While obviously the Government can help the cause of peace considerably by releasing leaders at once, there is reason to think that various political groups are also trying to combine for considering a connected move. An All Parties Conference has been suggested for reviewing the situation as a whole and considering what can be done to revive political work. Among the many suggestions which have been made during the last few days the most interesting is Sir Mirza Ismail's suggesting the appointment of a small constituent committee of about 25 representative Indian leaders to prepare a constitution for India. From what I can gather the official reaction to this proposal is quite favourable, but as a number of Assembly members have told me, the Government can establish their *bona fides* easily by releasing Congress leaders and offering to reconstruct the Central Government on a popular basis. Another interesting suggestion which has emanated from the columns of the *London Times* is that side by side with the release of Congress leaders, His Majesty's Government should issue a White Paper containing revised proposals of the British Cabinet for settling the Indian question including the cardinal question of the partition of India and set up a Round Table Conference in India representing all the various interests to explore the possibilities of a settlement in the light of these revised proposals without waiting for the end of hostilities. There is a good deal which can be done, but unless the Government show some earnestness, no solution is possible. It is hoped in Assembly circles that instead of following the present policy of drift with all its dangerous possibilities, the Viceroy should consult Mr. Bhulabhai Desai and other leaders during the present session and take some definite step.

* * * *

Though the present Viceroy, Lord Wavell, has so far made no effort to solve the political deadlock, there are reports here that he is exerting himself to see whether Indian aspirations cannot be satisfied in certain minor ways. I have already referred to the possibility that one of the present Indian Members of the Viceroy's Council may succeed Sir Jeremy Raisman as Finance Member after the next Budget. Another strong report current in New Delhi mentions the possibility of one of the Indian Secretaries—the name mentioned is Sir Akbar Hydari—going as a Governor. In the coming year a number of Governorships are falling vacant—Madras, Central Provinces, the United Provinces and one or two other provinces. It is also said that one or two Governors propose to go on leave next year. This provides an opportunity to the Viceroy to nominate one or more Indians as Governors and thereby remove one standing grievance. It is also believed that the Viceroy may also favourably consider the demand for dissolving the Central Legislature and ordering fresh elections next year.

* * * *

The problem of Indians overseas is causing a severe headache to the Government. The united Indian opposition to the new Natal Ordinance has again put the South African issue in the forefront and there is universal demand for the recall of the Agent-General and application of economic sanctions. The loud assurances which the Commonwealth Relations Member gave during the last Assembly session have turned out to be mock heroics and doubt is expressed whether the present Government will ever be able to get a fair deal for their nationals in South Africa. The Ceylonese Ministers too are proving to be intransigent and Mr. Aney has come here all the way to discuss the critical Indo-Ceylonese relations with Dr. Khare. The Government have not yet decided whether they will resume negotiations with the Singhalese Ministry or leave it to the Reforms Commission to do justice to the Indians. The Ministry still refuses to enfranchise certain categories of Indians and go beyond the terms of the Bajpai agreement in this matter. The Indian case is that while prepared to stop, future emigration, they cannot tolerate the permanent disenfranchisement of hundreds of thousands of Indians who have already settled down in Ceylon. The postwar plans of the refugee Burma Government and their request to reopen negotiations on the unratified Indo-Burma agreement of 1941 is also forcing the Government to make up its mind about the future of Indians in Burma. It is understood that most of the million Indian refugees from Burma now in this country are keen to return to Burma as many of them have left property behind. The appointment of Mr. Jamnadas Mehta as representative with the Burma Government has been practically settled though no official announcement has been made. Mr. Mehta's main task when he takes up his new job, will be to settle the immigration issue.

* * * *

The newsprint situation has considerably eased in recent months and shipments are arriving more regularly now. I understand that the Government are planning to increase the newsprint quotas to papers by another 33 per cent but are keen on a reduction of newspaper prices. Most of the papers are still opposed to such a reduction on the plea of increased costs of production and limited advertisement space. The Government are even reported to have held the threat that the additional newsprint may be distributed only among those papers which are willing to reduce prices. The Government case is that not only are the newspapers ensured fixed newsprint supplies at controlled rates, an attempt is also being made to procure other materials for them at controlled prices and there is no reason why

(From Our Correspondent)

Bombay, October 31.

Sir Ardeshir Dalal's speech at the General Policy Committee (Industry), and the preliminary official report on reconstruction should go far to dispel any doubts as to whether the Government of India are really sincere in their reconstruction plans. Apart from the significant and very precise observations made by the Member for Planning and Development, there is a general impression in industrial circles that Sir Ardeshir is going to commit the Government of India to a forthright progressive industrial and fiscal policy. As one member of the Committee told me, the official Yellow Book bears many traces of Sir Ardeshir's advent. In fact, the report had been ready for publication some time back, but the new Planning Member seems to have changed materially many portions, which have made all the difference. Nobody who reads the Report without bias can fail to see the progressive touch of Sir Ardeshir. Last week's meeting enabled the distinguished and competent members of the Committee to offer constructive suggestions which will doubtless be given due weight.

If one thing stands out more than any other in Sir A. Dalal's speech, it is the precision and practicability of his planning and his awareness of the need for having a feasible target and the inevitably gradual approach to be made to the great problem. That he has already taken vital decisions should be clear from the announcement that a permanent Tariff Board is envisaged and that fiscal policy will be liberalised. The factual information provided by him is important. A number of panels for enquiring into the problems of development of individual industries are being set up, and the provinces will have industrial committees. In the list of tentative panels, it is proposed to attach experts as well as an officer of the Planning Department to each panel. In the case of industries involving complex technical processes like aircraft, electrical machinery, plastics and dyestuffs, individual arrangements will be made, while the panels in these cases will make only general recommendations. The enquiries by Government seem to have had a poor response and Sir Ardeshir stated that the exact requirements of capital equipment could not be assessed. But he warned industrialists to book their requirements of capital goods as early as possible. A scheme of registration of the orders to be so placed has been started and those who fail to register their orders now will receive no assistance from Government and will not be eligible for import licences. An official notification is to be issued shortly. On the question of providing dollar exchange in respect of orders for plant placed in U.S.A., Sir Ardeshir was not very encouraging, and merely stated that the more essential requirements will be given priority. There is so far only negative control, as he himself admitted. The existing controls over capital issues, imports, etc. will naturally continue; and in any scheme of planning, there is no getting away non-control in any case. The regional location of industries will be promoted as far as possible. While admitting the part to be played by private enterprise in the brave new industrial worlds to come, Sir Ardeshir voiced his conviction that the State would have to exercise a greater measure of control over industries than in the past.

It is heartening to hear that Government have a scheme for sending a number of students (500) for training abroad in technical lines. The setting up of institutes for technology, medical research, agriculture, etc. is also under active contemplation. As Sir Ardeshir stated, the real bottleneck to progress will not be finance but the availability of capital goods and of trained personnel. The emphasis here shows the man. As one who has brought the Tata Iron & Steel Co. to its present position more than anyone else, Sir Ardeshir naturally is worried about the lack of tools and trained men. The provision of the latter will be the first job, and Government are going about it in a vigorous manner. As regards finance, the Finance Member has estimated that Rs. 1,000 crores will be available in the first five postwar years. Half of this sum will be raised by loans and the other half is to be found from revenue surpluses. A notable feature is that in the financial aspect, Centre and the Provinces will operate jointly. This is to apply both to the manner of raising the money and of distributing it. The exact principles of distribution to the provinces cannot, of course, be laid down as yet. As the provinces have each their own plans—Bombay has a Rs. 50 crore plan, U.P. and Punjab a Rs. 100 crore plan, and States have theirs too—a joint policy is indispensable. The example of the Tennessee Valley Authority inspires a solution on the lines of evolving one authority to look after industrial development in spheres that overlap. Finally, the plans postulate continuance of the financial policies inherent in the existing political set-up, which as Sir Purshottamdas Thakurdas is said to have pointed out, will hardly be a wise assumption. The value of the plan as now outlined in the Report is that it tries to outline the definite increases which could be brought about in the individual output of goods and services constituting a national income. The Report has avoided colourful planning and the statement of high sounding objectives. On the other hand, it is definitely couched in more sober and modest terms. The next Report would probably lay down things in more concrete shape. A beginning has been made, and from the look of it, it seems to be not at all a bad beginning.

In the Finance Committee, Sir Jeremy Raisman gave the lie direct to the rumours of a revision in the exchange value of the rupee. He also gave an account of the deliberations at the Bretton Woods conference.

The behaviour of the bullion market is very significant. The presence of the Finance Member in the city was the signal last week for a policy of sales of gold and silver by the Reserve Bank at steadily declining prices. The Reserve Bank sold about one lakh tolas of gold and the market went down to Rs. 60-4 for forward gold and Rs. 113 for forward silver on Thursday. The authorities, however, seem to have been counting without the host, for from Friday there has been a demand of very impressive proportions for bullion. On Saturday alone, the bazar is said to have experienced a demand of 1 lakh of tolas. Throughout the week, the offtake per day was on an average 40,000 tolas. No wonder that the market swung up, the forward rates for gold and silver being Rs. 61 and Rs. 114-8. Yesterday, the Reserve Bank sold 30,000 tolas at Rs. 63-4 and 100 bars at Rs. 117-10 which contrasts with the prics of Rs. 61.8 and Rs. 113 at which offerings were made last week. The recovery speaks for itself. It is doubtful if the authorities would succeed in beating down the prices—at least the present policy cannot.

After Deliverance

Dr. Benes has expressed a belief that six months after Czechoslovakia is reconstituted her exports will be seen in all markets, and if usual trade figures under the Occupation are lacking, the prospective restoration of the Sudeten territory sustains the belief that trade will revive. In a volume dealing with Czechoslovak relations with India published on October 28, 1943 (The Czech Independence Day) it was noted that Indian exports to Czechoslovakia greatly exceeded the imports from the Republic. Since the seaborne trade accounts throw no light the relevant figures are the Czechoslovakia Republic's trade returns. Exports in 1937 valued at Rs. 4.7 crores exceeded the total imports valued at Rs. 1.61 crores. Czechoslovakia's large takings of oilseeds, hides, jute, cotton and other materials in return for exports of glass, ironware, machinery, shoes and paper merely indicate the character of a fully industrialised State's forign trade. In the future the principal requirement of India may be machinery rather than glass bangles; and Czechoslovakia's ability to supply the former is to be inferred from the equipment drawn in the past for the sugar and other industries.

Rivalry in respect of jute manufacture is of course less significant than the rapid industrial reorganisation carried out in the era of Czech independence. The unusual combination of large-scale industry with peasant agriculture is as interesting as the development of agricultural co-operation in the Republic. The production of sugar and alcohol by industrial instruments owned by farmers affords an indication of the line of development not only for Czechoslovakia but for India. A flourishing agriculture was the basis of the export surplus and changes since 1938 in the country's economy may be dealt with by the adjustments to follow German economic disarmament. Czech iron and steel production (more than double of that of India) would certainly recover its importance and access to German rivers and ports should lead to a rapid transformation of industry and trade.

Opening Possibilities for New Industries

ALUMINIUM HYDROXIDE & OXIDE

of very high grade now in production.

● **ALUMINIUM HYDROXIDE:** Used in the manufacture of Aluminium Compounds for textiles, dyeing, paper, printing ink, water purification and as a catalyst in synthesising acetates, tannates, etc.

● **ALUMINIUM OXIDE:** Manufactured in several grades for decolourising and deodorizing solutions, grinding and polishing metals, manufacture of abrasives, grinding wheels and high grade laboratory ware, etc.

● *Sodium Aluminate & Aluminium Sulphate are also manufactured at our works.*

THE ALUMINIUM CORPORATION OF INDIA, LTD.

KAMLA TOWER, CAWNPORE — WORKS AT ASANSOL.

Lost Possessions

It is still hard to say if imports are rising because the total value of imports for the first quarter of 1944-45 is not greatly in excess of the value of imports in the final quarter of 1943-44. The growth of exports during the period as compared with 1943 has also to be taken into account along with the prompt reversal of the unfavourable trend noted in May, when the value of British Indian imports exceeded the value of exports. A comparison with 1943 however establishes the fact that India's imports like her re-exports have risen to a far greater extent than exports, and the new policy of relaxing controls for the benefit of the consumer is fully reflected in the trade returns for the most conspicuous change in this case is the enlargement of supplies from the U. K. the value of imports rising from Rs. 5.18 crores in the first quarter of 1943-44 to Rs. 9.47 crores in the same period of 1944-45. A corresponding increase of supplies from the U.S.A. should not be over-looked. The sustained rise in imports since December has supported price control measures while the limited rise in exports points to a similar degree of success in holding down the price-level.

That exports continued to rise in spite of restrictions points to the keener demand for cotton and jute manufactures. The fall in exports of food and raw materials is made good by the rise in exports of manufactures. Imports of manufactures except for chemicals, paper and machinery show no striking increase as compared with June 1943, and the increases can be defended by reference to the previous scarcity. The continued increase in India's takings of mineral oils is a wartime development, leading to the unusual dominance of Iran among the sources of Indian imports. Mainly favourable to Indian industry as the observable increases in imports are they indicate also that foreign countries have a greater tshare in India's import trade. A substantial rise in raw cotton imports accounts for the rise in India's trade with Egypt and the simultaneous rise in seaborne trade with U..S.A. certainly proves that the supply of dollars for the post-war reserve is being enlarged. It is noteworthy that exports of ute manufactures for some time are greatly enlarged by the big U.S. order of June last. Since exports of raw materials like ute jute, cotton and wool are lower than last year the home supplies must be larger. Arresting for various reasons is the increase in rubber exports assisted by the production bonus scheme. The fall noted under oilcakes is a symptom of the agricultural policy at work rather than a consequence of the reduced exports of oilseeds and oils. In view of the usual cautions against month to month variations, the fall in tea exports will be regarded as less important than the great fall observed under exports of grain, pulse and flour. The active balance of trade with the Empire remains the same as last year but significant changes can be found in the fall in imports from South Africa and Ceylon and the great rise in Indian exports to the Island and the Union. India's trade latterly with the Middle East has shrunk rapidly while trade with the Colonies is more or less stable according to the returns for June. The increase in Indian exports to South America this year may be connected less with the trade mission than to Britain's export trade difficulties.

The loss of Serbia and the landing at Split is more important than the partial evacuation of Greece. The loss of the Balkan resources throws Germany on Hungary and Western Poland. The destitution of the Balkan people is no guarantee that stocks have been built up in Germany. While it is freely suggested that the loss of 2 million tons of oil from Rumania could be made by synthetic production at home, there is no substitute either for chrome ore or copper got from the Balkans. Turkey before breaking off diplomatic relations with Germany prohibited exports of chrome ore. Invasiin in the west has removed French wheat and Belgian potatoes from Germany's reach but the bacon of Yugoslavia represented a very important part of Germany's food supply. Rumania ordinarily exported half a million tons of grain to Germany and this loss is as important as the soyabeans that she grew to Germany's order. The new colonies have been lost one by one and a fresh loss is the denial of Bulgarian tobacco supplies. Cotton and silk too will be scarcer after the changes at Sofia and a more important loss than of tobacco or fruit is the cutting off of manganese imports. After the Ukraine was lost the minerals of the Balkans particularly copper became more important for the Nazis. The shrinkage of German foreign trade last year indicates the failure of the satellites to provide as before raw materials for German war industry. If total mobilisation can get over the manpower crisis in Germany, the shortage of raw materials will remain with the Nazis. In the past S.-E. Europe was a German preserve but occupation and deliverance must greatly change the pattern of foreign trade in the Balkans.

Metal Corporation of India Limited

An announcement relating to the Metal Corporation of India refers to the issue of shares in a new company to take over interests in lead and other minerals. Direct extraction from Indian ores in the plant already functioning accounts for a yearly production of 3,500 tons valued at nearly Rs. 19 lakhs. The Government is the principal customer and permission for extensions to plant has been procured. The proved success of the Eastern Smelting and Refining Company has led to the formation of a company with a larger capital and certain developments in reference to production of nonferrous metals are promised in the prospectus. A 20-year lease with option of renewal has been secured from the Jaipur Government. The influential Directorate secured for the company is to be noted. The present offer to the public merely follows the acquisition of the successful smelting and refining company with assets valued over Rs. 5 lakhs. The erection of furnaces near the mines is contemplated; and a fall in costs after the war will ensure competitive capacity. Additional mines are also being sought and the hopeful aspect of these may be stressed in relation to the keener demand for metals and alloys. The present issue of capital is meant to support an important programme of development in the national interest. If indications of future profits are not to be found in the sales and stock figures it may be pointed out that metallurgical companies resemble iron and steel companies rather than coal mining and their prospects must be assessed more hopefully than usual in view of the events of 1942 in Burma while the company's ability to earn from the start is to be inferred from the estimate of opportunities and the Government contracts held.

(*Continued from page 618*)

done in the matter of sterling balances, a change in the rupee rate now will certainly not be opportune. The discussion has reference only to the future. As part of post-war planning, there are numerous problems to which the ratio question must yield precedence; and it cannot be pretended that these problems have been dealt with. If the question of the rupee rate has come up now, it is because the public is quick to take alarm in this regard and is disposed to see in the statement of officials more than was meant. The speech of Sir Chintaman Deshmukh at the Rotary Club in Bombay was dealt with at length in these columns. But I saw no reason to apprehend any intention on the part of the authorities to effect an early change in the rupee-sterling rate. I understood the Governor of the Reserve Bank to suggest that import controls and the exact rupee rate are questions of greater importance than the problem of sterling balances as the public has so far regarded it. It is true, his reference to the place of an adverse balance of trade with Britain in any scheme of repayment of Britain's dues to India raises the fear that the rupee rate might be adjusted so as to help the growth of an import surplus. But only in conditions of free trade and free private enterprise is a change in the exchange rate necessary for such objectives as an import or an export surplus. In the post-war period, planning with the widest possible scope and controls over various sections of the economic life are bound to be resorted to. In such conditions, imports will depend less on the calculations of a large body of traders and entrepreneurs than on the needs which the plans on hand will set up. Not that the exchange rate will cease to have importance. But there will be no need to change it with one or two narrow objectives in mind, since they can be secured by other means.

* * * *

Nevertheless, Sir Chintaman's reference to the rupee rate has had the effect of encouraging speculation about its future. And Sir Jeremy Raisman has felt called upon to declare emphatically that no change in the rupee rate is now contemplated. This must serve to give the quietus to disturbing rumours. But interest in the problem, once aroused, does not cease abruptly. And it is well, considering that the war is nearing its end, that the future of the rupee rate should be discussed from now. Here, as in most other economic problems of the present time, the first step is mentally to go over the approach, the standpoint and the considerations, which were appropriate in the past and see how far they are applicable to the conditions of the post-war period. The general theory of exchange is evolved in relation to the conditions of free trade, free international gold standard, free private enterprise, and the fluid structure of free prices which all of them together mean. In these conditions, the keynote of which is automatic self-adjustment, there is scope for deliberate policy. But the scope is always limited. In the application of the theory of exchange to the problems that have been thrown up in the years after the depression, the main aim is not so much to secure unfair advantage in trade competition as to protect the internal credit policy from the expediencies in the sphere of exchange. The aim is rather to segregate the one from the other. In an era of import controls, currency depreciation cannot serve as an instrument of development of exports. Nearly every nation knows the whole bag of tricks in the game of exchange depreciation. If there is still scope for this game, it is no more than what is afforded by political subjection or other similar factors. And even this would tend to be reduced, if the International Monetary Fund should enjoy a wide basis of membership.

* * * *

In the case of India, however, there is still fear that the authorities may look to the appreciation of the rupee as a means of reversing the recent trends in the commercial and financial relations between India and Britain. The memory of past experience is strong. The favourable balances which India had accumulated during the last war, the beginnings of industrial development which Indian businessmen had endeavoured to secure, the decline in British exports to India, all these were reversed by the policy of increasing the external value of the rupee. But it must not be overlooked that this time, the policy is more difficult to pursue and will be less effective in producing the desired results. For one thing, the general climate of national and international opinion is different. I have already referred to the fact that members of the Monetary Fund will have to follow a certain procedure in regard to changes in the exchange rate; and this procedure involves a degree of uncomfortable publicity. Within India, too, the public is more well-informed and is equal to defeating the Government's ends in various ways. Secondly, the volume of sterling assets is too large to be dissipated by any modern variant of reverse councils. Thirdly, Indian industry is not in the embryonic stage in which it can be killed outright by the creation of one or two adverse circumstances. And lastly, since a policy of planned development has been accepted by the Government of India, it would not be as easy to secure increase in British exports to India of a wide range of goods merely through the depreciation of sterling in relation to the rupee. A regime of planned economy calls for different tactics.

* * * *

News reaching India of Mr. R. B. Lagden's death in an accident to the aircraft in which he was coming back caused real gloom last week. Condolence meetings held this week referred appreciatively to his services to sport in Bengal. His own performance was of a high order and he recognised in sport as many recall gladly a real tie between nations. On behalf of the Bengal Chamber of Commerce of which he was Vice-President there has been duly placed on record the sense of loss to the business world while associations devoted to sport have acknowledged readily his great work for games in Bengal. Though his main interest was tea he was an active member of other bodies besides the Indian Tea Association. He was certainly popular with many classes duirng the twenty-five years he gave to Mcleod & Co. The influence he wielded has been decidedly helpful to many including this journal and the sincere regret expressed far outside his own office has shown that he had more than made his mark in this city. The proposal for an adequate memorial is therefore one that commands everyone's approval.

"EAVESDROPPER".

Bharat Insurance Ltd.

A marked increase in new business stands out as the feature of the Bharat Insurance Company's report for 1943. The Company accepted 7,983 proposals assuring in the aggregate Rs. 215.79 lakhs as against Rs. 133.72 lakhs in 1942. The improvement in revenue follows the increase in business in force. Net premiums for the year totalled Rs. 51.48 lakhs of which first year's premiums accounted for Rs. 11.19 lakhs. In the revenue account interest, dividends and rents received are shown as over Rs. 7.36 lakhs. Claims accounted for over Rs. 25.07 lakhs and the company's expense ratio last year is known to have fallen. The transfer of Rs. 8,05,914-12-3 arising from appreciation in value to the Investment Reserve Fund shown in the balance-sheet for 1943 is the most noteworthy feature of the year's outgo. The surplus of receipts leads to the addition of Rs. 14.9 lakhs to the Life Fund which stood at Rs. 282.59 lakhs at the end of 1943. The classified summary of assets shows that holdings of Government Securities (mostly 3½ per cent Government Paper in this case) account for Rs. 140.75 lakhs of the total. Preference shares alone account for Rs. 38.7 lakhs though the book value of both is lower than the totals shown. Revenue items in the balance-sheet added to cash are in excess of liabilities relating to claims and premium deposits. In view of the proceedings for compulsory acquisition the Company's known holdings of electric supply shares acquire great importance. The increase under policy loans is moderate but the absence of mortgages and the relatively large value of lands and buildings are features to claim notice always. The paid-up capital in Rs. 20 paid-up shares amounts to Rs. 2,48,520 and the balance to credit of profit and loss account for the year is Rs. 2,34,983-13-6 suggestive of a very high rate of earnings. The revenue figures of the general departments are now of less importance at present owing to the company's investment in the subsidiary, Bharat Fire and General Insurance. The latter company is known to have made a good start in 1943. If the more important features described above are common to the leading Indian insurance offices the considerable increase in new business signifies increasing confidence in Bharat. The creation of an Investment Reserve to supplement the depreciation funds is noteworthy despite the further improvement in security values to which the classified summary bears witness.

BOMBAY MARKETS

BULLION

(*From Our Correspondent*)

Bombay, November 2.

After early steadiness gold market developed nervousnss in midweek, Forward gold declining to Rs. 60-8 especially when the Reserve Bank raised offerings from 30,000 to 50,000 tolas. However Mr. Churchill's speech indicating a longer war and heavy upcountry offtake amounting daily to 35,000 tolas induced recovery to Rs. 63-8. Today spot is quoting Rs. 64-12 despite Bank's announcement of larger offerings on Friday. The undertone is steady. Recent price oscillations emphasise the inadequacy of Reserve Bank's sales to force prices down.

Silver market is less steady because of upcountry arrivals and banks sales of 200 bars daily. Since Wednesday bull syndicate is liquidating holdings. Forward silver firmed to Rs. 117-10 on Monday when bulls demanded budlee of Rs. 3-4 and bears preferred covering. Hundred bars were sold an Tuesday at prices Rs. 117-4 to Rs. 118-0. Market opened weak on Wednesday at Rs. 112-12, but has since recovered to Rs. 115. Today ready is Rs. 2 higher despite official sales at rates varying from Rs. 115-6 to Rs. 118-8. Steady undertone is derived from offtake. It is notable that the public is paying higher rates than Bank's tender limits.

Airway Port

(FROM OUR CORRESPONDENT)

KARACHI, October 27.

Karachi businessmen had a hectic time for the last days. They gave a warm reception to the Indian Commercial delegation, members of which left this city for the United States today. A last-minute change has been made in the venue of the conference, which will be held at Rye, instead of Atlantic city, as originally planned. Rye is about an hour's drive from New York, and a spacious estate, nestling amidst sylvan surroundings will house the three hundred and odd delegates who will assemble to participate in the proceedings of the conference. Mr. Satypal Virmani dropped out at the last moment and in his place Mr. M. A. Fazalbhai is proceeding. Being an entirely non-official delegation, there are no sanctions behind the plea that will be voiced by the Indian delegates, who at best will be able to contact businessmen from other parts of the world.

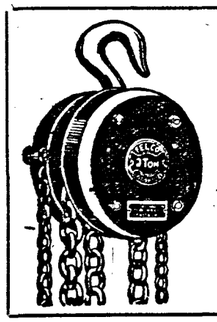
The revelation was made by Sir Chunilal B. Mehta, leader of the delegation, that the Federation of Indian Chambers and Industry accepted the invitation of the convener of the conference only after a clear understanding that the Federation was recognised as the only commercial organisation representing the business community of India. The occasion was a tea party given in honour of members of the delegation at the Buyers and Shippers' Chamber. Sir Chunilal further stated that originally the Federation was invited to send three representatives in addition to three delegates from the Associated Chambers of Commerce, representing the European trade. The Federation sent a cable that it would refrain from sending any delegates if its sole claim to represent Indian trade was not accepted. The conveners of the conference accepted the claim and invited the Federation to send all the six delegates.

Welcoming Sir Chunilal and other members of the delegation, Mr. Jamshed Nusserwanje, Chairman of the Chamber, referred to some outstanding problems concerning the future of Indian trade, such as the industrialisation of the country, the need for receiving every pie of its outstanding sterling balances, either in cash or in kind, and the need for facilities for her young men for receiving technical training in foreign countries. Mr. Jamshed hoped that the delegation would tackle all these problems and added that they should make it clear that not a ple's worth of machinery would be purchased unless the manufacturers promised to train Indian workmen in the use of these machines.

Sir Chunilal, replying said that this was perhaps the first International Conference, in which a purely non-official delegation was proceeding from India. The Government of India had no hand whatsoever in their appointment. After explaining the subjects that were likely to come up before discussion, he said that the main point would be what should be the policy of different countries for trade and commerce after the war. He emphasised that for India, the basic need was that she required a national government. He felt that the position of the Indian delegation was a little different from the delegation of other countries, who would be confident that they would have the backing of the governments, in the views expressed by the conference. The Indian delegation did not know whether the government would support their views or not. He advocated the need for rapid industrialisation of India, now that other countries were trying to plan out their policies for industrial expansion after the war. And he felt that India had to adopt a policy which would suit her own particular needs and problems. His delegation was not going to bargain any deals with anybody nor were they going to settle what industries should be established in India and what not.

Later, at a Press Conference, Mr. G. L. Mehta, deputy leader of the delegation said that they would place the views of the Federation in the most emphatic terms and there was no likelihood of any difference of opinion on matters to be discussed at the conference between the views of the Federation and the country at large. On the contrary, the Federation had given a lead to the country in moulding its opinion on economic matters of far-reaching importance. He emphasised that they had undertaken this mission to see that India's case did not go by default.

I understand that private enterprise would not come for discussions at the conference as originally planned.



With a view to further transport development, the Government of Sind are considering a proposal to exempt vehicles coming into Sind from other provinces from provincial road tax, if it has been paid in any other province for the same quarter. The Bombay government have already passed such orders. The contemplated free passages of vehicles is expected to promote inter-provincial trade.

Resume of Commodity Markets

There has been a further decline in raw jute prices during the past week. The jute manufactures market also has ruled easier in sympathy with the raw jute market. The bullion market has been fluctuating in wide limits. The uncertainty regarding the Reserve Bank's selling policy and the buying by bulls at the lower levels has had a mixed influence on the market. The British Premier's latest speech is taken to mean that the war in Europe will take a longer time to finish. The raw cotton market has been slightly better this week, while the piece-goods market has been uninteresting.

* * * *

There is a continued decline in prices in raw jute and it looks as if yet further lower levels will be touched. Except for lower qualities prices for loose jute are around the minima. It is even reported that business is being done below minimum prices. The provincial government has certainly an obligation to prevent such illegal trading in view of the assurances given to the ryot earlier in the season. As was pointed out last week, there is no reason for the sharp fall in prices in recent weeks. With an increase in production to an average of 100,000 tons every month there will not be any surplus jute left especially as the prospects for exports are reported to be brighter. While it cannot be expected that exports to the Continent will increase appreciably in the near future, it might be that, the shipping position permitting, exports to U.S. show an appreciable increase. There has been a cry of jute shortage in that country and producers have been clamouring for larger imports of jute in order to be able to manufacture their requirements for packing purposes.

As regards jute goods it is rather surprising that secondhand dealers should be pessimistic regarding the future outlook what time the Committee of the Indian Jute Mills Association has been asking for an increase in the size of the jute crop for the next season. It is pointed out that the demand for hessian and sacking, with the cancellation of war orders, might not be such as to necessitate an increase in the rate of production. What exactly is the reason for this feeling is not clear. It was only recently said that the cessation of hostilities might bring about a large demand for both hessian and sacking.

* * * *

The bullion market has been rather irregular during the past week. The continued selling by the Reserve Bank at lower rates with an increase in the total quantity of gold and silver sold has not affected the general sentiment in the market. There was good buying at the lower levels. The close for the week is higher on balance on the hopes that the war might yet be prolonged and that there will be good investment buying of the precious metals so long as there is no further scope for reinvestment. On Tuesday as the Reserve Bank sold more than 50,000 tolas of gold and 200 bars of silver the quotations recorded a sharp decline. On Wednesday also the Bank sold 50,000 tolas of gold and 200 bars of silver while on Thursday there was a reduction in the sales of gold to 30,000 tolas of gold. Silver sales were maintained at 200 bars. The rejection of tenders of silver and the irregular changes in the selling limits have given rise to the feeling that the Reserve Bank might not push down prics further unduly. The close is thus rather firm.

* * * *

Details of the production bonus scheme for rubber producers are now available. It will be remembered that bonuses ranging from Rs. 11-1-9 to Rs. 33-5-3 per 111 lbs. over the existing purchasing prices based on the production achieved during each quarter is payable to the planters. The annual basic tonnage has been fixed at 16,000 tons and is divided into quarterly quotas of 4,640 tons, 3,360 tons, 2,880 tons and 5,120 tons. It was estimated that surplus stocks in the hands of dealers at the time the bonus scheme was introduced were 2,360 tons. Dealers and producers are required to deliver to the Central Government a minimum tonnage of rubber at various dates to earn minimum or maximum bonus on deliveries in the succeeding quarter. Under the scheme increases of over 3 per cent and up to 10 per cent on the cumulative quarterly quotas earn a bonus of Rs. 11-1-9 per 100 lbs. on rubber delivered in the succeeding quarter. Similarly, increases in excess of 10 per cent and up to 15 per cent qualify for bonus payments of Rs. 22-3-6 and increases in excess of 15 per cent qualify for bonus payments of Rs. 33-5-3. The working of the scheme has shown that deliveries to Government from April 1, 1944 to September 30, 1944 have exceeded the required 8,916 tons and a bonus of Rs. 11-1-9 per 100 lbs. has accordingly been declared payable on all rubber delivered to the Central Government during the quarter October to December 1944.

(*Continued from page 619*)

the newspaper reader should not get some relief. The Government intend to fix maximum prices for newspapers and abolish the present minimum rates.

* * * *

The Government appears to be quite satisfied with the experiment of labour exchanges in this country and are now planning to quickly expand the scheme. I learn that the number of labour exchanges will soon be increased from 10 to 30 and by July next may approach 70. The Government are immediately opening training centres at Bombay and Calcutta for the staff needed for these exchanges. The Government intend to make the exchanges a regular channel for industrial employment even in peacetime and to help in adjusting the labour deficits and surpluses in different areas. It is proposed to appoint committees including representatives of employers, workers and the Government to supervise the work of the exchanges. No final decision has been reached about the sharing of the expenditure on the exchanges. At present it is shared equally by the Central Government and the provinces and for the duration at least the present arrangement may continue.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

CALCUTTA, 2nd November.

The present position in the Jute Fabrics market, particularly that for Heavy Goods, presents an interesting field for speculation —speculation of the metaphysical variety, be it understood, not of the gambling variety, which we have fortunately been spared to a large extent of recent years, though there are regrettable signs of this menace again raising its head, largely due to the position which has arisen and which we propose to discuss. Less than three months ago, Mills were being implored to sell heavy goods of almost any description, to almost any extent, for shipment up to and even beyond a year ahead. The situation was such in fact that the possibility was freely canvassed of an increase in the maximum price levels to put some restraint on the insatiable demand. Mills, presumably in view of the uncertainty of coal supplies and also perhaps to reserve room for possible Government orders, were for the most part reluctant sellers, and though a large business was actually put through, the apparent demand was far from being satisfied. And it is to be noted that the demand seemed to emanate from genuinely reliable sources, not from Bazar speculators. That was the position so long as the representative of the U.K. continued buying, and a large proportion of the business put through undoubtedly went ultimately to that functionary. But when he ceased operations, a complete change came over the scene. As it happened, the country demand, particularly from the Punjab, ceased simultaneously, and the market was faced with an entirely novel situation, virtually without a buyer in sight. And that situation still subsists and shows little or no sign of any early change. While business was briskly proceeding, there seemed still to be every indication of a very large unsatisfied demand. When the main buying agency withdrew, the demand vanished almost in a night, and has signally failed to put in a reappearance. The question is, what happened to this unsatisfied demand? Was it purely illusionary—merely speculative in origin, but unrecognised as such at the time because it was carried along and progressively absorbed in the wave of general genuine buying? It might be imagined that there was a tremendous potential requirement of gunny bags of almost any description, not only now but in the early future. Areas which have been in enemy occupation have received no supplies for years except what they may have been able to manufacture themselves of "ersatz" materials. And there are many of such lands which have no manufacturing potential at all, unless of the most primitive description. For the rehabilitation of such countries, vast quantities of containers must be necessary, and of these the foremost is the humble gunny bag. Yet, at a time when these occupied territories are being progressively released from the enemy's yoke, sacking goods are practically unsaleable on the Calcutta market. The situation seems paradoxical to say the least.

Why the Mills did not partake more largely of the business offered, when it was offering, it is difficult to understand. They had little or nothing to lose so long as the maximum price levels were maintained, and they themselves would at any time have had the largest say in whether or not these price levels were to be maintained. If they found themselves oversold by reason of allotments of subsequent Government orders, they could always plead priority for the latter. In the last resource, if they had to buy back their own goods they could still do so at the same maximum rates and lose only their selling brokerage. But the fact is that Mills did not fill their books with the business that was offered them, except to a limited extent, and now they find themselves liable to run into unsold stocks of Heavy Goods. So far they have resolutely refused to break the maximum rates, and now they are terrified to do so because they have no means of gauging to what level the market might crash before a level could be found that would attract buyers. The speculative element in the Bazar has not been slow to size up the position, and at the first sign of weakness on the part of Mills, the "bear" operators would be leading the downward rush, and Mills would still probably find it difficult to sell any quantity without breaking the price progressively. To the uninvolved observer the position is not without its piquancy, but we imagine there must be not a few headaches amongst mill salesmen. At the moment the only policy appears to be for the Mills to hold on, in the hopes that demand will come along from somewhere, though how soon or how late that event may happen it is impossible to forecast. But to break the market now when there is not a sign of buying demand, would appear to be suicidal. The Mill Industry has been in awkward positions before now and the luck usually seems to turn their way before it is too late, so much so that it has been fervently remarked more than once that "God does love the Jute Mills". There really seems nothing for it at present but to put their trust in Him.

It has been suggested that the tendency for jute prices to decline might be used as an argument to induce the authorities to increase the supplies of coal to the mills. Certainly the stoppages due to lack of coal have proportionately affected the amount of jute consumed, and by limiting the demand, have depressed the market and the price levels. But it is mainly the Bengal Government that is interested in keeping up the price of jute, while the supply of coal is now regulated by the Supply Department of the Central Government. And it is by no means certain that the same argument would impress both.

The Bulletin of the Indian Central Jute Committee is as usual full of interesting miscellaneous information. For instance, we are informed that the Australian Federal Government has relaxed import control over more than 40 items of a wide range of goods. This means that more brassieres, cotton tape measures, hair waving compounds and sewing needles will be available soon. While it is satisfactory to know that the morale (sic) of Australian womanhood is to be kept up by this relaxing of restrictions, it is not so apparent why the Jute Industry should be informed of it through official channels.

Beyond some business in private marks, there has been little to note in the Export Jute market, general demand being negligible. Some further sales to Mills were recorded of Dundee Daisee Assortment at Rs. 77 and of Lightning grade at Rs. 74. All descriptions except the lowest, (Rejections and Cuttings continue to command Maximum rates) are freely offered at minimum price. At the close there is a report of further business with Mills but the details are not yet available.

In Loose Jute a little more interest has been shown at the decline. European Middles alone sold at Rs. 16, but bids of Rs. 13 for Bottoms alone were refused. Business however would probably be accepted for a 50/50 assortment at Rs. 16 and Rs. 13 though the general asking rate is still four annas more. European Tossa sold at Rs. 16-8 and Rs. 13-8 Mids and Bots, and Indian District Tossa were taken to some extent at Rs. 12-12 to Rs. 12-8 for Bottoms alone according to the district, with Jungli Tossa done at Rs. 12-4 and Rs. 12. Indian Jat white was reported at Rs. 15-8 and Rs. 12-8, while Supervised packing in 50/50 assortment sold at Rs. 15-12 and Rs. 12-12. For higher assortments, four annas less was accepted. Mofussil markets have tended to decline with less buying pressure in evidence, but as usual on a declining market, imports show signs of falling off.

The Fabrics market is dull and inactive. Some nine porter hessians have changed hands at maximum rates up to June next year but in the forward positions, second hand holders of eleven porters are offering at discounted prices. The official purchaser for the U.S.A. is departing for that destination, which indicates that the immediate requirements for that market have been covered and there is no other channel of demand immediately in sight. But Mills are well sold for some time ahead and no pressure is to be expected from that quarter. It is far otherwise however in the Heavy Goods section. Mills are anxious to get business but there are no buyers in sight at all. The result is a strong bearish sentiment in the Bazar, though little is actually being done except in their favourite gambling counter "B" Twills which hover around Rs. 62-4 near.

IT'S A FACT—

that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

JUTE

(By Our Staff Correspondent).

Calcutta, November 2.

The raw jute market has been further easier with very little business passing. In spite of the fact that arrivals into mofussil centres have been on a smaller scale sellers have been very eager for business. As mill production is still at a low level and there is considerable uncertainty regarding the size of the crop for the next season dealers are anxious to clear as far as possible their holdings at reduced rates if necessary. For some of the qualities of loose jute quotations are reported to be even below the minimum and transactions are concluded by subterraneous methods. The sudden weakness of the market is rather surprising especially as it was reported earlier in the week that the U.S. War Production Board had decided that there will no longer be any restriction in regard jute imports into the U.S.A. and will not be confined to those who were doing business in 1939 and 1941.

In the loose jute section Supervised Jat, Middles and Bottoms were done at Rs. 15-8 and Rs. 12-8 per maund with Middles alone at Rs. 15 per maund. European packing Jat and District were very much lower at Rs. 16 and Rs. 13 per maund. Bengalee Bottoms for forward shipment sold at Rs. 13.

In the pucca bales section, business for export has been restricted, only a small amount of Dundee Daisee 2/3 and Lightnings being done at Rs. 77 and Rs. 74 per bale. Mills have purchased cuttings N.C. and M.C. at Rs. 43 and Rs. 42 per bale respectively. For other discriptions quotations are around the minimum levels.

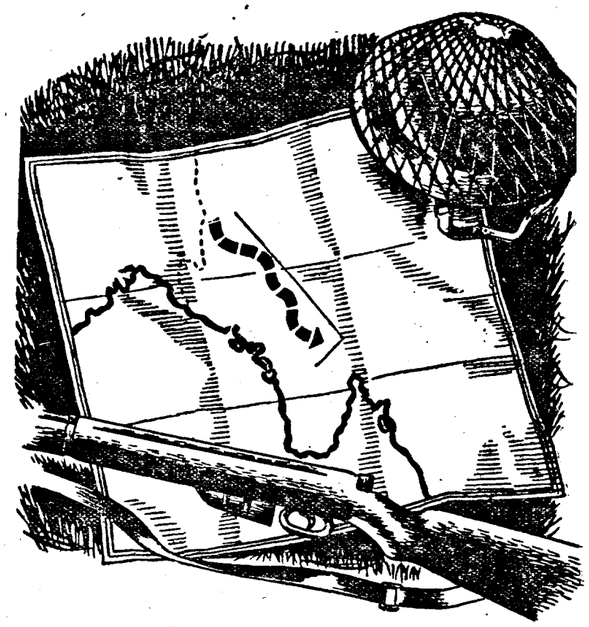
JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, November 2.

The jute manufactures market has been very quiet secondhand sellers being prepared to offer a discount for both hessian and heavy goods. The suspension of buying official agencies has been mainly responsible for the weakness of the market. Mills are not prepared to offer any discount in rates and are still holding to maximum prices for business as it is feared that any inducement offered to buyers might result in a slump in prices. The anxiety of secondhand sellers to do business has made it difficult for mills to induce buyers to offer larger quantities of hessian combined with heavy goods. It is not clear as to how long mills can hold out especially as the position in regard to sacking is very unhealthy and it will not be possible for mills to keep unsold stocks for a long time.

PIECEGOODS



(From Our Correspondent)

Calcutta, November 2.

The piecegoods market has not been very active and business has been on a small scale. Arrivals into mofussil centres has been satisfactory and consumers are not so anxious to purchase their requirements. The yarn market is firm and there is still great difficulty in respect of supplies. The Textile Commissioner, Bombay, has informed the Calcutta Yarn Market's Association in reply to their telegraphic communications regarding profit margins for sale of yarn, that the intention clearly is that the maximum margin of 12 per cent should apply in cases it is necessary for yarn to reach the ultimate consumer to pass through a number of hands. In such cases, it would normally be expected that the quantities bought by such consumer would be small and in the nature of a retail sale. In case of powerloom factories and other organisations buying supplies in bulk, it is equally clear that they should be able to buy nearer the source of supply and at a margin not exceeding 3 per cent and 7½ per cent depending on the place of sale.

The whole problem is under examination with a view to further clarification. Meanwhile sales to consumers will be governed by the broad principles enunciated above.

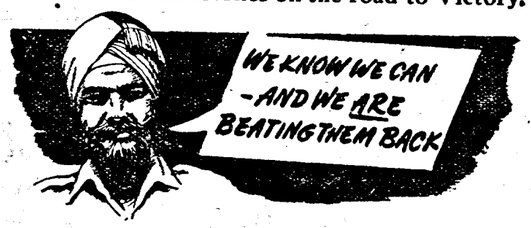
ROAD BACK TO BURMA



Japan's "invincible men" are meeting their doom everywhere. They are on the run.

On the Manipur and Burma fronts five Japanese Divisions have been decimated. Fifty thousand Japanese have been killed. And this takes no account of the thousands of victims claimed by our aircraft. In Burma, where for a considerable time our men were on the defensive, we are definitely on the offensive now. Slowly, mile after mile of Japanese occupied territory is being cleared.

Japan has now suffered an unbroken series of defeats everywhere, on every front, far and near. The initiative at all points, from Myitkyina to the Bay of Bengal, is with our men.

DIMAPUR—KOHIMA—BISHENPORE—PALEL—MOCAUNG—MYITKYINA—SITTAUNG

these are the milestones on the road to Victory.

FRIEND OR FOE?

There has never been a time when thrift was more important, more vital to India's future. During these war days there is a surplus of purchasing power in the country, and by "purchasing power" we mean money, cash, rupees. Thrift can make this surplus a blessed friend—for you and for the nation. Careless spending can turn it into the deadliest of foes—inflation.

There is a shortage of goods in wartime India and unless the demand for them is reduced the prices remain high. Control measures have checked the upward trend of prices, but in this fight against inflation we need all the help *you* can give.

Invest wisely: Do not invest in jewels, land, buildings, manufactured goods or commodities. Today's best and safest investments are Insurance, Co-operative Societies, a Savings Bank Account or the Post-Office Savings Bank. Best of all invest in Government Loans or National Savings Certificates.

Every time you go into a shop ask yourself this question. "Do I really need it?" By self-denial now you help keep prices down and the value of money up. And you save money too.

Vol. XXXIV. No. 18 SATURDAY, NOVEMBER 4, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

IMPROVED JUTE MILL EARNINGS

Stock markets both in Calcutta and Bombay have not been very interesting during the past few days and there are no important fluctuations in prices to be recorded. While the British Premier's speech had an encouraging effect on the bullion market it is rather surprising that the stock markets have not reacted in a similar manner and there has been a noticeable decline in the amount of business passing on the floor. Everyone seems to be marking time. There is a general tendency to await further developments. Reports regarding the possibility of a change in the value of the rupee and the wide fluctuations in bullion prices have left many undecided.

* * * *

The latest among the rumours is the reference to the possibility of a reduction in the bank rate. It might be that the rumours to this effect have the same basis as last week's whispers of the possibility of a change in the value of the rupee. It is important to note here, however, that, with the continued expansion of currency and the uncertain outlook in other markets, stock exchange securities will continue to be in good request and that prices for the more important counters would be higher.

* * * *

The position in regard to deliveries is still not quite comfortable and the Committee of the Stock Exchange has been obliged to place further restrictions on trading. It was reported during the week that the rise in Burrakurs was mainly due to bear-covering.

* * * *

It has been resolved by the Committee in the meeting held on Thursday that business is to be done only on three days in the week, namely Monday, Wednesday and Friday. It has been further resolved that deliveries and Patans should go on as usual including Mondays. No business even on telephones is permitted at any time when the Stock Exchange is not open for business. This rule came into force on Friday.

Another bunch of jute mills reports has been received during the week and they make a good showing. Wherever it has been possible to make up lost production, earnings are more than proportionately higher though it has not been possible for every company to distribute higher dividends to shareholders on account of the larger provision for taxation.

* * *

Anglo-India Jute Mills Company, Limited, has earned a net profit, before providing for taxation and depreciation, for the half-year ended September, 1944 of Rs. 19,81.455 against Rs. 9,78,328 for the previous six months. After providing Rs. 12.6 lakhs (Rs. 4.75 lakhs) for taxation and Rs. 2.5 lakhs (Rs. 50,000) to War contingency reserve the dividend on the ordinary shares has been maintained at Rs. 7-8 per share. The amount carried forward is slightly higher at Rs. 1,69,424 against Rs. 1,63,699 brought in. Up to the middle of July working at the steam-driven Middle Mill was spasmodic owing to the short supply of coal. Thereafter the coal position deteriorated and it was necessary to close down this mill and concentrate manufacture at the electrically-driven Lower and Jagatdal Mills. By working 120 hours per week, as from July 23 at these mills it has been possible to utilise all but 7 per cent of the loom-hours to which the Company is entitled.

* * *

Fort Gloster Jute Mills Company, Limited, has for the same period been able to report a net profit before providing for taxation and depreciation of Rs. 9,64,556 against Rs. 4,36,861 for the previous half-year. The amount set aside to depreciation is Rs. 1.5 lakhs (Rs. 1 lakh) while the provision for depreciation and compulsory deposits is as much as Rs. 6.25 lakhs (Rs. 2 lakhs). The ordinary dividend has been increased to Rs. 10 per share from Rs. 8 per share. The North Mill was requisitioned in August and arrangements were made to transfer the production of this unit to the Old and New Mills where by extended single-shift working, the loom hours of the North are being utilised in full except for a small balance which is transferred to Fort William Co., on the purchase basis of hours as approved by the Indian Jute Mills Association. Labour musters are satisfactory but unfortunately output is still seriously affectd by the poor quality of coal supplied from the jute industry's central dump.

* * * *

The net profit of the *Fort William Jute Company, Limited*, for the six months ending September, 1944 is Rs. 5,61,337 against Rs. 3,42,047 for the previous six months. Provision for taxation is Rs. 4.1 lakhs (Rs. 2.1 lakhs) while the charge on account of depreciation is Rs. 50,000 (same). The dividend has been increased to Rs. 5 per share from Rs. 4 per share previously. The amount carried forward is Rs. 65,327 against Rs. 68,990 brought in. Owing to coal shortage the mill lost 364 working hours which can be made up gradually at some future time. Both units are now running to an extended single shift system in order to utilise the transfer of loom hours arranged with the Fort Gloster Jute Mill Co., owing to the requisitioning of one of their units. As a result of this arrangement it is expected that labour position will show a considerable improvement and that the earnings for the current half-year would be better.

* * *

As a result of the reduction in the contract price payable by the Government of India and the further increase in the costs of production the *Bengal Paper Mills Company, Limited*, has suffered a sharp decline in earnings for the half-year ended June 1944, even though the output was maintained at a high level. The net profit, before providing for taxation and depreciation is Rs. 13,03,381 against Rs. 19,44,192 for the latter half of 1943. As a result of the smaller provision for taxation, Rs. 8,30,225 (Rs. 13,31,875) it has been possible to distribute the same dividend and bonus on the ordinary shares, the total distribution amounting to 22½ per cent. The amount set aside for depreciation is Rs. 1,94,995 (Rs. 2,34,332).

* * * *

It is not definite yet as to what exactly will be the purchase price payable to the Calcutta Tramways by the Calcutta Corporation even though the latter has decided to

A. C. C. To Issue Fresh Capital ?

(By Analyst)

BOMBAY (*By Wire*).

Last week I had mentioned that Associated Cements moved up sharply on reports that a Marwari had accumulated thousands of shares. There were several rumours in the market that the company is likely to issue fresh capital. I have been making private enquiries and I understand that there are still chances of the Associated Cement Companies, Limited, increasing its capital by about Rs. 2 to Rs. 2½ crores. There are rumours in the market that the Directors contemplate issuing one share for every three shares held at Rs. 50 premium i.e., at Rs. 150. If there should be any truth in this rumour a buyer of three shares at the current market price of Rs. 240 will be getting a new share at Rs. 150 and thus the average price for a lot of 4 shares would work out to Rs. 217-8. On the assumption that the company would be able to maintain a dividend of Rs. 7 despite the increased capital the shares would give only an yield of nearly 3%. Of course, the industry has excellent postwar prospects and even assuming that the dividend might be a little higher than Rs. 7 in the postwar period on the basis of a prospective yield of 4% I feel that the shares look fully valued at about Rs. 250 or so. I would therefore recommend liquidation of Associated Cements between Rs. 250 and Rs. 260.

Coming to the bank section, it would be remembered that when United Commercial Bank touched about Rs. 94|95 some time ago I had recommended liquidation of these shares on the plea that the bank is going to increase the capital by an issue of one share for every share held at par. It is reported that there has been knowledgeable buying of these shares in the last two weeks at the lower levels and I found even on the Moorat Day many institutional investors bought United Commericial Banks. Ever since the Moorat Day United Commercial Banks have been very steady around Rs. 84 and Rs. 85. Of course some of my readers who sold out around Rs. 94 did cover some of their sales around Rs. 75 but many of them had not made any extra purchases. I have therefore made enquiries this week about the latest working of the Bank and I was agreeably surprised to hear that the Bank has been doing wonderfully well and that profits every month are now ranging between Rs. 1 and 1¼ lakhs and that the total for the current year might be anywhere between Rs. 12.15 lakhs. A buyer at Rs. 85 gets a new share at Rs. 50 and the average price would work out to Rs. 67½ and the old shares are likely to get a dividend for 1944. In some quarters a dividend of 4% is expected. If there should be any truth in this expectation these shares should move up on the basis of longterm prospects.

(*Continued from previous page*)

purchase the entire undertaking under the agreement, dated December 9, 1889. It is said that the Company might be able to get a substantial allowance for keeping the properties in an excellent condition and that a good portion of the Depreciation Fund will be available to the shareholders. The Calcutta Corporation has decided to operate the service under their own aegis and control. It is proposed to carry on and work the undertaking through an Agent appointed by the Corporation. As many as 22 tenders are reported to have been already submitted. According to the terms and conditions set out by the Corporation the Agent shall have to provide such capital expenditure as may be required for the purchase of the undertaking in the name of the Corporation of Calcutta in whom the same shall vest and who shall be the owners of the tramways undertaking. The Chief Executive Officer of the Corporation will be the Supervising authority. The appointment of the Agent will be made for a period of 25 years with an option on either side to extend the period for a further 10 years.

Watch-Dog.

JOHN PATERSON & COMPANY (INDIA) LTD.,

NOTICE

is hereby given that the Annual General Meeting of the Company will be held at No. 9, Clive Street, Calcutta, the City Office of the Company, on Monday, the 20th November, 1944. at 4-30 P.M. for the transaction of the following business :—

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 3.

The Calcutta Stock Exchange has been rather uninteresting during the past week and business passing has been restricted. The week under review is short of one working day, markets being closed on Tuesday on account of the procession of *Pareshnath*. The easier tone of the markets has been due to the lack of buying support. It was expected that Mr. Churchill's speech indicating that the war might yet be prolonged would have an encouraging effect on the market, but speculators have been rather quiet with prices fluctuating within narrow limits. Indian Irons were higher earlier in the week at Rs. 38-14 ex-dividend. There was, however, a setback to Rs. 38-4. The quotation at the time of writing is steady at Rs. 38-6. Cotton shares were uninteresting while among coal shares Burrakurs were an outstanding feature with a rise to Rs. 42-3. Sugar shares were slightly better while there was selective buying of Jute shares. The maintenance of the half-yearly dividend of the Howrah Mills Co., Ltd., disappointed the market. The general undertone is steady. Both operators and investors like to await further developments.

The giltedged securities section has continued firm with 3½ per cent Paper at par. Rumours regarding the possibility of a reduction in the Bank rate should have a stimulating effect on giltedged prices. Short and medium-dated loans continue to be in request, 3 per cent defence loans 1949-52 being done at Rs. 100-10 and 3 per cent 1951-54 at Rs. 101-4. A small lot of 1953-55 changed hands at Rs. 100-8. 3½ per cent 1947-50 were Rs. 103-12 and 5 per cent 1945-55 Rs. 103-10. Among long-dated loans, 3 per cent 1963-65 were done at Rs. 99 and 4 per cent 1960-70 Rs. 110-12. There have again been no transactions in Provincial Loans. Easy conditions continue to prevail in the money market though the average discount rate in treasury bills does not show any change at 7 annas 11 pies per cent per annum.

Among Bank shares, there is no important change to be recorded, *Imperial Bank* fully paids being Rs. 1,918 and contributories Rs. 495. *Calcutta National Bank* were Rs. 14-7. *Bharat Bank Ordy.* Rs. 108 and *United Commercial Bank* Rs. 34-8 premium.

Cotton shares have been absolutely uninteresting though towards the close *Cawnpore Texiles* registered a rise to Rs. 14. *Elgin* were quieter at Rs. 65-8. *Bengal-Nagpur* were unchanged at Rs. 37-4 as also *New Victoria* at Rs. 8-6. *Benares Cotton* were Rs. 13 and *Kesoram* Rs. 16-11.

The Coal section was not very active but there was quite good enquiry for Burrakurs and Sendras on the report that these companies would be able to effect a substantial increase in raisings in the current half-year. *Burrakur* were 2 points higher at Rs. 42-3 but have reacted to Rs. 42-2 while Sendra improved by nearly 2 points to Rs. 25-4. *Bengal* were slightly easier at Rs. 644 as also *Equitable* at Rs. 63-8. *New Beerbhoom* were Rs. 35 and *South Karanpura* Rs. 21-3. *Talcher* quieter at Rs. 10-4.

In the Jute section, the declaration of a dividend of Rs. 1-12 for the half-year ended September 1944 by the Howrah Mills Company Ld., has had a depressing influence as it was generally expected that a higher dividend would be paid. There has, however, been some selective buying of Adamjees, Indias and Ganges. *Howrah* were Rs. 84-4 and *Anglo-India* Rs. 455. *Nuddea* were steady at Rs. 128; *Megna* were better at Rs. 116 while *Northbrook* were lower at Rs. 44-14.

Engineering shares. too. have been uninteresting with Indian Irons fluctuating for the most part of the week between Rs. 38-4 and Rs. 38-14 ex-dividend, the close being nearer the lower levels at Rs. 38-6. *Steel Corporation* did not encounter the same demand and are now easier at Rs. 32-2. *Burn & Co.*, were unchanged at Rs. 418 and *Indian Standard Wagon* at Rs. 83-12. *Britannia Engr.* were further higher at Rs. 21 while *Kumardhubi Engr.* were Rs. 11-8.

Sugar shares came in for selective buying on the announcement of an increase in the ex-factory price for sugar, reference to which was made in these columns last week. *Balrampore* were steady at Rs. 17-12, *Buland* at Rs. 43-12 and *Raza* at Rs. 45. *Champarun* improved to Rs. 42 but are now lower at Rs. 40-12. *Carew & Co.*, had a sudden setback to Rs. 27-12 but the quotation at the time of writing is a little better at Rs. 28. *Belsund* were Rs. 16-7 and *Murree Brewery* Rs. 27-14.

Tea shares have been very steady with *Hasimara* at Rs. 74, *Hantapara* at Rs. 725 and Tukvar at Rs. 21-12.

In the Miscellneous section, *Burma Corporation* were easier at Rs. 4-9 while *Indian Copper* were unchanged at Rs. 3-1. *B. I. C.* were sticky at Rs. 6-8 while *British Ceylon Corpn.* came in for attention at Rs. 17-12. *Calcutta Trams* have been fluctuating in wide limits. After being higher at Rs. 50-12 the quotation is now Rs. 47-12. There is considerable speculation regarding the purchase price payable by the Calcutta Corporation to the Tramways Company. *Aluminium Corpn.* were Rs. 17-4 cum-rights and *Britannia Biscuits* Rs. 25-10. Among paper shares, *Titaghur Paper* were steady at Rs. 27-12 and *Mysore Paper* at Rs 23-10. *Assam Bengal Cement* were Rs. 16-9 and *Dalmia Cement* Rs. 17-4 cum-dividend. *Midnapore Zemindary* were Rs. 167.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100/- from 1st September, 1944 and there after increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

INDIAN TEA LICENSING COMMITTEE

NOTICE

Due to the recent increase in the Indian export allotment the Licensing Committee has issued a further allotment of export quota amounting to 2.68 per cent of estates' crop bases making a total of 67.57 per cent for the year 1944-45.

Individual tea estates will be advised as to the amount of their increase of quota as promptly as possible.

J. M. Pye,
JointController.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions continue to prevail in the money market with call money nominally quoting ½ per cent in Calcutta and ¼ per cent in Bombay. There is no suggestion of any hardening in money conditions in spite of the reports that the cotton crop has begun to move in the Western Presidency. At the auctions of treasury bills held this week greater interest has naturally been shown and there is a further increase in the amount of applications to Rs. 15.78 crores from 15.01 crores. The decrease in the average discount rate, however, is only slight, the rate being 7 annas 10 pies per cent per annum against 7 annas 11 pies per cent last week. The offer for the next week has again been maintained at Rs. 6 crores. With the continuance of the present conditions in the market it should have been even possible for the authorities to get their requirements at slightly reduced rates.

The returns of the Reserve Bank for the week ended November 3, 1944 show that there has been no fresh expansion of currency and that total notes issued are slightly lower at Rs. 972.07 crores owing to the decrease in the amount of rupee coin to Rs. 13.45 crores from Rs. 13.6 crores. Notes in circulation register a sharp increase to Rs. 964.9 crores from Rs. 956.54 crores. Notes held in the banking department as a result are lower at Rs. 7.14 crores against Rs. 15.64 crores.

In the banking department there is no appreciable decline in Central Government's balances in spite of the large month-early disbursements. The figure according to the latest return is Rs. 193.13 crores against Rs. 196.49 crores. Other Government accounts are nearly Rs. 1.9 crores lower at Rs. 10.57 crores. As a result of the continued increase in bank deposits and the decrease in advances, deposits of scheduled banks with the Reserve Bank have risen in recent weeks and the latest figure of Rs. 113.1 crores is the highest for several months. The absence of any appreciable decline in Central Government's balances is, perhaps, due to the receipts from other sources. Other deposits show a significant decrease to Rs. 6.99 crores from Rs. 10.3 crores. One would have expected that with the continuance of gold sales on a large scale the figure under this head would have shown a substantial increase. Foreign balances are Rs. 11.6 crores higher at Rs. 324.53 crores and thus stand at the highest level for the year.

The return of the scheduled banks for the week ended October 27, 1944 again reveals a large increase in both demand and time liabilities, demand liabilities increasing by over Rs. 8.5 crores to Rs. 603.68 crores and time liabilities by Rs. 1.5 crores to Rs. 196.38 crores. The increase in the working capital by over Rs. 10 crores has not been reflected fully in cash balances even though advances are lower by Rs. 1.5 crores at Rs. 195.04 crores. Cash on hand shows even a small decrease to Rs. 27.48 crores from Rs. 27.86 crores though balances with the Reserve Bank are higher by Rs. 2.08 crores at Rs. 104.34 crores. It is satisfactory to note that in recent weeks bills discounted have shown a steady increase and are now Rs. 10.23 crores against Rs. 9.94 crores in the previous week.

In three weeks the Imperial Bank has been able to gather nearly Rs. 8.5 crores of deposits the figure in the return for November 3, 1944 being Rs. 240.2 crores against Rs. 231.64 crores on October 13, 1944. There has not been any appreciable increase in the investment portfolio during this period. It might be that maturities of treasury bills in recent weeks were mostly on account of this Bank. Total investments were only Rs. 143.24 crores against Rs. 140.61 crores. Advances are higher at Rs. 57.1 crores against Rs. 55.06 crores. There is an increase in cash credits and advances and bills discounted. Cash balances, nevertheless, show an improvement to Rs. 49.67 crores from Rs. 48.87 crores.

While the future of the rupee has begun to exercise vaguely the mind of the Indian public, the City Editor of the "Financial News," according to our London Correspondent, is indulging in vain regrets that the rupee was not reduced to 6 pence and India's accumulation of sterling balances prevented in time. One has only to mention this to realise that the sight of vast external balances to the credit of India and the countries of the East is sufficient to deprive City Editors in London of their usual clarity of perception and reasoning. One cannot perhaps help one's reactions to other people's prosperity. But financial journalists, when they advocate a reduction of the external value of the rupee, should be clear about the grounds on which they can ask for it. It is true that the internal purchasing power of the rupee has gone down. But that is by no means the starting point of the argument, since that is the result of the inflation caused by the failure of foreign countries to pay for their purchases in rupees. If natural forces had been allowed free play, the rupee would appreciate, and not depreciate. What the City Editor of the "Financial News" wants is that the internal value of the rupee should be brought down by forced inflation and that this fall should be treated as sufficient ground for reducing our sterling credits to a third of their size! A simple demand for repudiation would do less violence to logic.

The position in regard to standard silver rupees and half-rupees has now been made clear by an announcement by the Government of India during the week. It is said that standard silver rupees and half-rupees of 11-12 fineness, having been demonetised, are not legal tender and it is neither illegal nor improper to hoard them or to melt them for sale as bullion. The selling of these coins at a value other than their face value is likewise no longer an offence. Standard silver coins which have ceased to be legal tender are accepted at the Bombay Mint for refining, like other silvers, and the silver bars (999.0 fineness) issued in exchange, after payment of the usual refining charges of Rs. 2-8 per 100 totals gross weight, the minimum quantity for acceptance being 3,500 totals.

The exchange market has been steady.

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, Nov. 7, 1944. Total amount offered was Rs. 15,78,00,000. Tenders at Rs. 99-14-3 per cent and above were accepted in full, and those at Rs. 99-14-0 per cent were allotted approximately 35 per cent. Total amount accepted was Rs. 6,00,00,000, the average rate of accepted tenders being Rs. 0-7-10 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, Nov. 14, 1944 in Bombay upto 11 A.M. and upto the close of business on Monday, Nov. 13, 1944 at other centres. Successful tenderers should make payment on Friday, Nov. 17, 1944. Other conditions are as usual.

During the week ended Nov. 3, 1944 Government of India Treasury Bills for Rs. 3,19,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay, *(By Wire)*.

Silver forward staged a sharp rise from Rs. 112-12 on Wednesday morning to Rs. 114-2 that same evening owing to heavy Syndicate purchases. The market is easier to-day owing to partial bull liquidation and partly because the Reserve Bank has announced increase in offerings to 300 bars tomorrow. The closing rate is Rs. 112-12, with Spot one rupee higher the market deriving its steadiness from scarcity of ready stock despite Bank offerings and upcountry arrivals of 300 bars. Railings upcountry average 250 bars. A feeling prevails that if the Bank offers 300 bars daily hereafter the market must decline. The Reserve Bank sold 200 bars daily on Monday at Rs. 113-15, Tuesday at Rs. 113-4, Wednesday Rs. 113-7 and to-day Rs. 115-8 all being at the lowest acceptance limits. The market was steady.

The gold market was firmer on exceptionally heavy demand averaging daily 50,000 tolas. The forward rate jumped from Rs. 61-10 to Rs. 62-15 on Tuesday as a result of speculative buying based on reports from China. The Reserve Bank sold 50,000 tolas at Rs. 61-13 on Monday and 70,000 tolas on Tuesday and Wednesday at Rs. 61-14 and Rs. 62-8 respectively. Today 40,000 tolas were sold at Rs. 63-9 and the forward rate declined to Rs. 61-12 when the authorities announced offerings of 75,000 tolas on Friday. Ready stock is still scarce. Hence the premium of one rupee. Upcountry arrivals are low. The market is an interesting stage.

RUPEE RATIO REVISION

"Financial News" into the Fray

London, Nov. 7.

Signs are multiplying that Lord Catto may soon be under fire.

Now he is Governor of the Bank of England, but from June 1940 to April 1944 he was Financial Adviser to the British Treasury. Hence there is a disposition to hold him largely responsible for the policy which, as the end of war approaches, leaves Britain saddled with huge sterling indebtedness to India and such Middle-eastern countries as Egypt, Iraq, Palestine, Persia and Syria.

The gist of the rising complaint is firstly, that Britain could have greatly reduced this colossal commercial indebtedness if she had promptly concluded Lend-Lease arrangements, especially, with India. Secondly, she need not have maintained the pre-war relationship between sterling and the currencies of these countries.

It is argued that the currencies of all these countries became heavily inflated and the Treasury pretence that they are still at pre-war parity with sterling was a costly and inexcusable myth.

The money market editor of the Financial News suggests that if the prices of goods in India and Britain are compared, then, the real foreign exchange value of the rupee would have been about six pence instead of 1 shilling 6 pence. Its maintenance at an artificially high rate has resulted in India being credited with something like three times as much sterling as she should have been.

The Financial News argues that "similar adjustments should have been made with Middle East countries. The full facts of our war Finance in the East will, when published, read like a tale from the Arabian Nights. The fairy princes of Whitehall have bestowed upon the poor people of Bagdad, Jerusalem, Cairo etc. modest presents running up to the 50 million, 100 million or 200 millions. The poor nations become overnight possessors of undreamed of riches-for no particular reason, except the lack of foresight on the part of generous donors. Unfortunately the money is not there."

The Financial News contends that Eastern countries would not have suffered any unfair disadvantage if foreign exchange rates had been adjusted "They would merely have been deprived of entirely unjustified war profits which they have gained by this for the revision of the amount is on balances owned by Governments and Central Banks. The holders should be persuaded to agree to a scaling down of these claims sufficiently to cancel unearned surpluses arising from artificial exchange rates."

This last sentence may or may not foreshadow a change in official policy regarding unwieldy sterling balances now owed to overseas owners.

Progress Report on Planning

The second report on Reconstruction Planning issued by the Reconstruction Committee of the Viceroy's Executive Council marks a recognisable step forward towards concreteness of post-war plans. Economic planning in a backward country like India is necessarily ambitious and its aims have an unpractical ring. Means and ends are so far apart that to bring them together in proper relation is an extremely complicated and arduous task. Only those who realise the difficulties of concretising the Plan will welcome the idea of publishing a report at each stage of the progress of planning. The first report described the progress which had been made at the Centre up to the end of January last and indicated some of the problems which the Government were examining in consultation with the various policy committees. The present report purports to be "a summary of the views of the Departments of the Government of India on the issues that arise in so far as it has been possible to formulate them with the material and in the time at their disposal." The authors of the Report add:

> It is not, however, intended to convey specific approval to any particular measures. It is not possible for Government to arrive at final conclusions on matters of policy until a more definite picture of the plans of the Provinces as well as the Centre can be drawn. The report is meant to provide guidance to the Departments at the Centre as well as to the Provinces, on the lines on which they should proceed. It is also intended to invite the expression of public opinion and to enlist public support. When the proposals in the report refer to subjects within the purview of the Provincial or State Governments they are subject to the views of these Governments.

Though the interval between the first report and the second is only a few months, the progress made by the various committees is sufficient to enable the Reconstruction Committee of the Council to visualise the nature of the plans under the various heads, the relations that subsist or ought to subsist between the various plans, and their requirements in their administrative or executive aspects. The Committee are quite aware that no planning is possible except on the basis of certain broad assumptions about the political as well as the economic background of conditions within the country and abroad. They have to assume, irrespective of whether the event will prove them true or false, that constitutional or political changes will not result in a radical departure from the present economic or financial arrangements, that demobilisation will proceed fast enough to bring about a reduction of defence expenditure, that world conditions will be such as to facilitate full employment and that the Government of the day and the public will favour the measures necessary for the success of economic planning. But these assumptions do not exhaust the necessary general conditions. Most of the matters to which an economic plan relates are subject to provincial jurisdiction, while the States are altogether distinct political entities. Economic development, if it is to be rational, should show no marked respect for political boundaries. And "one of the fundamental principles of the Plan is regionalisation, so that the different parts of the country benefit in as equal a measure as is compatible with the physical features and natural resources of each part." There is thus a clear need not only for co-ordination, but for a far closer integration of plans and of the executive authority necessary for their execution. In the matter of transport and particularly road development and civil aviation, the need for centralisation is so strong that the case against local authorities is self-evident. Road and road transport has to be dealt with in the same department and in the case of air lines, it is impossible to organise any rational system on any other basis.

Over other fields of planned endeavour, however, it is idle to look for similar advantages of complete centralisation. For the plan itself, as it can be deemed to have emerged from the labours of the various committees, is not a compact unit. The educational plan, for instance, is drawn up for a period of 40 years. The Health Plan is still under consideration. The Agricultural Plan and the plan for railway replacement are for different periods. If we consider these facts along with the differences of Provincial, State and Central jurisdiction, we shall recognise that the administrative framework has to be specially considered. The Report is in favour of an all-India plan for postwar reconstruction and development as a whole and as part of it a detailed five-year plan for (1) British India for Central subjects including finance (2) each Province in respect of its own subjects including finance and (3) each State of a suitable size in respect of all subjects including finance. Mutual consultation and co-ordination of plans in its initial stages will go a long way towards eliminating the possibilities of conflict. The method by which plans will be evolved is that for each subject a Development Officer will be appointed by the Central Government. Provincial and State Governments should also, it is suggested, appoint a Development Commisioner or create a special Department devoted entirely to development planning, so that the activities of the various departments may be co-ordinated and contact maintained with the representatives of the Central Government. This may not be necessary for every province; and even in the provinces where development officers may be appointed, the officers will find complete plans prepared which need little amendment. But the advantage of comparing plans, picking the good points of some and applying them to others and bringing about a modification of the all-India plan must be fully ensured. The Report is careful to emphasise that "the appointment of Development Officers will in no way absolve the Secretaries of the Central Departments from the ultimate responsibility for planning." In the formulation of plans in accordance with these ideas, the functions of the Centre will consist of the initiation of plans and policies for which the Centre is responsible and their elaboration in detail in consultation with the Provinces and States, the provision of expert advice to the Provinces and States so as to ensure a common policy on important questions, the ensuring of exchange of information and technical advice, provision of financial advice and assistance and co-ordination of scientific research and plans and priorities.

It is a question how far these proposals for what may be called planning the Plan will be effective in speeding up its formulation. The Provinces and States, the latter to an even greater extent than the former, are ill-equipped to take up the task of formulating plans for themselves. So far, Bombay among the Provinces and Mysore among the States have been alone in putting up a plan with some definiteness of outline. The U. P. has put forward an industrial Plan. While it is true other Provinces and States can and should take up the question without loss of time, it may also be ventured that, till the Centre puts forward more concrete proposals in matters which are under its direct jurisdiction or of which it has to take prior cognisance on account of their all-India importance, provincial and State plans will have to be in the nature of groping amongst uncertainties. The Second Report of the progress of reconstruction planning, though it affords in its second part a summary of the proposals so far made by the various sub-committees cannot be said to have met this need. What the report has to say under the three main headings, agriculture, industrial development and trade and commerce is largely a matter of general principles rather than delineation even in the broadest outlines. There is throughout the Report a disproportionate emphasis on controls, which many in this country will view with some disquiet, if there should be no change in the constitution of a democratic character. Nevertheless, one may note with satisfaction the fact that the Government of India contemplate a permanent Tariff Board and the liberalisation of the terms of grant of protection.

If the stage of concrete industrial plans is still far off, the plan on the side of finance seems to be taking recognisable shape. The future of economic planning, so far as finance is concerned, was brightened when the Finance Member declared in his last budget speech that, while the use of created money might be dangerous, the finances of India could well afford to give planning a good start. The Second Report observes that "The Government of India have estimated on the basis of certain fundamental assumptions, that a round figure of Rs. 1,000 crores might be available for the first five year period taking effect from the year 1947-48 and ending in 1951-52. Approximately half of the total will consist of revenue surpluses which would be available for financing such Central development projects as are not financed by loans and for making grants recurring or otherwise. The remainder, that is, about Rs. 500 crores, represents the total loans representing new money, which it is felt might be raised by the Centre and by Provinces, in the five year period. It will be noted that this figure of one thousand crores is exclusive of amounts which could be raised from the market for private investment. This may be of the same order as that estimated for Government borrowings."

The public will probably have to wait till the next budget to know the exact basis on which these estimates have been made by the Government of India. An annual revenue surplus of Rs. 100 crores is possible only on the assumption that, while the revenue heads continue to yield as much as during war time, the defence budget will have fallen by Rs. 100 crores. And revenue can continue at high levels only if the general tempo of business activity and profit margins remain unchanged. We have often expressed our belief that these can be maintained if public policies are shaped towards that end. It is also possible that in the conditions of the post war period, customs revenue may prove to be far more fruitful that it has been for a decade and a half. Of the chief sources of Central revenue today, railway surplus can be maintained if the volume of

The New India Assurance Co., Ltd. takes pride in announcing its latest business figures, which sum up the company's progress during the short period of 25 years.

Established in the year 1919, New India to-day holds the unique position of being the premier Indian Composite Insurance Organisation transacting Life, Fire, Marine, Accident, and all other forms of insurance.

Prudent and efficient management, a huge paid-up capital, which is one of the largest in the world, a far-seeing and cautious policy in the matter of investment, and last, but not the least, the unfailing service of the organisation to the policy-holders — these are some of the factors that have contributed to the success of New India in the course of this short period.

New India offers attractive policy terms, maximum security and willing service from its agents, and guarantees a prompt settlement of claims.

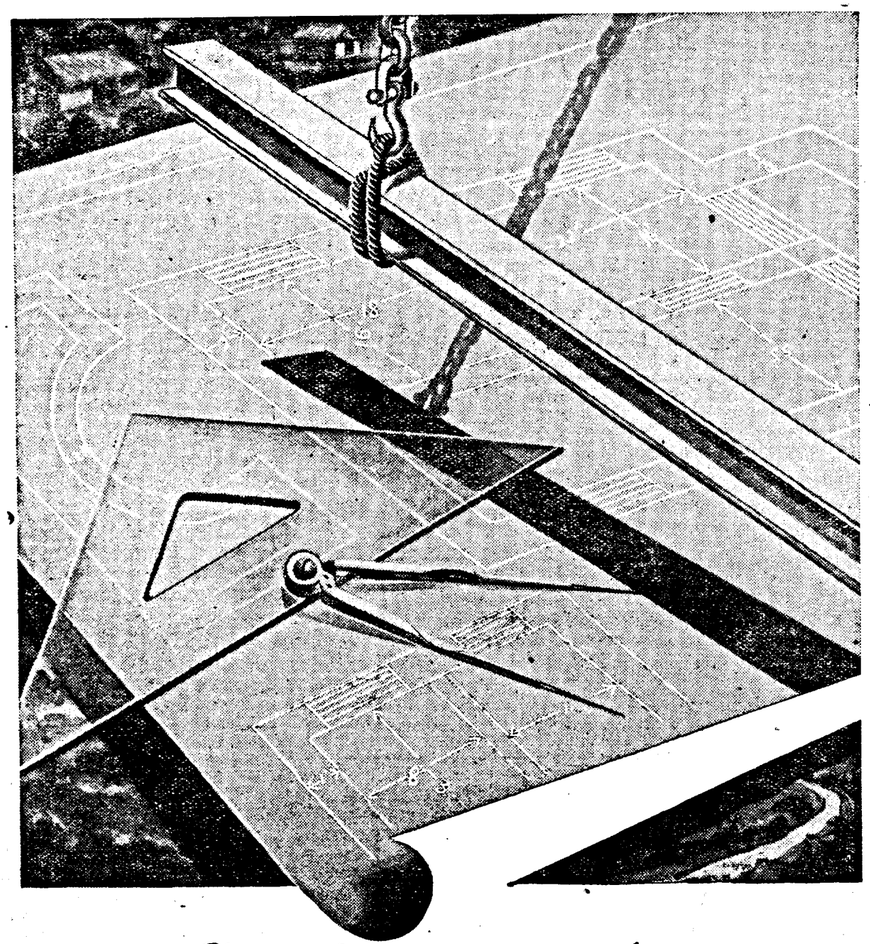
business activity is not suffered to fall. While E.P.T. may be affected, income tax may well become a highly expanding source of revenue. Some doubt may reasonably be felt as to the continuance of Reserve Bank profits on the present scale of Rs. 10 to 12 crores. What is doubtful is not the maintenance of revenue at about the levels of the war period but the speedy decline of defence expenditure. If demobilisation and disposals are properly effected, there would be the double advantage that not only will defence expenditure decline, but substantial additions to the national income will have been rendered possible. In any case, finance has ceased to be a paralysing bogey to the authors of economic planning; and it is to be hoped that the development of planning in the manner contemplated in the Second Report will not be allowed to suffer delay on any account.

Food Policy, Here & Elsewhere

Sir J. P. Srivastava's recent review of the food position in this country does not make encouraging reading. Though the Government have taken energetic steps for better distribution, more scientific rationing and an improved procurement system, the situation still leaves room for concern. While steps have been taken to implement the recommendations of the Foodgrains Policy Committee, the imports of food grains from outside have fallen short of expectations. Nearly one full year has passed since Bengal experienced the most devastating famine of recent history. Disease and pestilence caused by the aftermath of famine in several areas have added to the sufferings of the people. The achievements of the grow-more-food campaign have not been substantial though rationing today in a sense ensures food to 40 million people in India. In Madras and other areas the actual acreage under rice has, instead of increasing, recorded declines. The latest survey of India's food policy in 1943-44 by the Food Department claims and deserves credit for the progress made in price control, transport arrangement, monopoly purchases etc., but it does not indicate that a satisfactory food plan has been drawn up. Reports on the technological possibilities of Indian agriculture, animal husbandry, forest wealth, etc., have been all placed before the public; but promises of adequate food supply in a comparatively distant future cannot be a satisfactory answer to the urgent calls of the present. The evolution of the Government of India's food policy has been criticised by different interests from different angles and the authorities have in their turn, explained the difficulties which are by no means a few. But the inefficiency and the enormous delay in evolving a suitable food policy for India before it is too late will be clearly understood only when India is compared with the leading nations of the world in this respect. Our record can best be appraised only in the light of the achievements of others during the war.

The League of Nations study on "Food Rationing and Supply in 1943-44" reveals that owing to the conditions created by war, difficulties of transport have in many places delayed the increase of agricultural production and in many areas actually caused serious concern for some time during the early years of this war. The continent of Europe recorded a continuous fall in agricultural production from 1939 onwards and the level in 1942 was lower by more than 12 per cent. Owing to the movement of large masses of troops and the serious shortage of fertilisers, draught power and man power, production is reported to have decreased considerably. But there has not been a famine of the magnitude experienced in this country. In U.S.S.R. owing to the swift advance of the German army during 1941-42 Russia lost over one hundred million acres or about two-fifths of Russia's grain area, between 80 to 90 per cent of her sugar area and about a half of her potato area. The supply of cereals from reserves and new crops was hardly sufficient to remove the strain caused on the Russian side. Russia's counter-offensive in the winter and spring of 1942-43 under conditions of scorched earth policy carried out by both sides only added to the strain because even the liberated population had to be fed adequately. While the territories under German occupation were experiencing hardship, we are told, the position in Soviet Russia was retrived partly by timely and adequate shipments of food from the United States of America and partly by the splendid achievements of the grow-more-food campaign of that country. Just after the late autumn of 1942 lease-lend food shipments to U.S.S.R. covered 277 thousand tons of sugar, 324 thousand tons of canned meat, 4.41.000 tons—of edible fats and oils, 136 thousand tons of dried fruit and vegetables, 38.000 tons of dried eggs and 33,400 tons of butter. Up to October 1943, 345.000 tons of wheat and flour were shipped from the U.S.A. besides 9 million bushels of Canadian wheat. Lease-lend supplies obviously averted famine conditions in some parts of Russia, but the Soviet food policy relied on internal production more than help from outside. During 1942-43 alone nearly 6 million acres had been added in the unoccupied regions to the area under food crops and the cultivation of food crops in Central Siberia has been successful beyond expectation. The Soviet Government's programme for 1943 was to increase the area under cultivation by 60 million acres and to put up the production of cattle by 12 per cent, of pigs by 16 per cent and sheep and goats by 14 per cent. We are aware that the scope for extension of cultivation in Russia was very wide unlike in India; but the point to be borne in mind is that in that country owing to the diplomatic power which the U.S.S.R. could wield and enforce the U.S. and the British Commonwealth were effectively persuaded to rush wheat and concentrated food at the proper time, that the drive for production was far more powerful and that there was no readiness to plead difficulties in defence of failure.

The example of England is no less remarkable. Before the war it is well-known that two-thirds of the British food supply was imported. By 1943 over two-thirds of the national requirements was grown at home and the League report further says "the national diet has become less varied but had been but little reduced in terms of calories per head, and from a nutritional standpoint, had been improved." Great Britain could increase the total area devoted to food grains from 4 million acres in 1939 to 7.6 million acres in 1943. 4½ million acres have been improved under Britain's draining programme. Figures for 1943 reveal that the area under wheat alone was raised by 35.6 per cent to nearly 70 per cent over the prewar level. With the labour force remaining more or less the same as before the war, production was nearly doubled owing to planned intensive farming and by increased mechanisation. The number of tractors used in British agriculture increased from 55.000 in 1939 to 150.000 in 1942 and tractor implements had also increased nearly sixfold. The programmes for 1943 and 1944 have kept up the trend of the previous years. In spite of extreme transport difficulties owing to German submarine warfare, England could easily keep the food situation under control.



Ireland, a country with a small reserve, tackled her food problem with equal efficiency. Irish farmers were obliged to keep a minimum proportion under the plough and this was raised from 12½ per cent to 20 per cent in 1942. 25 per cent in 1943 and 37½ per cent in 1944. The area nnder wheat increased from 255 thousand acres in 1939 to 574 thousand acres in 1942. It was laid down that in 1943-44 season every Irish farmer should sow a minimum area under wheat, varying according to the countries, from one-tenth down to one-twentyfifth of his holding.

In the Mid-East there has been a sustained effort at a planned shift from cash crops to food crops and vegetables and the food position was kept under control. Iran, which has suffered particularly under inflation, was saved by timely arrangements for wheat supply from the U.S., India and other parts of the British Commonwealth.

It is remarkable that in the chief wheat exporting countries the acreage has been continuously declining since the beginning of this war. It is stated that during the six years between 1937 and 1943 the wheat acreage of the Argentine, Australia, Canada and the U.S.A. shrank by nearly one-third. The U.S.A. reduced its area from 81 million in 1937 to 52½ million in 1943. Canada from 29 millions in 1940 to 17½ millions in 1943, Australia from 14½ millions in 1938 to 8½ millions 1943 and the Argentine from 21½ millions in 1938 to 17 millions in 1942 and 1943. These reductions form part of Government's plan for diverting the rapid increase in supplies towards the production of the more immediately needed foodstuffs. In 1942-43 it is amazing to see that nearly 350 million bushels have been used as fodder for lifestock and 54 million bushels were diverted to the production of alcohol required for the synthetic rubber industry. The Argentine actually used wheat for fuel as a substitute for coal, and Canada reduced the wheat area to increase her linseed production. The impending famine in 1943 was made known sufficiently early for the Government of India to have requested any of these wheat-exporting countries to supply a negligible percentage of their wheat production to avert the loss of millions of lives. Mr. Roosevelt who was evolving his four freedoms could have implemented his 'freedom from want' by sparing a few million tons to India at the critical hour. What Russia and Iran and even Greece could gain India was not destined to have. For a country which is reputed to posses the capacity of buildings six ships a day, it should not have been very difficult to take the initative for rushing the much-needed supplies to India. What is being done today could have been done yesterday.

From a survey of the developments of the food policy in foreign countries, one impression is inescapable. While in this country the authorities are more concerned with price control, hunting of profiteers, procurement plans and urban rationing

in other countries where the Government is responsive to peoples' demands and desires, the food crisis was tackled from the production side rather than the supply side. The Food Department's Survey says even at this hour that in India food does not lend itself to planning. In other countries food has been ably planned and there is no reason why it should not be planned also in India. No doubt, the food policies will have to be evolved as part of the agricultural policy in India which, in its turn, has to be fitted in an all-India plan of development. This should be done not only to serve civilian needs but to meet the demands of war. Australia can get her agricultural implements and machinery from the U.S. to stabilise her food industries not only to serve her own domestic requirements but also to feed the Allied armies in the different theatres of the Pacific. The woes of Indian agriculture are indeed many and owing to the size of this country difficulties are bound to be severe; but these cannot justify the inexcusable delay to evolve a food policy to serve the needs of the immediate present. We are not yet out of the wood. The public have a right to insist that delay is dangerous and urge something urgent must be done now to place Indian agriculture on a stable basis so that the horrible conditions of 1943 may not recur again.

Coming events..

When peace returns, the pent-up energies of man will be used to create a happier and a better world.

New towns and villages will be planned, new houses built.

Then, steel will once again take its rightful place in the industrial development of India.

Editorial Notes

Plan for Mysore

Since the revival of the Mysore Economic Conference the task of postwar planning for the State has been ably pursued with full cooperation between the officials and the general public. The State is well endowed with natural resources and owing to the far-sightedness of a series of able Dewans, the economic development of Mysore has won the admiration of British India. Plan for postwar development in this State is, in fact, a continuation for the pre-war effort, though conditions and ideals created by six years of war might have greatly accelerated the tempo of the drive. A new factor that has to be reckoned with by planners in Indian States as in the Provinces is that they have to formulate their policies and evolve local schemes so as to fit them in the general economic plan for all-India. The country has to be taken as a single unit and both the Bombay Plan and the Government blue books on postwar schemes have made this clear. The Plan for the Economic Development of Mysore drawn up by Mr. P. H. Krishna Rao, Commissioner for Economic Development and Planning, has been correctly conceived so as to maximise the utilisation of the resources of Mysore for the people of the State and to harmonise the Mysore Plan with the Development Plans for India as a whole. Calculation of the targets has gone on familiar lines suggesting a close modelling on the Bombay Plan, the People's Plan and the Government of India plans. Certain all India problems like fragmentation of agricultural holdings, soil erosion, primitive land tenure etc. are not acute in Mysore and hence suitable changes have been duly incorporated in the proposed plan for the State. The recent economic survey of some 258 villages in Mysore has yielded the much needed data for inaugurating a correct policy for rural development and the elaborate industrial questionnaire issued is expected to bring in statistical material to tackle the industrial sector of Mysore economy. The Mysore Industrial Statistics Act of 1943 remedies the defect in the Census Act and the result when collated will be a great help for the authorities in drawing up the necessary industrial plans. The floor space available for each family in each municipal town was surveyed at the recent census and the Government could, as a result, prepare schemes for housing programmes for all classes of people in different areas of the State. Better distribution of industries so as to prevent concentration in the Bangalore and Mysore areas is aimed at; and the economic development of the Malnad or hill tracts and Jog Fall scheme would correct the existing maldistribution of industries. The development plan for Mysore involves an expenditure of Rs. 200 crores in a period of fifteen years. It is interesting to note that Mysore, which is one-fiftieth of India in area, plans for an amount just one-fiftieth of the capital involved in the Bombay Plan. The capital requirements for the first five years are calculated at Rs. 35 crores distributed as follows: Agriculture Rs. 10 crores, Sericulture Rs. 10.85 crores, Industries Rs. 5.25 crores, Transport Rs. 6.7 crores, Housing Rs. 3 crores. Public health Rs. 3 crores, Education (buildings) Rs. 0.5 crore, Medical Rs. 0.5 crore, Hydro-electric work Rs. 2.2 crores and Malnad improvement Rs. 2 crores. Mysore has sizeable postwar funds and her credit stands high. Bottlenecks there are, as for instance, the lack of trained personnel. But those are worries not peculiar to the State; and in fact Mysore is more fortunately placed in the matter of able engineers and technicians than several other areas in India. Her resources, agricultural as well as industrial, are adequate to sustain the ambitious plans for the all-round development of Mysore put forward by Mr. Rao.

A 'Chemical City' For India

Is India to have her own 'chemical city'? The question may appear preposterous when set against the uncertainties of the present and of the immediate future and the known handicaps under which the indigenous industry labours. The second report of the Post-war Planning Committee recently published deals elaborately with different aspects of planning both long-term and short-term, but discreetly avoids any mention of chemicals. And the reasons are not far to seek. The Hon'ble Commerce Member in a different context made a passing reference to the difficulties and to circumstances which favour interests not our own. And earlier, the Government of India withheld sanction for capital issues for starting new chemical ventures, on grounds which only serve to emphasize India's need for a chemical industry of her own.

Nevertheless, the question is no idle joke. For, the conditions under which the chemical industry can grow to its full stature indicate that if at all, India is to have a full-fledged chemical industry, the concentration of the different branches in a particular locality or localities will be an inevitable sequel. The chemical industry is one which lends itself readily to integration and interlocking combinations, and as it will be uneconomical to keep different branches in watertight compartments separated by long distances, the tendency will be for the different undertakings to gravitate to the most favourable locality. Besides, each individual business engaged in one particular line of production, will be forced to expand and enter into different fields as the price of survival. A dyestuff industry may find itself unable to pay its way unless it can find industrial users for gas as well as subsidiaries ready to take up the products of coal tar distillation. Besides it will have to enter the fertiliser market to dispose of its ammonium sulphate. And its chances of success will be improved if the source of heavy chemicals is near at hand.

India before the war used to import close on Rs. 3½ crores worth of dyestuffs and an in-

dustry started in India to manufacture dyes is not likely to languish for lack of demand. All the important raw materials which count in the evaluation of cost are readily available within the country or can be made available. The conditions for the successful establishment of a dyestuff industry are examined in an article by Mr. R. B. Forster, in the November issue of the Journal of Scientific and Industrial Research. Mr. Forster considers that 'it is possible to lay the foundations of a very large and comprehensive industry on a much more economic basis than exists in other countries provided that a suitable site is selected for carrying out the project.' And in the process of establishing the dyestuff industry 'an industrial area could be built up, in which manufacturers could obtain cheap supplies of gas, water and electricity on tap and in addition be adjacent to a supply of heavy chemicals, coal tar distillation products, coke and pitch. So that not only could a dyestuff industry be established under favourable conditions but also the heavy chemical industries and the way made clear for the building up of the other industries which are dependent on a supply of coal tar distillation products.'

If technical feasibility alone mattered, there is no reason why India should not have its own centre of chemical industries. It is also useful to remember that all schemes of post-war development proceed on the assumption, stated or implied, that the development will take place within a political framework which makes for the unhampered development of the economic potentialities of the country.

More Pressure

Another round in the battle for oil is being fought in Iran with the Russians eager for Northern Iran's deposits in addition to those in the east. Suggestions that a crisis to suit Soviet purposes may be manufactured have appeared lately. Iran as a country allied in war with Britain and the U.S.A. appears to be well placed in regard to her decision confirming the Majlis' opinion that further concessions can be leased only after the war. The Soviet Union's desire to expand beyond the Caspian may be explained with less reference to the inadequacy of Iran as a bridge of victory than to her desire to acquire export markets for oil. Britain's desire to build up a big oil-refining industry to support local chemical manufactures has obviously no connection with the Soviet Union's desire to acquire outside markets for oil. A review of past events and bickerings is scarcely helpful; for Anglo-American support is evidently promised to Russia against Iran which decided that oil deposits outside South Persia can be distributed only after the war.

Russia's desire to expand beyond her frontiers is less puzzling than the breach of the Allied guarantee as to Iran's integrity and independence implied in the charges made by the Russian Government. If Iran has been less faithful since 1941 than presumed the guarantee could not have been voluntarily given in December 1943. The improvement in Anglo-Iranian shares indicates the market's unwillingness to exaggerate the implications of the conflict. That prospecting and development in India might suffer from disruption of the price structure arising from the entry of Russian oil may be a less valid argument than the need to safeguard Iran's position. Owing to the large increase in oil production Iran's exports have increased in recent years, and further increase may not be necessary. Admittedly, Russia's own lack of reconditioning Caucassian oil-wells is an extreme argument against the display of force majeure to which the *Observer* report points. Anglo-American support is probably expected in view of the share-out in Iraq and Saudi Arabia; but it is well to remember that the Soviet war economy has little margin left for outside investment. And assured of Rumanian indemnity, probably in tanker cargoes to Odessa, the Soviet will probably have the opportunity to compete in Eastern Mediterranean markets with Anglo-American oil

LOAN AND CREDITS
Whenever financial accommodation is required, particularly to accelerate the flow of goods in production and distribution, the Hind Bank is keen to offer its services. Cash Credits can be provided against rotating stocks of goods under a declaration system; outright loans or overdrafts on approved securities are of course alternative means of obtaining finance from this Bank.

interests. The new production in Bashkiria must be considerable enough to enter world markets after the war. So far the suspicion that Iran will not get a square deal has scarcely been mentioned in connection with the report that the Soviet Union wants to reopen the question. The entry of Russia may conceivably strengthen the position of older concessionairies but that will not raise the royalty income in the immediate future. It is perhaps necessary to say that Iran's acceptance would not prejudice Anglo-Iranian's own share because the South Persian oil deposits are the richest in the world.

"Food Problem of Maharashtra."

The disaster on the food front experienced last year has evoked serious study of food planning in India. The Grow More Food Campaign initiated by the Government of India is now in full swing but the schemes evolved under the impulse of this drive are based on existing territorial units of provinces or States. The lesson that transport in this sub-continent proves a menace during critical periods like the present war has been well learnt but the search for optimum size of the area where a correct regional food scheme could be evolved has not been pursued by many. In this respect Mr. N. G. Apte's booklet "Food Problem of Maharashtra" (Published by Mr. Y. R. Date, 952, Sadashiv Peth, Poona 2 Re. 1) cuts new ground and calls for similar studies elsewhere in this country. He has made a thorough study of the food position of the contiguous Marathi speaking area and has found that the grow-more campaign would produce better results if Maharashtra is taken as a whole as one unit though it cuts across provincial and State borders. The region occupied by the Marathi speaking population consists mainly of Bombay and its Suburbs, the three districts of Konkan, eight districts of Bombay Presidency, four districts of the C.P., five of the Berars and seven from the Nizam's Dominions. Five of the districts are however only semi-Marathi. The region has been chosen as a bloc for study not only because Marathi is the language spoken but it satisfies the required tests of geographical compactness, common habits, common cropping, and short transport. Nearly 1,35,000 square miles (7.5% of All-India area) with a population of 30 million (6.7% of All-India total) are involved. Figures for the production as well as the requirements of food grains, vegetables, milk, fodder for cattle etc., are collected for all the districts covered. Each one of these districts is classified into area under crops, forest areas and areas where crops could be grown. Similar details are also given with regard to fodder position, the number of bullocks and bullock carts available etc. Correct ration for the Maharashtra population has been calculated after correspondence with Dr. Aykroyd. Mr. Apte finds that the Marathi-speaking area is not far short of self-sufficiency level in food grains but deficiency in fruits, vegetables, milk and fodder has to be corrected. The special requirements of well-defined areas within Maharashtra are also clearly brought out and certain anomalies in the Grow-More Food Campaign conducted in Bombay pointed out. The author is of the opinion that if the area he has suggested is taken as a single unit for food planning the aim of self-sufficiency could be achieved without the least disturbance to the existing economic activities of the people. He lays particular emphasis on the utilisation of groundnut for human consumption and demands that the use of groundnut as manure should be penalised and exports stopped. Mr. Apte's booklet is the result of his sustained efforts at evolving a satisfactory food plan for Maharashtra and, in spite of certain deficiencies in the statistical material available, the publication is bound to be well received. Similar studies in other parts of India are not impossible though difficulties in the way are not confined only to lack of statistics. The problem of choosing correctly sized area for regional study bristles with difficulties, statistical, as well as political, but if pursued would go a long way in evolving a rational All-India plan for self-sufficiency in food.

War And Leather Production

In a review of India's war effort in the fifth year some figures as to leather production are available. The output of the Harness and Saddlery factories and its contractors is placed at Rs. 20 crores per annum and practically all the material is derived from Indian sources. The Supply Department met the shortage of hides and skins by movement control orders, fixed prices and limited exports. Production of barktanned leather in 1943 rose from 25.38 million to 29.36 million lbs. while production of chrome uppers rose from 15.18 million square feet to 16.46 million square feet. In spite of this increase, footwear production fell owing to lack of sole leather. The fall in Government takings corresponds to the recession noted in wollen production. Control has been modified in the case of woollen goods to help civilian consumption. Leather supplies have probably increased this year

EAST INDIA RAILWAY TENDER NOTICE

Special item costing over Rs. 5,000/- Class I Contract.

Sealed tenders are invited for the following and will be received in the Controller of Stores' Office, East Indian Railway 105, Clive Street, Calcutta up to 12 o'clock on 4th December 1944.

Tender No. SP/Gb2/389 for the supply of Burner and reservoir, complete with reflector for hand signal lamps.

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, 105 Clive Street, Calcutta on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for same.

Firms outside Calcutta may however remit the amount to the Controller of Stores direct by money order. No refund is permissible after payment.

to support the scheme of controlled prices for footwear. Comparison with pre-war prices suggests that leather goods are as high as textiles. Prices progressively reduced in the case of the latter have not yet helped the country over the shortage. The consumption of leather after the war may show great changes when export markets are available. For the present, the increase in Government requirements is not the outstanding fact. The increase in the supply of tanned hides is due to special encouragement. When the rubber scarcity passes the footwear production may show great changes. During the war the manufacture of Army boots has taken precedence over everything else. The falling off referred to is notable for the reason that civilian supplies may increase in the future. The hope that manufacture for export may increase is supported by calculations as to Europe's relief requirements. The leather industry's problem has always been that of export markets and competitive power is ensured by improvement in the supply and marketing of hides and skins. From the investment angle the industry is unimportant at present but it may be expected that large-scale conversion of the whole trade may create opportunities. Footwear manufacturers in Britain always had a very stable earnings record and the lessons of experience may support the hope that indigenous manufacture would develop on new lines.

Progress of Silk Industry

The war has conferred great importance on Indian silk. Parachute factories represent a new demand for silk. Sericulture protected by the Tariff Board has developed in recent years. The utilisation of silk is dependent entirely upon production. Both form part of the cottage in Bengal where silk has been the subject of special care from the Industries Department. Reeling and conditioning have been the main lines of development after the decay that overtook the industry about 20 years ago. Mulberry growing is established for centuries but the industry in Bengal was scarcely flourishing. Revival measures include the introduction of new fertile hybrids. Revival prospects are brightened by the control of diseases and seed distribution schemes. Last year a research station in Berhampore was set up along with a sub-station at Kalimpong. The weaving school has been converted into a technical institute. Owing to the war demands special advances were made to the filatures which increased in number by order. Silk mills are likely to gain in importance as sericulture is expected to hold its own after the war. Price control scarcely touches silk though the main objects of use are prescribed at present. Progress in Mysore and Kashmir has been on parallel lines but the industry in Bengal is much older. The revival since 1941 is not merely due to the disappearance of competition but to the encouragement of sericulture as a rural industry by the Bengal Government. The conditioning warehouse set up before the war, reinforced the efforts made to increase the supply of silk rapidly. The wartime success in Mysore is due to the multiplication of filatures. Mulberry is grown in as many as eight districts of Bengal and the advantages of the British Indian tariff are reaped by Bengal as well as the two States directly interested.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. War Transport Achievements

Encouragement of producer gas and country craft is not the only aspect of the War Transport Department's activities to claim notice. In respect of coal distribution the Department looms large and the difficulties experienced in 1942-43 find mention in a recent survey. Achievements to date are the import and distribution of motor vehicles for civilian use. In 1943 the War Transport allotted 7,663 motor vehicles and in the first half of 1944 it allotted 5,416 vehicles mostly 3-tons lorries. The distribution through Controllers is meant to let the Government have first claim on the service of motor transport. Petrol saved by the adoption of producer gas amounts to 25 million gallons a year and supervised imports of vehicles do not mean for the present extra petrol consumption since Lease-Lend vehicles are usually equipped with producer gas plant by order. In regard to dealings with coal the rationing scheme last year was born of the difficulties which arose from an increase of 2 million tons in consumption. The scheme suffered from the decline in output, but for a time there were enough wagons for those who could afford to pay high prices. Since other measures including price control have been adopted after the choice of a local commissioner the Supply Department looks after coal. The post-war plans include a solution of the road-rail problem. There is a 20-year road development programme to be financed by the expenditure of Rs 450 crores. The war Transport Department's concern with shipping is limited as the British Ministry's representative looks after cargoes and vessels the diversion of responsibility has not been wholly advantageous but the enquiry into the Bombay Docks explosion was ordered by the Department. Control orders in regard to spare parts for vehicles and a list of maximum prices for secondhand cars were issued by the Department last year. Countrycraft services for the second season are run under the War Transport Department directly and the Department has drawn up a schedule of freight rates and priority instructions for the use of agents at ports.

Strain and Sanctions

A correspondent writes:—

An official motion accepted by the Central Assembly this week reviewed India's relations with South Africa. The question of economic sanctions was raised promptly in an amendment. The European Group referred to the difficulty in the way of sanctions, but passed over two points. The Union is the main source of gold wanted for exchange stability at any time. The Union is the principal market for British manufactures. It is also the most promising since Germany, Italy and Japan are out of the running and American capital has too large a stake in the mining industry to let sentiment interfere with business. If inter Imperial strain passes beyond a point the South African Government may decline to sell gold at an agreed price to Britain and some of the sterling area's strength will disappear at once. That South Africa's harbours are wanted for naval ascendancy in the Indian Ocean has been known from the time that Madagascar was taken. The speeches of the Executive Councillors hardly referred at all to the price of Admiralty. The only caution offered was in respect of Wattlebark imports by Sir Frederick James. The size of the reserve held for production of sole leather in India is probably not going to affect any decision to check trade. But the repercussions will certainly be considerable on the hides and skins market even under Control. It is quite possible that a shortage of tanning material may

Bitumen was widely used for driveways—four years ago

Today all available supplies of bitumen are reserved for vital roads and aerodrome runways and for essential road maintenance. These must come first in the interests of the war effort of the United Nations. When the time comes Burmah-Shell will ensure that not only bitumen but all petroleum products are again available for normal peace time requirements throughout the length and breadth of India in ample quantities.

INSERTED BY BURMAH-SHELL

Clive Street Gossip

"Eavesdropper" wires from Bombay :—

The sending of my weekly despatches by telegram causes displacements and distortions in transcription at the other end, which, to one so fastidious even as regards punctuation, give a sure pain in the neck. I find, in my first message from this city, the Finance Minister of Hyderabad has been awarded a knighthood. I need not make a serious grouse in this particular respect as this may be construed as the shadow cast by the coming event. The deknighting of the Governor of the Reserve Bank is a different matter. Except that Sir Chintaman Deshmukh is characteristically free from snobbery of any kind or degree, I may have been confronted with the embarassment which assailed Bertie Wooster who, innocently and in the utmost geniality of nature, made enquiries of the health of Mrs. Little. This enquiry met with the following rebuff from the husband of the estimable lady :

"My wife is happily robust. But er not Mrs. Little. Since we last met, a gracious sovereign has been pleased to bestow on me a signal mark of his favour in the shape of -ah- a peerage. On the publication of the last Honours List I became Lord Bittlesham."

* * * *

This reminds me of a more or less similarly worded message I had to deal with twenty-five years ago in a more or less similar situation. When I was the Private Secretary of the Maharaja of Darbhanga, he received the distinction of K.B.E., and telegrams of congratulation poured in a spate. It was my task to send suitable replies ; and, in one case, I sent the message of thanks to the address of Mr. Suraj Baksh Singh, Lucknow. What was my discomfiture when, in acknowledgment of the thanks, the gentleman pointed out that a gracious Viceroy had conferred on him the title of "Raja". My offence was doubly grievous as, while in service of a Maharaja, you are expected to know the full and accurate details of the prefixes and suffixes of each and everyone to whom letters might have to be sent.

* * * *

At this point of my writing, I realise that to-day's despatch hardly merits the description "well begun." I find, I have, at the outset, struck too frivolous a note ; and, on occasions such as this, it is not easy to recapture the right note and correct strain. The reader will have to put up with a message sent at some expense and dealing with nothing in particular. In extenuation, I may plead that there is valid reason for my having no definite topic in view this week. Over the last few days, I have given myself a treat of utter laziness. Since a week, I have not stepped beyond the door of my rooms ; and this is my first stay in the Western capital when I have been allowed to lie low. Friends have been considerate and helped me observe, without interference, this self-imposed spell of idleness. If visitors are rationed, what chances are there for profitable eavesdropping?

* * * *

I may, however, relate a recent exchange of compliments in connection with sterling balances. Mr. Jamnadas Mehta, who is very sore about the composition of the Indian Delegation to the Bretton Woods Conference, has been making out that it was all a show of capitalists. His specific charge is : the Indian capitalists did not, all these years, raise any objections to the piling-up of sterling balances ; nor did their mouthpiece, the Federation of Indian Chambers of Commerce ; it was only the economists led by Dr. C. N. Vakil, who warned against accumulating sterling assets and suggested the solutions for preventing the accumulation ; the capitalists have now come forward to ventilate their views about sterling balances as they want to grab good slices of them for their industrial projects ; that, as the capitalists have to import foreign machinery, they are suggesting even a higher rupee sterling ratio. "When did we ask for a higher ratio?" thundered Mr. G. D. Birla, who added that it was a lie. It was left to Mr. A. D. Shroff to convert Mr. Jamnadas Mehta's missile into a boomerang. In effect, Mr. Shroff said : "We have learnt, from a recent press announcement that Mr. Mehta has been, for reasons of his hundred per cent suitability, appointed the Indian High Commissioner in Burma. It seems to me that Mr. Mehta must have been in enemy-occupied Burma since long. Otherwise, he could not have been ignorant of the hundreds and hundreds of protests raised, from time to time, by Indian capitalists and their organisations against the accumulation of sterling." And, in an examination of the causes and personnel connected with this phenomenon Mr. Shroff asserted that the Natioal War Front, of which Mr. Jamnadas Mehta is a shining light, had contributed more than any other factor to the piling up of sterling. Mr. Shroff's argument was ingenious : "What does National War Front mean? It means that India must do her biggest and her best for the war effort. That is, India, without any other thought must provide all possible supplies and services for the Allied Nations. It is these supplies and services which have stimulated and aggravated the Mount Everest growth of sterling assets in favour of India."

* * * *

I have known Mr. Jamnadas Mehta since the early 'twenties. We were neighbours in Gamdevi in my Bombay days. We also saw much of each other in Delhi when Mr. V. J. Patel and he were inseparable and pugnacious twins. His progress in public life was strident ; and the Gandhi cap he affects has helped him to early recognition and rapid advance. While the Gandhi cap was to him not only a symbol but a creed, he was effective, impressive and telling whenever he participated in important deliberations, especially discussions on economic questions. Then followed a sudden and sharp change. And his recent association and postrings are not conducive to his playing the same effective role. He can now be so easily taunted on this activity or on the other contact of his. His presidentship of a labour organisation which receives a fat subsidy from the Government the manner of exposure of this fact did even more damage—accounts for his criticism and comments

being received with the feeling that they are perhaps suspect. It is all a great pity. For, Mr. Jamnadas Mehta has a clear head and a powerful tongue. And these assets, if utilised in causes whose bonafides cannot be impugned, would benefit Mr. Mehta and India alike.

* * * *

My last week's comments on the revival of the exchange controversy had to be adjusted to the limitations of space. And though I do not believe that I am much better placed this week, I must try to complete the picture that I had begun to draw of the position of the rupee in post war times. I pointed out last week that in considering the future of the rupee rate, we should not be influenced unduly by past experience. I do not mean that the danger of an increase being brought about by the Government in the hope of its leading to an allround increase in imports should be ruled out altogether. But it is well to recognise the change in circumstances, economic and other, and not take an unduly alarmistic view of the prospects. Even apart from the interested view which the British Government may take of the position and prospects of the rupee rate, the problem of the exchange rate, considered with some freedom from the desire to help either the import trade or the export trade, rests in the main on the relative price levels of the countries in question and the balance of current transactions. The existence of large foreign reserves, the possibility of raising foreign loans and the chances of large demands arising for export staples or various lines of goods in the import trade have, no doubt, a place in the picture. But price levels and the normal balance of trade must monopolise the foreground. And it is also necessary, since the exchange rate is to be fixed for a period ahead and not for one point in time, to judge the probable trends in the light of plans on hand as well as of normal potentialities and take them into full consideration in arriving at a decision. It is helpful to separate these two aspects and fuse them together later. Or, to put it differently, we may superimpose the second picture on the first and be guided by the composite result.

* * * *

Taking first the question of the relative price-levels, the outstanding fact that, while prices in India have gone up to nearly three times the pre-war level and costs only to a lesser extent, the impact of wartime finance on the structure of costs and prices has been carefully reduced in other countries, particularly in Britain. That is, the purchasing power of the rupee within the country has gone down a great deal. As for the future, hardly any one can doubt that a return to the price level of pre-war times is out of the question. It is socially iniquitous, since the impact of a deflationary policy will be felt to a far greater extent by the cultivators than by any other section of the people. From the standpoint of a national economic policy also, such serious deflation is undesirable. For, a degree of profit inflation is necessary for economic development on the basis of private enterprise: and this indicates that inflation, and not deflation, is the more appropriate policy. While thus in India a far higher level of prices than the prewar is suggested, Britain is not likely to witness a rise in prices in postwar times.

As for the balance of current transactions, the future must be pronounced to be highly obscure. If the demand for our export staples continues and if we succeed in reducing costs and increasing our capacity for competition, we should enjoy a similar advantage. That, however, can be said only, if at all, of consumer's goods. In producer's goods, there is, in spite of all our attempts at adjusting ourselves to wartime conditions, a large volume of pent up demand to reckon with, in respect of spares and machinery for replacement. This might well rise to what may be considered an abnormal level. But it is extremely unlikely that anything can happen in the sphere of normal trade transactions which can impart positive weakness to the rupee. The possible strength of the rupee can be easily exaggerated. So that, when we look at the first of the two pictures, the decrease in the internal purchasing power of the rupee is by far the more important factor to reckon with.

* * * *

As for the second picture, there are on the one side, the large external balances which must be available for reducing the pressure on the rupee and on the other, the possibility, or even certainty of a large demand for imports of machinary on account of the big projects that are now being formulated. The problem of the rupee exchange will be considerably simplified, if these two factors are balanced by bringing the settlement of the problem of sterling balances into proper relation with new projects and the extraordinary demand for machinery and the like. If that is done, there will remain only the normal factors to have free play of their own and the situation will never be out of control. The British Government will show no eagerness to control the rupee rate, since it will have been assured of a fair demand for British goods.

Olympus

(FROM OUR CORRESPONDENT)

NEW DELHI, November 6.

The first few days of the Assembly autumn session have been unexpectedly dull. The unusually big crowd of censure motions promised some exciting debates. But the Viceroy's refusal to allow discussion of embarrassing subjects like the Phillips affair and a narrow interpretation of the standing order by the President killed most of the adjournment motions. Even the movers were not quite serious and quickly withdrew them on the first opportunity. The pitiful remnants that were discussed generated little interest outside the House. The prompt retaliatory action by the Government within two days of the passage of the new Natal Ordinance—by applying the Reciprocity Act to the Union of South Africa in response to unanimous public demand took this matter out of the realm of bitter controversy so far as India is concerned.

* * * *

It is not quite easy to sum up the results of the Assembly debate on the South African question. In his opening speech, Dr. Khare, the Commonwealth Relations Member spoke with surprising vigour. Nothing could be stronger than his statement on the floor of the House. "I wish India had been in a position to declare war against South Africa here and now". That showed that so far as opinions went, there was no difference between the two sides of the House. The only discordant note came from the European Group, but as Sir Sultan Ahmed on behalf of the Government severely criticized the European Group's attitude and ruled out every one of the objections raised by its spokesman, Sir Frederick James, the European Group found itself in a position of uncomfortable isolation. The question which still remains to be answered is what further steps will the Government take and when? The application of the Reciprocity Act means little, for there are only just over a hundred South Africans in the country. Speakers in the Assembly demanded that even the Reciprocity Act should be amended in order to bring even the armed forces within its purview. "We do not want any South African in our Army" said a Muslim League speaker. It is not also clear whether the Government of India would go to the extent of discharging South Africans in Government services in the service of the Commonwealth Relations Department itself there is reported to be a South African official. It is evident that the Government of India are now in communication with Whitehall on the subject of economic sanctions and the recall of the High Commissioner. The Assembly has emphatically demanded both, but the difficulty appears to be that the Government of India are no free agents in the matter. Dr. Khare plainly confessed "we cannot get away from the fact that politically and internationally our position is weak." Still the feeling in Assembly circles is that the very pressure of public opinion will force the Government to recall the High Commissioner and apply economic sanctions.

In the Assembly the Commerce Member stated on Tuesday that it is the policy of the Government of India to see that the industries which have come into being whether for war purposes or for essential requirements in India should continue to exist after the war. He mentions that the industries so protected were bichromates, steel pipes and tubes, aluminium, calcium chloride calcium carbide and starch.

* * * *

The food debate still unconcluded also promises to be a tame affair. It appeared as if the speakers were dealing with a remote academic issue and not a grain crisis that involved the lives of thousands. The Food Member's opening speech did little to allay public fears. It was a dull recital of what the Food Department had always done but gave no indication as to the future. He did not say what the Government proposed to do to remove the now almost chronic food shortage in several districts of Bengal, to end the continued huge deaths among the so-called destitutes, to improve the quality of rationed food in many of the towns and to increase the share of the basic protective foods of children, women and the very poor. Sir Jwala Prasad however gave hint that his department once a temporary expedient will be a permanent feature of Central administration due to need for planned development of food economy. Prof. Ranga castigated the Food Department for trying to appease the townsfolk and organised industrial labour at the expense of the villagers. He wanted the high food prices to be maintained and consumers to be subsidised, if necessary.

During a brief debate on the Bombay plan, Sir Ardeshir Dalal said the Government was not bodily adopting this or any other plan but helping plans of its own. The Congress Party asked for a committee of 15 elected members of the Legislature to report on the post-war plans. The only criterion for the soundness of any plan was whether it benefited the masses. It wanted the key industries to be controlled by the State.

liser industry in this country would be to build a plant costing about 10 crores near Aligarh with an annual capacity of 350,000 tons. The Mission estimates the cost of production at Rs. 126 per ton. However if production is spread over two plants (one in north and the other in the south) initial capital outlay will go up by Rs. 2.5 crores and the cost of production by about Rs. 10 per ton. Spreading the same production over six factories would mean doubling the initial investment and shooting up the cost by Rs. 40 a ton. In any case it would mean a big saving for India in importing ammonium sulphate at Rs. 240 a ton at present. As it is ultimately planned to manufacture 10 million tons of ammonium sulphate in India, it will perhaps be better to confine war-time production to one plant and then build additional plants after the war in widely separated areas. According to the mission only about Rs. 4 crores worth of plant shall have to be imported, the rest can be built in this country. An urgent need is to train personnel and for this purpose men must be soon sent abroad.

* * * *

The mission recommends that a survey should be undertaken to investigate the quantity of anhydrite in the salt range as this material could be used in preference to gypsum to effect certain economies in the manufacture of ammonium sulphate. In the event of anhydrite not being available, the production of gypsum should be developed in Rajputana.

The Assembly was informed that the Government had taken action "in a broad sense" on the resolution of the House recommending subsidising to agriculturists to further the "Grow More Food" campaign. The Government was doing everything to step up borrowing on the one hand and on the other hand helping them to produce more food including milk and milk products. The total grants given to the provinces during 1944-45 in connection with the grow more food campaign came to Rs. 137 lakhs with Bombay heading the list with 39 lakhs, the Punjab coming next with 15 lakhs, Bihar 12 lakhs, Madras 12 lakhs, Bengal 10 lakhs and U. P. 9 lakhs.

* * * *

It was stated in the Assembly that the sterling balances stood at Rs. 1,149 crores on October 13, 1944. The entire amount was held in the issue and Banking departments of the Reserve Bank of India and no portion was separately held in the post-war Reconstruction Fund. The question of the utilisation of these balances was recently discussed when the Finance Member visited London recently but no decision has yet been reached. "Neither side was in a position to undertake any commitments and the discussion related mainly to a programme for more formal discussions in the future."

Six foreign health experts—three British, two American and one Australian—are now in Delhi to give evidence before the Bhore Enquiry Committee on Public Health. The experts will tour the country for a month before their evidence is recorded and they are expected to address some public meetings also.

South India

(From Our Correspondent)

Madras, November 6.

The war has demonstrated with painful clarity the inadequacy and the thoroughly disorganised state of India's means of transport. While it is a well known fact that the number of first class harbours capable of handling heavy traffic to and from India can be counted on fingers, it was generally assumed that the transport facilities within the country were fairly satisfactory. But the moment war needs began seriously to interfere with the country's transport facilities it became evident that the railways, roads and other means of transport were extremely inefficient and inadequate to deal with the abnormal situation. While it is a fact that the stoppage of imports is the principal cause of the shortage in many commodities including foodstuffs, transport bottlenecks brought about by the curtailment in the number of trains coupled with the petrol shortage are responsible for the confusion that has not yet been completely overcome.

Sir Lakshmipathi Misra, Member of the Railway Board who is now engaged in working out a programme for road-railway projects in the post-war period in consultation with the Govt. and the Railway Managers had been here last week. The Southern India Chamber of Commerce discussed with him post-war transport problems with particular reference to South India. In the course of the discussions Sir L. P. Misra disclosed that a private firm had already offered to manufacture locomotive boilers as a war measure. The Government had also planned to manufacture in one of the workshops 70 to 80 locomotives for a year. He further indicated that proposals for the establishment of a workshop in South India were under consideration. He then spoke about the Government policy towards the machine tool industry. On the promise of the Government to purchase a fixed amount of tools every year in India, a number of firms have already commenced production on a large scale. India is self-supporting in regard to sleepers and rails. Now that all the railways in India have been taken over by the Government, the Supply Department who have been entrusted with the supply of stores are following a progressive policy of buying Indian products. In order to stimulate indigenous manufacture of an increasing number of the Railway's requirements, the Railway Board will be shortly circulating a list of imported articles so that Indian manufacturers may take advantage of the information and produce them locally.

In South India the electrification of the railways is a distinct possibility even though it has not been possible to put forward definite schemes at present. It is only a question of time and the whole problem needs thorough examination.

Sir L. P. Misra said that the South Indian Railway was considering a number of alternatives in regard to Dhanushkodi pier and if circumstances justified it, facilities would be provided at Rameswaram for a ferry service between Ceylon and India. The Railway Board have come to a decision with regard to the classification of Railway compartments. It is proposed to amalgamate First and Second classes and retain the Inter and Third Classes with suitable improvements.

Considerable progress has been made in the sphere of post-war reconstruction plans for the province. Some of the sub-committees have already completed their plans while some have to make further investigations before they can submit their recommendations. The Agricultural Committee has concluded that the fundamental question in regard to Agriculture was the attainment of self-sufficiency in the matter of foodgrains after the war.

It has been decided by the Communications Committee that all trunk roads, portions of the proposed national highways and important roads connecting agricultural and industrial centres should be under the direct control of the Provincial Government. The new village roads to be built under the post-war development scheme should be constructed by the Government from their own funds. Another recommendation is the creation of a Highway Department to carry out the schemes involving an annual expenditure of Rs. 5 crores under a separate head in the budgets. In the opinion of the committee Transport service could be efficiently operated only by large companies owning at least 20 vehicles on a competitive basis. The formation of railway-road companies is also to be encouraged. The committee was informed that very few army vehicles would be suitable for civil use after the war and that no quick supply of new vehicles could be expected.

Pandit Hriday Nath Kunzru toured the Northern Taluks of Malabar, and parts of South Kanara, Coimbatore, Vizagapatam and Madras with a view to study the food situation at first hand. In a statement issued before his departure for New Delhi to attend the meeting of the Upper House, he agrees generally with the policy of the Government and particularly with the recommendation of the Foodgrain Policy Committee in favour of the rationing of heavily deficit areas. Referring to the decision of the Government in making wheat as a compulsory part of the rations he says that this policy deserves support. He however criticises the inadequacy of the sanctioned scale of rations especially for the labouring classes.

Resume of Commodity Markets

There have been no interesting developments in the commodity markets in the past few days. There is still considerable speculation regarding the future of jute and jute manufactures. Mills are not prepared to enter into any fresh commitments pending a clearing up of the situation. The bullion market has been fluctuating in narrow limits. The uncertainty regarding the Reserve Bank's selling policy and the large offtake of gold have prevented any decline in prices. The raw cotton market has been rather weak on poor support by mills and the reports regarding the movement of the cotton crop in upcountry centres.

* * * *

The position in regard to jute is still not clear. It now appears that the sound statistical position will be upset by the uncertainty regarding the rate of shipments even if there be an improvement in the coal situation from the beginning of next year. The increase in local stocks at the end of October has added to the fears of both dealers and mills. It was reported that production during last month was rather low and that if, there were the usual offtake, there would not be any appreciable increase in stocks of hessian and sacking. Contrary to general expectations, however, there is an increase in total stocks by over 8,000 tons, the first increase in several months. The weakness of the heavy goods section and the pressure of arrivals of jute in upcountry centres should naturally have an upsetting influence on prices. Whether it would be possible to take a more definite view in the next three months cannot be possibly said.

* * * *

No definite explanation is offered for the present weakness of the markets. The sudden drying up of demand for both hessian and sacking has been entirely due to the cessation of official buying. There has been no enquiry from other sources. The absence of any demand on account of the liberated countries and the lack of orders on behalf of the U.N.R.R.A. are also other contributing factors. It may be that if there were relaxation of control there will be greater demand from unofficial sources. If shipments show an appreciable increase, it would be possible to take up jute in larger quantities. What is thus important is that there should be an increase both in production at the mills and a large offtake from the godowns. Without a continuous flow of goods from the producing centres the difficulties in respect of godown space might create bottlenecks. The Bengal Government seems to have under consideration the question of the regulation of the jute crop acreage for the next year but it is expected that no definite decision will be taken until it is possible to form a clearer view.

• • • •

Hitherto, there was an impression that despatches from jute mills were regulated to the rate of production and that there was no dearth of shipping space. As most of the mills stocks are sold it must be that available shipping in recent months could not be utilised for despatching stocks to the required centres. Something should be done in this regard especially in respect of Government stocks which have piled up for a long time. Godown space is very important at the present moment and if no effort were made to clear stocks as soon as possible, mills might be obliged to slow down production owing to lack of storage space.

• • • •

The bullion market has been fluctuating in wide limits but with the uncertainty regarding the Reserve Bank's selling policy and the frequent changes in their offers, there has been no appreciable decline in prices on balance. There is an emergence of investment demand at the lower levels. It was pointed out last week that there was some dissatisfaction with the Reserve Bank's selling policy and that the quantities offered were not enough to depress prices effectively. It is argued in certain quarters that this uncertainty about the selling policy has checked speculative activity to a certain extent though it has by no means discouraged buying by genuine investors. If the Reserve Bank were to attempt to push down prices unduly there might be an effort at cornering and when stocks run out a sharp rally in prices might be staged. At the present moment there is no chance of a major upward movement. There would be no criticism of the Reserve Bank's policy if the Government of India derived some advantage out of the gold sales. A stage has now been reached when there should be some modification of the original arrangement in respect of the utilisation of the profit on gold sales. It is hoped that this aspect of the question has not been overlooked by the authorities.

* * *

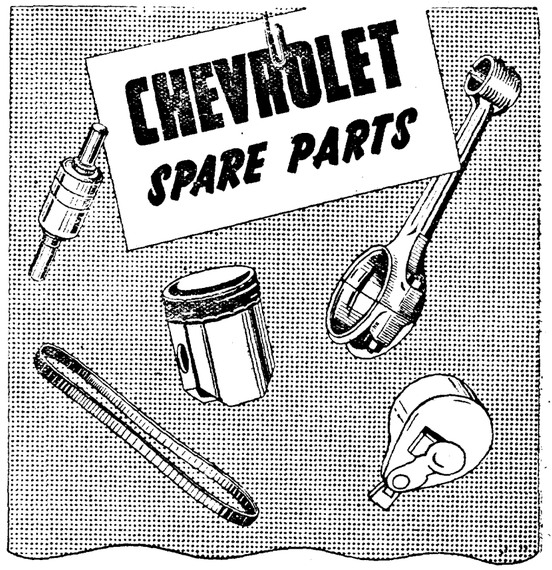
After a long time the British Ministry of Food has resumed purchases of linseed in the Indian market. It was at first feared that the absence of enquiry from the British Ministry of Food, was due to buying from other quarters and that with higher Indian prices there was no early chance of resumption of exports from this country. The re-entry of the Ministry of Food in the market has therefore been welcomed. As the position in respect of linseed is very healthy there has been greater activity in the local market and operators are inclined to be bullish. Official purchases of linseed have been on a large scale.

• • • • •

The groundnut market has perhaps derived greater relief as with the large increase in the acreage under the crop in Madras and the anticipation of a big surplus prices are sure to be marked down unless exports improve to a great extent. How far official purchases will assist the groundnut market cannot be definitely said at the present moment.

EAST INDIAN RAILWAY

TENDER NOTICE.



Class I Contract.

General Manager, E. I. Railway, Calcutta invites sealed tender No. RI/EBl/44/W.440/A for the supply Shackle hook coupling, etc.

Tender forms at Rs. 2 per copy can be had from the Controller of Stores' Office, E. I. Railway.

Firms outside Calcutta may remit the amount direct to the Controller of Stores. No refund is permissible.

Closing date 30th November, 1944.

While we are essentially engaged in the production of various Chevrolet Military-type vehicles for India's Armed Forces, we are also producing Chevrolet 160" chassis, with 3-ton load bodies, to take care of India's essential civilian needs.

To keep these vehicles continuously at their job of hauling goods or transporting passengers, Chevrolet spare parts are available through gazetted Chevrolet dealers at Government-controlled prices.

Do not pay more than the controlled prices as given in printed lists issued by General Motors India Limited and available from Chevrolet dealers. The retail selling prices of some of the fast-moving items are given below for ready reference:

Water pump	Rs. 43/-	Connecting Rod	Rs. 21/10
Fan Belt	Rs. 6/14	Piston	Rs. 21/-
Axle Shaft	Rs. 54/-	Camshaft Gear	Rs. 31/8

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, 9th November.

After a long period of steady decline, it is unfortunate to find a sharp increase in stocks of goods in Mill godowns at the end of last month. The decrease at the end of September was not substantial, only 1100 tons, but still on the right side. As it is not expected that the production figures, when published, will show any remarkable rise, it is to be presumed that the increase in stocks is to be attributed either to lack of shipping space, or to lack of shipping orders, in the present depressed state of the market, more probably the latter. Commercial hessians show an increase of 62 lakhs of yards or 2207 tons over the previous months' figures. Commercial heavy goods increased by no less than 133 lakhs yards, or 5461 tons. There is therefore a total rise in stocks of commercial goods by 7668 tons. Military hessians are higher by 54½ lakhs yards, or 1434 tons and Military heavy goods are the only item which show a decrease—of 11 lakhs yards or 488 tons. Overhead therefore there is a gross increase in stocks of 8614 tons, of which 3641 tons is hessian and 4973 tons is heavy goods. Total stocks of hessians amount to 2874 lakhs of yards or 72,957 tons, fairly equally divided between Commercial and Military goods, though the latter shows a greater yardage for a lesser tonnage. In the Heavy goods total of 107,959 tons only 10,182 tons is for Military account, the preponderance as usual being on commercial account. The gross total stock is thus almost 181,000 tons as against 172,300 tons last month. If, as seems not improbable, last month's figure is to turn out the "low" for sometime, it compares satisfactorily with the position a year ago when 230,000 tons of goods were held in stock, while the figure at the end of June, 1943 had stood as high as 276,000 tons. It is regrettable all the same that the steady decline recorded over recent months, has been checked. It is to be hoped this is only a temporary feature.

The situation in the fabrics market at present is however not a little disquieting, more particularly in the heavy goods section, the market for which seems to be completely barren of orders. This position gives the "bear" operators in the Bazar the opportunity to pursue their way unchecked. The favourite counter, "B" Twills has been marked down no less than four rupees since last week. Of course in reality the present quotation of Rs. 58-4 is a purely fictitious one, just as any other quotation which might be named, when there is no real business going on in the goods concerned. If anyone came out at the moment to force a sale of, say, 1000 bales of "B" Twills, it is not at all improbable that the market would have dropped two rupees before they could be got rid of. On the other hand, if one came out to buy 1000 bales of "B" Twills, the price would almost certainly jump a couple of rupees at once. It is in fact entirely impossible to place a real value on any type of standard heavy goods at the moment. A suggestion has been made however which might go far to restore or at least stabilise the situation.

The depression in the goods market has had the same inevitable effect on the loose jute market with the result that prices have in some instances struck the minimum level. This is the point at which the Government of Bengal are more or less morally bound to come into the market to buy jute to support the price. The suggestion is that, instead of buying jute, they should buy heavy goods, and there are several very cogent reasons why such a policy would be advantageous. If the Government come out to buy jute to support the market, they must buy—and pay for—jute for ready or early shipment. To buy forward would not affect their purpose for that would still leave dealers with stocks in hand to get rid of, which would still have a depressing effect on the market. Only by clearing the stocks actually in hand could dealers be encouraged to go on purchasing in the mofussil and so maintain prices. And a purchase of the magnitude which would be necessary to achieve this would need a lot of money. Again, where is Government to store such jute as they might buy in this way? They cannot expect to leave it in dealers' hands to store for them, for that would so curtail the dealers' capacity to operate that the effect would be to nullify the object of the purchase. On the other hand, if Government were to come out as purchasers of a judicious selection of standard heavy goods, the market for these would immediately re-cover, and Mills would undoubtedly re-enter the jute market to cover their sales. Moreover, immediate cash would not be required. It would be quite sufficient if the purchases of goods were made for delivery in January/June or even April/June of next year. By the time the goods fell due for payment,

KOHIMA TO KABAW AND BEYOND

JAPAN'S OFFENSIVE against India having failed disastrously, their once proud armies are now on the run. The last Japanese has been driven out... and the war is now being fought beyond the frontier of India. Our offensive presses on into Burma.

KOHIMA WAS THE TURNING POINT. From Kohima to Kabaw and beyond is a long road, but it leads to Victory.

TAMU

WE RECAPTURED THE KEY-TOWN OF TAMU months ago. Much of the history of the war in Burma is linked with this place. It had witnessed much fighting. TAMU was one of the earliest places captured by Japanese after they had crossed the Chindwin. Its capture was their big boast! To-day, their bones lie scattered on the paddy fields of TAMU.

OUR BRAVE AND GALLANT MEN have inflicted a tremendous defeat on the enemy. Tokyo no longer repeats arrogant heroics about the "Invincible Sons of Heaven."

OUR FIGHTING MEN HAVE PROVED THAT WE CAN BEAT THE JAPS

—AND WE ARE BEATING THEM BACK

ISSUED BY THE NATIONAL WAR FRONT

AAA 1321

conditions might easily have so changed that Govt. could resell their purchases and not to have to take up and pay for the goods at all. Again in the matter of storage, even if at the worst Government did have to take up and pay for the heavy goods, they would be kept stored for them in Mill godowns, as in the ordinary course of trading, and also even kept insured until disposed of. The effect of buying jute and buying heavy goods would have identical results on the price of jute, whereas the buying of goods would have the effect also of restoring confidence in the markets generally and ensuring that the hours of employment of jute mill workers need not be cut down, and wages possibly correspondingly reduced, owing to the difficulty of mills in disposing of their products. Moreover, we have said before, and we still think, that there is still a very large potential demand for containers of all sorts in the work of rehabilitating and restoring territories which are being gradually wrested from the hands of the enemy. It has been a matter of some concern that there has been no reserve of gunny bags on which an organisation such as UNRRA could draw at short notice. Here is the opportunity of the local Government, assisted if necessary by the Central Government and H.M.G., to create such a reserve. We certainly think the suggestion merits careful consideration, for if the present situation is permitted to continue for much longer, prices of both goods and raw material will certainly sag still further and Government will be faced with the necessity to fulfil its obligations unde the controlled price scheme, in which case the purchase of manufactured heavy goods seems to offer certain very definite advantages over the purchase of raw jute.

The interest shown in Pucca bales for the export market has been very slight and only limited transactions in Dundee Daisee and Tossa and Heart marks, all at minimum prices, have been recorded. A fair business was reported with Mills in Pucca bales at the end of last week, some of the sales being for delivery spread over the period January to June next year. The sales included Lightnings at Rs. 75/-, Hearts at Rs. 68/-, Dundee Daisee at Rs. 77/-, Dundee Tossa 4s at Rs. 60/- and habi-jabi at Rs. 57/-. Cuttings were also reported done, both ordinary N.Cs and M.Cs at Rs. 43/- and Rs. 42/- and Special cuttings at from Rs. 47/- to Rs. 50/-.

There has been a moderate turn-over in Loose Jute, but not nearly enough to satisfy sellers and so relieve the selling pressure, or to check the declining tendency in prices. European packing has been done at Rs. 16-4 and Rs. 13-4 and then at four annas lower, at which level it is still on offer without attracting buyers. Supervised Jat has sold at Rs. 15-8 and Rs. 12-8 with sellers over, and Indian Jat Midles are reported at the close done at Rs. 15/-, the minimum price. Indian District Tossa sold in assortment at Rs. 15-4 and Rs. 12-4, with Bottoms alone at Rs. 12-8 and Rs. 12-4. Selling pressure still continues. Total arrivals of jute into Calcutta during October are estimated at 6,34,000 bales, a considerable advance on the figure for a year ago, which was 4,85,000 bales. For the first time this season, the total arrivals now exceed those recorded in the similar period last year, 21,77,000 bales against 21,23,000 bales.

In the Fabrics market, complete apathy seems to prevail. The only business in hessians has been a small quantity of nine porters and odd widths and weights and specialities. Mills maintain quotations at maximum but in almost every position, second hand sellers could be found willing to discount prices. The heavy goods position has been discussed at some length earlier. Beyond a few specialities which have to be got from mills at maximum rates, the tendency has been steadily lower and the drop in the price of "B" Twills has been markedly steeper in the last two days. The outlook in this section is distinctly bleak.

(Continued from page 649)

force up the price of myrabolams and also lower the price of hides and skins. Excessive reliance on the promises made in the past must not blind us to the fact that the Union is dominant in Africa owing to the war and plans for closer union may be stimulated by a hint of outside interference.

The form that reprisals would take has been indicated already in the amendments accepted by the Assembly. It may not be out of place to suggest that repatriation is out of the question while freezing of South African assets like a special tariff on diamonds or other import will not help India to any extent. Dr. Khare and Sir Sultan Ahmed made no reference to the Dominions Office view of the alleged breach of the Pretoria agreement. It is only Natal legislation that has provoked the official expression of displeasure and the Union Government will probably take note of Indian remonstrances. That would however, not be possible without intervention on the part of His Majesty's Government though to it is arguable whether the refusal to interfere in 1943 does not hold good for ever. A complete and permanent severance of commercial relations with both South and East Africa will offer both advantages and disadvantages though the official regulations can be by-passed through Portugese East Africa. India's trade with the latter has declined in recent months but it should revive substantially when sanctions are in force. How sanctions can be applied *inter se* without the consent of the entire Commonwealth is a point beyond the Reciprocity Act. If the issue is primarily one for London, it is worth noting that the consequences of the struggle cannot be confined merely to India.

Mr. Roosevelt's Victory

The general election in the U.S.A. has given Mr. Roosevelt a Fourth Term and the Democratic party a bigger majority. The improved position of the party whose platform has just as little bearing on policy as any platform is important for certain reasons. International commitments will be the rule, and the visits of carpetbaggers will be many and frequent. The revenue and the debt alike will grow to take up a larger portion of the national income while the wartime agencies assured of Administration support are likely to bring out all their plans. Farm product prices, wage formulae and anti-trust inquiries are likely to experience the impact of party victory. The only wartime election the U.S.A. had in 1864 is of course not a parallel. Lincoln beat Mclellan because he christened the Republicans the Union party and secured a victory by a relatively narrow margin struggling against both Democrats and against dissidents in his own party. The victories of Sherman influenced Lincoln's victory to a greater extent than the battle in the Philippines though it was obvious that the return of MacArthur to the Philippines would affect electoral opinion at the crucial moment. The difficulties experienced in the second term with Labour and the Supreme Court are not likely to recur; but there are problems in the South as well as the West. Reconversion has ceased to be an issue after the George and Thomas bills were adopted though questions as to the timing of changes at home will remain. The election which brought out the importance of organised labour may make for fundamental changes in respect of trade union rights. The possibility that tariffs may be kept up to defend the wage level should be noted along with the continuance of wartime controls. The agreements to which the U.S.A. is a party do not promise a radical change but pressure groups will be kept in their place and the U.S.A. as an architect of the postwar settlement will not have to look beyond the immediate results. The election is duly viewed as bearish for the bullion market and bullish for the stock exchange, in spite of Mr. Churchill's assumption that a conference will cut down the length of the war in Europe. The President's victory was expected by Wall Street which was as shrewd in pre-judging the outcome as in 1936. The results promised in relation to world security and armaments are perhaps more important than the assurance of jobs for 60 million Americans. Yet that assurance alone is calculated to create faith in the jute industry's future. If there is less criticism of what has not been done in China or Italy there will perhaps be greater eagerness at home and abroad to hope only for the best.

Hindusthan Mercantile Bank

Beginning its career with a paid-up capital of Rs. 49.98.750 in ordinary shares only the Hindusthan Mercantile Bank had at the end of September over Rs. 170 lakhs in Deposits. The statutory report issued by the Board refers only to barely four months' working and figures in the accounts merely indicate that the cash ratio is commendably high and the Bank's investments have kept step with advances. It is known that branches are to be set up soon in important cities like Amritsar and Delhi and the figures presented on Saturday last to the statutory meeting should be viewed as an earnest of richer progress to come. Preliminary expenses and brokerage come to just Rs. 45,000 and the income for the period is Rs. 21,103-3-6. The beginning made under Mr. A. C. Bhat's management is impressive from the point of Deposits and bills discounted alike. The statutory report discloses that opportunities for jointstock banks in India are still widening while the problem of lending has been surmounted successfully in this case since Advances totalling Rs. 70.63 lakhs exceed Investments in Government Securities totalling Rs. 66.75 lakhs.

JUTE

(By Our Staff Correspondent).

Calcutta, November 9.

Slightly more business has been reported in the raw jute market but there has not been any change in the general tone. With the anxiety of sellers to do business and the easier tendency of mofussil centres, there cannot really be any strengthening in the price structure. The publication of local stock figures revealing an increase in stocks in both sacking and hessian has also had a discouraging effect. Prices, however, are not very much lower. There is a general tendency to await further developments. It is felt that the Provincial Governments might interfere if there is any undue decline in prices. In the mofussil markets there has been a falling off in arrivals but this has not resulted in any improvement in values. Buyers also are not taking any interest and are effecting only small purchases to satisfy immediate requirements.

In the loose jute section European packing Middles alone were done at Rs. 16 per maund and Supervised Jat Middles and Bottoms at Rs. 15-8 and Rs. 12-8 per maund respectively. Indian District Tossa Bottoms alone were done at Rs. 12-8 per maund. Sellers have shown a reserved attitude towards the close and buyers are not interested except at slightly reduced rates.

In the pucca bales section export business has been rather poor, Dundee Daisee 2/3 and Tossa 4 being done at minimum prices. Mills purchased Lightnings at Rs. 74 and Hearts at Rs. 68. Quite a large amount of business was reported in cuttings and rejections. Straight-morahed were done at Rs. 60 and special cuttings at Rs. 47 to Rs. 50 per bale. N.C. and M.C. were done at Rs. 43 and Rs. 42 respectively.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, November 9.

The publication of the local stock figures for the month of October revealing an increase in both sacking and hessian has naturally had a depressing effect on the good market. The cessation of official buying and the drop in shipments in the last two months have given rise to the fears that mills might not be able to dispose of all their output if there was an improvement in the coal position. There are second-hand sellers for both 9 porters and 11 porters, in spite of the fact that mills were well sold up to March next year.

In the heavy goods section prices have been marked further lower, "B" twills recording a drop of 3 points to Rs. 59-8 for ready delivery.

Local stock figures for the month of October 1944, published during the week show that hessian, cloth and bag, were 72,957 tons against 69,310 tons at the end of the previous month and sacking cloth and bags 107,959 tons against 102,986 tons. Total stocks were thus higher by 8.620 tons at 180,916 tons. The increase in stocks is mostly on account of sacking for civilian consumption from 92,316 tons to 97,777 tons. This is the first time that there is an increase in total stocks since April this year. The figures are given below:—

Total reported stocks of manufactured goods exclusive of Government Orders.

Description.	30-9-1944	31-10-1944
Hessian cloth and bags—		
Yards ..	12,72,74,177	13,34,77,268
Tons ..	35,072	37,279
40 ins. 8 oz. Hessian (included in above)—		
Yards ..	21,09,936	24,91,879
Tons ..	475	556
Sacking cloth & bags—		
Yards ..	22,01,33,507	23,34,11,861
Tons ..	92,316	97,777

Total reported stocks of manufactured goods held on Government Account.

N.B.—October stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Kedarnath, Nafar Chandra, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of September, 1944.

PIECEGOODS

(From Our Correspondent)

Calcutta, November 9.

There is considerable anxiety in the market regarding the proposed scheme of the Government to select some agents and retail shops for the sale of fine and seasonal goods. In the opinion of the dealers, the exclusion of these fine quality goods for which there is great demand in the market, is sure to disturb the piecegoods market in so far as it is bound to create various complications and technical difficulties. The selection of dealers for seasonal goods too, it is contended, should be made from amongst well-established traders who are already in the line and who have reliable agencies and resources for equitable distribution.

Yarn:

The yarn market remained unchanged as in the previous week. Throughout the week a steady tone prevailed. There were transactions will mills only of 'quota' goods, while moderate business was done with weavers and fisherman in mofussil areas. The stock position was unsatisfactory particularly due to the 'freezing order' of the Government.

The question of equitable distribution of yarn is also engaging the attention of the Bengal Government. The Hon'ble Minister for Civil Supplies is convening a Yarn Conference at the premises of the Bengal Chamber of Commerce today which will be attended by prominent yarn merchants, besides representatives of important Chambers of Commerce and trade Associations. It is yet to be seen how the Government frames up a scheme for distribution of yarn.

YOU WOULD NOT LET THIS HAPPEN

Yet, this is exactly what happens every time you make an unnecessary purchase. The prices of most things are abnormally high and you lose money every time you buy something you do not really need. Be wise. Do not buy unless you must. Wartime prices are *bad* value for money.

You risk your money if you buy jewels, land, buildings, commodities or manufactured goods. Their prices are subject to fluctuations and make no mistake, the trend of prices is now *downward* and not upward.

These investments are both safe and profitable:

- ★ **Insurance,**
- ★ **Co-operative Societies,**
- ★ **Savings Bank,**
- ★ **Post-Office Savings Bank.**
- ★ **Government Loans and**
- ★ **National Savings Certificates.**

The returns on a safe investment may be smaller, but the capital is secure - and that is what counts during wartime.

Stock Markets to-day and to-morrow:

BURN & CO. 1943-44 RESULTS

The Calcutta Stock Exchange has been rather quiet during the past few days. Earlier in the period, with restricted business prices were fluctuating in narrow limits. There was a tendency to await further developments. The Bombay market was inclined to take a more serious view of the Chinese situation. Some anxiety also was felt over the results of the U. S. Presidential election. Contrary to expectations, however, the re-election of Mr. Roosevelt for a fourth term has had no encouraging effect on prices in the Calcutta market though Bombay reacted more favourably to the news. The only reason, perhaps, is that deliveries are coming in at a faster rate now that the Committee of the Stock Exchange is insisting on an early adjustment of outstanding transactions. In the absence of any outside buying support, the effect of larger deliveries has been to depress prices. It cannot be said that the Chinese situation is a bearish factor for the stock markets as, in view of the reports regarding the possibilities of Russian help to the Allies in the prosecution of the war in the Far East, there can be no reverse to the United Nations militarily.

* * * *

The accounts of *Burn & Co., Limited* for the year ended April, 1944 make very good showing, there being a substantial increase in the net profit for the year. As the position in regard to supplies of raw materials as and when required showed a slight improvement sales were appreciably higher at Rs. 2.51 crores against Rs. 1.54 crores The coal situation fortunately did not interfere with production though the management had to pay close attention to this question. The results would have made better showing if imported articles were available more freely. The net profit, before providing for taxation and depreciation, is Rs. 29,21,440 against Rs. 15,62,330 for the previous year. The amount set aside to depreciation is Rs. 3,14.174 against Rs. 3,12,800. Provision for taxation is considerably higher at Rs. 16.5 lakhs (Rs. 7.8 lakhs). There could be no increase in the dividend on the ordinary shares as on the last occasion the distribution was payable only after the transfer of Rs. 4.2 lakhs from the Dividend Equalisation Fund. The present dividend of Rs. 17-8 per ordinary share is thus payable wholly out of profits. The amount carried forward is higher at Rs. 92,024 against Rs. 50,759 brought in. Prospects for the current year prove to be rather reassuring as the works-in-progress show a satisfactory increase to Rs. 2.19 crores from Rs. 1.79 crores on April 1, 1943. War demands again absorbed a greater proportion of the manufacturing capacity of the Company's works.

* * * *

The accounts of the *Bokaro & Ramgur Limited*, for the half-year ended June, 1944 were eagerly awaited as it was generally expected that they would contain some reference to the sale of coal lands to the *Tata Iron & Steel Company Limited*. There is no such reference, however in the Director's report. The working for the half-year is satisfactory in spite of the continued difficulty in regard to labour. The net profit, before providing for taxation and depreciation, is Rs. 2,68,845 against Rs. 2,32,456 for the previous six months. The amount set aside to depreciation is Rs. 40,000 (Rs. 35,000) while provision for taxation is Rs. 1.5 lakhs (Rs. 1.25 lakhs). The transfer to E.P.T. Deposit Reserve Account is Rs. 17,000 (Rs. 10,000). The larger provision for taxation has prevented any increase in the dividend payable to shareholders which is only 5 percent the same as for the previous half-year.

During the half-year the Company has taken up the mining rights of approximately 1,273 bighas in Kuju area where the Kuju seam of selected 'B' grade is being mined. Owing to the impracticability of putting a siding into this area during the War, temporary arrangements have been made to transport the coal by road to the Railway. Progress has been made with the opening up of the Colliery but the output will be restricted by the limited transport facilities. Since the closing of the half-year the mining rights of 510 bighas in Pipradih area have been taken up where the well-known Kargali seem will be mined. The extra output which will result from the addition of these two collieries to the Company's assets will it is hoped reflect favourably on the profits in the near future.

* * * *

Bally Jute Company Limited' has done very well in the half-year ended September 1944, there being a sharp increase in the net profit before providing for taxation and depreciation to Rs. 16,58,278 from Rs. 9,86,121 for the previous half-year. Provision for taxation is Rs. 14.5 lakhs (Rs. 6.6 lakhs) which also includes provision for E.P.T. compulsory deposit. The allocation in this respect for the previous half-year was Rs. 80,000. Nothing has been transferred to Deferred Repairs Reserve as against Rs. 41,000 formerly. The amount set aside to depreciation is Rs. 50,000 (Rs 45,000). In spite of the appreciable increase in earnings the dividend on the ordinary share is actually lower at Rs. 4 per share against Rs. 5 per share on the former occasion. Amount carried forward is Rs. 70,267 against Rs. 62,049 brought in.

* * * *

Dhrangadhra Chemical Works, Limited has made remarkable progress in recent years. The accounts for the year ended June, 1944, now available, show that it has been possible for the Company to make a net profit of Rs. 20,00,366. After setting aside Rs. 2,05,017 for depreciation, Rs. 3.5 lakhs is to be transferred to General Reserve. A sum of Rs. 50,000 is to be allocated to Staff Bonus Fund and Rs. 75,000 to Workmen's Bonus and Welfare Fund. A dividend of 50 per cent is payable on the ordinary shares. The amount carried forward is Rs. 28,284 against Rs. 12,936 brought in. Out of the net profit a sum of Rs. 2.3 lakhs is to be paid to the Dhrangadhra State Government to be utilised for the benefit of the State and its subjects.

The financial position of the Company is very sound. With a paid-up capital of Rs. 21.5 lakhs the net block is Rs. 24,69,123. There is a depreciation reserve of Rs. 5 lakhs while General and Dividend Equalisation Funds total Rs. 10.8 lakhs. Investments in Government of India securities are as much as Rs. 12 lakhs. Cash balances are rather ample at Rs. 6.63 lakhs. Stocks on hand valued at cost are Rs. 14.35 lakhs

Production of soda ash and soda bicarbonate during the year was affected by shortage of coal and other raw materials and was completely suspended for nearly two months. The coal position is now more satisfactory although the allotment is not sufficient to enable the works to operate to full capacity. Distribution was affected owing to the restrictions on movements by rail, but by the intervention of the Department of Industries and Civil Supplies, Government of India, zoning arrangements have now been brought into force which permit of disposal of the whole of the company's output on a rationalised basis. Sale prices have been stabilised and are published in the press throughout India. The plant at Dhrangadhra has been maintained at a high state of efficiency in spite of the difficulties in obtaining the necessary spares and equipment.

FIRMER MARKETS

A. C. C. to have more Factories

(By Analyst)

BOMBAY (*By Wire*).

There was good deal of enquiry for Rampur Maize shares in the Bombay market but at the same time I was surprised to note that Delhi was a consistent seller and these shares had declined to Rs. 46 as against the recent price of Rs. 70 ex-rights a couple of months ago. It is reported that the selling is due to the belief that the dividend for the year ended 31st July 1944 will be only Rs. 3 as against Rs. 10 paid last year. The Company made a profit of Rs. 17,23,406 on a paid-up capital of Rs. 6,00,000 in 1943 and since this profit was earned within eight months from the commencement of the factory the shares were done up to Rs. 140 cum rights. The Directors after paying a dividend of Rs. 10 capitalised Rs. 6,00,000 from the total Reserve Fund of Rs. 9,00,000 and issued one share for one share, free. Now the capital is Rs. 12,00.000 and for the year ended 31st July 1944 it is estimated that the profit will be around Rs. 9 to 10 lakhs and even on this basis a dividend of Rs. 4 would absorb only Rs. 4,80,000. In some quarters a dividend of Rs. 5 is expected. Basing our calculation on the basis of a dividend of Rs. 4 the shares at the current price of Rs. 46 cum div. (dividend announcement likely this month) the shares give an yield of 9.5 per cent. On the basis of a dividend of Rs. 3 per share the yield is over 7 per cent. My recommendations in the last few months have been based on the assumption that the war is likely to be over very soon and on the basis of postwar prospects I have recommended several scrips. Luckily for the starch industry the Government of India very recently issued a communique that the starch industry will be given protection in the post-war period though details of the nature of protection have not been announced. The assurance from the Government of India is a sufficient bull point for investors to pick up Rampur Maize Products. Now that the erection of a glucose plant is completed the results for the current year should be much more satisfactory than for the year ended 31st July 1944. I would therefore definitely recommend investment around Rs. 45 since I consider this an investment scrip I would put the stoploss at 20 per cent from the recent top of Rs. 48, that it is to say at Rs. 38 instead of my usual 10 per cent, i.e., at Rs. 36.

* * * *

Last week while recommending Associated Cements around the market price of Rs. 240 I had given my arguments for liquidation of these shares between Rs. 250 and Rs. 260.

On further enquiries I hear that the extra capital to be raised will be used for expansion purposes. Many factories are likely to be built all over India. Looking to the post-war demand people connected with the company feel that particularly in view of the re-construction plans like hydro-electric schemes, roads etc., despite the increase in the productive capacity of A.C.C. the demand for cement will be so great that there will be scope for some more concerns in India. The shares are, therefore, likely to move up beyond Rs. 260 and there is no hurry to liquidate one's holdings. Associated Cements moved up to Rs. 245-8 and closed at Rs. 244-12. There is very good buying by Marwari operators. Further, the technical position of the market is very healthy for a rise in view of the short position in this counter. Sellers are paying As. 12 to Re. 1 for carrying forward their short position.

Bokaro and Ramgur have declined to Rs. 40 in sympathy with weakness in other coal shares and I would take this opportunity for accumulating these shares for income as well as capital appreciation.

This week there was very good investment enquiry for *United Commercial Banks* which closed at Rs. 86 cum rights.

In Dalal Street, Textiles continued to be the centre of attraction and the leader, *Bombay Dyeing* moved up to Rs. 1,772-8. *Kohinoor* were firm at Rs. 589-8, *Azamjahi* at Rs. 510 and *Osmanshahi* at Rs. 300. I look for a further rise. Madras also was steadier with *Buckingham* around Rs. 306, *Madura* at Rs. 67 and *Cambodia* at Rs. 31. Steel section was featureless but suddenly at the close there was demand from professional operators and *Tata* Deferreds closed better at Rs. 2,096-4 and Ordinaries at Rs. 382 after being done as high as Rs. 2,105 earlier in the session. *Indian Iron* and *Steel Corporation* are quiet at Rs. 38-8 and Rs. 32-2. *Mysore Sugar* is maintaining the dividend of 20 per cent. The report of course, gives a better reading than last year's. The quantity of cane crushed during the year being higher at 204,587 tons against 166,212 tons in the previous year. The trading profit was higher at Rs. 18,44,528 against Rs. 13,86,373. The Net profit is slightly better at Rs. 7,34,465 against Rs. 7,02,014 in the previous year. Readers are aware of the financial position of the company. General Reserves in the Balance sheet as on 30th June 1944 stand at nearly Rs. 57,00,000 against the paid-up capital of Rs. 21,79,280. These shares have moved up to Rs. 61 cum div. on the publication of the report and I recommend investment purchases. *Consolidated Coffees* have come out with a maiden dividend of 8 per cent. The market expected 12½ to 15 per cent and hence the shares have declined to Rs. 13 c.d. sellers. I. for my part, feel that the results are quite satisfactory and I would retain holdings. For making fresh purchases I would like to wait and accumulate shares around Rs. 12.

THE NORTHBROOK JUTE COMPANY, LIMITED

NOTICE is hereby given that the Seventy-second Ordinary General Meeting of The Northbrook Jute Company, Limited, will be held at the Office of the Company, Chartered Bank Buildings, Calcutta, at 11-30 a.m., on Saturday, the 9th day of December, 1944, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 30th September, 1944, declaring the Dividends recommended by the Directors, electing Director and for transacting any other ordinary business of the Company.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November, 10.

THE Calcutta stock exchange has been rather quiet during the two days markets remained open this week. As a result of the decisions taken by the committee last week, markets will henceforth be open only for three days in the week, that is, on Mondays, Wednesdays and Fridays. The period under review is therefore short of two working days. The easier tone of the markets was due to the discouraging advices from the Western Centre and the anxiety to await the results of the U. S. Presidential election. The Bombay market favourably received the news of the re-election of Roosevelt for a fourth term, but an easier tendency has been noticeable in the local market in Friday's session. Indian Irons are quoting Rs. 38-2 and Steel Corporations Rs. 31-14. A slightly easier feeling is noticeable all round though no substantial decrease in prices is to be recorded.

The giltedged securities section has been quietly steady with 3½ per cent paper quoting Rs. 99-15. Among terminable loans, good business has been reported in short and medium dated loans, 3 percent 1951-54 quoting Rs. 101, 3 per cent 1949-52 Rs. 101-12, and 5 percent 1945-55 Rs. 103-8. 3 percent 1953-55 were Rs. 100-12, 3 percent 1963-65 Rs. 99-10 and 4½ percent 1955-60 Rs. 116-12. Among Provincial loans only one transaction has been recorded in 4 percent Punjab Loan 1948 at Rs. 105-2. Easy money conditions continued to prevail in the market and there has been a further reduction in the average discount rate on treasury bills to 7 annas 10 pies percent per annum

Bank shares have been steadier with *Imperial Bank* fully paids at Rs. 2,000 and *contributories* at Rs. 507-8. *United Commercial Bank* were 1½ points higher at Rs. 35-8 prem. while *Reserve Bank* were very steady at Rs. 132-8. *Hindusthan Commercial Bank* were Rs. 3 premium and *Bharat Bank* ordy. Rs. 109.

Cotton shares were uninteresting with *Cawnpore Textiles* at Rs. 13-3 and *Kesoram* at Rs. 16-6. *New Victoria* were a shade lower at Rs. 8-3 but *Elgin* were better at Rs. 67.

Coal shares were rather quiet in sympathy with the other sections. *Burrakur* declined by over a point to Rs. 41-8, *Bokaro & Ramgur* were 8 annas lower at Rs. 40, the lowest level touched during the week being Rs. 39-7. *Bengal* were Rs. 645, *Equitable* Rs. 63-2, *New Beerbhoom* Rs. 34-14 and *North Damuda* Rs. 4-5 *South Karanpura* were lower by one point at Rs. 21-12.

Jute shares were not very much changed though *Howrah* were rather subdued at Rs. 83-12. There was a further decline in *Clive* to Rs. 54. *Anglo-India* were lower by 6 points at Rs. 448 while *Champdany* were unchanged at Rs. 257. *Hukumchand* were Rs. 38-4. *India* Rs. 692. *Megna* Rs. 113, *Nuddea* Rs. 128. *Presidency* were 10 annas lower at Rs. 10-6.

In Engineering shares, Indian Irons fluctuated in very narrow limits the lowest level touched being only Rs. 38 the quotation at the end of last week being Rs. 38-10. A quiet feeling is now noticeable the rate being Rs. 38-2. Steel Corporation receded to Rs. 31-12 but are now quoting Rs. 32. The balance-sheet of Burn & Co., for October 1944 has been published and the dividend has been maintained at Rs. 17-8 per ordinary share. *Arthur Butler* were very steady at Rs. 23-10 as also *Britannia Engr.* at Rs. 21. *Indian Standard Wagon* were steady at Rs. 24 but *Jessop & Co.*, were easier at Rs. 23-4.

Sugar shares were steady. *Balrampur* quoting Rs. 17-8 and *Buland* Rs. 44-8 *Rana* were easier at Rs. 44-6. *Carew & Co.*, were unchanged at Rs. 28 as also *Belsund* at Rs. 16-2. *Murree Brewery* on the publication of an encouraging report are higher at Rs. 29-14. *Ramnugger Cane & Sugar* were quiet at Rs. 13-1.

There has been selective buying of tea shares though not much business has been done. *Bishnauth* were steady at Rs. 41-4, *East India* at Rs. 15-4 *Hasimara* at Rs. 75-3, *Patrakola* at Rs. 1,200 and *Tezpore* at Rs. 20-6.

In the Miscellaneous section, *Burma Corporation* were easier at Rs. 4-8 while *Indian Copper* were unchanged at Rs. 3. A second interim dividend of 8 per cent for the year ended October, 1944 has been declared by the British Ceylon Corporation but the announcement has had no effect on the market. The quotation is unchanged at Rs. 17-12. *Calcutta Trams* were firmer at Rs. 54 while *Indian National Airways* were very steady at Rs. 21-10 ex-rights.

Among paper shares, *Titaghur Paper* were well held at Rs. 28-1 and *Orient Paper* at Rs. 28-2. *Midnapore Zemindary* were Rs. 163, *Assam Saw* Rs. 5-3 and *I. G. N.* Rs. 150.

THE STEEL CORPORATION OF BENGAL LTD.

NOTICE is hereby given that the Directors have authorised the half-yearly payment of dividend due on the 5% Cumulative Preference Shares of the Corporation for the half-year ended 30th November, 1944.

The Share Transfer Books for the Preference Shares of the Corporation will remain closed from the 16th November to 30th November, 1944 both days inclusive. Payment will be made only to those Members or their Mandatees whose names appear on the Register of the Corporation on the 15th November, 1944.

No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfers will not be entertained.

By Order of the Board.
BURN & CO.,
Managing Agents.

Uneasy lies
THE HEAD .....

If you are the head of the family, you must be feeling uneasy for the future. There will be so many problems to face and solve. At least solve your problems by saving what you are earning. Through INSURANCE.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Plethoric conditions continue to prevail in the money market and call money is unchanged at ½ per cent. in Calcutta and ¼ per cent. in Bombay. The weight of funds seeking investment has resulted in large buying in the giltedged market. The quotation for 3½ per cent. Paper has been above par in spite of the large sales by the Reserve Bank recently. In the absence of any large increase in advances and the continued expansion of currency it should be said that there is no prospect of any hardening in money conditions. The results at this week's auctions of treasury bills, however, are not in accord with the conditions in the money market as even with a large increase in the amount of applications there is a token rise in the average discount rate to seven annas and eleven pies per cent per annum. There seems to be some sanctity about this level as fluctuations in recent months have been confined to a few pies. The slightly higher average discount rate was perhaps due to the offer of Rs. 6 crores treasury bills on account of the provincial governments. The Bengal Government is asking for Rs. 5 crores and the Madras Government Rs. 1 crore. The Central Government's offer for the next week has nevertheless been maintained at Rs. 6 crores.

We have pointed out on several occasions that it would not be possible to prevent further additions to currency if no alternative method of financing war expenditure in this country were found. Accordingly, after the lapse of two weeks the return of the Reserve Bank for the week ended November 10 shows that there has been expansion of currency against sterling securities for Rs. 10 crores. The total of notes issued does not show a corresponding increase as rupee coin are lower at Rs. 12.41 crores against Rs. 13.45 crores. Total notes issued are thus Rs. 981.00 crores against Rs. 972.03 crores. Notes in circulation are Rs. 8.4 crores higher at Rs. 972.23 crores. Sterling securities have increased by Rs. 10 crores to Rs. 866.33 crores.

In the Banking department, Central Government's balances are steadily mounting up and are at new a high level of Rs. 207.37 crores. The figure on November 3 was only Rs. 193.13 crores. The increase in government balances is as much as Rs. 14.2 crores and must have been due to some large payments by tax-payers. The sales of rupee counterparts last week should have also improved the cash position. There is a decline in other Government accounts to Rs. 5.55 crores from Rs. 10.57 crores. Bank balances with the Reserve Bank were sharply lower at Rs. 104.19 crores against Rs. 113.09 crores last week. In spite of the continued sales of gold on a large scale there in only a slight increase in other deposits to Rs. 7.67 crores from Rs. 6.99 crores. Balances held abroad were Rs. 322.33 crores against Rs. 324.53 crores but taking into consideration the transfer to the issue department there is a net receipt of sterling for Rs. 8.8 crores.

The return of the Imperial Bank for the same week does not show any change in deposits. there being only a small rise by Rs. 54 lakhs to Rs. 240.74 crores. There is a jump in investments to Rs. 149.46 crores from Rs. 143.24 crores. Advances were Rs. 57.50 crores against Rs. 57.20 crores. The large investments in giltedged, even in the absence of any increase in the working capital, is perhaps an indication that the management does not anticipate any large demand for funds. As a result of the increase in both advances and investments cash balances are lower at Rs. 43.78 crores against Rs. 49.67 crores.

That money could not be put to good use at present is reflected in the consistent increase in bank deposits. The rise in demand and time liabilities in the last two weeks especially has been very pronounced. The return of scheduled banks for the week ended November 3, 1944 shows that demand liabilities were higher by Rs 10.63 crores at Rs. 614.30 crores and time liabilities Rs. 80 lakhs higher at Rs. 208.17 crores. As advances and bills are higher by only Rs. 2.01 crores cash on hand and balances with the Reserve Bank have improved by Rs. 7.58 crores to Rs. 139.41 crores.

In spite of heavy selling by the Reserve Bank the bullion market has been very firm. With an increase in the offtake tenderers have been very keen on fresh supplies so that the rates at which the Reserve Bank have affected sales of bullion have increased as the week progressed. It is said that the strength of the market is due to the operation of a bull syndicate. It should be made sure by the Reserve Bank authorities that there is no undue concentration in the hands of prominent operators as otherwise when the Reserve Bank reduced its sales bulls might try to take up prices. Earlier in the week there was a feeling that the bulls had lost the grip on the market but the large buying for forward is ample evidence that the bulls have not lost their initiative yet. Quotations for both gold and silver are thus considerably higher on balance.

A new series of Government of India Re. 1/- notes will shortly be issued. As notified in September 1943 there will be no change in the design of the note. but the serial prefix and number will be printed in green instead of black, while at the end of the number a capital A will be printed in the dark grey head colour of the note.

The Exchange market has been steady with a few export bills showing.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay, *(By Wire)*.

Despite the Reserve Bank's offerings of 300 bars of silver and 75,000 tolas of gold daily, bullion markets are extremely firm on continued bull support and good upcountry demand. Thus, silver forward rate is today four rupees higher than on Saturday, spot quotation being Rs. 117-12. Banks sales were made at the prices of Rs. 113-10, Rs. 114-12, Rs. 115-7 and Rs. 115-12 respectively since Monday. The rise in acceptance limits reflects the temper of the market but it also encourages speculation. The undertone is very steady since offtake of 250 bars daily practically nullifies Bank's offerings of 300 bars. Ready stock is still scarce. Hence the premium for spot is Re. 1-12 today.

75,000 tolas of gold offered daily since Monday at Rs. 62-11, Rs. 63-9, Rs. 64-3, and Rs. 64-2 by the Reserve Bank had hardly any effect on the market especially as upcountry arrivals are nil. Hence forward gold rose from Rs. 62-12 to Rs. 64-10 today on heavy purchases in Forward effected by a Bull Syndicate. Spot gold demand is somewhat lower. Hence the premium has declined from a rupee to four annas. Forward is now quoting Rs. 64-8. In the face of heavy demand it is unlikely whether Reserve Bank can ever sell at lower rates. The fact that the market is firm despite consistent high offerings speaks for itself.

SAVINGS BANK—Deposits received and interest allowed at 1 per cent. per annum.

W. G. GROUNDWATER, General Manager

Problem of Priorities

On the question of priorities of planning, which is increasingly to the fore as the various Reconstruction Committees progress with their tasks, there is a general haziness of ideas which might prove dangerous to planning, if it is allowed to continue for long. It is all the more dangerous, since it is not alone the public and the business classes but also the Government that suffer from this lack of clarity. The order in which reports and schemes attain a presentable form and are released for publication has also done its bit to increase the confusion. The first of the reconstruction reports to get the light of publicity was the Education scheme of Mr. Sargent; and this circumstance and the fundamental importance of education to national reconstruction have combined to give education a priority, which may not seem to be quite justified in comparatively cold economic calculation. The public was therefore almost shocked, when Lord Wavell declared in his address to the Associated Chambers of Commerce that education should come much lower down in the order of priorities and that communications should rank among the highest. Much exploratory work has since been done in post-war reconstruction; and, though the salient features of more than one scheme have emerged into view, there has been little light shed on the vexed question of priorities.

In his meeting with the All-India Manufacturers' Organisation at Bombay, Sir Ardeshir Dalal clearly stated that he could not mention any special order of priorities, as the question of development had to be considered from all sides and should take into account, along with industry, education, agriculture and other subjects and that the Government were dealing with the general aspects of these subjects. He is reported to have added that the order of development would be increase of supply of mechanical power through electric power development, construction of roads and demobilisation. If the latter statement is, as it seems to be, a weak modification of the former, then the basic fact remains that the Government are yet to take up seriously the question of priorities. The two reports, so far published, of the Reconstruction Committee of the Council also bear no trace of any attempt to tackle the problem of priorities. And it may be admitted that it would be premature to consider priorities at this stage. It is not till all the more important schemes are duly formulated in concrete terms with estimates of costs in terms of money and other relevant standards that their relative urgency can be adjudged. Indications of priorities are too much to expect in the Second Report of the Council and Sir Ardeshir Dalal, considering the very responsible position that he holds, showed himself more ready to satisfy public curiosity than the public has a right to expect.

It must be said, however, that while officials have good reason to postpone the consideration of priorities and remain reasonably reticent about it, there is no similar defence about the persistence of nebulous ideas among even informed sections of the public. The failure, so far, of the authors of the Bombay Plan to follow up their original publication as they promised to also points to difficulties which call for enquiry. For our part, while we have been ready and even eager to give both the Bombay Plan and the proposals of the various Reconstruction Committees our general support, we cannot help feeling that the Bombay industrialists, and the Government are conveniently forgetful of the inner contradictions of some of their major ideas on post-war planning. In the first place, the framework of the Bombay Plan has been constructed without any reference to the question of priorities. Secondly, importance is attached both in the Bombay Plan and in the reports of official Committees alike to controls and to private enterprise. It is not inconceivable that free private enterprise is allowed a wide scope in an economic life in which order for purposes of planned development is ensured by a system of Government controls. But there is an intrinsic conflict between control and free private enterprise which is not resolved merely by affirming the ideological neutrality of planning. Planning may be said to be neutral between rival social creeds only in the sense that, in the adoption of their methods, the directors of a planned economy pay no regard to doctrinaire consistency. But that does not mean that they will seek to follow inconsistent principles at the same time and in the same context. In a well-developed economy such as those of the advanced industrial nations of the West, the aim of planning is not development, so much as readjustment and reconstruction. In the plans prepared for such conditions, their authors can mark off the spheres of state intervention and control from the spheres in which private enterprise will be afforded freedom, though only within the limits set by the larger purposes of planning. Such a demarcation is rendered possible by the comparative adequacy of social resources for the purposes on hand. There is no forbidding problem of allocating meagre resources among a number of objectives with a more or less equal urgency and importance. The oppressive problem of priorities is solved for them to a large extent by the comparative plenitude of their resources. At any rate, they do not have to face it in the form in which it confronts us in India. Control and private enterprise could subsist together.

But in India, we start from scratch. In education and public health, in agriculture as well as industry, in transport, in taxable capacity and in public finance, in fact, in every sphere which is of importance to the pace of economic progress, we are most dishearteningly backward. Raising the school-leaving age is a problem which is far different from finding the means of putting millions of children to school and keeping them there long enough to make the benefits of schooling last through life. Where the means at the disposal of the nation are definite, though necessarily not unlimited, the problem is one of sacrificing some purposes in the interests of a few others with more pressing claims. But in India the problem is of priorities, and not of preferences. It is the working out of the principle that first things must come first, not as a matter of more or less arbitrary choice, but in order that second things may be looked forward to with reasoned hopefulness.

There has thus to be marked objectivity in the determination of priorities. This objectivity inheres—so at least it is claimed by the advocates of economic individualism—in the economy of free private enterprise. Every interference with the freedom of economic life is a self-denial of the advantages of automatic solution of the problem. With control, therefore, goes the responsibility of deciding these priorities, while private enterprise necessarily means that, in the sphere in which it is free, it will decide the same question in accordance with the requirements of private profit-making. The advanced industrial countries, where the inadequacy of resources is not so serious, can afford to leave certain sectors of the national economy as the preserve of private enterprise leaving for the State the other spheres and a general power of direction and interference where and when necessary. But a country in which the basic resources are all too meagre cannot afford to have these conflicting forces working at the same time.

The Bombay Plan is drawn up on the simple basis of the addition to national income necessary to assure a minimum standard of living for the whole population and apportioning the requisite increase to the three sources of agriculture, industry and the services. The tasks before us are determined by the increase in output of agriculture and industry and by the outlay needed for ensuring high standards of public health and popular education. The official Committees follow the other course of examining each national problem, surveying our needs and estimating the outlay in money and effort that may be needed. So that in neither case is there an attempt to relate our resources to the tasks and bring them into proper relation. And in both cases there is the handicap of equal deference to the principle of control and the principle of according a large sphere for free private enterprise.

The country has before it two sets of tasks, each of great magnitude, one referring to a vast increase in the production of the ordinary necessaries of individual life and the other referring to the provision of education and the ensuring of a reasonably high standard of public health. Distinguishable, to some extent, from the two is a third set of problems, namely, the improvement of transport and other economic questions in the solution of which, even in the best of conditions, the State has a big role to play. It need hardly be mentioned that the last two are the responsibility of the State wholly or in large part, while in respect of the first mentioned, the place of the State and the claims of private enterprise are debatable. The magnitude of every one of these tasks and our general impatience in solving them has led to their being lumped together to the detriment of the problem of priorities. Since all these big problems are put together indiscriminately, we speak in the same breath of a wide variety of controls and a large field for private enterprise. With one eye on our meagre resources and another on the vast objectives of our economic planning, we make an easy decision in favour of postponing the consideration of priorities. The Government have to be clear in their minds whether they favour private enterprise out of an ideological bias or because they consider that in the conditions of India a large part of the work before us will necessarily have to devolve on private business. They will have to be clear, too, whether they will be content to provide all the conditions, in which private enterprise—whether it be in the form of individual productive work in the rural areas or of floatation of large scale industrial concerns—will gain a new buoyancy and swell the output of agriculture and industry or whether they will take upon themselves the responsibility for the whole, as well as every detail, of national economic life and national economic development. If their choice is the former, then the problem of priorities will become easier

An everyday scene four years ago

Oil and its by-products contributed in many ways towards this scene. Petrol and lubricants in the car, solvent oil and carbon for manufacturing the tyres, bitumen on the roads.

Economy is a wartime necessity. Oil must go in ever increasing quantities to the war machine of the United Nations. By practising the most rigid economy, each one of us plays a valuable part in defeating the enemy.

When the time comes, Burmah-Shell will again strive to make petroleum products of high quality readily available throughout the length and breadth of India.

INSERTED BY BURMAH-SHELL

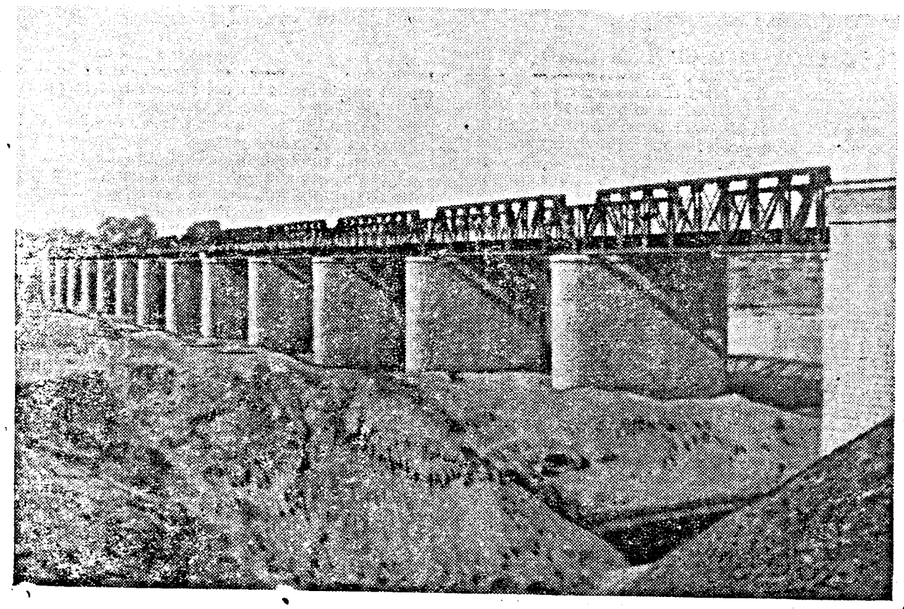
of solution both in the sphere of state action and, given certain safeguards, in the sphere of private enterprise.

For, then, the priority of the schemes without which a vast increase in productive activity is impossible will be self-evident and will need no argument in its support. Without development of power, without adequate facilities for transport, without irrigation and a large supply of fertilisers, development is impossible whether of agriculture or of industry. But it is not enough to grade schemes according to urgency, we have also to be sure that the demand which these schemes will make on total resources will leave enough for private enterprise to discharge its functions with. We incline to the view that in the initial years, attention must be directed to the prosecution of these schemes, and that the Government must watch carefully how far private enterprise responds to the various stimulii thus provided. Controls are better left in the background as a deterrent to profiteering than brandished from the start, unless the Government propose to take far more on themselves than they now seem willing or able to perform.

Investment under Planning

The capital required in five years of India according to the progress report on planning is estimated to be Rs. 1,500 crores. The single fact overshadows all other issues raised in respect of planning because a scaling-down of demands obviates the need for created money, and makes known the limit of sacrifice implied in the control and direction of investment. The general assumption that the rate of interest will fall and the rate of saving will remain constant or move upward underlies most calculations as to the borrowing programme. The Reconstruction Policy Committee was told that borrowing in five years would take Rs. 500 crores while private investment would absorb Rs. 500 crores and another Rs. 500 crores would have to come from the revenue surpluses of Governments—this being a form of compulsory saving. One condition for saving at a high rate in India would be a prohibition of treasure imports. The purely temporary expedient of gold sales to order would have to be given up. The size of prewar savings must not however affect calculations as to future savings. That savings increase in proportion to the national income or rather the margin left after consumption rather than the yield available is demonstrated duly by experience. The steady fall in interest rates can be glimpsed in the present yield on debentures and preferences. The average yield is coming down to 3½ per cent. and it is only necessary to look at the current yields on ordinary shares to see why this development has taken place. An assumed yield of 2½ per cent. on giltedged in relation to that on industrials certainly makes the assumption of 5 to 6 per cent. yield on industrials faulty. Given the condition of expanding income and savings a glut of capital after the war is predictable. This is the basic advantage for planners today though the Bombay Plan takes into account the entirety of sterling balances and about Rs. 300 crores out of our hoarded wealth as representing capital available for use. The two items alone meet the requirements of Government planning but the latter may be as hard to get at as the former. Hoards can be tapped only if a fear of depreciation leads to a conversion into currency. The ordinary faith in the precious metals as investment can only disappear through a progressive reduction in prices, and a beginning lately made supports the belief that hoards can be regarded as potentially useful.

In respect of the probable response to the demand for capital some uncertainty is engendered by the belief that cheap money cannot continue indefinitely. This is a guess contradicted by experience since compulsory investments at 2 per cent can be kept up if E.P.T. is retained. Fiscal policy therefore acquires great importance in relation to investment. Taxation may limit the yield, and at the same time stimulate institutional investment. While it is clear that the demand for short-term funds may increase immediately after the war, it is not deducible that interest rates would go up. Wartime experience supports the belief that the size of borrowing has no connection with the return sought by the investor. Current trends in the banking field point altogether to a steady increase of funds for continuous investment in giltedged and in the first lustrum of planning no change can be foreseen. Some would however, depend upon an increase in time deposits and a progressive increase in insurance funds.



The outline of capital requirements leaves aside the question of control of investment. On the general view the case for retaining controls is self-contained and we may expect no alteration in the economic climate. The price-level may be a deterrent to large-scale private investment in buildings or lands particularly when the return on such investment may be small or uncertain. There is indeed reason to urge that fertiliser manufacture rather than land may appear attractive to urban investors. What part foreign borrowing (put in the Bombay Plan at Rs. 700 crores) would play in relation to future investment can scarcely be indicated by a reference to the international experts agreement reached in July. If repatriation of sterling investments is deemed necessary, India, exercising the rights of a creditor, can scarcely look for assistance from abroad. But all the same the export of capital can be readily prevented by exchange control and agreement as to this is inseparable in relation to the falling yield on capital. The size of current savings in the postwar period is always the principal factor. The fact that Russia in the third period of planning assigned 14.2 per cent of the national income to investment exclusively must weigh with those who look for control of non-essential consumption. It is not the return on new investment, but the share left to the State out of the national income that should determine the pace of investment. There is already a guess as to the possible rate of saving. It is assumed that 6 per cent of the national income can be treated as the optimum saving. The official estimates of capital requirements do not suggest that inordinate sacrifices would be called for. Continuous investment depends more upon the success of plans put into effect. State investments in respect of railways and irrigation admittedly support optimism as to probable success. One condition of success in regard to planning is duly satisfied since the marginal productivity of capital in India will be as high as in Russia. A possible factor in relation to the import of capital goods is the export surplus. The recurring favourable balance of trade in normal times in effect is a supplement to savings for investment. But the surplus will be influenced by the rate of current consumption, as well as the gradual disappearance of trade restrictions. In regard to the former the retention of surcharges on import duties would appear essential, while the latter must be governed by the continuance of bilateralism. If the blocked balances are not dealt with as desired, freedom to pursue a strictly national policy must be reserved, and this is all the more important when it is clear that demand for Indian raw materials for some years will be continuously rising.

That investment under planning is more important than the choice of targets may be presumed from the Soviet Government's reliance on the sales or purchase tax. Profits and interest on capital are withdrawn by indirect taxation and the sales policy of new State enterprises must be governed only by the desire to recover capital in instalments. This will not however detract from the argument that the yield on private investment must be kept low by taxation or other means. Wage-stops may be required in the interest of stabilisation of costs, and to that extent, private enterprise would benefit.

The proportion of nation-building expenditure to outlay in the first period must be kept small because of the overriding need for a direct return for investments. Revenue surplus can scarcely be applied for what may appear non-remunerative expenditure. Since the Yellow Book puts capital to be invested in five years at Rs. 1,500 crores (against Rs. 1,400 crores prescribed by the Bombay Plan), it may be imagined that pressure on the margin left after consumption may be excessive. A temporary fall in the standard of living may do no harm though it is harsh to suggest that in the light of wartime experience. Government's willingness to go all the way is inferrable from the choice of objects and the scale of outlay. The size of new investment in five years in relation to old investments (aggregate value is placed at Rs. 700 crores) may influence local ideas as to yield rather than the ratio of net product to capital invested. It is difficult to assume that denial of political advantages will not be an advantage, provided that a straight choice is made by the Provinces enjoying autonomy. One point that requires special notice is that reliance on internal borrowing in place of foreign borrowing and the building up of a sound budgetary position would warrant continuous borrowing. On this point, too, wartime experience is conclusive, while it may be suggested that, if prices and distribution are controlled, it would be possible to influence directly the rate of investment in Government loans. The fixation of targets etc., for Victory Loan subscriptions may be viewed as the first step in this direction. The combination of borrowing and taxation is still the guarantee against budgetary inflation but the sector assigned to private invest-

ment must also be watched. Price control and a system of priorities must be supported by some rule as to dividend limitation. The tightening of control when inflation is endemic is familiar but it is quite permissible to urge that after inflation is held in check, the justification will remain. The existence of controls will affect general ideas as to yield. Not many have noted the effects of debt relief legislation in India on investment and the rates of interest ruling. In nature and sequence they must be cumulative and if the reduction of mortgages and loans is an indication it may be urged that private investment will never flow in prewar channels.

Another factor that deserves appraisal in this connection is the assurance against depreciation of exchange. It may be that prices in India are bloated by the war but progressive reduction is the keynote of policy. The submission to discipline now appearing is of value to the planning programme as well as the pitch of investment. The main assurance, however, is that funds drawn by taxation or loans would not be sterile but actually used to increase the supply of consumer goods. This has important implications for both incomes and the rate of savings for the disposition to enlarge savings is determined by the certainty rather than the level of profit. A limitation of profits may impinge on the rate of interest as the element of risk will recede in both cases. Any limitation of the residual share may react favourably on the volume withdrawable from civilian consumption by taxation or borrowing. Payment of interest at home, in the main, represents no subtraction from the national income and if the rupee remains 'hard' through a refusal to turn to created money it is possible that the borrowing programme (Rs. 100 crores per annum) would make no large demands on the capacity of the capital market. Of real value as to the future remains the rise in security values—the peace panic has not at all affected the improvement noticed over a year. That alone should support our hope of falling yield and greater readiness to invest when the outlook is clearer.

Editorial Notes

Fertiliser Plans

The Gowing Mission has submitted a report within three months. The Gregory Committee asked for fertilisers and local manufacture became important. The summary of the mission's conclusions may be different from those offered by Sir Padamji Ginwalla and so far as management of new factories is concerned, no advice has been apparently tendered. Costs and processes have been indicated as also the direction of future development. The question of regional location will, however, bring out arguments for and against a single factory at Harduagunj near Aligarh. It is really a question of balancing higher costs in smaller plants against freight payable. Since railways cannot handle all the bulky traffic offered today, the weight of opinion will be on the side of the plan for six factories involving an outlay of Rs. 20 crores. Variations in plant design may lower costs. In any case, costs in India would be lower than C.I.F. price of Rs. 240 per ton. It would be imprudent to count upon tariff protection but private capital, if allowed, may possibly ask for a subsidy per ton. The collection of many agricultural cesses is altogether a justification for the payment of subsidies. The proposals submitted to the Government refer to coal and gypsum. Though hydroelectric power is available coal is scarce in the South but that does not mean that choice of sites near Trichy and Bezwada would be inexpedient. The saving in cost of imports must be spread over a wide area and supplies ensured to all rice-growing tracts. A more specific question relates to the association of existing manufacturers of fertilisers or of private enterprise into Government. If training of personnel, import and purchase of plant is to be undertaken at once, as the Mission recommends, a decision as to future ownership of the potential industry is necessary. The net return on capital invested in this case may be limited by previous agreement but it is being urged that fertiliser prices payable would be too high. There is, however, the need for an increase of 800,000 tons in the production of rice and deficit provinces may be inclined to transfer a part of the development funds for the purpose of making fertilisers. Of the distant effects notice must be taken. Food crops grown at lower prices may be less valuable in the future than commercial crops and crop restriction schemes may cease to have validity at some time.

Rice Cess

Mr. Tyson's bill presented this session for the levy of a cess to finance a Rice Committee is wholly meant to stimulate research and marketing. A duty of 6 annas per ton payable by rice mills is expected to give Rs. 40 lakhs for the purposes of the proposed Committee. It is noteworthy that the area under rice in India is almost constant and the increase in yield desired can come only from better seed or irrigation. The collection of the cess would, of course, increase the Centre's share in the tasks of agricultural development. But if the public is to pay through higher prices for husked rice, the necessity to define the task undertaken becomes even more important than the representation accorded to paddy-growers. It is perhaps expedient to refer to the position of rice in Burma to show that an excise or export duty always has a place. Partnership in research schemes and irrigation development is obviously less important than the link-up between Provincial plans and Central plans. In C. P., hardy hybrids have been secured in recent years; but the adoption of early and late varieties so as to ensure a constant supply of rice would appear as pressing as the advice that may be given as regards manure. The fact that only 6 percent of the area under rice in India is under selected types is the strongest argument for special guidance and assistance. Parallels may be found in the raw jute duty levied in Bengal and the sugarcane cess in Bihar and the U. P.; but the familiar complaints that growers have derived little advantage so far may nip excessive optimism in the bud. The limit of variation in the annual production of rice in India is fairly wide. That is the outstanding reason for the production plans to which the cess is an inducement.

Civil Aviation

Civil aviation in Britain, now under a separate Ministry, is in origin private. Its history spread over 25 years demonstrates not only the value of independent enterprise but the value of State encouragement. The Imperial Conference of 1922 called for a combination of four subsidised companies to undertake what was mostly pioneering work. Work from the ground began after Imperial Airways was launched; but India was linked with Britain by air services only in 1929. The route to Australia was open in 1934 while the route to the Cape was open in 1931. The trans-African route from West Africa to the Sudan is a wartime development and few will forget that in spite of the loss of Singapore, air services to Australia continue. In view of surveys etc., the establishment of the Empire Air Mail Service in 1937 was possible. In regard to South America and trans-Pacific services from Britain, civil aviation was not idle and Hongkong was the Far Eastern terminus linked with the air route to Australia. Trans-Atlantic services have been operated continuously since 1938 and the doors into Europe have been kept open by services to Lisbon and Stockholm. The fact that route mileage has risen from 200 miles to 80,000 miles in 25 years deserves special notice in view of what has been lately claimed for Britain in postwar aviation in respect of traffic originating in Britain and the Commonwealth. Beyond the issues at Chicago there lies the question as to peacetime prospects of Britain's biggest industry, aircraft manufacture. Its views as to control of air services by Government are known, but it is necessary to remember also that most of the progress recorded in civil aviation was made under private auspices. The main result of the Montreal and Chicago talks is that the Dominion claims have been elbowed out and a pact between America and Britain is more or less probable. The other possibility as to joint Anglo-American enterprise appears remote since the U.S.A. does not want to keep up the Air Transport Command's monopoly and wants to give private enterprise its head.

Concrete, Tough and Rigid

The sixty years since the invention of reinforced concrete have seen radical changes in ideas of architectural design, which it will be no exaggeration to describe as revolutionary. Its extensive use as a structural material sustains a major industry so that any new development in technique should be of general interest. The strong point of concrete is its ability to withstand compressions which makes it an ideal material for foundations and bearings. But in using concrete allowance has to be made for the fact that it is not as tough as it is rigid. It cannot stand tensile stresses of more than a few hundred pounds to the square inch. This sets a limit to the load which a concrete beam can carry without cracking and so to the length of the spans which can be safely employed. A new development, initiated by a French Engineer, M. Freyssinet, promises to overcome this basic weakness and to make concrete as strong against tensions as it is against compressions. The process is known as pre-stressing. By this process compressions set up in the body of the concrete are made to counteract the tensile stresses. The compressions are set up by stretching steel wires embedded in the concrete until the tension reaches 50 to 70 tons per square inch. The ends are then clamped and anchored. The tension of the steel wires is transmitted to the concrete as a compression which neutralises the bending moment of the load carried. By this means it is possible to use lighter and longer beams and it is said that structures with spans of 200' have been erected. Pre-stressing may be carried out, before, during or after the setting of the concrete. Pre-stressing the wires before the concrete is poured, or while it is hardening, requires elaborate apparatus, which is not economical except for the manufacture of standardised members in quantity. The last method, that is pre-stressing after the concrete has hardened, can be used anywhere, as it does not require any elaborate plant or specially trained workmen, and it is of interest to note that India is the first country in the world where this method has been successfully adopted. The wide scope for pre-stressed concrete in the construction of hangars, garages, auditoria, bridges etc. is immediately obvious and the method when fully developed is sure to influence domestic architecture. The theory of pre-stressing and its technical aspects are described in an interesting article in the October Number of The *Indian Concrete Journal* by Mr. Robert E. Shama.

Not So Fast

The Central Legislature appears to be in a sufficiently revolutionary mood to consider offhand schemes of nationalisation. In the discussions on the Insurance Act Amendment Bill and on coal, there were members ready to suggest nationalisation as the handy remedy for a number of vexatious problems. The reactions to these proposals in various circles may be readily imagined without the aid of first-hand reports. Sir Cowasji Jehangir went to the length of underrating the difference between the cost of postal insurance and the cost of insurance facilities offered by competitive jointstock companies. The pros and cons of nationalisation have been debated so long that its prospects today rest less on argument than on the power to bring it about or to foil it. But in India, we might reasonably hope that what the State will do to any branch of industry or of business will be determined, not by sentimental allegiance to rival social creeds, but by the obvious requirements of successful economic planning. If the industrialisation of the North-East should be found to depend, as many hold it does, on the establishment of mammoth thermal stations in the coal fields, the coal industry has little hope of functioning in conditions of wholly unrestricted private enterprise. Likewise, since in this country life insurance is the only means of ensuring middle class savings and since the level of savings is important for the success of planning, a wide extension of State insurance may well be found to be necessary. But radical reforms must await the progress of planning, if not of the Plan itself.

Significant Changes

Changes in the import trade to which attention must be drawn owing to the apprehension that control will be modified to procure more consumer goods from Britain in the future are indicated in the June trade returns. The increase of Rs. 131.48 lakhs in the value of imports of food and drink is mainly due to the imports of wheat and tobacco. The substantial increase under the latter means prosperity for the Indian manufacturer and larger receipts of excise duty. Imports of liquors are lower than last year's imports, while salt imports have increased. The increase under dates accounts for the rise under fruits and vegetables and the small increase under canned foods can be ignored. It has been frequently mentioned that the increase under oil and raw cotton are really advantageous to India. The biggest increase noted under imports this year is in regard to mineral and other oils. Imports of paper-making materials have increased at the same time as imports of paper and stationery; but the imports spell no danger to Indian paper mills. The fall under raw wool is, however, to be grouped with the reduction in the Supply Department's demand for Army blankets and woollen fabrics. Imports of chemicals have been higher than in the past two years and this too is likely to favour industrial production.

To satisfy frequent and general demands there have been increases in India's imports of hardware, glassware and earthenware. These figures represent smaller takings than in 1942. The recorded increases under electrical machinery, instruments and machine tools point only to industrial expansion. The higher value of textile machinery imports in April-June can also be regarded as essentially favourable. In the textile group India's imports have scarcely increased to any extent as compared with 1943 and what was India's biggest imports in the past counts for very little now. The only measurable increase in the first quarter is under tea chests and this may be due wholly to the quota increase. Imports of manufactures except perhaps in the case of drugs and medicines and paints and colours, are of little consequence to established secondary industry. Only in the case of salt are imports of a protected material higher than in 1943 and in this case allowance must be made for the higher prices. Since India's imports of cotton tend to be larger than her exports, it is clear that the war has affected the export trade to a great extent. The increase is offset by the increase under exports of cotton textiles, which are as important as jute manufactures in the export trade at present. The fact that India's exports of manufactures exceed her imports of manufactures must be related to the fall under exports of raw materials and the increase under imports of raw materials. If evidence is scanty there is not much reason to believe that the increase under machinery imports will hamper indigenous manufactures. Significant changes include the increase under rubber manufactures coinciding with an increase in India's exports of raw rubber this year. If merchandise exports are just around last year's level, it is only the large increase in imports from Iran and the U.S.A. that stands out in the foreign trade returns. The increase in imports from the U.S.A. must satisfy those who fear that the dollar pool is not being used to advantage.

IT'S A FACT—
that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

METALS ARE CHEMICALS

THAT is, the 'noble' metal platinum, for example, or the useful copper, can take the form respectively of a grey and a green powder — expressed in chemical formulæ as platinum sulphide (PtS_2) and cupric chloride ($CuCl_2.2H_2O$)! This is a fact worth remembering as we note our daily dependence on metals, and consequently on the work of the chemist in laboratory and factory. If you look around, you will soon recognise that iron is only one of the many metals by which we are served. In the kitchen there is the indispensable remnant of a once proud display of aluminium pots and pans — the missing utensils probably ranging the skies as part of an R.A.F. machine! The taps in kitchen or bathroom may be of nickel or nickel-plated brass. Nickel and chromium alloyed together form the heating elements in electric fires. The filaments in the electric light bulbs are made of that tough and uncommon metal, tungsten. The "tin-helmet" contains manganese — not to be confused with the magnesium in incendiary bombs — and the A.R.P. buckets of sand and water are rendered rust-proof by their coating of zinc. Copper is very important, both alone and in alloys. The nursery thermometer contains mercury. Except in jewellery, there is probably not much platinum — a metal first studied by the English chemist Wollaston about 1802 — in the average home, but morsels of it play an important part in electric bells and in the ignition system of the motor car. A speck of the still rarer metal, iridium, is likely to be found on the tip of the fountain pen. The extraction of these metals from their ores, their scrupulous purification and the careful investigation of the properties which lead to their practical uses, are services performed by the chemist and the British chemical industry.

Clive Street Gossip

"Eavesdropper" wires from Bombay :—

A fellow-scribe in a contemporary financial paper related an episode arising from the reference in a recent issue of "Indian Finance" to rumours of a reduction in the bank-rate. An important dealer in giltedged securities had a hurried glance at his copy of "Indian Finance" (which, I am ashamed to own, reached this city only on Tuesday); and the first sentence to catch his eye was the one about change in bank rate. He did not pause to read the whole paragraph but rushed to the Reserve Bank to enquire if the Bank would sell Rs. 50 lakhs of 3½ per cent. rupee paper at par. His calculation must have been that, if the bank rate were brought down to 2½ per cent., there should be strident advance in the whole range of giltedged; and that it would be worth while to keep a considerable overbought position in 3½ per cent Paper as this was the only scrip in which a big block could be secured. It would appear that the Reserve Bank said "Okay" and the deal for Rs. ½ crore of Paper was put through. It is also rumoured that another large parcel of Paper was similarly taken up by a market operator. My friend, who narrated this incident with the air of one who had verified its veracity, seemed to suggest that there were two operators who bought Paper heavily had been misled by Indian Finance's reference to bank-rate reduction.

* * * *

The insinuation left me cold: I was more concerned with an examination of the practical wisdom of the two big deals in Paper—and with a re-examination of the factors and forces relevant to a scientific appraisal of a change in the bank-rate. In connection with the first, I may pose the simple question: "Is investment in 3½ per cent Paper more risky than that in any other government security?" As from 1927 banks as such have been transferring their affections and preference to short-dated as opposed to long-dated securities, 1926 constituted the peak of the Government of India's success in new loan piloting. Thereafter, the borrowing rate was rapidly going up, the Mount Everest of 6½ per cent being attained in the summer of 1931. In the quinquennium ending 1931, a distaste for long-dated securities was justifiable and could be said to have been a correct and safe policy. It must, however, be stressed here that, following the de-linking of the rupee from gold in September, 1931, there was, both in Britain and in India, a complete reversal of the earlier deflationary forces and measures; and there were repeated doses of inflation of currency, which, more correctly, was described as reflation of currency. In the eight years following the dethronement of gold in the sterling area, currency and credit were in adequate supply; money rates underwent sharp declines; giltedged securities advanced by leaps and bounds; Governments' borrowing rates came down in sensational style; and new loan issues were placed on the markets on terms which were almost incredibly favourable. These eight years may be looked upon as the heyday of the giltedged market. Giltedged prices say, in 1936 were correspondingly at far higher levels than in 1926, which, as I said, was the peak of giltedged activity in the 'twenties.

In spite of the consistent and substantial profits which investors in giltedged had been making ever since 1932, the prejudice against long-dated securities had continued unabated. There is no rhyme or reason for this continued prejudice; and the only explanation I can think of is that the average head of a banking institution considers conservation as the highest virtue—the more stupidly conservative he is, the more pompously proud he is of his high rank in banking virtues; that this habit instals and confirms in him a general attitude of "closed mind"; that, once a prejudice enters his head, it just stays put for all time. Now, 3½ per cent Paper, deemed by banks as the most aggravated type of a long-dated scrip, has suffered most from this prejudice. No investor in 3½ per cent Paper has, except in a narrow short-term view, suffered any loss in the last decade: on the other hand, he has secured a more attractive return on his money, and has also benefited by spectacular capital appreciation. Yet, if the giltedged investments of India's leading banks (such as Imperial Bank, Central Bank of India, Bank of India, Allahabad Bank, Punjab National Bank, Bank of Baroda, United Commercial Bank, Indian Bank) were taken into account, it may be found that, out of, say, Rs. 300 crores invested by them in giltedged excluding Treasury Bills, not even Rs. 5 crores is in 3½ per cent Rupee Paper. There is an unholy conspiracy against 3½ per cent Paper, the leading banks being the principal members of the conspiracy. In spite of such powerful forces ranged against it, 3½ per cent Rupee Paper has advanced from strength to strength, and it is now serenely quoting at an anna below par. It will have marched past par mark except for fear of unlimited scales of the scrip by the Reserve Bank through the tap. For my part, I have no doubt in my mind that, but for the positive hostility of most bankers and for the ready acquiescence of the Reserve Bank in this attitude, it should have been possible, long ere this, for the Government to give the required notice of redemption to the holders of 3½ per cent Paper; long ere this, 3½ per cent Paper could have been replaced by scrips at interest rates fully ½ per cent lower.

Instead of the Reserve Bank being desirous of selling Paper at par through the tap, it would be more meet and proper that it should be buying all the paper offering at par. In sum, I take, as my readers know only too well, a very cheery view of giltedged prospects; I have abundant faith in the credit of India and in our ability to borrow on terms as favourable as any the strongest government in the world; and, holding this view and believing in such a prospect, 3½ per cent Paper at par is, in my estimation, the best investment, if it is to be an investment in giltedged.

• • • •

These two friends, who have bought large parcels of Paper on a cursory reading of "Indian Finance," will have every cause to feel gratified, especially as, while the return they get is 3½ per cent, they can finance their purchases through call loans at 1½ per cent. Here is an assured margin of 20 per cent.

When one thinks clearly of the pros and cons of the Bank rate, one cannot help coming to the conclusion that the onus is on the Reserve Bank authorities to explain why they have been persisting in a 3 per cent Bank rate. During all these five years of war, the 3 per cent Bank Rate may be said to have been left high and dry in relation to other relevant money rates. Inter bank call money is nominally quoting ¼ per cent, in Bombay and ½ per cent in Calcutta. There are nominal rates, and none so poor as to want to take money at these rates. Treasury bill discount is around ½ per cent. No respectable bank will pay more than ¼ per cent for twelve month deposits. The rate for advances in the bazar is much lower than the official minimum of the Reserve Bank or the Imperial Bank. The Bank Rate as at present has, therefore, no relation to the general structure of money rates. This total lack of link and relationship between official rate and market rates has been allowed to persist all these years. It seems to me that it is the Reserve Bank that has to explain this anomaly.

• • • •

I may be told that, in London also, the Bank of England Rate has remained unchanged at 2 per cent since October, 1939; and that the Bank of England Rate, too, must be deemed an anomaly in relation to money rates in London. My answer is simple. There is more sense in a 2 per cent Bank rate as in London than in 3 per cent bank rate as in India. Moreover, the average discount on British Treasury Bills is slightly over one per cent. The discount on fine trade bills is higher. The rate at which banks are asked to put up Treasury deposits is 1½ per cent. Thus, the margin between the Bank of England rate and the other money rates is less than one per cent. The disparity in India in respect of some rates is as much as 2½ per cent.

* * * *

The real fact of the matter is that, for reasons which I have never been able to understand, the financial authorities in India have always taken a gloomy, rather than cheerful, view about giltedged and have been opposed to a lowering of the Bank Rate. Let me hasten to add that, during Sir Jeremy Raisman's planning of defence loans, there has been a sharp break from the past. Let me, for the first time, lift the veil over the happenings at the time of the last reduction in the Reserve Bank Rate. If I remember aright, "Indian Finance," then as now, irrepressible for its suggestions, whether or not the suggestions are accepted, examined the various factors in the money market situation and emphasised the proposal that, as soon as Sir Osborne Smith who was then in London returned to India, the first thing he had to do was the reduction in the Bank Rate. A few weeks thereafter, Sir Osborne came back to India and seemed to have made up his mind to reduce the Bank Rate. Possibly, he had communicated this intention to Sir James Grigg who was the Finance Member. In the forenoon of the Wednesday on which the Bank Rate reduction was to be announced, Sir Sikandar Hyat Khan, who was the Deputy Governor, got a line clear Trunk message from New Delhi; and he was requested to communicate to Sir Osborne Smith that, if the Bank Rate was reduced that day, it would be open war between Sir James and Sir Osborne, Sir

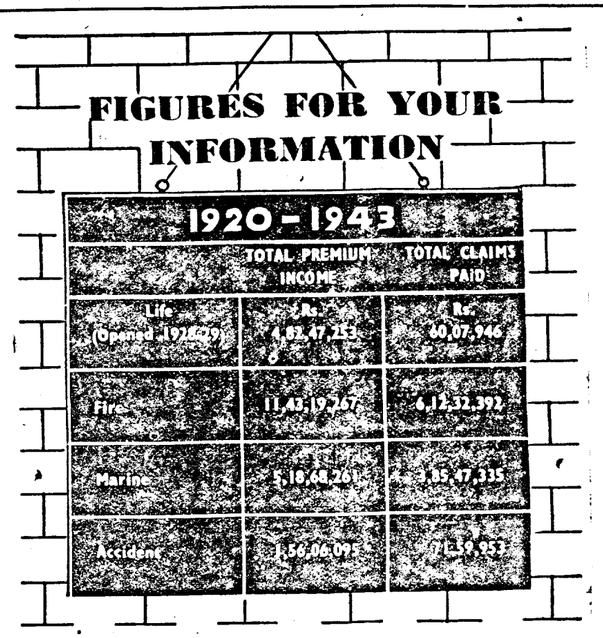
(FROM OUR CORRESPONDENT)

NEW DELHI, November 11



There has been considerable activity in New Delhi—almost daily conferences in the Viceroy's House—since the Natal Debate in the Central Assembly. The unconventional language used by the Commonwealth Relations Member in protesting against the anti-Indian policy of the South African Government appears to have created a furore in London and Cape Town. It could not have been unknown to the South African authorities that the Government of India would protest vehemently and even proceed to apply the provisions of the Reciprocity Act, but they were apparently unprepared for the language used by the Government Members—particularly the statement of Dr. Khare that he wished it was possible for them "here and now" to declare war on South Africa. These words have evidently perturbed London. And according to reports current in New Delhi, the Viceroy had some 'frank talk' with his councillors on the subject. Fortunately, all the Indian Members of the Viceroy's Council stand united on this issue. They cannot, without appearing ridiculous before the world, go back on their declared policy. There are three possibilities at the moment. Firstly, it is within the power of Whitehall to intervene and see that this obnoxious occupation ordinance in Natal is withdrawn completely. Secondly, it is possible that Marshall Smuts himself may recognise the intensity of feeling in this country and try to resile from his present position. After all even Marshall Smuts cannot deny that the Pretoria Agreement to which he was a party has been deliberately and flagrantly broken. And thirdly, there is also the possibility that in order to placate Indian opinion the Government of India may keep the High Commissioner's place unfilled and also enforce economic sanctions in a certain measure while at the same time measures are taken, in the name of the war to nullify the effect of these sanctions. In situations such as the present, half-hearted measures are as bad as, if not worse than, surrender. The future depends upon the strength shown by the Indian Members. If at this time and on so important an issue as this they allow themselves to be dictated by Whitehall it will be a cruel blow to the cause of Indians overseas.

• • • •

An interesting issue has now come up to the forefront in connection with certain recent statements and speeches of Government Members. Often—even when they have been speaking in the Central Legislature—they have claimed the right to speak in their personal capacity. The speeches of Dr. Ambedkar in his recent tour have particularly figured in Assembly questions. It would appear that Dr. Ambedkar claims that as a Member of Government he is not exactly in the position of a Government servant under the terms of the Government Servants Conduct Rules. For this reason he holds himself free to speak on political subjects and express his personal views. These speeches have, however, shown that the Executive Council has no political or even administrative cohesion. If each member can speak as he likes, and whenever convenient, can explain away his statements saying that he was speaking in his personal capacity the importance attaching to the speeches of Government Members will disappear. From one point of view, however, this freedom will be an advantage to the public. It is a matter of common knowledge that in many matters the Government of India are merely helpless instruments of the policy laid down by His Majesty's Government. In many instances they have no other alternative than to carry out the instructions of Whitehall. And it is equally true that whatever may be the wishes of the Viceroy's Council they cannot carry out their decisions in any cases, without the sanction of His Majesty's Government. Why should the Indian Members bear the odium for what is really the responsibility of His Majesty's Government? If Indian Members will take the public into their confidence and state clearly what they have tried to do and what they have been forced to do, it may help to ease many situations. And even His Majesty's Government will hesitate to interfere or overrule the wishes of the Indian Members?

India is still feeling sore about the Empire Dollar Pool. She is unable to buy all the capital goods she needs from America. If she only were free to utilize the huge dollar credits she has amassed! The industrialists are worried but the Government of India seem to be sleeping over the matter. The Finance Member stated in the Assembly last week that the arrangement to be made when the Empire Dollar Pool was dissolved had not yet been considered. He said that the dollar credits had been received by India equivalent in amount to the favourable balance of payments India had with the U.S.A. The arrangement was that the total dollar earnings of all empire countries were

The New India Assurance Co., Ltd. takes pride in announcing its latest business figures, which sum up the company's progress during the short period of 25 years.

Established in the year 1919, New India to-day holds the unique position of being the premier Indian Composite Insurance Organisation transacting Life, Fire, Marine, Accident, and all other forms of insurance.

Prudent and efficient management, a huge paid-up capital, which is one of the largest in the world, a far-seeing and cautious policy in the matter of investment, and last, but not the least, the unfailing service of the organisation to the policy-holders — these are some of the factors that have contributed to the success of New India in the course of this short period.

New India offers attractive policy terms, maximum security and willing service from its agents, and guarantees a prompt settlement of claims.

The

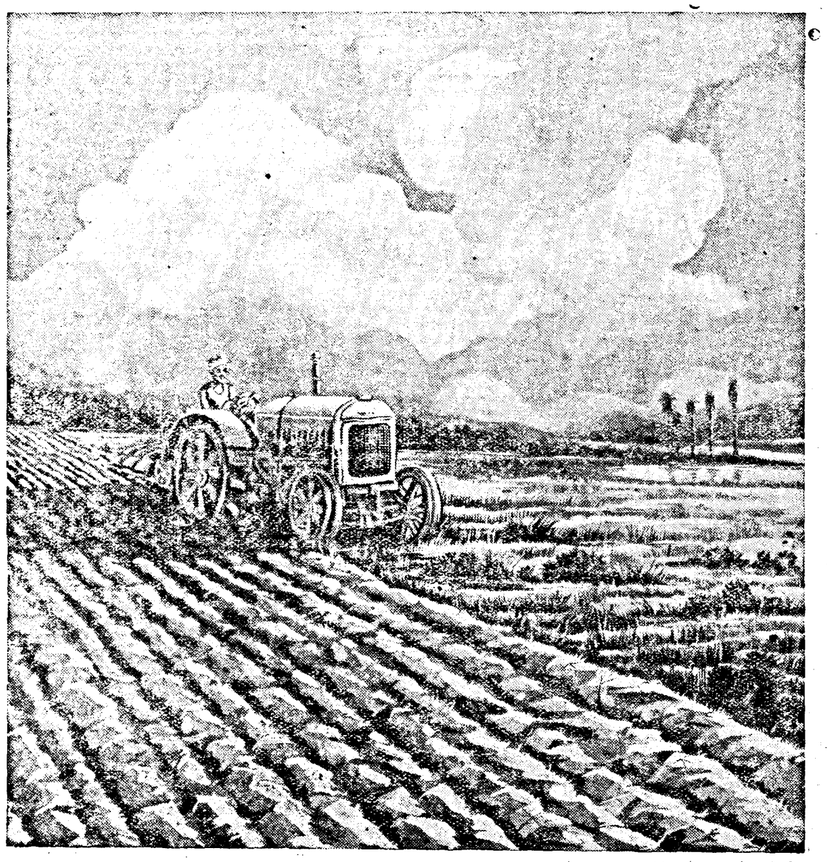
surrendered to the Empire Dollar Pool. There was no fixed allocation between the sterling area countries.



* * *

The improvement in the paper situation is given in a statement in the Assembly stating that the Government have been able to reduce their requirement from 90 per cent of the Indian production reserved between October 1942 to March 1943 to 70 percent since April 1943 and 65 percent between October and December 1944. Economy measures in many cases have resulted in reduction of paper consumption by 50 per cent. The Government have been receiving larger quantities of wood pulp, newsprint and other kinds of paper from outside during 1944 compared to the imports in 1943.

* * *

As Britain is taking steps to secure the maximum prices for her post-war exports, there is anxiety in Britain that Indian Industries may be forced to purchase machinery in the United Kingdom at inflated prices. The Government have obviously not decided on any measures to prevent this and questions in the Assembly on this subject only received non-committal replies. Prof. Ranga felt concerned about the possibility of obtaining better prices for agricultural commodities when they are exported to other countries.

The Government feel much embarrassed as there is an attempt to probe into the activities of the U.K.C.C. in India. It was stated that the Corporation had done Rs. 18 crores worth of business. Goods worth Rs. 16 crores had been exported to Russia alone. The Government seemed to be ignorant of the huge profits made by the Corporation in its transactions. To a question whether the U.K.C.C. had sold sugar in Persia at eight times the purchase price there was no reply. The Government also gave evasive reply to the question whether it was not in India's interest to get a portion of the profits the U.K.C.C. made at India's expense.

For the Nation's Granary..

Obtaining an increased yield of crops from the land is a major item in the plans for the economic development of India.

By furnishing the essential modern implements of agriculture, transport communication and irrigation services the steel industry will help to transform arid deserts into smiling wheat and rice fields.

(From Our Correspondent)

Bombay, November. 14

The classic figure of economic man was *a product of scarcity, when there was not* enough to go around. He is increasingly out of his element in an economy of abundance. A century hence there may be no economic problem in the sense of utilising scarce means for alternative ends; but even before the war is ended, abundance has begun to pose many a serious problem. Cotton developments in U. S. are calculated to induce great anxiety in the minds of other cotton producing countries. They suggest that, alike in world money and world commodities, the U. S. is on the high road to economic royalism. Fourth term for Roosevelt spells greater agricultural support, and the furthering of inflationary ideas. With a large cotton surplus, the Administration has made up its mind to dump this cotton on world markets by giving the farmer a subsidy of four to five cents. The cotton policy is of a piece with the President's forswearing all progressive ideas. U. S. exports will be pressed forward irrespective of quality or price. The Commodity Credit Corporation has already decided on exports of cotton and wheat at artificial prices by paying subsidies amounting to the difference between world and domestic prices. Full details of the C. C. C's plan have not been published, but it has already started buying under its purchasing programme and will, it seems, sell any quantity at any price. The latter might be 4 or 5 cents above the Brazilian price. As the *Manchester Guardian* puts it, the U. S. is not going to practise what it preaches. Indications are that all export controls will be removed long before the collapse of Germany.

Sir Purshotamdas Thakurdas has rightly drawn pointed attention to the dangers to Indian cotton implicit in U. S. policy. Countries less equipped in financial and other respects than the U. S. will have to go to the wall if the U. S. unloads its huge cotton surpluses on the world by the naked use of its financial power in the world. The President of the E. I. C. A. has stressed the value of export markets to the Indian cotton-grower. It is enough to remember that, between August 1939 and August 1944, the Indian carry-over has increased to 40 lakhs bales, and that, since the announcement of the U. S. subsidy proposals, the hedge contract has been steadily going down. The worst aspect of it all is that the U. S. has thought it unnecessary even to consult the wishes of other cotton producers of the world. The Indian delegation at the International Businessmen's Conference meeting now at Rye will certainly talk the matter over with American businessmen.

The Government of India have not been letting the grass grow under their feet. They have decided to send their special adviser for cotton to the U. S. to study the U. S. proposals and the cotton situation on the spot. The official may even be negotiating with the U. S. Government for shipments of long staples to India to replace Indian imports from the Sudan and East Africa. Among members of the textile industry, there is a sharp animus against Africa both for the anti-Indian policy pursued there and for the high price exacted for African cotton. The decision of the Government to send its representative to America to study the cotton situation firsthand has the support of the public and the trade.

The cotton futures market cannot be said to have registered its full reactions to the U. S. policy. The I. C. C. March Contract no doubt dipped to Rs. 398 on the 8th instant but that was due to hammering of bears over the Moscow reports of poor fighting in China against the Japs. Actually, the market went up to Rs. 415 later, thanks to the colossal purchases of a Marwari operator who seemed bent on pulling the market in its favour. This operator was making his purchases in the March contract, while he was going short in the May contract. Curiously enough, though he was the only one to take a bullish view while the rest of the market consisted of men who took an overwhelmingly bearish view, his steady buying did succeed in imparting a slightly steadier tone to the market. There is little doubt, however, that the trend of the futures market is definitely downward, as a result of the apprehensions about U. S. export policy and the advent of hedge pressure when the crop movement begins. Those who now go long in the futures market are apparently banking on the long interval that lies between now and the expiry of the contract and on sudden development which would enable them to get out of the market. The strength of the futures market has not passed to the spot market in which the premium of Sind NT and Punjab 289F is falling. Mill buying is, of course, of a hand-to-mouth character. The figures of consumption by mills for the 1943-44 season, furnished by the Indian Central Cotton Committee, show a decline from the 1942-43 consumption by 190,306 bales at 4,116,525 bales. A decline of nearly two lakhs bales in consumption was at least partly due to shortage of coal. In order to see the consumption of cotton in proper perspective, it may be stated that Indian Mills have consumed about 30% more cotton in 1943-44 than in the pre-war year 1938-39.

The budget estimates for 1944-46 have been presented to the Standing Committee of the Bombay Municipal Corporation by the Commissioner, Mr. M. D. Bhat, who will shortly be taking up a different post with the Bombay Government. The receipts of the Municipality for 1945-46 are placed at Rs. 5.2 crores and a surplus of Rs. 93 lakhs is anticipated. In his note, the Commissioner has drawn attention to the heavy arrears of replacements and repairs owing to lack of materials and their high prices in war-time. After the war, a lot of expenditure will have to be incurred on these, while improvement of water supply, drainage and housing etc. would call for large loans. The Commissioner has proposed to earmark Rs. 55 lakhs out of the anticipated surplus to a post-war reconstruction fund, and the allotments under the various heads have been suggested. The Municipal Act has been amended by the Government of Bombay to empower the Corporation to create this fund. Under the present Act, the Corporation's annual revenues can only be applied to meet the expenditure of the next official year, and taxation imposed must be regulated for the purpose of meeting that expenditure. The Corporation cannot impose taxation and apply the proceeds to expenditure at some indefinite time in the future. In view of the postponement of many essential items of expenditure, the creation of a post-war fund has become inevitable. Annual contributions will be made from the revenue each year to the proposed fund. The Corporation will raise a loan of Rs. 40 lakhs in the next financial year; and judging from the great demand for the Corporation's loans in the giltedged market, any flotation is sure to be attended with success. General tax will be raised by 1% to 12½%, according to the Commissioner's proposal. The expenditure of Rs. 5 lakhs on the scheme for free supply of milk to children in Municipal schools deserves special mention.

Developments in the bullion market are very interesting. Since Friday last, the Reserve Bank has been offering 75,000 tolas of gold and 300 bars of silver daily and it looks as if the offerings will be maintained on this scale. The market, however, is very steady as may be seen from the fact that forward gold is quoting at Rs. 62-10 and forward silver at Rs. 114-8. While the premium in spot silver has narrowed, the premium in spot gold is still large at Rs. 1-4. However, it is fairly correct to say that the market does not derive its steadiness from any such technical factor as shortage of ready stock. There is no denying the existence of a very well-sustained and large demand for gold which sometimes goes upto 70,000 tolas daily. The Reserve Bank is not cutting the prices low, and at this rate of absorption of the precious metals, the present scale of offerings will not bring prices down. On one or two occasions, the Bank sold gold in excess of the amount for which tenders were invited. This policy has come in for some criticism on the ground that such sales aid the bulls.

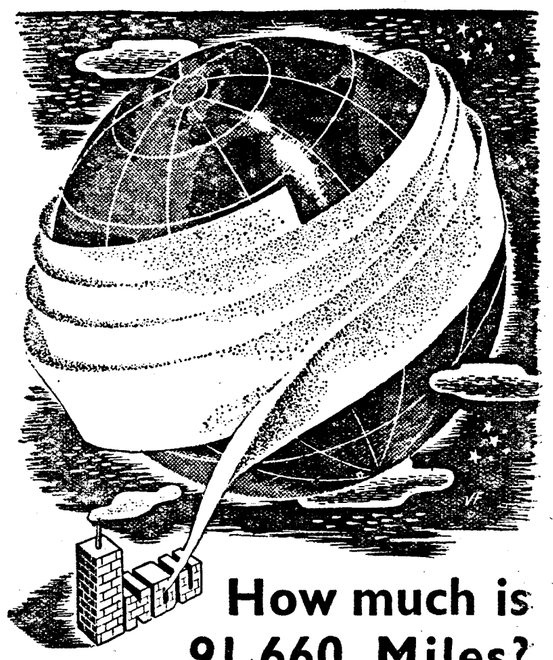
Airway Port

(From Our Correspondent)

Karachi, Nov. 8.

Sind commercial circles are still disturbed over the fate of the Foodgrains Syndicate. When there was a furore of criticism over the working of the Syndicate, the Premier Sir Ghulam Hussain gave an undertaking on the floor of the Assembly that he would abolish the Syndicate at an early date. No doubt, the Government have abolished one of the Syndicates, namely, the Foodgrains Exporters' Syndicate, but the other which is the combine of the three flour mills is still functioning. I understand that in the place of the Foodgrains Exporters' Syndicate the Government propose to bring into being another syndicate consisting of about twenty merchants. The Wheat Syndicate which has been allowed to function cannot claim immunity from the criticism levelled against the working of the Syndicate system. Huge stocks of several commodities such as rice, wheat and gram are still lying in the mofussil for want of a buyer and prices have gone below the floor rates or the economic levels fixed by the government. For example, the price at which the government is supplying gram to the mills at Karachi is Rs. 8-6 as. per maund, whereas the price in the mofussil is as low as Rs. 4-8as. per maund. Similarly, while the consumer has to buy wheat at Rs. 10 per maund in the rationed areas, in the mofussil, it is selling at Rs. 7 to Rs. 7-8 as. per maund.



The government control was professedly introduced in the interests of the consumers on the one hand and the growers on the other to ensure fair and economic prices to the growers and the supply of essential foodgrains to the consumers at fair and equitable prices. Again being in the position of monopolist buyers, constituents and agents of the Syndicate have opportunity to exploit the situation and make illegitimate profits and levy undue exactions. Sind being a surplus province, the government can manipulate prices to any level to the detriment of the grower. But that is not the way to encourage the grow more food campaign. The easiest thing to control the prices and ensure fair and remunerative prices to the grower is to make trading in the province free with ceiling prices fixed for all commodities in the interests of the consumers. Exports should be regulated up to the extent of the surplus and under permits from government. This will entail minimum supervision of the government who have now installed a complicated and expensive machinery.

The Hon. Mr. Somerset Butler, an officer of the Food Department of the Government of India is now in our midst to discuss with the local authorities the scheme prepared by the Government of Sind about the procurement and distribution of foodgrains. During his stay at Karachi, Mr. Butler will meet the Governor, the Premier and other officers of the Civil Supplies Department. The representatives of the Indian merchants' association will also meet him in connection with the government's contemplated move to form a board of merchants to substitute the abolished Foodgrains Exporters' Syndicate.

At a meeting of the superintending engineers, presided over by the chief engineer of Sind, a number of technical objections were raised over the question of the construction of a barrage for lower Sind. The meeting deputed the superintending engineer in charge of the scheme to investigate into the matter and submit his report of the various experiments performed by him.

On a representation of merchants and mercantile organisations in the Sind and the Punjab where huge surpluses of gram are lying undisposed of, the Government of India have removed restrictions on the movement of gram. Accordingly, the Government of Sind has removed restriction of the booking of gram from up-country stations to Karachi. It is estimated that 3½ lakhs of bales of gram are lying in Sind. A part of this is old crop. The internal consumption during the remaining four months after which the new crop will be harvested is estimated at less than one lakh of bags. The entire surplus should be exported as soon as possible, otherwise it is likely to be destroyed by weevil. According to the basic food plan, Sind can send gram only to South India.

American plans for subsidised export of cotton have made the local merchants nervous. They fear such a step would oust Indian cotton from the world market. In spite of the shortage of cotton this year and the quality not being up to standard, cotton prices are sagging. Only a month back, trading in new crop was permitted. 4 F then was quoting about Rs. 45 per maund, which today is quoting at Rs. 4 less. There is no demand at all in the ready market and the bears are hammering the forward without any compunction in spite of the fact that the floor rate for 4 F is Rs. 37-8as. Owing to serious damage caused by rain the yield this year is expected to be very small. On the basis of the present procurement level, the grower will hardly get his cost of production.

How much is 91,660 Miles?

It's nearly four times the earth's girth! To be exact, it is 3 2/3-times the circumference of the earth. All this tremendous length of cloth is produced annually by the India United Mills Limited—not to outdo the equator—but to clothe India's tinker, tailor, soldier, sailor, and all the teeming population.

Today, our mills are humming with war orders. The needs of the fighting services receive first consideration. As soon as Victory is won we shall go all out to meet civilian requirements. Remember, when better cloths are woven, "INDU" will take the lead.

Resume of Commodity Markets

The raw jute and jute manufactures markets have been slightly better though the undertone is still quiet and there is a general tendency to await further developments. The bullion market has been firm in spite of the offerings of gold and silver on a larger scale by the Reserve Bank. There has been an increase in the offtake. It is, however, felt that the ready position will be considerably easier in a short period and that the demand from the investing public might slow down. Active conditions continue to prevail in the piecegoods market and business has been restricted by the lack of adequate supplies. The recent restrictions in regard to the despatch of goods and the registration of dealers have slowed down deliveries. The cotton market was inclined to be firmer earlier in the period but the close has been quiet. The earlier strength of the market was due to large buying by a prominent bull operator.

The slightly better feeling in the jute market is due to the publication of the production figures for the month of October. The increase in mill output by more than 20,000 tons has given some encouragement to the market as it has given confirmation of the expectations of the trade that it would be possible for the industry to keep up production at 100,000 tons even with the restricted capacity of the industry if sufficient supplies of coal were available. The position in the coal industry is expected to improve to a great extent from the beginning of the New Year. The higher production figures have naturally led to a revision of the offtake figures which were originally placed at a low level. Total despatches from mill godowns during the last month have not been very much lower than the figure for September. In fact they are much higher than the figure for August though very much lower than the average for the first half of the year. If greater attention were paid to the effective utilisation of existing shipping space it is believed that conditions in the raw jute market would improve.

The policy of the jute mills in refusing to sell below the maximum rates has naturally come in for considerable criticism. It is pointed out that the mills have been trying to make a larger profit on their sales by pushing down jute prices and waiting for an opportunity to market their production at full rates when it was possible. It is said in defence of the mills that the insistence on maximum rates was due to the fear that there might be a slump in prices when they started discounting rates. The absence of minimum prices for jute manufactures is attributed as one of reasons that compelled mills to adopt a reserved attitude. It is happy to note that mills' fears have been exaggerated to a certain extent and this week's sales of "A" twills and other goods to the bazar at lower prices have not any great depressing effect. There was an initial decline in prices but the close has been firmer. If it were possible to effect large sales by offering a slight reduction in rates it would be very helpful under the present circumstances.

The raw cotton market has been steady during the past week. The earlier strength of the market was due to large buying by a prominent bull operator. As there was not much support from mills it was feared that bears would come out as sellers at any moment and the close was quietly steady.

There is considerable speculation regarding the future of Indian cotton. Much concern is being expressed at the U. S. proposal to subsidise cotton exports. It is feared that heavy subsiding by the U. S. Government might result in a slump in world prices and the Indian farmer might be hit badly. There is already a large carryover of short-staple cotton, the same having increased in the war period from one million bales to 4 million bales. Sir Purshottamdas has naturally objected to the latest proposals and said that it might result in the restoration of trade barriers and defeat the very object of the United Nations who are now taking steps to promote international trade in the postwar period. The case of the United States is understood but it is pointed out that there should be orderly liquidation of these accumulated stocks at prices which would not affect anyone country adversely.

The bullion market has been rather interesting during the past week. In spite of the large offerings by the Reserve Bank there has been an improvement in prices. The increase in the daily offtake to 150 bars has encouraged tenderers to offer higher rates so that the rate at which the Reserve Bank sold gold and silver in the latter half is actually more than a point higher. The effect of the larger sales has, however, been reflected in a smaller premium for ready. It is said that, with the continued offerings of gold and silver on the present sale, prices would come down.

The piecegoods markets in all centres have been firm. With the increased consumer demand there is a shortage of supplies and it is said there has been a considerable slowing down in deliveries on account of the

(Continued on page 688)

THERE'S MORE TO IT...

Perhaps you do not realise the amount of work and careful planning involved in the sending of parcels by the Indian Red Cross to prisoners of war. There's much more to it than meets the eye.

Special care is taken to ensure variety in these parcels which fall into two categories. Food, clothing and toilet requisites come under the heading "Material", while books, musical instruments and instructional matter are included under "Intellectual".

All nationalities, classes and creeds are catered for, and delegates visit the prison camps regularly to determine the needs of those in captivity.

Sent to neutral bases and distributed at regular intervals, these parcels help to ease the monotony of camp life and give our men something to look forward to.

We depend on your help to continue this vital service.

Please send your donation to the Hony. Treasurer, Indian Red Cross Appeal, Government House, Calcutta.

INDIAN RED CROSS

SPACE GIVEN BY THE IMPERIAL BANK OF INDIA

new restrictions. Demand for finer qualities is very great with mill production short of requirements. It is said that prices for coarser qualities should be reduced to increase their offtake and that a higher level of prices should be fixed for the finer qualities. How far it will be possible to increase the production of finer qualities to the required level remains to be seen.

The Government of India have amended Clause 14 of the Cotton Cloth and Yarn (Control) Order, 1943. Under the Clause as amended it will be an offence for any dealer to buy or sell or have in his possession after December 31, 1944, any cloth or yarn manufactured and packed before January 1, 1944. The Clause further lays down that any cloth or yarn whether manufactured in India or imported must be finally disposed of within 12 months from the last date of the month marked on the goods; no such cloth or yarn shall be kept in unopened bales after 6 months from that date.

(*Continued from page 682*)

Osborne did not have to learn much in strong language from Sir James. The due answer was given and the Bank Rate was reduced. In the letter that Sir James wrote complaining about this defiance, his real grouse seemed to be that Sir Osborne was more anxious to prove "Indian Finance" a correct prophet than desirous of accommodating the steward of India's finances. The reduction in the Bank Rate was the real cause of the quarrel that finally cost Sir Osborne's job. Even after this experience, I maintain that there is no excuse for postponing a considerable reduction of the bank rate.

I have narrated this episode firstly, to show the ingrained disinclination of financial authorities to lower the Bank Rate, and secondly, to emphasise that, if, on the present occasion, Sir Chintaman Deshmukh takes the initiative and proposes reducing the bank rate to two per cent, he will not find Sir Jeremy Raisman obstructive or unappreciative. The reduction of the Bank Rate is related to the further proposal I would like to make in regard to redemption of 3½ per cent Rupee Paper. Conditions today are ideal for undertaking replacement of 3½ per cent Paper by loans carrying 3 per cent interest and under. It looks as though a kindly Providence has brought together a concert and combination of the most auspicious circumstances for the success of such an operation. Never in the annals of the Government of India did they enjoy such affluent cash balances. The latest figure for the Central Government's deposits with the Reserve Bank is Rs. 207 crores. Deposits maintained by scheduled banks with the Reserve Bank are over Rs. 104 crores. The giltedged market is passing through a confident phase. Funds pressing for investment are plethoric. If the Government decide to give the required three months' notice to holders of 3½ per cent Paper and at the same time announce the terms of option for conversion into any one of the three loans, a 2½ per cent six-year loan, or a 2¾ per cent 12 year loan or a 3 per cent 18 year loan, there can be no doubt that the entire lot of 3½ per cent Paper (outstanding amount is Rs. 282 crores) will thus be converted. Even assuming the worst, not more than 25 per cent of the outstanding amount may elect to keep out of conversion. In other words, the Government may have to make cash payment for a maximum of Rs. 70 crores. This is a commitment which the Government of India can meet with the utmost ease. If Sir Jeremy Raisman and Sir Chintaman Deshmukh take action on the lines of my suggestion, it will constitute the most spectacular and the most triumphant conversion operation in the new loan history of the Government. An operation so epochal is today within the grasp of the Finance Member; and, as I said, Providence has been exceptionally kind and gracious in bringing about such a conspiracy of propitious factors. The opportunity is now and here ready to be grasped and availed of. I cannot help feeling that, if this opportunity so unique and so hundred per cent favourable is not taken full advantage of, it is incumbent on our financial authorities to explain to the public why they have chosen to miss this opportunity.

"EAVESDROPPER".

BEGINNING OF THE END

REMEMBER THESE NAMES?... Not very long ago they were headlines. The railway near DIMAPUR was threatened. The Indian garrison in KOHIMA was outnumbered and besieged. Japanese troops had entered the plains of Imphal and were north and south of BISHENPORE. UKHRUL was unsafe...

All this is ancient history now. The Japanese have been defeated and are on the run. To-day they are nowhere within 150 miles of Dimapur. The Nagas have returned to Kohima. Plans to rebuild this bullet-riddled and bomb-scarred hill-town are going ahead. Amongst the Bishenpore Hills lie the bones of Japan's self-styled "Invincible armies..." IT IS THE BEGINNING OF THEIR END. When you read this... think of the brave and gallant men who have made these victories possible.

OUR FORCES HAVE PROVED THAT THE "JAPANESE" ARE NEITHER DEMI-GODS, NOR UNBEATABLE SUPERMEN.

AAA 1308

ISSUED BY THE NATIONAL WAR FRONT

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, November 16.

Mill production in October shows the gratifying total of 92,755 tons, an improvement of 21,214 tons on the previous month's total, equal to 30 per cent. This reflects some improvement in coal supplies, rather more in quality than in actual quantity, and is the best monthly production since June. Of the total, 9,815 tons, or 10.6 per cent was on Government account, the largest percentage for some time. This was accounted for by a rise in the quantity of Sacking goods on Government account to 6,600 tons, which is higher than normal. The total quantity of Hessians turned out was 1,417 lakhs yards or 38,850 tons, of which all but 82 lakhs, or 2,800 tons was on Commercial account. Total Sacking produced amounted to 1,164 lakhs yards, or 50,517 tons, of which Government share was 150 lakhs yards or 6,600 tons.

Stocks having increased at the end of last month by 8,614 tons, it is apparent that despatches of goods from Mills amounted to 84,141 tons, which, while being better than the previous month by 11,500 tons, is still well below the level of despatches attained in June, July and August. It is however above the average recorded during season 1943-44, which was 80,000 tons. Average monthly despatches for this season stand at 87,400 tons, against an average monthly production of 83,700 tons, the capital production for the four months July to October being 334,700 tons.

The October production represents a consumption of 5,13,000 bales of jute which brings the season's consumption up to the end of October to 18,51.000 bales. We quoted estimated arrivals in the same period as 21,77,000 bales, so a margin of safety is being established between arrivals and consumption plus export. Analysis of the arrival figures for October, which were the best for many months, reveal a satisfactory increase in the amount carried by Rail, which at 15½ lakhs of maunds was better than any month recorded last season. The Railway authorities will probably claim this to be the result of their new regulations and if they keep it up, perhaps we may be persuaded that they are right. On that point we reserve judgment. Arrivals by river were also relatively good, being only beaten by two months' figures during last season. There is still however considerable complaint that the tonnage space available for river transport is not being utilised to the best effect, and the fault is neither that of upcountry shippers nor of Mills. It is reported that some 16 flats are held up at one important upcountry station loaded with foodstuffs and coal on Government or Military account and that discharge is only proceeding at the rate of two hours per day. The transport authorities lay down that shippers must load, and Mills must discharge jute at the rate of 4,000 maunds per day. It would be interesting to know if this rate of handling is applied to Government and military cargoes, and if not, why not?

We remarked above that the improved production recorded in October reflected some improvement in coal supplies. This is confirmed by the announcement a few days ago, that the Jute Mills Industrial Pool had paid its way for the month of October and actually showed a small surplus. This must be very satisfactory to the authors of the scheme, though there is still a large debit balance from previous months to be adjusted. We have not stressed the subject of coal supplies so much recently because it does not appear to be quite so vital a factor at the moment in the economy of the industry as the continued absence of overseas demand for Sacking goods. In fact, if supplies of coal during the last 3 months had been such as to permit of coal burning mills to work full out, the depression in the Heavy Goods market might have been much worse that it is even today. The shortage has in fact been almost a blessing in disguise, though by no means a satisfactory manner of relieving the industry of a worse market situation. Our suggestion, mooted in these pages last week, that Government would be better advised to buy Heavy goods, rather than jute, if they are forced into the market to support jute prices, has been criticised in that, to achieve the desired result, mills would have to undertake to buy jute against sales of Heavy Goods. We do not imagine for a moment that there would be any difficulty whatever in getting mills to guarantee the purchase, weight for weight, of jute against sales of gunnies. They have come to the assistance of Government before in buying specified quantities of jute under circumstances less favourable to themselves than would be the case in this instance. To secure sales, we believe mills would be only too pleased to buy the equivalent weight of jute against them. Further it is argued that minimum rates would have to be fixed for gunnies at which Government would buy, for when the Jute (Price Control) Order 1944 was promulgated last April, while both maximum and minimum prices were laid down for all grades of jute in deference to the desires of the Bengal Government, only maximum prices were fixed for manufactured goods. Whether this was due to confidence, unfortunately proved by events to be unjustified, in the strength of the market, is not known. But the fact remains. However, the relative minima in the case of Heavy Goods is easily enough arrived at and without elaborate calculations the minimum in the case of "B" Twills for instance should, on the basis of a two rupee margin between the maximum and minimum rate for jute, be approximately Rs. 6 below the maximum rate, that is Rs. 60-12 minimum against Rs. 66-12 maximum. Current Bazar quotations for "B" Twills stand at Rs. 58 to Rs. 58-8 well below the relative minimum, and for an altruistic purpose such as supporting the market for jute in favour of the cultivator, we do not quite see why Government, if asked to buy, should not buy at the most favourable rate available, even if it is below the minimum. In fact the whole theory is that Government should not interfere till prices are *below* minimum, and only to bring prices back to that level. In our opinion the mere announcement that Government were about to enter the market for Heavy Goods, would bring out not only local operators, but also most probably overseas buyers, and prices would immediately register a sharp advance and the market become stabilised at a better level. On the other hand, we cannot see the same results happening if Government purchases were to be concentrated on jute.

There has been little demand for Pucca bales either for export or for mills during the past week and balers would gladly accept business at well below minimum rates if this were permissible. It is in fact reported that inter-baler business has actually been done in Dundee Daisee 2/3 at Rs. 67-8 against the minimum export price of Rs. 75. This would indicate, and it is undoubtedly true, that the prices of baled jute relative to loose jute, were fixed at too high a level. Balers are now demanding that the minimum prices of bales should be reduced, though we heard no complaint to that effect when the market was standing at the maximum rates.

Further reduction in quotations in the absence of any important demand from mills, has to be recorded in Loose jute prices. European packing was done at Rs. 16 and Rs. 13 for Middles and Bottoms, but subsequently four annas less was accepted for Jat alone, and at the close business is reported in half Jat, half District, at Rs. 15-8 and Rs. 12-8, though there are not general sellers at that level. Supervised Jat sold down to minimum at Rs. 15 and Rs. 12 though a small premium is still available for Bottoms alone. Indian Jat has also been recorded at Rs. 15 and Rs. 12 with Bottoms alone at Rs. 12. In Indian District Tossa Rs. 15-6 and Rs. 12-6 was paid for shipment spread over February-June. Tossa Bottoms alone have been recorded at Rs. 12-8 and later at Rs. 12-4. Any enquiry from mills tends towards forward shipment owing to restricted storage space, whereas there is less temptation to sellers to accept minimum rates for forward delivery when what they want is to get rid of current stocks.

In the Fabrics section there is little change in hessians, where mills are generally well sold and only have monthy surpluses to dispose of. Mill quotations consequently remain at maximum though there is a report current that this has been broken by eight annas. Second-hand holders, however, are offering freely at a progressive discount as delivery goes forward. There was a small sensation in the Heavy Goods section when the first official break in the maximum rates by a mill was reported at the week-end. That was a sale of November-December Liverpools at Rs. 71 against the maximum rate of Rs. 75-6. Little else of interest has been reported, "B" Twills in the Bazar quoting from Rs. 57-8 to Rs. 58-8 according to the sentiment of the day.

JUTE

(By Our Staff Correspondent).

Calcutta, November 16.

The raw jute market has continued quiet though a slightly better feeling is noticeable with the publication of the production figures for the month of October. The falling off in imports in the mofussil centres has also arrested to a certain extent the downward movement though it cannot by any means said that prices would be maintained in the absence of any large increase in buying by mills. The general outlook is still uncertain and a government statement of policy is awaited. It is now felt that efforts should be made to improve exports as otherwise it will not be possible for mills to buy jute on a larger scale. The difficulty of mills in respect of godown space will be evident from the conclusion of contracts for the purchase of jute for month to month delivery till the end of June.

Arrivals in upcountry centres are on a smaller scale as ryots are busy on the harvest of the paddy crop. Prices are lower but they are still above Calcutta parity prices.

In loose jute section business has been on a restricted scale but last week's prices have been maintained. European packing Middles and Bottoms were done at Rs. 16 and Rs. 13 per maund while Supervised Middles alone were done at Rs. 15 per maund. Indian District Tossa Middles and Bottoms for month to month delivery till the end of June have been done at Rs. 15-6 and Rs. 12-6 per maund.

In the pucca bales section rather uninteresting conditions have been noticeable and no business of importance has been noted. Mills are reported to have purchased Lightnings at Rs. 74 per bale and Hearts at Rs. 68 per bale. Cuttings are still in demand and are quoting above minimum prices.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, November 16.

The important event of the week in the jute manufactures market is the willingness of mills to come out as sellers of heavy goods to the bazar at below market prices. There is a steadier feeling in the hessian market after the publication of the production figures for the month of October. It was not expected that it would be possible for mills to produce as much as 93,000 tons last month as there were reports that the steam-driven units were still having difficulty in respect of coal supplies and that only the foster mills were continuing production. No business has been reported with mills in hessians at below maximum rates. There are second hand sellers for both 9 and 11 Porters at a discount.

The sale of heavy goods, Liverpool Twills at Rs. 71 for November-December shipment, had at first a depressing effect but later there was a recovery. "B" Twills were better at Rs. 58-8.

The production figures for the month of October have been published during the week. Total production is 92,755 tons against 71,541 tons for the previous month. Sacking output was 50,517 tons against 39,917 tons and hessian 38,850 tons against 28,865 tons. Other manufactures were 3,388 tons against 2,759 tons. The increase in production by more than 20,000 tons was unexpected. There is therefore satisfaction that shipments during the last month have not been so unsatisfactory as was originally expected. The figures are given below:—

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS.*

A NEW JOB—WITH A FUTURE

Nature has bestowed upon you her richest gift—your heart's desire, your child is on its way.

Every father-to-be naturally wants a healthy happy baby; you should take steps now to ensure its safe delivery. Your wife, after seeing a doctor *early*, should attend a prenatal clinic regularly. In addition, make sure that every weapon known to medical science is fighting on your side, in the great battle against infant mortality.

When you see your baby, chubby and contented, sleeping peacefully in his cot, consider for a moment your big new job—that of being a father. This job has a Future—a very important one.

Now is the time to make sure that, no matter what happens in the years to come, your child's education and career will not suffer. Our Agent will gladly advise you in these matters.

EVERY RUPEE SAVED NOW...

will buy more when the war ends. With prices as high as they are today it is plain commonsense that you are getting bad value for your money. Besides, remember that prices are falling. Compare the prices of cloth, foodgrains, medicines etc. a year ago with prices today. The wise man saved his money and can now buy cheaper than before. The wisest thing of all however, is to save all you can now in order to get twice as much for your money when peace returns.

Be sure that the money you save is safely invested. Jewels, Land, buildings, manufactured goods and commodities are bad investments these days. Their prices are abnormally high and you will certainly find one day that they are coming down.

For security and fair return put your money into Government Loans, National Savings Certificates, Insurance, Co-operative Societies, Post-Office Savings Bank or a Savings Bank Account

Stock Markets to-day and to-morrow:

IRREGULAR MARKETS

The Calcutta Stock Exchange seems to have struck a rather bad patch. Business passing is very small and there is very little speculative interest. There were no important fluctuations in prices earlier in the week, but in Friday's session a quieter feeling is noticeable and the speculative counters have lost ground. The easier tone of the market has been due to the uncertainty regarding the future of the jute industry. It was expected that higher Bombay advices would have a stimulating effect on the Calcutta market. There has been a sharp rise in Textiles issues in Bombay on the hopes that the changes in prices and the revision in production schedules would result in an increase in earnings. It is also felt that with the ability to effect sales of cotton textiles at ceiling prices and with lower cotton prices mills earnings might be maintained at high levels.

With the continued strength of the Bombay bullion and stock markets the Calcutta market cannot remain idle for long. The technical position will get adjusted and the stage for the next rise will soon be set.

* * * *

The statement issued by the Burrakur Coal Company at the half-yearly meeting of the shareholders shows on the part of the Directors both a consciousness of something to explain and an anticipation of opposition from the general body of the shareholders. As pointed out in the Directors' report on the accounts for the half-year ended June, 1944 the Chairman naturally laid emphasis on the heavy incidence of taxation on the company's earnings owing to the low standard profit basis on account of the Loyabad disaster and the depression in the coal trade. It is said that the heavy tax provisions prevented any large increase in the ordinary dividend and that the taxation provision in future years might even be higher as the deficiency in earlier years had been fully utilised. With the improved prospects for the industry and the increase in raisings one is left with the impression however that the directors have been unduly pessimistic in the estimate of future earnings and that they have been over-anxious to strengthen the financial position of the company which is already sound. The shareholders would not possibly like to draw any comparison between the working results of similar concerns but they would have been immensely satisfied if the available earnings were distributed to the shareholders. Compulsory deposits and possibility of tax refunds are other ways of strengthening the position. A transfer out of the profits for the last half-year to the Dividend Equalisation Fund will not have equal appeal to Directors and to Shareholders. There is an increase in the sum carried forward by over Rs. 11,000. If this sum had been utilised in the payment of ordinary dividends it would have been possible to pay an additional 1¼ per cent. for the half-year without any difficulty, making the total distribution 7½ per cent.

* * * *

The results of the *Howrah Mills Company, Limited* for the half-year ended September, 1944 seem to have had a depressing effect on the market.

It was at first expected that it would be possible to report higher earnings and pay a larger ordinary dividend. When the dividend was only maintained at Re. 1-12 per ordinary share, there was some disappointment. But it was felt that earnings would have been maintained at the previous levels. The accounts now available, however, show that the net profit before providing for depreciation and taxation is Rs. 32,91,077 against Rs. 43,58,175 for the previous six months. The mills have been able to work throughout the period, but working expenses have been higher so that even with an increase in sales to Rs. 2.12 crores from Rs. 1.86 crores, earnings are lower. The provision for taxation is Rs. 22.55 lakhs (Rs. 30.05 lakhs) while the transfer to Reserve for E.P.T. Deposit is Rs. 4.85 lakhs (Rs. 8.20 lakhs). The dividend has been maintained at Re. 1-12 per share. The amount carried forward is not very much changed at Rs. 1,08,000.

* * * *

In the last two years many companies under foreign management have changed hands to Indian owners. The acquisition of these undertakings have been possible only due to the attractive prices offered but the legacy of efficient management, the prospects of a high level of earnings for several years and useful employment for surplus funds have created a new set of conditions which give every encouragement to the entrepreneur. One of such concerns is the *John Paterson & Company (India), Limited*. Till recently it was a private limited company with the main interest in the hands of Paterson Brothers. This Company was registered in this country in 1926 and has since been carrying on the business of manufacturing chemists, and manufacturers of soap, oil, grease, insecticides, washing disinfectant fluids etc.

The profit for the year ended March, 1944, before providing for taxation and depreciation, is Rs. 76,582 against Rs. 70,814 for the previous twelve months. The earnings for the latest accounting period would have made much better showing but for the increase in costs of production. Actually, sales are very much higher at Rs. 6,22,300 against Rs. 5,05,517. Cost of goods manufactured at the same time have increased to Rs. 5,06,334 from Rs. 3,99,982. The sum set aside to taxation is Rs. 36,466 (Rs. 23,624). The dividend payable is Rs. 3-12 per share. On the last occasion Rs. 40,000 (nil) was transferred to General Reserve.

The earnings of the Company would appear to be fairly high in relation to the paid-up capital of Rs. 1,05,750. The balance-sheet position is sound. The block of over Rs. 1.5 lakhs has been completely written off. Stocks were Rs. 1,05,394, Sundry debtors unsecurred Rs. 57,189 and deposits Rs. 40,900. Cash on hand is Rs. 53,036. Sundry liabilities are Rs. 90,430. There is thus a strong liquid position.

In addition to the manufacture of concentrated commercial clensel, domestic clensel and insecticides the Company has already started to produce bar soap and toilet soap at a reasonable price. With the expansion in the activities of the Company and the high level of standard profit (Rs. 92,000) it should thus be possible to pay even higher dividends.

SPURT IN TEXTILES

(By Analyst)

BOMBAY (*By Wire*).

The Gilt-edged market is firm with 3½ per cent paper at par. Rumours of course persist that the bank rate is likely to be reduced though on enquiries I find there is no truth in this rumour. Looking to the credit of the Central Government it will be possible for them to reduce the bank rate and at the same time pay off 3½ per cent paper. In which case I visualise a boom in the gilt-edged market.

Textiles in Bombay had a spectacular rise on Thursday with *Dyeing* touching Rs. 1,810, *Kohinoor* Rs. 603 and *Swadeshi* Rs. 555/-. Even neglected scrips like *India United* Ordinaries and deferreds were done upto Rs. 15/10 and Rs. 3/4/6 respectively. *Apollo* were better at Rs. 4/6.

Madras also followed suit, and a scrip like *Sitaram* was done at Rs. 185 buyers. *Mettur Industries* closed at Rs. 285, *Madura* at Rs. 68 and *Buckingham and Carnatic* at Rs. 310. I look for a further rise in all textiles. *Sri Krishnarajendra Mills* of Mysore changed hands around Rs. 66/12. I feel these shares are cheap at current market levels particularly in view of the fact that there is no excess profits tax in Mysore State. My favourite scrips, *Azamjahi* and *Osmanshahi* have moved up to Rs. 535 and Rs. 320 on the eve of the dividend announcement. I look for a rise.

Last week, I had recommended *Rampur Maize Products*. The shares after touching Rs. 47/8 declined to Rs. 46 and are now steady at Rs. 46/4. Delhi reports that the company has declared a dividend of Rs. 3 per share. I still continue to recommend investment purchases.

Associated Cement, of course, have been sticky around Rs. 241/8 but I would prefer accumulation.

In the Bank section, *United Commercial* were firm around Rs. 87 on genuine investment enquiry. *Central Bank* have forged ahead to Rs. 86. *Imperial* fully paids and partly paids were also in request around Rs. 2,017/8 and Rs. 510 respectively. *Jaipur* were in good demand up to Rs. 71/8. In the insurance section, *New India* were steady at Rs. 85. Sometime ago there were rumours that *Empire Life* is changing hands. But I now hear that the deal has not been put through and the old management will continue to be in charge. The shares closed lower to-day at Rs. 1,045.

Mysore Paper has come out with a disappointing report and with a dividend of 5 per cent. It is true that the result is disappointing but looking to the number of days that the mill was at work I consider the results quite satisfactory. Looking to the future I would even recommend purchases at the current price of Rs. 23/- c.d.

Among Planting issues in Madras, *Kalpetta Estates* were in good investment enquiry around Rs. 43. The dividend for the year ended 30th April, 1944 will be around Rs. 3/- free of tax. Investment purchases may be made.

HOWRAH MILLS COMPANY, LIMITED.

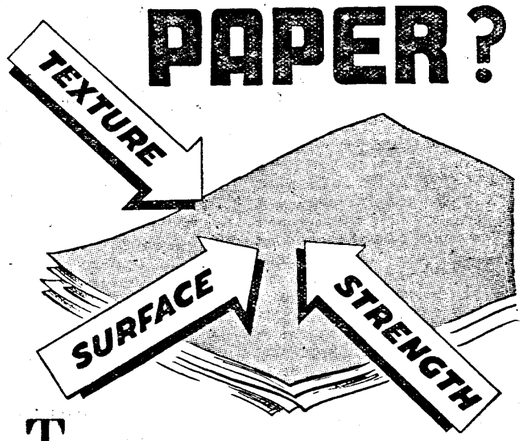
NOTICE is hereby given that the One-hundred and eighth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No.4, Clive Row, Calcutta, on Friday, the 8th December, 1944, at 12 O'clock noon, for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1944.

(2) To declare Dividends.

(3) As special business, to consider and if thought fit to pass, with or without modification, the following resolution, namely:—

"That in compliance with the recommendation of the Committee of the Indian Jute Mills Association that the Company contribute to His Excellency the Governor of Bengal's Red Cross and St. John's Ambulance Appeal on the basis of Rs. 7-0-0 per loom, the Directors be and they are hereby authorised to make a donation of Rs. 13,580/- to the said fund from the assets of the Company."



(4) To transact any other business that may be brought before the meeting.

The Share Transfer Books of the Company will be closed from 17th November to 8th December, 1944, both days inclusive, and it is notified that Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares under blank transfer are advised to effect registration of scrip to their name as soon as possible, but not later than 16th November, 1944.

By order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 31st October, 1944.

HOW DO YOU JUDGE PAPER?

The Master Printer knows how to select his paper for a particular job. Not so the layman and yet he needs good paper. Surface, Texture and Strength determine the Quality of paper. It is not true that a smooth surface is necessarily better than a rough one or that a particular texture is superior to another or that the stronger the paper the better it will be, under all circumstances. It all depends on the nature of the job for which the paper is required. It is possible to-day, with the highly developed modern machineries, to manufacture paper to suit every purpose.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 17.

Rather quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week. Business is very restricted and with very little outside interest prices were fluctuating around last levels in the first two days. The reopening this morning has been rather quiet and prices have been marked lower for the speculative counters. In spite of the firmer tone of the Bombay market Calcutta operators are inclined to await further developments. Indian Irons have been marked lower at Rs. 37/14, Steel Corporations at Rs. 31/8 and Howrahs at Rs. 81/2. The general undertone is quietly steady.

The giltedged securities section has, however, been firm and business has been restricted only by the scarcity of sellers. 3½ per cent. Paper has been quoting for the most part of the week above par and there are good buyers at the lower levels. Short and medium-dated loans were in good request with 3½ per cent. 1947/50 four annas higher at Rs. 104-2 and 4½ per cent. 1955/60 at 116-12. 3 per cent. 1951/54 were Rs. 101-2. Among long-dated loans, 3 per cent. 1963/65 were Rs. 99-5 and 3 per cent. 1966/68 Rs. 98-5. 5 per cent. 1945/55 were steady at Rs. 103-10. Easy conditions continue to prevail in the money market though there has been a slight hardening in the discount rate on treasury bills to seven annas and eleven pies per cent per annum.

Cotton shares were firmer in sympathy with Bombay but the tone at the time of writing is easier, *Cawnpore Textiles* being quoted Rs. 13-12 after being higher at Rs. 14, *Elgin* were Rs. 66. *New Victoria* were firm at Rs. 8-6. *Dunbar Cotton* were Rs. 267.

Jute shares have been quiet with the continued uncertainty in the jute and jute manufactures markets. *Anglo-India* were Rs. 445, *Champdany* Rs. 245 against Rs. 255 and *Clive* Rs. 52 against Rs. 54. *Howrah* are now quoting Rs. 81-2 against Rs. 83 on Wednesday. *India* were Rs. 692, *Kamarhatty* Rs. 644 and *Presidency* Rs. 10-4. *Nuddea* were two points lower at Rs. 126-8.

Coal shares were irregular with *Bengal* at Rs. 640 and *Bokaro and Ramgur* at Rs. 39-6 ex-dividend. *Burrakur* were Rs. 39-12 and *Equitable* Rs. 62-10. *North Damuda* changed hands at Rs. 11-8 and *Talcher* at Rs. 10-1. *South Karanpura* were not very much lower at Rs. 21-8. Among the lower-priced shares, *Bhalgora* were Rs. 15-5, *Jainty Central* Rs. 7-9 and *Parasea* Rs. 11-6. *Deoli* and *Raneegunge* have been outstanding with a rise to Rs. 15-12 and Rs. 52 respectively.

Engineering shares have been fluctuating in narrow limits. *Indian Iron* were a shade better earlier in the week at Rs. 38-6 but are now lower at Rs. 37-14. *Steel Corporation* were Rs. 31-10. *Burn & Co.* were Rs. 412 and *Kumardhubi Engineering* Rs. 11-4. *Braithwaite & Co.* were Rs. 11-12. *Marshall* Rs. 4-8.

Sugar shares have been rather weak with *Balrampore* at Rs. 16-5, *Carew* at Rs. 28-3 and *Belsund* at Rs. 15-15. *Cawnpore* were quoted Rs. 38-2 and *Purtabpore* Rs. 23-12. *Ramnugger Cane and Sugar* were Rs. 12-14.

Tea shares continued to be in good demand in spite of the general apathetic tone of other sections. *Hasimara* were in good request at Rs. 76-4, *Bishnauth* at Rs. 42-4 and *Tezpore* at Rs. 20-8. *East India* were Rs. 6-2 and *Patrakola* Rs. 1,210. *Patrakola* were lower at Rs. 1,210.

In the Miscellaneous section, *Burma Corporation* were sticky at Rs. 4-9 and *India Copper* at Rs. 3-2. *Dalmia Cement* also were steady at Rs. 16-13 and *Alkali Chemical* at Rs. 30. *Britannia Biscuits* were unchanged at Rs. 25-12, *B. I. C.* at Rs. 6-8. *Humayan Properties* ordinaries and deferreds came in for greater attention and the quotations were higher at Rs. 16-12 and Rs. 4-6 respectively. Among Paper shares, *Orient Paper* were Rs. 28-8, *Titaghur Paper* Rs. 27-12 and *Mysore Paper* Rs. 23-4. *Midnapore Zemindary* were Rs 164 and *National Insulated Cables* Rs. 12-13.

No transactions have been recorded in public bodies debentures. Among preference shares, *Bally* were done at Rs. 193-8 cum-dividend and *Cheviot* at Rs. 192. *Clive A* were Rs. 177 and *Hastings* Rs. 171-8. *Kamarhatty* were well held at Rs. 172-8 and *Reliance* at Rs. 195. *Burn & Co.* six per cent preference were dealt in at Rs. 164 and *Cawnpore Sugar* Rs. 217.

WORLD OF INDIAN FINANCE

Calcutta, Friday evening.

Call money is quoting ½ per cent. in Calcutta and ¼ per cent in Bombay. There is no important change in the conditions in the money market though it would appear that there has been slightly more demand for funds. As was pointed out last week the offer of treasury bills by two provincial governments has resulted in a sharp decline in the amount of applications against the Central Government's offer to Rs. 9.61 crores from Rs. 17.74 crores last week. The poor response, however, has not resulted in any big rise in the discount rate which is only one pie higher at eight annas per cent per annum. The Madras and Bengal Governments got their requirements at nine annas per cent per annum, a very satisfactory rate indeed. The Central Government's offer has been maintained again at Rs. 6 crores.

There has been no expansion of currency in the week ended November 17 and total notes issued are only slightly lower at Rs. 980.96 crores with the decrease in the amount of rupee coin to Rs. 12.38 crores. Notes in circulation, on the other hand, are higher at Rs. 973.19 crores against Rs. 972.23 crores. There is a corresponding decline in notes held in the banking department.

In the Banking department Central Government balances have sharply improved to Rs. 219.79 crores from Rs. 207.37 crores due to the further receipt of sterling from the British Treasury and, perhaps, large receipts from tax-payers. Other Government accounts show an increase of more than Rs. 1 crore to Rs. 6.63 crores. In the course of two weeks bank balances with the Reserve Bank have declined by nearly Rs. 1.6 crores. The increase in advances and the decrease in Imperial Bank's deposits must have been responsible for this big drop. Other deposits are appreciably higher at Rs. 10.12 crores against Rs. 7.67 crores. Balances held abroad show an increase of Rs. 9.8 crores to Rs. 322.11 crores.

The statement of the Imperial Bank for the same week shows a reduction in deposits after a considerable time by Rs. 2.4 crores to Rs. 238.4 crores. The investment portfolio, however, has further increased by Rs. 1.4 crores to Rs. 150.83 crores. Total advances are lower by Rs. 30 lakhs at Rs. 57 2 crores. The decrease in deposits and the increase in Investments has naturally been reflected in lower cash balances, the latest figure being Rs. 40.47 crores against 43.8 crores at the end of the previous week.

The return of Scheduled Banks for the week ended November 10, reveals an increase in advances by Rs. 3.6 crores to Rs. 201 crores. But there is a slight decline in demand liabilities to Rs. 613.55 crores from Rs. 614.3 crores. Time liabilities, however, are again higher by Rs. 80 lakhs at Rs. 198.27 crores. As the decrease in demand liabilities has been offset by the rise in Time liabilities and as advances have improved by only Rs. 3.6 crores the reduction in total cash balances by Rs. 8.6 crores, Rs. 130.83 crores against Rs. 139.41 crores, must be explained only by further investments in Government loans.

Inspite of the continued selling by the Reserve Bank of large quantities of gold and silver, bullion prices have remained firm and are now quoting at the highest levels for some time. It is rather surprising that the market should absorb so easily daily sales of 75,000 tolas of gold and 300 bars of silver even after the total sales by the Reserve Bank aggregating nearly 140 crores. The behaviour of the silver market, especially, during the week is intriguing, as it was reported earlier that the new supplies of white metal had considerably eased the ready position. It is said that the recent rise in prices is due to the manipulations of a bull clique. The Reserve Bank seemed to have control on the market when daily sales were only 30,000 tolas of gold and 100 bars of silver. It will be remembered that there was a decline in the quotation for gold to below Rs. 60 and for silver to Rs. 112-8 when sales were increased to 50,000 tolas of Gold and 200 bars of silver. It was feared that there might be a further slump in bullion prices. There was in fact an initial decline in values. But it proved to be only temporary and the authorities were obliged to increase sales to the present level. It is now more than ten days since the Reserve Bank started selling daily 75,000 of gold and 300 bars of silver and with the present tone of the market there is no indication of an early decline in prices. It is not clear as to how long the Reserve Bank can continue to sell on the present scale. It is very important that no cornering of available stocks should be allowed. If necessary, the present method of selling on the basis of tenders should be revised. Even if this change in the selling policy does not have the desired effect the necessary amendments should be made to the rules regarding the conduct of business on the bullion exchange.

The Exchange market has been steady with a few export bills showing. It is reported that banks have increased the buying rate for dollars by ½ per cent.

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 21st November, 1944. Total amount offered was Rs. 9,61,00,000 Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 62 per cent. Total amount accepted was Rs. 6,00,00,000, the average rate of accepted tenders being Re. 0-8-0 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 29th November, 1944 in Calcutta upto 11 a.m. (Standard Time), and up to the close of business on Monday, the 28th November, 1944 at other centres. Successful tenderers should make payment on Friday, the 1st December, 1944. Other conditions are as usual.

During the week ended the 17th November, 1944, Government of India Treasury Bills for Rs. 1,10,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Madras:

Tenders for Rs. 1,00,00,000/- (Rupees one crore only) of three months' Madras Government Treasury Bills were opened on Wednesday, the 22nd November 1944. Total amount offered was Rs. 3,10,00,000/- (Rupees three crores and ten lakhs only). Tenders at Rs. 99-13-9% were allotted approximately 87 (thirty-seven) per cent. Lower tenders were rejected. Total amount accepted was Rs. 1,00,00,000/- (Rupees one crore only), the average rate of accepted tenders being Rs. 0-9-0 (Annas nine only) per cent per annum.

Nationalisation of Electric Supply

Though nationalisation of certain kinds of public utilities has long been a part of established public policy, there have been of late instances of regrettable vacillation in the face of opportunities for further application of this policy. Even the Government of India, which originated this policy decades ago, was found before the war to lack alacrity in terminating the contracts for company management or completing the State ownership and management of the Indian Railway system. In the conditions of the war period, with their need for repatriation of the sterling obligations of the Government of India, the programme is virtually completed. One would think that with the example and the experience of the Centre before us, provincial governments and municipal authorities will be quick to avail of the opportunities of extending the policy to other spheres to which it is suitable. Calcutta has two large public utility undertakings, both of which are sterling companies, and the contracts in both cases provide for their acquisition by public authority. But neither the Corporation of Calcutta in its dealings with the Calcutta Tramways nor the Government of Bengal in their relation to the Calcutta Electric Supply Corporation has shown marked enthusiasm for the nationalisation of these two vital services or correct appreciation of the issues involved. As we have hinted already, public policy in this regard has gone far past the stage of academic discussions of the pros and cons of nationalisation. And if, in the case of ownership by a provincial government or a municipality, the danger of inefficient or corrupt management are more considerable than in the ownership of the Railways by the Central Government, it is only another problem to be faced and not an argument for reversing the trends of established policy. No one in authority can forget that we are on the eve of planned efforts at comprehensive economic development and that in the forthcoming period of economic planning a wider orbit of State ownership and control is to be reckoned as a great advantage.

In the case of the Calcutta Electric Supply Corporation the Government of Bengal made a bad start by calling for a report from a firm of consulting engineers who are also consultants of the Calcutta Electric Supply Corporation. With the best will, the firm can not eradicate from its mind an unconscious bias in favour of one of its valued customers. And it would be surprising indeed, if the report were found to be a great help in furthering the Government's purpose of acquiring the business from its present proprietors. Though the terms of reference of the Government of Bengal laid due emphasis on the Government's decision to nationalise electrical undertakings in Bengal, this objective, which is, in fact, a guiding principle, does not appear to have weighed with the experts as much as it should.

What, on the other hand, seems to have been a decisive consideration for the consulting engineers and to have turned their mind from nationalisation of electricity in Bengal is the multiplicity of the licenses which the Calcutta Electric Supply Corporation is working under and the varied terms in those licenses as regards the dates on which the State could exercise the option of purchase. A further complication in this regard is that, while the Calcutta Electric Supply Corporation is working under as many as fourteen licenses, the generating stations and other assets do not lend themselves to be divided into the parts which may be said to pertain to each of these particular licenses. While this is undoubtedly a serious complication from a practical point of view, it can hardly constitute a reason for surrendering a vital point of public policy. The point to take careful note of in this connection is that it is the Calcutta Electric Supply Corporation that is responsible for this complication. The Company should have known that under the contracts under which it is functioning the various licenses expire at different dates. This fact, far from nullifying some of the terms of these contracts, only imposes on the Company the duty so to plan their development that they can readily and easily earmark the assets for each separate license as and when the license comes up for the exercise of option. If the Calcutta Electric Supply Corporation omitted to take this precaution, it cannot expect to be rewarded now by a further long extension of its license. One should rather say licenses, for the tangle, which is apparently a powerful argument for extension will remain when the next license will fall due and the next option will call for exercise. It is for the Calcutta Electric Supply Corporation to find ways and means of finding a solution for the complication it has itself created.

The option must be exercised because it is in line with the policy now followed throughout India in the case of all public utilities. Since 1924, it is the settled policy of the Government of India to exercise option of purchase in the case of several railways which hitherto had been company-managed. In the case of telephone companies, the Government exercised the option to purchase, and the telephone service throughout India today is nationalised. If, in the case of the license of the Calcutta Electric Supply Corporation, such option is not exercised, the Bengal Government will be effecting a momentous departure and will therefore have to explain to the public the special reasons for failing to do what has been done throughout India in the case of public utilities.

Much has been made of fairness due to the Calcutta Electric Supply Corporation from the point of view of the value of their licenses which expire only in much later years. The determination of these licenses on dates earlier than the dates specified therein should not present any insuperable difficulties. In the case of the M. S. M. and S. I. Railways, the contracts with the Companies were terminated earlier than the due dates; and a suitable formula was found for the purpose which was satisfactory to both parties. Another relevant instance is that of the holders of India sterling stocks who were paid off at dates earlier than the dates of the maturing of the loans. In the case of the sterling loans, the British Government issued an order that the holders will be paid off on the basis of the rates at which the loans were quoting in the market on the eve of the order. In connection with sterling debt repatriation, the war time regulations made it possible and practicable to terminate contracts, at earlier than the specified dates, so far as holders of sterling loans and railway Companies are concerned. It is difficult to say why the same war time regulations could not be availed of for a similar purpose in the case of the Calcutta Electric Supply Corporation. Such earlier termination in the case of sterling loans and Company-managed railways was justified as facilitating sterling debt repatriation. In the case of the Calcutta Electric Supply Corporation also, the same argument of sterling debt repatriation is equally valid. By the Bengal Government exercising option with regard to all the licenses of the Calcutta Electric Supply Corporation, they will be responsible for an operation which involves repatriation of sterling capital for a considerable amount; and this operation of sterling debt repatriation will be in conformity with the settled policy of the Government of India.

The consulting engineers have not apparently appreciated the necessity to consider the case of the Calcutta Electric Supply Corporation in a setting of war time regulations as well as in relation to the plan and programme of sterling debt repatriation. It was beyond the terms of reference of the consulting engineers to have considered the matter in this light. But, so far as the Bengal Government are concerned, this is a point of view which must have special significance. Viewing the matter in this light, this question is one which needs to be discussed between the representatives of the Bengal Government and the Finance Department of the Government of India. So far as the Government of India are concerned, they will firstly be able to proffer advice as to the lines on which the termination of the license is to be effected analagous to the termination of the contracts, of sterling loans and Company-managed railways; and secondly, to find all the sterling that is necessary for putting through the operation.

It is then for the Bengal Government to raise, by way of loans, the amount necessary to pay the Indian Government for the sterling they provide. It is difficult to say at this stage precisely what will be the total of rupee finance which has to be raised for the conversion of Calcutta Electric Supply Corporation into a rupee undertaking and a national undertaking. The amount cannot be more than Rs. 10 crores. It is definitely possible for the Bengal Government to raise Rs. 10 crores from the Indian capital market on a 3 per cent basis. If the Calcutta Electric Supply Corporation is thus nationalised and if the finance for this nationalisation is found on a 3 per cent basis, the Bengal Government will find that, as has happened in the case of the telephone companies and the railway companies, this plan of nationalisation turns out to be substantial revenue-earning project. If the license in the case of the Calcutta Electric Supply Corporation is given extension as proposed by the consulting engineers, it is as good as postponing nationalisation of electricity in Bengal for decades.

The Government of Bengal will do well to realise that, both from the point of view of their own finances and from the point of view of Bengal's economic development, they cannot do better than fall in line with States like Mysore and Provinces like Madras, Punjab and the United Provinces. In all these cases, nationalisation of electricity, far from providing detrimental to the interests of the State, has facilitated rapid strides of progress. In just over a decade, electrical development in the Madras Presidency, planned and worked out as a department of the Government, has been so successful as to cover the entire presidency with a network guaranteeing wide distribution of power supply. Equally striking is the progress in the Punjab and the U. P., the speciality in this case being the utilisation of electric power for agricultural purposes. Mysore was the earliest Government in India to instal hydro-electric power under State auspices; and there is no part of India so highly developed from the point of view of the use of electricity both for industrial and agricultural purposes. On the other hand, Bombay is almost the only instance in India

where a Province has left the exploitation of electricity to private enterprise. There are three joint concerns developing power from hydro-electric source. But here, while most of the important towns are electrified and the Western Presidency has a high record in the utilisation of electric power for industry and urban life, no development has so far taken place with regard to pressing electricity into service for agricultural purposes.

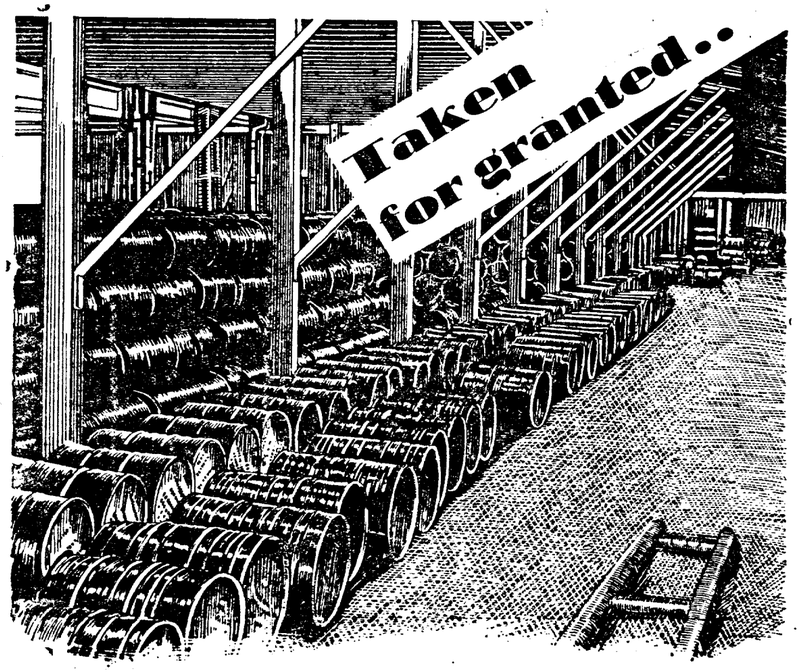
A comparative study of the electrical development in the various provinces in India from the point of view of State enterprise versus private enterprise brings out the conclusion that, if electricity is to be pressed into service in every way possible, the only way of achieving this result is nationalisation. The present Government of Bengal need have no doubt that when their predecessors arrived at the conclusion that nationalisation of electrical undertakings is in the best interest of the province, they did so after the most careful consideration. If the reports of the consulting engineers be adopted, Bengal will not have any nationalisation for at least another generation.

The right guides in this matter are not the consulting engineers in London, but the Finance Department in Delhi. The quickest, the fairest and the most satisfactory way of dealing with this question of the licenses of the Calcutta Electric Supply Corporation can be found in the light of the recent experience of the Finance Department of the Government of India who have, by this means of terminating contracts before maturity, repatriated sterling debt for nearly £400 millions.

Postwar Irrigation

A few of the salient features of the Postwar Irrigation Plan can be gathered from some of the recent statements of Sir William Stampe, the Irrigation Advisor to the Government of India. Addressing the Institution of Engineers (India) at New Delhi a fortnight ago, the Irrigation Advisor had many interesting things to say regarding the problem of irrigation and food supplies in India. The population of India is increasing at the rate of five million per year and more than 150 million people require additional ration of 4 ounces per head per day. The need for foodgrains is great, and Sir William estimated that the combined effect of swelling population and deterioration in nutrition can be tackled only by increasing the supply of food grains by one million tons on the first account and seven million tons on the second, the target to be aimed at being eight million tons. He expressed the opinion that about two million tons of this target figure should be obtained by increase in yields secured from adequate chemical fertilisation and other methods of improving agriculture, while five million tons should be secured as a direct result of improvement of irrigation. He lays down that 20 million acres have to be brought under irrigation if this target is to be hit. An increase of about two million acres within three years is envisaged by the adoption of tube-well irrigation.

The tube-well system of the United Provinces, he pointed out, worked satisfactorily and the U. P. Government are vigorously extending it with the aid of grants from central funds. There were in 1935-36 400 tube-wells working in the U. P. serving 50,000 acres Kharif and 120,000 Rabi; but in 1942-43 the figure of tube-wells rose to 1,700 covering 200,000 acres of Kharif and 440,000 Rabi. The remarkable success achieved by the tube-well system in the U. P. has to be adopted in other parts of the country wherever possible. It is also interesting to note Sir William referring to the Saraswati river "as the basic source of all the deep well water required for cultivation in the plains above." The cross sectional area of the Saraswati appears to be about 148 million square feet, while its "underground discharge may well be of the order of 125,000 cusecs as against 5,000 cusecs, the minimum surface flow of the Ganges at Hardwar." The possibilities of this river, therefore, are undoubtedly great for serving postwar Indian agriculture. Sir William also emphasised the need for using hydro-electric power for tackling water-logging and pointed out that large scale aerial reconnaisance schemes should be undertaken on the model of the measures taken by the Tennessee Valley Authority in the U.S.A.



Speaking at a press conference at Delhi last week the Irrigation Advisor revealed that the Government of India had undertaken emergency irrigation schemes calculated to increase the area under food crops by about 3.3 million acres. These schemes would be put into operation only at the end of 1946 owing to the shortage of equipment and skilled personnel. The Provinces and States are known to be evolving their own irrigaonal plans to be submitted to the Government of India for proper coordination and action; but, excepting some meagre information about the irrigation projects of Madras, Sind and the U. P., the public are not aware of any details regarding the schemes that would be put through just after the war in different parts of the country. Sir William stated that projects covering 5,72,000 acres are under construction while projects covering 12,24,000 acres are under examination. The emergency irrigation schemes would cost Rs. 588 lakhs but nearly 4 lakhs tons of additional crop would be raised for the public benefit. The Centre, it appears, has agreed to subsidise the schemes to the extent of Rs. 44 lakhs.

Perhaps the most notable contribution of Sir William Stampe to postwar planning in India is the definite emphasis he places on regional planning, as against the planning conducted by the administrative units of Provinces and States. The enormous advantage of planning on a regional basis have been brought out in the actual working of the Tennessee Valley programme in the U.S.A. As in agriculture and industry, in irrigation too, the best method of exploiting the water resources of India would be one based on regional planning. The vast potentialities of the power resources of the Sone Valley in helping irrigation, drainage and industries in the U. P., Western Bihar, North Central Bihar and North Central Provinces have been emphasised by Sir Ardeshir Dalal recently; and it appears that the U. P. Government are now contemplating the institution of a Sone Valley Authority modelled on the T.V.A. The Government of India have not yet evinced keen interest in planning agriculture and industries on the basis of the great river valleys in different parts of India; but as an expert who knows the best way of tapping the natural resources the Irrigation Advisor does not hesitate to favour such an approach. Soil erosion in India has gone on unchecked as in different parts of the world. It has been stated by the Irrigation Department Committee that deterioration of land in India has already reached a dangerous stage and several tracts are doomed to become swamps and jungles. There are eight million acres of ravine land in the U. P.; and the desert regions between Rajputana and the U. P. are, it is believed, the result of man's negligence. Soil erosion has been at the root of the partial filling of reservoirs and choking of irrigation canals in the Punjab. Sir William himself estimates that every year nearly 50,000 acres of precious land are forced out of cultivation in India. In the Rawalpindi district, for instance, three lakhs acres of alluvial soil are now under the menace of soil erosion, while the Jhelum district has lost 50,000 acres of cultivable land during the past two or three decades. Nature has been in a violent mood towards Assam and part of Bengal where excessive floods resulted in wasteful run-offs. The short-sighted forest policy followed by the Government of India for many decades has decreased the forest areas to dangerously low levels and thereby exposed several tracts to the ravages of soil erosion. Thus, while the menace of erosion covers big slices of regions cutting across Provincial and State borders, it can be tackled only by close and co-ordinated effort on the part of the Provinces and States.

It is well-known that our experience of inter-provincial and inter-State co-operation in the matter of irrigational development has been anything but encouraging. For instance, the Tungabadra Project in South India was postponed for long just because adjacent administrative units found it convenient to argue again and again but not co-operate with a view to serving the common requirements. Till recently, such an important development subject like irrigation—like roads and industries—has been relegated to the impoverished provinces while the Centre kept quiet doing nothing. As a result of famine and its aftermath a situation has now risen when the Government of India felt the necessity of taking a direct interest in the irrigation development of India, as in evolving the transport plans. At present, the provinces and states are planning as independent entities. If the findings of Sir William Stampe are to be translated into practice for India's welfare, the Central Government should examine these provincial and State plans and weld them into well-defined regional schemes. There may be a clear necessity to persuade some of the provinces and States to modify their projects and agree to the regional schemes, as that is the best way of exploiting India's resources for the abiding interests of all parts of the country. In this respect it is gratifying to note that the Second Report on Reconstruction Planning proposes the reorganisation of the Central Board of Irrigation so as to make it not only "a clearing house of ideas" but also as a Board of Referees on all matters relating to irrigation, drainage and allied subjects. The Government have also assured in public that the schemes would not be shelved on the score of their being unproductive or marginal projects. The urgency for increasing food supplies is so great that marginal schemes of irrigation should not be neglected because of too rigid criteria of productivity.

While it will be agreed on all hands that irrigation would speed up agricultural production, we should not forget that it often leads to increase of population in favoured localities. As a result of irrigational development in the Punjab and Sind, it has been observed, there has been a remarkable growth of population in these areas. Irrigation tends to increase the fertility of the soil and thus offers a stimulus to demographic forces resulting in rapid multiplication and also attracts population from the neighbouring areas, congested or otherwise. But a well-planned irrigational drive in different regions of this sub-continent would surely go a long way in reducing the frequent migration of destitution and in relieving the excessive pressure of population in a few areas. Better distribution of population would be the result and this would facilitate a better distribution of the country's industries and improve the general conditions of living.

Irrigation is the handmaid of agriculture, since it corrects the vagaries of rainfall, helps in the fullest utilisation of the water resources, adds security to cultivation, increases the yield, particularly of the cash crops, and serves as an insurance against famines. It brings agriculture closer within the orbit of internal trade and rescues the agriculturists from their state of indebtedness. The provincial revenues, as is well-known, are well tied up to the fortunes of the soil and irrigational improvement would naturally swell the Provincial exchequer and inaugurate an era of financial prosperity for the provinces. The public are not yet aware of how far the Government of India's irrigation plan necessitates the import of machinery and other goods from the U. K. but they would be surprised that even emergency schemes are to begin only late in 1946 by which time, it appears, the war is expected to be over.

Four years ago tins and barrels were plentiful

No package in the world served so many people in the past as the kerosine tin. The 40 gallon barrel was also put to many uses after it brought oil to India's industries.

Today steel is required to meet more urgent demands. It must make tanks, munitions and ships. The public can play an important part in defeating the enemy by taking the greatest care of all barrels and by returning them for re-use quickly.

When the time comes, Burmah-Shell will again provide oil containers to meet the full requirements of all our customers in every village & town throughout India.

ANNUAL CONTRACT ITEM QVER
Rs. 8.000/-
TENDER NOTICE

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta on the 12-12-44 at 12 O'clock Noon.

"Tender No. SP/E/Est/30/Gb4 for conversion of 264 tons of Scrap C & W white metal into an equivalant quantity of new white metal."

Tender forms with full particulars can be had from the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may, however remit the amount to the Controller of Stores, direct by Money Order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into tender Box, outside the Dy. General Manager's (Works) room by the Tenderer or his representative.

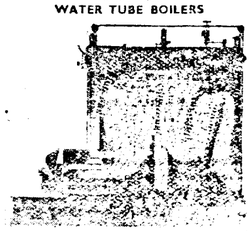
Editorial Notes

What About Terms?

Official reconstruction reports have complained at more than one point that the questionnaire issued by the Government regarding the post-war requirements of Indian industry in respect of machinery have evoked poor response. This would, indeed, be regrettable if it were due either to negligence or to incapacity to estimate the certain and probable requirements of the post-war period. But the matter puts on a new complexion when the authorities are not content with mere estimates, but aim at booking orders from the various parties. More than one official of the Government has stressed the importance of booking orders for machinery in advance with the Government of India in order to ensure due priorities in the post-war period, when, by all tokens, the demand for various kinds of machinery will be far in excess of supply. It would appear that Indian industrialists have their doubts about the nature of the commitments, which such booking as is now asked of them would involve; and it may be guessed that the question of prices is not the least important. Considering that, as part of the anti-inflationary measures, imports have been made on an appreciable scale at prices which are not very much higher than the pre-war level, one would think that these prices should mark the upper limit for imports during the post-war period. The position, however, seems to have been highly obscure; and this uncertainty accounts for the poor response to the enquiries made by the Government. It is to be hoped that the forthcoming conference with industrialists will clear up the doubts and the foundations of our post-war development will be well and truly laid in this respect. It is inconceivable that the Government will seek to canvass business for foreign machinery manufacturers without being able to give any idea of prices and other terms.



Openings in Australia

In the report for 1942-43 submitted by the Indian Trade Commissioner at Sydney special mention is made of Australia's takings of Indian textiles. While India is favourably placed at present, exporters have to study the overseas customer's requirements and pay attention to the packing as well as the business methods. It is suggested that samples must be adequate and prices quoted firm. Though Australia's import trade in textiles has been affected by rationing and various controls, it is believed that goodwill can be built up and retained. Mr. Saksena's report states that grey goods, white and coloured goods as well as cotton canvas and duck constitute the main import lines. Owing to the fall in U. K. exports of textiles to Australia, Indian exports rose during 1942-43 while prices also were higher. In the case of grey goods also India's share of the Australian market increased. That Indian goods were cheaper than British goods was not the chief reason for the increase. In the New Zealand market Indian textiles overshadowed imported supplies from the U.K. In relation to wartime development, it is pointed out that Indian exporters must devote greater attention to importers' requirements. Shoddy materials are objected to in both Australia and New Zealand. Quality and finish are particularly important for overseas markets. A warning that in competition with foreign goods after the war Indian goods may not be able to hold their own has been addressed. Since Manchester is looking beyond the war and design has made progress there the caution is important. It is reported that new fabrics have been produced in the U.S.A. and one known as Masslin is independent of spinning and weaving. It is deemed suitable for sheeting. The Indian mill industry is reminded that technical progress is inseparable from the preservation of markets won during the war. From the report it appears that local importers' names have been sought by Indian firms. Enquiries were not limited to piece-goods and yarn since Australian firms wrote for information as to Indian suppliers of cotton waste and kapok. Though import of essential goods alone is permitted at present the course of trade in 1942-43 appears to favour Indian manufacturers and Australia manifested interest in oil and oilcake as well as minerals like manganese and mica.

Currency Reserves

In the June statistical bulletin of the League of Nations appears the usual table as to gold, silver and foreign assets held as currency reserves. The more important changes of 1943-44 can be summarised easily. If gold mining output fell last year the South African gold reserve increased along with the increase in the Union's sterling balances. Private sales of gold to check inflation brought about no increase in Egypt's holding of gold but her sterling assets exceeded £109.1 millions at the end of March. The U.S.A. lost only a little gold in 1943 but the small reduction month by month points to repatriation as before. Something more remarkable is the absorption of surplus sterling in the Canadian Mutual Aid programme. Canada has no overseas assets while her gold reserve is as negligible as

that of the Bank of England. Nevertheless, the Canadian dollar is known to have appreciated in New York during 1943-44. The enlarged surplus of Argentine exports accounts for the increase under both gold and oversea balances. It is perhaps worth nothing here that oversea assets totalling 2270 million peso are vastly larger than those held in 1939 and correspond to the sterling that the Reserve Bank of India has accumulated. The figure suggests that Argentine overseas assets are not fully equal to the amount of British investments in the Republic. Countries with experience of inflation, notably Iran, Egypt and Argentina have added to their gold but Vichy France did not add anything. It is of course the gold held in the U.S.A. that must stiffen the backing for the franc whose value at 200 to the £ is so near the prewar rate as to mask the heavy depreciation during the German occupation. Belgium's blocked balances continued to rise throughout 1943 and it is perhaps the loss of depreciated marks that will be the heaviest liability. Inflation in Germany, duly reflected in the distribution of bank assets, forced saving and State borrowing, had scarcely any effect on the nature and scope of currency management. Hungary sold more to Germany and got marks to her credit in the Berlin Clearing Neutrals had a different experience. Fugitive gold again entered Switzerland and in spite of restrictions, there was further repatriation of Swiss assets held abroad. In the case of Sweden repatriation apparently ceased last year but the Krone has distinctly strengthened as the gold holding of the Riksbank has increased. Portugal's favourable balance of payments before the cessation of wolfram exports is duly reflected in the influx of gold and the increase in foreign assets. The London assets of Eire continued to increase during 1943 while the backing for the Spanish currency has not undergone any change to judge by figures alone.

The Best Means!

Our comments on the International Business Conference are borne out by the reports of the proceedings so far to hand. It is true that work of a more detailed kind is being done in the various committees. But the Conference's obsession with the importance of private enterprise is seen in the report of the Action Committee which asserts, that "the private enterprise system is the best known means of bringing about effective world prosperity and employment and of securing and maintaining world peace, thereby assuring a higher standard of living for all peoples." It would be interesting, when the full report will be available, to learn the reasoning on which this assertion is based. But the experience of a century and more, if not a much longer period of history, seems to afford no unqualified support for this contention. Whatever private enterprise may do or fail to do for the standard of living of all the peoples of the world, it is too tall a claim to make on its behalf that it is the best known means of securing and maintaining world peace. The links between private manufacture of munitions and war-mongering have been so well established by authentic historical work that a responsible conference should have known better than to prejudice by false claims the good case that there still is for private enterprise. Nor is anything gained either for the interests represented at the Conference or for the world at large by speaking of "the best known means." National and world economies alike are so placed today that there is no single system which can be called the best means. The need for planning is paramount; and since it is impossible for private enterprise to plan for public benefit, State control is inevitable. From this, it is however easy to rush to the conclusion that private enterprise has no place and that collectivism must be all-pervasive. For as long as we can foresee, the economic order must rest to no small extent on the self-interest of the individual. Conferences of the kind which has now met in America will do well to think out the principles on which a rational demarcation of spheres can be effected. Even if the private enterprise system were the best means, total war has destroyed the bridges by which the State can beat a retreat to economic non-interventionism.

Agreement with Belgium

Belgium is now in the sterling area. During the war the Congo has been included but the agreement of 1941 has been extended to the mother country. At the end of August M. Camille Gutt announced that decrees were in preparation so as to promote Belgian recovery. A monetary agreement also was concluded and M. Gutt duly announced on October 5 that the agreement made with Britain fixes the rate of exchange. It was stated that the exchange rate is confirmed as 176.625 francs to the pound. The rate is unalterable without consultation of the two parties. The two Governments acting through the Banks of issue agree to sell sterling and franc to each other at the fixed rate. The permissible debit balance for Britain is limited to 883,125,000 francs and corresponds to a maximum of £5 million laid down for Belgium. Under the agreement of August Belgium is permitted to use deposits, dividends and redemption bonds held in Britain. The agreement is intended to avoid drawing on metallic reserves but relates only to current commercial balances as distinct from capital transfers or sums for relief. On the control of civil affairs passing to the lawful government Belgium took steps to deal with inflation. It was ordered that all notes for 100 francs and over should be surrendered within a specified period and a new note issue would take its place. The individual's holding of notes was then fixed at 2,000 francs and the blocking of old notes was supplemented by the freezing of bank balances to the extent of 90 percent. According to the decree, even firms were permitted to have a free balance of 1,000 francs only per employee. It was also stated that after a month a decision as to the release of currency blocked or retained in bank accounts would be reached by Government. The decree sought to cut down the number of notes in circulation while the blocking of bank accounts is intended to facilitate collection of a capital tax if undue war gains could be proved.

Indian Scientific Office in London

The proposal to establish a permanent Indian scientific office in London, which is reported to be planned by the party of Indian scientists now in Britain, is a fitting climax to the excessive hobnobbing of Indian scientists with British, which has been going on during the last one year and more. While contacts between research workers in India and abroad have much to be said in their favour, the move to make the scientific work of Indians a mere sector or department of British science must be viewed with grave disquiet by all sections of the public in this country. Indian scientists have scored many a notable triumph with no more contacts than what are natural among men of light in all parts of the world. While such contacts may be regularised or more facilities provided therefor, close association of an artificial, almost bureaucratic kind is inimical to the spirit of research and apt to breed more careerists than genuine scientists. It would be interesting to know which great country maintains in another a scientific office of its own.

Wheat Supplies

Proof as to the contraction of wheat supplies in India is forthcoming in the final memorandum on the wheat crop of 1943-44. Both area and yield are lower than in 1942-43 and the average yield per acre also is lower. A fall of 2 percent in area and of 12 percent in yield greatly strengthens the case for imports though the memorandum gives no figures as to oversea trade in wheat during 1943-44. Total supplies including that of non-reporting areas is placed at 9.9 million tons. The large increase in U.S. and Canadian supplies this year can help only in the future, and no importance can be given to the maintenance of the decennial average in India. The fall in the outturn this year is most pronounced in the case of the Punjab and Sind which are surplus Provinces while the reduction in the U.P. also is considerable in relation to the average of the five preceding years. The final crop figures point to a fall of 6.2 percent in the yield in comparison with the average of five preceding years. The decrease in wheat supplies has not led to any rise in prices, but that may be due as much to a fair-sized carry-over as to price control. The further increase in Argentine supplies is referred to in the crop forecast. The use of wheat as fuel in Argentina certainly provoked the feeling that India could have imported wheat during the famine despite the shipping difficulty. The large increase in U. S. supplies by as much as 8 million tons over 1943 favours relief plans in Europe but there is no guarantee that India will receive the substantial imports asked for in July and afterwards. The Secretary of State has given no assurance that imports in 1944-45 would be enlarged to make good the deficiency of wheat, and of rice in some provinces. In view of the anticipated increase in Canadian supplies the recent agreement as to export quotas and division of markets acquires importance. Whether the quota will help countries short of dollar exchange remains to be seen.

Anti-erosion Measures

The stagnation of soil fertility is not the only feature calling for notice in connection with the land and its problems. Soil erosion is as serious as in the U.S.A. and plans to combat it have taken a high place in post-war planning. Sir Harold Glover's findings as to the damage to man and beast are set out in a recent pamphlet. There is street erosion and gully erosion, the former in the Peninsula and the latter in the Districts near the mountains. In alluvial plains the problem is hardly present; but over wide areas, major problem is to make rain water the friend, and not the foe, of the cultivator. The causes of soil erosion listed include the destruction of forests, excessive grazing and shifting cultivation. Faulty cultivation is in many places a cause of erosion and the famine relief work in Bijapur undertaken last year brought contour bunding to its position as a cure for erosion. The indirect results are a lower rainfall and shortage of river floods for both irrigation and hydro-electric power. The U. P. Government's success in regard to the ravines in the lower Jumna basis shows what the closure to grazing and afforestation can achieve. In the Siwaliks, too, erosion has been prevented and the contrast with the Punjab is present in the advocacy of special measures such as torrent training. Sir Harold Glover records the formation of afforestation branches in the Forest Department of the U. P., the Punjab and Bombay. Kashmir also has begun to pay attention to soil conservation. The formidable conclusion that soil erosion has lowered the productivity of 150 million across in India justifies the measures advocated. What has been done with the Hoshiarpur Chos was described two years ago by Sir Harold, whose main point is that Man rather than Nature is the agent in regard to floods. It is suggested that recent dis-afforestation in Chota Nagpur is the cause of recurring, violent floods in the

THE IMPREGNABLE SHELTER

In a total war civilian life can be as much exposed to injury or loss from enemy action as the forces in the front line.

While the combined efforts of the Government and the public can minimise the possibility of damage to life and property, only a Life Insurance policy can provide the afflicted families with the necessary financial protection.

Our Agent will be glad to call and explain to you the unique advantages this Company offers to its policy-holders.

RUBY GENERAL INSURANCE CO., LTD.

Chairman : B. M. BIRLA, Esqr.

Head Office : 8, Royal Exchange Place, Calcutta.

LOW LIFE ASSURANCE RATES

have been made possible partly by the economical management of the Society, the expense ratio being lower than that of the majority of the larger life assurance companies in India.

Taking the first fifteen Indian insurance companies in order of their total business in force, the Society's premium rates for life and endowment policies are among those of the four companies who charge the lowest rates.

Rebates allowed by the Society on the premium rates include: 2½% for annual payment; 5% to 10% for residence in healthy climates; 10% to employees of Municipalities, Schools and other departments insuring through their employers; and As. 8/- and Re. 1/- per thousand for single policies of Rs. 10,000/- and over and Rs. 20,000/- and over respectively.

The Society's life and endowment policies offer the best value to those who look for a large company with economical rate schedules. A copy of the 1944 Prospectus and Tables of Rates will be gladly supplied on request.

Damodar River. Co-operation and autonomous management of small forest areas meant for pasture represent one line of advance towards soil conservation, while a reduction in the number of cattle that claim a share of limited pastures is implicitly prescribed. The main remedy lies in the blend of forest and agricultural policy on the basis of local popular support. That it is possible is proved by experience.

Russian Demographic Front

Russia's population is to be increased after the war as the Soviet Government has got a radically new population policy. The main object is to make up war losses as rapidly as possible. Before the war the net reproduction rate was higher in Russia than in any other country. That advantage may not remain after the war so that subsidies for large families appear desirable. A decree issued in July marks the beginning of a policy so far removed from precedent as to be exceptional. In the past mothers of large families got allowances after the seventh child. Hereafter allowances are to be paid for and from the third child. A lump sum at birth and grants for five years are to be paid, and the grants are to increase progressively up to the eleventh child. The adoption of the family allowance in schemes for social security has not been the only factor underlying the endowment of mothers. The allowances ordered are large—a child will get an adult worker's yearly wages—and they are cumulative. In the case of children from large families, kindergarten fees are to be reduced. Family Women's Rations are also to be larger and ante-natal and post-natal services are to be improved. Overtime and night work are forbidden for pregnant women while leave for confinement is to be extended. Medals are to be given for children borne. These medals mean advantages in regard to food and clothing and also exemption from standing in queues. Under the new programme the State is to assume full responsibility for children born out of wedlock. Unmarried mothers can get allowances or turn over the babies to the Government provided no case for maintenance is instituted. Foreseeing a surplus of women in Russia special care is to be paid to natural children. Those who deliberately choose to disregard the new principle of large families for the nation's benefit are to be taxed. Not only bachelors and spinsters but couples with only two children are required to pay a heavy, progressive tax. In order to sustain the anticipated increase in babies, the State has decreed the establishment of homes and larger production of children's clothing and footwear. The Soviet view of the family has also changed greatly. Divorce is made very difficult and unregistered marriages cease to be valid. Only those with high incomes can obtain divorce. To countries worried by fear of a stationary population at present, the Russian example may not be wholly alluring, but the endowment of motherhood with special advantages marks a great change. It is as an upholder of family life, not of free love, easy divorce and of special clinics for abortion and birth control, that Russia must be regarded. The compromise with the Orthodox Church may not have been without influence on the Soviet view as to optimum population. But the concern with quality as well as quantity should help the working class to attain a higher standard of living rather easily, and fairly soon.

Beyond Burma

Success in Upper Burma and failure in S. W. China is the lot of the Chinese forces cooperating with the Allies. Cabinet changes at Chungking and a forecast of increased American aid have come this week to duly remind the world that not only the Japanese escape routes, but the entire area of conquest is in danger. The seaward attack has not yet developed on any scale, but the East Indies are nearer the invasion zone than in 1943. So is the navy's route from Malaya to Burma and the first daylight air attack on Singapore by U.S. aircraft on the docks was a terrible reminder of the fact that the new Japanese Empire is too tightly stretched. Various estimates of Japanese losses and damage have appeared. It is however not difficult to assume that the failure in Upper Burma is the natural sequel to defeat on the Indian frontier. Though signs of a new Allied offensive in the Arakan have not appeared, the new land route to China like the pipeline under construction constitutes a notice to quit. The opening up of the Burma Road after the descent down the Irrawaddy is not the only attainable object of Sino-American forces.

Military activity after General Stilwell's departure certainly neutralises alarm created by despatches concerning China's internal difficulties. The Marshal's failure to agree with the Communists however falls into its proper place after the assurance that direct American assistance is to be increased. From this alone it may be expected that instead of Lower Burma the main object of Allied attack would be Southern China where the Jap-Occupied area is small. Mr. Attlee's statement concerning Hongkong suggests indeed that early recovery is presumed and what part the Japanese fleet would play against landings in South China is the only question that matters. Mr. Patterson lately referred to the fleet as still being a factor in Japanese defence while Admiral King on the basis of proved U.S. superiority has virtually written it off. The substantial difference of opinion should not however affect the course of war. Attacks on Japan's industrial centres instead of the Occupied areas compromise recovery while the loss of the Philippines ores would hold up both steel production and shipbuilding. The greatly altered position of Japan accounts for the hesitancy and vagueness noticed in the Conservative Party's 'blueprint' for Burma. The conditions outlined are by no means harsh, but the offer of Dominion Status after a period is not impressive, which is one reason why Burma shares have not responded at all to recent news. The issue of compensation for war damage is not wholly settled. For a month our markets have looked beyond Burma. Only a joint statement of policy can infuse interest in reconstruction though it is apparent that prices of Burma shares are a long way ahead of last year's.

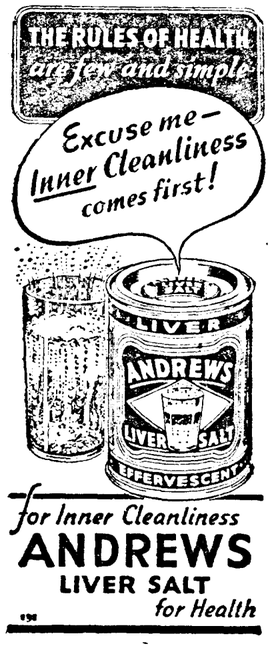
Clive Street Gossip

Calcutta Corporation versus Calcutta Tramways Company, and the Bengal Government versus the Calcutta Electric Supply Corporation are two controversies which throw into ugly relief the inconsistencies of the local government, the incompetency of the local body and the strange ways of the sterling companies. The main issues connected with the option shortly exercisable with regard to the purchase of the undertaking covered by some of the electric licenses are examined elsewhere in this issue; and, in this column, I shall deal with the more urgent problems that arise in connection with the tramways deal. At the outset, I may emphasise that there has been an understandable conspiracy of silence on the steps, preliminary or otherwise, so far taken by the authorities by way of investigation and negotiation. More than two decades ago, the principle of nationalisation of public transport was accepted as more or less the general policy of this country. A resolution to this effect with specific reference to the Indian Railways was moved and passed in the Central Legislative Assembly at the instance of Sir Vithaldas Thackersey. In pursuance and execution of this policy, the East Indian Railway and the G. I. P. Railway, which were under company management, were subsequently taken over for management directly by the State. In spite of a few lapses from this policy it may now be said that, so far as the railway system in India is concerned, complete nationalisation has been the accepted policy. With regard to power, in the Punjab, the U. P. and Madras the grid system has been developed and worked as State enterprises. In recent years, the Bengal Government have also accepted nationalisation as the clear objective of their policy in regard to electricity. In these circumstances, one would have thought that, as and when the options fall due for exercise, the provinces or the local authorities concerned would without hesitation or doubt decide on the purchase of such undertakings. That is to say, in the ordinary course, the clear and simple decision to take as regards the Calcutta Tramways and Calcutta Electric Surply Corporation is the taking over of these concerns at the earliest opportunity.

* * * *

Though there is no official confirmation, there are reasons to believe in the correctness of the rumour that the Bengal Government contemplate the extension of the Calcutta Electric license up to something like another 10 years. If this is so, the action of the Bengal Government will be in direct violation of the policy they themselves have laid down and it will be diametrically opposed to universal and informed public opinion expressed in the clearest terms in the country on the principle of nationalisation. While behind-the-scenes developments regarding the Calcutta Electric Supply Corporation are shrouded in mystery and in such suspicion that one cannot help hearing whispered charges of graft, discussions and negotiations for the purchase of the Calcutta Tramways Company are supposed to be taking place in the full view of the public. In this case also, there are reports that the developments behind the scenes are more significant than the public proceedings in the committee of the Corporation. In this instance also, charges are made that the matter is not being pursued energetically or on right lines, and that the cause for this is graft. I have deliberately referred to the allegations of graft in both these transactions, as it must be admitted that the opinion of other provinces with regard to various recent developments like famine and food crisis in this province is that the sufferings of Bengal might have been greatly mitigated but for general corruption. The fair name of Bengal is involved; and it is the duty of every authority concerned to find bonafide solutions for such problems of far-reaching importance as the nationalisation of public transport or power—solutions which will be hailed by the people as having been made indubitably in the public interest, solutions that do not suggest the slightest tinge of suspicion that they have been determined by the machinations of this group or the personal interest of that caucus.



* * *

I shall furnish a brief recital of the suggestions connected with the Calcutta Tramways; and it will be clearly seen that the policy adopted by the Corporation is tortuous and seems to have been designed to end in failure. The following are the facts. Under the agreement with the Calcutta Tramways Company, the Corporation of Calcutta and the Howrah Municipality have the right of giving the company six months' notice to take over the property situated in their respective areas; and such notice has already been given by the Calcutta Corporation on July 1, 1944 and the undertaking can now be taken over on January 1, 1945. If this opportunity were missed the Corporation would have to wait for seven years. Thus, there are only five weeks in which the Corporation must complete all the arrangements which will put it in a position to take over the Company on January 1.

* * * *

The price at which the undertaking of the Calcutta Tramways Company is to be purchased is fixed at 25 times the net yearly earnings of the Company based on the average for 7 years immediately preceding the purchase date. As in the case of the Calcutta Electric's license there is, in the Tramways' license also, a likelihood of ambiguity of interpretation in regard to some of the terms. So far as I can make out, the terms set out regarding the purchase price may be said to mean that the company is entitled to 25 times the difference between the gross annual income and working expenses. Working expenses will include normal depreciation, but not any provision for taxes. On the basis of the disclosed earnings in the Tramway Company's accounts for the last six years, and on the assumption that earnings for 1944 will be maintained at the level of 1943, the average annual net profit before providing for taxation, but

after providing for depreciation to the extent of £40,000, will be approximately £167,000. If 25 times this amount is to be paid as purchase price to the Calcutta Tramways Company the amount that is now to be raised for completing the deal is Rs. 5.58 crores. It is not clear in the agreement whether the Tramways undertaking is to be taken over as a going concern. What the agreement says is that the Calcutta Corporation is entitled to purchase the Tramways along with the plant, machinery, stores and everything connected therewith. Does this mean that cash, investments and other free assets connected with the general reserve and renewal fund will lapse to the shareholders of the Calcutta Tramways Company? The directors of the Calcutta Tramways Company have been none too eager to provide the relative information necessary for authoritative appraisal of the findings involved. Nor has the Corporation set about the right way for eliciting information or for formulating plans. The simple straightforward course would have been to have the matter examined in all its financial implications by the Finance Committee of the Corporation assisted, if necessary, by a competent financial expert; if such an examination proves the proposition to be financially sound, the Corporation should have decided to raise the requisite loan and approached the Bengal Government for sanction to raise the loan; if the proposition was financially sound, the Bengal Government could not have refused to accord the sanction; on securing such sanction the Corporation should have gone to the public for the loan; and the loan should have been raised sufficiently ahead of January 1, 1945; and on January 1, 1945 the transaction should be completed and the tramway taken over by the corporation to be run in the same way as other utilities are being run by the Corporation. With only five weeks for the date of change-over the Corporation has no clear idea as to the amount that has to be raised and as to whether the deal can go through at all.

* * * *

Instead of a straightforward loan for a specific period for purchasing the tramways and instead of the straightforward course of running tramways in the same way as the water supply or the lighting is run by the Corporation, the Public Utilities Committee of the Corporation has hit upon a strange and tortuous device. The proposal is that the Corporation should purchase the tramways undertaking and work it through an agent whose duty will be to find the necessary finance at the outset and to run the business in the subsequent period. The Corporation has invited tenders from prospective agents and reports have already appeared in the press that as many as 22 tenders have been received. I am in a position to state that there is no truth whatsoever in these reports. Not one tender has so far been received. What has happened so far is that 22 of the tender forms especially designed for this purpose have been purchased from the Corporation. So with only five weeks more to complete negotiations, the Public Utilities Committee has not received even one application for financing and working the business even on its strange agency basis. Meantime, the Calcutta Tramways Company is hustling the Calcutta Corporation for a final decision before the end of the month on the ground that in the event of the Corporation exercising its option to purchase the tramways, the present employees of the Company will have to be given one month's notice of termination of their service. On this particular point, the Corporation appears to have assured the Calcutta Tramways that the existing staff will be taken over and that, therefore, there is no need to give notice to the staff of termination of service.

* * * *

So far as the final arrangements are concerned, the present position seems to be quite chaotic. Under the Act, the Corporation is not permitted to take any loan without the sanction of the Bengal Government. It is therefore not clear how the transaction can be financed by the agent, even if he agrees to do so. The suggestion seems to be that the agent may be asked to pay a 'salami' which will amount to the purchase price; that the agent in consideration of this "salami" be given suitable terms and recommendation for running the business; that the agent get 3 per cent as interest on the capital on the "salami" paid; that further the agent be given 3 per cent as commission for running the business. As the amount involved is approximately Rs. 5 crores, the total payment to the agent by ways of interest and commission will amount to about Rs. 30 lakhs. On the face of it, the payment of Rs. 30 lakhs will strain the finance of the tramways undertaking. While the running of the tramways will be extremely profitable if the business is conducted on sound lines, the scheme as such does not allow the payment of Rs. 30 lakhs to an agent. The margin that is available is in clear terms not adequate for the payment of Rs. 30 lakhs. Let me give an analysis of the working results of the tramways company. As I have already stated, the average annual earnings of the Calcutta tramways on the basis of the results of the 7 years are £167,000. This amount is arrived at after providing £27,000 for debenture interest. If the Calcutta Corporation takes over the tramways, there will be no question of paying debenture interest. It may therefore be said that the average earnings will be of the order of £200,000 per year. An annual income of Rs. 26 lakhs on Rs. 5 crores

capital investment in a public utility must be considered extremely satisfactory. But an income of Rs. 25 lakhs falls short of the Rs. 30 lakhs required for the agent contemplated by the Public Utiliies Committee. To make confusion worse confounded, the Bengal Government refused permission to the Corporation and the press report on this matter has reached me just at this point of writing and reads as under:

> The Government of Bengal are unable to accord their sanction for the Calcutta Corporation to enter into an agreement with any agent for purchasing and working the Calcutta Tramways undertaking. Intimating this in a communication to the Chief Executive Officer of the Corporation, the Government state that they have been advised that the execution of an agreement with an agent would constitute the giving and taking of a loan as between the agent and the Corporation. The communication adds that, as the proposal involves the raising of a loan for a purpose and in a manner not provided for under Section 87 of the Calcutta Municipal Act the Government are unable to accord their sanction.

* * * *

What, then, is the position? The Calcutta Corporation had made up its mind to purchase the tramways. This fantastic scheme of working the tramways through an agent has been rightly rejected by the Government. The Corporation has now to think of another scheme. In fact, the only scheme is for the Corporation to approach the Bengal Government to issue the loan as early possible, to purchase the tramways with the proceeds of this loan and work the tramways departmentally. But can all this be done within five weeks? Who is responsible for such dilatory and inept handling of the matter as has left the Corporation no more than five weeks to complete so many complicated transactions? Why did the Public Utilities Committee of the Corporation take on itself the responsibility to deal with the financial issues of the question? Why was this matter not referred to the Finance Committee of the Corporation? Why was no expert consultation asked or provided for on the financial or other implications? The Mayor for the current year has been touring all over India and making quite a big noise. Was not the expert and timely handling of the Calcutta Tramways question a more pressing and important responsibility of his?

* * * *

There are other complications too. No reply has so far been received from the Howrah Municipality regarding its consent for the purchase of the whole tramways undertaking. Even if the Howrah Municipality agrees to the proposal of the Calcutta Corporation, it appears that the Municipal Act has to be amended so as to permit the operation of the tramways undertaking as a joint interest. The Railway Board has also got to give some kind of sanction; but the Railway Board has curtly replied to the Corporation that its views will be communicated to the Bengal Government. The large body of rate-payers in Calcutta have every right to demand of the Mayor how this important matter has been so handled that the time factor will decide almost every connected issue against the public interest. It is indeed a serious indictment of the authorities concerned that no preparation of any kind has been made for carrying out a transaction of such magnitude and intricacy. It is hard to believe that the emergence of a position in which, for sheer want of time to complete the preliminaries, the Calcutta Tramways Company will have another seven years is due to mere dilatoriness or inadvertence on the part of the authorities concerned. The public is entitled to full explanation.

* * * *

The American Academy of Political and Social Science has done well both by this country and by the United States to have devoted the May, 1944 issue of "The Annals" to India and to her problems. The goodwill which prompted this decision is matched only by the choice of the editors for this special publication. Sir Manilal Nanavati and Mr. C. N. Vakil deserve the thanks of the public for having put to good use this opportunity of placing all Indian problems before American and world opinion in a setting of judicious appraisement by very high authorities on the questions treated in the volume. No facet of our national life has, indeed, been omitted. Sir Radhakrishnan and Prof. Kabir write on the cultural background as affecting their respective communities. Pandit Kunzru on Defence, Prof. Rao on the National Income, Sir C. V. Raman on Scientific Research, Sir P. Ginwalla on Industrial development, and so on; the contributors are of the top class. Foreign students of India's problem, who have till now been confronted mostly by crude propaganda regarding India have now a wealth of material with which to judge what is happening to so large a section of civilised humanity. The volume is hardly less valuable or even indispensable to Indians, since facts and figures of such a wide range are rarely available in India within the covers of a single volume. But the few whom I have referred to this book have come back to me for a loan of my copy, since it is not available in the bookstalls.

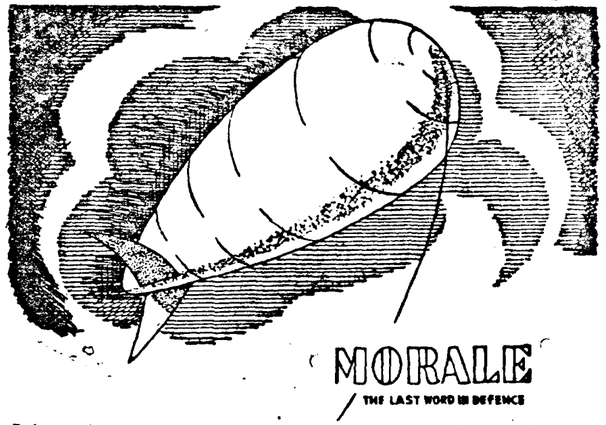
EAST INDIAN RAILWAY

ANNUAL CONTRACT ITEM OVER Rs. 8,000/-

CLASS I CONTRACT

TENDER NOTICE

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta on the 15-12-44 at 12 O'clock Noon.



"Tender No. SP/E/Est/32/Gb4 for the supply of Carriage and Wagons Antifriction white metal."

Tender form with full particulars can be had from the Controller of Stores, East Indian Railway, Calcutta on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta, may however remit the amount to the Controller of Stores, direct by Money Order.

No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into tender Box outside the Dy. General Manager's (Works) room by the tenderer or his representative.

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Harfons play the leading role in these supplies. Whatever the kind of quality in ropes may be Harfons have the variety to choose from.

C. F. Harfon & Co. Ltd.

ORIENTAL INDUSTRIAL INVESTMENT CORPORATION LIMITED

EXCELLENT FIRST YEAR'S WORKING

MAIDEN DIVIDEND OF 2 PER CENT

Presiding at the Annual General Meeting of the Oriental Industrial Investment Corporation, Ltd., on the 10th November, 1944, the Hon'ble Sir Shantidas Askuran, Kt., Chairman said:—

GENTLEMEN,

The Report and the Accounts for the period ended September 30, 1944 have been in your hands for some time and as is customary, with your permission I shall take them as read.

We gather here to-day on the auspicious occasion of the first annual meeting of this company and I trust you will consider the results we have achieved for our initial financial period are highly satisfactory. I may advise you that throughout it has been our policy to conduct the affairs of this company in a safe and cautious manner, with the object of obtaining as high a yield as possible, compatible with that safety and caution. At the same time, it has also been our endeavour, so to utilize our resources that a capital profit could be attained, for in this manner our financial position can be strengthened considerably. You will note, therefore, that in the very first year, on this account alone, we have been able to secure a profit of over Rs. 1½ lakhs, all of which we have deemed it wise to transfer to a "CAPITAL RESERVE A/C", one which we hope considerably to augment in the years to come. At this stage, it is perhaps necessary for me to mention that our accounts would normally have been closed on July 31, in that event covering approximately twelve months, but after mature consideration it was decided that September 30, would be a much more convenient date for the end of our financial year, so our first accounts, therefore, cover a period of about 14 months.

In drawing your attention to these accounts, I should like you particularly to note the extremely liquid state of our investment portfolio. Approximately 58.6 per cent of our investments is held in Government Securities, 4.9 per cent in industrial debentures, 6.3 per cent in industrial preference shares and 30.2 per cent in ordinary shares of sound industrial concerns, which have been well spread. No less a proportion than 69.8 per cent, therefore, is in fixed-bearing investments at the present moment, but changes will necessarily have to be made as the situation at any time may call for them.

Turning to the Profit & Loss A/C. I should like you also particularly to observe the extremely economical manner in which the affairs of the company have been conducted and for this, our best thanks must go to the Secretaries, as also for the fact that they have voluntarily foregone even the minimum commission of Rs. 12,000 to which they were entitled by virtue of their agreement with the company.

MAIDEN DIVIDEND

After making the allocations as set out in the Report, we propose to pay a dividend at the rate of 5 per cent per annum less tax on the preference shares and at the rate of 2 per cent or Re. 1 per share free of tax on the ordinary shares. This will then leave the amount of Rs. 36,096-0-2 to be carried forward, subject to taxation. The Directors trust that these distributions for the very first year's trading will be considered very satisfactory.

As regards the future, it is indeed difficult to be prophetic. After five years of a very bitter struggle, the war has been carried into Germany itself but the final cessation of hostilities cannot now be very far off. But even with peace in Europe, there is still Japan to be conquered and ousted from territories she has overrun. Quite certain it is, however, that the problems which peace will bring in Europe, are likely to prove to be equally as complicated as those experienced during the war. With this uncertain future in view, the sphere of investment in India must inevitably be interlinked but your Directors are alive to this fact and every precaution will be taken in your interests, to deal with the situation as it may change from time to time, in connection with the activities with which this company is vitally concerned.

One very significant prospect ahead in this country and one of much potential importance, is the inevitable certainty of schemes of agricultural and industrial reconstruction being put into operation in the post-war period. It will be the intention of this company to lend whatever assistance it can in such expansion, and, indeed, one of our main objects is the underwriting of sound ventures in the realm of joint-stock enterprise. Up till now, our scope in this connection has been limited for several reasons but during the last financial period we successfully underwrote one flotation and subsequently we have jointly underwritten another, also with success. This branch of our activities we feel is capable of considerable development on sound and cautious lines and we shall make every effort to expand in this direction, with mutual benefit to any national progress in the sphere of industry and to the company itself.

Without being unduly optimistic I feel that we can look forward to the future with confidence in the sphere of investment, an opinion which is shared, I might add, by a prominent firm of stockbrokers in London, who have recently issued a booklet drawing marked attention to the future of investment in India. Space and time necessarily forbid me making any detailed reference to the conclusions drawn but they are roughly summarized in the assertion that "'India provides great and promising opportunities for investment in industries that already exist plus potential additions and developments which cover a wide field". If capital abroad can appreciate those opportunities why should we in this country not possess the same acumen to discern them?

Unfortunately, investors so far have not been allowed to share the fruit of the industrial progress which has been made over recent years, the bulk of the profits going to Government. One thing is, I think quite certain, however, and that is schemes for industrial expansion, for which this country has such legitimate aspirations, can hardly secure the support they deserve from those with resources until every effort is made to reduce the burden of taxation and thus donate to the investor the incentive to assist in the country's economic and industrial development. This is a consummation we all sincerely wish for and I think that the authorities, being fully aware of this fact, would be wise to exert every effort to lessen the onus of taxes at the earliest possible date.

The Hon'ble Sir Shantidas Askuran, Kt., Sir Rustom P. Masani, Kt., Ramniwas Ramnarain, Esq., The Nawabzada E. I. Ahmad Khan, K. U. Advani, Esq., were re-elected Directors and Messrs. N. M. Raiji & Co. were appointed Auditors.

EAST INDIAN RAILWAY

Tender Notice

Sealed tenders are invited and will be received in the General Manager's Office upto noon on Wednesday the 13th Dec., 1944.

Tender No. Sale/4 for purchase of heavy and light steel turnings and borings from the Jamalpur Depot of the Railway Administration.

Full particulars and tender forms can be had from the Controller of Stores Office, 105, Clive Street, Calcutta on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same. This sum is not refundable.

Firms outside Calcutta, may however remit the amount to the Controller of Stores direct by Money Order.

Lancashire Criticism of U. S. Subsidy Plan

LONDON, Nov. 22.

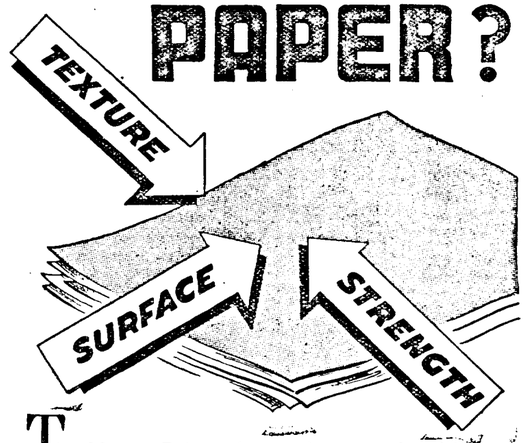
Lancashire takes a very poor view of the new United States export subsidy for cotton. According to a trade correspondent of the Manchester Guardian it is widely regarded as a "severe rebuff to those ministers, businessmen and others who in the past few years have been stressing the need for free, fair dealings in international commerce and for the abandonment of artificial barriers to imports and stimuli to exports."

While the new subsidy is aimed at Brazilian cotton which is competing successfully with United States cotton in Canadian markets, it will, according to the prevailing view, hurt Indian and other growths as well.

American cotton manufacturers are reported to be fearful that foreign textile manufacturers may take advantage of the cheapness of American cotton as a result of the subsidy by making up textiles for export to the United States. Hence United States manufacturers are already demanding legislation which would make this particular trade impossible.

There has been desultory discussion as to whether growers of Indian, African, South American cotton might form a series of international cartels to lift world prices nearer the American level. In any case, the United States move has discouraged those who have been hoping that after the war the world would be free from dumping which harried traders in pre-war days. For the time being, while the demand for agricultural products and especially fibres remains abnormal, this subsidy is not disadvantageous to Lancashire but after conditions become normal, its effect upon cotton-producing countries will be adverse.

Meantime, Lancashire is heatedly discussing the pros and cons of the recent report by the British Cotton Mission to the United States with its severe criticisms of alleged technical backwardness of Lancashire spinning and weaving mills. The prevailing view appears to be hostile to the major recommendations of the Mission.



For example, it is argued that while American mass production methods are suitable for a country which has a huge market at its doors it is not suitable for Lancashire which produces a wide range of qualities for a large number of highly exacting markets which separately take only a comparatively small amount of various indicated qualities and types. Thus "long runs" of automatic machines which are possible in the United States are not possible in Lancashire. Hence the present type of machines, though requiring more labour than American machines, are better suited to Lancashire with its "short runs." As usual in British controversies a middle view is now developing, namely, that for a certain percentage of Lancashire output (perhaps 50 to 60 per cent) mass production is possible and desirable; hence Lancashire should avail itself of the most modern types of automatic textile machinery leaving the remaining 50 or 40 per cent for the present old-style machinery.

Editorial Notes—(Continued.)

Post-Armistice Claims

The military affairs subcommittee of the U.S. Senate very recently reached conclusions that put aside the idea of a soft peace. It is on that view that the Low Countries have asked for a share in the task of post-armistice occupation. The demand made is not novel or unexpected. After the last war an Allied military commission took charge of the Rhineland though the main French claim to permanent acquisition was negatived. Evacuation of the Rhineland and the Ruhr was agreed to by France in 1924 only under pressure. The claim now made by the Low Countries corresponds largely to the French claim for the Rhineland. Only the delay in the framing of the armistice terms would justify the request, but the request is based also on experience of German occupation for over four years. The acceptance of France as an active ally is the inspiration for the demand. But the demand is also due to the Low Countries' relations with Germany. They are more closely linked with Germany rather than Northern France; and their main object is not the exaction of compensation. Having seen their neutrality shattered their main interest lies in the adoption of precautions against aggression. Their own distrust of collective security schemes may underlie the claim for a share in occupation. There is no demand for either partition or cession of territory; only for a due share in post-armistice control arrangements. The claim may be hard to resist if the European Advisory Commission is relying entirely upon events. The U.S. diplomatic representative with the Supreme Commander has not provided so far any scheme. General Eisenhower's proclamation to Germany in September, was concerned merely with the operations in progress. If the Low Countries' interest in Germany's future is due to the entry of two non-European powers, the U.S.A. and Soviet Russia, it is manifest that the occupation will accentuate the manpower shortage noticed during the liberation. Compensation for occupation may be claimed as of right and may even complicate the terms of armistice.

HOW DO YOU JUDGE PAPER?

The Master Printer knows how to select his paper for a particular job. Not so the layman and yet he needs good paper. Surface, Texture and Strength determine the Quality of paper. It is not true that a smooth surface is necessarily better than a rough one or that a particular texture is superior to another or that the stronger the paper the better it will be, under all circumstances. It all depends on the nature of the job for which the paper is required. It is possible to-day, with the highly developed modern machineries, to manufacture paper to suit every purpose.

S. G. P.—10

South India

(From Our Correspondent)

Madras, November 6.

Madras cannot look forward readily to tax relief. There are brave new plans hatched by Sub-Committees one by one, and the Executive at any rate thinks only of expanding expenditure. All amenities have to be paid for by the people as the Governor told a Guntur audience. He added that taxation in India even now is lighter than in other countries. He argued there is need for additional taxation. Last October taxation was enhanced by notification on the ground that post-war schemes required a revenue reserve. The same argument may be repeated on all occasions and it is futile to hope for retrenchment.

Districts still vie with one another in raising war loans and contributions to the war fund. The success of anti-inflationary measures in Madras may be measured by the progress made towards the target of Rs. 20 crores fixed for Madras this year. The collections up to 4th November totalled Rs. 721.59 lakhs and somewhat bigger results are looked for. Whether savings would help the saver directly has not been asked but at present it is the promise of early victory that is keeping up the rate of subscriptions.

An announcement that there is no reason to increase paddy and rice prices in the surplus districts has been made last week. Purchase officers however are free to pay a little extra for one or two varieties. The press note argues that the producer's costs have not risen and the outturn of rice can be larger if milling is not excessive. Ceiling prices fixed for the surplus Districts vary as before but the public is assured that scarcity will not lead to price-raising tactics in the Province. A small and gradual rise in prices after the harvest is promised but the difference would not be enough to encourage cultivators to hold up stocks. While requisitioning is a guarantee of supply the middleman is not rooted out; and small, casual variations in prices are not going to disappear. So far as surplus districts are concerned the prices fixed per maund are nearly uniform but the price of raw rice will be conventionally higher. The Civil Supplies Department's note mentions prices fixed for seven districts and does not guarantee uniformity as regards deficit districts. Since rural rationing is expected to spread the chances are in favour of very limited difference in prices from district to district. While the Press Note doubts the rise in the cost of living it may not be correct as to costs of paddy production. The rise in rural wages apparently is not taken into account because it is assumed that payment in kind is still the rule. The food position in some districts has worsened since October and townsmen are actually at an advantage owing to the introduction of rationing.

At the Andhra University Convocation Sir C. R. Reddi stated that the Vizag Medical College's capacity had been raised from 57 to 100. The Government has accepted the need for expansion (raised rather abruptly by the Principal of the Madras Medical College). Medical education requires expansion in the light of post-war needs. The Special Committee's proposals include the opening of a new Medical College at Madura where it is possible that hospital facilities may justify the training of 100 instead of 75 students. The cost of expansion is put at Rs. 73.74 lakhs and recurring expenditure at Rs. 9.4 lakhs. Nursing is to receive special attention in accordance with present needs. Improvements to hospitals include the provision of training facilities for pupil nurses. The Universities' opinion is sought in connection with the expansion proposals. In going ahead of other Provinces as regards medical education it is clear that relief for demobilised doctors is assured in Madras. The plans for bigger hospitals are of course meant for patients as well as medical students.

The food debate in Delhi led to the ventilation of certain grievances concerning Malabar where wheat is not approved. Epidemics were attributed by more than one member to shortage of food. The views offered as to price control certainly threw into relief the success of Madras as regards procurement and distribution. Though Sir Gopalaswami Iyengar asked for the association of the people's representatives he mentioned that full statistics were obtained and control is relatively easy in Madras. There was a demand for giving effect to all the recommendations of the Gregory Committee but Madras is not greatly interested in imports from Nepal or any area. No assurance as to ceilings and floors for rice was given during the debate and it is still left to the Provinces to leave differences as they were. The Central Government's decision to make no change is certainly sustained by Madras example.

Apart from the proposal to grant a war allowance there has been lately a decision in favour of salary revision. The Congress Ministry lowered scales of pay. The pre-1938 scales were restored and the only safeguard is that back pay cannot be claimed as of right. The revision of salary scales may have effects on both wages and employment, for, it is known that shortage of applicants has already forced up rates of pay. The position will not change easily after the war and it is noted in recent months that for classes outside the associations and unions the claim for allowances etc., has been made by those who are altogether disinterested. Local Boards however overlook the rise in prices and wages and their ability to compete with employers is getting more and more doubtful.

A students' meeting listened to C.R.'s advocacy of State planned enterprise. In relation to revolutionary changes elsewhere the argument for planning was put forward on the basis of resources as well as needs. Mr. Rajagopalachari did not ask for a political solution but referred only to the fact of poverty. Students found the argument for national planning on the Russian model pleasing. The second conversion of the intelligentsia into the bureaucracy will however afford no guarantees of safety or prudence. But the really important point is that objections to State control of enterprise are ceasing to be valid. The Congress moved readily towards planning in the hope of spreading benefits to the masses. Yet it is the acceptance of the old view by dissidents that makes the plea for State control of business more than interesting.

Resume of Commodity Markets

There are no important features in the commodity markets during the past week. The jute market has continued idle with business on a very restricted scale while a slightly steadier tendency was noticeable in the jute manufactures market on the reports that the United States had removed the ban on private imports of jute manufactures and that there was a possibility of a large order from the government for heavy cloth. The bullion market has been firm, especially silver, in spite of the continued selling by the Reserve Bank. The cotton market also has been steadier in sympathy with bullion.

The position in the jute market is still a source of anxiety and seems to be giving a lot of headache to both the Central and Bengal Governments. There has been a further decline in prices during the week and even bottom grades can now be had at minimum prices if only buyers agree to take a good quantity of middle grades as well. If the present conditions continue to prevail for sometime more the black market in jute, in the reverse, will thrive better and the ryot will be affected thereby. It is unfortunate that conditions in the jute market should have come to such a pass especially when the statistical position is very sound and it is felt in certain quarters that there might be a large increase in demand for both jute and jute manufactures in the middle of next year. It is still not clear as to how the Central Government's undertaking to stabilise jute prices above the minimum could be implemented though the Bengal Government is reported to have addressed the Centre on this subject. Rather significantly there has been a report during the week that a large order will be placed for the manufacture of heavy cloth by the Government of India to be used in place of coir matting. This order is expected to consume a large quantity of jute and afford relief to mills by disposing of their sacking production. It is likely, however, that the question will be discussed more fully when the Commerce Member visits Calcutta next week. Either mills might be asked to supply sacking goods and required to purchase the equivalent quantity of jute or there might be a gentlemen's agreement for the purchase of a specified quantity of jute at particular rates on an assurance that a liberal allotment of coal supplies to the industry would be made and there would be a larger offtake of jute goods. It should be remembered that the question in the last resort is one of effective utilisation of available capacity of mills for production, absorption of all jute arrivals into Calcutta and despatch of all jute goods produced to consuming centres. In the absence of any co-ordination between these factors it would not be possible to ensure good prices for jute manufactures. With the lack of storage and and other facilities the actual purchase of jute might not have the desired effect. The developments in the next few weeks should be very interesting.

The raw cotton market has remained firm throughout the week and quotations are several points higher on balance. The strength of the market has to a certain extent been surprising as business has been very small and mills are not taking any interest in the ready markets. The implications of the U. S. subsidy plan have not been clearly understood. In view of the storm of protest from several countries it is expected that there might be a modification of the original plan. It is reported that the Government of India have sent their cotton adviser to the United States and that that he would make proper representations to the U. S. authorities.

The bullion market continues firm and there is no uggestion of any weakening in prices. The tendency is rather irregular. Earlier in the week there was profit-taking but there has been a sudden firming up in Thursday's session particularly in silver. Throughout the week the Reserve Bank has been selling 75,000 tolas of gold and 300 bars of silver to the highest tenderer. As arrivals from the mofussil have been negligible and it has been possible to sell all the quantities offered by the Reserve Bank without any difficuty tenderers in their anxiety to get bullion, have put up rates everytime. The Reserve Bank has naturally taken advantage of the situation. The policy of selling bullion on the tender system has been criticised in these columns. It need not be emphasised that under the present conditions it will not be possible to push down prices effectively.

No purchases of castorseed and groundnut have been reported by the British Ministry of Food during the week. Sellers are prepared to accept the lower rates offered by the Ministry but the official purchasing agency is reported to be waiting for a further decline in price. In the Linseed market, greater activity has been noted. Sellers were anxious to do business for forward deliveries earlier in the week as there were reports of larger arrivals in upcountry centres but towards the close they are rather reserved.

Earlier fears regarding the surplus groundnut crop in the Madras povince having an unfavourable effect on prices seem to have been rather exaggerated. It is reported now that the crop has been affected by unfavourable weather conditions and that the provincial government would welcome any increase in the yield if only for the larger supplies of oilcakes which are so badly needed for manuring purposes. The need for strengthening the soil by the use of manures has gained such importance that there is effort in every province to control the movement of oilcakes.

BOMBAY MARKETS

COTTON

(From Our Correspondent)

Bombay, *(By Wire)*.

The Cotton hedge contract price is well held at Rs. 417 for March and Rs. 421 on speculative support, banking on delivery being three months ahead. There are hopes that some bullish development may occur meantime. Hedge selling is restricted since holders of actual cotton do not view the contract as an effective hedge as the futures market has lost contact with the spot market, as witness disperate and sometimes contradictory price movements. In two months, while hedge contract rates have declined by Rs. 22, spot old Jarrillas are lower by Rs. 50 and Sind NT by Rs. 47. These abnormalities are, however, temporary and trade expects prices ultimately to work lower, especially as no dearth of tenderable cotton will exist and the export outlook is so clouded.

The International cotton market is narrow since countries which absorbed two fifths of the world's cotton imports are still isolated. Consequently, even a limited increase in American exports will cause a disproportionate reaction on prices generally. Despite contradictory price making influences the New York market is steady. Official support and inflation is partly offsetting peace views. It appears that American cotton utilised by Britain for exporting goods are outside the scope of Lease-Lend and have to be paid for in dollars at subsidised prices.

It is notable that the delegations meeting in New York representing Liverpool, New York, New Orleans cotton exchanges and spinners associations have passed resolutions advocating relinquishment of controls, as early as possible, leaving economic factors free play. Opinion was unanimous about the reopening of the Liverpool market, and establishing private trading. It was urged that provision should be made for imports into Britain of certain types of cotton outside Lease-Lend to enable British merchants to begin rehabilitating exports. It is significant that the opinion rejected the usefulness of cotton agreements and plumped for free competition in alleged interests of efficient production and marketing.

The Indian cotton trade is watching trends with anxiety.

SILVER

The silver market is at the mercy of a powerful bull clique who manipulate rates every day and absorb all offerings of the Reserve Bank. The stock is small, thanks to local demand and upcountry offtake. The Forward rate opened at Rs. 117 on Monday and shot up to Rs. 119-14 the same evening on heavy buying and to Rs. 120-6 on Tuesday. The new settlement quoted Rs. 117-4 on Wednesday noon, but rapidly advanced to Rs. 121 to-day, closing somewhat easier at Rs. 120-10 with spot commanding a rupee premium. The official sales rates from Monday were Rs. 117, 118-5, and 120-10 respectively. Offtake 300 bars daily.

Date	Quantity (Bars)	Price (per 100 tolas) Rs. A.
Nov. 17	.. 300	117 9
Nov. 20	.. 300	117 7
Nov. 21	.. 300	120 10
Nov. 22	.. 300	118 5 & 118-6
Nov. 23	.. 300	120 10

GOLD

Gold is quieter except for the jump from Rs. 64/4 Forward yesterday to Rs. 65/4 to-day with Ready four annas higher. The offtake averages 40.000 tolas daily and Bank's sales of 75,000 tolas daily, relieves the stock position. The Bank's acceptances since Monday were respectively Rs. 64/10, 65/3, 64/7, and 64/15. The undertone is easy.

Date	Quantity (Tolas)	Price per tola. Rs. A.
Nov. 17	.. 75,000	65 1
Nov. 20	.. 75,000	64 3
Nov. 21	.. 75,000	65 4
Nov. 22	.. 75,000	64 7 to 64-9

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, November 23.

Rumours have been rife in the market-place during the past week. On the Jute side it was that Government were negotiating with the Jute Mills to get the latter to buy jute in order to support prices and relieve Government of the necessity to do so. On the Gunny side it was that mills were about to fix minimum prices for all types of jute fabrics so that limits might be defined within which trading would be permissible. The latter rumour can be disposed of at once, for no confirmation can be obtained of any move to fix minimum prices for hessians or gunnies. In any case it would not be in the province of the mills to fix such rates under a Government Ordinance, though naturally they would be consulted in the matter. But any fixation would have to be by Government decree, amending the existing Order.

There appears, however, to be some substance behind the jute buying report. So far as can be learned, Government enquired to what extent mills were prepared to purchase jute in the near future, after which, if the price still remained depressed, Government might continue buying to support the market. At the present time the problem which confronts the mills in deciding their buying policy, is a three-fold one. Are they going to get a sufficient supply of coal to enable them to take off their normal production of manufactures? What are the prospects of resumption of demand for manufactures, particularly for Heavy Goods? And finally the question of storing capacity, both for raw material and for manufactures. It naturally follows that, if production falls by reason of short coal supplies, the consumption of jute must fall in direct ratio. And none of the promises freely made in the past regarding improved supplies of coal have been redeemed. So, without something more tangible than mere promises, mills will be chary about committing themselves to any buying policy which is related to coal supplies. As to the prospects of a revival of demand for manufactured goods, while almost everyone is convinced that there are in the world today very large potential requirements of jute goods, there is no blinking the fact that, at the present moment, overseas markets are very successfully disguising the fact that they have any requirements at all. Possibly it is the weak tone of the markets generally that is causing them to hold back, and demand might revive if there were indications that the bottom had been reached, or that any effective steps were being taken to stabilise the present depressed situation. But the outlook at the moment is undoubtedly bleak and it would be asking a lot of mills to expect them to buy jute now at minimum prices of over, on the prospect of being able to sell their goods against these purchases in some indefinite future and at some undefined price. Finally in the matter of storage space. It might be pointed out that mills are holding a smaller tonnage of gunnies in stock than they were a year ago, and probably no greater quantity of jute. But it must be remembered that there have been great inroads by requisitioning on their storage space in the past year and mills generally are simply not able to accommodate anything like their normal carrying capacity, either of raw material or goods. Without an early improvement in demand for heavy goods, not a few mills will be storing unsold goods—a most unusual predicament for them. Further, there is every probability that large quantities of sold goods will be left in mill godowns from the orders they are still manufacturing because there is no immediate offtake for these to overseas markets. Actually, the mills seem to be faced, at no very distant date, with the prospect of having to shut down a percentage of sacking looms, unless there is a very marked change in the situation. Altogether mills' position at the moment is not one to encourage them to heavy buying of jute, even at minimum rates, and we cannot believe that their reaction to the Government approach could be favourable in the circumstances.

One gleam of hope there is, and that is the report of a Government enquiry for a large quantity of heavy gunny cloth to be used as a substitute for coir matting. If the quantity were big enough and the construction not too far off standard, such an order would be a godsend for the mills and might go far to solve the problem. But the quantity would have to be very substantial, and the matter has not got beyond the enquiry stage, as far as can be ascertained. Another hopeful feature perhaps is the report that the U.S.A. is withdrawing the restrictions on the private importation of burlaps. This, however, does not seem likely to affect the position before the July-December shipping position, for it is believed that the requirements for that market up to June next year are already fully covered by official purchases. In any case, it is not the Hessian position but the Heavy Goods position which is the acute one at the moment.

We remarked last week on the hold up of a large quantity of valuable shipping space upcountry owing to the delay in unloading upward cargo, mainly on other than commercial account. We are assured that a good deal of blame attaches to the Railway in dilatory unloading of coal, though the Civil Supplies Department and the Military are also blameworthy. We are further assured that demurrage will be charged to these departments on the same scale as merchants would be charged. We are afraid that there is too much regardless squandering of public money already for anyone in authority to lose any sleep over such demurrage charges, apart from the fact that demurrage might be charged, but not necessarily paid. What is important is not the realisation of so many thousand rupees of demurrages, but the unnecessary waste of so many thousand tons of shipping space which ought to be in active employment and not lying idle. Shortage of labour owing to the insatiable demands of the military, is at the root of the trouble. But it might not appear unreasonable that extraneous requirements for labour by such as the Military and Civil Supply authorities, should be met by special arrangements of their own without encroaching on and upsetting the local labour supply to the detriment of everyone concerned, whether civil or military, official or unofficial.

We have been favoured with some further information on the progress of Jute cultivation in the Amazon Valley in Brazil, where it was started some years ago by Japanese. The project appears to have the active backing of the Brazilian Government and though the available statistics are somewhat contradictory, the 1944 crop outturn being variously reported at from 3500 tons to 6500 tons, progress does not seem to be spectacular. In 1942, the last year for which reliable figures are available, Brazilian consumption of jute and similar fibres was 30,000 tons, of which half was Indian jute and the balance indigenous fibres, but Amazon jute only contributed 1650 tons. At that, Brazil a small exporter of bags, mainly to the Argentine, so her domestic requirements were apparently covered by less than 30,000 tons of jute or similar manufactures. Any increase in jute cultivation therefore would seem to involve the export of the raw fibre. The yield seems to be not dissimilar from Indian jute, being recorded as the equivalent of 2.8 to 3.3 bales per acre. The production cost quoted would certainly make it competitive—at Rs. 5-12 to Rs. 6 per maund, but a report on the quality is that while colour is fair, the fibre is harsh and brittle and for spinning purposes could

International Business Conference

Controls to go—But not Imperial Preference —China asks for foreign aid—U. S. not reconciled to Import surplus.

WASHINGTON, November, 20.

The main feature of last week's session of the International Business Conference at New York was the support given to the Empire preferential system by the British delegates and the refusal of the American delegates to take a definite stand in regard to the Bretton Woods proposals. The Conference also listened to China's interest in foreign investments described by Mr. Li Ming of Chekiang Industrial Bank of Shanghai which has its Headquarters now at New York.

Mr. Henry F. Grady, Chairman of the United States Delegation, raised the point of preferences when he spoke in opposition to bilateral trade agreements. Mr. Peter Bennett representing the British Delegation, said that Britain favours the lifting of all trade restrictions and controls and made an exception of the imperial preference agreement. "Britain" he averred, "wanted to get rid of controls as soon as possible." Mr. Grady said that such policy as is inherent in bilateral agreements leads to government controls over international trade, because only through enforced quotas and exchange allocations can agreements favouring one nation against others be reached. Mr. Grady called for "Collective economic security" as the cure for economic war.

The United States delegates deferred taking a stand on the Bretton Woods agreements, pending the publication of certain studies by the American Bankers' Association, the New York State Bankers' Association and the National Foreign Trade Council.

When the British delegate Mr. Arthur R. Guiness sought an endorsement of monetary proposals stating that International Bank would encourage sound international investment in the post-war period many delegates supported his view.

The Chinese delegation urged that China be given consideration by all Nations in her reconstruction and development in the post-war period. Mr. Li Ming said that foreign investments will be adequately safeguarded and that the officials of the organisations to be set up need not be Chinese citizens except in the case of the Chairman of the Board of Directors. The Chinese urged "withdrawal by the United States and other countries of tariff barriers thereby permitting increased importation of Chinese goods." Mr. Ming added that China will expand agricultural and mineral exports and endeavour to ship more of finished products.

Mr. Grady made the statement, "The danger confronting the United States in its extension of loans and investments abroad is that it will not willingly face economic realities and so adjust its tariff schedules as to bring about excess of imports at some reasonably early date." He added that capital exports from the United States which do not have their counterpart in imported goods or services will only constitute gifts to foreign consumers.

(*Continued from Previous Page*)

only be successfully used in a mixture with other fibres.

There is nothing of interest to record from the Export Jute market. It is reported that offers sent to Dundee at one pound below the minimum equivalent here, elicited no response, whether because it was contrary to the Ordinance or not, we cannot say. All grades except the lowest continue on free offer but the only business recorded is a very small one with Mills in Lightings and Hearts at Rs. 74/- and Rs. 68/-.

In loose Jute there has been a little more doing but the turnover is far below normal. European Jat is reported at Rs. 15-12 and Rs. 12-12 Mids and Bots with four annas more done for Tossa. A moderate business has been done in Supervised Eastern Jat at Rs. 15-4 and Rs. 12-4 in low assortment lower than most sellers care to accept, as they already have excess Middles in stock. Indian District Tossa was also done to a small extent at Rs. 15-4 and Rs. 12-4 in assortment and at Rs. 12-8 for Bots.

There is no change in the Hessian section of the Fabrics market, Mills not pressing for business as they are pretty well sold for some time ahead. Also there is some enquiry for specialities in over-portered and over-shotted goods for such as care to make them. In the Heavy Goods section however there is anxiety to get business on almost any terms, but no sign as yet of recrudescence of demand for standard goods. Sentiment varies from day to day but there is little change in the nominal price level since last week and nothing to record other than inter-Bazar transactions.

SOMETHING "EXTRA" IN THIS INVESTMENT

Life insurance offers you an ideal investment proposition. Government Securities, Bank Deposits, etc., are First Class Investments, but certain New India policies afford better advantages. They are as follows:

- **Handsome Profits:** *At the end of the term, the policy returns the Capital invested with an yield in compound interest which is very often larger than the yield from the Capital invested in other securities.*
- **Full Life Coverage:** *In the event of early demise, the full sum assured (with or without profits) is paid out to the beneficiaries. Very often this means a return out of proportion to the Capital invested.*
- **Saving in Income Tax:** *To those who pay Income Tax, such policies are an added attraction as a substantial rebate is allowed on the premiums that are paid.*
- **No Depreciation:** *The Capital invested does not depreciate nor is adversely affected by market fluctuations*

The Capital may be invested by instalments or in a lump sum at a discounted rate, As the yield varies in each individual case according to age, term, income tax payable, etc., a detailed plan to suit your own needs will be furnished on request.

Premium Income in 1943	Total Funds
Rs.2,13,08,304	Rs. 5,56,30,654

New India's huge assets constitute an unimpeachable security. To-day this company can be proud of being the largest Indian Composite Insurance Organisation, transacting Life, Fire, Marine, Accident and other forms of insurance.

JUTE

(By Our Staff Correspondent),

Calcutta, November 23.

Dull conditions have continued to prevail in the raw jute market and business is on a very small scale. Though a slightly steadier tendency has been noticeable in the goods market, there is no disposition on the part of mills to enter into fresh commitments There is a desire to await further developments. Such business as has been put through during the week has been mostly for forward deliveries on conditions relating to storage accommodation. It appears that mills are prepared to pay a slight premium for deleveries in equal quantities over a period early next year and thus feeding the mills without taxing their godown capacity. Sellers are more than ever willing to do business for middle grades. Prices have continued to decline even for bottom grades. The position in the jute market is such that both the Bengal and Central Governments are considering ways and means to stabiiise prices around the present levels. The rumours during the week that the Government of India might place orders for large quantities of heavy cloth to be used as a substitute for coir matting are not perhaps without significance. Mofussil markets have been uninteresting and prices have continued to decline even with the decrease in arrivals. With ryots busy with the harvesting of the paddy crop and the fall in the level of the rivers, it is reported that there is a deterioration in quality.

In the loose jute section, European Jat Middles and Bottoms for forward deliveries are reported to have been done at Rs 15-12 and Rs 12-12 per md while Eastern District Tossa Middles were sold at Rs 15-6 and Rs. 12-6, also for forward delivery. Jungli Tossa Middles and Bottoms were quoted at Rs. 14-12 and Rs. 11-12 per md respectively.

In the pucca bales section, export business has again been poor. Mills are reported to have purchased Lightnings at Rs 74 and Hearts at Rs. 68 per bale. Cuttings continue to be in demand, N. C. & M. C. being purchased at Rs 43 and Rs 42 per bale. It appears that sellers are prepared to offer a slight reduction in prices for Rejections Ropes and Cuttings if buyers express an inclination to take up higher grades of jute as well.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, November 23.

In the jute manufactures market there was no important change in prices earlier in the week. Private enquiry is still poor and there are secondhand sellers for every description of jute goods at a discount. Mills have not hitherto broken the maximum prices for hessian but it is reported that some further sales have been effected for heavy goods below maximum rates. In midweek, reports to the effect that the U. S. Government has removed the ban on private imports of jute manufactures was well received. It was hoped that there might be a cessation of official buying and that business on private account might show a large increase. This, coupled with the report, that there was a possibility of large orders for heavy goods by the Government of India had a steadying influence. Pending the confirmation of the new order, however, there is no disposition to push up prices further.

In the heavy goods section, B. Twills were lower at Rs 57-8 earlier in the week. They have improved towards the close to Rs. 58-8. Some business has been reported by mills for other descriptions at last week's rates to private consumers.

PIECEGOODS

Business in the piecegoods market is restricted by the scarcity of supplies. The arrangements under the new scheme have not yet been completed and it appears that there is considerable delay in the despatch of goods from the Western Presidency. There is also a famine for the finer quality goods, while there is little demand for the coarser grades.

ESTABLISHED IN 1980

Managing Director:

Mr. N. C. DATTA, M.A., B.L.

EPIC OF KOHIMA

TOJO'S MEN had crossed the Chindwin. Slowly, stealthily, they had reached the slopes of Mt. Japvo and the Naga Hills. They took the few ridges and hills around Kohima. The Nagas had been driven out of their villages. Their houses were burnt, their huts were razed to the ground, their pigs, poultry and crops looted and plundered. "INVASION OF INDIA" the Japanese called it.

Events moved rapidly. You remember the names: the Jail Hill, the GPT Ridge, FSD Ridge, the Pimple and lastly the D.C.'s Bungalow. It was a bitter battle.

BUT OUR MEN, GREATLY OUTNUMBERED, NOT ONLY HELD OFF THE ATTACK, BUT ULTIMATELY SMASHED THE FOE AND WON A GREAT VICTORY.

This was the epic of Kohima. Here our men proved that...

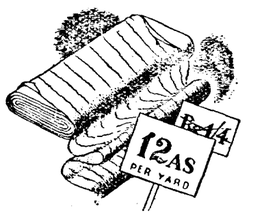
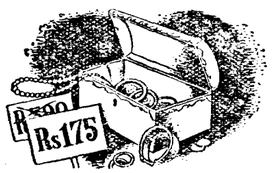
SEEING IS BELIEVING





falling prices prove the wisdom of saving for the future

If no one had saved money last year and early this year; if Government had not introduced strict price controls and increased the manufacture of bazaar goods, prices would still be fantastically high, as they were last year.

But private savings and administrative action by Government have brought prices down. People who foolishly invested in jewels, property, commodities and goods have seen their investments shrink before their very eyes.

And this is not the end. The downward trend will persist. Be wise. Don't be caught by falling prices.

These, as before, are today's best investments: every time prices fall an anna, these investments improve in value: Co-operative Societies. Insurance, Savings Bank Account. Post-Office Savings Bank, Government Loans and National Savings Certificates.

Do without luxuries. There is plenty of time after the war for new clothes, new furniture, new houses, new cycles and motor cars. Save money now to spend it then.

Stock Markets to-day and to-morrow:

BIRD & HEILGERS JUTE RESULTS

THERE has been a sudden firming up in prices on the Calcutta Stock Exchange in the last two days. There is no special reason for the improvement in prices. The continued strength of the Bombay stock, bullion and cotton markets and the better technical position brought about a resumption of investment buying. Coal shares were in great favour as it was said that the industry was doing well and that many companies would be able to exceed the target level in the current half-year. The confidence in the future outlook for the industry will be evident from the fact that coal bearing lands which have not been hitherto exploited have come in for attention and some of the collieries in the Bird group are reported to have purchased new properties from the Karanpura Development Company Limited. There was a sudden rise in Bengal Bhatdee, as in the case of Deoli Coal last week, on the report that raisings would considerably improve with the working of new properties. However, as the earlier rise in prices had been overdone it cannot be definitely said that a further rise in prices will be justified.

* * * *

That the position in regard to deliveries has been adjusted to a great extent will be evident from the decision of the Committee at a meeting held on Thursday to the effect that the market should be again open for business on week days excepting Saturdays and holidays. On Mondays, Tuesdays, Wednesdays and Thursdays the market will remain open from 12 noon to 3 p.m. and on Fridays from 12 noon to 2 p.m.

* * * *

It is reported that a clearing arrangement has been concluded and that the Allahabad Bank Limited will be the clearing house as from December 4, 1944. The first clearing will be on December 11, 1944 and the scrips affected are the four counters, Indian Irons, Steel Corporations, Burrakura and Howrahs.

* * * *

Thanks to the satisfactory working of the Industrial Pool scheme and the continuous working of the foster mills, with the special priorities enjoyed by them, jute mills have been able to report satisfactory earnings in the half-year ended September, 1944. The balance sheets of nearly twenty jute companies have been published in the past two weeks and all of them reflect in full measure the improved conditions in the industry. The Bird and Heilgers group of companies have published their accounts for the six months ended September 1944 and all of them make interesting reading.

The foster mills and requisitioned and foster mills have benefited to a great extent by reason of continuous working. There was no difficulty in the case of Auckland as it was electrically operated and there were no other problems facing the Company. The Old Mill of Clive was requisitioned but the New Mill which is electrically driven worked double shift, and there was no loss in working hours. Lansdowne, Lawrence, Naihati and Union had difficulties on account of coal supplies. Lansdowne lost 605 working hours of which 550 hours were utilised by the Industrial pool and 55 hours have to be made up, as they were lost before July 1, 1944, i.e., before the introduction of the industrial Pool scheme. Similarly, Lawrence lost 714 hours of which 510 hours were utilised and 204 hours are to be made up at a future date. Naihati lost 686 hours of which 510 hours were utilised by the Pool. Union's South Mill suffered through lack of coal supplies. Lost working hours were utilised to the extent of 510 hours. There is a balance of 157 hours to be made up.

*

The sums received from the Industrial Pool by the undermentioned companies were:

	Rs.
Lansdowne ..	.. 4,69,540
Lawrence ..	.. 4,77,658
Naihati ..	.. 4,69,469
Union ..	.. 4,84,779

Kinnison and Northbrook were requisitioned completely. It was possible to utilise fully the working hours of Northbrook at the Standard and Dalhousie Mills, but Kinnison had difficulty in disposing of 199 hours.

The table below gives the result of the Bird & Heilgers group of companies for the last two half-years. As foster units, Dalhousie and Standard have done very well, the net profit being nearly three times higher than the figure for the previous six months. In the case of the requisitioned units the financial arrangement has worked so well that earnings have nearly doubled in the case of Kinnison and Northbrook 50 per cent. Five companies have increased the distribution, Auckland and Dalhousie raising the dividend from Rs. 4 to Rs. 5 per share, Clive from As. 6 to As. 7. Standard from Rs. 3 to Rs. 4 per share and Northbrook from As. 4 to As. 6 per share. The dividend of Lansdowne has been maintained at Re. 1 per share, Lawrence Rs. 4 per share, Naihati Rs. 4-8 per share, Kinnison Rh. 5 per share and Union Rs. 7-8 per share.

	Half-year ended. 30-9-44	31-3-44
	Rs.	Rs.
Auckland ..	12,63,305	8,92,002
Clive ..	11,04,102	8,30,844
Dalhousie ..	13,18,162	4,37,169
Lansdowne ..	4,48,807	1,81,611
Lawrence ..	4,84,504	1,28,779
Kinnison ..	8,91,392	4,26,529
Naihati ..	5,25,093	4,86,044
Northbrook ..	6,88,328	4,49,374
Standard ..	9,47,976	3,29,442
Union ..	9,69,964	6,23,976
	86,42,133	47,85,770

It would have been possible for the *Auckland Jute Company Limited* to pay a larger dividend but for the larger tax provision. The net profit before providing for taxation and depreciation for the half-year is Rs. 12,63,305 against Rs. 8,92,002. Tax provision is Rs. 8,82,076 against Rs. 5,67,513. The provision for depreciation is Rs. 1,05,374 (Rs. 1,13,833). Transfer to other funds is Rs. 1,54,666 (Rs. 36,700). After paying the dividend on ordinary shares at Rs. 5 per share (Rs. 4 per share) the amount carried forward is Rs. 15,527 against Rs. 29,338 brought in.

* * * *

The increase in earnings of the *Dalhousie Jute Company Limited* has been mostly taken up by the higher provision for taxation. The net profit is Rs. 13,18,162 against Rs. 4,37,169 for the previous half-year. The taxation provision is Rs. 9,54,288 (Rs. 2,35,963). War Contingency Reserve receives Rs. 1,25,000 (Rs. 25,000) and depreciation Rs. 70,244 (Rs. 41,295). Other funds get nil (Rs. 16,300). The Ordinary dividend has been increased to Rs. 5 per share from Rs. 4 previously.

Bombay Investors & Indian Stock Exchanges.

ENCOURAGING OUTLOOK FOR TEA INDUSTRY

TEXTILE ISSUES MOVE UP

(By Analyst)

BOMBAY (*By Wire*).

London Stock Exchange operators feel that the tea market is looking firmer with a modest revival of investment demand, particularly in view of the fact that the Food Ministry's contract this year is more favourable and tea shares also give good yields. The Chairman of Malayalam Plantations recently expressed the opinion that the outlook appears to be very favourable for many years ahead. In Calcutta also tea shares were in great demand, particularly shares like Hasimara, Bishnauth, Patrakola, New Doars and Sapoi.

Despite encouraging advices from London and Calcutta, South Indian tea shares were neglected throughout the week. In Madras, as well as in Bombay, this is probably due to a series of disappointing reports published recently, the last being, Midland. I, for my part, feel that the present is an opportune moment for investment in select tea shares. In Calcutta, I favour *Hasimara* and *Bishnauth* and in Madras, *Peermade, Hadleyburia, Highland Produce, Periakaramalai* and *Chembrapeak*.

Coming to the Rubber section, it is reported that the International Rubber Regulation scheme has come to an end, by a recent notice issued by the Colonial Office. Thus one of the most successful organisations is meeting with an unnatural death. The chief cause is said to be the emergence of the United States of America as a large producer of synthetic rubber. It is true that for some time to come, America will need a considerable amount of natural rubber but in view of the fact that that country will certainly try to support its synthetic rubber industry, despite synthetic rubber being very costly compared to natural rubber, I am not very optimistic about the long term future of the rubber industry. For two to three years there may be a scramble but I would favour liquidation of shares if there should be a rise of 10 percent from present levels.

Coming to the Coffee section, I am rather optimistic in view of the fact that Indian Coffee is probably the best coffee, in the world and is gradually catching hold of the masses. Military personnel in India also have taken to coffee very seriously. Indians also have begun to take more and more to coffee, due to the successful propaganda by the Coffee Marketing Board. I would, therefore, welcome investment in tea-cum-coffee shares say, shares like Outcherloney Valley or Nilgiri Nirugundi.

In the giltedged market, 3½ per cent paper has been steady at Rs. 100/1. Almost every market operator is thinking of a reduction in the bank rate and repayment of 3½ per cent paper as discussed by "Eavesdropper" last week.

It is advisable to sell 3½ per cent paper and buy longdated loans like 3 per cent 1966/68 at the current price of Rs. 98/4. I have also recommended many to sell out 3 per cent. 1936-65 which is quoting around Rs. 99/4 and reinvest the proceeds in 3 per cent 1966-68.

Dalal Street welcomed with a sigh of relief the news that the fertiliser industry will be stateowned and statecontrolled. Unless details of the scheme are known it is very difficult to pronounce an opinion. since there were persistent rumours in the market that Imperial Chemicals will be asked to control this industry. As for Chemical shares in general, I continue to be bearish and I would recommend liquidations of even investment holdings.

Textiles in Bombay were active, Svadeshi, Nagpur and Tata mill were the centre of attraction and were done up to Rs. 580, Rs. 411 and Rs. 72 respectively. It is said that the rise is due to rumours of an amalgamation of all the mills in the Tata group i.e., Ahmedabad Advance, Central India Svadeshi, Nagpur and Tata Mills. There is no confirmation of these rumours.

Madras Textiles forged ahead on investment enquiry from Bombay. *Madura* were done up to Rs. 69/12 with more buyers than sellers in evidence. *Sitaram* were done up to Rs. 190/; *Buckingham* were steadier at Rs. 313. Among Mysore Scrips, *Krishnarajendra* deserve attention at the current price of Rs. 68.

In the Miscellaneous section, *Rampur Maize* due to Delhi shortcovering improved to Rs. 48/8 and closed at Rs. 48. *Associated Cement* are sticky around Rs. 242. Whenever the market moves down to around Rs. 238 professional operators give good support. They seem to unload again around Rs. 245. Since I would always prefer to go with the market I would recommend investors to wait and watch and buy below Rs. 240, say, Rs. 238. Since the shares are cum-dividend the cost will be around Rs. 230. On the basis of a dividend of Rs. 7, the yield will be 3 per cent. If there should be any new issue, as indicated earlier, the shares would certainly move up.

THE CENTRAL BANK OF INDIA, LIMITED

NOTICE

Re: Conversion of 2 Coupons into a Share

NOTICE is hereby given that the last date for submission of Coupons for conversion into Shares of the Bank is further extended from 15th November, 1944, to 15th December, 1944.

KAMLA TOWER, CAWNPORE — WORKS AT ASANSOL.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Nov. 24.

There has been a sudden firming up in prices on the Calcutta Stock Exchange this week. Quite active conditions were witnessed in Wednesday's session with coal shares leading the market. As the position in regard to outstanding deliveries had been adjusted it was felt that prices for selective shares were rather depressed, especially as the Bombay market has recorded a continued rise in prices. The strength of the Coal section has been due to the hopes of higher dividends with a substantial improvement in raisings and earnings. Jute shares were rather quiet while Engineering issues were uninteresting. Cotton shares were firmer in sympathy with Bombay. The undertone is generally firm.

The giltedged securities section has been very steady, 3½ percent Paper quoting above par for most part of the week. There has been good demand especially for short and medium-dated loans, greater attention being paid to the relative yields on particular loans.. 3 percent Paper was noted at Rs. 91/12. Among terminable loans, 3 percent 1946 were Rs. 102/8, 3 percent 1949-52 Rs. 102, 3 percent 1953-55 Rs. 100/12 and 3 percent 1957 par. There is a rise of more than 4 annas in all the cases. Long-dated issues also have come in for some attention, 3 percent 1966-68 particularly being taken up at Rs. 98/4 and 3 percent 1963-65 Rs. 99/5. No transactions have been recorded in Provincial loans. Easy conditions continue to prevail in the money market though there has been poor response at the auctions of Central treasury bills this week and the average discount rate has hardened to 8 annas percent per annum.

In sympathy with the giltedged securities section Bank shares were higher. *Bharat Bank* ordy were Rs. 109 and *United Commercial* Rs. 38/4 premium. Transactions have been noted in *Hindustan Mercantile Bank* around Rs. 50/8. *Hind Bank* were Rs. 54 and *Calcutta National Bank* Rs. 14/4. *Reserve Bank* were steady at Rs. 137 and *Imperial Bank* contributories at Rs. 510.

There has been greater enquiry for Cotton shares from Cawnpore and quotations have risen all round. *Cawnpore Textiles* being Rs. 14, *Elgin* Rs. 68/4 against Rs. 66/4 and *Kesoram* Rs. 16/12 against Rs. 16/2. *New Victoria* were done up to Rs. 8/15 from Rs. 8/4 earlier in the week. *Mahalaxmi* changed hands around Rs. 34/8.

Coal shares have been very active in the last two days on encouraging reports from the industry that raisings have been maintained at high levels. *Raneegunge* have risen by 3 points to Rs. 54 on reports of a higher dividend for the last accounting period while there was a sensational rise in *Bengal Bhatdee* from Rs. 9/12 to Rs. 15/4. It is said that the Company has commenced raisings from the newly acquired properties. *Amalgamated* were one point higher at Rs. 45/13 and *Bengal* 5 points at Rs. 644. *Bokaro and Ramgur* were uninteresting at Rs. 39/9 but *Equitable* improved to Rs. 63/12 from Rs. 62/2. *New Beerbhoom* were Rs. 35/12 against Rs. 34/2, *South Karanpura* Rs. 22/8 against Rs. 21/6 and *Talcher* Rs. 10/3 against Rs. 9/13. It is expected that South Karanpura Coal Company Ltd. will be able to pay a small dividend for the half-year ended August, 1944.

The Jute section has been devoid of interest though *Howrah* were higher in sympathy with the other sections at Rs. 82/3. There were reports that the Government might make efforts to stabilise both jute and jute prices which is an encouraging factor for the industry. Before long prices for jute shares will be quoted higher especially as the balance-sheets published during the past few days make very satisfactory showing. *Anglo-India* were unchanged at Rs. 450 while *Champdany* were a shade easier at Rs. 258. *Clive* were steady at Rs. 54 and *Ganges* Rs. 529. *Kamarhatty* changed hands at Rs. 636 and *Kanknarrah* Rs. 545. *Nuddea* were in greater enquiry on the announcement of a higher dividend for the halfyear ended September, 1944, Rs. 2 per share against Rs. 1/8 per share for the previous half-year. *Presidency* were Rs. 10/10 against Rs. 10/6 and *Reliance* Rs. 67/2 against Rs. 66/4.

In the Engineering section, *Indian Iron* and *Steel Corporation* were rather sticky at Rs. 38/2 and Rs. 31/12 but the sharp rise in prices in coal shares has resulted in an improvement in prices for Indian Irons and Steel Corporations to Rs. 38/12 and Rs. 32/2 respectively. *Britannia Eng.* were Rs. 22 against Rs. 20/8 while *Indian Standard Wagon* were Rs. 84. *Jessop and Co.*, were better at Rs. 24/5 but *Kumardhubi Eng.* were unchanged at Rs. 11/6.

Sugar shares were neglected. *New Sarun* and *Ramnugger Cane & Sugar*, however, registered a rise to Rs. 21/4 and Rs. 13/10 respectively. *Buland* were steady at Rs. 44 as also *Carew & Co.*, at Rs. 28/8 *Champarun* were Rs. 38/8 ex-dividend and *Darbhanga Sugar* Rs. 30.

Tea shares continue to be in good request. *Bishnauth* were steadier at Rs. 42/6 and *East India* at Rs. 17/8. *Tezpur* were Rs. 20/14 and *Central Cachar* Rs. 93/8.

Among miscellaneous shares, B. I. Corporation were 4 annas higher at Rs. 6/12. There was a sharp rise in *Calcutta Trams* on bear covering to Rs. 54 but on reports that the Bengal Government had not accorded sanction to the proposal that the Calcutta Corporation would purchase the Tramways undertaking through an Agent, there has been a decline to Rs. 51. *Bararee Coke* were Rs. 30 and *National Insulated Cables* Rs. 13/13. *Burma Corpn.* and *Indian Copper* were unchanged at Rs. 4/10 and Rs. 3 respectively. *Alkali & Chemical* changed hands at Rs. 29 and *Dhrangadhara Chemicals* at Rs. 505. Among Paper shares, *Titaghur Paper* were Rs. 28 and *Orient* Rs. 30. *Midnapore Zemindary* improved to Rs. 168 from Rs. 164. *Humayan Properties* ordys were steady at Rs. 17/5.

KHARDAH COMPANY, LIMITED

NOTICE is hereby given than an Extraordinary General Meeting of the Khardah Company, Limited, will be held at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta, on Wednesday, the twentieth day of December, 1944 at 12-15 in the afternoon when the sub-joined resolutions will be respectively proposed as Special Resolutions:—

I. "That the action of the Directors in making a donation of Rs. 6,010 from the assets of the Company to "H. E. The Governor of Bengal's War Purposes Fund" be and the same is hereby approved."

II. "That in accordance with the provisions of Section 3 of the War Donations and Investments (Companies) Act, 1940, the Directors be and are hereby authorised to make from time to time donations from the Company's assets to any public fund formed for the purpose of assisting in the prosecution of the present War as may from time to time be approved by the Directors not exceeding in all Rs. 20,000 (Rupees Twenty thousand) excluding the donation already given for such purpose as aforesaid."

By Order of the Board,
ANDERSON, WRIGHT & CO.,
Managing Agents.

Dated 21st November, 1944.
7, Wellesley Place,
Calcutta.

Company meeting.

BANGASRI COTTON MILLS LTD.

SATISFACTORY WORKING RESULTS FOR 1943

IN SPITE OF ADVERSE CIRCUMSTANCES

At the eleventh ordinary general meeting of the shareholders of the Bangasri Cotton Mills Ltd., held on Wednesday, the 15th November last, Mr. D. N. Chaudhuri, Chairman of the Board of Directors, made the following speech:—

GENTLEMEN,

The audited balance sheet for the year ending with the 31st December, 1943, and the Directors' Report on the working of the Company, have already been circulated to you, and I trust you will appreciate that in spite of the various adverse circumstances the working results have generally been satisfactory.

The most important fact to note is that in the year 1943 Bengal witnessed the greatest calamity that ever befell this province, and apart from the millions of human lives lost as a direct result of the Great Famine, the moral and material deterioration which came in its trial have caused a tremendous setback to the economic life of the province. The working of your mills during the year 1943 had naturally been greatly influenced by these events and labour conditions became extremely difficult. We had to work hard to keep our employees satisfied by arranging for the supplies of food stuff at reasonable prices, and I must mention that we had been singularly fortunate in being able to supply our staff various food grains at practically pre-inflation prices, although the market rates were 400 and 500 per cent higher. When the scarcity was acute most of the workers brought their family members from the famine stricken rural areas and we had to arrange for large additional supplies. It was a strenuous job. But we worked heart and soul to keep our labour staff happy and contented. By the grace of God we have successfuly passed through a great ordeal.

I fully realise that the reduction of the dividend from 16 per cent for 1942 to 13 per cent for 1943 has not given you complete satisfaction. But if all the factors are taken into account, viz., the heavy increase in wages, the steady reduction of prices of manufactured goods, the incidence of excess profits tax etc., you will easily realise that such good results have been solely due to the efficient management of the mill and rigorous economy in various directions. During the last two years your Directors had recommended payments of ad-interim dividends from the profits of current years, but for obvious reasons they have considered it necessary to discontinue it this year.

In spite of the operations of the above factors the working of your mill has been smooth and continuous. For this I must thank your mill manager Mr. C. Choudhuri and his staff who worked hard with unstinted devotion. The policy of your board of directors has always been to co-operate with the Government for the prevention of profiteering and black marketing and I have always received their active guidance in this noble work.

Lastly, I must mention that the international situation has brightened up with the successive Allied victories in all the fronts, and it will not be too optimistic to expect an early termination of hostilities. Your directors have been in constant touch with the course of events in order to give effect to the various post-war plans of improvement of the mills which are under careful consideration.

NEW COMPANY REGISTRATION

J. K. COMMERCIAL CORPORATION LIMITED

Audited accounts of the Company for the period commencing from the 17th May 1943 *to the* 30th *June* 1944.

The results for the period, after writing off the whole amount of Preliminary Expenses Rs. 2,429, show a net profit of Rs. 2,76,427/-. This sum, the Directors recommend, should be disposed off as follows:—

To make a provision for taxation Rs. 1,72,000/- to dividend at the rate of 8 per cent, free of Income-tax on 'B' class ordinary shares Rs. 12,000/- to transfer to General Reserves Rs. 75,000/- and the balance to be carried forward Rs. 17,427/-.

The Company acquired two Managing Agencies and one Sole Selling Agency of limited companies during the period and the Directors expect that with the full working period of these businesses in coming years, the company shall exhibit better results.

Synopsis of Balance-sheet as at 30-6-1944.

Liabilities.	Rs.	*Assets.*	Rs.

J. K. INVESTMENT TRUST LTD.

Audited accounts of the Company for the period commencing from the 17th May 1943 *to the* 30th *June* 1944:—

The results for the period, after writing off the whole amount of Preliminary Expenses Rs. 2,518 and providing Bonus to the staff Rs. 1,200/- show a net profit of Rs. 7,40,667/-. This sum, the directors recommend, should be disposed off as follows:

To dividend at the rate of 8%, free of Income-tax on 'B' Class Ordinary shares on the amount paid up on these shares for the time being Rs. 20,000/- to transfer to General Reserve Rs. 7,00,000 and the balance to be carried forward Rs. 20,667/-.

The Company holds investments to the aggregate value of Rs. 1,18,10,598/- in 191 private and public limited companies, consisting of Seventeen Groups of almost all major trades and industries in India. The Directors feel sure that the shareholders will consider the results achieved during the very first year of the Company's working as highly satisfactory.

*In each case the closing quotation for each day and the lowest and highest quotation for the period are given.

Standard Jute Company Limited for the same half-year has earned Rs. 9,47,976 (Rs. 3,29,442). The taxation provision is Rs. 6,47,849 (Rs. 2,01,210) while the charge on account of depreciation is Rs. 68,148 (Rs. 41,000). Allocation to funds is Rs. 1.25 lakhs (Rs. 41,000). The Ordinary dividend is Rs. 4 per share against Rs. 3 per share.

* * * *

The accounts of the *Reliance Jute Company Limited* for the half-year ended 30th September, 1944 make better showing than the sister company, Howrah Mills Limited. The net profit, before providing for taxation and depreciation, is higher at Rs. 11,65,191 against Rs. 6,44,330 for the previous half-year. The amount set aside to taxation is Rs. 7.5 lakhs (Rs. 3.45 lakhs) while the allocation to Reserve for E.P.T. is Rs. 1,35,000 (Rs. 13,000). As the increase in earnings has been very nearly taken up by the large provision for taxation and compulsory deposit the dividend has been only maintained at Rs. 1-4 per share.

The results for the half year reflect credit on the working arrangement with Kanknarrah Company Limited. As our readers are aware the mill was requisitioned on November 30, 1944 and joint working commenced at the Kanknarrah Mill on December 6, 1944.

* * * *

Observations as to the successful operation of an investment trust contain more than one reference to an appropriation for reserve. Sir Shantidas Askuran reviewing the first year's results of the *Oriental Industrial Investment Trust* described the beginning made. The distribution of assets is, of course, as important as the conservation of earning power which is one reason why most investment trusts choose prior charges. Consistent improvement in values in this field brings into being an internal reserve; but the principles of variation are upheld. Mr. K. U. Advani's firm is directly and advantageously associated with the Trust whose maiden dividend is bound to attract interest. Opportunities for the Trust in the future are related to promotion and underwriting. Sir Shantidas indicated that the Trust recognised its duty in the matter of supporting promising issues. There is a distinctly optimistic note in regard to new industries, and to investment opportunities. The only reservation or claim made is in regard to taxation. Relief is demanded in the interests of capital accumulation for industrial development.

The report and accounts issued last month sufficed to show the promising departure in the field of indirect investment; and the preponderance of giltedged in the portfolio is both a guarantee of security to the Trust's shareholders and an indication to Government that investment trusts must be classed with insurance companies for purposes of taxation. Shareholders will certainly share Sir Shantidas' satisfaction with the efficiency and economical working to which this report bore witness. They will also note that the future is fully reassuring for the institutional investor whose income is likely to respond to the expansion of jointstock enterprise in India.

At the Bangasri Cotton mills' annual meeting, Mr. D. N. Chaudhuri referred to the hardships of the labour force in relation to the cut in the dividend from 16 to 13 per cent in order to make it plain that the reduction arises from circumstances beyond the management's control. The outlook is rated good though no interim has been announced this year. For Bengal the textile industry has chances of expanding continuously which is the reason for the improvement schemes under consideration. The Bangasri cotton mills' results in regard to periodical dividends and proportionate payments on its partly-paid up shares were fully indicative of the co-partnership principle accepted by the Board. The payment of 13 per cent for 1943 assuredly suggests that control has not cut very deeply into profits and the current revival in Cotton mill shares is attributable also by the clearing up of the outlook.

WATCH-DOG.

SHREE GOPAL PAPER MILLS LTD.

K. N. DALAL, *Managing Director.*

Time marches on. And, with Time, the country's progress also. The India of 100 years ago has changed so very much that today industry has almost as important a place in India's scheme of things as agriculture.

India's industry is today on the march—a march that is destined to bring a general increase in the standard of living of the country's teeming millions. In keeping with the country's march of progress, both industrial and agricultural, the 60-YEAR-OLD-FIRM of Herman & Mchatta, Western India's pioneers in the Iron and Steel Industry, are now busy manufacturing goods for agriculture and industry.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

By the canons recognised, say, in the 'twenties, December marks the beginning of the peak period of the busy season. There is nothing in the December of this year to distinguish it from the peak month of the slack season. In fact, for the past few years, the demarcation and distinction between the slack season and the busy season have disappeared more or less completely. It is certainly an interesting coincidence that the setting up of the Reserve Bank of India is coeval with this development. Whether the monetary policy and the technique of the Reserve Bank has induced and promoted this development, is an investigation that involves a comparative study of bank rates and money rates in the 'twenties, 'thirties and forties. This examination should provide significant conclusions; and we trust it may be possible for us, on a later occasion, to correlate the data and make the relevant deductions. Meantime, it may be said, the current month does not show the slightest trace of the attributes usually associated with the busy season, nor is there much likelihood of the coming months proving different; and, in this respect, the busy season of this year is in line with the busy season as we have experienced it during the preceding war years.

Short credits have been in plethoric supply both in Bombay and Calcutta. Inter-bank call money continues to be nominally quoted ¼ percent in Hornby Road and ½ percent in Clive Street. Central treasury bill rate has steadied roundabout 8 annas percent per annum. The piling-up process with respect to Central Government's deposits with the Reserve Bank continues in full force. Deposits of scheduled banks are also at a high level. In bazar circles, funds go abegging; and there is, on all hands, an avid search for avenues of investment. Against Rs. 6 crores of Central treasury bills on offer on November 29, applications came to Rs. 11.29 crores. The full quota of Rs 6 crores was secured at an average rate of 7 annas 11 pies percent per annum. The offer for next week is unchanged at Rs. 6 crores. The Bengal Government came on the market for Rs. 5 crores of three months bills. Applications at 5.90 crores made poor showing. As was to be expected in the circumstances, the average rate of accepted tenders was rather high at 9 annas 5 pies percent per annum. This compares with the rate of 9 annas at which the Madras Government were able to place their treasury bills on November 22. In the case of the Madras bills, against Rs. 1 crore on offer, applications came to Rs. 3.10 crores. From the ratio of applications to the amount on offer, it looks as though bankers are rating the credit of the Madras Government higher than that of the Bengal Government. The Assam Government will be on the market on December 6 for Rs. 2½ crores of treasury bills. It is to be hoped that Assam will be able to get its accommodation at a less onerous rate than Bengal.

The returns of the Reserve Bank for the week ended November 24 show hardly any change in the issue department. In the banking department, Central Government's deposits at Rs. 228.40 crores show an increase of Rs. 8.60 crores. The deposits of Provincial Governments are also higher by Rs. 3.84 crores. Deposits of banks, however, have gone down by Rs. 5.97 crores to Rs. 91.29 crores. Miscellaneous deposits stand at the high figure of Rs. 12.55 crores, recording an increase of Rs. 2.42 crores. On the assets side, foreign balances have risen by Rs. 7.11 crores to Rs. 339.23 crores.

A close study of the Reserve Bank returns for the last six months reveals interesting conclusions regarding accumulation of sterling assets and currency expansion. Between June 9 and September 1, active notes in circulation rose only by Rs. ½ crore to Rs. 928.28 crores. During this period, foreign balances held in the banking department had risen by Rs. 85 crores to Rs. 258.67 crores; sterling balances held in the issue department had gone up by Rs. 5½ crores to Rs. 828.33 crores. That is to say, sterling assets of the Reserve Bank during this period increased by Rs. 90 crores. In spite of such a considerable addition to sterling assets, there was hardly any increase in active note circulation. During the same period, Central Government's deposits with the Reserve Bank advanced by Rs. 82 crores to Rs. 139.00 crores. Thus, the additional sterling that was received between June 9 and September 1, had no other effect than augmenting the cash balances of the Central Government. The currency policy during this period must, therefore, be considered successful from the point of view of controlling inflation. In the following months, however, the situation was not under similar control. Between September 1 and November 24, active notes in circulation have gone up by Rs. 45 crores to Rs. 973.09 crores. In this period, sterling securities in the issue department have gone up by Rs. 38 crores to Rs. 866.33 crores. Foreign balances in the banking department have advanced by Rs. 80½ crores to Rs. 339.23 crores. In other words, whereas sterling assets held by the Reserve Bank have gone up by Rs. 118½ crores, active note circulation has increased by Rs. 45 crores. Deposits of the Central Government have, during this period, risen by Rs. 89 crores to Rs. 228.40 crores.

The statement of the Imperial Bank of India for the week ended November 24, shows only minor changes.

The exchange market has been very steady with a good showing of export bills as well as export T.T.

Bank's buying 90 days/St. at 1s. 6¼d., for 1 and 2 months; Bank's buying 90 days/St. at 1s. 629/32d., for 3 to 6 months.

B.C. rates T.T. 1s. 5 15/16d., B.C. rates D.D. 1s. 5 15/16d. Bank's selling T.T. 1s. 5 31/32d. Bank's selling D.D. 1s. 5 31/32d. Bank's buying T.T. 1s. 6 1/32d. Bank's buying D.D. 1s. 6⅛d.

London—New York.—X'Rates $4.02½/3½; Bank's selling T.T. Rs. 332¾; Bank's selling D.D. Rs. 332¾. Bank's buying T.T. Rs. 329½. Bank's buying D.D. Rs. 326½.

London—Montreal.—X'Rates $4,43/47; Bank's selling T.T. Rs. 302½; Bank's selling D.D. Rs. 302½. Bank's buying T.T. Rs. 297¾; Bank's buying D.D. Rs. 294¾.

Call money quoted ½ per cent in Calcutta and ¼ per cent in Bombay. 3 to 5 months ½ per cent; 6 to 11 months ¾ per cent and 12 months 1¼ per cent.

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Nov. 29, 1944. Total amount offered was Rs. 11,28,75,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14 per cent were allotted approximately 51 per cent. Total amount accepted was Rs. 6,00,00,000 the average rate of accepted tenders being Re. 0-7-11 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on December 5, 1944, at Calcutta up to 11 a.m. and up to the close of business on December 4, 1944, at other centres. Successful tenderers should make payment on December 8, 1944. Other conditions are as usual.

During the week ended Nov. 24, 1944 Government of India Treasury Bills for Rs. 1,95,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Treasury Bills

Tenders for Rs. 2,50,00,000 of three months' Government of Assam Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta up to 11 a.m. on December 6, 1944. Successful tenderers will be required to make payment and take up their bills on December 8, 1944. Other conditions are as usual.

Government of Bengal

Tenders for Rs. 5,00,00,000 of three months' Bengal Government Treasury Bills were opened on Thursday, the 30th November, 1944. Total amount offered was Rs. 5,90,00,000. Tenders at Rs. 99-13-9 per cent were accepted in full and those at Rs. 99-13-6 per cent were allotted approximately 70 per cent. Total amount accepted was Rs. 5,00,00,000, the average rate of accepted tenders being Rs. 0-9-6 per cent per annum.

By Special Cable.

Prewar Lessons for Postwar Period

MERGERS IN BRITISH INDUSTRY

BALDWINS, A TEST CASE

LONDON, (By Cable).

According to most authorities, Britain's ability to compete abroad was, during the pre-war years, severely handicapped by high costs which persisted despite numerous amalgamations of business, elimination of redundant plants, and concentration on the theoretically most efficient economical plants. According to pure laissez faire theories, inefficient business should be allowed to go bankrupt, thus removing themselves from the competitive field without expense to the victors. But actually, this drastic course was never adopted. Efficient plants bought out inefficient ones usually giving the latter guaranteed income represented by income from debentures or preference stock. Under this system, as frequently pointed out, Britain's successful staggered under the increased burden of fixed charges, which in turn proved a constant temptation to keep their selling prices as high as market conditions allowed. The classic example of this policy has been the case of redundant shipbuilding companies. About one-third of the shipyards were purchased during the nineteenthirties and closed down. The owners were paid through a compulsory levy imposed on all shipbuilding done in shipbuilding yards. This compulsory levy served to keep British shipbuilding costs higher than costs in Dutch, Belgian and other European shipyards.

This situation has been discussed ad nauseam during the pre-war years and there is widespread interest to see whether lessons learned then will be reflected in the proposed amalgamation of Richard Thomas Company—leading lowcost producer of Tinplate and sheet steel in the United Kingdom—with the old-time steel firm of Baldwins, Ltd. Baldwins own a good deal of obsolete or obsolescent plant, which, under normal conditions, Richard Thomas Company would never dream of buying, but Richard Thomas are not entirely a free agent; for control is vested in a group of rival steel companies which with the help of the Bank of England secured control some years ago. The terms provide that the owners of Baldwins receive debentures or preference shares in Richard Thomas covering the valuation of their obsolescent plant, then Richard Thomas will have needlessly increased its fixed charges and reduced its postwar competitive position. On the other hand, if Richard Thomas gives merely a block of its own ordinary shares whereon they need only pay dividends, if actually earned, then Richard Thomas will not be worse off than before and consumers such as the British Motor Industry will be able to get steel sheets at prices not inflated by amalgamation, thus helping them to compete abroad. According to some commentators, this promised to be a test case—whether the controllers of British industry have learned by lessons of the pre-war period and intend to face the severe competition of post-war days in a realistic fashion.

Industrial Location & Regional Planning

Alongside the wave of optimism caused by talks of post-war planning, there is also in the mind of the public in many parts of India an uneasy feeling that schemes of post-war development might tend to accentuate the differences in the standards of living between Province and Province. Such a feeling, born, no doubt, of the consciousness of existing differences, is strengthened by the recognition that industrially progressive Provinces will be in a better position than the others to take advantage of the facilities that post-war planning will provide. The disadvantages of a late start are as effective among the different regions of one country as among the different countries of the world. But while in the latter case, the people of the backward country may look up to their national governments to remove the handicap, in the former, a similar attitude has to reckon with the dangers of excessive provincialism. Nevertheless, the need to secure uniformity of economic progress in the various Provinces and States cannot be got over by affirming the unity of India. Reconstruction Committees of the Government of India have so far worked on the assumption that the drawing up of a Plan in the initial stages is the direct responsibility of the Government of each Province or State, though the plans so drawn up will have to be modified by the principle of regionalisation and by the overriding authority and responsibilities of the Central Government. The emphasis laid by the Reconstruction Reports on regionalisation and on the importance of agricultural development and rural uplift is the only assurance that the public at large has so far had against an inequitable distribution of the benefits of post-war planning. But the fear of uneven progress is felt, not so much about agricultural, as about industrial development. Generally speaking, agriculture in India may not be held guilty of pronounced partiality for particular Provinces or States. The giddy prices of some of our export staples are balanced, to some extent, by the steep falls of periods of slump; and if some areas have had the benefit of spectacular irrigation works, they leave no rankling sense of injustice in the minds of others.

The case of industry is far different. The natural advantages of one centre over another are so far from being obvious to the ordinary man that differences of industrial development strike him as historical accidents of an iniquitous kind. What India felt towards Lancashire, Bengal could feel towards Bombay, with as much justification, though, perhaps less animus. Existing differences, however, would not matter, if they had no special potentialities of perpetuating and accentuating themselves. If the purpose of planning in a non-communist regime is to provide the conditions in which private enterprise can secure a vast increase in productive activity, then the benefits of planning are clearly conditioned by the ability of the business classes in each area to take advantage of such favourable conditions. But it is a question how far differences of industrial development are attributable to the differences of natural advantages and how far to those of the human factor. The latter are to some extent a resultant of the former; and in so far as they are so, a change in the setting of natural advantages may be relied on to reduce the differences of entrepreneurial ability in the various Provinces and States.

Much then depends on the setting of natural advantages for industrial development; and that is a matter for objective study without the intrusion of wish or wishful thought. The study of "The Location of Industry in India" carried out by the Economic Adviser to the Government of India is an indispensable preliminary to any economic plan which is not content with a mere over-all increase in production, but also aims at an even distribution of productive activity throughout the country with a view to avoid disparities in standards of living between the various parts of the country. Though the present position as set out by him is not exactly heartening from the point of view of equal development, Sir Theodore Gregory does not end his survey on a pessimistic note. But the fact remains that the distribution of industrial activity in India is extremely uneven both absolutely and in relation to the distribution of population. Bengal and Bombay with 15 and 5 per cent of the population respectively contained in 1939, 29 and 23 per cent of the total number of industrial workers. Bombay's large share of industrial workers, relatively to population, is attributable to her dominant position in the cotton textile industry. While her population is only 5.4 per cent of that of India her share of workers in the cotton textile industry is as much as 49.9 per cent, while the corresponding figures for Bengal are 15.5 and 5.4 respectively. In the case of Madras there is no marked disparity between the two figures of 12.7 and 11.6. But the dispersion of the cotton textile industry is a recent development which had to await the development of hydro-electric power and the increase in the importance of the domestic market. A similar dispersion is noticeable in the cement industry also where the wider distribution of the raw material and scientific marketing under a single organisation have helped a more even distribution of productive activity. But the wide distribution of raw material or of consumer demand cannot as a rule be depended on to secure a dispersion of productive activity. In the case of leather tanning and dressing, the skill of South Indian workers has secured for that part of the country a large share of dressed hides while army demand has helped to localise leather manufacture in Cawnpore. In the case of jute and iron and steel, natural factors have given Bengal and Bihar a virtual monopoly, though the iron and steel industry has a modest home in Bengal and Mysore as well. General engineering is necessarily tied to the great industrial centres. The distribution of industries like paper, soap, matches and the like has been determined by the natural advantages of raw material, power and nearness to important consuming centres. The Sugar industry is perhaps passing through the same phase as cotton textiles two decades ago, with U.P. and Bihar taking the place of Bombay. There is little danger in pressing the parallelism far. Sugarcane like cotton is widely grown; and sugar, like cotton goods, is widely consumed.

The general picture of distribution of industry in India is, as has been mentioned already, not heartening from the point of view of equal development. But it must be borne in mind that India has so far had no industrialisation as such, but has been suffered to establish and develop, as well as possible in certain given conditions, a few industries which have been deemed fit for the grant of discriminating protection. The notable exceptions are jute and cement, the latter revealing no serious maldistribution and the former being a monopoly of Bengal. The distribution of industrial activity in India is therefore only the distribution of these few industries over various parts of this sub-continent. These industries have not only been few in number but have also had an extremely limited market and scope for expansion. The basic condition of availability of power was satisfied only in a few places. In such conditions, differential natural advantages have been a far more potent factor than they would have been, if there had been a general alround industrialisation as distinct from a policy of aiding a few industries, and that, too, up to a point. Even in the case of the cotton textile industry, it spread to other parts of India only when power supply was more widespread. The pursuit of industrialisation as an established policy would mean the direction of attention to the provision of the basic conditions for the establishment and growth of industries. The present distribution of industry is therefore no reason for taking a pessimistic view of the possibilities of equal economic development. Of the industries now in existence in India, cotton textiles, sugar and cement and, to a lesser extent, paper admit of a wider distribution, when the basic condition of wide supply of electric power is satisfied. For, in these cases, both raw material and consumer demand are well spread over all parts of the country. While every province may not aspire to have a Jamshedpur of its own, fears of uneven progress in industry or wide disparities of standards of living can be overwrought.

The question, however, remains as to the policy which can secure the best distribution of industrial activity in India. The first step is to be aware of the dangers which have to be carefully avoided. The foremost of them is the excessive provincialism which comes of taking the dubious principles of economic nationalism wholesale to the economic life of every Province and part of a Province. There is, then, the proneness to regard industry, not as one of the sources of national income, but as a necessary condition of social self esteem. If disparities in standards of living are to be avoided, it does not follow that every Province must have a share of every industry proportionate to its share of the total population. The location of industry must, for as long as we can foresee, follow the geographical distribution of natural advantages. And public policy can address itself only to the removal of those disadvantages, which are either the result of social inertia or have ceased to be inevitable with the progress of science. In the provision of power, financial facilities, expert assistance and general help in organisation of productive effort, intelligent State policy can do a great deal to reduce the handicaps of backward areas. No Government, however powerful or wise, can ensure the presence of gold veins and coal seams beneath the soil of every Province or State. But when electric power is widely distributed, and new basic industries are as well diffused as they can be, not only will agriculture be more fruitful, but the industrial production of many classes of consumer's goods will be carried on over the widest areas of this vast country. And it is well to remember that the same forces which will aid a better distribution of industrial activity among the Provinces and States will also help us to avoid overcrowding and other familiar evils of modern industrialism.

Policyholders and Life Insurance Companies

(Contributed)

The business of life insurance is in several respects different from the business of a trading or manufacturing concern. One important difference is that in the case of trading and manufacturing concerns, the entire capital is supplied by the shareholders. There may be cases where the capital is augmented by borrowing, but the amount borrowed cannot ordinarily exceed the capital. In the case of a life insurance company, the position is just the reverse. Although under the present law, there is some need for some capital when a company is started, yet as soon as business starts coming, its necessity decreases and later on when the business expands, its importance fades into insignificance. By the nature of its transactions, funds keep accumulating in the hands of a life office. This fact can be appreciated by a reference to the latest Insurance Year Book. On 31st December 1942 there were 15 companies whose life funds exceeded one crore; the total of the life funds of these companies was Rs. 65,98,40,000 and amounted to 87 per cent of the life funds of all Indian companies taken together. Out of these 15, one is a mutual company having no share capital and where every policyholder is a member and another a composite office having big capital required for non-life business. The life funds of the remaining 13 companies amount to Rs. 60,49,56,000 and work to about 80 per cent of the total of the life funds of all companies taken together. The following table shows the life funds of these 13 companies for the last 5 years:—

(In thousands of Rupees).

Name of Insurer	Life Insurance Fund at the end of the year					Percentage of life Fund at the end of 1942 to that at the end 1938
	1938	1939	1940	1941	1942

Total ...	43,10,71	4,26,486	51,05,96	55,67,86	60,49,56	140·34

The table clearly indicates that, except in the case of one company, the life funds of other companies have been steadily increasing. In five years, the total of the life funds of these companies has increased from Rs. 43,10,71,000 to Rs. 60,49,56,000 registering an increase of 40.34 per cent.

The table appearing in the next column gives the subscribed and paid up capital of these 13 companies as at the end of 1942 and the percentage of the paid up capital to life funds as at the end of the same year.

The subscribed capital of these companies is, no doubt, Rs. 1,06,61,000, but this high figure is mainly due to the fact that Asian, Hindusthan and Industrial & Prudential have subscribed capitals of Rs. 25 lakhs, Rs. 17,20,000 and Rs. 18,27,000 respectively. If life funds and capital of Industrial & Prudential and Asian are compared with the life funds and capital of United India or Western India or even of Bombay Life, and the life fund and capital of Hindusthan were compared with that of Oriental or Empire or National, it will clearly indicate that for the business of life insurance, such high capital is not necessary at all. The column of percentage of paid up capital to the life fund clearly shows that the importance of the capital to life offices is very little. It is neither necessary for the development of organisation and expansion of business nor does it offer any real or substantial additional security.

(In thousands of Rupees).

Name of Insurer	Figures as on 31st December 1942			
	Life Insurance Fund	Subscribed Capital	Paid-up Capital	Percentage of the Paid-up Capital to Life Fund

Policyholders of life offices have long-term agreements. The financial implications therefore are not restricted to the present or even to the immediate future, they range in influence and importance over a prolonged series of years. Any adverse circumstance caused by the negligence or the lack of judgment on the part of the Directors may have repercussions occasioning serious and heavy losses. The shareholders no doubt, will have to share these losses, but their share of the loss can hardly compare with what will have to be borne by the policyholders. This fact appears to have influenced the enactment of Section 48 of the Insurance Act of 1938. Under that section "not less than one-fourth of the whole number of the Directors of the company shall be persons having the prescribed qualifications and holding policies of life insurance issued by the company and shall be elected to the Board of Directors of the company in the prescribed manner by the holders of policies of life insurance issued by the company". It is true that some of the members of the Legislative Assembly wanted to get the percentage of policyholders' Directors on the Board increased, but their efforts did not succeed.

The right given to the policyholders to elect their representatives on the Board of Directors, no doubt, is a step in the right direction, but unfortunately, the object with which this provision was enacted has not been achieved, because the policyholders cannot really influence the election of the Directors and the so-called representatives of the policyholders on the Board of Directors of various life offices cannot be considered to be the representatives of the policyholders. A person who wants to seek election as a policyholders' Director has to face several insurmountable difficulties. Some of them are:—

(*a*) the number of voters is very large and in some cases larger than the biggest constituency of any legislature or municipal body in this country. This fact can easily be judged by a reference to the following table which gives the number of policyholders of the 13 companies above referred to as on 31st December 1942:—

(In thousands of Rupees).

Name of Insurer	Total number of Policies effected in India in force at the end of the year	Name of Insurer.	Total number of Policies effected in India in force at the end of the year
Asian	27,231	Lakshmi ...	43,359
Bharat... ...	44,040	National ...	63,144
Bombay Life ...	36,645	Oriental ...	4,10,372
Empire of India ...	78,246	United India ...	38,612
General ...	26,947	Western India ...	44,812
Hindusthan ...	1,04,832		
Indian Life ...	11,938	Total of All Indian Insurers	14,64,133
Industrial & Prud.	28,184		

(b) The voters are spread over a very large area and in the case of most of the companies over the whole of this country.

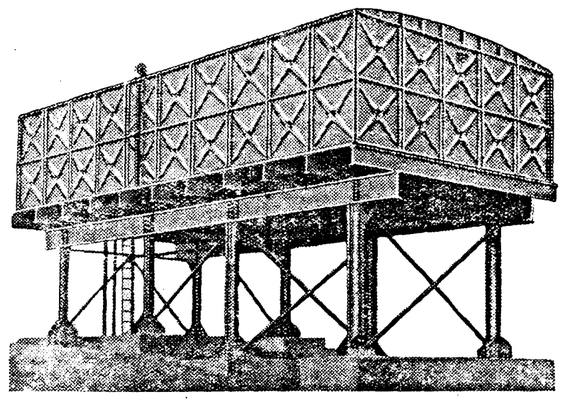
(c) A candidate is not entitled to get a list of voters.

Elections held under these handicaps cannot be real and they do not serve the purpose for which they were introduced. Neither a candidate can get a fair chance of election nor the policyholders have an opportunity to elect their bona-fide representatives.

The position of the shareholders, on the contrary, is different. They do not suffer from these handicaps. It is possible for them to have proper representatives elected if they so desire. There is, however, only one situation which makes the position of the shareholders subservient and the election by them unreal and formal. If an individual or a set of individuals as a group corner shares and hold a majority of them or even a substantially high percentage of the capital, such individual or group of individuals becomes supreme and he or they become the virtual owners of the institution. In such cases, other shareholders have in law several rights; but in practice they hardly count, they are unable to influence the elections or other matters pertaining to the affairs of their companies. Unfortunately the tendency to capture life insurance companies by buying majority of shares is now in evidence. The capital of a life office being small, it is easy to pay fancy and tempting price to buy shares because the total outlay, even if the shares are purchased at abnormally high price, will not be very large. In the case of such companies the Directors whether they are supposed to represent shareholders or policyholders, become in fact the nominees of an individual or of a group.

It is high time that this situation should be reviewed and necessary steps taken to safeguard the interests of the policyholders. The right to elect Directors has failed to safeguard their interests. The elections are not effective. Persons elected in the circumstances above referred to cannot safeguard the interests of the policyholders.

Life insurance companies are credit institutions and play a very important role in the finances of the country. The funds in their hands constitute a large part of the surplus wealth of the nation. Nationalisation of this business therefore is the only remedy, if the interests of the policyholders are to be satisfactorily safeguarded. The National Planning Committee appointed a sub-committee to consider the position of the business of insurance but for reasons best known to those responsible, the report is not available. A stage has been reached when the Government should appoint a committee to go into the matter and work out the details necessary for nationalising the business.



Working out of the details for nationalisation must take time. Something has to be done in the meantime to protect the policyholders. Their interests may be jeopardised by the frequent sales of the controlling interests. A company in the hands of an honest and scrupulous person may be safe; but there is no bar to its being sold. Institutions like life offices are now becoming saleable goods. The interests of a large body of policyholders and of generations to come can pass from one hand to another.

The Reserve Bank of India is a shareholders' institution. To prevent its becoming the property of an individual or a group of individuals, it has been provided that though there is no limitation on the number of shares that can be purchased by a person, yet no one can exercise more than 5 votes. Why not incorporate this or similar provisions in the Insurance Act? It may be argued that such provisions will amount to undue interference. Is not the Insurance Act based on that principle? Regarding several matters of great importance the Act has provided limitations statutorily. The Act which can prohibit Managing Agencies, limit their remunerations, fix agency commission, and provide for policyholders' Directors can also provide for restricting rights of voting. The helplessness of the policyholders and the importance of their interests to the nation at large impose a moral responsibility on the State. Let us hope that the matter will receive the consideration it deserves.

A Divali scene four years ago

The illuminations at Divali are normally a part and parcel of Indian life. Candles are a prominent feature of these celebrations. In the past their availability was taken for granted. But the modern candle is made from petroleum wax, which today is playing its part along with other products of petroleum in the war effort of the United Nations.

So for some time past, we have gone short of candles, plain and coloured, common and decorative, bought for everyday use or for special occasions like Divali. It is hoped shortly to make more candles available in certain sizes, and users can rest assured that as soon as possible Burmah-Shell will again put on sale its full range of candles to suit every need and occasion.

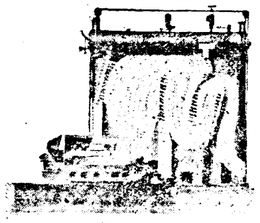
Editorial Notes

Central Power Board

The decision of the Government of India to establish a Central Technical Power Board will be welcomed throughout the country. On the eve of a period of planned development, one would normally expect the constitution of such a Board to follow, and not precede, the inauguration of economic planning. But considering that expert surveys of power potentialities and formulation of new power projects are in part the basis of a Plan, the new Board has vital contributions to make to the planning that is now in progress. The functions of the proposed Board are to be of a very wide and comprehensive character. They range from the conduct of propaganda for the education of the public in the uses of electricity to the most technical aspects of generating and distributing electric power throughout the country. Electrical development in India has hitherto been both fitful and haphazard; and after the spread of hydro-electric development in Mysore, Madras, Punjab and the U. P. there has been a somewhat feverish exploration of possibilities in other parts of the country. There is need for assurance not only that the new schemes of the future will be technically sound, but also that the various power projects will be properly co-ordinated. The Central Power Board is to be charged with this task. Its services, advisory and other, are to be available for the Provinces and the States. But it has other functions to perform on its own. It has "to investigate and bring to light the prospects for the utilisation of electric power in any region" where economic development can be benefitted thereby and to prepare projects in detail and present them to the Governments concerned. The Board is to be responsible for the load direction and collation of hydrographic surveys on a standard basis. It has to review and lay down for the whole of India standard voltages and practices for generation, transmission and distribution of electricity. It is charged with maintaining statistics relating to electric supply and consumption. And needless to say, it will maintain close relations with the Electric Commissioner's office. The place which such a Board will occupy in our economic planning of the future invests the question of its constitution and control with a special importance. But there can be no question that such a Board is indispensable for the formulation as well as the successful prosecution of adequate economic planning.



State Aid and Shipping

To assist in the development of a native mercantile marine an increased share of coastal trade is always required. Hence shipping flotations are in a sense distinguishable as essential, more so in view of the present strain on the railway system. Officially, the view is that coastal traffic after the war will increase, and encouragement given under certain conditions by the Travancore Government falls into place as it is the kind of assistance that may be required by others elsewhere. Travancore's attitude to immigrant capital has been again made clear by the Dewan. The reservation of 51 per cent of shares for the State indicates that control remains with the Government, which has framed conditions as to employment and training of State subjects in the shipping industry. Since the aim is largely to rehabilitate minor ports and country craft, the objects of the Indian Government are not far removed from those of Travancore, but provision of capital to some extent is also the function of the State. It is not however the return on capital but general control of working that is demanded by the State. There will, however, be no question as to subsidies, should the concern be State-sponsored. That the original departure in road transport does not affect the organisation of shipping and shipbuilding in Travancore will be attributed to the requirements mentioned by the Dewan. The new shipping company will, however, have no monopoly on the West Coast and the present intention may be merely to run feeder services. The opportunities for shipbuilding in India were examined by the Tariff Board which came to the conclusion that Calcutta alone possessed many advantages. The West Coast's advantages are scarcely ascertainable but maritime transport is well established there. The arrival of a fairly strong new rival will, of course, lead to claims of one kind or another, but it may be said that State concerns would have to furnish very strong proof of ability to survive, if they were to ask for a revision of Lord Irwin's award, also to prove that they are as competent as British India's shipping companies.

Cloth Distribution

The Commerce Member's statement on the floor of the Central Assembly that India's total cloth ouput is 6,300 million years this year and that it might be 200 million yards more next year has somewhat heartened the hard-pressed piecegoods trade in the country. Handlooms accounted for about 1,500 million yards of this output, while not more than 900 million yards were produced for the Defence Services. It is gratifying that the unwanted standard cloth production is on the decrease, from 14.7 per cent in 1943-44 to 8 per cent in 1944-45. Taking into account the export allocation, what remains is quite inadequate to the consumer's demand in the country, which, it should be remembered, includes large arrears of unsatisfied demand from previous years. Consuming centres, local traders and exporters have to exert themselves to obtain their requirements. After the reduction in ceiling prices, grey cloth has practically all gone underground again, and the blackmarket has received a new lease of life. It is stated by the piecegoods merchants that the increase in restriction coupled with the lowered prices has given a stimulus to illicit trading. In finer lines and fancy styles, demand outruns available supply, which is only 5 per cent of the total output. Steps are being taken to increase the production of these styles, but this naturally results depend upon a number of limiting factors such as availability of the new material, chemicals and mill stores. Meanwhile the Cloth Distribution Panel is gallantly tackling the problem of distribution. In a press note, the Textile Commissioner informs the cloth trade that no further permits will be issued this month for the despatch of goods to any deficit zones. It appears that sufficient permits had been issued by the middle of November to ensure that the several areas obtained their fair share of the piecegoods available. He has warned merchants in Bombay that no further sales of cloth should be made by them for destinations in the particular deficit zones for which the last date for obtaining permits has expired. Should any dealer continue to sell

in November to these zones after the dates, it would merely result in cloth being immobilised needlessly there, with a concomitant deprivation of other zones. Dealers have been clearly warned that the fact that they may have sold cloth in November will not assist them in getting priority in respect of their permits for the ensuing months. In other words, dealers should sell during a particular period only the total quantity allotted for any particular period for any particular zone. These restrictions as regards both the quantity and the period to which the cloth quotas are related are, no doubt, well conceived. But the trade cannot help murmuring. It is a far cry from the chaos and the profiteering ramp of 1943 to the discipline and the lower profits of the new regime of control.

Mission to Liberia

The report of a U. S. mission to Liberia is certainly suggestive of U. S. interest beyond the Straits of Dakar. The alliance contracted during the war led to President Barclay's visit to the U.S.A. but the mission is probably connected with a separate pact. The "Wall Street Journal" mentions the construction of a port under the direction of the U. S. Navy. From the language used it is easy to infer that a naval base is to be leased to the U. S. A. on the usual terms. Difficulties encountered in the past in respect of the Firestone loans are probably ignored in the U. S. plans for Liberia's development. Liberia's customs revenue is entrusted by arrangement to a Receiver and Financial Adviser chosen by the U. S. Government. The fact that no survey of Liberia's minerals has been made explains the purposes of the mission but Liberia is not yet equipped with railways. Rubber plantation is especially mentioned, because Liberia is suited to rubber-growing and the Firestone Plantations were started with the purpose of creating an alternative source of supply. The extinction of Liberia's debt to Britain was followed by an arrangement with the U. S. A. appurtenant to the loan made in 1927. Both France and Britain are likely to show much interest in Liberia's development under U. S. auspices since Liberia, a small negro republic, is a coastal pocket surrounded by the colonies of European powers. Probably, the rule of equal

access may be involved even if it is admitted that West Africa generally has outstripped Liberia, whose case clearly is one of retarded development.

Plea for Probity

Business morality was indeed at a very low ebb in the country till recently. Sir Chintaman Deshmukh, Governor of the Reserve Bank, had some pertinent observations to make on this question when he presided over the naming ceremony of the Deccan Educational Society's College of Commerce. The conditions created by the war have, no doubt, caused a deterioration of commercial morality in all the countries of the world, but whereas the more advanced countries can afford to have such lapses from good business codes, India cannot. In the words of Sir Chintaman, "We are about to enter upon a battle for standards of life which may well prove more taxing than war itself, and unless we plan our human resources to the best of our power and refurbish our moral armour, we are likely to find that we are being outstripped in the race instead of making progress." This is a characteristically incisive observation from the very erudite and shrewd head of our central banking institution. His remarks acquire a special importance when viewed against the background of unsocial practices so rampant in the textile trade till very recently.

Ceylon's Claims

Ceylon's Council has decided in advance what the Constitution of the future should be. The resolution anticipating the work of the small Royal Commission, now on its way to Ceylon will, of course, be regarded as a blow to the moderation of the Ministry. But one Minister suggested that amendments to Ceylon's constitution might be retrograde. Such Colonial constitutions as have been amended in wartime have been liberialised, and it is perhaps the fear of Safeguards like the Governor's reserve powers that provoked the debate. The conclusion that the Royal Commission would be boycotted is, however, not in accord with the debate. Ceylon's main minority problem differs vastly from the Indian minority problem, though constitution-making will suffer therefrom. The majority view is against Safeguards so that the immediate outlook for Lord Soulbury and his colleagues appears obscure. The Constitution introduced in 1931 admitted the principle of Executive responsibility but only in part. Attempts have been made to secure further reforms but until last year were unsuccessful. A constitutional struggle would affect the island's economy very little. For the Indian immigrant protection still has to come from without, and Ceylon's aspirations have not therefore evoked even passing enthusiasm. The Indian community's attitude has however not been obstructive, and if it disagrees about a boycott, it may be duly attributed to the instinct of self-preservation. Sinhalese opinion is now fairly precise as to the immediate grant of Dominion status though defence and other problems appear overwhelming. The Ceylon Ministry favours substantial changes and its representations led to the declaration of Col. Stanley in favour of reforms. The idea of one union is wholly absent in current discussion though arguments have been advanced in view of Ceylon's proximity to India.

Aid to Britain

Since the *Wall Street Journal* made mention of the U.S. Administration's proposal to make available five billion dollars to Britain, it is clear that Lend-Lease is to continue after the war. The press report last week stated that Congress would be informed in January of the proposal to add to the Lend-Lease expenditure which, it may be recalled, was approved in 1941 as being undertaken for the defence of the United States. The repeal of the Johnson Act of 1934 may not be undertaken but support has been given by Mr. Winthrop Aldrich indirectly to the idea of a postwar credit for stabilisation of sterling. The conditions he outlined were (1) elimination of war debts and a generous settlement regarding Lend-Lease (2) reduction of trade barriers between the U.S.A. and the British Commonwealth (3) the grant of a credit possibly totalling three billion dollars for Britain's immediate post-war import needs. American interest in the stability of sterling springs entirely from

STRAIGHT FROM THE TAP

A COPIOUS supply of pure water is an amenity of our civilisation which we take for granted. Cut it off, or even curtail it, and domestic life becomes sadly disorganised. This confidence in our water supplies is a tribute to the excellence of our public services, behind which stand years of unremitting chemical and engineering research. Water in its natural state is often unfit for use, both owing to the presence of disease germs, and frequently to coarser impurities which make it look and taste unpleasant. Thanks to chemical research it is now possible to make water safe to drink by sterilising it with chlorine to kill the germs and by treating it with other chemicals to render it clear and tasteless. Indeed mere traces of chlorine will not only kill disease germs in our drinking water, but destroy other minute organisms which can grow very rapidly and cause infinite trouble in the water systems of Industry. In short the chemist has given the community water that they can drink straight from the tap. He has lessened the dangers of infection in the swimming bath. He has shown how water can be purified for use in Industry so as to improve products and prevent breakdowns in plant. Last, and by no means least, it is largely due to the chemist and the British chemical industry that so high a standard of health prevails in the thousands of stations, huts, and barracks occupied by civilians as well as troops in the armed camp that is India today.

ICI

No. 18 in the "Services of an Industry" series issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

the need to keep up U.S. exports of cotton, tobacco and oil. The farm programme cannot be limited to loans and subsidies. Assistance must extend to importers in the same way as it is given to Latin America during the war. Since the point taken in the *Wall Street Journal*'s despatch has not been denied so far it is concluded that Lord Keynes's mission to Washington was directly concerned with the obtaining of a credit. In his book on Lend-Lease Mr. Stettinius has illustrated by diagrams the depletion of Britain's dollar resources by January 1941. It has been also made known that Lend-Lease aid had taken only 12 percent of U.S. war expenditure up to June 1943 and the monthly expenditure since has been at the rate of 1000 million dollars. But Lend-Lease has been turned into mutual aid by agreement and U.S. forces in Britain have been assisted with articles, facilities and information. Mr. Stettinius has noted that after the British Government had completed in the summer of 1943 dollar payments on most of their pre-Lend-Lease contracts valued at 3600 million dollars the reverse Lend-Lease assistance covered many raw materials and foodstuffs shipped to the U.S.A. Up to June 1943 aircraft and food represented the most substantial items in Lend-Lease supplies. If the second item is to stay in peace as in war the continuance of U.S. aid is imperative. But the credit referred to by the *Wall Street Journal* concerns only the post-war requirements of Britain, not other purposes, for example, those connected with the liquidation of abnormal balances. A general consideration, however, must be noticed. A loan for stabilisation as recommended by Mr. Aldrich would be different from the general appropriation desired or proposed. The latter would possibly impose no conditions but attention must be drawn to the agreement made in August last to keep the dollar-sterling rate between four and five dollars to the £ long established. The rate will probably be retained after the war to facilitate the repayment referred to. Instead of Britain being asked to go to the World Bank, direct U.S. assistance is contemplated. There may be no specific reason for this other than the excess of U.S. exports to Britain. Such a credit if voted should be of advantage to this country in view of India's claims on the Empire dollar pool, and lead to a larger dollar exchange reserve. The other advantage would be that sterling would be stronger, and familiar questions as to the wisdom of keeping sterling securities as cover for the note issue would not recur. It is believed that the credit is connected with warlike co-operation in the Pacific, in which case China may qualify for similar assistance when the situation is clearer.

Canadian Supplies

While industrial production in Canada has been relatively high, it is agricultural progress and the recovery in the timber industry that must claim special notice this year. Mineral production, notably, coal has fluctuated in 1943 and after and mineral production generally has fallen away, an exception being provided by the new oilfields in the Arctic circle. In the first quarter of 1944 Canadian industrial production was fairly high. The drop in the second quarter is limited to some industries. In the pulp and paper industry at any rate production rose as compared with April while it fell in the automotive trades and iron and steel trades too. The slackness due to the spring did not extend to food production. After an indifferent start crop prospects in the Prairie Provinces were regarded as good and the increase in wheat area was attributed to the better prices received for the subnormal 1943 crop. In spite of a rise in farm costs, agricultural incomes were higher. Rural prosperity is directly related to the progress made by the C.C.F. party this year and the Provincial elections marked a swing away from Mr. Mackenzie King. Reduced demands for war purposes did not affect agriculture because 1943 was a year of poor crops, and immediate recovery was desired. While factory construction fell off there was an increase in private building despite higher costs of construction. Though shortages are rampant in Canada as elsewhere capital is abundant and the housing difficulty is being got over. In the case of timber reduced war demands and the increase in the labour force are expected to bring about an increase in output so that British and U.S. requirements would be met. An increase in newsprint manufacture this year led to an increase in exports as compared with 1943. The North American consumption of newsprint has declined by 10 percent since 1943 but the demand for paper for cartons and containers has increased despite the rise in production and salvage so that supplies are short of requirements. The Dominion's export trade with the exception of trade in gold followed the increase in production. The principal customers are the U.K. and the U.S.A., and Canada's trade with the Empire is not growing. Of some interest to India is the increase in imports of nuts, fruits, coffee and tea into Canada this year. The fluctuations in Canada's industrial output are offset by the increase in meat production and the growth shown under dairy products. The diversion of agricultural production away from wheat is the outstanding result of the war but this year's increase in wheat indicates that overseas markets' requirements receive more attention than presumed. From an outsider's standpoint the gains recorded in non-ferrous metal production are probably less permanent than the growth of the livestock industry. An established outlet at home for feed may give Canadian wheat, oats and linseed a special position in the future in relation to exporting rivals and the U.S. market.

Postal Traffic and Revenue

Postal traffic figures for 1942-43 point to a steady increase of activity. The Department's loss of 3000 employees for field service and fresh recruitment of 12,000 new employees are features of the year reviewed in the report. In 1942-43 the Indian Post Office handled nearly 24 million telegrams and an average of 11,000 trunk calls a day. The P.O. also despatched over 20 million airgraphs to foreign countries. Besides the tele-communications programme due for completion in 1944-45 the war led to the expansion of stores manufacture. The Department's takings of stores rose in value from Rs. 61.95 lakhs in 1938-39 to Rs. 483.46 lakhs in 1943-44. The workshop expansion programme led to the setting up of a huge shop costing over Rs. 30 lakhs in Central India and distribution of work in 91 other workshops. The increased demand for

postal facilities led to a revision of rates. Financial results certainly reflect the increase in traffic. The Department's revenue at Rs. 19.3 crores exceeded the expenditure of Rs. 14.76 crores in 1942-43. The surplus rose to over Rs. 4.51 crores as against Rs. 3.4 crores though the surcharges etc. are regarded as purely temporary. Except for packets all classes of traffic handed by the Post Office increased in 1942-43. The number of telephone connections increased from 38,207 to 73,561 but this outstanding rise may be due to State acquisition rather than to the number of new instruments provided. The number and value of inland money orders and postal orders issued in 1942-43 showed an increase, but a surprising feature is the fall in savings bank deposits as compared with 1938-39. Withdrawals also exceeded the deposits so that thrift has not been stimulated to any degree by the Post Office. The departmental figures for post offices and staff employed show an increase but the number of letter boxes was lower than in 1941-42. The August disturbances affected the post offices as well as railways, as it is recorded that 941 post offices were attacked of which 60 were destroyed and 270 badly damaged. The mileage figures for telegraph and telephone services point to some progress but the distance over which mails were conveyed was slightly lower. The steady increase in revenue since the outbreak of war is perhaps the feature to merit attention as the postal department must continue to yield a surplus. No indication of capital at charge is available, but the department apparently looks to the continued growth of revenue after the war through the development of air mail services and the savings movement.

No Competition

A report that German war industry has been decentralised to an unusual extent and functions on a cottage basis despite repeated air raids is difficult to reconcile with the known facts as to the Ruhr. The heavy industries which were thoroughly cartelised were under Nationalists whose outlook was Prussian. The leading industrialists were allied with the Nazis and their activity extended beyond the frontiers after the conquest. French and Belgian industry was linked up by force and the question for the future is whether the forced integration should survive the defeat of Germany. It is known that many advantages would spring from control of production and prices, but U.S. hostility to cartels must be reckoned with. To help rivals of Germany to recover lost resources is, of course, more important than control of German industry; but the decentralisation order may have forced down output within Germany to an uneconomic level. In the future Germany like Belgium might have more coal than iron and her own low-grade ore may limit recovery of steel production after the war. International supervision would confer few advantages on the Germans, especially when the foreign workers are withdrawn. The main direction of industrial supervision can only be ascertained in the light of disarmament clauses. If Germany's peace requirements are scaled down substantially, the problem of a surplus tied up with reparations demands for Russia's benefit will hardly arise. But much depends on the proposed transfer of Upper Silesia to Poland and the question of what Germany deserves must be related to postwar requirements within Europe. The U.S.A. can hardly compete owing to the level of costs at home while Britain's stabilised output will be taken up for Portal bungalows and the like. The possibility of Russian steel output recovering very slowly must also be recognised. New producers can, therefore, count on a minimum of competition from Europe and justification for wartime development may be found in a prospective shortage of imports. If the State-aided industry of Germany were to pass out of range, there would only be a question as to the nature of post-war imports from Britain. The development programme at home may increase the demand for steel in India. The tariff preference then

INDU FABRICS BOMBAY

A Pledge and a Promise

A lot is talked about stamped cloth and unstamped cloth. Look at the "INDU" stamp above and stamp it on your mind. It's the mark of quality in textiles. It is stamped on 91,660 miles of cloth produced annually by India's largest textile group—"INDU."

While nearly all our vast resources are now pledged towards winning the war, we promise you that in the wake of this war we will bring you quality textiles of remarkable durability. When better cloths are woven, the "INDU" trade mark will be stamped on the best.

may not be regarded as a danger to the Indian industry especially when the downtrend in pigiron exports stands out as a feature of trade in 1943-44. What is important to know is that if German steel production is deficient in volume under restraint, the world's exportable surplus will be small and in the Middle East there may be found again some markets for iron and steel manufactures. The second war should leave the Indian steel industry in a position to stand up to competition from Australia or Britain because the level of prices would never come back to that of 1939 in countries which have gone through the war and more than doubled their public debt.

India's Sterling Balances.

The record of debt repatriation during the war is proof positive of India's altered position in relation to Britain. The direct connection between the Reserve Bank's sterling assets and the Financial Settlement that British opinion is apt to emphasise is not overlooked by Mr. Bimalendhu Dhar whose (Cooperative Book Depot, Calcutta Rs. 3) book on *India's sterling position and the war* is more concerned with the technique than the results. It is encouraging to find that the main objects of financial policy are wholly approved in the light of events from 1940 to 1944. Mr. Dhar declines to accept the view that there is a good debt. He looks upon India's blocked sterling balances as convertible though he admits that others are more advantageously placed. The sterling exchange standard that called for oversea assets is the original cause of the accumulation. Mr. Dhar's analysis of the rupee's position before and during the war, leads to the rather uncomfortable conclusion that gold exports must be banned after the war. This view cuts across the assumption that private hoards are a part of the national capital immediately investible for development. Sir John Anderson's description of the legal status of sterling assets generally supports the argument that the new debtors have gained in more ways than through the extinction of interest payments. Almost a model in its careful analysis of oversea debt reduction Mr. Dhar's little book makes it plain that war has been financed in India with distinct advantage to the taxpayer. The first opportunity to pay off Britain was utilised without imposing new burdens on India. The other creditors of Britain who paid off debt and continue to retain sterling assets in London are many. Argentina is secured against hypothetical depreciation of sterling and is distinguishable from other countries. A renewal of Lend-Lease with the object of sterling-dollar stabilisation is calculated to suppress latent fears. The fact that Britain and America are the most important countries in India's foreign trade at present deserves more attention than the discharge of obligations. The outright purchase of private British investments in India (estimated at £240 millions) is not wholly favoured mainly on the ground that buying at inflated prices is not going to help India. At Bretton Woods the problem of abnormal accumulation was put before the world's experts who declined to discuss it and left adjustment to the future. Mr. Dhar offers no counsels of perfection though he is duly hopeful of direct negotiations yielding results. The mode of gradual repayment would correspond to the manner of accumulation and disbursements up till now. Mr. Dhar's little volume is more than helpful in putting the facts in sequence and making known the disadvantages of precipitate repayment.

Clive Street Gossip

If I revert to the question of the Calcutta Corporation's tackling of the problem of the Tramway purchase, I need not labour any apology. There has been a black-out of information and comment in the public press. No daily paper has so far given details of the scheme sponsored by the Market and the Public Utilities Committee to run the tramway business through an Agent appointed by the Corporation. The general body of the Corporation had some kind of discussion on the question this mid-week; and it appears as though most members of the Corporation are themselves in darkness about the scheme. The main point stressed in the discussions at the meeting was that opinion was being taken as regards the legal aspects of the proposal to appoint an Agent. Even in this regard, it transpires that the Corporation could not get the opinion of the Advocate General as the latter has already been retained by the Tramways Company. Surely, the authorities of the Corporation could have realised well in advance that important legal issues would be involved; and, guided by that realisation, it should have been the Corporation's business to retain the Advocate General of Bengal for tendering advice. That the Calcutta Tramways Company has been allowed to steal a march in this matter, does not reflect credit on the people concerned.

* * * *

The proceedings at this week's meeting of the Corporation gave impression that the main issue in the matter was the Government's disapproval of the plan suggested by the Public Utilities Committee. Piqued by the Government's announcement in this regard, the uppermost thought in the minds of the Public Utilities Committee is to prove themselves in the right and prove the Government in the wrong. That is to say, right or wrong from the legal standpoint. Those who had read my last week's instalment of Gossip will have no difficulty in perceiving that the legal issue is the least important in a detailed analysis of the problem. In fact, I am surprised that the Corporation members did not insist on a proper examination of the financial and practical implications of the scheme of the Public Utilities Committee. At this week's meeting of the Corporation, the simple question should have been put to the members of the Public Utilities Committee whether their scheme had been subjected to an expert financial exaimnation; whether the scheme had been studied by the Finance Committee of the Corporation; whether the scheme was such that there were reasonable chances of its being carried into effect. I examined, in the last week's number, the financial implications of the scheme to work the Tramways through an Agent. From the information I was able to gather, the annual payment by way of interest and commission to the Agent would amount to Rs. 30 lakhs. This amount would strain the earnings of the Tramways. Even on the basis of the phemomenal traffic which the trams in Calcutta have been carrying during the war years, the surplus available would only be Rs. 25 lakhs per annum. Prudence demands that allowance must be made for some shrinkage in traffic receipts during the postwar years when other means of transport will be enjoying greater facilities such as more plentiful and cheaper petrol, and when the City will not be harbouring such large numbers of British, American and other Services.

This is from the point of view of current revenue and current expenditure. The Scheme is equally unsound from the point of view of the capital plan. The proposal is that the Agent will deposit an amount of Rs. 5 crores with the Corporation; that this amount will be utilised to pay the Calcutta Tramways Company. In the first place, no one can, in one lump sum, produce cash for Rs. 5 crores to Rs. 5½ crores. I do not suggest that this City of vast wealth does not posses millionaires who are worth over Rs. 5½ crores. But how many are there who can spare this sum in one single lot and who can keep sparing it for the next 30 years or so? I happen to know a good few millionaires and multimillionaires; but cash for Rs. 5½ crores down on the nail is just an impossibility. Moreover, what is the security that the Agent who is called upon to put up Rs. 5½ crores has for this large amount? I suppose, the Corporation will give him a deposit receipt for Rs. 5½ crores. It will be no easy matter to negotiate this deposit receipt. If, on the other hand, this amount of Rs. 5½ crores is raised by way of loan, the holders of the loan get in exchange scrips which are negotiable. There is another important consideration. While the gentleman advancing the money gets a security which will be non-negotiable, can he be sure that his legal title on the basis of the deposit receipt is without any flaw? The very fact that an outside counsel had to be consulted on the legal issues of the scheme, emphasises that it is not all smooth sailing with regard to the legal title; it is not improbable that some future legal complications may arise. In such circumstances, is there anyone so overloaded with cash in Calcutta and so overembarrassed with its lying idle that he would advance as much as Rs. 5½ crores on a security which is non-negotiable and with the prospect that there may be legal complications? The answer to this question is eloquently furnished by the fact that the Corporation has not so far received even a single tender. In the last article, I referred to the press report that twentytwo tenders had been received; and I had also categorically stated there was no truth in this report, that in fact, not one tender had been submitted. Since then, a Calcutta daily has vouchsafed the information that tenders are pouring in. I am again in a position to state emphatically that, up to the time of writing, the Corporation has not received one single tender.

Apart from the financial aspects of the scheme of working the Tramways through an Agent, we have to enquire whether the scheme is in accordance with correct policy. In the case of railways, option for purchase was exercised so as to nationalise the entire railway system. Similarly, in the case of the telephone companies, India has now effected complete nationalisation. It has been the acknowledged policy that, when the opportunity offers itself, all public utilities must be nationalised. The proposal of the Market and Public Utilities Committee to run the Tramways through an Agent is not nationalisation; it is nothing more than the exchange of white capitalists for black

capitalists. The Corporation must clearly understand that the policy with regard to the purchase of the Calcutta Tramways is not one of Indianisation of capital but one of real nationalisation.

* * * *

The correct solution of the problem of the purchase of the Calcutta Tramways undertaking has more than a local interest. The option for the purchase of the Delhi Electric Supply and Traction Company falls due in 1947. Two years notice has to be given to the Company. Under this stipulation, notice must be given next February. The Madras Electric Supply Corporation can also be taken over by the Madras Corporation in August 1947; and notice in time has to be given to the Company. It is now in the power of the Calcutta Corporation to furnish a shining example as to the correct policy and apt scheme for the municipalisation of an important public utility. By the way things have been messed, it looks as though the action of the Calcutta Corporation will be in the nature of a warning rather than an example.

The time has arrived for the Calcutta Corporation in a general body meeting to take the matter into its own hands and deal with it expeditiously and competently. To leave the matter further in the charge of the Market and the Public Utilities Committee is as good as giving a guarantee to the Calcutta Tramways Company of an extension of seven years.

* * * *

Sir M. Visvesvarayya's speech at the Manufacturers Association is a reminder, of which there is unfortunately need today, of how much the cause of economic planning in India owes to this virile octogenarian. The credit for forcing the Government of India to accept planned development as our postwar policy may go to the authors of the Bombay Plan. The standing which its authors have in our business world, the nature of our postwar problems and the Government of India's need to provide compensation for its negative political policies have all served to make planning practical politics. But it is now more than at any other time that the pioneer should be honoured. While all the rest of the country was thinking in terms of Takkavi loans and aid to industries, and recoiling, too, from the financial consequences of such steps, Sir Mokshakundam came out with a 1,000 crore plan for alround economic development. And those were days when the Reserve Bank statement showed no figure bigger than 180 crores! Those who scoffed then are praying at shrines even more pagan. But Sir Mokshakundam is glad not only that his earlier labours have borne fruit but that he could continue his efforts to ensure that the future prosperity of this country will not be left to chance but built up, fast and sure, with courage and circumspection.

BOMBAY MARKETS

BULLION

Bombay (By Wire).

(FROM OUR CORRESPONDENT)

The deadlock between bulls and bears in Forward Silver continues and efforts at compromise for fixing reasonable budlee difference have failed. Since the bull clique is not interested in overtures and is remaining adamant. Hence to maintain hold over ready supplies bulls bought up from the Reserve Bank at high prices, being Rs. 123-12 on Tuesday, Rs. 124-4 on Wednesday though at Rs. 121-5 to-day. Forward rate, opening at Rs. 123 on Tuesday, shot up to Rs. 124-4 the same evening. Bears were obliged to cover at advancing prices. Budlee difference has risen from Re. 1-6 on Tuesday to Rs. 3-8 on Wednesday. The backs of bears are broken and the Committee is powerless to intervene. The Reserve Bank is only too eager to respond to the higher bids of bulls being intent only on highest prices regardless of consequences. New settlement temporarily dropped to Rs. 119-8 on bull unloading but is now Rs. 120 with spot at Rs. 123-4. Stock is 1,200 bars while offtake is somewhat reduced.

There was hardly any business in gold early this week and Forward went down to Rs. 63-8 on Wednesday, but upcountry offtake of 40,000 tolas helped the rise in price to Rs. 64-10. The undertone, however, is easier since stocks are high at two lakhs tolas. Bank sold 75,000 tolas daily at Rs. 65, Rs. 63-12 and Rs. 64-12 respectively.

COTTON

Cotton March contract firmed today to Rs. 424 with May Rs. 428-8, due entirely to gigantic purchases of single bull before whom bears have given up. Selling on Karachi account was offset by support at declines. Market, however, is entirely artificial being divorced from spot market.

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

Olympus

(FROM OUR CORRESPONDENT)

NEW DELHI, November 28.

The surprise appointment of an Army Reorganisation Committee of military experts has intrigued political circles here. It is strongly felt that it is difficult to separate the military aspects of this country's defence needs from their political aspects. On all major issues political considerations come first. Only a popular government can decide what the defence needs are. Only a people's army can bring down the defence costs and such a reduction in the defence budget is an absolute necessity for this country, if adequate funds are to be made available for essential nation building services. The proposed Committee's work, however, may prove useful if it provides the necessary data on which the Government's decision can be based. Even a rough idea of post-war defence needs will facilitate demobilisation work. It is stated that the Government itself will decide all the major policy questions—the racial and communal composition of the armed forces, its part in internal, imperial and international security, the strength of the Army, the Navy and the Air Force, the maintenance of British officers in the Indian armed forces and finally the size of the annual defence budget.

It is realised that the experience of the present war has revolutionised the traditional view of the defence of the north-west frontier with the spectacular development of the air arm. The defence of the north-eastern frontier cannot be neglected in the future. It is also realised that ultimately India's defence needs (together with the needs of other countries) will depend upon the effectiveness of the post-war security organisation and India's relations with her powerful neighbour, Russia and potentially powerful China.

The report of the Public Accounts Committee which was only briefly discussed in the Assembly on the last day of the autumn session contains some sensational revelations. The committee is deeply apprehensive of how war-time conditions have tampered with even elementary financial (audit) precautions in the case of any big emergency items of expenditure; of how the extent and number of supplementary grants has risen steeply and of how the danger of "the continuance of a tendency to take the approval of the Legislature for granted which might possibly outlive the urgency of the times which gave birth to it" is making itself felt. The number of supplementary grants voted by the Legislature during the year under review was 46 for a total sum of over 13 crores (representing no less than 52 per cent of the original voted grant). The corresponding figures for 1941-42 were only 29 supplementary demands amounting to Rs. 2.63 crores. "There are two substantial items of expenditure with the state of the accounts of which we are far from satisfied," says the report, "the first relates to the grants made to provinces for expenditure on War Publicity with regard to which Audit has been having the greatest difficulty in getting its requirements satisfied. We are concerned that the accounts of so large an item of expenditure are on so unsatisfactory a basis and we have asked the Auditor General to report to us on the arrangements he has found it possible to make with regard to the proper accounting and audit of this expenditure. We trust that the adoption of the scheme for the improvement of these accounts, which we are told is now under consideration, will not be long delayed. It is however, the expenditure in Bengal on the Denial policy and other similar measures which has caused us the greatest misgiving. We understand that there has been great difficulty in getting any kind of account at all for this expenditure and such as have been produced do not satisfy the standards of Audit. We realise that the conditions under which this work was done were of the utmost urgency and abnormality. We also recognise that some confusion was only to be expected in the circumstances and we are willing to make all allowances for it. But we do not see any excuse whatever for such neglect of elementary financial precautions as we are told prevailed in this matter in Bengal and which is one of the causes for its now being difficult for any adequate accounts to be produced. All that we desire at present is that the Auditor General should investigate fully into the facts of the situation and present to us a report with regard to the entire Central expenditure in Bengal which is now held in suspense. At the same time, however, we feel it our duty to place on record our view that if this further investigation reveals that the control of the Bengal Government was, through negligence, so lax as to give rise to serious doubts as to whether the money was actually spent on the purposes for which it was meant, we shall hold ourselves at liberty to recommend that the Central Government should accept debits which do not satisfy the reasonable demands of Audit." Another alarming feature of Public accounts is the arbitrary interpretation of the Indo-British financial settlement for allocaion of defence expenditure. The expenditure of one crore on two airfields built outside India was thus debited to India's account contrary to the settlement, merely on the Air Officer Commanding-in-Chief's certification that the fields were needed for the local defence of India.

It is learnt here that while all the Section 93 provinces have carried out the Central Government's suggested measures to restrict the slaughter of cattle, the provinces with popular ministries have so far ignored that. Meanwhile Sir Datar Singh's mission to organise 'Gowshalas' is making progress. Sir Datar Singh recently visited Sevagram to consult Mahatma Gandhi in the matter. It is understood that the military authorities are importing frozen meat in larger quantities but there is no likelihod of a reduction in the consumption of indigenous meat by Indian troops during the next year. It is however expected that "by the end of 1945 issues of imported frozen meat will have increased to such an extent that the off-take of indigenous meat for British and Allied trops will be reduced to one quarter of the present figure." The Bengal Government is planning to have three meatless days per week instead of two.

It is reported here that the possibility of sabotage is not ruled out in the recent Punjab Mail crash near Patna. Tampering with rails is suspected and the enquiry which is being held now is expected to throw light on this. The scene of the accident (near a culvert) has given rise to such suspicions for culverts provide a suitable hiding place to the accused who perpetrate such crimes. The authorities, it is understood, have put a cordon round the scene of the accident to preserve evidence of the actual derailment. The death-roll of eight is considered rather luckily small for a serious accident like this.

Mr. J. C. Savage, the well-known American dam-designer arrived in New Delhi from China last Friday. Mr. Savage visited India in January, visited the major dam sites in the Punjab, and the United Provinces and submitted preliminary reports to the two governments. This time he is also expected to visit Bengal, Madras and Mysore to advise on irrigation and hydro-electric projects. Mr. Savage is understood to have advised Chunking on a huge Yangtse project capable of generating 10.5 million kilowats of hydro-elctric power. The total production of the Punjab projects is expected to be only one-fifteenth of the Yangtse project.

The Indian Institute of International Affairs, which was invited to select a delegation to represent India at the Commonwealth Relations Conference to be held in London in February next, has extended a number of invitations for inclusion in the delegation. Among those invited are Sir Ramaswami Mudaliar, Sir M. Zafrullah Khan, Sir C. P. Ramaswamy Iyer, Sir Frederick James, Sardar K. M. Panikkar, Mr. Pothan Joseph and Mr. Sivaraj.

(From Our Correspondent)

BOMBAY, November 28.

The U.S. Office of War Information has set up a library in the city whose main object is to enable this country to understand American ideas and institutions. Mr. Howard Donovan, American Consul, read a message from Mr. Edward R. Stettinius, in which he hoped that the library would perform a useful role in the exchange of ideas between the two peoples and promote closer bonds of friendship and understanding. Mr. Donovan explained how war-time restrictions had created a dearth of information about America when Indians are really more interested than ever in things American. The present library stems directly from the war, and is the result of the initiative of both the U.S.O.W.I. as well as the Library of Congress. Mr. Ralph Block, General Representative of the U.S.O.W.I., hoped that the library would be a prelude and forecast of closer understanding between India and America. The opening ceremony was performed by Mr. B. J. Wadia, Vice-Chanceller of the Bombay University, appropriately enough. Mr. Wadia in welcoming the library as a cultural mission looked forward to the day when India in her turn would be able to open an Indian library in the U.S. and make the American people *au fait* with the pageant Indian history, the greatness of Indian culture and the undeniable justice of her political aspirations. It is high time that the American people got their information about India from truer sources than the propagandist mouthpieces of the British Ministry of Information.

U.S. interest in India is, by all tokens, increasing; witness the report that the Washington Library of Congress is anxious to obtain all available publications relating to India from 1938 upto the present time. It appears that the Foreign Service of the U.S. has addressed Indian commercial organisations accordingly, and welcomes all reports, bulletins and other commercial reports from India which are not ordinarily available. It is perhaps too sanguine to expect that the idea behind all this is really to understand the Indian scene. Rather it must be that the U.S. is more interested in the economic aspect, and probably U.S. businessmen want to be on the *qui vive* to grasp every available opportunity to take a hand in the economic development of the country and to take the fruits of the same. Uncle Sam and John Bull are far too committed to exploitation to be credited with an objective interest in India. General Motors have recently published an economic survey of India, intended for circulation among American businessmen. The tone, trend and scope of the survey reeks of the motive of exploitation of commercial opportunities in the changing India. These are straws in the wind.

The Indian delegation to the International Business Conference has, after all, been allowed to place its resolution protesting against the American policy of subsidising cotton exports. Sir C. B. Mehta seems to be too hopeful of a large market for Indian products in the U.S.A. after the war. Dr. P. S. Lokanathan's guarded statement on the results achieved by the Indian delegation has not gone unnoticed. It is noteworthy that on questions like protection to investments, cartels, commercial policies and currency relations, the Indians stuck to their guns and were not afraid of putting across their views however much they may have been divergent from those of the British or American businessmen. At least, it could be said now that the Indians did their best to pull off the blinkers which shut off the eyes of International businessmen to the economic aspirations and rights of India. It is all too clear that the U.S. is prepared to go very far towards satisfying Britain, and the proposed 3,000 million dollar loan to Britain for post-war needs will not in the least help India to retrieve the fruits of her labour represented by the sterling balances. In that sense, the Conference has not taken matters a whit farther than Bretton Woods.

It is surprising how little comment there has been in India over the U.S. Cotton subsidy programme. Apart from Sir Purshotamdas Thakurdas' warning in the statement issued to the London *Financial News*, there has been very little of properly directed agitation in India, although the U.S. policy affects Indian cotton vitally. Both the London *Times* and the *Manchester Guardian* have not hesitated to condemn the policy behind the export subsidy as a travesty of the professions for a world of lower tariffs and freer trade. The excuse that the subsidy is directed against Brazil will not mislead anybody since Indian cotton will be equally hard hit if not more. Viewed against the world statistical position which suggests that world production of cotton this year may touch an all time high record of 50.4 million bales as against consumption of never more than 31 million bales, American policy is particularly vicious. The C.C.C. has already purchased about 70,000 bales under the new programme upto the middle of November. In some quarters however, pessimism is not so overwhelming, as it is pointed out that the subsidy of four cents a pound will enable American middling cotton to be offered at somewhat below 18 cents which exporters from Brazil are said to obtain. That price would still be 100% above the 1939 price; and this has stimulated a belief that, at that price, non-American producers might still be able to obtain a good margin, provided they are able to sell their cotton and have the requisite facilities such as shipping space etc.

Cotton developments in other countries deserve careful attention. The Belgians and the French are negotiating with countries like Egypt and America to obtain cotton in order to get ahead with textile production, especially as German occupation has not been so disastrous to their textile machinery as was commonly imagined. Sweden is credited with the intention of buying Brazil cotton to the tune of 10 times its pre-war offtake. Spain has already bought 75,000 bales from America. British manufacturers are agitating for the imports of other types of cotton than those available under Lend-Lease so that they might make a start with a high power export programme. In fact, despite the pre-occupation with the war, every country is out to make the most of the opportunities coming its way. And only India is left to find for herself.

Inasmuch as Brazil is practically on the same footing as India on the cotton question, the reactions of Brazil are noteworthy. The announcement of the American export subsidy was greeted with indignation by the Brazilian press which characterised the export policy of the U.S. as intolerable and contrary to the spirit of Bretton Woods, Hot Springs and Dumbarton Oaks. The next Brazil crop is estimated at 600,000 tons, which will leave a surplus of 400,000 tons since internal consumption will not be more than 200,000 tons. Although Sweden or other Continental countries may be taking Brazilian cotton, it is obvious that the American subsidy will cut right across Brazil's export ambitions. The cotton exchanges in Brazil witnessed wide fluctuations and only the warning of the Brazilian Government that wide price movements will be checked by appropriate measures has kept the Sau Paulo market steady around 91 cruzeires per 15 kilos as against 60 cruzeires a year ago.

The position in Egypt is rather intriguing. On the one hand, Indian mills have been led to expect difficulties of supply on the ground that Egyptian cotton has a multitude of bidders and at higher prices. The Egyptian crop is said to be 5 million kantars as against 3.5 last year and a large stock has been carried over in August. Moreover, India remains the only real importer: and yet Indians have been free to buy in the open market only after the recently created Cotton Co-ordinating Commission has effected its purchases for the United Kingdom, the liberated countries and official Indian defence purchases. The U.S. economic mission has been at Cairo for some time and its report will shortly be placed before the Administration. Until then, we shall not know what American intentions are. And so remains the raw cotton position, a tangled skein and quite baffling.

Once again unbridled speculation has led to a deadlock in the bullion market between the bulls and the bears. The short sellers have decided not to pay more than Re. 1 and 4 as respectively towards carry-over charges for silver and gold. The bull chokseys have been manipulating prices at their sweet will; and time and again, they have succeeded in exacting onerous penalties from the shorts. Unfortunately, ever since matters came to a head some months back when the parties went to the High Court, forward trading in silver has lacked official sanction and been carried on on the basis of private understanding. Naturally, the present deadlock has to be resolved amongst the merchants themselves, and the Board is powerless to intervene except in a private capacity. The recurrent misunderstandings between the two sections of the bullion trade are regrettable and it is high time that the need for a measure of commercial discipline is recognised in the trade.

Airway Port

(FROM OUR CORRESPONDENT)

KARACHI, November 30

Sind's favourite pastime to circumvent a Ministerial crisis is expansion. It was at one time expected that Sir Ghulam Hussain would not fill the breach caused by the arrest of Khan Bahadur Khuhro till the outcome of the case against him was known, but he found to his dismay that intra-Ministerial intrigues were making themselves felt and some of his own colleagues were attempting to oust him from the Premiership. So, one fine morning, he drove to the government house with two names of persons whom he wanted to include in his Cabinet. One of them was Muslim Leaguer Mir Ghulam Ali Khan Talpur, a cousin of Mir Sundeh Ali Khan Talpur, the ex-Premier of Sind. For quite a long time, his name was being mentioned as a Ministerial probable and his inclusion therefore did not cause any surprise. But a rank outsider romped home in the person of Mr. Roger Thomas, a British planter who owns extensive cotton lands and an estate in Mirpurkhas. Though he is not even a member of the Sind Assembly, he has been selected and it is hoped that one of the Europeans in the Assembly would give him the chance to contest a by-election. Mr. Thomas, by the way, is the first English Minister in India under provincial autonomy. He is in charge of the portfolio of agriculture and is expected to ginger up the department. The portfolio of law and order was taken from the hands of Mr. M. H. Gazdar and given to the new entrant, Mir Ghulam Ali. In spite of this expansion, Sir Ghulam still feels shaky in his seat and is out to get more support. He wanted to placate the Syed group by the offer of a Ministry to Syed Mahomed Ali Shah but the latter turned down the offer. An overture was also made to Pirzada Abdus Satar, an ex-Minister and colleague of the late Mr. Allah Buksh, but he too declined. Now Sir Ghulam is trying to rope in Mukhi Gobindram of the Independent Hindu party. He is likely to accept the offer provided the Premier agrees to release the Congress detenus and gives more representation to the Hindus in the services. The real strength or weakness of the Ministry will be known only when the Assembly meets for the Budget session and that is yet far off.

That due to the present world conditions, control over the food grain business might continue for another five years was the opinion expressed by the Hon'ble Mr. Somerset Butler, special officer of the Food Department of the Government of India, who was in our midst recently. This view was expressed at the local Indian Merchants' Association, where he had been invited to hear the grievances of the merchants against the present control policy of the Government of Sind. The Chairman of the Produce Exchange Board of the Karachi Indian Merchants' Association dilated on the impropriety of government trading in essential commodities. In the course of his representation he said: "The government control was professedly introduced in the interests of consumers on the one hand and growers on the other in order to ensure fair and economic prices to the growers and supply of essential food grains to the consumers at fair and equitable prices. But neither the grower gets a fair price for his produce nor is the consumer free from profiteering. So far as this province is concerned, it is easy for the government to achieve their main object of ensuring supplies to the consumer at fair and equitable prices and obtaining surplus for export with the least interference with the normal trade channels. Ceiling prices may be fixed and exports regulated, according to the surpluses available, by means of permits issued to bona fide merchants. Such a system would entail minimum supervision on the part of government who have now installed a complicated and expensive control machinery."

Mr. Butler explained that the Gregory Committee had recommended that rationing should be started as widely as possible and that there should be complete control over procurement and that the provincial and State governments should, as far as possible, introduce monopoly in produce trade. The present food control policy was, he said, devised in pursuance of these recommendations. However, the Government of India was in favour of utilising the existing trade channels to the maximum possible extent.

The main features of the rice purchasing policy of the Government of Sind were announced recently. The price of rice will remain unchanged for twelve months. The government will purchase all rice and pay an extra monthly charge to the zamindars and merchants for their storage etc., if delivery is not taken on the due date. The new policy is a variation in the control policy which the government have pursued so far. Till now the trend has been to prevent prices from going up. The new policy makes a move in the reverse direction, fixing minimum prices and seeking to prevent them from going down. Though the government have agreed to purchase all rice, they have not undertaken that responsibility in respect of paddy for two reasons: firstly, that paddy involves unnecessary transport space and weight and secondly, that it also involves the operation of milling. But they have taken measures to see that the paddy grower is not put to any loss. Sind's present rice crop is estimated at about 450,000 tons. Roughly half of Sind's crop is exported.

PAPER economy

After five years of war it is hardly necessary to emphasise the importance of economising in the use of paper. But it is worth your while to know how best to economise paper. The first point is, of course, to use only just the amount of paper which is absolutely essential and no more. The second, and no less important point is to use paper of a good quality which will enable you to write or type on both sides without affecting legibility.

Resume of Commodity Markets

Both the jute and jute manufactures markets have been steadier during the week while the raw cotton market remained fairly steady. The piecegoods market again ruled firm. With the efforts of the authorities to provide greater transport facilities and export goods from Bombay to Calcutta by sea, it is believed that the acute scarcity in some centres will be relieved. Madras especially is reported to have received larger quantities in the past two weeks. The bullion market has been slightly easier in the past two days on account of the unwillingness of bears to pay the penalty demanded by bulls. In spite of the fact that the bullion exchange was open on Tuesdays and Wednesdays there was very little trading and most of the business passing was on account of bull operators.

That the statistical position of jute is quite sound is borne out by the recovery in prices in the past two days. There is even a change in the general sentiment in the market. It is now felt that, given a little support by the official authorities and greater cooperation from the mills, it will be possible to maintain prices for the raw material around the minima. There were rumours of an enquiry from the Government regarding the ability of mills to stock jute but no further reports have been received in this regard. It is to be presumed that the matter is still under negotiation.

It is rather interesting that reports regarding the possibility of a large increase in the demand in the latter half of 1945 should be coming in just at the present moment. The U.S. War Production Board announced last week that the recommendation for private importation of burlap from India should be authorised as soon as conditions warranted. The Burlap Importing and Bag Manufacturing Industry Advisory Committee seems to be of the feeling that adequate shipping space should be provided to importers and that there should be no restrictions in regard to purchases. Even prices should be adjusted to permit of private operations. If a shortage of jute manufactures is anticipated a system of quota allotment and issue of permits is advocated. The position will be again reviewed by the Committee early next year. As the U.S. requirements till the middle of next year have been anticipated and official purchases have been concluded, the recommendation regarding private import of burlap can be given effect to only by July next year. If something can be done to relieve the position in the heavy goods market at the present moment it can be safely expected that the jute industry will take care of itself in the next season. There are reports that the Government might place fresh orders. Last week's order was very small and could not have any effect on the market.

The position in the bullion market is confused. The old controversy between bear and bull operators has been revived. In spite of the large sales by the Reserve Bank available supplies of the precious metals have been cornered by a strong bull syndicate. As the bears felt that budlee differences demanded by bulls were very heavy it was dcided to have the claims settled in a court of law. A meeting was to have been convened for this purpose by the operators concerned but so far nothing has been done. Meanwhile, business in the bullion market is restricted. The Reserve Bank's offerings of 75,000 tolas of gold and 300 bars of silver, per day, however, have been absorbed without any difficulty.

Quite a rosy picture of the world's wheat position has been painted by the City Editor of "The Times." In spite of the smaller American crop last season, the carry-over at the end of 1943-44 was twice as much as the previous average. At the beginning of 1943-44 the U.S. Department of Agriculture estimated the carry-overs of the four main wheat exporting countries, Canada, U.S.A. Argentine and Australia at an all-time peak of 1,748,000,000 bushels compared with the average figure of 457 million bushels in the last five pre-war seasons. It is said that the Australian crop has been badly affected and that the yield may even be half the figure of last season. But with the large surpluses, as mentioned above, and the efforts to cut down the use of wheat for other than human consumption, there is no anxiety regarding adequate supplies of the cereal. More than ever before the problem will be one of providing adequate shipping space to consuming centres from the surplus areas.

By a notification issued under the Indian Woollen Goods (Control) Order 1944 the Central Government have fixed the maximum retail prices of Indian woollen goods other than controlled ones.

The prices fixed are for the best quality material and prices for lower qualities should be proportionately less. The maximum retail price of tweeds and woollen suiting manufactured from Indian machine spun woollen yarns is Rs. 5-10 per lb. and that for blankets and rugs manufactured from Indian machine spun woollen yarns is Rs. 4 per lb.

Maximum retail prices for a variety of worsted cloth manufactured in India are: Rs. 26 per lb for worsted cloth (suitings, shirtings, flannels, shawls etc.) manufactured from imported worsted or union (RC quality) yarns; Rs. 22 per lb for worsted cloth manufactured from cotton warp or cotton twisted with imported worsted yarn with cotton contents not exceeding 25 per cent; Rs. 18 per lb for worsted cloth manufactured from cotton warp or cotton twisted with imported worsted yarn with cotton contents above 25 percent; Rs. 20 per lb for worsted cloth manufactured from imported worsted and union (TC quality) yarns twisted with rayon or staple fibre yarn and Rs. 9-8 per lb for worsted knitting yarns of Indian manufacture. These ceiling prices will probably be reduced within four months.

(From Our Correspondent)
Special to "Indian Finance".

Calcutta, December 1.

With two holidays intervening the period to be reported on this week is curtailed. The principal item of interest in the markets has been the placing of the first definite orders on behalf of U.N.R.R.A. which have been long awaited. Now that they have started it is to be hoped that there will be others, and larger ones to follow, patricularly for Heavy Goods and Sacking descriptions, for it is in respect of these that Mills are at present none too comfortably placed. The dearth of business is only too clearly shown forth in the returns detailing the sales made by Mills during the week ended 18th November. These are:—

	This and next month yards.	Forward yards.
Hessians ...	16,46,000	41,37,000
Twill Goods ...	11,49,000	3,65,800
Plain Goods ...	29,64,000	8,54,933

Without looking back records, we think it must be many a long day since Mills managed to dispose of no more than 12 lakhs yards of Heavy Goods in the course of a week in the forward positions when they were, practically without exception, keen sellers. These returns show, as nothing else can, how bare of enquiry the market has been and how vulnerable it has consequently been to the "Bear" operations of Bazar speculators. The U.N.R.R.A. orders therefore came as a welcome gleam of hope on an otherwise bleak prospect. Part of the order was for Hessian bags which were not of such moment to the market as Mills generally are comfortably sold in Hessians for some months ahead. The important part of the order was for 15,000 bales of "B" Twills for early shipments, which must have set aflutter the heart of more than one eager salesman, calculating what his share was likely to amount to. It is perhaps unfortunate that the order could not have been placed to achieve the greatest psychological effect on the market, one of the reasons presumably being that no price has yet been fixed, or at least announced. If the order could have been placed in the ordinary way in the open market, it would have immediately shown up any chinks in the armour of the "Bears". For it is extremely doubtful if a quantity like 15,000 bales of "B" Twills is actually held by Bazar operators, otherwise than on paper. The probabilities are that there would have been a rush for cover and the price would have advanced several rupees before the order could have been covered. That perhaps was another reason why the order was not placed on the open market. Perhaps the next best thing would have been to award the order to, at most, two groups of Mills who were known to be gasping for business of this sort, and who would have absorbed the whole parcel without a tremor. That would at least have reduced the pressure to sell from these directions for some little time. As it was, the order was split up and distributed widely, so that no Mill got any considerable quantity, and some got a share who did not particularly want it. This wide dissemination of the order detracted to a large extent from the stabilising effect it might otherwise have had on the market, though it must be admitted that this effect was not entirely lost, and the tone has been steadier since.

It is reported that an order of considerable magnitude for Hessians has recently been covered on this market on behalf of Canada. The business did not reach Mills direct, but was covered from second-hand holders, or bear operators, so that Mills have either already got the business on their books, or will ultimately get it. It is rumoured that there are other orders on Government account for substantial quantities of Hessian cloth about to be placed, so that there is no reason to anticipate any decline in prices for that commodity. But the Sacking section is still the subject of concern. The market is not exactly bare of enquiry, but what there is exclusively for specialities, and not for the standard goods which Mills are anxious to sell.

It is interesting to learn that the Ministry of Supply in England appears to hold the opinion that the trade in Dundee should, when restrictions are relaxed, concentrate their energies on the poduction of the type of goods formerly largely manufactured on the continent of Europe, leaving the standard types to be supplied by Calcutta. It is anticipated that there will be a keen post-war demand from the U.S.A. for descriptions of specialities which continental mills will not be in a position to meet, possibly for some years, and this offers Dundee an opportunity to re-establish their foreign markets, and perhaps establish new ones, in lines of business where they do not have to compete at a disadvantage with Calcutta-made goods. Dundee is not without its labour troubles, and it is of interest that manufacturers there are looking forwad to minimise this in future by the installation of modern and labour-saving machinery at the earliest opportunity.

On the subject of labour, Jute interests up-country have a very well founded grievance against both the Military authorities and the Supply Department in respect to the rates which are being paid for ordinary coolie labour. It is alleged that, by discharging 20 or 25 bags of food-grains from a flat, a coolie can earn, at Government rates of payment, sufficient unto the day, which is as far ahead as the average coolie looks. This easily explains why there has been a serious hold-up of flats at up-country stations through dilatory discharge, and the resulting shortage of freight for downward cargos of jute. Also the position has its repercussions in Balers godowns, which are often jammed with loose jute which they cannot assort or press for lack of labour, or at any rate labour at wages which they can afford to pay or which the business will stand. It seems grossly unfair at a time labour is in any case scarce enough, that Government or Military, regardless of expense which comes out of the tax-payer's pocket anyway, should pay rates of wages which reduce the coolie's working day to a matter of a couple of hours work. If the trader is to be allowed to trade, so that he may be taxed to foot the Government's bills, there should be less poaching on the supply of labour necessary to his trade, and certainly no poaching by means of the offer of ludicrously high wages which automatically reduce the quantum of work done. It cannot be pleaded that this is an effort to raise the standard of living, for at his present stage of development, the average coolie's highest ambition is a full belly, and that achieved, he stops work.

Coal supplies have been far from adequate during November, and few coal consuming mills have been able to work more than one week during the month. It looks like another month of poor production and another heavy debit for the Industrial Pool. Incidentally it is reported that requisitioning of Jute Mill premises is not even yet at an end. We understand that another three Mills are under notice to double up —all of them electrically driven. By working doube shift in half the premises, the loss in production will not be great, but the loss of godown accommodation may act as a brake on the purchase of jute, which the local Government wish to encourage.

There is little to comment on regarding the Pucca bale market. Any export enquiry seems to be confined to private marks, and sellers of public marks at minimum prices for all grades, with the exception of Rejections and Cuttings, fail to elicit any response either from overseas or from local Mills.

There has been a little more animation in the Loose Jute section and prices show an all round advance of at least four annas since last week. The turnover has not been extensive, but the higher rates have been paid, though the main strength of the market has come from the steadiness of up-country prices, due to smaller imports, because the paddy harvest has commenced. Dealers are also hampered, as we have pointed out above, by overstocked godowns due to shortage of labour and also shortage of freight space. In which connection it might be mentioned that the quota system is not working by any means harmoniously yet. It remains to be seen whether the introduction of the universal "Pool" of all freight space will result in more equitable distribution of what is available. European packing has sold from Rs. 15-12 and Rs. 12-12 for Mids and Bots to Rs. 16 and Rs. 13. Supervised Jat advanced from Rs. 15-4 & Rs. 12-4 to four annas more, with Rs. 12-12 reported paid for Bottoms alone. Indian Jat has sold at Rs. 15-4 and Rs. 12-4. Balers have paid a substantial premium for good Tossa Bottoms.

The Fabrics section has been dealt with earlier in its broader aspects. Hessians remain at maximum rates so far as Mill sellers are concerned and second hands who were discounting have largely disappeared. On the Heavy Goods side there has been little worthy of note beyond the U.N.R.R.A. order and the usual inter Bazar transactions, but the tone is more buoyant and prices generally marked up "B" Twills for instance having been as high as Rs. 61 for December.

(Continued from page 751)

There is at present substantial stock of last year's crop lying undisposed in the mofussil.

I understand that the Government of India have been perturbed at the repeated complaints that have been voiced about the quality of food grains imported. They have therefore under contemplation, it is reported, plans for setting up an agency which would be able to check the quality of food grains sent out to consuming provinces from the exporting provinces. After eighteen months' experience, the Government of Sind have now introduced a system in their proposed buying policy for Sind. by which, the quality of food grains purchased is to be assessed on the basis of standard samples with the Karachi Indian Merchants' Association. So far as the export of food grains from surplus provinces to importing provinces are concerned, there have been repeated complaints in the past that the quality of grains sent was much below par. The exporting provinces, however, disowned all responsibility and there was no knowing where the blame lay. The government's plan contemplate a check on the quality of food grains at the point of despatch so that the consuming provinces should be in a position to know exactly what stuff they are getting.

Seth Kasturbhai Lalbhai, the well-known Ahmedabad mill owner, was on a short visit to Karachi recently. He said that the Tata delegation to England and America would not proceed till March or April next year.

JUTE

(By Our Staff Correspondent).

Calcutta, Nov. 30.

Steadier conditions have been noticeable in the raw jute market during the week. The firmer tone of mofussil markets and the larger investment buying by speculators have been mainly responsible for the better feeling. There is a slight improvement in prices on balance. It is generally believed that the Government will act in co-ordination with jute mills and stabilise prices around present levels. Actually, earlier in the week jute mills had been enquired as to the extent to which they could effect jute purchases to stabilise prices but nothing further has been reported. Even the rumours regarding the possibility of Government intervention in the jute and jute manufactures markets have thus been useful and it is a reflection on the soundness of the statistical position in the raw jute market. Holders in upcountry centres are rather reserved and are inclined to await further developments, it being expected that there will be an improvement in prices early next year. Arrivals in upcountry centres are still on a small scale but it is expected that with the improvement in transport facilities, arrivals will be on a larger scale.

In the loose jute section, Supervised Jat Middles and Bottoms were done at Rs. 15-4 and Rs. 12-4 per md. for lower assortment. Bottoms alone were Rs. 12-8 per md. European packing Middles and Bottoms were unchanged at Rs. 15-12 and Rs. 12-12 per md. Supervised Jat were 4 annas higher at Rs. 15-8 and Rs. 12-8 per md. for Middles and Bottoms.

In the pucca bales section buyers are still not prepared to pay minimum prices. Mills, however, are reported to have purchased Lightnings and Hearts at Rs. 74 and Rs. 68 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, Nov. 30.

The jute manufactures market has been steadier in the latter half of the week and second hand sellers are not so eager to do business at a discount. The placing of a small order for hessian and sacking bags and the reports of further orders have kept mills out of the market. The decision of the U. S. War Production Board that facilities would be given to private trading as far as possible in the latter half of 1945 has given rise to the hopes of a large increase in exports next year. Between now and June mills are fairly well sold in hessian. If something were done to improve the demand for sacking, the present difficulties of the industry would have been satisfactorily solved. Prices for hessian are nominally at maximum rates while in the Heavy Goods section B. twills have improved from Rs. 58-4 to Rs. 59-4. Some small business has been reported by mills at slightly below maximum rates.

PIECEGOODS

Calcutta, Nov. 30.

In the piecegoods market business is restricted on account of the restriction of supplies. The transport difficulties creating bottle-necks in the despatch of goods to consuming centres from producing areas will be evident from the decision of the Government of India to agree to the despatch of piecegoods by sea from Bombay to Calcutta till the end of the year. Distribution of available supplies also seems to be the subject of coniderable criticism as even now various suggestions have been put forward for distribution among retaillers. At a meeting of the Calcutta retail cloth dealers during the week a resolution was passed urging the Government to refrain from the policy of distribution of cloth through 150 selected shops and seasonal goods from 30 shops. In the opinion of the meeting if this were allowed the interests of retailers as a whole would be prejudiced and the policy of distribution of cloth on the quota based for elimination of black markets would prove a failure.

OUR KITES OVER KOHIMA and KABAW

"...To-day our aircraft flew over enemy territory and delivered thousands of pound loads of bombs and strafed enemy positions, strongholds and troop concentrations..."

This is a typical communique and behind it lie the stories of the deeds and exploits of our Indian Airmen, who have proved worthy of the trust we reposed in them. Their courage, skill and endurance in the air or on the ground in the worst weather in the world and over appalling country, have won the admiration of all who have known them and seen their work.

TO-DAY, Fighters, Dive-bombers and Reconnaissance squadrons of the INDIAN AIR FORCE are operating in strength over enemy occupied territory in Arakan and Burma.

OUR Kites were over Kohima during the epic battle. To-day they are flying far into Burma. Hurricanes and Vengeances have hurled death and destruction on the enemy. INDIA IS PROUD OF HER I.A.F. BOYS

WHO HAVE PROVED THAT WE CAN BEAT THE JAPS

-AND WE ARE BEATING THEM BACK

NO PROPHECY REQUIRED

You don't need a prophet to tell you whether prices are going to rise or fall in the near future The experience of 1943 is enough to convince all that the trend of prices is definitely downwards. All around us there is evidence of falling prices. Introduction of control on prices and vigorous prosecution of the profiteers have ensured it. Do not be caught by falling prices.

This is no time to lock your money in manufactured goods, commodities, land, buildings or jewels. Their prices are sure to fall as time goes by and Rs. 100 invested now might easily dwindle to Rs. 70 or less within a year.

Today's best investments are Insurance, Co-operative Societies, Savings Bank Account, Post-Office Savings Bank, Government Loans and National Savings Certificates.

Prices of cloth, leather goods, drugs, medicines, food-grains, etc. are falling. Control measures are being extended and rigorously enforced. Be sure, prices will come down further.

Stock Markets to-day and to-morrow:

CLEARING HOUSE SCHEME DETAILS

Stock markets in Calcutta and Bombay have been firm during the past week. The Calcutta Stock Exchange was inclined to be quietly steady earlier in the week, but the Western Centre was firm throughout and prices for Textile issues especially were very much higher. The British Premier's statement in the House of Commons that there is still hard fighting ahead and that the war in the West might continue till next summer had an encouraging effect on values. In Friday's session in the Calcutta market a large business has been put through especially as the adjustments in respect of deliveries have been very nearly completed and it is felt that trading will be easier with the introduction of the Clearing House scheme.

Full details regarding the clearing house scheme are now available. I give them below:

As from the 4th December, 1944, all transactions in shares selected by the Committee and listed in the Schedule annexed will be settled, and delivery effected, through the Clearing House, which will be conducted on behalf of the Association by the Allahabad Bank, Ltd.

Clearing will take place on Monday each week and will comprise transactions from the Monday to the Friday preceding the clearing day, both days inclusive. If Monday is a holiday, clearing will be effected on the next working day but should there be more than two holidays in a week, the Committee will decide whether clearing is to be effected or transactions carried over to the next week.

In respect of each transaction in any of the shares listed in the Schedule, the selling member will deliver to the purchasing member, during working hours of the next business day, a Sold Note in Form "A". Similarly, the purchasing member will deliver to the selling member a Bought Note in Form "B". Each member will prepare a statement on Form "C" of his purchases for the week, a separate form being used for the shares of each company, and attach thereto the Sold Notes received. He will also list on Form "D" his sales of shares of each company during the period, attaching the Bought Notes received. All transactions will be summarized on Form "E" and this must be handed to the Clearing House, together with the statements of purchases and sales and the Bought and Sold Notes, before 11 a.m. on the clearing day.

Those members whose sales of any of the scheduled shares exceed their purchases must deliver to the Clearing House before 1 p.m. on the clearing day the number of shares sold in excess of their purchases, attaching a list in duplicate, one copy of which will be signed and returned to the messenger. Members whose purchases exceed their sales will receive the balance of shares from the Clearing House between 5 p.m. and 6 p.m. on the clearing day. Any shares not taken up by 6 p.m. will be presented to the members concerned, at their risk, before 11 a.m. on the day following, which will be known as Settlement Day.

The amount receivable or payable by each member will be credited or charged to his account with the Allahabad Bank before 11 a.m. on Settlement Day. The Bank reserves the right to withhold delivery of shares in individual cases until payment is made.

Members may instruct other banks to take up their purchases from the Cearing House or to present shares for the amount due will be tendered or delivered by or to the Bank concerned, at the Clearing House, before 6 p.m. on the clearing day.

Should any member fail to take up the shares receivable by him, these will be sold on his account by the Committee in their absolute discretion, the proceeds being paid to the Bank. Members whose sales to the defaulting member exceed their purchases from him during the week will be liable to contribute *pro rata*, according to the amount of the difference, to any shortfall. They will be liable similarly to contribute in the event of any member failing to pay for shares delivered to him. In such cases the sums due will be debited to the accounts of contributing members with the Allahabad Bank. The Committee will see that the Clearing House have a first charge on the card value of any defaulting member.

The value of stamps recoverable in respect of shares delivered to the Clearing House should be shown on the list referred to above, but the amount, as regards individual items, will not exceed the duty chargeable on the value of the shares calculated at the closing price fixed by the Committee at the close of business on Friday or, if that be a holiday, the next preceding working day. The cost of stamps to be received or paid by members will be added or deducted by the Bank to or from the amount payable or receivable as shown in the summaries in Form "E" and adjusted as stated above.

Shares received from the Clearing House which are the subject of objection must be returned to the Stock Exchange by 2 p.m. on Settlement Day. One or more members of the Committee will attend at that hour and will adjudicate in all cases of dispute. If the shares are held to be in order, the member concerned must accept them, otherwise they will be returned by the Clearing House to the member by whom they were lodged with a bill for the cost, calculated at the closing rate for that settlement as fixed by the Committee, the amount being charged to his account with the Allahabad Bank and credited to that of the member returning the shares.

Where shares taken up from the Clearing House are presented to the company for registration and found to be irregular, the purchasing member may apply to the Clearing House, if within one year from the date of the clearing in which they were received, for the name of the member who lodged the shares and the latter will then, replace them by shares constituting a good delivery. Pending replacement the ledger will refund the value at the market rate.

The scheme has been modelled on the Bombay arrangement and would be helpful in preventing the building up of large speculative positions. The clearing arrangement is only in respect of four counters, Indian Irons, Steel Corporations, Howrahs and Burrakurs.

MARKETS FIRMER

TEXTILES PROMINENT

(By Analyst)

BOMBAY (*By Wire*).

Mr. Churchill's speech was responsible for the buoyant feeling in the market Tata Steels forged ahead and were done up to Rs. 2,185 though closed at Rs. 2.173-12. Ordinaries were done upto Rs. 408, but closed at Rs. 406-8. Indian Irons were steadier at Rs. 38-10 and Bengal Steels at Rs. 32-. Cements, which were sticky around Rs. 232, came into attention suddenly on renewed buying from Marwari operators and I hear that the balance-sheet to be published next month will give a very impressive reading though the dividend may be only Rs. 7. I have several times mentioned that the Company is likely to issue new shares at probably a premium of Rs. 50 to the existing shareholders in the coming months. I look for a gradual and substantial rise over a period of 12 months. I, therefore, continue to recommend purchases around Rs. 240. For investors with a jobbing tendency I would recommend profit-taking at Rs. 250 with a view to replace holdings on a reaction of ten points.

Textile shares firmed up and the closing this week was practically the highest for the last two months. Bombay Dyeing were better at Rs. 1,842-8 and Kohinoor were up by 10 points at Rs. 616. Svadeshi continued to be the centre of attraction around Rs. 593. Among the low-priced scrips India United ordinaries improved to Rs. 16-0-6 at the close.

In Madras, Madura were better at Rs. 71-8 and Buckingham were done upto Rs. 317-8. It is reported that profits of most of the textile mills for the current half year compare very favourably with those in the first six months and therefore there is likelihood of a further rise in mill shares. On a further rise of about 5 per cent I would, however, recommend liquidation of holdings.

Among sugars, Belapur suffered a sharp decline to Rs. 239-8 from Rs. 250. I like shares like Mysore (Rs. 63-3), Nizam (Rs. 90), Buland (Rs. 45) and Raza (Rs. 46).

Among the Burma scrips, Bombay Burmah were a little better at Rs. 492-8 on the publication of an encouraging report. A dividend of Rs. 7-8 per share has been recommended by the Directors from the income obtained from South Indian Tea Estates. On a careful reading of the balance sheet, I feel that the shares are cheap at the current price of Rs. 492-8, particularly in view of post-war prospects. Scindias suddenly rose from Rs. 33 to Rs. 34-9 and this rise is attributed to the Company's taking 49 per cent interest in Travancore Steam Navigation Company and the balance of 51 per cent by the Travancore Government. The management of the company will be in the hands of Scindia Steam Navigation Company Ltd. I would not be surprised if Scindias move up further particularly in view of the investment demand in the last few days.

Among the Mysore shares, Mysore Chemicals and Fertilisers were in special request upto Rs. 32-8, probably due to short covering by bears who sold short in the expectations of a disappointing report. Looking to the tone of the market I would not be surprised if Fertilisers move upto Rs. 34-35. But I would consider any price around Rs. 35 a good level to book one's profits.

There was better enquiry for tea and Tea-cum-Coffee shares this week and first class shares in Madras were slightly higher at the close. Some time ago I had written that Mr. A. V. Thomas is floating a concern for acquiring a coffee estate. I hear he has received permission to float the company and the prospects of Babaudin Coffee and Produce Co., Ltd. will shortly appear in the papers. It is said that capital structure is Rs. 5 lakhs divided into Rs. 3 lakhs 6 per cent Mysore tax free cumulative preference shares of Rs. 10 each and Rs. 2 lakhs ordinary shares of Rs. 5 each on the basis of estimated profits of nearly Rs. 72,000. The 6 per cent preference shares will be covered nearly 4 times. After paying the preference dividend the Directors estimate profits to amount to 26 per cent of the ordinary capital. I also hear that the Karnatak Industrial and Plywood Company Limited is raising its capital from Rs. 2 lakhs to Rs. 7 lakhs by the issue of 5 per cent British tax free preference shares of Rs. 100 each and Rs. 3 lakhs ordinary shares of Rs. 10 each. This Company has been lucky enough to get American machinery under lease and lend and the machinery has reached the factory site. One factory will be erected at Dharwar and another at Supa. I like both the ordinary and preference shares. I shall give full details next week about this Company.

THE INDIAN CABLE CO., LTD.

NOTICE

The Twentyfifth Ordinary General Meeting of the Shareholders of The Indian Cable Company, Limited, will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, at 9-30 a.m. on Friday, the 22nd December, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1944.

(2) To declare Dividends.

(3) To elect a Director in place of Mr. T. S. Gladstone.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) As a special business, to consider and if thought fit to pass, with or without modification, the following resolution, namely—

That donation of Rs. 20,000 be made from the assets of the Company to the National and Provincial Funds for Red Cross, St. John's Ambulance and amenities for troops.

(6) To transact other (if any) competent business.

The Share Transfer Books of the Company will be closed from the 11th December to 22nd December, 1944, both days inclusive.

By order of the Board,
BRITISH INSULATED CABLES LIMITED,
Managing Agents.

Calcutta,
24th November, 1944.

THE GANGES MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Fifty-eighth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company No. 2, Fairlie Place, Calcutta, on Tuesday, the 19th day of December, 1944, at 12 noon.

AGENDA

(1) To receive and approve the Report of the Directors for the half-year ended 30th September, 1944.

(2) To receive and pass the Company's Audited Profit and Loss Account for the half-year ended and Balance Sheet as at the 30th September, 1944.

(3) To declare Dividends on Preference and Ordinary Shares.

(4) To elect a Director.

(5) To confirm appointment of a Director.

(6) To appoint Auditors and fix their remuneration.

(7) Any other ordinary business.

The Share Transfer Register will remain closed from 10th December, 1944 to 19th December, 1944, both days inclusive.

Shareholders and holders under Blank Transfer are reminded that upon declaration of the Dividends, the Dividend Warrants will be posted at once to registered Shareholders or their Mandatees. No application for payment will be necessary.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send us their Shares for registration as soon as possible and not later than the 9th December, 1944.

By order of the Board,
MACNEILL & CO.,
Managing Agents.

Calcutta, 25th November, 1944.

INDIAN TEA LICENSING COMMITTEE

Export Quota 1945-46

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, as amended, Tea Estates desiring to be allotted an export quota for the year 1st April, 1945 to 31st March, 1946 are required to submit an application for such which must be filed with the Indian Tea Licensing Committee not later than the 1st of February, 1945. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee Coonoor.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 1.

The Calcutta Stock Exchange was quietly steady early in the week and not much of business was passing. Markets were closed on Monday on account of a Muslim festival. The period under review is, therefore, short of one working day. In Friday's session, however, a definitely firmer tendency has been noticeable in sympathy with Bombay. The British Premier's speech indicating that the war might yet be prolonged encouraged bull activity. There was a smart rise in prices and quotations at the time of writing are at the highest levels for the week. The undertone is firm.

Giltedged securities have been firm though 3½ per cent. Paper has been slightly easier. The quotation is Rs. 100-0-6 against a premium of four annas at the end of last week. Terminable loans, however, have been in good request with 3 per cent. Defence Bonds at Rs. 102-10-6 and 3 per cent. 1949-52 at Rs. 102. 3 per cent. 1951-54 were Rs. 101-2, 3 per cent. 1953-55 Rs. 100-11 and 3½ per cent. 1947-50 Rs. 104. 4 per cent. 1960-70 changed hands at Rs. 113 and 5 per cent. 1945-55 at Rs. 103-8 No business has been recorded in provincial loans.

Bank shares have not been interesting but quotations were fully maintained with *Imperial Bank* fully paids at Rs. 2,025 and *United Commercial Bank* at Rs. 37-8 premium. *Reserve Bank* were Rs. 136 and *Hindusthan Mercantile Bank* Rs. 50.

Cotton shares were easier with *Cawnpore Textiles* at Rs. 13-12 and *Kesoram* at Rs. 15-12. The late rally in prices in the Bombay market and the reports that the earnings of textile mills are running at high levels have resulted in a rise in prices towards the close *Cawnpore Textiles* being quoted Rs. 14, *Elgin* Rs. 67 and *Kesoram* Rs. 16. *New Victoria* were quiet at Rs. 8-6.

Coal shares have remained firm and there are some important features to be recorded. The low-priced shares have registered a rise in prices. *Burra Dhemo* being more than one point higher at Rs. 11-6. *Bhulanbararee* were Rs. 29 against Rs. 27-12 at the end of last week. *Bengal* were five points higher at Rs. 650 while *Bokaro* and *Ramgur* were Rs. 41. *Burrakur* are now quoting Rs. 41-8. *New Beerbhoom* were irregular but the close is firmer at Rs. 38. There has been good enquiry for *North Damuda* at Rs. 12-8. *Equitable* were unchanged at Rs. 64. *Sendra* were Rs. 24-12 and *Talcher* Rs. 10-7.

Jute shares were not very much in the picture and quotations were fluctuating in narrow limits. General sentiment, however, was more cheerful on the reports that large government orders and official intervention in the jute market would improve the outlook for the industry. The hopes of a big increase in exports in the latter half of 1945 have been mainly responsible for the rise in prices in to-day's session, *Howrah* being done higher at Rs. 83-12. *Anglo-India* were Rs. 458 and *Fort Gloster* Rs. 820 against Rs. 798. *Kamarhatty* were 10 points higher at Rs. 663. *National* have been in request and done upto Rs. 32-2. *Presidency* were firmer at Rs. 10-12 and *India* at Rs. 700.

In the Engineering section, *Indian Iron* and *Steel Corporation* were Rs. 38-6 and Rs. 31-14 but the quotations are now higher at Rs. 38-14 and Rs. 32-10 respectively. *Burn & Co.* have been very firm at Rs. 428 cum-dividend and *B. I. Electric Construction* at Rs. 16-2. *National Iron* were unchanged at Rs. 13-8 but *Marshalls* were easier at Rs. 4-12 and *Kamardhubi Engineering* at Rs. 11 *Braithwaite* were steady at Rs. 12-6.

Sugar shares were not very interesting but in to-day's session there has been a rise in the quotation for *Carew & Co.* on the report that a dividend of one rupee per share is to be paid to the ordinary shareholders in respect of the year ended June, 1944. The quotation is now Rs. 28-12 against Rs. 27-12 earlier in the week. *Champaran* were Rs. 38-7, *Darbhanga* Rs. 30 and *New Savan* Rs. 21.

Tea shares have been firm, *Bishnauth* being Rs. 42-12, *East India* Rs. 17-10, and *Namburnadi* Rs. 11-14. *Sapoi* were higher at Rs. 22 and *Patrakola* at Rs. 1,220.

In the Miscellaneous section, *B. I. Corporation* were well held at Rs. 6-15 while *Calcutta Trams* have been fluctuating in wide limits. There was a sharp drop towards the close of last week on the reports that the Bengal Government had refused sanction but with the further reports that the Corporation is pursuing its efforts to acquire the Tramway undertaking there has been a rise to Rs. 51. The position is still confused and it is not clear as to what will be the outcome of the Corporation's efforts. *Bararee Coke* are further higher by a point at Rs. 32-6. *British Ceylon Corporation* were Rs. 18, and *Britannia Biscuits* Rs. 26-5. *Midnapore Zemindary* were steady at Rs. 160 while *I.G.N.* were slightly higher at Rs. 161. Among Paper shares, *India Paper* were steadier at Rs. 221, and *Orient Paper* at Rs. 29-12. *Titaghur Paper* A and B shares continued firm around Rs. 28-12.

THE GANGES ROPE COMPANY, LTD.

NOTICE is hereby given that the Eighty-Fourth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, NO. 2 Fairlie Place, Calcutta, on Tuesday, the 19th day of December, 1944, at 12-10 P.M.

AGENDA

(1) To receive and approve the Report of the Directors for the half-year ended 30th September, 1944.

(2) To receive and pass the Company's Audited Profit and Loss Account for the half-year ended and Balance Sheet as at the 30th September, 1944.

(3) To declare a dividend.

(4) To confirm appointment of a Director.

(5) Any other ordinary business.

The Share Transfer Register will remain closed from 10th December, 1944 to 19th December, 1944, both days inclusive.

Shareholders and holders under Blank Transfer are reminded that upon declaration of the Dividend, the Dividend Warrants will be posted at once to registered Shareholders or their Mandatees. No application for payment will be necessary.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send us their Shares for registration as soon as possible and not later than the 9th December, 1944.

By order of the Board,
MACNEILL & CO.,
Managing Agents.

Calcutta, 25th November, 1944.

(*Continued from Page 757*)

interesting. There is a large increase in earnings for the half-year ended September, 1944, but unfortunately the low level of profits for the standard period has resulted in a large increase in the provision for taxation. Only a small increase in the ordinary dividend has thus been possible.

The net profit of *India Jute Company, Limited*, for the half-year is Rs. 22,75,640 against only Rs. 12,20.989 for the previous six months. The amount set aside to depreciation is Rs. 88,875 (Rs. 91,000) while the provision for taxation is as much as Rs. 15,68,696 (Rs. 8,77,576). The transfer to Contingency Suspense, being approximately the amount of cumpulsory E.P.T. deposit, is Rs. 3.5 lakhs (Rs. 2.3 lakhs). The dividend on the ordinary and deferred shares has been increased to 3 per cent from 1½ per cent. The amount carried forward is Rs. 41,415 against Rs. 35,246 brought in.

* * * *

The net profit of *Megna Mills Company, Limited*, for the same half-year makes better showing, the figure before providing for depreciation and taxation being Rs. 18,48,830 against Rs. 6,43,313 for the previous six months. Provision for depreciation is Rs. 1,20,813 (Rs. 1,23,775), but taxation takes away the bulk of the increase in earnings and the total provision is Rs. 12,27,456 (Rs. 3,11,138). Allocation to Contingency Suspense is Rs. 3 lakhs (Rs. 1.5 lakhs). The dividend has been increased to 5 per cent from 2½ per cent. The amount carried forward is slightly higher at Rs. 78,084 against Rs. 53,752 brought in.

Due to the requisitioning of the North Mill by the Military Authorities the South Mill during the period under review worked on double shift the total number of hours as permitted under the working time agreements of the Indian Jute Mills Association.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market with call money quoting ½ per cent in Calcutta and ¼ per cent in Bombay. There has been greater use for funds on account of the movement of the cotton crop in the Western Presidency. The need for money from other quarters also has been larger as evidenced by the successive increase in both advances and bills discounted in the last one month. The statement of the scheduled banks for the four weeks ending November 24, 1944 shows that advances have risen in a month by over Rs. 12 crores and bills discounted by Rs. 1.4 crores. In the same period demand liabilities have risen from Rs. 603.68 crores to Rs. 612.3 crores and time liabilities from Rs. 196.28 crores to Rs. 201.6 crores. The increase in time liabilities is rather significant as it is suggestive that surplus funds are still large enough and that any increase in the demand for funds cannot possibly have any effect on interest rates. It is interesting to note that in the same period the Bengal Government have asked for treasury bills for Rs. 10 crores, the Madras Government for Rs. 1 crore and the Assam Govenment for Rs. 2.5 crores. The Central Government has been taking its usual quota of Rs. 6 crores every week.

At the auctions of treasury bills held this week total applications were higher at Rs. 13.3 crores against Rs. 11.29 crores, but bidding has not been keener and the discount rate is unchanged at 7 annas 11 pies per cent per annum. The Assam Government has been more fortunate in getting its bills accepted at a discount of 9 annas per cent against the Bengal Government rate of 9 annas 5 pies per cent per annum. The total offer of Rs. 2.5 crores brought in applications to the extent of Rs. 3.66 crores. Orissa Government is asking for Rs. 60 lakhs of treasury bills next week.

The returns of the Reserve Bank for the week ended December 1, 1944, show further expansion of currency, Notes issued being higher at Rs. 985.88 crores against Rs. 981.16 crors. Notes in circulation are also higher by Rs. 4.57 crores at Rs. 977.66 crores. Sterling securities have increased by Rs. 5 crores to Rs. 871.23 crores, but rupee coin are lower by Rs. 28 lakhs at Rs. 12.3 crores.

Central Government's balances have again increased, the latest figure being Rs. 231.61 crores against Rs. 228.4 crores. Other Government accounts show a rise of Rs. 1.36 crores to Rs. 11.83 crores. The next return might show a decrease in Central Government's balances on account of month-early disbursements. Bank balances with the Reserve Bank were lower at Rs. 89.4 crores against Rs. 91.29 crores. Other deposits have decreased by 27 lakhs to Rs. 12.29 crores. Foreign balances are higher at Rs. 342.25 crores in spite of the transfer to the issue department of Rs. 5 crores, the total net receipt during the week being of the order of Rs. 8.02 crores. Investments by the Reserve Bank have increased by Rs. 1.63 crores to Rs. 13.55 crores.

As a result of a further decline in deposits, an increase in advances and investments cash balances of the Imperial Bank are lower at Rs. 36.22 crores against Rs. 40.54 crores according to the return for the week ended December 1. Deposits are Rs. 50 lakhs lower at Rs. 237.2 crores while investments are nearly Rs. 1 crore higher at Rs. 152.22 crores. Advances are Rs. 2.27 crores higher at Rs. 58.88 crores, the increase being mostly on account of bills discounted and loans.

We can understand Britons being touchy on the question of India's sterling balances; but we cannot excuse their being nasty. So far as these sterling balances are concerned, Indian publicists and leaders have generally gone out of their way to understand Britain's special difficulties and have been anxious to find a solution which is in mutual interest. At no time their sterling balances was made a controversial theme by Indians. In the early stages of discussions on sterling balances, the main point of view in such discussions was that the abnormal accumulation of sterling assets was one of the main causes of inflation in this country. Public discussion was directed largely to the relation of sterling balances to the growing menance of inflation. It was our friends in Britain who made sterling balances a controversial issue. It was they who have made comments and offered solutions which cannot but have the effect of creating irritation and suspicion in the Indian public mind. One of the solutions suggested is that part of the balance must be blocked. Another fantastic solution was the depreciation of the rupee to 6d and the writing down of the sterling debt correspondingly. The proposal equally fantastic is put forward by the City Editor of the *News Chronicle*, whose comment has been cabled by our correspondent in London. This City Editor thinks that the time has come for Britain to take a strong line of action. As it is, in his view, "the Government is laying up untold trouble in store for itself by its present policy of lying low and saying very little. We know from bitter experience that war debts can act as a constant source of friction and irritation between nations for a quarter of a century and more. If we intend to reopen the question of the sterling debt of India, we ought to say so at once rather than allow the debt to go on accumulating on the present intensified basis without saying anything about it, because to be honest now will be politically inconvenient". According to the City Editor of the *News Chronicle*, honesty

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00.000 of three months' Government of India Treasury Bills were opened on Tuesday, the 5th December, 1944. Total amount offered was Rs. 13,29,50,000. Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14-0 per cent were allotted approximately 65 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6,00,00,000, the average rate of accepted tenders being Re. 0-7-11 per cent per annum.

Tender for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 12th December, 1944 at Calcutta upto 11 a.m. and upto the close of business on Monday, the 11th December, 1944 at other centres. Successful tenderers should make payment on Friday, the 15th December, 1944. Other conditions are as usual.

During the week ended the 1st December, 1944, Government of India Treasury Bills for Rs. 61,25.000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 2.50,00,000 of three months' Assam Government Treasury Bills were opened on Wednesday, the 6th December, 1944. Total amount offered was Rs. 3,66,00,000. Tenders at Rs. 99-13-9 per cent were allotted approximately 73 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,50,00,000, the average rate of accepted tenders being Re. 0-9-0 per cent per annum.

Government of Orissa:

Tenders for Rs. 50,00,000 of three months' Government of Orissa Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay, Calcutta and Madras upto 11 a.m. on Wednesday, the 13th December, 1944. Successful tenderers will be required to make payment and take up their bills on Friday, the 15th December, 1944. Other conditions are as usual.

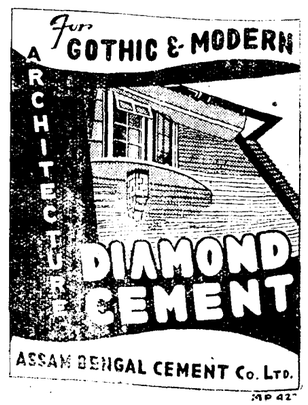
By Special Cable.

No Standing Pat on Preference

Delegates to Rye Explain

WASHINGTON, (By Cable)



Mr. John S. Dodd M. P. and President of the Association of British Chambers of Commerce represented the problem of world reconstruction last week as one for whose resolution all nations are looking to the United States and the British Empire. In an address before the British Empire Chamber of Commerce in the U.S.A. Mr. Dodd declared that trade after the war be conducted on a multilateral basis and there must be no thought of a division of world markets between the United States and Britain.

Mr. Dodd was one of the British Representatives at the International Business Conference recently held at Rye, New York State. He said that fundamentally the problem of world reconstruction comes down to an agreement between the United States and the United Kingdom and "some time" there must be discussion between the two countries "in an atmosphere of mutual trust." Continuing, he said 'there should be no thought of a division of the world between the United States and the United Kingdom—trade should as far as possible be on a multilateral basis. It is to the interest of the United States to have a strong Britain and British Empire if we are going to "lead ourselves out of the trouble into which the world has fallen". He said that Britain must increase her exports not because she wants to take over markets "but because we have to pay for our imports".

At the same meeting Sir Peter Bennet, Director of Imperial Chemical Industries, Limited, discussing Imperial Preference said. "we are bound by an agreement with all other members of the British Empire that there will be no alteration before we discuss it ourselves. That is a solemn agreement made. After we talk it over among ourselves, we will talk it over with you, and we will talk it over, with the understanding that it will be something for something, not something for nothing."

Sir Peter said, thus the British position at Rye had been "slightly misrepresented" by the Press which had interpreted the Delegates' position as standing pat on Preferences.

Commenting on the Bretton Woods agreement, Sir Peter said that Britain thought the recommendations made there are as good as any that have yet been made and is consequently giving them careful consideration.

Human Factor in Economic Planning

Of all the questions connected with economic planning, the personnel of planning is likely to be the most neglected. While our requirements in material may be carefully estimated in advance and provided for, as well as circumstances permit, our requirements of men are apt to be overlooked, because of the general proneness to assume that the demand for men is met more or less automatically as it arises. This tendency has been overcome to the extent that there is general recognition of the scale on which planning will set up need for various kinds of ability. In fact, it has been emphasised quite often that in almost every sector of the plan to come, the most serious of the limiting factors is the shortage of men and the time that will be taken to train them up in adequate numbers. But this is solely in reference to technical ability. Not only in respect of mechanics and technicians, but even in respect of teachers for secondary and primary schools, the dearth of men is a heavy handicap. In conditions in which the demand for men cannot be expected to be met automatically, there is little difference, from the point of view of the authors of the various plans, between men and material. What eludes the various committees in charge of particular sectors of the plan—because the question does not fall within the scope of any one of them—is the demand which planning as a whole will make on the administrative framework of the country. While Mr. Sargent, for instance, details his scheme for the training of teachers and the Industrial Committee devotes the attention to the training of technicians, the larger question, whether the administrative machinery of the State will stand up to the strain of the varied and unlimited responsibilities inseparable from planning, is by no means assured of due attention.

Such attention as this problem has had is due solely to the concrete obstacles which particular committees have come up against while tackling their own special problems. It is inevitable that a committee entrusted with irrigation problems or power projects or particular agricultural staples should chafe against the artificial barriers of provincial or state boundaries and emphasise the importance of zoning and regionalisation. Likewise, the danger of different political jurisdictions facilitating evasions of control measures is too obvious to be overlooked. Above all, the uncertainty of the future constitution of the country, extending to whether we are dealing with one country, or two, or even three overshadows all the others. Planning today is done on the basis that the bigger constitutional problem is best solved by being shirked, if not denied, and that, on the question of jurisdiction, the various committees should be content to state the obvious requirements, in the administrative sphere, of the practical working of their schemes. It is in consideration of these requirements that Sir Ardeshir Dalal has more than once emphasised the importance of regionalisation. The Second Report of the Reconstruction Committee also lays great stress on treating contiguous areas with common economic features as a single region and paying less regard to whether they are under the jurisdiction of one or more political units. It is still too early to say whether the subordination of political authority to the requirements of planning will be achieved to this extent and, even more, whether plans based on this principle of regionalisation will be effective and fruitful of results. One thing, however, is certain, that in India as she is placed today, and minded, an appreciable improvement in the standard of living of the people is bound to be viewed, in the States as well as in the Provinces, as ample compensation for any inroad into political integrity or insularity.

That, again, is a problem of personnel. According to the second report of the Reconstruction Committee, provincial or regional plans are a provincial responsibility, the role of the Centre being confined to the provision of certain aids which are duly detailed in the Report. And yet there is no guarantee that provincial or State planning will keep pace with planning in the Centre. As we had occasion to mention in these columns, only a few States and Provinces have shown themselves sufficiently energetic and far-sighted to formulate plans for their own territories, while the others have done little or nothing in this regard. If the Central Government is serious in suggesting that the Provinces must also make plans for themselves, they have also a responsibility to see that the Provinces do not neglect this task any longer. But the Provinces can do little, if they cannot find men in sufficient numbers and of the requisite knowledge and calibre to tackle the tasks of provincial planning. The dearth of men for planning committees would have been felt much earlier, but for the readiness of the authorities to regard position in public life or business as in some strange way a substitute for competency for the work of the committee concerned. It would be surprising even then if all the States and Provinces should succeed in getting the men needed for their part of the work of formulating a plan. And yet this is important, not only because the work cannot be done otherwise, but also because some of the more important administrators of our future regime of planning are thrown up in the process of discussing and drawing up the Plan.

However, the problem of personnel is not confined to the creation of men for some of the key positions. The problem is far wider, to ensure that the administration, in its entirety and in each part of it, is equal to shouldering and discharging the ponderous and multifarious responsibilities which all-out planning entails. The Second Report of the Reconstruction Committee shows the Committee to be aware of a number of aspects of this problem. It refers to the need for co-operation not only between the Centre and the Provinces and States, but also between various departments and committees. It draws attention to the place of local governments in the execution of a Plan and the need to examine the whole situation as regards local government. It emphasis that a "very considerable increase will be necessary as regards both administrative and technical staff and new services or specialised branches may have to be created." And as regards administrative methods, the Report observes:

> It must also be recognised that present administrative methods which have developed over a long period of years may not be suited to modern times or be adequate for carrying out comprehensive development schemes. This is true not only of Government Departments at the Centre and in the Provinces but even of the work of the Patwari in the villages. It is perhaps most marked in the districts.
>
> A comprehensive review of office methods and routine, of reports and returns, in fact of the whole system, is required. A better qualified and better paid subordinate staff should be provided, and when this is done it should be possible to secure a reduction in numbers. To carry out this work especially selected officers are required who have made a study of the subject; they should be capable of analysing the work done by every individual and be able to distinguish between what is, and what is not, essential and what amplifications of method are possible.

This is apparently exhaustive. But it is one thing to consider the problem as such and quite another to create it, so to say, out of the direct requirements of so many other problems. If we view it as a resultant of other problems, we shall, of course, take note of the requirements of the Industrial Plan for technical training, the requirements of regionalisation for overriding disparate political authorities and the general need for a new orientation in the outlook of the administration as a whole. But if we view it as a problem by itself, we shall recognise that a satisfactory solution lies not in adjusting or adapting the existing constitutional and administrative framework to the more obvious needs of planning, but in creating a new framework exactly suited to the regime of planning and, what is more, in providing a milieu of conditions in public administration, in which not only will planning be a success, but it will also have been robbed of the dangers it undoubtedly holds for the freedom of the individual. The removal of these dangers is important not only in itself, but also for the success of the Plan. While some degree of sacrifice of individual freedom may be legitimately asked for in the interest of the Plan and in the name of all that it stands for, such a demand must be accompanied by the most reliable assurances of justice and fairness. Controls and regulations are far less wider in scope during the present war period than they will be in the period of planned development. And yet, the war years have allowed no illusions about the incorruptibility of the rank and file of officials in this country. If to the temptation of individual gain should be added the comparatively less reprehensible motives of party or communal or other sectional advantage, the possibilities of unfairness, injustice and even oppression will have been vastly increased during the years ahead.

What, then, are the requirements of planning so far as administration and personnel are concerned? (1) There are, first of all, the constitutional and political requirements. Here, as we have mentioned already, the tendency is to shirk or deny the problem so far as the future constitution is concerned and to regard appeals for co-operation as sufficient for ensuring co-ordinated action. Strictly speaking, economic planning must be deemed to have changed the whole complexion of our constitutional problems, since, at least to the extent that it

distributes its benefits evenly, planning must weaken the economic motive behind political quarrels and disputes, whether they are between communities or between nations. (2) Secondly, there is the problem of ensuring an administrative system which is exactly suited to the smooth and effective working of the Plan. An administrative system may be said to fall under the following main heads: (a) the ministerial positions, (b) the permanent superior services, whether of a technical or expert or of a general kind (c) the subordinate services (d) the non-officials who become associated with the administration, either on a formal basis as in the case of the local government, or on a comparatively loose basis as in the case of committees of enquiry or supervision, or more or less permanent bodies of an advisory or consultative kind. (3) Thirdly, the public at large is not less a part of the personnel of planning than the officials and non-officials who are directly in charge of the execution of a Plan. If some of the tasks of planning are assigned by the Centre and are passed on stage by stage to the lowest classes of officials and the smallest localities, there are others which cannot be accomplished unless the public is directly alive to its responsibilities. Official guidance and probably even punitive measures may, perhaps, be some help. But any plan is bound to fail, if it is not worked in conditions of full popular appreciation of what is required of the public in general enthusiasm, in readiness to undergo such privations as planning may entail and, above all, in a new sense of the dignity of the citizen, which will ensure a resistance to abuses of power not less than a readiness to co-operate with authority in all legitimate plans and purposes. The issues that have been indicated above will form the subject of a series of articles in subsequent issues.

The Fertiliser Report

Public opinion in India is slowly gathering strength in opposition to the proposals of the Gowing Mission. The composition of this body did not in the first place commend itself to the public. And now their recommendations have justified the earlier criticisms. While the Mission was on tour visiting different Provinces to discuss problems connected with the organisation and production of ammonium sulphate, the view was expressed, almost in every place where the experts cared to discuss the matter with the public bodies, that production should be widely diffused to utilise local raw materials and power resources and to serve the special demands of local agriculture. Excessive centralisation of industrial effort leads to lop-sided development, particularly in this country of vast distances; and the U K. Mission were also informed of the proposals in some provinces and States to start fertiliser factories. Madras, Bihar, the Punjab and Travancore in particular, have in fact workable local plans to start local production of ammonium sulphate. The possibility of setting up economic units in several places has been pointed out many times before. It is in the face of this that the Gowing Mission recommends that it would be economic to concentrate production in one place, their choice for the purpose being Harduaganj in the U. P. The approximate capital cost of the factory is Rs. 10.1 crores and the approximate factory cost of the finished product would be Rs. 112 per ton. The centralisation of production in a single factory in the U. P. has been preferred on the ground that, if more factories are started, the initial capital cost would be unnecessarily heavy. It is also pointed out that, if five factories located in different consuming areas are to be preferred, the initial capital cost would go up to Rs. 21 crores and ammonium sulphate would cost the ryot Rs. 167 per ton. No one doubts the necessity of reducing the cost of production so as to bring it within the purchasing power of the cultivators. But even on this score, the Mission's recommendation has been far from satisfactory. Prof. V. S. Dubey observes "As regards manufacturing cost in the Punjab, with plenty of gypsum and the use of tertiary coal, it will be Rs. 65 per ton and with imported coal at Rs. 75 per ton. In Bihar even with imported gypsum from the Punjab the manufacturing cost will not be more than Rs. 70. In Madras with cheap hydro-electric power and local gypsums the price will not be more than Rs. 65 per ton." Thus it would appear that the ryot would have to pay almost double the sum which he would be called upon to pay according to Prof. Dubey's calculation. Evidently, there is a need to examine the estimates of the U. K. Mission with special reference to local conditions prevailing in different parts of India.

Apart from the cost, it should be remembered that there are other advantages which should not be lost sight of when the proposal of starting a factory is to be finalised. Recently, the well-known sugarcane expert, Sir T. S. Venkataraman has pointed out that the need for starting fertiliser factories in different parts of India has to be viewed, not only with a view to lowering the cost of production but also with an eye to such economic values as utilising local raw materials, training local men to make and use fertilisers, giving employment to local labour, and serving the special needs of local agriculture at the proper time. Further, an ammonium sulphate factory, it is well-known, has always a certain risk of explosion and if the fertiliser production for the whole of India should be concentrated in a single place, there is every chance of one unfortunate accident throwing out of gear the even and assured distribution of this vital material. It is therefore advisable, as some technicians have pointed out, that the ammonium sulphate industry should be, as far as possible, diffused from the point of view of safety.

Regarding the method of manufacture the Mission recommends "the production of ammonia by using water gas made from coke, and then converting it into sulphate." The reasons stated are that raw materials are available from Indian sources and that local processes "perfected over a long period of years" could be utilised. Details in carrying out design and development work and items of equipment which might be required for other purposes, it is argued, will be entirely eliminated. While we are sure that in some parts of India the gas process would be easier of adoption and more economical, we are not sure if electrolytic processes would not be possible in some other places. It is feared that the reserves of coking coal are not unlimited; and if these are utilised for the manufacture of fertilisers in large quantities, metallurgical industries would be correspondingly adversely affected. No doubt, the Technical Mission has recommended that the possibility of utilising a lower grade of non-coking coal for gas prduction should be investigated. But if the Government of India's plans of generating electricity in different centres, either through hydro-electric projects or through thermal stations, are to be translated into practice, we have no doubt that the production of ammonium sulphate would become profitable and easier under electrolytic processes in places where there are no coal reserves in the vicinity. Instead of overlooking the effect of electrical development on the ammonial sulphate industry, it would have been better for the British Mission to have recommended an early initiation of hydro-electric schemes.

Further, the Technical Mission in formulating its views seems to have given little consideration to the fact that raw materials for the ammonium sulphate industry available in this country have not yet been thoroughly and satisfactorily surveyed. They have themselves recommended that a "survey should be undertaken to investigate the quantity of anhydrite in the salt range (in the Punjab) so that this raw material can be used in preference to gypsum." They are of the opinion that if anhydrite is not available, the production of gypsum in Rajputana should be considered for a second source of supply. Gypsum is widely distributed in India. Though exact estimates of India's supply of gypsum have not yet been made, experts are of the opinion that vast quantities are available. If the extraction of gypsum from sea water as a by-product of salt manufacture is given the necessary fillip, as it can be done without large investment or procurement of elaborate machinery, adequate quantities would be produced for all kinds of demands. It is therefore necessary that before the recommendation of the Technical Mission to centralise production in one place is given effect to, a thorough investigation into the raw material resources of the different provinces should be carried out and the costing of the fertilisers should be done after taking into consideration the processes and economies which will be facilitated by the completion of the hydro-electric plans of the Government of India.

It should not be forgotten that the soil in India, particularly South India, is deficient in phosphates and the need to use phosphatic manures is very great. The principal sources of phosphates, viz. bones and phosphatic rock, are found in adequate quantities in India. The phosphate deposits of Trichinopoly in Madras and those in South Bihar should be exploited fully for the manufacture of fertilisers. The investigations carried out by the Indian Institute of Science, Bangalore, have shown that those deposits—estimated at seven million tons—are eminently suitable for extraction and use. Doubt was expressed if India could produce with imported sulphur sufficient sulphuric acid at economic rates. Recently, investigations have been carried on to prepare quick acting phosphatic fertilisers from natural phosphates without the use of sulphuric acid. Successful results have already been achieved and the Government should therefore give the initial impetus for starting this branch of the fertiliser industry.

The one-factory idea of the U. K. Technical Mission will be viewed with not a little misgiving by industrialists who are keeping an eye on the postwar prospects of India's industrialisation. Though the peacetime fertiliser requirements of India are known to be three million tons the target now aimed at is 3½ lakhs tons of ammonium sulphate. In fact, if India's agriculture is to be properly developed, there will be a ready market for something like ten million tons per annum. It may be considered, therefore, that the Government should now plan to organise this key industry not for the very low target of 3½ lakhs tons to be produced in a single place, but with a view to preparing the ground for intensive development of India's agriculture in postwar years. The proposed scheme to manufacture 3½ lakhs tons of ammonium sulphate would take nearly 2 years to materialise. The war may be over before then and with a low target like this and with peacetime competition of foreign chemicals combines restored, India will not be in a position to supply her own local needs and it would not be difficult for the British chemical industries to flood the country with their own products. Mr. T. T. Krishnamachari has pointed out in recent Assembly debate that before the war the production of sulphate of ammonia was twice the requirements of the whole world. It is clear, therefore, that with enormous excess capacity in foreign countries and with a poor production organised within India, the way will be clear for the easy flooding of foreign fertilisers into the Indian market. The transport organisation in this vast subcontinent is so faulty that freight rates by themselves have been a deterrent factor in the growth of industries. Instances are not wanting to show that in some parts of India it was more economic to import foreign goods than to purchase the same from another province in this country. If this situation should continue, and if production is to be only for a low target and centred in a single factory in the U.P., 1,200 miles away from S. India, it would be easy for foreign chemical industries with the support of shipping interests to capture our market. Schemes must be evolved to erect several fertiliser plants in different parts of India, if this danger is to be warded off. If the single-factory idea of the Mission is given effect to, we envisage a situation in S. India in postwar years when it would be more profitable for the S. Indian ryot to buy imported fertilisers than to procure his needs from distant U.P. It may be alleged in interested quarters that the single factory idea has been preferred by the Government because even if the clamour for tariffs arises in postwar normal years, one factory, owing to its inability to meet all-India demands, would not be able to put up a powerful plea for protection but would have to be content with subsidies from the Government. But there would be a wide gap between internal production and the growing needs of the country which would be left open for foreigners to exploit. It is therefore incumbent upon the Government of India to weigh the different aspects of this most important matter and organise the ammonium sulphate industry as part of the other postwar plans which are based on a healthy location of industries and speedy improvement of the lot of our agriculturists.

How often do you remember that . . .

in any convoy the tanker is singled out by the enemy for destruction because the loss of tankers is even more damaging to the Allied cause than that of other merchant ships? Nevertheless Merchant seamen continue to render steadfast and unstinted service aboard the tankers of the United Nations.

It is the duty of every petroleum *user to make certain* that the hazards to which the tanker is exposed are not being taken unnecessarily. And remember, every cargo of oil imported into India means two trips for the tanker. Twice must the gauntlet be run to carry only one shipment of oil because the tanker must return empty.

We urge every user of petroleum products to eliminate all wasteful and unessential consumption.

Editorial Notes

No End to Food Control!

To judge by the accounts appearing in the daily Press, the report of Mr. Somerset Butler, the Special Officer of the Department of Food in the Government of India, is characterised by a cock-sureness which is specially dangerous in the sphere of the supply and distribution of food. When Mr. Butler says that it would be "ridiculous" to suggest that "all schemes have been successful, that there have not been mistakes or that hardships have not been caused," he seems to say it more in modesty than with a recognition of its importance to the final conclusion. For, how else can he say that "the policy is right, there are no two opinions amongst those who have tried it out". His dogmatism extends to the non-officials, because according to him "the same thing can be said for the views of non-officials". The public also must be deemed to be among those who have tried this policy out; and there can be no question that the public sighs for the return of normal times. It is one thing to say that, in the conditions of the war period, there is no alternative to monopoly procurement. But it is a big jump from this to the assertion that

> Sufficient progress has been made in food control in India to warrant consideration of the question as to whether control should not, either in its present or some modified form, be used on a long-term basis as a means of stabilizing the economy from the food and agrarian points of view.

We are surprised to find Special Officers of the war period addressing themselves to questions like the stability of the national economy from the food and agrarian points of view. These questions should, and do, engage the attention of Sir Ardeshir Dalal and the Committees working under the direction of his department. Meantime, attempts to pre-judge them or create a pre-disposition in the public mind for particular solutions should be deprecated. For our part, we consider the present tendency to pitch the claims of control high as particularly dangerous to the public interest. If even in peacetime, the average citizen has literally to eat off the hand of the officials, then we might as well confess ourselves converts to the worst kind of economic regimentation and set no value on freedom and other finer values of life.

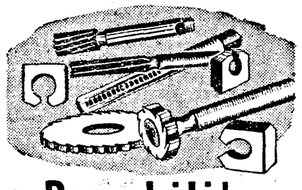
Calcutta's Slums

An accurate survey of slums in Calcutta has not been made and a stray attack on dismal housing conditions in parts of the city will probably yield few results. Slum clearance is not an end in itself. Rehousing is the more important problem. The war checks both public and private effort in the matter of building and the official reminder as to the presence of slums is due entirely to the epidemics. It will however be agreed that epidemics are temporary while the slum evil is permanent. Current estimate is that a million people live in slums. What slum rents are, who the landlords are, and how they will be compensated are more important than indignation. The Corporation's responsibility has been indicated. The Governor of Bengal wants a radical change within six months. Against this laudable desire must be set the difficulty of clearance in the cold weather. Can emergency dwellings be provided in new areas? The answer will be No. The slums are not a product of industrial development alone, for Calcutta's industries sprawl over th suburbs, and along the river. Industrial employers have no specific responsibilities in regard to the city's slums, though it is easy to argue that industrial profits can be made to supplement municipal revenue for a specific approved purpose. Tenements on municipal estates would probably not meet with general approval; for, the same unsanitary conditions may emerge. The Bengal Government is reported to be eager for improvement and the Defence Rules are to be employed for making landlords carry out prescribed duties. Meanwhile, the Health Officer has suggested that real estate companies, financed by institutional investors like banks, could supplement State effort in the matter of building dwellings for the poor when they are removed from the slums. An annual grant for slum improvement in the Corporation's own budget is also suggested As regards the co-operation required of private capital, the terms suggested are a guarantee of profit and a promise by Government to make good any deficit. Attempts may be also made to enlist the support of organised charity, though the amount involved may be too large. The deterioration of conditions in the war period may signify to some that the Centre cannot wholly disclaim responsibility as regards Calcutta's slums.

Wheat Supplies and Imports

The final wheat forecast for 1943-44 indicated that imports of wheat were more than ever important for India. The world wheat position in 1944 has changed for the better owing to larger crops in the U.S.A. and Canada; but there is no guarantee that Indian requirements will, for that reason, receive special consideration. In view of the drought in the southern hemisphere, the Argentine's stocks may be reduced and, in any case, there is the difficulty arising from non-recognition. In the latest issue of *Austral News* it is stated that Australia can export in 1945 a limited quantity of wheat to Britain only, and other countries cannot expect Australia to ship wheat. Supplies including the carry-over are put at around 110 million bushels and essential requirements including feed for cattle at 95 million bushels. The disappearance of a regular exporter from the world market may have no effect on wheat prices; but there is the fact that a former exporter, Russia, is now an importer of wheat. Since relief supplies will take precedence over shipments for ordinary commercial purposes, the world, as was feared early this year, will be short of wheat. The reduction in Australia's carry-over implies a reduction of exports next year also. It may be suggested that the mutual aid agreement signed with Canada may give India a claim on Canadian supplies. There will be however the memory of the difficulties arising last year as to the reported gift of 100,000 tons of wheat and the discussions in London and Washington over its nature and disposal The shipping position however will be the determining factor and it is obvious that Australia's decision concerning wheat export is a real check to optimism.

The Saar



Allied entry into the Saar Basin is more than a threat to Germany's coal production. Allied arms have cut off a part of the Nazis' iron and steel production by capture of many towns in the Saar Valley. Under the Versailles settlement, the Saar Basin, like the city of Danzig, was governed by an International Commission responsible to the League. But the transfer to Germany after 15 years by plebiscite was provided for. In the January 1935 plebiscite, all but a few Socialists voted for reunion with Germany though the Nazis were in power by then. General de Gaulle's visit to Moscow is presumably connected with the disposal of the Saar Basin after the war. Between 1918 and 1935 the Saar was thoroughly assimilated into French border province. It is French effort in Alsace that has made the run-through from Lorraine into the Saar Valley possible. The original breach in the Siegfried Line at Aachen appears less important than the breach to the south. The last attack on Duisburg was meant to show that between the Ruhr and the Saar everything is in confusion. Though the fighting in S. E. Holland is still indecisive, the Allies' entry into the Saar makes it easy to regard the Rhineland as more vulnerable than ever. It is noteworthy that air attacks are stronger and more frequent this winter and the targets chosen range from the frontier to Czechoslovakia. The German High Command's determination to hold the Saar Valley through a new war of attrition is not questioned. The Saar produced over 10 million tons of coal in addition to hard coke and the Germans' dependence on brown coal and low-grade iron ore is accentuated by military disaster. The Saar, of course, will figure in schemes of economic disarmament and its most recent adaptation to Reich purposes must not be overlooked. Though war industry has moved to the west it is recognised that the Saar Valley is vital for Germany. But Belgium, Luxembourg and France have a definable interest in the region and the Advisory Commission if asked to keep West Europe's unity in mind may be induced to deal with the Saar on the same lines as in 1919.

Admirable Substitute

The sweet potato as an emergency food came into the news only when stories of the North Bihar famine appeared. Its place in the people's diet is now secure in view of the scarcity of potatoes. The main merits of the crop have been described in Indian Farming this year. For the poor, the sweet potato, raw, scorched or boiled, has a special advantage. Its nutritive value is as high or higher than that of the potato. The root crop does best on light, sandy soils because alluvial soils don't suit the root. It does well near the sea coast and on clayey soil too, its only requirement being that the soil must be well-drained. Warm weather in the period when plants are growing is another requirement. Cuttings are used in the case of the crop which requires little attention. The vines, of course, require to be protected against weeds and grass. No watering is needed as rainfall in August-September is enough to bring the plants to maturity. Only in the event of drought is irrigation necessary. Manure is not wanted and a crop can be got even on poor soil. Rotation is prescribed after a crop is taken. Lifting the tubes is the job undertaken three months after planting. The leaves turn yellow, and the tubers are then taken out. The usual cleaning is the only thing needed to get it ready for the market. The outturn per acre in India is put at 100 to 300 mds. per acre though very heavy yields have been reported in America and Malaya. The estimated outturn is certainly higher than that of the potato. Attention to cultivation and manuring is known to raise the yield. The advocate of the sweet potato makes use of the fact that acre to acre and bulk for bulk sweet potatoes yield more food than any other food crop within a comparatively short period. The other argument in its favour is that it will help to keep potatoes for the Army which need them most. As a substitute for grain sweet potatoes have been used with indifferent results, but the grower of vegetables has reason to look only at the figures of yield and the relative hardiness of the crop.

Variations on Lend-Lease

Modification of Lend-Lease in 1945 has been promised and the new rules apply almost entirely to British imports. The undertaking given as regards British exports is modified suitably. Certain new principles are also enunciated. When Britain exports certain goods payment in dollars will be necessary. That means the sterling area's dollar pool must serve Britain's expanding needs in the future. There may be some disagreement as to the necessity, but an export trade drive meant to liquidate gradually Britain's current debt will not excite alarm. Possible saying to the extent of 5 percent on appropriations may not interest the U.S.A. so much as Britain's recovery. Conversion is possible only on the basis of larger imports into Britain and necessarily of larger exports. The acceptance of this doctrine which ante-dates the Bretton Woods Conference is far more important in regard to the future than the present. Reverse Lend-Lease in the war against Japan is not the only binding consideration. There is the U. S. agricultural export programme. Producers of cotton, hogs, corn and tobacco

Durability + Precision

BATU Tools are unexcelled in durability and high precision, for these are made from the finest procurable materials in a factory housing the latest type of machinery, by highly skilled craftsmen under expert European supervision

All Batu Tools are carefully checked before leaving the factory by trained engineers. You'll never regret using Batu Tools.

Batu Tools conform to British Industrial Standards and are tested and approved by Government Workshops.

CURRENT ACCOUNT: Interest allowed at 1/4 p.c.
FIXED DEPOSITS: received and Loans and Advances made on very favourable terms.
All sorts of Banking Business Transacted.

SOMETHING "EXTRA" IN THIS INVESTMENT

Life insurance offers you an ideal investment proposition. Government Securities, Bank Deposits, etc., are First Class Investments, but certain New India policies afford better advantages. They are as follows:

- **Handsome Profits:** *At the end of the term, the policy returns the Capital invested with an yield in compound interest which is very often larger than the yield from the Capital invested in other securities.*
- **Full Life Coverage:** *In the event of early demise, the full sum assured (with or without profits) is paid out to the beneficiaries. Very often this means a return out of proportion to the Capital invested.*
- **Saving in Income Tax:** *To those who pay Income Tax, such policies are an added attraction as a substantial rebate is allowed on the premiums that are paid.*
- **No Depreciation:** *The Capital invested does not depreciate nor is adversely affected by market fluctuations.*

The Capital may be invested by instalments or in a lump sum at a discounted rate. As the yield varies in each individual case according to age, term, income tax payable, etc., a detailed plan to suit your own needs will be furnished on request.

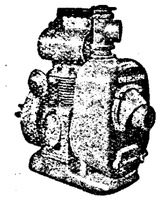
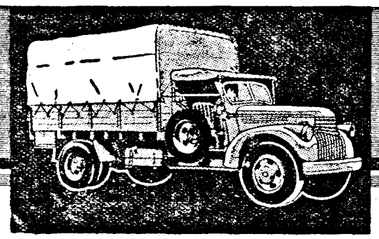
depend upon export markets, and if food sent out under Lend-Lease is paid for in part federal subsidies at home become workable. A further point to consider is that Britain's takings of U. S. cotton and tobacco, deliberately limited during the war, would show an increase and the consequence may be an increase of supplies for both Britain and her customers.



A self-denial clause as to exports imposed in 1941 should not be called restrictive but the general result of the Anglo-American agreement is to stimulate Britain's imports from the U.S.A. If a form of veiled preference were given to food imports most U. S. objections to Imperial Preference generally would crumble. Larger results in the form of a U. S. credit after the war may be found along with an agreement to respect the tariff inter-dependence of the British Commonwealth. There is not however a guarantee that export markets will be shown special consideration for the relaxation of war effort in Britain is meant to increase supply of goods to civilian consumers in the sixth year of war. A departmental conference to review Lend-Lease has been set up and present U. S. intentions are advanced enough to contemplate a repeal of the Johnson Act. The Assistant Secretary of State indicated the opportunity to get rid of an obstacle and the frequent coupling of Lend-Lease arrangements with views as to the Aldrich formula shows how far opinion has moved with the U. S. Administration. The W.P.P., is against immediate conversion at home but not opposed to the modification of lend-lease because reverse Lend-Lease has benefited the U.S.A. and in regard to certain critical items like rubber and industrial demands the worth of British aid is scarcely indicated by the cost.

RAPIER WATRE PUMPS



An ideal pump for A. R. P. duties in Factory, Office or Bungalow. Made in 1½", 2" 3" and 4" sizes for outputs from 720 to 37,500 gallons per hour.

1½" Size

Thousands of Chevrolet trucks, with various Military-type bodies built by General Motors India Limited, are now serving the Armed Forces with the same rugged stamina and dependability which have always characterized their performance in commercial transport.

The same sturdy Chevrolet trucks, in 160" wheelbase, either as chassis only or with 3-ton load body, are available at Government-controlled prices for essential civil requirements.

These trucks will be delivered through gazetted Chevrolet dealers to purchasers approved as essential users by the Motor Transport Controller of your Province or State, to whom you should address your requirements.

Due to the heavy demands on petrol for military vehicles, special consideration is given to purchasers willing to install Producer gas plants approved by Government.

Bombay's Special Areas

The Bombay Government's postwar plans postulate that nine districts should be dealt with as special areas. The reasons for special treatment are given and it is to be noted that health and education will occupy the same place in the programme as irrigation and anti-erosion measures. The problem of trained men for reconstruction work is being dealt with at once. The Agricultural College at Poona is taking 150 students instead of 100 and the annual supply of graduates will be 80 instead of 40 as at present. A diploma course is devised for assistants and fieldmen. Other educational institutions also are to enlarge their capacity. The work of livestock improvement is to be entrusted to special breeding centres and fodder supply is to be improved in the interests of the five-year scheme. Available resources at the end of 1944-45 are put at Rs. 7 crores and additional expenditure is contemplated.

The departure in regional planning in the interests of vulnerable areas is not wholly novel, but what is perhaps most striking today is that the concentrated areas chosen for development will receive proportionately more attention in view of their contributions in recruits to the Army. The special areas in Bombay are not larger than in other Provinces but their requirements have been tabulated in advance. It is noteworthy that except for a brief mention of an electric grid for rural areas and a synthetic fertiliser plant for the Province, the postwar plan does not notice large-scale enterprise at all. Obviously, a large field is left for private initiative or for the Central Government's effort. The pattern provided for provincial reconstruction is simpler, in spite of the assumption that construction of buildings would absorb a fair proportion of the reconstruction expenditure. In leaning to the country rather than the town, in preferring rural development to industrial advance, the official Bombay plan for Bombay has distinctive and valuable features. In every Province depressed areas can be identified and their special problems must have priority. The generic similarity between vulnerable areas is not the only argument for imitation. Demands for expensive imported supplies are strictly limited since the rural plans begin with elementals like water supply, medical relief, and veterinary help. In regard to finance Central assistance is expected and desired by Bombay. The distribution of both direct and indirect revenue cannot remain unchanged after the war. There is, however, the consideration that postwar borrowing of provinces would be on a strictly limited scale and their claim for larger grants would inevitably depend upon the retention of surcharges on import duties and income-tax.

Army Factories' Future

Instead of the Provinces, the Centre, according to Sir M. Visvesvarayya should take up the work of assisting industries. In his latest address to Indian manufacturers, at Calcutta this time he dwelt on the need for an Economic Council and an annual appropriation of Rs. 8 crores for industrial advance. A long catalogue of immediate requirements suggests how the grant would be applied in relation to the proposals for agriculture and industries. The disposal of military works and factories to national advantage has also been suggested. The reconstruction Committee's second report devoted special attention to the problem and reached the conclusion that trade channels should be referred. The only material suggestion is as regards conversion of Army factories for civilian production in order to give employment to the demobilised. Examination of the capacity and possibilities is promised though it is recognised that future defence requirements should be kept in view. The Ordnance branch is expected to outline detailed proposals concerning the postwar uses of new factories. The Manufacturers' Organisation does not offer suggestions far removed from those made in the report referred to. The release of trained personnel for civil industry from the factories is not the only consideration. Sale is favoured for more than one reason but the question as to India's part in Empire defence is left unnoticed. There may be real cause for large peacetime production of munitions etc., in India and installations etc., may have to be retained. What is however indicated for the first time is that the State's new industrial assets can be disposed to advantage. In regard to shipbuilding and repairing the peacetime requirements of India may be smaller than presumed and the transfer that is suggested may become feasible. The manufacturers clearly lean towards freedom of enterprise and the reconversion process is accordingly as one of realisation of assets. How sales would impinge on investment and production is not wholly ascertainable either from experience or from legislation undertaken in the U. S. A. for contracts and reconversion. The A. I. M. O.'s attitude however is defined early so that further plans for regional development would be influenced by hopes of acquisition from the Government.

Canadian Crisis

Canada's crisis was sprung by General Mc Naughton's demand for more men for the expeditionary force. Instead of a single Corps as in the last war Canada has sent an army to Europe since 1940. Its commanders have asked for the extension of conscription. The Cabinet has evidently accepted despite the rumbling in Quebec. The familiar differences among the Liberals in the Cabinet are not magnified into a disruption since conscription is not like Irish Home Rule a threat to unity. The Canadian crisis calls attention to the important place taken by the Order in Council (which is however issued by the Privy Council in Canada). The usual referendum method is discarded for the issue involved really is between Dominion and one Province. Who will win can be predicted early in spite of the decline of the Liberal Party against the pressure of the C.C.F. led by Mr. Coldwell. The Liberals after a long spell of power have admittedly lost ground but Col. Ralston's resignation by breaking open the liberals' compromise with Quebec has created an unusual opportunity for Mr. Mackenzie King to avoid an election for some years. The Quebec disturbances are not dangerous to Mr. King's Cabinet but it is already recognised that the extension of conscription would accentuate labour shortage. Farming and the timber industry have been dependent on draftees retained at home. The winter however is an argument in favour of a change in policy.

The Canadian crisis was not unexpected though it was delayed by the change of Government in Quebec last month. The question of reinforcement is connected largely with casualties abroad. Canada's losses separately calculated may show a higher rate than expected, but that would not be an argument at any time against despatch of conscripts abroad. In the Pacific war Canada's part may be smaller than expected and that is possibly the best guide to the situation. Since the issue is primarily one for the Liberal Party the Opposition's demand for resignation is rather hard to explain. Mr. King has duly converted the issue into one of confidence and if one goes by Mr. Churchill's win over the equal pay amendment to the Education Bill it is easy to predict the outcome. A material factor in Quebec may be the attitude of the Roman Catholic priesthood which is not likely to miss the significance of the French revival and Britain's promise of continued assistance.

CANCER CAN BE CURED

Medical science is slowly, but surely, winning the great battle against Cancer. The usual sites of this dread disease are the stomach and breast; any organ, however, and even the bones and skin, may be attacked.

There is no pain and little warning in the early stages. Be on the safe side and have yourself examined periodically; don't neglect even the smallest symptoms of ill-health, especially if you are over 40.

Some of the commonest symptoms are an unusual lump or thickening, especially in the breast; any noticeable change in the size or colour of a wart; a sore that will not heal; and persistent indigestion.

If you suffer from any of these consult a qualified doctor immediately—the chances of cure depend entirely upon how *early* Cancer is recognised and treated.

Letter to the Editor :

ACQUISTION OF ELECTRICAL UNDERTAKING

SIR,

Your admirable article on Nationalisation of Electric Supply, appearing in the issue of the 25th inst., deserves praise and has dealt with the whole problem from all points of view. The Bengal Government will be utterly failing in their duty if they let slip the opportunity of acquiring the electrical Undertaking in Calcutta in 1948, merely because the Calcutta Electric Supply Corporation has various licenses expiring on different dates. All electricity licenses in India are granted under 1910 Act, which repeals the 1903 Act under which Licenses were granted to various sterling companies, such as the Madras Electric Supply, the Delhi Electric Suppiy, the Cawnpore Electric Supply etc., but they are all the same governed by the 1910 Act. In this Act, special provision is made in Section 10 for acquiring an electrical undertaking if the Provincial Government so desires, and for varying the terms and conditions upon which the licensee is bound to sell his undertaking, notwithstanding anything contained in sections 5, 7 & 8 which apply in case of the usual procedure for purchase. The Provincial Governments are given general power under this section and can terminate the license at any time, if they desire. The Bengal Government can terminate all the sundry licenses granted to the parent company and purchase the whole undertaking with the 13 licenses in 1948 without an excuse of different licenses expiring on different dates belonging to the Calcutta Electric Corporation. This can be done without resorting to war-time ordinances as in the case of repatriating sterling obligations on previous occasions.

Your estimate of the purchase price of Rs. 10 crores in the case of the Calcutta Electric Supply Corporation seems to be very low. Section 7 of the 1910 Act provides for the purchase at the market value of all lands, buildings, plant etc., at the date of purchase. This value is determined either by the cost of replacement or by the earning capacity of the concern. Whatever calculation is taken into account, the purchase price of the Calcutta Electric Supply Corporation will be about Rs. 20 crores, if not more. Figures available for 1940 show the net profit for that year as £600,000 and gross block account over £9 millions. Even then it would not be difficult for Bengal Government to raise this loan at 3 percent. If this opportunity is lost, the cost to the Bengal public at the time of the next option will increase by another four to five crores.

The Bengal Government must not go against accepted public policy in regard to all public utility services in India, whatever be the cost and the present is the best opportunity, considering the condition of the money market and the accumulation of sterling balances in London.

Clive Street Gossip.

There is a strange and kind Destiny that of late brings my way more and more opportunities of relieving human suffering and distress. Most of my readers know the part I played, almost in spite of myself, in the relief that was provided to the refugees from Burma when they reached here at the end of their long and agonising trek over the vales of death between Burma and this country. Then came, not long after, the Bengal famine and the immigration of even bigger hordes of unfortunates into this city. And now my interest is being sought in the organization of relief in Kerala where the severity of the food problem is no longer a matter of statistical surmise for large numbers of the people. I am not yet in possession of full details. But my knowledge of the food position in Malabar in normal times and, even more, my knowledge of the men who have approached me in this regard leave me in no doubt as to the need for immediate relief.

* * * *

I do not know how many outside Malabar are aware of the low standards of living that prevail in that part of the country even in normal times. People have been taught to regard that part of India as in some way a romantic land with an arcadian simplicity of living and an enviable freedom from sophistication. This is, indeed, true, to a large extent. To the sojourner, Travancore, Cochin and those parts of Malabar which form part

Editor "Indian Finance".

of British India are undoubtedly attractive at first sight. The landscape is picturesque and almost lyrical in the emotions it induces. The play of colour and wealth of palms and green vegetation also create the feeling that here Nature is bountiful and that men and women in those regions do not need to live by the sweat of their brow. The people are fair in complexion, handsome in features, neat and unsophisticated in their ways. They are normally happy with their low standards of living, standards so low that rice is to large classes a luxury. The food of the people was till recently confined to the limited range of products that land in Malabar yields. As I have hinted already, Malabar is far from self-sufficient in rice, which by stages has crept into more common and constant use. The Railways linked up this land beyond the hills with the rest of the country; and the Malayalee who is as shrewd and intelligent as any in India has the additional advantage of adaptability to new conditions. The homing and the migratory instincts are equally strong in him. With more contacts with the outside world, Malabar's dependence on imports of rice and other necessaries has vastly increased and with it has increased sensitivity to the economic trends in India and the rest of the world.

* * * *

It is only to be expected, therefore, that in a time when other Provinces are garnering and guarding their food resources Malabar should find itself in far greater difficulty of securing its requirements than almost any other part of India. I have said "almost," because I am unwilling to subscribe to the theory, that is becoming more popular outside this Province, that the food position in Bengal neither was nor is more grave than in certain parts of South India and that the difference, if any, is attributable to this Province's flair for propaganda. That the food crisis in Bengal a year ago was acute and that the scale of suffering was more vast in proportions and more distressing for that reason, there can be no doubt. At any rate, it is utterly pointless and, what is more, it is suggestive of a cold and unemotional nature to insist on a calculus of suffering even when suffering is beyond tolerable limits and to determine priorities in claims to relief. The quality of mercy is not strained. When human beings suffer, and suffer in a manner that the most complacent of us cannot be indifferent to it, there is an inescapable duty to provide what relief we can. For my part I had never been egotistic enough to believe that I could relieve suffering on a large scale. But as I have said already there is a strange destiny that has added this to the other blessings of my life.

* * *

When the refugees from Burma first began to reach this city there was no idea either in the ranks of the Government or among the public at large of the intensity of suffering or of the scale on which relief would have to be provided. It was at first a tiny trickle of miserables, whose needs could be provided by those who came into contact with them at first. But the trickle soon developed into a stream and the stream into a flood or an avalanche. The tale of their sufferings would move a stone into pity. They had passed through such suffering that hell can have nothing to show by comparison. Human spirit when it is mortified is degraded as well. The ordinary human emotions get distorted, perversity becomes natural. In most cases, to reclaim the refugees for ordinary humanity was an even more difficult task than to find their material needs, though the latter had to be found on an increasingly larger scale.

* * * *

I found myself more and more in it. More and more was it out of the question to put down what had devolved on my shoulders. But I was sustained in this onerous task not less by the imperativeness of the work than by the help of various kinds which was freely forthcoming from all quarters. At the start the paucity of workers was more pronounced than the paucity of funds but soon the whole public woke up to a sense of its duty to the refugees. Large numbers of young men volunteered for the most arduous manual tasks and cheerfully discharged them in the most trying conditions. I have known men who worked with hardly three or four hours rest in a day and subjected

themselves to this kind of strain for months. Those who learned of the good work that was being done volunteered their contributions in money with equal grace. The Government and the officials generally learned to do their part with equal compassion and sense of duty. And so the good work was done leaving behind a fund of goodwill, concrete experience of practicable tasks and habit of sympathetic understanding, which stood me in good stead in these tasks. I bank on this when I agree to interest myself in relief work in Malabar. Those who ask me to do so have a claim on me, since they were among the most untiring workers in the days of the relief to Burma refugees. What is more, I am proposing, even otherwise to spend a few weeks in South India on a holiday. And a holiday will be more enjoyable if I can devote a part of the time to the kind of relief work for which I have developed a special fondness and aptitude. In undertaking this, I look forward to the same help from my friends and the rest of the public which I had on earlier occasions. The present period is prolific of opportunities alike of making big money and of giving large sums to relieve suffering. This column, is well read by men of means; and I am sure I shall not be disappointed by the response to this appeal for funds.

* * * *

From the Chief Minister's reply to the adjournment motion in the Bengal Assembly on the Tramways question, it may be inferred that the Provincial Government is in substantial agreement with the views I had put forward in this column in the last two weeks. Seeing that, in spite of there being a number of common points both as regards arguments and conclusions between Sir Nazimuddin and "Indian Finance," I was surprised, judging from the press reports, that there was no reference to "Indian Finance" in the course of the Chief Minister's speech. I now understand from Dr. S. P. Mookerjee that Sir Nazimuddin did refer to this journal and suggested that the Assembly members would do well to study these two articles for a full understanding of all the relevant factors. As one compliment deserves another, I may say that Sir Nazimuddin's statement of the Tramways issue was admirable in tone, temper, logic and point of view. He made out the following points:

1. The Bengal Government is in favour of municipalisation of the Tramways.

2. But it cannot agree that the scheme proposed by the Market and Public Utilities Committee can in any sense be construed as municipalisation.

3. On the other hand, this scheme is nothing more than the substitution of black capitalists for white capitalists.

4. But the strangest part of it is that only four persons were in the know so far as this scheme is concerned.

5. At no time was the scheme placed before the Finance Committee.

6. In a project which involves several crores of rupees, what is most important is that the financial implications be examined carefully and competently.

7. Did the Corporation make such a careful and competent investigation of the financial and other aspects of this transaction, and then decide that it is advisable to take over the Tramways and run them departmentally, the Corporation will be well advised in approaching the Government for the sanction of the loan required and for any other assistance with regard to changes in legislation.

8. If the Government be so approached by the Corporation, Sir Nazimuddin assured, the Government will be willing to provide every help.

* * * *

Since then, a meeting of the Corporation was held, and it was resolved that a deputation should wait on the Chief Minister. The impression created by the proceedings of this meeting is that the general body of the Corporation is in favour of municipalisation. I understand that no date has as yet been fixed for the deputation to wait on the Chief Minister. Nor has the matter been referred to the Finance Committee for a detailed examination of the financial implications of the purchase. It is also not clear whether the members composing the deputation are all of one mind in this matter.

* * *

Another significant factor in this week is that the Calcutta Tramways Company has provisionally intimated to the Corporation that the purchase price would be slightly above Rs. 7 crores. My readers will remember that the figure I had suggested was between Rs. 5 crores and Rs. 5½ crores. Now that the outlay will be as much as Rs. 7 crores, there is all the greater need and urgency for the financial aspect of this deal to be examined by the Finance Committee of the Corporation in consultation with suitable experts. If the purchase price is to be Rs. 7 crores, I wonder if the Tramways can be run on a profitable basis. The payment of 3 per cent interest on debentures for Rs. 7 crores plus provision for a sinking fund for repayment in 30 years will require a minimum annual net earning of Rs. 35 lakhs. On the other hand, the average earnings of the Calcutta Tramways even on the basis of the prosperous war years, will be about £200,000 or Rs. 27 lakhs; and this amount is arrived at after providing £40,000 for depreciation but before providing for debenture interest and taxation. It may be argued that there will be a substantial reduction in expenses as the present heavy Home charges will be eliminated. But it is up to the Finance Committee to ascertain the exact savings that can be expected in this regard. The Finance Committee will also have to satisfy itself that the purchase of the Tramways undertaking on the basis of the terms of the agreement of 1900 and in terms of the inflated profits of war years will not result in excessive over-capitalisation. The Corporation suffers in two ways in this transaction. In the first place, the agreement provides for a method of determining the purchasing price and this method seems to be one-sided. In the case of Light Railways for example, the usual provision is that the purchase price is to be so many times the yearly average net earnings subject to a maximum price of 120 per cent and a minimum price of 100 per cent of the capital cost. No such maximum has been provided in the Tramways agreement. In the second place, the years which are relevant for the determining of the purchase price are all in favour of the Tramway Company. On the face of it, over-capitalisation is clear and unmistakable. There is, however, no reason to suppose that by postponing the purchase to a later date, the Corporation will get a better deal. The mistake was made in 1900; and the consequences will be equally adverse whether the deal is put through in 1944 or 1951. From this point of view, the Finance Committee may decide that, once the principle of municipalisation is agreed upon, it had better be given effect to now rather than seven years later. Personally, I take the view that municipalisation as such is so important that the question of over-capitalisation is a comparatively subsidiary issue. The Government is agreeable to help in the expeditious disposal of matters as far as it is concerned. It is now up to the Corporation to act in double quick time and in an extra-competent style.

* * * *

Rumour sports the name of many a prominent public man for the Finance Membership of the Government of India when Sir Jeremy Raisman's term draws to a close. Sir Jeremy has already had an extension. But that is no reason why he should not be given another. I know Sir Jeremy for his part would like to retire from an office which is generally a thankless job and often brings on its incumbent almost universal dissatisfaction. But the reasons which suggested Sir Jeremy's continuance are quite as strong as a year ago. If, however, a successor to Sir Jeremy must be found, the choice is, indeed, difficult. Not because we have a lack of men. The place is normally Sir C. E. Jones' both by seniority and by his special aptitudes and attainments. But it is widely recognised that Sir Jeremy must be succeeded by an Indian. There can be no two opinions about the eminent fitness of Sir Purshottamdas Thakurdas for the headship of India's finances during the crucial times. Only I am almost sure that Sir Purshottamdas cannot be prevailed on, despite his public spirit, to take up this responsibility. Sir Purshottamdas, I saw lately, is not quite his usual self, despite a longish holiday at Ooty. One has therefore to look for a second best. Personally, I would like to see Mr. H. V. R. Iengar who, was Finance Secretary under Mr. Kher in Bombay, as Finance Member of the Government of India. Mr. Iengar belongs to the Permanent Service and can be expected to combine the traditions of the Service with the broadness of outlook which an Indian in his position can be expected to have. In he ranks of our public men, though more than one name has been suggested, I would for my part vote for Sir Manohar Lal, who in addition to his experience as a Finance Minister in an autonomous Provincial Government has the background and expert knowledge of an academic economist. Sir Manoharlal should do well in a position which calls for precisely these qualities.

"EAVESDROPPER".

By Special Cable

The Unspendable Balances

ANOTHER PLEA FOR AGREED REDUCTION

London, Dec. 7.

Mr. Oscar R. Hobson, City Editor of the *News Chronicle* writing on "Our Debt to India" mentions the statement in the Commons on Tuesday on the blocked sterling balances of India and quotes the Financial Secretary's answer to the question of Mr. Touche that it was incorrect to describe sterling balances being blocked since they were available for expenditure anywhere within the sterling area.

Mr. Hobson says the last part of the reply seems to be a little disingenuous since whether technically blocked or not, India could not possibly spend these balances within the sterling area at the present time, and will not be able to do so except gradually over a considerable period of years without very seriously prejudicing Britain's economic situation. On the main issue, Mr. Touche was perfectly right. We are paying a grossly excessive price in sterling for the goods and the services which India is rendering us. At the present moment, our war debt to India is around £900,000,000. If a corrective were applied to this based on price differentials over periods in which the loans were contracted these £900,000,000 would, on a conservative basis, fail to be written down by at least £150,000,000 i.e. it would be reduced to £750,000,000. If India's war debt to us is to be treated more on a Lend-Lease basis, then India could fairly claim to be repaid in due course, and over the period in the currency which would assure her the same value of goods and services as those originally rendered by her. In other words, she could fairly claim to be indemnified against any inflation in Britain. These questions will be raised when the *final negotiations for the settlement of debt* are undertaken. The Government is laying up untold trouble in store for itself by its present policy of lying low and saying very little. We know from bitter experience that war debts can act as a constant source of friction and irritation between nations for quarter of a century and more. If we *intend to reopen the question* as to the figure of sterling debt to India we ought to say so at once rather than allow the debt to go on accumulating on the present unjustifiable basis without saving anything about it because to be honest now would be politically inconvenient.

(FROM OUR CORRESPONDENT)

New Delhi, Dec. 5.

The week has opened with a startling political crisis, an open quarrel between the Princes and the Paramount Power. Matters came to a head yesterday with the resignation *en bloc* of members of the Standing Committee of the Chamber of Princes and the postponement of the session of the Chamber. For some days the capital was thick with rumours of vital differences on several major political and economic issues between the Princes and the Political Department but nobody expected the Princes to indulge in any violent political gesture, even remotely smelling of direct active tactics. Though the text of the correspondence between the Chamber and the Political Department has not been released to the press and is not likely to be in the near future, circles close to the Princes do not entertain any doubts about the issues involved and the differences on those issues. The major problems on which differences have arisen relate to grouping of states, states merger schemes, revision of treaties, arbitration proposal and States' part in post-war reconstruction, the last issue being the most important. The States made it clear that they did not wish to be bound down to any all-India economic plan evolved by New Delhi. The States were economically backward and wanted to have their own plans for intensive industrialisation. For this purpose they wished to have complete autonomy regarding any concessions they wanted to give to attract industrial capital to their states, their own tariff policy, light taxation policy, labour laws and programme for import of foreign machinery. Their contention was that any attempt to force the backward states to fit into an all-India economic plan would only hamper the states' progress. The Government naturally have not been able to agree to the states' demands. The Crown representative is supposed to have taken the line that it was difficult just now to foresee what reconstruction demands would be made on the states and that it would ultimately in the interest of all states to fall in line with British India. On almost all other issues too the Crown Representative has rejected the Princes' demand. The states wanted the merger schemes in consultation with the Chamber of Princes. They demanded that the grouping of states for a common judicial and administrative machinery should be left to the Standing Committee of the Chamber. The total effect of the Crown Representatives' reply to the Princes' memorandum has been that they have been made to realise that the letter of the treaties must take into account the changed circumstances and cannot stand in the way of the country's economic development. Once again the Princes have been widely reminded of Lord Reading's dictum that Paramountcy must remain paramount. The crisis is still unresolved but ultimately the Princes are expected to acquiesced in the Political Department's wishes.

* * * *

The joint Indian and British pressure on the South African Government is after all reported to have had some effect. General Smuts received an Indian deputation and is reported to have admitted that the recent Natal Ordinances infringe and are contrary to the spirit of the Pretoria Agreement. He is also said to have belately admitted that the question of Indians in South Africa cannot be divorced from general inter-racial and international questions. It is now expected here that the Natal Ordinances will be declared *ultra vires* at an early date. Thus, the pessimism of last week that the British Government was delaying the application of economic sanctions against the Union has given way to renewed hopes of settlement. The Commonwealth Relations Member had said he would not be satisfied with mere barking, "but wanted to bite". It is now felt that biting will not be unnecessary though it is realised that mere withdrawal of the Natal Ordinances will not solve the Indian problem in South Africa. For that many more racial changes will be necessary.

* * * *

A definite assurance that the Government of India would liberalize their fiscal policy after the war was given by Sir Ardeshir Dalal speaking at the inaugural meeting of Glass Manufacturers' Federation here. Sir Ardeshir said that several of the conditions for protection laid down by the Fiscal Commission had become out of date. Thus the condition that raw materials for the industry seeking protection must be available in the country could no longer hold good. "I do not think that should be so", he said. "That is one of the points on which the tariff policy of the Central Government will be reconsidered". Sir Ardeshir advised the glass industry to improve its standards of prouction and promised an early improvement in the coal situation. It was revealed at the meeting that the glass industry was at present employing 50,000 persons and turning out goods worth Rs. 5 crores a year.

* * * *

It is learnt here that the Woodhead Commission report on famine is a strong indictment of the bureaucracy both in Bengal and at the Centre. The report is expected to be submitted to the Government shortly though it is doubtful whether the Government will make the Commission's conclusions public.

There is again renewed speculation here about Sir Jeremy Raisman's successor. It is doubtful if Sir Jermy will receive another extension in his term of office when he retires next April. The British Government have not taken any final decision about the new Finance Member though it is likely that an Indian only for the first time be given this portfolio and a British financial adviser to the Viceroy may be appointed in addition.

TEXTILE CONTROL

WARNING TO ALL DEALERS

In Notification No. T. B. (1) 29/44 in the Gazette of India of the 4th November 1944 Clause 14 of the Cotton Cloth and Yarn (Control) Order, 1943, has been amended. After 31st December 1944 it will be an offence under the Order for any dealer to buy, sell or hold any cloth or yarn manufactured in India and packed before the 1st August 1943, or texmarked cloth or yarn packed after the 31st July 1943 and before the 1st January 1944.

Any cloth or yarn whether manufactured in India or imported must in future be finally disposed of within twelve months from the last date of the month marked on the goods; such cloth or yarn may not be kept in unopened bales after six months from that date. The amendment further states that a bale or case shall be deemed to be unopened if the hoops or other bindings and all other outer covering have not been removed.

All dealers are warned that no extension will be given by the Textile Commissioner in the time for disposal stated above unless the holder can show that he was unable to dispose of the goods due to causes entirely beyond his control. Dealers who contravene the above provisions will render themselves liable to cancellation of their dealer's licence and to prosecution, and Courts are empowered to confiscate the goods in respect of which the offence is committed.

M. K. VELLODI,
Textile Commissioner,
GOVERNMENT OF INDIA.

Gateway of India

(From Our Correspondent)

Bombay, December 5.

The Textile Control Board met here last Thursday and reviewed the cloth position in the country besides discussing the constitution of the Handloom Board proposed to be set up. The officials of the Industries and Civil Supplies Department including Sir Akbar Hydari were present at the meeting, which recommended the setting up of the Handloom Board with a personnel of 25 members. It was tentatively proposed that there should be 15 members representing the provincial government and the handloom weavers, four representing the States and 6 members to be nominated by the T. C. B. as representing the millowners and the yarn merchants. The proposal for a handloom board has been hanging fire for a long time now, ever since the Fact Finding Committee mooted the idea. The special difficulties of the handloom industry which came to a head when the yarn position became acute and dyes and chemicals became scarce, have made it inevitable that this ancient industry should be dealt with on a separate footing. In view of the acute cloth scarcity now prevailing and in view of the fact that there is a limit to the production of the mills, the part that the handloom industry can play in bringing relief to the cloth supply situation is very important indeed. The proposed Board will assist the handloom weavers in getting dyes, chemicals and stores at fair prices and supply yarn. A special subcommittee has been entrusted with the problem of yarn supply.

The prevalence of the black market in cloth in astounding proportions in spite of the control has evoked from Sir Akbar Hydari a dire warning to the cloth dealers that, if things did not mend by January, Government would give the retail trade short shrift. Both in Ahmedabad and in Bombay, Sir Akbar met the cloth dealers and warned them that government were ready with stringent measures for removing black markets and that, if they did not heed his warning, they might find themselves wiped out of the trade for all time. Ahmedabad is the worst offender in this respect, and the black market there is simply a scandal. At a press conference in Ahmedabad, it was submitted to Sir Akbar that the figures of the cost of production submitted to the government by the mills were too high and that the government, in being guided by them for fixation of cloth prices, had really allowed too large a margin of profit to the mill industry. The editors of Ahmedabad newspapers pointed out that black market prices were 50 per cent above the control prices and urged drastic measures to cope with the situation. Sir Akbar in reply pointed out that very few mills were making profits over 7½ per cent on the cost of production and that exports would not increase. At the Bombay meeting of cloth dealers, Sir Akbar recalled the early phase of cloth control when the retail trade had threatened to break control and said that the co-operation of the mill industry and the public had enabled government to surmount the difficulties. The Distribution Panel looks to the problems of distribution and the difficulties of the cloth dealers. It was rather amusing to see the cloth dealers shedding crocodile tears and complaining that their margin of profit was too low. Actually, while they were asking for a 5 per cent margin of profit, they were making 25 to 50 per cent. There is no doubt that the retail trade has hardly played fair with the public and deserves quite a draconian treatment at the hands of the powers that be. The mills are certainly doing their best and the charge of profiteering laid against them is anachronistic. On the other hand, at the sacrifice of profits and greatly overworked machinery, they are nobly playing their part. In fact, the position has so far improved from the point of view of the mills that even the mills which had been taken over by the government some months ago are, now to be treated with leniency and may shortly be allowed to allot quotas to their merchants as of yore with the permission of the Board.

Reports are current that some millowners are already seeking to replace their machinery by purchases from Lancashire and elsewhere. Indeed, it is high time that the Indian mills turn to this question seriously. According to a textile expert, the replacement of something like 10 to 20 million spindles will fall due very shortly and the mills ought to be allowed more profit in order to have sufficient reserves to provide for all the replacement that is essential. The question of monetary assistance to the industry has been under consideration of the Bombay Millowners' Association for a long time now, and the committee of the Association has had discussions with the officials of the Central Board of Revenue. The Committee has now represented to the Government of India that the expenditure to be incurred in reconverting the industry to post-war footing should be allowed as expenditure and adjusted in the last E.P.T. assessment, provided such conversion was effected within a specified period after the termination of the war or the removal of the E.P.T. whichever was later. It has also been suggested that the special sums set aside for repairs and renewals deferred on account of the war should be allowed as deduction for purposes of E.P.T. even though they have not been utilised, subject to the understanding that any amount not spent within a reasonable period after the war can be regarded as income in the last year of the E.P.T. The Committee has also urged that the relief to be provided by government in respect of losses incurred in regard to plant and machinery engaged in the war effort should not be confined to those cases where equipment is actually scrapped in the switchover from war to peace-time production, but should also cover the loss of value even in those cases where such equipment may continue to be in use in a deteriorated condition. (The corresponding provisions in the United Kingdom are far more liberal than those of the Government of India, and the former are certainly drafted with more solicitude for the industries). Similarly, the mills are bound to carry at the end of the war stocks of items valued at higher prices than would be the case in peace-time. The Millowners' Association Committee therefore suggests that the assessee should have the option to ask for a reconsideration of the last E.P.T. assessment so as to set off the losses accruing from the drop in valuation. More perhaps then any other industry excepting probably steel, the textile industry deserves well of the government and the people alike and has a right to be treated with the utmost consideration.

(Continued from page 767)

now will consist in reducing the sterling debt willy-nilly. Britons can talk of blocking the debt due to India or reducing it and get a claim that they are quite honourable in their ideas of debt. A few years ago, the Indian National Congress demanded that an examination must be made of the manner in which the foreign debt of India was incurred; and the shout went forth in England that Indians wanted repudiation of her debt. If Indians asked for an examination of the details of a debt, it is repudiation; if Britons asked for blocking a debt or reducing a debt, it is honourable practice.

The exchange market has been quietly steady with a few export bills showing.

Life Insurance in a loftier sense is also an Art of Home-Making. For him and his family the man has found in it a unique shelter against the storm and stress of life.

Take a Life Policy of Howrah Insurance—you will be happier with it. There is no better assurance of protection and security.

Resume of Commodity Markets

The jute and jute manufactures markets have been definitely steadier during the past week, the jute market particularly. The Cotton market has been easier in the last two days with government selling and prominent bull unloading. It is felt that prices for the hedge contract have no relation to the spot market and with larger arrivals of the new crop prices will be lower. The bullion market has been uninteresting. Earlier in the week, the silver market was firm but with stale bull liquidation prices have been marked lower and the Reserve Bank sales in the last two days have been at lower rates. The piecegoods market has remained firm. With the further efforts to eradicate black market trading it is hoped that the supply position would get easier.

The sudden firming up in jute prices has, perhaps, greatly relieved the government authorities. The decision to set up immediately a jute purchasing panel in Calcutta would have had no encouraging effect two weeks back. As mofussil prices are considerably above Calcutta parity prices there will be no need for making any immediate purchases. It is said that the purchasing panel will be charged with the duty of buying on behalf of the Central Government raw jute to an extent which will support the jute market at a figure not below the guaranteed minimum prices announced in the Department of Commerce notification dated April 5, 1944. The personnel of the panel has not been announced yet. It is not clear why the Government of India decided on the purchase of jute directly especially as there were reports to the effect that the authorities were negotiating with the mills for the purchase of specified quantities of jute in a specified period in return for certain assurances. It was not perhaps possible to meet the wishes of the mills. It is, however, satisfactory to note that some orders for hessian and sacking have been placed on behalf of the UNRRA and that there is possibility of more. It is expected that exports of jute will be on a larger scale both to the U.K. and the United States. Only during the week reports have been received to the effect that production at the Dundee mills would be increased in order to meet the larger demand for jute goods both in the United Kingdom and from the liberated countries on the Continent. It is rather surprising that the United Kingdom should have decided on the increase in production at the Dundee mills instead of buying their requirements direct from Calcutta.

The jute manufacturers market was steady for the most part of week but the local stock figures showing a small increase in stocks for the second month in succession has had a slightly discouraging effect in the latter half of the week. In the absence of the production figures it is not possible to say whether the increase in local stocks has been due to larger production. It is said that on account of the shortage of coal supplies production would be lower even though there were larger number of working days during the month.

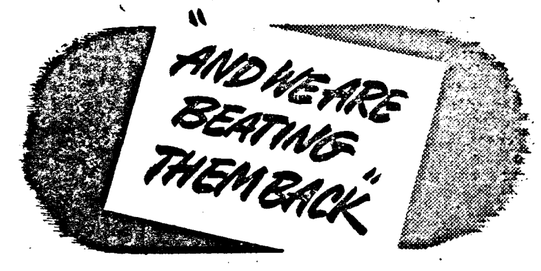
The Textile Control Board means greater business. From the beginning of November a new system of distribution was introduced. But even now, after one and a half years of control, there are loud complaints regarding black market trading. Sir Akbar Hydari, when he was in Bombay last week, had to utter a strong note of warning to the dealers. There is a feeling that the lack of complete success of tetxtile control has been due to the absence of co-operation from the distributing trade. The offenders have been given time for another two months to set their houses in order. If at the end of this period it were found that malpractices still persisted appropriate measures would be taken. Might be that the Textile Control Board takes the task of distribution and retailing as well.

The Textile Control Board discussed at its meeting in Bombay last week the constitution of the Handloom Board proposed to be set up by the Government of India in the light of the views expressed by the provincial governments, the Millowner's Associations and other interested bodies. It is understood that the meeting decided to recommend to the Government of India to constitute the Handloom Board.

The proposal for setting up the Handloom Board was recommended by the Fact Finding Committee of the Government of India. The Board is expected to assist the handloom weavers in getting dyes, chemicals and stores at fair prices, undertake research in respect of the marketing of handloom products and make available to the handloom weavers much needed yarn.

The tentative constitution of the Board provides that there will be 25 members, 15 representating the Indian states and six to be nominated by the Textile Control Board to represent the millowners and the yarn merchants. The final decision in regard to the constitution of the Board will be taken by the Government of India.

SALUTE THE SOLDIER



LET US SALUTE THE SOLDIERS WHO DEFENDED INDIA

NOW that Japan's defences are crumbling and their armies are being pushed back, let us thank those who have done it... let us salute those who are fighting for our freedom. Theirs was a difficult task magnificiently performed.

THE jungles of Kohima, slopes of Palel, tracks of Ukhrul—to-day these names are no longer in the news but they will long remain in the memory of those gallant men who were there, who fought for them and recaptured them.

ON trackless paths our men advanced, mud-bespattered, clammy with sweat, wet with ineessant rain and loaded with their guns and equipment. HOW DID THEY ENDURE IT? No words can tell. *But they did endure it.* It was a war of endurance. It was under such conditions that our men fought and defeated Japan's fanatical forces.

LET US SALUTE OUR SOLDIERS WHO PROVED THAT WE CAN BEAT THE JAPANESE...

ISSUED BY THE NATIONAL WAR FRONT

AAA 1908

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, December 7.

The returns of stocks of goods in mill godowns at the end of November show only a slight deviation from the position a month previously, though unfortunately that deviation is again on the wrong side. The increase of 2,529 tons is practically equally distributed between Hessians and Sackings, 1,281 tons and 1,248 tons respectively. Commercial hessians show an increase of 1,290 tons while Military hessians record a decrease of 9 tons. Commercial and Military heavy goods show increases of 289 tons and 959 tons respectively. The hessian stocks are still fairly evenly balanced between Commercial and Military account, but as usual Commercial Sackings stock preponderates in the proportion of 9 to 1. Total stocks of Hessian are returned at 74,339 tons or 2,915½ lakhs yards, while Sackings total 109,110 tons or 2,604 lakhs yards. The gross stock thus amounts to 183,449 tons, more than 100,000 tons less than the figure returned at the end of October 1943. The net reduction over the past six months amounts to a total of 37,400 tons. Not much is to be read into these figures yet except that despatches just barely kept pace with production, and as the latter is believed to have been relatively poor during November, it looks as if either freight had again been scarce or that overseas orders to fill the freight offering were not coming forward. Again the quantity of forward Heavy Goods reported as sold by mills during the week ended 25th November represent, the miserable total of some 15 lakhs yards.

A Press report that actual supply operations by U.N.R.R.A. have not yet begun in the field might lend hope that this organisation may still come along for substantial quantities of jute goods. Emergency needs in the liberated areas are apparently still being undertaken by the military authorities, but it is to be presumed that this duty will be handed over at an early date to U.N.R.R.A. and in view of the enormous potential requirements of containers for their distribution work, it does not seem unduly optimistic to hope that further orders from that source will have to be placed before long and for pretty prompt shipment, which is just what the market wants to restore its confidence on the Sacking side.

Coal supplies are again the cause of much anxiety to the Industry. Last week the average supply dropped to no more than one-third of actual minimum requirements and the position was such that "foster" mills were warned that even their supplies could not be guaranteed, and some were actually almost on the brink of stoppage. In these circumstances what hope has a single shift coal consumer of being able to run? Some of these have even been reduced to using wood fuel in their maintenance equipment with grave and even dangerous reduction in its efficiency as a result. It is difficult to avoid the conclusion that, since coal was taken over by the Supply department and numerous Commissioners and Controllers appointed, the coal supply situation has progressively deteriorated without any plausible explanation of the reason why. And it seems about time that all these newly appointed officials showed results to justify their continued existence. The Jute industry at least has every reason to demand very convincing proofs that the new administrative policy is not to blame for the worsening of the situation.

No solution appears yet to have been found to the muddle in the transport position at Khulna whereby only one line of carriers is authorised to book jute from upcountry stations with transhipment to rail at Khulna on a through Bill of Lading. As the River Transport Control now has power to pool all craft and direct it where it should go, and as the same authority is anxious to utilise the rail route from Khulna to Calcutta stations to the utmost of its capacity, it seems ludicrous that the jute fortuitously carried by certain craft should have privileged treatment over that carried by other craft, when the shipper has no say in the matter of how or by what route or craft his jute will be shipped. It is understood that the stumbling block is the B. & A. Railway administration, whose excuse is that its accounts would become too involved if through booking were permitted by more than one concern. This might be valid in normal times though it sounds reason why the same treatment should not be meted out to the Railway Co. As things stand at present, certain documents issued for the Khulna route are negotiable, others are not; thus some merchants are unfairly penalised for no fault of their own, nor can they refuse the freight space offered because of the penalties they may thereby incur at the hands of the River Transport Control.

The Director of Technological Research of the Indian Central Jute Committee, in an article in the latest number of the I.C.J.C. Bulletin, shows up some of the grave anomalies in the arithmetical grading scheme for raw jute, conceived by Professor Todd. We commented at the time on what we considered the undue weightage which the Professor gave to Colour in the fibre at the expense of Strength and Defects—particularly the former. One quite frequently comes across "porcha" or "ashmara" jute of quite good colour but of little value for spinning purposes, but the involved notation invented by the Professor could, in certain circumstances, invest such jute with a notation value far higher than that of clean, sound, spinnable fibre of much superior value to a mill. Later in the same number of the Bulletin, the Director outlines suggestions for what he calls a revised "Five Grade" Scheme, though this in practice actually produces twelve grades. It preserves, in outline, the present grading of Tops, Middles and Bottoms, but between Tops and Middles there is inserted an "Inter" grade divided into two grades of colour, while Middles and Bottoms further subdivided into three grades each on the basis of colour, and Low Bottoms added at the foot of the list with two colour grades. The colour standard is balanced by a "Cutting" standard, i.e., a dark coloured jute must show much lighter cuttings to make the grade than light coloured jute. It must be admitted that a classification on this basis would simplify matters materially for the consumer, but whether it will be easy to educate the average assorter up to its niceties, is another matter altogether. Another snag which we foresee is the fixing of the limits of colour for the three grades, light, Medium and Dark, for the appearance of jute from a colour point of view is quite considerably affected by the "light" in which it is being looked at, and in this regard, not only direct light but reflected light has to be taken into consideration. Still, the scheme is probably the most likely that has been evolved so far.

EAST INDIA FUND

Receipts for week ending 30th Nov., 1944 - Rs. 18,589

Total to date - Rs. 1,18,58,366

Contributions may be sent for the general purposes of the fund or earmarked for the following specific charities:—

1. H. E. The Governor of Bengal's War Purposes Fund for Amenities for Troops.
2. King George's Fund for Sailors.
3. The Lord Mayor's National Air Raid Distress Fund.
4. Jt. War Committee of the Indian Red Cross and St. John Ambulance.
5. British Red Cross.
6. Royal Indian Navy.
7. Merchant Service in England.
8. St. Dunstan's Fund.
9. High Commissioner for India's Comforts Fund for Indian Troops.
10. Royal Air Force Benevolent Fund.

In this connection, a circular has been issued by the Commerce and Industries Department of the Government of Bengal to the European Mofussil Jute Balers Association, notifying the formation of a number of jute grading parties in the mofussil for the purpose of instructing the cultivator in the intricacies of grading his jute. The circular asks the co-operation of the balers in teaching the parties their job. In the circumstances it might have been more appropriate to send the grading parties to the Technological Laboratory for that instruction.

Rather more interest has been evident in the Export Jute market. Short Group Daisee sold at Rs. 85, first for April and later for February-March shipment. Long Group Daisee sold at Rs. 75 and later at Rs. 76, first for February and then for January shipment. Balers generally are keener on the quicker shipment. Mills also have taken some interest, sales being reported at Rs. 79 for Firsts and at Rs. 74 for Lightnings, with a premium paid for European packing. Outport Tossa 4s were done with mills at Rs. 69.

There has been quite a fair turnover also in Loose Jute and prices have recorded an advance of 12 annas from the bottom. European packing sold at from Rs. 16 and Rs. 13 Middles and Bottoms to eight annas more, and sellers now ask Rs. 16-12 basis. Supervised Eastern Jat sold at Rs. 15-12 and Rs. 12-12 to Rs. 16 and Rs. 13 with a further premium of four annas paid for February-March shipment. Supervised Jat Tossa sold at Rs. 16-4 and Rs. 13-4 and then at four annas more, while Jungli Tossa fetched Rs. 15 and Rs. 12. Arrivals of Jute into Calcutta during November are estimated at 5,61,000 bales against 4,26 000 bales in November last year. Arrivals from the beginning of the season now total 27,51,000 bales against 25,49,000 bales during the similar period, July to November last season.

The Hessian market has taken on a firmer tone during the week and second hand sellers who were prepared to discount maximum rates have disappeared, at least so far as shipment up to April-June is concerned, and mills have found buyers for a considerable quantity of both nine and eleven porters at maximum rates up to that point. The Heavy Goods section is also steadier in tone though the quantum of fresh business placed has been small and mainly specialities.

Army Reorganisation

The setting up of a Committee within the Army to advise on reorganisation is perhaps a reminder of the Indian Legislature's powerlessness to deal with defence has appeared a subject that is closed to discussion but the new Committee may be more concerned with a consequential reduction in British units serving in India than with questions as to mechanisation etc., dealt with by the Chatfield Committee. Since the C-in-C was directly associated with the Chatfield Committee the technical Committee may be merely called upon to review progress made in the war period. The appointment of a Committee without reference to the advisory Committee after the Assembly session is bound to provoke questions as to the purposes of the preliminary investigation. There is little doubt that reorganisation, independent of a political settlement, will meet with strong opposition The Army in India in relation to postwar requirements cannot be treated as an 'imperium in imperio'. Its future size, etc., are already prescribed by the Reconstruction Committee and the change-over can scarcely create difficulties when the Frontier problem is absent in large measure. Not many will forget that during 1942 the C-in-C became a distinct political element, and if it is intended that the situation must remain as before, some alarm is bound to arise. The Committee is however wholly subordinate to Government and the findings are not likely to be put in the imperative mood. That is perhaps the only relieving feature. India's defence expenditure has risen to the point at which retrenchment is likely to be demanded. If the new Committee anticipates the demand, it will not be without value, but there is no certainty of the Committee setting about that. Postwar requirements will probably be determined by the peace treaties rather than any investigation with reference to happenings like the Japanese invasion. In any case, the Central legislature during the budget session may feel entitled to seek information relating to the job assigned. Over and above the question of non-voted expenditure, there is the question whether defence can be examined without reference to Imperial defence generally.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay (*By Wire*).

An easier undertone marks the bullion markets. In silver, the chief bull was even oversold on Monday and bears got relief from the surplus stock of 1,500 bars. How the new settlement jumped from Rs. 118 on Monday to Rs. 122 by Wednesday, when speculative buying commenced with the Japanese advance in China. Powerful bear-selling and heavy stocks caused the forward price to decline to Rs. 119-8 today. The Reserve Bank has offered 300 bars daily since Monday at the prices of Rs. 118-11, Rs. 118-3, Rs. 121-1 and Rs. 120-6.

Forward gold quoted at the higher level of Rs. 65-5 on Wednesday on speculative purchases coupled with better offtake of 60,000 tolas, but bull liquidation at higher levels brought the market down to Rs. 64-5 today with spot just two annas higher. The Reserve Bank accepted tenders for 75,000 tolas daily from Monday at Rs. 63-12, Rs. 63-12, Rs. 64-13 and Rs. 64-9 respectively. Larger stocks are responsible for the quiet undertone.

COTTON

The cotton futures market has been exceptionally firm with May contract quoting Rs. 444 the highest on Bull party's consistent support. Weather reports and crop estimates are favouring longs but divergent opinions as regards prospects prevail.

JUTE

(By Our Staff Correspondent).

Calcutta, Decr. 7.

THE raw jute market has been definitely steadier during the past week and a larger amount of business has been recorded but the rise in prices has been more than in proportion to the increase in turnover. The emphasis on the excellent postwar prospects for the jute industry and the reports that Dundee Mills might be requiring more jute have obviously been responsible for the steadier tone of markets. The announcement regarding the formation of a jute purchasing panel in Calcutta has also been a favourable factor though under present circumstances there will be no need for immediate Government interference in the market. The higher prices in Calcutta have been reflected in upcountry centres also where dealers are rather reserved as arrivals are still on a small scale. The improvement in prices by over 12 annas per md. in the past two weeks has entirely changed the general sentiment in the market but it is not clear whether the present rise in prices will be sustained as there are still reports that the jute industry is experiencing considerable difficulty in respect of supplies of coal and that wagon arrivals in the past two weeks have been considerably short of requirements.

The Jute Purchasing Panel will be charged with the duty of buying on behalf of the Central Government raw jute to an extent which will support the jute market at a figure not below the guaranteed existing prices announced by the Department of Commerce Notification dated April 5, 1944.

In loose jute greater interest has been noticeable and buyers have paid the higher prices demanded by the dealers. European packing Middles and Bottoms sold at Rs. 16-8 and Rs. 13-8 per md. an increase of 8 annas. Supervised and Bengalee Jat were done at Rs. 16 and Rs. 13 per md. while Supervised Jat Tossa Middles and Bottoms were 8 annas higher. A good quantity of jungli Tossa was bought by mills at Rs. 15-12 per md. There has been a slowing down in buying towards the close as sellers are not clear in their ideas.

In pucca bales no business has been reported in exports, enquiry being confined only to private marks. Mill business also has been poor. Only Rejections and Cuttings continue to be in demand and are quoting above minimum rates.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, Dec. 7.

In the jute manufactures market firm conditions continued to prevail though the publication of local stock figures for the month of November had a slightly discouraging effect towards the close. No important business has been done but reports that Dundee Mills will have to increase their production to satisfy the needs of the liberated countries has given rise to hopes that large orders might soon be forthcoming. Some business was done in 7½ 9 porters at maximum rates.

In the heavy goods section prices have been maintained at last week's levels. B. twills are quoting Rs. 61-4 for December.

Local stock figures for the month of November show an increase in both hessian and sacking stocks. Hessian goods, cloth and bags, were 29.15 crore yards against 28.77 crore yards at the end of the previous month and sacking 26.04 crores yards against 25.84 crore yards. The increase in hessian stocks is wholly on civilian account while in sacking the increase is more pronounced on military account. The figures are given below: —

Total reported stocks of manufactured goods exclusive of Government Orders.

Description.	31-10-1944	30-11-1944
Hessian cloth and bags—		
Yards ..	13,39,58,543	13,79,61,621
Tons ..	37,426	38,716
40 ins. 8 oz. Hessian (included in above)—		
Yards ..	24,91,879	43,70,618
Tons ..	556	974
Sacking cloth & bags—		
Yards ..	23,31,68,931	23,35,26,575
Tons ..	97,680	97,969

Total reported stocks of manufactured goods held on Government Account.

N.B.—November stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Calcutta, Naskarpara, Kedarnath, Nafar Chandra, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of October 1944.

PIECEGOODS

Thursday, Decr. 7.

Firm conditions continue to prevail in the piecegoods market and it is not possible for dealers to meet the demands of consumers. There is still great confusion regarding the release of frozen goods. The allotment of cloth on the basis of 10 yds. per head for Bengal will not be sufficient as there is a large influx of population from other provinces. The release of frozen goods on a quota basis has not been of considerable value as there has been great delay in the issue of permits and large stocks are lying in godowns unopened.

The Committee of the Bengal Textile Quota Holders Association met during the week to consider the questions affecting the cotton textile trade. It is felt that something will be done as a result of the coordinated efforts of the representatives of the trade and Government authorities. The Textile Controller has issued a warning to the trade saying that all cloth and yarn with quota holders and importers on whom permits were issued are, in some cases, adopting all kinds of tactics in order to delay deliveries. If it is proved that there are definite cases of evasion, licenses of dealers will be cancelled and sterner action will be taken if necessary.

YOU..

YOUR MONEY..

AND THE FUTURE

"My money is my own. Why can't I spend it as I like?" Of course you can. But if you have earned it by the sweat of your brow you would not like to *throw* it away. This is exactly what you are doing every time you buy needlessly and at inflated prices. Much better to postpone your purchases till prices are normal again.

And do not forget the future. When victory is won and once again India turns her energies and resources to the arts of peace she will need all the capital she can get for post-war development. Whatever you save now will make a firm foundation for your future.

Insurance, Government Loans, National Savings Certificates, Post-Office Savings Bank, Savings Bank Account and Co-operative Societies are good investments. Your money is safe and these investments give you a fair return.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Stock Markets to-day and to-morrow:

MARKETS STEADY

Stock markets both in Calcutta and Bombay were inclined to be definitely firmer in the early part of the week. In the Calcutta market coal shares were very firm. Markets would have been higher but for the alarming reports regarding the military situation in China in the past few days. Strictly speaking, the worsening in the situation in China cannot be regarded as a bearish factor for Indian stock markets as the enemy has been kept well outside Indian frontiers and it can be expected that there wil be an intensification of operations against occupied Burma to retrieve the Chinese reverses. In this way, greater importance to India as a base of operations against Japan should be regarded more as a bullish factor for the markets.

* * * *

The feature of the market is the rise in prices for Equitables, New Manbhooms and South Karanpuras. It is confidently expected that the improvement in the labour position and the introduction of mechanised methods would result in a substantial increase in earnings. The reports that further relief might be given to the collieries for rehabilition purposes in the postwar period have also had an encouraging effect. In view of the earlier rise in prices it cannot be definitely said that there is any further scope for a large increase in earnings but it would be safer to confine purchases to the larger collieries which have a good earnings record.

* * * *

The controlling interest in the Singareni Collieries Company Limited has been acquired by the Nizam's Government and the consideration paid to the vendors is a very modest figure.

* * * *

The Nizam's Government paid in all one crore and ten lakhs of rupees. Against this value the assets acquired aggregated to about one crore and twenty-two lakhs of rupees at the current market rate. The transaction thus showed a net gain of about twenty-two lakhs of rupees. No credit had been taken out of the sum of Rs. 45 lakhs shown in the company's balance-sheet as the value of the concessions and rights surrendered, nor had any credit been taken of the value of the plant, building site etc., and of the leases surrendered. The transaction, among other things, gave the Nizam's Government control of 88½ per cent of the total shares of the Singareni Company. The net quantity of coal available from the area under lease with the Singareni Collieries is estimated at 1,000 million tons. Since obtaining the lease only 33 million tons had been extracted leaving a balance of about 967 million tons.

* * * *

Since the acquisition of shares from the Hyderabad Deccan Limited by the Nizam's Government there has been a rise in the quotation for the shares by over five points to Rs. 25.

* * *

The accounts of *Carew & Company Limited* for the year ended June, 1944 should be considered satisfactory, having regard to the difficulties of sugar mills in Bengal about supplies of cane. But the increase in earnings has not been of any advantage to the shareholders. As a matter of fact the larger provision for taxation has more than offset the improvement in profits. It has been necessary to effect a cut in the dividend on ordinary shares to Re. 1 per share from Rs. 1-4 per share on the former occasion. The three distilleries worked profitably throughout the year and there is an enormous demand for the company's bottled spirits. The prospects for the current season for the sugar mills, however, are not any better and it is expected that there might again be a loss in respect of the two factories owned by the company.

* * * *

The net profit, before providing for taxation and depreciation, for the year is Rs. 3,28,587 against Rs. 3,62,243 while provision for taxation is as much as Rs. 16.3 lakhs (Rs. 8.5 lakhs). No transfer to general reserve has been possible against Rs. 2 lakhs on the former occasion. After the payment of dividends on the preference and ordinary shares the amount carried forward is very much lower at Rs. 12,776 against 75.548 brought in.

* * * *

Rosa Sugar Factory crushed 16,05,547 mds. cane, but the cane was of indifferent quality and the factory made a small loss. Darsana Sugar Factory crushed 14,15,679 mds. cane making a loss. Transport difficulties and delays resulted in the cane being delivered stale to the mills. Competition from gur, which was selling at prices much higher than those fixed for white sugar, and the high prices being realised for other agricultural products deprived the Factory of sufficient supplies of cane. Since these conditions existed during last planting season, cane has not been planted to any great extent in the area, and next season's crush is expected to be also a short one.

* * * *

In view of the rapid rise in prices for shares of the *Indian National Airways Limited* in recent months the accounts of the Company for the year ended June, 1944 should be interesting. With the expansion of the activities of the Company it has been possible to report a higher net profit, before providing for taxation and depreciation, of Rs. 2,36,545 against Rs. 2,05,428 for 1942-43. The charge on account of depreciation is Rs. 60,508 against Rs. 50,479. After paying a dividend of 5 per cent on ordinary shares (same) the amount carried forward is Rs. 1,15,505 subject to taxation. The provision for tax out of the profits for 1942-43 was Rs. 97,000. Earnings would have made better showing but for the large increase in operating expenses and the necessity of building up the company's organisation so as to take full advantage of any additional fleet that might be made available in the near future. The directors point out that the basis of the company's operations in the postwar era is receiving constant attention of the Board and that every endeavour is being and will continue to be made to extend the services of the company during the ensuing years.

* * * *

Total sales of the *Sholapur Spinning and Weaving Company Limited*, for the year ended March, 1944 were higher at Rs. 3.99 crores against Rs. 3.22 crores. But the increase in working expenses actually resulted in a lower level of profits for the last accounting period. The net profit, before providing for taxation and depreciation, is

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. 'Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment. Ed.—I. F.]

On my return to Calcutta after an absence of more than three months I find a distinct change in the conditions prevailing on the Calcutta Stock Exchange. There is no hectic trading and there are no violent fluctuations. Except for a slight revival of activity in the present week, for the last few weeks the market has been in a sort of moribund condition with prices remaining at a steady level.

The present lull, however, should not cause anyone to think that the factors that created violent fluctuation do not exist any more. The speculators were only temporarily dazed by the severe blow that they received in September last. I find that a feeling of confidence is returning although there is a thin coating of ash on the surface. The speculative fire burns as strongly as before and I will not be surprised to see it burst forth once more in flames provided some stimulant is forthcoming.

Three months back the prevailing feeling was that as soon as the war was over all markets would come down. The opinion regarding the course of the markets on cessation of hostilities remains the same but the general feeling in the market now is that the end of the war is not yet in sight. In these circumstances the market in my opinion will be inclined to follow to the fullest extent all factors favourable to a rise.

At present the market is in a mood lative markets should always try to study the mood of the market. The reaction of the market to a particular piece of news is a much more important factor than the news itself. This is what is called market psychology. I shall write some day a special article dealing with this very important factor.

At present the market is in a mood to follow bullish factors. The recent movements in the price of Indian Irons is a distinct pointer in that direction. In the beginning of the week a prominent operator who is supposed to be in touch with people in the know sold a fairly large quantity of Indian Irons. The market was told that the Company was going to close down a part of its production equipment for major repairs and that the working will be very adversely affected thereby. This had very little effect on the market. It came down by only a few annas and stayed at the lower level only so long as the selling was there.

The next day there was a rise of about Rs. 1-12. It was said that the Company intended to increase its capital for post-war expansion and that the fresh shareholders will be given certain concession in respect of the additional capital to be issued. There is no confirmation of this piece of news but I am giving it here just to show the mood of the market.

Coal shares are being slowly purchased by people who are supposed to be shrewd operators. It is believed that to encourage production still further the Government of India intend to give some relief to the coal industry in respect of E.P.T. Some believe that a general relief is to be given with a view to enable Companies to build up reserves for replacement of machinery after the war and that cotton and coal will be specially benefited thereby as they have very poor standard profits.

Whatever may be the nature of the relief I look for a substantial rise in coal shares unless something very unexpected happens.

I may give here a bit of advice to those who intend to speculate. In a rising market anything can be bought and sold with ease. But there are some securities which are difficult to be disposed of in a quiet market. You simply do not get a bid for them. One, therefore, should always look to the negotiability of the security that one purchases. Bengal Coal and Equitables are like currency in the coal section.

BIRDS INVESTMENTS LIMITED

NOTICE is hereby given that the Eighth Ordinary General Meeting of the Shareholders of Birds Investments Limited will be held at the Registered Office of the Company, at 4. Lyons Range, Calcutta, at 11 a.m., on Friday, the 29th day of December, 1944, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 30th September, 1944, declaring the dividend recommended by the Directors, appointing Auditors and for transacting any other ordinary business of the Company.

The Share Transfer Registers of the Company will be closed from 15th December to 29th December, 1944, both days inclusive.

Dated, Calcutta,
the 4th December, 1944.

*The dividend as recommended by the Board, if passed at the General Meeting, will be paid to Registered Shareholders on and after 23rd December, 1944.

Bombay Investors & Indian Stock Exchanges.

Heavy Buying of Steels

(By Analyst)

Bombay (By Wire).

With strength in evidence in the cotton and bullion markets Dalal Street continued to move upwards under the leadership of Tata Steels, particularly Deferreds. Tata Deferreds were in the limelight on reports that a bull operater in the cotton market has bought thousands of Deferreds and that he is looking forward to a good rise. It is the usual practice in Dalal Street to talk of higher levels when the market is on the move. I have mentioned last week when Deferreds were quoting around Rs. 2,140 that I would like to book profits on a 5 per cent rise. Now that Deferreds have touched Rs. 2,280 it is just possible the market might move up after one sells, but investors and speculators will appreciate it is next to impossibility to sell at the top or to buy at the bottom. Indian Irons and Bengal Steels also followed in the wake of deferreds and were done up to Rs. 39-12 and Rs. 33-4 though the close was quiet due to profit-taking.

Textiles also were buoyant and Dyeing were done upto Rs. 1,875 though they closed quiet at Rs. 1,855. 'Simplex' were the centre of attraction in view of the maintenance of the interim dividend at Rs. 4 'Azam Jahis firmed up gradually and steadily to Rs. 590 and Oosman Shahis to Rs. 332-8. Madras was, however, quiet with nothing special to report. On a further rise I feel one should book profits on textiles; of course, this rule does not apply to shares in Native States where the incidence of taxation is not very heavy and in that category fall Azam Jahis, Oosman Shahis, Krishnarajendra, Sitarams, Raza Textiles, etc.

The short interest in Cements still continues; hence A. C. C's after declining to Rs. 242 suddenly recovered to Rs. 245 at the close.

Among other shares in the Miscellaneous section in Bombay Scindia Steam continued to be in good demand. The postwar prospects for this company are quite rosy and I therefore favour investment purchases around current market levels. I would not be surprised if Scindias touch Rs. 40 in the next few months.

Last week I promised to give full details of Karnatak industrial and Plywood Company. Now that I have made enquiries I feel that the issue is an attractive one in view of the fact that the Company has obtained concession from the Government of Bombay in the form of long tenure of 40 years commencing from 1943 to exploit the forest in Supa and the royalty payable to the Government under this concession is Re. 1 per ton or 50 cubic feet of wood. Further I hear that the Company has been fortunate in securing through the Supply Department of the Government of India valuable American machinery for the manufacture of plywood, and this machinery has already reached the factory premises in Supa and is in the process of erection. The finishing factory will be erected in Dharwar and this will be complete by February 1945.

(Cotinued on page 791)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 8.

Fairly steady conditions have prevailed on the Calcutta Stock Exchange and business passing has been large. There has been a revival of investment buying and seliers were inclined to be reserved. But for the anxiety regarding the Chinese situation in the latter half of the week it might be expected that prices would be marked further higher. The general undertone is very steady and it is expected that, given the continuance of present conditions, prices will continue to be on the upward trend. Coal shares have again been the feature of the week. There has been good buying by prominent operators. Jute shares were inclined to be slightly steadier while cotton shares were neglected. In the engineering section Indian Irons have improved by more than 1 point as also Steel Corporations.

The giltedged securities section has continued firm though business passing has been slightly restricted owing to paucity of offerings. 3½ percent paper fluctuated around Rs. 100/1. Among terminable loans, 3 percent 1946 were Rs. 102/10, 3 percent 1949-52 Rs. 101/10, and 3 percent 1953-55 Rs. 100/8. Among Provincial loans, 3 percent 1952 Punjab loan changed hands at Rs. 100/6, 3 percent 1953 Rs. 100/4, and 3 percent 1956 Rs. 100/4. There has been a slight hardening in money conditions, call money rates quoting ¾ percent in Calcutta ¼ percent in Bombay. The Central Government was able to get its requirements of treasury bills at the unchanged rate of 7 annas 11 pies percent per annum.

Banks shares were uninteresting, *Imperial Bank* fully paids being Rs. 2,010 and Contributories Rs. 505. *Reserve Bank* were a shade easier at Rs. 135; *Hindusthan Mercantile* were higher at 12 annas premium. *Hind Bank* were easier at Rs. 53/12.

Cotton shares were neglected. *Cawnpore Textiles* were Rs. 13-6, *Elgin* Rs. 66, *New Victoria* Rs. 8/4 and *Kesoram* Rs. 16/2. There was some enquiry for Dunbars and the quotation was done up to Rs. 303.

Coal shares have been very active with the popular counters in great request. The expectations of a large increase in earnings and the liberal allowance for depreciation on machinery have been mainly responsible for the activity in this section. *Bengal* improved by nearly 15 points to Rs. 672, *Bhalgora* were steady at Rs. 17 while *Bokaro* and *Ramgur* have risen by 2½ points to Rs. 43/8. *Burrakur* were Rs. 42/8 against Rs. 41-10, the highest during the week being Rs. 42-14. There was a jump in the quotation for *Equitable* from Rs. 64-15 to Rs. 67-2 and *S. Karanpura* to Rs. 26-6 from Rs. 23-1. *New Manbhoom* also were suddenly active and done up to Rs. 76. There was quiet buying of *North Damuda* and the quotation was higher at Rs. 12-12. *Raneegunge* have been uninteresting around Rs. 53-10. *South Karanpura* were Rs. 25-10 against Rs. 23-5. *Talcher* were very popular and were further higher as Rs. 11-6.

Jute shares have been steady. Business was restricted. *Anglo-India* were Rs. 460 against Rs. 454, *Champdany* Rs. 259 against Rs. 255, and *Chitavalsah* Rs. 30-12 against Rs. 29-8. There is a sudden rise in the quotation for *Fort Gloster* by 35 points to Rs. 834. *Hukumchand* also were quietly absorbed, the quotation improving in recent weeks by nearly 5 points to Rs. 45-4. The rate at the end of last week was Rs. 43-8. *Howrah* have been fluctuating between Rs. 83-8 and Rs. 84, *Megna* were better at Rs. 122 on the declaration of a higher dividend.

Among Engineering shares, Indian Irons and Steel Corporations have been very active with the quotations done up to Rs. 40 and Rs. 33-4 earlier in the week. There was a decline to Rs. 39 for Indian Irons on reports that some of the furnaces at the works would be closed down for repairs. The close, however, is very steady. *Kumardhubi Engineering* were Rs. 11-4, *Bhartia Electric Steel* Rs. 23-12, *National Iron* Rs. 13-8 and *Marshalls* Rs. 4-14. *Burn & Co.*, were Rs. 427 and *B. I. Electric Construction* Rs. 16-4.

Sugar shares were quiet. *Carew & Co.* being easier at Rs. 28-6. *Champarun* Rs. 38-11, and *New Savan* Rs. 28-7. *Buland* improved to Rs. 45-8. *Belsund* were crossed at Rs. 15-12.

Tea shares have been in good request and there are buyers for the popular counters. *Patrakola* were further higher at Rs. 1,237 while *Bishnauth* were Rs. 42-12. *Tezpur* were Rs. 21-2 and *Banarhat* Rs. 9-15 ex-dividend.

In the miscellaneous section, *B. I. Corp.* were unchanged at Rs. 6-13 as also *Bararee Coke* at Rs. 32-8. *Calcutta Trams* have been fluctuating in wide limits. There is some satisfaction with the latest move taken by the Corporation and the quotation has improved to Rs. 50-4. The position, however, is still confused. *Assam Saw* were higher at Rs. 5-9 and *I. G. N.* at Rs. 163-8. Paper shares were quieter with *India Paper Pulp* at Rs. 219, *Mysore Paper* at Rs. 225-10 and *Titaghur* at Rs. 28-8. *Midnapur Zemindary* were better at Rs. 172-8.

THE KINNISON JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Seventy-seventh Ordinary General Meeting of The Kinnison Jute Mills Company, Limited, will be held at the Office of the Company, Chartered Bank Buildings, Calcutta, at 11-5 a.m., on Saturday, the 9th day of December, 1944, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half-year ended 30th September, 1944, declaring the Dividends recommended by the Directors, electing Director and for transacting any other ordinary business of the Company.

The Share Transfer Registers of the Company will be closed from 25th November to 9th December, 1944 both days included.

By Order of the Directors,
F. W. HEILGERS & CO.,
Managing Agents.

Note.—Printed copies of the Report and Accounts will be despatched to Shareholders on or about 18th November, 1944.

Dividends will be paid to registered shareholders only.

Chartered Bank Buildings,
Calcutta, 4th November, 1944.

THE UPPER GANGES VALLEY ELECTRICITY SUPPLY CO., LTD.

NOTICE

is hereby given that the Twenty-eighth Ordinary Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday the 23rd Demceber, 1944, at 11-10 A.M. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-year ended 30th June, 1944, and to transact any other ordinary business of the Company.*

The Share Transfer Books of the Company will be closed from the 17th to the 23rd December, 1944, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Director.

Dated, Calcutta,
the 4th December, 1944.

*The dividend as recommended by the Board, if passed at the General Meeting, will be paid to Registered Shareholders on and after 23rd December, 1944.

(Continued from page 790)

I find from the draft prospectus that the company will be able to manufacture more than 20.000 square feet per day as soon as the erection of the factory is over. The directors of this company feel that in view of Forest concessions of about 183 square miles on a nominal royalty of Re. 1 per ton the cost of production even in the postwar period will compare very favourably with that of imported goods and that this factory will be able to earn a decent margin of profit even if there should be competition.

(Continued from page 789)

Rs. 64,14,207 against Rs. 91,05,338. Depreciation on property is Rs. 8,25,100 (Rs. 10 lakhs) while provision for taxation is Rs. 50 lakhs (Rs. 70 lakhs). The dividend on ordinary shares has been maintained at 40 percent. Redeemable cumulative first preference shares receive the first dividend of 3 percent taxfree. First cumulative redeemable preference shares of Rs. 100 each (paid up Rs. 50) were issued during last year. These shares carry preferential claim to repayment of capital and are redeemable at the option of the company at any time after March 31, 1948 on six months notice.

Pursuant to the Resolution passed by the Debenture Holders at their Meeting held on 18th February 1944, the debenture loan has been paid off together with the accrued interest at 5% upto 30th June 1945. The amount non-collected by the Debenture holders upto the 31st March 1944 was Rs. 12,20,529-14-0. Since then the amount has been reduced to Rs. 2,44,525-1-0.

The results of *Alkali & Chemical Corporation of India Limited*, for the year ended June, 1944 has been disappointing to a certain extent as it was generally expected that the coming into being of the Punjab factory and the intensified working of the Calcutta factory would result in an appreciably higher level of earnings. The net profit, however, is actually lower at Rs. 4,30,724 against Rs. 4,73,153 for the previous 12 months. After providing for depreciation Rs. 1,07,214 (Rs. 1,12,179) the provision for income-tax and super-tax is Rs. 1,04,815 (Rs. 1,23,000). After paying the dividend on the preference shares the amount carried forward is considerably higher at Rs. 3,29,719 against Rs. 2.66,059 brought in.

The working of the Calcutta factory was affected by difficulties in regard to supplies of coal. Transport difficulties also did not permit of the plant maintaining full production. The manufacture of soda ash in the Punjab factory was begun during the year and several hundred tons of good quality were produced but shortage of labour due to malaria and the difficulty of recruitment under existing conditions in the district have retarded regular production. There are no technical difficulties that stand in the way of increasing the output but it is feared that unless the supply of suitable labour is forthcoming production will be seriously affected.

Watch Dog.

THE CENTRAL BANK OF INDIA, LIMITED

Re: Transfer of New Shares

NOTICE is hereby given that the Transfer Books of the above Bank for registration of new shares will be opened on and from the 1st December, 1944.

By the Order of the Board,
H. C. CAPTAIN,
Managing Director.

Bombay, 28th November, 1944.

JOHN PATERSON & CO. (India), LTD.

Audited accounts for the year ended 31st March, 1944:—

The Company made a net profit of 76,582-9-11, after allowing for depreciation and other incidental charges. Adding Rs. 60,001-6-8 brought forward from last year the total amount of the net profit to the credit of the Profit and Loss account is Rs. 1,36,584-0-7. Out of this sum, Rs. 40,000 is set apart in the Reserve account leaving a balance of Rs. 96,584-0-7 and the Directors recommend setting apart a sum of Rs. 36,465-15-0 as reserve for Income tax etc. After deducting the said amount, a sum of Rs. 60,118-1-7 is available for distribution and it is recommended that the amount be disposed of by paying a dividend of Rs. 3-12-0 per share on 10,575 ordinary shares which will absorb Rs. 39,656-4-0, leaving a balance of Rs. 20,461-13-7 to be carried forward.

Authorised Capital—Rs. 1,50,000. *Issued and Subscribed—Rs.* 1,05,750 *in* 10,575 *shares of Rs.* 10 *each, fully paid-up:—*

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions continue to prevail in the money market and there is no change in call money rates being ½ percent in Calcutta and ¼ percent in Bombay. It would appear, however, from the returns of the scheduled banks for the last three weeks that there has been an increase in the demand for funds especially for crop movement. Such an increase in demand for funds has not had any effect on rates. At the auctions of treasury bills this week, however, smaller interest was shown in Central treasury bills and there is a decrease in the amount of applications to Rs. 10.15 crores from Rs. 13.3 crores last week. The average discount rate is slightly higher at 8 annas percent per annum. The offer for next week is maintained at Rs. 6 crores. The Provincial Governments, however, have been able to get their requirements at the former rates, the Assam Government's offer of Rs. 2.5 crores bringing in applications for Rs. 3.66 crores. The average discount rate is 9 annas percent per annum. The Orissa Government was able to secure Rs. 50 lakhs at the same rate, total applications being as much as Rs. 1.26 crores.

The returns of the Reserve Bank for the week ended December 8 1944 shows a rather large increase in notes issued at Rs. 999.27 crores against Rs. 985.88 crores. The next addition to the note issue will thus see the thousand crore mark being passed. Notes in circulation are Rs. 12.15 crores higher at Rs. 989.82 crores. Sterling securities have improved by Rs. 15 crores to Rs. 886.33 crores while rupee coin are lower at Rs. 10.69 crores against Rs. 12.3 crores. In the banking department, Central Government balances have declined to Rs. 225.13 crores from Rs. 231.61 crores while other Government accounts are higher at Rs. 12.38 crores against Rs. 11.83 crores, due perhaps to the sales of treasury bills on account of the Assam Government. Bank balances with the Reserve Bank have resumed the upward trend, the latest figure showing a rise of Rs. 2.9 crores to Rs. 92.25 crores. Other deposits also are more than Rs. 2 crores higher at Rs. 14.3 crores. Sterling receipts continue to be on a large scale; the total of sterling balances in the banking department is only Rs. 2.2 crores lower at Rs. 340.03 crores after the transfer of Rs. 15 crores to the issue department.

There was a slowing down in the rate of deposits of scheduled banks early in November. As a matter of fact, in the week ended November 17, demand liabilities showed a drop of over Rs. 3 crores. But in the latter half of that month, the upward trend was again resumed. Demand liabilities on December 1 were Rs. 630.11 crores against Rs. 612.3 crores at the end of the previous week and Time liabilities Rs. 202.43 crores against Rs. 201.6 crores. It is encouraging to note that there has been a large improvement in Time liabilities in the last quarter of this year. Between June and December the total has risen by over Rs. 20 crores. In the same period demand liabilities have improved by Rs. 48 crores. The increase in advances in the past four weeks is rather striking, there being a rise of over Rs. 16 crores. It is said that the large demand of funds was mostly on account of crop finance. Advances against bullion might have been higher. The increase in advances by over Rs. 6 crores has resulted in a decrease in the balances with the Reserve Bank which are only Rs. 85.95 crores against Rs. 89.98 crores. Cash on hand is slightly higher at Rs. 28.33 crores against Rs. 28.19 crores.

The statement of the Imperial Bank for the week ended December 8, 1944 shows a drop in advances to Rs. 235.86 crores from Rs. 237.2 crores. Investments also are lower at Rs. 151.48 crores against Rs. 152.22 crores and advances at Rs. 58.34 crores against Rs. 58.88 crores. There is an increase in loans but bills discounted are Rs. 1.3 crores lower at Rs. 4.2 crores. As a result of the decrease in both investments and advances, there is no important change in the cash balances at Rs. 36.2 crores.

It appears that there is no prospect of an early decline in prices for the precious metals. A few days back it looked as if bulls were losing control of the market and that the continuous offering by the Reserve Bank of 75,000 tolas of gold and 300 bars of silver daily would result in a fall in prices. But the reports regarding the Chinese situation and the continued expansion of currency have again led to speculative buying and quotations are at the highest levels for sometime. As it is, bullion sales serve only as a fruitful source of rupee finance for the United Nations. Unless there is a change in the policy the continuance of sales as at present will prove to be very harmful.

The exchange market has been steady with a few export bills showing. Remittance demand has been negligible.

Bank's buying 90 days/St. at 1s. 6 1/4d., for 1 and 2 months; Bank's buying 90 days/St. at 1s. 629/32d., for 3 to 6 months.

Planning and Politics*

Logically, if not chronologically, the first requisite of sound and successful planning is a political constitution properly geared to an efficient administrative system. Since the essence of planning lies in the methodical tackling and achievement of natural economic forces, planning requires both a popular political consititution and an administrative system assured of social ends which in the past had been left to the freeplay of every help necessary for its execution. The two are, to a very considerable extent, incompatible. While a democratic constitution is necessary to ensure that the ends of planning are in conformity with the social will, the established habits of democratic communities and the inherent shortcomings of men in the mass alike discourage hopes of smooth working of economic planning under a democratic constitution. Likewise, the efficiency of a handpicked bureaucracy is not always sufficient compensation for its proneness to develop an incapacity for sympathy and breadth of outlook. While the difficulty of securing these incompatible objectives is common to all countries, India has special problems of her own, firstly in the inescapable necessity for a federal, in place of a unitary, constitution, secondly, in the imminence, as it looks now, of a bifurcation of the whole country, and thirdly, the presence in the States of a large number of desperate political units of a wide variety of size, status and importance. These difficulties complicate the problems alike of the political constitution and of a compact and efficient administrative system, not to speak of the even more intricate problem of establishing a proper relation between the two.

The question is: On what lines can we seek to solve these problems or expect to see them solved or aggravated? As we pointed out last week, such progress as has been achieved in drawing up a plan has been achieved on certain assumptions, the validity of which it is palpably inconvenient to examine. The authors of the Bombay Plan have assumed that before the inauguration of planning in India a truly National Government will have been installed in power at the Centre. The Reconstruction Committee of the Viceroy's Executive Council naturally have nothing to say about a National Government but assume that:

> (i) any constitutional or political changes which, may be introduced will not result in a radical departure from the present economic and financial arrangements; and
>
> (ii) that in the interests of the future development of the country the Government of the day will be prepared to impose, and the public will be prepared to accept or submit to, full development and exploitation of the taxable capacity of the country.

The practical significance of these assumptions however needs to be determined. Full exploitation of the taxable capacity of the country is more or less a matter of detail from the present point of view and may be dismissed as such. But when the Committee assumes the absence of radical departure from the present economic and financial arrangements, it is difficult to see in the first place what is exactly meant and secondly how far it is hopeful of its assumption being proved right. The constitutional or political changes that are now being pressed for by the political party which is today the most effective in Indian politics, viz. the Muslim League, are unquestionably such as to result in a radical departure from existing financial and economic arrangements. The Reconstruction Committee cannot deny or pretend ignorance of this fact. And if it has made special mention of this assumption, one cannot help suspecting that the Committee is confident that no constitutional or political changes of any kind will be made for some time to come. In other words, the Committee more or less shirks the political problem and expects to adopt the existing political framework to the additional responsibilities of a regime of economic planning.

The authors of the Bombay Plan for their part have never missed an opportunity of stressing the importance of a National Government to the smooth working of their Plan. They argue that their plan calls for popular effort on a vast scale and, even more, for patient suffering of the privations it will entail in the initial stages and that only a National Government can rouse the enthusiasm of the people to the requisite pitch. It will be seen that according to the authors of the Bombay Plan, a National Government is needed more for the working of the Plan than for drawing it up or directing its working. But the more important questions are how far they expect this condition to be satisfied and whether they would go the length of dissociating themselves from planning of any kind if this condition should continue to be unfulfilled. The answers to these questions are not far to seek. Shrewd businessmen as they are, the authors of the Bombay Plan are not likely to have ruled out the chances of the present political stalemate continuing indefinitely. Nor are they likely to regard it as practicable or wise to stand aloof from the plans which an unreformed Government of India may introduce in the post-war period.

If these surmises are correct, then it is not considered quite impossible, either by the Government of India or by the Bombay industrialists, to carry out planning of a sort without a National Government. The difference that the advent of a National Government would make to economic planning in India has often been indicated in these columns. But nothing is gained by overlooking the fact that a National Government is impossible except by agreement between the various political parties and that, as things are, such agreement carries with it the danger of radical departure from the existing financial and economic arrangements. On the other hand, it is not without concrete advantage to recognise that planned development on certain lines is not impossible even under the present constitution and that, in any case, the improvement in the standard of living of the masses cannot be made to wait on agreement between groups of highly unrealistic politicians.

From a practical point of view, therefore, the political and constitutional problem, so far as it concerns planning, has to be thought out as well in terms of the existing conditions as of the conditions of freedom from foreign domination. There are reasons to think that the Government of India are, indeed, proceeding on the basis of no change in the constitution. The reports of the Reconstruction Committee stress the importance of co-operation between the Provinces and the various departments of the Centre. Machinery is already being set up to effect such co-ordination. As regards the States, it has been disclosed by the London "Times" in connection with the recent crisis in the affairs of the Chamber of Princes that the Government of India are putting pressure on the States to make them line up with the British Indian Provinces in the matter of planned economic development and subordinate themselves to the Government of India. Changes in the system of local Government are hinted at in the Second Report of the Reconstruction Committee; and in the present conditions the Government have the means of effecting any change they desire in this respect. And when plans for regionalisation are completed, the problem of rival or conflicting jurisdictions will be solved in a rough-and-ready way. With the constitution as it is, the task of adopting the administration to the requirements of the plan is far simpler than it would be in conditions of political autonomy.

It is for the people to make clear whether they will be content with such a solution of this problem. As we pointed out already, a democratic constitution is as essential for laying down a plan in the broad popular interest as a strong administration is necessary for its smooth and successful execution. We cannot dispense with either in the interest of the other. Nor can we overlook the danger that planning under an irresponsible Government will deviate more and more from the national interest and that such deviation will be facilitated by the increased powers which the Government can secure for itself in the name of the Plan and its declared objectives. At the same time, the fact that every effort to secure a National Government serves only to endanger national unity all the more cannot be overlooked. It is certainly rational to insist on a National Government as a condition precedent to the inauguration of planning. But can the insistence be taken to the point of holding aloof from the post-war plans of the present Government of India? And will that not be a case of extending non-cooperation to the economic sphere with no better chances of success than in the political? Will it be practicable for big businessmen, however nationalist they may be in their outlook, to cold-shoulder large schemes of development emanating from the Government?

These are questions which do not admit of direct answer. And in this form, the problem is different from what it was at the start. Strictly speaking, the problem cannot be solved, unless the country as a whole learns to defer to the requirements of a comprehensive plan. In the present conditions, it is inevitable that planning, too, should be regarded by each political party or each section of the people in the same way as electorates or seats in the legislature. But planning proper transcends the limited objectives of any part or section of the country. Planning is "economic" only in a limited sense. It embraces ends which are cultural and even spiritual. It is difficult to restrict its benefits to particular sections of the

PROSPECTUS

OBJECTS

The Company has been formed generally for the several objects set forth in the Memorandum of Association and with the immediate object to acquire the assets of the Oil Mills and Ice Factory in Chandausi belonging to Sahu Mehilal Rustagi, with all lands, buildings machinery and other fixed and movable assets.

PROSPECTS OF OIL INDUSTRY IN INDIA

Oil Industry occupies a very important place in the economic life of the country. There are about 294 million acres of land under cultivation in India and of this 27 million, i.e., about 9 per cent are devoted to the cultivation of oilseeds crops. The area under oilseeds is even more than that under cotton, which is 25 million acres. India is not only the largest producer of oilseeds, but also occupies a very important position among the leading oilseeds and oil exporting countries of the world. Before the outbreak of War about 15 crores worth of oil and oilseeds were exported out of India and the demand of these exports was steadily increasing in foreign markets. The demand of oil is also rapidly increasing for internal consumption in India on account of the rapidly growing demand for edible fats brought about by the shortage in the supply of butter and ghee and increase in the variety of uses to which vegetable oils have begun to be put industrially.

Crushing of oilseeds and expelling oil by modern scientific methods is in itself a profitable industry, but oil and its byeproducts have many uses and they can be easily converted into far more valuable finished products. India annually imports about 20 crores worth of vegetable oil products in the shape of refined oils. edible oils, margarine, vegetable butter, glycerine, paints and colours, soaps, varnishes, perfumes and toilet articles, etc. All these commodities—which are finished products of oils and its byeproducts —of daily utility to every household. rich or poor, can be manufactured in India. With the improvement in the standard of living of 400 million inhabitents of India, the demand of these commodities must increase. The Oil industry has a great future in India, as this country is the largest producer of oilseeds.

SPECIAL FEATURES OF THE COMPANY

(1) Our Oil Mills are situated in CHANDAUSI. It is a big market town, especially famous for wheat and oilseeds. All the oilseeds that come to the Chandausi market cannot be crushed by the oil mills that are now in existence in the town. So about one lakh maunds of oilseeds are exported every year to be crushed in oil mills situated hundreds of miles away from Chandausi. There is thus an abundant supply of oilseeds in the very town in which our Mills are situated.

(2) CHANDAUSI is a junction station of the E. I. R., connecting such important towns as Aligarh, Bareilly and Moradabad. The Mills are situated very close to the railway station and transport is very easy and convenient.

(3) We are acquiring the Mills in perfect working order, with 20 bighas of freehold land within municipal limits, buildings, machinery, tanks for oil-storage, etc. So no time is to be taken up in purchasing land, building houses and the erection of machinery. All machinery is of best foreign make and in very good condition.

(4) The vendor of the Mills has been earning a decent profit. His income from the mills has been ranging from 20 to 25 per cent of the price to be paid to him.

We got the machinery, buildings, etc, of the Mills examined by an expert engineer (a qualified Engineer of the Technische Hochschule, Berlin), who assessed the value of each item separately, and in his opinion the price to be paid is very moderate and reasonable.

PROSPECTS

These Oil Mills have a capacity to crush 500 mds. of oilseeds and expell about 200 mds. of oil per 24 hours. If the working hours are calculated to be 384 per month (two shifts of 8 hours each per day and working days per month being 24 only), they can easily crush about 8,000 mds. of oilseeds and expell about 3,200 mds. of oil per month.

The margin of profit on crushing oilseeds mostly depends upon the market prices of seeds and of oil and oil-cakes. Even the current controlled prices, which are considered rather adverse to their interests by the oil industry, allow a decent margin of net profit, which is about one rupee per maund of oilseeds crushed.

As our present Mill has a capacity of crushing about 96,000 maunds of oilseeds per year, we can safely expect sufficient profit to enable us to distribute dividend among the shareholders even in the first year of our working.

The Ice factory also allows a good profit. The current wholesale market rate of ice in Chandausi is Rs 2-8 a maund. But basing our estimate on pre-war rate of one rupee per maund, the Ice Factory allows an income of about Rs. 2,500 a month or about Rs. 10,000 during the summer season.

It is proposed to add to the existing machinery:—
(1) An oil refinery
(2) A plant to double boil the linseed oil, and
(3) A soap factory.

These additions are to be made immediately. These will greatly add to the earning capacity of the Mill.

It may be mentioned here that other oil companies are paying decent dividends. There has been a substantial appreciation in the value of their shares. For example, Northern India Oil Industries Ltd. of Cawnpore is paying dividend at a rate of 20 per cent and its share of the denomination of 10 rupees has been appreciated to Rs. 22. In the same way, the shares of the Tata Oil Mills Co Ltd., are selling at Rs. 80 each, while their paid-up value is Rs. 25 only.

CAPITAL OUTLAY

The amount realised on issue of capital is proposed to be expended in the following manner.

	Rs.
(1) Purchase price of land, buildings, complete oil mill and ice plant with all workshop, accessories, furniture, flour mill and ginning machinery, etc. ...	3,00,000
(2) Purchase of additional land, building and machinery	1,25,000
(3) Working Capital	1,50,000
(4) Preliminary expenses, registration, brokerage, etc.	25,000
Total ...	6,00,000

BROKERAGE

Brokerage at the rate of 2½ per cent will be paid by the Company to the recognised brokers on allotment made in respect of applications bearing the stamp of such brokers.

APPLICATION FOR SHARES.

Application for shares may be made on the form accompanying the prospectus, or in a form similar to the same and be forwarded to the Registered Office of the Company or to the Company's bankers at all their branches, together with a remittance of Rs. 6 per share.

Where no allotment is made the deposit will be returnel in full. and where the number of shares is less than the number applied for, the balance of the deposit will be returned.

people. At any rate, in a regime of planning, the blame for the backwardness of particular communities can be more justly laid at the door of the directors of the plan than it can be attributed today to the machinations of other communities. A good economic plan can blunt the edge of communal antipathies, disarm political suspicions and achieve unity of purpose and endeavour more easily than mere wrangling over seats or discussions over electorates. With India as she is today the solution of the constitutional problem, whether in itself or in relation to the requirements of economic planning, lies largely in helping all sections of the people to appreciate what planning means to them and to appreciate too, the danger of thwarting the advent of a National Government. That primarily is a matter of intelligent and honest propaganda, and it is the responsibility of those who made planning practical politics to carry out such propaganda. Only then can unity and the safety of the broad public interest be ensured. But a National Government at the Centre is not the only requirement of planning as regards the constitution. The other requirements will be examined in the next issue.

Sugar and Price Control

At the inaugural meeting of the Indian Central Sugar Committee the growth of the Indian sugar industry was reviewed so as to indicate that progress since 1932 has been appreciable and uninterrupted. The sugar cane area and sugar production figures for 1943-44, pointing to an increase of 12 per cent may also be regarded as justifying the optimistic note struck by the Member for Lands, who referred particularly to India's independence of imports and the employment afforded to over a lakh of workmen in India by sugar factories. The constitution and functions of the Committee to be financed by the excise duty were discussed some months ago. It is, however, to be noted that the outlook for sugar mills has become obscure of late and company reports discussed in this journal have indicated that conditions outside Bengal have been rather difficult in 1943-44, while the future is by no means secure for two news items appearing last week connected with the fall in the area under sugar cane in Bihar and the probable control of gur production and the cut ordered in sugar cane cultivation (even on estates belonging to sugar companies) by the Bombay Government in the interests of food production made it clear that sugar producers face difficulties for which the recently authorised increase in sugar and cane prices is no real remedy.

The clue to the situation last season may be found in the fact that gur prices were higher than sugar prices. If the disparity remains in the way the sugar manufacturers will have no reason to feel pleased either with the percentage of recovery or the improvement in quality recorded from season to season. Though absolute uniformity cannot be expected in the field of company results the wide variation in profits and the intensified pressure of taxation will lead to the view that in the war period the sugar industry outside the Indian State is weaker than before. Although tariff protection was devised in the interests of the cane-grower the cane-grower's manifest inability to attain competitive equality with cane-growers in other countries is the prime factor in the situation. Opportunities of swift advancement in regard to manuring and watering have been indicated in the past. The uses of molasses and oil cake already in favour have been indicated in the survey of possibilities of agricultural development in India. Against an average yield of 15 tons of cane per acre yields of 25 to 55 tons of cane, i.e., an average yield double the present yield, are looked for. The investigation into the effects of manuring, suitability of soil and the control of pests and diseases are obviously related to Governmental measures for the welfare of the cane-grower. If the area under sugar-cane has slightly increased under the impetus of grow-more-food plans the stagnation of cane yields, despite the extension of varieties evolved by cane-breeding research, fixes a limit to the progress of the industry. Object lessons from the Philippines and the Dutch East Indies have been frequently held up and the conclusion that cultivations must be progressive has been drawn. But withdrawal of Government control in two Provinces apart from influencing an increase in the area under cane has not helped sugar manufacturers.

This fact may not be ordinarily turned into an argument for abolition of price control, but it is useful to recall that the system of minimum prices for cane throws responsibility on Government as well as the cane-grower. Benefits provided in the past, for example in 1939-40, when overproduction did not hurt the cane-grower to any extent are perhaps lost to view. But last season's supplies were not sufficient by prices alone. Since bonus payments have been the rule and the manufacturers' margin of profits is the same as before in spite of an increase in costs the Central Sugar Committee has to formulate proposals that will prevent the threatened fall in production. The retail price of sugar fixed on an All-India basis ignores the differences between production in Upper India and the Peninsula. Variations such as are permitted in regard to rice would appear to have justification, but more important is the question of tax relief. Since the connection with agriculture is close and constant, it may be doubted whether the operation of E.P.T. is desirable. Experience suggests that a stimulus to production cannot come merely from control of gur movements, but must cover all the uses to which sugar-cane is adopted. Though compensation for higher cane prices was provided in Bengal by the Provincial Government, the majority of manufacturers did not obtain much compensation and the correct proportion as between cane and sugar prices has not been worked out. There is always an arguable case for higher prices and in any event fair selling prices for sugar cannot be determined by the cost of imports. In any case, compared with salt, a commodity produced under supervision and enjoying the same tariff protection as sugar, the authorised increase in prices is greater though the ostensible reason is the difficulty of transport by sea. The index for sugar prices throughout 1943-44, was unchanged without reference to the ascent of wages and all costs of manufacture. It is not hard to state the case for enhanced prices especially when the excise duty has been increased twice in the war period. In accepting price control the spokesmen of the industry always have argued that the agricultural side must respond in equal measure. Since that has been far from the case it is expedient even to consider a production bonus that will assuredly be in the interests of the consumer, as ensuring regular and larger supplies. The case of the coal mining industry is not distinguishable.

TEXTILE CONTROL

WARNING TO ALL DEALERS

In Notification No. T. B. (1) 29/44 in the Gazette of India of the 4th November 1944 Clause 14 of the Cotton Cloth and Yarn (Control) Order, 1943, has been amended. After 31st December 1944 it will be an offence under the Order for any dealer to buy, sell or hold any cloth or yarn manufactured in India and packed before the 1st August 1943, or texmarked cloth or yarn packed after the 31st July 1943 and before the 1st January 1944.

Any cloth or yarn whether manufactured in India or imported must in future be finally disposed of within twelve months from the last date of the month marked on the goods; such cloth or yarn may not be kept in unopened bales after six months from that date. The amendment further states that a bale or case shall be deemed to be unopened if the hoops or other bindings and all other outer covering have not been removed.

All dealers are warned that no extension will be given by the Textile Commissioner in the time for disposal stated above unless the holder can show that he was unable to dispose of the goods due to causes entirely beyond his control. Dealers who contravene the above provisions will render themselves liable to cancellation of their dealer's licence and to prosecution, and Courts are empowered to confiscate the goods in respect of which the offence is committed.

Editorial Notes

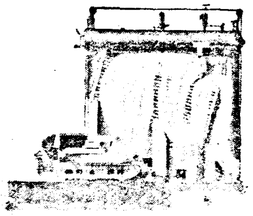
Revision of Fiscal Policy

Sir Ardeshir Dalal who was present at the meeting of the All India Glass Manufacturers Federation also spoke on the occasion and offered a few valuable suggestions for strengthening and reorganisation of the glass industry. Indian industrialists will surely feel encouraged at the remark made by Sir Ardeshir that the condition that raw material for the industry seeking protection should be available in the country will be reconsidered favourably. It is well known that the stringent conditions laid down by the Fiscal Commission actually operated as a deadweight meant to stifle the industrial advancement of India and the need for a drastic revision of the conditions has been felt for long. The glass industry in particular was once refused tariff protection on the ground that soda ash had to be imported. Never in the history of any free country has protection been so circumscribed by rigid conditions as in India and if the tall talks of post-war development plans are to be translated into practice to reduce the lack of balance between agriculture and industry in the country the fiscal policy has to be liberalised and rationalised. It is hoped that Sir Ardeshir in whom the country has great confidence would take up this vital problem and lay the foundations for quick industrial expansion in post-war years

No Agreement.

Disagreement concerning essentials punctured every stage of the Civil Aviation Conference at Chicago so that the substance of Agreement as to the constitution of an Air Board scarcely represents a triumph for the U.S. delegation which offered concessions in order to prevent effective international control. In fact, it may be concluded that the Montreal talks are likely to have a greater effect on the development of civil aviation provided always that the right of cabotage is preserved, Though no difficulties will arise over subsides, the U.S. stand for absolute supremacy in the air concealed in a claim for full freedom of competition is destructive of others' ambitions and hopes. Sir Gurunath Bewoor's statement at Montreal suggests that no commitments have been entered into but India cannot remain separate in the way that Russia can. Russia incidentally refused to participate in the Chicago discussions and is evidently resolved to exclude all foreign airlines. Though the plans for Empire routes and termini have received unusual publicity, the rejection of the convention offered by Britain made it clear that gains arising from the elimination of Germany and Japan will not accrue to all countries. The displacement of Cuba by India on the proposed Air Council does not seem altogether a satisfactory solution for an outside authority would prescribe routes, frequency and freight rates for international air traffic. Competition for internal traffic may not develop but overseas expansion is rendered universally difficult for countries that have not the experience and resources of the U.S.A. Though empire unity is preserved the provision for dealing with grievances may not be enough and regulations in which the advantages would not lie with India are inescapable. Though it may be said that by amendments to the Indian Aircraft Act, the machinery for the development of Civil Aviation is available to India the consequences of disagreement at Chicago must be considerable. The original Air Convention of 1921 received little notice during the proceedings because the right of innocent passage and the right to deal with intermediate traffic were not provided for by the Convention. Yet the duty to provide proper ground facilities is laid upon small countries like Egypt which hopes to make the most of air traffic as a junction. Since the U.S.A. thinks more of separate agreements with each country on the lines of the treaty with Spain the bare possibility that India can strike a bargain for herself will remain. If the conference took over a month to expose the causes of disagreement, it also revealed that the Commonwealth did not have a complete plan, and the latter had to accept concessions intended to help Britain to turn her aircraft makers towards civil aviation. The conference, however, forces each country to improve and extend internal air service on the assumption that Empire Air Mail services will require full support, it is possible that established air lines may find opportunities not only on the basis of achievement but on the ascertainment of U.S. intentions.

Trade with Middle East.



Trade with the Middle East has grown at a remarkable pace to judge only by the figures relating to mineral oil imports and cloth exports. The increase of imports is more marked than the mild rise in exports this year owing to the shortages of cloth, sugar, etc., experienced in India. The Middle East as a market for Indian coal when shipments are authorised has been mentioned in connection with the reports as to diversion of Indian coal to Italy. The Middle East, undoubtedly, includes Egypt which is known to be keen on tea and cloth from India. Since the Middle East includes Syria as well as Arabia and Iran, the proportion of imports drawn from this area to Indian exports is greater than the proportion of imports derived by India from the Colonies in relation to exports. Though violent changes in trade have occurred during wartime it is noteworthy that the Middle East can provide only two essential raw materials and no manufactures for the Indian market. As the Middle East is fully in the sterling area, the excess of imports has not presented any problems for India so far and supplies of gold and silver for Iran to deal with inflation there have been primarily the Allies' responsibility.

The Middle East with the possible exception of Iraq has no exportable surplus of food as was indicated very recently in the approval given for the shipment of 500 tons of grains from India to the Hedjaz. There is, however, the steady increase in oil production on which Bahrein as well as Iran relies. The other raw material viz., cotton that Iraq or Iran can offer may be regarded as competitive so that the only permanent item is mineral oil. In spite of high duties oil imports have risen steadily, but after the war when Burma and India will figure as alternative sources, the trade may undergo decisive changes. The Middle East's preference for Indian manufactures should however be constant as trade reports from Alexandria indicate that in spite of tariff changes and controls Indian goods have penetrated into all markets. Since the Middle East has no protected industries, and the tradition of State enterprise is weak, the degree of unification attained in wartime may be, on the whole, an advantage. Bilateral trade pacts may not be required for the cardinal factor is, the disappearance of Japanese competition. The publicity planned for Indian goods should also take into account the displacement of Russia as an exporter and a direct gain in the form of treasure (which has been absorbed by the Middle East) when abnormally large imports of oil disappear will not be overlooked in any evaluation of possible developments.

Rise in Employment.

The figures issued in the Indian Labour Gazette point to a considerable increase in factory employment during 1943. The increase occurred in respect of perennial factories and was limited almost entirely to male adults. It is encouraging to find that war has not led to any increase in juvenile employment and has actually reduced the number of women working in seasonal factories. Though much of the increase in employment arises from the expansion of work in Government factories, the process of enlargement is continuous in regard to cotton mills. The total average number of workers in cotton mills including children aged over 12 in 1943 is shown as 650,662 against 611,025 in 1942. The figures do not correspond to those furnished in the annual mill statement for 1942-43 but the relative difference between the jute and cotton mill industries is indicated by the fact that the total number of workers in jute mills fell from 309,962 in 1942 to 302,304 in 1943. The proportion of female to male labour in the two industries is more or less the same but adolescents and children engaged in jute mills are fewer. Since nearly half the number engaged in perennial factories are dependent upon the textile industries, hours and wages in these two urban industries are more important than in the other organised industries. Changes in regard to classification of factories and more detailed statistics have been promised after

a conference of Inspectors of Factories held in October. The differences between Provinces in regard to industrial development are reflected in the employment totals. Though more men are seasonally employed in the U. P. the largest number of adult factory workers is found in Bengal where the total runs to seven lakhs. The largest number of women workers is reported by Bombay in regard to both perennial and seasonal factories. It is noteworthy that Madras reports the largest number of children employed in perennial factories, and information obtained after the amendment of the Factories Act makes it clear that the number of children employed outside Madras is inconsiderable.

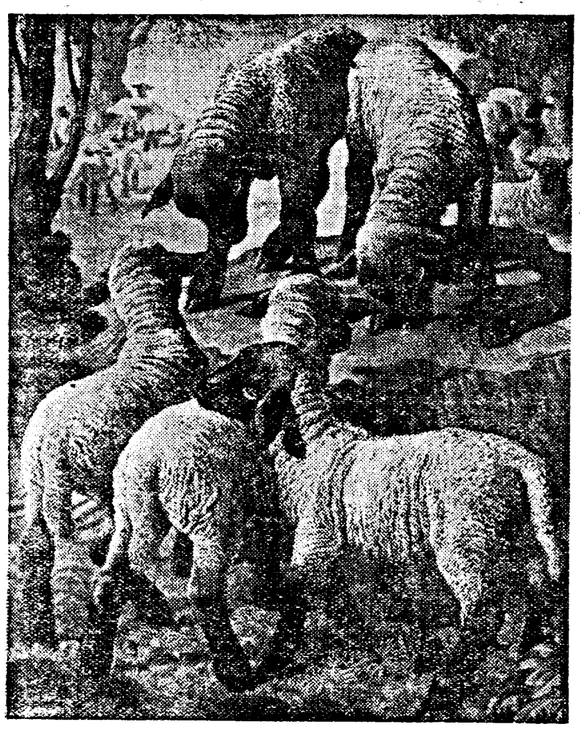
Mutual Aid.

The reported signature of a mutual aid agreement between India and Canada last month is invested with importance owing to India's food requirements in the immediate future. The appropriation made under the agreement is a matter for the Dominion Government which allots supplies for those countries with whom agreements have been concluded. The promise of assistance in return is inseparable from the agreements but normal trade may shrink rather than expand. For India, the main advantage will lie mainly in not being called upon to acquire Canadian dollars for payment either for food or for essential imports like motor vehicles. Imports of motor vehicles in 1943-44 were substantially lower and mutual aid should promote rapid recovery. Assistance in regard to locomotives for Indian railways has also been promised by Canada and the mutual aid agreement will probably determine the volume and date of supplies. The Canadian Government has provided 800 million dollars in this year's budget to cover mutual aid expenditure and among countries eligible for Dominion supplies are China and Russia. India has been added to the list partly because normal trade has fallen away and partly because Canada wants to turn mutual aid into a weapon for maintaining her export trade after the war.

Though consultation with Washington may be required in respect of food exports, the mutual aid programme should help India to draw wheat from Canada next year. The increase in exportable surplus should support the inclusion of wheat in the list of items despatched under the Dominion's special budget for her allies. Since Canada needs U. S. dollars, and has not as far sought to turn her export 'surplus' into a device for acquiring more dollars, the main lesson to be drawn is that Canada is indifferent as to sterling assets and is willing to let foreign investments in Canada remain. The Indian Government's obligations in regard to Canada will probably be indicated in the next Budget but the quantum of assistance required will be smaller than that afforded to the U.S.A. under existing arrangements since Canadian requirements are limited to Europe. The agreement with Canada should not limit the possibilities of trade after the war for Canada's metallurgical and chemical industries have developed greatly in the war period and power development provides a pattern to work up to. The mutual aid applied has not been without benefit to Canadian producers of bacon and cheese since Britain's consent to take fixed quantities at higher prices is a measure of reciprocal advantage.

Textile Output.

The increase of 745 million yards in India's cloth production during 1943-44 has been referred to recently by the Supply Member in indicating that the total quantity available after the first year of control will be larger especially as Defence takings are reduced. Textile control has been fruitful in so far as mill production surpassed the record output of 1941-42. Though production in April-May 1944 suggests that there has been a fall owing to the mills being short of fuel, the supply must be influenced by the latest warning given to the trade. Since exports in 1943-44 were reduced substantially through licensing rules and by the levy of a cess since the net addition to cloth supplies must exceed over 1,000 million yards. Prices since April have declined and the drop in the index from 524 in May 1943 to 324 in May 1944 indicates that material improvement has followed the imposition of control. In April measures were adopted to fix quotas and direct the distribution of cloth to retailers. The increase in Indian mill production exceeds the decline shown under imports in 1943-44 as compared with 1940-41. Retained imports in 1943-44 amounted to three million yards only. The increase in Indian mill production accounts for a rise of 274,000 bales in consumption of raw cotton. Though the increase is not very impressive, it exceeds the decrease shown under exports of raw cotton from India. As the 1943-44 cotton crop was estimated at over five million bales the surplus has not been without effect on prices since March. But recovery has taken place and in the light of the figures as to textile output, the cotton market may be expected to hold up. The more significant development of the war period is the increase in raw cotton imports. At present India's imports of raw cotton exceeds her exports and the only relevant factor for the future is the state of the mill industry. Since exports have declined protection for cotton manufactures may be viewed in the future as protection for the Indian cotton grower who is helped already by the import duty of one anna per lb of raw cotton.



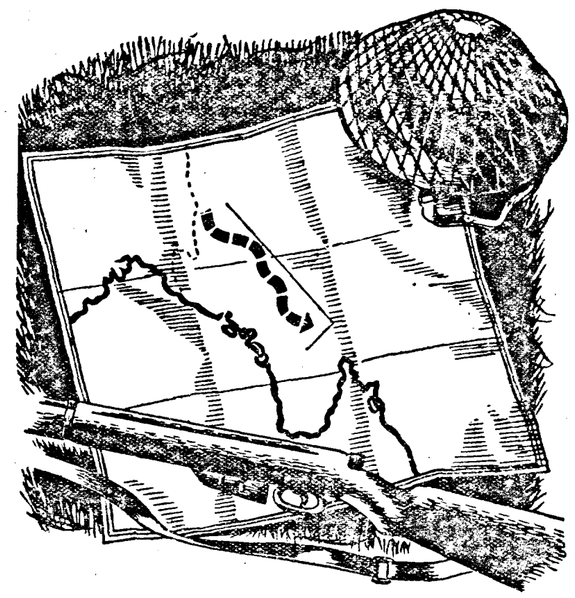
Problems Before the Glass Industry.

Indian glass industry has been quick in taking advantage of the artificial protection provided by war conditions. Today there are 200 glass factories in India employing no less than 50,000 workers. The value of total output is estimated at about Rs. 5 crores and the amount of capital invested comes to a few crores. The growth of the industry has been achieved in spite of halfhearted help from the government but the post-war years threaten to put the clock back unless adequate steps are taken to safeguard the interests of this industry. In his presidential address at the inaugural meeting of the All-India Glass Manufacturers' Federation at New Delhi on the 4th instant Mr. D. N. Sen drew pointed attention to the fact that more capital has to be invested if research and mechanisation are to be organised for the technical efficiency in the industry. But since the Government have not yet given positive assurances of help industrialists are hesitant in sinking more funds. While a few specific industries such as aluminium, calcium carbide, calcium chloride, steel pipes, starch, etc., have been assured of post-war protection, no assurance has been extended to the industries which have grown up during the war to meet essential civilian or even military supplies. The contribution of the glass industry to war effort is creditable and while the proposals to start a Central Glass and Silicate Institute and a permanent Tariff Board are welcomed the real need of the hour is a clear statement of post-war fiscal policy calculated to protect Indian industries against the onslaught of foreign products. It is urged that, besides tariff protecttion, facilities for importing machinery from abroad and better transport facilities should be offered if the glass industry is to progress during peace time. Mr. Sen expressed grave concern at the present-day working of the imports control under which glass containers, bottles, etc., are being allowed to be imported while India has ample capacity to produce these items. It is really significant that while shipping space for importing about 20 tons of machinery for the manufacture of atabrin has been refused the Government could conveniently allot space for procuring bulky bottles from the U.K. Already the industry is worrying about the lack of raw materials, drift of labour and shortage of internal transport, and unless the Government comes forward to give a helping hand the future will be dark and dismal.

Postwar Shipping Policy.

In the report of the proceedings of the conference at Bombay on postwar shipping policy what stands out is the desire to ascertain non-official opinion as to the development of Indian shipping after the war. Since the General Policy Committee gave its support to the plea for large-scale, rapid development of Indian shipping, the conference that is to meet in April should be guided by the declaration made in favour of reservation of coastal traffic for Indian shipping by Sir C. P. Ramaswami Ayyar as well as the aims listed in the memorandum, namely, an increased share of coastal trade including trade with Ceylon and Burma (the present Indian share is estimated as between 20 and 30 per cent) and a substantial share in the near trades e.g., to the Persian Gulf, East Africa and the East Indies besides a fair share in the trade between India and Europe and North America. The development of countrycraft should receive the enlargement of the Indian share in coastal trade, but in regard to India's share in other trades much depends upon the agreement reached with Britain. The Commerce Member announced that India is not committed to any international agreement and the approval of the memorandum presented was influenced largely by the announcement. India's aspirations were referred to in the statement made at New York by Mr. G. L. Mehta last week when the connection between the mercantile marine and naval defence was stressed. Reference was made to the U. S. desire to carry at least 50 per cent of its overseas trade in its own vessels in order to support the view that India is entitled to a larger mercantile marine in the future. Since Maritime states are ranged with the Indian shipping industry as regards a new definition of both status and privileges, the sharing out of enemy countries' traffic acquires greater importance than the restoration and replacement of tonnage.

SHEPHERD'S DELIGHT....



. . . and the embodiment of animal health. Yet diseases of sheep cause an annual loss in Britain alone estimated in money values at over £1,000,000. Mastitis, a disease which attacks dairy cows, alone reduces our milk supply by many million gallons a year. Although Britain has done more than any other nation to raise the standard of animal breeding, she can ill afford losses on this scale with food, one of the major problems of the country. No more can India. The veterinary profession, helped by the work of the research chemist and the products of the British chemical industry, is setting out to reduce them. The duty of the veterinary surgeon, "the physician of the farm", is to prevent disease as well as to control and cure it. For these purposes he must have a wide and growing range of chemicals — ranging from simple salts to make good the mineral deficiencies in their food or pastures which cause wasting diseases in animals, to complex synthetic compounds used to remedy certain glandular troubles, including forms of sterility. He needs a variety of disinfectants and antiseptics to destroy germs; arsenical, sulphur and derris compounds to check external parasites; and organic products, such as phenothiazine, to purge animals of parasitic worms. Sulphonamides and flavines help him to combat strangles in horses, mastitis in cattle and pneumonia in pigs. He exercises increasing control over many diseases by chemically treated vaccines. The vaccine for dog distemper involves the use of formalin and a recently developed vaccine for swine fever, of crystal violet. These are great advances. But such serious diseases as tuberculosis, Johne's disease and contagious abortion still await specific cure. The alliance between the veterinary profession, the research chemist and the British chemical industry is already a close one, but it must be developed and strengthened before it can be expected to cut the annual bill for animal ill-health to a figure which can be viewed without anxiety.

ROAD BACK TO BURMA

Japan's "Invincible men" are meeting their doom everywhere. They are on the run.

On the Manipur and Burma fronts five Japanese Divisions have been decimated. Fifty thousand Japanese have been killed. And this takes no account of the thousands of victims claimed by our aircraft. In Burma, where for a considerable time our men were on the defensive, we are definitely on the offensive now. Slowly, mile after mile of Japanese occupied territory is being cleared.

Japan has now suffered an unbroken series of defeats everywhere, on every front, far and near. The initiative at all points, from Myitkyina to the Bay of Bengal, is with our men.

DIMAPUR—KOHIMA—BISHENPORE—PALEL —MOGAUNG—MYITKYINA—SITTAUNG

DESPITE THE 'ACTS OF GOD'

In less than five minutes the Bihar Earthquake of 1934 accounted for the loss of over 7,000 human lives in addition to a considerable destruction of property.

The actual loss of life will never be known, but it is quite certain that a considerable number of able bodied earning members of the families in affected areas perished; and the damage to property denied their surviving dependants of whatever financial security they possessed.

Ruby General policy protects against such 'acts of God'. There is no other way by which you can guard yourself and your family. The strong foundations on which Ruby General Insurance Co. Ltd., is established coupled with the business ability of the management, offer you the best possible protection and security.

In this context the purchase of superfluous tonnage from the United Nations appears shipbuilding. This may be duly linked with the disposal of sterling assets and State investment in shipping. In spite of Australia's experience with the Commonwealth Line there is reason to urge that State-owned shipping will be able to stand up better to competition, and claims formulated on behalf of India will meet with a better hearing if the State takes a direct interest in shipping. That the Government is dissatisfied with the existing position is perhaps the strongest argument in favour of State investment in ships. Private capital may be invited to assist on definite terms if the form of State control is settled in advance. British shipping obviously looks for an era of revival after the removal of control. That must not be lost sight of in examining the claims advanced on behalf of Indian shipping. The failure to secure proper advantages for India in regard to civil aviation need not be viewed as a bar to the prompt assertion of national claims. Satisfaction with the official outline of India's requirements should be associated with knowledge of what is being attempted by South Africa which is resolved to develop trade with Central Africa in South African bottoms and has proceeded far with shipbuilding plans.

France and Russia.

The direct result of Gen. de Gaulle's visit to Moscow is a treaty of mutual assistance between France and Russia. The condition of co-belligerency is recognised in the pact signed on December 10, but the Soviet Union has not made a promise like Britain to supply arms to France. The alliance will doubtless strengthen the case for territorial compensation that France will present. It will also weaken plans for a West European bloc. The visit of a Soviet Military Mission to Paris will determine other things besides the support that the parties of the Left will give to the provisional government. But it is rather surprising that the French desire for security has taken shape in advance of the peace settlement. The Soviet-Czech treaty made last December has influenced France even more than the Anglo-American failure to frame armistice terms for Germany. If the frontiers are excluded from consideration, the treaty which inevitably provokes comparison with Laval's effort in 1935 to secure Russian support against German aggrandisement will be generally treated as a symptom of Europe's distrust in the ability of the Three Powers to meet post-war demands. The new system of alliances need not detract from the strength of the proposed organisation for collective security, though it will make Russian dictation in respect of Poland's frontiers inescapable. The treaty indeed follows the failure of the Polish National Committee to frame proposals for consideration by the Soviet Union. It will, therefore, be regarded as a blow to Poland. There is, however, the effect on French revival. The triple entente is re-established in a new form. When Germany's alliances have been shattered, it is Russia that has found the European vacuum most advantageous. If the Franco-Soviet treaty affords no indication of what support will be forthcoming for the inevitable claim to the Saar or the Rhineland, it makes apparent the complete break with foreign policy pursued between 1938 and 1940 by Russia. Since Russian policy is no longer Isolationist, there may be support for Russia in regard to Yugoslavia where the federal solution is now sought to be imposed in the interests of Yugoslavia as well as her Allies.

Help from the Army.

What the Army is doing about increased food production is shown by the help given to vegetable growing in the Nilgiris. That is not the only activity pictured in the Southern Army's programme. The Director of Agriculture estimates that 300,000 acres only are under vegetables in Madras and the outturn is not enough for the population of 49.8 millions. A daily ration of 10 ounces of vegetables is described as the minimum for the Province and the hints given to cultivators are meant for the Army as well. The Southern Army's own efforts extend from Poona to the far South and livestock outside barracks are not neglected. Poultry and pigs are the object of special farms. The first number of the magazine that describes the Army's grow-more-food programme refers to the increase in vegetable growing in the Nilgiris as amazing. The Badagas have benefited most, but civilian consumers in Madras have also derived the advantage of lower prices as military demand has been taken off. In other Commands similar efforts are being made. Though prices have not yet responded to the increase in independent production, the general result may be favourable in the future. There have been enough hints as to soils and seasons in the advertisements prepared and the price control of local and imported vegetable seeds was undertaken to supplement the drive for more market gardens. Waste land and waste water are put to new uses and the Army's ingenuity with salved materials is described in the account of what can be done by way of stites, hutches and lofts with old iron and bits and pieces of wood. Since the Army's interest in civilian effort is unmistakable, it is the farmer who must watch the efforts made to store potatoes and preserve eggs. As the Army's whole plan helps to keep prices stable and supplies through the year continuous the public should benefit greatly. The main idea is to extend the food-and-feed to all units. If ex-soldiers are given an interest in special branches of agriculture they may do better after they return to the villages. The Army's assistance to market gardeners in the Nilgiris extends to the provision of fertilisers and lorry transport but the Government has helped directly with advances and advice. The success of the scheme is an object lesson to all Provinces. That is one reason for desiring the maintenance of the co-operation between the Army and civilians in regard to food and fodder.

Chandausi Oil Industries

An announcement relating to the ordinary and 5 per cent preference shares of Chandausi Oil Industries appearing today relates to the acquisition of an oil mill and ice factory as a going concern. In the big U.P. market town connected with the principal trade centres the crushing of oil-seeds has long been profitable. Extensions to the plant with the help of capital raised are planned. Only Rs. 6 per share is payable as the intention is to raise Rs. 6 lakhs only through the present issue. Oil mills in India have at present special earning potentialities and shares of oil mills stand at a high premium. The promoters' estimate of one rupee per maund of oilseed crushed with the mill's annual intake at 96,000 mds. implies earnings at the rate of over 19 per cent on capital to which the ice factory's profits (put at Rs. 10,000 per season) will be added. This is a high return on capital in a non-risky enterprise. The additional plant for refining, and double boiling of linseed oil, and soap manufacture will enhance the profit earning capacity of the Company.

Remarkable Growth

Dividends at the rate of 5 per cent on the Preference 6 per cent on the ordinary and 15 per cent on the Deferred shares (since converted into Ordinary shares) of the National Savings Bank (the same as last year) are to be declared at the annual meeting on December 23. The substantial increase in the Bank's profits from Rs. 5.39 lakhs accounts for the larger net profit of which Rs. 50,000 is set aside for Reserve Fund and Rs. 20,000 for Investment Reserve. The increase in the Bank's capital following the issue of shares at a premium is going to lead to a substantial addition to Reserve Fund so that the Board's satisfaction with the results for the year ended October 31st rests on a solid foundation. The Bank's balancesheet as on October 31 shows total deposits exceeding Rs. 419 lakhs and ad-

On Application Rs. 10-8 Per Share

Letters of acceptance or renunciation along with the remittance should be received at the Company's Head Office or the Company's Bankers, the Bank of Mysore, Ltd., Madras, on or before the 28th December, 1944.

Details of the issue and forms for acceptance or renunciation are being posted to all shareholders registered in the books as on 6th December, 1944, and any shareholder failing to receive the forms is requested to communicate with the Company.

By Order of the Board,
S. PARTHASARATHY,
Managing Director.

vances totalling Rs. 118.12 lakhs. Cash balances totalling over Rs. 150.2 lakhs indicate a very liquid position while the major asset is the Bank's investment in Government securities totalling Rs. 164.13 lakhs. For a Comparatively new bank with branches limited to Bombay and the Punjab the figures are undoubtedly impressive) Further expansion of resources and activity is ensured by the Board's decision to open four more branches. The National Savings Bank's progress in 1943-44 is fully reflected in the profit and loss account for the second year and the increase in ordinary capital is testimony to its successful working. The Board in expressing confidence as to the future have reason to look upon the past year's results as eminently satisfactory.

Letter to the Editor :

SIR,

I have read with interest a contributed article under the caption "Policyholders and Life Insurance Companies" in your issue of 2nd December 1944.

I entirely agree with your contributor as regards the transfer of Companies. A set of persons by reputation and by careful management might have attracted a large number of policy-holders to place their savings with an Insurance Company. They should not then be allowed to transfer the control to other parties who may or may not take the same interest in the concern as they did. One way to present this is to put a check on the voting power of the Shareholders who hold a large number of shares.

In this connection, I may inform you that the "Industrial and Prudential Assurance Company, Ltd.," have got a Clause in their articles restricting this right of voting. They have got one vote per share upto 5 Shares, and after that the right of voting is restricted to one vote per five shares. This automatically becomes a good check.

The instance of the Reserve Bank of India, restricting the maximum voting power to five, may not be very acceptable from another point of view. Just as the policyholders are to be protected against transfers of control, in the same way the management should have some protection against the stray shareholders who may combine and do things without rhyme or reason.

A further suggestion may be made as regards new Insurance companies. If it is felt that Life Insurance Companies should be predominantly governed by the policyholders' vote, it may be suggested, that, under new floatations Life Insurance and Non-life Insurance should have separate companies. The life insurance companies may be allowed to have a redeemable Share Capital with the condition that the management should have a right to return the capital after 15 years of the establishment of the company on certain terms. This provision will automatically turn all such life insurance companies into Mutual Companies after the agreed period, if it is so desired.

Regarding Nationalization of Insurance, it will be agreed, that it involves a larger question of policy, and till so many other things are nationalized, it cannot be discussed. To talk of Nationalization under a bureaucracy is a contradiction in terms. It may be called a bureaucratic control of Insurance, and not Nationalization of Insurance. We have very sad experiene of the managements undertaken by our bureaucracy in India. They are more expensive than private managements, and not always as efficient. Situated as we are, there immediately arises in State managed concerns, the question of proportionate employment according to communities and races. The theorists who discuss this problem forget the practical aspect of it. My suggestion, therefore, would be to postpone the consideration of this question till we get a National and responsible Government.

K. C. DESAI

Clive Street Gossip

This year's annual session of the Associated Chambers of Commerce seems to me in some ways markedly different from last year's. Last year, both Lord Wavell and the President seemed anxious to grapple in a helpful and realistic spirit with India's political and economic problems. For Lord Wavell, it was almost the first occasion for a public utterance; and the speech gave evidence of his eagerness to be considered sympathetic, open-minded and progressive in matters relating to India. He was then fresh from his vigorous personal efforts to resolve the food muddle. The whole of India expected him to give some kind of clue about the policies he would pursue in his regime. And though it is possible that people read more into it than was meant by its author, it did lend itself to a cheery interpretation. Likewise, the President's speech as well as the main resolutions of the session were liberally conceived. British commerce seemed not unwilling to turn its back on the old policy of stolid opposition to India's political and economic aspirations. This year, I must say, I miss that note of sympathy. Lord Wavell's speech is couched in more complacent language. His consciousness of freedom from immediate political pre-occupation is clearly seen in almost every line. Mr. Mealing, too, relapses into the old style speech of British commercial leaders in India, who thought it sufficient to tone down their condemnation of nationalist opinion and policy by a few conventional compliments to this "great country". I have not yet received the resolutions to be passed at this year's session; and I can say nothing about them. But of the Viceroy's speech and that of Mr. Mealing, I would say that both reflect the easy position of the Government at the present time and the complete discomfiture of the political parties.

My point will be better understood with the following extract from the leading article of "Indian Finance" of December 24, 1943, entitled "Better Mood of British Business":

> 'This year's session of the Associated Chambers of Commerce will be memorable for a long time for the evidence it bears of the anxiety of British commercial interests in India to align themselves, as far as may be, with public opinion in this country. Though it is regrettable that Lord Wavell missed the opportunity of striking responsive chords in the public mind, the speech of Mr. Burder and the tenor of the more important resolutions will be welcomed throughout the country as a promise of greater concord. The Presidential address at the annual session of the Associated Chambers is usually a pean of praise for the official policy of repression or an apologia for the Government's record in the political field. The Chambers ventured to criticise the Government only on minor details of policy which affect adversely the interests of the constituent members. But Mr. Burder has now cut fresh and fertile ground by exposing the defects of the food policy, upholding the claims of education to priority in post-war reconstruction and emphasising the need to pull up the general standard of living as well as the dangers of disproportionate attention to industrial labour. Both in what it omits and in what it includes, the speech shows a judgment and a sense of proportion which the Indian public would be ill-advised to ignore.'

* * * *

My comment on this year's speeches is that they undermine the optimism which we felt a year ago. If British commerce seeks to retain its importance in the Indian economic life, its leaders ought to be able to command more enthusiasm for post-war planning. Mr. Mealing, while he referred to the readiness of the British Commercial community to offer such co-operation as might be possible, also observed: 'It must, I fear, be anticipated some interests will desire to shape industrial planning with greater regard for their own benefit than that of the country, and that political and racial slogans will be used to that end. I trust such a policy will not prevail as it can only stultify efficiency and progress towards sound industrial development.'

* * *

I am by no means ready to assert the contrary. But, if last year's good beginning is to be kept up, more constructive suggestions ought to be forthcoming for ensuring mutually profitable co-operation between Indian and British business. And the charge presumably against Indian businessmen that some sections will like to benefit themselves more than the country should have been held back, if only because British commerce cannot throw the first stone.

* * *

It is a pity that Lord Wavell, too, has failed to evince in this year's speech the same spirit as characterised his last year's address. This is not a surprise, as it is becoming increasingly clear that Lord Wavell is content to run the Government of the country merely on the basis of efficient tackling of the tasks which appear important to him. To the administrator who is actually in charge, these tasks are, no doubt, important. But not to the exclusion of others, which in any view but the most near must seem paramount. In this connection, one is struck with the failure of His Excellency to develop a cogent policy for the settlement of the Indian political problem. When Lord Wavell made his first address to the Central Legislature, it was thought that he saw in the close association of popular leaders in the discussion of long-term problems a way out of the present deadlock. He made it clear that he did not expect the Congress to go into sackcloth and ashes over the August resolution but that he considered the readiness of leaders to co-operate in these tasks as an equitable condition for their release. It is indeed unfortunate that this speech led to no results. But all the same, it is no solution of the problem to jibe at "Quit India", as a quack remedy or to cast a mild discredit on Pakistan as an unnecessary major operation on a healthy body. Nor will it cut ice with the public to claim that the present Government is a National Government. The only hopeful part, if we must hope against hope, is Lord Wavell's reference to the further discus-

sions of the problem undertaken by prominent Indians. But this, too can mean little in the face of Lord Wavell's unequivocal statement:

> 'The average man is not willing to surrender comfort and income for the benefit of those poorer than himself or of future generations, unless he is coerced by a dictatorship, or led by those in whom he has great confidence. If it were possible to form such a National Government during the war, it would quite clearly and quite definitely have to function under the existing Constitution, no material change of which is possible during the war.

* * * *

The Coffee House imbroglio, I understand, is not near its end. In fact, it could hardly be otherwise, with so much of obduracy on one side and so much of justice on the other. The facts of the case are well known. And, the authorities are apparently trying their best to avoid such a palpably indefensible hardship to the public and the Coffee House interests. "Interests" is not the proper term, since the Coffee House is today almost the only place where the civilian public can get refreshments of reliable quality at very near cost price. This does not weigh with those who insist on having the Coffee House premises and refuse to consider any alternative proposition, however intrinsically good it may be. Perhaps, they have their reasons. But one result of this prolonged tussle is that it is now established that the White House, which accommodates an industrial museum, can be made available for the Coffee House. The Government of Bengal, who have offered it as an alternative to the American authorities, cannot refuse it to the Coffee House when it will be ejected from its present premises. It cannot be that the White House can be spared for the American authorities but will suddenly become indispensable if the prospective tenant is the Coffee House. The thought that at the worst the Coffee House will have to shift to a building nearby and not close down altogether should be as invigorating as the coffee that it serves to a public which is hardpressed in many ways.

My appeal for funds for relief work in Malabar has brought forth quick, but not yet adequate, response. Those with whom I have directly come in contact during the last week have readily and generously volunteered their contributions. The acknowledgements are made at the end of this column. The amounts so far received total Rs. 3,653 as against the target of Rs. 10,000. I take encouragement as much from what has been done already as from the fact that "Indian Finance" takes more than three days to reach the various important cities of India. Even in Calcutta, thanks partly to themselves and partly to the tardiness of the delivery peons, some subscribers read the paper only on Monday. All these are our potential in the war against famine in Malabar. I have no doubt that the target will be reached. But to give promptly is to give profusely.

Better late than never. I had been wanting to refer to Mr. N. V. Nayudu joining the United India after resigning his place in the Government of India as the Assistant Superintendent of Insurance. Mr. Nayudu was in the Insurance Department in just that period in which on the strength of the Act the Department was tidying up the position and affairs of many a company. It was a job that required sympathy and firmness alike; and Mr. Nayudu had more than his share of this difficult work. With this experience which is by no means common, he has joined the United India. I have no doubt that the leading South Indian Company will find in him an apt instrument for drawing up and executing new plans for the Company's progress.

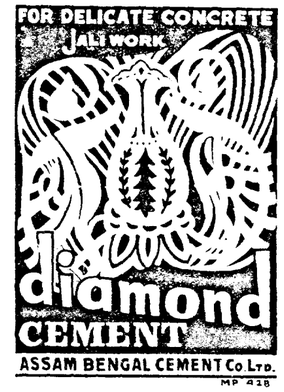
(FROM OUR CORRESPONDENT)

New Delhi, Dec. 13.

The spectacular storm raised by the Princes has blown over for the present. The Viceroy has gone on tour and most of the Princes and their advisers have left the capital. According to one report the controversy will now be carried on by correspondence and the Chamber may not meet till at least the major differences are smoothed over. It is understood that the Centre is not going to yield on the question of treaty rights and other issues concerning maladministration in petty states and here the Princes can expect little public support. The question of industrial development and taxation policy are however more complicated. While it is realised that for economic development the whole country must be treated as one unit and provincial and state plans must fit into the general picture, special facilities must be provided for backward units to catch up with the rest of the country. And that means they must be allowed to keep down taxation at a level which will attract capital and not in any way hamper initial progress. In this connection it is mentioned that even the provinces have so far refused to fall in line with the Centre. The provinces are clinging to autonomy in this matter and only want the Centre to subsidise their pet scheme without in any way dictating what those schemes shall be. As one local paper remarks: "Provincial autonomy and economic integration are proving contradictory and the attempt of the present central government to prepare a blueprint for the whole of the country is meeting with opposition."

* * * *



The Viceroy has been non-comittal in his reply to the Princes on industrial policy so far. "The question of industrial policy of the Central Government", he is said to have written "as it affects the Indian States has since been the subject of discussion between representatives of the States and the Central Government. His Excellency trusts that as a result of these discussion the doubts to which the deputation gave expression will be resolved and that the Indian States will be enabled to play their full part in the post-war development of industrial and other activities in the country. The problem of co-ordinating post-war development objectives as between the Central Government and the Indian States has also since been the subject of discussion between your representatives and those of the Central Government. In the circumstances and pending the conclusion of these discussions it is not possible for the Crown Representative to comment in any profitable way on the suggestions made by the deputation. I am to assure you, however, that the Crown Representative recognizes this problem as one of very real importance and that it is receiving—and will continue to receive—his close personal attention." Till the Central Government's blueprint is ready it will be difficult to judge the right and wrong of the post-war reconstruction controversy between the Centre and the States.

* * * *

The second part of the Stone Commission's report on the Bombay dock explosion issued yesterday is as strong an indictment of the emergency relief measures during the period immediately following the explosions as the first part which traced the explosions to the lack of most elementary precautions at every stage. The Government appear to have arbitrarily limited the scope of the inquiry to relief measures taken up to 10-30 a.m. the day following the explosions, thus keeping out the inadequacy of the relief to the thousands rendered homeless and the salvage work out of the Commission's purview. As it is, however, the Commission's findings are damaging enough. "During the whole period covered by this report," says the Commission "no organised fire-fighting was undertaken in Prince's and Victoria docks." There was no centralised control whatever to meet the terrible emergency and all the available manpower for relief work could not be effectively utilized. The Port Trust had apprehended the danger of such accidents when the byelaws preventing the admission of explosives into docks alongside a harbour wall were abrogated. But the Government failed to set up the necessary organisation to deal with such an accident if it happened. The action on the contrary hindered relief, according to the Commission, which says: "The miscarriage of the orders of the Commissiontr of Police given at 6 p.m. that Victoria and Prince's Docks were to be thrown wide open and in the case of Alexandra Dock all essential services were to be admitted without question was most unfortunate, since the police officers on the spot, with their minds directed to sabotage, were still thinking in the terms of security measures ordinarily applicable to wartime conditions and had not appreciated the wider aspect that, contronted with the extreme gravity of the situation which would result from the spread of the fire, the risk of relaxing measures of security had to be taken in favour of the maximum effort in fire-fighting, clearing the docks of ships and explosives and preventing generally the spread of the fire." Even taking into account all the extenuating circumstances the Government remain largely responsible for the woeful inadequacy of emergency relief measures.

South India

(From Our Correspondent)

Madras, December 13.

Motor transport interests in South India arranged a conference recently to ventilate grievances and ask for changes in policy and conditions of reorganisation. Operators of road services are suspicious of fusion plans generally and look upon the Railways' arguments for co-ordination as selfish and short-sighted. Proposals for formation of transport companies under the Railways' auspices were deprecated at the conference held at Coimbatore. Relief in regard to tyre control was requested as well as changes in the code and traffic rules. The most important resolution passed was that asking for enhancement of fares. Road transport interests urged that in view of difficulties regarding spares, tyres and fuel the maximum fare per mile should be 9 pies for the duration instead of 6 pies per mile as at present. Those in the business have been reminded that individual owners cannot get on as before and must organise themselves into either co-operative or joint-stock concerns so that the authorities would give them the same consideration as they give to big concerns running fleets of trucks and buses. Motor transport is certainly developing as usual as the figures show an increase in the number of lorries running in 1943-44. There was however a small decrease under buses as compared with 1942-43. A similar decrease under cars and taxes is recorded. The increase of large scale operators is indicated by the fact that 40 operators owned 20 or more buses. The smaller operator diminishes in importance and the defensive attitude adopted by the conference at Coimbatore is thus fully explained.

Co-operative banking in Madras continues to flourish to judge by Mr. Sathianadhan's survey of the central co-operative banks' working in a speech at Tinnevelley last week. More deposits flowed in as central banks tend to resemble jointstock banks in regard to the disposition of assets and liabilities. Since the co-operative banks finance 15,000 credit societies their progress to the point at which bad and doubtful debts are inconsiderable in relation to their reserves will be welcomed. The Registrar confessed that only in the Ceded Districts does the movement appear to call for special attention. The co-operative banks, nowadays tend to avoid long-term loans and in spite of the need for advances for agricultural improvement prefer liquidity to an increase of advances. A reduction in agricultural indebtedness was referred to as proof of the agriculturists' prosperity. Increased demand for funds came from weavers' societies and consumers' co-operative societies last year. Co-operative finance for land colonisation schemes and self-governing workshops set up by war technicians is expected. As to advice the only suggestion made by the Registrar to central banks was that borrowers should get the benefit of cheap money conditions so that the numerous primary societies could develop.

Several chambers of commerce find the Hoarding and Profiteering Ordinance of 1943 rather inconvenient in relation to trade. A detailed account of difficulties was given lately. It was declared in a resolution adopted after the meeting on Friday last that wholesalers owing to new rules as to distribution and profit margins were handicapped and were also losing custom to new men who had no experience and no obligations. It was proposed that a deputation should wait on the Governor to furnish a statement as to hardships and available remedies.

Mr. C. Elphinston at the Madras Chamber of Commerce annual meeting discussed nearly all issues relating to trade and industry. An objection to official agency for the distribution of fertilisers was entered largely because of a fear that trade channels would suffer. Controlled development is the only thing that will satisfy the European community in India and agriculture is duly preferred to industry, while a fresh argument that tariff protected industries must sell their products at prices that permit of competition with the imported articles may be designed to uphold the system of Central excises. Mr. Elphinston's summary judgement on the Bombay Plan as interesting but unworkable was linked with a plea that real progress is impossible in India without educational advance. The recommendation that parties and their policies in India can be fused has probably nothing to do with the Sapru Committee but springs from the familiar demand for agreement in India.

Mr. B. R. Sen's visit to Madras to ascertain the causes and extent of scarcity provoked petitions and deputations in many places. It is recognised that Government must spend heavily on making rationed food available to the poor. Agricultural development does not promise immediate relief and reliance on Government purchase is approved. The Provincial Food Council appraise of plans for the deficit districts accepted th principle that producers must give up their surplus to Government. The argument for uniform rations for each district was not wholly new. Since shortage of milk and vegetables is now familiar the only comforting intelligence to date is that cows from Sind are to be imported. Alarm may gradually disappear in view of the widespread rainfall in November and after. The Food Council advocated shortage of requisitioned grain and the only material item of intelligence is that Rs. 10 lakhs have been or are being spent on Government godowns to supplement the procurement machinery at work.

LOOKING BACK, YOU SEE THE FUTURE

There is hardly a commodity whether it be a necessity or a luxury, whose price has not risen several fold during the last four years. Control measures have checked the upward tendency of prices and in several cases they have actually come down. But if prices have to be lowered still further—and they must—something more is needed than Price Control. There is only one royal road to lower prices—SAVINGS.

Protect your savings: Land, buildings, commodities, jewels and manufactured goods are bad value for money. Their present prices are unreasonably high. Put your money in fixed investments. There are several. Invest in Insurance, Co-operative Societies, Savings Bank Account, Post-Office Savings Bank and best of all in Government Loans and National Savings Certificates.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Savings can be your safeguard in old age or your opportunity after the war. The man who does not save is missing a golden opportunity.

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

AAA 1117

Gateway of India

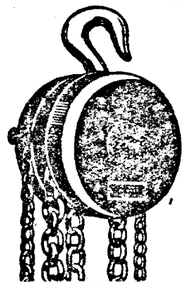
(From Our Correspondent)

Bombay, 12th December, 1944.

India's mercantile marine was very much to the fore this week, what with the Viceroy's fine speech at the annual meeting of the DUFFERIN, the discussions at the first meeting of the Policy Committee on Shipping and Mr. G. L. Mehta's forceful plea in United States for an adequate mercantile fleet for India. Lord Wavell has a way of speaking straight to the heart. A profound observation here, a happy reminiscence delved out of a protean career, a fine joke and often a tiny bit of poetry—these are the lights and shadows that play around the "land-lubber" Viceroy's speeches. The Viceroy admitted that India should have an adequate strength of shipping manned by her own citizens and seemed aware that India's coast line was shorter than only Australia and U.S.A. The DUFFERIN experiment is something like a slow motion projection on the national screen. Since 1927, 719 cadets had joined the ship and 145 cadets are now under training. More than half of the trained men are actually serving in the R.I.N. or mercantile marine. This year a record number of applicants had turned up. So far so good.

At the Policy Committee meeting, the discussions centred around the memorandum put out by the Government of India indicating their approach to the problem. The memo contains some frank observations and seems to recognise the vulnerability of India's position, emphasised by war conditions. The acquisition of an adequate share in the world's carrying trade was stated as the aim of post-war shipping policy and steps have to be taken to ensure this end. Sir M. Azizul Haque, the Commerce Member, hoped that the discussions would lead to the enunciation of a definite post-war policy. The members present expressed general agreement with the memorandum, while Mr. Walchand Hirachand made a forceful speech stressing that the national mercantile marine must be owned and run by Indians. It is noteworthy that an increased share of the coastal trade including trade with Ceylon and Burma, a substantial share in the trade with the Persian gulf, East Africa, Malaya and the Dutch East Indies besides a fair share in the Far East trade and other overseas countries are all visualised for India in the official memorandum. As India may have to look to all forms of transport to sustain her economy in the post-war period, the part that country-craft can play was fully realised by all members. Sir C. P. Ramaswami Iyer on behalf of Travancore and Cochin welcomed the importance given to the country craft. The reservation of coastal navigation for the Indian shipping industry has long been a sore point in nationalist circles and it is hoped that before the next meeting of the committee the Government of India would announce their final decision.

* * * *



Mr. M. K. Vellodi's address at the Rotary Club on textile control was notable for the realisation as much of what has been done for what is yet to be done to solve this great problem. He reviewed the textile position in the country since the outbreak of war, and, while noting the undoubtedly sobering influence of control on the trade, was not loath to admit that "the effect of the shock had begun to wear off". The Textile Commissioner, after observing that the black market was almost the obverse side of control, concluded that there were only two methods to tackle the problem; first, Government should acquire possession of every yard of cloth and every pound of yarn produced and ration them to the consumer: second, the distribution of the goods should be allowed through the ordinary channels of the trade with due safeguards devised by Government and the Textile Control Board. There was more than a hint in Mr. Vellodi's speech that the public has not played its part in the control scheme. No one can deny that the readiness of the public to pay prices higher than the control limits has greatly sustained black markets. The public has been a very active abettor in the offence perpetrated against society as a whole. A measure of self-discipline on the part of the public is clearly necessary, and the control authorities have a right to expect it. You cannot expect cloth control to be a hundred per cent success in this tangled textile position marked by acute scarcity on the one hand and enormous money on the other to feed black marketing.

A special sub-committee of the Insurance Advisory Committee has been discussing the Bill to amend the Insurance Act which has been now referred to a Select Committee. It is presided over by Mr. L. S. Vaidyanathan, Superintendent of Insurance, and includes Messrs. K. M. Naik and Mr. T. C. Kapur. The members were apprised through an official note of the need for Indian life insurance companies to improve the valuation basis and reduce the cost of procuring business especially in the post-war period. More liberal conditions for issuing life insurance policies have been advocated. Especially important is the official view that too many uneconomic units are in existence and that the resulting high expense ratio could be avoided by amalgamation. It is said that necessary legal facilities will be provided by government to bring about such mergers without recourse to a court of law. There is general agreement over the desire ability of the amendments now proposed to the Act, but the commission to be paid to branch managers of companies is still under dispute. The consideration of questions like the control of accumulation of shares and allied problems was postponed to the next meeting of the committee. A tribute must be paid here to the unflagging energy and the crusading zeal of Mr. L. S. Vaidyanathan, whose fervour for improving insurance reminds one of the great effort made by Sir N. N. Sircar when the present Act was laid on the statute book.

Cotton is very much in the news. The local cotton futures market witnessed some pyro-technics when frantic covering by the shorts raised the I.C.C. March to Rs. 452 on Saturday last. The market has since reacted to Rs. 440, but the change in sentiment is significant. The bull clique which has been buying since the Contract declined to Rs. 400 many weeks ago has succeeded in converting the rest of the market to its view. The bears are assailed by jitters and dare not take too heavy a risk. The resulting steadiness of the market has enabled the bulls to unload a good part of their holdings and yet the market remains steady. The strength of the forward market has communicated itself to the upcountry markets where an improvement in the basis has been noted. The spot market at Sewri has been firmer thanks to some active buying by mills which are now interested in both old crop and new crop. The further

Resume of Commodity Markets

There was a rather sharp rise in the raw cotton market early this week though with reports regarding the possibility of a change in the basis of contract a slightly easier feeling is noticeable in the last two days. Bullion prices have continued firm in spite of the regular sales by the Reserve bank of 75,000 tolas of gold and 300 bars of silver. The jute market is easier with the small interest shown by mills and the reports regarding the continued difficulties in respect of coal supplies. The jute manufactures market has remained steady.

There are no important developments in the raw jute market. It is now generally believed that there will be no difficulty in disposing of the balance of the current season's crop and that even if there were a decline in prices, Government buying would be rather prompt. Reports have again been received during the week that Dundee mills are very keen on increasing production and that workers are being called up.

It is unfortunate that the jute mill industry should be experiencing difficulties in respect of coal supplies even with an increase in raisings at the mines. It is said that the Coal Controller is not in a position to allot the requisite number of wagons for the transport of coal. It should be realised at a complete co-ordination of activities of the respective branches of the industry is necessary to prevent further confusion. Raw jute supplies are coming in rather freely but they cannot be accommodated as the offtake is not quite satisfactory and mills are not in a position to continue production at as high a level as they wish. It is hoped that something will be done at an early date to improve the situation.

There was considerable speculative activity in the raw cotton markets last week and the higest levels for Jharilia March was recorded on persistent bull buying. It was reported that unfavourable weather conditions would result in a reduction in the yield and that the calculations of bears would be upset. As bulls had the upper hand there was forced covering and prices were marked higher. Conditions in the futures market, however, are not in accord with the spot market where old cotton is still available at cheaper rates and mills are not very keen buyers of the new crop. The rumours that the Standard Committee is likely to adopt the standard of ¾ inch Jharilla Khandesh which is selling in the market around Rs. 350 had a depressing effect and some of the gains were lost. Quotations, however, are still higher on balance.

The Indian Central Sugarcane Committee has now been formed with its headquarters in Delhi. The first meeting of the Committee was held a few days back and different sub-committees were constituted, one each to deal with technological and agricultural research, a Committee of Exports, a Sugar Standards Committee and Gur and Khandsari Committee. All these would be advisory bodies to the main committee. The Finance Committee which is also constituted will be among the executive and will have all the powers of the full committee.

The all-India Groundnut Forecast for 1944-45 published during the week estimates the acreage under the crop at 5,302,000 against 5,575,000 acres (revised) in 1943-44. There is thus a decrease of 5 per cent. The condition of the crop is reported to be good on the whole. The forecast relates to the period up to October 1944 in the case of Hyderabad State and up to the end of July or beginning of August 1944 in the case of other tracts.

The advantage of a larger summer lac crop has been nullified by the smaller Jethua and winter lac crop. The Baisakhi lac crop which is the major crop harvested in April-June yielded 770,500 mds., an increase in the yield of nearly 100 per cent over 1943. The Jethua lac crop is only 12,500 mds. against 97,000 mds. in 1943. The winter crop in 1944 is estimated to be 185,875 mds. as compared with 387,000 mds. in 1943, a decrease of nearly 200,000 mds. The Katki crop shows a decline of 50,000 mds but the fall in the Kusmi crop is over 150,000 mds.

(Continued from previous page)

trend of the market is rather difficult to assess in this complex context, but it may be noted that the Government of India are expected to release the cotton crop forecast in the last week of the month. That might well change the trend of the futures market. Current estimates in market circles place the crop at 40 lakhs bales and more as against the previous market estimate of below 35 lakhs bales. The reliance now placed on a reduced crop may prove to be wrong. Moreover, a considerable weak element has crept into the bull camp and the technical structure of the market has been weakened.

The E.I.C.A. Board has now decided that the members serving on the *ad hoc* Survey Committee created by Government cannot become members of the E.I.C.A. Super Appeal Committee. The elections for the latter will shortly be held. The bear operators are in great glee that their agitation has succeeded. It is the view of some people that their views need not have been endorsed by the Board, as the men composing the Government Survey Committee are men of unquestionable integrity and command the respect and confidence of the trade. Indeed, what could one have to say against men of such unimpeachable integrity as Mr. Haridas Madhavdas, Mr. R. G. Saraiya? And yet, the E.I.C.A. Board has bowed low before the blast.

SOMETHING "EXTRA" IN THIS INVESTMENT

Life insurance offers you an ideal investment proposition. Government Securities, Bank Deposits, etc., are First Class Investments, but certain New India policies afford better advantages. They are as follows :

- **Handsome Profits :** *At the end of the term, the policy returns the Capital invested with an yield in compound interest which is very often larger than the yield from the Capital invested in other securities.*
- **Full Life Coverage :** *In the event of early demise, the full sum assured (with or without profits) is paid out to the beneficiaries. Very often this means a return out of proportion to the Capital invested.*
- **Saving in Income Tax :** *To those who pay Income Tax, such policies are an added attraction as a substantial rebate is allowed on the premiums that are paid.*
- **No Depreciation :** *The Capital invested does not depreciate nor is adversely affected by market fluctuations*

The Capital may be invested by instalments or in a lump sum at a discounted rate. As the yield varies in each individual case according to age, term, income tax payable, etc., a detailed plan to suit your own needs will be furnished on request.

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, December 14.

Production returns for the month of November are not yet available, but they will be awaited with interest. The general impression was that, due to poor coal supplies, the production during that month had been relatively small. We learn, however that the Industrial Pool not only paid its way but showed a small surplus, which indicates that production must have been well up to average. This is the second month in succession that the Pool has more than balanced itself and it is to be hoped, for the success of the undertaking, that conditions will permit of a continuation on those lines.

The reiteration of the complaints about coal supplies tends to become monotonous if they were not so essential to the well-being of the Industry. Some slight improvement in the position is recorded but the supply is still very far short of the minimum requirements in quantity and from the point of view of quality, perhaps the less said the better. Unless that it is astonishing to most consumers that there is such a preponderance of rubbish produced in the coalfields, to judge by the stuff which mills are expected to use up. In his speech to the Associated Chambers of Commerce today, the Viceroy forecast an improvement in the coal position after the turn of the year. We trust that the information from his Departmental Heads on which that forecast was based is a little more reliable than all the promises with which the Jute Industry has been so lavishly furnished in the recent past.

There was quite a flutter in the Gunny dovecots when it became known that a census of all the "B" Twills in stock in Mill godowns had been called for. The conclusion drawn from this measure was that there must be a considerable Government or other official order in the offing. There have been attempts to appease the curiosity aroused by suggestions that the information was called for merely to ascertain how much justification there was for the recent "bear" attitude of Bazar operators. But the fact that the information was asked for at the instance of the Adviser on Jute Supplies lends colour to the assumption that there is some substance in the belief that the enquiry portends an official order of some magnitude. Such an order would be greeted with undeniable satisfaction in the Heavy Goods section of the Fabrics market where it is believed that more than one group of mills is actually manufacturing "B" Twills for stock—an almost unprecedented position of recent years. But the dearth of offtake in Heavy Goods is again shown forth in the returns of sales by mills for the week ending 2nd December, during which they were unable to dispose of as much as 10 lakhs of yards of twill and plain goods combined, for shipment positions beyond this and next month.

The flood of eloquence which the discussion on the maximum prices for jute in the Bengal Legislative Assembly evoked, only served to show up the distressing ignorance which prevails amongst legislators on the subject of the most important of Bengal's Industries and also her most important cash crop. The amount of ill-informed criticism which the debate produced, and the fact that it was left to the European benches to introduce a measure of reality into the discussion, might well lead the cultivator to ejaculate, "God save us from our friends."

We have previously referred to the muddle which has been occasioned by the increased routing of jute to Calcutta Mill stations via Khulna. It should be recorded that this scheme originated owing to the War Transport Board having decided that upward coal should be moved via Khulna. To provide return traffic for the 60 waggons per day which were alloted for this upward coal traffic, and also for the river craft which did the on-carrying from Khulna, it was decided by the River Transport Control to increase the downward booking of jute by this route to the full capacity of the waggons available. But, as it has been pointed out, only one small carrying company had an operative through-booking arrangement with the B. & A. Railway.

The Joint Steamer Companies also have such an arrangement, but it is to all intents and purposes inoperative. The result was that, the carrier with the through-booking arrangement not having the capacity to handle all the traffic required to fill the available waggons, the craft of other carriers were pressed into the service without any arrangement being made that these carriers should also be provided with through-booking facilities. In such instances therefore the journey divides itself into two distinct sections—the river portion as far as Khulna, for which the carriers only charge their proper proportion of the through-rate of freight, and the rail portion from Khulna to the Calcutta destination, for which the railway charge the full local rate, which is materially higher than their fair proportion of the through-rate. Thus the freight payable on consignments by one company of carriers is appreciably lower than that payable on consignments carried by others, which is manifestly unfair discrimination and should be rectified without delay. But the matter does not end there. The Bill of Lading issued by the privileged carrier, being a through Bill of Lading, can be negotiated immediately it comes to hand and can also be covered by transit insurance in the normal way. On the other hand, the Bill of Lading issued by carriers who have no through-rate arrangement with the railway, only covers the goods as far as Khulna, and is not negotiable because it is incomplete until complemented by the Railway Receipt issued after the goods have been transhipped at Khulna. Nor can such goods be insured under the normal transit tariff on account of the transhipment hiatus at Khulna. There is even some considerable doubt as to in whom ownership of the goods vests during this hiatus. In their haste to introduce the increased use of this route the River Transport Control have definitely erred in not making simultaneous arrangements for through-booking facilities being made available to all carriers tendering consignments to the Railway at Khulna. And in the circumstances it seems up to them to clear the muddle and inconvenience and loss which their neglect has occasioned. It is understood that opportunity is being taken to place the matter before the Chairman of the War Transport Board during his visit to Calcutta, in order to have the position regularised by the extension to at least one more carrying company of the through-booking facilities at present enjoyed exclusively by one small concern.

There is little on which to remark so far as business in Export jute is concerned. Enquiry in the shipment market has been

JUTE

(By Our Staff Correspondent).

Calcutta, December 14.

The raw jute market has been quietly steady with a smaller volume of business passing. With the continued difficulties of mills in respect of coal supplies, mills have not taken keen interest in the market. The statement of Government policy regarding the subject of jute prices has also had a discouraging effect. It was at first expected that efforts might be made for a revision of both minimum and maximum prices though the expectations in this regard were not justifiable. But there is no suggestion regarding a weakening in prices as mofussil markets have remained firm and holders are hopeful of being able to get higher prices in the New Year. It is a pity that shortage of wagons should be curtailing supplies of coal to the mills what time there has been an improvement in transport facilities for the movement of jute.

Mofussil markets as remarked above, have remained firm and there has been anxiety to absorb all supplies of jute coming in. Arrivals are still on a small scale.

In the loose jute section a small business has been recorded but quotations have been very nearly maintained at last week's levels. European packing Middles and Bottoms were done at Rs. 16-8 and Rs 13-8 per maund. Supervised Jat Middles and Bottoms were done at Rs. 16-4 and Rs. 13-4 per maund. Sellers are more anxious to do business.

In the pucca bales section, business for export has been poor Dundee Daisee 2/3 were done at Rs. 76 and Short Group Daisee the market though some business has been at Rs. 85. Mills have been keeping out o reported in Tossa varieties at minimum rates A small business was reported in Lightnings and Hearts at Rs. 74 and Rs. 68 per bale respectively.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, December 14.

The jute manufactures market has remained firm as it is felt that the lower level of production will be a helpful factor for the market. It was reported that many steam-driven mills were idle during the week and that even the foster mills had interrupted working. Some business was reported in 9 Porters for April-June shipment Quotations are nominally at maximum rates..

In the heavy goods section steady conditions have been noticeable. B Twills have been quoting at the higher level of Rs. 62.

PIECEGOODS

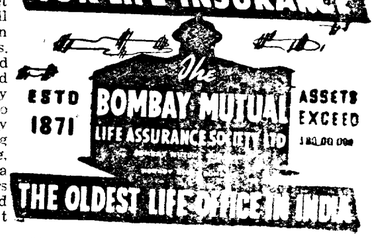
Calcutta, December 14.

There is a great scarcity of seasonal goods in the local market and it is very difficult to get woollen goods both indigenous and imported varieties The arrangements in respect of the distribution of controlled goods have not been satisfactory as supplies received by licensed dealers are meagre. The difficulty in mofussil centres is even greater.

The scacity in respect of finer varieties of cotton goods is still unrelieved and the local stock position is deteriorating.

Yarns of counts 20's and over and ply yarn above 20's continue to remain under the freezing order of the provincial authorities. It is understood that Mr. R. P. Shah has been appointed as the Handling Agent to distribute all frozen yarns to the mofussil centres at 3¼ per cent commission.

The Committee of the Marwari Chamber of Commerce and the Calcutta Yarn Merchants Association met Mr. Kasturbhai Lalbhai, Member, Central Board, on Tuesday evening at the Chamber premises and discussed with him various problems regarding cloth and yarn distribution in Bengal.



(Continued from Previous Page)

negligible and the only business heard of has been done direct by balers on offers to the Purchasing Control in Dundee. The manner in which such purchases have recently been made are the cause of much dissatisfaction amongst shippers of public marks, who believe, with some apparent reason, that they have been scurvily dealt with. Mills have shown practically no interest in pucca bales, although all grades bar Rejections and Cuttings continue to be freely offered at minimum rates. Only small sales of Lightning grade at Rs. 74 have been recorded.

The turnover in Loose Jute has been infinitesimal. After the considerable business of the previous week and the consequent advance in up-country prices which immediately followed sellers had perforce to raise their asking rates, and for several days remained firm at the enhanced level. Towards the close however, in the absence of any response from Mills, sellers are again showing more pressure to get fresh business and the tone is rather easier. At the moment quotations are well above minimum, so talk of buying intervention by Government to support the market has died down. European jute could again be bought at Rs. 16-8 and Rs 13-8 for a fairly low assortment of Mids and Bots, while Supervised Jat quotes Rs. 16 and Rs. 13. Moisture is again showing very prominently in arrivals up-country.

The Hessian section of the Fabrics market has ruled steady and Mills were able to sell a fair quantity, mainly of nine porters, in the April/June position at maximum rates. This demand seems to have been satisfied for the moment and little has been reported for some days. But Mills must be fairly comfortably sold up to June and there is no sign of weakness in that section. Heavy Goods however continue to be largely a drug on the market although, as mentioned above, the census of "B" Twill stocks provided a flicker of hope to holders and manufacturers alike. About the only business recorded was in "B" Twills for January/March at Rs. 61/8 with the usual day-to-day transactions in the Bazar at prices ranging from Rs. 61 up to Rs. 62 and back at the close to Rs. 61-12.

Stock Markets to-day and to-morrow:

INDIAN IRON BONUS ISSUE?

Both the Calcutta and Bombay stock markets were inclined to be rather quiet early in the week but a definitely firmer tendency is noticeable in the latter half with an increase in the volume of business passing. The rise in prices in Calcutta has been more pronounced in engineering shares while in the Bombay market on Thursday a general improvement was recorded with the latest large addition to the note issue. It is said that as long as there is expansion of currency, whether against sterling or rupee securities, inflationary conditions will persist and prices for securities will be marked higher. The strength of the bullion market in spite of the heavy sales by the Reserve Bank is also due to the same reason.

* * * *

Rumours regarding the possibility of the issue of new capital on bonus terms to shareholders by the Indian Iron and Steel Company have been persistent for some time. It was reported during the week that the directors might announce the terms of the new issue at an early date. It is said that the shareholders will be allowed to subscribe for one new share for every four shares held at a premium of Rs. 15 per share. The additional capital is perhaps, needed for additions to plant. There was naturally a tendency on the part of operators to push up prices for Indian Irons. The close for the week is at the highest level of Rs. 40/7. On the basis of the proposals, referred to above, there is scope for an increase in the price for the shares to Rs. 42/8 but as there is a possibility of a proportionate reduction in the dividend on the increased capital, it would not be justifiable to entertain expectations of any sharp rise in prices. In sympathy with Indian Irons, Steel Corporations have been done up to Rs. 33/10.

* * * *

A number of balance-sheets relating to important companies have been published during the week. That relating to Amalgamated Coalfields Limited for the half-year ended September 1944, makes very interesting reading. The shareholders, however, will not be enthusiastic about the increase in earnings of the company as the greater proportion of the increased profits is taken up by additional provision for taxation. The excellent results for the half-year have been due to the increase in raisings from the new Incline at the Datla Colliery, total raisings being 312,351 tons against 268,664 tons in the previous half-year and 244,521 tons in the corresponding period of 1943. Despatches were 313,616, 267,822 and 246,722 tons respectively. No reference has been made to the target quota of the company and there is also no indication of any bonus payment in the accounts for raisings in excess of the target level.

* * * *

The net profit before providing for taxation and depreciation, is Rs. 8,30,935 against Rs. 4,00,205. Provision for depreciation is Rs. 40,344 against Rs. 34,220 while that for taxation is Rs. 5,56,000 (Rs. 2,26,969). Allocation to buildings and machinery replacement fund, being the amount of compulsory E.P.T., is Rs. 1.1 lakhs (Rs. 40,000). The dividend is higher at 10 percent against 8¾ percent. In the half-year ended March 1944 the distribution to shareholders was reduced on account of the large increase in taxation though profits were higher by more than Rs. 1½ lakhs.

* * *

Pench Valley Coal Company Limited, belonging to the same management, has been able to show a net profit, before providing for taxation and depreciation, of Rs. 1,99,954 for the half-year ended August 1944 against Rs. 1,52,728 for the previous six months. Provision for taxation is Rs. 79,222 against Rs. 65,498 while the charge on account of depreciation is Rs. 10,404 against Rs. 10,000. The dividend has been increased to 11¼ percent from 10 percent. The amount carried forward is higher at Rs. 21,734 against Rs. 8,312 brought in. The output was well maintained during the half-year in spite of the great difficulties in respect of labour and the procurement of essential stores and equipment.

* * * *

Even with the slight decrease in the output over the average for the previous years in the various departments of *Indian Steel & Wire Products Ltd.*, in the year ended March 1944 total sales were higher than in 1942-43. The Company has been successful in the manufacture of special types of wires and it is hoped that after the war it may be possible to take up the manufacture of these special wires on a competitive scale. The net profit, before providing for taxation and depreciation, is appreciably higher at Rs. 77,63,923 against Rs 40,79,253. Additional provision for taxation and compulsory E.P.T. deposit as in the case of other companies, resulted in a considerable reduction in the amount of disposable profits. In order to maintain the dividend for both ordinary and deferred shares the directors decided to make only part provision for E.P.T compulsory deposit as it was thought that the cash resources of the company were sufficient to meet any E.P.T. tax deposit liability that might arise. Provision for taxation is Rs. 54,25 lakhs against Rs. 22.25 lakhs while the amount set aside to depreciation is Rs. 7,00,169 against Rs. 5,90,281. The sum of Rs. 5.5 lakhs against Rs. 2 lakhs has been transferred to the Reserve Fund, being part provision for the deposit under the Excess Profits Tax Act. The dividend on ordinary shares has been maintained at Rs. 3/8 per share and on deferred shares at Rs. 2/8. The sum carried forward is lower at Rs. 42,662 against Rs. 59,211 brought in.

The earnings for 1942-43 were adversely affected by the shortage of motive power available from Tata Iron & Steel Company Limited, due to the strike in their works. It is interesting to note, that the earnings for the latest accounting period are the highest in the history of the Company.

* * *

Thanks to the larger cane supplies *Mysore Sugar Company Limited* has earned the highest profits since 1940 in the year ended June 1944. The net profit, before providing for taxation and depreciation, is Rs. 18,83,996 against Rs. 13,71,168 for the previous year. But the directors have again decided only on the maintenance of the dividend and bonus at 20 percent. for the fifth year in succession, the increase in earnings being utilised towards larger depreciation on fixed assets and allocations to reserves. Provision for taxation is considerably higher at Rs. 6.51 lakhs (Rs. 2.75 lakhs) while the amount set aside to depreciation is Rs. 4,53,531 against Rs. 3,94,153. The allocation to funds is Rs. 3 lakhs (Rs. 2.5 lakhs). The amount carried forward is Rs. 88,451 against Rs. 89,843 brought in.

* * * *

With the addition to reserves as above, the total reserves will stand at the phenomenal figure of about Rs. 42 lakhs against the share capital of Rs. 21 lakhs. The Chairman has taken pains to explain the reasons for strengthening the reserves as there has been an insistent demand for the issue of bonus shares to the shareholders of the company. It is said that the directors have been anxious to build up a strong reserve position in order to be able to provide fully finance for future requirements.

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment. Ed.—I. F.]

Towards the close of last week a slightly easier feeling was in evidence due to the receipt of unfavourable news from China. The easiness, however, proved to be short-lived and the intrinsic position of the market asserted itself quickly.

Talking about developments in China I fail to understand as to why an unfavourable development there should be construed as a bear factor for our markets. Even the Bombay operators whom I consider to be the shrewdest speculators in the world are inclined to take a bearish view of the market whenever unfavourable news is received from China. It reminds me of the days immediately following the collapse of France in June 1940. There was a sort of panic in the market and prices of all securities came down sharply. One day when I was in the market a number of operators gathered round me and wanted to know my opinion about the existing situation. I asked the question: "What would you do if apprehensions are raised in your mind regarding the solvency and stability of some institution or party with whom you have money on deposit? Will you not try to save your money by trying to withdraw your deposits if possible? What would you think of a fool who instead of taking steps to withdraw his deposits goes to the market sells his house, shares and other securities and deposits that money free of interest with the party about whose solvency he is apprehensive? The collapse of France means that you are now uneasy about the future of the British Empire. If you sell your shares and deposit that money in the bank it means you are lending it money free of interest. If I were in your place I would get hold of all the cash I can and buy whatever commodity or shares I can get cheapest.

I need not say that the panic that followed the collapse of France in 1940 proved a very short-lived one. Everyone who disposed of his shares and securities had to regret his action because all markets thereafter experienced a sharp rise.

Similarly, if unfortunately Chinese resistance collapses, looking to the prevailing psychology of market operators, there is bound to be a setback though it will be only temporary. If the British Empire could come out on top even after the collapse of such a powerful ally as France, the collapse of China cannot make difference to the ultimate outcome of the present conflict. It may if anything prolong the course of the war in the East. But that should be a bull factor in the market. If on receipt of any unfavourable news from the Chinese theatre there is a fall one would be well advised to purchase in that market.

On reports that Indian Iron & Steel Company intended issuing additional capital and that the new capital would be offered to the existing shareholders at a price of Rs. 25 per share in the proportion of one share to evtry holder of four existing shares there was a fair-sized rise in the price of Indian Irons. On Thursday the market closed at about Rs. 40-4 after touching Rs. 40-8 . If this information turns out to be correct the market may still go up by about a rupee.

On discussion I find that so far as Indian Irons are concerned there is a mixed feeling in the market Some of the prominent operators are inclined to take the view that the additional capital will be a bear factor as this new capital is not likely to have profits in the near future and therefore it will only mean that there will be so many more mouths to feed out of the existing earnings. I would reserve my judgment till I know definitely the purpose for which the additional capital is to be raised.

Coal shares have been steady without any change in values. There were rumours in the market that the coal industry may receive some further encouragement to increase its output but nothing definite is yet known.

After a careful study of the present market conditions I find that general opinion is that while there is no reason to expect a decline there will not be any substantial rise unless there is fresh outside buying. There is a feeling at present that the present prices are fairly high. The market requires some fresh stimulus to go up. I think the fresh stimulus will come if expectations regarding relief in respect of E.P.T. materialise.

LATE RALLY IN PRICES

STEEL & TEXTILES PROMINENT

(By Analyst)

Bombay. Dec. 14.

Dalal Street after declining substantially in the early part of the week firmed up again at the close due to professional support and also bear covering. Calcutta also was strong in Jutes and Coals whereas Madras was dull all round without any special feature to report. In *Tata Steel* a leading professional operator who was reported to have sold and booked profit around Rs. 2,270 seems to be still a buyer and Deferreds moved up to Rs. 2,267-8 to-day and Ordinaries to Rs. 405-8, though closed lower at Rs. 2,243-12 and Rs. 403 respectively. I recommend the liquidation of Tata deferreds around Rs. 2,270. I still stick to my opinion though some of the operators in the market are talking of Rs. 2,300 for Deferreds before X'mas holidays. *Indian Iron* were marked up to Rs. 40-7 suddenly due to revival of rumours of bonus issue.

Textiles also lost ground in the beginning of the week but on Wednesday, *Kohinoor* which opened at Rs. 598 suddenly came into demand and were done up to Rs. 623, though closed steady at Rs. 616. *Simplex* also were in special enquiry around Rs. 276. *Bombay Dyeing*, after declining from Rs. 1,875 to Rs. 1,820, are better again at Rs. 1,845 though lower than the highest touched of Rs. 1,915 on Thursday. Of course, bazaar operators are tipping Kohinoor and Simplex. But I feel that at present prices the shares discount all favourable factors and therefore would not recommend fresh purchases unless there is a reaction of 5 per cent all round. *Azamjahi* moved up to Rs. 590 but are a little quiet at Rs. 570. *Ocsmanshahi* after improving to Rs. 335 are again at Rs. 320. I think these two shares are a good buy at current market levels.

As for other outside textile scrips, Raja Textiles were quiet at Rs. 78, New Victoria due to onslaught of bears declined almost every day and Ordinaries were done as low as Rs. 7-2 on rumours of a dividend of As. 2 per share. Preferences also were as low as Rs. 9-4.

Madras Textiles, however, were quiet with *Madura* at Rs. 71, *Rajalakshmi* at Rs. 275, *Lakshmi* (old) at Rs. 174 and B. & C. at Rs. 308. *Sitaram* were steadier at Rs. 192 on the expectation of a final dividend of Rs. 10 making the total for the year of Rs. 20 I would recommend booking profits around Rs. 200.

In the Miscellaneous section, *Associated Cement* after touching Rs. 241 are better at Rs. 243-8. *Scindia* were in very good demand around Rs. 34-12. I look for a gradual rise in this scrip. *Bombay Burmah* are steady at Rs. 491-4 and they still look attractive for investment. *Calcutta* was very active with Jutes and Coals in the forefront. *Howrah* were quoting Rs. 83 ex dividend. *Kamarhaty* Rs. 662 and *Kanknarrah* Rs. 560. Among the low priced shares, *Presidency* were the centre of attraction at Rs. 10-13 due to Bombay buying. I look for a further rise in Presidency but would favour booking profits at higher levels.

In the Coal section, *Bokaro and Ramgur* are better around Rs. 44-8. *Amalgamated* changed hands at Rs. 48-0. I continue to recommend both these shares for capital appreciation. Among the coal shares in the Madras market, *Singarenis* were weak at Rs. 23-12.

Company Meeting.

The General Assurance Society Ltd.

Chairman Reports Record Progress During 1943

The thirtyseventh general meeting of the General Assurance Society Ltd. was held at Calcutta on the 21st September, and the Chairman's (Mr. B. N. Jalan) speech reviewed the working of the Society during the year ended 31st December, 1943, as follows:

"Gentlemen. I feel happy in being able to present to you the Directors' report and the audited accounts for the year 1943 which disclose a very satisfactory progress all round. Since the report and the accounts have already been in your hands for some time, I shall with your permission take as read.

"During the last five years, Life Assurance Business had to face numerous difficult situations owing to War, especially decreasing returns of New Business and unfavourable lapse experience during the years 1939, 1940 and 1941. Your Society's steady onward march, however, was not disturbed even during these three dismal years, and continued with greater acceleration in the years that followed, as illustrated the following comparative table:—

New Business	68,58,000	71,03,000	1,21,81,000
Total Income	25,60,000	26,45,000	33,00,000
Assets	1,12,38,000	1,21,39,000	1,34,00,000
Renewal Expense Ratio	16.8%	15.3%	14.5%

"You will be glad to learn that during the current year New Business continues to flow with a still greater momentum.

"During the year under review, we received 5,378 proposals for Rs. 1,44,47,900 out of which 4,816 resulted in policies assuring a sum just over Rs. 1,21,81,000 as against Rs. 71,03,000 in 1942. The increased business should be considered highly satisfactory looking at the unprecedented famine conditions which prevailed especially in Bengal and Malabar. The average sum assured also recorded an increase to Rs. 2,529 per policy as against Rs. 2,351 in 1942 and Rs. 1,948 in 1941.

"Our total premium income during the year amounted to Rs. 27,97,818 being an increase of Rs. 5,89,298 over that of the previous year. Similarly the gross income increased form Rs. 26,45,310 in 1942 to Rs. 33,00,305 during the current year, the outgo during the same periods being Rs. 17,97,561 and Rs. 21,87,980 respectively. Thus the Society was able to make a nett addition of Rs. 11,12,325 to its Life Assurance Fund, the largest addition made during any one year up till now. It is also gratifying to note that the renewal expense ration has gone down to 14.56 per cent as against 15.31 per cent in 1942.

"Our mortality experience continues to be well within expectation". During the year under report claims by death amounted to Rs. 4,78,931 and those by maturity to Rs. 5,21,813. No claim arose under the permanent disability clause.

"The Society's experience in the matter of paid-ups and surrenders also has been satisfactory. In spite of the business in force being larger, the reduced sum assured under policies converted into paid-up assurance amounted to only Rs. 98,853 while surrender values paid during the year totalled Rs. 78,906 against the previous year's figures of Rs. 1,05,999 and Rs. 1,01,134 respectively. Similarly lapses were over 33 per cent lower than in 1942. Loans against policies stood reduced at Rs. 16,36,922 as at 31st December, 1943.

The interest yield on the Life Assurance Fund comes to 3.85 per cent. compared to 3.80 per cent in the previous year. The statutory provision that the tax deducted at source has to be excluded coupled with the provisions of Section 27 of the Insurance Act has made the position for Insurance Companies very difficult, especially when the rate of income-tax is being increased year after year. Under these circumstances the slight increase in the yield over 1942 should be considered quite satisfactory.

As you are perhaps aware, the rates of premium charged by the Society till May last were calculated on the basis of 4 per cent interest. Since the actual net interest yield has been falling from year to year, it was considered advisable to revise the premium rates slightly, and the new rates came into force from 1st June, 1944. Our rates still compare favourably with those of the other sister institutions.

"In August last you resolved that Fire and Marine business should be started by the Society and accordingly the registration certificate for these classes of business was obtained in October. Subsequently, in pursuance of your resolution passed in November, the Society was registered for carrying on Miscellaneous Insurance business. All the necessary preliminaries having been completed, we have started writing all classes of insurance business since May, 1944. Gentlemen, your Society has thus now really become a 'general' assurance society as its name denotes.

"As desired by you in the Extra-ordinary Meeting held last month, the paid-up capital of the Society will soon be raised to ten lakhs, the permission for the same having already obtained from the Examiner of Capital Issues."

The Chairman then referred to several matters of common interest to Indian Insurence Companies in general. He thought the rate of 6½ pies in the rupee fixed by Government, as the maximum payable by insurance companies towards income-tax and supertax, was too high; and urged the Indian Life Assurance Offices' Association to take up the matter afresh. He also appealed to Government to reconsider the recent amendment to the Income-tax Act, which limited for abatement of income-tax, amounts paid as insurance premium to 1/10th of the sum assured, since the new provision was an additional handicap to insurance companies. He further referred to the inconvenience experienced by life offices in complying with the insurance legislation in the Indian States and expressed the hope that the present Superintendent of Insurance who has had personal knowledge of the difficulties, will do his best to establish reciprocal relation with the States concerned.

The establishment of an Insurance Examination Board under the auspices of the Indian Life Assurance Office's Association was welcomed by the Chairman as fulfilling a long-felt want, and he hoped that in course of time centres for training students will be established in every province.

In conclusion the Chairman thanked all the agents, field representatives officers and staff of the Society's various offices, for their efficient and devoted service under the able guidance of Rai Sahib Pandit Brahma Datta, the General Manager, making possible the excellent results achieved by the Society

General Assurance Society

Reporting an increase in new business and premium income the General Assurance Society of Ajmer must be included among the leading Indian life offices. The chairman's satisfaction with the results arise from Rs. 71.03 lakhs in 1942 to Rs. 121.82 lakhs in 1943. Apart from the rise in premium income by Rs. 5.89 lakhs to Rs. 27.98 lakhs the company's investment income also rose in 1943. Total claims took Rs. 11.64 lakhs and other expenditure absorbed Rs. 10.23 lakhs. The surplus of receipts is applied to raise the Life Fund by Rs. 11.2 lakhs to stand at Rs. 131.31 lakhs. The Society reports the largest addition so far made to the Life Fund and a fall in the expense ratio in respect of renewal premiums. A resolution to enter the field of general insurance has been given effect to and the department began to underwrite fire, marine and other risks after May, 1944. New directors were appointed in place of them who retired and the General Assurance Society's career promises to develop on satisfactory times. The classified summary of assets shows that that the bulk of the Society's investments valued Rs. 83 lakhs is represented by a holding of Indian and other Government securities and the most considered item after gilt-edged is shown under Policy Loans. The Society's 37th report undoubtedly shows that vigorous growth took place last year and further growth is promised by the expansion of business and income referred to by the Chairman whose speech appears in this issue. As the Society's position has clearly improved the results for 1943 will be noted with special attention.

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN THAT THE FORTY-THIRD ORDINARY GENERAL MEETING OF THE CHAMPDANY JUTE COMPANY, LIMITED, will be held at the registered office of the Company, 1, Clive Street, Calcutta, on Friday, 29th December, 1944, at 12-30 p.m., for the following purposes:—

Director,
Managing Agents.

The 11th December, 1944.
Dalmianagar:

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Dec. 15.

QUITE steady conditions have been noticeable on the Calcutta Stock Exchange in the past week and the volume of business passing was satisfactory. The re-opening for the week was rather quiet with the pre-occupation of operators regarding clearing house arrangements and also the fears that enemy air attacks in this part of India might be more frequent. But the quieter feeling was not noticeable for long as even on Monday evening there was a sharp rise in prices and quotations were back at the highest levels of last week.

The outstanding feature of the week is the rise in prices for Indian Irons on reports of a new issue on bonus terms to shareholders. The close was at the highest levels of Rs.40-7. Markets are closed today on account of the need for adjusting outstanding transactions in respect of the four counters affected by the clearing house scheme. It appears that there was considerable confusion regarding the filling of forms and furnishing of details to complete the necessary adjustments.

The giltedged securities section has been quietly steady with not much business passing. Quotations, are a shade easier, 3½ percent paper quoting Rs. 100-0-6. Among terminable loans, 3 percent Defence Bonds 1946 were Rs. 102-10, 3 percent 1953-55 Rs. 100-10, 3 per cent 1957 Rs. 99-14 and 3 per cent 1966-68 Rs. 98-5.5 per cent 1945-55 changed hands at Rs. 103-8 and 3 percent 1951-54 at Rs. 101-3. No transactions have been recorded in Provincial loans. Easy conditions have continued to prevail in the money market though there is a slight increase in the discount rate to 8 annas percent per annum.

Bank shares have been featureless with *United Commercial* at Rs. 36-8 premium. *Hind Bank* were Rs. 53-12 and *Hindusthan Commercial Bank* Rs. 7. *Mercantile* were a shade better at Rs. 81. *Reserve Bank* were quiet at Rs. 135.

Cotton shares have been rather weak on reports that Cawnpore companies have done badly *New Victoria* especially being marked down as low as Rs. 7-2. There was some buying at the lower levels and the quotation at the close is slightly higher at Rs. 7-11. *Cawnpore Textiles* also were quieter at Rs. 13 and *Elgin* at Rs. 65-8. *Dunbar* continued firm at Rs. 309 but *Kesoram* were easier in sympathy with other counters at Rs. 16-13. *Basanti Cotton* were Rs. 11-15 and *Dhakeswari* Rs. 28-8 cum-dividend.

Coal shares are still in good request. *Bengal* were Rs. 678 and *Amalgamated* Rs. 48-4. *Bokaro & Ramgur* remains steady at Rs. 44-4. *Burrakur* were easier at Rs. 41-12 but have recovered to Rs. 42-6. *Deoli* have been in keen demand and there is a rise of more than one point to Rs. 17-8. The highest level touched during the week was Rs. 18-1, *Equitable* were Rs. 67-2 and *New Beerbhoom* Rs. 38-10. *South Katrapara* were fluctuating around Rs. 26-8 and *Talcher* Rs. 11-4.

Jute shares have been rather uninteresting on reports that the industry is having still difficulties regarding coal supplies. But it is said that production was maintained in November very nearly at the level of October and that mills did not suffer to any great extent. Operators, however, are inclined to await further developments. *Anglo-India* were Rs. 486, *Champdany* Rs. 260, *Howrah* Rs. 88 ex-dividend, *Kamarhatty* Rs. 362; *Megna* were Rs. 124 and *National* Rs. 32-10. *Nellimarla* were higher by 1½ points at Rs. 33-8 on *Reliance* at Rs. 68-4 cum-dividend.

Among Engineering shares, *Indian Iron* have been very firm in the latter half of the week on reports that there will be a bonus issue and the quotation at the close was Rs. 40-7. *Jessop & Co.*, were sticky at Rs. 24-4, *National Iron* were unchanged at Rs. 13-8, *Braithwaite* Rs. 12-6 and *B. I. Electric Construction* Rs. 16-12.

There is unsatisfied demand for selected Tea shares, *Hasimara* quoting higher at Rs. 80-4, *Bishnauth* at Rs. 44-2 and *Banarhat* at Rs. 920 cum-dividend. *New Dooars* were Rs. 14-13 cum dividend.

In the Miscellaneous section, *Calcutta Trams* were higher at Rs. 53-4 earlier in the week but have receded to Rs. 52 towards the close. *B. I. Corpn.* were Rs. 6-10, *Dalmia Cement* Rs. 17-15 and *Dunlop Rubber* Rs. 59-4. *Bararee Coke* were very firm at Rs. 34-4, the quotation at the end of last week being Rs. 32-12. *Indian National Airways* defd. were Rs. 10, *Spencer's* Rs. 15-6 and *National Rolling Mills* Rs. 13-4. Paper shares were steady with *Titaghur* at Rs. 28-8, *Mysore* Rs. 25-10 and *Bengal Paper* Rs. 223. *Midnapire Zemindary* were Rs. 172 and *Borpoah Timber* Rs. 18-10.

(*Continued from page* 822)

In Bombay, Chemical shares were dull with *Tata Chemicals* around Rs. 21. In Madras, *Mettur Chemicals* ordinary declined to Rs. 16 and the Deferred shares were around Rs. 6-3 on the announcement of an interim dividend of As. 6 per share.

Tea shares were in the forefront in Calcutta. *Hasimara* were adound Rs. 80-8 and *Bishnauth* at Rs. 44.

In Madras *Peermade* were sticky around Rs. 51 and *Haileyburia* at Rs. 35. *Highland Produce* were neglected at Rs. 34-8. *Periakaramalai* were marking time at Rs. 32. *Outcherloney* were quiet around Rs. 12-10 on rumours of a lower dividend. I would picking up select tea shares at current market levels.

In the Insurance group, *New India* were steady at Rs. 81-4. Among the new shares, *All India General* were done up to Rs. 31-12. In Madras, *Prithvi* changed hands at Rs. 11-12 cum rights. The Prithvi Insurance Company is issuing Rs. 5,00,000 capital to the existing shareholders in the ratio of one share for every two shares held at a premium of as. 8 per share. Looking to the prospects I am sure every shareholder will exercise his right. The shares look a very good but at current levels from a longterm point of view.

Among Preference shares, *Midland Rubber Preference* changed hands at Rs. 10-4 and *Rajagiri Rubber Preference* also at Rs. 10-4. The Rajagiri Rubber and Produce Company Limited has declared the preference dividend from the date of allotment to 31st December, 1944 an I hear the dividend on Midland Preference will be declared in March.

THE NATIONAL IRON & STEEL CO., LTD.

NOTICE

NOTICE is hereby given that the Ninth Annual General Meeting of the National Iron & Steel Co., Ltd., will be held at the Registered Office of the Company at Stephen House, 4, Dahousie Square, Calcutta, on 30th December, 1944, at 11-15 a.m. for the purpose of :—

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is no important change in the conditions in the money market and call money is unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay. But with the approach of the year-end, the slowing down in the rate of increase in deposits and the continued rise in advances, there was a certain reluctance on the part of lenders. It appears that tax payments also have been on a heavier scale. At the auctions of treasury bills this week there was smaller interest though there is no important change in the amount of applications, the figure for this week being Rs. 10.3 crores against Rs. 10.15 crores on the previous occasion. Since the middle of June the average discount rate has not risen above 8 annas per cent per annum. The lowest rate touched during the period was only 7 annas 7 pies per cent per annum. So that it was almost taken for granted that the yield on treasury bills had been stabilised around 8 annas per cent. The increase in the average discount rate this week to 8 annas 3 pies per cent per annum, even with maturities equal to sales, should, therefore, be taken note of. With pressure on account of tax payments in the last quarter of the year it might be that the authorities would have some difficulty in respect of short-term borrowing on the present scale but, in view of the large surplus funds and the continued expansion of currency, it should be made sure that there is no appreciable increase in the borrowing rate. In December, 1943 the average discount was around 12 annas per cent per annum but there was a drop to 9 annas per cent in the first week of January. The rate, however, increased to 13 annas per cent in the first week of April due to the anxiety regarding the war situation in the North-east Frontier. Last year, there was no borrowing of treasury bills in the Xmas week but the authorities have now decided to call for tenders next week also, the offer again being Rs. 6 crores. Applications will be received up to the close of business on December 28, 1944.

Owing to the Xmas and New Year holidays there will be no issue of "Indian Finance" next week. The next issue will appear on January 6, 1945.—Ed. I. F.

The return of the Reserve Bank for the week ended December 15, 1944 shows a further increase in total notes issued thanks to the receipt of rupee coin by the Reserve Bank for Rs. 5 crores from the Central Government, thus enabling the Rs. 1 000 crores mark to be crossed. The actual figure is Rs. 1,003.16 crores against Rs 999.27 crores at the end of the previous week. Notes issued are Rs. 994.7 crores against Rs. 989.82 crores. There is no change in sterling securities but rupee coin are higher by Rs. 4.4 crores at Rs. 15.03 crores.

In the banking department, there is a jump in Central Government balances to Rs. 238.57 crores from Rs. 225 13 crores. This increase must be due to the payment of rupee coin to the Reserve Bank, heavier tax receipts and further sterling payments by the British Treasury. Other Government deposits have declined to Rs. 11 15 crores from Rs. 12.38 crores. Bank balances with the Reserve Bank are Rs. 11 crores lower at Rs. 82.98 crores but Other deposits have risen by more than Rs. 3 5 crores to Rs. 17.89 crores. Foreign balances, are Rs. 7.08 crores higher at Rs. 347.11 crores.

The statement of the Imperial Bank for the same week does not support the conclusions derived from the returns of the Reserve Bank, there being a rise in deposits to Rs. 237.45 crores from Rs. 235.86 crores. Investments are nearly Rs. 1 crore higher at Rs. 152.46 crores, while there is a decline in advances to Rs. 55 26 crores from Rs. 58.34 crores. As a result of the increase in deposits and advances, cash balances are higher at Rs. 39 9 crores against Rs. 36.2 crores.

The statement of the scheduled banks for the week ended December 8, 1944 makes rather interesting reading. There is a decrease in total working capital by Rs. 25 lakhs, the increase in Time liabilities to Rs. 203.44 crores from Rs. 202.43 crores being offset by the decline in demand liabilities to Rs. 611 68 crores from Rs. 613.11 crores. Total cash balances have risen by Rs. 2.42 crores in spite of the further rise in advances and bills discounted by Rs. 2.31 crores and the decrease in the working capital. It will thus be clear that far from there being any support to the short-term borrowing programme of both the Central and Provincial Governments, there has been some liquidation of investments. It will therefore be interesting to know whether there has been outside interest at the treasury bills auctions in recent weeks. The next return of the scheduled banks may perhaps throw further light.

The exchange market has been steady with a few export bills offering.

The Art of HOME MAKING

Life Insurance in a loftier sense is also an Art of Home-Making. For him and his family the man has found in it a unique shelter against the storm and stress of life.

Take a Life Policy of Howrah Insurance—you will be happier with it. There is no better assurance of protection and security.

HOWRAH INSURANCE CO. LTD.

TREASURY BILLS

Central Government:

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on December 19, 1944. Total amount offered was Rs. 10,30,25,000. Tenders at Rs. 99-14-0 per cent and above were accepted in full and those at Rs. 99-13-9 per cent were allotted approximately 28 per cent. Total amount accepted was Rs. 6,00,00,000. The average rate of accepted tenders was Re. 0-8-3 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Thursday, December 28, at Bombay up to 11 a.m. and up to the close of business on December 27, 1944 at other centres. Successful tenderers should make payment on December 30, 1944. Other conditions are as usual.

During the week ended December 15, 1944, Government of India Treasury Bills for Rs. 3,95,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,00,00,000 of three months' Government of Assam Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta up to 11 a.m. on December 28. Successful tenderers will be required to make payment and take up their bills on December 30. Other conditions are as usual.

By Special Cable.

Synthetic vs. Natural Rubber

A Problem for the U.S.A.

Washington, By cable.

The United States Government now owns $750 miliions' worth of synthetic rubber plants, the post-war disposition whereof is of vital interest to millions in the Far East who depend directly or indirectly on rubber plantations for their livelihood. This country is approaching the goal of 800,000 tons of synthetic rubber production annually which represents a greater volume of rubber than ever used before the war. In addition to this, it is believed that Canada, Russia and Germany will produce enough to bring the total to 1,000,000 tons annually. Natural rubber production may be expected to reach 1,800,000 tons.

This total as to synthetic and natural rubber, namely, 2,800 000 tons would cover twice as much rubber as the world has ever used in any one year. There is presented an obvious economic problem, therefore, and already proposals have been heard in the United States to erect protective tariffs for the synthetic rubber industry. Such an action naturally would conflict with the Administration's over-all foreign economic policies, and will conflict even with the proposals of those who favour protective tariffs for rubber since they favour free competition abroad.

The United States will soon have to reach some policy and decisions in respect of these synthetic plants—a fact of which the Baruch Committee was well aware when it worked out for the United States its wartime rubber policies. At that time, Mr. Baruch said "never before has this country embarked on an undertaking comparable to the recent developments of the synthetic rubber programme." He said that the nation was involved in "a new political and economic undertaking".

It is virtually certain that some synthetic plants will be kept in operation. For example, military security is likely to necessitate the retention of sufficient capacity for making 200 000 tons annually. An effort, however, is being made in some quarters to keep all plants in operation which would cause heavy competition with British and Dutch plantations who expect that natural rubber from the Far East would dominate the market. There is a saving factor in that at present the technical evidence indicates that synthetic rubber cannot replace natural rubber in many respects nor is it expected to compare favourably with natural rubber in price for some time. Experts count moreover on a much larger market for rubber after the war than before the war.

Planning and the Constitution ☆

In our examination of the relation between planning and politics in our last week's issue, we stated our conclusion that the requirements of planning cannot be met unless the public as a whole learns to defer to them. This is far different from mere agreement about the desirability of trebling or doubling the per capita income. The test of effective propaganda for planning is the extent to which people are enabled to appreciate the political and cultural, not less than the narrowly economic, significance of planning and, even more, the extent to which they are induced to set aside the cliches of ordinary party politics in the interests of the ends of planning, which are at once lofty and concrete. Propaganda, intelligently carried on, should help all sections of the public to turn their minds from nebulous ideas of political power to concrete notions of the ends for which it is sought. People in India are in a better position than people in other countries and probably better disposed, too, to appreciate the significance of the Marxist dictum that what a civilised society is interested in is not the Government of men by men, but the accomplishment of tasks. Political power is, no doubt, needed to ensure that those tasks are well chosen in the interest of all; but the scramble for power is such that the tackling of those tasks, not to speak of their achievement, will be indefinitely postponed. The people need to be appraised of this fact; and it should be brought home to them that there are means other than weightage and other political safeguards of ensuring that the benefits of planning are evenly distributed over all parts of the country and over all communities and that these means call for more attention than votes and that, at any rate, by prolonging the political wrangles, the people are only postponing their economic deliverance.

Propaganda must increase the impact of planning on politics. To the extent that it concretises economic issues, planning must be capable of rescuing politics from its present phase of groping for vantage in a game in which no party can adequately apprehend either the rules or the goal. It is no exaggeration to say that no political party in India is clear in its mind as to how it will utilise its power so far as the economic interests of its followers are concerned. To talk of freedom or of cultural ends is an easy and ready escape from an acknowledgement of vapidity in this regard. But, while the economic aggrandisement of one community at the expense of another is a distinct possibility, though difficult to achieve, planning both as a cult and as a programme places the issues before the public as a whole and provides them the tests of communal impartiality in its conception and in its actual working. Special institutions designed to study the economic conditions of particular communities and gauge the improvement thereon in a regime of planning are a far better safeguard for the interests of those communities than cliquish politicians apt to turn their voting power to personal advantage.

It is these facts combined with a translation of particular plans into concrete terms as affecting the various communities that need to be placed before the country, not with a view to discredit one or more parties, but to create that consensus of opinion in the country without which the wisest and the most careful plans will prove a costly futility. Such a propaganda can do a great deal to mitigate communal and provincial antipathies and suspicions, remove political prejudices regarding constitutional principles and create in the public mind a recognition of the paramountcy of economic planning. If at the time of conducting such propaganda, a rational political constitution, such as Sir Tej Bahadur Sapru and his friends are engaged in evolving, should also be expounded and placed before the country, the political deadlock may well vanish, as by a miracle. In other words, planning not only requires the political education of the masses as a condition precedent to its inauguration, but also provides an invaluable aid and opportunity for curing the body politic of its principal malaise.

But a National Government is not the only requirement of successful planning on the political side. The moot problem of efficient Government in a democratic State is the reconciliation of the conflicting claims of expertise and popular representation. In Britain, the traditional solution of this problem lies in the position of the permanent services. The Minister of State, admittedly a layman in matters coming under his portfolio, falls back upon the expert knowledge of the civil servants under him to safeguard himself from serious errors, but learns to overrule them when questions of policy which have significance to the large mass of the electorate are involved. This compromise worked smoothly for centuries. But with the increasing need for expertness in Government, outstanding members of the permanent services have attained cabinet rank, while the Chancellor of the Exchequer has come to be guided by advisers far more important in the eyes of the world than himself. In the U.S.A. the President has sufficient powers to ensure precedence being given to acknowledged experts over mere party men in key positions. All the world over, Government has long ceased to be the affair of the strong man who needs but a minute to decide on the proclamation of martial law. While it has not ceased to be the Government of men by men, it has become the accomplishment of tasks to a far greater extent than ever before.

But, in other countries, not only has this change been spread over a period, but political leaders have as a rule been drawn from business and have been found to possess the abilities required of men of affairs. In India, the change is abrupt. Politicians, who are strangers even to the ordinary tasks of pre-war times, will be called to the ponderous and intricate tasks of economic planning which require special equipment and training of some kind or other. It would be a dangerous optimism to think that the qualities required for planning on so vast a scale and in such exceptionally difficult conditions will be forthcoming from the class of politicians that we have to-day. While we shall be the last to deny the danger of setting no value on the ability of ministers to retain the respect and affection of the people, we would stress firstly, the importance of the people learning to insist on concrete capacities in their leaders and secondly, the importance of variety in talent, aptitude and attainments in the leadership of parties. It is high time that the gift of the gab and the knack for wire-pulling were rated less than they have been till now.

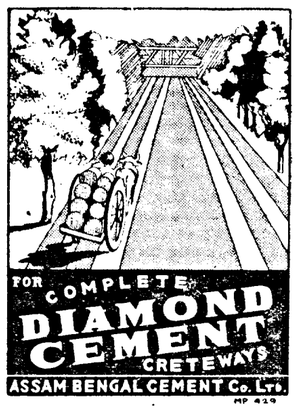
This applies as well to the Provinces and local bodies as to the Centre, to the Congress as well as other parties. The assumption has been made hitherto by party leaders as well as the electorate that no regard need be paid to the qualifications of individuals in nominations for the elections other than a vague general ability to command or influence votes. That assumption never had much to be said in its favour; but it will be increasingly wrong in the future. But the requisite change must be attempted from both sides, from the side of the public as well as the side of the leaders. In the past, the Congress party weakened itself very considerably by exaggerating the importance of certain technical qualifications like spinning and the wearing of Khaddar. A more catholic outlook, more rational criteria of judging one's nationalist fervour and regard for the work of the party when it gets into power are clearly called for; and parties which overlook these points may well weaken themselves politically and disable the country, too, for the tasks of planning which lie ahead.

It is only when the personnel of political leadership is in line with economic planning that the constitutional difficulties in the way of concerted action between the various limbs of Government is possible. It is a common mistake to think that the constitution can be designed to serve fully the interests of economic planning. It is thought that the powers of the various entities can be so defined, and overriding powers so vested in the Centre, that there can be no danger of obstructionism raising its head. This is indeed an illusion; and even if it could be translated into reality, it is not without its dangers. For one thing, it cannot be overlooked that the fruits of planning are in the future and, to that extent, dubious. For another, India is a vast country, where unity is an ideal to be achieved rather than a fact to go on. Provincial feelings and the suspicions of Indian States, while they, no doubt, can be taken to absurd extremes, are not wholly irrational. If the political constitution should be hammered into a unitary one, these suspicions, far from being allayed, are apt to be strengthened and assured a further lease of life. The remedy lies rather in the administration in States and Provinces seeking a higher level of ability to judge the plans from whatever source they may emerge and to suggest the alterations and improvements that may be needed to make them serve better the particular interests. For, then, a common ground will have been provided by the anxiety of all parties to evolve a wise plan and work it out with the necessary adjustment of powers and jurisdictions. What matters is sympathy with the objectives of public policy, and not the devolution of powers in a written constitution or the scope for the big stick wielded by the dominant factor in a given situation.

The case of the Indian States is illustrative of some of the more vital aspects of our present problem. Judging by the account of the London "Times", the Government of India are attempting to get over the obstacle of States' jurisdiction by exercise of the rights of paramountcy. Not only has such a course its drawbacks, but it will not be open to the National Government of the future, which will have to adhere to the terms of the instrument of accession. There is no reason to think that the States are less keen on economic development

*This is the third of the series of articles begun in our issue of December 11.

TEXTILE CONTROL



WARNING TO ALL DEALERS

In Notification No. T. B. (1) 29/44 in the Gazette of India of the 4th November 1944 Clause 14 of the Cotton Cloth and Yarn (Control) Order, 1943, has been amended. After 31st December 1944 it will be an offence under the Order for any dealer to buy, sell or hold any cloth or yarn manufactured in India and packed before the 1st August 1943, or texmarked cloth or yarn packed after the 31st July 1943 and before the 1st January 1944.

Any cloth or yarn whether manufactured in India or imported must in future be finally disposed of within twelve months from the last date of the month marked on the goods; such cloth or yarn may not be kept in unopened bales after six months from that date. The amendment further states that a bale or case shall be deemed to be unopened if the hoops or other bindings and all other outer covering have not been removed.

All dealers are warned that no extension will be given by the Textile Commissioner in the time for disposal stated above unless the holder can show that he was unable to dispose of the goods due to causes entirely beyond his control. Dealers who contravene the above provisions will render themselves liable to cancellation of their dealer's licence and to prosecution, and Courts are empowered to confiscate the goods in respect of which the offence is committed.

than British India or less conscious of the need for co-operation. The difference lies in the fact that, while one party is confident of safeguarding its interests, the other is not. The suspicions are bound to be dispelled when there will be competent critics on both sides, and when both sides are equally appreciative of the benefits of planned development. It is interesting to recall in this instance that most of the changes which the New Deal called for in the American Constitution were avoided by appropriate changes in the personnel of the Supreme Court and of certain key positions. Given sympathy allround for its objectives, economic planning can be well served by a Federal constitution; and India need not forego all the checks and balances which it will provide for a young democracy though, clearly, the design of the constitution will have to be changed to import to it a degree of elasticity.

What has been said of ministerial and other places of political significance applies with even greater force to the permanent services in all their various cadres and branches. The overhaul of the permanent services with a view to fit them better for the purposes of planning must form the subject of another article in this series. Here it should be mentioned that in addition to the general defects and shortcomings, the services in India have been weakened by communal considerations in recruitment and promotion. These communal considerations, however defensible they may have been in the past, are patently anachronistic in a regime of planning. They belong to a time when jobs under the Government represented a very large part of the total jobs available in the country. When the economic plan makes reasonable progress, there should be attractive careers open for all; and communal reservation, which are a stigma on the majority and a slur on the minority, should go. The aim should be to secure the best men for every piece of work; for planning such as India is now embarking on can have no surfeit of ability.

Labour and Social Security

In view of a recent outline of what has been accomplished during the war in the field of labour welfare after the appointment of Special Advisers, more may be expected of the Central Government. In the matter of labour legislation generally, it is easy to say that India is still lagging behind other countries. But membership of the I.L.O. has resulted in the acceptance of obligations, and both before and after the introduction of Provincial autonomy a very considerable addition to labour laws was made. The Indian labour code took shape between the Wars but it is felt efficiency of administration has not been commensurate with the law-making. It is, however, accepted that more State intervention on the basis of consent is required. The Industrial Council proposed by the Whitley Commission has been created in the form of a tripartite conference meeting regularly at intervals. A broadcast discussion on November 20 called attention to the essentials of the labour problem and the speakers (Mr. Wickham Steed, Sir Frank Noyce, Mr. S. Courtauld and Mr. V. B. Karnik) reached the conclusion that the Central Government must have a greater measure of control over industry than it has at present. This conclusion is identical with that reached by Sir Atul Chatterjee in an article in the International Labour Review, April-May 1944 arguing that in spite of the reforms attempted in India by Provincial Governments, the needs of the future are such that by offering grants-in-aid the Central Government must see to the effective administration of labour legislation. His main argument turned on the need to give the Provinces no choice in the matter of applying labour laws. His survey of the work done after the Whitley Commission reported led to the discouraging conclusion that except for mines legislation, directly administered by the Centre, the labour laws in actual working reflected too much the differences between the Provinces. The case for giving the federal centre greater powers as has been done in the U.S.A. was set out by Sir Atul Chatterjee in his review of intentions and achievements.

Much the same view has been developed by Mr. Abhyankar in a study of Industrial Labour and Social Security (The Author; Rs. 6) whose analysis of measures enacted is the best indicator of what has been so far done by the Government for the industrial worker in India. Though it is frequently urged that landless labour requires protection through minimum wage legislation or in other ways, the study makes it clear that there is a danger in attempting too much and too rapidly. It is recalled that up to 1922 labour legislation turned out to be negative in character and a positive beginning was made in India only with the Workmen's Compensation Act. The regulation of hours and conditions of work began before the Comprehensive Factories Act of 1940. In 1937 unregulated factories were dealt with in the C. P and the Indian Factories Act Amendment in 1940 brought within the scope of control all factories employing ten or more persons and using mechanical power. Though the first Maternity Benefits Act came in Madras from a private member's proposal, in all other Provinces the legislation passed was due to the reforming zeal of the new Ministries which took up also the question of safeguarding shop assistants. In the U.P. and Assam there has been some delay in putting the measures on the statute book. The periodical reviews of labour legislation yield the conclusion that the Central Government's example in regard to mines legislation has been copied widely. Separate acts govern dock labour and railway servants while the payment of wages also has been subject of legislation. In respect of industrial relations the Indian record appears to be brighter than believed, and if the war has put in Rule 81 in place of Conciliation the recognition given to trade unions and workers' organisations since 1926 and the departures in welfare covering the relief of indebted workers indicate how far and fast India has travelled. Mr. Karnik, in the broadcast discussion referred to, suggested that the State alone can pursue a liberal social policy. The legislation so far enacted has no complete parallel in the States and the main issue raised by every enquirer is the necessity for uniformity. Since 1941 there has been real agreement as to the value of uniformity. It is feared that there has been a time-lag and also considerable diversity of conditions. This has indeed influenced the employer's demand for cautious advance, and also sustained the argument that the administration must be tightened.

The Whitley Commission drew attention to laxness of administration in several provinces and the escape clause in many items of labour legislation has also made for lack of uniformity. Inasmuchas Central legislation regarding exemptions from mandatory provisions in the Factories Act, double shifts and minimum wage rules alone can secure uniformity the future must witness an abridgment of the autonomy that engenders diversity. Sir A. C. Chatterjee's allusion to Canadian experience after the Rowell-Sirois Commission reported on inter-provincial relations indicates that a constitutional issue is involved. But that industrialisation will proceed and adjustments in the interests of competitive power will be called for confers great value on the argument for securing uniformity.

If criticism is not lacking it must be recognised that the period of autonomy led to detailed investigations and improvement in working conditions has not been an obstacle to industrial development, for, a direct result of better conditions has been an increase in output. An expansion of the inspectorate for effective administration is a responsibility of the Central Government. The direction of advance is certainly settled by the enquiry committees which reviewed the situation in Bihar, Bombay and the U.P. Agreement has been reached as to the minimum standards and the mere fact that education is put down as the first need of labour shows that money as well as leisure to enjoy the opportunity of education must be made available.

While the maintenance of industrial peace is always the concern of the Provinces, there are obviously many ways of stabilising relations between labour and capital. The tripartite machinery evolved at present affords a secure foundation for the building up of the labour movement. There is no need to draw comparisons between India and other countries but the main reason for continuous progressive improvement may be found in the hopeful conclusions drawn in 1938 by Dr. H. B. Butler. Practical interest has been shown in labour welfare by both the Government and employers. It is only in regard to sickness insurance on a contributory basis, that views different from these propounded in Professor Adarkar's report appear. It is recognised that the Textile Labour Enquiry Committee accepted the proposal for sickness insurance as feasible, but Mr. Abhyanker wants that the scheme should be selective to a restricted degree. Since employers have accepted the principle of contribution and the Adarkar report proposes that Central subventions for the insurance fund must stiffen the financial side, the very cautious support given to the proposed start in social insurance must be due to the feeling that wide variations observable today constitute an obstacle. But it is welcome to find that in regard to holidays, sickness benefit etc., collective agreements are viewed as practicable. But there is little doubt that the Central Government must (to adapt Mr. Samuel Courtauld's phrase) play the role of both policeman and adviser. The object of all labour legislation must be to raise the standard of living and the true purpose of industrial development is distinguished in Mr. Abhyankar's book.

A CORRECTION

Though we cannot pretend that proof mistakes are rare in our columns, those which occurred in our leading article of last week have not even the saving grace of suggesting clearly the words that were meant. They therefore call for correction.

Editorial Notes

Open to Settlers

A conference in Shillong arranged by Assam's Chief Minister reached a decision as to the abolition of the Line System. Assam's dislike of immigration is modified by the appreciation of the food requirements of the Province which is thinly populated as compared with the rest of India. Last month Sir Andrew Clow referred to the local controversy concerning immigration and the apprehensions of those who urged that immigration from East Bengal would lead to the enlargement of the Muslim minority. He recalled, however, that in the past immigration had increased the number of non-Muslims in the total population. Since the demand for the Line System has been withdrawn by consent, and immigrants are to be drawn from the U. P. as well as Bengal, the main changes that may be expected in Assam are not going to be cataclysmic. Settlers who entered before 1938 are given preference in regard to distribution of waste land and reservation of 30 per cent of land for natives is a further safeguard provided under the agreement. The solution that Sir Andrew Clow looked for in his address to the Legislature has been obtained by an arrangement between the parties in the Legislature. The agricultural development programme is assured of a fair start since the colonisation schemes recommended in support of grow-more-food plans are accepted in Assam. It is noteworthy that immigration became a live issue only in 1938 after the introduction of autonomy and the new agreement is, in effect, only an endorsement of the Muslim League's argument that settlement must not be checked merely on account of the apprehensions as to the Pakistan demand. Land reclamation and drainage schemes in Assam may call for Central assistance while the possibilities of collective farming in newly settled areas may not pass unnoticed in other Provinces. Though an increase of over 10 percent in the area under rice was reported in 1942-43 the principal export crops in Assam have been tea and jute.

The Population Committee

The tremendous growth of Indian population for the past few decades has been causing great concern to the administrators as well as the people of this country. Over-population seems to be a fact though India has resources to maintain her teeming millions. Under the present conditions in India, the swelling population reduces national income, makes agriculture a bad job and saps the vitality of the people to dangerously low levels. Growth of population is not evenly distributed in all provinces and uneven growth leads to concentrated strain on certain areas. The gap between the rich and poor widens and the landless proletariat and workless labourers form a fruitful hunting ground for unscrupulous politicians. Post-war planners consider Indian population a menacing factor capable of sponging off the achievements of the most ambitious plans. Mr. Amery found in the growth of Indian population an excellent pretext to explain away the famine tragedy in Bengal and elsewhere. It is therefore clear that a correct population policy has to be evolved here and now, so that postwar development schemes can be vitally affected, in quality as well as in numbers. Britain, U.S.S.R., Australia and other countries have already started evolving suitable schemes for demographic adjustment. Australia wants more Whites, Russia has launched a powerful drive for more children and Great Britain has appointed a Royal Commission to report on her postwar population problems. The Census organisations of the American and European countries are well organised and are able to institute "population projections" into the future and estimate the probable future trends of their populations. Indian census leaves much to be desired and does not enable scientific forecasts. The need to collect the existing data and organise for more has been felt for long. It is therefore most welcome that the Government of India have constituted a small expert committee under the Chairmanship of Mr. W. M. Yeatts, formerly Census Commissioner, to review what materials exist and to consider whether they are adequate to form a basis for forecasts. Though the scope of the enquiry is limited it would, we hope, lead to the establishment of an adequate machinery to collect facts and figures, regarding the population trends in all our provinces and States. In the last analysis the Indian population problem can be tackled only by a bold economic drive for all-round progress, but searching for statistical raw material is the correct beginning.

No Yielding

The threat of an abrupt end to Indo-South African trade is removed by General F. M. Smuts' action in respect of the Natal ordinances. There is, however, no reason to feel pleased with the temporary veto; for two items of legislation remain and the Pretoria agreement is abrogated. Like any belated compromise it must be reckoned unsatisfactory. Indian withdrawal from the Broome Commission investigating Indian penetration creates a new situation in the Union. It is now conflict with the Union Government rather than the Natal Council which passed the housing and property legislation exalting the principle of segregation. The Pegging Act of 1943 is, of course, accepted by both the Union Government and the Administration in Natal and the earlier investigation of the Broome Commission is to proceed. It is therefore not clear who has gained more—the Union Government facing the Reciprocity Act or the Indian Government forced to consider retaliatory measures. The Indian community in South Africa in view of recent cases certainly cannot look for relief because Natal has passed the Housing and Expropriation Ordinances and these ordinances may be used to the same purpose as the residential property ordinance so as to freeze out the minority. Withdrawal of the High Commissioner is ruled out and the chances of getting the Union's Supreme Court to pronounce upon the Natal ordinances are not very bright. South Africa's Indian leaders do not consider the concessions offered material in relation to their main demand for equal rights in the Union. They still look for effective intervention from India, though it may be argued that enough has been done to indicate Indian disapproval. The continuance of the Broome Commission's enquiry is clearly meant to provide evidence to sustain Natal's action. Though it is urged that purchases and sales of property in Durban constitute the real cause of the difficulty there is the consideration that the Capetown Agreement of 1927 is not fully implemented. There is, however, the other consideration that a far larger majority of Africans labour the same hardships in South Africa; and the separate Indian agitation ignores the greater

hardships imposed on other coloured people. That may be said to justify intervention by the British Government only but the fact of Dominion Status is against all such intervention. There is however the Union Government's yielding to representations concerned directly with the preservation of the Pretoria Agreement which conceded the Union Government's right to demarcate areas for residence so as to make it appear that Indian settlers must take their chance under the Pegging Act of 1943 in Transvaal and Natal alike.

Wages in Bombay.

An enquiry into wages in the Bombay Presidency during 1942-43 has shown that wages rose for all classes of workers in both urban and rural areas. The results of the enquiry published in the Bombay Labour Gazette indicate that variations are common; also that rural wages rose to a greater extent than urban wages. Since index numbers are used, it is not possible to indicate the average rates for skilled and unskilled labour. But the figures available readily suggest that the rise was not commensurate with the rise in the cost of living for the working class. Since 1942-43 there must have been further adjustment of earnings to prices. Mofussil labour does not enjoy the bonus and allowances that are available to factory labour, but it enjoys a degree of mobility, and where payment in kind obtains, it has a useful cushion against inflation. The Bombay study certainly makes it clear that wages rose only on account of the rise in prices. It also makes it clear that the general condition of the worker did not improve. From the comparison with wage rates ruling in 1941 it is apparent that rural wages rose very slightly but more important is the number of days worked. That the demand for labour increased during 1942-43 is indicated by the reference to the drawing in of field labourers for work on P.W.D. contracts and seasonal industrial establishments. In the famine area, however, the supply of labour exceeded the demand, and the fact that rural wages rose by 4 pies only in the Deccan circle proves how much the field labourer had to struggle against. It is noteworthy that holidays during the monsoon period reduce the worker's annual income. No calculations as to annual income are possible but the limited increase in the wages for skilled labour in 1942 shows that unskilled labour was not particularly handicapped. The upward trend in wages for the whole Province will however suggest that it is not in the areas favourable to recruiting that wages rose. Since the spread between urban and rural wages was reduced during 1942 in some parts of Bombay it may be inferred that the year was not wholly unfavourable. It is noteworthy that in the Deccan where the state of employment was least satisfactory the level of both urban and rural wages was less satisfactory than in other Divisions. The draft on skilled labour in the Northern Division was however unmistakable and wage rates for masons and carpenters went up. The experience of other Provinces must be similar to those of Bombay but in as much as the rise in wages fell short of the rise in prices, the situation in 1942-43 was hardly satisfactory and that wages for skilled labour rose to a smaller extent than the wages of field labour, proves that inequalities persist in regard to the demand and distribution for labour outside the large and well-established industries.

Chosen Instrument

The Chancellor of the Exchequer after defining the obligations of the sterling area without distinguishing between customary reserves and war debts has made it clear that national needs will be permitted to override international undertakings. Younger Tory M. P.'s have been looking for assurances as to the time and manner of the disposal of sterling balances by new creditors like India and so far as can be seen the rule is that explicit promises are to be avoided. But one promise has not been avoided as a question in the Commons brought the assurance that the U. K. C. C. would be retained for at least eighteen months after the war with Germany is over and perhaps longer. The assurance is in line with Dr. Dalton's promise to keep the U. K. C. C. going after the war. It is perhaps as part of the plan to adhere to bulk purchase of commodities for Britain that the U. K. C. C. will be retained. As a depressant of prices for exporting countries, its policy will run true to form, but the main idea may be to get better returns on the Treasury's own investment. The justification may not be found in the Treasury's sale of shares in cotton and shipbuilding concerns or in the need to keep up the supply organisation for the Middle East. The emergence of the U. K. C. C.'s opposite member in the U. S. A. is perhaps the most adequate reason for the opinion expressed by Sir John Anderson as to the necessity for the U. K. C. C. After explanations as to its object and achievements little concern will be manifested in India though the case for an export corporation for India is duly strengthened by the British example. The more important results may be that in colonial trade generally the U. K. C.C. will become a singularly powerful intermediary and in the future, the American purchases of cocoa, rubber or tea may have to be made wholly through or of the Corporation. The development of a State monopoly in place of private monopolies is not likely to pass unnoticed when the whole subject of monopolies is up for critical scrutiny.

don't be caught by unwise buying

As the last year has shown, investments in goods, property, land and commodities have turned out badly. Prices have fallen and money invested in these things has visibly *SHRUNK!*

Lucky, indeed, the wise people who invested in sound securities. Their savings have grown. Their money has become more valuable. Assisted by price controls and increased manufactures, they are defeating the profiteers and hoarders. They have rendered both India and themselves a great service.

Keep on with the good work. Prices are still falling and will continue to do so as long as people spend less and save more. Now, as many people have found out, money investments are the best. Any of these is absolutely secure:—Co-operative Societies, Insurance, Savings Bank Account, Post-Office Savings Bank, Government Loans, National Savings Certificates.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Avoid all unnecessary expenditure on clothes, furniture, crockery, cycles, motor cars, and other things which you will be able to buy much more cheaply after the war. For the duration, do without luxuries. This is the true path to personal and National prosperity.

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

AAA 1118

India's Chief Export

Since jute and jute manufactures are the biggest item in India's export trade today the survey of the agricultural, industrial and commercial aspects of jute made by the Indian Central Jute Committee for a chapter in the Dictionary of Economic Products is welcome. The war has reduced the consumption of jute but domestic consumption amounting to 16 per cent only is still small in relation to export trade. Though India has a virtual monopoly the fact that exports have declined since 1938 must not be ignored. But the decline is partly due to the increase in exports of manufactures. Exports of jute manufactures accounted for 74 per cent of the total value of jute and jute manufactures exported in 1941-42 from India when the exports of jute manufactures exceeded the average of the year 1924-25 to 1928-29. Exports of raw jute go to highly industrialised countries, but of these Britain alone is important. For Jute manufactures, the U.S.A. which takes over one-fourth of cloth and bags, and about half of hessian and sacking exported, is the principal market.

While figures illustrative of changes in prices over twenty years suggest that raw jute is lagging behind other raw materials, the needs of the industry largely dependent on export markets deserve recognition. India possessing about 57 per cent of the world's looms must continue to be the leading exporter and manufacturer. The jute export duty gives the Central Government an interest in the export trade and the fall in its yield since 1937-38 is obviously a reason for keeping up exports of jute manufactures at a high level. The world demand for jute is influenced by its cheapness as compared with other fibres and the fact that the use of jute outside the mill industry is small requires notice. It is, however, noted that the war has led to a bigger spread between Calcutta and mofussil prices. The Indian Central Jute Committee's analysis of handling and transportation charges yields the familiar conclusion that freight difficulties lie at the bottom. In normal times 52 per cent of jute, came to Calcutta mills by river steamer, and 43 per cent by rail. The mills' habit of holding large stocks of raw jute from season to season should be viewed as a helpful factor. The habit of mills making for stock is as important as ever in keeping employment constant.

Across the Rivers

If Mr. Amery's offer to Burma is as vague as it was in 1943, the widening range of operations is an indication of what might be expected in view of Mr. Amery's reference to the problem of compensation for all interests affected by the disaster of 1943. Most recent changes are due to the Allies' crossing of the Chindwin and the prompt junction of the Army in North Burma with that which has crossed the Chin Hills. Simultaneous entry shows that three forces are in occupation of a line to be drawn roughly from Akyab to Mandalay. The Allied effort in Burma certainly transcends the test campaign of 1942-43 not only on account of Sino-American assistance but in the steady offensive kept up since the Japanese invasion was checked. The Allies' occupation of North Burma in part implies that the defence of Yunnan, if it is menaced, will not be the responsibility of the Chinese army alone, as the expectation that

THE ASIAN ASSURANCE COMPANY LIMITED

a land route to China would be opened soon is not confined to American commanders. The Allied offensive in the Arakan began after the Chindwin was forced and all strong points in the Chin Hills retaken. Last year's offensive was limited to the coast while the present one follows the liberation of three river valleys. Since the railway system is broken the chances of successful defence have receded rapidly. From one point of view, the capture of river ports acquires great significance. Boat-building in India, after the decision to restore lost rivercraft, may not be enough. There may be an immediate need for reopening of river navigation on both the Chindwin and the Irawaddy, and the outlook for Indian inland shipping companies may be said to have changed. In the past the special requirements of Burma were satisfied by shipbuilders in Britain but in the future the orders may be distributed between India and Britain, especially, as development of river navigation is desired, and Indian experience in the matter of shipbuilding now is considerable. A marked revival in shipping shares in India may be expected on this ground. There may be direct negotiations in regard to the future use of Burma's waterways by Indian vessels since Mr. Amery has made it clear that the Government of India is free to negotiate with Burma before the work of liberation is over.

THE STEEL CORPORATION OF BENGAL LTD

The Romance of a Cotton Bud

Nature's bounty and man's ingenuity have given us many of the finer things of life. The inanimate and most unimaginative object—the cotton bud—gives man a great opportunity in fashioning for himself cotton materials rich in texture, and in a wealth of designs, to suit a variety of tastes and fancies. From sarees to shirtings, and bedsheets to several other household fabrics, the cotton bud is a faithful servant in the hands of man who can mould it to his liking.

The Lakshmiratan Cotton Mills are amongst the oldest textile manufacturers and it is their policy to apply their experience and resources to producing new and better fabrics to meet the requirements of one and all.

Offer to Poland

Mr. Churchill's offer to Poland took the form of a statement in Parliament concerning Russo-Polish relations and Britain's interest in a speedy settlement. The Russian demands are accepted and if reliance is placed on direct negotiations in order to secure a joint guarantee for Poland's frontiers, the fact of Partition in 1939 is treated as immutable. The disappearance of the Corridor will be the chief consequence of the compensation promised to Poland in addition to Danzig. Germany as much as Poland will suffer through the territorial changes advocated. The Corridor divided East Prussia from Germany and therefore East Prussia is promised to Poland. German settlement in the Corridor did not affect the population ratio and the Prime Ministers' offer to Poland covers other areas besides East Prussia. The fall of M. Mickolajczyk explains the steps taken to avert a final breach that would follow the recognition of the Lublin Committee. The steps adopted would weaken Germany on the East and would leave Russia strong up to the Carpathians.

In the Commons debate on Saturday the main Polish case was argued energetically but Mr. Eden argued that East Prussia would be as good as the Ukraine. There would be no inconvenient minority as a transfer of population would be arranged. The acquisition of a seabord is held to be enough if four millions of Poland's inhabitants are left in the territory added to the Ukraine and white Russia. The additional compensation promised probably means the addition of Upper Silesia to the industrial region of S. W. Poland. The advantages should be considerable, should Poland take the offer. Though little time has been lost in securing Parliament's opinion, the U. S. view of the offer is likely to be slow in taking shape. Though the independence of Poland was proclaimed in 1916 by the Central Powers, the career of the Republic has been determined by the Treaty of Riga. That Treaty is revised by Mr. Churchill in the interests of Russia as well as Poland.

Though the final agreement between Russia and Poland is necessary in this case the offer made on Friday left no doubt as to the need for extending the right of self-determination to 10 millions of non-Polish inhabitants. It also indicated that the Red Army's halt on the Vistula is due largely to the fact that the eastern frontier that Russia prescribed had not been accepted by the Polish National Committee. Under the Treaty of Versailles Poland received both a part of Upper Silesia and a part of East Prussia where a plebiscite arranged in July 1920 went in favour of Germany. But that was offset by the transfer of a part of Upper Silesia (a part of Prussia) to Poland. In order to avoid the difficulty arising in the past from the part of four million Germans in Polish territory, a transfer of the local population adding to Polish living space has been proposed. The very considerable agrarian changes in Poland may have to be copied in East Prussia but the Allies are probably prepared to break all the eggs needed for the new Polish omelette..

Intervention in Greece

The turn taken by events in Greece has led to what looks like a difference of opinion between Britain and the U.S.A. Intervention such as has been promised by Mr. Churchill in the interests of Greece is not desired by the U.S.A. The State Department's attitude however would make it increasingly difficult for Poland to reach a settlement as to her own eastern frontier. If it is merely a question of the Left in Italy or Belgium getting a due share of power British intervention in either country has not been guided by particular prejudice. The main difficulty in Greece arises from the Papandreou Government's inability to prevent civil war and carry out the work of reconstruction efficiently and quickly. There is at the same time the obligation to keep Greece in the war. Help given for one or other object cannot be regarded as unusual in view of the declaration made in October that the Greeks are free even to reject monarchy. The worst inflation known in the war befalls Greece and complete relapse to barter has been reported from the country where the £ exchanged for 800 million drachmae. The ineffectiveness of M. Papandreou's Government in the crisis must be regarded as adequate ground for measures that hardly resemble those adopted after the casual victory in the Bay of Navarino. No second occupation of the Ionian islands is contemplated, and it is important to add that Greeks abroad, in Egypt and South Africa have not indicated disapproval of the departure from strict neutrality. Intervention in Syria and Lebanon last year was concerned with protection of British interests in the Eastern Mediterranean. Intervention in Greece today on the same score can be viewed in the same light although the American attitude is against commitments. The last Moscow Conference left the impression that the future of Greece was primarily Britain's concern. The restoration of the Government was carried out by British forces and the conflict that has developed since has been dealt with entirely by local British forces. In the war of 1940-41 the only ally of Greece was Britain implementing her voluntary guarantee. The preservation of the alliance is not less important than relief work and the measures sought to be applied are not different from those employed in France where a division of authority obtains after the recognition of the provisional Government. If the position of Britain is not that of a Mandatory Power the conditions for an extension of the Mandate system to parts of Europe obviously exist. The temporary cure for racial and political difficulties may be found in Mixed Commissions as applied in the Saar; and Greece may prove the best testing-ground if the previous promise cannot be fulfilled owing to local difficulties.

Insurance and Publicity

For both agents and policy holders there is useful information relating to life insurance in Mr. S. P. Chatterjee's *Insurance Advertising and Selling* (The Insurance World, 15, Chittaranjan Avenue, Calcutta, Rs. 7-8) Mr. Chatterjee's reflections on the paramount necessity for life insurance are always pertinent. He is convinced that life insurance in India is still under-developed. As to what a policy holder must look for and how he gets it, his instructions are precise and complete. Field-workers therefore will find talking points in abundance and Companies too may consider the advantages of the combined effort that he advocates. Novelties in advertising are few but the permanent value of slogans cannot be missed. Where Indian life offices fall short in regard to publicity is necessarily one of the issues raised by the book. It is urged that conventional or casual advertising is not enough. Though direct sales do not follow advertising, it is obvious that more must be done to indicate how insurance is a sound investment. It is perhaps the need for increased saving that is the most compelling reason for extention of life business. During the war progress has been made in India as in other countries but the opportunities remain vast. The hints to field-workers indicate also what the prospective policyholder must expect. Examples are given to show how insurance is an everlasting stand-by for the assured. That means lapses must be avoided and the cure suggested for this recurring difficulty is perhaps as interesting to policyholders as to companies. What must be done for organisation apart from publicity concerns the insurance company closely. There are numerous suggestions as to the volume and tempo of advertising. Convinced that advertising is the key to increase in new business, the author insists that direct relations are desirable. How the press helps and can help continuously is appreciated in a volume that lays bare the inter-dependence of interests that makes insurance indispensable. The most important service performed is the elucidation of the prospects that lie ahead for both agents and companies. At the same time enough is said to show that insurance advertising must be distinguished from the rest of advertising inasmuchas it is based on truth and does not represent a superfluous item in distribution costs.

Book Reviews

India Tomorrow (By B. K. Shah, Padma Publications Limited, Fort, Bombay, Rs. 4).

The Bombay Plan has fixed the targets for economic development and stimulated public thought on the urgency of a powerful prosperity drive for the whole country. The Government of India are releasing sectional plans without outlining a master-plan for the country. While the approach to planning from the standpoint of production can be tackled without much difficulty the lasting benefits of the development schemes depend upon the solution of three problems, viz., distribution of wealth, ownership of the means of production and the role of the State. Mr. B. K. Shah in his *India Tomorrow* emphasises the lacunae in Part I of the Bombay Plan, condemns the Central Government's "tinkering" with the problem of planning and outlines his own scheme. As all planners do Mr. Shah critically examines the Russian Five-year Plan against the Soviet background and indicates the reasons why that country could easily forge ahead with planning. Conditions in India are shown to be different and a new approach to planning advocated. The Italian scheme of Corporations controlling, rationalising, disciplining and organising national economic life appeals to the author. It is claimed that a system of public board ownership and management of our means of production would achieve the advantages of private initiative and collective outlook. A planned economy, Mr. Shah points out, divides itself into four basic functions, viz., planning, adoption, executions and supervision. A Planning Board should do the first, the Legislature should be responsible for the adoption of plans, while the execution of the plans would be entrusted to a Public Board for each sector of the national economy and an Institute of Public Accounts and Statistics should check up and supervise the execution and progress of the plans. The constitution and functions of the various suggested bodies are clarified. He lays down that no enterprise should be privately owned. Principles of corporate ownership are advocated and the capital structure of each new enterprise shall be constituted as follows: 25 per cent of the ordinary capital shall be contributed by the Industrial Planning Board, 15 per cent by the management and 60 per cent by the public. The scheme recommended by the author may have theoretical virtues, but in continental India, with powerful centrifugal forces working in political and social life, the adoption of the corporate system would present bristling difficulties. Mr. Shah is aware of the present-day handicaps for planning: and, like the Bombay Planners, pins his faith on a National Government and an economic centre of power. The book presents an intelligent analysis of the Russian plan and seeks to reconcile the desire of the common man to put an end to the evils of untrammelled capitalism and the aspiration of powerful vested intesests to be allowed scope to play their own part in national regeneration. The publication is a valuable addition to the literature on postwar planning in India and would be particularly well received in circles sympathising with Labour's aspirations.

India's Sterling Assets (By Mr. P. Dasgupta. Published by General Printers and Publishers Ltd., 119, Dharamtalla Street, Calcutta. Price Rs. 2).

A plea for orderly liquidation of India's sterling balances is entered in this booklet under review. The author subscribes to the view that accumulation of sterling does not indicate any real increase in production of of wealth in India. Since Britain has got into deep debt the repatriation of our assets should be based on a procedure agreeable to India and Britain alike. Economic development in postwar years, according to the author, will be very slow and India's capacity to absorb capital goods from abroad will also be limited. On the basis of this opinion it is argued that a methodical repayment of India's sterling balances by Britain stretched over a long period, say, 25 years, for the liquidation of sterling assets should be agreeable.

Food and Milk (Tract 1. All-India Women's Conference. By Smt. Kamaladevi. Padma Publications Ltd., Sir Phirozeshah Mehta Road, Bombay. As. 8).

A critical analysis of Government's food policy is presented by Smt. Kamaladevi who pleads for more and healthier food. Women's organisation can help in reducing the distress by establishing co-operative kitchens, disseminating information on the preservation of food and avoiding of waste. A power-

Company meeting.

THE MYSORE PAPER MILLS LIMITED

CHAIRMAN'S REMARKS ON THE DIFFICULT CONDITIONS OF WORKING

Welcoming the members to the above meeting, Mr. M. L. Narasimiengar, referred to his previous association with the Company as its first Secretary and later as General Manager and delivered a speech. The following are extracts therefrom:

Before I proceed further, I wish to refer to the valuable work of my predecessor Mr. C. A Jabbar, as Chairman and Managing Director of the Company and to the very satisfactory and efficient manner in which he conducted the affairs of the company during his stewardship. The Board have placed on record their appreciation of his services as mentioned in the report.

A full and, I trust, a clear account of the operations during the period of nine months ending June 1944, has been set forth in the report before you—but considering the appreciable fall in the revenue for the period as compared with the previous year, you would naturally expect from the Chairman a further reference to certain features of the working of the company by way of elucidation.

The Board had hoped to be able to present a better account to the shareholders, but for certain factors beyond their control which have contributed to the comparatively unfavourable result obtained.

During the period of nine months under review, the Mills worked only for a period of 144 days; and for the rest of the period of 129 days, they were compelled to suspend operations mainly for lack of coal and latterly for lack of electric power. Inspite of the best endeavours of the Management and the representations to the various authorities concerned for securing coal, supplies did not reach the Mills resulting in shut-down as stated. Another factor for continuing the shut-downs or partial working, was the unfortunate accident to the Electric Power generating station at Shivasamudram from the 19th May 1944. The result has been a considerable loss in output and revenue, dislocation of labour and delay and difficulties in the resumption of operations. Luckily however, the supply of power was soon restored, though on a smaller scale, enabling the Mills to re-start operations, first on one shift basis and later with two shifts until a few days ago, when further supply was made available to work the Mills for longer periods with certain load restrictions at the peak load hours. The Management hope to work three shifts immediately after coal supply is improved and secure the normal and full output thereafter.

The following other factors also contributed to the deterioration in the financial results: (i) Increase in the cost of manufacture due to higher prices of raw and other materials, and increase in wages, (ii) Lower prices for supplies to the Central Government—lower prices have been accepted on the assurance of the Central Government to reimburse the Mills after examining the accounts in the event of a margin of profit falling below a certain percentage, (iii) Lack of supplies of salt for manufacturing bleached and better quality papers solely due to transport difficulties.

Coming to the question of profits and appropriation thereof, your Directors had hoped that they would find it possible to provide for general and special reserves following the sound policy of conserving the company's resources and augmenting its finances; but they could not do so for the reason that even out of the reduced profits, realised, an appreciable portion thereof, had to be earmarked for meeting the unforeseen increase upto 50 per cent in the rate of income and super-taxes relating to the previous period when lower rates prevailed. Due representations have been made to the Government in the matter and should the Government be pleased to sanction their request, the amount thus released would be transferred to General Reserves. For the same reason your Directors could only recommend a lower rate of dividend this year.

As a result of the continued difficult conditions brought about by the War, the Paper Industry in general in India has suffered in output for lack of coal and raw materials. The needs of the Central Government absorb about 70 per cent of the output and there has therefore been considerable disparity between demand and supply. This has resulted in the Central Government having had to promulgate further orders controlling the manufacture, distribution, consumption and prices of paper and boards manufactured in India with a view to securing the utmost possible economy in the consumption of paper. These have imposed restrictions seriously affecting all interests in the production and consumption of paper.

We, in common with the Paper Industry, have been co-operating with Government in the situation. Our customers are all aware of this and have borne with us with patience. We are anxiously looking forward to the day when we can resume our service to our customers as in the past.

The arrangements made by the Management for securing regular flow of stores and spares have been satisfactory: but owing to the enforced shut-downs for reasons mentioned, a considerable amount has been locked up in the shape of stores. Further purchases will be delayed until stocks are reduced appreciably.

It is a matter for gratification that the trends of War indicate certain Victory to Allies and early return to peace-time conditions.

The Management are fully alive to the problems connected with the post-war reconstruction and competition and will endeavour their best to adopt measures necessary to meet such conditions. As a first step in this direction, action is being taken to overcome the defects and deficiencies in the existing Plant by securing the necessary Spares and Equipment and improving the efficiency. Your Directors are aware that post-war competition in the trade cannot be met with successfully unless we increase the output and reduce production costs. The question relating to the ways and means by which to secure additional equipment, etc., are being pursued.

In view of the control of production and prices and also fixation of lower prices for supplies to Government and with no prospects of any corresponding reduction in the prices of raw materials and spare parts, a decline in revenue earnings in the future will have to be faced.

I am glad to report that the relation between the labour and the Management has been quite happy. During the difficult times when the Mills were forced to shut down, the Management devised means to provide partial employment to most of the workers and granted them financial facilities to tide over the difficult days.

In addition to enhanced rate of Dearness allowance paid from 1st October 1943, a war bonus equivalent to one month's wages for the year under review has been granted.

The Management have been keeping the welfare of their labour staff constantly before them, and providing further amenities—such as additional housing accommodation, better medical aid and sanitary aid, etc.

It is hoped that they realise their best interests are linked up with that of Management and will put forth their best endeavour in improving the working results.

During the period under report, the Mysore Paper Mills were honoured by the visit of Their Highnesses the Maharaja and Maharani of Travancore, the Prince of Aundh, the Minister for Industries and Supplies in Mysore, the Hon'ble the Resident and Mrs. Fraser, S. A. Venkataraman, Esq., Joint Secretary, Supply Department, R. K. Mitra, Esq., I.C.S., Controller of Printing and Stationery, India, and Sri C. Rajagopalachari, Ex-Premier of Madras.

Your Directors wish to take this opportunity to express their gratitude to the Government of His Highness the Maharaja of Mysore for their continued solicitude in the well-being of this concern, and in particular to Pradhanasiromani N. Madhava Rau, the Dewan and Mr. M. A. Sreenivasan, Minister for Industries and Supplies, for their guidance and encouragement. Our thanks are also due to other departments of Government for their co-operation.

My predecessor and myself have had the full benefit of the hearty co-operation of the fellow Directors on the Board and of wholehearted and loyal service by the entire staff during these difficult days.

After answering the questions put at the Meeting, the adoption of the report of the Directors and the Accounts for the period ended 30th June 1944 was duly moved and carried unanimously.

The dividend recommended by the Board of Directors, viz., 5 per cent for the period of nine months (free of Mysore income-tax) was duly declared.

The three retiring Directors, Capt. Rao Bahadur A. Thangavelu Mudaliar, Rao Sahib V. S. Thiruvengadaswamy Mudaliar, and Rajakaryaprasakta Diwan Bahadur K. Ramaswamy, were duly re-elected as Directors.

The retiring Auditors, Messrs. S. R. Mandre and B. K. Ramadhyani and Co., were duly re-appointed as Auditors for the year 1944-45.

Opening Possibilities for New Industries

ALUMINIUM HYDROXIDE & OXIDE

of very high grade now in production.

● **ALUMINIUM HYDROXIDE:** Used in the manufacture of Aluminium Compounds for textiles, dyeing, paper, printing ink, water purification and as a catalyst in synthesising acetates, tannates, etc.

● **ALUMINIUM OXIDE:** Manufactured in several grades for decolourising and deodorizing solutions, grinding and polishing metals, manufacture of abrasives, grinding wheels and high grade laboratory ware, etc.

● ***Sodium Aluminate & Aluminium Sulphate are also manufactured at our works.***

Clive Street Gossip

This Christmas, the sixth since the outbreak of the war, does not hold out definite promise of proving the last of the present war period. A few months ago, there was talk in all circles among the United Nations of the war in Europe being over before the week-end. Qualifications of such prophecies were made more for the sake of form, than because of strong doubts about their proving true. Governments during the war are generally chary of inducing premature hopes of early peace; but when responsible heads of Governments were found to be seriously looking forward to an early end of the war, optimism spread to all ranks. It would now appear, however, that there were unknown, if not unpredictable, factors in the German position. In fact, in all his speeches a few months ago, Mr. Churchill at any rate was careful to refer to Germany's secret weapons and went even so far as to indicate the main characteristics of some of them. These secret weapons have since kept coming. Flying bombs led the way. And then came what are known as V-2. The latter would appear to have been of greater consequence in checking the advance of the allied armies. While the flying bombs were only causing casualties among the civilians and failed to prevent the flow of arms from Britain and America into the European mainland, the V-2 and, its variants would appear to have been employed in staging a large-scale counter-attack which at the moment of writing is in full swing. That it has had some striking success so far, it is admitted on all hands.

Editor "Indian Finance".

But whether Germany has been able to evolve and employ her secret weapons so as to turn the tide of the war is the more important question. In this respect, experience of earlier instances show that secret weapons either cease to remain secret for long or are countered effectively. What the fate of the V-2 will be, it is not easy to say. But it is difficult to believe that by itself it can alter the course of the war. As I have often said in these columns, the scientific knowledge that is necessary for success in modern warfare is not and cannot be the monopoly of any one camp. If at certain stages one group of belligerents seems to be ahead of the other, the differences do not take long to be obliterated. On the other hand, the nations which have larger war potential will be in a better position to benefit by the advance made than their original inventors. But even apart from this, it seems certain that Germany has not been able to invent ways and means of stopping the flow of allied arms into Europe. Nor has anything been done to slow down the consolidation of ground which Russia has been effecting for herself in the East. The two greatest dangers that Germany has always had to reckon with in a major war are firstly, the two-front war, and secondly, her helplessness in the face of the naval power of the English-speaking countries. Inventions of new weapons, while they seem spectacular at the moment of their release and while they may also change the nature of the warfare in the long run, are still powerless to get over the basic geographical and historical factors. Competent critics claim to see in the course of this war the effect of the heavy handicap which Germany labours under owing to her lack of a strong navy. Indeed, they go so far as to say that, when this war will be over, the loss of German influence in the Baltic, not to speak of the possible dismemberment of Germany, will have the effect of reducing Germany to the position of Austria, without an outlet to the sea and with no chance of developing a place in the naval map of the world. Even if one should take a very serious view of the present counter-attack, one must agree that it cannot possibly lead to a worse position for the Allies than what prevailed before the landing in Normandy. In other words, the Allies will still be in a position to overpower the military strength of Germany by even more thorough-going preparations. What I mean to emphasise is that there is nothing that Germany can do to change the course of the war. And the worst that can happen is that the progress of the allied army towards Berlin will be delayed by a few months.

* * * *

What has happened in Europe however is less important in itself than for its repercussions on the war with Japan. It has been aptly said that every month Germany gains for herself leads automatically to an extension of war with Japan by two months. The validity of this saying is too obvious to call for exposition in detail. With China rendered weaker and weaker and America and Britain waiting for the end of the war in Europe to exert themselves effectively in the war in the Pacific, the effect of sudden spurts in the German offensive can be easily imagined. It is not wrong, therefore, to suggest that what the German counter-offensive calls for is not only a revision of General Eisenhower's plans and a strengthening of his position but also a revision of the ideas regarding the final overthrow of Japan in the Pacific and the Far East. The impact of the war on the effective ideology of the United Nations has at all stages been cushioned partly by the narrow outlook of those in power and partly by optimism about the course of the war itself. Not to speak of the Colonial and subject peoples in the world, even the nations of Europe did not have the promises of the Atlantic Charter vouchsafed to them till it was thought expedient for the progress of the war. As regards the peoples of the East, the idea of promising them freedom after victory has been won hardly occurred to the Great Powers. Because it was assumed that, once Germany is overthrown in Europe, it would be no problem for America and Britain to encompass the defeat of Japan. No bid was, therefore, made for the enthusiastic support of the subject peoples of Asia for the war against Japan. The fate of the Cripps proposals, which can be deemed to be the only exception, only emphasises the truth of the general rule. The initial progress of the Allied forces after the landing in Normandy was followed by the re-emergence of cynicism in international politics. On the one side, Russia's plans of strengthening her position in Europe

were pursued with the cold calculation which is characteristic of Stalin; on the other, Britain began to feel less restraint in pursuing policies designed to serve her special interests.

* * * *

The climax has now been reached in Greece where British policy has aroused serious hostilities leading to a determined attack on the British Embassy. The redeeming feature of the present situation now is the statement of Mr. Stettinius that America will not be prepared to back Britain in such policies. Even more encouraging is the growth of opposition to such policies in the rank and file of the Liberal and Labour parties. Political circles in Britain are perhaps for the first time prepared to face up to the demands which Mr. Churchill has made as the condition of his continued retention of responsibility for the conduct of the war. Mr. H. G. Wells has been outspoken in his denunciation of Mr. Churchill. This is an index of the recognition that must soon dawn even in less perceptive minds of the dangers of surrendering one's judgment on peace problems to others, solely on the ground of their special competence in the conduct of the war. That this incipient insurgence of feeling and opinion on post-war problems should have asserted itself just at the time of Germany's counter-offensive is in many ways a hopeful development. It indicates in the first place the dangers of shouting before one is out of the wood. It provides a valuable antidote to premature optimism. Secondly, it helps the ruling classes in the United Nations in gaining a realistic appreciation, not only of the issues at stake in the war, but also of the expediency of making further progress in taking the four freedoms to all parts of the world. The Labour Party's stand on the Indian question is typical of this phenomenon. It is true that those, who stand for the release of Congress leaders and the resumption of the negotiations with them for the settlement of the political deadlock in India, do not base their demand on the ground that Indian support is necessary for the Japanese war. But the fact that no such stand was taken earlier is significant. Much credit is due to Professor Laski for the way he conducted the Conference and the opportunity he provided for progressive opinion to assert itself and gather support. There is talk now of Sir Stafford Cripps being appointed by the Labour party to reconsider the proposals he made two years ago and undertaking the mission in which, for some reason or other, he failed. Whether these talks will lead to anything concrete or not, it is not possible to say. But that they should have occurred just when Lord Wavell's speech at the Associated Chambers of Commerce last week had made the Indian political outlook more bleak than ever before is not without significance. In this season of goodwill, it is well that prospects of better understanding among the peoples of the world should not be despised, however slender they may seem in the light of past developments. Historic festivals and festive seasons will lose much of their rationale and significance, if they do enable us to break the encircling gloom and not only see the sunshine beyond but infect others with a similar cheer and goodwill. It may not after all be a misfortune that this war has seen a sixth Christmas, if it should prove that by its prolongation, the war will turn out the evil within itself and the world at large and fit mankind for the glory that may yet belong to it in the world abroad. So at home, too, let the season of goodwill spur one and all alike to fresh efforts to resolve the sterile and stultifying deadlock of our national politics.

* * * *

There is good reason to remember that the Sholapur Spinning and Weaving Company had a distinctive capital structure in that fixed interest capital preponderated. The advantages have been manifest in recent years and the Company, established in December, 1874, has made arrangements to deal with its obligations in a notable manner. The details are to be found in Mr. J. H. Bhabha's address to shareholders on December 15 but one may observe that the owners of the equity must continue to prosper. They should benefit also through the splitting up of the big, heavy shares which always stand at an impressive premium. Shareholders' opinion as to this proposal is to be ascertained, and the attitude of the Board shows a high sense of responsibility to proprietors. Ready appreciation of the advantages of cheap money explains the recorded changes in capital issued to date. But the benefits derived by shareholders from these changes are real, and there should be general satisfaction with the success of the amortisation scheme that was prepared with the issue of the debentuses. The Sholapur Company's balance-sheet has always been an admirable pattern for company finance.

* * * *

If Mr. Bhabha's words are extremely re-assuring from the point of view of the immediate audience those interested in the outlook for the cotton mill industry will not be wholly relieved from anxiety. But on one point his views are completely in accord with what was said here as to Government's share in the war profits of India's cotton manufacturers. The State is established as the senior partner in every enterprise and analysis of the 1943-44 results yields only the conclusion that the immediate future calls for enhanced depreciation and some relief on

(Continued on page 847)

Gateway of India

(From Our Correspondent)

Bombay, December 19.

The Textile Commissioner to the Government of India presided over a conference of Provincial Textile Controllers which was held in the middle of last week to concert measures for the eradication of black markets. There appears to have been a strong feeling on the part of those who met at the conference that if the control orders were not obeyed by the trade, it should have nothing but short shrift. I am told that quite stern measures are under contemplation to counter the machinations of the unscrupulous elements in the trade. A foretaste of this had already been given by Mr. Vellodi in the shape of a warning at his Rotary Club speech, when he stated that....."when supply is not equal to demand it is futile to expect the total eradication of the black market, but when this assumes the proportions it has assumed during the last two months, something has got to be done about this." That "something" is going to be pretty stiff. The control authorities have extensively and solemnly adjured all dealers that after 31st December, 1944, it would be an offence for any dealer to buy, sell or hold any cloth or yarn manufactured in India and packed before the 1st August, 1943, or tex-marked cloth or yarn packed after the 31st July, 1943. Also, cloth or yarn manufactured in India or imported must in future be finally disposed of within a year from the last date marked on the goods, and bales have to be opened within six months thereafter. The Textile Commissioner has made it plain that excuses on the part of the trade will not avail with him and that those who contravene the provisions will have to face the full impact of the law.

* * * *

An indication of how authority is bracing itself up to the new tasks that await it in the New Year is provided by the latest order dated December 16, from the Textile Commissioner directing that no quota holder carrying on business in the city of Bombay or in the suburbs shall sell or deliver any cloth purchased by him directly from a manufacturer or open any such bale of cloth except under the specific directions of the Commissioner. This order has been given immediate effect and applied to both existing stocks as well as future deliveries from the mills. Moreover, under it failure on the part of a quota holder to take delivery of cloth from the mills will result in the forfeiture of all his quotas in the future. The order in simple terms vests the Textile Commissioner with wide and extensive powers of directions to manufactures and dealers in regard to the distribution of cloth or yarn. The power to fix the dealers' margin of profit is also vested in him.

* * * *

On the eve of the latest phase of the drive against black markets, it is perhaps not surprising that the grievances of dealers should be ventilated strongly. There was, however, more than a note of special pleading in the account rendered to the Press by Mr. Jayanand N. Khira; President of the Bombay Retail Cloth Dealers' Association, as to the difficulties of the retail cloth dealer. The gravamen of his complaints was that the margin of profit fixed by government was, for the most part, taken away by the millowner and the wholesale dealer leaving the retailer with next to nothing. Mr. Khira pointed out how the stamping of prices was not always above board. He pleaded for a clearer definition of the margin of profit to be allowed to the manufacturer and hoped that the retail trade would also be represented on the Textile Control Board. The margin of profit was also the theme of a piecegoods merchant in another part of the country. He pointed out that the 20 per cent allowed under the order was entirely inadequate for these reasons; after paying 4 per cent to the quota holder and 4½ per cent for his commission agents, brokers, rent, war risk insurance etc., a wholesale dealer was left with only 1½ per cent, as of the total of 20 per cent, 10 per cent was reserved for the retail dealers even that 1½ per cent did not constitute a clear profit since it was only out of that that the wholesaler had to meet his expenses. He therefore urged that firstly, the authorities should increase the margin of profit by 2½ per cent to be distributed over the entire field of distribution except at the retail stage, and secondly, that the first quota holder's margin should be reduced from 4 to 2½ per cent. Suggestions like these from different sections of the trade are legion and it is doubtful whether the authorities can take them seriously. The crux of the matter was put aptly by Mr. Vellodi last week when he referred to the demand for an additional 2½ per cent margin of profit. He gave this crushing reply to the clamour: "This point might have been worth pursuing if all that the consumer has to pay today for his cloth were another 2 per cent over controlled prices, but when the consumer cannot get cloth except by paying prices ranging from 20 to 60 per cent over controlled prices, the suggestion that an addition of 2 per cent to the margin of profit would cure the (black market) evil appears ridiculous. The fact of the matter is that war profits have blinded the trade to their very serious responsibility."

* * * *

Markets are running amok. There is anything but that sobering atmosphere which alone can bring down prices. The cotton futures markets witnessed a speculative ramp that took the I. C. C. March Contract from Rs. 432 to Rs. 448 in the course of a few hours' trading on Monday. The bullion markets were not to be beaten in the game. The speculative fraternity saw to it that the 7 days' settlement rates for gold and silver touched Rs. 70-6 and Rs. 131-12 respectively. In the morning, the market opened at the levels of Rs. 68-8 and Rs. 129-4 and the unsuspecting Reserve Bank authorities sold the usual quota of 75,000 tolas of gold at Rs. 68-9 and 300 bars of silver at Rs. 128-9. By noon the market was deep in a bullish orgy. The only reasons for this flare-up in bullion prices are stated to be the usual anticipations of a prolonged war and, of course, the latest stiff dose of currency expansion. The battle against inflation is going very much against the government, I am afraid, and unless policy undergoes an orientation, run-away markets may well be the order of the day hereafter. It is in such a setting and against such a background that the Textile Commissioner is launching his new drive. For achieving success in it, he will need all the best wishes and co-operation that the public can give him.

* * * *

The turn of the year will see the Indian Central Cotton Committee going full steam ahead with its plans for a brave new cotton world. The Planning Sub-committee appointed in July last has prepared a plan for the regulation of cotton cultivation. The first will be a 5-year plan for restriction of acreage and styles suitably to the prevailing context, to be followed later by a long-term plan which will be drawn up when some inkling can be had into the post-war shape of things for cotton. The Sub-committee's chief recommendations are that the 1942-43 All-India cotton area of 19.2 million acres should be reduced by 3.1 million acres in the next two years, that there should be a cut of at least two million acres under short staples and 1.1 million acres under low-grade medium staples. The views of the provincial governments and Indian states are being taken and the plan will be put before the committee at the forthcoming meeting in January. It is interesting to note the conditions laid down in the plan for the success of the scheme. These are that mixing of cotton should be prohibited by legislation,

SHORT OF CAPITAL

The Stock Exchange's Post-War Problem

LONDON, By Cable

Although the general public habitually regards stock exchange firms as "wealthy"—which they are—this is nevertheless a purely relative term and the stock exchange's problem of maintaining sufficient capital in the form of capital for its members to function as a nationwide market has become a serious one which is much discussed.

For there has been a drain of capital during the war from many stock exchange firms due to the death or retirement of elderly members while, at the same time, young partners have been slow in accumulating fresh capital due to the heavy surtax levied on their earnings. After the war it is expected that a number of elderly partners who have been carrying on as a matter of duty while the young men are in the fighting forces will seize the opportunity to retire. Thus, the post-war period may find a greatly increased volume of business which firms will be expected to handle despite, in many cases, a greatly reduced capital.

Firms of stockbrokers are not more affected than jobbers. It is not difficult for them to secure new partners with adequate cash who can be trained in a few months in the intricacies of stock exchange work as seen from the broker's viewpoint.

But jobbers are in a much more difficult position. A firm of jobbers needs much more capital than a firm of brokers, for its function is to stand ready to buy or sell at a moment's notice an unlimited account of any security in a particular section of the market wherein he specialises. Its aim is to fix such prices as will attract roughly the same amount of buying as selling so that its books are "even" and it is neither heavily loaded with securities nor committed to supply a serious amount of securities which it has not got on hand. But fluctuations, even in fairly quiet times, are frequently severe. Thus, the silent partner who merely furnished funds and took no active part in business would find such periods very trying. But it takes many months to train a new partner so that he is an asset and not a terrifying liability.

Failures of stock exchange firms who are both brokers and jobbers were not unknown in the past. It has sometimes been due to poor judgment or unlucky speculation, but occasionally to simple lack of adequate capital. Hence the lack of adequate capital is not merely of academic interest—on the contrary it is vital to the market's functioning. Today there is such a capital shortage, as is revealed by the unwillingness of many jobbers to buy or sell an unlimited amount—they frankly put a limit upon the amount of stock they are prepared to handle. This often forces a broker to spend days or even weeks on filling a client's order if it is an exceptionally large one.

One solution discussed is to convert firms into private companies with unlimited liability. Such a company would be allowed to place a reasonable amount of its earnings to Reserves thus building up capital which the surtax upon individual earnings now makes impossible.

Another, more drastic proposal is to convert firms into companies whose shares would bring limited liability. Such shares could be sold to outsiders thus furnishing additional capital. The discussion is thus far unofficial but the Stock Exchange Committee is expected some day to appoint a sub-committee to canvass the whole situation.

lines already suggested in a memorandum submitted by the Millowners' Association. Though the earnings in proportion to capital tend to be high the difficulties to which mills have been exposed must claim notice today. But confidence in the future is unmistakable. Demand for cotton goods in the home market as well as abroad is likely to continue for some time after the termination of hostilities, according to Mr. Bhabha who developed a critical view as to the impact of Control on the trade and mills' earnings alike. There is however a caution as to a reasonable level of prices for manufactured goods. Developments and extensions are more than part of a private plan to expand and stabilise output. They are to be related to the Government's own effort in connection with replacements and renewals deferred on account of the war. In these respects, Mr. Bhabha's forward view is singularly refreshing, and he is evidently not dismayed by his own review of happenings which held up productiton. There is indeed reason to look upon the Chairman's frank survey as meant for others besides Sholapur's shareholders. There should however be no tinge of doubt as to the continuance of the dynamic stage into which the war lifted our largest industry.

• • • •

War has its grim repercussions on the cultural life; and not the least regrettable of them is the increasing rarity of exhibitions of fine arts. In peacetime, Calcutta used to be the favoured spot for actors and dancers, and at times there was almost a surfeit of high class entertainment. With the war, the position has changed vastly. What with the black-out, the difficulties of travel and the crowds in cinema houses which make a good theatre unavailable for special shows of any kind, a good and elevating entertainment was almost a forlorn hope. It is therefore with special feelings of relief and gratitude that I expect Calcutta to see Gopinath and Thangamani at the Globe at 10 a.m. on the 27th December. Mr. Haren Ghosh, the well-known impresario, has been at special pains to provide this show, for the Calcutta public. Gopinath is famous as the artist who modernised, so to say, the ancient art of Kathakali and presented it in a form in which modern audiences can see the glories of classic Indian dancing. Discerning critics like Dr. Cousins and the late Dr. Rabindranath Tagore have acclaimed it as part of the renaissance in Indian Dancing. And even those who may not have familiarised themselves with this form of Indian Dancing will, I am sure, flock to partake of a feast that is now as rare as it has always been good.

• • • •

Though it is obvious that respect for precedent determined the decision of Government in picking India's next Finance Member many will regret that after Lord Wavell's description of the Expanded Council as a National Government something was not done to select one with adequate political experience. The rule as to alternation between a promoted Secretary and an imported Civil Servant appears to have been too much even for a Government with a majority of Indian members. In the common view the appointment of Sir Archibald Rowlands implies that Finance will remain a Reserve subject and the main advantage for India appears to lie in the next Member's previous experience of India. Military Finance has been his speciality and he may be expected to cherish great regard for the financial settlement that was secured by Sir Jeremy Raisman with H.M.G. Familiarity with the processes of Provincial administration may also be reckoned a very important, and real, advantage though there will be considerable shaking of heads over Government's strictly conventional choice in view of what is hoped and desired in respect of India's sterling assets. Possibly, Sir Jeremy Raisman will be free to deal with the negotiations planned after the Budget is presented.

ful plea for "Drink Milk" campaign is also entered.

Youth's Burden (By Jawaharlal Nehru. Published by Hamara Hindustan. Publication, 23-2, Medows Street, Fort, Bombay. As. 2).

This brochure contains Jawaharlal's valuable advice to Indian youth. Students of today are the responsible citizens and leaders of tomorrow and their outlook as shaped today has much to do with the future of India. If youth takes a broad outlook on life, fights evil, breaks barriers of communalism the way for unity would be clear and with it of Swaraj. This publication should interest all since it comes from one of India's beloved leaders

Market Reports (By A. M. Lorenzo. Kitabmahal, Allahabad. Rs. 2-12).

With the growth of industries and the investment habit interest in market reports is bound to gather strength. A careful organisation of markets (either commodity, capital or foreign exchange) is essential for orderly progress in different sectors of national economy. It is essential that the general public should undestand every detail about the special terms used in the reports as otherwise they will not be able to appreciate and interpret the price changes. Intelligent investors and consumers should help themselves and act as a powerful check against exploitation by the unscrupulous. Mr. Lorenzo's book serves to educate the public as to how to understand market reports of all varieties. The publication is bound to be a valuable guide to students, investors and laymen alike.

(*Continued from page 845*)

that the area under styles left alone under the plan should not increase, that irrigation water should be denied for cultivation of short staples, that the proposed reductions should be enforced compulsorily. The plan reflects the earnestness and the sincerity of the I.C.C. for advancing the interests of the raw cotton grower.

• • • •

The Sugar Controller has decided to effect a cut of 5 per cent in the sugar quota for Bombay, but the Bombay Government in its infinite mercy will continue the existing ration of sugar to private individuals. But the Bombay Government also propose, through the Growth of Food Crops Act, to compel the sugar factories of the province to devote half the land to the cultivation of food crops. The lack of co-ordination in the activities of government departments has, however, not escaped ahe Argus eye of Mr. M. P. Gandhi than whom probably there is no other competent critic of the government's sugar policy. In a statement, Mr. Gandhi refers to the topsy-turvydom inherent in the present policy, as a result of which cane growing became less remunerative than food crops and the cane area in U.P. & Behar has declined this season. Mr. Gandhi apprehends that the sugar production this season will be much smaller than in the last, perhaps to be repeated in the 1945-46 season also. The Bombay Order seems all wrong since it will result, as far as Bombay is concerned, in a further cut in production from the last season's output of 96,000 tons, as against an allotment for consumption of 1,88,000 tons for Bombay.

Resume of Commodity Markets

The important feature of the week is the publication of the long-awaited cotton forecast figures for the season 1944-45. It has been considerably delayed, the explanation given by the Government being that efforts were being made to make the forecast as reliable as possible. The general expectation of a smaller crop for the next season has been confirmed and the market has closed higher. There has been excited trading in bullion, hopes of a prolonged war and heavy speculative buying by operators in the cotton market being responsible for the sharp rise in prices. Only profit-taking and selling at the higher levels has resulted in a slight reduction in prices in the last two days. The jute market has been quiet but the jute manufactures market has been steady.

The raw jute market has been apathetic. It appears that there will not be any improvement in prices. There is a cry again of coal shortage and it is reported that even the foster mills have been obliged to curtail production in the past few days. With jute arrivals into Calcutta on a fairly large scale and rather poor enquiry for jute sellers have naturally been obliged to offer a reduction in rates. But for the fact that most of the arrivals are in fulfilment of earlier contracts and upcountry prices have been maintained at higher levels, quotations would have been lower. As has been pointed in these columns on more than one occasion, it should be made sure that available supplies of jute are absorbed by mills and that production is maintained at as high a level as possible by providing the necessary requirements of fuel.

The bullion market has been quite firm, quotations for both gold and silver in midweek being the highest for some time. There is no special reason for the rise in prices and speculative activity, on the hopes of a prolonged war, was mainly responsible for the initial rise in prices. Attempts at cornering also accentuated the upward movement with shorts rushing in to cover their open positions. The Reserve Bank has continued to sell 75,000 tons of gold and 300 bars of silver daily at increasing rates. Offtake, too, has also tended to improve. It remains to be seen how long the Syndicate can keep its control on the market.

The cotton market has been very firm and the expectations of a short crop for 1944-45 have been fulfilled. The figures published on Thursday show a reduction in the acreage by 24 per cent, due chiefly to the "Grow More Food Campaign" and partly to the comparatively lower level prices of cotton in relation to food crops. The total area under the crop is 11,560,000 acres.

The cultivation of Indian cotton is likely to be regulated from next year under a well-defined plan which is at present being worked out by the Indian Central Cotton Committee. The plan, which will cover a period of five years, will be followed by a long-term plan, to be chalked out after some indication of the post-war export outlets for Indian cotton becomes available. This plan will indicate the part of cotton in the proposed planning of agricultural production.

The short-term plan will be discussed at the meeting of the Indian Central Cotton Committee in Bombay towards the end of January. In the meantime, the Committee has sought the views of the Provincial Governments and Indian States interested in cotton cultivation. It is learnt that the Government of India will give effect to the plan by introducing legislation in the Central Legislature.

A special sub-committee of the Indian Central Cotton Committee has drawn up the plan after taking into account such factors as the paramount necessity of producing more food grains, the nature and extent of the present demands for cotton for internal consumption and export, the probable requirements of the immediate future and the existing large surplus stocks of certain styles. It has been recommended that the 1942-43 all-India cotton area of 19,200,000 acres should be reduced by 3,100,000 acres during 1945-46 and 1946-47 followed by such adjustments as may be necessary in the light of circumstances then existing. Out of the proposed reduction of 3,100,000 acres, 2,000,000 acres will be under short staple cotton and 1,100,000 under low-grade medium staple cotton.

In order to ensure the success of the proposed plan, it is recommended that (1) there should be no increase in areas under styles not proposed for reduction; (2) irrigation water should not be supplied for producing short staple cotton in canal irrigated tracts; (3) the reduction proposed in the different administrations should be enforced compulsorily; (4) the Provinces and the States compelled to reduce the area should be allowed to meet their respective deficits in regard to cotton seed for cattle feed by imports; and that (5) the mixing of cotton should be prohibited by Central legislation.

The question of regulating cotton cultivation on an all-India basis was considered by the Indian Cotton Committee at its meeting held in July last when it appointed a Planning Sub-Committee.

Tea and Industrial Output

Few matters have received such detailed attention since the war began as the efficiency of industrial production. In India the problem has been greater than in most other countries because, to meet the basic needs of the fighting forces, a great new industry has had to be created without the help of either a large machine tool industry or a large mass of skilled labour accustomed to factory conditions.

That tea—India's own product—has played a valuable part in achieving unprecedented output figures is a matter for no small satisfaction. The part that tea has played—is playing, and will continue to play—is to promote concentration. In the old days it was accepted throughout the world, as an unavoidable fact that output would fall towards the end of a working shift. Today this is no longer accepted, because it has been proved over and over again that tea served to the workers on the job renews concentration and flagging energies with the result that output remains at its peak level *right to the end of the shift.*

To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

IK 241

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

CALCUTTA, 21st December.

Total production of goods by Calcutta Mills during November is returned at the fairly satisfactory figure of 88,177 tons, somewhat larger than was earlier anticipated on account of the irregularity of coal supplies. It is to be feared that the same cause will reflect unfavourably on the production figures for the current month. As it is, November production shows a drop of 5% from the previous month's total though it is above the average for the five months of the current season which now stands at 84,575 tons against the target figure of 100,000 tons aimed at by the Industry with the approval of the Central Government. Of the total outturn, 34,382 tons represented 1308 lakhs yards of commercial hessian, while 2915 tons represented 85¼ lakhs yards of hessian on military account. On the Sacking side, 41,890 tons represented 996¼ lakhs yards of commercial heavy goods and 5,805 tons, 132 lakhs yards of goods for military account. The proportion of production on military account remained practically the same as the previous month, 10.5% against 10.6%. The tendency for military requirements to run more to sackings than hessians, noticeable in recent months, continues.

With the production figures now before us, and the increase in stocks by 2,529 tons recorded earlier in the month, we arrive at a total for despatches of goods from mills of 85,648 tons during November. This compares with 84,141 tons in the previous month and an average of 87,000 tons over the five months of the current season. Average despatches thus keep ahead of average production for the season by about 2,500 tons.

The production quoted above represents a consumption of raw jute to the extent of 4,87,600 bales which, added to the consumption for the previous four months, brings the consumption for the first five months of the season to 23,38,000 bales. Against this, arrivals of jute recorded for the same period amounted to 27,59,000 bales and exports to 3,55,000 bales, so on balance, stocks of raw material in Calcutta have increased by some 66,000 bales during the period.

Detailed analysis of the November arrivals of jute reveal that rail arrivals show a decline from the previous month, but a very satisfactory improvement over the corresponding figure for the same month last year by more than double. Arrivals by river show a falling off both from the previous month and from November a year ago. Possibly the increased routing of jute via Khulna has had some effect in increasing the rail figures at the expense of the river arrivals, but apart from that the rail transport returns reflect a much better waggon supply at stations which have been very ill-served in the recent past. Arrival figures for the first half of December are estimated at 3,31,000 bales, against 1,76,000 bales during the similar period last year, thus bringing the total arrival figures for the season up to 30,90,000 bales against 27,25,000 bales for the similar period a year ago.

We are glad to record that the Member for War Transport was not long in finding a satisfactory solution to the muddle over the routing of jute via Khulna. We dealt fully with the position as it then stood in our issue of last week. The obstructing party was the B & A Railway who resisted the proposal to extend through booking facilities to all river carriers tendering jute to the Railway at Khulna for on-carriage to Calcutta destinations, while in practice this facility was enjoyed by only one carrier to the exclusion of all others. Through booking arrangements were in existence between the Railway and the "Joint" steamer companies but were not operative. The solution has side-stepped the Railway objections by the temporary chartering to the "Joint" companies of all outside craft carrying jute to Khulna, so that the "Joint" companies can now issue a through Bill of Lading from the point of despatch to the Calcutta destination, which document will be acceptable to and negotiable with the consignee. Transit insurance will also thus be simplified. There remains the question of the excess freights which have already been paid on such shipments, but it is understood that the new arrangement will be made retrospective, and these excesses therefore recoverable. The thanks of the trade are due to the Transport Member for the prompt and sympathetic manner in which he dealt with the grievance.

During the discussion on Maximum and Minimum prices of Jute in the Bengal Legislative Assembly recently, the spokesman of the European Party took the opportunity of drawing the attention of the Ministry to the difficulties which were being experienced by the dealers in the mofussil through shortage of storage accommodation, brought about by the wholesale requisitioning of jute storing godowns by the Department of Civil Supplies for the storage of foodgrains. This drew from the Minister of Commerce, Labour and Industries an assurance that he would take all possible steps to remove or minimise these difficulties, and that no further requisitioning would be done. Dealers would do well to take note of this assurance so that no further godown space should be requisitioned without protests being made to the appropriate quarters.

The coal position continues to give cause for great anxiety. Many mills have had to remain idle for lack of supplies, while some who optimistically started up the week hoping that additional supplies, would enable them to keep running, have had to close down. Even "foster" mills have had to endure spells of idleness. All this irregular working has a bad effect on labour. The amenity allowance payable when a mill is idle is sufficient compensation for the lowly paid worker, but constitutes little attraction for the more highly paid operatives like weavers. These, after a period of broken time during which they only get the minimum allowance, are tempted to seek some more regular form of employment where their skill is more amply compensated, and when a mill is once more in a position to resume full working, it is liable to find itself minus the necessary complement of weavers and other skilled workers. Unless therefore there is very early improvement, and a sustained improvement, in coal supplies, it may well be found that, even if certain sections of the mill can be kept running when coal is available, the balance of labour is

BULLION

(From Our Correspondent)

Bombay *(By Wire)*.

Bullion prices have been very firm during this week. Thanks to the prospects of a prolonged war Silver forward opened at Rs. 130-10 on Monday and flared up to Rs. 132-8 the same day. The firmness continued on Tuesday, but the market closed easier at Rs. 128-14 on Wednesday. The Reserve Bank sold 300 bars daily but to-day has called tenders for 1,000 bars for sale on Friday, the last day before the holidays. Bulls did not expect this but nevertheless silver forward is quoting Rs. 131 now after being higher at Rs. 131-12 in to-day's session. The undertone is still steady.

The heavy stock of 2½ lakhs tolas explains the comparative quietness of gold, but the undertone is very firm. To-day forward is quoting Rs. 71-9. Throughout the week the spread between spot and forward was never above two annas. Hence trend of market may be imagined.

COTTON

Hectic Trading has been seen in cotton futures. March contract was extremely steady around Rs. 450. The cotton acreage forecast to-day disclosed a decline of 24 per cent from last year thanks to the food cultivation drive and the greater attractiveness of food crops. March contract shot up immediately to Rs. 459 on the news, but profit-taking ensued. The rate is steady at Rs. 450. Poor arrivals and strong speculation is helping firmness of market.

(Continued from previous page)

so upset that a normal production is unattainable. Such skilled workers cannot be trained in a matter of days or even weeks and once they have found other suitable employment, it may be difficult to tempt them back to the jute mills.

There is almost nothing to record regarding business in the local Pucca bale market. The Jute Control in Dundee seems to be confining business to offers sent direct by balers, and nothing is reaching the regular shippers. Small inter-balers business was reported in Dundee Daisee at the minimum rate of Rs. 75 and all grades except the lowest are freely on offer at minimum prices without attracting any business either for export or from local mills. The return of Jute exported during November was only 72,000 bales compared with 82,000 bales during October and 1,28,000 bales during November last year. The total quantity exported since the beginning of the season now totals 3,55,000 bales against 3,94 000 bales last year and 6,24,000 bales the year before that.

There is also very little to record in the Loose Jute section, Mills generally having shown no buying interest whatever. Some European packing was reported on the basis of Rs. 16-4 for Mids and Jungli Tossa Bots at from Rs. 12-4 to Rs. 12-8, but the turnover has been negligible and it looks as if business were over for this year. Mofussil prices remain high and imports small, being fed to the markets with extreme discretion.

Mills have been able to sell some hessian during the past week, but the buyers are Bazar operators, so the business is not so satisfactory as it might be. Overseas demand is conspicuous by its absence. Maximum rates have been paid for all positions from January/March up to July/September and the tone remains steady at the close.

In the Heavy Goods sections. "B" Twills were the only description in which interest was shown in the earlier part of the period under report. Some demand came from the country trade for goods in rope-bound bales, of which the Bazar were short. The result was that the price for that description improved to Rs. 64 for Near delivery, while the quotation for iron-bound bales lagged well behind, though it improved sympathetically to Rs. 62-12. Towards the close certain mills came out as sellers at considerably below the maximum rates for which they had been holding. and a considerable business was done, again with Bazar operatrs, in April/June Liverpools at Rs. 70, also July/September at Rs. 69. Cornsacks at Rs. 62 for April/September and Cuban Sugar at Rs. 75 for July/September.

PAPER economy

After five years of war it is hardly necessary to emphasise the importance of economising in the use of paper. But it is worth your while to know how best to economise paper. The first point is, of course, to use only just the amount of paper which is absolutely essential and no more. The second, and no less important point is to use paper of a good quality which will enable you to write or type on both sides without affecting legibility.

JUTE

(By Our Staff Correspondent).

Calcutta, December 21.

Rather quiet conditions have been noticeable in the raw jute market in the past week. With the continued difficulty of mills in respect of coal supplies, there has been very little business. But for the higher upcountry advices prices would have been even lower. With arrivals into Calcutta both by rail and steamer on a large scale and mill buying not satisfactory it will not be possible to maintain prices at the higher levels. The lack of any interest in the market in the past week is in part due to the coming holidays, but unless there is a substantial improvement in the coal position, it cannot be expected that mills would be absorbing all supplies especially as godown accommodation is very difficult. Arrivals into mofussil centres also might improve after one or two weeks. In which case the absence of any increase in consumption by mills will have a depressing effect on values. It is said that the smaller coal supply is due to the shortage of wagons. The Transport Member seems to be appraised of the situation and there have been repeated assurances that there will be an improvement in the situation from the beginning of the New Year. But in the absence of any real improvement in the coal situation, no hopes can be entertained unless actual results are accomplished.

In the loose jute section, European packing Middles and Bottoms were done at Rs. 16-4 and Rs. 13-4 per maund, while Northern District Tossa Middles and Bottoms were sold at Rs. 15-8 and Rs. 12-8 per maund respectively. Sellers are not very anxious to do business as mofussil markets have continued firm but shippers having unutilised space are prepared to offer a slight discount for immediate delivery.

In the pucca bales section export business has been small Dundee Daisee 2/3 being done at Rs. 75 per bale and Lightnings at Rs. 74 per bale. Mills have not taken any interest in the market and quotations for all grades are at minimum prices with the exception of cuttings and rejections. Balers are anxious to do business for early shipment.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, December 21.

The jute manufactures market has remained firm on reports that even the foster mills have been obliged to close down for want of coal supplies. It was also felt that the Government of India might place further orders. Mills are not anxious to do any business. In fact, it has been possible to sell freely 9 porters for deliveries up to September next year.

In the heavy goods section prices have been maintained at last levels though there has been no improvement in outside enquiry. The strength in this section is mainly in sympathy with the hessian market. "B" twills quoted Rs. 62-4.

PIECEGOODS

Calcutta, December 21.

The piecegoods market has remained steady and it is not possible for dealers to satisfy all the demand. In spite of the fact that at the close of the year considerable stocks of goods will have to be disposed of there is no anxiety on the part of dealers to do business in any centre. The local stock position is deteriorating and the expected supplies from Bombay have not so far been received. The difficulty in respect of yarn especially is very great and dealers have been agitating for a more equitable distribution of available supplies. There is an acute scarcity of winter goods.

KOHIMA TO KABAW AND BEYOND

JAPAN'S OFFENSIVE against India having failed disastrously, their once proud armies are now on the run. The last Japanese has been driven out... and the war is now being fought beyond the frontier of India. Our offensive presses on into Burma.

KOHIMA WAS THE TURNING POINT. From Kohima to Kabaw and beyond is a long road, but it leads to Victory.

TAMU

WE RECAPTURED THE KEY-TOWN OF TAMU months ago. Much of the history of the war in Burma is linked with this place. It had witnessed much fighting. TAMU was one of the earliest places captured by Japanese after they had crossed the Chindwin. Its capture was their big boast! To-day, their bones lie scattered on the paddy fields of TAMU.

OUR BRAVE AND GALLANT MEN have inflicted a tremendous defeat on the enemy. Tokyo no longer repeats arrogant heroics about the "Invincible Sons of Heaven."

OUR FIGHTING MEN HAVE PROVED THAT WE CAN BEAT THE JAPS

Vol. XXXIV. No. 25 SATURDAY, DECEMBER 23, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

FIRM CLOSE FOR THE YEAR

The approach of the Christmas and New Year holidays has not led to any pre-holiday selling and the close for the year has been quite firm. On the Calcutta Stock Exchange, coal shares especially finished at the highest levels for the war period. Other sections also have been quite steady though Cotton shares on the publication of discouraging reports have been weak. In the Bombay market, prices were at higher levels earlier in the week, but the close has been easier with the reports regarding a major German counter-offensive.

* * * *

The experience of operators in the current year has on the whole been satisfactory. In the first half of the year markets made a mixed showing with the developments in the North-east Frontier. In the month of March and April particularly there was considerable anxiety about the token Jap invasion of this country. After May, however, developments in the war situation proved satisfactory from the Allied point of view and operators were concerned only with the continuance of war-time conditions so that earnings of companies would be maintained at fairly high levels. For this reason, the reports regarding the possibility of an early peace had a discouraging influence in September and a sizeable decline in prices was recorded. The reopening after the Puja holidays, however, on the Calcutta Stock Exchange and after the Diwali holidays in the Bombay market was characterised by active trading conditions and in the last two and a half months of the current year a steady upward movement in prices has been recorded. The strength of the bullion markets and the continued expansion of currency have been other factors in favour of stock markets.

With the expectations of a prolonged war and the satisfactory progress of operations in the Burma theatre the New Year should thus begin under favourable auspices. There might not be any great speculation over the Budget proposals for 1945-46 as it can be said that the peak of military expenditure has been passed and with the possibility of a large increase under customs revenue there will be no need for any fresh taxation though the authorities might devise new measures to pursue their anti-inflationary programme.

* * * *

The reason for the sharp decline in prices for the Cawnpore group of cotton shares is now clear. The accounts of the *Cawnpore Textiles* and *Elgin Mills, Limited* for the half-year ended September, 1944 show that the reduction in ceiling prices for cotton cloth and yarn and a further increase in working expenses have resulted in a decline in profits. But the low level of earnings has not in anyway affected the distribution to ordinary shareholders in the case of both companies. The net profit, before providing for taxation and depreciation, for *Cawnpore Textiles Ltd.*, is Rs. 11,28,167 against Rs. 21,51,922 for the previous six months. Provision for taxation is Rs. 9.5 lakhs against Rs. 16.35 lakhs and depreciation Rs. 1.5 lakhs (Rs. 1 lakh). Allocation to other funds is Rs. 76,250 (Rs. 4,05,764). After paying the ordinary dividend of 3 annas per share (same) the amount carried forward is Rs. 26,314 against Rs. 30,647 brought in.

* * * *

Elgin Mills Limited also has reported a lower level of earnings for the same half-year, the net profit, before providing for taxation and depreciation, being Rs. 35,40,408 against Rs. 57,41,818 in the previous six months. Allocation to taxation reserve is Rs. 25,77,935 (Rs. 45 lakhs). The amount set aside to depreciation is Rs. 2.5 lakhs (same). The transfer to General Reserve is Rs. 2.5 lakhs (Rs. 8,49,945) and Stock and Stores Reserve Rs. 1 lakh (nil). Dividend on ordinary shares has been maintained at Re. 1-8 per share. The amount carried forward is slightly lower at Rs. 1,07,717 against Rs. 1,13,894 brought in.

* *

The accounts of *South Karanpura Coal Company, Limited* for the half-year ended August, 1944, reflect in full measure the improved conditions in the coal industry. None of the collieries which have published their balance-sheets so far have been able to make an encouraging report and take a very optimistic view of the future outlook. This company perhaps is in a more advantageous position at the present moment than other collieries. Raisings for the half-year were 58,853 tons against 39,748 tons in the previous half-year and despatches 55,898 tons against 37,191 tons. Considerable assistance was provided for the removal of the over-burden in the quarry by a military unit using mechanical equipment. With the mining methods adopted by this company, coal reserves being tackled now are mostly surface coal, women labour has proved of inestimable benefit. The directors, point out that the company is exhausting its limited reserves of coal in the quarry at a rapid rate though in view of the national coal shortage this policy is justified.

* * *

The net profit, before providing for taxation and depreciation is Rs. 2,06,011 against only Rs. 34,785 for the previous six months. Total sales were Rs. 5,93,303 against Rs. 2,31,915. Provision for depreciation is rather high at Rs. 73,000 (Rs. 28,538). After wiping off the debit balance of Rs. 1,04,004 brought in from the previous accounts a dividend of 2 annas per share is to be paid to shareholders. There has been no need for provision for income-tax and E.P.T. as the unabsorbed depreciation and deficiency in earnings in previous years obviated the need for any allocation in this regard. The company, however, will have to make large provisions in the future. The standard profit is only the minimum of Rs. 35,000. An appeal has been submitted with a view to obtaining an increase in standard profit.

* * *

It appears, however, that the company is more favourably situated in regard to the bonus scheme the target level being relatively lower. In the last half-year a sum of approximately Rs. 40,000, which is subject to income-tax and super-tax, was earned under the bonus scheme. The directors say that

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment. Ed.—I. F.]

In my first instalment of Market Gossip I said that the market was in a mood to follow any favourable factors that may arise. The behaviour of the market during the week under review has proved the correctness of the opinion expressed by me. Indian Irons improved to Rs. 41-8 to close at about Rs. 40-12. Coal shares also registered a sharp rise. Bengal Coals improved to Rs. 715; Equitables were done upto Rs. 70-12.

Shareholders of the Indian Iron and Steel Company have received the reports and accounts for the year ended 31st March, 1944. The chairman in his statement to the shareholders has drawn their attention to the considerable drop in sales figures which he says is due to contraction of output, the carrying out of furnace relining programmes and difficulties arising from shortage of transport and shipping. This proves that the rumours that were current in the market about three weeks back were not without foundation.

As regards the raising of additional capital, the chairman says, "With the statutory provision for payments of taxation in advance, the capital extensions which we are compelled to undertake in the near future and to which we are in part already committed, a close cash position during the current year is indicated and *additional finance in some form or other will be required*". (The italics are ours.)

The recent rise in the price of Indian Iron is due mainly to expectation of additional capital being offered to existing shareholders at some concession as compared to current market rates. If the directors decide to raise capital by way of debentures, there will be a sharp fall in the price of there shares.

The words *compelled to undertake* used by the chairman in respect of capital extensions are very significant. Some say that a part of the programme is not extension, but replacement as a part of the present production plant has become obsolete. If so, the chairman should have made it clear. I would like the shareholders to bear this in mind when they attend the general meeting.

A careful study of the balance sheet shows that the drop in sales figures explained in 1943 is likely to continue in 1944 as the conditions that were responsible for the drop in 1943 have not altered or improved in 1944.

As regards future dividends I do not look for any improvement. On the contrary, there may be smaller dividends.

For the year 1943 the company paid an interim dividend of annas 6 per share and a final dividend of Re. 1-6 per share. Strictly speaking it is wrong to call the first payment an *ad interim* dividend. If a company publishes its accounts once a year, if the profit position warrants it pays a dividend for the half-year on the earnings for the half-year. But in the case of Indian Iron the so-called *ad interim* dividend was declared in May 1944, that is some time after the year closed so that it is really a sort of payment on account. Although at the time of the payment of the so-called *ad interim* dividend the final accounts may not have been complete it cannot be said that the directors had no idea of the total profits made for this year. If the accounts justified a total payment of Re. 1-12 for this year the directors should have paid out the major portion in the beginning and the balance when the accounts were finally ready. The fact that the company now contemplates raising additional capital may give some justification for thinking that the final dividend looking to the initial payment made in May would have been smaller but for the fact that new capital should be raised. Taking all the factors stated above into consideration I think Indian Irons are fully priced and unless conditions change materially I do not expect any further rise.

I would, however, like to remark that the mood of the market continues to be bullish and when the market is in that mood it never stops to study the intrinsic position of each and every share dealt on the Exchange. When the market is in a mood to rise even bad shares go up. But when the reverse is the case even first class dividend paying concerns experience a fall. But the investor

(*Continued on page* 859)

SOMETHING "EXTRA" IN THIS INVESTMENT

Life insurance offers you an ideal investment proposition. Government Securities, Bank Deposits, etc., are First Class Investments, but certain New India policies afford better advantages. They are as follows :

- **Handsome Profits :** *At the end of the term, the policy returns the Capital invested with an yield in compound interest which is very often larger than the yield from the Capital invested in other securities.*
- **Full Life Coverage :** *In the event of early demise, the full sum assured (with or without profits) is paid out to the beneficiaries. Very often this means a return out of proportion to the Capital invested.*
- **Saving in Income Tax :** *To those who pay Income Tax, such policies are an added attraction as a substantial rebate is allowed on the premiums that are paid.*
- **No Depreciation :** *The Capital invested does not depreciate nor is adversely affected by market fluctuations.*

The Capital may be invested by instalments or in a lump sum at a discounted rate. As the yield varies in each individual case according to age, term, income tax payable, etc., a detailed plan to suit your own needs will be furnished on request.

Premium Income in 1943	Total Funds

Company Meeting.

THE SHOLAPUR SPG. & WVG. CO., LTD.

FINANCIAL POSITION GREATLY STRENGTHENED

SHOLAPUR MILL'S CHAIRMAN AS ON OUTLOOK

Presiding at the 69th Annual Ordinary General Meeting held on the 15th December, 1944, at the Registered Office of the Company, Mr. C. H. Bhabha, the Chairman, said:—

"The Report of the Directors together with the Audited Statement of Accounts of the Company for the year ending 31st March 1944 having been in your possession for some time past, I shall as is customary, with your permission take them as read.

"I feel it my duty to refer before the commencement of these proceedings to the sad demise of Mr. T. R. N. Cama one of our oldest directors. He was associated with the Company as a Director for the last 25 years and had taken a lively interest in its affairs during this very long period. The loss of Mr. Cama's advice based on his vast experience and his kindly—personality and tact will be greatly felt by his colleagues on the Board.

"During the year under review the Textile Industry in India passed through a strenuous time. With a view to control yarn and cloth prices which were soaring to dizzy heights, the Government inaugurated a series of control measures in the interests of the consumers. The chief feature of these measures was to exercise a control over the distribution and the price of textile goods in consultation with the Textile Control Board. The Government's anxiety to look after the consumers' interest is to be highly appreciated and the adoption of these measures is an evidence of that anxiety. The question however remains whether these, hap-hazard, measures have been successful in eradicating the disease. The answer is in the negative as has been admitted by even some of the controlling authorities— themselves. It is highly appreciable that they have recently admitted that Black-Markets during the last two months have assumed proportion which will not be tolerated for any long time. But what is worse is, that Government intervention has broken longstanding trade links and goodwill built up through decades of expert experience and those engaged in the industry very naturally are concerned about the far-reaching deleterious results of these measures on the future working of the Textile industry in India. It is indeed, therefore, gratifying to learn that Government proposed to allow distribution through the ordinary channels of trade subject to certain healthy safeguards. All that may be said at present is to express a hope that all concerned namely the manufacturers, the distributors and the consumers will whole heartedly co-operate with the Government in their efforts to smash the Black-markets.

"The Management had by no means an easy time particularly during the last two years. The Government Control Order was introduced in August last and there was subsequently a welcome fall in prices. Drastic regulations were imposed and Stamping of piece-goods and yarn was resorted to. Moreover, there were transportation difficulties owing to wagon shortage and delay in the issue of priorities for civilian requirements. The same reason was also responsible for difficulties of cotton, coal and particularly stores supply to the mills at Sholapur. As a result of the coal position becoming acute, all the mills at Sholapur had to close down jointly for a short time. Several discussions for a solution of this issue were held and the result was the formation of Coal Pool system at Sholapur which has with all its limitations so far worked smoothly and satisfactorily.

"As you are already aware the new Tax free Cumulative First Preference Redeemable shares were issued during the year. The reasons for this were sufficiently explained at the Extra-ordinary meeting of shareholders held early last year. The proceeds of this issue amounting to Rs. 16 lacs were invested in Government Securities as per terms of the Consent Order of the Government. The securities have since been utilised for the repayment of our mortgage debentures as sanctioned and approved by the Debenture holders at their meeting of 18th February 1944. The major portion of the Debentures have now been thus paid off and only a very small proportion remains unpaid in respect of those holders who have not yet called to receive payments. The unpaid balance of such debentures amounts to Rs. 3,06 224/- whereof the amount standing due to Messrs. Morarjee Goculdas & Co., out of these debentures will also be soon paid off in terms of the Debeture Trust Deed. The Debenture Sinking Fund which now stands at Rs. 27 lacs as well as the premium on issue of shares amounting to Rs. 8 lacs will now form part of free funds belonging to Company thereby greatly strengthening the financial position of your mills. No further contribution will have to be now made to this Debenture Sinking Fund nor will any previous sanction of the Debenture-Holders be necessary for payment of suitable dividends in excess of 6 percent as heretofore.

"An analysis of the Balance-sheet reveals very sound position. The liquid assets of the Company stand at gigantic figure of 2.88 crores. It may be pointed out further that the loans from banks were at the time of the date of the accounts of a purely temporary nature which have since been paid off. The expense during the current year under particular items no doubt show a fairly large increase and the explanation for the same is none too far to seek. Larger payments for wages and bonus and for stores and for cotton account for main increases on the expenditure side. Correspondingly also total realisations from proceeds of cloth and yarn show a marked rise. High prices prevalent for all articles during the year under review largely explain the increases referred to above.

"I feel sure you will like me to say a few words about the Taxation Policy of the Government. Recent trend of taxation leave people in pursuit of industry and enterprise to feel that the official disposition towards them is that of treating them as tax gatherers and tax collecting Agents. Let me say bluntly that the age-old enthusiasm of trying to secure maximum gains has to an extent damped down and given place to lethargy. The new taxation policy inaugurated with the last budget proposals is, of course, intended to immobilise further sums of money upto 100% of Excess Profits and you will understand therefore that the 6 2/3% of excess profits which was available under 1943 Ordinance is now not available for distribution as Dividend. Out of the total profits of the year ending 31st March 1944 amounting to Rs. 64 lacs it has been found necessary to set aside for taxation a sum not less than 50 lacs of rupees leaving a paltry balance Rs. 14 lacs for appropriations towards depreciation and distribution as Dividend. Due provisions for depreciations as is indicated in the report has been made and specially in view of double shift and high pressure under which the Mills are working, the same will be considered reasonable.

"It is satisfactory to note that there has been no discontent amongst our labourers during the year. Wages had to be increased in co-relation to the cost of Living Index and may still have to be enhanced if just find on Index basis. Dearness allowance has also been granted to the staff. With the introduction of Rationing in December 1943, we took over the work of distribution of foodgrains on a monthly basis, to our workers, who number no less than 13,000 on an average daily. As regards labour housing the programme of last year has been continued. 10 (ten) lines of the Virchandpura chowls have been completed and the eleventh is well under way. The Hospital building and other structures had to be left unfinished owing to the present shortage of building materials. Cloth was distributed to our workers at or below cost to the value of Rs. 30 per head per year as part of dearness allowance. The staff too, get the benefit of this scheme to the extent of Rs. 100/- a year.

"As for the future at this stage, he would be a bold prophet who could express any definite views at this stage. One thing appears clear, and that is that demand for Indian Cotton goods both in the home market as well as abroad is likely to continue for some time after the termination of hostilities. But this also envisages reasonable level of prices for textile goods in the future. For this aim your Company has drawn up a moderate post-war scheme for the purchase of certain upto-date and efficient machinery which can without much expenses or labour be fitted in our existing buildings. An extension programme for our Power Plant too has been chalked out so as to enable us to run all our machinery on electricity besides providing for extension of our City Supply.

"As already stated in the Directors' Report a sub-committee of the Directors was appointed to go into certain matters of stores, cotton etc. Owing to peculiar circumstances the sub-committee was able to give a report about store purchases policy of the Company only. This was duly sent by the Board before taking any definite action to the Managing Agents for a detailed explanation. Inspite of even a reminder, no remarks on the sub-committee's report have been so far received from them. It is contemplated to send them now a Notice specifying the particular time limit for their explanation failing which, I feel, it may be a painful duty of the Board to take such action as may be advised by the Company's Attorneys. All that has so far been done in this connection by the Managing Agents is to revoke the Power of Attorney of their representative who was attending to this business of the Company.

"Before I finish I must make a reference to the question of splitting up of our Ordinary shares that has recently been raised by some shareholders. Several suggestions have been received and there seems to be a lot of divergence of views on this subject as well as confused thinking and as has been mentioned in the Directors' Report to the shareholders your Board is anxious to gather general views of all of you after the conclusion of the business of the meeting.

"Considering the circumstances enumerated above, I feel sure that the results achieved by the Company during the year under report may be accepted as satisfactory.

"Finally I would like to record my appreciation of the co-operation given and the work put in by my colleagues, Agents and the entire staff both at Bombay and Sholapur.

"I now proceed to move the adoption of the Directors' Report and Audited Statement of Accounts and the Profit & Loss Account for the year ended 31st March, 1944.

THE INDIAN IRON & STEEL CO., LTD.

NOTICE

The Twenty-Seventh Ordinary General Meeting of the Shareholders of the Indian Iron and Steel Company, Limited, will be held on Wednesday, the 24th January, 1945 at 11 a.m., at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business :—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1944.

(2) To confirm the payment of the ad-interim dividend which was paid on and after 31st October, 1944.

(3) To elect a Director in place of Mr. Jna Basu who retires and is eligible for re-election.

(4) To elect a Director in place of Sir P. P. Ginwala who retires and is eligible for re-election.

(5) To elect a Director in place of Dr. N. N. Law who retires and is eligible for re-election.

(6) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 17th January to 24th January 1945, both days inclusive.

By Order of the Board,
BURN & CO.,
Managing Agents.

Calcutta, 18th December, 1944.

Company Meetings

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

PRODUCTION LIMITED ON ACCOUNT OF COAL AND TRANSPORT DIFFICULTIES

PUNJAB FACTORY COMMENCES WORKING

Remarks made by the Chairman, Sir Bernard Pratt, at the Annual Meeting of the Alkali and Chemical Corporation of India, Ltd. held at Calcutta on the 15th December, 1944.

The Calcutta Factory operated efficiently throughout the year, but production was limited on account of restricted supplies of coal and transport difficulties. Some of the Company's principal customers have been in similar difficulties from time to time and for this reason have not always been able to take as large supplies of chemicals as could have been made to them. The position has improved slightly since the close of the Company's year, but in present circumstances it is impossible to say whether the improvement will be maintained.

You have seen the remarks in the Report of the Directors regarding the Punjab Factory. The limited operating experience that we have had so far, has indicated that the Soda Ash Plant is technically satisfactory. In the last month labour position has improved considerably and we expect to recommence production almost immediately. I must however record here that until adequate coal supplies are available, it will not be possible for the Soda Ash Plant to work at its full rated output.

Mr. Mason a Director of the Alkali Division of Imperial Chemical Industries Ltd., the Company's Technical Advisers, has been in India for the last two months in connection with the Soda Ash Plant, and his technical and administrative experience is proving very valuable.

Relation with staff and work-people at both plants continue to be satisfactory. A Provident Fund for staff is already in existence and it is now proposed to establish a voluntary Provident Fund for workers. It is hoped that the Fund will encourage thrift and contribute to their contentment and efficiency. Owing to the improved food situation the cheap price grain shop at the Punjab Plant was found unnecessary and was discontinued in March 1944 but the shop at the Calcutta Plant has continued to function and is appreciated by the Company's employees. A cooked food canteen for workers at the Calcutta Plant was opened in April 1944. Free medical attention and medicine is available for staff and workers at both Plants. Workers at the Calcutta Plant are permitted 14 days leave on full pay per annum, and a similar scheme is under consideration for the Punjab Plant.

The Company made a profit of Rs. 3,23,510 on the year's trading after providing for depreciation. The dividend on the preference shares for the year has been duly paid but I regret that the Company's position does not not yet justify the Directors recommending a dividend on the ordinary shares.

Auditors.—The Auditors, Messrs. Lovelock & Lewes, retire from office and offer themselves for re-appointment.

Directors.—Imperial Chemical Industries (India) Ltd., the Company's Secretaries appointed Sir Harry Burn on the 4th January 1944 an ex-officio Director under Article 111 of the Company's Articles of Association. His great industrial experience has been and should continue to be of considerable value to the Company.

In accordance with the Company's Articles of Association I, Mr. David Hendry and Khan Bahadur Sir Syed Maratib Ali, C.B.E. retire from office and offer ourselves for re-election.

The following resolutions were passed unanimously:—

1. That the Report of the Directors and the Balance Sheet and Profit & Loss Account of the Company as at 30th June 1944 be adopted; and that the dividends on the preference capital of the Company at the rate of five per cent per annum, free of British Indian Income Tax, in respect of the half-years ended 31st December 1943 and 30th June 1944 paid on 7th January 1944 and 8th July 1944 be confirmed.

2. That Sir Bernard Pratt, Mr. David Hendry and Khan Bahadur Sir Syed Maratib Ali, the retiring Directors, be and they are re-elected Directors of the Company.

3 That Messrs. Lovelock & Lewes be and they are hereby appointed the Company's Auditors for the current year at the same remuneration as was paid to them in respect of the year ending 30th June, 1944.

(*Continued from page 853*)

the present prospects of earning bonus are considerable. As Depreciation is to be allowed on a generous scale and as the standard profit is low the shareholders can expect payment of good dividends only if large sums are earned under the bonus scheme. There has been a rise in the quotation for the shares to Rs. 27-8 on publication of the accounts but having regard to the difficulties under which the company has to function, the present price would seem to have discounted prospects a long time ahead.

* * * *

The accounts of *Indian Iron and Steel Company, Limited* for the year ended March, 1944, have been published. The reduction in earnings for the year would not have come as a surprise to the market as the dividend which has already been distributed to the shareholders gave an indication as to what can be expected. Having regard to the difficulties under which the company had to function the results for the last accounting period should be considered satisfactory. The Chairman in a brief statement to the shareholders points out that the drop in sales from Rs. 4.95 crores in 1942-43 to Rs. 4.63 crores in 1943-44 was due to the contraction of output with coal difficulties, carrying out of furnace re-lining programmes and the inherent difficulties resulting from shortage of transport and shipment facilities. The company also had to incur very large expenditure amounting to Rs. 30 lakhs per annum for the supply of cheap foodstuffs to labour. The net profit, before providing for taxation and depreciation, for March, 1944 was Rs. 98,61,025 against Rs. 1,28,41,985 for the previous year. Provision for depreciation is unchanged at Rs. 25 lakhs, but that for taxation is appreciably lower at Rs. 25 lakhs against Rs. 40 lakhs. The allocation to Debenture Sinking Fund is Rs. 3,39,400 (Rs. 3,24,640) and War Risks Factories Contingency Fund Rs. 3.25 lakhs (Rs. 10 lakhs). A final dividend of Re. 1-6 per share and an interim dividend of 6 annas per share makes Re. 1-12 per share for the whole year against Rs. 2 per share for 1942-43. The amount carried forward is considerably lower at Rs. 2,71,267 against Rs. 5,19,766 brought in.

* * * *

The directors are rather optimistic regarding the prospects for the current year. They point out that for reasons beyond their control capacity output from the furnaces could not be expected though there is demand for all the iron produced. The foundries are fully booked ahead and, given continuance of present conditions, capacity output and despatches in this department should not be affected.

In view of the reports in recent weeks of additional issue of capital on bonus terms, the Chairman's remarks regarding the need for additional finance in some form or other are significant. It is said that the additional capital is required in order to be able to meet tax payments in advance and also to provide for capital extensions which are very necessary. It is expected that large sums will be needed for improvement and additions to the existing plant. The additional capital, when it is fully utilised, will thus result in a further increase in the earning capacity of the company. It might be even be possible to pay higher dividends in the future though immediately it might be necessary to effect a proportionate decrease in the dividend distribution.

* * *

At the annual meeting of the Mysore Paper Mills the reasons for the reduction in dividend for 1943-44 were explained in detail by the Chairman. Recovery in output is expected and it is noteworthy that the quotation has improved steadily after the accounts were issued. Since tax relief is anticipated the Reserves should be duly strengthened. As to the outlook the Chairman is cautious but improvel fuel supply must offset the experience recorded.

WATCH-DOG.

DEORIA SUGAR MILLS, LIMITED

Extraordinary General Meeting

Notice is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held at its Registered Office, 5, Royal Exchange Place, Calcutta, on the 25th January, 1945 at 4 p.m for the purpose of considering and if thought fit, passing the following Resolution as a 'Special Resolution' of the Company:—

"RESOLVED:

That in sub-section (2) of Regulation 97 of the Articles of Association of the Company, the words 'excluding Income Tax and Super Tax' appearing therein at the end be deleted and the following substituted instead:—

"(a) 'without any deduction in respect of Income Tax, Super Tax, Excess Profits Tax or any other tax or duty payable or levied on income or revenue or for expenditure on Capital Account.'

"(b) That this amendment do have effect from 1st September, 1943.'

By Order of the Board,
KARAM CHAND THAPAR & BROS., LTD.
Managing Agents.

Calcutta,
The 14th December, 1944.

BURN & COMPANY, LIMITED

NOTICE

Notice is hereby given that the Board of Directors of this Company have sanctioned payment of the usual Dividend on the Preference Share Capital of the Company for the half-year ended 31st December, 1944. Payment will be made on or after the 10th January, 1945 to those shareholders whose names appear on the Company's Registers on the 31st December, 1944 or in accordance with their instructions.

By Order of the Board,
BURN & COMPANY,
Managing Agents

Calcutta,

The 18th December, 1944.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Dec. 22.

Very steady conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing has been on a large scale. The approach of the holidays has not had any effect on markets. As a matter of fact, with hopes that the war will be prolonged there has been heavy speculative buying. Coal shares have again provided the feature of the week. Gilt-edged securities have been firm. Cotton shares were quiet on the unfavourable showing of balance-sheets of Elgin and Cawnpore Textiles for the half-year ended September 1944. Jute shares remained uninteresting for the greater part of the week though towards the close a steadier feeling is noticeable. Engineering shares have been firm throughout. The general undertone is steady.

The giltedged securities section has been firmer in the latter half of the week with 3½ per cent being done up to Rs. 100-6. There has been good enquiry for short and medium-dated loans, 3 per cent 1951-54 being done at Rs. 101-4, 3 per cent 1946 were Rs. 102-10, 3 per cent 1953-55 Rs. 100-11 and 3 per cent 1949-42 Rs. 101-13. Among the long-dates issues, 3 per cent 1963-65 were Rs. 99-4 and 3 per cent 1966-68 Rs. 98-8. 4 per cent 1960-70 were dealt in at Rs. 113 and 4½ per cent 1955-60 at Rs. 116-14. Easy money conditions continue to prevail though with the approach of the year-end there has been a slight hardening in rates and the average discount on treasury bills has risen to annas 8 pies 3 per cent per annum from 8 annas per cent.

Bank shares were unchanged with *Imperial Bank* Contributories quoting Rs. 500, *Reserve Bank* Rs. 134-8 and *United Commercial Bank* Rs. 37-10 premium. *Calcutta National Bank* were a shade better at Rs. 15-2 while *Bharat Bank* ordy. changed hands at Rs. 107-8.

The Cotton section was rather quiet with *Cawnpore Textiles* marked down to Rs. 12-14 on the publication of the balance-sheet for the half-year ended September, 1944. The dividend is unchanged at 3 annas per ordinary share. *Elgin* also were lower at Rs. 64-8 but there has been a recovery to Rs. 66-4. *Kesorams* were easy at Rs. 16-10, *New Victoria* came down to Rs. 7-2 but are now better at Rs. 7-9. The dividend for the year ended October 1944 is 2 annas per share.

The [illegible] section was very firm with a further rise in prices all round. *Deoli* had a sensational rise from Rs. 17-8 at the beginning of last week to Rs. 25-10 to-day. It is reported that this company might stand to benefit considerably under the bonus scheme. *Bengal* were not very much higher at Rs. 710. There has been a steady rise in *Bokaro and Ramgur* to Rs. 45-8 from Rs. 44-4 at the end of last week. *Burrakur* went up to Rs. 44 but on profit-taking there was a decline to Rs. 42-14. The close is better at Rs. 43-10. *Bengal Bhatdee* were Rs. 15-4 against Rs. 14-10, *Burra Dhemo* have been frequently dealt in and the quotation has improved from Rs. 10-5 to Rs. 13-10. *Dhemo Main* were a point higher at Rs. 27-8. There has been good investment buying of *Equitable* and the quotation rose to Rs. 70-8. *Searsole* also were in favour with a rise of 4 points to Rs. 12-10. On the announcement of a dividend of 2 annas per share for the half-year ended August 1944, *South Karanpura* have improved further to Rs. 27-10. *West Jamuria* were Rs. 60-8.

Jute shares were quietly steady for most part of the week but in the last two days, there has been greater enquiry and a slight improvement in the quotation has been recorded. *Howrah* were Rs. 83-4. *Anglo-India* were 10 points higher at Rs. 465. *Champdany* were dealt in at Rs. 265. *Chiavalash* and *Nellimarla* were 2 points higher at Rs. 32-6 and Rs. 35-4 respectively. *India* were not very much higher at Rs. 791. *Megna* were Rs. 119-8 against Rs. 116-8 ex-dividend. *National* were Rs. 33-10 against Rs. 32-8 and *Presidency* Rs. 10-15 against Rs. 10-9. *Nuddea* were unchanged at Rs. 128

In the Engineering section, *Indian Iron* had a further rise to Rs. 41-6 on the publication of the report for the year ended March 1944 containing a reference to the possibility of additional capital issue in the near future. The accounts, however, should not be considered encouraging from the market point of view as there is a sharp decrease in earnings. Profit-taking and selling at higher levels brought the quotation down to Rs. 40-10. *Steel Corporation* improved to Rs. 33-15 and are now quoting Rs. 33-9. There is good buying at the lower levels. *B. I. Electric Construction* were Rs. 13-14 and *Bhartia Electric* Rs. 20-6. *Kumardhubi Engineering* were Rs. 11 and *National Iron and Steel* Rs. 13-6. *Indian Steel Wire Products* ordy. were Rs. 55-8 and defds. Rs. 37-8.

Sugar shares were neglected but there has been selective buying in the last few days. *Carew & Co.* were a shade better at Rs. 22-6 and *Cawnpore* at Rs. 39-12. *Champaran* were Rs. 38-6 and *Dharbhanga Sugar* Rs. 29-11. *Balrampur* changed hands at Rs. 16-11 and *Murree Brewery* Rs. 21-4. *Ramnugger Cane & Sugar* were sticky at Rs. 13.

On selective buying tea shares have further improved, *Hasimara* being Rs. 31-8 and *Patrakola* Rs. 1,252. *Bishnauth* were Rs. 44-6.

In the Miscellaneous section, there has been less interest in Calcutta Trams and the quotation is lower at Rs. 45-8. *B. I. Corporation* were Rs. 6-8 and *Indian Wood Products* Rs. 32-12. *Balmer Lawrie* were better at Rs. 475 while *Bararee Coke* were easier at Rs. 34. There is no rise in *Burma Corporation* and the quotation has remained unchanged at Rs. 4-7 with *Indian Copper* at Rs. 3-1. *Dalmia Cement* were lower at Rs. 16-10. *Alkali & Chemical* were unchanged at Rs. 29-2. *Dharangadhra Chemicals* were at Rs. 530.

It is not clear as to how the valuation of the C. T. C. assets by the Corporation was reached as there is a difference between the estimate furnished by the Corporation and that of the C.T.C. of as much as Rs. 3 crores. Latest reports suggest that within the short time available it will not be possible to decide on any course of action. It is not surprising, therefore, prices for C. T. C. shares have declined to Rs. 45-8.

The room of the Calcutta Stock Exchange will remain entirely closed from December 23, 1944 to January 1, 1945, both days inclusive, on account of the Xmas and New Year holidays.

HUKUMCHAND JUTE MILLS, LTD.

Notice to Shareholders

NOTICE is hereby given that the Directors in their Meeting held on the 20th December, 1944, decided to pay an interim dividend of Rs. 3-8 per share, free of income-tax, on the Preference Shares out of the profits of the Company for the six months ended the 30th September, 1944. The dividends are payable on application after the 15th January, 1945, to the Shareholders whose names are registered in the Books of the Company on the 8th January, 1945.

The Share Transfer Books of the Company will remain closed from the 9th January to 15th January, 1945, both days inclusive.

By order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.
