as last year. No amount has been transferred to Reserves against Rs. 1,50,137. The shareholders get a distribution of Rs. 3,60,000, a dividend of 20 per cent against 30 per cent on the last occasion. The amount carried forward is Rs. 2,40,386 against Rs. 2,42,270.

International Cloth Rationing Scheme

Coals in Good Request: Cements Depressed

(By Analyst)

Bombay, September 29.

Reading through Mr. Churchill's speech carefully it looks as though the European war might take a few months and the Pacific war might come to a close only sometime in 1945. As for the political situation in India with the failure of Gandhi-Jinnah talks the question of our having a national Government at an early date seems to have receded to the background. Of course, on the day we get a national Government the future of every industry in India is assured but till that lucky day we will have to think of the industrial future on the assumption that the present day conditions continue.

Very recently Sir Vithal Chandavarkar speaking at the annual meeting of the Mill-owners' Association said that the world textile production is likely to be halved at the end of the war and envisaged a scheme of international cloth rationing in which the Indian textile industry will have a distinct role. Of course, this news should be welcome to holders of textile equities but for the nth time I have to repeat that while making a selection of textile equities only those companies which have an excellent standard profit should be selected. Now that the market trend is a little on the upward I would suggest taking interest in Bombay Dyeing around the current price of Rs. 1,740, even Nagpurs which were as high as Rs. 425 on July 13th have declined to Rs. 365 and are today around Rs. 377 and they are an attractive purchase.

Madras also followed in the wake of Bombay. Vasantas have moved up to Rs. 280 and Maduras are steadier at Rs. 67-8. Lakshmis were in good enquiry around Rs. 42. They look cheap at current levels. Rajalakshmis have improved from Rs. 170 to Rs. 190.

Holders of cement shares got a rude shock this week and almost every friend of mine brought a copy of the balance-sheet of Dalmia Cements for my perusal. The loss amounts to nearly Rs. 14 lakhs and market operators feel that the results of Associated Cements also will not be encouraging but in view of the postwar prospects for the industry I would definitely be a bull in cements. In view of the bearish feeling in the market I would rather wait for a further reaction and I would recommend purchases of Associated Cements around Rs. 200 and Dalmias around Rs. 15.

Steels are also steadier with Tata Deferreds around Rs. 2,130 and Ordinaries Rs. 379. I will not be surprised if Deferreds come upto Rs. 2,200. Despite Calcutta market being closed Indian Irons and Steel Corporations have moved on short covering to Rs. 39-4 and Rs. 31-4 over Rs. 40 and Rs. 32. I would recommend liquidation.

Coals are privately in good enquiry despite Calcutta being closed particularly after the report that West Jamuria has declared a half-yearly dividend of Re. 1-8 as against As. 12 in the previous half-year. I will not be surprised if the half-yearly reports of most of the Coal companies show much better results. When the Calcutta market reopens after the Pooja holidays I will not be surprised if Coal shares quote substantially higher. As for Fresh purchases, I would suggest concentrating in low-priced shares like Mahakali, Singareni, etc., since West Jamuria which is quoting around Rs. 56 looks fully valued even on the basis of prospects.

Opening Possibilities for New Industries

ALUMINIUM HYDROXIDE & OXIDE

of very high grade now in production.

● **ALUMINIUM HYDROXIDE:** Used in the manufacture of Aluminium Compounds for textiles, dyeing, paper, printing ink, water purification and as a catalyst in synthesising acetates, tannates, etc.

● **ALUMINIUM OXIDE:** Manufactured in several grades for decolourising and deodorizing solutions, grinding and polishing metals, manufacture of abrasives, grinding wheels and high grade laboratory ware, etc.

● ***Sodium Aluminate & Aluminium Sulphate are also manufactured at our works.***

THE ALUMINIUM CORPORATION OF INDIA, LTD.
KAMLA TOWER, CAWNPORE — WORKS AT ASANSOL.

In Madras, plantations have been steadier this week on genuine investment demand. I look for good rise particularly in tea shares and I would suggest investment purchases of Chembra Peaks, Haileyburia Teas, Peermade Teas, Periakarmalais and Ouchterlonys. Highlands on a further decline may be bought for investment. In Calcutta Hasimara Teas may be bought.

Indian Bank's Progress

The Indian Bank Ltd., whose balance sheet is published elsewhere in this issue, has again been able to show an impressive working during the half-year ended 30th June, 1944. The progress made in recent periods has completely eclipsed the setback recorded in 1942 which followed the enemy occupation of the Bank's overseas branches. Public confidence has been completely restored as will be seen from the deposits now standing at an alltime high of Rs. 9.5 crores against Rs. 8.14 crores at the beginning of 1944 and only Rs. 5.24 crores at the corresponding period of 1943. Deposits have thus nearly doubled in the course of a short space of 18 months. The latest balance sheet shows the increase in the paid up capital of the Bank which now amounts to Rs. 33.3 lakhs against Rs. 28.9 lakhs. The additional funds realised by the increase in Deposits have been utilised to make more Advances, which have increased by nearly Rs. 3 crores to Rs. 5.13 crores during the half-year. The Cash and Investment position shows further improvement at Rs. 6.26 crores against Rs. 5.8 crores. The high rate of liquidity is being maintained; Cash in hand and at call amount to Rs. 1.88 crores and the balance of Rs. 4.38 crores is made up of Rs. 4 crores of Central and Provincial Government securities, Rs. 34 lakhs of State Loans and Rs. 3 lakhs of Joint Stock company shares and debentures.

The net profit for the first half of 1944 has greatly risen to Rs. 7.74 lakhs against Rs. 10.97 lakhs for the whole of 1943 and Rs. 5.47 lakhs for the corresponding period in 1943. If the present rate of progress is maintained, a net profit of say Rs. 14 lakhs or an

THE TINNEVELLY-TUTICORIN ELECTRIC SUPPLY CO., LTD.

The Thirteenth Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No.14, Old Court House Street, Calcutta, on Tuesday the 10th day of October 1944, at 3 p.m. for the following purposes:

(1) To pass the Directors' Report and the audited Accounts for the year ended 31st March 1944.
(2) To elect a Director in place of the retiring Director.
(3) To elect Auditors for the ensuing year, and to fix their remuneration.
(4) To transact any other business that may be brought forward.

The Share Register of the Company will be closed from 4th October to 10th October 1944, both days inclusive.

OCTAVIOUS STEEL & CO., LTD.
Managing Agents.

Calcutta, 22nd September, 1944.

Note:—In accordance with a Government of India Notification No. 1564-DR/42 dated 7th September, 1942. the Directors' Report and the Accounts will not be published.

BHARAT INSURANCE COMPANY, LIMITED

Directors' Report for the Year ended 31st December, 1943

The Directors have much pleasure in submitting to shareholders and policyholders their Forty-eighth Annual Report together with audited revenue accounts and Balance-Sheets for the year ended 31st December, 1943.

New Business and Assurances in Force.—During the year under review, 9680 proposals were received for assurance amounting to Rs. 2,68,12,611. Out of these, and of a few incomplete proposals of the last year, 7983 proposals resulted in policies assuring in aggregate the sum of Rs. 2,15,79,417 as against Rs. 1,33,72,816 of the last year. The rest were either rejected, withdrawn, postponed or awaiting completion.

The new business, shows a marked increase and is indicative of the confidence reposed by the public in the Company.

The total number of policies in force is 48,290, assuring with bonus additions the sum of Rs. 9,38,87,984 out of which Rs. 17,98,870 is reinsured.

The Total Income and Life Fund.—The total income for the year amounted to Rs. 59,15,190-6 of which Rs. 51,48,090-4 were derived from premiums against Rs. 39,82,675 in the previous year. The outgo amounted to Rs. 44,24,520-3-11 leaving a balance of income of Rs. 14,90,670-2-1 over outgo which income has been added to the life assurance fund raising it to Rs. 2,82,59,049-6-8. The total assets of the Company now amount to Rs. 3,19,77,613-7-1.

Claims.—During the year, claims inclusive of Bonus addition amounted to Rs. 25,07,589-7-5. Out of these, Rs. 8,55,365-3-3 were claims by death and Rs. 16,52,224-4-2 claims by maturity.

Expense Ratio.—It is gratifying to note that the expense-ratio to renewal income for the year, according to Formula laid down by Rule 25 of the Insurance Rules, shows considerable decrease over the last year.

Directors.—The directors place on record their appreciation of the services rendered by Mr. Shriyans Prasad Jain, *Vice* Chairman, in conducting the administration of the Company for most of the part of the year. Owing to his forced absence Mr. Vishnu Hari Dalmia, one of the Directors, worked for the remaining part of the year as Director-in-Charge.

Messrs. J. Dalmia and Shanti Prasad Jain retire, but being eligible, offer themselves for re-election.

Auditors. The Company's Auditors, M/s. Sodhbans & Company retire, but are eligible and offer themselves for re-election for the current year.

General.—The Directors, in conclusion, record with pleasure their appreciation of the valuable services of the officers and staff the representatives of the Company and of the co-operation and active help rendered by its shareholders and policyholders in all directions throughout the year.

By Order of the Central Board,
JAI DAYAL DALMIA,
Chairman.

Lahore, 24th July, 1944.

(*Conteinued from page* 467)

increase of 50 per cent over the 1943 level, is not difficult of achievement for the current year. Advantage of this prosperity has been taken to further strengthen the Reserve position of the Bank, as a sum of Rs. 1,50,000 has been transferred to that account bringing the Reserve Fund to Rs. 32 lakhs. The Directors have declared an ad-interim dividend at the rate of 10 per cent per annum free of income-tax for the half-year. This is on level with the corresponding half-year's distribution, but it should be noted that distribution of dividend has now to be made on an increased capital.

The Jagatjit Distilling & Allied Industries Limited

The Jagatjit Distilling and Allied Industries Limited of which an announcement is published in this issue is a war time industry which is in no danger of turning into a war baby. So far as the demand for its products is concerned, it is extremely unlikely to suffer a domination from the progress of Allied armies in Europe. The company has the advantage of a big contract with the Supply Department; and the Association of Messrs. Spencer & Co., in this venture is an assurance that peacetime prospects, too, have been carefully appraised. Profits in this line of business are too well-known to call for more than a mere mention.

WANTED

"Agents reliable and intelligent customers for whole sale business of high grown Teas required, liberal commission.

For full particulars of terms apply to:—

Southern (India) Trade Association,

BANKERS:

1. THE BHARAT BANK LTD.
2. THE PUNJAB NATIONAL BANK LTD.

AUDITORS:

Messrs. WALKER CHANDIOK & CO., Lahore & Delhi.

REGISTERED OFFICE:

HAMIRA, N.W.R. (Kapurthala State).

OBJECTS & PROSPECTS:

The Company has been formed for the purpose of carrying on the business of Distillers, Rectifiers, Methylators, Brewers, Maltsters, and to make and deal in spirits, Liquors, and alcohols of all types potable and non-potable, and for all other purposes as detailed in the Memorandum of Association of the Company.

The Distillery is situate at Hamira and has been put up at the request and with the active assistance of the Directorate General of Supply, Government of India, and under the distinguished patronage of His Highness The Maharaja of Kapurthala State and has the full support of His Highness's Government.

The production is earmarked to meet essential requirements of Alcohol and its derivatives, of the Directorate General of Supply, Government of India, and the Department of Food, Government of India, and who have already placed a very large running contract for the supply of Rum commencing from October, 1944. The balance of the Production (high class Gin & Rum) will be made available for Civil consumption through Messrs. Spencer & Co. Ltd., who are the sole Distributors of the Company.

The construction and erection of the Distillery building and its plant is nearly completed and it is expected that the Distillery will come into production in October 1944, and will be the largest and the most modern in India producing about 10.80,000 gallons per annum.

MANAGEMENT:

Subject to the control and supervision of the Board of Directors, the general management of the affairs of the Company will be in the hands of the Managing Agents, Messrs. L. P. Jaiswal & Sons Ltd., on the terms detailed in the Articles of Association of the Company.

BROKERAGE:

Brokers recognised by the Company will be paid at -/4/- per share on all allotments made in respect of applications received through them.

APPLICATIONS:

Applications should be submitted for ten or multiples of ten shares only, on the forms obtainable from the Company's Registered Office or any of the branches of the Company's Bankers. Applications for shares will be received at the Company's Registered Office or by the Company's Bankers at their various branches by the 12th October, 1944.

COMPENSATION IS PAYABLE

to workers in cases of fatal and non-fatal accidents under the Workmen's Compensation Act. Employers may, again, have to face action for damages if a workman is killed under circumstances detailed in the Indian Fatal Accidents Act; or for injuries to workmen on the ground of neglect, wrongful act or default of the employer.

The General Assurance Society has policies to suit individual requirements of almost every employer. While a policy with the Society will provide against monetary loss, the employer is entirely relieved from the trouble and anxiety of dealing with claims.

Any Office or Agent of the Society will gladly furnish rates and particulars on request.

ALUMINIUM AND BRASS UTENSILS

PURE ALUMINIUM THE CROWN

Due to scarcity of metals difficulties in getting utensils of every day use are intensified. Output of Indian Aluminium, though large, is insufficient to meet essential needs. Scrap resources are being exhausted: Prices are very high.

To remedy this situation we arranged with difficulty, to import Aluminium: First consignment arrived but it has been used up for essential needs. Second lot, to arrive in two to three months, time, will increase supplies at much reduced prices.

Meanwhile, the Government has taken the important decision to supply about eight to ten lakhs pounds Brass utensils coated with pure Tin every month, through several factories in all Provinces.

These Utensils will be available everywhere at stamped prices from August onwards: Purchasers are requested to make sure of these stamped price, which in no case will be higher than Rs. 2.4.- per lb. for a suitably tinned article.

JEEWANLAL (1929) LIMITED
CALCUTTA; BOMBAY; MADRAS; RAJAHMUNDRY; DELHI; ADEN; RANGOON.

(Continued from page 465)

The *Samastipore Central Sugar Co. Ltd.* though having done badly has been able to declare dividend of 7½ per cent against 10 per cent. This has been possible by making no transfers to Reserves and also drawing heavily on the undistributed profits of the previous year. The net profit for the same period is down by more than 50 per cent figuring at Rs. 4,05,749 against Rs. 8,52,531. After paying taxation of Rs. 2,65,000 (Rs. 5,80,000) and setting aside to depreciation Rs. 75,000 (Rs. 40,493) and paying dividend absorbing Rs. 89,925, the amount carried forward is Rs. 23,147 against Rs. 67,323 brought in.

* * * *

The Indian Standard Wagon Co. Ltd. has made very excellent progress during the period ended 31st March, 1944 and shareholders have reason to feel gratified over the increase in the dividend distribution of 15 per cent. from 12½ per cent. in the previous twelve months. Sales during the year have been a record at Rs. 78.24 lakhs against Rs. 41.90 lakhs. Satisfactory production was maintained in most of the shops and improvement in the supply of raw materials continued during the year. There were however slight delays and shortages in the supplies but for which fact the turnover would have been much higher. Manufacturing and other expenses have been surprisingly kept low while the increase under the head Salaries and Wages to the extent of Rs. 8 lakhs has been mainly due to the fact that the Company had to bear the higher cost of living by supplying labour with certain foodstuffs at concessional rates. The net profit before providing for taxation and depreciation at Rs. 8,15,169 for 1943/44 is a record in recent years and compares with Rs. 3,59,797 in 1942/43. Practically all the increase in the net profit has to be set aside for paying E.P.T. for which, a sum of Rs. 4,60,000 has been provided against only Rs. 45,000 in the previous year. A higher sum has been written off for depreciation at Rs. 67,933 against Rs. 60,674. After paying 7 per cent. to the Preference shareholders, a dividend of Rs. 3-12 has been declared on the ordinary shares against only Rs. 3-2 on the former occasion. The amount carried forward after all these disbursements is not very much changed at Rs. 18,823.

* * * *

I understand that the Examiner of Capital Issues has given consent to the issue of additional capital by the *United Commercial Bank* on the basis of one new share at par for every old share. The Bank is doing exceedingly well and must be able to show a profit of atleast Rs. 12 lakhs for the period April to December. This should enable the Directors to declare a satisfactory maiden dividend. In view of this dividend prospect and the substantial value of the bonus of an additional share at par, I should consider that *United Commercial Bank* shares of Rs. 50 paid up at the current market rate of Rs. 29 premium is a most attractive bargain.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Short credits have been a glut in the market; and interbank call money is nominally quoting ½ per cent in Calcutta and ¼ per cent in Bombay. There was greater bidding for Central Treasury Bills this week, applications amounting to Rs. 11.31 crores as compared with Rs. 10 crores on September 26. The average discount rate, however, remains unchanged at annas 7 pies 11 percent per annum. The offer of treasury bills for next week is Rs. 6 crores.

The returns of the Reserve Bank for the week ended September 29 disclose hardly any important change in the issue department. Total notes issued are higher by Rs. 39.55 lakhs, due mainly to an increase in rupee coin. Active note circulation is now Rs. 941 crores, recording a rise of Rs. 68.60 lakhs on the previous week. The statement of the banking department, however, reveals big changes. The deposits of the Central Government have increased by as much as Rs. 18.89 crores, to create an all-time high at Rs. 187.60 crores. The deposits of provincial governments have risen by Rs. 1.33 crores. Those of scheduled banks have gone down by Rs. 5.27 crores to Rs. 95.98 crores. The most outstanding feature on the assets side is an increase of Rs. 14.75 crores in foreign balances held in the banking department. These balances have now crossed the Rs. 300 crore mark. Between the issue department and the banking department, total sterling assets of the Reserve Bank are now Rs. 1,140 crores.

In the quarter ended September, the authorities in charge of monetary and currency policy have a remarkable achievement to their credit. Between June 30 and September 29, active note circulation increased by only Rs. 10 crores from Rs. 931.37 crores to Rs. 941.25 crores. That notes in circulation have increased by only Rs. 10 crores in the space of three months, is a definite assurance that the currency inflation of the earlier months is being definitely brought to a halt. This increase of Rs. 10 crores in active note circulation is all the more noteworthy as, during this period, the Government of India's sterling receipts from the British and Allied Governments have been many times this amount. Sterling securities in the issue department have advanced from Rs. 828.33 crores on June 30 to Rs. 834.33 crores on September 29. During the same period, foreign balances in the banking department have gone up by Rs. 131 crores from Rs. 173.74 crores to Rs. 304.85 crores. That is to say, sterling payments received by the Government of India in the second quarter of this fiscal year amount to Rs. 140 crores. It may now be definitely claimed by the Government that sterling payments made by the British and other Governments are being prevented from having any inflationery effect on the Indian currency situation. While sterling balances held by the Reserve Bank had increased by Rs. 140 crores in three months, active note circulation has gone up only by Rs. 10 crores; how has this been achieved? The payments received in respect of inter-governmental transactions have been mainly utilised to strengthen the cash balances of the Central Government, whose deposits with the Reserve Bank have gone up by Rs. 122 crores from Rs. 65.25 crores on June 30 to Rs. 187.60 crores on September 29. Another way of describing this development is that all the sterling payments have been more or less immobilised by their being allowed to have no more effect than piling up the Central Government's deposits. It may, therefore, be inferred that all the disbursements made by the Indian Government since July, whether on their own account or on account of the Allied Governments, whether in respect of budget allocations or in respect of items outside or exceeding budgetary grants, have been found from revenue collections plus the accruals to the various loans issued through the tap and otherwise.

The closing quotations are: Banks buying 90 days-st at 1s., 6¼d., for 1 and 2 months; Banks buying 90 days-st at 1s. 6 9-32d., for 3 and 4 months.

B.C. rates T.T. 1s. 5 15-16d., B.C. rates D.D. 1s. 5 15-16d. Bank's selling T.T. at 1s. 5 31-32d., Bank's selling D.D. at 1s. 5 31-32d. Bank's buying T.T. at 1s. 6 1-32d., Bank's buying D.D. at 1s. 6 1-8d.

London-New York Rates:—X'Rates 4.02½-3½; Bank's selling Rs. 332¾; Bank's selling D.D. at Rs. 332¾. Bank's buying T.T. Rs. 329½; Bank's buying D.D. at Rs. 326½.

London-Montreal:—X'Rates $4.43-47; Bank's selling Rs. 302½; Bank's selling D.D. at Rs. 302½; Bank's buying T.T. at Rs. 297¼, Bank's buying D.D. at Rs. 294¾.

Call money in Calcutta is nominally quoting ½ percent. In Bombay, Call money as well as 1 and 2 months deposits quoted ¼ percent, 3 to 5 months deposits ½ percent, 6 to 11 months ¾ percent and 12 months is 1¼ percent.

On their return to India, Sir Shanmukam Chetty and Mr. A. D. Shroff, the two non-official Indian delegates to the International Monetary Conference in America, availed themselves of every opportunity to inform the Indian public of the outcome of the Conference and of the part they played, in co-operation with the other delegates, in presenting proposals demanded by the special circumstances of India. Copious as is the information supplied by them, there are some new points of importance which have been revealed by Sir Chintaman Deshmukh, Governor of the Reserve Bank, who was also one of the delegates. In the speech which Sir Chintaman delivered at the Bombay Rotary Club, he gave a balanced and penetrating analysis of the results of the Monetary Conference. We have requested for a full text of the speech and hope to discuss its main points in a subsequent issue. By far the most important news given by the Governor of the Reserve Bank is with regard to India's seat on the Committee. The two non-official delegates revealed the information that India would have got a permanent seat on the Committee but for America's unwillingness to allot two seats to the British Empire. This allegation is confirmed by Sir Chintaman; at the same time, he provides the new information that the quota allotted to India is such that India can be and will be elected to the Committee without a doubt and without any outside support. That is to say, India has been denied a permanent seat but India is assured of a seat. Sir Chintaman's reference to the question of seat and quota bears testimony to his balanced judgment and correct approach in this matter.

"Here it was clear from the beginning that we were up against a conclusion foregone not on any valid economic ground, but for political reasons, namely, that the inclusion of two permanent members from the British Empire might be misunderstood by the American public. In an indirect way, the validity of our claim was recognised in that we were given a quota sufficiently large to ensure a seat for us in every election without any outside support. Thus, the conclusion might be regarded as meeting all our legitimate aspirations, but not satisfying our national dignity."

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000/- (Rupees six crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 3rd October 1944. Total amount offered was Rs. 11,31,50,000/- (Rupees eleven crores, thirty-one lakhs and fifty thousand). Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 54 (fifty-four) per cent. Lower tenders were rejected. Total amount accepted was Rs. 6,00,00,000/- (Rupees six crores), the average rate of accepted tenders being Rs. 0-7-11 (Annas seven and pies eleven only) per cent per annum.

Tenders for Rs. 6,00,00,000/- (Rupees six crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 10th October 1944 in Bombay up to 11 A.M. (Standard time) and up to the close of business on Monday, the 9th October 1944 at other centres. Successful tenderers should make payment on Friday, the 13th October 1944. Other conditions are as usual.

During the week ended the 29th September 1944 Government of India Treasury Bills for Rs. 2,70,00,000 (Rupees two crores and seventy lacs only) were sold in favour of the Issue Department of the Reserve Bank of India.

State & Business in Post-war Period

With peace looming ahead, many minds, all the world over, are exercised over the role of the Government in post-war business. The problem was never simple, not even in the days of widespread support of laissez-faire or implicit faith in it But in the conditions that will obtain in the postwar period, the problem is bound to be so complicated that one may doubt if forethought can do much to simplify it. Both on the Left and on the Right, the traditional approach to the question of the State and industry has to a great extent been abandoned. In the last war, State control of industry in the interest of the war effort was a late development. And once the armistice was signed, the Governments of the Allies lost no time in washing their hands clean of every sin against the Holy Ghost of laissez-faire. The consequences, however cheerfully they may have been borne at the time, are now recognised to be a wholly avoidable blunder. Though the Government is always an unwelcome intruder in private business, the latter is aware of good reasons for preventing his precipitate departure; and private business is eager to prevail upon the Government to continue its controls with a view to smoothen the transition to peacetime economy. This is also to some extent an administrative responsibility of the Governments, however narrowly such responsibility may be viewed. War production boards, war controls and stocks of various goods acquired and held on war account are not easily liquidated. In the case of the democracies the party in power has also to look to the next election. On the side of the masses, there is the post-war optimism of the people which is often in sad contrast to the overt cynicism of the Governments. But on this occasion, there is reason to believe that the Governments in every country will find it more difficult to go back on the promises they made to the people in order to raise their enthusiasm for the war effort. During this war, a position has been created in which the old remedy of hasty retreat to laissez-faire is not open to post-war Governments.

This position is better understood in terms of each country. In the United States of America, the pressure of the problem of return to peacetime basis has already begun to be telt. Mr. Donald Nelson has resigned on the ground that his job is finished. Re-conversion plans are said to be in a more or less advanced stage. The place and functions of the controls are being discussed. And more than all that, there is a lot of lively speculation on the relation between America's loans to foreign countries and her production and foreign trade.

In Britain, however, postwar reconstruction is being considered partly in terms of the requirements of competition in foreign markets and partly in terms of the adjustment of problems outstanding between industry and the trade unions. Our London Correspondent draws attention in his cable published in this issue to the scheme which the trade union leaders have drawn up which they propose to place before the Labour Party. Their scheme, it is suggested, is based on some broad lines of agreement between the Trade Union leaders and the Federation of British Industry. The clevage between the Labour movement as a whole and the Trade Unions as but a part of it, however big, is seen in the provision in their scheme of nationalisation for compensation for the colliery owners. The T.U.C. scheme, no doubt, retains some of the features of traditional Fabianism; but one can see that it will more readily make concessions to the owners which the rest of the Labour movement would like to fight to the last. The chances are that post-war reconstruction in Britain will be determined by the paramount claims of the export trades on the one side and on the other, the needs of repairing war ravages. To the extent that these two require State intervention, the Government can interfere in industry without provoking opposition from any section of the public. Reconstruction of the cotton textile industry which has been discussed threadbare since the days of the Balfour Report and the Liberal Yellow Book is again to the forefront, and one may be sure that what remains of the old individualism will get short shrift.

The problem of the relations between the Government and industry in the postwar period is thus materially different in different countries. In Britain, it is partly a question of making the world safe for Britain's exports and partly of meeting the demand for nationalisation of industries and working out plans of social security of a more liberal kind. In the U.S.A. industry and the public alike look forward to the removal of straight-jacketing controls. In a land of plenty, rationing seems an obvious injustice, which will become more unbearable when peace will have been signed. At the same time, various interests concerned ask for safeguards against the effects of a sudden withdrawal of controls. Ceilings would be unnecessary and floors would become all important. There is a section of opinion which insists that, since America is a large producer of foodstuffs and the world will have need for such large quantities, the Government must be prepared to buy the surpluses and keep the floor prices effective. On the other question of Government control over industry, it is thought that the Government should not unduly delay their exit out of the sphere of private industry. But President Roosevelt has more than once publicly reminded Mr. Cordell Hull that his crusade against cartels, whether in America or outside, should not be abated.

If British plans run on the line of unified control of big industries and the American Government are opposed to all suggestions of monopoly, some friction is, no doubt, indicated. But what matters for the world at large is that, despite differences of principle, policy and objective, both Britain and the U.S.A. will witness the continuance in some form or other of war time controls well into the post-war period. How long the controls will survive the war is a question that should be decided in the light of the possible expediencies of the future, rather than the political predelictions of the present. Those expediencies grow in the process of executing the post-war plans which will have for their objective, not the withdrawal of control—which will, no doubt, continue to be professed by the Governments concerned—but the realisation of certain broad national purposes, such as the stability of agriculturist prosperity in the U.S.A., and of the export trades in Britain, the expansion of foreign trade as a whole and the practicability, financial and other, of schemes of social security or popular amelioration. It is significant that in Britain, it is now taken for granted that the U.K.C.C. is not to be closed down after the war, but continued in some form as a means of securing Britain's entrepot trade. State monopoly or government control and direction of foreign trade may thus be more in vogue in the future.

In India, we have to reckon with the differences both in political status and in economic conditions. The relations, between the Government and business in any period, war or no war, depend primarily upon the nature of the Government and the extent to which it can count on the support or the acquiescence of the people. Where the Government is neither formally responsible to the people nor can command their confidence, its capacity or readiness to interfere in the sphere of business is severely limited by the fear of adverse reactions in the public mind. Likewise, in a country in which the economic organisation is undeveloped and public opinion has not advanced far along the lines of established social creeds, the scope for State interference in industry for administrative or ideological reasons is extremely limited. Nevertheless, the need for interference, by all tokens, will not be less in postwar India than in post war Britain or the U.S.A. In all countries, it arises, in the first instance, from the fact that Government have gone too far in the direction of wartime controls to retrace their steps all of a sudden. But it has to take new forms, because not only the transformation from war economy to peace economy, but also the objectives of post-war economic policy, derived partly from the changed economic conditions of the time and partly from the rise of new economic ideals, require the exercise of State control and direction. This is not less true of India than of Britain or the U.S.A. The grow-more-food campaign and the policy of food control with its procurement and rationing imply definite commitments to the agriculturists, disregard for which will have serious consequences. Likewise, industries which came into being in order to support the war effort have certain claims to Government support. The disposals department has with business a liaison of serious potentialities. The discharge of the moral obligations which the Government has felt towards the men who have enlisted in the forces has its implications for economic policies and programmes.

As for the economic ideals of the post-war period, India has been led by its factual freedom from ideological bias to allround support of the idea of planned development, which is different from prevalent social ideologies in that it will prescribe for any plan or policy the test of concrete results. The people at large, who will have no means of appraising the scheme or schemes that may be put before them, know now that the proof of wise planning, as of the pudding, is in the eating of it; that is to say, in the rise in the average man's consumption of the necessaries and comforts of life, in other words, the standard of living. Such planning is an obvious necessity of peace and order in the post-war period. And the difference between a national government and Government such as we have now is that, while the former may look to the needs of long-term development, national security and the drying up of illegitimate sources of profit to foreigners as not less important than an immediate rise in the standard of living, an unrepresentative government under foreign control will deny importance to the objects mentioned above and will include foreigners also among the primary beneficiaries of its post-war economic policy. But the latter cannot deny, any

Managing Director: **Dr. S. B. DUTT, M.A., B.L., PhD. (Econ.), London, BAR-AT-LAW.**

more than the former, the importance of an improvement in the general standard of living. A national Government is no more likely to proceed on the lines of nationalisation of industry and finance than a foreign government; and the latter will have to concede as much importance as the former to an increase in the standard of living. Both will be fettered to an equal extent by the need to liquidate the Supply Department in the manner least likely to disturb the even tenor of post-war economic life.

In these conditions, the relations between the Government and business in the post-war period will be governed firstly by the liquidation of the war effort and secondly by the needs of planning. In India, the nature of the war effort is such that the two may be said to converge to a large extent. Our war effort is the diversion of industrial production from civilian to military consumption and not the conversion of industry from peace to war purposes. We have no problem of reconversion such as the U.S.A. is faced with. In fact, to some extent the war effort naturally dovetails into postwar economic development. The grow-more-food campaign has developed under pressure of circumstances into an agricultural plan which will be part of an all-out economic plan on the Bombay model. The vast increase in steel production will be the basis of our industrial advance in the future. The increase in aerodromes will facilitate the development of airways. The mechanical equipment acquired or developed during the war period is largely of the nature of swords and ploughshares in one.

The need for State interference may, therefore, be said to arise less from the problem of conversion to peacetime basis, than from the administrative necessity of executing an economic plan of wide scope in a country which has, so to say, to start from scratch. The first requirement of an economic plan of this kind is the disbursement, if not outlay in the strict sense of the word, of large amounts of money by various agencies, and the Governments most of all, in the various sectors of the plan and in all parts of the country. Money is the indispensable catalyst for stimulating productive activity. The disbursement of such large amounts would be in vain and far worse, if they do not flow along the channels which are preconceived by the planners as most helpful to economic development and the further progress of the plan. The income of the masses has to be wisely divided between current consumption, savings for extraordinary expenditure and savings for yield of interest or dividend. In this division, the current level of prices is a potent factor. But prices being normally sensitive to speculative manoeuvres or intrinsic economic factors are bound to be unstable at a time when production and demand will alike be susceptible to great changes. The safety of the Plan requires that the Government shall stand guard over prices in order to ensure that the Plan will not be upset by untoward trends in the price levels.

While thus the primary duty of the Government in the post-war period is to stand guard over prices, the implications of effective discharge of this duty reach far into many aspects of the national economy. In fact, closer analysis will show that measures, which may seem forbidding as suggestive of an extreme form of state socialism, are really simple requirements of successful planning in Indian conditions. Into these questions we propose to go, in a later issue.

Disposal of Surplus War Stocks

As the war is coming to a close the problem of disposing of stocks of vital materials, food stores and other goods acquired for the Allied Army in India has to be faced from now. Sometime ago, the Supply Member spoke at Bombay on the disposal of surplus vehicles; but no clear-cut and comprehensive programme has been made public yet. The war has now entered the sixth year and large quantities of material produced in India and elsewhere have been stocked with a view to prosecuting the war against the Axis. The shipping position has become quite favourable for the Allies; and already consumer goods are flowing into this country. Industrialists and traders, therefore, have reason to be anxious to know full details regarding the policy governing disposals and the administrative machinery to be created for performing this task. The decision of the Government of India to constitute a Disposals Board for controlling of disposal operations and for dealing with policy matters in connection with the work is most welcome. It appears that the Board will consist of the Secretary, Supply Department (as Chairman) and Secretaries to the Industries and Civil Supplies, War, Commerce, Planning & Development, Finance, and Food Departments, the Financial Adviser, Military Finance, the Master-General of Ordnance, the head of the Ministry of Supply Mission in India and the Director-General (Disposals). The main function of the Board will be to devise ways and means of disposal of stocks to the Central, Provincial and State Governments and to private parties, to take steps against the possibility of excessive accumulation of surpluses and, of course, to plan for the orderly disposal of such surplus as these might arise in future. It is also made clear that stocks will be released at rates calculated to prevent the internal market from being flooded with these goods and to protect the internal economy and production plans from being thwarted by reckless sales of foreign goods now stored in India. Care will be taken to see that the ultimate consumer gets the goods at prices reasonable in comparison with current prices of similar articles and steps will be taken to minimise intermediaries and profiteering by middlemen. Assurance is given that normal trade channels of distribution will be used as far as possible, so that the traders and manufacturers in different parts of the country are enabled to get their fair share of the quantities available. First preference will be given to the Government of India, Provincial Governments and the States and their requirements would be met before the material is released for the general market.

The formation of the Disposals Board and the assurance given regarding some of the main principles to govern the functions of this Board are, no doubt, satisfactory as far as they go. But it is not clear that the Government have considered the complications that arise from the attitude of powerful foreign nations towards India. Since a good part of the war stores in India belong to the His Majesty's Government and the United States, the policy governing the disposal of these goods will naturally be outlined by those respective governments. A recent cable from Washington made it clear that U.S. has already spent diligent thought over the disposals problems and the report prepared by the Business Advisory Committee and issued by Mr. Leot Crowley, the Foreign Administrator, on the disposal of foreign surplus property seems to suggest that the organisation which will handle the problem of disposal for the U.S. Government will have to follow the dictates of the U.S. foreign policy. The U.S. Government, it appears, also contemplates the disposal of their goods in such a way as to acquire in exchange raw materials from different countries considered essential for post-war U.S. economy. A definite time limit has been indicated for the completion of the U. S. disposals programme, which would be over before two years after the surplus has been declared. American stores would be sold for American dollars only and, when felt necessary, short-term credits would also be given to facilitate the disposals. Long-term credits are not entirely ruled out, but will be extended according to the dictates of U.S. foreign policy or needs of the post-war commercial interests of that country.

The U. K. has her own plans for the disposal of her war stocks to the best advantage of her imperial trade. A sizable part of the stores in India belongs to the U. K. and it would not be difficult for her to arrange for disposing her consumer goods, transport equipment etc., in India at rates favourable to her with a view to wiping out part of the accumulated sterling assets; while, at the same time, by doing so she can forge yet another weapon for destroying those Indian industries which have sprung up in India during wartime.

It is well-known that there is considerable scarcity of consumers goods at present and imports are flowing in where internal production should have supplied the required demands. If the disposal of war surplus stores is so outlined as to release essential civilian requirements even before the end of hostilities, it would decrease the need for imports, help the Exchequer and also satisfy the merchants and industrialists who have been loudly protesting against the recent increases in the imports of consumer goods. Suitable arrangements should be made with His Majesty's Government and the Government of the U.S.A. for the acquisition of working plants in the several war factories received under lease-lend and in disposing of them the Government should remember the post-war industrial plans of the Provinces and the States also and encourage as far as possible the acquisition of these assets by private Indian industrialists. Thanks to this prolonged war, the U.S.A. and the U.K. have got excess machines tools capacity; and it should not be difficult for the Government of India to arrange that in the disposal of that capacity India is duly benefitted. If and when foreign stocks are purchased, full publicity should be given regarding the prices at which the purchases have been made, and it is also the responsibility of the Disposal Board to see that, when valuable plants and stores are distributed to the public, Indian interests get the preference, as otherwise foreign interests would be well entrenched in India and begin to thwart the rapid progress of Indian industries.

By Special Cable.

T. U. C. & Post-war Plans

Compensation for Collieries

No Leftward Swing

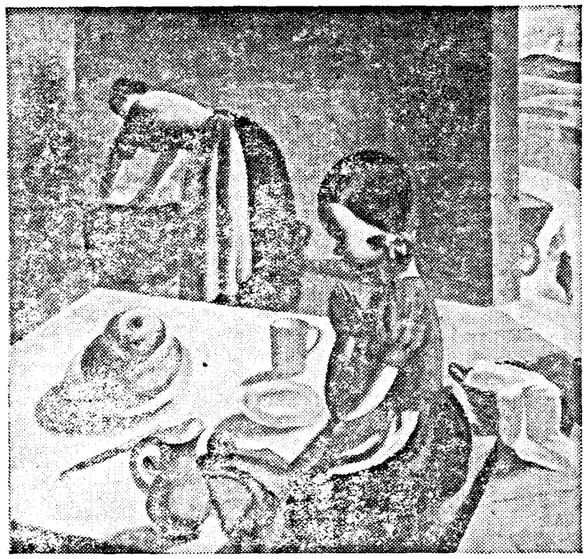
London, Oct. 5.

Typical of the confusion now prevailing in the British labour movement is the fact that trade union leaders have drafted and published their own plans for post-war reconstruction of Britain, without consulting the Labour Party whereof they are only a part. Their plan is published in a fifty-page pamphlet and will be submitted to the annual Trade Union Congress on October 17.

It is adopted by the Labour Party, it will be confronted with an accomplished fact and will have apparently no option except to endorse it and present it to the country as the Labour Party's own programme. If the Labour Party, with great daring, should defy the Big Trade Unions and attempt to draft their own programme with a broader appeal to the nation, it will firstly, reveal and accentuate the hidden cleavage between the political and the trade union wings of the movement and run considerable risk of losing a substantial portion of the trade union funds for the general election.

The fundamental principle running through the T.U.C. scheme is tight organisation of all important industries under boards, consisting of an equal number of trade unionists and business interests with an independent chairman and possibly a handful of outsiders representing the consuming interests. It proposes immediate Government ownership of coal mines and railways and would like to see Government ownership of all transport and fuel power, such as gas and electricity, but is willing to accept nationalisation of coal mines and railways as useful instalments.

For important industries, however, its recommendation is for public boards controlled jointly by trade unions and employers with the proviso that "any proposal to fix minimum general prices or restrict production or control entry into industry" must be subject to Government approval and possibly parliamentary approval.



It is difficult to detect any important difference between this tight cartel scheme and similar schemes proposed by the Federation of British Industries and other leading industrialists.

Apparently, the scheme represents the fruits of weekly conference between the Committee of the T.U.C. and the Committee of the F.B.I. which have been reported to be held behind closed doors over the past year or more. Indeed, the whole structure with its National Industrial Council and large apparatus of consultative councils, works council, production committees will seem to many to look dangerously like the beginnings of the hated "Corporative State".

Certainly, there is no trace of the old-fashioned "Socialist", as preached by the founders of the Labour movement, such as Keir Hardie and Tom Mann. When, for example, colliery companies are purchased by the Government, the T.U.C. suggests the shareholders should be given Government bonds to the full value of their properties and earning assets. In economic terms it can only mean their colliery owners will receive claims to a portion of the national income in perpetuity without any further anxiety or trouble on their part. Their only loss would be possible loss of various concealed perquisites, such as earnings through ownership of private companies which act as middlemen in coal distribution or as sellers of mine timbers or other supplies to the mines.

Thus while the press constantly refers to the country's mood as a "leftward swing" it is far from certain that the Labour Party, saddled with a scheme of this type, can win a general election.

Our Daily Bread

IN this hour of peril prayers for our daily bread acquire a new intensity. We are reminded more acutely than before of our dependence on a Higher Power for our loaves and cakes and our food-grains of all kinds. We recognise more readily too the debt we owe to the cultivators and farm-workers who grow the food-grains at home and the merchant seamen who bring in imports from overseas. It does not occur to us that to the chemist is due his meed of praise. Yet housewives as well as bakers can see his contribution in baking powder and bicarbonate of soda, and grain merchants in the fumigants used to protect stored flour or grain from insect pests. These are small things in comparison with what the chemist has done to enable the grower to harvest every ounce from every acre. To ensure healthy crops, he has provided mercurial dusts which prevent the diseases carried by the seeds. To check weeds he has provided sprays for their destruction in growing corn. To increase the yield from the soil he has provided fertilisers. A single pound's weight of sulphate of ammonia can, if properly applied, provide enough extra grain to make a quartern loaf of wheat bread or fifteen plates of oatmeal porridge! In the science and practice of soil fertilisation Britain has always been in the van. Cavendish, between 1781 and 1784, was the first man to "fix" nitrogen from the air. Basic slag was a British discovery and Lawes discovered superphosphate, the first chemical fertiliser to be made on a commercial scale. A century ago Lawes and Gilbert gave the world its first agricultural research station — at Rothamsted in Hertfordshire.

Editorial Notes

Hyderabad Finances

The Hyderabad budget for 1944-45 (the financial years begins from October 6) bears all the familiar features of a wartime budget in a prosperous Indian State. The upward trend of revenue has been felt uniformly during the last two years, revised estimates proving better than budget estimates and actuals even better. The rising prosperity of the working classes tends to put up excise revenue, while the improvement in the earnings of the Railways is on a par with that in British India. At the same time, expenditure has not moved up accordingly. In fact, on some items like A.R.P., it has gone down with the improvement in the war outlook. The year 1942-43 left a cash balance of Rs. 4.49 crores against the estimated surplus of Rs. 66.07 lakhs. The coming year is estimated to leave a surplus of Rs. 3.08 crores, revenue being put at Rs. 16.64 crores and expenditure at Rs.13.56 crores. The favourable experiences of the present have not, however, led to undue optimism or extravagance in expenditure. Mr. Ghulam Mohammed, the Finance Member, has been careful to emphasise that the increases in expenditure are such as can be pruned without serious adverse consequences when revenue will begin to shrink. This contingency must lose its importance against the background of the plans which are being drawn up for post-war development. While reserves amounting to about Rs. 20 crores should suffice to meet the narrow financial problems of a post-war slump, the State is preparing for a plan involving expenditure of as much as Rs. 115 crores. Mr. Ghulam Mohammed's note on the Budget bears the impress of a mind which is not only progressive but has also imbibed the New Delhi traditions of efficiency. A general overhaul of the system of administraetion and of taxation is being achieved with a blend of tact, firmness and vision, the benefits of which the State must realise before long. Meanwhile, increased expenditure is being incurred mainly with a view to prepare the ground for post-war plans of industrial and economic development.

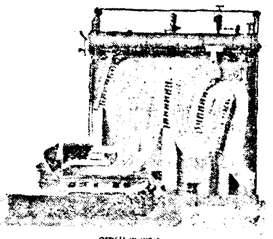
U.N.R.R.A. Again

At Montreal the U.N.R.R.A. Council has approved of the resolution introduced by the U. S. delegation under which areas affected by famine and disease and which happen to be the bases for important military operations of the United Nations are to receive benefits available through the U.N.R.R.A. Mr. Acheson, Leader of the U. S. delegation to the conference informed Sardar J. J. Singh, President of the India League of America, that India is now entitled to aid from the U.N.R.R.A. But the interpretation given to the resolution and the attendant circumstances indicated make it clear that promise of relief for India would for some time to come remain a mere paper promise. It appears that three factors are considered to stand in the way of grant of relief to India. Firstly, there are transport difficulties, particularly as the tempo of war against Japan is intensified. Secondly, India being a contributing nation cannot, under the present plans of the Administration, expect to receive relief. Thirdly, the funds and facilities are stated to be inadequate to meet the urgent needs of liberated countries in Europe and that the plans for aid in Asia are still incomplete. Mr. Acheson must have been aware of the difficulties enumerated above when he categorically expressed the view that India is now entitled to aid from the Administration. But the leader of the British delegation, Mr. Richard Law, in a statement gave out that the U.N.R.R.A. first contemplated the relief of twenty million displaced persons at least twelve million of whom had been torn from their homes. Since the resources of the Administration are now limited, India is now asked to wait for better developments in the future.



The Indian public would certainly be surprised that India's status as a contributing nation would in itself be considered a disqualification for receiving the much-needed relief.

Ten-Year Plan For Cocoanuts

The value of cocoanuts as a cash crop is fast increasing as the uses of copra, cocoanut oil and coir multiply. While the demand for cocoanut products has grown considerably in recent years, production has not come up to the required levels. Considerable quantities of copra and cocoanut oil have to be annually imported into India and enquiries in several localities suggest that the yield has been declining since 1931. The uneconomic prices offered are the main factor discouraging production while manurial tests and experiments in inter-cultivation show that the outturn could be vastly improved. The Report on the Marketing of Cocoanuts and Cocoanut Products in India just published by the Agricultural Marketing Adviser to the Government of India discusses in detail problems connected with the production of cocoanuts, regulation of imports of copra, improvement in the quality of cocoanut, better utilisation of the husk, shell and fibre. It favours the formation of an All-India Cocoanut Board to attend to the task of placing the cocoanut industry on a strong and profitable footing. A ten-year plan to increase the production is suggested for the Indian Cocoanut Board which should also arrange for giving loans at cheap rates for manures, offer facilities for inter-cultivation and encourage underplanting or even removal of trees where necessary. The area under cocoanuts in India is about 1.5 million acres producing annually about 3000 million nuts. But statistics are incomplete and unreliable and the yield is subject to considerable variation from year to year. Some scheme for checking cocoanut acreage at least once in ten years will be essential and a system of recording yields by selected growers in different areas should be devised. The imports of copra and cocoanut oil have increased recently to a great extent and tend to influence the prices in India. If the internal production could be stepped up and the by-products developed the Indian Cocoanut Board could effectively regulate the imports with reference to internal production. Co-operative societies should solve some of the marketing difficulties of

Wartime Agriculture In Canada

Food is an important war material needed to keep the fighting forces going and the civilian population efficient and contented. At the outbreak of war, many countries could not envisage the magnitude of the strain to be caused on agriculture as a direct result of war and war work. Canadian agriculture was not in a strong financial position in 1939 and, like Indian agriculture, was not prepared to assume the serious responsibility of keeping up the efficiency of cultivation. Before the war eight years of drought in the Prairie Provinces and ten years of very low prices depressed Canadian farm business even as the Slump added to the distress of the peasantry in this country. Rural indebtedness had been on the increase and farm lands, machinery and buildings were in a rundown condition. As prices were 30 percent below the 1925-29 parity the farmers were not enthusiastic about more production. Though there has been a slight improvement in the quantum of production of farm products just before the outbreak of hostilities, the course of war brought in several handicaps like shortage of labour, lack of fertilisers, scarcity of seed grains etc. From March 1939 to March 1943, 100,000 men from the farms joined the fighting forces and 245,000 men were taken away for war industries. In spite of this drain on manpower agricultural production increased considerably, the figures for 1942 being 32 percent above the 1938-39 level. Owing to longer hours of work on the part of old men, women and children, the production index has risen from 100 for 1938-39 to 163 in 1943. Though the wartime prices for farm products have been rising steadily owing to the corresponding increase in costs, the farm business did not yield benefit until the Autumn of 1942. The purchasing power of the Canadian farmer in 1943 is estimated at 25 percent higher than the prewar level. Recently, the rigors of labour shortage have been mitigated owing to official supply of adequate mechanical equipment and larger quantities of fertilisers. Milk production in Ontario recorded a decrease of 7 percent in 1943 compared with the previous year. Agricultural prosperity observable since 1943 has already resulted in a reduction of farm debt and given a powerful fillip to production. At a conference of Dominion and Provincial officials held at Ottawa last December, production goals for 1944 were fixed. Production of field crops, fruits and vegetables will be speeded up. Decrease in rye, oilseed crop, butter and cheese however appears unavoidable. The targets will have to be reached owing to the need for greater reserves, growth in livestock holdings and increase in Canadian population. If the crop weather proves good enough the year's achievement would do credit to the Grow-More-Food drive in Canada.

Railway Plan Criticised

The Railway Development Plan for India outlined by Sir Lakshmipathi Misra sometime ago has come in for criticism at the hands of the Committee of the Indian Chamber of Commerce, Calcutta. In a letter addressed to the Secretary, Railway Board, the Committee state that the period of seven years laid down for implementing the programme is an unnecessarily long one and the target of 2500 miles itself is very low. They are in favour of the Bombay Plan target of 21,000 miles of new railway lines to be undertaken within a period of 15 years. The contention that the Bombay Plan target will not be a strain on national finances may not be readily accepted by the Government. The point has, however to be borne in mind that accepting part of the Bombay Plan without agreeing to the general principles laid down therein is not surely best suited to the long term interests of the country. It is also doubtful if an overemphasis of the transport plan when production schemes are not properly conceived and co-ordinated can really be of any permanent value to a balanced economy for India. Sir L. Misra therefore could not be criticised for not accepting the Bombay Plan target since he had to draw up a plan according to the departmental view point. The Committee, however, have put forward very valuable suggestions for the development of the railway system in India. That the manufacture of locomotives in this country has been woefully neglected in the past will be agreed to by all, and the Misra Plan has not certainly promised satisfaction in this respect. The Committee have further suggested the construction of broad-gauge lines in the future and electrification of suburban railways and plead for the manufacture of electric locomotives in this country. Jobs in railway services have till recently been beyond the reach of Indians and the Committee rightly points out that the future must be quite satisfactory regarding the admission of Indians to the top jobs in the railway services. The plea for revising the present railway convention with a view to implementing the programme of rehabilitation and expansion is put forward. It is suggested that financial arrangements also may be arrived at by which the railways might cease to pay contribution to the Central Exchequer and might be allowed to expand within the limits set up by their reserve fund. Reduction in the railway costs is long overdue and must be made easy in view of the amalgamation of the various railway systems under the Government. War has brought in centralisation in different branches of administration and this very move of centralisation must be utilised for a rational reorganisation of the railway system in India. A simplified and clear Standard Goods Classification for universal adoption by all Indian Railways on a telescopic basis has been asked for and the principle of charging less for fully wagon loads is still to be put into practice. Traders know only too well that the railway rates in India have been operating more in favour of foreign trade than internal trade and often against the development of indigenous industries. A thorough overhauling of the rates structure is necessary and in view of all the principal railways being now State-managed, a Railway Rates Tribunal should be formed for the purpose. The Committee also plead for a distribution of control over railway mileage on the ground that it is not economic since it has been established by separate railway companies. Distribution in the working and control of railways in India should be devised on the basis of geographical and trade factors. There are tremendous problems of rehabilitation and rational construction before the railway authorities and the Committee suggest that the development of airways may well be left to private enterprise. It is to be hoped that the Government Railway Development Plan will not be fully relegated to the coming of peace, but steps will be taken to implement some of the preliminary schemes before the war is over and, as the Committee suggest, the railway plan must be well co-ordinated with other Government of India plans if the tempo of the future economic development is to be properly regulated and adjusted to the needs of the country.

Industries Plan for U.P.

The industries plan for the United Provinces prepared by Mr. L. C. Jain Director, Department of Commerce and Industries, Government of the U. P., has been well conceived and drawn up with a knowledge of present wartime development and future possibilities. The scheme consists of three parts, the first dealing with the most vital issues of technical education, while the second part details the lines of development for the basic and large-scale industries of the province. The last part outlines the development of cottage industries. Vast

THE CREEPING MENACE

As a rule Tuberculosis creeps very gradually upon its victims. Its symptoms, though dangerous, appear so innocent that this creeping menace is often disregarded until too late.

To keep healthy, eat as much fruit, vegetables and dairy foods as possible. Try to get sufficient sleep. Above all make the most of fresh air and sunshine.

In India over 5 lakhs of people die of T.B. every year. Loss of weight, undue fatigue and persistent coughing are the danger signs of this tragic disease. When you feel run-down consult a qualified doctor immediately—before the trouble becomes serious.

If you already have T.B., your doctor will arrange for your admittance to a sanatorium, free of cost if necessary. Treatment in a sanatorium taken *early*, will almost always effect a cure.

PROSPECTUS

1. OBJECTS OF THE COMPANY.

The Company has been formed for the purposes set forth in the Memorandum of Association and in particular to acquire the fixed assets of the Sugar Factory belonging to the Kirlampudi Sugar Mills.

2. PROSPECTS OF SUGAR INDUSTRY IN INDIA.

Sugar industry has achieved a great success in India since the grant of protection in 1932. There were only 32 Cane Factories in that year producing about 1,58,000 tons of sugar while in 1943-44 the number of Factories working rose to about 158 and sugar production was about 12½ lakhs of tons. Although India is one of the largest sugar consuming countries in the world, the per capita consumption of sugar is very low as compared to other civilised countries in the world, as can be seen from the table given below:—

Country.	Per capita consumption.
U. S. A.	103 lbs.
Great Britain	112 ,,
New Zealand	115 ,,
Australia	114 ,,
France	54 ,,
Germany	59 ,,
Cuba	88 ,,
Denmark	128 ,,
India	6.5 ,,

(25 lbs. including gur consumption).

With the rapid development of industries and agriculture, the standard of living in this country is bound to go up which should lead to increased consumption of sugar.

The present war has, however, made India an important sugar producing centre, particularly after the occupation of Netherlands East Indies and the Phillipines by the Japanese. There is, therefore, a considerable demand for sugar not only from the Indian market but also from other countries which were previously receiving their supplies from Java and the Phillipines.

It is well recognised that Molasses from Sugar Factories can be economically converted into absolute alcohol, rectified spirits and power alcohol for which there is a heavy demand in this country. Addition of an Alcohol Plant to the Sugar Factory not only supplies the much needed alcohol to the country but also helps in reducing the cost of production of sugar itself so that industry will be in a position to successfully withstand post-war competition.

Sugar Factories in India have, therefore, a very good future.

3. SPECIAL FEATURES OF THE COMPANY.

The Sugar Factory at Kirlampudi which is 10 miles from Samalkot in the East Godavari District was installed in the year 1934 by the Zamindar of Kirlampudi, and commenced operations at full capacity in 1936. Since then the Factory has been working as a proprietory concern till 1944, when it was purchased by the Kirlampudi Sugar Mills. The Factory has got all the natural advantages that are necessary for the successful development of a Sugar Factory.

(1) The Factory is situated in the heart of a cane growing area extending over about 3,000 acres with an average yield of 35 to 40 tons per acre within a radius of about 8 miles from the Factory. The average annual production of cane in this locality is estimated to be over a lakh of tons as against the requirements of this Factory of 24,000 tons. There is thus an abundant supply of cane at easy distance from the Factory.

(2) The Factory is connected with good roads on which bullock carts regularly ply facilitating easy and economic transport of cane to the Factory.

(3) The average sucrose contents of the cane grown in this area (CO-419) is 13.5 per cent as per the report of the Agricultural Department. Though the commercial recovery of sugar has been estimated at 10 per cent, experts have based their calculations on only a 9 per cent recovery, making liberal allowances for unforeseen contingencies.

(4) The Machinery supplied by the well-known Firm of John McNeil & Co. of Glasgow, is most up-to-date and is in good condition. To obtain the maximum recovery for the coming season, which commences in November next, the machinery has recently been thoroughly overhauled.

(5) The Factory has now secured the necessary expert technical staff and skilled and cheap labour is available in neighbouring villages.

The present crushing capacity of the Factory is 150 tons per day and it can be easily increased to 250 tons with slight alterations which the Directors propose to effect before the commencement of the next season (1945-46). It is also the intention of the Directors to enlarge the Factory by insalling additional machinery so as to increase the crushing capacity to 500 tons as early as possible.

The Factory was purchased from the Zamindar of Kirlampudi by The Kirlampudi Sugar Mills (represented by the Sole Proprietor Mr. K. V. Subbarao) at a price of Rs. 3,00,000.

The Factory was recently inspected by an expert Engineer who valued the fixed assets on the basis of fair prices at Rs. 4,25,000. In view of the fact that Mr. K. V. Subbarao is interested in this Company, being the Managing Partner of the Managing Agents, the Directors have been able to purchase the entire property of the said Kirlampudi Sugar Mills from him for Rs. 3,25,000 which amount represents his actual cost price of Rs. 3,00,000 plus the amount spent by him towards overhauling, additions and sundry expenses.

In view of the natural advantages and potentialities for future development that this Factory possesses and taking into consideration the difficulties in obtaining fresh Machinery, the Directors are of opinion that the price paid is reasonably low.

4. PROSPECTS.

A cane field survey has been made and it has been found that the area has already early and late varieties of cane which will enable the factory to work during the coming season from 15th November to 15th May, i.e., for full 6 months. Contracts for supply of cane for the requirements of the factory for the season have already been entered into. Although the crushing capacity of the factory is 150 tons a day, calculations have been made on the basis of crushing only 125 tons a day with a recovery of 9%.

It is estimated that the Factory would be able to crush 21,000 tons of cane and produce 1,900 tons of sugar at a cost of Rs. 360 per ton as against the present control price of Rs. 440 per ton. While making the above estimates, the experts have taken into consideration the cost of cane at the contract price, and made liberal allowances for other items of expenditure including excise duty. Based on these estimates, a profit of about Rs. 1½ lakhs, at the rate of Rs. 80 per ton can be safely expected and the earnings on this basis work out to about 25% on the capital. After setting apart adequate amounts towards depreciation and taxes, the Directors feel confident that it should be possible to declare a handsome dividend from the very first year.

The post-war prospects of the Company are also attractive for the following reasons:—

(1) It will take a fairly long period for Java and the neighbouring Sugar producing countries to re-establish their industry, and effectively come into the market on a competitive basis.

(2) It is very unlikely that the present E.P.T. and other forms of heavy taxation will continue for any length of time after the war is over.

(3) It is the intention of the Directors to add a Distillery Plant for utilising the by-products which will reduce production costs substantially, thereby increasing the profits of the Company.

(4) It is also proposed to acquire an Agricultural Farm and grow sugarcane crops of different varieties in rotation thus enabling the Company to have a working season of 8 months in the year.

The Board consists of very influential businessmen. Mr. K. V. Subbarao of the Managing Agency Firm is a well-known and experienced businessman connected with the Management of a number of Joint Stock Companies in South India.

The following table will give an idea of the share value of some of the Sugar Mills having more or less the same crushing capacity:—

Name of Mill	Crushing capacity	Paid-up value per share	Last Dividend	Market value
	Tons	Rs.		Rs.
Jeypore Sugars ..	200	10	6¼%	13/12
India Sugars ..	500	10	12½%	24/10
Southern India Sugars ..	300	10	3%	16/-
Vizag Sugars ..	120	10	Nil	12/10

The shares of some of the big Sugar Mills such as the Mysore, Buland, Raza and Cawnpore Sugars are all quoting at very high levels ranging from 5 to 6 times their paid up value. Therefore, an investment in these Shares should be very attractive both from the point of view of immediate returns and capital appreciation in the long run.

5. MANAGEMENT.

Messrs. K. V. SUBBARAO & CO., are appointed as the Managing Agents for the Company for a period of 20 years. They will be paid an Office allowance of Rs. 750 per mensem plus 10% on the nett profits of the Company.

6. MINIMUM SUBSCRIPTION.

The minimum subscription upon which the Directors would proceed to allotment is shares of the face value of Rs. 3 lakhs.

7. AGREEMENTS.

The following agreements have been entered into:—

(1) An agreement between the Company of the one part and Messrs. K. V. SUBBARAO & CO., of the other part for the appointment of the said Messrs. K. V. SUBBARAO & CO., as Managing Agents for a period of 20 years on remunerations referred to in this prospectus under the head 'Management'.

(2) An agreement between the Kirlampudi Sugar Mills represented by the Sole Proprietor, Mr. K. V. Subbarao and this Company for the sale of the Plant, Machinery, Laboratory, Stores, Electrical Plant, building, land, etc., of the Sugar Mills for a price of Rs. 3,25,000. A Sale Deed for the immoveable property will be executed by the said Mr. K. V. Subbarao in favour of this Company.

(3) Underwriting agreement with Mr. P. R. Subramanyam of Bombay.

(4) Underwriting agreement with Messrs. B. V. Sarabhaiah & P. Kotaih of Bezwada.

8. DIRECTOR'S QUALIFICATION.

Under the Articles of Association, the qualification of every Director other than an Ex-Officio Director shall be the holding of, in his own name or jointly with any other person whether beneficially or as trustee, shares in the Company to the face value of Rs. 5,000.

9. INTEREST OF DIRECTORS.

(1) Mr. K. V. Subbarao is interested as the Managing Partner of Messrs. K. V. Subbarao & Company who are the Promoters and Managing Agents of the Company. He is also interested as the Vendor to this Company.

(2) Rajah Ravu Sri Ramakrishna Rangarao Bahadur Varu, one of the Directors, is interested to the extent that he is the original owner and first Vendor of the property of the Sugar Mills, and he is still to receive from Mr. K. V. Subbarao Rs. 1,28,750. Under advice from Mr. K. V. Subbarao, the Board has agreed that out of the sale price of Rs. 3,25,000 due to Mr. K. V. Subbarao by the Company, they will pay the said Rs. 1,28,750 to the said Rajah Ravu Sri Ramakrishna Rangaravi Bahadur Varu.

10. PRELIMINARY EXPENSES.

The preliminary expenses, excluding any brokerage or commission or other underwriting charges payable for procuring subscriptions, are estimated not to exceed Rs. 15,000 and are payable by the Company.

11. VOTING RIGHTS.

On a show of hands every member present in person shall have one vote. Upon a poll every member present in person or by proxy shall have one vote for every share held by him. No member may vote, act as a proxy or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

12. RESTRICTION OF TRANSFERS.

The Directors have the power to refuse to transfer shares without assigning any reason whatsoever, the same discretion being used as in the case of original application for shares.

13. DOCUMENTS.

The Articles of Association and the Agreements mentioned under Clause 7 as also the Engineer's valuation report can be inspected at any time during business hours at the Registered Office of the Company at 99-A, Armenian Street, G. T., Madras. A copy of the Company's Memorandum of Association is attached to this Prospectus and forms part of it.

14. BROKERAGE AND UNDERWRITING.

Out of the 3,000 shares now offered to the public, Mr. P. R. Subramanyam, M.A., of Bombay has underwritten 2,000 shares, and Messrs. B. V. Sarabhaiah & P. Kotaih of Bezwada have underwritten 1,000 shares for an underwriting commission of 4%. The underwriters have agreed to pay a brokerage of 2½% on allotments made on applications bearing the stamp of recognised Brokers or Bankers or other authorised Agents. The Directors are of opinion that the resources of the said underwriters are sufficient to discharge their above respective underwriting obligations.

15. APPLICATION FOR SHARES.

Application for Shares should be made on the form accompanying the Prospectus, or in a form similar to the same and be forwarded to the Registered Office of the Company, or to the Branch Office at Kirlampudi, or to the Brokers, or to any of the following Bank offices together with a remittance of Rs. 30 per share:

The Central Bank of India, Ltd., Bombay, Delhi, Calcutta, Madras, Rajahmundry, Ellore, Bezwada, Guntur, Coimbatore and Madura.

The Bank of Jaipur, Limited, Madras and Bombay.

The Indian Bank, Limited, All the offices of the Bank.

The Andhra Bank, Limited, All the offices of the Bank.

Where no allotment is made, the deposit will be returned in full and when the number of shares allotted is less than the number applied for, the deposit amount paid on application will be appropriated towards the amount payable on allotment and any balance will be returned to the applicant.

Cheques drawn on Banks at places other than those stated above should include the necessary amount to cover collection charges at ¼%.

Copies of the Prospectus and forms of application for shares are available with and may be obtained from the Bankers, Brokers or the Registered Office of the Company.

Dated this 27th day of September, 1944.

expansion in the H. B. Technilogical Institute, Cawnpore, is envisaged and the courses will be extended so as to include (1) oil, including oil, soap, paints and varnishes (2) glass and ceramics (3) leather, including leather chemistry and leather working (4) textiles, including textiles chemistry (5) radio engineering (6) chemicals and pharmaceuticals (7) food chemistry and (8) engineering, mechanical industrial and electrical. Separate institutions for different subjects are not conductive to co-ordinated effort and research facilities and polytechnic are definitely favoured. Lack of personnel threatens to be the chief bottleneck in post-war plans in India and the U. P. plan rightly places the first emphasis on the required educational drive for coming industrialisation. The province has already made some headway in heavy chemicals, re-rolling, cement and fertiliser industries. The existing ordinance factories and the Cawnpore workshop are an asset in speeding up the industrial plan. The Government are investigating the possibilities of inviting the Lucknow marl for cement and of establishing a plant for the manufacture of ammonium sulphate. A thorough survey of the raw materials, supply and transport facilities would be needed. The established industries of the province require technical help, guidance and also assistance from the Commercial Intelligence Bureau. Possibilities for organising the manufacture of electric bulbs, electrical equipment, thermos flasks, optical glass potteries, enamelware, plastics, plywood, sunn hemp fibre, artificial silk, razor blades, safety pins etc., are shown to be vast. Regarding cottage industries, the plan takes into account the contemplated development in hydro-electricity and suggests that since comparatively large-scale production can be organised in villages with the use of electricity, the old definition of cottage industry must yield place to a new one including industries that require capital up to Rs. 1 lakh. Among the cottage industries with good prospects are mentioned the following: toys, silk filiature, wool spinning and weaving, torch bulbs, dry-cell batteries, electric torches, die punching, fountain pens, buttons, pencils, glass beads, spectacle frames, clocks and watches. Marketing facilities are essential and a Central Marketing Organisation with a capital of Rs. 10 lakhs (of which the U. P. Government should subscribe Rs. 2 lakhs and the rest by the public) is suggested. The plan is by no means too ambitious and if the U. P. Government should give their earnest consideration to the early implementation of the schemes suggested we have no doubt that the industrial future of that province would be full of hope and cheer.

Clive Street Gossip

Mahatma Gandhi's seventy-fifth birthday fell, with illuminating coincidence, after the failure of his talks with Mr. Jinnah. And this failure came on top of the rebuff from Lord Wavell and the more or less complete futility of what should normally have been the historic interview he gave to Mr. Gelder. Judged by ordinary standards, Mahatma Gandhi must be deemed to have reached the nadir of his political power and prestige. And yet his birthday has been celebrated as if his 74th year has been his 'annus mirabilis'. Not only has the day been celebrated throughout this vast country, but prominent men and women all the world over have acclaimed it as one of great moment to the future of the human race, not less than of India. Not many outside India can understand the significance of the feelings which the frail, old man evokes in men and women of vision and goodwill. Not many can realise why India still continues to swear by a leader whose record in recent times is to all appearances utterly bleak. Gratitude in politics is a notoriously weak emotion—it is a question whether it has any lasting place in the mass mind. And it would be as untrue and fallacious to trace India's allegiance to Gandhi to his achievements of the past, as to suggest that, when Mr. Churchill will have won the war, he can grab the premiership in perpetuity. Successful leaders may be adored; but they can never be sure of permanent allegiance. If Gandhiji still remains the accredited leader of the Indian masses and the Indian intelligentsia, the reason must be found in ways quite out of the common.

The attitude of the Indian people to Mahatma Gandhi is one, in which the vicissitudes of his political campaigns, whether against the British Government or against other parties, are more or less wholly irrelevant. This may strike many as the language of an irrational political mysticism. But the problem of India, particularly Hindu India, is not so much to get over the political and economic disabilities of this generation or the next, but to find for itself, and discover to the world at large, its true soul. The genius of India is for synthesis. And while Indian philosophers had little difficulty in achieving synthesis in their thought and in their own individual life, synthesis in social and national life is a far more difficult problem and waits on the development of a wide world that has little thought and no respect for idealism of any kind.

Arabindo Ghose, in a brilliant critique on Kalidasa, points to the three distinct ages in the history of Hindu India, the keynote of each of which was best expressed by the three great poets, Valmiki, Vyasa and Kalidasa. Each age, according to Arabindo, represented an experiment in a proper scheme of life for society and individual. Each revealed at the end its shortcomings; but the stage was set for the final synthesis of all the three ways of life. And it is quite conceivable that the synthesis would have been effected, if the long and unending invasions from without had not overpowered Hindu Society. The problem of India now is to pick up the broken threads where they were left nearly two thousand years ago. All the vast, rich experiences of a glorious past lie buried in the sub-conscious mind of the nation as a whole. The national psyche is vaguely stirred by the sub-conscious, what time the ponderous forces of the living present impel it to action on somewhat different lines. The conflict is there; but the relative strength of different forces is not easily appraised. Modern India sways, now towards ancient ideas, now towards the empiricism of present-day conditions. Between modern industrialism and the simple life of olden times, between the violence of tank and bomber and the force of persuasion drawing power from the hidden springs of the nation's innate spirituality, the Indian mind feels constantly torn by an inner conflict. Here again, there is the vague feeling that the solution lies not in a wise choice between clear-cut alternatives but in a synthesis of the principles that Life in its fulness reveals to man. Whatever that may be, the mass mind in India has an instinctive appreciation of the fact that our national problem is not the problem of Donald Nelson or Himmler or the Maquis, but the problem of knowing our true national self, so that we may do well by ourselves and by the rest of the world. What India stood in need of was not a Marshal Tito. Titos will grow on every hedge when the time comes or the need arises—but an inspired leader who will dig up the national self from the debris of the sub-conscious.

Decadent as India has been, she never lacked poets and scholars who, in their own way, revived the past for the benefit of the present. But till Mahatma Gandhi came on the scene, there was none to symbolise in his own person the hoary ideals of the people, none to take even the most unpractical parts of the racial ideology to the sphere of action on a nation-wide scale. That is what makes Gandhiji unique not only among our leaders but in the history of India and of the world. To the masses, his life is at once an epitome and an enlargement of all that is noble and sublime in our epics. Vasishta pitted his soul force against the crude violence of Viswamitra. But that is a story, here, Gandhiji demonstrates on a grand scale the validity of that principle which the epics contained in its embryonic form. It is not as the virtue of a lone individual which can only glimmer like stray glow-worms in the gloomy history of mankind that Gandhiji upholds it, but as a strong and enduring basis of life for man as a social being. Gandhiji does not make small batteries of individual virtue, but sets up a power-house which will develop on a vast scale the hidden might of unarmed Right.

Not only India, but the whole world, has need for such a demonstration, India because the national mind could not function at all without being re-awakened to its ancient yearnings. And the world, because it must, by its very excesses, develop to the point at which its better minds can respond again to the voice from the East. In the spiritual evolution of the human race, it must be remembered, the missing links are more numerous and baffling than those of its physical evolution. The more advanced types are infinitesimally small. But numbers do not invalidate the evolutionary thesis. And the fact remains that there are many outside India who will heed to the call of nobler ends and cleaner means. To such, the failure of Gandhiji's efforts to conciliate this factor or that in the national life of India matters little. What matters is that the world will not be allowed to put out of its mind the alterna-

tive to wars of violence and that there is still hope of Gandhiji's power house developing power and functioning without fear of breakdown.

That hope was best expressed—that is, without either exaggeration or any streak of undue pessimism—by Bernard Shaw when he said, "I wish this were Mr. Gandhi's 35th birthday instead of his 75th". Who would not wish that Gandhiji were younger in body as in spirit, so that in the arduous tasks that have devolved on him, we could feel more confident of sustained efforts over a long period. Perhaps, the wish is a betrayal of poverty of faith. For the tasks that destiny has allotted to the Mahatma, his age and physical strength are matters that do not matter. In a sense, his tasks are done. For, as Pearl Buck has aptly put it, Gandhiji has taken the Indian people to the gates of liberty and the means by which he has taken them to the doorstep may yet suffice to open the gates.

Knock, not batter; and it shall open. Before the very gates of freedom, Gandhiji pauses, argues and pleads with the gatekeeper—a process that sorely tries the patience of his impatient following. With Jinnah, as with Lord Wavell, he is still content to plead and parley. Persuasion in politics is a dangerous and difficult task. But Gandhiji is not deterred either by danger or difficulty. The British as a people have never understood him. They see him as speaker, writer, politician or missionary. But it is not given to them yet to see him in the full integrity of his personaliy. That perception may come with some turn in the events, some flash on some facet of his personality, which will illumine the whole. To wish the Mahatma many more years is commonplace; to be confident is more apt.

* * * *

One of the nasty surprises that Calcutta has suffered of late is the report that the premises of the India Coffee House in Central Avenue are to be requisitioned for the use of the American authorities. The surprise was nasty enough when it first came on us. What is nastier is that, while the public was thinking that such an obviously unjust proposal had been abandoned for good, it is still being actively considered. On the merits of the question, there is no room for doubt. The India Coffee House is almost the only decent resort for middle-class Indians, men, women and children while new cafes for the members of the allied forces are being set up almost every day. I sometimes wonder where these cafes get their provisions from. If it is not from stocks already earmarked for the army, the new cafes must mean a serious drain on the stocks for civilian consumption. And their proprietors must be doing their daily marketing with a princely disregard of prices—which is perhaps the most powerful factor in the rise in the prices of vegetables, eggs etc. It is for the Minister of Civil Supplies to look into this question. But that is by the way. What I want to stress is that, while these cafes are growing up like mushrooms, the India Coffee House is almost alone in catering to civilian needs without overlooking the members of the allied forces. As against this, what weight can be attached to a departmental requirement of the Americans which can be met by other buildings or sheds put up in vacant sites nearby? Requisitioning is a provincial responsibility But the Government of Bengal has its responsibilities to the people as well. And it passes my understanding how the Government of Bengal neglects to explore obvious alternatives or tamely agrees to play the bailiff for the Americans in India.

Out of the mouths of babes.....Will it make a difference to the authorities to know that it is not alone the grown-ups that will resent the closing down of the India Coffee House, but the children, in whose life Calcutta with its parks closed or filled with dugouts hardly leaves any sunshine? I hope it will; and in that hope let me give here a few uncut gems of juvenile contributions on this subject.

> I went to India Coffee House yesterday and learnt that it was going to be taken by the Americans. I had gone there some weeks ago and I learnt the same, but I thought they would'nt take the place because it is one of the important restaurants in Calcutta. It is in the mid'st of very important offices, large mansions with high cast people living in it and other important places. In the evenings many people goto India Coffee House to refresh themselves. We civvilians Chinese, British Troops and other people in Calcutta think it a shame for the Americans to take India Coffee House.
>
> Calcutta is now very crowded and the milatray have taken clean restaurants like Grand Hotel and Continental Hotel. The cleanest of all is India Coffee House. If the military take all the clean restaurants what are we civvilians to do? After going to pictures where are we to go and have a feed? We get doughnuts only in India Coffee House. Not only can you drink coffee there but they sell you goods coffee seeds and coffee powder, at a very cheap price. . Thereb ara

(FROM OUR CORRESPONDENT)

NEW DELHI, Oct. 1

The "adjournment sine die" of the Gandhi-Jinnah talks last week was regarded here as something of a political anti-climax after three weeks of suspense. Last Monday itself the battle for a compromise was considered as good as lost. Political circles here are glad that the failure has not engendered that bitterness which might have been expected in normal circumstances and credit is given to both the leaders for that. The causes of the failure which have been analysed in detail in the press are mainly three: Firstly Mr. Jinnah's reluctance to submit the partition issue to a vote of the people of the majority Muslim areas, secondly his implied hint that the boundaries of Pakistan need not coincide with the Muslim majority districts; and lastly his reluctance to put the independence issue on the forefront of the League programme. Mr. Jinnah interpreted the Lahore League resolution to include implications hardly present in the original. There is a widespread pessimism in political circles here as to the future prospects. It is felt that political frustration has reached a new intensity.

* * * *

How India is getting a raw deal in the matter of her food requirements is clear from a recent disclosure that her demand for 150 tractors in 1943 brought her only one tractor in 1944. This fact has to be set against the intensive mechanisation of agriculture that has taken place in Britain during the war to augment her food production. It is learnt that whatever tractors are released by the United States go to Britain or the British Dominions. India's requirements come at the rock bottom of the priority list. It is stated in this connection that a meeting of Central, Provincial and State representatives recently held to consider this matter decided to depute someone to Washington to secure allotment of tractor supplies for this country. Tractors, it was considered, would render great help in bringing areas infested with weeds under cultivation. If India can manage to get 400 tractors, about 400,000 acres of weeds land can be made to yield food crops. It is stated that the presence of weeds (which cannot be properly dealt with by plough) reduces the yield by as much as three-fourth.

* * * *

Belated approval by the U.N.R.R.A. Council to include India among the areas "affected by famine and disease and important to the military operations of the United Nations" removes one of the main reasons in favour of India's boycott of the organisation. No details have yet been received officially by the Government of the decision. It is stated that it will take some time before the details of the aid India needs are worked out in close consultation between the Indian Government and the U.N.R.R.A. It is still feared however that inspite of the last year's famine disaster in Bengal and other areas and the acute distress still prevailing in Bengal districts, the scale of the U.N.R.R.A. help will be more limited than in the case of other war devastated countries. In any case it should be easy now for the Central Assembly to give its assent to India's participation in the relief organisation.

* * * *

The Central Government are keeping quiet about their promise to secure 400,000 tons of food imports from overseas to make up for the huge deficit still facing the country. Sir Henry French, the British expert, who was sent here to investigate the country's food needs, has left without giving the slightest idea of his findings or conclusions. It is strongly felt here that the Government must make a detailed statement about the food situation in the country, their representations to London and the extent to which those demands have been met. Complacency has already cost the country a terrible famine. The epidemic casualty reports from Bihar continue to be further talks can be carried on with any alarming. The Central Government seems to be doing absolutely nothing in the matter.

* * * *

The Government of India still haven't come to any conclusion as regards the date of sending a deputation to Britain to discuss the liquidation of the sterling balances. Not a hint has been dropped either by Sir Jeremy Raisman or by Sir Theodore Gregory about their recent discussions in London. It is stated here that both Britain and India have to prepare certain relevant preliminary data—as to what goods India needs and as to what Britain is prepared to supply—before further talks can be carried on with any advantage. India does not want payment in gold but will be only too glad if Britain could meet her needs in capital goods within a reasonable period. It is stated that Sir Jeremy should consult industrial interests in this country before he arrives at any conclusion in this matter. Under no circumstances will this country agree to buy goods she does not need or reconcile herself to getting supplies of capital goods in such small quantities as to upset her post-war industrialisation plans.

* * *

It is regretted here that the Government of India should be so secretive about the dollar credits accruing to India which have gone into the Empire Dollar Pool and about the Lease-Lend transactions generally. Even the Reserve Bank annual report is silent in the matter of dollar credits. Most of the information regarding these items that we possess has originated from the U.S.A. It is felt here that the Government should make public its policy regarding the dollar pool and as to what share of these dollar resources will be available to India to meet her post-war needs.

HILL-BIRD.

BOMBAY MARKETS

SILVER

(*From Our Correspondent*)

Bombay, October 5.

From Rs. 122-5 on Friday Silver weekly delivery price declined to Rs. 118-4 on Wednesday, but the Reserve Bank's refusal to accept tenders even at Rs. 123-8 caused a recovery in price to Rs. 122 today. A prominent bull syndicate in silver as in gold has been formed. Spot silver is quoting Rs. 2-4 higher. The market is steady.

GOLD

(*From Our Correspondent*)

Bombay, October 5.

From Rs. 68-13 on Friday, forward gold declined to Rs. 68-8 on reports of Reserve Bank reviving sales on Saturday. As American gold commanded a premium of Re. 1-4, dealers offered tenders on Tuesday at Rs. 70 which was accepted by the Reserve Bank thereby causing market to recede to Rs. 66-2 on Wednesday.

The lower level stimulated upcountry demand to the tune of 40,000 tolas and speculative buying forced the rate to Rs. 68-3 today. Firmer tone supported by Reserve Bank's refusal to accept bazar tenders at Rs. 68-6 was noticed today. The market trend is uncertain especially when 22,000 tolas of Kolar gold are about to be sold.

COTTON

(*From Our Correspondent*)

Bombay, October 5.

After a brief spurt of speculative buying which took March Contract to Rs. 423½, Mr. Churchill's speech foreshadowing longer war brought about selling from Karachi operators besides hedge selling against new crop. Bulls are utterly nervous and trade demand is insufficient to absorb offerings at declining values. The market is a trifle steadier with March Contract quoting Rs. 414 today, but prospects are bleak.

LOW LIFE ASSURANCE RATES

have been made possible partly by the economical management of the Society, the expense ratio being lower than that of the majority of the larger life assurance companies in India.

Taking the next fifteen Indian insurance companies in order of their total business in force, the Society's premium rates for life and endowment policies are among those of the four companies who charge the lowest rates.

Rebates allowed by the Society on the premium rates include: 2½% for annual payment; 5% to 10% for residence in healthy climates; 10% to employees of Municipalities, Schools and other departments insuring through their employers; and As. 8/- and Re. 1/- per thousand for single policies of Rs. 10,000/- and over and Rs. 20,000/- and over respectively.

The Society's life and endowment policies offer the best value to those who look for a large company with economical rate schedules. A copy of the 1944 Prospectus and Tables of Rates will be gladly supplied on request.

(From Our Correspondent)

BOMBAY, Oct. 3

The Famine Inquiry Commission arrived in Bombay on Thursday last and has since been examining representatives of the Government of Bombay, the Standing Committee of the Food Advisory Council and Provincial Food Council. It is a pity that evidence is taken *in camera* since many of the root causes of the food muddle may otherwise have seen the light of day. Indeed, the measures taken in this province to accumulate food stuff long before the rationing scheme was inaugurated bore the impress of foresight as to the shape of things that were coming on. The great success of urban rationing and its gradual extension to mofussil areas are now matters of common knowledge. Mr. A. D. Gorwala, the indefatigable Civil Supplies Commissioner, appraised the Commission of the steps taken by the Government since 1942 to meet the food shortage. After detailing the quantities of food grains received from other provinces, Mr. Gorwala described the system of food procurement within the province itself—the system of monopoly purchase and the steps taken to increase the cultivation of food crops and reduce that of short staple cotton. But for the energy and foresight with which the provincial government acted, this food-deficient province would have found it extremely difficult to carry on in those dark months of 1943 when famine stared the people of India in the face. The Woodhead Commission must have been impressed by the arrangements made for importing wheat from abroad and from other parts of India and by the arrangements for storing, cleaning and sales of food grains. The members also went round and saw with their own eyes the working of the ration shops. The terms of enquiry include the investigation of the cause of food shortage in India last year, besides exploring the possibilities of improving the system of administration for supply and distribution of food. There is no doubt that the Bombay Government will have very little to learn from the Commission, although the recommendations it may make from all-India point of view will surely be read with profit.

The results of mobilisation of food supplies in the interior of the province form a brilliant vindication of the steps taken by the authorities. To take Belgaum district for instance, the total food requirements were estimated at 30,000 tons a year, of which 25,000 tons were secured in the district. 3,000 tons have already been received towards making up the deficiency. Towns with a population of over 10,000 fall under the compulsory ration scheme, but the large rural tract is a more intractable problem which has been overcome by the administration in this way. First, a census of village families and the stocks of foodgrains with them was taken. From that, lists of people who had stocks for a short period and of those who had none were prepared, the lists being subject to revision every fortnight. The people with limited or no stocks are supplied with coupons to obtain weekly supplies from the 800 distribution centres in the district. At the end of August, it was said that there were 2,80,250 people in the first category and 1,51,700 in the second. A review of operations after two months of working showed that only a limited number of people were drawing their rations. It was also noted that a large section of village labourers did not draw any rations but received wages in kind. These show Belgaum district to be fairly comfortable in regard to food. Government have provided two further amenities in the shape of a village fund and exchange banks. The fund enables a village to stock any surplus food in villages while the bank gives the people a chance to exchange one kind of grain for another. The stocks of food are as a result greater. Thus, experimentation is still going on within the province, and the Bombay Government must take credit for being very vigilant throughout in order to improve the food supply position by every possible means.

A Committee has been appointed by the Municipal Corporation to report on the 15-year plan unfolded by the Bombay Government, with special reference to its relevance to the city of Bombay. The feeling prevails that less stress is laid on health, water supply and housing than on roads. The government proposes to build 4,000 single room tenements in 15 years. That is snail's progress with a vengeance. As regards the complaint against the insanitary conditions, the Municipal Commissioner observed that the present design of buildings should be radically changed before improvement could be expected. He pointed out that the population of the city had increased by 5%, and that nearly 16,000 tons of refuse had to be moved out daily. There are not enough lorries and hence a certain degree of bad conditions was inevitable. The only consolation is that Bombay is better off than any other big city in India There are 40,000 houses in the city, many of which require to be reconditioned. A cleaner Bombay drive is not practical politics now, for the reasons that skilled workers like plumbers, carpenters etc. are not available for repairs of houses, new construction is not allowed and above all, there is an unwieldly population.

All is not well in the textile front. 15 months of textile control has only touched the fringe of the problem of making cloth available to people at progressively lower prices. No doubt, prices of cloth have been brought down by 40 to 50% from the 1943 peak levels, but the vast mass of consumers have still to realise the benefit of the control measures owing to the still defective distribution. There is a general feeling that the quota system operates harshly on the consumer and the quota holders are abusing their position. The majority are in Bombay and Ahmedabad and upcountry dealers experience difficulty in getting stocks from the quota dealers. Heavy premiums are usually exacted by the latter. This stranglehold must be done away with, as it has become a serious bottle-neck on the distribution side. Further, even on the production side there would seem to be considerable room for improvement since an increase in production must also occur in order to defeat the machinations of the textile sharks. Nobody denies the credit that is undoubtedly due to the Textile Commissioner and the Control Board, and these complaints are only voiced with a view to goad them to takle the unsocial elements in the trade more severely. It is high time that the cloth merchant ceased to batten on the consumer.

Ever since the Central Government exercised the right to impose central exercise duty on tobacco in 1943 there has been a move to avoid double taxation by the Provinces and the Centre and negotiations between the Government of India and the provinces were carried on for the purpose. It appears that the Bombay Government have already come to an agreement with the Central Government and, as a result, it is expected that the Bombay City Tobacco Excise Act would soon be repealed. This would be welcomed by the traders concerned because it would involve the removal of several disabilities such as imposition of vend licenses, restrictions on the opening of shops in the city etc.

The 5th Annual
ART
in Industry
Exhibition

The support of India's leading industrialists has made possible the rapid growth of the 'Art in Industry' movement. After a brief life of four years, Art in Industry Exhibitions, which embrace commercial art and industrial design, are now a well established event in India's annual diary, and there is every likelihood that they will play an important part in India's post-war industrial development.

Copies of the prospectus of the 1945 exhibition are now available on request at all main Burmah-Shell offices.

ORGANISED BY BURMAH-SHELL

BSK 116

South India

(From Our Correspondent)

Madras Oct. 3.

Erstwhile there was a rush for yarn due to depletion of stocks in the local market. The position has now considerably improved and consumers can obtain their requirements at controlled prices but demand has fallen off perceptibly. The reason is not far to seek. Now that prices have been fixed and yarn is available at controlled rates, buyers prefer wellknown varieties only. They go in only for yarn of proved quality and manufacture with the result that the less popular varieties are accumulating with the dealers. While the yarn market is dull and uninteresting, in the piecegoods market the situation is far from satisfactory. Stocks of dhoties and sarees with wholesalers are not upto the mark and there is a scramble for the available stocks in the wholesale market.

The Southern India Millowners' Association have resolved to recommend to member mills that an annual prosperity bonus equivalent to 3 months' basic wages be paid to mill workers anytime before Deepavali. So long workers were given a bonus equivalent to only 2 months' wages. In spite of the fall in the earnings of mills in the current year as compared to last year's earnings, mill owners have decided to pass on a larger part of their earnings to workers than has been the case hitherto. The entire bonus is not going to be handed over to the worker in cash. Two months' wages will be given in cash and one month's wage will be saved for the worker in the form of either war savings certificate or as share capital in co-operative and any other registered credit society attached to the mill.

The plastics industry is full of immense possibilities. It is now generally accepted that the industry is destined to have a pre-eminent position among the industries of the world on account of the varieties of uses plastics will be put to. It may be mentioned here that the plastics Committee of the Council of Scientific and Industrial Research of the Government of India have already made considerable progress in this field. At a recent meeting held in Bangalore the Committee has recommended to the Council of Industrial and Scientific Research that a Central Plastics Research Institute at a capital cost of Rs. 20 lakhs and recurring annual expenditure of Rs. 4 lakhs should be established in order that researches may be conducted in a systematic manner. The Committee suggested that no attempt should be spared to manufacture in India raw materials essential for the development of the plastics industry in this country.

It is common knowledge that Mysore is one of the most progressive Indian states. In his address to the Mysore Representative Assembly the Dewan gave a comprehensive picture of the developments in the various departments of the state during last year. The review makes interesting reading. The State's financial position is comfortable. The accident to the Sivasamudram hydro-electric station has not affected the state revenues in 1943-44. The revenues of the current year also will not be as badly hit as was estimated in the beginning. In common with many other parts of the country, the state's food position continues to cause anxiety. The Government have already taken active measures to meet the situation. The requirements of the State in food grains are not completely met by local production and the quotas alloted by the Government put together. Application for further quotas has been made to the Central Government. Shortage of materials has been the cause of a slow development in road construction. However the Government have approved a five year road plan for cement concreting 150 miles of important trunk roads. A sum of Rs. 15 lakhs has been provided in the current year's budget. Industrial expansion in the State has been satisfactory and the Government had decided to proceed with the erection of electric smelting furnaces and other extensions at Bhadravati iron works. The Jog Hydro-electric station is being further expanded with a view to double its generating capacity. Perhaps the first step in the direction of deofficialising Government enterprises is the Government's decision to float a public limited liability company to take over and develop the Industrial and Testing Laboratory.

It is understood that as a result of representations made by the Orissa Government, the Madras Government have cancelled the agreement made with the Maharaja of Jeypore in respect of the proposed Machkund Hydro-Electric scheme.

(From Our Correspondent)

Karachi, October 2.

The course of the war, the breakdown of Gandhi-Jinnah talks and other topics have taken second place and the whole of Sind is now interested in the sensational events leading to the resignation and the arrest of Khan Bahadur Khuhro, our Revenue Minister. Ever since the ghastly murder of Mr. Allah Baksh, there had been a lurking suspicion that there were "hidden hands" behind the crime and now, after sixteen months, the details of the plot to plug him emerges in all their sinister outline. Prior to Khuhro's arrest, his brother was arrested in his own town of Larkana for having harboured a proclaimed offender, one Daresh Khuhro, the chief absconder in the Allah Baksh murder case, who is alleged to have hired the assassins. Daresh himself was tracked down in a village near Sukkur and taken to Karachi, where before the District Magistrate, he is reported to have made a clean breast of all the happenings leading to the murder of Allah Baksh. Khuhro's arrest is a result of the confession of Daresh, who happens to be his nephew and chief kamdar. The ex-Revenue Minister has been taken to Sukkur where he will be tried. We do not know yet whether the trial will be before a special tribunal under the Hur Outrages Act or in the ordinary court. Some more arrests of persons in high positions are expected as a result of the information vouchsafed by the Khan Bahadur.

The chief defect in the province of Sind is its lack of communications. This will be remedied immediately the war is over. It is well known that an ambitious plan to build national highways which would connect principal Indian cities is under the consideration of the Government of India. A meeting of the chief engineers of all provinces held at Nagpur recently decided that the post-war programme for the construction of road system all over India would cost about Rs. 450 crores, but the Government of India have not arrived at any final decision. According to the road plan specially prepared for Sind, it is learned that 10,000 miles of roads will be improved and made up-to-date. Though the estimated cost is not available, yet a substantial amount will be sanctioned for the purpose.

The recent Indus floods are estimated to have caused damage of about one crore to the crops in the affected area in Sind alone. Particularly severe has been the damage to the rice crop in the districts of Dadu and Larkana. The total crop acreage loss by floods is 70,000. No crop could be grown on 46,000 acres of rice land in Rice Canal Division alone. 15,000 to 16,000 acres of land have been affected in south Dadau. Sind Government have sanctioned Rs. 20,000 for immediate relief of those affected by the floods. It is expected that some more money will be granted towards flood relief.

The Government of Sind are in earnest about the "grow more food campaign", and a number of facilities, concessions and expert advice are being made available to the growers to encourage them to grow more food. New methods of drilling the seed instead of broadcasting have been suggested to the zamindars to increase the yield per acre. Sulphate of ammonia is being sold to the cultivators to ensure increased yield. Improved seeds are being imported from the Punjab for distribution purposes. By these methods it is expected that the yield per acre will increase from 16 to 20 maunds to 25 to 30 maunds.

The condition of agricultural classes in Sind has improved considerably on account of war time prices of crops, which is evident from the fortnightly return of recoveries of arrears in different districts during the past few months. It is gathered that the recoveries of all the arrears have on the whole been most satisfactory in the province and it is hoped that a clean sheet of all the arrears will be forthcoming very shortly.

I learn that fish dehydrating factory will be set up in Karachi soon by the Central Government. The required supply will be procured by employing a new fishing fleet to exploit the fishing centres which have not been tapped so far. This will not interfere with the local civilian supplies. It is expected that this step will result in the expansion of fisheries and fishing craft in the post-war period.

The municipal authorities in Karachi have formulated an ambitious scheme for relieving pressure on dwelling houses in the city by constructing some new tenements themselves in various parts of the city. The tenements are expected to be given on rent just as other private tenements are given. The scheme which is as yet in the initial stages provides for an immediate start being made in a small way by constructing tenements costing about Rs. 2 to Rs. 3 lakhs. But the programme it would be extended when building materials are available freely.

The Government of Sind have declared a surplus quantity of rice to the extent of 15,000 tons in addition to the previously announced surplus of 2,00,500 tons and have placed it at the disposal of the Regional Commissioner of Food for distribution among deficit areas. Of this fresh surplus, 5,000 tons have been allotted to Madras, 1,000 tons to Western India States and the remaining 4,000 tons to the Karachi Storage Depot. Out of the total quantity, including the fresh surplus which comes to 2,15,500 tons, 1,45,430 tons have already been exported to deficit areas during the period from November, 1943 to September, 1944. Apart from the allotment of food grains to deficit areas, the Regional Food Commissioner has recently devised ways and means to co-ordinate the civil and military requirements of all foodstuffs to meet the general scarcity of edible things. The Government of India have alloted 100 tons of tinned foodstuffs for civilian consumption.

The cotton outlook for Sind is very depressed. Owing to the recent rains a large quantity of crops has been damaged. New crops will be made available for ginning factories only at the end of October. The carry-over of old stock is not much. For Punjab desi and other quality cotton, there is no demand. The prices of all produce commodities have come down. Buillion which ruled weak for some time has again rallied, after the latest war news and the recent speech of Churchill in the Commons.

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance".

CALCUTTA, Oct. 5.

The issue of the consolidated statement on the Final Jute Forecast last week did not throw any more light on the situation. The position remains that the forecasted crop of 55 lakhs of bales is only a lakh more than Calcutta Mills have actually consumed during the past season. Exports must be allowed at least 10 lakhs of bales and if the war situation cleared up in the west, considerably more might be demanded. It is obvious therefore that the policy of the Bengal Government, if the official figures are to be taken as gospel, is running the Jute Industry dangerously short of raw material. Trade channels however generally judge the Forecast to be an underestimate, in as much as the current crop in most districts is a well-grown one, in fact over-grown in many cases, so that the weight yield is likely to be considerably above normal. An ultimate out-turn of nearer 65 lakhs of bales would not be surprising. Even this however leaves no margin and if trading and other conditions are no better than normal, stocks are bound to be eaten into during the coming season.

Talking of trading conditions, the coal position still leaves much to be desired and it will be but cold comfort to idle mills to read in the Press that requirements of coal for Italy since the beginning of this year have been partially met from India. In this connection, the Industrial Pool scheme of the I.J.M.A. of which we gave a summary last week in these columns, was passed at a general meeting of the Association with only one dissentient, and is now in operation.

Representatives of the trade interests concerned met this week to discuss the proposed new regulations governing transport of jute both by rail and by river. It is of interest to note that while the river transport rules are comparatively innocuous and are really an elaboration of broad principles already accepted by the trade, by courtesy of the controlling authority they were submitted for comment before being finalised. The Railway rules on the other hand, which are much more open to criticism, have been handed out as a *fait accompli*, with no request for comment or criticism, and though both have been offered, it is extremely doubtful if they will be considered. We commented last week on some of the more flagrant shortcomings of the Railway rules, and it is understood that a protest from the trade follows somewhat similar lines. The Railway is to be asked to define a "wagon load" for the guidance of the merchant if he is to be compelled to indent for his freight by wagon-loads. Strong objection is also voiced at the dictatorial powers with which Station-masters are invested. The Rules lay down a series of so called "offences" with the appropriate "penalties" which the station-master is empowered to impose. The opportunities for oppression and corrupt practices which these offer are too obvious to require stressing and it is demanded that no penalty should be imposed except by an authority much higher than a station-master and that in all cases the explanation of the "offender" should be heard and considered. It is also quite reasonably asked that, if booking to a destination for which a merchant has a registration, should be closed when his turn for an allotment comes, he should be permitted to transfer his allotment to a different destination.

The aim of the new River Transport regulations is to direct the largest possible loads to the fewest possible destinations, to economise in the use of lighters in the Port of Calcutta and to ensure the quickest possible turn-round of flats. Some points however call for clarification. There are listed 15 so called "Carrying Companies." Of these, only 5 are generally recognised in the trade, who accept their Bills of lading as negotiable documents of title and pay against them. Of the remaining 10 concerns, most confine their carrying to their own jute. It is apparently contemplated that all the available carrying capacity, in flats, barges, lighters and boats, of all the 15 concerns is to be pooled. If however the craft of a private concern is to be utilised for the carriage of public goods, are Bills of Lading to be issued for such consignments, and if so by whom? The minimum rate of loading as well as of discharging is laid down and the same rate is specified in each case, viz. 4000 mds. per day. In the first place, the basis should be stated in bales rather than in maunds, in as much as it takes just as long to load or unload 1000 3½ maund bales as it does for 1000 4 or 5 maund bales. Again the facilities for unloading at a well equipped Mill are much greater than at most mofussil stations. A mill has a permanent jetty with crane, trollies and trolly lines, and generally speaking, jetties cannot be permanent in view of the varying river levels, cranes are almost unknown, ditto trollies and lines. Leads are often very long particularly in the dry season and much loading must be done by carrying on coolies' heads. The rates of loading and unloading should be graded according to the available facilities, and generally speaking a loading rate of 750 bales per day would be considered good work, particularly in these days of scarcity of labour and what there is weakened by famine and malaria. Penalties are also laid down for failure to abide by the River Transport rules, but the imposition of these is the prerogative of the Deputy to the D. D. Movements Eastern (River) and is not even delegated to the local Steamer Agent, let alone to someone on the level of a station-master! It is pointed out that the imposition of the penalty of suspension of booking upon a Mill would have an unfair repercussion on upcountry merchants who had contracts to deliver to the Mill. No doubt means will be found to avoid or minimise this. The working of the new rules may occasionally cause some hardship but if greater all-round efficiency in the utilisation of the available carrying craft is attained, the results may justify the means.

With regard to the rates of demurrage laid down as chargeable by the local Lighterage

NOTICE

With reference to the Notification published in the Press towards the end of July 1944 regarding the import of "Low-Cost" Machine Tools, it has now been ascertained that import of such machine tools for stock purposes will be permitted to a limited extent in approved cases.

Importers desirous of importing "Low Cost" Machine Tools for stock, either from U. K. or U.S.A., should submit to the Machine Tool Controller, Calcutta, not later than October 31st 1944, a list of the machines they desire to import for stock, giving the following information:—

(a) Brief specification of each machine;
(b) Name and address of preferred manufacturer;
(c) Quantity.

No machine should be included in these lists which is not covered by the broad classification of Low Cost Machine Tools which can be obtained from the broad classification of Low Cost Machine Tool Controller on request.

Machine Tool Controller on request.

Importers should clearly understand that no guarantee can be given that it will ultimately prove possible to grant Import Licences for all or any of the machines which they may include in these lists, which will first be scrutinized by the Machine Tool Controller here, and then sent up for the joint consideration of the U.K. and U.S.A. Authorities concerned. The decision as to the quantities that can be released for export to India and the source from which such exports will be made, will be taken in the U.K.

EAST INDIAN RAILWAY.

TENDER NOTICE.

Special item costing over Rs. 8000/- Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's office, East Indian Railway, 105, Clive Street, Calcutta, before 12 Noon on the 23rd October, 1944.

Tender No. SP/E/Est/35/Gb8 for the supply of 180 Nos. Bedstead Iron 6'-8" x 3'-0".

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, Calcutta on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores, by Money Order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the Tender Box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

Pool, it is remarkable that, while rates are provided for jute ex-flats and ex-requisitioned Press houses, no demurrage appears to be leviable on jute exported from a working Press house to a Mill.

It has again been a dull and eventless week in all markets. Export Jute is quiet with some business reported in Short Group Daisee at Rs. 85 and in Long Group at Rs. 77.

Loose Jute is distinctly easier, with sellers pressing for business but Mills showing little response. Some European Jat was done in low assortment at the end of the week at Rs. 17 and Rs. 14 but four annas less would now be accepted. Supervised Jat was reported at Rs. 16/8 and Rs. 13/8 and later Bottoms alone at Rs. 13/8. Ready Bottoms ex Bazar were done at Rs. 13/12 for Jat and at Rs. 13/4 for District. Indian District Tossa was reported at Rs. 16/8 and Rs. 13/8 and later at four annas less. Estimated arrivals of jute into Calcutta stations during September is recorded as 5,28.000 bales against 4.91.000 bales a year ago. This brings the total arrivals since the beginning of the season to 15.40.000 bales against 16.38.000 bales for the same period last year.

There is little to record in the Fabrics section. There is still some demand for Hessians for the U.S.A., eleven porters in the near positions and nine porters for January-March, maximum prices ruling. Export demand for Heavy Goods is still absent and though the tone of this section is rather steadier than it was, with "B" Twills quoting around Rs. 63, there is no business offering at maximum rates to tempt mills, though some are anxious sellers.

Comilla Union Bank Ltd.

The Comilla Union Bank Limited, which heads the "Big Four" among Bengalee banks from the point of view of total deposits and resources, has made strident headway in 1943-44. The paid-up Capital has increased from Rs. 24.98 lakhs to Rs. 31.90 lakhs; and the current year's working may well see the paid-up capital attain the half crore mark. The published reserves have gone up from Rs. 12 lakhs to Rs. 13.07 lakhs. The most striking progress is in respect of deposits which have expanded from Rs. 4.20 crores to Rs. 6.80 crores. We understand that, since the publication of the accounts, deposits have further mounted up to Rs. 7.80 crores. The Bank maintains an extremely strong liquid position. Cash at Rs. 2.16 crores works out to over 30 per cent of deposit liability—an unassailable position. Giltedged securities amount to Rs. 2.55 crores. Taking cash and giltedged together, liquidity is 69 per cent. Loans, advances and bills account for Rs. 2.58 crores. The net profit for the year is just short of Rs. 4 lakhs, which allows of a substantial allocation to Reserve (Rs. 1.32 lakhs). By all tokens, the Comilla Union Bank, under the administration of Dr. S. B. Dutt, should be able to create in 1944 yet more impressive records among Bengalee banking institutions.

Kirlampudi Sugar Mills

South India is one of the areas in this country which are underdeveloped from the point of view of sugar production. Yet, South India grows some of the finest sugar canes. In fact, in certain tracts of Madras Presidency, the outturn of cane crop and the yield of sucrose compare favourably with the best records in Java. One such tract is the Godavary Delta where as much as 40 tons of cane per acre is grown and sucrose content is as high as 13 per cent. Such richness in quality and supply is the special advantage of Kirlampudi Sugar Mills, which has the further advantage of taking over a running sugar factory. A running sugar factory does not mean an old factory; for, the plant and machinery were installed less than a decade ago. With all these facilities, the purchase price of the factory (capacity 150 tons a day) is only Rs 3 lakhs against an estimated value of at least Rs. 4½ lakhs. The capital is Rs. 6 lakhs—Rs. 3 lakhs already taken up by the directors and their friends; and Rs. 3 lakhs under-written and now being issued to the public. Mr. P. R. Subramanyam, of whose quality of, and skill and success in, underwriting our readers are aware, accounts for 2,000 shares of the 3,000 issued. That the issue will be oversubscribed is therefore, a foregone conclusion.

The Chairman of the Board is Dewan Bahadur C. S. Ratnasabapathy Mudaliar, and the active spirit in the managing agency Mr. K. V. Subbarao. These names furnish further guarantee of integrity and efficiency in adminstration and working.

BEGINNING OF THE END

REMEMBER THESE NAMES?... Not very long ago they were headlines. The railway near DIMAPUR was threatened. The Indian garrison in KOHIMA was outnumbered and besieged. Japanese troops had entered the plains of Imphal and were north and south of BISHENPORE. UKHRUL was unsafe . . .

All this is ancient history now. The Japanese have been defeated and are on the run. To-day they are nowhere within 150 miles of Dimapur. The Nagas have returned to Kohima. Plans to rebuild this bullet-riddled and bomb-scarred hill-town are going ahead. Amongst the Bishenpore Hills lie the bones of Japan's self-styled "Invincible armies..." IT IS THE BEGINNING OF THEIR END. When you read this... think of the brave and gallant men who have made these victories possible.

OUR FORCES HAVE PROVED THAT THE "JAPANESE" ARE NEITHER DEMI-GODS, NOR UNBEATABLE SUPERMEN.

NO PROPHECY REQUIRED

You don't need a prophet to tell you whether prices are going to rise or fall in the near future The experience of 1943 is enough to convince all that the trend of prices is definitely downwards. All around us there is evidence of falling prices. Introduction of control on prices and vigorous prosecution of the profiteers have ensured it. Do not be caught by falling prices.

This is no time to lock your money in manufactured goods, commodities, land, buildings or jewels. Their prices are sure to fall as time goes by and Rs. 100 invested now might easily dwindle to Rs. 70 or less within a year.

Today's best investments are Insurance, Co-operative Societies, Savings Bank Account, Post-Office Savings Bank, Government Loans and National Savings Certificates.

Prices of cloth, leather goods, drugs, medicines, food-grains, etc. are falling. Control measures are being extended and rigorously enforced. Be sure, prices will come down further.

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

AAA 1115

HERE ARE THE ANSWERS TO YOUR QUESTIONS ABOUT Prize Bonds

"How much do they cost?" There are two denominations—Rs. 10 and Rs. 100.

"Where can I buy them?" At any Indian Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury business.

"What are the prizes?" The prizes are by series of 1 lakh pieces. For each series of Rs. 100 Bonds participating in a draw, 1st Prize Rs. 50,000, two 2nd Prizes of Rs. 20,000 each and two 3rd Prizes of Rs. 5,000 each. Total prize money, Rs. 1,00,000 for each drawing. For Rs. 10 Bonds, 1st Prize Rs. 2,500, two 2nd Prizes of Rs. 1,250 each, five 3rd Prizes of Rs. 500 each and ten 4th Prizes of Rs. 250 each. Total prize money Rs. 10,000 for each series.

"Once a Bond has won a prize I suppose it is withdrawn from all future draws?" Certainly not. Every Bond whether it has won a prize or not is included in all draws until 15th January 1949 and so can, if you are lucky, win more than one prize for you.

"Are prizes subject to a tax?" No. They are free of Income Tax, Super Tax, Excess Profits Tax or Corporation Tax.

"Where are prizes paid?" See question two. Prizes are paid at all the above mentioned offices and at Sub-treasuries also.

"Are Prize Bonds repayable?" Yes, at par on or after 15th January 1949. That is, you get absolute security for your money AND the chance to win one or more large cash Prizes.

MACNEILL'S COAL GROUP MAKES SPECTACULAR SHOWING

The improvement shown by the Macneill group of coal companies for the half-year ended 30th June, 1944, when compared with the previous periods is truly remarkable. The results stand out as the best in recent years; and the fact that such a record should be set up where only six months ago the group reported a severe setback should give satisfaction to shareholders. It is a pointer to the present conditions in the coal industry as well; and, given continuance of these conditions, the effect should be felt in other major industries which, in the periods when coal raisings were dangerously low, had to curtail production and limit their operations. In fact, there had been many cases of small companies which, for lack of coal, had to close down. Steps had to be taken to attract labour to the collieries; and the ban on the employment of women labourers was lifted. In addition to a labour welfare scheme of wide scope, to be financed from a cess, the Government adopted a system of bonus payments to induce production in excess of fixed limits, the bonus being exempted from liability to E.P.T. The effect of these steps is now being gradually felt in the industry, and is reflected in the current balance sheets.

Taking the whole group into consideration, net Raisings during the half-year under review have improved to 11,45,016 tons from only 7,85,100 tons in the previous half-year and 10,26,358 tons in the corresponding period of 1943. Despatches have followed likewise, the figures being 11,42,074 tons against 8,01,275 tons and 10,51,956 tons in the preceding periods. Stocks, too, are at the lowest level at 37,918 tons against 57,716 tons and 55,563 tons. It will, therefore, be seen that, during the six months in question, the problem of wagon shortage had not been felt and all that was raised was despatched. Sales at Rs. 1.25 crores represent an increase of 50 per cent against Rs. 63.3 lakhs in the previous half-year and compares with only Rs. 59.2 lakhs in the corresponding period of 1943. We give below a table showing Sales, Raisings and Despatches for the individual companies in the group.

West Jamuria	7,28,023	1,28,829	1,40,291
Total	59.16,135	10,26,358	10,51,956

The most outstanding achievement of the group is the amazing step-up in production at a time when other coal interests had enough ado to maintain previous production figures—at a time, moreover, when every extra ton of coal was as good as a direct contribution to war effort.

The net profit for the whole group is more than six times the previous half-year's level amounting to Rs. 44.27 lakhs against only Rs. 6.9 lakhs. The figure for the corresponding half of 1943 was Rs. 10.9 lakhs. Necessarily, a big portion of this has to be set apart for liability towards taxation, the amount provided for this purpose being as much as Rs. 27.33 lakhs against Rs. 2 lakhs & Rs. 2.18 lakhs in the preceding periods. The amount written off depreciation is Rs. 2,63,511 against Rs. 2,37,811 and Rs. 2.38,255. Reserves have been strengthened by a substantial allocation of Rs. 6.8 lakhs against Rs. 2.3 lakhs. With the exception of *Mundulpoor Coal Company, Limited*, where the dividend distribution has been maintained at the previous half-year's level at 2½ per cent, all the other companies have been able to increase the dividends substantially. *Dhemo Main Collieries Limited* has returned to the dividend list, paying 3¾ per cent after a lapse of three half-years. *Equitable Coal Company, Limited* and *Hurriladih Coal Company, Limited* have trebled the distribution at 15 per cent against only 5 per cent and 7½ per cent against 2½ per cent respectively. *West Jamuria Coal Company, Limited* is paying double the previous half-year's dividend at 15 per cent.

Of the group, the results of the *Equitable Coal Company, Limited* are the most spectacular. The net profit, before providing for taxation, depreciation and allocation to Reserves, is Rs. 27.64 lakhs which compares with Rs. 3.58 lakhs and Rs. 6.77 lakhs in the two previous periods. The amount provided for taxation is Rs. 15.35 lakhs against nothing previously while a sum of Rs. 4.5 lakhs against only Rs. 1 lakh has been placed to the credit of the General Reserve. Assets have been written of by Rs. 1.98 lakhs against Rs. 1.69 lakhs. Ordinary shareholders participate in a dividend amounting to 15 per cent against only 5 per cent, actual amount distributed being Rs. 4.5 lakhs. The amount carried forward is Rs. 1.25 lakhs against Rs. 1 lakh brought in.

The Raisings of the Company for the half-year are only 952 tons below the highest raisings ever recorded by the Company, the record being 7,09,746 tons during the first half of 1938.

The Directors consider this "to be an achievement of which shareholders should take note, as it has been carried out in spite of serious difficulties, during a continuing shortage of miners and material, and certainly before any of Government's various schemes to assist the mining industry have had time to take effect. Moreover it is an example which goes to disprove the allegations which have unfortunately been heard, amongst those ignorant of the difficulties, that the coal industry is not putting its best foot forward. With regard to the future it should be remembered that conditions at present are quite artificial as prices are fixed, at high levels, and an offtake for all raisings is secure".

"Peace-Panic" Killed and Crushed

Interesting capital issues in Mysore and Travancore

(By Analyst)

BOMBAY, (By Wire), Oct. 6.

In my last week's Gossip, I stressed that the market trend had changed; that one should wait for a rise of 10 to 15 per cent before unloading holdings and booking profits. Market developments this week justify my expectation.

Textiles in particular have had an alround improvement; and my favourite scrips, Bombay Dyeing, Azamjahi and Osmanshahi were in keen enquiry and closed steadier at Rs. 1,752/8, Rs. 500 and Rs. 295 respectively. The rise in Azamjahis and Osmanshahi were due to a spurt of investment demand on the last day of the week: I look for substantial rise in these three scrips. The other textiles in Bombay have also improved, Nagpurs rose by 20 points at Rs. 388 and Kohinoors are better at Rs. 570, Svadeshis were in better demand around Rs. 510. In Madras, Lakshmis gained 15 points at Rs. 455 with very little business passing between Rs. 140 and Rs. 155; Muduras were steadier at Rs. 68 Rajalakshmis were done upto Rs. 210; Vasantas improved to Rs. 292; and Sitarams had a spectacular rise to Rs. 167, buyers. Krishnarajendra Mills were better at Rs. 68. I look for a further rise in all these scrips.

In the Steel Section, Tata Deferreds, after touching Rs. 2,130 are rather quiet at Rs. 2,115, due to heavy profit-taking. It seems some prominent speculators sold out, due to fears that our offensive against Japan might bring about retaliation in the form of enemy bombing. I personally feel that there is absolutely no fear of this sort and all information confirms that the Jap aerodromes have been rendered unserviceable. Tata Steel Deferreds look cheap at current prices. I must add, however, that the hope of the conversion scheme going through seems to have receded, due to the opposition of the minority big holders. As for Indian Irons and Steel Corporations, as forecast by me last week, they have improved further to Rs. 39-10 and Rs. 31-7 respectively. There seem to be still short interests; and now that buyers are giving notice for effecting deliveries, I expect a further rise in both these scrips, probably a rupee in each share. At around those levels, I would favour booking profits.

Calcutta opened very cheerful after the Pooja holidays; and Howrah Jutes, as usual, led the show and closed steadier at Rs. 83-4. All other jutes and coals were better and I look for substantial rise next week. Let me again commend Bokaro and Ramgarh in particular.

In the Cement Section, Associated Cements, which were as low as Rs. 217 a few days ago, have now improved to Rs. 223. I would rather wait for a reaction, say, around Rs. 200. Dalmia Cement opened around Rs. 16/3 and are now better at Rs. 16/8. For making fresh commitments, I think one would wait for a reaction of a rupee or so.

As for Chemical Shares, Tata Chemicals have been remarkably steady around Rs. 22-8. I favour booking profits. Alkali Chemicals in Calcutta have improved to Rs. 18/4; and Deferreds to Rs. 8/8. I still continue to recommend liquidation of Mettur Chemicals Deferred. As for Mysore Fertilisers, they are better at Rs. 25/8. I look for a further rise, but, around Rs. 30, I would favour liquidation. Sugar shares have been rather quiet, due to disappointing reports published by Cawnpore Sugar companies like Champaran. Belapur Sugar were steady around Rs. 227/8; and Mysore Sugars were unchanged at Rs. 60. I think the sugar industry should do well in the post-war period. In a weak market, I would suggest purchases of Belapur, Mysore Sugars Bulands and Razas.

I hear the Mysore Government is contemplating conversion of the Industrial Textile Laboratory (which is now purely a Government concern) to public limited company. The products manufactured by the Industrial Textile Laboratory particularly tonics, are quite good and compare favourably with imported patent medicines. I think the shares of this public limited company would prove a profitable investment. I have not yet received details of the capital structure, etc.

From Travancore, I hear, the fertilisers and Chemicals (Travancore) Limited, are going to increase the capital shortly by further Rs. 2 crores; and that the Managing Director, Mr. Seshasayee of Messrs. Seshasyee and Bros., is leaving for America to make necessary arrangements for the purchase of up-to-date machinery.

Travancore is also contemplating starting of a new Electric-Chemical Company for the manufacture of carbon and Graphite materials. I hope to give full details of this company next week.

Plantations, which were unduly depressed

(Continued on page 500)

(Continued from previous page)

It follows, from the above, that the results for the current half-year should be even better.

Analysis of the results of the individual companies for the last three half-years is furnished in the following table:—

	Net Profit	Taxation	Deprec'n & Reserves	Divid Amount	Per cent	Carry forward
			30-6-1944.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday, evening.

When the Calcutta Stock Exchange closed for the Id and Puja holidays it was generally believed that Germany's surrender was only a question of weeks. A depressed feeling was evident and operators were not prepared to enter into any undue commitments, and since support was lacking, prices of most of the active counters were marked down. The close was therefore, one of cautious expectation. Since then, however the developments in the war situation and Mr. Churchill's reference to many months of fighting in 1945 have imparted a better sentiment. The reopening of the Exchange after 13 days has reflected such reaction and steady conditions, but for minor fluctuations, have prevailed during the four days of working this week. Important gains were recorded in the coal and jute sections and the coal company dividends by the Macneill group are considered quite satisfactory.

The *Government Securities* section ruled firm throughout the period and minor fluctuations only took place. 3½ *per cent Paper* are quoting at Rs. 99-13, the pre-puja quotation, being Rs. 99-8 3 *per cent Paper* is quoting around Rs. 90-8. Among terminable loans, 3 *per cent* 1953-55 were done at Rs. 100, 3 *per cent* 1966-68 at Rs. 98-8. 3½ *per cent* 1947-50 around Rs. 103-8 and 3 *per cent* 1953-55 at Rs. 100-8.

Among the *Banks*, the rise in the quotation of the *United Commercial Bank* is worth mention. From Rs. 29 premium ruling before the holidays, the quotation has sharply jumped to Rs. 34-12 premium. The reason for such a sharp rise is due to the fact that sanction has now been obtained from the Government for the issue of additional capital on the basis of one new share at par for every old share. *Reserve Banks* are unchanged at Rs. 130.

The *Cotton* section has been uninteresting though prices for popular scrips are better than those ruling before the holidays. *Cawnpore Textiles* are hovering around Rs. 13-8; *Elgin* at Rs. 67-6 and *Kesoram* at Rs. 16-2.

Coals have been the most interesting feature during the week, the opening quotations after the holidays for popular shares being many points higher. A large volume of business was put through in this section and with the exception of *Burrakur* which has lost some points as a result of the disappointing dividend all other shares have invariably registered gains. Burrakurs are now quoting at Rs. 39-12 after being as high as Rs. 40-12. All the companies of the Macneill group have recorded advances, *Dhemo Main* to Rs. 25-8 from Rs. 24-6, *Equitable* to Rs. 65-12 from Rs. 63-8, *Hurriladih* being stationery at Rs. 34-2, *Mundulpoor* to Rs. 23-12 and *West Jamuria* to Rs. 60 cum dividend from Rs. 57. A heavy rise was seen in Bokaro and Ramgur from Rs. 36-14 to Rs. 42-6. *South Karanpuras* have also improved to Rs. 22 from Rs. 20-4 and *Talcher* are now sticking around Rs. 10-8.

The *Jute* section has also been active throughout and all the important counters are marked higher. *Howrahs* closed at Rs. 83 against Rs. 80-6, the opening quotation after the holidays being Rs. 82-5. Closing quotations are Rs. 453 for *Anglo-India*, Rs. 62-8 for *Clive*, Rs. 652 for *Kamarhatty*, Rs. 549 for *Kanknarrah*, Rs. 378 for *Kinnison*, Rs. 31-14 for *National*, Rs. 128 for *Nuddea*, Rs. 66-8 for *Reliance* and Rs. 31-4 for *Soorah*.

Transactions in the *Engineering* section were for the most part limited to *Indian Irons* and

Post Box 72 LUCKNOW — **Post Box 44 CALCUTTA**

Steel Corporation which close quiet at Rs. 39-4 and Rs. 31-3 respectively. *Braithwaite* are around Rs. 11-6, *Jessop* Rs. 24, *Kumardhubi Engineering* at Rs. 11-8, *Marshalls* Rs. 4-13 and *National Iron* at Rs. 13-11.

In the *Sugar* section, *Carew* registered a rise to Rs. 29-10 at which rate it has closed. *Balrampur* are at Rs. 17, *Belsund* at Rs. 17-9, *Darbhanga* at Rs. 30 and *Ramnugger Cane* at Rs. 13-8.

In the *Miscellaneous* section, *Calcutta Tramways* have sagged to Rs. 44. *B. I. Corporation* are higher at Rs. 6-5 and *Indian Wood Products* have closed at Rs. 29-8. There were minor fluctuations in *Rohtas Industries* around Rs. 40. *Midnapore Zemindaries* crossed hands at Rs. 179 c.d.

(*Continued from Page* 498)

in the Madras market due to activities by some panicky speculators, have now recovered the lost ground; Cochin Malabars are again at Rs. 17/12; Midlands were better at Rs. 14/2. Rajagiris Rs. 15; Nilamburs are on enquiry around Rs. 22/8 x.d.; Highlands were done upto Rs. 36/12; Kapettas upto Rs. 43; Hailbeuria Tea to Rs. 39, on declaration of a dividend of Rs. 3. I hear that Rs. 1/8 is towards last year's final and the balance of Re. 1/8 for this year's interim. Thus, the 1943 dividend will be Rs. 4 per share, as against Rs. 3/4 in the previous year. I hear that, this year, the Company has done well and it seems the directors contemplate paying another interim dividend of Re. 1 in December and the final is expected to be again another Rs. 1/8 somewhere in February/March, making the prospective dividend for the year 1944 Rs. 4 i.e. same as last year. The shares look a good buy at the current price of Rs. 39. In the A. V. Thomas group, Neelamalai is coming out with a maiden dividend of 5 per cent. This should be considered, I think, satisfactory if one bears in mind that the estates were bought rather at a high price. The ordinary shares have improved from Rs. 3 to Rs. 3/8.

In sum, let me emphasise that "Eavesdropper" by single-handed effort has completely killed and crushed the "Peace-panic." In this, further impressive confirmation has been provided by Mr. Churchill's revision of his earlier promise of war ending this year.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100/- from 1st September, 1944 and there after increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

New India's Jubilee

For the New India Assurance Co., Ltd., 1944 is the Silver Jubilee year and the Company completed its 25 years of existence on July 23. To mark the occasion, a special jubilee bonus of 8 annas per share, free of income-tax, is being distributed to shareholders along with the yearly dividend of Rs. 1-8-0 per share, making in all a distribution of Rs. 2 per share.

The Balance Sheet and accounts for the year ended 31st December 1943 make excellent showing; and another year of all-round progress has been left behind. The Fire Department, as the biggest to contribute to the general revenues of the company, is growing at a rapid rate. Net premiums derived by this department amounted to Rs. 68.7 lakhs against Rs. 57.5 lakhs in 1942. Out of this, premiums derived from business effected in India and outside amount to Rs. 24.6 lakhs and Rs. 44.13 lakhs respectively, the figure for 1942 being Rs. 18.52 lakhs and Rs. 38.95 lakhs. The claims paid and outstanding were only Rs. 24.26 lakhs against Rs. 27.81 lakhs, representing a reduction of Rs. 3.55 lakhs. Of the claims paid, Indian claimants accounted for only Rs. 1.4 lakhs, while claims outside India had to be paid for Rs. 20.5 lakhs. It will be, therefore seen that for a net increase in the premium income during the year of Rs. 11.3 lakhs, the increase in the claims paid has risen only by Rs. 4.7 lakhs—a very satisfactory position indeed. Commission, Expenses of Management represent 27.6 per cent against 27.4 per cent of the premiums during the year. The additional Reserves have been increased by Rs. 2.5 lakhs, same as last year, bringing the total to Rs. 34 lakhs. The combined Reserves amount to Rs. 61.48 lakhs against Rs. 54.49 lakhs in 1942. A balance of as much as Rs. 20.83 lakhs has been transferred to the Profit and Loss Account against only Rs. 6.13 lakhs. Incidentally, such a big transfer is the highest to be made.

The Accident and Miscellaneous Department has received a net premium income of Rs. 17.27 lakhs, an increase of Rs. 2.42 lakhs over the previous year. Net claims paid and outstanding amount to Rs. 7.14 lakhs against Rs. 6.54 lakhs while Commission, Expenses of management etc. account for only 11.7 per cent. of the premium income against 17.6 per cent. in 1942. After strengthening the Additional Reserve by Rs. 50,000 bringing the total to Rs. 9.75 lakhs, a sum of Rs. 7.32 lakhs against Rs. 4.95 lakhs has been transferred to the Profit and Loss Account.

The Marine Department has suffered a slight setback, as during the year, net claims paid and outstanding increased to Rs. 38.44 lakhs against Rs. 25.58 lakhs. The net premium income also shows a reduction of Rs. 12 lakhs to Rs. 33.69 lakhs from Rs. 45 lakhs. No amount has been transferred to Profit and Loss Account against Rs. 2 lakhs made last year.

The Life Department which is a later extension by the company has been able to effect new policies to the extent of 11,515 proposals against 5,683. The new policies represent a sum insured of Rs. 4.54 crores against Rs. 2.34 crores. In addition, 16 Immediate Annuity Bonds for a consideration of Rs. 2 lakhs, 8 Deferred Annuity Bonds for single premiums of Rs. 57,989 and 25 Deferred Annuity Bonds for annual premiums of Rs. 48,853 were issued. The total number of ordinary policies in force is 50,108 against 40,295, assuring with bonuses, a sum of Rs. 10 crores against Rs. 12 crores. The net premiums during the year amounted to Rs. 94 lakhs against Rs. 66 lakhs. The Life Fund at the end of the year is as much as Rs. 3.19 crores against Rs. 2.53 crores. It will be interesting to note that in 1937, the life fund amounted to only Rs. 74 lakhs.

With the contributions from the various departments, the Profit and Loss Account shows a balance of Rs. 30.95 lakhs. A sum of Rs. 22 lakhs against Rs. 8.4 lakhs has been reserved for taxation.

A notable feature in the Balance Sheet is the increase in the investment portfolio of the company, the book value aggregating to Rs. 6.19 crores against Rs. 5.06 crores in 1942, the market value being Rs. 6.68 crores against Rs. 5.27 crores.

Judging from the results for 1943, one can safely predict that the silver jubilee year 1944 will create another record in the history of the Company.

"Commercial India"

War has created numerous economic problems of great importance and close vigilance on the part of the commercial classes and the general public is necessary to protect national interests against the intrigues of foreign political groups or economic combines. In educating the public on the implications of economic policies and in fighting injurious machinations of vested interests, the newspapers play a useful part. The scope is vast and the need for more papers cannot be doubted. *Commercial India* (Copy As. 8) a weekly started by Mr. K. Srinivasan is devoted to India's economic progress, and presents all important items of weekly news, market quotations, articles and comments and is sure to be well received. We wish this young contemporary every success.

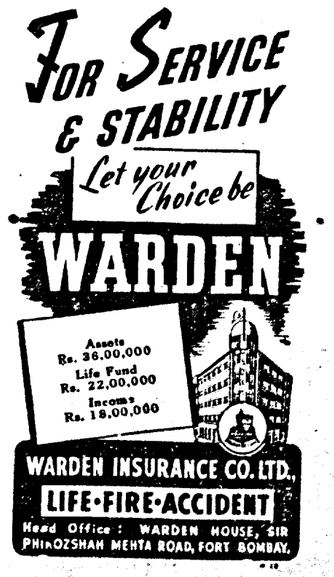
WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

As we are approaching mid-October, there are signs of the cold weather nip in the air. But, judging from current trends and tendencies in the money market, there is not even the shadow or trace of cold weather finance. The short loan market is experiencing abundance of funds; and, though the ways and means position of the Central Government is far from requiring any reinforcement, weekly sales of treasury bills for Rs. 6 crores have been maintained to prevent abundance of credits from becoming superplethora. On October 10, treasury bill applications came to Rs. 10.99 crores. and the average rate of accepted tenders was unchanged at 7 annas 11 pies percent per annum. The offer for next week remains unchanged at Rs. 6 crores.



The statement of the Imperial Bank for the week ended September 29 shows a sharp rise in deposits from Rs. 227.93 crores to Rs. 232.17 crores. While loans and advances are unchanged, investments have gone down from Rs. 137.58 crores to Rs. 135.33 crores. In the result, cash shows a substantial increase from Rs. 44.24 crores to Rs. 50.66 crores.

An important conference of the joint-stock banks of South India was held early this week in Madras, the Hon'ble Mr. Chidambaram Chettiar opening the conference and Mr. T.T. Krishnamachariar presiding over it. Mr. S. Parthasarathy made valuable contribution, while Mr. Wajahet Hussein, Deputy Governor of the Reserve Bank, participated in the proceedings. South India is essentially the home of small banks; but, while these institutions are on the small side from the point of view of capital and deposits, they have set an example to other banks in India by their valuable contribution to the technique of branch-banking. It may be said that, for efficiency and economy of branch administration, South Indian banks hold a pre-eminent place in the country. It is only recently that more powerful banks of Bombay and Northern India started exploiting the South Indian field. Even before they came on the scene, the South Indian banks as such had developed branch-banking activity to such an extent and on such a scale that it may be said that even medium-sized towns enjoy the amenities of modern banking. During Sir Osborne Smith's time as Governor of the Reserve Bank, an attempt was made to make a study of the special features and requirements of South Indian banks; and an officer was appointed for this purpose. But the failure of the Travancore National and Quilon Bank (for reasons which do not reflect any discredit on South Indian banking methods and practices) resulted in the transfer of this officer to other activities. That is to say, the officer who was specially appointed by Sir Osborne to be the underwriter of a more prosperous career for South Indian banks became the undertaker of one of these institutions. Now that the recently held conference of South Indian banks has facilitated the coming together of the executives of all these institutions, we, for our part, would suggest the reassaying of the task of estimating the special qualities and requirements of South Indian banks.

One of the complaints ventilated in the conference was to the effect that the Department of the Examiner of Capital Issues in conjunction with the authorities of the Reserve Bank was standing in the way of the smaller banks strengthening their capital structure. We have no evidence as to the experience of South Indian banks in this regard. But, generally speaking, the more important of the South Indian banking institutions are already equipped with a paid-up capital which must be considered adequate for the deposits attracted by the respective banks. We also remember a recent issue of additional capital by a bank hailing from Travancore. While we do not know the actual cases in which the conspiracy of the Examiner of Capital Issues and the Governor of the Reserve Bank has resulted in a South Indian bank being deprived of the opportunity to strengthen its capital, we should say that our experience so far as the medium and small banks in Bengal are concerned, is that, where a proper case has been made out, there has been no difficulty in securing the Central Government's consent for additional capital. Everyone of the Big Four in Calcutta has issued additional shares since the control of capital issues came into effect. Many other smaller institutions have also been permitted to expand their capital.

One of the incentives for the smaller banks to strengthen their capital structure is that, by bringing up the paid-up capital to over Rs. 5 lakhs, a claim can be made for enlistment as a scheduled bank. This criterion of a paid-up capital plus reserve of Rs. 5 lakhs for admission into the ranks of scheduled banks has already done great harm. As the Reserve Bank of India Act stands now, the only condition required of a bank to be included in the second schedule is that its paid-up capital and reserves must be not less than Rs. 5 lakhs. Whether a particular bank was running its business on sound lines or in a *bona fide* manner, or whether its paid-up capital and reserve was in any way affected by bad debts with the result that this minimum of Rs. 5 lakhs could not be considered as being intact—these were considerations which were not taken into account at all when the original schedule at the time of the drafting of the Reserve Bank bill was compiled. Nor were these tests applied to many of the subsequent entrants to the schedule. The result is that there are now included in the schedule a few banks whose banking methods are dark and whose investments are vile. These banks with such unsound financial position continue to be on the schedule; and the process of unscheduling them is arduous and complicated. The Reserve Bank has to address the Government of India in the Finance Department and explain that it has reasons to think that the bank in question shows a number of defects in the balance sheet whose effect may be to bring below Rs. 5 lakhs the total of paid-up capital and reserve. The Finance Department, thus goaded by the Reserve Bank, writes to the bank concerned that its books will be examined and investigated by the Reserve Bank. Then follows much exchange of letters, which may enable the bank

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 10th October, 1944. Total amount offered was Rs. 10,99,00,000 (Rupees ten crores and ninety-nine lakhs only). Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 53 (fifty-three) per cent. Total amount accepted was Rs. 6,00,00,000 (Rupees six crores), the average rate of accepted tenders being Re. 0-7-11 (Annas seven and pies eleven only) per cent per annum.

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills will be received on Thursday, the 19th October. 1944 in Bombay up to 11 a.m. (Standard time) and up to the close of business on Wednesday, the 18th October, 1944 at other centres. Successful tenderers should make payment on Saturday, the 21st October, 1944. Other conditions are as usual.

During the week ended the 6th October, 1944, Government of India Treasury Bills for Rs. 6,83,25,000 (Rupees six crores, eighty-three lacs and twenty-five thousand only) were sold in favour of the Issue Department of the Reserve Bank of India.

Controls in Post-war India

In our leading article of last week, we examined the relations between Government and business in the post-war period, as they may be shaped by the conditions of the time and the the requirements of the more pressing problems We stressed the fact that the mood of the time would secure a degree of freedom from the extremes of ideological bias, but that the nature of the problems and the momentum of wartime developments would alike lead to increasing interference of the Government in business. So far as India is concerned, we expressed the view that it would not make much difference to this particular question, whether the Government of India of the post-war period were a responsible National Government or such as we have today. Since both will find it equally expedient to put forth planned efforts to raise the general standard of living and since the success of such a plan will depend primarily on an appropriate control of the price structure as a whole and the prices of essential consumer's goods in particular, the nature and extent of Government intervention in business would be more or less similar.

It is necessary now to look more closely into the factors making for Government intervention and map out, as well as possible, the lines of its probable development in the future. In such an attempt, it would be useful to recall the dialectic of Government intervention during the war period that is now drawing to its end. Dialectic, it undoubtedly is; for, no one can pretend that the net work of controls over the various industries and markets was thought out as a whole well ahead, in their entirety and in their inter-relations, and introduced in instalmen's as the need for each measure made itself manifest. In spite of the fact that the totalitarian methods of the Axis powers were broadcast even during their long preparation for the present war, its actual outbreak found the allied nations with mental reservations of their own about the extent of their conversion to totalitarianism so far as the war effort was concerned. In India, there was even less readiness to extend the sphere of Government control, partly because it was more difficult to presume popular support for such measures and even more because neither the impact of the war on India nor the demands it might make on this country could be foreseen to a nicety. The Ordinances were comprehensively worded more with a view to secure amplitude of executive powers than with a view to their enforcement in all their unrestricted scope. The Government's role in our economic life today has been determined by the drift of events, rather than their own preconceived purposes. At the beginning of the war, there was, no doubt, a vague recognition that at some stage the Government would have to step in in order to keep prices down. But Government control over the economic life as a whole is to be attributed to three factors, all of which arose at different times and developed at different paces. The first is, of course, the requirements of supply for war purposes, the second, the need to fight the effects of inflation rather than inflation itself, and the third, is the resultant at each stage of these two factors in the general economic situation. The third is entitled to special enumeration, if only because it is more powerful than either of the first two, being in itself more than a combination of both. The requirements of supply lead to complete control of all the goods and stores which industries require and which are in shortage. Inflation suggests price control; and price control requires for its success control of stocks and control of output. Food control leads, on the one hand, to rationing and Government depots and on the other, to restriction of acreage under non-food crops. Cloth control makes cotton control more or less inevitable. With control of inflationary effects goes the control of new issues. And it is thus that ultimately, not only no attempt is made to draw the line, but the very task comes to be recognised as futile and impossible.

A similar phenomenon can be confidently expected in the post-war period. It is not for us to consider the various contingencies in which economic plans, such as we now hear of from the official as well as the non-official side, may fail to be inaugurated. It is sufficient that we consider it extremely unlikely that the masses and the intelligentsia in this country will easily acquiesce in economic planning being relegated to the background or overshadowed by other preoccupations of the Government or of the leaders of political parties. On the basis that planned economy of some kind or other is bound to be attempted in the post-war period, we can presume that the foremost objective of such planning will be the achievement within the shortest time possible of an increase in the general standard of living. The objectives and the methods of the plan which will, no doubt, determine the nature and extent of Government control and interference in business are susceptible to more or less wide variation. Improvement in the standard of living which, as we have shown already, must be the common objective of national and nominated Government alike, can be attempted either directly by immediate stimulation of production of consumer's goods or by a forced accumulation of capital wealth in the shape of plant and machinery and producer's goods of a more or less complicated kind. Russia chose the latter course, in spite of the knowledge that it involved a serious accentuation of the shortage of consumer's goods and of the poverty and suffering of the masses. But in this choice, she was governed not so much by the consideration of affluence at a later stage as by the fact that accumulation of capital goods and organisation of heavy industries, while they were only desirable for the national economy, were really indispensable for national survival. In India, it has become usual to regard Russia's efforts to establish large scale industries as the result of a choice between two alternatives and as therefore something like a blunder in economic policy. But Russia organised both for war and for peace at the same time and during a very short period compared to the tasks she had on hand.

In our case, to the extent that India will be subject to Britain or linked to the Empire in other ways, we may be free to accord lesser importance to armaments and war potentials. We may be free therefore to attempt an improvement in the standard of living by applying stimulus directly to the production of consumer's goods rather than indirectly by building up huge capital wealth and forcing the masses to undergo all the privations necessary for saving on such a scale. A National Government might attempt both these methods at the same time in appropriate blends or in different sectors. But a foreign Government is likely to favour the idea of encompassing an increase in the production of consumer's goods by various measures calculated to increase purchasing power and effective demand on the one hand, and productive capacity of agriculture and small scale or cottage industries on the other. This policy will not obviate the need for large scale industries, such as fertilisers; but the emphasis is clearly not on productive equipment of the massive, modern kind. On the other hand, a policy which aims at the same time the huge projects involving outlay of hundreds of crores on fixed capital and at the same time the expansion of small scale productive activities is more likely to appeal to a National Government.

In either case, the initial stages of post-war planning will be marked by the inauguration of various plans, for agriculture, irrigation, roads, railways etc. All these plans involve the expenditure of large amounts from the Exchequer; and however they may be raised, they are bound to have inflationary effects on the economic life not unlike those which have been experienced during the war period. Similar inflationary effects must also be expected to follow the release of capital now tied up in the Government's coffers on account of new companies which will begin to operate soon after the signing of peace. It is in regard to the new industrial and other business ventures of the post-war period that one may feel some doubt as to their scope and magnitude. The advent of a National Government would certainly mean a vast increase in the size and scope of these ventures. For a National Government is bound to be more ambitious, if only because it will have to respond to the aspirations of the intelligentsia and the ambitions of our industrialists regarding industrialisation. Whether these aspirations and ambitions can be heeded to in a short time and how the effects of large outlays on big industries will be tackled are questions which may be considered later.

It is sufficient to note that, while the outlay on big industries hangs on the issue of present political tuzzles, plans for direct attempt at popular amelioration seem now to be sure to be introduced. Even on the basis of the most conservative estimates, these plans will involve an expenditure which may well compare with the expenditure incurred by the Goverment of India at present on war account; so that peace purposes may well be said to take a place in post-war economy not far different from that of the war effort during the war period. Such differences as there may be between the two will however accentuate rather than reduce the need for control of prices and general regulation of the economic life of the country. In the case of the plans for popular amelioration the outlay will be more evenly spread over all parts of the country and more money will flow directly into the pockets of the rural masses. While this flow may be expected to stimulate production to meet local demand, it may also tend to create a relative shortage of manufactured goods and put up their prices. Wider margins of profit for certain industries will tend to attract capital towards those industries and jeopardise the prospects of new industries finding their requirements of capital. The allocation of available savings among the various capital plans on hand according to their importance to the later stages of economic progress and not the differentials of productivity of profit is of the very essence of any economic plan. These are particular considerations in relation to the general consi-

deration of protecting all Government plans from the danger of being upset by untoward trends of prices. Changes in estimates of cost for big plans would be very serious, indeed, if the cost of living and prices of essential materials are allowed to move up without a rational syetem of con trol.

It will thus be seen that if the plans that are now being formulated by the Government of India are not a make-believe, then the conditions of the post-war period will make a general system of control as necessary as during the present war period. In fact, the experience gathered during the war in regard to Government's ways and means, price control and, last but not least, offsetting the effects of a liberal policy in wages and salaries will be very handy in administering the plans smoothly. On the other hand, the need to keep the cost of living steady will require the retention of price controls in a less drastic but more effective form. On the other, the continuance of the Government in the role of a big buyer of the products of industry and of the ultimate agency of price control will require their intervention in the working of industry with a view to regulate production and sales, ensure uniformity of standards of wages and salaries and cooperation with Government in the successful working of the plans on hand. Doubtless, this raises many controversial issues, both points of principle and problems of administrative importance. But the war has cured us of undue regard for either.

The Hyderabad Budget

If five years of war have changed the finances of the Government of India and the Provinces in several important respects, their effect on the fiscal policies of the Indian States has been no less spectacular. If one compares the budgets of the States of to-day with those of the years before the war the trend is unmistakable. Before 1939, the States not only shared all the general handicaps of India as a whole, but parochialism, feudal elements and lack of resources also played their part in intensifying the unsatisfactory conditions. Excepting for a few of the bigger States, most of them were far behind the British Indian Provinces in the matter of administration. Their communications were worse by comparison, their land system more unsettled and out-of-date and their Government secretariats did not even make a start in collecting statistics and reorganising finances. But the war has surprisingly released unsuspected forces of progress in the States, and the record of the more advanced of them compels the attention of the British Indian provinces. The creed of post-war planning has caught the imagination of the States as well and many of them have prepared schemes, fixed targets and time limits and developed sizeable reconstruction funds. There are moves for group planning covering several smaller but adjacent States and, above all, the States have, instead of resisting the inevitable forces of unification of all parts of India, inclined to favour the idea of getting closer together with British India. The absence of political parties with a tradition of mutual jealousy and hostility has actually left the field clear for administrative reforms.

Hyderabad is an instance of the rapid strides taken by the States towards a fuller and prosperous social order. In our comments on the Hyderabad State budget for the year 1943-44 we pointed out how Mr. Gulam Mahommed has introduced several innovations with a view to preparing the State for the coming constitution. For the first time the budget was framed on an annual basis instead of on the triennial contract basis introduced twenty years ago. Three important post-war funds, viz., Budget Stabilisation Reserve, Post-war Development Reserve and Securities Adjustment reserves, have been developed to stabilise the State finance during the war and to regularise thereafter the annual budgets system. The establishment of a Stock Exchange and a State Bank, the institution of an Expert Committee to review the whole system of taxation, the imposition of the E.P.T. though on a level lower than the British Indian counterpart and the formation of a Retrenchment Committee with non-officials included these are measures calculated to invest Hyderabad with the attributes of a modern state. That 34.9% of the expenditure had been set apart for the development services is a matter for gratification.

The budget estimates for the year 1944-45 reveal a revenue of Rs. 16.64 crores and an expenditure of Rs. 13.55 crores leaving a big surplus of over Rs. 3 crores. Compared to the previous two years, the estimates are as follows:—

(In lakhs of rupees).

	1942-43 (Accounts)	1943-44 (R.E.)	1944-45 (B.E.)
Revenue Receipts ..	12.00	15.32	16.64
Expenditure ..	10.68	12.83	13.55
Surplus ..	1.32	2.49	3.08

The revised estimates for 1943-44 revealed increases under Excise, Customs, Forests, Railways, E.P.T. and Paper Currency counterbalanced by decreases under Land Revenue and Excise duty on cigarettes and tobacco. The estimates for the coming year, or the Hyderabad year of 1354F, are placed higher than ever before marking an increase of 82 per cent over the estimates of the prewar budget. During the year under review excise revenue has grown phenomenally owing to remarkable increase in wages and the growth of military personnel in the population. Excise duty on cigarettes and tobacco provides for an increase of Rs. 13.8 lakhs for the coming year while customs receipts are expected to go down to Rs. 210 lakhs since the price of consumption goods are expected to go down. E.P.T. would remain and is expected to yield Rs. 80 lakhs. Though the actual contribution of the Railways cannot be calculated before the close of the Railway Financial Year the revenue from this source is expected to decrease by Rs. 28.21 lakhs.

On the side of expenditure increases are provided for all important development services and Education has been most favoured this year. The debt position continues to be satisfactory as can be seen from the growth of the Debt Redemption Reserve from Rs. 409 to Rs. 462 lakhs. Easy monetary conditions prevailed and the securities of the Government recorded steady rise in prices. The closing balance of the various Reserves and Funds is expected to be Rs. 2,417 lakhs at the end of 1944-45 as against the revised estimates of Rs. 1,905 for the last year. Excepting the Famine Reserve which is plated at Rs. 278 as against Rs. 296 as closing balance for 1943-44 all other special reserves and funds mark appreciable increases. The picture presented gives the State confidence and hope in tackling the problems of the future.

The Budget Note for 1944-45 presented by Mr. Ghulam Mohammed reveals certain notable features besides the increase in revenue and expenditure. During the year under review Hyderabad continued to fight inflationary forces with determination. The drive for Grow More Food was prosecuted very vigorously and steps were taken to mop up the savings of different sections of the population. A system of cash certificates was introduced and an ordinance provided for compulsory savings from all persons whose income exceeds Rs. 6,000 per year at a sliding scale ranging from 4 per cent to 12 per cent. Relief from compulsory savings is provided for contributions to War and purchase of Government of India loans Savings Certificates etc. The deposits bear an interest of 2 per cent and will be repayable after the war or 5 years from the date of the promulgation of the Ordinance, which ever is earlier. A Development Loan has also been floated for drawing off surplus money and a system of treasury bills has also been introduced both for stabilising the State finances and attracting idle money. Control of capital issues has been administered with tact and firmness; and it has been laid down that a new company would be permitted to be floated only on condition that 10 per cent of the shares of the proposed company should be bought by the Managing Directors and that the funds raised by them which are not required for actual working should be deposited with the Government until such time as they are required for establishing factories or importing machinery from abroad. Growth of cash crops like groundnuts, cotton, and castor has been restricted under an Ordinance, which provides for a surcharge on land revenue in respect of land under cultivation of these crops. These surcharges are heavy as they vary from twice to thrice the normal land revenue and levy of sales tax on these cash crops has also been permitted. These steps, it is expected, would effectively stop profiteering and encourage the production of foodstuffs.

The Finance Member's views on how postwar planning in the Indian States should be done deserve wide notice and support. He points out that no part of India can afford to stand behind vis-a-vis the others and that the supreme necessity of the day consists in "a concerted plan of all units forming the vast sub-continent of India having one common aim differing in methods of work and execution only to suit local conditions." Since the resources of technical manpower is limited in India, no part of this country should waste its energies by uncordinated and separate efforts. Distribution of industries should not be planned merely out of deference to regional wishes but on their suitability and ability to sustain such industries, on an efficient and competitive basis. The view of the Nizam's Government that postwar plans are not limited to mere settling of soldiers now fighting in far-off lands, or the rehabilitation of technical personnel, but they should make up for what perhaps might have been done before the outbreak of the war is noteworthy. The peculiar difficulties of planning for postwar India arise not so much out of scarcity of raw materials within the country, but because the authorities have neglected the vital development services in the past for too long. The future must be shaped on the definite objective of raising the standard of living of the masses.

Hyderabad, as we have pointed out in earlier issues, has an ambitious postwar plan covering the better utilisation of the State's mineral resources, manufacture of fertilisers, encouragement of indigenous schools of medicine, resuscitation of handloom industries, development of communications, facilities for the training of technical personnel etc. As Sir Ardeshir Dalal pointed out recently, the most important bottleneck in the way of postwar planning for India would be lack of personnel and Mr. Ghulam Mohammed proposes to solve this problem by evolving an efficient Economic Civil Service in Hyderabad. In his last year's budget note, he referred to the need to study the field of administration in economic matters with a view to tuning it to the requirements of peacetime planning. The recent plea for an Economic Civil Service made by Dr. John Matthai finds support in the Finance Member of Hyderabad and, in the present budget note he outlines a proposal for evolving a new type of administrators who would be entrusted with the actual execution of postwar plans for the State. If Hyderabad should succeed in developing a sound system of economic administration consisting of expert economists, engineers and scientists she will go a long way in establishing a model for the rest of India to follow. We have no doubt that under the able stewardship of the present Finance Member the Hyderabad fiscal system as well as administration would be thoroughly modernised and made a fit instrument for achieving all the high aims which have now gained the enthusiastic acceptance of the Government of His Exalted Highness.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100/- from 1st September, 1944 and there after increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

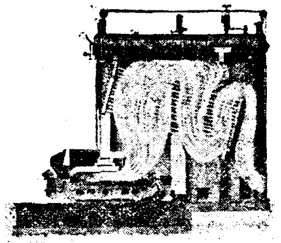
Editorial Notes

Another Conference

From British press claims as to the nature and purpose of blocked balances the only conclusion derivable is that the export revival meant to support free employment at home took precedence over outside claims. The most moderate arguments did not gloss over the acute need for an expanding market for British goods in India, and Lord Catto has made it plain that unfreezing of the balances was Britain's concern and nobody else's at present. To square British claims with Indian claims to draw capital goods at an agreed rate from Britain a conference has been promised even as it is known that Lord Keynes has left for Washington to explain how Britain intends to deal with her new creditors. Over and above the claim for prompt or continuous repayment looms the question of the future of Sterling. Britain's future dollar resources are likely to shrink rather than expand, and the sterling bloc is not as strong as it was ten years ago when tariffs made the British market important for small nations. The obligations connected with lease-lend also cut across the new creditors' claims, and it may be urged therefore that supplementary payments other than reverse lease-lend aid are dependent entirely on adjustments made with Britain's new creditors, of whom India is only one.

It is clear that negotiations promised at present do not rule out an imposed settlement in this case and the treatment accorded to substantial creditors like Argentina may be held up as satisfying Indian requirements. The latest messages hardly elucidate the nature of the ultimate or probable solution, for Egypt can be offered shares in the Suez Canal or even amendment of the Treaty in return for adjustments of financial claims while Indian claims can scarcely be dealt with on the same plane. Canadian aid has been praised with reason by Lord Catto, but the Mutual Aid programme can hardly be adopted by India owing to the Centre's financial weakness as compared with the Dominion's. But it is fairly clear that the success of the next conference does not turn on the ratification of the Bretton Woods agreement, and it may even be assumed that if there is no Exchange Fund or Bank to which contributions are necessary the debtor-creditor relations can be more easily adjusted. So far little attention has been paid to the exchange value of the rupee but, as in the past, the New York—London cross-rate is likely to be the decisive factor and avoidance of depreciation is as necessary for India as for Britain because the exchange standard postulates always a relative strength of sterling in relation to the dollar.



Egypt's Crisis

Why the Wafd fell suddenly from power of the King's grace can be explained easily though many are ready to link Nahas Pasha's dismissal with the vague claims for amendment of the Treaty. The readiness of King Farouk to tread in his father's footsteps might suggest lessons of another kind, especially as the Copt. Makram Ebeid has come back into favour. The old split into Saadists and Wafdists has admittedly been turned to advantage by the King who got thirteen Ministers to take office at short notice. Obviously the new Cabinet is pledged to uphold the Treaty of 1936 and Britain has no real cause for anxiety. Leadership in the Arab world may not be strenuously claimed by Egypt and the resolutions recorded at Alexandria may lose their significance. There is likely to be no departure from neutrality, and the Wafd's economic programme of electrification and aviation is not likely to suffer a setback merely because Nahas Pasha has been dismissed.

A Cabinet crisis is likely to infuse enthusiasm into the bullion markets in the Middle East and present indications are bullish for the Indian bullion market. A rise in cotton or bullion prices in Alexandria may even neutralise the anticipations of lower selling limits in Bombay so that the most recent break in bullion prices may be regarded as purely temporary. The Wafd's protectionist policy may not undergo any change, and anti-inflationary measures in Egypt may proceed on their course though it may be inferred that Egypt's probable profits from the Sudan may be less after the departure of Nahas Pasha. The foreign investor may regard the change as calculated to strengthen his position in the future though repatriation was carried out by the outgoing Wafd ministry and the scope for investment in Egypt is reduced both by the war and the rise of secondary industry. Beyond Egypt, in North Africa generally, the exit of Nahas Pasha will be viewed as a check to any revival of Pan-Arab plans though King Farouk's ambition to revive the Caliphate may be sustained by his swift success at home. Since Egypt is independent there may be no clarification by London of the issues involved, and from the cotton market angle, the Wafd's fall means probably larger supplies and exports of Egyptian cotton though market tremors cannot be measured with anything like assurance.

Problems of Expansion

In the speech of Mr. T. T. Krishnamachari to a Madras Conference of banks the principal issue was the Banking Bill which is promised though in abeyance. Suggestions for improving the provisions did not affect the acceptance of the need for supervision of jointstock banks. Two points, viz., number of branches permissible and the ratio of paid-up capital to deposits in the case of banks were dealt with. Mr. Krishnamachari objected to hard and fast rules of any kind especially as to a cash ratio of 30 per cent though an increase in the number of Scheduled Banks through immediate increase of small banks' capital was readily approved.

As to postwar difficulties, with deposits stagnant or contracting alongside of a shrinking note issue, the only solution offered was the abatement of internal competition. The elimination of differences in rates paid on deposits might be a means to this end, though no precise proposals were made.

Opinion as to the value of smaller banks in the smaller towns has been less uniform than in the past but South India's special contribution has not been overlooked. During the Depression and after, small banks set themselves a task which was carried out, and the latest plea for small scale enterprise may be contrasted with suggestions for amalgamation. The argument that India has too many banks was hardly noticed in the survey which dwelt particularly on the special privileges accorded to the Imperial Bank in the matter of remittance by agreement with the Reserve Bank. Monopoly was readily deprecated but the present lack of uniformity as to commissions may underlie the continuance of privilege. How inert capital has been mobilised in wartime and applied to advantage has been explained often, but the Madras conference heard no suggestions in favour of 'mixed' banking. It is noteworthy that banks do not intend to compete with private investors in the future. How wartime expansion of deposits has favoured Government rather than business and how far reduced liquidity in the future may inure to the advantage of trade and industry can be readily indicated by reference to banking statistics. Free resources may tend to be larger, but the demand for funds might vary in character. The balance is apparently tilted in favour of orthodoxy and nothing as to finance under Planning was mentioned at the conference.

Fresh Fears

Sir Henry French's estimate that a shortage of rice is inescapable in India as the countries with surpluses are cut off was based on something more than conventional observation. The problem is still one of limiting consumption in relation to reduced supplies but this found no place in Mr. Amery's last assurance as to adequacy of the coming rice harvest. The difficulty as to rice imports is obvious but wheat can and must supplant rice even in Malabar, and the original demand was for 1½ million tons of grain from abroad. That demand figured in resolutions of many official bodies; yet Mr. Amery's statement contained no hint of total imports up to September. The unsatisfactory nature of the S. W. monsoon confers added importance on the imports that can be drawn. Since no international agency is interested in India's food shortage the import must be on trade account and in the absence of crop forecasts (the final rice forecast is due in February), it is possible to give rein to anxiety though report of a fall in rice prices in the Punjab may counter inherent pessimism at present.

The assurance that Bengal is out of the wood has been reiterated in Mr. Amery's answer on October 5 in the Commons, but it is essential to remember that average prices in Bengal, still the biggest producing area, are higher than elsewhere. No estimate as to the actual deficit per annum and the probable increase in harvests through special encouragement has appeared anywhere. Last year's figures admittedly have no bearing on the question of Indian imports being made up to the prescribed limit but at the same time the war may exert a powerful effect on the shipping position. How the War Transport Department can act independently, by chartering vessels, if need be at higher rates, need not be indicated at present or even the difficulties with Argentina which has a surplus of wheat as well as maize. The improvements in control cannot enlarge the volume of supplies and grow-more-food measures are at the mercy of the weather like everything else. Mr. Amery indeed declined to give any positive opinion as to the

RATIONAL DISTRIBUTION for NATIONAL NEEDS

THE COUPON PLAN

Mills supply shop with fixed quantity Books covering schools and colleges served by it.

Mills supply Principal of each School or College with Coupons to cover his total students—averaging 3 Books per student each quarter.

Principal signs and issues each student his or her coupon as actual need is proved by previous books being filled.

Student buys new books from shop at fixed price, surrendering coupon with Mills' serial number and signature.

Shop orders from Mills as many new books as are represented by numbered coupons returned. He gets no more.

OVER 10 MILLION EXERCISE-BOOKS HAVE BEEN ISSUED TO STUDENTS THROUGH THIS PLAN SINCE THE SCHEME WAS STARTED IN MAY 1943.

Education is the basis of all progress, and because new ways of life must always come from those now at School and College, we have always treated paper for students as a first essential. Therefore our first attempt at scientific distribution has concentrated on Exercise Books of 64 pages retailed at 2½ annas in Bihar, Orissa, U. P. and As.-/2/9 in Bengal (inclusive of Sales Tax)

Profiteers bought and held up a large part of our supplies—carefully calculated to cover the needs of all schools and colleges. They squeezed the poor students to pay two and three times our prices. Retailers could not be expected to distinguish students in actual need of books from other buyers.

With the co-operation of Principals, Students and Retail Shops, we have smashed the racket in Exercise Books, by establishing supply in terms of each student's different need.

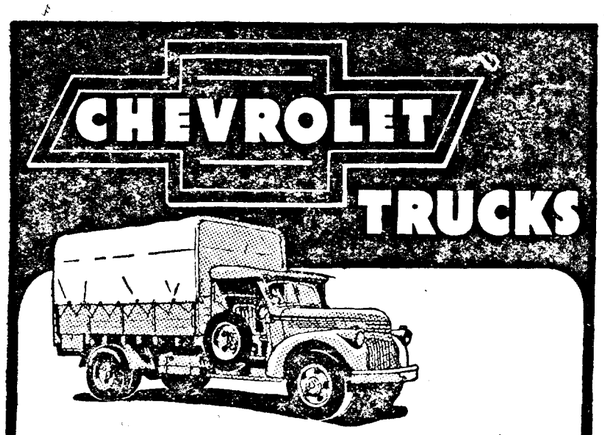
food position in India while suggesting that imports at the previous rate would continue into India. But the imports cannot meet the short fall in wheat production in 1943-44 and present lack of wheat in many places suggests that the request of the Central Legislature through its advisory committee for grain imports is more important than ever in view of an admission that supplies of millets at Government's disposal are deficient this year.



"Indian Rural Problem":

The problem of economic reconstruction of India offers peculiar difficulties because of continued neglect of the Government in facing the major tasks of tapping our country's economic resources for the welfare of the masses. While the world around us progressed fast owing to the active interference of the State Indian economy developed an amazing inertia and lopsidedness and during critical periods like the present war exposed the country to the ravages of famine and disease. Agricultural production has decreased owing to the pressure of population, fragmentation of holdings, faulty land tenures, and the inability of the cultivator to help himself. The Government of India now and then came forward to revitalise the national economy but since their attempts touched only one or two sectors of national life in an unrelated way and failed to cover all parts of our vast economic structure, the remedy often proved worse than the disease. Indian industrialists have often pointed out that if agriculture is to be made more remunerative the most effective way is to embark on a scheme of industrialisation. But imperial interests blinded the vision of the Government of India and even today the Central Government is evincing disproportionate interest in agriculture and keeping silent over the future of Indian industries. That Indian agriculture can be improved only if the large surplus population of the villages is absorbed in remunerative employments offered by industries is a lesson that has to be driven hard into the minds of those who govern the destiny of India today. This task is eminently achieved by Sir Manilal Nanavati and Prof. J. J. Anjaria who, in their study "The Indian Rural Problem" (The Indian Society of Agricultural Economics, Bombay, Price Rs. 8/-) have indicated the urgency of visualising our rural problem *as a whole*. The book is divided into three parts. Part 1 gives facts and figures of the Indian economic Life. Part 11 offers a critical and fairly comprehensive review of the activities of the Government Departments, and public and semi-public bodies and their achievement. In Part 111 the essentials of a correct agricultural policy are well set out against the socio-economic background. The authors present the different problems of agriculture against the historical development and state that the root cause of the low productivity of Indian agriculture lies in our failure to apply modern science to it. Any bold plan of agricultural rehabilitation and development should have the question of land reform as the basic plank. "Unless the system of land tenures and land holdings with the attendant evils of absentee landlordism, sub-infeudation and tenancies, feudal levies and exactions and sub-division and fragmentation of holdings is altered, it is not possible to increase the productivity of the land." Reform of land system, according to the authors, should proceed on three lines. Firstly, the cultivator should have a reasonable size of holding assuring him a minimum standard of living. Secondly, the tax system should be modified so as to be elastic varying with climatic and other conditions of the region and with the changes in the price levels. The cultivator's burden of taxation should be well related to his ability to pay. Thirdly, a comprehensive scheme of rural industries should be put into operation to relieve the great pressure of population on land. The merits and demerits of collective farming and small-scale peasant farming are discussed and the authors themselves favour a system of peasant proprietorship as the best suited for India at present. Collection of land revenue from the cultivators direct, is favoured even in Zamindari, Talukdari and Malguzari areas. The abolition of the Zamindari system is to be achieved by the State taking over the landlord's functions and paying the landlord a fair rent for the land or a lump sum payment to liquidate the landlords' claims for ever. The authors' study is well based on all available statistics and the outstanding merit of the publication lies in the fact that Indian agricultural problems are studied against the larger socio-economic perspective. The Indian Society of Agricultural Economics deserves congratulations for this valuable work which should correct many of the fallacies contained in the arguments of Mr. Amery and others of his way of thinking and should greatly help the authorities in tackling the supreme problem of India with greater circumspection. The book also serves to educate the public on right lines at a time when they have to understand the real worth of the postwar plans of the Government of India.

Coal Exports

In the table of imports and exports for 1942-43 no indication is available of where Indian coal went. All that is known is that coal exports declined dramatically as control of trade preceded the control of the industry. A recent allusion to Italy's intake of Indian coal has been explained. Some quantity of coal is shipped from India. In the Assembly last year, it was explained that Ceylon was a special exception, and since then it is known that even to Ceylon direct shipments have ceased. To prevent confusion of mind arising from the report as to Indian coal in Italy, it has been made known that the shortage of coal here still stands in the way of exports. In the pre-war year 1938-39 India's coal exports totalled over 1.34 million tons and have since fallen to 15,680 tons in 1943-44. The fall in exports is not the direct result of higher prices but the fall in production which explains both rationing and the ban on exports from India.

The complaints of coal shortage from August last were duly met by a ban on exports so that during December-February no shipments of coal took place. The Middle East depends largely on Indian coal but sanctioned exports in 1943-44 were roughly one-tenth of the quantity exported from India in 1941-42. What has been often noted in regard to iron and steel exports is true of coal for control is meant to conserve supplies in India for essential

Chevrolet Trucks in 160" wheelbase, with and without bodies, are now available in limited quantities, at controlled prices, for essential civil requirements, under special arrangements with the Government of India.

The body built by General Motors India Limited on Chevrolet 160" chassis is a load body with fixed sides, drop tail-gate and tarpaulin top, constructed in accordance with Government of India specifications. The gross laden weight of the vehicle with 32 x 6 heavy duty rear tyres, as approved by Government, is 14,500 lbs., giving a payload of three to four tons.

Prices of Chevrolet controlled chassis and bodies are established by the Government of India, and particulars may be obtained from the Motor Transport Controller of the Province or the Resident of the State, to whom should also be addressed applications for purchase of Chevrolet trucks.

Special consideration will be given by Government to purchasers who are prepared to operate with an approved charcoal gas plant.

A GIFT OF NATURE CARRIED BY MAN...

Water is a gift of nature and an essential adjunct of life. Yet it can also be a source of danger and disease. Conveying pure water without the risk of contamination is a major problem for scientists and engineers; drinking water needs protection against elements of nature and against all contact with foreign matter.

Pipe lines carried overhead quickly reveal faulty joints and weak spots thus facilitating rapid repairs. In some parts of India the soil precludes any other safe transport of water.

Always everywhere **STEEL** *for strength.*

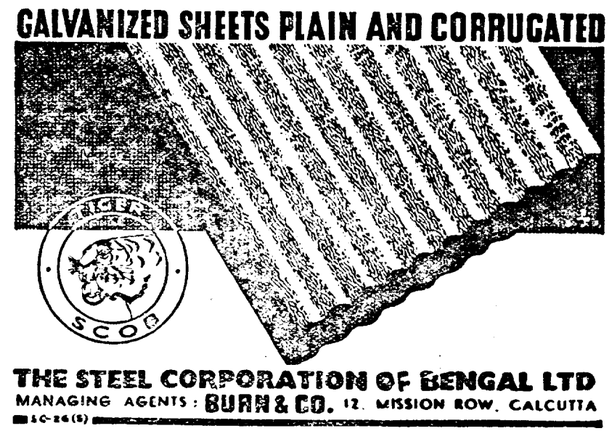
purposes. Whether South Africa will keep the Ceylon market after the war is a question of little value at present. The continuance of the ban on exports means that recovery in coal output in the first half of 1944 will be of real and immediate advantage to Indian industries only. The railway loading figures assuredly throw little light on coal loadings and movements for the year; and comparative figures anyway are of little importance in view of the announcement in August that the production for the first half of 1943 was surpassed in the first half of 1944, followed by the publication of improved results for the first half of the 1944 by leading coal companies. The ban on exports should hardly touch earnings for maximum prices fixed take account of the rise in costs and the general level in prices. The export problem would perhaps emerge only if subsidised Natal coal comes to Indian ports again where it may be urged that in natural markets Indian coal should obtain its former position.



Powers of Resistance

Estimates of the duration of the war necessarily vary but the most recent survey of Japan's debits and credits has made it clear that after the Phillipines there are other acquisitions that give Japan the power to replace her shipping and aircraft losses. In view of what is said about China's difficulties and Allied aid to China, special importance attaches to the outline of U.S. naval requirements in addition to control of China's coast. The Japanese navy remains powerful for defence; and her industries are not seriously damaged as yet. Conference in Tokyo to organise and develop production may have little value but all the same, it has been admitted by Mr. Ralph Bard that Japan is fighting resolutely for her conquests. The assurance of Anglo-American naval cooperation does not modify the previous familiar conclusion that Japan has enough shipping and raw materials to wage war for years. Except in Arakan there is no serious threat to occupied territory if the chances are still in favour of the attack from the east. A year after S.E.A.C. came into being, it may be generally marked that its achievements remain surprisingly modest. There have been air raids and naval sorties but Japan has kept Greater East Asia for her own purposes.

In a detailed analysis of advantages and disadvantages the U.S.O.W.I. mentioned last month Japan's ability to draw materials for industries though unable to help Germany in any way. The main factor today may not be occupied China's industries or Manchuria's but the oil and iron ore that Japan can get out. There is a steady reduction of shipping for essential needs but the main campaign is by land and the U.S. navy does not have a voice in Central China. The assurance that the defence in Burma is weakening does not affect the view that operations in the Palau islands or the latest attack on the Ryukiu islands do not create openings for the invasion of China by sea. Optimism certainly receded after Mr. Churchill's war review and slackening of interest in Burma mining shares marks more than the usual reaction. The admission of a crisis for Japan by her Ministers does not imply that collapse is near for Japan's conquests provided supplies to replace used-up stocks and created also the conditions for the substitution of markets and materials. The problem of inner defence is simple even after the loss of the bases though Mr. Alexander's assessment of Britain's naval might puts a different complexion on what may be inferred from Japan's possession of a battle-fleet in home waters and an army of four millions raised for oversea service.

Sir Visvesvaraya's Planning

Sir M. Visveswaraya's latest booklet, *Reconstruction in Postwar India*, though it does not indicate a change in his well known views on the subject reinforces the demand for all-round industrialisation of this country. Advanced countries, it is pointed out, are planning wide programmes than the ones conceived by the Government of India at present. Postwar schemes should naturally consist of two parts, viz., the short-term and the long-term ones, and while the former consists mainly of problems of transition to peace, it is the latter that has to be worked out in a cautions and rational way. It is agreed that reconstruction in this country to be fully effective has to be conceived not merely against the economic background but against the whole set-up of political. economic and social conditions of the present. The author therefore has a plan for political reconstruction and appears to aim at Dominion Status within the British Empire and a National Government. Regarding the social side of reconstruction, the author treads familiar ground and refers to over-population, disunity, illiteracy, lack of self-reliance, etc. On the vital question of economic reconstruction the do-nothing policy of the Government is criticised and general support is accorded to the Bombay Plan. He deplores the lack of co-ordination in Government of India plans and articles the priorities to be pursued in the actual execution of postwar schemes Sir Mokshagundam's constructive suggestions comprise the demand for the Economic Council and a separate Central Department for Industries with a full-time member-in-charge. His well-known view that a five-year plan could be deduced from the Bombay Plan receives due mention and care is taken to administer a note of warning that postwar plans for India should be so schemed as to bring about uniform development of different regions. From a study of his booklet it would appear that more thought has been spent on the

production end; but vital issues concerning distribution, the role of State in postwar world, etc., have not been fully clarified and discussed. While his powerful plea for rapid industrialisation would be readily welcomed the question of land reform, mechanisation of agriculture, etc., have not been tackled. He has suggested the three corporate bodies, viz. (1) A Reconstruction Commission for building new constitution. (2) An Economic Council to watch and stimulate economic progress. (3) A National Reconstruction Board to attend to social and cultural reconstruction. For furthering postwar reconstruction the Government are asked to grant Rs. 10 crores per year for the first five years of planning and preparation of all the three classes of reconstruction from which Rs. 8 crores would be spent on investigations, preparations, etc. of productive undertakings. Pitfalls in planning are also pointed out and though there are no apreciable differences between Sir M. Visveswaraya's plan and the Bombay Plan, such differences as there are are instructive and interesting. The public would be immensely benefitted by a study of the views of one who has for several years been devoting all his energies to the problems of planning.

(*Continued from page* 507)

to gain considerable time. Finally, the investigation takes place; and, if the findings are adverse, attempts may be made for some kind of a solution. During all this process of delay, it is quite conceivable that the position of the bank in question grows from bad to worse. In any case, there is no reason to assume that banks of this kind take, on their own initiative, steps to cause a reversal of the methods and practices which had got them into trouble. We cannot help feeling that the criteria for a bank securing inclusion in the schedule must be very much more rigorous than they are now. Before a bank is allowed to advertise itself as a scheduled bank, the Reserve Bank must make an investigation not only of its investments and financial position but also of its banking methods and practices. Our view, therefore, is that applications for additional capital by small banks must be scrutinised by the Reserve Bank from the point of view of the present intrinsic soundness of the institution and its present banking methods and practices. So far as Bengal is concerned, there is a strong and urgent case for inducing, by coaxing if possible and coercion if necessary, most of the institutions to strengthen their position not by asking for more capital, but by pooling their capital through a series of amalgamations.

Clive Street Gossip

Sir Chintaman Deshmukh has seized the earliest opportunity "to give an objective summary of the proceedings (of the Bretton Woods conference) with explanatory observations." Without reflecting on the non-official members of the Indian Delegation to Bretton Woods, I may say there was need for such a statement from Sir Chintaman. Both Sir Shanmukham Chetty and Mr. A. D. Shroff have made a number of statements on what transpired during their sojourn in the States and its significance to India's policy in this regard. It is the right and duty of a non-official to put things colourfully before the public, if only because public interest is not aroused much less sustained, by cold recitals of mere facts. There is in fact nothing to be said for Sir Shanmukham or Mr. A. D. Shroff being unmoved by the treatment which the Indian Delegation had at Bretton Woods. But if on the one hand, we must learn to resent and react suitably to such slights as we may have suffered in the international sphere, we have also to learn what to do next. A sullen aloofness is rarely a suitable solution in these cases. The non-official delegates too have indicated that their disappointments at Bretton Woods do not necessarily suggest non-co-operation with the Fund and the Bank as the best policy for us. Doubtless, Sir Jeremy Raisman, the leader of the Indian Delegation, will place not only his views but what will be virtually the final decision on this matter. But Sir Chintaman occupies a position midway between Sir Jeremy Raisman, who is a member of the Government of India, and Sir Shanmukham and Mr. Shroff, who are non-officials. As an Indian and as the Governor of the Reserve Bank, Sir Chintaman must have an approach to the problems which is distinguishable alike from that of the Finance Member and that of his non-official colleagues in the Indian Delegation.

* * * *

Sir Chintaman's speech at the Rotary Club shows not only such an approach, but also the concrete results of such an approach. It is true that his aim was to be "as objective as possible" and "to explain the significance of the many issues without indicating my view of the findings." But subjectivity of the right kind is nothing but illuminative objectivity; and the country must be grateful that Sir Chintaman has provided it with such an objectivity in a matter in which there has so far been more heat than light. Sir Chintaman does nothing to minimise the gravity of the affront to our national dignity, but proceeds at the same time to assuage feelings by citing certain extenuating circumstances and even more, by pointing out that our interests are far from having been wrecked at Bretton Woods. While it is, no doubt, true that Britain and the U.S.A. and other nations could have shown a greater spirit of accommodation, it must also be remembered that their attitude to India must not be inferred only from the fate of the amendments proposed by the Indian Delegation. For Sir Chintaman points out:

> We found no resistance to such inclusion or any evidence of a desire to burke disussion. From the very first of the series of the meetings that were held there under the Chairmanship of Mr. Harry White of the U.S.A. Delegation, it became clear that latitude would be allowed to all the delegations for the full expression of their views on all aspects of the subject. The Agenda Committee did some exploratory work on the joint statement in addition to drawing up the Agenda. The atmosphere at Atlantic City was one of earnest reasonableness among the many experts gathered there and gave a good augury for the main Conference at Bretton Woods.

* * * *

Nothing is gained by overlooking the fact that both the U.S.A. and Britain have their own special difficulties in regard to the carrying through of the scheme. The U.S.A. administration will have to convince their public that it does not mean a radical departure from the orthodox gold standard. On their part, the U.K. will have to convince the Legislature that the scheme does not mean a surrender of their freedom to arrange their internal economy to the best advantage of the country. In fact, each country had its special problems. Russia was anxious not to part with her gold; she was also reluctant to furnish information about her gold production and stocks. Mexico's interest lay in god-forsaken silver. The European nations were more concerned with rehabilitation and reconstruction and long-term development than with immediate exchange stability. The Latin Americans came into the picture as creditors, who were above need for any special organisation. That, in spite of these special interests, there was a general spirit of cooperation and results have been achieved which are worthy of careful consideration by the countries concerned redounds to the credit of the various delegations.

* * * *

Not all these special interests of the various nations have fared well in the plans that have emerged from Bretton Woods; and it is fair alike to ourselves and to others to recognise this fact when we nurture our grievance that the Indian Delegation was shabbily treated. Not that a complete volte face is called for. But our resentment of that treatment should not dominate our attitude to the Fund and the Bank. As Sir Chintaman has been careful to emphasise, "there seems to be no hurry for making up our mind. We can afford to let the dust of controversy settle in order to be able to see things more clearly while the U.S.A. and the U.K. are making up their minds". According to Sir Chintaman, the three important proposals of the Indian Delegation are firstly, the recruitment of staff for these institutions on a basis of geographical distribution consistently with efficiency, secondly, the demand for a permanent seat and suitable quota for India, and thirdly, the demand that at least a portion of our sterling balances should be cleared through the machinery of the Fund. Of these three, the first point is said to have been conceded, though in a modified form. It would appear that the non-official delegates are not of the same opinion, since in some of their statements they indicated that the development of backward countries was not given sufficient importance by the conferences at Bretton Woods. It is doubtful whether the principle of geographical distribution of jobs is a guarantee of sufficient attention to the needs of backward countries. In any case, far more

depends on the constitution of the Bank and the Fund and the way they work than on the composition of the staff or the resolutions of deliberative bodies.

* * * *

In that view, the constitution of the Fund and the fate of our sterling balances are far more important. Sir Chintaman has given an altogether new complexion to the question of quota and permanent seat on the Executive when he says that "in an indirect way the validity of our claim was recognised in that we were given a quota sufficiently large to ensure a seat for us in every election without outside support." "Thus", concludes Sir Chintaman, "the conclusion might be regarded as meeting all our legitimate aspirations but not satisfying our national dignity." It amounts to saying that we cannot make a big grievance of our having been denied a formal permanent seat on the Executive of the Fund. At any rate, it cannot by itself form a valid ground for refusal to enter the Fund. But it is important to note that in this matter the Indian Delegation was up against a foregone conclusion, foregone, "not on any valid econo-economic ground, but for political reasons." Though Sir Chintaman would not like to attribute any specific statement to any member of the U.S.A. Delegation, Mr. Morgenthau has been publicly credited with having said that India was denied a permanent seat because of her membership of the British Empire.

* * * *

Whatever the merits of the other two questions, India's attitude to any scheme of international financial cooperation will be determined in the main by the fate of the sterling balances and by the exchange policy of the postwar period, since both are extremely important to our plans of postwar development. Sir Chintaman's treatment of these problems will be found to be illuminating and otherwise also helpful. Though the Indian Delegation has failed to get the sterling balances included within the scope of the Fund, it has apparently succeeded in correcting the misapprehensions in foreign minds that our sterling balances have been amassed in some way by our shirking the war effort. This is, indeed, a great gain, which can be turned to advantage when favourable opportunities occur in the future. Already its effect is noticeable in the general recognition that the settlement of war balances is not a matter of exclusively British or Empire concern, and "that the United States and all other countries are interested in seeing re-established a healthy flow of trade both into and out of Britain and in freeing the large volume of purchasing power now held in sterling to seek goods in the most advantageous markets wherever they may be." If the Indian proposal was rejected, it must be attributed less to direct opposition to the main objectives, than to the reluctance to increase the Fund or give the double guarantee to a part of the balances which the proposal of the Indian Delegation involved. The Indian Delegation succeeded not only in convincing foreign delegations that the fate of our sterling balances is a matter of common concern for world economy as a whole, but also in avoiding the antagonism of the British Delegation. Sir Chintaman emphasises the fact that "members of the British Delegation in their private capacity congratulated some of us on the reasonableness and restraint with which our case had been presented to the Conference". For the upshot of the discussion on sterling balances, one should look, not to its rejection by the conference, but to Lord Keynes' assurance:

> We appreciate the moderate, friendly and realistic statement of the problem which Mr. Shroff has put before you today. Nevertheless the settlement of those debts must be in our clear and settled judgment a matter between those directly concerned. When the end is reached and we can see our way into the daylight, we shall take it without any delay, to settle honourably what was honourably and generously given.

Sir Chintman's conclusion, then, is clear and unambiguous:

> On our own part, instead of devoting too much attention to our possible attitude to the prospective Fund and the Bank, it would be more helpful if we devoted serious thought to considering what measures would be necessary to enable us to receive the payment that Britain might be in a position to make from time to time in the form of goods. In other words, we ought to get busy with our development planning and to consider what sort of controls and exchange rate would be appropriate in the circumstances of the case, the object being the establishment of a suitable surplus of imports from the U.K. over exports representing the repayment of our sterling balances.

* * * *

In a few sentences, Sir Chintaman has given just the lead that the public needs and should be able to make the most of. If the essence of the problem of our sterling balances is to secure their repayment, then it is surely more helpful to think out the form of the repayment than to nurture irrelevant feelings of resentment against foreign delegations. Obviously, there can be no repayment, if we continue to sell more to Britain than we buy from her. There has to be a surplus of imports. What form have these imports to take? What are the terms on which these imports should be made? The former is dependent on our development plans, while the latter has to do with the rupee exchange and import control. Our development plans have to be so framed that they will give rise to a demand for capital equipment which Britain will be able to satisfy; and no time can be lost in drawing up such plans. But these plans will, far from obviating the need for import control, only enhance it. Today, import control functions only to achieve objectives connected directly or indirectly with the war effort. But in the postwar period, the paramount aim will be the success of the plan, the progress of the industries which it will bring into being and develop to a mature state. Such an import control will have to work on quite different principles. Likewise, the rupee rate will be adjusted to the needs of the Plan. Public apprehension of a high exchange rate is still lively, considering past experience and present position alike. But it is obvious that a high rupee rate is far more appropriate today when our exchange has a oneway traffic than after the war. Since the British Government has not altered the rupee rate now, for the obvious reason that the only effect of it would be to accelerate the rise of sterling balances, there can be no valid reason for its increase in the postwar period. The paramount need of India, whichever way you may regard it, is concrete planning.

* * * *

The application of control calls for judgment and finesse and that both can develop to the proper pitch has been provided by the new department under the Examiner of Capital Issues. There has been a temporary change at New Delhi when the mantle fell on Mr. K. A. Master who dealt with the subject of applications and sanctions as successfully as the permanent chief, Sir A. H. Lloyd. It is not always easy to hold the balance squarely and reconcile interests with an eye both to the present and future, but Mr. Master has, according to all accounts, done it, and done it well. The proved worth of the department has been kept up during his brief term and it is gratifying to record that in respecting rules and procedures the Examiner's department has given a square deal to the public which has found that control of capital issues is more than a regulator of the volume and pace of investment. For Mr. Master's success the record of the department is only partly responsible because the personal equation does matter and his own keenness combined with a sense of fitness has been a decisive factor.

(FROM OUR CORRESPONDENT)

NEW DELHI, Oct. 9.

As far as New Delhi is concerned the dust has not yet settled down on the communal controversy. As a matter of fact, after a short-lived truce, there is increasing bitterness. At the week-end there was a regular communal duststorm when the Akhand Hindustan Conference met here to mobilise opinion against the Pakistan demand. The President made a plea for a federal constitution on the U.S.S.R. model granting total cultural autonomy to units rearranged on a linguistic and more rational basis. The conference atmosphere was heated and the speaker at the conference named the four enemies of India in order of priority as "British imperialism, Muslim fanaticism, Congress wobbling and our own apathy." Political circles here feel depressed at the confused situation. The British Government has again refused to take the initiative and even release the Congress Working Committee members. The release of Dr. Syed Mahmud took place this week-end under rather intriguing circumstances and the full story is not yet known.

* * * *

The future of civil aviation (practically non-existent now) in India is bound to shoot-up into news in the next few weeks. Sir Frederick Tymms, Director of Civil Aviation in India, and Sir Gurunath Bewoor are expected to attend the preliminary Empire aviation discussions which is to be opened at Montreal on October 23 and the international conference to be held in the U.S.A. soon after. It is not known here what concrete proposals the Indian delegation will put forth beyond toeing the line taken up by the British delegation. What happened at the confidential discussions between Sir Frederick and the British authorities last autumn is also not known. The general principles—an international agreement on a fully reciprocal basis; freedom of flight, landing for refueling and other non-traffic purposes on a non-discriminating basis; sovereignty of internal air and reservation of 'cabotage'—enunciated by the Government were quite satisfactory as far as they went. Sir Mohammed Usman's assurance that in April this year that internal air services in this country would be developed with only Indian capital and under Indian management was also generally welcomed. But these assurances left the most vital questions unanswered. What are the Government plans regarding the development of an aircraft industry without which India shall have to compete with other nations on a most unequal basis? Why don't the Government start from now on to convert at least some of the big repair and maintenance bases into construction centres? What is to be India's share in Empire air services? What shall be her position regarding services to such neighbouring countries as China, Afghanistan and Iran? In India where the cheapness of the air services is more of a necessity than in richer countries, how can the maintenance and operational costs be kept comparatively low if the country has no aircraft industry of her own? The Government's proposals as regards future internal air services—involving an air fleet of only about 40 places—are ridiculously inadequate. How the General Policy Committee on post-war reconstruction reacted to the Government's proposals is not known but can be guessed. The experience at Atlantic City and Bretton Woods has increased India's suspicion that economically backward nations have little chance of getting a fair deal from more prosperous and privileged countries. The experience at the Aviation Conference is only likely to confirm that.

* * * *

The Federation of Indian Chambers of Commerce and industry haven't yet selected their delegation of six members and six advisers to the International Business Conference to be held at New Jersey in the middle of November. The names of the personnel ought to have reached New York last month and the delay is rather inexplicable. The Federation ought to have convenient machinery for quickly selecting delegates for such conference instead of wasting time in suggestion and counter-suggestions. The conference will only consider Big Business interests. Perhaps the growing tendency towards socialisation of industries and plans for rigid post-war controls alarmed these interests to take stock of the whole position, "Maintenance of private enterprise" is one of the chief problems to be discussed by the conference. Other items on the agenda include currency relations, international shipping and aviation policies, industrialisation of new areas and post-war world supply of raw materials.

* * * *

It is learnt here that Sir Jeremy Raisman is planning to introduce a bill imposing estate duty on non-agricultural property during the next budget session of the Central Assembly. By that time, the Government of India expect, the British Parliament would have passed the necessary legislation to amend the Government of India Act in the light of the Federal Court view adding estate duty to the Federal list. The Finance Member does not intend to rush the bill. It will be first circulated for opinion and then referred to a select committee. The yield from estate duty is estimated at about ten crores a year. It is generally regretted that the Government should be so afraid of offending big landed interests as to exempt agricultural property from estate duty and thus leave a big source of revenue untapped. Such property is also exempt from income tax in most taxes. Only the Bihar Government has so far attempted to remove this discrimination between urban and agricultural property. The bill, it is expected, will be strongly opposed by big industrial interests.

Sir Chintaman Deshmukh's plea for moderation in the sterling balances controversy has evoked widely divergent reactions here. Many feel that Sir Chintaman put the whole issue in a proper perspective by advising against too much concentration on the prospective International Monetary Fund and the Bank. The cruicial problem, they assert, is the necessary measures, as the Reserve Bank Governor put it, "to enable us to receive the payment that Britain might be in a position to make from time to time in the form of goods," the objection being "the establishment of a suitable surplus of imports from the United Kingdom over exports representing the repayment of our sterling balances. The critics plead that statements by British official spokesmen so far have done nothing to create that confidence that Britain is ready to export the necessary surplus goods India may require to build up her post-war industries. What is one to make of Lord Keynes' assurance given to Sir Chintaman when Sir John Anderson, the Chancellor of the Exchequer, tells this country a few days later that the sterling balances are just war debts? Keynes himself has made several public statements saying that Britain had taken on a financial burden too large and unequal for her to discharge. Moreover the treatment meted out to India at Bretton Woods on grounds which Sir Chintaman himself admits, were wholly 'political' has only increased India's suspicion. Sir Chintaman's advice that "India need not be depressed unduly by the rejection of her request in respect of her sterling balances" will be difficult to follow. It is hoped here that at the meeting of the General Policy Committee towards the end of this month, the Finance Member may throw some fresh light on the sterling balances controversy.

Powders and face creams will help you to look lovely, but the secret of a really beautiful skin is to be clean inside. Until you realise this you are wasting half the money you spend on beautifying yourself. So let Andrews give you deep-down tonic Inner Cleanliness. That is the first step to a lovely clear skin. A glass taken regularly—whenever you feel you need it—cleanses, cools, refreshes and invigorates. This is how Andrews does its health-giving work:

FIRST . Andrews refreshes and cleans the mouth and tongue.

NEXT . Andrews settles the stomach and corrects acidity.

THEN . Andrews tones up the liver and checks biliousness.

FINALLY . To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness be regular with your

Bombay, October 10.

Sir Chintaman Deshmukh's speech to the Rotary Club was in many ways interesting and instructive, especially as the Governor of the Reserve Bank shed light on many points on which he could speak with more authority and knowledge than either Mr. A. D. Shroff or Sir Shanmugham Chetty. The highlights of Sir Chintaman's address are: firstly, that India can take heart from the categorical assurance of Lord Keynes that the sterling obligations will be met: secondly, that the Indian Delegation could have been larger, more appropriate to India's size and importance and more useful to the Committees at Bretton Woods; thirdly, that the conference was pulled about in all possible ways by each country to gain its ends; fourthly, that the questions of permanent seats and suitable quotas in the schemes of the Monetary Fund and the Bank were decided on purely political grounds by the American contingent; fifthly, that India should have asked for a temporary doubling of the quota to obtain dollar and gold overdrafts against a portion of the sterling balances—the U.K. objection to this being that the uncertainty of its future balance of payments precluded giving a guarantee in respect of the repayments of such overdrafts; sixthly, that India need not be unduly depressed by the meagre results achieved by her at the conference and that criticisms of the Fund from different points of view might not be so utterly disregarded after all. He seemed anxious that India should not reject the scheme out of hand but should wait and see how things shaped. Sir Chintaman pleaded for a shift in Indian discussions from our possible attitude to the Fund and the Bank to serious consideration of how best we could get on with our development planning schemes and how far the establishment of a suitable surplus of imports from the U.K. over exports could be achieved. The final impression one gets from his observations is that, despite all the sordid log-rolling, wire-pulling and tendencies of economic royalism which were conspicuous at Bretton Woods. India could derive some benefit from the International schemes, which are fortunately still in a formative stage.

The levy of excise duty on tobacco by both the Government of India and the provincial governments has long been operating harshly on the tobacco vendors, particularly the systems of double taxation in force. It had been felt for a long time that the excise duty might be administered by the Government of India and that the provincial governments may be allotted a share in the proceeds of such duty. Negotiations had been in progress between the Centre and the Provinces and the Bombay Government have come to an understanding with the Government of India, as a result of which the Bombay City Tobacco Excise Act is to be repealed. The existing system of vendor licenses and fees will therefore go and more shops may be opened in City. The former had been one of the most fruitful sources of revenue to the provinces, but since the coming into force of the Government of india Act, 1935, by which the Central Gofernment got the right to impose Central excises, dual taxation came to prevail from 1943. The Government of Bombay suspended the levy which they used to recover at the rate of Rs. 30 per maund of tobacco issued from bonded warehouses for consumption in the City. Some sort of unification of the system was badly needed. It will lead to simplification of the administrative side, while the provincial government has nothing to lose. The license fees charged in the case of retail dealers selling tobacco and manufactured products will hereafter be removed.

The movement of the cost of living index is interesting. The working class cost of living index for August for Bombay went up by 9 points to 250 (average prices for the year ended June 1944 equal to 100). The index number for food articles advanced by 17 points to 287 in the same period. In view of the success claimed for the anti-inflationary drive and in the light of the insignificant additions to currency in recent weeks, the upward movement of the cost of living index has a deep significance. It at least shows that the cost of production of both food and manufactured articles is likely to remain nigh for a long time, and militate against price reduction by the controlling authorities. It is not without significance that textile circles are already beginning to feel that further cuts in the price of cloths should not be imposed, inasmuch as there has not been a proportionate decline in costs to justify a reducaion in controlled prices. It would be a queer state of affairs if industry is asked to cut its profits when the powers-that-be have not succeeded in halting, much less reducing the cost of production.

The Committee of the Indian Merchants' Chamber has again addressed the War Transport Department of the Government of India pressing the need for suitably safeguarding the interests of traders, in view of the system of storing commercial cargo along with explosives in the dock area. The findings of the Stone Commission and the ban against taking legal action against the Port Trust in the event of damage to property emphasise how unprotected the commercial community is. The least that the Government of India can do is to assure the commercial community that losses arising from untoward accidents would be duly compensated. The alternative is to see that explosives are not discharged in the docks along with cargo. The Committee has pressed upon the authorities the desirabilty of taking the commercial interests into their confidence before taking decisions on these questions.

India deeply appreciates the invitation extended by the organizers of the International Business Conference to send six delegates and six technical advisers. The Federation of Indian Chambers may, however, send only 6 representatives from India, the balance to be made up from Indian residents in the U.S.A. Suggestions have been invited from member bodies as regards the personnel. Certainties are Mr. J. C. Setalvad, President of the Federation, Sir Chunilal B. Mehta, G. L. Mehta. Dr. P. S. Lokanathan will be one of the advisers to the delegation. After the sad episode of Bretton Woods, this Conference should be a heartening thing for Indian businessmen. The proceedings of the Conference will be watched with the greatest interest in India.

THE FLOATING FORTRESS

In 1943 an unusual monsoon caused floods, devastated rich fields and drove the people to destitution in the various parts of India. Even dry regions like Ajmer did not escape this calamity. Bengal and South India are frequent scenes of such visitations.

While science and engineering can prevent a recurrence of this terrible havoc only an Insurance policy on an established company can mitigate the suffering of the individual and his family. In times of flood the Insurance policy is a floating fortress for the policy-holder.

When you buy Insurance from Ruby General you assure yourself of all these advantages and in addition the unique benefits this company offers its clients.

Anglo-U. S. Trade Rivalry Predicted

Washington, October 12.

Both Government officials and traders here are paying increasing attention to the value of Lend-Lease as a national asset with important implications in respect of America's position in post-war international commerce. They see the Lend-Lease Act, although it was enacted entirely as a measure for the defence of the United States, as a means whereby this country now has a spring-board from which it could inaugurate its post-war trade expansion. This aspect was recently stressed by Mr. J. Laughlin Currie, Deputy administrator of the Foreign Economic Administration, in a statement to a Congressional Committee.

He observed that United States shipments under Mutual Aid indirectly achieved "what has probably been the biggest sampling campaign ever carried out in the world." He said that Government has a staff of one thousand specialists on markets, their needs and trading conditions in specific regions abroad. Mr. Currie noted however a bar to trade in inherently impoverished foreign treasuries, and insisted that the United States, in order to sell goods abroad must be prepared to import from other countries marketable goods.

Officials are working intensely on plans for world trade expansion under minimum restrictions. This activity, it appears from London dispatches, has caused considerable reaction in Britain which has lost seventy per cent of its exports in volume during the war, and which after the war must export in volume fifty per cent higher than before the war. Observers bluntly forecast an intense Anglo-American rivalry for foreign markets, and one factor which could make for friction is Lend-Lease. British traders appear to feel that their hands are now tied by Government's stipulation that goods similar to Lend-Lease materials may not be exported in competition with American goods. It would appear from this situation that the U.S.A. would meet opposition in Britain to its announced intention to wipe out international cartels as far as possible after the war. For this reason there is encouragement here from London stories quoting several responsible British newspapers as opposed to cartels.

Meantime, Mr. Donald M. Nelson, Ex-Chairman of the War Production Board is presumably preparing to become commercial ambassador for Mr. Roosevelt to pave the way for post-war economic cooperation among nations. Commenting in this regard, the *Washington Post* said "Now that we have taken upon our shoulders the major responsibility for keeping peace in the Pacific, for economic aid, and for rehabilitation, China (from which Mr. Nelson recently returned) becomes an investment in Peace we cannot afford to ignore."

BOMBAY MARKETS

BULLION

(*From Our Correspondent*)

Bombay, October 13.

Silver prices are fluctuating widely as a result of the tussle between bulls, who force up rates by asking for delivery taking advantage of the paucity of stock, and the bears who sell, banking on war news and Reserve Bank's selling at current prices.

The rate for Forward was easy at Rs. 120-6 per 100 tolas on Monday owing to bear sales but a carry-over difference as high as Rs. 2 against the bears unnerved them causing covering, the rate touching Rs. 121-7 on Tuesday.

After declining to Rs. 119-6 on Wednesday the market steadied upto Rs. 121-10 on Thursday evening when the Bank refused tenders at Rs. 124. The stock is 300 bars and the offtake is 40 bars; arrivals are around 20 bars with Ready quoting at a premium of Rs. 2-12.

Early easiness was noticeable in gold on Monday owing to heavy arrivals and Syndicate liquidation so that the price declined to Rs. 64-2 on Tuesday, when a prominent operator unloaded 70,000 tolas to-day. However, the Reserve Bank refused tenders even at Rs. 65-8 and bears therefore covered. The offtake was 40,000 tolas on Tuesday and Wednesday. The market is steady to-day at Rs. 65-14 and the stock is dwindling; hence the premium of Re. 1-4 for both American and Durban gold.

COTTON

(*From Our Correspondent*)

Bombay, October 13.

The cotton market is depressed despite occasional steadiness, derived from either speculative support or bear covering. The March contract after rising to Rs. 403 sank back to Rs. 399 to-day on hedge selling and liquidation. The market is dominated by apprehensions of American subsidy, Lancashire competition, and the poor export outlook. A downward drift is anticipated.

PAPER economy

After five years of war it is hardly necessary to emphasise the importance of economising in the use of paper. But it is worth your while to know how best to economise paper. The first point is, of course, to use only just the amount of paper which is absolutely essential and no more. The second, and no less important point is to use paper of a good quality which will enable you to write or type on both sides without affecting legibility.

Resume of Commodity Markets

A sharp decline in cotton prices on Monday, attributed to lower New York advices, stands out as the feature of the week, though recovery has been noted in mid-week. Apart from the slight fall in cotton and the steadiness of the bullion all markets in India show no change for a week.

Report of larger sales by the Reserve Bank in the future has hardly touched the bullion market.

Jute has been more or less steady with the turnover small as before, both in pucca bales and loose jute. New Crop Firsts have been done at Rs. 79 during the week but the forecast has been apparently without any effect on the market except for a slight drop in prices that hardly accords with the expectation of a crop smaller than last year's. The easiness probably is due to the decline in upcountry markets where arrivals have increased. Arrivals by rail have increased as compared with last year. Mills have shown very sparse interest in both jute and hessian though the Indian Jute Mills Association's attitude to crop restriction has undergone a decisive change: report has it that a 12 anna crop in place of a 8 anna crop is desired for the next year. In view of requisitioning and the coal situation mills can hardly hope for regular working and jute prospects are tied up with outside factors. Middles and Bottoms alike are quoted below the maxima.

The jute manufactures market has latterly been steadier with heavy goods quoting slightly higher. There is, however, no premium for forward delivery and both 9 Porters and 11 Porters are standing at the maximum rates. Demand for jute manufactures is improving and the U.S.A. is known to be keen on jute especially as the world is said to be short of cotton. Mills retain fairly large stocks and have reported a very small decrease in stocks of manufactures during September. When production has not been up to the mark, the very small decrease in mill stocks is rather hard to account for. The stock position should keep prices from rising, particularly as hessian stocks are up as compared with August-end.

The U. S. Secretary of Agriculture has announced the conclusion of a wheat agreement. The Big Four, U.S.A., Canada Argentina and Australia are said to have agreed as to the sharing of markets and an agreement will follow probably as to prices later. The U. S. export quota is said to be 72 million bushels. The quota seems high, but it is as a post-war limit for U.S. exports it is to be taken especially when demand may be larger from Europe since the Russian surplus and the Danubian surplus alike may not be available to regular importers. The level of prices compared with 1943 is lower and the Lyallpur quotation is Rs. 8/4 per maund. Apprehensions of smaller supplies are, to some extent, offset by the report that movements of food grains under Government auspices have been satisfactory.

Improved demand was noted at the two tea sales held on October 10 and 11 in Calcutta. Changes in prices for medium broken grades favoured sellers but green teas and fannings were irregular. Teas for internal consumption particularly Dusts encountered better demand at the recent sales, the average price for better sorts being 1 anna to 1½ annas per lb higher.

In addition to a notice in the press drawing the attention of unlicensed dealers to transactions in raw rubber, there has been a more important announcement for producers. The production bonus is to come back and the Central Government offers Rs. 11-1-9 per 100 lbs. on rubber offered between October and December 1944. In the period April-September deliveries of rubber have exceeded the basic quotas fixed under the production bonus scheme.

EPIC OF KOHIMA

TOJO'S MEN had crossed the Chindwin. Slowly, stealthily, they had reached the slopes of Mt. Japvo and the Naga Hills. They took the few ridges and hills around Kohima. The Nagas had been driven out of their villages. Their houses were burnt, their huts were razed to the ground, their pigs, poultry and crops looted and plundered. "INVASION OF INDIA" the Japanese called it.

Events moved rapidly. You remember the names: the Jail Hill, the GPT Ridge, FSD Ridge, the Pimple and lastly the D.C.'s Bungalow. It was a bitter battle.

BUT OUR MEN, GREATLY OUTNUMBERED, NOT ONLY HELD OFF THE ATTACK, BUT ULTIMATELY SMASHED THE FOE AND WON A GREAT VICTORY.

This was the epic of Kohima. Here our men proved that...

"WE CAN BEAT THE JAPS and WE ARE BEATING THEM BACK"

AAA 1306

ISSUED BY THE NATIONAL WAR FRONT

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance".

CALCUTTA, 12th October.

Stocks of manufactured goods in Mill godowns at the end of September showed little variation from the position a month previously, a drop of only 1,102 tons overhead. There was however considerable variation in the factors. Commercial hessians showed an increase of 79 lakhs yards or 2.247 tons, which was largely counterbalanced by a decrease in Military stocks of hessian by 73 lakhs yards or 1,976 tons, resulting in an aggregate increase of 271 tons of hessian goods. On the Sacking side, Commercial goods declined by 56 lakhs yards or 1,446 tons, while military goods showed a minor increase of 73 tons, leaving a net decrease of 1,373 tons of Heavy Goods. The total net decrease is thus 1,102 tons over the month. In tonnage, the hessian stocks are nearly equally divided between Commercial and Military, 35,156 tons and 34.417 tons respectively, making an aggregate stock of 69,573 tons of hessian goods. The actual yardage however points to Military goods being largely light weights, for the Commercial yardage is 1.275 lakhs with a heavier weight than the 1,494 lakhs of Military goods. Sacking is as usual preponderatingly on Commercial account with 2,197 lakhs yards and 92,102 tons against a Military stock of 263 lakhs yards and 10,759 tons. The total Sacking goods in stock thus amounts to 102,861 tons and the aggregate stocks of goods of all descriptions to 172.434 tons. This marks a drop in stocks of 23,000 tons since the beginning of this season on 1st July. The general impression conveyed by the stock figures is that despatches of goods have just about kept pace with production. but this cannot be confirmed till the production figures are published.

On the subject of production, coal is still a sore point. The Commerce Member some time ago ventured to forecast that coal raisings would improve in September and October and that Jute Mills would benefit by any such improvement. It is believed that raisings are actually better, but neither in quantity nor in quality has any of the benefit accrued to the Mills and the amount of incombustible rubbish which is foisted on them at an inflated price, and which is not really worth the cost of the freight, is little short of a crying scandal.

The value of a loom hour for transfer purposes under the Jute Mills Industrial Pool has been fixed again at twelve annas for the month of October by the Jute Mills Committee. The Committee also decided to approach the Government of Bengal to increase the licensed acreage for Jute for the next Crop to twelve annas of the standard acreage, owing to the diminishing stocks of the fibre.

The September issue of the Bulletin of the Indian Central Jute Committee contains among other items of interest, a comprehensive survey and analysis of the trading conditions ruling during the Jute season 1943-44, both locally and in the main importing markets abroad. There is a rather rambling note on the possibility of economy in fuel by moistening coal as it is introduced into the furnace, but the conclusions seem to be so vague as to be almost valueless. How the U.S.A. anticipated and tackled the loss of imported fibres such as Manila hemp, sisal, not to mention jute, is elaborated in a couple of interesting articles. The steps taken to conserve essential stocks and to encourage the use of substitute fibres is described and it is a notable achievement that, despite the fact that War requirements have increased the demands for rope by two and a half times over the normal peace-time demand, the question of supply is now conditioned, not on the quantity of fibre available, but on the man-power available in the processing mills. The shortage of bags in the Argentine is presumably the cause of further steps on the part of the Government to take virtually entire charge of the grain trade. Powers have been taken to take possession, by expropriation if necessary, of all equipment for storing and handling grain and seeds, and in future the manipulation, cleaning and grading grain for export will be taken out of the hands of exporting firms and undertaken by Government. What repercussions this action may have on the Indian Jute trade remains to be seen but it must be remembered that the Argentine is in normal times the next best customer for Indian Hessians after the U.S.A., and any steps towards the reform of the grain exporting trade there will certainly be in the direction of increased bulk handling of the crops.

Only a very moderate business is reported from the Export Jute market, mainly in Long Group Daisee at Rs. 76-8, Short Group Daisee at Rs. 85 and in Dundee Tossa Fours also at Rs. 85. Pressure to sell by Balers, probably due to lack of storage space, brought the price of Mill Pucca bales down to minimum at the end of the week, with the result that a fair quantity was taken up on the basis of Rs. 79 for Firsts, Rs. 74 for Lightnings and Rs. 70 for Heart marks.

After a prolonged period of dullness, there was a little more activity in the Loose Jute market and a moderate business has been recorded. European packing sold in assortment at Rs. 16-12 for Mids and Rs. 13-12 for Bottoms, while for Bottoms alone both Rs. 14 and Rs. 13-12 was reported. Supervised Jat sold at Rs. 16-4 and Rs. 13-4, Mids and Bots in assortment, with Bots alone reported at Rs. 13-8. Indian District Tossa was again reported at Rs. 16-4 and Rs. 13-4 Mids and Bots. It is notable that much of the business was done for December/January shipment, a commentary on the limitations now placed on the storing capacity of most mills by requisitioning for military purposes. In many cases two mills are working by double shifts in the premises of one, while about half the storing godowns of that one is occupied for military purposes.

There is little change to record in the Fabrics section. There has again been quite a considerable turnover in Hessian at maximum rates right up to December of next year, though the bulk of the business was for January/June. It is suggested however that the immediate requirements of the U.S.A. Buying agency are just about filled. Open market demand for Heavy Goods is non-existent at the moment. There have been some transactions reported in combined Hessian and Sacking on the basis of one and a half lakhs of hessian cloth to one hundred bales of heavy goods. But there are very definite limitations to the extent of this type of business. Only Bazar dealers will undertake it, and the result in present circumstances will be that, while the hessians will probably be shipped when due, the heavy goods will remain in Mill godowns, cluttering up their already restricted storage space. While Mills still refuse to break the maximum rates for heavy goods, all descriptions are quoted at a more or less substantial discount in the second-hand market. The popular counter, "B" Twills is quoted at Rs. 62-12. About the only description which has shown some appreciation over the week is D.W. Flours which are quoted up from Rs. 74 to Rs. 76.

JUTE

(By Our Staff Correspondent).

Calcutta, October 13.

The jute market has again been quiet with prices latterly dropping slightly. There is little doing in loose jute and quotations for Middles and Bottoms are below the maxima. The report of larger arrivals in upcountry markets is one reason for the idle conditions noted, while another is the shortage of coal for mills. The chronic coal shortage affects jute. Export demand remains very moderate only with some business in Dundee Daisee for December delivery. Since September the jute market has been subdued and larger arrivals of raw jute into Calcutta contribute to the lack of tone referred to. The fear of a smaller crop has no effect on jute prices, and prices now are below the July level for loose jute, while quotations for export are also somewhat lower.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, October 13.

In the hessian market firm conditions have been noted with sellers scarce. 9 porters quote Rs. 22-2 and 11 porters Rs. 29 as before but demand again appears to exceed supply. Mills are very reserved according to report and secondhand rates are slightly higher than mill rates. Forward delivery business in hessian has been reported at the maximum rates.

The slight lift in rates for heavy goods has not held up well as business is very limited. "B" Twills are quoting Rs. 62-8 as against Rs. 62-12 earlier this week and Heavy Cees are standing at Rs. 63-8. Rates are unchanged for days. The outlook for hessian is however brightening as the official review of the jute trade in 1943-44 noted, and this should help to maintain prices at the agreed ceilings.

INDIAN JUTE MILLS ASSOCIATION.

N.B.—September stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Calcutta Jute, Kedarnath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai but an estimate of stocks of Katihar Jute Mills for the month of August 1944.

PIECEGOODS

(From Our Correspondent)

Calcutta, October 13.

The surrender of cloth stocks by dealers has been followed by a request for its steady distribution. This indicates that after the holidays the cloth available for the market is limited, and new agencies of distribution may not effect an improvement in conditions. Until the next week the outlook for yarn and cloth would be rather obscure but rates for standard lines are regularly advertised of late in order to protect consumers. The post-holiday market has been disappointing in many respects and Bombay reports quieter conditions of late despite a flicker of retail buying. The decay of the black market has not led to any decisive change.

A wise Director who buys for an industry is as important as the plant itself. All articles produced in any leather, metal or wood industry will finish better when quality coated AJAX abrasives are used.

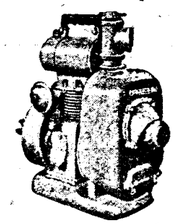
YOU..

YOUR MONEY..

AND THE FUTURE

"My money is my own. Why can't I spend it as I like?" Of course you can. But if you have earned it by the sweat of your brow you would not like to *throw* it away. This is exactly what you are doing every time you buy needlessly and at inflated prices. Much better to postpone your purchases till prices are normal again.

And do not forget the future. When victory is won and once again India turns her energies and resources to the arts of peace she will need all the capital she can get for post-war development. Whatever you save now will make a firm foundation for your future.



Insurance, Government Loans, National Savings Certificates, Post-Office Savings Bank, Savings Bank Account and Co-operative Societies are good investments. Your money is safe and these investments give you a fair return

Vol. XXXIV. No. 15 SATURDAY, OCTOBER 14, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

McLEOD GROUP JUTE RESULTS

In spite of many encouraging indications this week there is a disposition to wait for a lead after the holidays. Operators confronted with two-way movements in prices are inclined to study the news from the Arakan front before deciding that the firmer tone noted on one day, namely Thursday, will hold. In the last four days Bombay has been rather unsettled and the market weather in Calcutta cleared up only in mid-week. Monday saw a dull market and prices on Friday are back to Tuesday's levels for both Indian Iron and Steel Corporation are quoting at Rs. 38-14 and Rs. 30-4 respectively. Confidence in Jute shares is unmistakably in evidence, supported by a firmer tendency in hessian and the news that compensation per loom hour is to contribute for the requisitioned mills. Some buying of Steels has been lately noted and it is believed that a firmer tone will set in after the Diwali holiday when Bombay operators will be able to put a definite construction on developments and prospects in store.

Good features have developed during the week with B.I.C. attracting considerable attention. Investment demand should broaden and the following for popular coal shares is expected to increase in view of the statement that measures to increase supplies and improve transport will continue in force. There has been useful support at the decline for sugar shares and paper shares alike and Bombay's view as to textiles is taken note of hopefully though quotations here do not suggest any improvement.

* * * *

The fact that the jute mill earnings are showing signs of improvement will be welcome to many. The loss of export markets at the earlier stages was offset by big U.S. orders later. But the coal supplies and transport problems became so acute towards the end of last year that some jute mills had either to close down or restrict production. Requisitioning of mills premises by the Government also created difficulties with regard to compensation and adjustment of loom hours to better equipped mills. The electricity driven mills were less affected than the coal driven ones, and most companies had to cut their dividend distribution drastically. In some cases dividends had been maintained only after making heavy withdrawals from Reserves built over years.

The coal situation has since improved and is reflected in the earnings reported by the McLeod group of jute companies for the six months ending 30th June, 1944. A substantial rise in the net profits, the rise being as much as 86 per cent, over the previous six months, is now shown, by this group. In spite of a higher incidence of taxation, opportunity has been taken to make increased allocations to Reserve. Only the Kelvin Jute Co., Ltd. has increased the dividend on ordinary capital from 12½ per cent to 15 per cent, while the Chitavalsah, Empire and Nellimarla Jute Companies have maintained previous dividends. The Soorah Jute Mills Co., Ltd. is only paying the preference dividend and the Presidency Jute Mills Co., Ltd. is again not paying any dividend, the last distribution dating back to 31st December, 1942.

Total sales for the group is satisfactory at Rs. 22.90 lakhs against Rs. 19.52 lakhs. Stocks of jute at the end of the trading period have also been built up to Rs. 43.58 lakhs against only Rs. 24.25 lakhs at the end of 1943. The net profit before providing for taxation and depreciation is Rs. 41.18 lakhs against Rs. 22.34 lakhs in the previous half-year and compares with Rs. 30.19 lakhs in the corresponding period in 1943. A sum of Rs. 26.99 lakhs, an increase of Rs. 13.64 lakhs, has been set aside to taxation. The provision for E.P.T. Deposit stands at Rs. 6 lakhs against Rs. 2.15 lakhs. For depreciation, a slightly higher allocation has been made at Rs. 3.73 lakhs. Total amount distributed by way of dividends, ordinary and preference, is Rs. 4.74 lakhs against Rs. 3.61 lakhs. The amount carried forward is Rs. 1.1 lakhs against Rs. 1.8 lakhs brought in.

* * * *

The *Chitavalsah Jute Mills Co., Ltd.*, the biggest mill in the group has been actually working 60 hours per week with all the looms in commission against 54 hours permitted by the Indian Jute Mills Association's agreement, the increase in the working hours being necessitated by the purchase of loom hours from other mills under the group. The net profit for the six months is Rs. 12,06,119 against Rs. 11,18,387 and Rs. 11,16,305 in the previous half-years. The amount provided for taxation is Rs. 8,66,000 Rs. 7,75,000, while allocation to Reserves has been increased to Rs. 1,94,000 against Rs. 1,20,000. Fixed assets are being written off by Rs. 80,000 against Rs. 1,50,000. The dividend distribution absorbs Rs. 50,250 for ordinary and Rs. 17,500 for preference shares as on the last occasion. The amount carried forward is Rs. 30,952 against Rs. 32,583 brought in.

The *Empire Jute Co., Ltd.*, by reason of the mills being run on electricity, was not affected by the coal shortage and but for a short period in April-May where output was restricted to a small extent by a shortage of labour, the earnings for the period would have registered even bigger figures. Even then, the net profit is considerably higher at Rs. 7,35,473 comparing with Rs. 1,46,358 and Rs. 2,89,355 previously. Tax liability absorbs Rs. 4,31,000 against only Rs. 30,000 while a sum of Rs. 98,000 has been placed to the credit of the E.P.T. Deposit account, against nothing in the previous half-year, and Rs. 50,000 has been set aside to depreciation. Dividend distribution at 5 per cent cost Rs. 30,000 for ordinary and Rs. 35,000 for preference shares. The amount carried forward is Rs. 5,361 against Rs. 13,668 brought in.

* * * *

The *Kelvin Jute Co., Ltd.*, has been exceptionally lucky to report a big increase in the net profit during the six months to Rs. 11,24,074 against Rs. 1,96,941 and Rs. 6,23,937 in the preceding periods. The mills of this company are also driven by electricity. A provision of Rs. 7,86,000 against Rs. 40,000 only has to be made for taxation. Reserves have been strengthened by Rs. 1,77,000 against nil. The dividend on the ordinary capital on the increased basis of 15 per cent works out to Rs. 1,05,000. The amount carried forward is Rs. 20,311 against Rs. 66,237 brought in.

* * *

The increase in the net profit of the *Nellimarla Jute Mills Co., Ltd.*, for the same period has not been anything spectacular, the figure being Rs. 8,35,364 against Rs. 7,35,167 and Rs. 6,97,629. Provision for taxation at Rs. 6,02,000 against Rs. 4,90,000 and Rs. 1,31,000 against Rs. 95,000 for Reserves has been made. The amount set aside for depreciation is lower at Rs. 46,000 against Rs. 75,000. The dividends absorb Rs. 71,250. The amount carried forward is Rs. 10,158 against Rs. 25,044 brought in.

BIRD & CO., CALCUTTA

Although the *Presidency Jute Mills Co., Ltd.*, is not paying any dividend the results for the half-year have been encouraging. The net profit at Rs. 1,22,380 compares with a net loss during the previous six months amounting to Rs. 53,694 after allowing for withdrawals from Excess provision for taxation in previous accounts of Rs. 2,15,000. The net profit should have been higher still but for the fact that the mills, being steam driven, suffered a loss of working time equivalent to 22,169 loom hours during the half-year as a result of coal shortage. The amount provided for depreciation is Rs. 90,000 against nothing previously and the amount carried forward is Rs. 36,382 against Rs. 4,002 brought in.

In the case of the *Soorah Jute Mills Co.*, Ltd., working conditions were acutely affected by the continued shortage of coal and these mills, also steam-driven, suffered abnormally and working time equivalent to 153,509 loom hours was lost during the half-year. This unavoidable reduction in output affected trading results adversely. The net profit for the period after taking into credit a sum of Rs. 37,900 being Excess Profits-tax refundable, is Rs. 93,536 against Rs. 91,272 in the previous half-year. On the last occasion, a sum of Rs. 70,000 was transferred to the Profit and Loss Account from the Reserves. The amount provided for depreciation is Rs. 40,000 against Rs. 60,000 and the amount carried forward is Rs. 7,814 against Rs. 37,398 brought in.

* * *

The McLeod group figures suggest that current preference for jute shares is well-grounded. It is notable that sharp rises have been of late recorded under the lead of Howrah though Chitavalsah alone of the group can be called a market favourite. The rise in Howrah to Rs. 84-4 with the close at Rs. 84 in a quieter market shows that investors assess jute mills' prospects more hopefully than in August when the maintenance of dividends by Kamarhatty and Kanknarrah caused no change in sentiment as the general mood then was bearish. The position as to reserves and E.P.T. refunds likely is certainly not overlooked by investors who keep in mind the changes both in yields and investment opportunities this year.

* * *

The consolidated statement of progress in the cotton textile industry up to August 1943 indicates that there has been no increase in the number of cotton mills in Bombay though the number of mills in India has increased by four to 40. The number of spindles and looms in Bombay shows a small increase over 1942-43 while the increase for India as a whole is over 1 million spindles and 720 looms. The increased consumption of cotton reflects the active and prosperous conditions in the mill industry during a period in which coal shortage did not rear its head. The number of workers in mills rose from 480,447 to 502,650 indicating that the cotton mill industry is still the biggest industry in India. Though Bombay accounts for more than half the cotton used and labourers employed, it is clear from the Bombay Millowners' Association's statement that progress is substantial outside the older textile centres. In 1943 there were 63 mills in Madras and 32 mills in Bengal. The average unit outside Bombay however remains smaller today, to judge by capital and labour employed though in point of spindlage, the Madras Presidency comes after Bombay and Ahmedabad. As many as six new mills were started during 1942-43 in Bengal. In the mill statement the grand total for capital invested in cotton mills is shown as over Rs. 48.54 crores including the capital of some concerns with sterling capital. The increase in capital over a year is necessarily small under conditions of control but mills projected or in course of erection should be able to secure capital more easily than in the past. The average number of days worked by cotton mills in India in 1942-43 was seldom below 300 and this too points to full employment of a kind. The increase in factory employment and the longer hours worked point to an increase in wages and allowances paid, but uniformity in regard to bonus payments etc. is absent so that it is difficult to describe the proportion between dividend distributions and the additional payments to workers.

* * *

Owing to accelerated industrial development along certain lines and continued inflation the scope as well as the thirst for profitable investment have increased. The need for reliable and full information about stocks and shares is pressing and Manumeta's Bombay Stock Exchange Year-Book (compiled by M. C. Mehta, Member Native Share and Stockbroker's Association, Dalal Street, Fort, Bombay, Rs. 10-8) does valuable service in presenting, besides summaries of financial accounts, balance-sheets and other information about 150 companies whose shares are transacted in the Bombay Stock Exchange, a general survey of economic, political and social factors affecting the growth of industries. The merit of the publication consists in bringing together precise information about the Government, and semi-giltedged securities and other shares and furnishing the economic background which govern their immediate as well as longterm popularity. The Year-Book is well schemed and is bound to be popular.

* * *

In the ninth edition of the Investors' Encyclopaedia compiled by Kothari & Sons, Madras, there is a place for the increase in transfer stamp charges, the increase in income-tax and super-tax this year as well as hints as to refund of interest on Government securities—subjects that are not ordinarily treated in other reference works. These are necessarily important for the investor, and the encyclopaedia is therefore useful in other respects besides providing the usual information as to profits and dividends in the past. The considerable development of the planting and textile industries like the expansion of joint-stock enterprise in the South can be measured readily in the names and details as to companies whose shares may find mention in our market reports from Bombay or Madras. It is gratifying to find that the improved, enlarged edition appears this year in spite of the paper shortage and from the index alone it may be suggested that more is swept up in the compiler's net. A special reference as to companies in Indian States might be made here as many companies are listed in the volume which scarcely differs from other yearbooks except in regard to its being more comprehensive. As the volume contains information as to lesser known companies it is particularly as a supplementary work that it should gain ready recognition today.

WATCH-DOG.

THE SOORAH JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that dividend at the rate of 7 per cent per annum on the Preference Shares for the two half-years ended 31st December, 1943 has been declared payable at once to the Registered Shareholders. The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday, evening.

Firmer conditions in giltedged accompanied by an improving tendency in jute shares mark off the week from the last though the volume of business has been limited as before. The more speculative counters have fluctuated as before within narrow limits so that the highest price for Indian Iron has been Rs. 39-8 and the close at Rs. 38-14 is almost the lowest rate noted this week. On two days the market has been firm and active but the improvement was not held since Friday saw something like a relapse. Early in the week news of clashes on the Border accounted for a measure of diffidence but that disappeared when jute shares came into the picture.

Government Securities have been very steady and some of the 3 per cent issues are now over par. *India* 4 per cent 46-70 Loan has been noted at Rs. 112-12 and 3 per cent *Defence Bonds* are quoting Rs. 102-4. The only quotation in Provincial Loan is that of *U. P.* 1952, 3 per cent Bonds at Rs. 102.

Bank shares have followed the giltedged as usual and quotations in the week include, *Reserve Bank* at Rs. 130 and *Imperial Bank Contributory* at Rs. 478. There has been considerable interest in *United Commercial Bank* shares following the appearance of a notice relating to the new issue. Business has been noted up to Rs. 34-12 premium.

Except for the striking rise in *Kumardhubi Preferences* to Rs. 407 there is no outstanding feature in fixed interest stocks. But it may be noted *Steel Corporation Preferences* quote Rs. 139 and *Jessop Preferences* Rs. 137, while *Alkali and Chemical Preference* have moved between Rs. 135 and Rs. 140 during the week.

In the Coal section *Burrakur* has been rather subdued with the price hovering around Rs. 40, but the general tendency is undoubtedly upward. There is renewed interest in *Bengal* as well as *Bokaro and Ramgur*. Among the smaller shares, *Churulia* has been easy favourite with business done up to Rs 5-10. Of the bigger shares *New Manbhoom* has attracted buyers at Rs. 64-8 and *Equitable* is at present quoting Rs. 63-4 ex-dividend. *South Karanpura* has been as usual active, but *Talcher* is decidedly off colour.

Except for a small revival in *Elgin*, cotton mill shares have been dull in spite of a steadier tone in *Bombay* and the more hopeful view taken of the textile industry's profits. *Cawnpore Tertiles* has been rather steady around Rs. 13-8 while *Kesoram* has moved between Rs. 15-12 and Rs. 16-2. There has been a resurgence of interest in *New Victoria* though the closing rate at Rs. 8-2 is below the best for the week, Rs. 8-7.

With *Howrah* rising from Rs. 81-12 to Rs. 84-4 the pace was certainly set for jute shares and some substantial changes in favour of holders has taken place during the week. Of the bigger shares, *Champdany* has improved from Rs. 245 to Rs. 258 and *Kamarhatty* has risen from Rs. 642 to Rs. 652. *Clive* and *Chitavalsah* have been the most active counters this week, but *Northbrook* has latterly become a very active share the price rising from Rs. 40-12 to Rs. 44-10. In spite of the passing of the dividend, *Presidency* has been steady around Rs. 11. In the Yule group *Delta* has been noted at Rs. 545 and *Cheviot* at Rs. 245. The steady rise in *Alliance* has not continued since the price has shaded to Rs. 619.

In the Engineering section apart from the rise in *Britannia Engineering* to Rs. 19-12 the feature has been the rise in *Burn & Co. Ordinary* in view of the imminence of the dividend. *Jessop* too has been notably steady around Rs. 24 and the only other change is the revival of interest in *Marshalls* up to Rs. 4-12. As said above, *Indian Iron* has been decidedly steady on all days, and the price has been maintained over Rs. 39. *Steel Corporations* has been done up to Rs. 31-8 the lowest quotation of the week has been Rs. 30-4.

In the Miscellaneous section *B. I. Corporation* has lately turned active and business upto Rs. 6-10 has been noted. Another active share, *Calcutta Tram* has moved between Rs. 44 and Rs. 45 on most days. Interest has sprung up in *Indian Cable* as well, business being noted at Rs. 28-2, Rs. 28-4 and Rs. 28-8 this week.

Paper shares are a shade steadier with *Titaghur* at Rs. 26-4 and *India Pulp* at Rs. 206. Transactions have taken place in *Shree Gopal Paper* at Rs. 19 and *Bengal Paper* at Rs. 221. *Star* is, however, depressed at Rs. 16 and *Mysore* is singularly inactive.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

Issue of New Shares and Closing of Transfer Books

The Directors of the United Commercial Bank Ltd., have decided to issue two lacs shares of Rs. 100 each of the Bank. On these shares Rs. 50 per share will be called up with application.

These shares in the first instance will be offered at par to the shareholders of the Bank on the register of members on 1st of December, 1944, in the proportion of one new share for every one existing share held by them. Any shares not taken up by the shareholders will be issued and allotted by the Directors on such terms and such conditions as they may decide in due course.

Full particulars of this issue and application forms for the same will be sent to the shareholders as soon as possible after 1st December, 1944.

The consent of the Central Government has been obtained to this issue under Defence of India Rules 94(a). It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of the statement made or opinions expressed with regard to them.

The Share Transfer Books and Register of Members of the Bank will be closed from Wednesday, 15th November, 1944 to Friday, 1st December, 1944 both days inclusive.

By Order of the Board,
B. T. THAKUR,
General Manager.

Calcutta, 7th October, 1944.

THE NELLIMARLA JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that dividends at the rate of 6 per cent per annum on the Preference Shares and of 15 per cent per annum on the Ordinary Shares for the half-year ended 30th June, 1944, have been declared payable at once to the Registered Shareholders. Where standing instructions as to the disposal of dividends have already been registered, Warrants will be sent accordingly.

McLEOD & CO., LTD.,
Managing Agents.

28, Dalhousie Square,
Calcutta, 9th October, 1944.

THE SALEM-ERODE ELECTRICITY DISTRIBUTON CO. LTD.

The Thirteenth Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court Honse Street, Calcutta, on Tuesday, the 31st day of October, 1944, at 3, P.M. for the following purposes :—

(1) To pass the Directors' Report and the Audited Accounts for the year ended 31st March, 1944,

(2) To declare a dividend.

(3) To elect a Director in place of the retiring director.

(4) To elect Auditors for the ensuing year, and to fix their remuneration.

(5) To transact any other business that may be brought forward.

The Share Register of the Company will be closed from 20th October, 1944, to 31st October, 1944, both inclusive.

OCTAVIUS STEEL & CO., LTD.
Managing Agents,

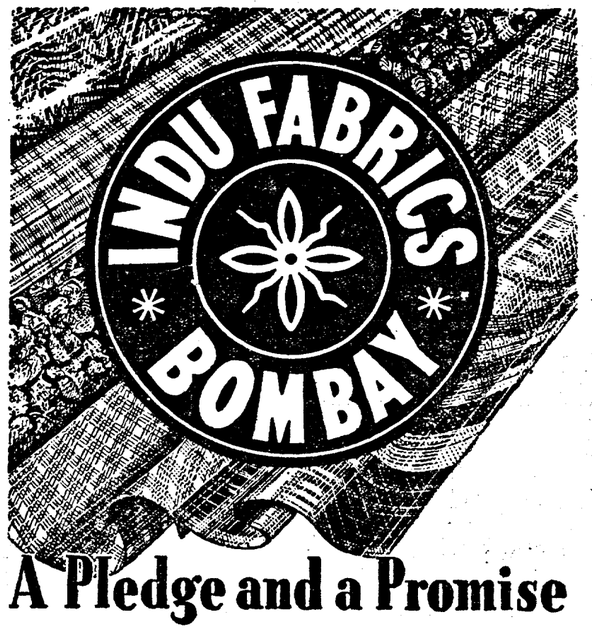
Calcutta, 10th October, 1944

Note.—In accordance with a Government of India Notification No. 1564-OR/42 dated 7th September 1942 the Directors' Report and the Accounts will not be published.

The Directors have recommended payment of a dividend at the rate of 2½ per cent free of income tax for the year ended 31st March 1944

JAGATJIT DISTILLING AND ALLIED INDUSTRIES LIMITED

NOTICE



In the advertisement of the Jagatjit Distilling and Allied Industries Ltd., Hamira, that appeared in *Indian Finance* dated 30th ultimo, the name of Raj Sir Dilijit Singh; K.B.E., O.S.I. (Director), was missed.

(*Continued from page 531*)

In the Sugar section an easier feeling is accounted for by the disappointment occasioned by the Begg Sutherland group results. *Champarun* has receded to Rs. 40 and *Cawnpore* to Rs. 36. An exception has been provided by *Carew* ordinary which has been in request up to Rs. 29-8. *Dyer Meakin Breweries* are quoting Rs. 16-4 ex-dividend and *Murree Brewery* has been noted at Rs. 26-3. There is little change in *Mohini* and *Darbhanga* for a week while *U. P.* has been rather steady at Rs. 29.

In the Mining section dull conditions still obtain and the *Indian Copper Corporation's* meeting hasn't had any effect on the quotation now at Rs. 3. *Burma Corporation* has declined to Rs. 4-7 as compared with Rs. 4-12 a week ago and *Consolidated Tin* is also lower on the week.

Tea shares in spite of the announcement of the Yule Companies dividends are neglected. *Tezpore* has been noted at Rs. 18-4 and of the smaller shares *Bateli* and *Baghmari* account for transactions this week. *Bishnauth* has been again done up to Rs. 40-12 but the general feeling is still conditioned by the dividend cuts noted in the case of *New Terai* and *Pahagoomiah* and many other shares.

A Pledge and a Promise

A lot is talked about stamped cloth and unstamped cloth. Look at the "INDU" stamp above and stamp it on your mind. It's the mark of quality in textiles. It is stamped on 91,660 miles of cloth produced annually by India's largest textile group—"INDU."

While nearly all our vast resources are now pledged towards winning the war, we promise you that in the wake of this war we will bring you quality textiles of remarkable durability. When better cloths are woven, the "INDU" trade mark will be stamped on the best.

WORLD OF INDIAN FINANCE

Calcutta. Friday Evening.

There is no change to report in money market conditions. As usual, the movement of the jute crop is financed mainly by the resources in the hands of the bazar. The season for the financing of the other crops is yet a month off. By all present indications, produce finance as such may not figure this year also as any influence tending to harden money rates. Prices of commodities are at more reasonable levels this year than was the case in the busy season of 1943-44. That is to say, the total outlay required for the movement of the various crops in the coming season will be appreciably less. It is admitted that cash in the hands of the bazar people is on a far higher proportion than at any time. We do not therefore expect any worthwhile reduction in the deposits of scheduled banks which is another way of saying that the Reserve Bank will continue to retain scheduled banks' deposits roundabout Rs. 100 crores. The heavy tax payments especially on account of the advance collection of E.P.T. do not adversely affect the deposits of banks in the last few months; nor will produce finance make any difference to deposits of banks in the coming months. Plethora reigns supreme in the money market.

As in previous weeks, the amount of Central treasury bills on offer on October 19, was Rs. 6 crores. Applications were considerably higher at Rs. 12.81 crores. Bidding, however, was slothful; and the average rate of accepted tenders registers a rise of 1 pie to 8 annas percent per annum. The offer of Central treasury bills for next week remains unchanged at Rs. 6 crores. The Assam Government are in the market for three months' treasury bills for Rs. 2.5 crores.

The returns of the Reserve Bank for the week ended September 13, disclose currency expansion for Rs. 6 crores against sterling securities. Rupee coin shows an outflow of Rs. 44.80 lakhs. Active note circulation has gone up by Rs. 7.08 crores to Rs. 9.57 crores. In the banking department deposits of the Central Government have risen sharply by Rs. 10.03 crores to Rs. 183.91 crores. Deposits of the Burma Government have gone down by Rs. 28.33 lakhs; those of the provincial governments by Rs. 2.72 crores; those of member banks by Rs. 5.33 crores; and miscellaneous deposits by Rs. 41.50 lakhs. Foreign balances held in the banking department show a slight rise of Rs. 55.08 lakhs. Ways and means advances to governments have increased by Rs. 83 lakhs to Rs. 124 lakhs.

In the first two weeks of October, in reversal to the trends of the previous two months, active note circulation records a sharp spurt. Between September 29 and October 6, notes in circulation advanced from Rs. 941.25 crores to Rs. 949.97 crores. By October 13, a further rise to Rs 951.05 crores is recorded. There is thus an increase of nearly Rs. 16 crores of active note circulation in the space of a fortnight. This more or less corresponds to the increase in the sterling securities held in the issue department, which have gone up from Rs. 834.33 crores on September 29, to Rs. 850.33 crores on October 13. During this period foreign balances in the banking department have gone down from Rs. 304.85 crores to Rs. 298.74 crores, that is, by nearly Rs. 6 crores. It may be inferred that the net increase in the Reserve Bank's sterling holdings during the fortnight is approximately Rs. 10 crores.

The events of the last three months in the bullion market show that, in the tussle between the Reserve Bank authorities and market operators, the latter have prevailed. In spite of war news aiding and abetting with the policy of bringing the prices of gold and silver to something like reasonable levels, the bulls on the Bombay bullion exchange have demonstrated their invincibility. Now that Sir Jeremy Raisman and Sir Chintaman Deshmukh will be meeting next week in Bombay in connection with the meeting of the General Policy Committee, they should confer upon the best means of carrying out an effective bullion policy.

The exchange market has been dull, without much business passing.

The closing quotations are:—Banks buying 90 days/st at 1s. 6¼d. for 1 and 2 months and banks buying 90 days/st at 1s. 6 9/32d., for 3 to 6 months.

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Thursday, the 19th October, 1944. Total amount offered was Rs. 12.80,75,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 46 per cent. Total amount accepted was Rs. 6,00,00,000 the average rate of accepted tenders being Re. 0-8-0 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 24th October, 1944. In Bombay upto 11 a.m. (Standard Time) and up to the close of business on Monday, the 23rd October, 1944 at other centres. Successful tenderers should make payment on Friday, the 27th October, 1944. Other conditions are as usual.

During the week ended the 13th October, 1944, Government of India Treasury Bills for Rs. 2,71,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Government & Planned Development

Two questions which worry the business classes in India most today are those relating to the postwar slump and the nature and extent of Government control over private business and industry. We have repeatedly shown ourselves inclined to the view that the postwar slump is largely a bogey and that, except in the unlikely event of Government concern for the masses proving to be an empty pretence, the postwar period must witness, irrespective of constitutional changes in the Government of India, the inauguration of various schemes of economic amelioration, and uplift, which in their cumulative effect will not only offset the innate tendency towards a slump, but substitute wellnigh booming conditions in trade and industry. We have also expressed the view on a former occasion that the smooth execution of these plans will make it expedient for the Government to retain an effective control over the economic life as a whole. We observed at the end of our leading article of last week :

"It will thus be seen that if the plans that are now being formulated by the Government of India are not a make-believe, then the conditions of the postwar period will make a general system of control as necessary as during the present war period. In fact, the experience gathered during the war in regard to Government's ways and means, price control and, last but not least, offsetting the effects of a liberal policy in wages and salaries will be vary handy in administering the plans smoothly. On the one hand, the need to keep the cost of living steady will require the retention of price controls in a less drastic but more effective form. On the other, the continuance of the Government in the role of a big buyer of the products of industry and of the ultimate agency of price control will require their intervention in the working of industry with a view to regulate production and sales, ensure uniformity of standards of wages and salaries and cooperation with Government in the successful working of the plans on hand. Doubtless, this raises many controversial issues, both points of principles and problems of administrative importance. But the war has cured us of undue regard for either."

These questions of principle and these problems of an administrative nature call for as careful and detailed a consideration as can be given them at this stage. It is, in the nature of things, an extremely difficult task to foresee all the major developments of the postwar period. Principles, as they have been formulated till now, as deductions from an a priori study of the social sciences, have in the mighty rush of events during the last one decade and more been deprived of their validity; and to this has to be added the fact that social ideologies have lost their appeal to all but the most fanatic of their former supporters. Certain social objectives of a broad non-sectarian character, like the four freedoms for instance, have been set up as almost a supreme arbiter of all questions of values. And the expediency of realising them is the deciding factor in matters of doubt. The modern world has under the pressure of the present world war learned to attach little or no weight to what would formerly have been regarded as grave administrative grounds. The idea of Government as the supreme social agent which should go about its allotted tasks and overcome possible obstacles, without citing them as reasons for changing its course, has gained ground enormously during the last few years. It is idle, therefore, to regard questions of principle or the magnitude of administrative problems as standing in the way of increased Government control over postwar business. Neither the primitive character of Indian agriculture nor the vast spread of the cotton mill industry or the trade in cotton goods has stood in the way of food or cloth control. The stark necessity of these measures for maintaining the war effort suffices as argument to silence the dissentients and as inspiration for those who are entrusted with these arduous tasks.

To get a glimpse of the nature and extent of Government control after the war will be over, we have to examine the nature of the tasks which the Government will set up for themselves and accept as of paramount importance and the strength and force of the expediencies which the effort to accomplish these ends will create. We have indicated in earlier articles on this subject that, if the constitution of the Government of India were to continue unchanged, we might have, not indeed a comprehensive and ambitious plan like the Bombay plan, but a number of plans for various projects of broad national importance, which would at least form a part, though not the whole, of a plan which a National Government would accept. Enough has transpired in the various official committees during the last one year and more to make it clear that these plans will refer to agriculture, irrigation, improvement of live-stock, communications, education and public health. All these plans involve, even on the most conservative basis, public expenditure running into hundreds of crores. It is obvious that the whole of this expenditure is not of the productive kind. Though, of course, expenditure on education and public health is in no sense a waste, yet from the standpoint of economic policy, it has been, and is still, rightly classed as immediately unproductive. Its importance to economic policy in the post-war period is that the expenditure thereon is of the frankly inflationary kind. It will be undoubtedly inflationary in effect. And if the cult of created money finds wider support it will probably be inflationary in origin as well.

As against this, the expenditure on the other plans will be deemed to be productive, though here, too, there is a difference between the standpoint of the accountant and the standpoint of the economist. For, expenditure on irrigation works and roads may be expected, after the initial stages in which for two or three years interest on loans may be legitimately charged to capital, to yield sufficient return for the necessary service of the debt. Expenditure on other schemes for the improvement of agriculture and the agriculturist may have the immediate effect of adding to the volume of annual production of goods and services, but may not like irrigation and roads yield the authorities a recognisably direct return with which to meet interest and other charges. The distinctive feature of the post-war economic policy in the event of there being no marked change in the constitution of the Government of India is that the plans will comprise three parts distinguishable on the lines indicated already and that the simultaneous execution of such plans will make controls highly essential to their success.

Economic problems, as a rule, have to be considered from the money end as well as the goods end. During war the paramount consideration is the production of war material and goods essential for civilian consumption. Money is expended without any other consideration being allowed to intrude. The plenitude of purchasing power, which is a consequence of war expenditure, and the shortage of goods, which is a consequence of the primacy given to war material, together make price control expedient. Price control has within it irrepressible forces of expansion. It necessitates before long control of distribution; and control of distribution intensifies the control over production which was necessary to some extent even at the beginning of the war period.

The conditions of peace-time planning are not far different, though there are differences which call for attention. It is as expedient, perhaps more, to limit the cost of large peace-time projects as to limit the prices at which supplies are secured during wartime. The inflationary background is common to both, except that in peace-time purchasing power at home has access to imported articles. But since unregulated imports are the gravest menace to the success of planned economy, the Government will have to limit the flow of imports in the interests of the indigenous production which it is the avowed purpose of the plan to promote. Imports, therefore, can only relieve to a limited extent the pressure of inflation on peace-time planning. In the regulation of imports, a variety of considerations has, however, to be borne in mind—the effect on indigenous industry, the need to secure favourable or fair treatment for our exports and the desirability of India not seeming to lag behind other nations in the effort to build a rational and stable basis for world economy and international trade.

The regulation of imports with due regard for these considerations cannot obviate the need for price control. For, expenditure on the plans now drawn up for the post-war period is likely to shower its benefits more evenly over all parts of the country. War expenditure is incurred without regard to the distribution of its benefits. Not only is it concentrated more in the industrial areas and the operational bases, but a large part of it goes into the pockets of the big business classes. Excess profits of this kind have not the same effect on prices as money that is doled out all over the country in road making, rural education, public health, irrigation, anti-erosion projects and the like. Such money flows like a mountain torrent into current consumption; and if it is allowed to, the effect on prices and the general price structure may be such as to jeopardise the success of the plan.

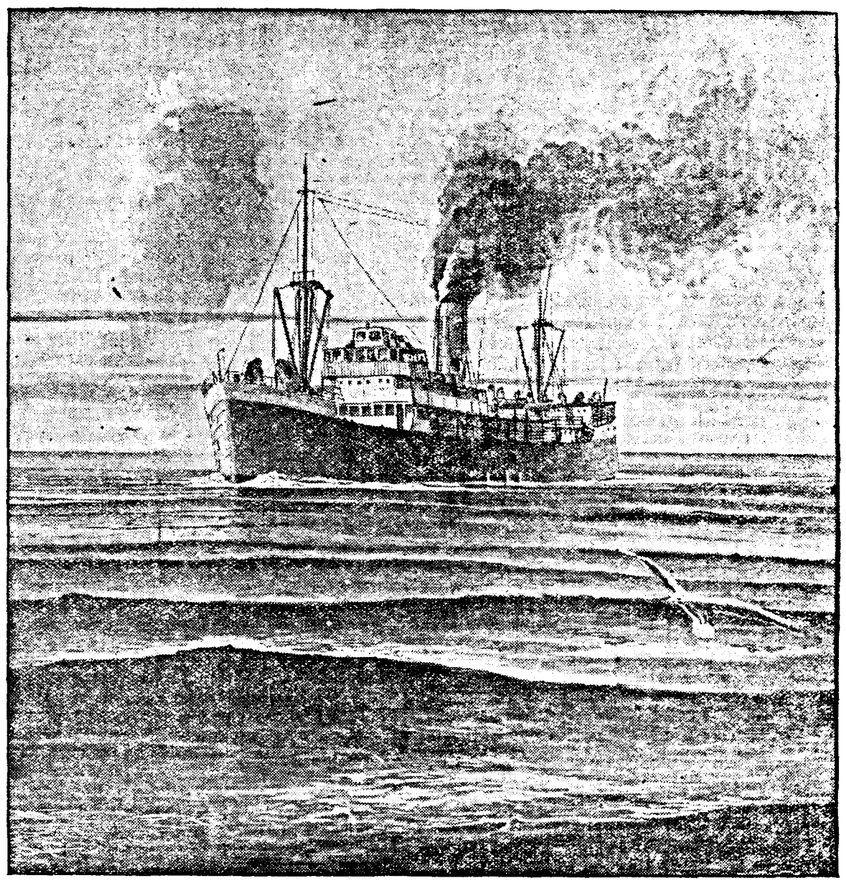
We have often expressed the view that the standard of living in India cannot be raised unless production of consumer's goods in the rural areas as distinct from large-scale industry in the urban is helped to expand. We have also pointed out that the shrinkage of this production in the past is to be attributed primarily to the shrinkage of purchasing power. Now in the conditions of post-war planning, purchasing power in the rural areas will undergo a marked expansion. Opportunity must be taken to let this increase of purchasing power have its due effect on local production. And this cannot happen, unless the products of large-scale industry are prevented to some extent from flowing headlong into rural consumption. The nature of these measures cannot be forecast. It is a question whether Indian industries will be in a position to meet all the demands that the phenomenal increase of purchasing power

in the rural areas will set up. And it is obviously inconsistent to suggest, on the one hand, that price control will be necessary to prevent the shortage of goods from sending up prices and, on the other, that the products of large-scale industry should not be allowed to prevent the expansion of production in cottage industries and rural arts and crafts. Quantitative notions, difficult to form at this stage, are necessary for more definite ideas about post-war controls.

But it is certain that post-war projects, like war expenditure, will release forces which cannot be expected to produce a harmonious effect on the economic life of the people and the paramount purposes on hand. Some will have to be reined in, while others may have to be whipped, in order that the whole team may keep abreast. For this purpose, the scope of control has little chance of being narrowed as compared with the controls of war time. While war time controls have to function under what may be called an absolute shortage of goods with little means of effecting appreciable additions, from indigenous or from foreign sources, control under peacetime will have to deal with a relative shortage, and even more with a shortage created with a view to stimulate production in certain areas.

This, it is necessary to recognise, is a form of control which will have to be even more interfering than the controls of the war period. It will not only regulate prices, but also demarcate markets and lay down the principal lines of production for industries like cotton textiles and cement. The question how far the Government will have to limit profits and otherwise interfere in the day-to-day operation of industry can be answered in the light of the plans that may be drawn up for the industrialisation of the country. We are at this stage proceeding on the assumption that industrialisation such as may enthuse a National Government is apt to leave a nominated Government somewhat cold and that the latter will be reluctant to attempt more than is necessary to placate the masses with a recognisable improvement in the standard of living. But even these minimum measures touch the sphere of big industry at many points. The manufacture of artificial fertilisers is an instance in point. It is not unlikely that in this sphere the Government are obliged to heed to popular opinion and take over for themselves what they would otherwise have willingly given away to foreign interests. Likewise, the large power projects that are essential for the most modest scheme of economic development may be found to require a closer control of the coal industry and its working. Railways in India have seen the peaceful advent of Nationalisation; and the extension of this principle to other means of transport seems almost a foregone conclusion. A large number of industries will be subject to indirect control through the need to secure priorities in orders placed abroad for plant and machinery. The Reserve Bank is bound to tighten its grip over banking and credit, partly as a result of past trends and partly with a view to ensure the smooth working of economic plans.

It will thus be seen that war time controls, far from losing their raison d' etre with the signing of peace, will be in greater need and will have to be adapted and extended to suit the requirements of post-war planning. There is, however, no reason to dread these developments as betokening the end of economic freedom. Planning is ideologically neutral. Its methods are determined by the needs of the time. And one may be sure that, while the grosser forms of profiteering and exploitation will get short shrift, the dominant note of economic life in this, as in most other countries, will be one of freedom.



Conditions of Freedom

Enough is known about the targets of planning and also about the desired results, provided that the agency and resources are utilised to effect. But doubt will arise, in view of the speculation as to controls, and as to the conditions that will obtain. Will economic freedom follow the execution of the plan? The initial criticism of the Bombay plan dwelt on the enlargement of profit-making opportunities to the advantage of the rich and the absence of guarantees as to equality, even if it were certain that the prospective national Government would regulate incomes by taxation. The reconstruction schemes to which the Government is committed have no bearing on social justice or the equalisation of opportunities. From what has been demanded in Britain as regards nationalisation, we may legitimately infer that planning here postulates the acceptance of the Socialist goal. But the goal is not easy to reach and how controls, when discarded, will be replaced by measures to promote labour welfare or agrarian reforms is perhaps the biggest issue that faces the advocate of planning. The assurance that enlarged incomes will reach the wage-earners, peasants and craftsmen in the same way is not available for it is common knowledge that in the war period the advance of wages has not coincided with the growth of profits and inflation which has helped both the maker of profits and the revenue has imposed unusual burdens on the worker and peasant. No positive suggestions as to fragmentation can miss the eagerness of cultivating tenants to own more land or the claim of workers for a share in the unusually large profits due to the war. Rough and ready adjustments are scarcely possible but the previous record in regard to debt relief and labour legislation is more hopeful than presumed.

The reform of the land system as a condition precedent to agricultural development can only follow a political decision but that decision must be openly directed towards economic freedom—not for the country but its people. Freedom to levy import duties or borrow abroad matters little to the peasant who is asked to surrender his surplus at fixed prices in the interests of price control. The extension of services both for the soil and the cultivator may not be duly appreciated because the cultivator might only look at the advantages available to the urban worker in regard to holidays with pay and sickness insurance and urge that he is entitled to one or all the services gratis. The dormant hostility between town and country has of course no bearing on the equalisation of opportunities either through education or other means. But the point as to disparity in wealth as between regions, communities or classes will have to be dealt with by variations of the principle of graduation. The lack of uniformity in regard to land revenue puts in a way freedom beyond the reach of the peasant. State landlordism affords no guarantee as to equality of burdens at present and if the Government of India Act is amended to permit levy of an estate duty landed property will probably stand on a different footing. While plans for increased production through development of irrigation, fertiliser manufacture have appeared, it is still difficult to see how the free co-operation of the cultivator is to be secured.

It may be suggested that guarantees given in international undertakings would not be more than evidence of intention. If it is true that compromise is inescapable, that private enterprise is indispensable the fact that agriculture and industry must leave a surplus after meeting the demands of increased consumption will call for abstinence on the part of the masses in the future. Their own function in respect of saving and investment will be in respect of curtailed consumption and to evoke the measure of sacrifice planning must offer rewards. If it is urged that the entrepreneur's sacrifice deserves reward through tariff protection or other benefits, the wage-earner's acceptance of standards below the best cannot be overlooked. There is an advantage in the tradition of inspection and enforcement but in the plans positive provisions as to welfare outside those related to a prescribed growth of public expenditure on education, public health etc., are conspicuously lacking. If social stratification has the sanction of custom it is arguable if it should remain under planning. If provincial revenues after meeting the cost of development projects are inadequate for social services the means to procure resources is scarcely indicated. After a long war a capital levy seems a fair method of ironing out differences apart from the corrective it supplies to inflation. The existence of hoarded wealth is **prima facie** an argument for the levy because income-tax does not touch wealth in many forms and shapes. If taxable capacity were to suffer in the short run redress would speedily come through the increase of production. Whether planning would lead to a multiplication of small capitalists with a vested interest in the structure of profits and wages is not at all certain and we might note that even advocates of industrial planning on regional lines with special reference to needs as well as resources agree as to the degree of control required for certain industries like mining. That is one aspect of the argument that planning is not co-terminous with development and objections advanced on the score of leaving shares in the national dividend unadjusted receive the support from the same argument as to the non-existence of democratic control. If all investment is left to a Central Board linked with the planning authority, the investor will not remain functionless since private enterprise will continue to flourish outside the public utility field. The question of a limit to profits is not to be divorced from the question of control of industry. Planning assuredly must allow for the development of Whitleyism and it is noteworthy that the Fabian approach has been wholly disregarded in the plan for increased production though democratisation alone can make for the stepping-up of production year by year.

Since the social system is left unscathed by planning the advocates of the under-privileged may offer objections of another kind. There is virtually no hope of industrial progress being a solvent of fundamental differences and it is only a fully democratic atmosphere in field and factory that can effect the changes that conduce to economic efficiency. The known defects and obstacles are such as to call for voluntary removal but the will to abolish or reform can ordinarily proceed only from the adumbration of a charter for non-capitalists. If it is imagined that constitutional reforms on the basis of a strong Centre will take care of the clash of interests it is still arguable whether the pace can be prescribed entirely by the State. The conditions for spontaneous co-operation from below must be, in any case, looked after. So far as the reconstruction schemes deal with all materials except the human, they fall short of the cardinal requirement that planning must bear definite resemblance to the Russian plan. The increase in trained personnel and the intelligentsia in Russia as a direct consequence of economic progress affords a basis for the belief that social changes can come through economic policy. The concentration of profits in the form of taxation in the hands of the State reduces the dependence on current accumulation by individuals. That again is not without a bearing on the costs and celerity of plans in India. The danger that the offer of free schools, dispensaries etc., may be met by stubborn apathy has to be mentioned in order to indicate the need for enlisting the masses support or in its absence legislative approach for both plans and development. The fissures left by early controversy have not widened but the variants of plans to suit local patriotism and the departures in bureaucratic investigation in the middle of the deadlock alike sustain the impression that political activism is inseparable from the more effectual consideration of tasks and opportunities. The fulfilment of one condition may lead to the modification of views already set forth as to the perpetuation of inequalities in income and status but the point that politicians must produce their own plan will scarcely be raised.

Traders of the Seven Seas

India's post-war future will depend to a large extent on the exchange with other countries of her raw and manufactured produce.

Shipping these goods across the "Seven Seas" will be of paramount importance.

Indian ships built of Tata Steel will help to promote the growth of India's post-war trade.

SOMETHING "EXTRA" IN THIS INVESTMENT

Life insurance offers you an ideal investment proposition. Government Securities, Bank Deposits, etc., are First Class Investments, but certain New India policies afford better advantages. They are as follows:

- **Handsome Profits:** *At the end of the term, the policy returns the Capital invested with an yield in compound interest which is very often larger than the yield from the Capital invested in other securities.*
- **Full Life Coverage:** *In the event of early demise, the full sum assured (with or without profits) is paid out to the beneficiaries. Very often this means a return out of proportion to the Capital invested.*
- **Saving in Income Tax:** *To those who pay Income Tax, such policies are an added attraction as a substantial rebate is allowed on the premiums that are paid.*
- **No Depreciation:** *The Capital invested does not depreciate nor is adversely affected by market fluctuations.*

The Capital may be invested by instalments or in a lump sum at a discounted rate. As the yield varies in each individual case according to age, term, income tax payable, etc., a detailed plan to suit your own needs will be furnished on request.

Premium Income in 1943	Total Funds
Rs.2,13,08,304	Rs. 5,56,30,654

New India's huge assets constitute an unimpeachable security. To-day this company can be proud of being the largest Indian Composite Insurance Organisation, transacting Life, Fire, Marine, Accident and other forms of insurance.

Editorial Notes

Large-Scale Requirements

Little is known of France's food requirements except that at present dairy products are wanted in plenty and housing is short. General de Gaulle believes that the position in Occupied France is better than believed and France has powers of swift recovery. As to Greece, fully liberated now that the Germans are leaving Salonica, the facts can be derived from the earlier report of famine. In respect of relief, Greece will be a simpler problem than most because the Aegean is safe for Allied shipping and supplies can be funnelled through the Middle East Supply Council while UNRRA has already set up a branch at Cairo. The principal import is likely to be wheat so that other countries in need of wheat are likely to get less. Little wheat can be had from the Danubian Basin because of the war and it is obviously futile to expect that Rumania in the near future can pay off her indemnity of £75 million in instalments of wheat.

The Low Countries stand on a different footing because supplies must go largely through the Channel ports which have been freed only recently. A recent Reuter message suggests that except for potatoes the Belgian position is not alarming but in the past the chief products of Belgium were coal and potatoes. Industrial equipment in spite of the occupation is said to be in fair condition and revival of textile manufacture, assuming that raw materials can be had quickly, is indicated in the case of Belgium. The heavy industries may stage a slower recovery because of the transport difficulty in the invasion period. As for Holland forcible flooding has wrought great changes. The Walcheren expedition of this century has been most successful in removing the works of drainage. Low-lying fertile land has gone under the waves. The reclamation of the Zuider Zee must be carried out afresh, as it is known that in the battle for the Scheldt, the Germans had their revenge on the Dutch people through the soil. The calculation that the Forties will again be hungry need not depress the Dutch alone though the question of compensation for wilful damage will certainly figure at the peace conference. If freed Holland were to become, through necessity, a large importer of rye and oats her trade with the Baltic may become as important as her trade with the Colonies. Always dependent on imports of food, Holland may have to limit all other imports after the war and also to increase the shipment of coal. The production of the State mines has to make up for the current fuel shortage as well as the import surplus in the future whether the floods will affect the large area of pasture (exceeding the arable area in Holland) cannot be indicated because the decline in livestock always is an important factor.

Profiteers' Activity

In the messages as to China's lack of essential supplies and the Government's failure to hold prices the persistence of inflation is indicated. From April 1939 prices have soared and the rise is greater than that recorded in Iran or Turkey. For the businessman inflation as in India has presented opportunities and accounts of what happened in China dwell on the rise of enterprising companies eager to pilot the flight from the Chinese dollar. Mushroom companies bought and stored goods merely for a rise in price and their number is said to run into thousands. Air raids in a way caused scarcity but the risk of regular additions to the currency was the greater one. That soon became a source of profit. The wartime decay of business standards is perhaps a less conspicuous result than the multiplication of banks. In January 1944 Chungking housed 250 different banks though depositors were scarce and advances were not wanted. It is inferred that the banks which were highly profitable entered into speculation or financed it. Government control came after prosperity was stabilised; yet mushroom banks continue to pay high dividends and bonuses. Insurance companies have multiplied without reason and beyond reason. Insurance of goods in transit and of property is not likely to yield large profits so that the furious spread of insurance business is connected with the buying and selling of commodities. As prices rose steeply from August 1943 to January 1944 speculation in real estate also became profitable and a golden harvest for finance companies was got for the asking. The advantages of control of capital issues and of banking functions stand out against this story of frenzied fomentation of banks and insurance companies whose function is to propel prices upward and take their profit without let or hindrance. That it is not joint-stock enterprise which is to blame but the situation arising from the disappearance of trade is to be understood but the Chinese profiteer is the prime factor. The lavish spending of the new rich is by itself a factor in the misery and the Fifth Column in China evidently is the unbridled capitalist.

Scientific and Industrial needs

From press reports as to the visit of Indian scientists to Britain it is clear that more than intellectual cooperation, good as it is, figures in the programme. Mention of enquiries and orders for scientific equipment put it in a class with supply missions especially after Professer Hill's linking up the sterling balances with the purchase of scientific and industrial equipment for India. The visit of Prof. Hill led to suggestions for increased expenditure, new institutions and permanent machinery for exchange of scientific and technical information. To carry out the suggestions the mission has to obtain information not as to priorities here but as to the limit of outside assistance for India. Since the mission proceeds to the U.S.A. after touring Britain, it should be possible to devise a scheme of scholarships to be endowed by the State. Efficiency has been demanded of new industries even as tariff protection is made conditional upon reconversion. Technical training schemes are outside the scope of the development to which the delegation referred. For the delegation spoke of key industries wanting in capital goods and special skill. It may well be that the metallurgical and other laboratories proposed require foreign encouragement but their subordinate function as training centres for experts for future industries has been indicated by the mission to Britain. In the outline of

basic requirements there is little to distinguish the Indian scientists' scheme though an interesting omission is the reference to post-war communication. The provision of new clearing houses for scientific workers may enhance the usefulness of research but how far private business, as distinct from the State, should support research for development is not known though the principle of a voluntary cess is familiar in regard to tea, lac and coffee. Prof. Hill's report presented on January 1 made known the probable advantages of extending the field of research and the reconstruction plans especially in regard to agriculture and power development are contingent upon the acquisition of scientific personnel for some departments. There is reason to think that expansion of institutions may add to employment but that is primarily the function of the Provinces. Medicine and public health are clearly outside the scope of the mission since the survey committee is at work and its recommendations may add to the supply of doctors in India.

State Railways.

The economic development of a country depends greatly upon the careful organisation and co-ordination of different transport agencies and the part played by railways in India, as elsewhere, has been noteworthy. In India, owing to special reasons, railways have not contributed the maximum possible benefits to our industries in the past. Fortunately wartime developments have now necessitated co-ordination and ambitious planning. The Railway Board Development Plan, the outlines of which have been published recently, has evoked considerable interest and the public should be eager to know something of State policy towards the railway system. Mr. T. V. Ramanujam's book on "The Function of State Railways in Indian National Economy" (Foreword by Sir C. P. Ramaswami Aiyer, Vice-Chancellor, University of Travancore. Printed at the Madras Law Journal, Madras. Rs. 4) gives an interesting historical and critical account of the development of State policy towards railways in several countries as well as in India. Those who strongly advocate a thorough re-examination of the railway rates structure in India would find the chapter on "The Theory of a Fair Return" and "Taxation of Railways" particularly instructive. The author has made a strong case for the taxation of State Railways and has pointed out the anomaly of exempting the Indian State Railways from taxes and, at the same time, making them pay a contribution to the General Exchequer. The exemption of State Railways from taxation, according to him, gives rise to the question whether they are actually State-subsidised or not. Copious instances from foreign countries are adduced to show that railways should be pressed for greater public service than hitherto. The vital question of rail-road competition has not been overlooked and the revolution caused by internal combustion engines on railways has been dealt with. The book will be useful for the general public as well as to the post-war planners who should scheme the future transport development in the light of the past omissions and the necessity of speeding up the country's industrialisation.

Light Alloys in Postwar Britain.

Great changes have often occurred in engineering industry owing to the appearance of a new metal or the discovery of new uses for metals already in use. Since the commercial application of aluminium tremendous progress has been achieved in several branches of the building industry in America and England. These are days of light metals and the demand for greater strength, corrosion-resistance, good appearance, ease of cleaning and freedom from warping has increased day by day. Since aluminium satisfies these requirements, its role in several key industries has grown by leaps and bounds. War-time progress has underlined the enormous possibilities of the use of aluminium in the form of suitable alloys, ferrous or non-ferrous, and in a paper read before the Royal Society of Arts on February 2, 1944 Mr. E. C. Goldsworthy, Development Officer, High Duty Alloys Limited, points out that the future of light alloys industry of Great Britain is bright and promising. The U.K. can rely upon adequate supplies of virgin aluminium and other secondary materials required for industrial purposes. Facilities for the manufacture of alloy components are rated large enough for any demand and the recent assurance given by Sir Stafford Cripps that a large army of workers skilled in the fabrication of light alloys will be released for the manufacture of light alloys products has given the necessary fillip. The aircraft industry is estimated to offer the greatest market for aluminium alloys and if technical progress should go along the way of jet propulsion or heavy oil engines, the demand is expected to be steady and growing. Every country has vast schemes for post-war road and rail transport and in view of the fact that railways have till now used very little of light alloys, they are expected to offer a lucrative market for the industry. There is vast scope for the introduction of light metals in motorcars, motorcycles, ships etc. Manufacture of aero-engines would be benefited by the technological progress in aluminium and its alloys since a reduction in weight and momentum and better thermal uniformity would be essential for success in this line. War has caused damage to ports, harbours, bridges and civilian buildings and the pent-up demand of the civilians will have to be satisfied when

BATU

TO GIVE YOU Tools YOU NEED

To meet the growing need of expanding Indian Industries for accurate and scientifically correct tools, Bharat Tools Factory has been set up in Bombay.
Neat, well-equipped, housing the latest type of precision machinery, this factory turns out, under European supervision, BATU TOOLS that are unexcelled in quality and precision.
ALL BATU TOOLS are treated by Modern thermal process, and are of high degree of accuracy with a tolerance of ± 0003" usually.
Tested and approved by Government of India's Workshops. BATU TOOLS conform to British Industrial Standards.

hostilities cease. Further, the electrical, chemical, food, milk and brewing industries have, under the spur of wartime necessity, found new uses for aluminium and light alloys. In agriculture the need for milk churns, dairy equipment, agricultural machinery etc. offers good scope for aluminium alloys. Domestic use of light alloys products is increasing fast and if an earnest attempt is made to raise the standard of living of undeveloped countries the demand for domestic appliances and utensils would indeed be pressing. Britain hopes to develop the light alloys industry in right earnest and already the post-war planners are giving thought and encouragement to this vital industry. The limiting factor for very rapid progress seems to be the price level and as steel prices are coming down the price of light alloys will have to face the strain of competition Plastics threaten to operate as substitutes in some lines but since the scope for light alloys, particularly for aluminium and magnesium alloys, is vast, no unhealthy rivalry is expected to develop.

Exports and Falling Imports

In the progressive increase in U. S. exports some will note more than the effective application of lease-lend. In the first half of 1943 over four-fifths of U.S. exports were consigned under lease-lend but the volume of regular exports did not shrink greatly. The increase in U.S. exports and the fall in imports point to the essential similarity between India and U.S.A. with the cardinal difference that exports do not lead to any accumulation of gold or oversea assets because the tendency is still for others to acquire dollars for reserve purposes. The very moderate degree of inflation in the U.S.A. is probably connected with the retention of oversea balances by many countries in New York today. The further increase in U.S. exports on relief account will lead to a wider gap between imports and exports and raise (at least for the future) questions as to tariffs and controls. Without any discernible increase in raw material production outside the U.S.A. corresponding to the increase in manufacturing activity there will be the usual trade difficulty and the ultimate solution may lie only in the enlargement of oversea investment for development. Agreement as to export quotas in regard to cotton or wheat suggest that the U.S.A. is resolved to export primary products not only because production elsewhere has gone down but on account of the need to keep home prices up by taking off even the reduced surplus. The trend in regard to special trade remained very favourable to the U.S.A. throughout 1943 as her exports continues to rise. The steady reduction in imports is not peculiar to the U.S.A. as Argentine's imports fell after July 1943 and India's imports in 1943 also were below the level for exports. Almost exceptional is the case of Palestine whose imports rose by fits and starts. The countries with import surpluses have reported a reduction in the value, and necessarily, the volume of imports last year, examples being Portugal and Sweden whose exports also suffered. The export trade of neutrals has scarcely increased in the same fashion as India's last year and one of the significant differences between India and the Dominions is the increase in imports at the expense of exports though Canada's Mutual Aid plan has necessarily led to a steady growth of exports corresponding to that noted in the U.S.A. The proportion of European trade to the world's volume has clearly changed as imports fell except in the special case of Iceland and exports especially in the case of the Occupied countries last year tended to fall. Without examining the chances for a return to the old proportions it may be surmised that relief and rehabilitation may not produce such speedy changes as may be expected in regard to exports.

Favourable Background

It is not possible to guess out the effects of control on the cotton mill industry. From the increase in raw cotton consumption by mills from 4,033,800 bales in 1942-43 to 4,301,000 bales in 1943-44, it should be concluded that the fall in cotton prices in March is not due to an adverse trend in consumption or exports or even the increase in the 1944 crop, but to the anti-inflationary mood through which markets are passing. Production in 1943-44 expanded to 4,642 million yards of piecegoods as compared with 4,109 million yards. The decline in textile imports to 3.6 million yards for the year was not a material factor in textile supplies as the increase of mill production in the year exceeded the quantity exported. Exports fell from 319 million yards to 461.5 million yards in 1943-44 and this is one aspect of control. The increase of production to make good stocks cleared off under orders is evident from the drop in cloth and yarn prices towards the end of the year as well as the increase in double shift working. It may be possible to view the successive reductions in prices as a consequence of increase in mill production or an adjustment to the lower cost of raw cotton.

India's imports of raw cotton last year were below the totals for the preceding two years but the decrease in exports should have partially offset the decline in raw cotton imports. The drop in the index for average prices of cotton manufactures from 524 in May 1943 to 324 in March 1944 is not the

principal though the most conspicuous result of the control order of May 1943. Assured of essential supplies mills were able to raise output particularly in the first quarter of 1944 to the level of July 1942 and this deserves notice in view of the encouraging nature of mill company reports published this year. The background is more favourable despite the fall in cloth prices by stages last year, and since, as the major factor for mills is the persistence of unsatisfied demand at home. The reduction in textile output caused by coal shortage is not obvious in the figures available after November, but improvement in fuel supplies must be duly reflected in production figures for recent months.

Private Mission.

Announcement last week that a private mission of Indian businessman has been invited to attend a conference at Atlantic City is perhaps the clearest hint of U.S. interest in India's development schemes. Though the conference will correspond lagely to meetings of the International Chamber of Commerce with which India has been linked its main business will be to declare that Governments must leave some freedom for private enterprise. Such a declaration, of course, does not mean that extended co-operation in regions of trade and investment is certain because many other agreements will regulate commercial and financial policy. The agenda for the first time brings in both shipping and industrialisation though the question of India's sterling balances was more or less excluded at Bretton Woods at America's instance. Where the mission will benefit is largely in regard to a first-hand review of U.S. war production. The means to develop new, heavy industry may be lacking at present but measures taken to raise shipyards' capacity and outturn should indicate clearly the nature of the opportunities in India. The despatch of another mission to the U.K. with similar objects but more strictly defined does not detract from the usefulness of a mission to supplement the work done by India's delegates to the I.L.O. Conference at Philadelphia. Though it is certain that any decision in regard to postwar controls must be political, there are real advantages in knowing the scope or degree of the impact of cartels elsewhere. Progress in the steel and cement industries here, after the war, must be related to the delay or resurgence, on the score of malicious interference or proved efficiency. The current view against cartels may shape discussions but in regard to shipping early acquaintance with the foreigner's intentions is altogether necessary for the framing of a programme for India. There is little use denying that private agreements acquire a statutory force and the nationalistic arguments offered by an Indian mission against any policy meant to defend Empire unity may influence future U.S. opinion. The familiar forecast of trade rivalry after the war may be viewed as an indication of U.S. desire to draw strategic raw materials without any difficulty. Indian businessmen could outline requirements or supply assurances in this case more effectively than governmental missions. That the gathering will be large like any other international conference and generalisation will be the rule are understood. But access to the capital market in New York where the projected World Bank will function is certainly required for India. Any outline of handicaps may well be supplemented by an outline of opportunities. Apart from the conference giving information hitherto not available to the Indian or U.S. public there should be a formal inquiry into the sources of essential imports for India. Replacements and renewals present a chance for practical collaboration which would modify previous, customary dependence because of the hint that cotton mills should take steps to replace machinery.

CRIME!

ACCORDING to writers of crime stories, criminal detection is largely an art. So it may have been once, but today it is even more a matter of science, and chemistry is the chief branch of pure science on which it draws. The way of the poisoner, for example, is beset with many more perils than it was when the XIXth century public were regaled with the deductive triumphs of the fictitious Sherlock Holmes. Minute traces of the rarest poisons can nowadays be recognised infallibly and estimated accurately. Chemical and biochemical tests enable bloodstains to be readily identified, revealing the species of animal or the particular "blood-group" of human being from which the blood came, and thus narrowing down and simplifying the work of the detectives. The chemist is often able to add precision to evidence which may in itself be vague. For example, the presence of phosphorus in the sulphuric acid vat of a munitions works may lead to surmise as to the fate of a missing worker; but if chemical tests prove that the phosphorus content of the vat is within the normal limits of phosphorus content of the human body, surmise may approach certainty. The research chemist, aided by the resources of the chemical industry, has also devised means of reading the writing on charred letters and documents; of unmasking forgeries in manuscripts and reputed "old masters"; of detecting adulterants in food and drink; and of analysing the most complex nostrums which are still bought by the more gullible. The role of the chemist is protective as well as constructive, and the public should appreciate the part that chemistry plays in helping the police force to prove the innocence of the guiltless and bring the guilty to justice.

ICI

No. 15 in the "Services of an Industry" series issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Clive Street Gossip

In the issues of "Indian Finance" dated September 23 and 30, I had furnished an outline of India's war economy; and I had adduced the reasons for my conclusion that India's postwar economy would be very much in the nature of a projection and expansion of her war economy. From this picture of India during war conditions and in the postwar period, it is now possible to draw inferences with regard to individual industries and individual aspects of economic activity. At the outset, it may be emphasised that, to the extent that the colossal military expenditure of approximately Rs. 500 crores a year was, in the main, responsible for such favourable developments as steady prices for agricultural and industrial products, substantial reduction in India's chronic agricultural indebtedness, the good showing which Indian industries have made, the more or less complete elimination of unemployment, there is no reason to apprehend a recurrence of the old evils in this regard with the drying-up of military expenditure, as its place will be taken by the enormous sums that will be spent by the Government and otherwise in the execution of the various postwar reconstruction projects. I assume, therefore, that, in postwar years, the personnel released from war services will be absorbed in postwar projects in equally remunerative ways; that there will be no unemployment either as regards agricultural labour or industrial labour or clerical labour or technicians; that, as a consequence, the purchasing power of the population in the country will be at a far higher level than we had known in the twenties or thirties; that producers in agriculture as well as in industry will greatly benefit by this increased demand caused by increased purchasing power: that, therefore, the nightmare of overproduction from which we had suffered in such commodities as cloth, sugar, cement, rice, wheat, etc., will never recur; that, on the other hand, the higher standard of living will necessitate measures for increasing the production of consumer's goods and foodstuffs of various kinds and of richer quality; that economic activity will be greatly quickened in the land; that people should be able to spend more and also save more; that budget figures of postwar governments will be ever so much more impressive than prewar budgets; that governments should be able to secure larger sums from revenues; that, at the same time, loans for the various industrial and other projects can be raised with greater ease and for far larger sums; that, thanks to the improved monetary technique and practices, borrowing rates in general will show even further decline; that the capital market will show more zest and activity and put up all the money that may be necessary for the financing of postwar plans; and that, in sum, the tempo of national economy will be higher and quicker.

* * * *

With this general background, we may proceed to examine sectional economic activities.

1. The first and foremost place in this discussion must be given to the industries and trades connected with building activity. On more than one occasion, I had referred to the impending building boom. During all the war years, buildings on civilian account have been completely at a standstill. Every kind of building material such as steel, bricks, cement and electrical goods has been under the strictest Government control. Such materials have been available at controlled rates only for projects directly connected with the war. Recourse to the black market was hardly thinkable, as black market prices have been several times the controlled rates. There is what may be called a minimum of annual normal construction of new buildings. The leeway for at least six years will thus have to be made up. It may be safely forecast that, as soon as building materials become available, many private individuals in all parts of India will be greatly interested in utilising a portion of their savings in the construction of buildings. In this context, it is necessary to remember that large fortunes have been amassed by people in various walks of life and in several parts of India. A goodly portion of these fortunes possibly represents accruals from tax-evasion and is kept hoarded in currency notes or in some such form which can escape detection. Buildings afford one of the best means for the utilisation of such black market money. It may also be added that the execution of the postwar plans will involve the construction of buildings for varied requirements. Taken all in all, there is every ground to anticipate a vigorous and widespread building boom in India. The building boom in this country will coincide with a similar development in Britain and the Continent, where the war-ravaged and bomb-wrecked buildings will have to be reconstructed. That is to say, quickened building activity in India will be coincident with quickened building activity in many parts of the world. Throughout the world, then, there is bound to be a sustained and considerable demand

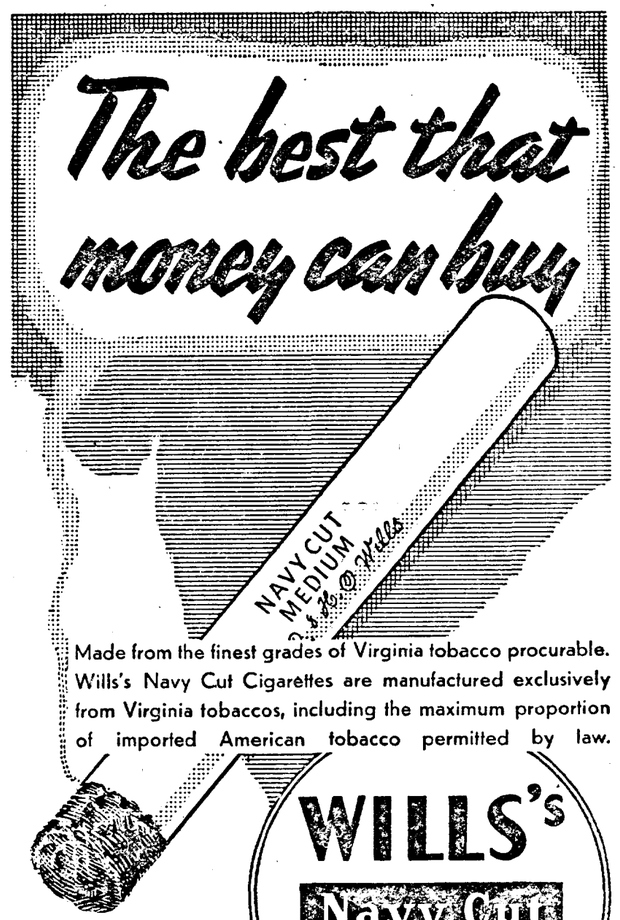
for all the materials necessary for building construction. The first industry that comes uppermost in one's mind from this point of view is cement. There can be no manner of doubt that the cement companies in India are assured of the rosiest postwar prospects. Equally prosperous must be the future of concerns engaged in the manufacture of bricks and tiles. Manufacture of bricks and tiles has been so far a cottage or small-scale industry in India. My estimation of postwar prospects suggests the opportuneness of starting large-scale companies for the manufacture of bricks and tiles on lines analagous to the London Bricks Limited. The steel industry will also participate in the prosperity diffused by the building boom. As India, after the enemy occupation of Burma, has been depleted of its timber wealth on account of the insatiable war demand, the price of timber for a long time to come will be so high as to stress the suitability as well as the economy of iron and steel in the construction of building.

* * * *

By the same token, I see a bright future for the industries connected with electrical and other appliances and with furnishings. Companies which are manufacturing electrical bulbs, cables, switches and other gadgets, must do exceedingly well. In fact, the present capacity of such companies is but a fraction of the demand that will arise in post-war years. There is considerable scope for the expansion in the capacity of existing companies; there is room for more companies of this kind; and there is considerable opportunity for enterprise in setting up plants for the manufacture of such articles as are not now being produced in India.

2. In addition to the facts set out in the last paragraph, the enormous leeway that has to be made in regard to railway repairs and renewals stresses the postwar prospects of the steel industry. Tracks have not been renewed for a number of years; and there has been much wear and tear owing to the colossal war traffic. The Railway Board will have to take on hand, immediately on the termination of the war, a big-sized programme for repairs and renewals. It has also to be noted that new railway lines will be opened. If the railway postwar plans are carried out in a scientific way, and if the Government do not permit the import of such materials as are manufactured locally, it may be said that more than a quarter of the output of the steel companies in India will be required to meet the demands of the Railway Board. There should also be considerable demand for iron and steel goods in connection with the execution of the various postwar plans. It may, therefore, be concluded that the postwar prospects of the steel industry are assured. In this connection, it may be asked whether the pig iron industry in India stands on the same footing. So far as pre-war production of pig iron was concerned, the bulk of the point of view, it may be assumed that exports of pig iron to Japan in postwar years will not be encouraged. The best solution will be to increase the capacity of Bengal Steel Corporation so that it can absorb most of the pig iron produced by the Indian Iron and Steel Company. I shall not be surprised if the authorities of the Bengal Steel Corporation have already devised plans for such expansion. They should be able to get the additional capital with the utmost ease and on the most favourable terms.



3. It follows that the engineering industries should do very well in postwar India. The plans connected with more roads and better roads, electrification, railway programme, increased building activity, all-round development of industries etc., will, each in its own way, bring more and more custom for the engineering concerns.

4. Such of the engineering companies as are manufacturing tools and spare parts and machines deserve special attention. In prewar years, we were doped with the feeling that India could not manufacture machinery. War as well as necessity is the mother of invention: and some of our engineering companies have successfully fabricated and produced various kinds of machinery. Postwar India should ensure good business for these concerns and also provide opportunities for more concerns for the manufacture of machinery.

5. If Rs. 500 crores per year or thereabouts is, to be spent on reconstruction projects of some kind or other, this will involve not only an army of staff of all kinds but a swarm of files. If red-tapism means anything, multiplicity of postwar projects means super-multiplicity of files. This aspect of planning must be particular-

(FROM OUR CORRESPONDENT)

New Delhi, October 17.

The autumn session of the Assembly is expected to be livelier than usual due to the Congress party leader's decision to attend this time. I learn that about thirty Congress M.L.As who are out of jail will be able to be in New Delhi for the session. The Government plan to make the session as brief as possible—about three weeks. Most of the time, it is expected, will be taken up by official business. According to the tentative time-table, Government hope to monopolise the session. Only three days have been allotted for non-official business as against twelve for official. A large number of resolutions and adjournment motions, as usual, will be a feature of the session. Notices have already been received for over 250 questions.

* * * *

Questions relating to the sensational revelations about the Phillips report on India and Sir Olaf Caroe's cable to the India Office declaring him *persona nongrata* are expected to be raised but the Government will prevent the members raking up embarrassing events. Notices have already been given of two resolutions on the subject: One by Sardar Sant Singh censuring the External Affairs Department for declaring Mr. Phillips *persona nongrata* and by Mr. A. C. Dutt condemning the Government for preventing U. S. views on India reaching this country. Apart from the Phillips affair, the recent alarming reports about grave food scarcity in certain districts of Bengal, the Government's failure to import adequate quantity of food and the deterioration of huge stocks of food in Bengal and Bihar are bound to be discussed. The Viceroy's refusal to see Gandhiji is another matter likely to be raised. Prof. N. G. Ranga has given notice of an adjournment motion condemning the continued detention of a large number of Indian patriots even after the emergency, alleged to have arisen after passing of the August Resolution in 1942 by the A.I.C.C. has definitely ceased to exist ever-since Mahatma Gandhi assured the nation that 1944 is not 1942 and that there could be no question of civil disobedience in 1944 in pursuance of 1942 resolution". The Secretary of the League Party, Sir Mohammad Yamin Khan, is to move a resolution decrying the action of those officers who advised the Viceroy to issue ordinance and demanding that these ordinances be withdrawn and placed before the Assembly. A resolution by Dr. G. V. Deshmukh urges that no coalition governments be found useful after the war until separate department are abolished and a new set of legislation elected by joint electorates.

* * * *

Observers feel that the failure of the Gandhi-Jinnah talks will not stand in the way of a temporary Congress-League alliance within the Assembly to defeat the Government on vital issues. Such an alliance it is recalled, has worked very well on previous occasions without a permanent understanding being reached outside.

* * * *

The Indian delegation consisting of Sir Chunilal Mehta, Mr. G. L. Mehta, Mr. A. R. Siddiqui and Mr. Virmani will leave for the United States next week by air to attend the International Big Business Conference to be held at Atlantic City (New Jersey). Mr. Erulkar will join the delegation from London and Mr. Mahindra from New York. Dr. P. S. Lokanathan, Editor of the Eastern Economist, is accompanying the delegates as Chief Adviser. It is realised that the post-war problems facing Big Business in various countries will vary from country to country. No joint policy or action is possible under the circumstances but a frank exchange of views will help the various delegations in solving their own difficulties. With the increasing influence of Soviet Russia and the intense political disruption caused by the war, Big Business in Europe obviously faces a more difficult situation than it ever did in the past. While the main problem for European Big Business will be just survival, the main concern of the Indian delegation will be to obtain favourable conditions for rapid industrialisation of the country after the war. The view of the Indian delegation is that first hand exchange of information with representative of various nations will be very helpful.

* * * *

The British decision to despatch another 30,000 tons of foodgrains to India during the next ten weeks making the total for the year 110,000 tons is welcomed here. The decision appears to be the first result of Sir Henry French's recent visit here to study the food situation at the spot. The British figure still falls far short of that recommended by the Foodgrains Policy Committee. Alarming reports about food scarcity in the eastern districts of Bengal and in Malabar continue to pour in. As a writer in a British paper pertinently pointed out, there is absolutely no reason, apart from rank discrimination, why food imports for Britain should come first on the priority list as regards shipping space while India's food needs come at the bottom. And this despite the fact that hundreds of thousands have already fallen victim to famine!

* * * *

The Government have planned an ambitious programme, I learn here to improve communications in Bengal and Assam after this war. The experience during the famine and war needs have emphasised the necessity of such a programme. The programme includes not only the bridging of the Brahmaputra and the construction of numerous other bridges throughout the areas of Assam which are practically cut off now during the monsoon. The Brahmaputra bridge will have eight spans of 400 feet each and 4 spans of 100 feet each. It will be by far the longest bridge in India. The estimated cost of the bridge is Rs. 2 crores while the draft of the programme will involve an expenditure of Rs. 7 crores. I learn that construction work is already under way to double the broad gauge line between Abdulpur and Santihar (about 60 miles) and the metre gauge line between Parbatipur and Gopalgunj (76 miles). The doubling work, it is expected, will be completed by the end of December.

* * * *

The Commerce Secretary, Mr. N. R. Pillai, has left for London on an official mission the purpose of which has not been disclosed yet. It is learnt that Mr. Pillai will stop at Cairo for a few days on his way to meet members of the Middle Eastern Supply Council and discuss some outstanding questions. Mr. Pillai is expected to discuss the various problems pertaining to Indo-British trade, such as import and export restrictions, tariff and shipping policies, with the India Office and the Board of Trade. It is regretted that Mr. Pillai did not consult industrial and trade interests in this country before leaving for London. Mr. Pillai, however, is well acquainted with the industry's views.

It is understood that the proposed financial delegations to Britain to discuss the sterling balances issue may be postponed till after the budget session.

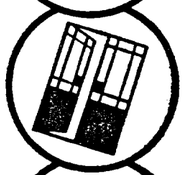
(From Our Correspondent)

Bombay, October 17.

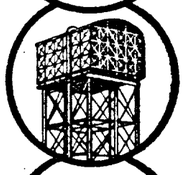
A hoary tradition combined with a hedonistic outlook invests Divali with a special national significance, especially to the western capital. The commercial community gallantly tries to view the future hopefully but this year Moorat trading in the Bombay markets was marked by a dullness and depression that beggars description. Marketmen wished each other a happy new year, but the trading reflected the leaden lack of cheerfulness weighing down the minds of businessmen. The bright lights in the bazars that one saw after four years provided the only spot of colour in an otherwise drab picture. Even the piecegoods and yarn markets which used to show at least some stimulated activity presented a languorous appearance. The grain markets were dull. The cotton market celebrated Moorat with a sagging tendency and I. C. C. March contract quoted below Rs. 400 as compared with Rs. 467-8 a year ago. The recent shake-out in which the market lost 50 points has imparted a slight touch of steadiness. The Stock Exchange refused to be stimulated by any bullish fervour, and business was meagre. One however, noted a welcome accession of steadiness in Textiles, Cements and New Indias. The bullion market may be said to be have given a better account of itself. With the Reserve Bank rejecting tenders for silver upto Rs. 125 and for gold upto Rs. 67, and with arrivals from upcountry on the small side, the bulls made the most of the opportunity. The shorts are distinctly worried by the Bank's refusal to lower its price limits for offerings. Operators are asking themselves how long this twilight period of the war will last.

The meeting of the Textile Control Board last week was in many ways important. Firstly, it enabled the Board to put forth a new scheme of distribution which will tackle the problem of scarcity more effectively. Secondly, it brought to light the scandalous situation prevailing in Bengal, as a result of which an enquiry is to be made by the Central Government as to why 20 million yards of cloth are still lying in godowns in Bengal undisposed of, while all the time the Bengal Government had been protesting that Bengal had been starved of cloth. Thirdly, there was the message from H. E. the Viceroy in which he had referred to the work of the Board in appreciative terms. The problem of distribution of yarn throughout India on an equitable basis has also received greater attention and a plan has been evolved.

Mr. Krishnaraj M. D. Thackersey outlined the new scheme of cloth distribution at a meeting of the Board on Friday. He stated that the ceiling prices had been further reduced to the extent of one anna per rupee from the prices ruling in the quarter ended August in the case of cloth, while in the case of yarn the reduction varied from one to three annas per pound. He pointed out that the price schedule is now being re-drafted on a more rational basis and that the mills had been requested to submit revised ceiling prices for their manufactures. Mr. Krishnaraj emphasised how, in spite of the handicaps in the way of mills obtaining adequate quantities of coal, dyes, chemicals and millstores, the production of cloth and yarn had continued to be at the optimum level. He, however, warned people against expecting any considerable improvement in the output of the finer varieties of cloth, although the demand has greatly increased latterly. While the mills have been encouraged to produce more of the better varieties, he wanted the people to realise that the limits to large improvement are set by the limited capacity of the mills on the one hand and the necessity of using up a great part of the imported cotton for the requirements of the Defence Services.



As regards distribution, acute shortages are still prevalent in various parts of the country in spite of the fact that the production of the mills has been canalised and the movement of cloth regulated. In the words of Mr. Thackersey, "the new scheme envisages the allotment of a pre-determined quota from the available supply for the use of each province, the quota being based on consumption in normal years with small adjustment. The number of wagons to be made available for transport of cloth in the main producing centres will be regulated in such a way as to restrict the maximum quantity which it will be possible for any one area to receive to that fixed under the scheme. With the assistance and collaboration of manufacturers and piecegoods merchants, it is proposed to ensure that each area will in fact receive the quota, by the use of transport permits for the movement of cloth. Without these permits no cloth can be moved. Information will be given to a co-ordinating authority in the receiving zones of all despatches, names of consignors, consignees and other details, so that those authorities keep an eye on the proper disposal. In other words, once a fair share of supplies is sent, it will be the responsibility of the regional authorities to ensure even distribution at fixed prices. Mr. Krishnaraj also stated that every encouragement will be given to the authorities in each zone to devise and develop planned schemes.



Sixty Years' Service

TO INDUSTRY

Our services to the Iron, Steel and other Indian Industries started sixty years ago at the growing port of Karachi, but today they spread all over India. As the largest engineering concern in North-West India, we have carried out many successful contracts both at home and abroad.

We manufacture:

Steel Doors and Windows; Pressed Steel Tanks; Equipment for Textile and Sugar Mills; Powerhouses and Factories; Garden Rollers; Water Supply Systems; Motor Launches; Plastiplug; Waterproofing, etc.

We stock:

Motor Trolleys; Marine Engines; Asphalt Boilers; Jenkins Clod Breakers; Structural and General Engineering Stores; Bitumastic, Pudlo and Solignum; Steel and other Metals; Cements, etc.

We can advise you on all your engineering and building problems; why not consult us without any obligation.

VULCAN IRON WORKS, KARACHI

★ BRANCHES ALL OVER INDIA ★

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, October 15.

The recent ordinance, restricting movement of goods from Karachi and requiring a permit from the Assistant Controller-General, Distribution, for dispatches by rail has caused some stir in mercantile circles. The Buyers and Shippers' Chamber has sent the following telegram in this connection to the Controller-General, Delhi: "The notice issued by the railway authorities requiring a permit from the Assistant Controller-General, for despatch by rail of all consumer goods, irrespective of quantities, will cause great trade difficulties, delays and expenses. This Chamber urges postponement of this order to November 1st, by which time a representative of the Chamber will meet you. If immediate postponement is not feasible, exemption limits to each scheduled item be fixed to facilitate normal trade activities".

One of the primary requirements of the city of Karachi, namely, the construction of cheap rent tenements as envisaged in the five-year plan, sanctioned by the Standing Committee of the Karachi Municipal Corporation and stressed by the Chief Officer of the Karachi Corporation in his blue print for postwar reconstruction and clearing slums in the city has already been passed by the Corporation at its special general meeting on October 6.

The war has been a blessing in disguise for the weavers in Sind in the rural areas. A weaver in Sind is now earning four times the amount he was earning in pre-war times. But there is still a dearth of weavers in this province. To meet this shortage, the Government of Sind have formulated a scheme of giving training in improved methods of weaving to weavers in backward areas who cannot find access to urban markets for selling their products. The Textile Commissioner of Bombay has recently placed orders with the department of industries, Sind, for the supply of yarn to the tune of Rs. 1,00,000.

The general body of the Karachi Indian Merchants' Association have decided to open a bullion department for operating a market for trading in bullion in the city. A committee has been appointed for framing rules and regulations for controlling the proposed market, which is to start functioning very shortly.

Mineral coal is reported to have been discovered some fifteen miles from Karachi. The discovery has been made by a citizen of Tatta, who has obtained a prospector's license for some area near about Karachi. Some samples of the material found have been brought to Karachi and satisfactory reports are said to have been obtained.

Yet another joint stock bank is to open shortly at Karachi. A Karachi businessman, Rao Bahadur Shivrattan Mohatta is to be at the helm of affairs of the proposed concern, which is to be registered in Bikaner and is to be known as the Bank of Bikaner. The Bank is to be floated with a capital of one crore of rupees and an application, seeking the permission of the Government of India has already been made.

In my last letter I forecast the bearish tendency in the cotton market. It still continues. Owing to abnormal rains in Sind, we doubt whether the staple of N. T. cotton will be as usual. After Deepavali, factories will resume their ginning activities. The government purchases nearly 2¼ lakhs of bales from Karachi and the upcountry which it cannot dispose of unless some foreign market comes to the rescue. Besides, in Karachi, there is dearth of accommodation for storing cotton. Considering the position, the market may go reactionary.

Mr. J. C. Ikiadis, representing the Textile Commissioner is now at Karachi. He is meeting merchants shortly to consider government purchase of India cotton.

Very shortly, large consignments of American goods are expected in the Karachi market. Not only necessities but luxuries will come into the market. Prices of articles are expected to come down.

SALUTE THE SOLDIER

LET US SALUTE THE SOLDIERS WHO DEFENDED INDIA

NOW that Japan's defences are crumbling and their armies are being pushed back, let us thank those who have done it... let us salute those who are fighting for our freedom. Theirs was a difficult task magnificiently performed.

THE jungles of Kohima, slopes of Palel, tracks of Ukhrul—to-day these names are no longer in the news but they will long remain in the memory of those gallant men who were there, who fought for them and recaptured them.

ON trackless paths our men advanced, mud-bespattered, clammy with sweat, wet with incessant rain and loaded with their guns and equipment. HOW DID THEY ENDURE IT? No words can tell. *But they did endure it.* It was a war of endurance. It was under such conditions that our men fought and defeated Japan's fanatical forces.

LET US SALUTE OUR SOLDIERS WHO PROVED THAT WE CAN BEAT THE JAPANESE...

ISSUED BY THE NATIONAL WAR FRONT

AAA 1300

(*Continued from Page* 551)

ly heartening to the paper companies. There is also the Sargeant plan of education. Which means that not only adults but youngsters will be using very much more paper than hitherto. Thanks to mass education and higher education and thanks to red-tapism, the concerns which are interested in the production of paper may look with confidence to postwar years.

* * * *

6. What about cotton mills? In the distribution of cloth among the provinces, the Textile Control Board has allowed something like a per capita consumption of 10 yards. The prewar average consumption was about 16 yards. With full remunerative employment in postwar years, the per capita consumption of cloth in India may well be expected to be doubled. No country displays so much nakedness as does India. It is not the exposure of nakedness dictated by fashion but the nakedness forced on the community by grinding poverty. The nation may be said to be decently clad only if the per capita consumption of cloth comes up to, say, 30 yards. If agriculture continues to be profitable, if agricultural and industrial labour are guaranteed suitable wages, if there is full employment among the middle classes and technical and other sections, the attainment of the target of 30 yards as per capita consumption of cloth may be taken as a foregone conclusion. During the war years, India has also developed a market in the neighbouring countries for her cloth manufactures. It may be hoped that some portion of this export market will be retained in postwar years. All circumstances taken into account, the postwar destiny of cotton mills must be considered satisfactory. There is a special circumstance which may render this destiny even more favourable. It is well-known that cotton mills in India have made good profits during the war years but have had to part with an extremely high proportion in the form of taxes. The cotton mill industry has suffered most from the point of view of standard profit. Whether the Excess Profits Tax continues after the war or not, and whether E.P.T. is replaced by some kind of taxation, it is certain that the incidence of taxation so far as cotton mills are concerned must be very much lighter in postwar years owing to the disappearance of the onerous implications of standard profit. In other words, during war years, cotton mills have done well but not the shareholders. In postwar years, cotton mills may not do well from the point of view of the ability to show fabulous profits; but the shareholders will be doing much better in the sense that they will be able to get for their share a higher proportion of the profits.

* * * *

7. The same considerations of higher purchasing power, fuller employment and more remunerative employment guarantee a bright future for sugar companies. It is strange that the first expression of any individual when he gets some more money to spend is to buy sweets. Children in India as children elsewhere love sweets. A considerable increase in the per capita consumption of sugar is a natural consequence of more money to spend in the hands of the population. If each Indian takes one more spoon of sugar, the sugar mills in India will have to increase their production to double the present capacity. India is today the biggest sugar-producing country in the world; but the per capita consumption of sugar in India is one of the lowest in the world. This anamoly underlines and emphasises the rosy prospects of sugar companies during years when national economy will be at a higher level.

* * * *

8. The tea industry is also similarly placed. One more cup of tea taken by the millions and millions of India is a prospect with which the Tea Market Expansion Board will feel more than gratified. As more money in the hands of children means more sweets, so more money in the hands of labourers means more cups of tea. It may well be that India has to supply tea on a large scale to the newly opened markets in Russia.

* * * *

9. My friends on the Calcutta stock exchange may charge me with neglect of jute by which they swear for over two generations and on which colossal fortunes have been made. Jute shares have been prime favourites with operators in Calcutta. If juts shares appear at the end of my list, it is not because of my diffidence about the postwar prospects of this industry. The jute industry differs from the other industries I have mentioned in one important particular. The future prosperity of the industries I have listed is dependent upon the domestic prosperity of India. The future of the jute industry is, however, governed by conditions in the world markets. What are those conditions likely to be in the postwar period? It is now clear that considerable movement of foodgrains is expected in fulfilment of the noble plans to feed the famished populations in the war-devasted countries. Every indication points to considerable increase in the world production of foodgrains and considerable international movement of foodgrains. If the humane missions to feed the hungry are to be carried out suitably and satisfactorily, Bengal's golden fibre is the indispensable packing medium. The prewar markets of Calcutta's jute manufactures have been starved for a number of years. There will be a hungry demand from these consumers. My friends on the Calcutta stock exchange have every reason to reinforce their confidence in the future of jute shares.

* * * *

A strong sustained interest in matters political and economic distinguished Mr. Amritlal Ojha who showed that Bombay's bent follows a steady course in any city. His death this week after a serious illness certainly deprives the Indian Chamber of Commerce here of one of its stalwarts, one who persistently looked at things in the round and made informed criticism of measures and proposals more than a hobby. His chief interest lay in the coalfields and to the extent his knowledge surpassed that of the mere financier his views were invested always with authority. For the Indian section of the coal mining industry he remained for years the natural spokesman and represented it with real ability on the statutory boards and committees that have sprung up. Towards the end of his career Mr. Ojha took a lively interest in that very alert and progressive body, the A.M.O. which bridges most provincial differences efficiently in its way. Of his newer interests like country craft there is no need to speak since they point to more than a sentimental resurrection of trades in decay. But they attest the blend of old and new that is viewed as the key to progress. Sympathy for Mr. Ojha's family in their bereavement is justified also by general regret for the termination of a career of purposeful achievement which contained promise of further success.

Resume of Commodity Markets

There are no interesting developments in the commodity markets during the past week. The raw jute market remained weak while firm conditions have continued to prevail in the hessian market. The reduction in the offtake during the month of September has had no appreciable effect on values. There has been greater interest in the raw cotton market on the emphasis that cotton supplies are very short and that if a famine in cotton is to be averted, other fibres should be cultivated on a larger scale. The bullion market was rather quiet earlier in the week but a firmer tendency was noticeable just before the Diwali holidays on some fresh buying. The large selling by the Reserve Bank for future delivery did not have any effect as investment buying was rather large. After the holidays, however, an easier tone is noticeable and quotations are lower than the highest levels for the week. The piecegoods market has been uninteresting. There is a tendency to await further developments. Considerable interest has been shown in the new scheme for distribution of cloth and yarn supplies to the various provinces.

* * *

The raw jute market has been neglected and very little of fresh business is to be reported. The difficulty at the present moment is one of movement and storage. The large arrivals in upcountry centres and the difficulty in respect of mill godown space have had a depressing effect and for two weeks in succession prices have been marked down in spite of the fact that demand during the rest of the season is expected to be more than the total available supplies of jute. The eagerness to dispose of holdings by balers has resulted in a temporary marking down in prices. If the coal situation improves and it were possible for mills to effect a larger offtake, the position will improve further. It is unfortunate that steam-driven units should be still receiving coal supplies which are barely enough for maintenance purposes and that no great advantage can be taken of the industrial pool scheme that is in operation now. The production figures for the month of September show clearly that mills cannot report any large increase in production if the existing capacity of mills is not effectively utilised. The decrease in production during the last month is as much as 20,000 tons.

* * *

The dehoarding movement in the various markets and the decrease in prices for imported supplies have brought fresh customers to the bullion and stock markets. In spite of the favourable developments in the war situation and the large-scale selling by the Reserve Bank, there has been no appreciable decline in prices either for gold or silver. It is true that there has been some selling from upcountry centres and arrivals have come in to Bombay, but fresh buying has fully absorbed all such arrivals and quotations are not very much lower on balance.

* * *

A new scheme for distribution of cloth and yarn on an equitable basis was outlined by the Chairman of the Textile Control Board last week:

The Chairman said: "Although the distribution of the production of the mills has been canalised and the movement of cloth from the manufacturing centres to consuming districts has been arranged on a more rational basis, actual experience has shown that certain parts of the country have not been receiving adequate supplies of cloth commensurate with their requirements."

It is proposed to introduce the distribution scheme with the object of ensuring an equitable distribution of cloth to the various surplus and deficit zones as defined under the Cotton Cloth Movement Control Order commensurate with population of those zones.

The scheme envisages the allotment of a pre-determined quota from the available supply of cloth for the use of each Province and State in India, based on consumption in normal years, adjusted as may be necessary according to the total quantities now available. The number of wagons to be made available for transport of cloth from the main producing centres will be regulated in such a way as to restrict the maximum quantity which it will be possible for any one area to receive to that fixed under the scheme. With the assistance and collaboration of manufacturers and leading piecegoods merchants associations in the main producing centres, it is proposed to ensure that each area will in fact receive upto the quantity allotted to it by the use of transport permits for the movement of cloth upto the maximum stipulated extent.

* * * *

Movement by rail, road or sea will not be permitted except under these transport permits. Information will be given to a coordinated authority in the receiving zones of all despatches, the names of the consignees and other relevant details, so that the authorities in those receiving areas will be able to keep a check on the goods and see that the consignees do properly dispose of those goods. Once having ensured the despatch of a fair share of available supplies on a predetermined basis to each zone, it is considered the duty and responsibility of the Control Authorities in that zone to see that the cloth received is properly distributed throughout the zone, marketed at not more than the wholesale prices permitted and sold to consumers at not more than the maximum retail prices permitted under the Control Order. Every encouragement will be given to the authorities in each zone to devise and develop planned schemes for distribution to ensure that cloth despatched to each zone will reach the consumer at the proper price and eradicate black markets.

In developing any scheme of regional distribution it is of supreme importance for the Control Authorities in the various zones to bear in mind the fact that trade should continue to remain substantially in the hands of those dealers who were engaged in it in the years 1940-42. All such 1940-42 merchants should be given a place and service to perform in the general scheme of distribution, such scheme being always arranged with the co-operation and assistance of representatives of the main piecegoods merchants associations in the main piecegoods distributing markets.

* * * *

The Textile Commissioner has decided that, with immediate effect, the Transport Section of the Textile Directorate will accept for movement registration applications relating to consignments proposed to be despatched by rail from Bombay City where the consignments comprise single yarn of counts 40s and below and folded yarn in cases where the constituent threads are of counts 24s and below. Movement in the case of finer qualities will only be allowed under a special permit. All applications for special permits should be made to the Provincial Textile Controller, Government of Bombay.

In the Western Hemisphere Smallpox very rarely occurs because Vaccination is universal.

Vaccination consists of 2 or 3 scratches that are quite painless. These tiny scratches are sufficient to admit a special protective serum into the bloodstream. Regular Vaccination will provide a reliable safeguard against Smallpox.

Government maintains free Vaccination Centres all over India. If you have never been vaccinated, any doctor will tell you where to go.

Smallpox epidemics claim about 48,000 yearly victims in India. This highly contagious disease starts with shivering, fever and vomiting: soon afterwards pustules or pocks appear on the face and spread to the body.

Should anybody you know develop these symptoms, send for a doctor immediately—it may be Smallpox. Prompt action will do much to check the spread of the disease.

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance".

CALCUTTA, 20th October.

The returns of Production of Goods during September are the lowest recorded for many months, being nearly 30 per cent below the target figure at which production of jute goods is supposed to be maintained. September was certainly a short month for working days, with two days officially recognised as holidays for the workers. Nevertheless this is not sufficient to account for the shortage, and much must be laid at the door of unsatisfactory coal supplies—not only insufficient quantity but incombustible quality. It is understood that the poor September production has been advanced by the Association as a potent factor in their latest plea to the Supply Department for more generous treatment in the matter of coal. Actually it is reported that some improvement, both in quantity and quality, has been observable during the current month, but temporary improvements have been recorded in the past without being maintained with any permanancy. In fact a graph of the weekly supplies of coal would more nearly resemble a cross-section of the Chin Hills on the Burma front than anything else.

To return to the production figures, the total recorded in September was only 71,541 tons, a drop of nearly 20,000 tons, or 22 per cent from the previous month when 91,439 tons were turned out. With many bad months in it, last season's average production was just under 80,000 tons per month. It does not look as if this season were to show any improvement, for the three months of it which have now elapsed only average very slightly over 80,000 tons. Whether those in high authority are content that the target figure should be consistently missed by 20 per cent it is impossible to judge. Certainly the remedy is not in the hands of the Mills themselves when they are starved of motive power. The percentage of the production which was on Government account dropped back to 8.6 per cent. It is noticeable that, with the cessation of manufacture of Sandbags, the proportion of Sacking goods manufactured on Military account is steadily increasing. The total quantity of hessians produced was 1937 lakhs of yards, weighing 28,865 tons. The total yardage of Sackings was 930½ lakhs weighing 39,917 tons,

The small reduction in stocks of goods which was recorded at the end of September indicated that despatches were only just keeping pace with production, so that despatches also show a heavy falling off. Adding the small drop in stocks of 1102 tons to the 71,541 tons of production gives a despatch figure for September of 72,643 tons, 24,000 tons less than either of the previous two months of this season and the lowest figure recorded since December 1943. The average rate of despatch last season was 80,000 tons, practically the same as the production rate. So far, for the three months of this season, the despatch rate has averaged over 88,000 tons, so it is to be regretted that the very satisfactory rate of offtake recorded in the first two months has been set back by the low figure for September.

The September production tonnage represents a consumption of 3,95,000 bales of jute and the consumption since the beginning of the season now amounts to 13,38,000 bales. The arrivals of jute into Calcutta for the first three months of the season total 15,37,000 bales. The September arrivals fall somewhat short of those in August but are slightly better than the corresponding month last year, but the total arrivals for the season are short of last year's figure by a lakh of bales. Arrivals by river show an advance on the previous month and are better than last year, but arrivals by rail are 2¾ lakhs of mds. less than the previous month and also short of last year's figure. Movements by country boat show some increase.

The Fabrics market has taken on rather an unusual aspect. Quite a large turnover has recently been recorded in Hessians, but peculiarly enough very largely on speculative account on the part of both buyers and sellers. Wherein consists the attraction to a speculator in buying hessians at maximum rates, not against an actual order, it is difficult to see. If the buyer is himself a shipper and ultimately sells for shipment, he can turn over his percentage as a shipper, but he cannot expect to obtain any more than the maximum rate laid down for the goods. On the other hand, if he fails to get an order for shipment, he has to resell and pay the selling brokerage. One would imagine that, with so little to be gained, it is hardly worth the candle to risk the possibility of a drop in prices below the maximum. The speculative seller at maximum rates has more logic on his side. He cannot expect to get a higher price and he *might*, at some juncture, be able to cover at under maximum. The more logical transaction for a speculator in the present market would seem to be to sell Hessians, which are freely saleable for a long way ahead at maximum rates, and to hedge with purchase of Heavy Goods, which are all quoted well under maximum in the second-hand market. But this transaction does not seem to appeal. So far as can be ascertained, official purchasing channels have not so far ventured beyond March, and are confining their dealings mainly to nine porter hessians. On the other hand, quite a large business has been recorded both in nine and eleven porters for positions April to September next year. As noted above, these forward purchases are almost entirely speculative, and even the selling has been speculative to no inconsiderable extent, though Mills also have sold There has been some further "double" business in Heavy Goods combined with Hessians, but the bait has had to be increased to make the transaction attractive to the buyer From 1¾ lakhs of hessian with every 100 bales of heavy goods last week, the proportion of hessian has had to be raised to 2 lakhs per 100 bales This type of business cannot be expected to continue to any great extent. Genuine demand for Heavy Goods remains virtually non-existent though the tone of the market has been slightly better this week and "B" Twills, the popular Bazar counter, is quoted up to Rs, 63-8, which is a rupee better than last week. This means nothing however, beyond perhaps the covering up of some short position.

With two holidays intervening, the period to be reported on is again a short one. There is no change to be recorded in the Pucca Bale market. Shippers continue to show some interest in Long Group Daisee and have been able to purchase actually below minimum prices by switching the tax on to Sellers' account, a difference of some ten annas per bale. Mills have shown little further interest though there have been large quantities offering in all available at minimum prices. In fact the only description which is not available at minimum level is Cuttings, which still command maximum rates and have been recorded at Rs. 43 for N.C. and at Rs. 42 for M.C. and T.C.

The tendency in the Loose Jute market has been easier and most upcountry markets have recorded a greater or less drop in price. Demand was confined however to small "Lucky Day" business by Indian Mills, mainly in Indian Jat Bottoms at Rs. 13-4 to Rs. 13, with Assam Bottoms also reported at Rs. 12. At the close, a fair turnover has been done in European packing at Rs. 16-8 and Rs. 13-8 for Mids and Bots, in Supervised Jat at Rs. 16 and 13, in Indian Jat Tossa at Rs. 16-8 and 13-8 and in Indian District Tossa at Rs. 16 and Rs. 13. Indian District Tossa Bottoms alone were also recorded at Rs. 13-4.

It is understood that the Jute Mills Committee have considerable hopes of persuading the Bengal Government of the necessity for increasing the acreage under jute in the next crop season. Some members at least of the Government appear to appreciate that, with the end of hostilities in the West probable in the near future, more provision ought to be made for exportable jute Also that the Carry-over position has been allowed to recede to a dangerously low level. Due consideration of the position leads to the conclusion that a crop in the region of 100 lakhs of bales is desirable, 60 lakhs for local mill consumption, 30 lakhs for probable export demand and 10 lakhs to restore the diminished stock and carry-over to a safer figure. An early meeting has been arranged to discuss the situation.

The position in the Fabrics section has already been commented on. Mills continue to be eager sellers of Heavy Goods but refuse to break the maximum rates. On the other hand, they are generally reluctant to sell Hessians, even forward, at maximum prices.

JUTE

(By Our Staff Correspondent).

Calcutta, October 19.

The raw jute market has continued quiet and business passing has been on a very small scale owing to the intervention of holidays. Markets were closed on Monday and Tuesday on account of *Kali Puja*. The general undertone is rather quiet with sellers anxious to do business. Arrivals into up-country centres are coming in on a larger scale and the difficulty in regard to storage space is compelling holders to offer a discount in rates. Prices as such are 4 annas lower than last week's rates. Mill business is very restricted. In view of the difficulty in godown space mills are only inclined to enter into contracts for forward deliveries and are prepared to offer a slight increase in rates for storing facilities. But for the slight disappointment over the production figures for September, the publication of the final forecast figures would perhaps have had a steadying effect on values. As it is, there is a tendency on the part of everyone to await further developments.

In the loose jute section business has been on a very small scale with mills taking little interest in the market. Indian Jat Middles and Bottoms were done at Rs. 16 and Rs. 13, while Supervised Jat Middles and Bottoms were done at Rs. 16-4 and Rs. 13-4 respectively.

In the pucca bales section shippers bought small quantities of Dundee Daisee 2/3 at minimum rates while mills purchased cuttings N.C. and M.C. at Rs. 43 and Rs. 42 per bale. A small lot of Firsts was purchased at Rs. 79 and Lightnings at Rs. 74.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, October 19.

The jute manufactures market has continued firm though a decline in the offtake during September had a restricting influence. There were good buyers for positions up to June next year and mills are reported to have entered some contracts for forward positions at maximum rates.

In the heavy goods section prices are nominally at maximum rates for mills, but almost all the types are available at a slight discount in the market.

Production figures for the month of September show a decline of 20,000 tons over the previous month to 71,541 tons. The decrease in production is both on account of hessian and sacking, hessian cloth and bag being 28,865 tons in September against 37,344 tons in August. Sacking stocks were 39,917 tons against 15,752 tons. The figures are given below:—

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS

*by the mills in the membership of the Association and also by Gagalbhai Mills.**

Description.	Quantity.
1. TWIST & YARN—	
(a) for sale ..	1,170 tons

PIECEGOODS

(From Our Correspondent)

Calcutta, October 19.

The piecegoods market has been rather dull as seasonal buying is over and there is a tendency to await details of the new scheme of distribution of cloth and yarn supplies to the various provinces on a population basis. Continued difficulty, however, is being experienced in regard to yarn supplies as the result of the freezing order affecting yarns above 20's. It is said that even yarns below 20's have been frozen as a result of this order and there is a great scarcity in the market.

A Press Note issued by the Civil Supplies Department, Bengal, reminds quota-holders of cotton cloth and yarn that those dealers who have not got their licences endorsed with the word "quota-holders" by the Provincial Textile Controller by August 31. 1944, must do so by October 20, 1944. Defaulters after this extended date will be liable to penal action under the D. I. Rules. Commission agents are also directed to get their licences similarly endorsed with the word "commission agents" by the same date.

LOOKING BACK, YOU SEE THE FUTURE

There is hardly a commodity whether it be a necessity or a luxury, whose price has not risen several fold during the last four years. Control measures have checked the upward tendency of prices and in several cases they have actually come down. But if prices have to be lowered still further—and they must—something more is needed than Price Control. There is only one royal road to lower prices—SAVINGS.

Protect your savings: Land, buildings, commodities, jewels and manufactured goods are bad value for money. Their present prices are unreasonably high. Put your money in fixed investments. There are several. Invest in Insurance, Co-operative Societies, Savings Bank Account, Post-Office Savings Bank and best of all in Government Loans and National Savings Certificates.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Savings can be your safeguard in old age or your opportunity after the war. The man who does not save is missing a golden opportunity.

Prize Bonds

Prize Bonds are absolutely secure, yet owners have a chance of winning large cash prizes. Rs. 100 can win as much as Rs. 50,000 and the chance to win persists twice a year for the currency of the issue. Meanwhile the capital retains its full value and is repayable at par on or after 15th January, 1949.

You can get either a Rs. 10 or Rs. 100 Bond. There is no limit as to holdings.

Prizes are drawn half-yearly, on 15th January and 15th July. All bonds purchased before the 17th December 1944 will participate in the next draw on the 15th January 1945.

PRIZES ARE

All prize money will be free of Income-tax, Super tax, Excess Profits tax and Corporation tax.

Each series of 1 lakh pieces of Rs. 100 Bonds

1 Prize of Rs. 50,000	Rs.	50,000
2 Prizes of Rs. 20,000	Rs.	40,000
2 Prizes of Rs. 5,000	Rs.	10,000
Total amount of prize money half-yearly in each series of 1 lakh pieces	Rs.	1,00,000

Each series of 1 lakh pieces of Rs. 10 Bonds

1 Prize of Rs. 2,500	Rs.	2,500
2 Prizes of Rs. 1,250	Rs.	2,500
5 Prizes of Rs. 500	Rs.	2,500
10 Prizes of Rs. 250	Rs.	2,500
Total amount of Prize money half-yearly in each series of 1 lakh pieces	Rs.	10,000

Available at:—Any Indian Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury Business.

Prizes will be paid at all the above mentioned places and also at sub-Treasuries on or after the 15th August or 15th February following the date of the draw. Every Bond remains eligible for prizes at all drawings up to 15th January 1949. Payment of Prize money of the Rs.10 series will be made in cash; of the Rs. 100 series, half in cash and the balance in Government Loans.

Winning numbers will be published in the Gazette of India and the Press, before 15th August and 15th February following the date of the draw.

Stock Markets to-day and to-morrow:

MARKETS ACTIVE

Stock markets in Bombay and Calcutta have been rather brisk after the Diwali holidays. In the Calcutta Stock Exchange especially a strong tone has been noticeable and in Friday's session the highest levels for the week have been touched. With the favourable developments in the war situation in the West and the encouraging news from the Pacific theatre there should have been a drop in prices but operators now seem to be of the view that war or peace stock markets would continue to be active. With the encouraging prospects for the post-war period and the weight of surplus funds seeking investment there could really be no reduction in stock exchange activity. I had remarked earlier that the reopening after the holidays in mid-October would be active and that the upward movement would continue to be in evidence till the end of the year. There has been a rush for covering in the last two days as sellers have been rather reserved and there has been more investment buying. It would be interesting to watch the course of markets in the coming weeks.

* * * *

The accounts of two cotton mills belonging to the Tata Sons group cannot be said to reflect the changes in the industry in the last eight months as the reduction in prices for cotton yarn and cloth came only after December, 1944 and there was no restriction in regard to trading for five months in the year ended June, 1944. They, however, show clearly that mills earnings will not be affected very much adversely and that the reduction in prices have been to a great extent offset by a decrease in working expenses. The balance-sheet of the Central India Spinning, Weaving and Manufacturing Company Limited would have made better showing but for the strikes at the factory which extended over a period of about two and a half months. The maintenance of earnings at a high level, however, has not enabled the payment of the previous dividend as the provision for taxation has been on a larger scale and there is besides the E.P.T. compulsory deposit.

Ahmedabad Advance Mills Limited has been able to report a net profit before providing for taxation and depreciation for the year ended June, 1944 of Rs. 25,46,343 against Rs 18,48,231 for 1943-44. The sum set aside to depreciation is slightly higher at Rs. 1,33,000 (Rs. 1 lakh). The provision for taxation at Rs. 17,80,000 (Rs. 12,75,000) absorbs very nearly the increase in earnings. The transfer to the Reserve Fund is Rs. 4 lakhs (the approximate E. P. T. deposit) against Rs. 1 lakh to Reserve Fund and Rs. 1.17 lakhs to the Equalisation of Dividend Fund on the former occasion. The final dividend of Rs. 10 per share is to be paid which with the interim dividend of Rs. 8 per share makes Rs. 18 per share against Rs. 20 per share previously. The amount carried forward is slightly higher at Rs. 26.059 against Rs. 22,716 brought in.

* * * *

Central India Spinning Weaving and Manufacturing Company Limited has earned slightly higher profits in spite of the strike which lasted for about 2½ months during the accounting period. The net profit, before providing for depreciation and taxation, is Rs. 99,07,541 for the year ended June, 1944 against Rs. 97,67,143 for 1942-43. The amount set aside to depreciation is Rs. 6 lakhs (same) while the provision for taxation is not very much changed at Rs. 73.5 lakhs (Rs. 73.58 lakhs). The transfer to the Reserve Fund is Rs. 7.75 lakhs (the approximate compulsory E. P. T. deposit is Rs. 16.75 lakhs) against Rs. 1.2 lakhs to the Equalisation of Dividend Fund and Rs. 2 lakhs to the Reserve Fund. The dividend on the ordinary shares is lower at Rs. 20 per share (final dividend of Rs. 10 per share and interim dividend of a like amount) against Rs. 25 per share. It is significant to note that the compulsory deposit amount is to be paid from surplus funds of the company and that a provision of only Rs. 7.75 lakhs had been made out of the earnings for the year 1943-44 against the sum required of Rs. 16.75 lakhs. Even then the ordinary dividend is lower by Rs. 5 per share.

* * * *

Following the publication of excellent earnings reports by the Macneill group of coal companies it was expected that the Bird & Heilgers group would be able to report substantially higher earnings and that larger dividends would be distributed. The balance-sheets now published, however, show that most of the increase in earnings is taken up by additional provision for taxation and that only slightly higher ordinary dividends could be paid. The Managing Agents, however, are to be congratulated in reporting an increase in earnings at a time when coal is so badly needed.

* * * *

Total raisings during the half-year were 7,07,866 tons, against 5,62,511 tons in the previous six months and 6,28,035 tons in the corresponding period in 1943. Despatches were 6,96,133 tons, 6,30,653 tons and 5,74,993 tons respectively. It will be clear that the wagon position has considerably improved and there has been no bottleneck on account of shortage of wagons. The aggregate profit for the group for the half-year is Rs. 25,11,725 against Rs. 14,53,089 in the previous half-year and Rs. 9,78,203 in the first half of 1943 The earnings of Borrea, Burrakur and Standard make very good showing. Ondal and Sendra are returning to the dividend list. The ordinary dividends have been increased in all other cases with the exception of Churulia.

The figures relating to raisings and net earnings are given in the tables below:

Raisings

H-year ended	30.6.1944	31.12.1943	30.6.1943

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

Burrakur Coal Company, Limited, the biggest in the group, has done well. The net profit, before providing for taxation and depreciation, for the six months ended June, 1944 is Rs. 17,10,796 against Rs. 10,71,438 for the previous accounting period. The provision for taxation is Rs. 10,21,428 (Rs. 4,50,000) while Rs. 1,62,368 (Rs. 1,31,892) has been charged to depreciation. The allocation to other funds is Rs. 4.5 lakhs (Rs. 1.1 lakhs). The dividend has been maintained at eight annas per share but a bonus of two annas is to be paid in addition.

Regarding the bonus scheme the directors point out in the report that the quota, which may be revised every six months, has now been announced and relates to the period April to September, 1944. The figure set to the Company is, however, approximately the same as the maximum raisings for the corresponding period over the last few years, and while every endeavour is being made to earn this concession, the labour position is such that there can be no certainty of so doing.

* * * *

The new issues of capital by *Rohtas Industries Limited*, should be obviously for making substantial additions to plant for the total new capital involved is as much as Rs. 1.2 crores and the premium as a result of the new issues will be over Rs. 27 lakhs. The paid-up capital as on October, 1943 was only Rs. 50 lakhs. 3,00,000 ordinary shares of Rs. 10 each, fully paid-up, will be issued free to ordinary shareholders in the proportion of one share for every share held. 5,40,000 ordinary shares will be issued at a premium of Rs. 5 per share to shareholders in the proportion of 27 ordinary shares for every 10 preference and/or ordinary shares. 36,000 preference shares carrying interest at 4¼ per cent tax free will be issued at a premimum of Re. 1 per share to shareholders in the proportion of 9 preference shares for every 80 ordinary and/or preference shares.

In view of the bonus share and the new issue on bonus terms to the shareholders the ordinary shares presently quoting Rs. 40 cum. rights should be considered cheap. But there will have to be a proportionate decrease in dividends till such time as the management is able to utilise the increase in working capital for expanding the capacity of the works.

Quiet Moorat Trading

Late Rally in Textiles

(BY ANALYST)

BOMBAY (*By Wire*).

On the Moorat Day investors followed the usual policy of wait and watch and my broker friends inform me that even the orders received on the Moorat Day were more on the selling side than on the buying side. In spite of the feeling that the war in Europe might last longer than expected and the Japanese war might last for more than twelve months, market sentiment has not changed and investors prefer to have liquid funds and wait for a market reaction before making investment purchases even on the basis of post-war prospects. I am also one with the general sentiment prevailing now and I would wait for a market reaction before making fresh commitments.

While discussing chemical industry I have been recommending liquidation of Tata Chemicals for the last several months. I am afraid Tata Chemicals will not be in a position to pay any dividend for a couple of years more to come and I would not be surprised if the shares touch a low of Rs. 15 even.

The only section which was a little lively was the Textile group in Bombay with *Bombay Dyeing* up by 15 points at Rs. 1,737-8. *Kohinoor* were in good enquiry and were done up to Rs. 564 and are talked off still higher levels. The market jobbers are freely tipping this share. *Swadeshis*, *Nagpurs* and *Gokaks* seem to be also favourites of the speculators and they moved up at the close to Rs. 507, Rs. 390-8 and Rs. 308 respectively. Looking to the good buying in mill shares, particularly the shares mentioned, I expect further rise in Bombay textiles when I would suggest booking profits.

In Madras, textiles were quiet, the only exceptions being *Buckingham and Carnatic* and *Madura* which were on keen enquiry around Rs. 307 and Rs. 67 respectively.

Tata Steels were dull and quiet with Deferreds around Rs. 2,067-8 and Ordinaries Rs. 380. If there should be a reaction to somewhere around Rs. 2,000 for Tata Deferred, I would recommend investment purchases. *Indian Irons and Steel Corporations* have sharply improved to Rs. 40-2 and Rs. 31-13 on Calcutta buying. I expect a rise of further one rupee in these two scrips.

BOKARO & RAMGUR, LIMITED

NOTICE IS HEREBY GIVEN that the Seventy-fourth Ordinary General Meeting of the Shareholders of Bokaro & Ramgur, Limited, will be held at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta, on Wednesday, the 15th November, 1944, at 3 p.m., to transact the following business:—

1. To receive the Report of the Directors and to pass the Audited Balance Sheet and Profit and Loss Account for the half-year ended 30th June, 1944.
2. To declare a dividend.
3. To transact such other business as may be brought before the Meeting.

The Transfer Register will be closed from the 8th November, 1944, to the 15th November, 1944, both days inclusive.

ANDERSON, WRIGHT & CO.,
Managing Agents.

Calcutta, 23rd October, 1944.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

FRIDAY, Oct. 20.

The reopening on the Calcutta stock exchange after the *Kali Puja* was marked by a definitely steadier feeling. In the last two days a substantial rise in prices has been recorded all round. With sellers reserved and good buying enquiry, quotations have naturally been higher, Indian Irons being done at Rs. 40-12 on Friday morning and Steel Corporation at Rs. 31-14 Quotations are a little easier at the time of writing at Rs. 40-6 and Rs. 31-10 respectively but they are substantially higher on balance. The indications are that the upward movement will continue to be in evidence for some time yet. There is no particular reason for the recent improvement in prices but it is now generally felt that with the prospect of an early victory and no great scope for remunerative investment, surplus funds would seek refuge in the stock exchanges especially as the future of the bullion market is uncertain. Developments in the next few weeks will be interesting.

There has been larger business in the giltedged securities section with short and medium-dated loans in short supply. There is a premium on ready delivery of 3½ percent Paper. The quotation was as high as Rs. 100. 3 percent 1953-55 were 3 annas higher at Rs. 100-11 as also 3 percent 1949-52 at Rs. 101-11. 4½ percent 1955-60 were Rs. 116-12. 4 percent 1960-70 Rs. 112-11 and 3 percent 1963-65 Rs. 99. 3 percent 1966-68. a further issue of which was announced sometime back, was very firm at Rs. 98-6. No transactions have been recorded in Provincial loans.

In sympathy with the strength of the giltedged securition section Bank shares have also been in favour. *Imperial Bank* contributories being Rs. 484 and *Hindustan Commercial Bank* Rs. 3 premium. *Reserve Bank* were Rs. 129-8 and *United Commercial Bank* Rs. 35-8 premium. *Bharat Bank* ordy. were Rs. 107 against Rs. 105-8 early in the week.

Cotton shares have been rather uninteresting, *Bengal-Nagpur* being Rs. 36-10. *Cawnpore Textiles* Rs. 13-6 and *Elgins* Rs. 66-8. *New Victoria* were unchanged at Rs. 8-4.

With the reports regarding the improvement in the coal industry and expectations of higher dividends by the Bird and Heilgers Group of Coal Companies, a rise in prices has been recorded in Coal shares. *Bengal* were 8 points higher at Rs. 684. *Bokaro & Ramgur* were 1½ points higher at Rs. 41-8, *Burrakur* at Rs. 40-2 against Rs. 39-8 and and *Equitable* at Rs. 63-6 against Rs. 62-14. *New Manbhoom* were further higher at Rs. 68-4. It is reported that North Damuda. Churulia and East India were in good request . New Beerbhoom were Rs. 35-8 and *Raneegunge* Rs. 50-4 against Rs. 49-4. *South Karanpura* were unchanged at Rs. 21-10 while *Talcher* were quiet at Rs. 10-2.

Jute shares have provided the feature of the week with nearly every share marked higher. The report that *Howrah* might pay a higher dividend for the halfyear ended September. 1944 was mainly responsible for the strength of this section. *Howrah* have registered a rise of nearly 2 points to Rs. 86-2 but the quotation at the time of writing is Rs. 85-12. *Anglo-India* were Rs. 471 against Rs. 459. *Alliance*, on the publication of the report, have improved further to Rs. 632. A dividend of Rs. 17 8 per ordinary share for the half-year ended July, 1944 against Rs. 12-8 per share for the previous six months has been announced. India have not recorded any appreciable rise in prices though the quotation is unchanged at Rs. 703. *Kamarhatty* were Rs. 658, and *Kankinarah* Rs. 552. *Meana* were easier at Rs. 107 while *National* were unchanged at Rs. 32-14 *Northbrook* maintained last

For Shareholders only

ROHTAS INDUSTRIES LIMITED

NOTICE

is hereby given that the consent of the Central Government has been obtained to the following issue, which the Directors have decided to issue on the terms and conditions given below. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

3,00,000 Ordinary shares of Rs. 10 each, to be issued as bonus shares to the existing shareholders. No payment will be required to be made by the shareholders in this respect, as these are to be issued on capitalisation of capital and general reserve to the like extent.

5,40,000 Ordinary shares of Rs. 10 each, which the Directors have decided to issue at a premium of Rs. 5 per share, i.e., issue price Rs. 15 per share.

36,000 Preference shares of Rs. 100 each, which the Directors have decided to issue at a premium of Re. 1 per share, i.e., issue price Rs. 101 per share.

The new Preference shares, Class B, will carry cumulative preferential dividend proportionate to the amount paid on them from the date of payment at the rate of 4¼ per cent per annum, income-tax free and they will rank *pari passu* in all other respects to the existing Preference shares, Class A.

This issue is being offered to the existing shareholders in proportion to the shares already held by them irrespective of any class of shares, under Section 105C of the Indian Companies Act, 1913.

For the above purposes, the Directors have decided to close the Shareholders Register from 25th October, 1944 to 31st October, 1944, both days inclusive.

The shareholders whose names will appear on the Shareholders Register on 31st October. 1944 or who will prove to the satisfaction of the Directors that they are actual holders of these shares on the said date will be entitled for each ordinary or preference share held by them as follows:—

One bonus share, free of charge, for every Ordinary share held. Preference shareholders will not be entitled to bonus shares.

27 Ordinary shares for each existing 16 Preference and/or Ordinary shares held by them, without considering bonus shares, at a rate of Rs. 15 per share; and

9 Preference shares for every existing 80 Ordinary and/or Preference shares held by them, at a rate of Rs 101 per share.

Shareholders can apply for a larger number of shares of any class than they are entitled to, but the discretion of the Directors in the matter of allotment of a higher number of shares than they are entitled to according to the above ratio, will be final.

In case of fractions, the Directors will allot the nearest round number that works out.

Full money, along with the application, should be paid in respect of Ordinary shares applied for and in the case of Preference shares Rs. 11 per share should be paid with the application and the rest money will be called as and when necessary by the Company.

The application, with the necessary money, should be deposited with the Registered Office of the Company or with the Company's Bankers. The Imperial Bank of India, Patna and Burra Bazar, Calcutta and all Branches of Bharat Bank Ltd., in the prescribed form, from 1st to 15th November, 1944.

By Order of the Board,
S. P. JAIN,
Managing Director.

DALMIANAGAR,
Dated, 12th October, 1944.

Where application Forms cannot be had, they may be written or typed as per below:—

FORM OF APPLICATION FOR SHARES

To
THE DIRECTORS,
ROHTAS INDUSTRIES LIMITED,
DALMIANAGAR (Bihar).

GENTLEMEN,

Having paid to the Company's Bankers the sum of Rupees.....Rs.....being application money at Rs. 15/- Ordinary Rs. 10/- on ——— shares each of the face value of ——— issued at Rs. 11/- Preference Rs. 101/- Rs. 15/- ——— per share and I request you for the allotment of the said or less number Rs. 101/- of shares as per your Directors' Notice, dated 12th October, 1944.

I hereby agree to accept the same of any smaller number of shares that may be allotted to me.

I hold the following number of shares:—

Class of Share.	Number of Shares.	Distinctive Numbers.

the sum of Rs.....
Date..... Bankers
Secretary

week's improvement at Rs. 44-12 while *Nuddea* were steady at Rs. 130. *Presidency* fluctuated around Rs. 11.

In the Engineering section, both Indian Irons and Steel Corporations have been active. *Indian Iron* improved from Rs. 38-14 at the end of last week to Rs. 40-12 after the close on Thursday but the quotation now is Rs. 40-8. Steel Corporation likewise improved from Rs. 30-13 to Rs. 32. The quotation now is Rs. 31-10. There has been some buying enquiry for Jessops though there is not much improvement in the price which is only Rs. 24. *Burn & Co.*, were Rs. 402; *Britannia Engineering* were bought up to Rs. 20. *Marshalls* were steady at Rs. 4-10 and *National Iron and Steel* at Rs. 13-2.

Among sugar shares, *Carew & Co.*, have been in good demand with a rise of 2 points to Rs. 31-8. *Belsund* were Rs. 16-12, *Champaran* Rs. 14-6 and *Dharbhanga* Rs. 30-8.

There has been some active buying in Tea shares with not many sellers. *Bishnauth* were Rs. 39-8, *Hasimara* Rs. 31-12, *Patrakola* Rs. 1,150, *Sapoi* Rs. 19 *Gungaram* Rs. 580.

In the miscellaneous section, *B. I. Corporation* were sticky at Rs. 6-8 while *Alkali & Chemical* were better at Rs. 30. *Dharangdhara* were Rs. 562, *Indian Cable* Rs. 28-2 and *Rohtas Industries* Rs. 39-10. *Calcutta Trams* fluctuated between Rs. 44 and 45.

Among paper shares *Titaghur* were rather quiet at Rs. 26-7. *India Paper Pulp* were higher at Rs. 219; *Mysore* were Rs. 24-5, *Star* Rs. 16-6.

B.B. Petrol changed hands at Rs. 4-1 and *Burma Corporation* at Rs. 4-10. On the announcement of a dividend of 6 annas per share *Dalmia Cement* are better at Rs. 17-14.

DALMIA CEMENT LIMITED.

NOTICE

Is hereby given that an ex-gratia Payment of Rs. 14,00,000/- on account of fixed price contract has been received from the Government of India towards the losses sustained by the Company for the period ended 31st October, 1943. The loss sustained by the Company for the year ended 31st December, 1943, will thus be reduced by this amount.

The Directors reviewed the present financial position of the Company and are pleased to declare an ad interim dividend at the rate of Rs. 6/- per preference share, i.e. 6 per cent per annum and -/4/- per ordinary share, i.e. 3 per cent per annum.

The dividend will be payable to those shareholders whose names stand on the books of the Company on 31st October, 1944, on 21st November, 1944.

The Share Transfer Books of the Company will remain closed from 25th October. 1944 to 31st October, 1944.

By Order of the Board,
For DALMIA CEMENT LTD.,
For DALMIA JAIN & CO., LTD.,
S. P. Jain,
Director,
Managing Agents.

Dated, Dalmianagar, 12th October, 1944.

THE MYSORE SPINNING AND MANUFACTURING CO., LTD.

NOTICE OF SIXTY-THIRD DIVIDEND

Notice is hereby given that a Final Dividend of Rs. 4 per share, and a Bonus of Rs. 4 per share of Rs. 50 for the year ended 29th February 1944, sanctioned by the Shareholders at the Fifty-First Annual General Meeting held on the 9th October 1944 is made payable at THE CENTRAL BANK OF INDIA, LIMITED, BANGALORE-CITY, on and after MONDAY, the 23rd October 1944 to those Shareholders whose names stand on the Register of Members on the 21st September 1944.

By Order of the Board,
N. SIRUR & CO., LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Bombay, 9th Oct., 1944.

THE CENTRAL BANK OF INDIA, LIMITED.

NOTICE

Re: Conversion of 2 Coupons into a share.

Notice is hereby given that the last date for submission of coupons for conversion into shares of the Bank is extended from 15th October 1944 to 15th November 1944.

Shareholders who are entitled for a coupon in the new issue and who have not yet taken delivery of their coupon are requested to take delivery thereof in exchange for the application receipt for Rs. 25 duly discharged by them and either submit it along with another like coupon for conversion into a share or dispose it off before the above-mentioned date.

H. C. CAPTAIN.
Managing Director.

Bombay, 14th Oct., 1944.

WORLD OF INDIAN FINANCE

Calcutta. Friday Evening.

Easy money conditions continue to prevail in the market and call money is nominally quoting ½ per cent. in Calcutta and ¼ per cent. in Bombay. With a smaller demand for funds and the large disbursements by Government in recent weeks bank balances have increased. It is not surprising, therefore, that even with an excess of treasury bills over maturities there has been no difficulty in getting the short-term requirements of both the Central and provincial governments. The Central Treasury Bills offer met with a greater response this week, applications being higher at Rs. 14.15 crores against Rs. 12.81 crores. There has been only a token decrease in the average discount, however. The offer for the next week has been maintained at Rs. 6 crores.

Against the offer of Rs. 2.5 crores of Assam Government treasury bills applications for Rs. 3.45 crores were received and the yield was lower than on former occasions at nine annas and nine pies per cent.

The return of the Reserve Bank of India for the week ended October 20, 1944 shows that there has been an expansion of currency for the third week in succession and on a large scale. The additions to currency in recent weeks are of the order of Rs. 22 crores against the total for the three months ending September of only Rs. 8 crores. It would thus appear that there has been no slowing down in the rate of expansion of currency and that with the intensification of the war against Japan the problem of finding rupee finance for Allied war expenditure would be greater than ever. Total notes issued were Rs. 971.74 crores against Rs. 9765.97 crores while notes in circulation were Rs. 962.19 crores against Rs. 957.05 crores. Sterling securities show an increase of Rs. 6 crores to Rs. 856.33 crores while rupee coins are slightly lower at Rs. 13.15 crores.

In the banking department Central Government's balances were Rs. 1.4 crores higher at Rs. 185.23 crores. Other Government accounts also are a little more than Rs. 1½ crores higher at Rs. 10.55 crores. In spite of the fact that treasury bills sales are at the present moment in excess of maturities, bank balances with the Reserve Bank show an increase to Rs. 103.47 crores from Rs. 101.13 crores. Foreign balances are Rs. 3.63 crores higher at Rs. 302.35 crores even with the transfer of Rs. 6 crores to the issue depatment.

On an earlier occasion we pointed out that the policy of the authorities in trying to keep down the increase in note circulation as far as possible was commendable, the additions to the note issue being only Rs. 8 crores in the three months July, August and September. It appears now that with the receipt of large sterling securities and poor gold sales, further expansion in currency against sterling securities cannot be avoided if Allied war expenditure continues on the present scale. Apart from the inflationary effect of further additions to the note issue, negativing to a great extent the object of anti-inflationary measures, it is desirable that as far as possible further accummulation of sterling balances should be avoided. Unless it is clear as to how these credits can be used some other method of financing Allied war expenditure will have to be devised.

Last week, we said that the absence of any decline in gold and silver prices was rather surprising as there has been a considerable improvement in the war situation. The steadiness of gold and silver was due to the refusal of the Reserve Bank to lower its selling limits. The developments in the bullion market during the past few days, however, are gratifying. There appears to be a change in the selling policy of the Reserve Bank, there being a reduction in the selling limits for both gold and silver on three occasions. There is a decline of as much as six points in silver and seven points in gold, silver forward being quoted as low as Rs. 114/6 and gold Rs. 60/- against Rs. 122/2 and Rs. 65/11 respectively at the end of last week. The aggressive selling of the Bank authorities has resulted in a drying up of investment demand. The offtake of gold on Thursday in the Bombay market was nil. Bears have naturally taken advantage of the present position to cover their open positions.

Mr. C. D. Deshmukh's reference, in a Rotary Club Speech, sometime back, to the need for a revision of the rupee exchange rate so as to admit of an import surplus gave rise to the speculation regarding the possibility of an increase in the exchange rate. The Bombay market was thick with rumours of a change in the rupee exchange. It is now said, however, that there is to be no change in the present exchange value of the rupee. It is also reported that the Finance Member speaking at the General Policy Committee of postwar planning and development on Friday categorically denied that there was any proposal under contemplation for a change in the external value of the rupee.

The statement of the Imperial Bank for the week ended October 20, 1944 shows an increase in deposits to Rs. 233.25 crores from Rs. 231.64 crores. Investments are higher by Rs. 2 crores at Rs. 138.99 crores as also advances at Rs. 56.03 crores. Cash balances are lower at Rs. 48.31 crores.

The exchange market has been steady. The closing quotations are:—Banks buying 90 days/st at 1s. 6¼d. for 1 and 2 months and banks buying 90 days/st at 1s. 6 9/32d., for 3 to 6 months.

B.C. Rates T.T. 1s. 5 15/16d., B.C. Rates D.D. 1s. 5 15/16d. Banks selling T.T. 1s. 5 31/32d., Banks selling D.D. at 1s. 5 31/32d. Banks buying T.T. at 1s. 6 1/32d., and Banks buying D.D. at 1s. 6⅛d.

London-New York:—X'Rates $4.02½/3; Banks selling T.T. at Rs. 332¾; Banks selling D.D. at Rs. 332¾. Banks buying T.T. at Rs. 297¾; Banks buying D.D. at Rs. 326½.

London-Montreal:—X'Rates $4.43/47; Banks selling T.T. at Rs. 302½; Banks selling D.D. at Rs. 302½. Banks buying T.T. at Rs. 297¾; Banks buying D.D. at Rs. 294¾.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 24th October, 1944. Total amount offered was Rs. 14,14,50,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 41 per cent. Total amount accepted was Rs. 6,00,00,000, the average rate of accepted tenders being Rs. 0-7-11 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 31st October, 1944 in Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 30th October, 1944 at other centres. Successful tenderers should make payment on Friday, the 3rd November, 1944. Other conditions are as usual.

During the week nded the 20th October, 1944, Government of India Treasury Bills for Rs. 2,31,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay, October 26.

Buillion prices have sharply declined this week thanks to the change in the Reserve Bank's policy to one of selling at lower and lower prices. A week back silver tenders were rejected at Rs. 124. The Bank started selling 200 bars on Tuesday and Wednesday and the market declined further. Today when the Bank accepted tenders at Rs. 3 lower at Rs. 119-12, the closing was weak at Rs. 114-8 for settlement and Rs. 116 for ready sales and reduced the bars to 100. A fall of Rs. 6 over the week speaks for it self. Likewise a fall of Rs. 7 in gold. On Monday the Bank sold at Rs. 67 which started the decline which was accentuated by sales at Rs. 64-9 on Wednesday and Rs. 63 today. With sales averaging daily 25,000 tolas the lowest touched was Rs. 60-4 for settlement and Rs. 61 for spot to-day. The undertone was steady, however, imparted by a rising offtake at lows amounting to 30,000 tolas daily. Arrivals also are falling as the Bank seems likely to sell at further declines.

Welcome Assurance

Though the end of the war has slightly receded, compared to the expectations of a month or two ago, interest in postwar problems has not flagged. On the other hand, men of position and authority have been more eager than before to grasp every opportunity to express themselves on the problems before them. The last week has seen a surprisingly big bunch of such pronouncements, which together cover a large part of post-war economic policies as they affect this country. Speaking at the East India Economic Association, Mr. Amery evinced a capacity for sympathetic appreciation of India's economic position, which one wishes, he could extend, in ever so small a degree, to the political sphere as well. His speech has been followed by that of Sir Ardeshir Dalal at the Industrial Policy Committee at Bombay. And lower down in the official hierarchy, Mr. F. M. Innes, the Chief Controller of Imports, was fairly communicative on questions relating to the import control policy of the Government of India. The three speeches taken together cover both questions of principle and the more concrete objectives of administrative policy. If mental reservations can be ruled out, they must go a long way to indicate what the country as a whole and the business community in particular can expect in the immediate postwar years.

It is, indeed, fortunate that the Secretary of State for India has felt called upon to affirm Britain's readiness, not to say, eagerness, for India's industrialisation. Mr. Amery was quite positive that "the Government of this country only wants to see Indian industry developing to the fullest. The last thing industrialists of this country have in mind is the idea that the British export industry can best prosper by India being held back in the course of her industrial development." The statement would have lost all value if Mr. Amery did not recognise at the same time the need for making it in the clearest possible terms. For, then, it would be on a par with his affirmation that the British Government's concern is to hand over the reins of power to a representative National Government. He recognises the existence of a feeling throughout India that Britain "or at any rate the industrialists of this country would wish to restrict the progress of Indian industry in the interests of British export trade." He chooses to call it a superstition, but adds that 'what lends colour to the superstition is that in the last century British authority was exercised in preventing protection of India's industry as against British imports, more particularly of cotton imports.' Mr. Amery's defence of the policies which lent colour to this "superstition" has nothing new in it; for, this is not the first time that we are told that the harm that was done to Indian economy was the incidental result of Britain's devotion to free trade. "In those days," Mr. Amery tells us now, "we in this country were concerned almost fanatically that free trade was essentially beneficial to everybody and wherever we could, we were bound in duty and under obligation of our trusteeship to the policy of free trade. For many long years after, we conceded India the right to develop her industry, while continuing to impose the handicap of free trade upon this country."

Mr. Amery does not realise that this is no answer to India's charge of interested obstruction to her economic progress, unless it can be shown that the free trade to which Britain was so devoted had the same hardships for her as for India. It paid Britain to be devoted to free trade; and if she "continued to impose the handicap of free trade upon herself," it was because she wisely chose the lesser evil. That, however, is of little importance to future policies. What matters is that the transitional period, in which free trade and protection or regulation were for Britain just two alternative evils, is now recognised to have come to an end and that Britain is not as eager as she used to be to coax or coerce the world back to a commercial policy which suited her interests admirably over nearly two centuries. She is more inclined now to a careful estimate of the advantages she might secure for herself by the efforts of backward countries to secure their full economic development. Whatever claims Britain may make for herself, she cannot claim to have been quick in appreciating either the significance of changes in world trade or the consequences of alround development, not to speak of the legitimacy of the economic aspirations of other nations and peoples. Britain has been unconscionably long in recognising it even as a possibility that "the more prosperous India can make herself, the more she will, in the ordinary course of needs of consumers—needs of factories for capital goods—have recourse to help from outside."

Sentiments like these have, no doubt, been expressed in the past; but they only masked the hope that by some inscrutable process India's purchasing power would be enlarged and that thereby India would be in a position to consume more of what Britain had in the past been selling to her. It is only now that a Secretary of State for India finds it necessary to tell his countrymen: "Provided we do not think India must always buy what we have always sold her, but are prepared to sell things India needs, there will always be favourable openings for British trade to India and even more favourable opportunities for collaboration between British and Indian industrialists."

Hardly any one in India would like to change a single word in the above statement. Hardly any one will grudge Britain either favourable openings for trade with India or favourable opportunities for collaboration. But as we have pointed out at the beginning, it still seems unsafe to rule out the possibility of mental reservations. The test of the new belief is the readiness to allow India to produce for herself what she has till now been importing from abroad, the readiness to see a decline in such imports and to provide India with the material necessary for manufacturing them in this country. The working of the import controls, it must be said, is not such as to strengthen faith in Mr. Amery's professions. There are cases of articles which are now being imported, for the manufacture of which the necessary raw material was denied to Indian industry not long ago. The ground for such denial at that time was the shortage of shipping space. And the ground for imports of the same articles in manufactured form now is the shortage of such goods, and, even more, the need to fight the effects of inflation. Mr. Innes, in his interview to a South Indian Chamber of Commerce is reported to have said that it has been the policy of the Government to facilitate the imports of consumer's goods as an anti-inflationary drive, and the improvement had been really remarkable.' But who can say that, if the additions to consumer's goods came from indigenous sources, the effect on inflation would be less marked? That the shortage of shipping stood in the way of imports of raw material need not perhaps, be questioned. But in the present circumstances the anti-inflationary campaign might be even more successful, if the authorities endeavoured to secure the import both of consumer's goods and of the material needed by indigenous industry. As it is, Indian industrialists find it hard to persuade themselves that Mr. Amery means all that he says or that the Government of India can be depended upon in the future to do the best by Indian industry.

Nevertheless, it is both discreet and fair to take the assurance of Sir Ardeshir Dalal that, "so far as His Majesty's Government are concerned, there is a clear appreciation of our needs and aspirations." Perhaps, he meant to sound a note of warning against undue optimism when he said, 'prosperity like peace is indivisible, and the awful tragedy of this war would have been enacted in vain, if powerful countries still believed that they would lay the foundation of permanent happiness for themselves on the backwardness and exploitation of less fortunate countries."

Though vestiges of this obsolete view may persist, it is not unreasonable to assume that the general conditions of the postwar period will be favourable to attempts at planned development of the economic life of backward countries. Sir Ardeshir's work would be impossible except on that assumption. The policy he has sketched on this basis is a welcome confirmation of our forecast of the place of the State in the business life of the postwar period. As an industrialist, Sir Ardeshir has emphasised the part that private initiative has still to play. He has also affirmed that controls must continue, and, what is more, that they must derive their sanction from formal legislative measures instead of the Defence of India Rules of today. He has promised what the country asked for in vain for years, a permanent Tariff Board and a liberalisation of the conditions for the grant of protection to industry. And he has sought to impress on industrialists the importance of booking with the Government of India their orders for machinery, so that they can secure due priority, when the time comes. These are, indeed, welcome signs that the Central Government is serious about planning and that they mean to bring the whole country under a comprehensive system of control, even if the attempt should involve an encroachment on the rights of the Indian States.

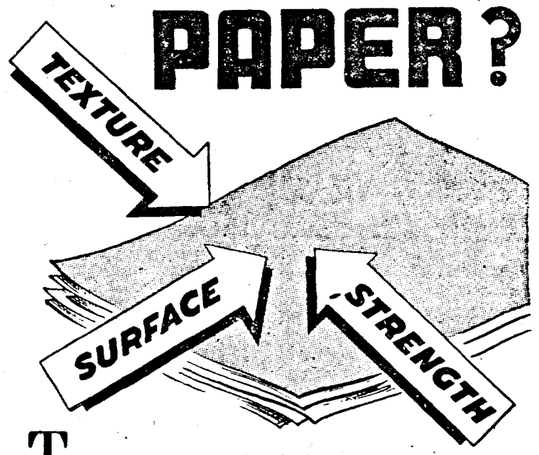
Machine Tool Industry

The views expressed by Sir William Stanier, Chairman of the Machine Tool Mission, now on tour in India, while speaking at a luncheon given in honour of the Mission by the All-India Manufacturers Organisation at Bombay would be received with great interest by all those who are anxious to hear the expert views of this Mission from England. It is well-known that the mission was sent to review the capacity of Indian engineering industries to keep up with the demands of the war and suggest correct lines of progress. The Mission has now toured a large part of this country, but have abstained from giving any lengthy statement of their views regarding the present position of the machine tool industry in India. However, Sir William Stanier has now tendered certain important bits of advice which those

who are interested in the early and healthy development of the machine tool industry in India should profit by. Trained personnel has been the bottleneck in several lines of progress and the manufacture of machine tools has been no exception. Sir William has done a service in pointing out the necessity for creating a class of craftsmen to operate highly specialised machines. This drawback which exists in India has to be set right and an intrinsic course of training craftsmen lasting for five years and more has been suggested. If industrial research is to be translated into practice for the benefit of industries, there should be close co-operation between the industry and the technical schools. Thanks to this war we have today in our midst, in the Supply Department and elsewhere, a number of foreign experts whose experience would be invaluable for Indian industrial workers and Sir William Stanier urges that the help of these experts should be sought for a sound organisation of Indian engineering industries. The industrial policy of the Government of India is not yet clearly known and no one is yet aware which of the industries may be allowed to thrive and which may have to shut down at the end of hostilities. The Chairman of the Machine Tools Mission is therefore justified in not giving his views and suggestions regarding the import of machinery for the manufacture of machine tools during the postwar years. Mr. Trimming, the Machine Tool Controller for India, who also spoke on this occasion, gave out that there are at present 260 manufacturers in the country licensed to manufacture machine tools. He felt satisfied that while before the war India produced only about 100 machine tools most of them intended for domestic use, today over 3,600 machine tools are being manufactured in this country. In view of the difficulty of securing technical assistance he considered this achievement highly remarkable.

The report of the speeches of Sir William Stanier and India's Machine Tool Controller paints a rosy picture of the development of machine tool industry in India during the war. But our enquiries from trade circles have shown that the record of the progress of machine tool industries in India has not been encouraging except in a few lines. The statement that there are 260 manufacturers in India capable of producing machine tools has been considered exaggeration. It appears that there are hardly ten or twelve firms which can produce some of the items of machine tools worth mentioning. Most of the firms included in these 260 manufacturers mentioned by Mr. Trimmings appear to be ill-equipped and absolutely unsuitable for organising a healthy machine tool industry in India. The story of Government's attitude towards the machine tool industry during the past five years has not yet been fully revealed to the public and it was characterised by half-hearted attempts at helping a new born industry just to support the war effort but not to lay the foundations of a prosperous industry which could tackle the problems of peace. During the first two years of this war, there has been no systematic attempt at offering facilities for the manufacture of machine tools though some firms expressed their eagerness to organise production. The unfavourable military developments in 1940-41 resulted in a sudden curtailment of the import of machine tools from Great Britain and U.S.A. our chief suppliers before the war. Japan could not supply high quality items and therefore the position remained quite unsatisfactory. A Machine Tools Controller was then appointed to devise ways and means of supply of India's machine tool requirements as far as possible from within the country. Then started hurried preparations to encourage local manufactures and the Government devised a scheme of bulk ordering on certain selected firms and gave them facilities for the manufacture of new items of machine tools and instruments. But this solicitude, we are told, did not continue for long At the earliest possible moment when the transport facilities improved, and when direct supplies from foreign countries particularly from America, could be assured, the policy seems to have changed for the worse. For the past eight months even those manufacturers who have been till now patronised by the Government have been more or less left to take care of themselves.

The return to normal trade and competitive markets during a period of rigid controls cannot be a happy prospect for these machine tools manufacturers and in the absence of a definite promise of help to put them on a stable basis, there seems to be little scope for postwar development of machine tools manufacture. Even today, with all the Government help, direction and facilities for technical advice, Indian machine tool manufacturers can hardly produce a few items of Grade I machine - tools. Most of the items produced in India are of the crude variety and yet foreign countries are forging ahead on the path of precision instruments and complicated machinery of the latest type. It is also well-known that even before the war America had an excess capacity of machine tools manufacture, and after this war England, Canada and one or two other countries may be in a position to export machine tools to India. Thus the immediate prospects before the Indian machine tools manufacturers are fierce competition from abroad and no promise of help from within. If they are left too long to unregulated competition, it is possible that many of them will have to close down their business. Some form of protection, tariff or otherwise, would be needed in order to encourage this essential form of engineering industry. The extent of progress achieved by machine tools industries in a country usually measures the strides taken in engineering development. While it is true that the establishment of the machine tools industry opens up new avenues for the progress of industries, it is equally true that a systematic and planned drive for fostering heavy industries necessitates a well organised machine tools manufacture.



If Mr. Trimming's picture of India's progress in the manufacture of machine tools should be read against the great strides taken by the Australian machine tools industry during the past four years, the contrast would be glaring and significant. Australia, it appears, had the same handicaps when the war started but, owing to the sympathetic and planned drive for industrialisation pursued by the Australian Government, that Dominion produces today several varieties of machine tools, factory equipment, electrical equipment, ball bearings and hand tools. At the outbreak of war there were hardly half a dozen shops capable of manufacturing machine tools but by October 1942 the Director of Machine Tools placed an order for more than £15 million of machine tools equipment. Out of a total of 21,000 machines provided from all sources Australian manufacture contributed a quota of not less than 14,000. 3,000 lathes of various kinds; more than 2,000 presses up to 3,000 tons capacity, about 2,000 drillers, 2,000 grinding machines, 1,000 milling machines etc., had already been delivered by the Australian manufacturers for speeding up the Allied war effort. The magnitude of Australian achievement lies not only in the wide variety of items they are manufacturing and the high quality of precision goods they are able to produce, but also in the price factor which is likely to count a good deal in sheltering the wartime developments against the onslaught of peacetime economic warfare. During the past three years, the Dominion has produced a large number of techinicians trained in the manufacture of machine tools and the industry has now been so well organised as to bring down the cost of production to a level at which it can face peace with confidence and cheer. The machine tools industry in India cannot boast of such a remarkable progress.

In fact the present is an opportune moment for the organisation of the machine tool industry in India. Firstly, the coming offensive against Japan would necessitate well equipped repairing yards and efficient workshops in India. The tempo of India's war effort has, therefore, to be speeded up, not slackened. Secondly, thanks to two years of Government aid there has been remarkable progress in some lines and if sympathetic help is extended to some of these manufacturers they could easily produce a wider variety of machines and a larger number of precision tools. Thirdly, agriculture which has been woefully neglected for long today clamours for urgent attention and one of the surest ways of increasing the output of foodgrains is the supply of cheap agricultural tools and machinery. Indian manufacturers have the capacity to meet internal demand for these articles and those who shout from the housetops on the need for growing more foodgrains would do well to ask for more tools and implements for our ryots. The machine tool industry of India should be made to serve Indian agriculture, here and now, if famine is to be avoided in future. Fourthly, it is also well to remember that normally the major demand in India is not for machine tools of super accuracy and refinement, but only for the simpler and general type capable of standing up to rough usage. The trend in foreign countries appears to be for the leading machine tool makers to abandon simpler and cheaper models in favour of special tools and high precision instruments. These older models may be as much as 30 percent cheaper than the new ones and since these types are in good demand in India there should be no difficulty in organising local manufacture of these items. The special tools and high precision instruments should, of course, be imported from abroad for some time to come. It should, however, be noted that deterioration in standards is one of the real menaces facing the machine tool industry and suitable steps should be taken for rigid inspection at all stages. Today our industrialists show a tendency to order new machines from abroad because they prefer up-to-date designs, the benefit of world-wide experience, special manufacturing facilities, low first cost and then technical service and backing. If Indian markets are to be safeguarded our machine tools industry should be helped not only to produce good quality machines but also to evolve Indian standard specifications at an early date.

Indian industries have grown up during the war and the authorities are promising a planned industrial drive in the near future. Without the establishment of key industries no headway could be made and since machine tool manufacture forms a basic engineering industry it should receive the greatest help from all those who seek to speed up the industrial progress of India.

HOW DO YOU JUDGE PAPER?

The Master Printer knows how to select his paper for a particular job. Not so the layman and yet he needs good paper. Surface, Texture and Strength determine the Quality of paper. It is not true that a smooth surface is necessarily better than a rough one or that a particular texture is superior to another or that the stronger the paper the better it will be, under all circumstances. It all depends on the nature of the job for which the paper is required. It is possible to-day, with the highly developed modern machineries, to manufacture paper to suit every purpose.

The simple health rule of Inner Cleanliness with Andrews will help every woman to keep fit, stay young and feel cheerful. For Andrews is more than a laxative. A glass taken regularly, as often as needed, clears away those poisons that cause skin blemishes, headaches and the little ills of life. See how Andrews purifies the entire system:

FIRST . Andrews refreshes and cleans the mouth and tongue.
NEXT . Andrews settles the stomach and corrects acidity.
THEN . Andrews tones up the liver and checks biliousness.
FINALLY . To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness be regular with your

By Special Cable

The U. S. A. and Eager Customers

WASHINGTON, (*By Special Cable*)

Mr. Ferdinand Eberstadt, formerly Vice-Chairman of the War Production Board, said last week it was "high time" the United States framed a national foreign economic policy for the post-war period. A well-known investment banker, who entered Government service to play a large part in America's mobilization for war, has thus centered attention on a problem that has recently been perplexing economists and traders on both sides of the Atlantic, namely, the organization of world trade after the war and the part the United States will play therein.

The United States is reported to be ready to call an international conference on world trade soon. There are many here who think this should have been done in advance of such things as the conferences at Bretton Woods on stabilization and the Chicago meeting in civil aviation. Economists and traders argue that the United States with a productive capacity sixty per cent greater than in 1939 must rapidly and intensively develop foreign markets in order to maintain economic stability at home. Mr. Eberstadt said: "The backbone of our industrial exports will no doubt remain those typically American capital goods with which other people can increase their own production, reduce their costs and thus raise their living standards".

Another economist, Mr. Fritz Sternberg of New York said last week American capital exports should assume the foremost role in world economy after the war in close relation with exports of industrial products in order to maintain employment at home. Whereas Mr. Eberstadt forecast exports after the war of seven to ten billion dollars annually Mr. Sternberg said they should reach twelve billions. Mr. Eberstadt classified India, Russia, Central and South America, and China as eager customers for American capital goods and industrial 'know-how.'

Dispatches from London continue to reflect the uneasiness in Britain about American trade prospects at the very time that American businessmen acting through the National Association of Manufacturers charged the U.S. Government for giving them no "inkling" of what post-war trade policies might be, especially, with respect to Lend-lease settlements.

The "New York Times" editorially wrote concerning "needless trade fears" both in America and Britain. The New York Times said "Obviously Britain will have to export enormous amounts after the war", but said also "purchasing power therefore is not a serious problem"; said it would come from Britain's creditors. "Britain's outside creditors will not be able to realize on their claims except by buying British goods with them or selling them to somebody else who will buy British goods with them. The *Times* vigorously opposed the hint given by Sir George Schuster, Member of Parliament and Director of numerous banks, that the United States should curb her post-war exports. "This is not the way to restore world productivity and world wealth. The more America sells abroad, the more it must buy from abroad and a greater customer it will be for British goods"; All this discussion here, and in Britain, gives point to Mr. Eberstadt's statement.

The New India Assurance Co., Ltd. takes pride in announcing its latest business figures, which sum up the company's progress during the short period of 25 years.

Established in the year 1919, New India to-day holds the unique position of being the premier Indian Composite Insurance Organisation transacting Life, Fire, Marine, Accident, and all other forms of insurance.

Prudent and efficient management, a huge paid-up capital, which is one of the largest in the world, a far-seeing and cautious policy in the matter of investment, and last, but not the least, the unfailing service of the organisation to the policy-holders — these are some of the factors, that have contributed to the success of New India in the course of this short period.

New India offers attractive policy terms, maximum security and willing service from its agents, and guarantees a prompt settlement of claims.

Editorial Notes

Fruits of Control

Cost of living changes this year have been of little consequence since price control has succeeded in keeping food prices down. The working out of the policy of ceilings and wider direction as to uniformity has made procurement the only problem today. The stable price level is best measured by reference to prices a year ago. Wheat and rice were dearer. So were oil-seeds. The general downward tendency has received much support from war news of late; also from the Provinces' acceptance of the necessity to appiy the Foodgrains Control Order. In regard to enforcement as well as rationing great strides have been taken. For the producer there has been assurance as to minimum prices even when production expands as well as advice to limit growing of commercial crops in the interests of food production. There is no uniform price for rice but the pricelevel in Bengal is falling well in advance of the harvest. The general position may be summed up thus. For wheat and the millets maximum prices apply and in the case of rice Control prices are enforced though variations between the Provinces persist. In Bengal, Sind and the U. P. the prices for all grains are definitely lower than a year ago. Consultation through an advisory committee preceded the fixation of maximum prices which take into account the rise in the producer's costs. The elimination of the profiteer as distinct from the speculator from the grain trade is another aspect of price control. Though it is believed that the size of the kharif harvest will influence prices, mention must be made of the indirect effects of the fall in bullion prices since August. The easiness noted in the cotton and jute markets alike may have a similar effect. Added to the psychological effect of war news is the enlarged supply of certain goods like cloth. Price control in respect of clothing and footwear as well as imported goods has succeeded to the point at which fears of a future advance in prices, contingent on the intensification of war in the East, should disappear. The existence of local anti-inflationary factors is no longer questioned, and idler conditions in the money market on the verge of the cold weather imply the withdrawal of resources from commodity and other markets because the scope for their employment is drastically limited by price control.

Past the Peak

The trend of prices for manufactures is the same as for most commodities. Stability has been regained at the decline to judge from the main movements in wholesale prices since March. The most striking example of stability is provided by hides but more significant, as evidence of the success of anti-inflationary measures, is the fall in the price of cloth. The lowering of the price of galvanised sheets is admittedly advantageous to the consumer. What marks off 1944 from the past year is the elimination of the fluctuations although the credit for the excentional steadiness of jute and hessian prices must go to the mills which worked out the price control scheme. The only manufactured article to quote higher than in March is cement and, in this case, the explanation is provided by the rise in the cost of coal. Further concessions to cement makers have been notified. Illustrative again of stability is the continued fall in the Calcutta wholesale price index which moved from 349 in May to 301 in December 1943; and has been more or less stationary. If the index for foodgrains, however, remains high, and building materials are dearer than in 1943, the measurable change in the commodity markets is indicated by the fall under cotton, oilseeds (rapeseed being an exception) and oils. In the case of copra, groundnuts and coconut oil, there have been fairly wide fluctuations in prices this year but the downward tendency is unmistakable in all cases. Charts illustrative of recent changes point to no rise in sugar, salt or shellac prices for months. Tea prices admittedly have gone down and the only substantial change to record is the authorised increase in coal prices this year. Practically no change has taken in iron and steel prices but the Calcutta index for metals also is substantially lower than in May 1943—the crest of inflation in many respects. The stability has not influenced the cost of living to a great extent but it is impressive in its way.

Revenue and Traffic

Railway earnings from April to September responded to the rise in traffic and the latest statement points to a rise in receipts above both the 1942 and 1943 level in regard to all railways except the Oudh and Tirhut. The largest increase in earnings as may be expected is reported by the B and A Railway and the smallest by the N.W.R. where earnings however stand at the 1943 level. Total receipts from April 1 to September 10 amount to Rs. 87.45 crores and the increase achieved without any enhancement in fares may be held to justify expectations. Of greater importance is the rise in wagon loadings. The increase to over 3 millions for 5-1/3 months has been achieved largely through the increase in oilseeds traffic and miscellaneous traffic. There is, in comparison with 1943 no increase under grain or coal and coke. A legitimate inference would be that the strain on the railways remains great and to support this mention may be made of the absence of any increase in tonnage lifted as compared with last year. How the Railways work has been lately explained at length but to support the hope of improved conditions, there is only the increase in loadings of Home line stores and materials and coal traffic on three lines. There is a fall in respect of coal and coke wagons for the public and foreign railways. The fall at a time when coal mining output has risen might be duly explained but it will certainly excite suspicion as to the adequacy of the arrangements for transport and distribution of coal. There is, however, a small increase in loadings on metre gauge lines. Tighter application of control rather than retarded movement will explain the fall under grains and pulses. Increased imports from abroad and the measure of self-sufficiency reached in Bengal may also have contributed to the drop in inland trade. No conclusions as to the proportions between civilian and war traffic can be reached but the rise shown under miscellaneous full wagons supports the view that war requirements are still increasing and further reduction of passenger traffic is required to permit an increase of freight trains. The rise in state railway earnings this year may have no specific effects on the Budget since the growth of war expendi-

ture is the material factor but it should favour the postwar plans of the Railway Board.

West Africa's Development

African surveys harp on the need to develop purchasing power as the basis of increased production. Much has been accomplished in regard to cocoa, oilseeds and minerals in the colonies and Indian trade with British West Africa is growing like the older trade with East Africa. The rise of secondary industries as a consequence of the steady reduction in imports since 1941 is however independent of the enlargement of exports. The rise will necessarily compromise the rapid recovery of former markets by suppliers like Britain and the temporary protection of local industries may become permanent without Britain being able to guide the industrial development. The fear is by no means illusory since large exports of capital are ruled out. The authorised rise in cocoa prices should improve the prospects for West African enterprise and the fear that known lower efficiency may limit further advance well may prove unfounded. It has been stated that African labour is not cheap in relation to the level of local manufacturer's costs. This caution is perhaps advanced against the hasty establishment of subsidiary plants by British manufacturers who are reminded that roads, water supply etc., leave much to be desired. The fact remains that higher wages have raised the standard of living and the enquiry into what can be made locally should limit South Africa's hopes of settling down to the position of provider of manufactured goods for Africa generally. Unrestrained mineral development after the the war may confer greater advantages on the local manufacturer in the four British colonies. It has been suggested that Colonial development plans should be adjusted to the economic policy of the U.K. In regard to building materials etc., it is expected that competition will be absent and development of West African production can be hastened. The argument that unless factory development gives scope for employment of the African nature it will not be welcome has been advanced. Progress in regard to soap, canned goods etc., has been reported but the net addition to unemployment is not known. What is clear is that the Colonies are less dependent on the cocoa ring which could and did stage a buyers' strike than in the past. It is difficult to assess opportunities but wages in the Gold Coast are relatively high, 1s. 10d. for an unskilled male and from 4/6 to 6s. per day for skilled workers. Increased use of machinery might lower costs and keep wages up while West Africa's essential advantages that the Native is not threatened by White settlement may prove an asset for the local industries in being. No specific plans for forcing the pace of industrialisation figure at present but the implications for outside suppliers of consumer goods are plain enough.

After Deliverance

The U. S. descent on the Philippines from the west follows continuous air attacks. From the east also the U. S. attack developed before the U. S. expeditionary force moved into the Philippines. The promise of independence in 1946 has been renewed at the same time as the request for local support is made. The lawful government in exile has gone back. The dramatic shift of interest from New Guinea to the Philippines is largely due to the drastic reduction in Japanese air bases in the Central Pacific. The successful landings last week were preceded by heavy air attacks on Formosa and Luzon. The old estimate of 1½ divisions as the Japanese garrison on the islands may require to be modified but the Philippines will provide a list of the usefulness of puppet regimes. To the extent it breaks rapidly the chances of Allied reconquest of Burma and Malaya should improve. Very heavy losses in the air and the difficulty of maritime communications account for the success of the surprise attack from two directions. The simultaneous attack on the Nicobars indicate both the Royal Navy's mastery in the Bay and how Allied efforts will be co-ordinated. The process of reconquest will be generally regarded as a means to restoration of President Osmena though the questions as to compensation etc., are for the U. S. Government. The islands compelled to forsake sugarcane for cotton may revert to Colonial economy easily while the immediate loss of iron ore and rubber may upset the Japanese war economy. The wedge driven into Greater East Asia by the attack on the Philippines may extend towards China as the Japanese apprehend. The naval interception failed like the effort in the air but invasion is largely dependent on Filipino support. The despatch of Gen. Ramulo from New Guinea to the battle area proves how the task of revenge is to be carried out. The quick slipping of the islands between New Guinea and the Philippines that distances in the Pacific have been abridged by air power. The Japanese island of Formosa has not been invaded. The presence of Chinese on the Japanese Navy's own colony is as helpful as the destruction of all the air strips but the Philippines threaten the Japanese in the East Indies and Indo-China. The Japanese fleet withdrawn to the Philippines in June has been worsted despite furious enquiries at home. During and after the battle for the Gulf of Leyte the fleet has been beaten and guesses as to its conservation for the defence of Japan proper are hardly in order.

Decline and Recovery

The fall in British exports since 1941 is attributed to severe restrictions. Imports increased subtantially but the supply of goods for both the home and foreign markets fell off. The figures available in the White Paper issued by the Board of Trade are more important than the explanation given for the decline or the description of changes in the textile trade. Exports to India valued £33.76 million in 1938 fell to £17.54 million. The case for a return to old proportions is not wholly proved by the figures given because European markets were lost; and India too suffered the same losses. Concentration of industry and control procedure for exports have also limited the intake of foreign countries. Perhaps the chief purpose of the White Paper is to indicate to the U. S. A. that Lease-lend has not been abused and the U. K. has lost ground in both friendly and neutral markets. At the same time, there is a prescription for recovery. Parliament this year was told of the intimate connection between Imperial Preference and the export recovery, meant to support the exchange stability required under new undertakings. The Tory Reform Committee in recent months has virtually asked for an export surplus of £500 million per annum both to pay off new debt and to reverse the process of disinvestment. The changes in wartime may be held to support the now general claim but nothing is said as to Britain's imports. If the promise of full employment favours large imports it is not at all certain if the continued rationing of markets would keep goodwill alive. Material changes in Britain's textile exports are to be viewed as enduring results of the war. If early recovery is predictable in the case of coal there is no prospect at all of cotton goods being poured out in abundance. The disappearance of Japanese exports might ostensibly favour British industry but the operative factor will be the level of wages and costs in Britain. For India the decline in British exports during the war is to be taken not only as a measure of the necessity to let in goods for debt but as a guide to the composition of her own import trade after the war.

Planning

In the small book on the Essentials of Planning (Oxford University Press Rs. 1-12) Mr. B. C. Ghosh describes not only the sacrifices entailed but the ends of planning. If there is due stress on the abridgement of human liberty for the common cause, it is notable that planning is not pictured as the road to slavery. Planning can be delinked from totalitarian rule. What India should strive for is freely indicated by the useful summary of the Bombay Plan which is principally meant to raise the people's standard of living. The justification for planning is provided by the incomplete utilisation of resources that some are apt to regard as the problem for India. There is no disagreement either as to ends or means but the conditions prescribed for the success of planning are by no means clear. The general misapprehension about policy and purposes is cleared up by a lucidly vigorous outline of what has been done in other lands. The targets are welfare and freedom and anyway the necessity for taking thought is established by the failure of improvisation, for the expedients adopted for suppressing inevitable results cannot be regarded as part of a system in which discipline is a factor. The argument however still turns on the nature and degree of planning rather than the conditions for

OBJECTS.

This Company has been formed for the purposes as set out in detail in the Memorandum of Association (which is attached hereto and forms part hereof) and to purchase and develop the assets of the Tomato Products Corporation Limited.

Tomato Products Corporation Limited have been marketing for some time squashes, jams, marmalades preserved fruits and vegetables, pickles and allied products under the name of Tims. These products have earned great popularity with the consuming public. Sales have shown steady expansion. Well-known clubs throughout India as well as various army departments are largely using Tims products. The demand for these products has now become so great as to necessitate manufacture on an increased scale as well as the establishment of Company's own farm with a view to standardise the quality of the products and purity and preservation. To provide for the increased purchases of fruits and vegetables during the season so as to cope with the increased production and to purchase and develop the Company's own farm, the Company is now proposing to raise the requisite capital.

The Company shall buy over the entire assets free from all liabilities of Tomato Products Corporation Ltd., including stocks, machinery, furniture. labels. trade marks, etc.. for Rs. 79,043-11-0. The price has been fixed on the basis of the report prepared by the auditors of the Company on an examination of the books and accounts of Tomato Products Corporation Ltd. The macninery is in good condition and it is designed to produce goods of high quality. These products will be traded under the name of Tims; and this name has already a great goodwill in the market.

On the basis of present sales and of the experience of the working of the Tomato Products Corporation Ltd., the Directors are satisfied that the working of the Company with increased manufacture and with its own farm will prove highly remunerative.

Minimum Subscription Rs. 1,50,000/-. Brokerage at Rs. 1-8-0 per preference share and four annas per ordinary share to approve brokers.

Preliminary Expenses. Estimated not to exceed Rs. 15,000/- excluding brokerage if any.

Promotion Money. No promotion money is to be paid.

MATERIAL CONTRACTS.

(1) Agreement between The Tomato Products Corporation Limited and Innit Limited as promoters of the Tims Products Ltd. to buy over the entire assets free of all liabilities of Tomato Products Corporation Ltd. including stocks, machinery, furniture, labels, trade marks, goodwill etc. Rs. 79,043-11-0 within 60 days from the permission from the Controller of Capital issues.

(2) An agreement shall be entered into between the Company and the Managing Agents and shall be open for inspection as soon as executed at the Company's office during usual office hours. The principal terms of the proposed agreement have been set forth in one of the following paragraphs.

DIRECTORS QUALIFICATION AND REMUNERATION.

Until otherwise determined by Extra-ordinary Resolution the number of the Directors shall not be less than three nor more than nine. Subject to the provisions of the Act the Managing Agents shall be at liberty to appoint up to but not more than one-third of the actual number of Directors and to remove from office any persons so appointed and upon the removal or retirement of any one or more such persons to appoint any other one or more persons in his or their place. Such Directors shall be ex-officio Directors within the meaning of these presents and such one of them as shall be named by the Managing Agents shall be Chairman of the Board.

The qualification of a Director, other than an ex-officio Director, shall be the holding of, in his own name or jointly with any person whether beneficially or as a trustee for any company or person or otherwise, five hundred Ordinary Shares in the Company, value Rs. 5,000/-.

Unless otherwise determined by the Company in General Meeting each Director shall be paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 32 for every meeting of the Directors he attends. The Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting such sum as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his remuneration as above specified.

In addition to the above remuneration, in any year in respect of which a divided in excess of eight per centum per annum is paid on Ordinary Shares the Directors shall be entitled to a commission of two and half per centum on the net annual profits, such net annual profits shall be determined in a similar manner as defined in Article 154. Such commission shall be divided amongst the Directors as decided by them.

MANAGING AGENTS.

The Articles of Association provide for the appointment of Messrs. Innit Ltd. as Managing Agents of the Company from the date of incorporation of the Company for a period of twenty years on the following remuneration.

(1) An office allowance of Rs. 500 per month, and

(2) A Commission at 12½ per cent on the net annual profits of the Company.

VOTING AND RESTRICTIONS.

On a show of hands every member present in person and entitled to vote shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him provided that no Company shall vote by proxy so long as a resolution of its directors under the provisions of Section 80 of the Act is in force.

The Company shall have a first and paramount lien upon all the shares registered in the name of each member (whether solely or jointly with others), and upon the proceeds of sale thereof for his debts, liabilities and engagements solely or jointly with any other person to or with the Company whether the period for the payment, fulfilment, or discharge thereof shall have actually arrived or not, and no equitable interest in any share be created except upon the footing and condition that Article 15 hereof is to have full effect. The said lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed, the registration of a transfer of shares shall operate as a waiver of the Company's lien, if any, on such shares. The Directors may decline to register any transfer of shares without assigning any reason for such refusal.

INTEREST OF DIRECTORS.

Mr. K. U. Patel is the Managing Director of Messrs. Innit Ltd., the Managing Agents of the Company, Messrs. G. Birla and K. P. Bhargava are shareholders of Tomato Products Corporation Ltd. the assets of which are to be bought over, and are also interested in the managing agency remuneration.

APPLICATION FOR SHARES.

Application for shares should be made on the form accompanying the Prospectus which may be obtained at the registered office of the Company or from the brokers of the Company and sent in accordance with instructions contained therein with a remittance of the amount payable on application.

When no allotment is made, the deposit will be returned and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. Failure to pay amounts due on shares allotted when due will render previous payment liable to forfeiture.

INSPECTION OF DOCUMENTS

Copies of the Memorandum and Articles of Association and the agreements referred to in the aforesaid paragraphs may be inspected at the registered office of the Company during the usual business hours.

success and it is not easy to say that the latter have been indicated with precision. But it must be said that official acceptance of the need to develop India after the war confers importance on the survey of deficiencies that is bound up with the planner's case.

Vigorous Defence

The Democratic candidate's campaign in New York began with an outline of foreign policy. Mr. Roosevelt's ready acceptance of the Dumbarton Oaks agreement is far more important than the charges levelled at the shrinking Isolationist fringe of the Republican party. The assurance that the U. S. A. will keep armed for peace has implications both for reconversion and demobilisation. But these problems found no mention while the decision to keep the grand alliance alive through the Assembly, Council and Court was explained. The Dumbarton Oaks agreement does away with the rule as to unanimity, and also provides for coercion. The defence of collective security belongs to the international force and American participation is assured not only by Mr. Dewey's more critical attitude but in Mr. Roosevelt's warm defence. More significant, for the short run is the declaration against any truck with the Nazis. Unconditional surrender is demanded again of the Nazis, and German recovery, in the military sense, is to be made impossible forever. The President made no reference to Pan-American obligations while proclaiming America's interest in the further growth of democracy. It is also remarkable that in the tribute to the people he discovered unquestioning support for his policy. The vacillation of 1937-38 is forgotten easily because the main argument is that the U. S. A. turned away from Europe twentyfive years ago without just cause. The new alliances demand postwar collaboration and the President has put over the last plan for collaboration among the Big Four. The extension of the U. S. frontier beyond the hemisphere puts both Iceland and New Guinea among the strategic outposts but no demands are made. The alliances are expected to run in such a way that friction will not arise. The divorce of disarmament from peace has important results for others besides the U. S. A. In the future the necessities of defence may be the same for others as for the U. S. A. and key industries may occupy a distinct place in postwar programmes for countries linked by the collective security organisation.

Tims Products, Limited

Both preference and ordinary shares of Tims Products, Limited (whose prospectus appears today) are available for subscription from 1st November to 7th November. The Company, formed to take over a successful though smaller concern, has in addition to the usual advantages a fund of goodwill for both canned goods and soft drinks. The expansion of manufacture is fully justified by the opportunities in the market. The Vendor's consideration is a fraction of the paid-up capital sought, and goodwill is taken over with the assets of Tomato Products Corporation. The immediate object is to get and run a farm for the vegetables and fruits required by the factory. This of itself should help greatly in the enlargement of production required. It is hardly necessary to add that Tims as a brand name enjoys a large following at present. To increase it is a strictly laudable object. Only a part of the money wanted is asked of the public in this case, and the minimum for allotment has been secured. The merits of a pioneering company claim however special notice. Profitability is only one of the tests to be applied for the tomato, as much fruit as vegetable, is now regarded as an exceptional source of vitamins. The major factor however in relation to prospects is the record of successful manufacture. That is one of the reasons why Tims should go down well with the investor who should note that managing agency terms are pitched as low as can be wished, and preliminary expenses are moderate. Confident conjecture as to the investor's response on this occasion is justified by reference to the certainty of dividends from the first year as well as the branded speciality for which manufacturing facilities mean increasing returns, especially, in view of the growth of demand for squashes, jams and preserves in India, sustained by the great shrinkage of imports.

Clive Street Gossip

The newspapers of the world, even those of the cheap and sensational kind, must reflect, to the eyes of the future historian, the major pre-occupations of the times to which they belong. I sometimes wonder what a research worker at some distant age in the future would think of our generation. For, our newspapers today seem to divide their available space equally between the efforts at present destruction and plans for future development. One half of the daily newspaper is taken by reports of large scale bombing of the most crowded cities of the world and the other half with the plans for providing even better housing conditions than what obtained before the outbreak of the war. There is something incredibly childish in this combination of the destructive and the constructive. But whatever future generations may think of us, we know it for a fact that, while large scale warfare descended on us like a blight in a way we could not help, our plans for future construction are made deliberately, and with not a little of deliberation. The latter should certainly be set to our credit. The nations of the world today are conscious, as they never were before, of the immensity and the intricacy of the problems ahead. Our forebears were more Christian atleast in that they believed in the saying, 'Sufficient unto the day is the evil thereof.' But while we may claim credit for our eagerness to plan, it is doubtful if we can lay claim to sincerity and competence. The virtues of unplanned drift, which were idealised in the apotheosis of laissez faire and free trade, consist in the main of the freedom from the conflict inevitable in the working of un-co-ordinated plans. Today, under the pressure of past disappointments and present misery, the world is determined that, the moment the war comes to an end, the various Governments shall put their shoulders to the wheel of economic progress.

* * * *

But, in the nature of things, there can be no adequate guarantee that all plans will not meet with the common doom of frustration through their irresoluble incompatibility. One has only to look into the proceedings of all the international conferences of economic importance during the last ten years and more to feel convinced that, while we may no doubt be enthusiastic about planned development, we should not overlook the need to minimise conflict between national plans and between the sectors of each national plan. However, in so far as the authors of each national plan have a duty to ensure that in the working of their plans they will not meet with insuperable obstacles in the shape of plans of other countries, there is also a natural process at work to minimise such friction. It would be obviously foolish for India to embark on a policy of increasing the exports of our agricultural staples when other countries also have more or less identical projects on hand or, if our markets should endeavour to grow for themselves what they had long been importing from other countries. Instances of this kind can be easily multiplied. What I am seeking to emphasise here is that no national Government can afford to make unreasonable assumptions about the intentions of other Governments in regard to their plans.

In the conditions of India we have the counterpart of the difficulties referred to in the international sphere. For, India is a vast sub-continent, where the need for economic development of particular regions is at least as important a consideration as the development of the whole of the national economy. Besides the difficulties of ensuring a more or less even distribution of the benefits of planned development, there is also the difficulty of bringing the constitutional and administrative machinery of the country in conformity with the requirements of successful planning. In India this is by no means an easy task. And when I think of this aspect, I think also that Sir Ardeshir Dalal is in a not too enviable position. I have reasons to believe that, far from being dismayed by the difficulties of his task, Sir Ardeshir is facing up to them martially. But the fact remains that all the recent trends in the sphere of political constitution and administrative machinery have been of the most unhelpful kind from the point of view of planning. In the first place, the efficiency of administration has been jeopardised considerably by concessions to separatist interests and by the natural political consequences of the introduction of responsible Governments in the Provinces. The British Government which raised the bogey of administrative inefficiency when highly qualified Indians claimed equality of treatment with European members of services, have latterly shown themselves only too eager to concede the claim of ill-qualified members of particular sections of the people. The result of this was brought out in a highly disquieting form, when a large number of senior officials had to be drafted from the Central Government for the benefit of a big Province like Bengal. Planning, if anything, calls for higher calibre in the personnel of public administration. It calls, too, for the capacity for higher loyalties which unfortunately today are at a discount.

* * * *

As regards the constitutional trends, the most popular aspect of the abortive Government of India Act was its bias in favour of Provincial autonomy. The whole of the Federal Constitution was conceived in terms of a Centre concerned mainly with Defence and a few residuary responsibilities, and of constituent units who were to discharge to the people under their care all the positive functions of Government. In fact, this trend may be traced to as far back as the Montford Reforms which transferred what were called the nation-building departments to the hands of responsible ministers. The motive then was political. The authors of these reforms wanted to be able to claim that they had provided practice grounds for democratic self-Government. In the case of the Government of India Act of 1935, the trend was strengthened since the position of the Provinces had to be comparable in some respects with that of the States who were chary of coming into the Federation without safeguards for their political integrity. All the efforts of Lord Linlithgow to bring the second part of the

K. N. DALAL, Managing Director.

Government of India Act into operation were based on the readiness to concede the autonomy of the constituent units. Provincial ministries and Indian Princes were alike taught to regard the Central Government as an extraneous authority which could be kept at arm's length from strictly internal affairs.

Now the advent of the cult of planned economy has rendered all the old ideas obsolete. A major crisis like the food crisis of 1942-43 found the Central Government labouring under handicaps of various kinds in its efforts to bring about a uniform distribution of the total food production of the country. If local authorities were found to be a hindrance even at a time of war when the Central Government has armed itself with limitless powers, how much more galling will they be found to be in the postwar period? It is this problem which probably takes more of the attention of Sir Ardeshir than the comparatively technical aspects. As I have said already, Sir Ardeshir must personally be inclined to sweep aside the cobwebs of old and out-of-date political ideas and to make the requirements of planning, the test of wise devolution of powers. But I wonder whether high up in the ranks of the Government there is adequate realisation of the impact of planning on politics.

"EAVESDROPPER".

NO CHANGE IN THE VALUE OF RUPEE

Eavesdropper wires from Bombay.

At today's meeting of the General Policy Committee Sir Jeremy Raisman took the opportunity to declare categorically that there was no intention of "sudden or drastic or any change" in the exchange value of rupee. The significance of this categorical declaration must be the rumours recurrently circulating in Bombay's whisper gallery that change in the rupee ratio was imminent. I reached Bombay yesterday afternoon but was in my rooms in the Tajmahal Hotel only late in the evening. By the time I went to bed I had received a dozen enquiries on this ratio question. This shows how rumour-mongers have been highly busy and some of them intended no doubt to make money on this canard as they had done on many other canards before. All that Sir Chintaman Deshmukh meant in his Rotary Club speech was that instead of concentrating attention on questions which have become bitterly controversial, the Indian public would do well to give thought to such questions as controls and exchange which have much relevance in preparing India to absorb goods which Britain might be able to export in post-war years. These two questions have already been discussed in recent issues of "Indian Finance." The keynote of today's Policy Committee meeting is that India should begin studying implications of planned foreign trade and planned money as part of the general all-India plan and as an offshoot of India's participation in international plans. By planned foreign trade is meant this. We have recently imported steel from America yet Jamshedpur and Hirapur have been asked to curtail production. Planned foreign trade means that we shall import only those goods which will not disturb but will prove beneficial to our economy particularly to our planned economy. Government must from now on collect data for machinery, personnel and statistics from the point of view of regulation of foreign trade. The same is true of exchange. Above all as suggested by Sir Ghulam Mahomed in reference to Hyderabad, we should explore every possibility of a new service called Indian Economic service. Indian Finance Service has proved its worth for ability and independence. A similar start must be made with regard to Indian economic service and it may not be doubted that similar traditions will be established.

(FROM OUR CORRESPONDENT)

NEW DELHI, Oct. 24

An analysis of the latest exchequer returns shows that during the first four months of the current financial year while the revenue receipts have shot up by about 20 crores (76 crores compared to 56 crores for the corresponding period in 1943-44) the defence expenditure alone has swallowed up an additional 33 crores (98 crores compared to 65 crores for the corresponding months in 1943-44). The present rate of war expenditure comes to about 25 crores a month. The upward tendency in revenue receipts continues. Compared to the period from April 1 to July 31, 1943, the customs receipts this year have doubled (24 crores against 12 crores), testifying to the enormous increase in imports. Both corporation tax and excise duties show increases of two crores and three crores respectively, while income-tax has touched a new peak with 15 crores compared to 13.5 crores for the corresponding period, last year. The present budget deficit (for the first four months) stands at 48 crores and the total deficit for the year, at the present rate, should touch 150 crores, a figure which would have looked incredible, five years ago. One has only to recall the revenue and expenditure figures from 1938-39 (76 crores and 85 crores respectively) to grasp the war-time gearing up of both taxation and expenditure. Defence expenditure continues to rise at an alarming rate and the only relieving features of the situation are the lower price level of commodities (compared to last year) and the unexpected buoyancy of the revenues.

* * * *

The expected cotton deal between India and East Africa has not materialised, it is learnt here. There were prolonged talks between delegation from East Africa consisting of Messrs. Parker, Collings and Clay and Indian representatives during the week-end but the gap between the price offered by the Indians and that demanded by the East Africans proved too wide to be bridged. Mr. Krishnaraj Thackersay, Mr. Kasturbhai Lalbhai, Mr. Ram Chandra, Commerce Secretary, Mr. Dalal and Mr. Sariya conducted the negotiations on behalf of India. The East African delegation are originally reported to have offered to sell 300,000 bales of cotton at Rs. 972 per candy, their plea being that last year they sold similar quantity at the rates now demanded. The Indians considered last year's price unfair to the Indian consumer and were not prepared to go beyond Rs. 800 per candy. The East Africans, refusing to come between Rs. 900, negotiations broke down. The Indians are reputed to have made it clear that if East Africa sticks to the present price, India shall have to drastically cut down her textile imports to East Africa. It is expected that the British Government may intervene in the matter to effect a compromise deal.

* * * *

Sir Edward Benthall painted a gloomy picture of the Railway transport situation in the course of a broadcast talk: The Transport Member warned the country that there was no hope of easing the present difficult situation. On the contrary civilians traffic may be further restricted for short periods due to military demands. He dismissed the idea of a system of priority for the upper classes as wholly impracticable. No one under-estimates the war-time pressure on railway transport, but the relevant point is that if the authorities had shown a little more far-sightedness could have managed things much better. To take one example, there is the big shortage of locomotives and the complete dependence on foreign supplies. Even after hostilities had broken out, the Government persisted in its view that it would be uneconomic to build locomotives in this country. Sir Edward glibly claims that the system of priority control of movements on goods has been "one of the successes of war-time control." And this in face of the chronic coal shortage in the industrial centres and Bengal's famine! Transport must take at least some share of the blame for them. Sir Edward complained of the unsatisfactory wagon situation, but did not say who was responsible for it. Out of the 38,000 wagons ordered at the start of the war, only 12,000 had been received so far. The extent of the problem faced by the railways is shown by the fact that passenger traffic alone has shot up by one million a day—an increase of 70 per cent—compared to the pre-war figure—while the trains carried 23.3 percent more tonnage in 1943-44 than in 1939-40.

* * * *

Quite a heavy volume of work awaits the Central Legislature which is due to meet next week. Over a score of adjournment motions have already been tabled, but few are likely to survive. As it is very likely that the Food Member will allot a special day for the discussion of food problems, those censure motions dealing with the failure of food supplies may be held over. It is hoped that the Commonwealth Relations Member will also agree to allot an official day for the discussion of the new situation in South Africa. The revised ordinance published by the South African Government is in more than one respect worse than the Pegging Act itself. In the first place, it practically amounts to the extension of racial segregation to the whole of Natal—not merely Natal as originally intended. And secondly, the new provisions seek to bring under Government control not merely residential occupation but even acquisition of property by Indians. There is abundant justification for the complaint that instead of honouring the Pretoria Agreement to which Field-Marshal Smuts was a party, the Smuts Government have been guilty of a clear and deliberate breach of faith. Messages from Durban show that the Indian community in Natal has been taken completely by surprise by this sudden change of front of the Smuts Government. The Natal Indian Congress has unanimously rejected the new ordinance. When the Assembly opens its session next week the Commonwealth Relations Member may be in a position to make a full statement and explain what the Government of India propose to do. At tomorrow's meeting of the Viceroy's Council, the High Commissioner's report is expected to be considered. So far as non-official opinion is concerned, there is no doubt that it is entirely in favour of applying economic sanctions against South Africa and put into effect the provisions of the Reciprocity Act. If the Commonwealth Relations Member does not realize the intensity of feeling in the country and tries any dilatory tactics again, he will not have an easy time in the Assembly.

BOMBAY, Oct. 24.

The General Policy Committee and the Industrial Policy Committee will be meeting in Bombay during this week. The discussions in both the Comittees are expected to be of an important nature. Sir Jeremy Raisman will be giving an account of the deliberations at the Bretton Woods Conference. After the indications given by Sir Chintaman Deshmukh recently, it remains to be seen whether the Finance Member will provide further clues to the attitude to be taken up by India in regard to the liquidation of the huge accumulation of sterling balances. The discussions will be followed with special interest if only because of reports emanating from London about referring the problem of sterling balances to a Sterling Bloc Conference in which the Dominions will be represented. Indian leaders are frankly sceptical of the results of such a Conference, and they point out that no good will be served by treating our sterling balances problem except as a straight issue between India and Britain. Both the magnitude of the sterling balances to India's credit, and the nature of their accumulation place the Indian question on an entirely different footing, it is pointed out. It is conceivable that in such a Conference India might be outvoted, and this possibility naturally makes Indian opinion view askance any such suggestion.

However, the sterling balances question can no longer be burked, and it is to be hoped that the non-official members of the General Policy Committee will not let slip this opportunity of setting the ball rolling. The official view favours putting off the negotiations on this issue till next spring. There is no conceivable reason why such a postponement is necessary, especially as the British Delegates at the Monetary Conference had expressed themselves as willing to get down to brasstacks on the question on their return to England. The non-official members of the Committee might press for the starting of negotiations on the question immediately. The only difficulty would be that the Finance Member would be busy with the November, and later the Budget. Sessions of the Legislature and may not have time to take up this question. It would have been better if Sir Jeremy Raisman had not resumed charge and if he had continued to be on special duty to tackle the sterling debt negotiations.

The Industries Policy Committee will be presided over by Sir Ardeshir Dalal, and inasmuch as eight of the authors of the famous Bombay Plan are serving on the Committee, it is expected that the discussions will centre around post-war expansion of Indian industry and allied important issues. The Post-war Reconstruction Department under the inspiring lead of Sir Ardeshir is said to have drafted the blueprints which will be submitted to the Committee. It is to be hoped that the Committee will give a concrete shape to post-war plans of Government, which have so far not gone beyond vague aspirations and have yet to acquire solidity. Sir Ardeshir will also be meeting the Committees of the Indian Merchants' Chamber and the All-India Manufactures' Organisation. He would also have the benefit of the recommendations of the Tata Planning Committee regarding the problems of distribution and control and also for raising the standard of living in the country.

The Indian Delegation to the International Business Conference, headed by Sir Chunilal Bhaichand Mehta, is leaving for Karachi on Wednesday. A number of functions have been held in the city to wish the Delegates Godspeed. At the dinner given by Mr. Walchand Hirachand, the object of the mission was appropriately described by Mr. Walchand as one of painting "before the Conference a true picture of India and to tell the representatives of the several countries gathered there how India thinks and how India feels. It had been a misfortune of India that, not Indians but Britishers as a rule, had been speaking in the name of India at International gatherings." Great satisfaction is felt at the recognition accorded to the Federation of Indian Chambers of Commerce and Industry whose opinions the delegation may be relied upon to put across to other businessmen of the world. The policy of the Federation is well-known and it would be the duty of the delegates to advocate that policy. As Sir C. B. Mehta emphasised, the position of the Indian delegation would be different from other delegations in that the views of the Indian delegation would not be supported by the Government of India whereas the views of others could be held to reflect more or less the views of their respective Governments. There is some regret in certain quarters that apart from Sir C. B. Mehta, Mr. G. L. Mehta and a few others, the delegation does not include any of the front rank leaders of Indian business. There are even unedifying stories current here about the attempts made by an influential committee member to send to the Conference a pack of novices and comparatively junior members of Indian commerce. Thanks to the resistance put up by a prominent businessman, the personnel of the delegation as now chosen is a considerable improvement although it is not as good as it might have been. If the delegation achieves no other object, it would at least be able to develop outside contacts which would be useful later. The value of such contacts was stressed by Mr. A. D. Shroff recently.

The Reserve Bank accepted tenders at Rs. 67 and over for 20,000 tolas of gold yesterday. The market is, however, very steady with delivery quoting at Rs. 65-1 and Ready commanding a premium of Re. 1-2. The silver section is also steady at Rs. 122-8 for settlement delivery. The steadiness of the bullion market, especially that of silver, is derived from the technical position which favours the bulls. Though the market realises that the broad trend is downward, the heavy *budla* charges have been acting as a deterrent against aggressive bear sales. By now, the form of the market has settled down to one of steadiness with occasional flare-ups. The absence of large silver sales by the Reserve Bank is a crucial factor in the maintenance of silver prices. Even in gold, the obvious reluctance of the Bank to sell at progressively lower levels is acting as a bar to any largescale downward drift. With currency expansion going on again as of yore, the inflationary forces have the whiphand again, and may be expected to keep up prices. In this context, the recovery on the stock exchanges has a significance which cannot be missed. The bullion policy of the Government will, it is hoped, be also raised at the coming meeting of the General Policy Committee.

Plain Speaking to Lancashire

A blunt report on the technical backwardness of the Lancashire cotton industry made by the British commission which visited the United States has left Lancashire stunned. The gist of the report is that British mills have practically stood still for the past thirty years, content with old-fashioned machinery requiring a large amount of skilled labour, while the United States textile industry has ruthlessly scrapped old machinery, established the most modern labour-saving machinery, permitting large scale production with minimum labour.

The 74-year old Mr. William Wiggins who for several decades has been president of the Federation of Master Cotton Spinners' Associations and one of the most masterful figures in the whole industry, revealed some stubbornness when he informed the *Financial News* "We will study the report, and if we can learn anything advantageous, there is no doubt we shall adopt, in greater or less degree, the several ideas promulgated there. But Lancashire cotton is not down and out. The final test is the cost of production of the finished articles."

The Manchester Guardian's Textile Editor discussing the repercussions of the report finds two sets of opinions, firstly an argument that it is now overiate for the development of mass production, on U. S. lines wherefore Lancashire must specialise on more expensive quality goods and novelties. secondly the argument it is not overlate to instal most modern machinery, thus lowering labour costs after which Lancashire will still be able to develop profitable markets for low cost goods for which, in the long run, there is vastly larger world demand than for expensive lines. The Editor himself agrees with the second view.

The Commission's report is applauded in the Press for courageous plain speaking. The members represented all sections of the Industry as well as Trade Unionists. The latter agreed there are many trade union restrictions which could be scrapped if labour-saving machinery permitted an increased output per man-hour and higher wages for the employees.

The Commission certainly is far more courageous than its predecessor—the Government Commission which investigated the industry in 1929. That Commission complimented the industry on the latest scheme which was a "through ticket scheme" whereunder groups of spinners and weavers and finishers collaborated in the making of goods aimed at specific markets which were carried through all stages at the lowest possible costs. The scheme was not unsuccessful as a short-term device but it left technical handicaps untouched.

In Lancashire technical conversation often discussed the question of backwardness sometimes attributed to lack of capital, sometimes to the indubitable fact that many small, old-fashioned mills are so skillfully run, that they continued to show profits when those modern mills with high capitalization showed losses. Some weavers were also influenced by the allegation that Japan after investigating automatic looms decided against them which confirmed their own prejudices.

But it is considered that probably the main influence has been the traditional tendency to take an optimistic short-view "it will outlast my time."

MADRAS, Oct. 26.

Rural rationing in Malabar was desired and accepted. Possibly the Famine Enquiry Commission has less to do with the present crisis than with the terms of reference, but the famine area has been regularly inspected. Appeals for full unreserved public support for rationing in Malabar have been launched. Mr. Dixon, a former Diwan of Cochin, asked British Malabar to take note of what had been attempted with success in Cochin. He urged that rationing assured something at least for the poor, and ended the scramble in black market. Agriculturists were asked to give help and wait for amendments to the Government's rationing scheme particularly as the ration fixed exceeded average consumption. Mention was made of the cut in the rice allowed and the inclusion of wheat. Grain wages will continue and landlords have been promised that agreements with farm servants would be respected. There is still propaganda for wheat though what Madras would get after a period of scarcity can only be guessed. But equitable distribution has been promised time and again. At Coimbatore, the Governor of Madras stated that immediate needs were known to Government and Coimbatore as a deficit district would receive attention. Less is talked about the monsoon failure than about the perfecting of distribution arrangements. Millets are expected to take the strain off shortage and in Salem at any rate, the people who want rice only have been told that they would have to forego a day's ration if they did not want wheat.

Political aspirations are not yet wholly displaced by anxiety here over food. Speeches on unity and the failure of the Bombay talks abound and the only suggestion of importance is that Gandhiji's offer of conditional acceptance of Pakistan must be withdrawn. The last small rift in Congress has scarcely evoked attention for it is observed that the demand for release of the Congress leaders is common to all manifestos and representations. Unconditional release of a few strengthens the case of the detenues. The August Resolution is now generally viewed as a dead letter, but the Hindu Mahasabha's anxiety to get the Cripps offer again can only mean that Gandhiji's own offer is to be by-passed. But Muslim Leaguers in many places, are coming out in favour of Pakistan on Mr. Jinnah's own terms and that is the cause of the new argument that arbitration in the last resort must be preferred to negotiations. The difficulties may inspire the hope that a Muslim split may yet save the situation, but concentration on the Hindu-Muslim settlement to the exclusion of electioneering in advance may lead to a real stiffening of the League attitude. It is singular that renewed emphasis on communal agreement appears at the same time as Gandhiji's hint of a new fast.

The Pankaja Mills' labour Colony near Coimbatore was opened recently by the Governor. Housing for 300 workers in the new estate is to be supplemented by housing for 600 more and the mills had allotted Rs. 105,000 for the purpose of housing, and a grant to the Cooperative Stores. The Governor in approving the objects drew attention to the merits of the experiment in Coimbatore whose own progress demanded an extension of industrial welfare. The mills have their own hospital, creche and canteen and the last departure in practical philanthropy has been held up as an example to follow. The mills' provision of amenities in the Governor's opinion would enhance Labour's efficiency and the hope that more will be done here may be related to the new official investigations into labour welfare.

There is more news beyond that of an official mission as to Indian cotton mills' requirements after the war. It is admitted that extra wear and tear requires to be dealt with and a programme of replacements in the interests of efficiency has been drawn up. The return of Sir Frank Plato to Britain with his commission advertising Lancashire's handicaps may have a bearing on sendings of machinery and spares to a powerful rival especially as the demand is for a revival of textile exports in volume not merely for European relief purposes. The suppression of the black market in Indian States has made cloth control order a reality at last. The trade here is all for uniformity in respect of distribution arrangements. Piecegoods merchants sent a wire to the Textile Commissioner stating that the consumer's cloth quota in Madras should be 18 yards as in the Punjab, Bombay and the N.W.F.P. The fact finding enquiry has led to the proposal that a board to deal with handloom weavers' problems must be set up. The ultimate solution is sought through a cooperative organisation though prospects are impaired in this case too by communal differences.

There is however agreement between the Chambers of Commerce as to increase of imports. The visit of Mr. E. M. Innes to Madras led to a recurring demand for fair and supplementary quotas. It was admitted that import control operates in favour of local industries which were assured of essential requirements from abroad. It was pointed out that despite strict control in the U.S.A. the supply position there was easier and import licenses should be issued. Mr. Innes gave only the assurance that import control would continue during the first half of 1945 and the Government of India had to decide when it should lapse.

Resume of Commodity Markets

The feature of the week is the decline in prices for both gold and silver and the reduction in the selling limits of the Reserve Bank. The raw jute market has been very quiet while the jute manufactures market has been indifferent. The raw cotton market has been lower in sympathy with the bullion market while piecegoods has not been very active.

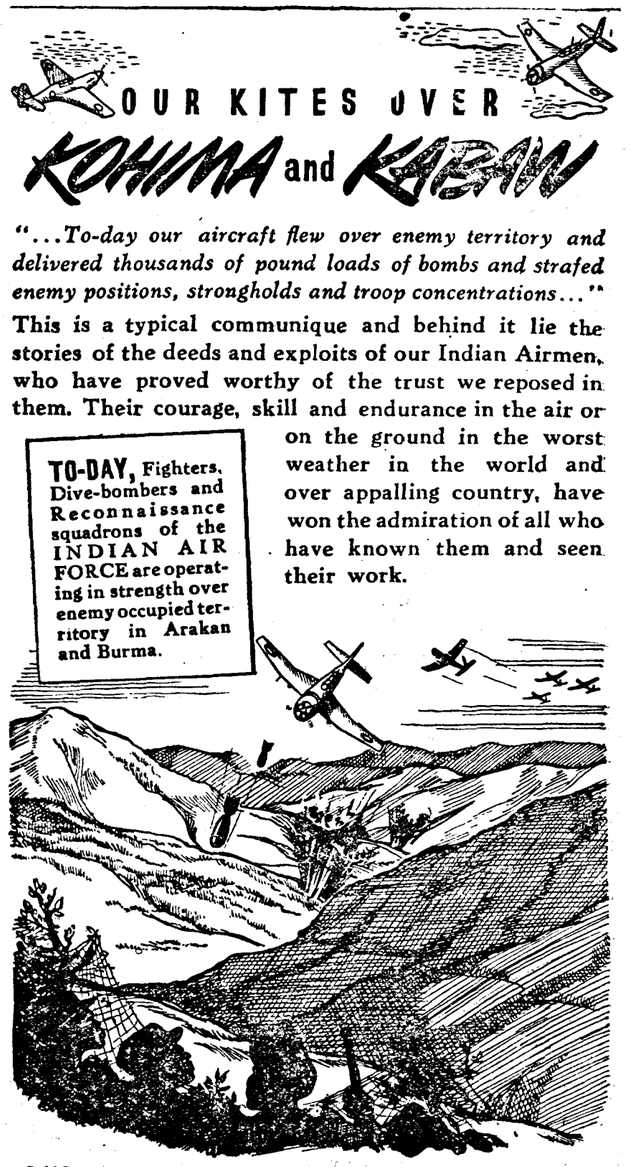
The drop in prices for raw jute cannot be altogether justified. There has been a further reduction in prices during the week and quotations are now barely at the minima. The statistical position does not warrant the recent decline in prices. The indecent haste of holders has been primarily responsible for the present state of the market though it might be said that the reports of the possibility of an increase in the area under the crop for the next season have created some uncertainty about the future. Beyond the report that the I.J.M.A. have approached the Government of Bengal for an increase of 50 per cent in the acreage over last year no decision has actually been reached. The Jute Production Advisory Board at a meeting held last week end considered the question of restriction of jute acreage of 1945. There was a general discussion regarding the supply position of jute but no agreement was reached by the members present regarding the extent of restriction next year. As mill stocks have to be replenished and it can be expected that buyers would purchase their requirements as soon as the position in respect of coal suplies improves there is no reason why sellers should be nervous about their ability to dispose of their noldings.

The weakness of the goods market is rather surprising. In spite of the lower level of production mills have been rather keen sellers and there are not many buyers. As orders could be placed only for the forward positions there is a tendency to await further developments.

* * *

The fall in prices for bullion as a result of the reductions in the selling limits of the Reserve Bank is to be welcomed. It has been pointed out on earlier occasions that the improvement in the war situation could not have any effect on the market as the Reserve Bank would not reduce its selling limits. Shorts were in a bad position and covering operations prevented any sustained drop in prices. It is happy to note that the Reserve Bank has effected a reduction in the selling limits an appreciable and that prices have come down rather sharply during the week. There has been a widening of the discount for the forward positions.

* * *



It should be said that the decision of the Government of India to increase the ex-factory price of sugar by Rs. 1-7 and Re. 1 per maund of Khandsari has come none too soon as owing to the foolish policy pursued in the last season considerable land went out of sugarcane cultivation and there was a great scarcity of sugarcane supplies. The anticipations regarding the possibility of a substantial decline in food grain prices have not also come out true.

This will enable the U. P. and Bihar Governments to raise the minimum price of sugarcane by As. 2 per maund as the new prices of sugar apply to sugar manufactured from cane bought at new prices, to be fixed by Provincial Governments and not to stocks of sugar already in the hands of factories and dealers.

The Government of India have decided to adopt a similar measure as was done last year to realize the amount equal to the difference between the old and new prices of sugar from producers and wholesalers by imposing an additional excise duty under an Ordinance issued for the purpose.

The procedure for the assessment and realisation of the above excise duty will be the same as that of last year.

While the question of yarn supplies for All-India is difficult of solution the claims of Bengal for a liberal quota merit consideration. It is well-known that Bengal is dependent on its yarn supplies on Madras and Bombay and that most of the cotton mills in this province consume their own yarn.

Jute and Jute Manufactures

(By Our Correspondent)

Special to "Indian Finance"

CALCUTTA, Oct. 26.

The tragic death of Mr. R. B. Lagden came as a great shock to Clive Street. Tnough his primary interests were in Tea, his eminence in various branches of sport in his younger days made him a well known figure amongst all sections of the community. Early in World War II he had much to do with the organising of the Calcutta Special Constabulary, of which body he was Commandant. Later, when food shortage became acute, he was largely responsible for the initiation and administration of the Bengal Chamber of Commerce scheme for the procurement and distribution of foodstuffs at controlled rates for the benefit of industrial labour and other employees of Chamber members, long before official rationing came into force. Mr. Lagden was Vice-President of the Bengal Chamber during the current year. Much sympathy will be extended to his widow and family, as also to his colleagues in McLeod & Co. Ltd., of which firm he was senior resident Director. What adds poignancy to the tragedy is the fact that Mr. Lagden would have been travelling a month earlier, except that his departure from England was delayed because his house had been damaged by a flying bomb.

Little progress appears to have been made at the meeting last week of the Jute Production Advisory Board when the question of the quantum of restriction which should be applied to the 1945 crop was discussed. The attitude of the Industry is that a crop of 100 lakhs of baies is desirable, making provision for 60 iakhs for local consumption, 30 lakhs for possible expansion in export demand in the event of an early cessation of hostilities, and a reserve of 10 lakhs of bales to increase the carry-over and improve the existing insecure stock position. To achieve this, twelve annas of the registered acreage under the Jute Regulation Act would require to be licensed. But after all, the last word is with the cultivator, who will sow whichever crop he thinks will yield him the best return. With the sharp drop in the price of paddy in many districts and the prospects of a good aman crop in view, the tendency will be for the area under jute to be increased if the price of jute is maintained near the present levels. The relative prices of jute and paddy at sowing time are the controlling factors to a great extent. It is of interest to note that the Bengal Government has decided to erect its own godowns for the storage of foodstuffs in different supply and procurement centres. This may release some of the jute premises which have been requisitioned for the purpose, though in many cases quite unsuitable. The hardships to jute merchants from these requisitionings have been not inconsiderable. Each district seems to have been a watertight compartment in this respect and the fact that godowns of a particular merchant in one district had already been requisitioned was not taken into consideration if his godowns in another district were coveted. We are aware of a case where, after his godowns in one station had been requisitioned, a merchant, with much difficulty, secured the necessary materials to erect fresh premises close by. These were scarcely ready for use when the local authority came along demanding that the new godowns should also be handed over. The decision to provide their own godowns has therefore been arrived at by Government none too soon.

Under the new scheme of working the transport of jute by river to Calcutta, an important point has arisen which will have to be dealt with. Movements Control have designated 16 concerns owning river craft of various types, all of which it is contemplated will be pooled for the carriage of jute. Of these 16 concerns, only five are recognised Carriers who issue recognised documents of title which can be negotiated. The Bills of Lading of these five companies are accepted by Buyers, and payment made against them. But hitherto the craft of the other 11 concerns have been utilised almost, if not quite, entirely for the carriage of their own jute. In many cases the craft were only used for local work in the mofussil and never came to Calcutta at all. If public cargo is now to be carried by these formerly private craft, is the owner of the craft going to issue a document of title for the cargo so carried, and if so, what arrangements are to be made to render these documents acceptable to buyers so that payment can be recovered against them? Few, if any, of these additional concerns are recognised Carriers under the Act and it is doubtful also if many of the craft concerned are registered for purposes of the insurance of the cargo they carry. The simplest solution would be for all the available craft to be distributed amongst the recognised five Carriers who could then issue documents for cargo shipped in such craft in the ordinary way. In fact we cannot see any other feasible method of dealing with the matter, for in any case the allocation of all available freight space will have to be dealt with by some central authority at each shipping station, and that authority will presumably be the senior local steamer agent. It is certainly going to be another headache for the shipper if it is to be a matter of luck whether he will be allocated space in a craft for which he can get negotiable documents, or in another in which he will have to wait for payment till after his goods arrive at destination, the insurance costs of which may also be far above normal. As it is, under the scheme a shipper is bound to run into a fair stock of jute before he can expect to get any allocation of freight. If he is to be precluded from recovering the value of his goods after they have been shipped, it is going to put a severe handicap on trading, with jute at present levels of price.

The quantity of jute exported abroad during September is returned at 74.000 bales, almost the same as a year ago when 76.000 bales were shipped. The total quantity exported since the beginning of this season is now 2.01.000 bales against 1.90.000 bales in July/September last year. Estimated arrivals of jute into Calcutta for the first half of October are 2,90.000 bales against 2.35,000 bales for the same period last year. From the beginning of July to mid-October this year arrivals total 18 33.000 bales, compared with 18.73,000 bales during the similar period a year ago.

Markets have ruled sluggish and inactive during the week. In Export jute only a very minor interest has been shown by shippers, in Short Group Daisee and Dundee Tossa. A small business was done by Mills in Dundee Daisee assortment at Rs. 77 and in Lightning grade at Rs. 74. The position in baled jute is that all grades except the lowest are freely offered at minimum prices. Only Reiections and Cuttings continue to command maximum rates, and even Rejections are now sagging, the price having declined from Rs. 64 to Rs. 62. Special Cuttings were reported done at Rs. 50 and Rs. 48.

In Loose Jute the tone has been dull and easier, with considerable pressure from sellers to secure new business and practically no response from buyers. Many of the coal consuming mills of course are only working intermittently and not using nearly their normal amount of jute. In cases of double-shift working, the main complaint is lack of storage accommodation, less than the normal godown accommodation for one mill having to make do for two. If no other excuse for not buying jute can be found, there is always the inability to sell heavy goods. The result has been a very meagre turnover. European packing is still held for Rs. 14-8 and Rs. 13-8 with no sign of takers. Supervised Jat is freely offered at Rs. 16 and Rs. 13 and might even be discounted. Sellers of District jute would accept Rs. 15 and Rs. 12 to get business. Supervised Jat Middle alone have been reported done at Rs. 15-8, and Indian District Tossa at Rs. 16 and Rs. 13 Mids and Bots with sellers over.

This week has been almost a blank so far as fresh business is concerned in the Fabrics market. The mainstay of the Hessian section, the official U.S.A. purchasing agency, having withdrawn after placing orders up to June next year, mainly for nine porters, there is no other channel of sale evident, and speculative holders of forward 11 porters are already prepared to discount maximum rates in order to unload. Mills however must be pretty well sold for some time ahead. In the Heavy Goods section there is no improvement and operations have been confined to the Bazar, where "B" Twills have dropped to Rs. 62-4 for October, a decline of Rs. 1-8 on the week. A government order is reported for a fair quantity of bitumenised "A" Twill cloth, but this is made only by a very imited number of mills and is little relief to the depressed situation.

(*Continued from page 585*)

Official Bills coming up for consideration include a fairly comprehensive measures to amend the Indian Insurance Act. Some of the amendments are intended to secure speedy settlement of claims. There are also some clauses about deposits in States in order to ensure that deposits in one place should not be returned without the agreement of the insurance authorities at the other. Negotiations for complementary legislation in the States concerned are said to be in progress. Another important clause in the Bill seeks to make clear that life insurance funds should be invested and kept apart from other assets of the insurer and further provides that a person carrying on life insurance business shall not be entitled to embark on other classes of business unless the Superintendent of Insurance is satisfied that the life insurance fund is adequate for its intended purpose. A small bill for amending the Payment of Wages Act will also be introduced. "Wages" is in the new bill defined so as to include allowances given against the increased cost of living. The new bill also makes clear that where there is an incremental scale reductions as a disciplinary measure are authorized but it may only be resorted to after notice for such period as is required under the contract for the termination of employment. It is also laid down that a dimunition of wages by reason of requirement to perform work involving a standard of skill or responsibility lower than in the previous work is not a deduction.

* * * *

There are rumours again about impending changes in the Viceroy's Council. It is reported that Sir Jeremy Raisman, Finance Member, may not be willing to accept an extension of service. Either a Provincial Governorship will be found for him or he may go to London. It would appear that Lord Wavell is considering the claims of suitable Indians. The old report that Sir Ramaswami Mudaliar may give up the Supply portfolio and take charge of Finance has again been revived.

N. R. NEWSUM Manager

JUTE

(By Our Staff Correspondent).

Calcutta, October, 26.

The week under review is short of one working day on account of markets being closed on Thursday for Jagadathri Puja. But during the days in which the raw jute market has remained open very quiet conditions have been noticeable and very little of business has been reported on account of mills. Sellers have been pressing for business but buyers have been showing very little interest in market. With the pressure of arrivals in uocountry centres and the fears that mills would postpone buying as far as possible there has been a further decline in prices. The decision of the Government of Bengal regarding the size of the crop for the next season is keenly awaited.

In the loose jute section business has been very restricted with sellers anxious to do business and prepared to offer a discount in rates. European packing have been in demand at Rs. 16-4 and Rs. 13-4 for Middles and Bottoms but sellers are slightly reserved. Supervised Jat Middles and Bottoms, however, are lower at Rs. 15-8 and Rs. 13-8 per maund. A small business in Middles alone was reported at Rs. 15-8 per maund. Indian District Tossa Middles and Bottoms were Rs. 16 and Rs. 13 per maund.

In the pucca bales section Export business has been negligible. Shippers have not been taking any interest. Mills are reported to have purchased Lightnings at Rs. 74 per bale and Dundee Daisee 2/3 at Rs. 77 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, Oct. 26.

Rather quiet conditions have been noticeable in the jute manufactures market. Even demand for hessians has disappeared, at least for the time being and second-sellers have been keen to do business in 11 Porters at a slight discount. Mills as yet have not reduced their rates. The sudden drop in demand for even the lighter fabrics is not quite understandable. It may be due to the fact that shipments have not been satisfactory so far this month.

In the heavy goods section much the same conditions prevail. Demand is negligible. B Twills were lower at Rs. 62-8 in the second hand markets:

PIECEGOODS

(From Our Correspondent)

Calcutta, Oct. 26.

The piecegoods market has been rather uninteresting and demand has been poor. There is greater anxiety on the part of dealers to dispose of tex-marked goods prior to April, which have been kept back for a long time, while buyers are prepared to buy only the cheaper goods.

A Press Note issued by the Provincial Textile Controller, Bengal, says: "As cloth and yarn merchants have intimated to the Provincial Textile authorities that they are unable to answer the questionnaire within the date prescribed in the Press Note dated Oct. 15, the date for submission of the correct answers to the same is extended up to Oct. 31, 1944.

"It has also been decided by the Provincial Textile authorities to release all cloth which was requisitioned on or before Sept. 25, 1944, and of which delivery has not been taken yet. The permit holder affected by this order will now forfeit his rights to the cloth allotted to him. The cloth which was voluntarily surrendered and which was not taken delivery of is also released for sale."

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100/- from 1st September, 1944 and there after increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

HERE ARE THE ANSWERS TO YOUR QUESTIONS ABOUT Prize Bonds

"How much do they cost?" There are two denominations—Rs. 10 and Rs. 100.

"Where can I buy them?" At any India Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury business.

"What are the prizes?" The prizes are by series of 1 lakh pieces. For each series of Rs. 100 Bonds participating in a draw, 1st Prize Rs. 50,000, two 2nd Prizes of Rs. 20,000 each and two 3rd Prizes of Rs. 5,000 each. Total prize money, Rs. 1,00,000 for each drawing. For Rs. 10 Bonds, 1st Prize Rs. 2,500, two 2nd Prizes of Rs. 1,250 each, five 3rd Prizes of Rs. 500 each and ten 4th Prizes of Rs. 250 each. Total prize money Rs. 10,000 for each series.

"Once a Bond has won a prize I suppose it is withdrawn from all future draws?" Certainly not. Every Bond whether it has won a prize or not is included in all draws until 15th January 1949 and so can, if you are lucky, win more than one prize for you.

"Are prizes subject to a tax?" No. They are free of Income Tax, Super Tax, Excess Profits Tax or Corporation Tax.

"Where are prizes paid?" See question two. Prizes are paid at all the above mentioned offices and at Sub-treasuries also.

"Are Prize Bonds repayable?" Yes, at par on or after 15th January 1949. That is, you get absolute security for your money AND the chance to win one or more large cash Prizes.

Vol. XXXIV. No. 17 SATURDAY, OCTOBER 28, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

JUTE INDUSTRY PROSPECTS

After early firmness the Calcutta Stock Exchange has been rather quiet and in Friday's session, reopening after the holidays, the market is rather featureless. The strength of the market early in the week was due to the rumours that the Indian Iron & Steel Company Ltd., might issue bonus shares but with the continued weakness of the Bombay market and the slump in both gold and silver prices, higher levels could not be maintained especially as there has been no confirmation of the rumours regarding Indian Iron's bonus issue.

* * * *

However, the technical position in the stock markets appears to be intrinsically sound as even with the sharp drop in prices for bullion, there has been no big decline in values in the Bombay market. While Calcutta operators have not taken any notice of the developments in the bullion market. As was pointed out by me on an earlier occasion, the possibility of a further decline in bullion prices should stimulate activity in the stock exchanges though there might be temporarily an upsetting influence.

* * * *

Rumours were current in the Bombay market this week that there might be a revision in the exchange value of the rupee. It need not be said that an appreciation or depreciation in the external value of the rupee has its effect on stock exchange values. An appreciation in the value of the rupee being followed by a decrease in stock market prices and a depreciation followed by an improvement. It is not clear, however, as to what exactly will be the effect of any revision in the rupee exchange at the present moment, with controls operating, but the tendency will be in the directions indicated above. It has been officially denied, however, that no change in the exchange rate is at present being contemplated and that there is no truth in the rumours.

* * * *

Reflecting the improved conditions in the coal industry the *North Damuda Coal Company Limited*, has reported an increase in earnings the net profit, before providing for taxation and depreciation, being Rs. 2,30,062 for the halfyear ended July 1944 against Rs. 75,390 for the previous six months. The higher level of earnings, however, has not been of any benefit to the shareholders as provision for taxation is very much more at Rs. 1,65,900 (Rs. 50,794) and E.P.T. compulsory deposit takes away Rs. 25,700 (Rs. 10,000). The amount set aside for depreciation is Rs. 4,590 (Rs. 3,000). The dividend has been maintained at 5 percent.

Raisings during the halfyear were 58,677 tons against 49,233 tons in the previous six months and despatches 58,141 tons against 49,219 tons.

* * * *

Rewa Coalfields Limited, also has been able to report a similar increase in earnings. The net profit, before providing for taxation and depreciation, for the halfyear ended June 1944 is Rs. 3,46,321 against Rs. 1,64,469 for the latter half of 1943. Provision for taxation is Rs. 1,94,366 against Rs. 56,063 while the amount set aside to depreciation is Rs. 22,324 (Rs. 7,202). The dividend has been increased to 8¾ percent from 7½ percent.

As a result of the continuous working for the five months in the last accounting period the *Caledonian Jute Mills Company Limited*, has been able to report a net profit of Rs. 1,74,549 before providing for taxation and depreciation (for the six months ending May 1944) against a loss in working of Rs. 4,32,666 for the previous half year. Earnings would have made a better showing but for the difficulty in respect of coal supplies. Provision for depreciation is Rs. 25,000 (Rs. 50,000) and that for taxation Rs. 50,000 (nil). The dividend is the same at Rs. 7/8 per share. Distribution for the last half year was payable as excess provision for taxation in the previous account had been made and credit was also taken for the estimated tax refund of Rs. 1.5 lakhs.

* * * *

The highest level of earnings in recent years is reported by the *Alliance Jute Mills Company, Limited* in the six months ended July, 1944. The availability of larger coal supplies has enabled the continuous working of the mills. The mills could be worked even extra time to make up lost loom hours. After recovering all hours lost on their own account the mills continue to work extra time when possible in order to make up arrears of "loom hours" for the account of the requisitioned Craig Mill. Double shift working was introduced from the 1st August, 1944, in order to absorb the "loom hours" both of Craig Mill and of Alexandra Mill, which has also been requisitioned.

* * *

The net profit before providing for taxation and depreciation is Rs. 27,19,690 for the half-year ended July, 1944 against Rs. 11,41,356 for the previous half-year. The charge on account of depreciation is Rs. 1.5 lakhs (Re. 1 lakh) while the provision for taxation is as much as Rs. 20.85 lakhs (Rs. 7,62,112). The sum of Rs. 1.64 lakhs has been transferred to funds against Rs. 60,918. The ordinary dividend has been increased to Rs. 17-8 per share from Rs. 12-8 per share. The amount carried forward is higher at Rs. 41,275 against Rs. 28,055 brought in.

* * *

As in the case of the Alexandra Jute Mill requisitioning of the *Albion Jute Mills* might prove to be advantageous to shareholders. The company has been able to conclude an advantageous working arrangement with the Cheviot mill. As a result of this arrangement it is expected that it will be possible for the company to take full advantage of the present conditions in the industry. As the Cheviot Mill is an electrical unit it will be possible to enjoy full priority. Albion on the other hand is a steam-driven unit. With the assurance of continuous running the earnings for the current half-year should therefore be considerably higher. Albion Jute has agreed to pay the Cheviot Mill Rs. 25,000 as compensation for additional wear and tear.

The net profit before providing for taxation and depreciation for the seven months ended May, 1944 is Rs. 1,49,220. The sum of Rs. 58,000 has been provided for taxation. The dividend on ordinary shares is payable at Rs. 3-8 per share for the period. The closing of accounts has been adjusted to coincide with the accounting periods of the Cheviot Mill as it will greatly facilitate matters. The arrangements with the Cheviot Mill is terminable on three months' notice.

* * * *

Orient Jute Mills is a foster mill working the loom hours of the requisitioned Lothian Mill. This enables the mill to get priority in respect of coal supplies. The mills commenced double shift working from March 20, 1944 and working has since continued smoothly. The working for the half-year ended May, 1944 should be considered satisfactory.

MORE FOOD

for India's millions

The primary need of India is to have more food for her millions. A sound physique and the means to preserve it by full and healthy diet are the foundation of all progress. More food grains, more fodder crop to make the cattle yield more milk should be the first aims of a planned national economy.

Through industrialisation of the country must hasten the attainment of these aims. The volume of money-crops which has to be grown to make payments to foreign factories will become smaller, wages, salaries, overheads and dividends will be paid in India and more land and money will become available to grow more and better food for India's millions.

J. K. Industries, by the nature of their business and the very large scale on which it is conducted, have gained considerable control in the new economic power of Indian Industry. As employers of many thousands and distributors to millions, J. K. Industries have an intimate knowledge of the needs and capacities of their countrymen that would ensure practical results from any national plan to which they contribute.

A. C. C. Move up

(By Analyst)

BOMBAY (*By Wire*).

Despite the news that the Japanese Navy had been defeated damaged and routed in the Philippines, markets did not improve due to pronounced weakness in the bullion market as a result of the Reserve Bank selling gold and silver at Rs. 61-8 and Rs. 119-12 respectively. There were also rumours in the bazar that there is likely to be a change in the rupee-sterling ratio. Thus investors are following a 'wait and watch policy' and market quotations are practically unchanged with prices more on the sagging side. The only scrip that is remarkably active this week was Associated Cements on rumours that a prominent Marwari operator had bought more than 30,000 Associated Cement shares. Market operators feel that Dalmia is also interested in buying Associated Cements. The shares were done up to Rs. 240-4, though closed at Rs. 239-8. Dalmia Cements also moved up to Rs. 18. I look for further rise in these two scrips, but would not recommend investment purchases at current high levels but would retain holdings for a further rise.

In Steels, Tata Ordinaries closed quiet at Rs. 383-8 and Deferreds at Rs. 2,070. Indian Irons were remarkably steady around Rs. 38-14 x.d., and Steel Corporations at Rs. 31-14.

Among Burma scrips Bombay-Burmahs were done up to Rs. 502-8 but declined at the close to Rs. 487-8 due to some selling by professional operators. I would however recommend investment purchases around Rs. 480.

Textiles declined at the close with Dyeings at Rs. 1,733-12. Madras also followed suit Bombay and most of the shares were a point or two lower than last week's closing. In the Electric Group, Bombay Trams ordinaries were quiet at Rs. 149 and preferences were around Rs. 72. I think I had already mentioned that I would favour liquidation of both ordinary and preference shares. Tata Powers were steady around Rs. 1,865.

In the Insurance Group, Empire Life was active in the market on a rumour that a block of shares of Empire Life is likely to change hands at a very high price. I however feel that any price beyond Rs. 1,000 for Empire Life should be considered an attractive level for shares to be sold out Bombay Life shares are reported to be around Rs. 800 due to reported cornering by Padmapat Singhania Group. My readers are aware that I am in favour of liquidating these shares and would therefore take advantage of the fight between the two groups to get control of the company. New Indias were however steadier at Rs. 79-4. Vulcans changed hands at Rs. 16-6 and Prithvi in Madras were in good enquiry at Rs. 11-12 United India Fire were done at Rs. 10-4. Among Banks Jaipurs were steady around Rs. 70-8. United Commercials were done up to Rs. 85. Reserves were quiet around Rs. 133-8.

In the sugar section, Belapurs were done up to Rs. 240 though closed quiet at Rs. 233-8. In view of the fact that the dividend time is approaching I would suggest investment purchases around Rs. 230. In Madras. Mysore sugars were unchanged around Rs. 60. Deccans were at Rs. 89 Travancores were quiet at Rs. 15. I like Deccan and Mysore at current levels. Among Calcutta shares Buland changed hands at Rs. 42-6 and Razas were around Rs. 42-4; Champaruns were done at Rs. 41-8. Buland and Razas still deserve attention.

Jutes have firmed up with Howrahs around Rs. 85 Kamarhatty at Rs. 658, Kanknarrah at Rs. 558, Gourepores have improved to Rs. 885. I look for a good rise in Gourepores and Howrahs.

In the Coal section, Amalgamateds were steady around Rs. 45, Bengals at Rs. 658, whereas West Jamurias were unchanged at Rs. 58-8.

Plantations in Madras were quiet. There was some activity in Haileyburia Tea due to recent announcement of Rs. 3 dividend. one rupee from last year's profit and Rs. 2 from this half-year's profit. I hear that the Directors contemplate paying a final dividend of Rs. 2 making the total for the year 1944, Rs. 4 as against Rs. 3-8 in 1943 and Rs. 3-4 in 1942 Nilgiri-Nirgundis were done up to Rs. 10 on reports of a dividend of a Re. 1 per share. This is also a good share and I would recommend investment purchase. Readers must have already seen that the Mysore State is contemplating a huge post-war reconstruction scheme and several new industries are to be started in Travancore. I think I have already mentioned that a new electro-chemicals industry will be started shortly and that the Central Government have given permission for the flotation of this company. I hear that the capital will be Rs. 9 lakhs of ordinary shares and Rs. 1,20,000 deferred shares. One-third of the ordinary capital, I hear is being taken up by the Travancore State, and the balance of six lakhs will be offered to the public. This company is formed for the manufacture of electrodes, graphites, carbon rods, etc. etc. and the company promotors have been able to secure a good board of directors and the prospectus will be out shortly. This industry will be the first of its kind in India and I feel that the future is assured for this industry particularly in view of the fact that the Travancore Govtrnment is taking a lot of interest and I hear that the Supply Department and other departments of the Government of India have also promised necessary help for making this industry a success.

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

Col. P. K. Kirkham & Co. Ltd.

61, HARRISON ROAD, CALCUTTA.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, October 27.

The week under review is short of two working days, markets being closed on Wednesday and Thursday on account of *Gopastami* and *Jagadhatri Puja*. In the four days markets remained open a definitely easier tone was noticeable as there was no confirmation of the reports of the possibility of a bonus issue by Indian Iron and Steel Company. Jute shares, however, remained steady and the general undertone of the market continues satisfactory though it would appear that with the sharp fall in bullion prices and the indifferent tone of the Bombay market, there will not be any appreciable increase in prices.

The giltedged securities section continues firm with 3½ per cent paper at par. It was reported that the Reserve Bank effected large sales at this level and there has been a drop in the quotation to Rs. 99-14. Short and medium-dated loans continue to be in good request. 3 per cent 1946 were Rs. 102-8, 3 per cent 1951-54 Rs. 101, 3 per cent 1949-52 Rs. 101-8 and 3½ per cent 1947-50 Rs. 104. Among other loans, 4½ per cent 1955-60 were Rs. 116-2 and 4 per cent 1960-70 Rs. 112-8. There have been no transactions in Provincial Loans.

Coal shares have been irregular. *Bengal* were steady at Rs. 651, *Bokaro and Ramgur* were done as low as Rs. 40-14, *Burrakur* were quieter at Rs. 40-5 on the announcement of a disappointing dividend. *Equitable*, on the other hand, were better at Rs. 64-4 and *Raneegunge* Rs. 51-10. *South Karanpura* were a shade better at Rs. 21-7 while *Talcher* were uninteresting at Rs. 10-3.

Cotton shares have been neglected especially as Bombay Textile issues showed a reactionary trend. *Cawnpore Textiles* were Rs. 13-7, *Elgin* Rs. 66 and *New Victoria* Rs. 8-5. *Bengal-Nagpur* changed hands at Rs. 37-2 and *Benares* at Rs. 13-8.

As remarked above, jute shares have been in good request though closing prices are a little lower in sympathy with the other sections. The publication of satisfactory earnings reports has been mainly responsible for the strength of this section. *Alliance* were Rs. 630, *Anglo-India* Rs. 464, *Champdany* Rs. 261 and *Clive* Rs. 59. *Howrah* were 1 point lower at Rs. 84-8 while *India* were unchanged at Rs. 700. *Northbrook* recorded a further rise to Rs. 46 from Rs. 45-2 at the end of last week while *Nuddea* were unchanged at Rs. 129 and *Presidency* at Rs. 10-11.

In the Engineering section, *Indian Iron* staged a sharp rise on Monday to Rs. 41 on reports that the directors might decide on the issue of new shares on bonus terms. In the absence of any confirmation of these rumours there has been a setback in prices and the quotation at the time of writing is Rs. 38-10 ex-dividend. *Steel Corporation* improved in sympathy with *Indian Irons* to Rs. 32-8 but are now quoting Rs. 31-11. *Burn & Co.*, were steady at Rs. 450 while *Jessop & Co.*, were a shade better at Rs. 24-4. *Steel products* were Rs. 8-4 and *Britannia Engr.* Rs. 19-11.

On the announcement of an increase in ex-factory prices for sugar so as to admit of the payment of a higher minimum prices to the sugar-grower, there has been greater enquiry for sugar shares. *Balrampur* were Rs. 17-10, *Cawnpore* Rs. 39-2, *New Savan* Rs. 21-8 and *Belsund* Rs. 16-8. *Carew & Co.*, were slightly easier at Rs. 30-14.

Business in tea shares has been rstricted but there has been good enquiry for selected shares. *Bishnauth* were Rs. 19, *Tezpore* Rs. 19, *Sapoi* Rs. 19 and *Gungaram* Rs. 580.

Among miscellaneous shares, *Burma Corpn.* registered a small rise to Rs. 4-12 while *Indian Copper* were unchanged at Rs. 3-2. *B.I.C.* were sticky at Rs. 6-8, *Britannia Biscuits* were further higher at Rs. 25-7 while *Calcutta Ice* were noted at Rs. 28-12. *Calcutta Trams* were more than one point higher at Rs. 46-8 while Indian *Cable* were steady at Rs. 28-2.

Among paper shares, *Titaghur Paper* quoted Rs. 27-12 and *India Paper Pulp* Rs. 218. *Dalmia Cement* ordy. were Rs. 17-6, *India General Navigation* Rs. 151 and *Midnapore Zemindary* Rs. 166.

ROHTAS INDUSTRIES, LIMITED

Shareholders of the Company are requested to note the amendments in the Notice dated Dalmianagar, 12th October and published in "Indian Finance" of 21st October, 1944 as under:—

The 36 000 Preference shares of Rs. 100 each are being issued at par and not at a premium of Re. 1 per share, so that the issue price is Rs. 100 and not Rs. 101 per share.

The figure of Rs. 100 should replace the figure of Rs. 101 in reference to the rate of Preference shares throughout the Notice, and the application money for Preference shares should read Rs. 10 in place of Rs. 11.

By Order of the Board,
S. P. JAIN,
Managing Director.

Dalmianagar,
12th October, 1944.

PRICES ARE STILL FALLING

don't be caught by unwise buying

As the last year has shown, investments in goods, property, land and commodities have turned out badly. Prices have fallen and money invested in these things has visibly *SHRUNK!*

Lucky, indeed, the wise people who invested in sound securities. Their savings have grown. Their money has become more valuable. Assisted by price controls and increased manufactures, they are defeating the profiteers and hoarders. They have rendered both India and themselves a great service.

Keep on with the good work. Prices are still falling and will continue to do so as long as people spend less and save more. Now, as many people have found out, money investments are the best. Any of these is absolutely secure:—Co-operative Societies, Insurance, Savings Bank Account, Post-Office Savings Bank, Government Loans, National Savings Certificates.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Avoid all unnecessary expenditure on clothes, furniture, crockery, cycles, motor cars, and other things which you will be able to buy much more cheaply after the war. For the duration, do without luxuries. This is the true path to personal and National prosperity.

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

UNION JUTE COMPANY, LIMITED.

Notice is here-by given that a Meeting of the Holders of the 1,200 Debentures of Rs. 1.000 each secured by the Trust Deed dated the 1st day of June 1937 will be held at the office of the Company at the Chatered Bank Buildings 1-1, Clive Street, Calcutta on Saturday the 25th day of November, 1944 at 12 O'clock in the noon for the purpose of considering the proposal for and if thought fit of passing resolution for sanctioning the release by the Trustees of the Company's property at Cuttack and also for the purpose of transacting such other business as may be brought forward.

The necessary resolution is to be proposed and will, if thought fit, be passed as Extraordinary Resolution under the provisions in that behalf contained in the said Trust Deed.

By order of the Board.
BIRD & CO.,
Managing Agents.
Union Jute Company, Limited.

Chartered Bank Buildings,
1-1, Clive Street, Calcutta
Dated, 25th October, 1944.

12th October, 1944.

The above notice is in the place of the one published in *Indian Finance* of 21st October as it contains some corrections.

UNITED IRON & STEEL CORPORATION LIMITED

With the permission of the Government, the name of the United Iron and Engineering works Limited, which has its registered office at 9, Clive Row, Calcutta, and its factory at 119, Grand Trunk Road, Belur, has been changed into "United Iron and Steel Corporation Ltd". The Factory of the company is situated over an extensive area of 13½ Bighas of land at Belur and is fully equipped with up-to-date machinaries. It is engaged at present in the execution of sundry war-contracts involving huge sums and its record of execution is convincingly satisfactory. The company specialises in the maufacturing of Precison Tools, all kinds of structural works, heavy and light, sheet—metal jobs including galvanizing, spray painting, foundry etc., and the quality of its production is distinctly of a high order, whereby the company has been able to secure large war-contracts in an ever-increasing flow. The company has a subscribed capital of Rs.15 lakhs, of which Rs. 13,71,396-10-0 have uptil now been fully paid up. It is being managed by a strong Board with Mr. K. N. Dalal as its Managing Directors. The company possesses a solid financial backing, having Mr. Dalal, at the helm of its affairs. Mr. Dalal has requistioned, inspite of war-conditions, the best possible services of European experts for the successful management of the concern. With their help, a post war scheme has been drawn up, specially for the production of textile and agricultural machinery, which when enforced after the war, will go a long way towards the advancement of the ndustrial and agricultural cause of the province. We hope the company will prove its usefulness to the country under the management of Mr. Dalal .

ISSUED WEEKLY

Vol. XXXIV. No. 18 SATURDAY, NOVEMBER 4, 1944 Price Re. 1

Uneasy lies
THE HEAD .....

If you are the head of the family, you must be feeling uneasy for the future. There will be so many problems to face and solve. You can at least solve your financial problems by saving while you are earning. Do it now through INSURANCE.

NATIONAL INSURANCE
COMPANY, LIMITED

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

The advent of the cold weather has not made any difference to the money market and money is as cheap as ever. In fact, with the larger subscriptions to the defence loans and the excess of treasury bills sales over maturities, it could be expected that there would be a slight hardening in money conditions. It has not been possible, however, to effect any reduction in the average discount on treasury bills. Even with the increase in the amount of applications in the last three weeks, bidding has not been keener and the average discount rate has remained unchanged at 7 annas 11 pies per cent per annum. The authorities obviously are thinking of getting as much money as possible on these terms. The offer for the next week has been maintained at Rs. 6 crores. The Assam Government, on the other hand, has benefited to a certain extent from the present conditions. As against the offer of Rs. 2.5 crores of treasury bills, applications received amounted to Rs. 3.45 crores, the average discount rate being lower at 9 annas per cent.

The return of the Reserve Bank for the week ended October 27, 1944 shows that there has been no further expansion of currency after the rapid additions to the note issue in the previous three weeks. Total notes issued are slightly higher at Rs. 972.18 crores against Rs. 971.74 crores owing to the increase in the amount of rupee coin to Rs. 13.6 crores from Rs. 13.16 crores. Notes in circulation are sharply lower at Rs. 956.55 crores against Rs. 962.2 crores.

In the banking department, Central Government balances have improved to Rs. 196.49 crores from Rs. 185.24 crores as also Other Goverment accounts to Rs. 12.45 crores from Rs. 10.55 crores. In spite of the rise in Government balances, bank deposits with the Reserve Bank have increased to Rs. 105.08 crores from Rs. 103.47 crores. The large increase in deposits, both Demand and Time, have enabled banks to keep a highly liquid position. Balances held abroad have increased by Rs. 10.6 crores to Rs. 312.9 crores and stand at the highest level for several months. With the present rate of sterling payments, it appears that the total of foreign balances in the banking department will be a huge figure before the year end. Thanks to the slowing down in the rate of expansion of currency the transfers from the issue department to the banking department for the ten months of this year amount to only about Rs. 120 crores, though total sterling receipts are well over Rs. 300 crores. What exactly the authorities propose to do with such large balances in the banking department is not clear. On more than one occasion we have said that further accumulation of sterling balances should be avoided as far as possible. In the absence of any clear understanding in respect of the disposal of these balances and limits to the expansion of currency this country will continue to suffer from inflation.

The return of the scheduled banks for the week ended October 20, 1944 shows a large increase in both Demand and Time Liabilities. Demand liabilities being Rs. 595.89 crores against Rs. 591.99 crores and Time liabilities Rs. 194.89 crores against Rs. 193.81 crores. Advances have declined further to Rs. 197.41 crores from Rs. 198.38 crores. Cash is thus higher at Rs. 27.86 crores against Rs. 25.56 crores. Balances with the Reserve Bank were Rs. 102.27 crores against Rs. 99.9 crores.

The return of the Imperial Bank for the week ended October 27, 1944 also reveals an increase in deposits to Rs. 236.56 crores from Rs. 233.25 crores. Investments in Government securities are higher, the total being Rs. 139.12 crores against Rs. 135.42 crores. Total advances show a decrease, loans being Rs. 8.64 crores against Rs. 9.25 crores and bills discounted Rs. 3.43 crores against Rs. 4.05 crores. Cash credits, however, are slightly higher at Rs. 43 crores against Rs. 42.13 crores.

Developments in the bullion market during the week have been very interesting. The Reserve Bank continued to sell gold in larger quantities at varying prices and it was expected that the increase in the offer of gold to 50,000 tolas and 200 bars of silver would have a depressing effect on the market. Actually, there was a sharp drop in values in mid-week but the reduction later in the offer of gold and silver and heavy buying at the lower levels caused a recovery. The British Premier's speech indicating that the war might be prolonged for some time also had an encouraging effect. There is a feeling, however, that the Reserve Bank should sell in larger quantities and push down prices for both gold and silver to considerably lower levels. Otherwise with the lack of scope for investment and the large volume of idle funds, there will always be a tendency to buy the precious metals whenever there is a substantial reaction. In the past three weeks gold forward has not been quoted very much below Rs. 60 and there has always been a smart recovery.

The exchange market has been steady with a few export bills showing.

International Business Conference

The Indian Delegation to the International Business Conference in the U.S.A. is the first instance during wartime of formal contact between businessmen of various countries. That such contacts have a special value cannot be doubted. But it is not clear what place this Conference is to fill in the plans that are being made to bring international trading relations in the post-war period into conformity with some definite pattern. The distinction between the Indian Industrial Mission and the Indian Delegation which has now proceeded abroad, has been and still is, to some extent, blurred. But it is obvious that the two cannot serve the same purpose equally. The International Business Conference has been convened on the initiative of four American Chambers of Commerce which have extended their invitation to the Federation of Indian Chambers of Commerce among the representative commercial organisations of various countries. The underlying idea probably is that businessmen of various nations meeting together in conference, without any close affiliations to the Governments of their respective countries, should be able to voice the needs of business and bring about some degree of conformity between official policy and the needs of private business. This idea underlay the activities of the International Chamber of Commerce in the pre-war period; and the journal which was published under its auspices supported a policy of free trade. Judging by results, it is extremely doubtful if the cause of free trade will find any effective reinforcement in Conferences of this kind. But businessmen all the world over affect economic wisdom which according to them is in some strange way denied to Governments and political parties. And their faith in the efficacy of an international conference to establish certain economic truths overlooked by Conferences with official delegations is not easily repressed.

But it is well to realise that between official conferences, that can negotiate on various outstanding issues and come to agreements, and contacts between businessmen of various nations, there is indeed, no useful half way house. Conferences of the kind that met at Bretton Woods have their uses, even if ultimately the agreements they arrived at should fail to be ratified by the Governments and legislatures of the respective countries. Considering the nature of the problems and the need for formal understanding between the various countries, attempts have to be made to reach such understanding, even if the prospects are not very heartening. And this is true not only of questions relating to currency and exchange, but also tariffs and other matters relating to commercial policy. We could well conceive of a Conference for discussing the production and marketing of raw materials. International Conferences could also discuss the geographical distribution of some of the big industries, with a view to minimise conflict. When the nations are far advanced in the formulation of plans for post-war development, a Conference might usefully consider how the various plans might be modified to ensure that they are not intrinsically incompatible. These problems can be discussed only by delegations which are duly instructed and authorised by their respective Governments. At the other end is the kind of contact which the projected Indian Industrial Mission was meant to promote. The difference between the personnel of that mission as it has been proposed and the personnel of the Indian Delegation that has proceeded to the U.S.A. is quite suggestive of the difference in purpose. The object of the former, according to a press note is "studying the present industrial organisation of these countries and the technical advances made by them during the last few years." It is added the mission will be unofficial in character, and its members, all Indians of independent views and position, will be free to arrange their programme and discuss any matter, unfettered by terms of reference or any form of control by the Government. They will be accompanied by their own technical advisers and will bear their own expenses throughout the trip. Government will arrange facilities for them to visit industrial establishments and to contact leaders of industry and prominent businessmen in Britain and the United States. It is believed that the mission's study on the spot of the latest developments in the industrial sphere, and the knowledge and ideas which they will bring back with them will be of great value in the further industrialisation of the country after the war.

The members of the mission are such as to plan on their own individual responsibility big industrial projects and establish, while they are abroad, such prior understandings as may be necessary for their execution on their return to India. We are aware that in some quarters there has been carping criticism of this idea, on the ground that special aids are being provided for big businessmen to further their own ends. But the point to emphasise is that these ends coincide with the ends of the nation, beyond a certain point. It is, indeed, regrettable that the departure of the Indian Industrial Mission has been delayed; and it is time that the dangers of indefinite postponement were realised. These contacts are best made, while the post-war plans of the great industrial nations are still in the formative stage.

The International Business Conference stands midway between the two. And members of the Indian Delegation, who had occasion to speak in public before they left India stressed the obvious difference between the position of India and that of most other countries which will be represented at the Conference. These speeches and statements show that the Indian Delegation is thinking of the problems from a national standpoint as distinct from the standpoint of private business, though the latter seems to be more in agreement with the ideas and objects of the conveners. According to a report in a Bombay contemporary, world business trends and the future of private enterprise will form the chief subjects for discussion at the Conference. The other subjects are the commercial policies of the nations, currency regulations, promotion and protection of investments and shipping and aviation. The list of subjects, though probably it is not complete, contains sufficient indication that the Conference is concerned with the interests of business classes rather than the larger objectives of national economic policy as it is conceived of in modern times. But the Indian Delegation seems prone to lay emphasis on the disabilities of Indian business which flow from the country's political subjection, the urgency of raising the standard of living and the greater need for machinery than for the articles which in the past had figured prominently in our import trade.

If we are right in our surmise that the protection of private enterprise will be the chief preoccupation of the Conference in America, the Indian Delegation will find it a somewhat ticklish business to define its standpoint. The delegations from the other countries are likely to show a strong bias in favour of private enterprise and, what is more, express themselves in terms with which the Indian Delegation may feel it not quite politic to agree. Not that all the members of the Delegation have a socialist bent of mind. But Indian businessmen are only too keenly conscious of the paramount need for Government help in entering many avenues of business. In America, the attitude of big business to this question is determined mainly by its reactions to the experiments of the New Deal. The claims of private enterprise have, undergone exaggeration, rather than suffered a process of understatement. And in so far as the American view point will determine the whole trend of discussions, the Indian Delegation will be faced with the necessity of entering a mild caveat. Mild, because it cannot be suspect of subscribing to socialist tenets. And it has also to bear in mind that some of the foremost members of the Federation which they represent are signatories to the Bombay Plan and must, therefore, support the principles and policies by which alone that or any similar plan can be successfully executed. On questions like aviation and shipping policy, they may find the position easier; for, whatever may be the standpoint of individual members of the various delegations, the general trend is towards co-ordination of national schemes and such co-ordination is impossible except on the basis of State interference. But on questions like private enterprise and protection of investors, the Indian Delegation will have to formulate their position with the utmost care.

THE PUNJAB NATIONAL BANK LIMITED

A typical bazar scene four years ago

Supplies of kerosine were available in such quantity that they were taken for granted. With Burma, India's main pre-war source of kerosine supply, temporarily in enemy hands, this product must now come in by sea from other more distant sources. Rigid economy is necessary to ensure that oil tankers can carry vital petroleum products to the many theatres of war in the vast quantities required. At sea today the hazards are great and constant. By practising rigid economy you are ensuring that they are not taken unnecessarily. You are also helping to release India's railway wagons for essential war needs. When the time comes Burmah-Shell will again strive to make kerosine readily available in ample quantities in the cities, and 700,000 villages of India.

INSERTED BY BURMAH-SHELL

Social Insurance—A Start

In advance of the more general findings as to labour welfare in India a scheme for sickness insurance for factory workers is ready and its details were made known last week. The completion of the inquiry is admittedly less important than the attitude of Goverment to the proposals. It is well to insist that the Geneva Convention of 1927 settled the principle of insurance. Health insurance was accepted as desirable from Argentina to Yugoslavia (to use only the alphabetical order for purpose of comparison). Its value is demonstrated by the acceptance of both the convention and the I.L.O.'s detailed recommendations by countries as differently placed as Italy and Chile where political pre-occupations as in India are known to stand in the way of economic and social advance. It is perhaps necessary to emphasise the fact that sickness insurance as proposed commanded approval at a conference of employers' and workers' representatives held in September, 1940. And the official inquiry only followed the general recognition of the value of sickness insurance. The Textile Labour Committee in Bombay reporting in 1941 outlined a scheme for the Bombay mill industry on a contributory basis with the State directly extending financial support.

The usual principle of insurance is of course varied as in any scheme of social insurance because the scheme is to be compulsory and more than the administrative expenditure will fall on the taxpayer in such cases. What the Dominions have done in this field is measured easily by reference to the New Zealand Social Security Act of 1938 which anticipated the British Beveridge plan in all respects. It is known that South Africa went into the question by consulting the I.L.O. about the general principles of operation and has since enunciated valuable principles. Opinion expressed by the Whitley Commission was essentially in favour of some scheme of sickness insurance. If it is urged that the Provinces and States can deal best with it attention may be drawn to the series of war-time conferences on Labour and the useful rule that in regard to protected industries, as in the case of mining, labour welfare measures must be the concern of the Central Government.

It is useful to summarise the scheme before discussing its application. The scheme is meant to apply to textiles, engineering and minerals and metals. The number of workers in these groups is estimated at 1.2 millions or 60 per cent of the total number of factory-workers in India. The Draft Convention referred to recognised exceptions so that scheduled exceptions will be allowed. The employer's contribution is fixed at 1-4 per month and the worker's at 12 as. if permanent, 8 as. if temporary and 4 as. if casual. There is no insistence as to covering Government's own employees in the matter of medical or cash benefits. The worker in return for his insurance contribution is to receive free medical treatment and attendance and cash benefit subject to certain conditions. As in other countries cash benefits will accrue only after a qualifying period. Instead of a public board to manage the insurance scheme a statutory corporation with regional boards is designated as the authority to administer and supervise. The assimilation of maternity benefits to the sickness insurance scheme is recommended along with amendment and extension. And disability in case of industrial workers is also to be met by insurance benefits making workman's compensation superfluous.

The main feature is the levy of contributions at a flat rate helping lower paid workers rather than the disparity between the employer's and the worker's contribution. The exclusion of Government and Local Fund factories is not suggested, but plantations and seasonal factories are wholly outside the scheme. The portion of expenditure to be borne by the State is higher than expected since 72 lakhs (18 from the Centre and 54 from the Provinces) are wanted to raise the insurance fund's resources to the total of Rs. 2½ crores a year. These proposals are meant to cover all workers aged between 12 and 60 and the limit of exemption from insurance is the receipt of Rs. 200 a month. Out of the total receipts 42.5 per cent is assigned for medical benefits and 12.5 per cent for administrative expenditure and 45 per cent is meant for cash benefits and reserve.

Since Government's attitude may be determined both by the legislature's opinion and the tripartite labour conference arranged at intervals it is best to look upon the previous expressions of opinion as a guide to what may follow. The joint conference of employers' organisations approved sickness insurance provided that: 1. The State, employers and labour contribute to its cost. 2. Legislation is on an all-India basis. 3. Legislation is made applicable to all important industries and Government undertakings, both Central and Provincial. 4. And similar legislation is concurrently enacted in all Indian States. Workers' views in favour of a nominal contribution as compared with the apportionment of the cost between Government and employers were recorded. That the conditions outlined by employers are not impossible will be recognised readily in view of the scale of contributions proposed by the Special Officer. The most important rule, as to Central Legislative control is implicit in the scheme which is based on the principle of assessing all employers and workers.

Correspondence in essentials to the National Health Insurance Act of 1936 in Britain is indicated by reference to some particulars. The 1936 Act applies to all manual workers with certain exceptions aged between 16 and 65 earning less than £250 in a year. Weekly premiums go into the fund which is subsidised by the State. Benefits are paid under statutory rules and include maternity benefit. Cash benefits are paid in proportion to weekly contributions received, while medical benefit is virtually unrestricted in duration. The distinguishing feature in Britain is the use made of friendly societies, trade unions and commercial undertakings. Insured workers are enrolled in approved societies which can offer additional benefits. Defects have been noted but the only change made in war is the enhancement of both the benefit and contribution payable. Over 19 million persons were covered fully or partially by the insurance scheme which applied to women as well as men, the ratio being roughly 1 to 2. The contributions fully covered the benefits paid in an average year but administration charges equal to 12.5 per cent of the cost fell on the Treasury. Interest earned on the Funds was applied in part to the accumulation of a surplus.

The argument as to the propriety of adopting the scheme should not turn on either the capacity of industry to pay or the discrimination in favour of certain classes of workers. If it is urged that compulsory contribution becomes a poll tax on industry, it is clear that it will be a cost which will be passed on to the consumer in due course. The need to work up to high standards in health is not the less acute on account of State expenditure on medical relief. On the shortest view compulsory insurance may be regarded as supplementary expenditure in respect of public health. Whatever benefits accrue in regard to industrial efficiency will insure largely to the advantage of the employer. The omission of calculations as to the rate of morbidity in factory labour cannot be called a drawback. A special investigation in 1933 in Bombay revealed no special features at all and in fact it may be assumed that healthy adults may be less liable to sickness, counting occupational diseases as exceptional. The Bombay Textile Labour Committee which wanted sickness insurance for mill workers had the support of the Ahmedabad Labour Association which has experience of running a hospital and dispensary for its members. The State's contribution per insured worker will be roughly Rs. 6 per annum which is within the estimates made before the inquiry.

Since the best opportunity for introducing the schemes arises when industry is flourishing and wages rising it is desirable to regard the scheme as requiring less amendment than presumed. As the subject of health insurance is in the concurrent List legislation by the Centre is feasible. There may perhaps be a desire to limit benefits to permanent employees only but it is only fair to admit that organised labour would ask for the maximum possible. The Royal Commission on Labour recommended that insurance should be adopted because medical facilities are less adequate and the incidence of sickness higher than in Western countries. That argument, like the reference to the level of wages in India, should hold good at present. Private initiative in regard to sickness insurance has not been wanting and the results obtained warrant confidence in the workability of the scheme published. The levelling up of responsibilities will certainly remove the handicaps arising from altruism. Rules as to the actual working of the scheme are ascertainable from experience in many countries but the plan will certainly call for both wholetime doctors and the evolution of a panel system. The medical profession if assured of capitation grants would look upon any innovation in the same light as the rural practioner's subsidy, already familiar to some Provinces. Since the scheme requires little defence in regard to its theoretical basis the start it gets will depend less on financial management than on unanimity as to the limits of social responsibilities.

THIS IS AN ANNOUNCEMENT AND NOT A PROS PECTUS

"Consent of the Central Government has been obtained to this issue of capital subject to the condition that so much of the capital as cannot in that Governments judgment be properly expended until some certain future date is invested and kept invested in prescribed securities which will not be released until the Central Government (in consultation with the Crown representative if any Indian State interests are involved) is satisfied that the time has come to make corresponding payments for purposes which are consistent with the enforcement of any measures of control or restriction that may be in operation at the time when such release is applied for. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them".

MANAGING AGENTS

THE EASTERN SMELTING & REFINING CO., LTD.,
10, Clive Row, Calcutta.

REGISTERED OFFICE

10, CLIVE ROW, CALCUTTA.

The company has been formed generally for the purpose set out in its Memorandum of Association and particularly for the purpose of acquiring the assets of the Eastern Smelting & Refining Co., Ltd., Calcutta and to carry on the business of lead ore mining and smelting and other non-ferrous mining and metallurgical operations. The assets acquired from the Eastern Smelting & Refining Co., Ltd., consist of leasehold rights, plants, machinery and other equipments at the factory and at mines, stock in trade, benefits of all pending Government contracts and all other assets including goodwill of the lead business carried on by them.

The smelting of lead by the company on a commercial scale directly from indigenous ore by modern methods is a pioneer venture in India. The present capacity of the Smelting Plant, which is the only one of its kind in India, with the additions now being made, is expected to be 3,500 tons a year valued approximately at Rupees nineteen lakhs at the rate now being paid by the Government to the company for its present output.

Permission of the Central Government has also been obtained for installation of Plants for the manufacture of Red Lead, Lead Pipes, etc., which should considerably supplement the income of the company.

The company has in its employment competent Metallurgists and Mining Engineers with long experience of Lead, Zinc and other nonferrous metal, mining and metallurgy.

The lead ore mine from which the ore is being extracted is situated in Rajputana, lease for which has been obtained for twenty years with an option for a further like period. In the opinion of competent Geologists the mines are situated in an area which is highly mineralised. This mine was so long worked by open quarry method and yielded approximately 1,000 tons Cerrusite and Galena. This ore is now in process of smelting. At present the mine is being developed by sinking shafts and winze under expert supervision. The present process of development is expected to be completed within the course of a year or so. Boring operations are also being carried on to search for and locate further reserve of ore at the mine which according to indications are likely to be substantial.

Negotiations are also proceeding for acquiring three more prospective mines elsewhere. With proper development of these mines the factory should run full swing. As and when yields from the mines justify it is proposed to instal latest type of smelting furnaces, designs and licence for the manufacture of which have already been obtained from a reliable British firm.

At the current rate of lead ingot now being paid by the Government the shareholders can confidently look forward to a fair return for their investments. During the Post War period when Concentration Plants are likely to be available and installed at each individual mine. it is expected that the cost will be considerably reduced enabling the company to compete successfully with imported metal and continue to give a fair return to the shareholders of the company.

Applications for shares may be made through some of the principal Branches of the Imperial Bank of India.

Editorial Notes

Food Survey

In the Food Department's review of work done in 1943-44 urban rationing is given a lower place than procurement operations. Under the system of controlled purchase the ability to move stocks to deficit areas has been acquired. Shipping and railways alike have been pressed into service. The basic plan provides a freight of 3 million tons in respect of rice, millets, wheat and gram. Storage, despatch and transhipment are not merely problems for the carrier but for the consignor. The drop in prices has facilitated procurement more than anything else. The regular arrivals of wheat from abroad establishes the need for increased agricultural production. In that field achievement still remains moderate and the Grow-More-Food policy requires support in all stages, and from all concerned, largely because fair prices are guaranteed. Figures available do not point to the abolition of deficits. Where the Department has succeeded most is in regard to several States which have escaped famine. The first annual review does not contain estimates as to carry-over, stocks built up for special purposes or in transit or to the existing gap between production and consumption though the ideal of a well-fed India is adumbrated.

The experience of rationing has been described as satisfactory. The connection between price control and rationing has for the time being proved the value of regulated distribution. The surplus Provinces have accepted the need for co-operation, agreed both to export and to ration their urban inhabitants. The financial aspects of the Food Department's working have certainly claimed less notice than warranted Short-term borrowing on a larger scale this year and the larger bank balances kept by the Government have a bearing on the scheme of procurement. It is possible that war risks insurance receipts have increased on account of purchases and stocks held. The totals disbursed and realised like the margins obtained should be interesting at least to the trade. The system of bulk purchases may lead to some departures in crop finance though the familiar method of advance against crops in bearing may be left out. Since uniformity is lacking, nothing can be said as to warehouses or the encouragement of co-operative organisations largely because Provincial Governments must deal with these matters.

Since the agency now created for foreign trade in foodstuffs would probably survive the war in many countries, it is essential only to indicate the importance of leaving relief entirely to the Centre in times of emergency. That means in case of distress the exceptional donation would not be called for. But it also means the creation of a sizeable revenue balance built up, if need be, out of provincial famine insurance funds. Centralisation in this case would have the merit of placing famine outside politics. The Famine Enquiry Commission's findings, however, cannot be anticipated but the omission of post-famine measures in Bengal in the Food Department's review is surprising because Calcutta is a liability of the Centre. Crop prospects for 1944-45 will have a material effect on future operation but the Food Department claims that it sticks to the principles laid down in the Gregory Committee's report in regard to price control, rationing and shipments from abroad.

Civil Aviation

Two conferences on civil aviation were preceded by a White Paper and an outline of U.S. intentions to run globe-girdling services from the U.S.A. The draft convention proposed does not appear to command Soviet support since withdrawal is presumed. While Britain's former ideal was obviously the right of innocent passage for all aircraft it has apparently been given up. The freedom implied that for lawful purposes planes could fly and land for refuelling but could not, unless by agreement, set down or take up payloads. In the general view the new principle to work up to is for freedom of the air with reservation of cabotage. The reservation of traffic between two airports in one country resembles the reservation of coastal trade for shipping by legislation. But any guarantee as to freedom of competition over international route raises question as to subsidies. If Britain under U.S. pressure declines to give subsidies the whole Commonwealth will probably have to give up subsidies. At Chicago the main issue may not be prospective competition from air lines owned by shipping companies, or the setting up of an international authority, but the broad terms of the Convention. The lapse of the freedom of air in Britain formerly noted in favour of regulation by agreement is due to claims for new routes. The reservation of internal air traffic thus might induce the U.S.A. to abandon extreme claims. The principle of uniformity in the Commonwealth as a unit should help to bring agreement within reach. The Dutch and French Empires are not disinterested in this matter and the bargain struck at Chicago may be one based on a division of traffic with deference to U.S.A. supremacy in Latin America. This may offset plans made by British shipping companies to enter the field of air transport but it would make air traffic subject to well-understood rules of competition. The exclusion of both Germany and Japan would be of advantage to the U.S.A. more than the others. The operation of mail subsidies would also be subject to accepted rules and if Russia propounds a doctrine of rigid sovereignty of the air subject to specific agreements with each country, the United Nations may leave Russia out, as it is unlikely that Russia will let air services operate over all her territories. It is hardly necessary to add that Indian expectations must be guided by the statement of policy.

Foreign Trade Changes

Illustrative of the tendency for imports to fall and exports to increase graphs relating to the foreign trade of many countries in the war period have been prepared for the League of Nations statistical bulletin. The familiar disparity between exports and imports is not limited at present to the U.S.A. but extends to Canada where the Mutual Aid programme (800 million dollars for 1944) represents an increase in exports for which the Dominion pays without asking the customers. Import surpluses are limited to tiny Palestine and Finland but a remarkable feature is provided by the stability of Danish foreign trade after the Occupation. Since money values alone have been calculated for indicating broad changes, the rise in prices since 1940 implies a sharp reduction in the volume of trade as in other countries. Creditor countries able to draw in more than the value of exports are distinguishable from countries which have accumulated oversea assets for other purposes. Though invisible exports have fallen, Swiss exports in 1942-43 nearly balanced imports. Self-sufficiency in regard to food made the fall in imports unimportant. But the analysis of quarterly movements since 1939 leaves, no doubt, as to the fall in foreign trade allowing for the strong rise in prices the rise in Iran's imports of the fall in Bulgaria's exports can only be regarded as symptoms of strain. The spectacular increase in U. S. exports since 1941 shows how Lease-Lend is the determinant of both the source and destination of supplies for many countries. Figures as to enemy countries are wanting, but inflation in Germany, concomitant with reduced consumption and forced savings through the six big banks, should be reflected in foreign trade trends. The drop in both Hungarian and Bulgarian imports in 1943 is decidedly suggestive of German difficulties. Neutrality has influenced the foreign trade of Portugal and Eire in different ways but the latter has retained a favourable balance of trade and the new Reserve Bank has sterling balances for use after the war. The growth of mineral oil exports from Iran and Venezuela is readily indicated in the movement of trade while the enlargement of imports to check inflation is characteristic of both Mexico and India. As to Britain's increased takings and reduced exports during the war, there is no need to refer. There is, however, the fact that industrial progress has stimulated imports into Canada and Australia during the war period and the total war effort led to a contraction of the usual export trade in the case of Australia, while stimulating imports greatly. There is reason to assume that in a period of rapid industrial development the content rather than the volume of India's imports would show changes. The rise of secondary industries in Brazil has clearly led to an increase in imports last year, imports being drawn without regard to the size and nature of Brazil's external debt.

Railways In War

An account of the uses made of the railways in war time must include a note on what they do for the armed forces and their supplies. Maj.-Gen. Russell D.Q.M.G, gave last month an account of the difficulties in India arising from distances. Keeping the ports clear is a job assigned to the railways. It was pointed out that ships must be unloaded, reloaded and sent away from our ports as expeditiously as possible. Keeping our ports clear is therefore one of the railways' biggest tasks and that is why difficulties are experienced in moving the traffic near the ports. Import and export trade must receive top priority. "This might easily suggest that industrial needs fall into second place but the movement of freight for war purposes differs greatly from the ordinary foreign trade, and there are no set preferences. The changes in direction and intensity of traffic during war are due to the criticism of factories, depots and even new lines. The break of gauge leads to difficulty in transhipments. Stations which in peacetime handled a small and fairly regular flow of traffic have had to be converted into enormous railway yards capable of handling more than ten times what they did before. Changes as to destinations and routes alike are inseparable from the demands of war. The freight movement has to be organised like that of the troop trains. The expansion of the fighting forces implies a progressive increase in traffic. Inward and outward freight tonnage runs into hundreds of thousands of tons a month according to General Russell. Current requirements may be measured in sample of figures given. To move the personnel of one Division only 20 special trains are needed, and for the vehicles, guns and stores 48 trains are needed. General Russell mentioned that as a result of the shift from the defensive to the offensive military movement in the last two years has increased two and a half times. His prediction that we have by no means reached the peak load as yet supports the War Transport Member's hint of greater strain on the railways in the future and more restricted facilities for non-essential traffic. What has been done for new construction is to be inferred from the provision of airfields aidings for new airfields during construction and a recent estimate is that over 10 million tons of material and at one time over 1.600 wagons per day were received for airfield sites.

Industrial Credit

The organisation of India's war effort has many glaring defects but the real significance to our industrial future arising out of faulty methods of industrial credit has not yet received due emphasis. The process of switching on industries from peace time production to war effort has been ably tackled in U.S.A. and U.K. where the Governments have given active financial help to industries and created the necessary conditions under which the national banking structure could play an active role in accelerating industrial expansion and output. In a short booklet entitled "Industrial credit in war and Post-war Economy" (Foreword by Mr. N. R. Sarkar. The Book Exchange, 217, Cornwallis Street Calcutta, Re. 1) Dr. Saroj Kumar Basu brings out the contrast between India and advanced foreign countries in this respect. In U.S.A. for instance the industries received unstinted help from Government not only for speedy expansion of factories during war time, but they are also granted adequate depreciation and renewal allowances for post-war recuperation. By 1942 31.9% of all loans granted for financing war effort has come from the Government and in some district the percentage rose upto 50%. Details regarding the means by which war effort is financed in India are lacking. But Dr. Basu has conducted enquiries on the subject and based on his findings and the available published material he indicts the Government of India and the Reserve Bank of India on the inadequate steps taken for the effective mobilisation of the resources of this country. The machinery for expediting war production in this country is shown to be rudimentary and galioping inflation could not achieve what correct planning alone could have done. The author further points out the harmful effect of Government's taxation policy on post-defence reorganisation and supports the popular view that E.P.T. refund would hardly be adequate for the problem of industrial reconstruction and rationalisation just after the war. He enters a plea for a comprehensive factual survey of Indian industrial requirements instead of the "too rudimentary questionnaire issued by the Government" and calls for a planned state direction and guidance in the transition of industry to peace time conditions.

Iran Refuses

The memory of the Anglo-Russian Convention of 1907 has not wholly died out as a claim to a share in Iran's oil was advanced by the Soviet Union according to recent reports. The manifestation of interest may be attributed to the Anglo-American oil agreement in which the advantages are heavily tilted on the U.S. side. Why a country with a large surplus of her own should look for concessions may be difficult to explain but across the Caspian lies Baku—the chief centre of the Russian oil industry. In spite of the Bashkirian development there may be need for oil while the fact that U.S. companies have acquired concessions in the eastern districts of Iran may be a powerful argument. It is reported that Iran has refused though opinion in Teheran was said to be in favour of the grant of concessions. The drop in Anglo-Iranian's quotation early last week may be unconnected with the story of Russian negotiations for new oilfields. That Russia, like the U.S.A., thinks her oil is giving out or that other countries have more oil than herself is a pointer to the effect of U.S. opinion as to the apportionment of Middle Eastern oil resources. The arrival of another company in which the Government interest would be predominant might not be wholly beneficial to Iran though additional royalty revenue would be welcome to Iran's rulers. The Iranian Government is now said to have refused to discuss till after the war the Soviet proposals so that dominance of Anglo-Iranian in the mineral industry is ensured. The treaty, of course, deals with foreign policy and Iran as a country at war is entitled to defer the development plans. There will, however, be a presumption that before Majlis and Cabinet could argue out the pros and cons the decision was reached because a new rival spells some danger to the interlocking arrangements known to be in force and a trans-Caspian tanker route would upset the supply of oil to markets like Afghanistan through India. Development in North Iran at the same time as in South Arabia would not detract from the value of the new pipeline or pipelines across the desert but it would inevitably lead to the question of markets of which the biggest at present is India where the import duty is offset by an excise. The tripartite guarantee given in December probably saves Iran's rights in regard to the disposal of concessions but the decision like the negotiations will convey the impression that perfect accord does not obtain.

BATH-TIME

A HOT bath is today a luxury. The urgent need to save both water and fuel compels us to cut down our bathing. The less often we feel justified in having a hot bath, the more we appreciate it, particularly after a long day's work or a night on A.R.P. or fire duty Yet the zest of any hot bath is reduced if the water is hard Hard water wastes soap — you know how the soap will not lather and scum forms on the surface. Thanks to chemical research the secret of hard water and its cure were discovered many years ago. If soft water makes home washing easier and more pleasant, it is a necessity for Industry Until the chemistry of water was fully understood factories had either to be built in districts with suitable water, or else suffer the disadvantages of hard water. Nowadays water can be made suitable for use in factories wherever they are sited, and even naturally soft water can be improved for special purposes. The industrialist installs a water softening plant or uses chemicals to reduce the harmful effect of hardness. Today softened water enables Industry to save fuel, and the work of the chemist is bearing fruit, as it so often does, in unexpected directions.

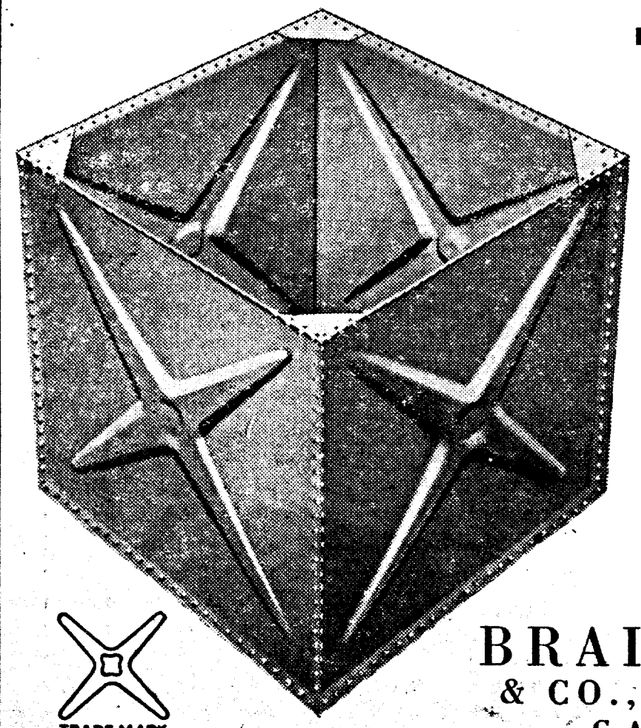
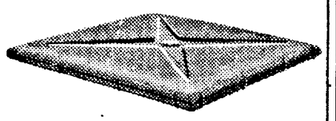
The Curtain-Raiser



The fall of Admiral Horthy after his decision to ask for an armistice points to no sudden recovery in Hungary which is both an occupied and an invaded country. His fall after 24 years of power is due to the native fascists' conspiracy with the Germans who swept aside the Ministers and quelled the Regent. Yet the *coup d'etat* would not save the defence since the Russians are across the Vistula and their hold on Rumania is tighter. If the fascist regime intends to carry on the war for the sake of Germany and Japan important elements are likely to resist it. Confusion should accelerate defeat in this case since the Soviet army's sweep into Yugoslavia is a threat to more than the Banat. There have been raids on Hungary from Italy, but the Red Army held up in Poland has moved into Transylvania which is certainly the part of Hungary that really counts. The fall of Horthy may lead to questions as to the agrarian changes of the future since Soviet success more than the Greenshirts' success may produce the revolt against the landlords. If Hungary's trade and industry passed earlier into German control the changes in April revealed the existence of some opposition to German demands. The opposition may be enlarged by the revolution that has no chance in defeat. Since Hungary passed imitative laws against the Jews and took her share of Rumanian, Czech and Yugoslav territory the escape from belligerency can come only through unconditional surrender. Horthy ordered negotiations for an armistice, because the German failure in the Baltic States and the evacuation of the Balkans put Hungary, more than the Reich, in the power of the invading army. The Allied reaction to the changes is not likely to be a special declaration in favour of Horthy. Yet the decision to sue for an armistice was that of Horthy who for a year after the fall of Italy stuck to the German alliance obviously wanted to avoid winter warfare as the Carpathians had been turned and Rumania was more than ready to assist the Russian army. If unemployment fell between 1942-43 Hungary's experience was distinctly chastening as the abnormal rise in note circulation from 1941-1943 has shown. The inflation in Hungarian bank deposits was a minor result of the stream of new money corresponding to the steady rise in the cost of living and the contraction of trade noted last year. Discontent may have simplified the task of the revolutionary aided by foreign arms but Hungary which largely escaped the results of the revolution of 1919 may undergo big changes before the invasion is over.

In the Last Ditch



Hitler's broadcast supplemented by Himmler's outline of new tasks and responsibilities for the German people leave no doubt as to the Nazis' resolve to stand in the last ditch. The main provision for the formation of a force meant to supplement the Gestapo is the drawing in of all males between 16 to 60. Defence, not repairs to damaged property, is selected as the principal task of the German people. Organisation runs on the familiar lines of resistance movements under occupation so that Germany's rulers have, in a sense, anticipated Allied Invasion. The Army as such is put outside the defence scheme. It may be due to the consciousness of recent failure or the conspiracy of July. The housing and other crises are slurred over like the decrees for total mobilization because the idea is to get a large force ready. What has been said about Hitler's Second Army before does not find support in the plan to recruit Irregulars though the plan makes good the Nazi resolve to turn to guerilla warfare. If anti-Nazis in Germany cannot derive advantages from the organisation, in whose favour the rules of war have been asked for by Himmler, it is manifest that the regime itself will be shaken up by a new manpower crisis. In the latest estimate of winter prospects collapse is duly excluded but the Allied air attacks persist and economic activity must suffer further. What could be done to replenish the Wehrmacht has probably been carried out. Destruction of property during the invasion is threatened but it will only be a small addition to the sum of losses. Whether the bombed-out can do enough to keep the Irregulars in shape and condition is not the only question provoked by the Soviet Army's entry into Tilsit. The more important issue is what arms would be available to the Irregulars for their own operations when the regular army is forced back through inferiority. If it is the intention to carry out economic disarmament by sabotage before defect many things become intelligible. Attempts may be made then to show that reparations are impossible. Mention may be made of passive resistance in the Ruhr in 1923 when the French took it over and the contrast offered by Himmler's plan for destruction on the grand scale because German anti-invasion measures too must cover the application of scorched earth tactics. If the Nazi resolve emphasises the need to yield no time for Nazi preparations it also makes known the gravity of the task in store. But the Nazis have not been offered winter help but new discipline in a new force and its formation points to suspicion of the reluctant foreigners drawn for forced labour.

Clive Street Gossip

"Eavesdropper" wires from Bombay :—

Since I have been here, I cannot help noting that the Reserve Bank of India comes in for considerable criticism on all hands for the methods adopted by it in respect of sales of bullion. The gravamen of this criticism is that the Bank has miserably failed to achieve the object with which the Government of India arranged sales of bullion in the open market through the Bank.

Now let us examine what the object of the Government is. It has been categorically claimed, both by the Finance Member and others competent to speak about the Government's mind, that sales of bullion are, in the main, anti-inflationary. The term "anti-inflationary" is as vague as it is wide ; and one must try and find out, in more precise language, what the object of the Government is. One may ask, for instance: Is it to absorb surplus purchasing power in the country generally and gradually, or is it to bring down prices of bullion suddenly and drastically and thereby create a psychologically bearish effect on other markets? This distinction appears to me to be necessary before one proceeds to judge whether the Reserve Bank has any bullion policy at all, and, if so, whether such a policy is a failure or a success. At the outset, incidentally, I would, straight-away rule out the suggestion, made in certain quarters, that the Government of India has allowed sales of bullion merely in order to permit other Governments to take advantage of the high prices for silver and gold ruling in this country.

* * * *

To continue the thread of my discussion. If the object is to absorb as much surplus purchasing power as possible for a given quantity of bullion, and the reduction of prices is only of secondary importance, the Reserve Bank's method of sales cannot be considered as a failure altogether. On the other hand, it must be said to be a complete success, for the Bank has been able to dispose of, during the last fourteen months, such a large quantity of gold (1½ crore tolas approximately) that nearly Rs. 110 crores have been taken back from the hands of the public. In other words, gold sales have prevented an accumulation of currency to the extent of Rs. 110 crores. But for these sales, our notes in circulation to-day would not be Rs. 962 crores but, say, Rs. 1,075 crores! It is doubtful whether the Bank could have achieved this result, if the bringing down of bullion prices drastically was its main objective. The latter objective, it should be noted, could not have prevented expansion of notes as effectively as the former. If this premise is conceded, it stands to reason that the psychological effect of lower bullion prices will not have any permanent effect on other markets. After all, movements of every market are ultimately influenced by factors which govern them independently and directly rather than by those of the other markets.

* * * *

Can it be said, then, that the method pursued by the Bank so far has been barren of results from the point of view of bringing down the prices of bullion? The answer here, again, seems to be "No." For, the prices of both gold and silver to-day are appreciably below the peak levels recorded in 1943 or, for that matter, in 1944. The price of gold, it may be added, is the lowest since October, 1942 and that of silver since March, 1943. If, however, one were to attach greater importance to the bringing down of prices of gold and silver to levels in the neighbourhood of world parity—this, again, is a vague term—or, say, to levels in the vicinity of the controlled prices in London or New York than to surplus currency absorption and its sequel—a fall in the general level of prices—then it can be said that the Reserve Bank's methods have not been wholly successful and that the Bank could have followed more effective methods. For instance, the Bank could have continued selling the metals on tap in unlimited quantities and at rates lower than those ruling in the market. To be quite clear, I would, in other words, suggest the abolition of the existing system of tenders for fixed quantities, as this system gives scope for cornering by speculators.

In following such a policy, the Bank should, of course, be prepared to brush aside possible criticisms that it is favouring the bears by giving them unlimited scope and so on.

In a falling market, the demand may disappear, especially if it is known that the Bank will be selling at progressively lower rates every day. To depress the prices thus, it may not be very difficult for the Bank, as is generally presumed, especially if it makes an attempt now when the tendency is not to absorb but to disgorge bullion. But what is likely to prove difficult for the Bank is to maintain the prices at low levels; for the latter, once achieved, would attract a large demand from those who have until now been holding back their purchases because of higher prices and biding their time. Has the Bank enough bullion at its disposal to meet such an eventuality? If the Bank has not, it would undo, at least substantially though not fully, all its efforts so far to bring down prices. Once it is known that the Bank has not enough stocks, speculators are bound to push up prices. It is, therefore, difficult to pass a definite judgment on the efficacy of the methods pursued by the Bank without a full knowledge of the limitations under which it is operating.

* * * *

In spite of the preoccupations of war time and approaching peace, the rupee ratio has elbowed its way to the forefront of current problems. It is the veritable King Charles' head of Indian finance. When the other nations of the world had no such problem, thanks to their adherence to the gold standard, India had to worry herself about the exact ratio between rupee and sterling. For the world at large, the worries of the exchange rates started with the abandonment of the gold standard. In the case of India, they date back to the abandonment of silver in 1893. For various reasons, and due to various causes, the abandonment of silver was not a step to the adoption of gold. There had to be, it was thought at the time, a transition. And the transition period showed the authorities the advantages of perpetuating the transitory measures. Not the least of those advantages is the fact that there can always be a prima facie case for effecting changes in the rupee rate. Since in the nature of

things the limit between the rupee and foreign currencies is of an artificial kind, the need for its regulation is axiomatic. Whether the trend is towards greater or increasing weakness, the authorities can find ways and means of making the system favour the interests that are near to them. When the rupee waxes strong, large funds accumulate while, when the rupee weakens these funds can be readily dissipated. It is only in comparatively critical moments that change in the rupee rate must be thought of. But the question of the rupee ratio is never outside the realm of controversy. To-day with the greater part of the world off the gold standard and, what is more, more reluctant than ever to get back to it, there seems to be no chance of India ever getting a respite from these vexatious problems. At the moment there is apparently little need to raise a public debate on the merits of the present rupee rate and the possible or contingent changes thereof. During the war period Government control is equally effective over trade and finance. The forces that tend to raise the value of one currency or force down that of another are completely sterilised at the source. There are no two countries of any considerable importance between whom transactions in trade and finance are effected on a normal peacetime basis By far the greater part of the movement of goods among the nations is on the basis of lease-lend and therefore raises no problems of exchange. The movement of goods on normal commercial basis is just a trickle. Between India and Britain goods move on the basis of payment on paper at both ends. The result is the accumulation of abnormal wartime balances to the credit or debit of the various countries concerned. Exchange problems, as a rule, are lacking in immediate importance and have reference only to the plans of the post-war period. If one thinks of the formidable array of uncertainties regarding the various national plans and the milieu of international trading conditions which is outside the orbit of national control, discussions on post-war exchanges are but an academic exercise, though by no means an unhealthy one.

* * * *

So far as India is concerned such discussions have to be more hypothetical and less grounded on concrete facts. The question must necessarily refer to the post-war period. There is no point in raising the value of the rupee now. An increase at any earlier stage of the war, while it would, no doubt, be justified by the demand for rupees as deduced from the balance of payments, would not have served Britain better, since more would have to be paid in sterling for every rupee. Since the "mischief" has been

MRS. ANOPHELES—PUBLIC ENEMY NO. 1

Malaria, one of the most dreaded, and yet most common diseases in our country, causes over 3 million deaths every year. Various complications, resulting from repeated attacks, render miserable even a larger number of people.

Yet the cause of Malaria is attributed exclusively to one type of mosquito—the Anopheles—and what is more, to the female species only. This pest, after sucking the blood of malarial persons, conveys the germs to others, and thus spreads the disease.

These mosquitoes breed in stagnant pools ; to exterminate them, the first attack must be launched here. Fill up, drain away, or disinfect these water haunts. Circumvent Mrs. Anopheles by sleeping under a mosquito net whenever possible.

If, even then, you fall a victim to Malaria, consult a qualified doctor immediately, both for your own sake, and to prevent the spread of infection.

(FROM OUR CORRESPONDENT)

New Delhi, October 31.

Nothing startling has so far appeared in the order papers of the Assembly. Only one political resolution appears in the list of ballotted resolutions put down for Friday—a resolution of the Nationalist member, Mr. Lalchand Navalrai recommending to the Governor-General in council "to arrange an interview with Mahatma Gandhi and Mr. Jinnah after the parleys which are going on between them are over in order to remove the deadlock and to restore peace and harmony in India". There is little chance of this resolution coming up for debate, but in a way it represents the feeling in the House. This feeling is summed up in the two questions—what should the Government now do to restore peace and harmony, and what, in the present circumstances after the failure of the Bombay talks, can Indian parties themselves do to revive some kind of political programme for the country? Though nothing officially may come up before the Assembly, the session undoubtedly provides an opportunity for informal talks in Delhi. The presence of the Congress party—though not in its full strength owing to the large number of Congress members still in jail—the arrival of Mr. Bhulabhai Desai and Mr. Jinnah and the political fillip given by the Assembly session itself have brought to the forefront the constitutional question. Whatever the present Viceroy's Council may or may not be able to do, it is certainly possible for the Government of India to release the members of the Government of India. It would appear that when the Viceroy's Council considered Dr. Syed Mahmud's letter and decided to release him, more than one member raised the question of releasing all the other members. There are also reports that more than one Provincial Government have expressed themselves in favour of releasing Congress leaders. Apparently the question is still before the Viceroy, but as the matter is bound to be brought up before the Assembly in one way or other, the Government of India will have to take an early decision.
