Schedule.

* SRI PILLALAMARRI VENKATESWARLU:—" I am not moving my amendment, Sir."

The schedule was put and carried.

Preamble.

The Preamble was put and carried.

THE HON. SRI T. PRAKASAM:—" Sir, I now move—

'that the Bill be passed into law.' "

B. POCKER SAHIB BAHADUR:—" Mr. Speaker, Sir, it is very unfortunate that in this House there is very little consideration paid to reason. I do not mind from what quarters any reasonable suggestion comes, but the suggestion has to be tested from the point of view whether it is reasonable or not. No doubt the Government looks upon us as its enemies. They are entitled to do so, but even from the enemy's side if some reasonable suggestion comes, it has to be given proper attention. Now look at the way in which not only this Bill but so many other Bills are being pushed through this House. The reason given by the Government was that we are living in extraordinary times. Though the war is over, the aftermath of war is there, we are told, and we must be deemed to be living under the same war conditions. The Defence of India Rules are about to expire and some provision must be made for their continuance under the Government of India Act. Under these extraordinary circumstances, unless those powers are legalized and continued, it would be difficult to carry on the administration of the country—that is what we are told. It was in that connexion that I proposed an amendment this morning that the further consideration of these measures might be deferred until it was definitely known whether the present Interim Government was going to continue the Defence of India Rules or not. I had sent a short notice question yesterday on this matter in order to elicit information."

* MR. SPEAKER:—" The hon. Member gave it at a late hour."

B. POCKER SAHIB BAHADUR:—" I could have the information from the Press only on Saturday evening and so I sent the question yesterday. That is all I could do.

1 p.m. " Even now, Sir, when I made the amendment on this point, the Hon. the Premier did not think it worthwhile even to answer whether he had any information or not, or whether he had bestowed any attention to that. He did not even have the courtesy to refer to it. Now, Sir, I ask whether it is not a matter to be taken into consideration at all in pushing these Bills in this hurried manner. If the Defence of India Rules are to be continued, there may not be any necessity for these provisions at all. When such is the case, Sir, I ask, why the Government should have treated this suggestion with that kind of contempt? Is it a matter to be treated with such a contempt? A point has been

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Call money is quoting ½ per cent. in Calcutta and ¼ per cent. in Bombay. Funds are in plentiful supply in spite of the fact that there have been larger subscriptions to the defence loans and tax collections also have been on a larger scale. The firmer policy adopted by the authorities in regard to short-term borrowing and the reduction in the offer from Rs. 6 crores to Rs. 4 crores have thus borne fruit. At this week's auctions applications were lower at Rs. 7.42 crores against Rs. 8.03 crores, but they should be considered large if the reduction in the offer is taken into consideration. The average discount on accepted tenders was seven annas and nine pies per cent. per annum against eight annas per cent. per annum. The offer for the next week has been maintained at Rs. 4 crores.

The returns of the Reserve Bank for the week ended June 30, 1944 show that there has been fresh expansion in currency after the lapse of two weeks. Total notes issued were Rs. 4.99 crores higher at Rs. 943.40 crores while notes in circulation showed an increase of Rs. 6.19 crores to Rs. 931.37 crores. Sterling securities were Rs. 828.33 crores against Rs. 822.84 crores, an increase of Rs. 5.49 crores. Expansion of currency has been for Rs. 5 crores only as rupee securities for Rs. 48.93 lakhs have been cancelled.

In the Banking department, Central Government balances were higher at Rs. 65.25 crores against Rs. 62.71 crores. Other Government accounts also showed an increase to Rs. 16.79 crores from Rs. 15.03 crores. There is a big drop in bank balances to Rs. 94.35 crores from Rs. 101.26 crores. Balances held abroad were Rs. 3.45 crores lower at Rs. 177.33 crores, but if the transfer to the issue department is taken into consideration there has been a net receipt of Rs. 1.90 crores.

In this connection, it is regrettable to note that the International Monetary Conference has refused to consider the question of blocked sterling balances and has said that the liquidation of sterling balances should be the subject of a bilaterial agreement between India and the United Kingdom. The Indian delegation's principal aim of pressing the claim for multiple convertibility of sterling balances has, therefore, been not successful.

The statement of the Imperial Bank for the same week reveals a sharp increase in deposits to Rs. 226.92 crores from Rs. 221.65 crores. Investments are exactly Rs. 8.1 crores higher at Rs. 126.51 crores while advances have declined to Rs. 63.89 crores from Rs. 66.61 crores. In the result, cash on hand is higher at Rs. 46.06 crores against Rs. 41.64 crores.

The statement of scheduled banks shows that demand liabilities are lower at Rs. 554.62 crores against Rs. 556.34 crores but time liabilities are higher at Rs. 180.96 crores against Rs. 179.64 crores. Cash on hand is Rs. 82 lakhs lower at Rs. 26.22 crores, but balances with the Reserve Bank are Rs. 44 lakhs higher at Rs. 93.78 crores Advances were Rs. 1.37 crores lower at Rs. 214.28 crores. Bills discounted also showed a decline by Rs. 32.27 crores to Rs. 8.85 crores.

The persistence of easy money conditions and the lack of scope for speculative activity in other markets has led to large scale buying in the Calcutta stock market and well-nigh boom conditions have been noticeable in the past week. It is perhaps incorrect to say that much of the surplus funds in the market is seeking investment in stock exchange securities as deliveries are accepted without much of bank accommodation and upcountry investors have paid cash. The rise in prices has been pronounced in the case of Coal shares and the jump in values in the last three days has surprised many. There has been an advance in other sections also.

The bullion market has been better chiefly due to technical reasons. There has been a gradual reduction in gold stocks in the absence of fresh sales by the Reserve Bank. The acute scarcity of supplies in the silver market has forced up prices inspite of the liberal selling by the chokseys. Bears have been keen to cover their positions.

The exchange market has been active with more remittance demand. A good number of dollar bills have been discounted There is no change in rates.

Call money quoted ½ percent in Calcutta and ¼ percent in Bombay, 3 to 5 months ½ percent; 6 to 11 months ¾ percent and 12 months 1¼ percent.

Bank's buying 90 days/St at 1s. 6 9/32d., for one and two months; Bank's buying 90 days/St at 1s. 6 5/16d., for three and four months.

B.C. rates T.T. 1s. 5 15/16d.; B.C. rates D.D. 1s. 5 15/16d., Bank's selling T.T. 1s. 5 31/32d., Banks's selling D.D. 1s. 5 31/32d., Bank's buying T.T. 1s. 6 1/32d., Bank's buying D.D. 1s. 6 5/32d.

London/New York:—X'rates $4.02½/3½. Bank's selling T.T. Rs. 332¾; Bank's selling D.D. Rs. 332¾; Bank's buying T.T. Rs. 329½; Bank's buying D,D. Rs. 326½.

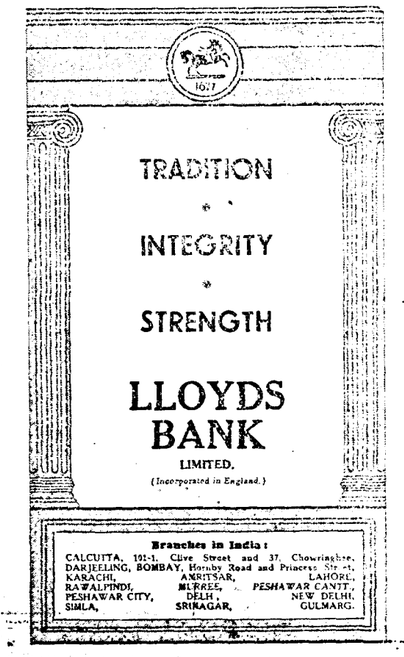
Finance Abroad.

Thursday Evening.

ON Sunday the international monetary conference opened and for five days running there have been reports as to its doings. Lord Keynes' arguments for a world reconstruction bank, able to take special risks, have been the kernel of discussions at the conference for Mr. Morgenthau's opening speech indicated that the U.S.A., if duly assured of exchange stability, is willing to lend to all who need. The silver bloc's proposals do not seem to get much encouragement at this stage for Dr. H. H. Kung has stated fairly precisely that China is in favour of a managed currency. But the Bretton Woods discussions falling between the Conventions are not likely to interest any but those with bees buzzing in their bonnets. The interest certainly lies away in the further improvement in shares on Wall Street where the turnover is more than normal for a market supervised by the S. E. C. The men playing the market would be certainly have no time to look through the discussions as to the disposal of blocked balances. But early decision by a majority as to the special position of the sterling area (in which payments are settled easily because exchange stability is an accomplished fact) would bring agreement within reach. British views as to silver can be guessed easily at present. When loans of silver are outstanding no country, including India, is likely to favour bimetalism. Silver's cause failed when Bryan failed to become President of the U.S.A. and the interested advocacy of Mexico is not likely to help silver any more than the arguments of the American Smelting and Refining Co.'s chief before the conference met.

The first report mentioned 44 nations being represented. Probably newly recognised Bolivia, too, has been given a place but the majority view as to blocked balances means at present that South American countries with their own increasing overseas assets are by no means eager to get something else. This means that the dollar would be steady; also that free lending abroad by the U.S.A. would not lead to depreciation. The proposal for international loans is said to cover France, Egypt, India, Brazil and other countries. It may be freely assumed that the proposal for loans is a consequence of the plan for a big export drive though the export may mainly be of capital goods.



Mr. Morgenthau's reference to impediments to world trade may not be wholly conventional in view of the British view that Empire economic unity comes first always. How the Anglo-U. S. differences will be resolved before the agreement as to the monetary fund is reached is hardly a matter for enquiry since the private Indian view has long been that getting at the sterling balances quickly for planning and development is the most important object of the conference. Possibly the difficulties encountered may lead to a hardening of the core of protectionist opinion in India and Mr. Morgenthau's arguments in regard to industrialisation and trade may be re-addressed to Britain. Increased aid to the U.S.A. under reverse lease-lend this year may modify Congressional opinion at some stage though it is clear that a Republican victory in November means that the cause of low tariffs is lost before it can be taken up. But U. S. exporters may gain through the anticipated weakening of the sterling block. If Canada provides enough sterling the U.S.A.'s needs in regard to the familiar import surplus in relation to the British Empire may be satisfied. The non-expert view now-ever, is that Europe will not require much by way of dollars or gold and regional agreements would create the conditions for post-war recovery.

It may be suspected that the U. S. Administration's encouragement of the world bank proposal is due entirely to the desire to keep up full employment there after the war. If there is no postwar slump, and plenty of loans are on offer the wartime depreciation of one or all currencies would be rectified. But so far no questions have been raised as to blockade balances in Berlin. If there is to be a collapse of the Mark after defeat the whole of Europe would be caught up. Avoidance of a crisis in Europe after the demand for unconditional surrender is met is hardly in the minds of the experts at Bretton Woods. If the old Russian claim for reparations is advanced alongside of demands for redistribution of Germany's territory, a slump is certain and dependence on U. S. aid would be inescapable. Probably that is expected or desired, but such a collapse would, in a way, underline the economic strength and discipline of the British Empire. That would in itself change Indian opinion as to Britain's outstanding liabilities. Since India's loss of European and Far Eastern markets would be a permanent factor like the reduction in overseas debt fresh views as to financial relations might take shape then.

There has been a brief reference to the first quarter's financial results in Britain. Though taxation was not increased in April revenue rose in comparison with 1943. Pay-as-you-earn is not the only factor in the higher revenue. Higher consumption of beer and tobacco explains the rise under excise mentioned while the rise under customs proves that import trade grows. Expenditure rose by £14 millions only on the 1943 total to £1,425 millions. The cost of invasion is not unduly high. New issue of loans and certificates is said to have brought in £400 millions in April-June, and the main change is an addition of £424 millions to the floating debt. The increase in treasury bills and deposits taken was regulated by the return of £316 million to investors in May, when the 5 per cent Conversion Loan was paid off. Increased drafts on the clearing banks for Government's expenditure are independent of the drop in bank deposits. Probably British banks' advances would fall and then investments would increase as a result though liquidity would remain high if the Treasury relies on short-term loans. The increase in short-term debt in reality means a saving in interest, but the first quarter's total incidentally suggests that Salute the Soldier weeks have forced up the volume of savings. An anticipated rise in the cost of living in Britain should not hold up the progress of savings. If the taxes *plus* savings have taken off £1,000 *millions* in the first quarter, it means that the previous estimates as to the State's own share of the national income are confirmed. The income is not rising because it is held down by wage-stops and price control. The addition of £820 millions to the National Debt in one quarter would suggest that after the doubling of the Debt in four years of war, the rate of increase is greater which is one reason why, as in the first year, short-term borrowing is in favour. This increase would have promoted slack conditions in the London money market especially as cash for holidays would not be wanted.

The firmness of rubber shares is clearly due to the progress of the war in the Pacific. The existing difference between the London quotation for Burma Corporation and the rates in India need not be indicated especially as a similar spread can be noted in the case of Barnagore Jute. There has been a rise in dollar shares but the continuous rise in Home Industries has evidently stopped as the gains noted this week are small. In the oil share market the most arresting change is the advance in Royal Dutch for naval operations in the Pacific bring restoration of properties nearer. Indications of interest in Burma mining shares among Indian investors are not wanting at present. The shadowy peace rumours have apparently been without any effect on stocks and shares in London. This may be noted here as also the fact that compliments to Spain's regime have been without any effect on the London market. The news from Bretton Woods is likely to promote firmness in all overseas issues for normal, orderly disposal of sterling balances is likely to help others besides banks.

The position of the Vichy Government, at present without an army and liable for costs of the German occupation, should certainly be patent to those who are merely indifferent to the Allied invasion. The Bank of France is under a German Dictator juggling with German money. Goebbels' own admission of the desperate position of the Nazis in this critical phase of the war must have given a shock to the collaborators. In London some recovery in French railway bonds on which the coupons are not cashable was noted last month. But the position as regards French securities generally appeared to be wrapped in mystery. In five years French economy has been running on Berlin tune to dopt an expressive phrase. That nothing more can be had out of France is implicit in Hitler's own appeal for greater efforts on the part of German war industry. Vichy has during its own career adopted some expensive reforms to live up to the slogan of work, Family and Fatherland. Those reforms are certainly endangered by the Allied conquest of part of Normandy: so are the Germans' hope of getting part of the war bill paid by another. The position of the Franc is not ensured by the rate of exchange fixed for Allied takings of goods from the occupied area.

By Special Cable

U. S. SENATORS' CLAIMS FOR SILVER

SPECIAL FOR "INDIAN FINANCE"

Washington July 4.

It became plain this week as the international monetary parley opened that the United States delegation will face a greater difficulty than originally expected in achieving its announced intention to "resist" attempts to base the stabilization fund on silver as well as gold. Mr. Harry D. White, author of the United States plan, which shuns silver, had carefully avoided the subject of international bimetallism by telling his associates that he hoped the issue would not be pressed when the conference was convened. But he was forced to concede in his first press conference at Bretton Woods that an amendment providing for the inclusion of silver as an exchange medium probably would be offered.

Two developments which people in the United States feared materialized to emphasize the fight that silver's advocates will make. Firstly, the Mexican Finance Minister, Senor Eduardo Suarez, who is a shrewd negotiator, told Mr. Morgenthau in Washington just before the conference that Mexico insisted on silver. Secondly, twentysix U. S. Senators wrote a letter to Mr. Roosevelt that the United States suffered from basic organic defect by assigning no place to silver. Thus the conference, plagued already by wide-spread differences on details of stabilization proposals, was handed an implicit warning that Congressional endersement of any agreement reached would be hard to obtain unless bimetallism is established.

There are numerous other Congressional objections to the proposals, for example, the fear that the United States would underwrite some currencies, but none which attracts such a large block of adherents as the silver bloc. It is pointed out that ratification of a treaty requires a two-third's majority in a Senate of 96 members wherefore if as few as seven Senators were absent when the stabilization agreement is voted on the 23 Odd silver bloc could prevent its adoption. The Senators told Mr. Roosevelt "since whatever plan is ultimately adopted will have to be approved by Congress we feel it is our duty to pass on to you without delay certain conclusions we have reached." It is said that fixed parities in terms of silver as well as gold would accomplish these results firstly that the physical supply of standard money would be expanded for the enlarged needs of the postwar world, secondly, the preference of a large part of world's population for silver money would be recognized, thirdly, the nations of Europe and the Far East could return to silver coinage on a sound basis, fourthly, the remonetization of gold and silver would be thus effected simultaneously and internationally.

Plan for Cotton

The U. S. Administration's cotton plan has not run the gauntlet of Congressional criticisms. There is no reason to think the Farm Bloc would disapprove of export subsidies and import quotas for other countries though not the U.S.A. The U. S. Department of Agriculture's aim appears to be to set up a Regulation Committee which would limit and look after the world's exportable surplus of cotton. Home production under the soil conservation programme would be limited so as to keep up prices and reduce the surplus. Since the main U. S. aim has been indicated—to sell abroad half the cotton crop raised in a pre-war year—the European market would not be enough. In China and Japan U. S. cotton would probably elbow its way against Indian exports. Subsidies would help the U. S. shipper while the U. P. textile manufacturer, called upon to pay high prices, would as usual have the U. S. tariff in his favour. It is conceded that export subsidies, the loan programme etc. would stay because parity prices have been promised. After the war U. S. high prices are going to stay high. The only way that prices elsewhere can move up is through crop curtailment. The official policy in India is bound up with acreage restriction and guaranteed prices. The yearly surplus has certainly been reduced, but future imports will be dearer Egypt and the rest of Africa called upon to work within quotas will inevitably ask for higher prices. Indian mills would then have to pay more, but if raw cotton is subject to regulation by quotas (which would favour India against Brazil) the justification for the enhanced import duty might disappear, especially, if India scarcely produces enough long staple cotton to meet the demands here.

How much is 91,660 Miles?

It's nearly four times the earth's girth! To be exact, it is 3 2/3 times the circumference of the earth. All this tremendous length of cloth is produced annually by the India United Mills Limited—not to outdo the equator—but to clothe India's tinker, tailor, soldier, sailor, and all the teeming population.

Today, our mills are humming with war orders. The needs of the fighting services receive first consideration. As soon as Victory is won we shall go all out to meet civilian requirements. Remember, when better cloths are woven, "INDU" will take the lead.

An Economic Civil Service

The development of State policy in the economic sphere has begun to influence even the most conservative circles in their ideas of governance. A few weeks ago, the London "Economist" entered a reasoned plea for the constitution of an Economic Civil Service on the lines of the Colonial Civil Service but with the basis of recruitment altered to the different requirements. In India, Dr. John Matthai marshalled with characteristic cogency the arguments for similar measures in this country. There can be no doubt that the time has long gone by when a civil service drawn from classical scholars was thought sufficient to provide the expertiset necessary for efficient administration. In fact, it is necessary to remind oneself in this context that the idea of employing a body of carefully chosen permanent officials to carry on the administration of the country regardless of changes in the Cabinet, but in accordance with policies laid down by the ministers, took somt time to evolve. One might go further and say that the distinction between administration as such and the possession and exercise of power in the political sphere was at best a slow growth. Political scientists only lately learned to clarify the difference between government and governance. In the distant past, administrative responsibilities devolved on the military hierarchy; and only in matters of finance, where the layman has more than his usual dread of technical subjects, was the civilian allowed to intrude. So long as government was a matter of punishment of crime and collection of revenue with a liberal display of force, administration offered no special problems. Changes in the functions of government brought about the need for changes in the system of administration. But the idea of constituting a body of permanent officials, who are something of experts in administrative tasks is a British contribution. Paradoxically enough, it drew its strength from the two party system which, prima facie, should have proved fatal to it. The U.S.A. has not even now closely followed the British example of leaving the official framework of the administration unaffected by the vicissitudes of the major parties. In Britain, ministers were quite aware even from very early times of how unfavourably the Minister at the top compared with the officials under him in knowledge of the matters affecting his portfolio. While democracy as an ideal requires a popular Minister at the top to lay down the broad objectives of public policy, the interests of the demos, realistically regarded, require the administration to be carried on by expert officials. Professor Laski has bestowed praise on this system of yoking the layman and the expert to the tasks of the common good.

What is new now is not the idea of an expert service, but the idea of giving the existing service a new orientation. It arises from a sense of the unsuitability of the existing services for the changing purposes of Goverment policy. Till recently, expertise of a high order was called for only in the Foreign Office and the diplomatic services. In this case efficiency was sought through restricting the field of recruitment to wealthy historic families the members of which were familiar with the ways of the courts of foreign monarchs. The winds of democracy were slow to blow over the foreign embassies. It was not till Europe became distinctly republican that the aristocratic monopoly of the diplomatic services was infringed. The Kremlin aided powerfully in the democratisation of the Foreign Office which was indeed the last stronghold of class privilege; for the Army had long before been thrown open to the classes and recruitment to the civil services had been put on the basis of a competitive examination. On the whole, the permanent services in the democratic countries have worked well. They have succeeded in developing the first requisite of smooth administration, freedom from party bias. Since the services have been drawn from the best products of the universities, the men have been of high calibre. They have minds which they can apply to any given task and they succeed in attaining a reasonable competency in any work, however unfamiliar it might have been to them before.

Both in India and England, the civil service has received the highest praise from competent and discerning critics. In spite of the difference in conditions, the Indian Civil Service has a record which can bear comparison with the record of its compeers in England. The civilian in India by the time he attains a fair seniority has had a width of experience which entitles him to be regarded as versatile. Beginning with revenue and magisterial work, he soon finds himself in charge of enquiries of wider scope and greater importance. He is shifted from a Province to the Centre. The civilian has no doubt developed according to the opportunities that are presented to him. In Britain, the permanent services have so acquited themselves that today they have two of their former colleagues in the British Cabinet.

Nevertheless, the inadequacy of the services for the new tasks of government is becoming more and more apparent. To give only one instance, Treasury officials in Britain must have found themselves wholly unequal to the task of negotiating with the U.S.A. the terms of the International Monetary Agreement. Professor Lionel Robbins, it is said, is today as good as a permanent official of the British Treasury, while Lord Keynes has been working wholetime for the State. Likewise the Board of Trade would have found its tasks too heavy but for the advice of men like Sir Arthur Salter whose work in the League of Nations gave them a competency which a place in the Civil Service could by itself never have given them. The truth is that the work of Government must inevitably tend to become more and more complicated and technical. In India, the task of negotiating trade agreements would have been felt to be more complicated, if the permanent officials had to work under a National Government instead of a Government whose task was to modify to some extent the proposals of the British Board of Trade. The shortcomings of the present personnel will naturally become more apparent as the Government takes up more and more of the complicated economic problems which this country has to tackle.

With the acceptance of planned economic development as the policy of the Government of India, the need for officials competent to deal with the various problems of planning will be found to be inescapable. In fact, even in manning the present Supply Department, considerable difficulties were experienced in the early stages of its organisation. The work of the Supply Department required in a large number of its officials close and intimate knowledge of the personnel and the practices of many industries and markets. If the Government was to have a fair deal in the various contracts for supply, the officials concerned had to be familiar with all the productive processes and the ways of the markets for the requisite raw material. The problem could not be solved except on the basis of taking officials directly from the ranks of the trades and the industries concerned. The Controllers of Supplies and their Assistants were chosen from trade circles. Liaison was established with the industry; and advantage was taken of the public spirit of private enterprise to complete orders for essential supplies. The problem is even more complicated where substitutes for unavailable imports had to be found. Neither private business enterprise nor scientists engaged in research had much experience of this problem. The Board of Industrial and Scientific Research was constituted; scientists of standing were drafted to government service. A new system of assigning specific work to the universities with necessary funds was established and the Industrial Utilisation Committee was charged with the task of putting the results of research to concrete use. In this, as in certain other respects, the war period represents a transition to new ways of doing things which governments will eventually have to adopt in the postwar period.

In the conditions of India, it is difficult to command pronounced optimism about the solution of the problem of personnel. The Civil Service, able and assiduous as it is, can hardly bear the burden of administration in a regime of economic planning. Even the preliminary stages of enquiry and broad appraisement of the tasks ahead have revealed the shortage of

BANK OF COMMERCE LIMITED

ESTABLISHED IN 1929

TO the Patrons of this Bank both past, present and future we offer our appreciation for your custom throughout the years.

We desire to express our consciousness of your trust, loyalty and confidence; and have the pleasure to announce that **the Bank is Scheduled under the Reserve Bank of India Act, 1934 (Gazette of India, Notification dated the 26th January, 1944.)**

We advance with profound sincerity our promise, proposals and policy to render in the future the finest and broadest conceptions of service that our greater facilities now make possible; and that this expansion can, and should develop with your abiding co-operation.

S. P. Roy Choudhury,
Managing Director.

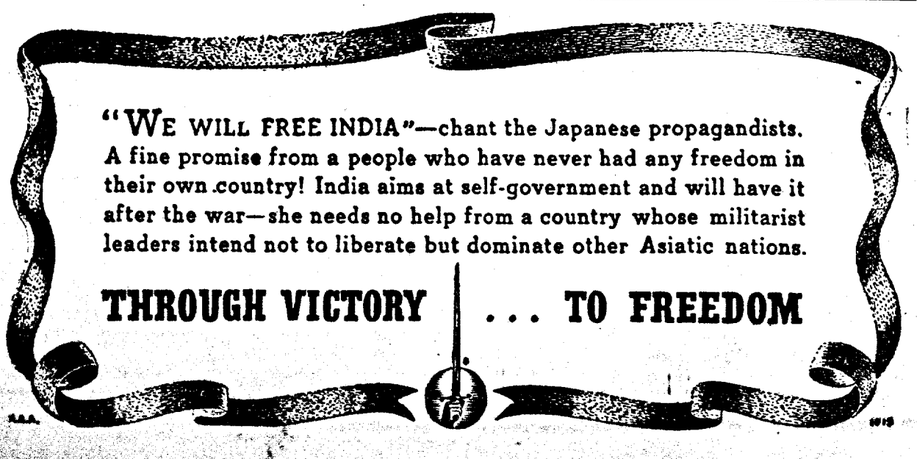
J. C. Bose, *Manager.*

personnel. Nearly every report referred to in the First Progress Report of the Reconstruction Committee emphasises the need for the training of personnel. And it is worthy of note that only in education and probably in public health have we reached the stage of concrete estimates. If our planning is to be a success, then we have to secure the increased and increasing efficiency of the working classes and provide for private enterprise and government services alike getting the proper personnel. There is thus a problem which to a large extent is, no doubt, educational. But it is nevertheless also a problem of administration. It can be solved only on the basis of a frank recognition that there is need for an Economic Civil Service and that in the nature of things the principles and conditions of recruitment to this service have to be in many essential features different from those for other services. The experience of the war period has shown that for the economic civil service, participation in business, far from being a disqualification, is a necessary qualification. Where the needs of the postwar period may prove to be different from those of wartime is in the greater need for academic knowledge. The seedbeds of the economic service will therefore have to lie in the post-graduate departments of the universities in addition to the reputed business firms. Theory and practical knowledge have to be in constant union each having more respect for the other than for itself, at least as a mental attitude. Big business houses have felt the need to take in academicians like Dr. Matthai while the average economist will find that contact with business widens his outlook and improves his perception. The universities, the business houses and Government service have all to work together if the colossal tasks of economic planning are to be accomplished. We should perhaps add in conclusion that much of what has been said of the economic civil service applies with equal force to journalism in general and economic and financial journalism in particular.



TECHNICAL MISSION OF FERTILISER INDUSTRY

The public would remember that the acute famine which ravaged several provinces of India last year forced the Government of India to appoint the Foodgrains Policy Committee to examine and recommend practical methods of tackling the food situation and that this Committee urged, among other things, the starting of a fertiliser industry in India without the least possible delay. More than nine months have passed since the report of the Gregory Committee was published, and now a British technical mission under the leadership of Mr. G. S. Gowing of the Imperial Chemical Industries has arrived in India to advise on the organisation of a chemical fertiliser industry. The Mission, it is reported, had a three-day conference with a Reception Committee at Delhi when preliminary discussions on technical, financial and even administrative aspects of the proposed industry were held. The Government of India have fixed 3,000,000 tons of fertilisers per year as the target for the post-war years but attempts will be made to produce 350,000 tons per year even before the end of the war. They have declared that this industry, being of enormous importance to agriculture, would be run as a State-owned and State-managed venture. Though powerful industrial interests have been trying to take a hand in the industry in co-operation with the Government, there are no indications as yet to show that the Government would deviate from their original policy and invite or accept the co-operation of the private interests. It is reported that the Technical Mission would visit Patna, Calcutta, Tatanagar, Cuttack, Madras, Kirkee, Bombay, Mysore and Hyderabad, and submit their report in three months. The terms of reference under which they have to study and report are very wide and are not therefore calculated to usher in the industry in a year or two. The Gowing Mission has been asked (1) to investigate and report to the Government of India on the technical problems involved in the manufacture of sulphate of ammonia in quantities upto 350,000 tons per annum; (2) to recommend, in the light of the raw materials and power available in India, the most economic method of manufacture; (3) to estimate the capital cost of the plants to be installed and calculate the approximate cost of operations and production of finished sulphate of ammonia; (4) to recommend the most suitable site or sites for the erection of plants, taking into account the raw materials available and the most economic distribution of the finished products; (5) to estimate the amount and approximate value of plant which it will be necessary to import from outside India, making fullest possible use of materials and labour available in India; (6) to recommend, if necessary, the most economical method of manufacturing nitrogenous fertilisers other than in the form of sulphate of ammonia and (7) to estimate the capital and operating cost of manufacture of such alternative nitrogenous fertiliser. It would indeed be a proud achievement for the Mission if they could finish their exhaustive enquiries in the course of the next three months and submit their final recommendations before October.

The Misson is now on tour and provincial authorities, under instructions from the Central Government, would submit their plans and views to the Mission. While no one can question the technical experience of the members of the Mission the public in this country needs to be satisfied on the question as to why the personnel of the mission is to thoroughly British and not even one single Indian is included. Lack of experienced Indian scientists or technical men cannot be a suitable answers. The members represent British chemical combines and the secrecy with which the formation and import of this Mission has been achieved by the Government of India has roused public suspicion in certain quarters. It is well-known that under wartime conditions the Imperial Chemicals has managed, with the co-operation of the Government of India, to establish a monopolitic position in this country and has even obtained a ninty-nine year lease of certain valuable minerals in the Punjab, but their attitude to indigenous concerns has been far from satisfactory. During the recent Assembly Session opinion was expressed that the I.C.I. was utilising its special position in this country to smother national aspirations. Mr. G. S. Gowing is from this I. C. I. and hence the public are agitated if the mission would really pave the way for the healthy establishment of a fertiliser industry. If persons like Dr. John Mathai of the Tata Chemicals have been included in the Mission public feeling would have been greatly satisfied and it cannot be said that the composition of the Mission is not an important factor in view of the fact that the terms of reference are very wide and capital to the tune of Rs. 12 crores will have to be ultimately invested in an industry to be started on the advice of this Mission. The account recently given by Professor Dubey of the Benares Hindu University as to how the plans for the manufacture of synthetic fertilisers prepared by the Congress Governments in Bihar and the U. P. have been dleberately shelved by the Adviser regimes only adds force to the public apprehension and discontent. The best that may be hoped for at this stage is that the Mission would give due weight to the public anxiety that the country's abiding interests should not be jeopardised in any way by starting this vital industry in such a manner as to perpetuate the influence of foreign vested interests in the web of Indian industrial structure.

It is not easy for us to offer suggestions on the technical side of production of chemical fertilisers, but we feel it necessary to emphasise one or two points relevant to the problem of locating the fertiliser plants. A report from Delhi says that in the opinion of the members of the Mission production of synthetic ammonia by the electrolytic process is not feasible in India because the requisite increase in power production would not be completed for the coming two or three years and that in view of the urgency of fertilisers it would be wiser to prefer the gas process for which raw materials are available in ample quantities in India. While we agree that gas power may be used in some areas, and when proved to be economical, we have to point out that there are experienced technicians in this country who believe that there is insufficiency of coal and coke even for the existing industries and that excessive importance attached to coal gas would necessitate great strain on transport and make for unhealthy concentration of fertiliser plants in a few coal mining areas. While only a few provinces could offer cheap coal for power purposes almost all provinces have great potentialities for water power. Further fertiliser industry being intimately linked with agriculture, decentralisation, with a view to catering to local needs and utilising local resources, would have to be preferred. If the Mission appreciates these principles it would surely recommend speeding up of the hydro-electric schemes as early as possible so that the required electric power could be generated in several part of India to serve the local fertiliser plants and offer encouragement to other industries as well. Electric power would be cheaper and better suited for large areas in India. We suggest therefore that the potentialities of water power of our provinces should be taken into full consideration by the Mission in their recommendation of the processes of manufacture, location of plants and estimate of costs. In fact in a vast sub-continent like India no single process, electrolytic or gas-power, can be chosen to the exclusion of the other. The country needs a chemical fertiliser industry which is widely distributed to suit local requirements and manufacturing processes should be chosen taking into full account not only the available human and material resources of the present, but also the probable hydro-electric developments in the immediate future.

Paper Quota Problems

At the Indian Paper Mills' Association's meeting last week, the claim for an increased quota for the public was again advanced along with the suggestion that Government should import paper from the U.S.A. and Canada. The scope for further economy is limited as Mr. Birla pointed out by citing figures as to consumption. Prewar consumption averaged 160,000 tons. The quota for non-Government use under the Paper Control Order is only 30,000 tons and an immediate increase to 50,000 tons was duly recommended. The manufacturers' view as to the home markets' needs certainly have undergone no change over a year. Production however, has received no special support. Months ago the paper mills' difficulties in regard to coal, raw materials and transport were explained in detail. Mr. Birla mentioned only the competing demand for bamboos from the military. Enhanced costs have obviously stood in the way of increased production though it will be admitted that a strict control of manufacturers' profits would also be attended with the same results. The reports circulating last month referred to requisitioning possibilities but there was not even a hint of what was considered and rejected in May. The only new argument is that special postwar relief, over and above the E. P. T. refund, is required for industries exposed to exceptional strain by Government's own demands for goods. But a general claim for special treatment would cut off the revenue required for reconstruction schemes. Admittedly, paper mills in India exposed to competition would encounter difficulties after the war, but all enterprises and manufacturers would have the same difficulties. Stabilisation and rejuvenation at the expense of the taxpayer would be unusual even in the case of protected industries. But revision of the control price schedule or differential prices for Government's requirements would appear justified. Higher prices charged by mills may force the Government to decrease its own takings of paper. This suggestion certainly should find favour as little help has been forthcoming from the Government.

Industrial Health

The Industrial Health Survey Committee's questionnaire elicited a reply from the Bombay Millowners' Association in May when the Committee explained that the cost of health measures should not be overlooked, while the overlapping of the Labour Investigation Committee's work with the Health Committee's must also be taken note of. The Committee's point of view, in short, is that the responsibility for providing an adequate health service rests on the Government. Industrial workers' health is provided in existing legislation and all that requires to be done is the enforcement of the rules. The proper utilisation of health services presupposes certain degree of education which unfortunately does not exist among the mass of industrial workers. Medical facilities provided by employers are often not fully utilised, and any suggestion in favour of medical examination, before or during employment, would have to face serious opposition from the workers.

The Millowners' Committee in dealing with the questionnaire pointed out that information sought is obtainable in the Textile Labour Committee's report and the reports of the Chief Inspector of Factories. In regard to future improvements, the Committee urged that labour standards must be uniform, and legislation should be Central though its enforcement would be a Provincial responsibility. It was also pointed out that existing health services are given free of cost and the entire cost is borne by the management. In regard to sanitation, mills comply with the requirements of the Factories Act and the Bombay Municipal Act. In regard to nutrition the mills decline to offer advice, but are content to run ration shops and canteens for workers. In some mills mid-day meals at cheap rates are available to workers, but further expansion is difficult. The Bombay Millowners' reply to the questions put by the Health Survey and Development Committee suggests that employers can do little more than what they have already done. They are disinclined to undertake more because legislative uniformity is lacking, and possible reforms have been carried out. In any case the question of cost appears fundamental because only a contributory system of health insurance can secure all the improvements prescribed.

Tobacco in Iraq

Iraq's tobacco industry has developed since June 1941 according to a special survey of the kingdom's industry by Charlotte. R. Budd. There was a shortage in 1942 eased by imports from India, Palestine and Egypt. Control followed and in its wake came the black market. Iraq's experience appears to be different from India's in many respects, for price control here extends to imported cigarettes under the Anti-hoarding and Anti-profiteering Ordinance. Tobacco cultivation has received special encouragement in Iraq since 1930. Sulaimanaya on the caravan route between Bagdad and North Iran is the great marketing centre connected with both Mosul and Bagdad partly by narrow guage railway and partly by motor route. Kurdish farmers get the crop ready between September and October before the rainy season sets in. Though there was damage by pests the 1943 crop exceeding 60,000 bales of 50-60 kilograms is reputed to be good. Some land under tobacco has been turned over to rice but the Kurdish crop was above normal. Exchange of tobacco for grain brought by trucks is apparently the rule. The Government Tobacco Monopoly set up in 1940 looks after the transport to the cigarette factories in Bagdad. Handmade cigarettes unusually are cheaper than machinemade cigarettes produced by six modern factories producing five millions a day. While factories are now free to bring their tobacco down from the north the Monopoly has also relaxed its control by authorising tobacconists to buy direct from factories. Foreign troops in Iraq are responsible for the increase in consumption. It is recalled that during the last war too there was a sudden increase in Iraq's tobacco consumption. Import of cigarettes increased thereafter. The local tobacco industry developed only after imports began to decline from 1929. At present imports of tobacco are very limited. Iraq's tobacco yields the Government a revenue of Rs. 79 lakhs a year, obviously a substantial head of revenue in the kingdom's budget. The postwar future however does not seem very secure specially as Iran also produces a considerable quantity of tobacco, and Turkish tobacco is likely to keep its hold on foreign markets.

Footwear under Control

Another Control Order issued by the Department of Civil Supplies and Industries seeks to protect the consumer. Footwear prices are regulated by a notification which does not however apply to bespoke footwear. The most important factor in favour of

price control is the acceptance by two leading shoe manufacturers of official directions to limit the range of production and to fix maximum prices. They have agreed also to limit the styles made. The first indication of what may be called the utility principle is now available though the closely associated principle of rationing by coupons is hardly likely to win support. The immediate adoption of the retail ceiling prices by the two makers of Flex and Bata shoes would probably influence general acceptance of the control order by wholesalers and others. While importers' margins are fixed the question of competition does not arise. As in the case of cotton piecegoods, the ceiling prices are only fixed after consultation with the trade. The fixation of prices implies the availability of controlled goods at the prices fixed. As exemption for made-to-measure footwear has been notified, the only part of the notification that would excite attention is the rule that the artisan working at home to a wholesaler's order should get 72 per cent of the price realised. The margin for the middlemen in this case appears higher than that allowed in the case of textiles unless it be that special methods are needed to sell footwear. In the case of woollen goods the ration in regard to woven and knitted goods was fixed during the last cold weather. There should be a seasonable welcome for the footwear control order, though it is clear that the leading manufacturers' own stores will be the chief factor in the successful working of any plan of regulating prices.

Labour Welfare

The 50th meeting of the Standing Labour Committee discussed the Indian Trade Unions Amendment Bill. The Bill dealing with compulsory recognition of unions was presented during the last session. The employer's views as to boards of recognition set up in each Province were made known while the workers' representatives asked for more privileges for trade unions through legislative provisions. The standing committee also examined a proposal to improve methods of compiling figures relating to trade disputes. Provincial Governments should help in securing uniformity so that comparisons with foreign countries could be made. The method offered by the Industrial Statistics Act of 1942 for obtaining information as to employment etc., has been recommended for adoption by the committee which noted that such procedure would correspond to that accepted by the I.L.O. Whether all factories or only those employing ten or more workers should come within the scope of notices served was separately discussed. The labour welfare arrangements of the Delhi Cloth Mills were inspected by the Labour Member and the committee on an invitation from Sir Shriram. The committee visited the workers' quarters and saw the sanitary and water supply facilities provided. The Delhi Cloth Mills' colony has a dispensary, a school and a library, equipped with a radio set for community listening. Recreation facilities shown included a swimming pool and a sporting club. A workers' theatre for amateur theatrical effort suggests that Delhi has its own version of Unity.

Progress of Trade Unionism

While questions as to the Indian Federation of Labour and its willingness to sustain morale in 1942-43 are common, the progress of the trade union movement has attracted little attention. In two Provinces trade unions increased in numbers and membership alike. Bombay reported an increase of twentyone newly registered unions but the

movement's success depended on 75 unions which gave details regarding their income and expenditure. There were 163,200 members in the unions largely owing to the spread of unionism in the engineering industry. In the transport industry too unions struck root while the number of registered workers in docks and port trust also increased. Bombay claimed twenty unions with over 2,000 members. The Textile Labour Association, a federated union, was certainly the most active of the big unions and differed from others in keeping a political fund though it amounted to Rs. 11,111 only. It paid out Rs. 12,639 in benefits to members in 1942-43 and spent on educational, religious and other objects as much as Rs. 34,439. The other unions financially appeared to be far weaker than the Ahmedabad Association; and unpaid subscriptions represented Rs. 27.59 per cent of the unions' assets. Unionism among females made little progress in 1942-43, though it is obvious that the claim for equal pay can only be sustained by trade union organisation. Compared with Bombay, the labour unions in the U. P. are small and few. The decrease in the number of registered unions during 1942-43 was however offset by the increase in membership. In the U. P. too women workers were not eager to become trade unionists. In the textile industry only did unions make substantial progress on account of the rise in employment due to the war. The U. P. labour movement was not so vigorous as in other years, and only 17 unions could show clean balance-sheets while 11 only could claim to be in a satisfactory financial position. The proportion of trade unionists to the number of factory workers in the U. P. appears to be small as 33 trade unions had 23,628 members at the end of 1942-43. The comparative failure of the movement to penetrate far beyond Bombay may be described as accidental. But the Bombay figures support the view that compulsory recognition of unions (if certain legislative requirements are satisfied) would lead to a steady increase in the membership and influence of trade unions in India. Leavening of the movement by England-returned technicians is clearly ruled out by the circumstances of deputation and training in their case.

Avoiding Strikes

A successful prosecution (the trial began in November last) in respect of charges involving a South African and a woman reported last month indicates how Defence Regulation I.A.A. is working out. Only nine M.P.S. wanted its repeal but the Labour party as a whole adopted Mr. Bevin's view as to the necessity to abridge the right to strike. Strikes have been frequent in the coal industry but the problem there has been solved by other means. In the case of other industries the aim has been to prevent political strikes by enhancing penalties for incitement by outsider, not bound by Union regulations. The rights of established trade unions are not touched. The T.U.C. was told in advance of the proposed Regulation and the Ministry of Labour's Advisory Council, which includes employer's representatives, was also informed. The end of the strikes in the coal-fields was secured before Parliament pronounced upon its value or necessity. The coal-miners' strikes were terminated actually by the Mineworkers' Federation accepting the wage agreement to run for four years. Trouble over extra payments is expected to disappear. The Porter award gave no satisfaction because the minimum wages ignored conventional differences. The owners and miners are bound to keep national and district wages at a certain level. Government would be called upon to raise coal prices to meet the rise in cost though higher output would probably affect costs. Coal mining as an industry will remain under control. Higher prices have cut at the root of the export trade. The Argentine market has been lost to South Africa and American countries. After the war coal exports may not be important to Britain but employment for collier tonnage, both coastwise and oceangoing, would assume some importance. The Tory Reform Committee offered a suggestion as to export quotas determined by an International Coal Council. While repudiating cartels the trend of opinion is distinctly in favour of supranational control.

★
Your Countrymen
Madam

MANY THOUSANDS of them are suffering daily from want which is the result of food shortage. Authorities have done, and are doing, all they can to assure that every man, woman and child in this country has enough to eat. But you, too, can help in this humanitarian task.

REDUCE your entertaining, but if you have to entertain, please see that no more food is cooked than is really necessary. You can also reduce your consumption of rice and wheat which is the staple food of the poor. Set an example to others in simple, but nevertheless healthy living, and earn the blessings of your less fortunate fellow-men. This is the least you can do.

A.A.A. 783

food for all
..but none to waste
Issued by the National War Front.

No Increase

March was a month of larger imports and reduced exports to judge by the seaborne trade figures. The figures certainly prove that the mild revival in imports noted since December continued. What is perhaps most interesting about the 1943-44 seaborne trade figures is their approximation to the 1942-43 totals. The total value of India's imports in 1943-44 was Rs. 118.85 crores as against Rs. 110.45 crores in 1942-43. The value of re-exports rose by Rs. 3.9 crores so that it is now clear that there was no alarming increase in imports. Indeed, the increase is almost entirely due to the large increase under mineral and other oils. The reduction in imports of manufactures indicates how control keeps down the inflow of foreign goods. The most noteworthy development is the increase of Rs. 116.98 lakhs in the value of grain imported into India. Indian exports of grain, pulse and flour fell by Rs. 462.41 lakhs so that the assurances given after June last have been carried out. The total value of Indian exports rose from Rs. 187.63 crores in 1942-43 to Rs. 199.2 crores in the next year. This increase was almost certainly due to the recovery in exports of jute manufactures. Indian exports of all manufactured goods were lower in view of the restrictions on exports. The recovery in raw cotton is attributable to the rise in prices but the increase under tea indicates how the Indian tea industry has kept up supplies. If the drop in Indian exports is proof of pressure on limited supplies it is remarkable that the balance of trade in merchandise is not very much larger than in 1941-42 or 1942-43. It may be cited as further proof of the Allies' war expenditure here being the real source of sterling accumulation last year.

Certain features of the import table require notice. The fall under seeds and nuts is obviously due to a fall in copra imports from Ceylon. The large increase under raw wool explains the increase under Indian imports from Australia in 1943-44. Many will derive satisfaction from the decrease in sugar exports as also the decrease in coal shipped from India; but the drop under gums, resins and lac suggests that high prices limited foreign purchases of shellac The effect of embargoes on exports of oil and oilcakes is to be noted in the decline under exports. From the trade returns it appears that jute rather than cotton is India's chief export because the large increase in trade with the U.S.A. and South America in 1943-44 has helped the former.

Invasion Boom

A steady rise on Wall Street corresponded to local anticipations. Many common stocks have gone ahead; so have cotton and wheat but the effects of invasion on market optimism tended to be different from those in India because the U.S. market previously was jittery on invasion rumours. In the first week of June the market strengthened; the industrial index rose to the highest level for the year on June 6 and the turnover exceeded one million shares on the day the big news was received. The big rise was concentrated in the best shares. The rise helped peace stocks rather than peace shocks. There was no warning against the rise because American investors showed real faith in peace. Though the rise in values was more pronounced in London, there was in New York a special feature. Buying of bonds especially railroad bonds swiftly increased. Second mortgage debentures attracted the buyers' fancy as U.S. railways in war can count on prosperity. Railroads have cut down their interest charges by buying up bonds from their profits. In London the industrial market soared on expectation of a postwar building boom while shipping shares went up first, on the offer to Lamport and Holt shareholders and after the invasion news on postwar prospects, also to the fact that money cannot buy goods. The boom in London was arrested rather abruptly by flying bombs as a special cable pointed out, but the rise in New York has continued though there was in June too a complaint that civilian industry was not helped to go back quickly into peacetime grooves.

Two Planting Issues

THE six per cent cumulative preference shares of two South Indian planting companies under the management of A. V. Thomas & Company of Alleppey are offered for subscription. The acquisition of an estate in bearing and a sizeable reserve from the Rani Travancore Rubber Company by the Rajagiri Rubber Co., Ltd. is the reason for the increase of capital. The fairly large acreage under budded rubber in this case deserves special notice. Crop particulars are furnished along with details as to reserve acreage. The estate is equipped with a factory for manufacture of crepe and smoked sheet. The rubber outlook is certainly improving in spite of the progress reported in respect of synthetic rubber. The estates in Travancore appear to have a secure future even after the termination of hostilities and the estimated return of 21 per cent on ordinary capital is likely to be exceeded when the full crop comes to hand. These are points of more than particular interest in relation to the consistent record of rubber plantations in South India. In the last three years the Rajagiri Rubber Company has declared dividends of 5 per cent, 7½ per cent and 12¼ per cent from net profits. The addition of a large area should stabilise both crop yield and profits in the case of a company whose income has risen to a greater extent than its expenditure to judge by the audited figures for three years. The increase of capital is certainly favourable to shareholders who have first claim on the new shares Full particulars as to the managing agency agreement appear in the prospectus.

The increase of capital in the case of the Midland Rubber Co., Ltd. is also determined by the sale of three properties by the Rani Travancore Estates. That Company's shares are over par and its sales are distinctly advantageous to the British shareholders. The deal has been mentioned in the press in advance and the acquisition of the additional area (in spite of the fairly high cost per acre planted) will certainly lift profits to a satisfactory level. There is a large area under tea while the reserve acreage too is large. The dividend record is certainly encouraging and the company's 1942-43 earnings more than cover the preference dividend. The new capital, as in the case of Rajagiri, is in the form of 6 per cent preference shares offered at a premium of 4 annas per share in the first instance to Midland's shareholders and then to the public. The list is to close on July 20th and present market conditions certainly suggest that here is a well-planned and well-timed issue.

Brand Watch Co.

Flotations from New Delhi are not too common for which reason alone today the Brand Watch Company's prospectus will be closely studied. The manufacture of watches and certain precision instruments is the object of the company for which the prospects are enhanced by the shortage of foreign made imports and the high prices quoted for watches and clocks. The tariff is not the least of the advantages for local manufacture in this case There is a large and growing market and a single line of manufacture, say clocks, would yield a high return on capital. The Company takes over tools and equipment of the concern known as the Brand Watch Company. The important and timely step from trade to manufacture is of great interest from any point of view and it is certainly encouraging to find that arrangements made for the conversion promise the inception of manufacture which in this case is the condition for payment of managing agency commission A fair part of the capital has been secured by the promoters and the modest issue, which has the advantage of several well known names on the Directorate, has a very strong claim to attention since the new effort to look beyond imports represents a very important step towards the real diversification of industry in India.

Lakshmi's Progress

Striking—in fact, phenomenal—as has been the success of Lakshmi Insurance Company from the first year of commencing business, the 1943 results disclose a measure of progress which is a mighty record even for this record-breaking company. The Company has not yet completed two decades of working, and total funds aggregate Rs. 2½ crores. Life Fund has jumped by Rs. 28¾ lakhs to Rs. 2.25 crores. This is supported by various reserve funds totalling Rs. 4.68 lakhs. The investments in buildings must now be showing a substantial surplus, being the excess of current value over book value. This achievement is particularly noteworthy in conditions which impose not a few handicaps on Indian life offices. The difficulties facing the latter are thus described by the Chairman, Rai Bahadur Lala Ishar Das:

"The hardships to which I have referred do not hit the foreign concerns operating in India so hard as the Indian Companies. The former have vast resources and have built up large reserves. Their field of operations is extensive. They have a wide choice for the investment of their funds and enjoy many other advantages. Almost all foreign Companies functioning in India have had a long start. Their operations abroad cover a field where earnings and standard of living are many times higher than in India, amongst people in whom insurance habit has become engrained. In India, on the contrary, insurance business is of comparatively recent growth, and we have to work amidst a clientele which is mostly illiterate, in which prejudices and superstitions of centuries are deeply rooted, and which on the average is always living on the verge of starvation. The Indian Companies are, therefore, working under great

Objects of the issue

To purchase the Shaliacary Estate and Brindavanam Reserve belonging to The Rani Travancore Rubber Company, Limited, London, in pursuance of an agreement of sale dated 23rd March 1944 and executed between the Managing Agents of this Company and The Travancore Agencies, Kottayam, who have obtained an option for the purchase of these estates, whereby this Company has agreed to purchase the Shaliacary Estate and Brindavanam Reserve for a sum of Rs. 21.29.000/- to The Rani Travancore Rubber Co., Ltd., as vendors of the properties and Rs. 41,000/- to The Travancore Agencies for transfer of their option to this Company, payable in cash.

PARTICULARS of the properties are as under:—

Rubber Seedling 1906/1920:	600.22 acres.		
Rubber Budded 1931/1940:	693.53 „	1,293.75	acres.
Fuel clearings & other lands including reserves.		1,141.35	acres.
Total:		2,435.10	„

CROP harvested from the Shaliacary Estate during the past three years was as under:

1941	...	3,49,690 lbs.
1942	...	3,64,400 „
1943	...	3,79,871 „

AREA The total area incuding the estates to be purchased is as under:—

	RAJAGIRI	SHALIACARY	BRINDAVANAM	TOTAL
Rubber	1,175.00	1,293.75	...	2,468.75
Other Produce	173.00	...	...	173.00
Jungle Reserve (including fuel clearings).	97.36	202.94	938.41	1,238.71
	1,445.36	1,496.69	938.41	3,880.46

BUILDINGS. The Shaliacary Estate is fully equipped with Bungalows, Staff Quarters, Cooly Lines, Factory buildings and the necessary machinery for manufacture of crepe and smoked sheet. The value of these is estimated at Rs. 1,65,750/-.

Prospects

The estimated total income is:— Rs.

11,00,000 lbs. Rubber at As. 7 per lb. ...	...	4,81,250/-
Less Provision for taxation ...	...	60,000/-
Balance	...	4,21,250/-

and this amount will be available for disposal as under:—

Dividend on 2,26,000 Preference Shares at the rate of 6%	1,35,600/-
Balance available for 1,35,000 Ordinary Shares ...	2,85,650/-

and this will show a return on Ordinary Capital of over 21% per annum.

When the budded rubber attains full maturity, the return on Ordinary Capital at the present level of prices is estimated to exceed 27%.

Voting Rights

Every share entitles the holder to one vote exercisable either in person or by proxy.

THE RAJAGIRI RUBBER & PRODUCE COMPANY, LIMITED, PROSPECTUS—Contd.

Brokerage and underwriting Commission

The entire issue has been underwritten by (1) Mr. P. R. Subramanyam, Stock & Share Broker, 61, Stock Exchange Building, Appollo Street, Fort Bombay, (2) Mr. Aravindaprasad Ramray Mahadevia, Share & Stock Broker, Stock Exchange Old Building, Dalal Street, Fort, Bombay and (3) Messrs. Raman & Company, Stock & Share Brokers, Alleppey, jointly, for a commission of 2½% on he amount of the issue. The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge the above underwriting obligations.

The minimum subscription is Rs. 22,60,000/-. The Directors will proceed to allotment to existing members immediately and to outsiders only after the shares remaining unabsorbed are subscribed.

Contracts

Messrs. A. V. Thomas & Co., Ltd., Alleppey, are the Managing Agents of this Company and their term of office and remuneration were revised by Special Resolution passed on 20th November 1943, as under:—

Term—10 Years from 1st July 1943.
Office Allowance—Rs. 750/- per month.
Commission—5 per cent of the Annual Nett Profit (Nett Profit being as defined in the Travancore Companies Act IX of 1114) and 1 per cent Sales Commission.

The following documents are open for inspection at the Registered Office of the Company during business hours.

1. Underwriting letter dated 10th May 1944 from the underwriters.

2. Agreement dated 23rd March 1944 between the Managing Agents and The Travancore Agencies, the option holders for the purchase of these properties from The Rani Travancore Rubber Company, Limited, London.

Copies of the above documents and of the Memorandum and Articles of Association of the Company and the Travancore Companies Act, may also be inspected at the office of Messrs. A. V. Thomas & Co., (India) Ltd., No. 3 Sunkurama Chetty Street, Madras, the Company not having established a place of business in British India.

General

The Company has not issued any shares for subscription within the past five years. None of the Directors have any interest in the properties intended to be purchased.

This issue has been in the first instance offered to the existing members in accordance with Section 138 of the Travancore Companies Act, and the balance remaining after allotment to the members are only offered to the public.

The following report by the Auditors of the Company will testify to the successful working of the Company and to the profits made and the rates of dividends paid, by the Company during the past three financial years. The Company's last financial year having closed only on 30th June 1943, the accounts of the Company will be made up next only after 30th June 1944.

"Report of the Auditors under Section 122 (2) (i) of the Travancore Companies Act, 1114."

Report of the Directors for the period from January, 1943 to 31st December, 1943.

TO

The Shareholders,
THE LAKSHMI INSURANCE Co., Ltd.,

Dear Sirs,

The Directors have great pleasure in submitting to you their report along with the Balance Sheet, Revenue Account and other statements for the year ended 31st December, 1943.

NEW BUSINESS

In this year 7513 proposals were received for assurance amounting to Rs. 2,37,28,586. Out of this and those pending from the previous year 7293 policies assuring Rs. 2,20,73,171 were issued. Proposals of the value of Rs. 33,49,148, were either rejected or postponed or accepted on terms which were not agreed to by the proponents or are awaiting completion. In addition to this one Annuity contract was also issued during the year.

INCOME AND OUTGO

The total receipts for the year amounted to Rs. 57,34,114-4-8 of which Rs. 48,46,331-0-3 were derived from premia. The outgo is Rs. 28,76,124-12-4. The excess of income over outgo being Rs. 28,57,989-8-4 has been carried over to the Life Insurance Fund. The expenses for the year amount to Rs. 14,53,087-8-7. The renewal expense ratio for this year is 15.518% (after allowing 90% as expenses for the first year and 7½% of Single Premiums and consideration for annuities for expenses on that class of business). This is slightly higher than it was last year and is due to the greater expense the Company had to undergo mostly in the shape of Dearness Allowance to the employees of the Company. But for this it would have been much lower than it was last year.

CLAIMS

Our traditions regarding the prompt settlement of claims have been fully maintained. During the period under report claims of the value of Rs. 6,93,476-13-0 accrued by death and Rs. 5,64,433-7-0 accrued by maturity. These include bonuses but exclude amounts reinsured. Out of these and those which were outstanding from the previous year, claims to the extent of Rs. 11,58,364-10-11 have been paid during the year under report leaving a balance of Rs. 4,76,095-1-4. In 1942 an intimation was received that the holder of Policy No. 104525 had died. A sum of Rs. 2,060/- was, therefore, included in the claim outstanding account. Now we are informed that the policyholder is alive. The entry of Rs. 2,060/- has been reversed in 1943 accounts.

VALUATION

The Valuation of the Company's business upto 31st December, 1942 took place last year. Considering the state of the money market where the interest rate earned has been declining steadily, the Directors and the valuing Actuaries considered it more prudent to adopt a very strict valuation basis and, accordingly, the valuation was done on the basis of 3½% interest whereas the rate assumed in the previous valuation was 4%. It is very gratifying to note that inspite of our assuming such a stringent basis our valuation has disclosed a surplus of Rs. 1,99,199/- (including the interim bonuses already paid). No account has, however, been taken of the greatly appreciated value of the Company's assets in arriving at this figure. Following the practice adopted by some of the best English and Indian Companies during this war, we have passed over any bonus to policyholders during this valuation. The financial position of our Company has been, however, very much strengthened.

RESERVES.

Investment Reserve.—The Investment Reserve which at the end of 1942 stood at Rs. 70,000/- now stands at Rs. 53,181-11-10. The difference represents the short-fall due to sale of some high interest yielding securities of which the time of maturity is near at hand and a small deficiency in another investment. In the opinion of the Directors it is not necessary to keep any amount in Investment Reserve because the market value of our investments on the 31st December, 1943 was much more than their book value and is believed to be much more than sufficient to cover any unforeseen contingency.

Building Depreciation Reserve.—This reserve has been further increased by the addition of Rs. 42,530-0-7 and it now stands at Rs. 2,28,549-6-2.

Furniture and Fittings Depreciation Reserve:—Reserve for depreciation in the furniture, medical instruments and library books has been further increased to Rs. 71,103-11-10 by transfer to it of a sum of Rs. 15,841-11-5 in the Accounting year.

DIRECTORS.

R. B. Lala Ishar Das Sawhney, Lala Balmokand Shah Sawhney and Mr. M. R. Dhand retire this year. They are eligible and offer themselves for re-election. Under Article 109 of the Articles of Association the Directors invited Mr. Devi Chand Sawhney to join the Board. You are requested to approve of his appointment. He also retires, but is eligible and offers himself for election.

AUDITORS.

Messrs. B. M. Chatrath & Co., and Messrs. Aiyar & Co., Auditors are retiring this year. They are eligible and offer themselves for re-election.

GENERAL.

The Staff at the Head Office and the Branches and the entire field organisation have worked very satisfactorily during the year of the report, for which they are entitled to our sincere thanks.

BY ORDER OF THE BOARD,
ISHAR DAS
Chairman.

	Tool and Stores at cost	2,050 2 8	2,925 13 9	
Total Rs. ..	2,50,89,075 12 1	Total Rs. ..	2,50,89,075 12 1	

Certificates as required by Regulation No. 7 of the First Schedule, Part I of the Insurance Act, 1938.

WE CERTIFY THAT:—

(a) The values as shown in the Balance Sheet of the investments in stocks and shares are at cost price and the market values have been arrived at from the published reports and quotations supplied by the Companys Brokers.

(b) The values of all the assets have been reviewed as at the date of the Balance Sheet, and in our belief the assets set forth in the Balance Sheet under the several headings:—"Loans", "Investments", "Outstanding Premiums", "Interest. Dividends and Rents Outstandings", "Interest, Dividends and Rents accruing but not due", "Amounts due from other insurers", "Sundry debtors", "Cash", "Furniture" "Medical Instruments", etc., are shown in the aggregate at amounts which, taking into consideration the Investment Reserve, do not exceed their realisable or market value. The increase shown in the value of the house property is due solely to the cost of subsequent additions thereto.

(c) No part of the assets of the Life Insurance Fund has been directly or indirectly applied in contravention of the provisions of the Insurance Act, 1938, relating to the application and investment of Life Insurance Funds.

AUDITORS REPORT

We have audited the Balance Sheet of the Lakshmi Insurance Company Ltd., as at 31st December, 1943, as also the revenue Account for the year ended the 31st December, 1943, and report that:—

(1) We have obtained all the information and explanations we required.

(2) In our opinion, the said Balance Sheet and Revenue Account are drawn up in conformity with the Law.

(3) Such Balance Sheet exhibits a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company as kept at Head Office and Returns received from the Branches.

(4) In our opinion, the books of accounts have been kept by the Company for the year under report as required by Section 130 of the Indian Companies Act.

(5) We have verified the Cash balances and the securities relating to the Company's loans and investments by actual inspection or by production of certificates or vouchers.

(6) We certify that no part of the assets of the Life Insurance Fund has been directly or indirectly applied in contravention of the provisions of the Insurance Act, 1938, relating to the application and investment of Life Insurance Funds.

BANKERS

THE NATIONAL BANK OF INDIA, LIMITED, Delhi.

AUDITORS

MR. S. VAIDYANATH AIYAR, *Registered Accountant,* Kashmir Gate, Delhi.

MANAGING AGENTS

MESSRS. S. P. LAL & SONS, LTD., Chandni Chowk, Delhi.

REGISTERED OFFICE

CHANDI CHOWK, DELHI.

OBJECTS

The Company has been formed for manufacturing and dealing in watches, mechanical and electrical clocks, timepieces, locks, hinges, gauges, mathematical and Scientific instruments, cigarette cases, water meters, cigar lighters, razor blades and various type of gear, die and punch work and various other articles outlined more in detail in the Memorandum of Association.

PROSPECTS

In 1937-38 imports of watches and clocks alone increased fivefold to Rs. 51,42,795/- from Rs. 10.65.660/- in 1931-32. On account of war conditions imports are at a standstill. With the rapid industrialization demand has gone up and would go much higher still after war. Import duty is 60%. Cost of Railway and Sea freight, insurance Sea worthy packing, is 20%. There is a standing advantage of about 80% over imported goods, which has only to be properly exploited to enable it to be firmly established and become unshakable.

Cost of production of a standard clock calculated on a liberal basis is Rs. 21/- which can easily sell for Rs. 25/-. 100 clocks per day would give Rs. 1,20.000/- in one year. In the course of 6 or 7 years the Company would be in a position to pay back the investment in full.

The same holds good in case of other imported articles.

TECHNICAL PERSONNEL

The Company has available to it skilled technician workers and operators trained by Mr. S. P. Lal, who would supply the nucleus. The number could be increased at a very early date. Mr. S. P. Lal would personally look to the higher Mathematical & Scientific side.

MACHINERY & EQUIPMENT

The Company is acquiring Machinery, equipment, tools, etc., from the Brand Watch Co., at a valuation of Rs. 25,787/-. Remaining Machinery and equipment can be procured.

DIRECTORS QUALIFICATION AND REMUNERATION

The qualification of a Director shall be the holding of Ordinary shares of the value of Rs. 2,500/- in his own name. Remuneration of the Director shall be Rs. 50/- per meeting besides railway and other out of pocket expenses and a commission of 2½% on net yearly profit of the Company to be divided among Directors equally or in such manner as they may determine.

MANAGING AGENTS

Messrs. S. P. Lal & Sons, Ltd., will be paid Rs. 1,500/- plus 10% on profits. They will not receive any remuneration till commencement of business by the Company.

PRELIMINARY EXPENSES

The Preliminary expenses in connection with the incorporation of the Company will be paid by the Company, to promoters and are not expected to be higher than Rs. 35,000/-.

BROKERAGE

Brokerage at 2% for all applications through brokers.

MINIMUM SUBSCRIPTION

The Minimum Subscription on which the Directors may proceed to allotment is Rs. 50,000/-.

PROMOTION MONEY

Mr. S. P. Lal, Proprietor, Brand Watch Co., the Promoter is being given fully paid Defd. Shares worth 15,000 for his services in bringing about formation of the Cmpany, obtaining the permission of the Controller of Capital Issues and registering the Company. He is not being paid anything for use of the name of his established firm.

APPLICATION FOR SHARES

Application for shares should be made on usual forms to Managing Agents together with 25% per share payable on application. If no allotment is made, deposit will be returned in full. If less number of shares allotted, the surplus deposit will be deposited in reduction of amount payable on allotment.

A copy of the Company's Memorandum of Association forms part of the Prospectus.

This list will close as soon as it is estimated that the shares offered for public Subscription have been applied for but not earlier than 20th July, 1944.

(A copy of this Prospectus has been filed with the Registrar of Stock Companies, Trivandrum and a certified copy delivered to the Registrar of Joint Stock Companies, Madras).

The company has no place of business in British India.

"Consent of the Central Government under Defence of India Rules 94-A and consent of the Government of Travancore under Defence of Travancore Rules 94-B have been obtained to this issue. It must be distinctly understood that in giving this consent, the respective Governments do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them".

PROSPECTUS

THE MIDLAND RUBBER & PRODUCE CO., LTD.

(Incorporated under the Travancore Companies Regulation, 1092),
(Certificate No. 18, dated 13th Kumbham 1112. Liability of Members Limited.)

AUTHORISED CAPITAL - - Rs. 75,00,000

MANAGING AGENTS.

MESSRS. A. V. THOMAS & CO., LTD., Alleppey.

OBJECTS OF THE ISSUE.

To acquire the Sittar, Vellanadi and Perinad Estates, belonging to The Rani Travancore Rubber Company, Limited, London in pursuance of an agreement of sale, dated 23rd March, 1944, and executed between the Managing Agents of this Company and The Travancore Agencies, Kottayam, who have obtained an option for the purchase of these estates, whereby this Company has agreed to purchase the said Sittar, Vellanadi and Perinad Estates, for a sum of Rs. 32,21,000/- to The Rani Travancore Rubber Company, Limited, as Vendors of these properties and Rs. 49,000/- to the Travancore Agencies, for transfer of their option to this Company, payable in cash.

Particulars of the properties are as under:—

		Acres.	Acres.
Rubber Seedling 1904/1927	...	2,247.87	
Rubber Budded 1931/1943	...	398.09	2,645.96
Fuel clearings and other lands including reserve	... ...	...	330.17
	Total	...	2,976.13

Crop harvested from these estates during the past three years was as under:—

	Vellanadi.	Perinad.	Sittar.	Total.
1941 ...	2,74,773	3,36,000	3,45,520	9,56,293
1942 ...	3,44,570	4,10,859	4,40,729	11,96,158
1943 ...	3,67,650	4,18,432	4,56,960	12,43,042

Area.—The total area including the estates to be purchased is as under:—

	TEA	RUBBER	Fuel Clearings Other Products, Etc.	RESERVE	TOTAL
Arnakal ...	1,109.00	...	262.75	1,715.75	3,087.50
Mukampala ...	...	351.60	17.45	5.00	374.05
Balamore, Corrimony & Mahendragiri ...	981.60	...	26.00	1,548.24	2,555.84
Sittar, Vellanadi and Perinad ...	...	2,645.96	41.97	288.20	2,976.13
Total ...	2,090.60	2,997.56	348.17	3,557.19	8,993.52

Buildings.—All the three estates to be purchased are fully equipped with factories, machinery, bungalows, staff quarters, cooly lines, etc., which are estimated at Rs. 2,66,800/-.

PROSPECTUS.

The estimated total income from Rubber and Tea is :—

	Rs.
15,00,000 lbs. Rubber at As. 7 per lb.	6,56,250
10,00,000 lbs. Tea at 30 cents per lb.	3,00,000
Total ...	9,56,250
Less—Provision for taxation	1,35,000
Balance ...	8,21,250

and this amount will be available for disposal as under:—

Dividend on 3,44,000 Preference Shares at the rate of 6 per cent	2,06,400
Balance available for 2,70,000 Ordinary Shares ...	6,14,850

and this will show a return on Ordinary Capital of over 22 per cent per annum.

When the budded rubber attains full maturity the return on Ordinary Capital at present level of prices is estimated to exceed this return.

THE MIDLAND RUBBER & PRODUCE COMPANY, LIMITED, PROSPECTUS—Contd.

VOTING RIGHTS.

Every share entitles the holder to one vote exercisable either in person or by proxy.

BROKERAGE AND UNDERWRITING COMMISSION.

The entire issue has been underwritten by (1) Mr. P. R. Subramanyam, Stock and Share Broker, 61, Stock Exchange Building, Apollo Street, Fort, Bombay; (2) Mr. Arvindprasad Ramray Mahadevia, Stock and Share Broker, Dalal Street, Fort, Bombay and (3) Messrs. Raman & Company, Stock and Share Brokers, Alleppey, jointly, for a commission of 2½ per cent on the amount of the issue. The Directors are of the opinion that the resources of the underwriters are sufficient to discharge the above underwriting obligations.

The minimum subscription is Rs. 34,40,000. The Directors will proceed to allotment to existing members immediately and to outsiders only after the shares remaining unabsorbed are subscribed.

CONTRACTS.

Messrs. A. V. Thomas & Co., Ltd., Alleppey, are the Managing Agents of this Company and their term of office and remuneration were revised by Special Resolution passed on 23rd December, 1943, as under:—

Term—10 years from 1st April, 1943.

Office Allowance—Rs. 1,000 per month.

Commission—5 per cent of the annual Nett Profits (Nett Profi being as defined in the Travancore Companies Act Ix of 1114).

The following documents are open for inspection at the Registered Office of the Company during business hours:—

1. Underwriting letter, dated 10th May, 1944 from the Underwriters.

2. Agreement, dated 23rd March, 1944, between the Managing Agents and The Travancore Agencies, the option holders for the purcahse of these properties from The Rani Travancore Rubber Company, Limited, London.

Copies of the above documents and of the Memorandum and Articles of Association of the Company and the Travancore Companies Act, may also be inspected at the Office of Messrs. A. V. Thomas & Co. (India), Ltd., No. 3, Sunkurama Chetty Street, Madras, the Company not having established a place of business in British India.

GENERAL.

In 1943 the Company issued for subscription 1,51,500 Ordinary Shares of Rs. 10 each, at a premium of Rs. 5 per share, for an aggregate amount of Rs. 22,72,500 and this issue was fully subscribed and the 1,51,500 shares were fully paid up and duly allotte. None of the Directors have got any interest in the properties intended to be purchased.

This issue has been in the first instance offered to the existing members in accordance with Section 138 of the Travancore Companies Act, and the balance remaining after allotment to the members are only offered to the public.

The following report by the Auditors of the Company will testify to the successful working of the Company and to the profits made and the rates of dividends paid, by the Company during the past three financial years. The Company's last financial year having closed only on 31st March, 1943, the accounts of the Company will be made up next only after 31st March, 1944.

REPORT OF THE AUDITORS.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like It)

Earesdropper writes from Delhi:

My visits to Delhi have of late become as frequent as in the earlier years of "Indian Finance" when, for various reasons, my contact with Delhi had to be close and intimate. Those were the days when not only the Central Assembly was full and of better calibre, but our legislators had to tackle new legislation of some importance. Government members and M.L.A.'s alike welcomed opportunities of contact with publicists, and there was advantage to both alike. Mine was at that time as familiar a face in Delhi as that of any member of the Government or of the leader of the opposition. I often had to explain my absence from Delhi as if I was one of its denizens. But that phase, I recall now, was somewhat short-lived, and soon yielded place to one in which I almost became a stranger to the people in the capital. The cycle was completed a year ago; and I find myself running up quite often to Delhi now on one business, now on another. A trip to Delhi is not always a pleasure. In summer it is an ordeal: and what with the shortage of ice and other hardships, it is an ordeal which only the air conditioned coach can help one to survive without serious damage. I am thankful that this time the journey is after the break of the monsoon. On one occasion, I, so to say, took the rains to Delhi—the clouds advanced at the pace of the train I was in and burst in showers over the parched city even as I set my foot on its soil. Since the monsoon had begun, the journey was distinctly more pleasant than it would have been otherwise.

* * * *

I am sure every reader of these columns knows or can guess the business which has now brought me to Delhi. The Paper Control Order, on which I wrote at some length last week is, to do the officials justice, far more than an inconsiderate and arbitrary excercise of governmental authority. True, it more than hits us, it threatens the majority of periodicals with virtual extinction. And when the periodicals were, one and all of them, asked to cut their size to an unremunerative scale, to put it mildly, naturally indignation ran high. Though we fight the Japs, we are asked to perform harakiri. But there are two sides to every case. To hear the other side and make the other side hear our side, the meeting of periodicals and publishers held on Tuesday June 26, elected a deputation of two, consisting of Mr. K. N. Chatterjee of "The Modern Review" and myself to proceed to Delhi. My colleague could not join me at the last moment and I bear the undivided responsibilities of the deputation.

My first job, therefore, on arrival at Delhi, was to meet Sir Akbar Hydari. M. S. A. Hydari, on being Knighted, elected to take the identical name of his father; and his demeanour and dealings with the numerous classes of people with whom he has now to do alike emphasise the appropriateness of name—truly a chip of the old block. Sir Akbar realises, as, indeed, one in his position cannot afford to realise, that when Governmental actions touch the conduct of the individual in the routine economic life, the least that the officials can do is to give a patient hearing to those who have been affected by such actions. I availed fully of Sir Akbar's readiness to give the other side a good hearing. And I may by way of reporting on my work say that Sir Akbar may be trusted to administer a harsh rule in as sympathetic a manner as possible.

* * * *

But the rule has to be harsh. Sir Akbar proposes to lay before the Conference he has convened at Bombay on the 11th July about the paper situation as it is now and as it will be for some time to come. These facts, I am sure, will convince every one that the Government has not exaggerated the shortage, though opinion must continue to differ as to the proper methods of ensuring the necessary economy. Government for their part are firm that the basic cut of 70 per cent which has now been ordered is unavoidable and indispensable. Where they may relent is in the insistence on all journals adopting the same drastic reduction. In special cases, Sir Akbar would be prepared to reduce the required cut from 70 per cent to 40. He might consider affording some relief to periodicals which are prepared to change over to newsprint. Relief for the generality of consumers of white printing can come only when the supplies are increased by import of foreign made paper. I understand Sir Akbar has negotiated successfully with the U.S.A. for the import of 20,000 tons of paper, and this shipment may arrive by about December. Meantime, Sir Akbar would like to receive suggestions as to other directions in which economy can be secured.

* * * * *

For my part, I drew his attention to some obvious instances. I emphasised that before limits can be set to the legitimate use of paper in periodicals, the Government must eliminate waste. I asked him what point there was in continuing to advertise with lavish use of paper goods which are already in general consumption all over the country. I adduced also the

case of cigarette cartons, which disappeared at one stage, and which are again in use.

* * *

Nearly a year ago all cigarette companies announced that cigarettes would no longer be available in packet: customers must bring their old cartons, if they wanted new ones. For many months cigarettes were being sold with just the paper wrapper. Nobody grumbled about it and everybody accepted the new procedure as imposing no special inconvenience. In the last two months, however, cigarettes have again been available complete with cartons. Does this show that cigarette companies' quota of cardboard has been increased? In any case is not the reappearance of cartons calculated to give the impression to the public that the paper crisis has eased? While such an impression was prevalent, the bomb shell of Paper Control has been thrown on the world of periodicals and the announcement was made without any government notification explaining how a critical situation in paper supplies has risen so suddenly. Sir Akbar said, he was not aware of this development in regard to sale of cigarettes in cartons and promised he would go into the question. On this and similar questions, Sir Akbar would like to have from the Periodical Press Association concrete suggestions for avoiding waste.

* * * *

There is reason to believe that Sir Akbar will welcome substitution of newsprint for Indian made paper in case of such periodicals as can do so conveniently. Newsprint situation is improving as is indicated by decision of Government to allow daily papers to sell each copy at whatever price they choose. The Newsprint Control Order has prescribed minimum prices in relation to number of pages. This provision is now being removed. The one anna daily is thus in immediate prospect. Proprietors of the Daily Papers would have preferred continuance of minimum prices and are disappointed at this curtailment of their profiteering.

I trust I have indicated not only the intrinsic difficulties of the paper situation but also the few rays of hope that are still afforded to us. I am afraid that many of us who have been affected by the paper control order think more of its drastic nature than of the inexorable facts of the situation which suggested such an order. We feel that, just because the cut asked for is for us an impossible one, the reasons behind it must be wholly hollow. During the few days that I remained in Calcutta after the order was announced, I found this feeling to be widespread among the interests affected. And when a meeting was convened to decide on the measures for combating this order, indignation, I found, yielded place to extravagant hopes of relief. While I am here to fight the Paper Control Order in its present form and while I will certainly continue the fight in the Bombay Conference, I feel it my duty to utter a warning against false hopes. Much has been made of the fact that any severe cut may mean the end of many small journals and serious hardship for the bigger ones. The force of this agreement is really related to the paper resources we have on hand. There is a saying in my part of the country that a bull cannot be made to yield milk even for an orphaned baby. Surely, the periodical press cannot be guilty of such meaningless importunity. The shortage of paper is there, for all to see, though it is capable of exaggeration. And relief is often most needed where it is most costly and most difficult to take. A forme more for the small journals, though an obvious dictate of ordinary ethical considerations, will suffice to throw the whole control out of gear. While invidious distinctions are, no doubt, to be deprecated, the facts of the situation will afford no warrant for a flat equality of treatment.

* * * *

Obviously, the whole question must be gone into in the light of the criticisms and representations that have been made. As I said earlier, the Government are not fully appraised of other sources of economy. They have exaggerated the shortage. They could have held out the promise of relief through newsprint, while they brandished a broad axe over the heads of the periodicals. At Bombay, I expect all these factors will be fully taken into account. But on our side, the periodicals must realise that the Government did not issue a paper control order only to annul it wholesale a week or two later. 70 per cent is too big a cut for any one to make; and in the case of the small journals, the mathematical impossibility of the part being bigger than the whole may be disapproved. But that a big cut is necessary can hardly be questioned. All that we can ask is that the basic cut shall be reduced and that the principles on which relief can be afforded in special cases clearly laid down. The next step is to ensure that further relief will be afforded through the supply of a certain quantity of newsprint, the use of which in addition to the permitted white printing will not amount to infringement of the Control Order. The Periodical Press can also legitimately lay claim to a high priority in the consumption of the imports when they arrive in India. I should have said little of the more sombre aspects, but for a feeling that false hopes have been allowed to rise.

handicaps and disadvantages as compared with the foreign companies and it is all the more necessary for the Government of India to take every possible measure to help them not only to keep their head above water but also to flourish and be in a position to render service to society."

New business written in 1943 was as much as Rs. 2.20 crores, an increase of 76 per cent. over the figures for the previous year. Total receipts show an increase of nearly 9 lakhs to Rs. 57.34 lakhs. The increase in premium income was from Rs. 40.37 lakhs to Rs. 48.47 lakhs. Mortality experience was again satisfactory. In 1942 claims to the value of Rs. 7,33,483 accrued by death against which similar claims during 1943 have amounted to only Rs. 6,93,477. The increase in the Life Fund by Rs. 28¾ lakhs to Rs. 2.35 crores has been referred to above. There has thus been striking progress allround.

The valuation of the Company's business upto the end of 1942 took place last year. Even on the basis of a stringent valuation of 3½ per cent. against 4 per cent. there was a surplus Rs. 1,99,199. No account, however, was taken of the greatly appreciated value of the Company's assets in arriving at this figure. It is unnecessary to emphasise that there has been a marked appreciation in market values since the date of the valuation and that the undisclosed surplus is at the present moment very much more.

Investments have been properly distributed. Policy loans were Rs. 29.58 lakhs. Besides the deposits with the Reserve Bank, the Mysore, Kashmir and Travancore States, investments in Indian Government rupee securities were as much as Rs. 77.45 lakhs. The face value of these securities was Rs. 78.54 lakhs. Provincial Government securities were Rs. 5.73 lakhs and public bodies debentures Rs. 15.97 lakhs. The total of investments in giltedged and approved securities and preference and ordinary shares is Rs. 167.18 lakhs. Of the balance of Rs. 35.07 lakhs after investing in giltedged and other approved securities Rs. 10.27 lakhs is in guaranteed and preference shares and Rs. 16.32 lakhs in ordinary shares. House property in India at cost at Rs. 34.21 lakhs must disclose a substantial surplus. Policyholders' interests have thus been fully protected.

The Chairman, Rai Bahadur Ishar Das, was naturally anxious that the progress of insurance companies should not be arrested by the high level of taxation and the declining yield on investments. It is feared that unless further relief is given in respect of taxation there will have to be a revision in premium rates. It is very important that the public should be encouraged to take additional 'cover'.

Chemical, Local or Foreign

In a recent representation to the Commerce Member, Indian Chemical Manufacturers raised the question of large imports without regard to the interests of established manufacturers. Imports are viewed as a danger to home manufacture of alumina ferric, soda ash and the bichromats. The manufacturers' view is that home production is sufficient in certain lines and the imports must be strictly regulated because official assurances were given when manufacture was quickly started in India. Indian manufacturers are handicapped by shortage of coal want of raw materials and transport difficulties at present. Certain figures relating to output of chemicals in India confer added interest on the memorandum. Production of alumina ferric is put at 10,000 tons per annum; reserve capacity is expected to give 5,000 tons more. Epsom salts to the extent of 2,000 tons per annum is available in India. Zinc chloride production is adequate for India's requirements but imports meant to undersell the Indian product have taken place according to the representation. Demand for sodium thiosulphate runs at the rate of 600 to 799 tons per year while existing Indian plants could provide a larger quantity. Production of sodium sulphide is estimated at 500 tons per annum as the manufacture of bichromates yields this chemical.

The withdrawal of assistance offered for the home production of calcium chloride is discussed alongside of the encouragement given to imports. The Indian production of bichromates is now put at more than 5,000 tons, enough to cover the country's needs, and can be increased to meet export demand. In regard to soda ash three imporant concerns produce soda ash in large quantities and imports are uncalled for. The main argument against imports is that home production should be given a chance to develop in spite of difficulties. It is urged that only 25 per cent of the coal ration is available to manufacturers who have unused capacity and are exposed to higher prices. Sulphur rules at Rs. 165 per ton in England and at Rs. 236 per ton in India. Foreign manufacturers hold advantages and Indian import control, if it is not meant to protect, must take note of advantages retained by manufacturers abroad and the difficulties of local manufacture. It is, therefore, urged that home manufacturers must be consulted before import is decided upon and only chemicals those not available here should be obtained from overseas. Assistance in regard to coal, raw materials, and transport is claimed because of the control measures in force. The wartime development described supports the claim that imports are detrimental but the persistent transport difficulties in India as well as the need to get things other than consumer goods from abroad may be regarded as invalidating one particular argument against imports.

Olympus

(From Our Correspondent)

New Delhi, July 3, 1944.

THE fear that the political deadlock is to be perpetuated indefinitely has proved true. The Viceroy has even refused to see Mahatma Gandhi in consideration of the radical difference in "points of view which appeared in our recent correspondence." Political circles here are rather surprised what His Excellency means by a 'definite and constructive policy'. How can the Congress reconsider and revise its policies if Gandhiji is not to be allowed even to meet and discuss things with the Working Committee? New policies cannot be evolved in a vacuum. Gandhiji's assurance that he had got definite remedies in view for the communal tangle, the 'political deadlock' as well as the food situation ought to have been enough for the Viceroy to open negotiations if there was the least genuine desire for a political settlement. The general impression here is that what the Government means by settlement is not a workable and honourable compromise but a confession of guilt by the Congress and a return to the unsatisfactory state of affairs as they were before August 1942. After its recent setback in the Punjab, the League too is in no mood to take the initiative for a settlement. Altogether the political prospects appear to be dark. There are some who go so far as to declare that the immediate political future now completely depends upon the way the war develops and the extent to which the U.S.A., China and Russia are able to intervene for a change in the present barren and static policy.

* * * *

The food situation is again causing considerable alarm in informed circles here. There are even fears of a second, though a milder famine if the Government do not take urgent steps. It is pointed out that the Centre's gross negligence is apparent from the fact that even the moderate recommendations of the Foodgrains Policy Committee have not been implemented. According to the latest information available, the Government have so far (after October 1, 1943), imported about 4,00,000 tons of wheat and hope to get an equal quantity in the next three months. It will be recalled that while the Foodgrains Policy Committee thought it essential to import at least 1,500,000 tons of wheat during the first year and a million tons during each subsequent years for the war emergency period. The Government would have imported according to present plans, only about 80,000 tons during the first year or only half the quantity recommended. There has already been inordinate delay in the establishment of a fertiliser industry and the expert enquiry in this connection has only just started. After last year's terrible experience, it is hard to justify even a day's delay in such a vital matter.

* * * *

For a long time there has been much public agitation against the indiscriminate slaughter of cattle to provide for military needs. It is pointed out that even on the most optimistic calculations it would take several decades to mechanise Indian agriculture. The big war time depletion of India's cattle wealth is thus bound to hit her post-war agricultural economy hard. The Government have already taken some half-hearted measures to check indiscriminate slaughter but there has been no effective, all-India policy yet. The Policy Committee on agricological development has already recommended that provincial governments should have legislative powers to ensure a more effective preservation of cattle wealth by all possible means. It is understood that representatives of the Health, Lands and Education Department will soon discuss the matter with high military officials to frame an all-India policy in this matter and reduce the slaughter of cattle in this country to the absolute minimum essential. Measures are also under consideration to increase the production of poultry, sheep and goats.

* * * *

A Federal Council of Agricology in place of the Imperial Council of Agricultural Research may be established as a result of the recommendations of the Policy Committee on Agricological development which met in a four days' session in Simla last week. Excluding the grants to the provinces the organisation is expected to cost 2½ crores a year. The proposal that half of the profits of the Reserve Bank should be utilised to finance the organisations as was done in France and Australia was dropped though it was agreed that the Central Government "should provide an assured and steady source of income for the various central organisations and activities proposed for agricological development such as might be secured by the proposal accruing to the Government of India". The Committee also endorsed the three general principles : (1) The need for an assured market and remunerative prices for agricultural produce; (2) The securing of the requisite facilities for the cultivation though this investment may not be remunerative to the Government; and (3) Necessary legislative powers for the provincial government to use expulsion in any measures designed to promote agricological development. If the Committee's recommendations are implemented, there will be a separate Federal Department of Agricology to look after agricological development. The whole policy, it is learnt, will again be reviewed by the Committee at a meeting to be held in October.

CHEVROLET TRUCKS are now obtainable as chassis or with tarpaulin-covered load bodies built by General Motors India Limited, at controlled prices, under special arrangements made by the Government of India.

ADDRESS YOUR DEMANDS TO THE PROVINCIAL MOTOR TRANSPORT CONTROLLER OF YOUR PROVINCE.

Due to heavy Government demands on petrol for Military vehicles, these Chevrolet controlled trucks will be released for essential requirements only, and special consideration will be given to purchasers who are prepared to operate them with an approved charcoal gas plant. Government approval of gas plants is restricted to those which have passed the gas purity and other tests. The buyer is thus protected from bad plants, while at the same time, he has a range of plants to choose from.

While producer gas is less powerful than petrol, the extent to which it prevents over-speeding, violent acceleration and consequent sudden braking, ensures a definite economy in tyres and parts replacements.

South India

(From Our Correspondent)

Madras July 4, 1944.

MR. C. C. DESAI's visit to the city offered excellent opportunity to the local merchants for expressing their grievances against the working of the Anti-hoarding and Profiteering Ordinance. The Muslim Chamber of Commerce, the Andhra Chamber of Commerce, and the Southern India Chamber of Commerce did not present a united front, but presented their addresses separately and outlined their demands. The Muslim Chamber wanted that prices should be fixed for necessaries of life only and not for luxuries and pleaded for regional as against all-India price fixation. Complaint was lodged that the Ordinance actually harassed the traders and that if the severity of its operation is to be mitigated warnings should be given before prosecution and the Provincial Government should sanction the prosecution. The Andhra Chamber stressed the point that the Ordinance came into effect suddenly and did not give the mercantile community time to adjust to new conditions. Mr. Desai explained the difficulties of fixing prices regionally but promised to make arrangements that prosecutions were sanctioned by Provincial Governments. The Ordinance was put into effect suddenly because the general consumer who has silently suffered for four years needed urgent protection. But amendment is not ruled out and minor defects in the working of the Ordinance would be looked into by the Deputy Controller of Prices, Madras to be appointed shortly. The Controller-General also stated that the profit margin of 20 per cent is not inflexible and if a convincing case for its upward revision is made it would be suitably liberalised. The memorandum of the Southern Indian Chamber pointed out that if the Government would compile and publish prices of commodities according to the order of necessity and leave it to the trades to meet and fix the prices of the remaining commodities the position would be satisfactory. Ceiling and provisional prices tend to be low and the most agreeable way of fixing prices is to relate them to local conditions. A plea was also entered for increasing the margin of profit particularly for seasonal goods like woollen. Mr. Desai announced that the price list of the remaining commodities would soon be compiled and assured that he would examine the points raised.

A few outlines of the postwar road programme of the Madras Government are now available. The total mileage of the Presidency is to be raised from 36,000 to 56,000 at a cost of Rs. 35 crores of which Rs. 25 crores will be spent for improving roads, Rs. 5 crores for constructing new roads and Rs. 5 crores for construction of bridges. It will be recalled that the Government of India have laid down that roads should be so planned as to connect every village with a population of thousand and more within at least two miles of an all-weather road if the village is situated in a highly agricultural tract and within six miles if it forms part of non-agricultural tracts. The actual plan of road construction for Madras is not known and no idea as to the standard of efficiency of roads is given. The public are not yet aware as to how the expenditure would be apportioned between the Government of Madras and Government of India. A Special Road Development Engineer has been appointed to draft the programme of road construction and it is expected his report would be available before September.

Control of pests is part of agricultural rehabilitation programme and the Director of Agriculture, Madras, has outlined a scheme for the improvement of jowar crop by effective use of sulphur as fungicide to tackle grain *smut* caused by Sphaeelotheba sorghi. The Government have sanctioned his scheme which, it is estimated, would cost Rs. 24,900. To begin with the scheme would be worked out in about 1.73 million acres in the districts of Guntur, Kurnool, Cuddappah and Nellore. 40 tons of sulphur would be purchased through proper channels and of this 25.77 tons would be utilised in the abovementioned districts. It is believed that this scheme would be very popular since a large quantity of crop would be saved by effective use of this fungicide.

Postwar reconstruction is not the special fad of British India and the Indian States have done their best to conserve the unexpected increase in revenues accruing from wartime factors for purposes of future economic progress. Travancore has been among the front rank states and the twelve-point postwar programme outlined by Sir C. P. Ramaswami Ayyar, Dewan of Travancore, bears ample proof to the strenuous preparations made by the Travancore Government in working not only to correct the defects in state economy but to pave the way for rapid advancement. Full utilisation of the valuable mineral and hydro-electric resources of the State is promised. If the schemes are realised Travancore would be blessed with industrial activity producing aluminium, rubber products, cement, fertilisers, woodware, porcelain and china clay. Inauguration of machine tool industries is also programmed and due attention is paid to the maximum utilisation of sea, backwater and road traffic of the State. Public health and education hold a high place in the order of priorities and the Dewan stated that if the reserves of the State were insufficient loans from the money market would be resorted to. A fund of Rs. 10 crores is sought to be built and already Rs. 1½ crores have been accumulated for the purpose. With an allocation of another Rs. 1½ crores during the current year the amount would mount upto Rs. 3 crores and the recent Travancore loan should raise the funds to Rs. 6 crores and the target of ten crores would surely be reached in a year of two. It is interesting to hear from the Dewan that the Travancore Government would go ahead with its plans independent of the all-Indian plan. Apart from the question how far the States can effectively plan without proper co-ordination of the activities of the British Indian provinces, the Travancore plan indicates the active industrial policy of the State and those who knew how the people of Travancore suffered during the past two years would surely wish their postwar plans early success.

Explaining the prohibition policy of the Mysore Government Mr. J. M. Imam, Minister for Public Works, stated in the Mysore Assembly that prohibition was a failure in British India and that the best way of eradicating the evil is by gradual process. There was no use, he contended, in introducing prohibition in certain parts of the State and devising other means of raising revenue to make up the loss in excise revenue. Mr. Imam would not have convinced many who are aware that prohibition was not a failure in British India and but for the reactionary policy adopted by the Adviser regimes the movement would have yielded better results. To introduce prohibition by gradual moves is the surest way of defeating its ultimate success and, at any rate, the contention that fresh taxation to compensate the loss in excise, is not relevant in view of the phenomenal rise of excise revenue in the Mysore State. In fact the latest Mysore budget contained taxes not for augmenting the rapidly swelling exchequer but to back up anti-inflationary drive. The question of finance therefore does not arise and the Minister should have chosen more convincing reasons for his indifference to what has been known to be a most vital reform needed by the masses in Mysore as elsewhere.

PUNJAB NATIONAL BANK LTD.

PROGRESS REVIEWED ON OPENING OF 137th BRANCH

At the opening ceremony of the new office of the Punjab National Bank Ld. at Nilagamabad the when Mr. A. A. Williams I.C.S, presided the chairman Lala Yodh Raj said:—

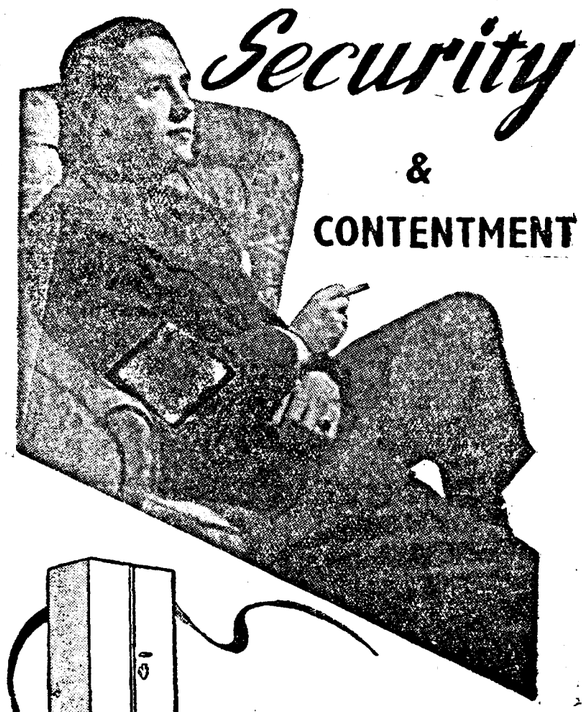
Mr. Williams and Gentlemen,

We have been studying possibilities of so improving or widening our Banking service as to furnish the fullest possible support to the trading and industrial community. We are prepared to introduce latest and uptodate methods of banking as obtain in highly advanced banking centres like London and New York though in doing so we have to contend against numerous difficulties mainly arising through paucity of trained staff. In our dealings with the public it has been our set policy to rely as much on the character, integrity and business capacity of the borrower as upon the extent and nature of his material resources.

There has been considerable development of Indian Banking in recent years. This war, contrary to first expectations, has helped this growth. The number of banks and the amount of business done by these banks has considerably increased. Thus inspite of war conditions and due, in fact, to a large extent, to these very conditions as stated above—Indian Bank's business has been remarkably active with expanding turnover and notable increase in the number of new accounts. The last mentioned feature is particularly encouraging in India where the habit of hoarding has been universal. Instead of keeping their wealth in the form of currency notes, rupee coins and bullion buried underground, our countrymen are becoming more and more banking minded. They are making increasingly greater use of the services which a modern bank offers.

This is all to the good of the country; for the years immediately following the termination of the War will present even more difficult problems than are being confronted these days. The proper employment of the great purchasing power that is being poured into the pockets of the people through war services and contracts is not to keep it in wallets or private hoards, where there is a great risk of loss, but in investments in Government loans or as deposits with banks. All notes not required for immediate need should be taken out of circulation by such investments or be paid into banking accounts whence they can be converted into Government Loans, or be usefully employed in trade or industry. In this way the public who are in receipt of the money dispensed on account of war production will become not only banking-minded but savings-minded, to the great advantage of their motherland and of themselves.

The growth of scheduled Bank deposits from Rs. 236.61 crores on 1st, September, 1939 to Rs. 741.40 crores on 2nd June, 1944 shows that a very large amount has already been saved by the public during the war years. But it is essential that this habit of saving and investing as opposed to that of spending engendered in these years should be continued during the postwar period.



In this connection, I would like to quote a few facts which throw interesting light on this point. On 30th of July 1943, the total note issue was Rs. 750.77 crores while scheduled Banks deposits amounted to Rs. 568.93 crores. The latest figure about total note issue is Rs. 926.18 crores on 2nd June. The scheduled bank deposits have also gone up to Rs. 741.50 crores. During the whole of this period the scheduled bank deposits have never fallen below 76 per cent of total currency and have been as high as 79 per cent. If we take only the new additions to currency these amount to for the same period to Rs. 175.41 crores. The corresponding increase in Scheduled Bank deposits amounts to Rs. 172.57 crores. In other words the scheduled banks have received by way of deposits during the last ten months 98 per cent of the total new currency created in the country.

The average monthly expansion of note issue and scheduled bank deposits works out at about Rs. 17½ and Rs. 17 crores respectively. If this state of affairs continues the year should close with currency at a little above a thousand crores of rupees and scheduled bank's deposits at about 825 crores of rupees.

The figures quoted relate to the issue of paper currency and increase in bank deposits. Total issue of notes should not, however, be taken as equal to the total purchasing power made available in the country. In the calculation of the latter as students of economics know, other factors such as the superstructure of credit created by the banker, metallic coin put in circulation, velocity of circulation of both currency and credit have all to be taken into account. It should be the banks' duty to encourage the public to keep more and more of the purchasing power acquired by them, with the banks, or invest it in Government loans. This is the most effective way of fighting inflation and helping the war effort.

The Indian banks through their investments in Government securities are doing their best for the furtherance of the war effort. After the war, reconstruction of all kinds will have to be taken in hand, and the great transition from war to peace will be as full of difficulties as the present times. I need scarcely add that our own bank, the Punjab National Bank in company with the other Indian Banks, will lend its full weight to the forces of reconstruction and cooperate with the authorities in making a smooth change over from war to peace economy.

Ours is the oldest Indian-managed Institution working in India. The deposits of the Bank now exceed Rs. 32 Crores. Our holding of gilt-edged securities exceeds Rs. 18 crores. The total number of employees of the Bank is about 4,000 and the Branches and Offices of the Bank are spread over the whole of Northern India and in Sind, Bombay and C. P. Our Working Capital now exceeds Rs. 36 crores and our business is expanding approximately at the rate of Rs. 1 crore a month. The first customer of the Punjab National Bank on the 15th of May, 1895 could never have visualised the breadth and variety of the facilities that the Bank is now able to offer to its numerous customers all over India.

Security & CONTENTMENT

Both are needed for a successful businessman. Security is achieved by being able to buy the best for keeping documents and cash safely free from the fear of burglars, fire, etc. Contentment is achieved by buying the best - Ajax steel Furniture, to beautify - office or home, besides providing security.

Resume of Commodity Markets

THERE have been no important developments in the commodity markets during the past week, the raw jute market remaining active and the jute manufactures market continuing firm. The raw cotton market has been irregular while bullion markets have been definitely firmer. The piecegoods market has been featureless and dealers are more freely selling.

* * * *

The raw jute market is uninteresting with only a small amount of business passing. The first two instalments of the preliminary forecast figures issued during the week do not give any idea of the size of the crop next season. The areas given are only those licensed by the authorities and it is said that these figures have not been checked. It is not known whether the licensed areas have been actually sown with jute. These figures according to districts, are actually larger in all cases and therefore cannot be taken as giving any indication regarding the size of the new crop On this basis, the crop for the next season would be very much more than the trade estimates. Only the final forecast figures will, therefore, give any idea of the Government's estimates regarding the total yield. The trade, however, is not in any way interested in the forecast figures as it is generally accepted that there will not be any large surplus of jute left over for mill consumption and that, if the coal supply position improves, there will even be a shortage.

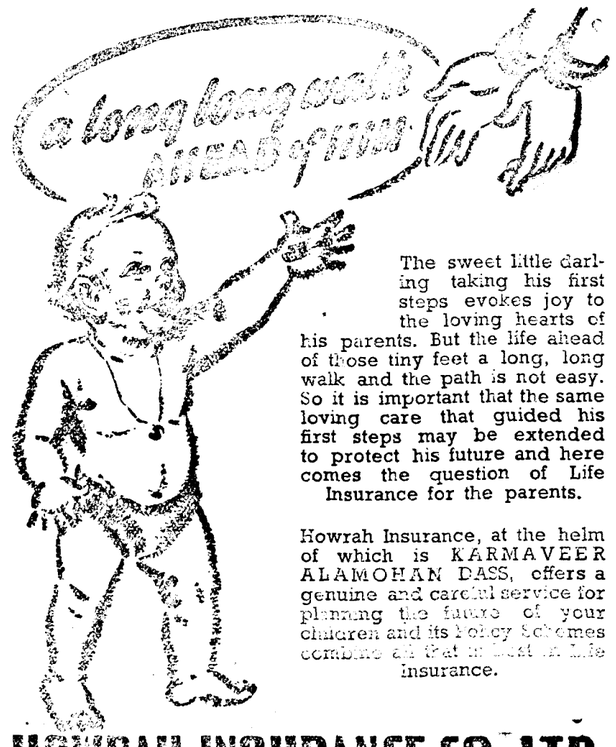
* * * *

Business in the jute manufactures market has been restricted. Mills apparently have no surplus left as recently a large amount of business has been done on U. S. account. It should be made sure that mills conclude their deliveries in time. The report that there has been a further reduction in the number of coal wagons during the week is therefore a disturbing factor. It is reported that the U. S. War Production Board have placed restrictions on the use of bags manufactured from burlap and laminated paper and have prohibited exports of open-mesh twisted paper bags as well as cotton-mesh bags without permission. Consequent upon the reduction of surcharge from 40 to 25 per cent for ocean freight from India by the U. S. War Shipping Administration the freight charges for the shipment of raw jute to the U. S. have been reduced to 21.25 dollars per ton from the previous figure of 23.8 dollars per ton. Ordinarily, this should lead to a large increase in exports but under the present circumstances the allocation of shipping space and the difficulty in respect of mill production prevent any large increase in exports.

* * * *

The raw cotton market is in a confused state. While the large-scale buying by Government has certainly averted a disaster the technical position of the market is by no means satisfactory and the hedge contract has been kept alive only with the greatest difficulty. There are reports that Government might suspend their purchases as soon as the July position is liquidated. The discontinuance of buying in the last two days has thus resulted in a sharp decrease in prices Earlier in the period the heavy discount for July induced some buying especially as the ready market was inclined to be firmer and more cotton was passing test. Regarding trading in new crop no decision has been taken. The weather was unfavourable for the cotton crop in C. P. and Berar earlier in the week but there have been reports of satisfactory showers in the last two days.

* * * *



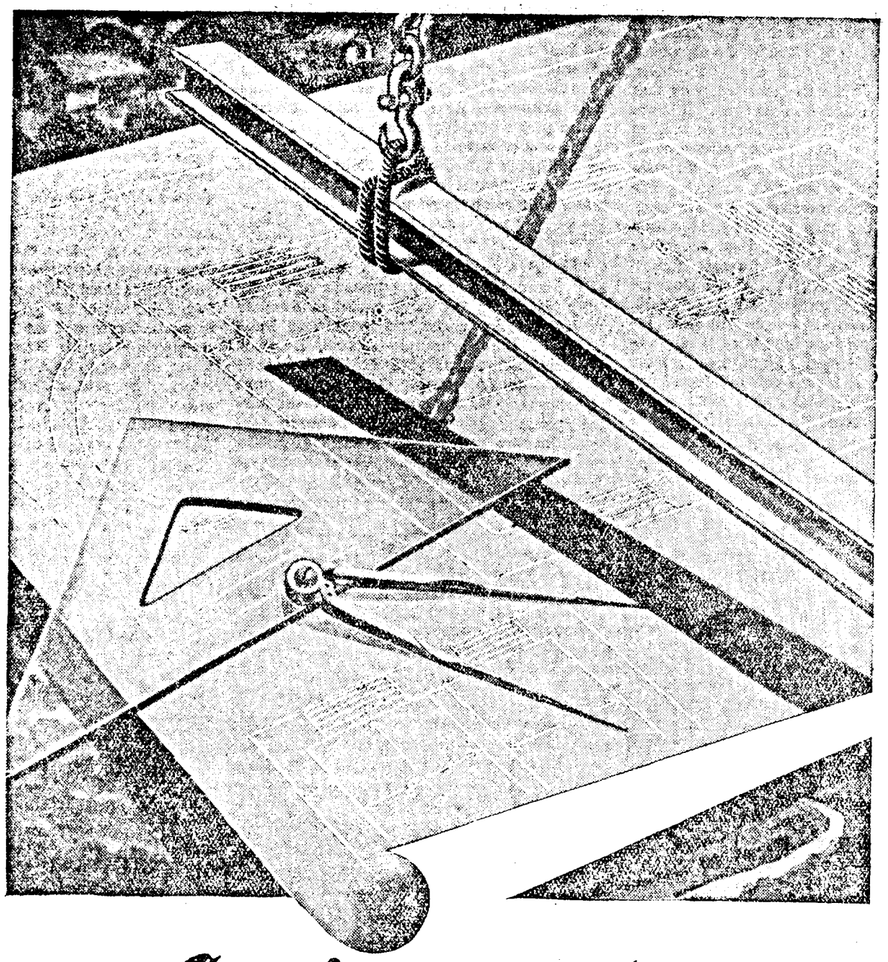
The agitation for a revision in the method of settlement in the Bombay Bullion Exchange has not been successful and at the last meeting no decision was taken. As before sellers are allowed to carry over their business on the payment of a penalty of Re. 1 per 100 tolas. The acute shortage of ready supplies and the firmness of upcountry centres has led to a considerable amount of bear covering during the past week. Prominent bulls have taken advantage of the recent rise in prices and have effected large sales but such selling was fully absorbed. As a result of the trading in the past week, there has been a reduction in the sold position to 12,000 bars from 20,000 bars. Unless the oversold position is completely rectified it cannot be expected that prices will come down to appreciably

* * * * *

The drive against the black market trader and hoarder is being pursued vigorously Only last week, the Government of Bombay served a notice under the Defence of India Rules on the Postmoster-General, Bombay, directing him not to send any cloth parcels by post to Kathiawar. Government have also "frozen" several hundreds of cloth parcels nearly four wagon loads awaiting despatch at the railway stations. This action has been taken to stop one of the surreptitious channels through which cloth was being smuggled out of Bombay to places where it could be sold at higher prices. Recently the booking of parcels at post offices increased so much that the post offices had to notify suspension of parcel bookings. The Provincial Textile Controller is continuing his drive against malpractices in the cloth trade. Recently he seized the books of account of the Ruby Mills at Dadar and its head office at Apollo Street. The mill shop at Mulji Jetha Market was also visited and books seized. Government are reported to be contemplating action against the Agent of the mill. Under orders of the Provincial Controller 244 bales of time-barred cloth were sealed in the Jamnadas Printing Works.

Changes in Foreign Trade

The fall in re-exports of foreign piecegoods, sugar, hides and skins and raw wool during 1943-44 is the result of the new export policy which sought to increase supplies for the home market by reducing both exports and re-exports. Except for the increase under cashew kernels there is no significant increase under food items. The increase under tea is a consequence of the higher quota. The increase under coffee is probably the consequence of higher prices. Exports of ghee, cardamons and turmeric went down as compared with 1942-43. While imports of tobacco increased the exports of tobacco dwindled. The imports of malt liquors were lower in value than in the two preceding years. Imports of spirits and wines rose only slightly in value. The increase noted under salt must be attributed to higher prices. The most important changes in imports which explain high



The sweet little darling taking his first steps evokes joy to the loving hearts of his parents. But the life ahead of those tiny feet a long, long walk and the path is not easy. So it is important that the same loving care that guided his first steps may be extended to protect his future and here comes the question of Life Insurance for the parents.

Howrah Insurance, at the helm of which is KARMAVEER ALAMOHAN DASS, offers a genuine and careful service for planning the future of your children and its Policy Schemes combine all that is best in Life Insurance.

HOWRAH INSURANCE CO., LTD.

30, STRAND ROAD :: CALCUTTA

prices, occasioned by scarcity are in respect of silk and timber. As compared with 1941-42 Indian imports were negligible. A development of special importance is the increase under imports of precious stones and pearls unset. The increasing and universal passion for gem stones as a medium of investment is certainly reflected in the trade figures. The rise in prices since 1941 however requires notice in this case as in the case of chemicals, drugs and medicines, the value of imports in 1943-44 being larger than in the past. Imports of textile machinery and of bobbins too increased in value while imports of nearly every other manufactured article were lower in 1943-44. On the export side the increase under raw rubber is clearly due to higher prices obtained under control. It is noteworthy that raw rubber exports have fallen away greatly as compared with 1941-42 since the Indian manufacturing industry's claims on available supplies are high. Shortage here is reflected in the fall under exports of coal. The only mineral export which increased in 1932-43 was mica, the total value of exports being Rs. 280.4 lakhs in 1943-44 as compared with Rs 271.16 lakhs in 1942-43. The decrease under exports of oilcake, bones and bonemeal as well as saltpetre is attributable to the increased consumption of manures in India. The position of secondary unprotected industries may be easily guaged by the fall under imports of paints and colours, glass, soaps and cigarettes in 1943-44. According, to the export figures there has been a substantial increase in Indian shipments of paraffin wax, presumably based on the larger takings of mineral oils by India.

Coming events..

When peace returns, pent-up energies of men will be used to create a happier and a better world.

New towns and villages will be planned, new houses built.

Then, steel will once again take its rightful place in the industrial development of India.

Jute and Jute Manufactures

(By Our Jute Correspondent)

CALCUTTA, 6th July.

On more than one occasion in the past we have had to deal somewhat scathingly with the issue of the official Jute Forecasts, but surely the series of figures at present being published reach the very nadir of futility, so far as any value can be attached to them All the Bengal districts published so far are qualified by the remark "licensed but not checked". The only conclusion to be drawn from this is that the Bengal Government are desirous of putting up a pretence of having complied with the promise made to the Indian Government and H. M. G. early this year that they would encourage the growing of a larger crop than that of the season just finished, to ensure that the Jute industry would not be starved of raw material. In implementation of this promise, the Bengal Government has increased the area licensed for the growing of jute, but what other encouragement they have given does not appear. What does appear pretty obvious is that they have not dared to check what proportion of the licensed area has actually been sown with jute, or if any check has actually been made, they dare not publish the results. Admittedly the counter-claims of the "Grow more Food" campaign must have been difficult to resist and it is also believed that many of the Jute Regulation staff have been employed on matters connected with the procurement and distribution of foodstuffs. If however this has been the case, it would surely have been more honest to state unequivocally that no Forecast was possible, rather than to waste time and money and paper on issuing a series of figures which at the worst are misleading and at the best worthless. To describe them as a Forecast is merely ludicrous. In the circumstances we refrain from quoting any of the figures or from drawing any conclusions from such obviously unreliable and uninformative data. Only one illuminating point emerges, that the figures from Bihar, Orissa and Tripura State, which are not qualified as unchecked, and so presumably represent some approximation to the actual area under jute in these jurisdictions, all show substantial reduction from last year. If the situation has its humourous side, that is enhanced by the observance of the technique of issuing the figures in batches, a few each day, to avoid upsetting the market! We fear that, after the first day's publication, the market completely lost interest and was not even amused.

It would be interesting to see a balance sheet of the Central Government's compulsory War Risks (Goods) Insurance Scheme. The sums collected in premia must be astronomical and the loss ratio infinitesimal. The only serious loss they have had to face was the Bombay Fire following the explosions in the Docks, and it is noteworthy that Government were very unwilling to accept this liability and only did so with a pretty poor grace. Now, to cover such additional risks, the premium payable has been raised from 1st July to 1 anna 3 pies per hundred rupees per month. In most cases of insurance the insurer has some choice as to what risks he wishes to cover. Here he has none, and a holder of goods in a remote corner of the mofussil with no explosives or munitions of war within possibly hundreds of miles, is compelled to insure against the risk. Unless and until Government publish figures showing that this increase is essential to balance the risk, it can only be described as another imposition on industry and trade. With the risk of enemy action steadily receding, the circumstances in which this increase is imposed seems to justify the ejaculation "God preserve us from our friends".

The suggestion which was quoted in these colums a few weeks ago in regard to the establishment of a list of "approved Loose Jute marks" culled from the quarterly published list showing reports on the quality and condition of such marks as have actually been delivered to mills, has been accepted by the Jute Mills Committee, but only in a very half-hearted manner. The list has been prepared and circulated, but without comment or recommendation. If we understand the idea behind the suggestion aright, it was that the list of "approved marks" which represented the reliable marks in which trading was actually going on, should become the basis of a new Register of Loose Jute marks, thus cutting away all the dead wood with which the present Register is cluttered up. But, as members of the I.J.M.A. are precluded from purchasing any marks not included in the present Register, it would be necessary, to prevent any suggestion of restraint of trade, to lift this prohibition and to leave it to the discretion of members to purchase, if they so wished, marks which were not included in the "approved list". Further, it should be made clear that any such "outside" marks would be eligible for inclusion in the Approved list after a period of satisfactory quarterly reports upon them, while any marks which appeared on the Approved List and which subsequently were adversely reported on, would be liable to be expunged from it. In this way, the Approved List would not only constitute a much less unwieldy Register for Mills to work on, but would prove an encouragement to existing marks to retain their status by reliable packing, and at the same time act as an incentive to other packers to get their marks included in the Approved List. The present circulation of the list is only a half measure and the full object of the idea will not be attained until the project is placed before all member Mills in a much more precise and specific manner. It is to be hoped that such action will not be long delayed, for the state of the current Register largely defeats its own ends, besides which there is reported to be still a long queue of applicants for inclusion.

The Supply Member, Government of India, when he was in Calcutta a few days ago, spoke somewhat optimistically of what was *going* to be done to improve the supply of coal to industry. Not much was said of what *had been* done, though it has been obvious for many months past that the coal supply situation was rapidly deteriorating and becoming more and more critical. We noted last week that the reserve stock was only about one sixth of what it ought to be to permit a reasonable margin to balance the seasonal shortage of raisings in the monsoon. Jute Mills, considering all they have been called upon to do to advance the war effort, can scarcely be considered to have had a square deal in the matter of coal supplies and their present position is parlous. Such mills as are working double and multiple shifts are, by present arrangements, entitled to priority in coal supplies over such units as still work only a single shift. The position has deteriorated to such an extent that it is questionable if even these priority mills will be able to keep going—some have actually had to close down this week for lack of coal. In these circumstances it seems inevitable that single shift mills which rely on coal as their motive power, will just have to go to the wall unless something quite unexpected arises in the matter of better raisings and despatches of coal.

There has been some mild activity in the Export Jute market for a change. Old Crop Long Group Daisee sold at Rs. 77/8 for August, while Dundee Tossa 2/3 sold at Rs. 88/- for July and August with 4s done at Rs. 81/- and Rs. 80/8 for July shipment. New Crop Short Group Daisee was done at Rs. 87/- for Oct/Nov. with Long Group at Rs. 78/- for the same shipment, but there are no longer buyers at these rates. New Crop Dundee Tossa 4s sold at Rs. 83/- for December and a lucky day sale for Oct./Nov. shipment was recorded at Rs. 81/9/3. Transactions have only been for minimum quantities and the total business does not amount to a great deal. Mills are reported to have bought Old Crop Firsts at Rs. 81/- and combined business in Hearts and Cuttings was reported at Rs. 74/- for the former and Rs. 43/- and Rs. 42/- for the latter.

The uncertainty of the coal position has put somewhat of a damper on the Loose Jute market, potential buyers being unwilling to commit themselves to purchases which they may not be in a position to work up. European packing in New Crop was again done at full maximum rates but though more business was also reported in Supervised packing at four annas under maximum, it was only for carefully selected Jat marks, and sales were also recorded in Supervised on the basis of Rs. 16/8 Jat Middles and Rs. 16/- for District. Old Crop offerings are neglected and there are more sellers than buyers in evidence all round. Estimated arrivals of jute into Calcutta for the month of June are put at 5,26,000 bales against 5,74,000 in June last year. This would bring the total arrivals for the season ended 30th June to 54,74,000 bales against 66,60,000 in the previous season. The forecasted crop for the season just ended was 69¼ lakhs of bales so, ignoring carry-over, the necessary transport has fallen short by 15 lakhs of bales.

There is no new feature in the Fabrics market unless that mill sellers are perhaps less in evidence than ever. Plenty of buying orders at full rates but almost no takers.

JUTE

(By Our Staff Correspondent).

Calcutta, July 6.

THE raw jute market has been quietly steady with a small amount of business passing. The further deterioration in the coal position has been responsible for the smaller buying by mills. There is also a tendency to await the final forecast figures. The first two instalments of the preliminary forecast figures published during the week do not give any indication as to the size of the crop for the next season. The area shown under crop for 1944-45 is only the licensed acreage and not the actual area sown under jute. The Export market has been more active and shippers have reported a larger amount of business both in old and new crop. Mills have purchased a fair quantity of Firsts and Lightnings. Mofussil markets continue firm and there is no tendency on the part of holders to reduce prices. Owing to the difficulty in communications arrivals are smaller and most of the jute is wet.

In the loose jute section not much of business has been passing. Supervised Jat Middles and Bottoms, old crop, sold at Rs. 16-12 and Rs. 13-12 per maund while Northern Bottoms new crop changed hands at Rs. 13-12 per maund.

In the pucca bales section more business has been done for export. Old crop Dundee Daisee 2/3 was done at Rs. 77-8 per bale. Dundee Tossa 4's for July shipment sold at Rs. 88 per bale and Dundee Daisee 2/3 for August shipment at Rs. 77 per bale. Short Group Daisee sold earlier in the week at Rs. 87 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, July 6.

THE jute manufactures market continued active though business passing has been on a smaller scale. After the recent large business on U.S.A. account mills have not any surplus production left. There are not many sellers for positions this side of December. The further deterioration in the coal position has prevented any large business and quotations are nominally at maximum rates.

In the heavy goods section there are keen buyers for both near and forward deliveries at maximum rates, but sellers are very reserved and no business of importance has been reported.

Memo of total reported sales for the week ending Saturday, the 24th June, 1944.

GOLD

(From Our Correspondent)

Bombay, July 6.

THE bullion market has been firm in the the latter half of the period under review, the rise in gold prices being due to the strength of the silver market. The Reserve Bank has not resumed its sales of gold and it appears that there is no likelihood of fresh sales at an early date. The premium for ready over forward has thus increased. Local stocks are daily decreasing. Gold ready was at one time as much as Rs. 74-8 and forward Rs. 74-2. The quotations at the end of last week were Rs. 73-2 and Rs. 73 respectively. The close is slightly easier at Rs. 74-6 and Rs. 74 respectively. The undertone, however, is very steady.

SILVER

(From Our Correspondent)

Bombay, July 6.

IN the silver market there has been much bear covering and liquidation by prominent Bull Chokseys has been taken advantage of by Longs. The delay in sales by the Government out of the stocks of silver recently acquired from the U. S. Government has come as a great disappointment to bears. While it is realised by bulls that present prices cannot be maintained the market is so heavily oversold that unless the technical position gets adjusted there is no likelihood of any appreciable setback in values. The covering by bears, however, has led to a slight decrease in discount for forward over ready. Silver ready closed at Rs. 132-4 and forward at Rs. 128 against Rs. 129-8 and Rs. 126 respectively last week.

COTTON

(From Our Correspondent)

Bombay, July 6.

THE Bombay raw cotton market has been rather irregular during the past week. Firmer conditions were noticeable in the early days of the period under review on reports that weather conditions in cotton-growing tracts were favourable and that with larger buying by Government and mills in the ready market cotton prices should be higher. In midweek, however, it was reported that favourable showers had fallen in C.P. and Berar and there was heavy selling. There was again a rally on good buying by Government, but the close is easier with the suspension of buying by Government agents. Jharilla July closed at the lowest level at Rs. 404-3 and September at Rs. 423 against Rs. 407-12 and Rs. 427-12 at the time of last writing. The position in regard to futures trading in new crop is not quite clear and it is expected that various questions connected with this issue will come up for discussion at the meeting of the Committee of the East India Cotton Association next week.

PIECEGOODS

(By Our Staff Correspondent)

Calcutta, July 6.

THE piecegoods market has been uninteresting as the months of July, August and September are usually the slack period for trading in the Calcutta market. With the improvement in the stock position, however, there is a tendency on the part of consumers to purchase their requirements. Dealers are naturally anxious to dispose of their stocks as far as possible.

Its her whole EXISTENCE

Who is so wise as can fathem a woman's heart? Mysterious are its ways, curious its expression. Yet, whoever has had the great fortune of having been loved by a woman knows how prefectly her love engulfs a man's personality in unimaginable bliss—how it inspires him to heights he would never otherwise have achieved. Perfect as a woman's love in its action over the body and the mind is the ideal tonic—LADCOVINE.

Stock Markets to-day and to-morrow:

BOOM IN COAL SHARES

FRIDAY'S session on the Calcutta Stock Exchange has witnessed the peak of activity and the highest levels for the year have been touched. The start for the week was not quite impressive and there was a tendency to take profit at the higher levels. But after Wednesday there has been a one-sided movement in prices, the maintenance of dividends by the *Tata Iron and Steel Company Limited* for the year ended March, 1944 being an encouraging factor. It is interesting to note, however, that the Bombay market was disappointed as it was confidently expected that the distribution would be larger.

* * * *

The reason for the abrupt rise in prices, however, is to be traced to other factors. There has certainly been an improvement in the war situation, but this alone could not have brought about the rise in prices witnessed this week. The boom in prices started with the Coal section, as will be evident from the table given below, and then spread to the Jute and Engineering sections. Cotton and Sugar shares were inclined to be higher in sympathy.

* * * *

The rise in Coal shares is due to the reports that the Coal Control Board would help the industry get over its difficulties and enable it to effect a large increase in raisings. Bird Group shares, in particular, have been in request and large buying by prominent operators has been reported. Investors are looking forward to an increase in earnings such as that occurred in the years 1937 and 1938. There is scope for such an increase in earnings provided collieries could effect the necessary increase in raisings and that seems to be a long way ahead. Mechanisation will help matters but even here not much of progress seems to have been made. Present prices have discounted prospects far ahead and in my opinion the market is to a certain extent overbought. The improvement in prices for some shares, in particular, is dangerous and investors should think twice before entering into further commitments. The abrupt rise in prices will be evident from the table given below:—

	6.7.44	3.7.44	22.6.44
	Rs. A.	Rs. A.	Rs. A.
Amalgamated ..	51 2	50 12	48 12

* * * *

I am rather glad to note that *Indian Irons* have crossed Rs. 40 mark after a long time. The maintenance of dividends by the *Tata Iron and Steel Company Limited* should result in a further appreciation in prices for Indian Iron especially as the market is bare of scrips. The advance from Rs. 37-10 to Rs. 40-6 has been mainly due to bear covering. The Committee of the Stock Exchange has insisted that deliveries should be completed at an early date.

* * * *

The drop in prices for *Jessop* on the publication of the accounts does not seem to be justified though market expectations of a higher dividend have not been fulfilled. The directors point out in their report for the year ended October, 1943 that the Company was again fully engaged on government work and that net earnings were affected adversely by the large increase in expenses on account of higher costs of production and the food subsidies to labour. The item of "Establishment and General Expenses" is nearly double in 1942-43 in comparison with the previous year. The net profit, before providing for taxation and depreciation, is even higher at Rs. 19,94,970 against Rs. 19,68,885. The provision for taxation is Rs. 10 lakhs (Rs. 9.5 lakhs) while the amount set aside to depreciation is Rs. 2,42,219 (Rs. 2,29,276). The transfer to General Reserve is Re. 1 lakh (same). The final dividend of four annas per share, with the interim dividend of Re. 1 per share already paid, makes 12½ per cent (same) for the whole year. The amount carried forward is slightly lower at Rs. 3,33,442 against Rs. 3,68,291 brought in.

* * * *

As it can be expected that, with the introduction of rationing, the loss on food at subsidised rates will be smaller and as in the opinion of the directors themselves "the prospects for the coming year appear to be reasonably favourable" there is no reason why, on the basis of present market estimates, the shares should not be quoting above Rs. 30. The yield at the level of Rs. 26/8 cum-dividend is more than 4.75 per cent tax-free.

* * * *

A reduction in both the yield and the average sale price realised has been responsible for the sharp decline in earnings for the *Kingsley-Golaghat Assam Tea Company Limited*. The outturn of tea in the year ended December, 1943 was 12,273 maunds against 14,831 maunds and the average price realised thirteen annas and five pies per lb. against thirteen annas and nine pies per lb. The net profit, before providing for taxation and depreciation, is only Rs. 2,55,034 against 3,92,266. The dividend has been drastically reduced to 35 per cent from 75 per cent. The amount carried forward is Rs. 14,295 against Rs. 16,529 brought in.

* * * *

The grip of the banking habit has certainly tightened in recent years and some interesting details as to its nature and growth were given by Lala Yodhraj on the occasion of the opening of a branch of the Punjab National Bank at Nilgumabad—the 127th of that Bank. Banking expansion in wartime is reflected in the number of accounts opened, suggesting that hoarded wealth is readily diverted to banks. How bank deposits dam up surplus purchasing power and turn it into new loans deserves special notice, for inflation is checked and savings for future use accumulated at the same time. The need to keep up saving was stressed for several reasons. What is however more important is that the increase in the note issue had to some extent been sterilised. Lala Yodhraj pointed out that Scheduled Banks' total deposits are equal to 70 percent of the note issue and a higher proportion of the new money has gone in the last ten months into bank deposits. The process of development is expected to continue, but the velocity is another matter. Clearing house figures do not suggest that credit has expanded to any great extent, while Bank advances too have increased very moderately in the recent past. Lala Yodhraj hopes, and expects, that the

Bombay Investors and Indian Stock Exchanges:

TATA STEEL MAINTAINS DIVIDENDS

BOOM IN CALCUTTA COAL AND JUTE SHARES

(By ANALYST)

Bombay (By Wire).

Tata Steel, which were in the lime light last week, declined this week slightly to Rs. 2,257-8 and Rs. 420 respectively from a high of Rs. 2.295 and Rs. 427 touched on Monday morning on the directors of the company declaring same dividend as last year i.e. Rs. 129 per derferred share and Rs. 23 per ordinary share. The bazar operators seem to have turned bearish in view of the short position in Tata Steels. I do not expect any drastic decline in Steels and on a fall of about hundred rupees, I would suggest fresh buying of deferreds particularly since there are still chances of the conversion scheme going through.

* * *

There has been hectic activity in Birla and Walchand Motor shares. Birlas were done as high as Re. 1 premium and Walchands, after touching Rs. 5 premium, are quiet around Rs. 2-8. Birlas have declined to 12 annas premium. I have made it very clear to investors that every Indian should put the barest minimum in these shares in view of the fact that this key industry is being started under the auspices of two leading Indian houses. Speculators, who are buying and selling shares on account of the attraction of a premium, I am sure, would suffer in the long run.

* * *

As for Textiles there is nothing very special to report from Bombay. Closing quotations are, however, slightly better than the lowest touched last week. I think, if there would be a further rise on bear covering, investors should liquidate most of the Textile shares in Bombay except Dyeings, Azamjahis, Osmanshahis, Mysores and Minervas if they have not already done so.

* * *

While looking into Madras Textiles shares I found that *Mettur Industries* sharply declined from Rs. 305 to Rs. 260 on the publication of the balance sheet and declaration of a dividend of Rs. 12 as against Rs. 22 in the previous year. I, for my part, was not surprised and I am sure investors will now appreciate what I meant by cut in prospective dividends. Despite the lower dividend of Rs. 12 I like Mettur Industries for investment since I feel confident that the Company would be able to maintain this dividend for the coming few years. Investors have already shown their appreciation since the shares sharply improved from Rs. 260 to Rs. 281 at the close.

* * *

Boomlike activity in Calcutta scrips, particularly Jutes and Coals, continued this week. Howrahs have moved up. Of course, Jutes have excellent post-war prospects but I feel market is getting a little overbought. I would even book profits in Howrahs beyond Rs. 80 and similarly in the case of other shares also.

As for Coal shares, I positively feel that the market has gone on the high side. Considering to-day's prices there has been very heavy speculation in Coal shares. To take an example *South Karanpura*, which were around Rs. 17 a few days ago, were done up to 19/12 yesterday and to-day my broker friend tells me that South Karanpura are at 23-4. Mind you there is no dividend in the case of South Karanpuras. *West Jamuria* have improved to Rs. 64 and *Amalgamated* to 51/8 and *Burrakur* 41/12. I feel that if one books his profit now he will be able to replace his holdings definitely cheaper in a few months.

* * *

Investors in Cement shares were a little shy this week on reports that another cement company is being started. I mean the *India Cement & Asbestos Corporation Limited*. I for my part feel that the cement industry will have a boom time immediately after the war and there is ample scope for more companies. But for the coal difficulty, Associated Cements would have moved up further. I still recommend accumulation at the current price of Rs. 229 for substantial capital appreciation in the long run.

* * *

In the Plantation group, there has not been any special activity either in Bombay or in Madras and to be correct most of the popular shares have declined a few points this week. In the last two months Plantations have been marked down and something tells me that the market in Plantations has more or less touched the bottom. The present is an excellent opportunity for genuine investors to buy selected Tea, Rubber and Coffee shares. Sometime ago I had mentioned the attractiveness of Midland & Rajagiri preference shares issued to the existing shareholders. A small portion of the capital is now being offered to the public and already applications are pouring in due to heavy demand from individuals as well as institutional investors. The six per cent Travancore Tax-free preference shares of both these companies, who have paid regular dividends for the last four years, and the fifth year dividend is to be declared shortly, look exceedingly attractive for investors Since the majority of first class preference shares are standing on a 3½ per cent basis.

The giltedged market was steady with 3½ paper around 99/4. I expect Paper to touch par in a week or so.

(*Continued from previous page*)

popularity of banks with depositors would endure. As for the Punjab National, its own progress figures tell the whole story, and the assurance that deposits at present rise by Rs. 1 crore per month indicates that the oldest Indian bank of Northern India acts as the pace-maker in many respects.

* * *

A new rule published in the Gazette of India relating to the Post Office Twelve-Year National Savings Certificates provides that national savings certificates can at any time, after three years from date of purchase, be utilised for payment of government or state dues to an official of any province or state, the government of which authorises acceptance of the same for the purpose.

* * *

The Corporation of Calcutta, it is learnt, has served a notice on the Calcutta Tramways *Company Limited* expressing its intention to purchase the Tramways undertaking on January 1, 1945 by virtue of its agreement of December, 1899, with the Tramways Company.

Under this agreement both the Corporation of Calcutta and the Howrah Municipality have the right, to take over the property situated within their respective areas, on the 1st January, 1938, and on the 1st January of every subsequent period of seven years, the purchase price being fixed at 25 times the nett yearly earnings of the Company, based on the average for seven years immediately preceding the purchase. It is estimated on this basis the shares will have a break-up value of 85s. The important consideration, however, is the fact that when the company is changed into a rupee company the liability for taxation will be smaller and as now it will not be necessary to pay the entire excess profits to the Government. The Corporation for its part will have to find a capital of nearly Rs. 5 crores.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 7.

Boom conditions have been noticeable on the Calcutta Stock Exchange during the past three days and there has been a rise in prices for almost all the popular counters. Coal shares have provided the feature of the week with a sensational rise in prices for shares in the Bird group, Bokaro and Ramgur and others. There has been general buying. As there was an oversold position in some of the counters the rise in prices has been jumpy. The improvement in the Jute section has not been pronounced but select shares are substantially higher.

The strength of the Coal and Jute sections has not been without its influence on other sections. Cotton shares are firmer while in the Sugar section quotations are higher all round. Tea shares have been uninteresting though a few shares are firmer. In the Engineering section, after a long time Indian Irons and Steel Corporations have come into their own and closing quotation are at the highest levels for the week.

The improvement in the war situation had an encouraging influence but the rise in prices during the week is due to a great extent to the technical strength of the market. The developments during the next two weeks should be rather interesting.

The giltedged securities section has been featureless with the quotations fluctuating in narrow limits. Owing to the strength of other sections operators have not paid much attention. 3½ per cent. Paper is quoting Rs. 99-6 with 3 per cent. Paper at Rs. 90. Among terminable loans 3 per cent. 1946 were Rs. 101-15, 3 per cent 1951-54 Rs. 100-13 and 3 per cent. 1949-52 Rs. 100-15. 3½ per cent. 1947-50 changed hands at Rs. 103-2 and 5 per cent. 1945-55 at Rs. 104-12. Long-dated loans were better with 4 per cent. 1960-70 at Rs. 115. Among provincial loans, a small lot of Punjab 1952 loan was put through at Rs. 99-12.

There has been no business either in public bodies or industrial debentures. Among preference shares, *Steel Corporation* were higher at Rs. 137. *Bally* were Rs. 183, *Howrah* 'A' preference Rs. 182, and *Standard* Rs. 151. Business has been restricted on account of the activity in equities.

Bank shares have been a shade better with *Imperial Bank* fully paids at Rs. 2,000 and Contributories at Rs. 505. *Reserve Bank*, however, were slightly easier at Rs. 136. *United Commercial* were very steady at Rs. 30-4 premium and *Hind Bank* at Rs. 61-4. *Central Bank* were Rs. 71-12. *Bharat Bank* were rather quiet at Rs. 116.

Cotton shares have been firmer in sympathy with the Coal section. The strength of the Bombay market also was to a certain extent helpful. The rise in prices is pronounced for *Cawnpore Textiles* and *Bengal-Nagpur*, the former closing at Rs. 13-14 against the lowest level for the week of Rs .12-14 and the latter at Rs. 40-4 against Rs. 38-4. *Elgin* were two points higher at Rs. 67-8 while *New Victoria* were not very much changed at Rs. 8-10.

There has been a sudden flare-up in prices for Coal shares. The meeting of the Coal Control Board was held this week and the statement made by the Supply Member after the meeting seems to have had an encouraging effect on the market. It is felt that there will be a large increase in raisings at an early date and that coal companies would benefit to a great extent. There was heavy buying. As bears rushed to cover at the higher levels the upward movement gained momentum. Thus, *Amalgamated* have improved to Rs. 51-2 ex-dividend from Rs. 49-4 ex-dividend. *Bengal* were Rs. 675 against Rs. 647, and *Bhalgora* Rs. 18-10 against Rs. 17-4. There was a further jump in the quotation for *Bokaro and Ramgur* to Rs. 46-8 from Rs. 41-8 at the time of last writing. Some selling at the higher levels caused a recession to Rs. 44-12 but it is now again higher at Rs. 46-12. *Burrakur* have jumped to Rs. 42-6 from Rs. 37-8 and are now quoting only slightly lower at Rs. 41-14. The Bird group of shares has been very active. *Borrea* being Rs. 38-12 against Rs. 36-12. There has been a sudden rise in *South Karanpura* to Rs. 25-8 from Rs. 19-12 and *Standard* to Rs. 43-12 from Rs. 36-12. *Dhemo Main* were Rs. 30-12 against Rs. 27-4, *Equitable* Rs. 68-10 against Rs. 62-10 and *New Beerbhoom* Rs. 44-8 against Rs. 37-10. The purely speculative counters have not been in the picture. *Bansra* were Rs. 15-7, *Jainty Central* Rs. 9-2 and *Samla* Rs. 9-10.

In the Jute section, *Howrah* have improved by two points to Rs. 79-8. The possibility of larger coal supplies to the jute mills improves the prospects for the industry. It would not be justifiable, however, to entertain any extravagant hopes in the absence of any actual increase in coal supplies. *Anglo-India* are unchanged at Rs. 471 and *Barnagore* at Rs. 238 cum-dividend. *Chitavalsah* were rather quiet at Rs. 36-12 while *National* were steady at Rs. 35-4. There has been a good rise in *Megna* to Rs. 120 from Rs. 104. *India* also have improved to Rs. 677 from Rs. 640. *Nuddea* were Rs. 140 and *Reliance* Rs. 68-8. *Presidency* are in good request at Rs. 12-2. *Rameshwara* have been rather quiet at Rs. 23-12.

In the Engineering section, both Indian Irons and Steel Corporations have been very active. In to-day's session a quotation as high as Rs. 40-12 was touched. The price earlier in the week was only Rs. 37-12. *Steel Corporation* are suddenly higher at Rs. 31-8 against Rs. 29-8. The rise in prices in the last two days has been mainly due to bear covering. *Bhartia Electric Steel* were very firm at Rs. 22-10 and *Burn & Co*, at Rs. 425. *Jessop* have receded to Rs. 26-12 on the publication of the report. The dividend has been only maintained at the level of last year at Rs. 1-4 per share. *Kumardhubi Engineering* are rather quiet at Rs. 12-12. *Marshalls* were Rs. 5-15 and *United Iron* Rs. 12-4.

Sugar shares were better with *Belsund* at Rs. 16-4 and *Darbhanga* at Rs. 45-2. *Balrampore* were eight annas higher at Rs. 20-2. *Carew* were Rs. 30-4.

Business in the Tea section has been restricted but there has been enquiry for some of the popular shares. *Bishnauth* were Rs. 41-4, *Tezpore* Rs. 19-12 and *Teen Ali* Rs. 23-12.

In the Miscellaneous section *Burma Corporation* were Rs. 4-10 and *Indian Copper Corporation* Rs. 3-1. B. I. Corporation have been surprisingly enough quiet at Rs. 6-10 with not many buyers. *Bararee Coke* have risen by two points to Rs. 35-4. *British Ceylon Corporation* were Rs. 22-8 and *Britannia Biscuit* Rs. 23-2. *Calcutta Tram* were lower at Rs. 37-12 but there has been a recovery to Rs. 39. *Rohtas Industries* have jumped to Rs. 41-8 from Rs. 35-12. *Dalmia Cement* were one point higher at Rs. 20-8 while *Assam Bengal Cement* have been easier at Rs. 19-14. *Paper shares* were firmer with *Titaghur* A and B ordinary shares at Rs. 29-10, *India Paper Pulp* at Rs. 229 and *Orient Paper* at Rs. 32-5. *Midnapore Zemindary* were firm at Rs. 175. *Calcutta Landing and Shipping* have risen by over six points to Rs. 39-6 while *I. G. N.* were well held at Rs. 180. *Karanpura Development* were very strong at Rs. 40.

(Annual General Meeting held on 28th June, 1944)

Audited Accounts for year ended 31st March, 1944:—

After allowing Rs. 28,637-1-0 for Depreciation, the Accounts show a loss of Rs. 34,230-1-3 on the year's working, from which must be deducted the sum of Rs. 22,283-9-3, being the balance brought forward from the previous year, namely, Rs. 12,318-0-3 and the amount written back from Reserve for Taxation no longer required Rs. 9,965-9-0. This leaves a debit balance of Rs. 11,946-8-0 to be carried forward.

At the commencement of the financial year difficulties arose owing to increase in the price of foodstuffs. It was necessary for the Company to make arrangements to supply foodstuffs to the Company's employees and to make an allowance to them for the extra cost of necessities other than food. The price of food began to rise until it reached unprecedented heights and although the Directors made every endeavour to offset the losses, contracts which had already been entered into had to be completed.

At the end of the first half of the financial year the Company was in the position that it had managed to offset these losses to a great extent and had the conditions prevailing continued a loss would have been avoided.

However, the Company was to meet with further troubles. Owing to the washout on the East Indian Railway there were serious difficulties in obtaining the necessary raw materials to keep the factory working. In spite of the ready help and assistance of the Department of the Director-General, Munitions Production, the greatest difficulty was experienced in obtaining supplies of materials, such as coal, furnace sand and pig-iron, and instead of being able to continue manufacturing at full production the factory was working under such conditions that it was not known on any day whether supplies would arrive in time to work the next. This had a very serious effect on both output and labour. This state of affairs continued until the works had to be shut down entirely for a short period as there were no raw materials. In the last six months of the year under review the average output has been two-thirds of normal production. This, together with the serious loss that the Company has had to face in providing subsidized food for its labour, is the cause of the present financial showing of the Company.

The Directors are pleased to say, however, that conditions have now improved and with supplies of materials being more readily obtained the future may be faced with renewed confidence.

Managing Agents.—Messrs. A. B. C. Coupler & Engineering Co., (India) Ltd.

Dividend % Ordy. ..	12½	12½	12½	12½

Audited Accounts for the year ended 31st March, 1944:—

After allowing for Depreciation, providing for Income Tax and Corporation Tax and paying a 5 per cent. interim dividend, there is a sum of Rs. 87,892-1-2 as the balance of Profit and Loss Account to which must be added Rs. 11,386-9-5 (brought forward), making a total of Rs. 99,279-10-7 which the Directors recommend be allocated as follows:—(1) Payment of a final dividend of 7½ per cent. on the issued capital of the Company—Rs. 62,097-12-0. (2) General Reserve—Rs. 25,000-0-0 and (3) Carried forward—Rs. 12,181-14-7.

It will be seen from the Accounts that the Trading Profit of the Company during the year under review is considerably less than the previous twelve months.

The Directors anticipated a reduction in profits, as to meet the Government of India's policy, orders were accepted on a smaller profit margin than had been the Company's normal practice, but in addition to this the food situation in Bengal was such that it was essential that food should be provided at reasonable prices for the labour force and a considerable loss was made on this account.

Although the Management made every effort to assist the labour in the very bad times they were passing through, labour troubles occurred, with the consequence that production was reduced and these labour troubles finally culminated in a strike when the Company's works were closed for over three weeks.

Audited Accounts for the year ended 31st December, 1943:—

The result of the season's working, after deducting the Manager's and Staff's commissions, is a profit of Rs. 62,212-11-7. This with the adjustment of the accounts for the previous year and provision for taxation and the contribution to the Retiring Allowance Fund, brings the amount at credit of Profit & Loss Account to Rs. 62,099-4-6 which it is proposed to allocate as follows: To payment of a Dividend of 10% Rs. 37,590-0-0. Improvement Fund Rs. 10,000-0-0 and Carry forward Rs. 14,509-4-6.

The acute shortage and the unprecedented price levels of all essential food grains caused grave anxiety throughout the year and the greatest difficulty was experienced in keeping the labour force adequately nourished. The Company was, in fact, compelled to purchase large quantities of rice from whatever sources that were available and weekly issues were made to the Labour at concession rates. Free issues of cloth to the value of about Rs. 500 were also made at the time of the Pujahs.

These vitally necessary concessions cost the Company Rs. 1,04,490-7-9, the equivalent of 3.3 as per lb. of crop and they are, of course, the main reason for the large decrease in profits.

The cost of essential stores, tea boxes and medicines also increased considerably during the year and, as a result, the all-in cost of production amounted to 12.38 as. per lb. as compared with 8.90 as. per lb. in 1942.

The Ministry of Food have agreed to raise the allowance for increased cost of production to 6d. per lb. under the 1944 Contract but, as it continues to be necessary for the Company to provide the labuor with their full rice requirements at concession rates, it remains to be seen whether this increased allowance will prove to be adequate.

Estimate.—The estimate for the current season provides for a crop of 6,900 mds. at a cost of 19.86 as. per lb. (exclusive of commission to the Manager).

Managing Agents.—Messrs. Kilburn & Co.

(Annual General Meeting held on 26th June 1944)

Audited Accounts for the year ended 31st December, 1943: —

The balance available for appropriation after the inclusion of the amount brought forward from the previous year is Rs. 1,22,694-11-6. From this is to be deducted the payment of the Dividend on the Preference Shares at 6% for the year, free of Income Tax, absorbing Rs. 14,400-0-0, leaving a balance of Rs. 1,08,294-11-6 out of which it is proposed to place to General Reserve Rs. 10,000-0-0 and recommend the payment of a Dividend on the Ordinary Shares of 35% for the year, free of Income Tax, absorbing Rs. 84,000-0-0 and leaving to be carried forward Rs. 14,294-11-6.

Estimates for Season 1944.—These allow for a crop of 13,500 maunds at a total cost on Revenue Account of Rs. 7,72,052.

Managing Agents.—Messrs. Shaw Wallace & Co.

Dividend % Ordy. ..	5	10	7½	5

Audited Accounts for the year ended 31st December, 1943. —

The balance available for appropriation after the inclusion of the amount brought forward from the previous year is Rs. 21,383-6-5 out of which it is proposed to place to General Reserve Rs. 5,000-0-0 and recommend the payment of a Dividend of 5% for the year, free of Incom Tax Rs. 16,000-0-0 and leaving to be carried forward Rs. 10,868-6-5.

This Company entered fully into the Contracts for the supply of Tea during 1943 to the Ministry of Food. The average price obtained for the Internal Teas was lower in 1943 than in 1942, but the proportion of the crop disposed of to the Ministry of Food at Contract Price was greater in 1942, than in 1943. The resultant average prices for the two years are therefore practically the same.

Estimate for Season 1944.—This is based on a crop of 4,200 maunds at a total Revenue Expenditure of Rs. 2,26,550.

Managing Agents.—Messrs. Shaw Wallace & Co.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There has been no change in the conditions in the money market and call money is quoting ½ percent in Calcutta and ¾ percent in Bombay. The large tax payments in recent weeks have not had any upsetting influence on the money market. Rather with the restricted scope for speculative activity in several markets and the reduction in the business turnover, there has been a sharp increase in the total of demand and time liabilities of scheduled banks. It is not surprising, therefore, that the Central Government has been able to get its requirements of treasury bills without any difficulty even when maturing bills were considerably below sales. Bidding, however, has not been so keen as one would have expected and the reduction in the average discount rate is only nominal, the latest figure being 7 annas 8 pies percent per annum against 7 annas 9 pies percent last week. The total amount of applications was higher at Rs. 8.44 crores against Rs. 7.42 crores. The offer for the next week has been maintained at Rs. 4 crores.

The return of the Reserve Bank for the week ended July 7, 1944 shows that there has been no expansion of currency, total notes issued being Rs. 943.22 crores against Rs. 943.4 crores. Notes in circulation were slightly higher at Rs. 931.93 crores against Rs. 931.37 crores. There is a further decline in the amount of rupee coin to Rs. 12.64 crores. There is no change either in sterling or rupee securities.

In the banking department Central Government balances are sharply lower at Rs. 57.84 crores against Rs. 65.25 crores due to month-early disbursements. Other Government accounts have increased by Rs. 11 lakhs to Rs. 16.9 crores. Banks deposits are a little more than Rs. 4 crores higher at Rs. 98.43 crores. Foreign balances have improved by only Rs. 72 lakhs to Rs. 174.46 crores.

The returns of the Reserve Bank for the week ended July 7, 1944 shows a further increase in total deposits to Rs. 228.49 crores from Rs. 226.92 crores. Almost the whole of the increase in deposits has found its way in investments in Government securities, the total investment portfolio being Rs. 128.44 crores against Rs. 126.51 crores. Advances were only slightly higher at Rs. 64.08 crores against Rs. 63.89 crores. Even with the increase in investments and advances, cash balances are higher at Rs. 47.44 crores against Rs. 46.06 crores. This is due to the reduction in the item "Sundries" from Rs. 3.28 crores to Rs. 1.44 crores.

The statement of the scheduled banks for the week ended June 30, 1944 is very interesting. After the lapse of many weeks there has been a rather sharp increase in demand liabilities and the figure at Rs. 565.12 crores is the highest touched so far this year. This represents an increase of Rs. 10.49 crores over the previous week's total. Time liabilities were Rs. 1.36 crores higher at Rs. 182.32 crores. This large increase in deposits even with the heavy tax payments perhaps provides an indication that speculative activity in the stock markets is mainly on account of people who have hidden money. The increase in time liabilities might be due to genuine investors who are dissatisfied with the present yields on stock exchange securities and who are afraid to enter the market at the present moment. Cash balances are naturally higher at Rs. 30.73 crores against Rs. 26.22 crores. Balances with the Reserve Bank were Rs. 95.98 crores against Rs. 93.78 crores. Advances were Rs. 2.8 crores lower at Rs. 211.47 crores. Bills discounted showed a decline of Rs. 31 lakhs to Rs. 8.53 crores. Considering the fact that there has been an addition to bank deposits by Rs. 11.8 crores and advances have decreased by Rs. 2.8 crores the increase in total cash balances by Rs. 6.7 crores is rather small. As much as Rs. 7 crores must have found its way in Government securities.

The results of four important banks for the first half-year of 1944 have been published. Needless to say, there is an increase in the earnings of all the four banks due to the higher level of deposits. The figures of Bank of India, in particular, make very good showing, the net profit, before providing for taxation, being Rs. 35.83 lakhs against Rs. 20.93 lakhs for the corresponding period for 1943. The Central Bank has earned a profit of Rs. 36.54 lakhs in the first six months of this year against Rs. 30.93 lakhs in the corresponding period of 1943 and the Bank of Baroda Rs. 11.35 lakhs and Rs. 8.89 lakhs respectively. The Imperial Bank has been able to report only a nominal increase in earnings from Rs. 45.25 lakhs to Rs. 46.02 lakhs, presumably due to the very low yield on treasury bills.

The dividends have been maintained in all cases but it should be remembered that with the exception of the Imperial Bank, the dividends are payable on a capital increased by the recent issues of shares to shareholders on bonus terms.

Exchange market has been steady but rates are unchanged.

TREASURY BILLS

Central Govt.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, July 11, 1944. Total amount offered was Rs. 8,44,25,000. Tenders at Rs. 99-14-3% were accepted in full and those at Rs. 99-14-0& were allotted approximately 39%. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Rs. 0-7-8% per annum.

Tenders for Rs. 4,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, July 18, 1944 in Bombay up to 11 a.m. (standard time) and up to the close of business on Monday, July 17, 1944, at other centres. Successful tenderers should make payment on Friday, July 21, 1944. Other conditions are as usual.

During the week ended July 7, 1944, Government of India Treasury Bills for Rs. 7,85,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Evening.

Mr. Roosevelt's announcement that he is ready to serve a Fourth Term as President and C.-in-C. is obviously a development of great interest to Wall Street which has been active again, with prices moving up since Mr. Dewey's candidature was interpreted favourably. The U.S. electorate is not called upon to remember Lincoln's warning against changing horses in midstream because the question of Mr. Roosevelt's candidacy this year is primarily a matter for the Democratic party which has witnessed the pendulum swing towards the Right for nearly a year. But this year's budget has been considered and the increase in debt and revenue are not of great importance as compared with the immediate problems of the transition. Reference has been lately made to the differences between Mr. Wilson and the Services in regard to the release of men and materials for civilian production. The speed-up of civilian production in order to meet the inflation peril is accepted as desirable, which is one reason for the rise in peace stocks on Wall Street for over a month.

The further rise in federal debt will probably require Congressional action this year but that is a small matter as civil non-essential consumption has fallen to produce an increase in private savings. Senatorial opinion as to Administration's plans has undergone little change as the declaration that the monetary fund scheme of Mr. Morgenthau is not relished by Congress has come from Sen. R. A. Taft this week. Senator Wagner of New York is said to have commended at Bretton Woods both parts of the plan but that will not weigh with Republicans. The claim for development loans made by the Mexican representative on behalf of economically backward countries may suit the Administration but not its critics who think that U.S. expenditure in cultivating Latin American goodwill has been prodigal.

The initial failure of the Indian delegation in making out a case for special treatment of sterling balances has not been affected by the views advanced by the Egyptian delegate as to the speedy liquidation of the new creditors' claims. While British oversea investments have been halved by the war as generally believed, they are probably more than equal to the new debt and the income obtained would be more than enough to supplement yearly instalments payable by agreement. Direct negotiation between the Governments concerned is indicated but Mr. Shinwell's question as to by whose leave the Indian experts raised the question has not been so far answered. A formal rebuke by Parliamentary resolution might not come since bigger things have to be negotiated fairly soon. There must be a quick decision at a political level which makes further statements as to India's sterling assets irrelevant. A national government, promised independence by treaty, would deal probably with the subject in a new fashion. Full control of civil administration implies control of finance and to-day there is no external debt problem to consider while foreign capital in India would probably advance no claims for itself.

A small drop in oil shares in London is offset by improvement in rubber shares this week. Though Rubber Trust passed the ordinary dividend again the shares have risen smartly and steadily after the annual meeting. The feature among Home Industrials has been Lever Bros. and Unilever ordinary as hope of recovery of European assets must be strong after the success of landings in France. Though the annual dividend is stabilised at 8 per cent. Imperial Chemicals ordinary has been held at Rs. 40-3. The statement at the meeting last month should evoke special interest in view of Lord McGowan's outline at Glasgow of I.C.I.'s own war effort of years.

A feature of great interest to Indian markets is the late jump in Indian Iron's quotation. Heavy Industries in London are less active than expected but Indian Irons special advantages since 1936-37 are remembered for it is perhaps the only stock to quote below the pre-war level. There has been renewed recommendation of Indian gold minings after the return of Ooregum Ordy. to the dividend list though the local premium on gold is duly absorbed by the Mysore excise duty. The rise in U.S. Steel by over 20 per cent in value in a month might suggest that steel shares in Indian markets have strengthened rather late and very moderately too. A curious difference between Cable and Wireless ordy. and A.T.T. and Western Union which have risen steadily for over a month may be here noted. Though traffic may be better year by year the British holding Co.'s stock cannot pay more than 4 per cent while the changes of war would favour both the main and subsidiary enterprises of the American companies. Since Indian investors are forbidden to invest in dollar shares much that could be said about U.S. market events would appear irrelevant. But a mining share in London which commanded some attention in India requires mention. San Francisco mines paid 30 per cent. as dividend for the last year which was full of records of many kinds. Unlike Rhodesian mines affected by a recent strike the only problem is local politics settled by the events of May 1942.

Future of Commodity Markets

SPECIAL FOR "INDIAN FINANCE"

London, July 12.

The big commodity markets of London and Liverpool are holding numerous conferences to determine their next steps in view of Government's recent hint that it will continue the policy of bulk purchases and sales of various commodities after the war. Unless they can devise some method whereby their members would be linked up with the Ministry of Food and the Ministry of Supply they fear a further period of costly idleness with the possibility of a new type of economy more or less perpetual which may mean their ultimate extinction.

Thirty-eight of these markets are now organised in a defensive Federation which has recently put forth propaganda designed to convince the authorities that they perform a useful function at a small cost to the business community. They have recently estimated that their members had a total turnover of £400 million during each of the years 1937 and 1938. Some markets like wheat and cotton are over 100 years old with international futures markets at least 50 years old.

Thus far the Government has appeared unimpressed. Mr. Oliver Lyttelton speaking recently about Government's wartime bulk purchases of copper said the Government had saved £35 million over what it would have been obliged to pay if the price had been fixed by the U.S. and Chilean copper-producers. It seems probable that there have been similar huge savings on other raw materials.

Steel from Britain for U.S.A.

The announcement in New York that the United States will draw 10,000 tons of steel from Britain every month in order to meet current shortages is a feather in the cap of the British iron and steel combine which has been under fire from time to time on the ground that it curtailed and kept curtailed British iron and steel capacity despite the country's urgent wartime needs. Except for the production of certain alloy steels which moves sharply upwards it appears true that the combine has rigidly held Britain's output of ingot steel around the pre-war level of 14 million tons. The capacity for long was believed to be about 14.7 million tons. The criticism has arisen from others noticing the contrast between the rigidity of British output and the way United States steel output soared from 28 million tons in 1938 to 80 million tons. Britain has been forced to import heavily from the United States but the fact that the tide is now reversed and Britain is able to meet her own domestic demands and export 10,000 tons monthly to the United States will tend to allay criticism.

The flying bomb has been a nuisance to the stock exchange for it has compelled members frequently to adjourn to adjoining streets for transaction of business. The exchange has a rigid rule that the floor must be vacated as soon as the warning siren sounds. This has reduced substantially the amount of bargains marked, though actual business including street dealings has been substantial, indeed of boomlike proportions. Home Industrials continue very strong; but there are complaints that buying is becoming somewhat indiscriminate.

To accommodate ourselves in the growing needs of the banking and business world, and to develop our services and facilities apace with all modern cmmercial evolution is our constant aim and endeavour.

The Feast of Shiraz

SHEIKH SAADI OF SHIRAZ, the celebrated poet of Iran, once visited a rich merchant in another town, where he was lavishly entertained. After meals, he frequently sighed and said "Ah, Dawat-e-Shiraz" (Ah, the feast of Shiraz). The merchant, scenting dissatisfaction, redoubled his efforts to provide fare worthy of his distinguished guest. But always after a meal it was the same "Ah, Dawat-e-Shiraz," and after three days the poet left. Later the merchant visited Shiraz and he determined to call on the poet and find out what made the feast of Shiraz so much better than his own fare. He was surprised, and even angry, when he received a modest meal. "This is but simple fare and costs so little that you may stay, if you like, for a year," said the poet. This, he explained, was true hospitality—embarrassing neither to the host nor to the guest. We, too, can prove ourselves good hosts by giving our guests simple food. We can make every meal "The Feast of Shiraz." Food is in short supply and it is the poor who suffer most. Now, more than ever, is the time to follow the advice of the wise poet of Iran.

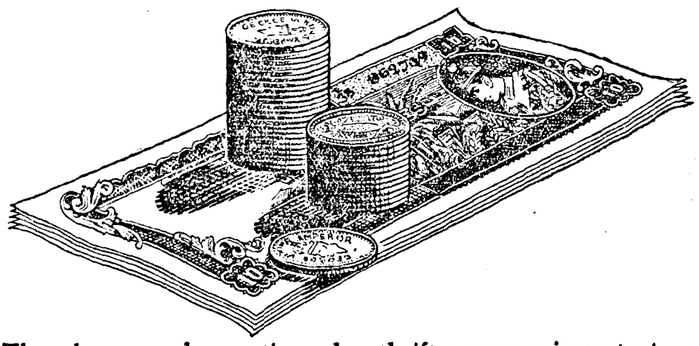
Editorial Comments

Sterling Balances & International Fund

The Brettonwoods Conference has dealt a series of disappointments to the Indian Delegation. The U. S. A., Britain and France combined to throw out the Indian proposal that the settlement of war balances should be brought within the scope of the International Monetary Fund. The other amendment, which was intended to enable the undeveloped countries to obtain capital goods from the U. S. A. and Britain, was also rejected. Strictly speaking, the action of the great powers in this regard is no disappointment. Statutes of international organisations are invariably drawn up with an eye to the interests of the great powers. Even an apparently humanitarian organisation like the U. N. R. R. A. was formed under rules which precluded the provision of famine relief in India. And in the case of postwar regulation of international finance, the British experts lost no time in persuading the American wing to go back upon its original proposal of bringing abnormal war balances within the orbit of the proposed international organisation. A position was thus created in advance of the meeting at Brettonwoods, in which Mr. Amery could express surprise that the question of India's war balances was at all raised at the Conference. In the case of the U. N. R. R. A., the position taken at first by the American executive, that the rules did not permit the provision of relief for the Bengal famine, was to some extent modified subsequently. No similar modification is in prospect in this case. Egypt, which is placed in a position similar to India's, also attempted to incorporate in the international Monetary Fund machinery for releasing blocked sterling balances and failed. The other amendment referring to help in obtaining capital goods is one that must benefit China and many other countries in Asia; but the British and American delegations persist in their narrow view of the scope of the proposed Fund. And Mr. Harry White's statement that the conference had dispelled certain impressions that the Fund would be unduly generous with the money of its members adds insult where the injury was humiliating, not less than harmful.

The Indian Delegation, a later report informs us, has abandoned its intention of leaving the Conference after such rebuffs and proposes to continue to participate in the deliberations. The reasons are not clear either for the original idea or for its subsequent abandonment. As mentioned already, it was unduly optimistic to expect that the British and the American delegations could be persuaded to agree to the inclusion of war balances in the scope of the Fund. India had, therefore, to make up one of two positions, either that India has no interest in international financial regulation apart from the settlement of her sterling balances and therefore cannot participate in the scheme, if no help is forthcoming in this regard, or that India has something to gain from the Fund as it was and is still being projected and that help for the liquidation of her foreign assets, though welcome and greatly prized, is not vital to the question of India's participation in the scheme.

The alternatives are, perhaps, too clear-cut to square with the facts of the position. India's attitude to the International Monetary Fund is not, after all, so easily defined. When the proposals were first published, the general trend of opinion in this country was that the primary problems of postwar finance, so far as they concern India are the liquidity and convertibility of her foreign balances and the availability of capital goods for postwar economic development. It was realised that the external value of the rupee or the settlement of India's current balances would not set up problems requiring foreign help for their solution. The General Policy Committee which met last in Bombay urged that a settlement with Britain about our sterling balances should precede, and not follow, India's participation in the International Monetary Conference. In the light of this, one would expect the Indian Delegation to withdraw from the Conference as soon as it became clear that the Conference would not consider these proposals.



But it is necessary to realise that though India may have no specific problems apart from her sterling balances for which she need seek the help of an international financial organisation, it does not follow from this that there is no advantage to be derived from participating in it. In any case, there is bound to be a considerable negative advantage. There is every reason to think that in the postwar period, international organisations of various kinds will be set up which will touch national economic policies at as many points as national governments are now touching private business. Non-cooperation with the International Fund is not a happy beginning for the international contacts which India will have to develop in the postwar period. An International Bank is in contemplation. Other international agencies, for developmental purposes, are bound to follow. If the Indian delegation continues to attend the conference, it need not be regarded as regrettable. What matters is in the first place, whether the problem of sterling balances has been rendered more difficult by the happenings in America and secondly, whether, apart from this particular question, the attitude of the other delegations to India is heartening.

As regards the question of the sterling balances, it is necessary that we should not overlook, in the heat of the present controversy, the really knotty part of the problem. We have also to be clear in our minds as to the kind of help that we expected from the International Fund and that has now been denied to us. The whole idea of a relation between the Fund and our sterling balances started with the incorporation in the White Plan of a set of proposals regarding what were called abnormal war balances. The period stipulated therein for the settlement of such balances was so unconscionably long that there was widespread fear that the International Fund might be used to our detriment, so far as our foreign balances are concerned That stage did not persist for long, partly because it was believed both in Britain and India that the facilities for borrowing, which the proposals for the International Fund promised for the members, would enable Britain to pay off her debts in annual instalments. The statement of the acting Finance Member did lend colour to that view and some of the comments in the London Press encouraged such an expectation. It is in this regard that we have had a disappointment. But, whatever the attitude of the International Fund, our sterling loans have to be realised from the British, and not from any international agency. We may resent foreign delegations saying that war balances are a matter to be settled directly by the countries concerned. But that is, indeed, the truth of it. If Britain will agree to the settlement of these balances on some definite basis, she will, doubtless, be equal to finding the ways and means of meeting the commitments. The position taken up by the American delegation is on the whole reasonable since the advisability of attempting a settlement of war balances through the Fund is at best doubtful. As for Mr. Andre Istel, the Frenchman was perhaps facetious when he cited the balances of occupied France in Germany as analagous to India's sterling balances in Britain. Britain must resent the innuendo.

The fate of the Indian amendment need not cause undue bitterness or depression. It has served its purpose of ventillating India's position. It is regrettable that the press report of Lord Keynes' speech is meagre and even disconnected. But it is clear Lord Keynes not only gave assurance of an honourable settlement between those directly concerned, but also emphasised that the Fund "might improve indirectly England's ability to meet her obligations." It is reasonable to presume from this that, once a settlement is arrived at between India and Britain, the Fund may be trusted, when the time comes, to

FRIEND OR FOE ?

There has never been a time when thrift was more important, more vital to India's future. During these war days there is a surplus of purchasing power in the country, and by "purchasing power" we mean money, cash, rupees. Thrift can make this surplus a blessed friend—for you and for the nation. Careless spending can turn it into the deadliest of foes—inflation.

There is a shortage of goods in wartime India and unless the demand for them is reduced the prices remain high. Control measures have checked the upward trend of prices, but in this fight against inflation we need all the help *you* can give.

Invest wisely: Do not invest in jewels, land, buildings, manufactured goods or commodities. Today's best and safest investments are Insurance, Co-operative Societies, a Savings Bank Account or the Post-Office Savings Bank. Best of all invest in Government Loans or National Savings Certificates.

Every time you go into a shop ask yourself this question. "Do I really need it?" By self-denial now you help keep prices down and the value of money up. And you save money too.

SAVE
ALL YOU CAN
AND INVEST
ALL YOU SAVE

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

give all reasonable facilities to Britain to meet her commitments.

What the Brettonwoods conference does or does not today is a matter of little importance compared to the spirit of international cooperation which will prevail in the future. If the postwar world is to avoid the usual aftermath of a terrible world war and to ward off the danger of another after a few years, co-operation among the nations has to be raised to a higher level of mutual sympathy and helpfulness. The Brettonwoods conference has not done well, by this test. While it is understandable that it should concentrate on the more direct purposes of the International Fund, it has given evidence of a degree of indifference to the interests of undeveloped nations, which is a highly disheartening start for the many tasks which have to be accomplished through international cooperation. There was nothing to prevent the conference from recording its appreciation of the importance of the questions raised by Indian delegation. If the main purpose of the Conference is the expansion of world trade and the maintenance of high levels of employment, then, surely, the smooth repatriation of our sterling balances and the facilitation of capital goods exports to undeveloped countries can hardly be said to be foreign to the purposes of the fund. Sir Shanmukham Chetty rightly pointed out that the Conference has not shown sufficient width of outlook. It is to be hoped that by the time other international conference come together, there will be better understanding of the scope and nature of international cooperation. Much will depend on India being able to figure in such conference as an independent or virtually independent nation, though it is only fair to note that this time the Indian delegation has exercised a large measure of freedom of thought and of expression. The lesson of the Brettonwoods Conference is that India can lose no time in arriving at an understanding with Britain about her sterling balances. The recent change in the political outlook, if it leads to the inauguration of a genuine national Government, will enable India not only to get justice for herself but also to pull her weight in the cause of a just and stable world order.

INSURANCE PROGRESS AND PROBLEMS

The observations of the Superintendent of Insurance on the state of insurance business in India in 1942 will certainly not be overlooked even by those who think that progress has relegated problems to the background. Of the problems such as the falling rate of interest on the funds many are fully aware. The average yield on funds obtained by Indian life offices has fallen from 5.15 per cent in 1939 to 3.94 per cent in 1942. This is a problem inseparable from the higher proportion of investments in approved securities. Out of the total assets of Indian insurers namely Rs. 96.73 crores about Rs. 62 crores at the end of 1942 were invested in approved securities. The total for stock exchange securities was nearly Rs. 69 crores. but the falling yield is clearly a warning of sorts. The adequacy of premiums therefore receives special attention in the official survey. If mortality experience is wholly favourable the expense ratio is not going down appreciably. The action resorted to by one company lately to revise its premium rates receives its justification from the remarks in the Indian Insurance Year Book.

Low rates of interest are universally stabilised by the war. The higher rates of taxation reduce the net yield. In the opinion of the Superintendent of Insurance a rate of 9½ per cent for the calculation of premiums would be hard to justify. It is urged that premiums payable must be raised wherever it is necessary. This warning receives support from the steady drop in the net rate of interest earned by India life offices in the past five years.

1938	...	...	...	...	5.15 per cent
1939	...	...	...	...	4.68 ,,
1940	...	...	...	...	4.37 ,,
1941	...	...	...	...	4.17 ,,
1942	...	...	...	...	3.94 ,,

The causes listed include taxation, but special relief such as has been asked for may not be forthcoming. The fixation of an upper limit to income-tax and super tax does not promise any improvement at all as the supply of funds is having its own effect on the rate of interest. Three special factors including the relative size of premiums are stressed in the review of pitfalls. The expense ratio has been falling for years but except for half a dozen leading offices, with the largest premium income, the position, in the opinion of the Superintendent of Insurance, is not reassuring though the average has dropped from 41.1 per cent in 1938 to 31.3 per cent in 1942 (the average for expenses of all Indian offices in 1942 was 26.7 per cent of the premium income). The third point is fairly high proportion of lapses. It is recommended that in view of the striking disparity in the lapse ratio as between old offices and young offices (average of three years was 29.16 per cent in the case of the former and 53.93 per cent in the case of the latter) attention should be paid more to the quality of new business as also to the question of retaining existing business at the same time as getting new business. The directly comparable figures for non-Indian offices are lacking, but the warning is reinforced by reference to the difference in the matter of expenses between the valuation assumption and the actual experience. The caution given as regards expenses and rate of interest extends also to the valuations. But the more important warning scarcely applies to existing companies whose progress is best measured by the increase in new business from Rs. 24 crores in 1933 to Rs. 36.5 crores in 1942. Indian offices also acquired a larger share of business offering since the total new business of non-Indian offices declined from Rs. 9 crores in 1933 to Rs. 6.4 crores in 1942.

The recovery in insurance business generally during 1942 when new business rose from Rs. 34.1 crores to Rs. 36.6 crores furnished additional proof as to the vitality of Indian insurance which has been more conspicuously in evidence. to judge by the company reports for 1943. Yet all the auspicious indications as to Indian life offices' business in 1942 in India (169.000 policies. Revenue Rs. 1.91 crores) do not detract from the issue of a warning as to new flotations. It is recalled that 15 years ago the Government Actuary pointed out that many insurance companies could pay no dividends for lengthy periods. Though the rate of increase from 1933 in respect of new business is steady the rate is not high enough to warrant the large number of flotations. The majority of companies doing business at present do not pay dividends on their shares. This fact is easily ascertainable from Pp. 84-115 of the Isurance Year Book. Slow growth and expansion is definitely preferred. There is. however. the consideration that Indian insurers engaged in general insurance obtained in 1942 as premium of Rs. 206 lakhs only as against Rs. 532 lakhs secured by non-Indian Companies. But the opinion on record is that the new flotations and several requests for extension of activity in other lines are being overdone. The apprehension as to the future is perhaps independent of comparisons instituted with foreign insurance concerns at present operating in India. Whatever may be the volume of Indian business (only the Companies claim fairly substantial results) the foreign insurer's position can be measured by larger assets even in India in relation to the business in force and premium income derived. The differences can of course be accounted for easily but the frank warning against an increase in the number of companies is based on experience (the Government Actuary's observations in 1929 are cited in this connection) as well as the desire to see Indian insurance business occupy the same high place that insurance business does in other civilised countries of the world.

OBJECTS AND PROSPECTS.

The Company has been formed for the purpose of carrying on business of assembing and/or manufacturing of cars trucks, tractors, chassis, motors, cycles,aeroplanes, engines, turbines, tanks, ships, boats, tools, equipments, accessories, buses, lories and other materials and products in India or elsewhere as permitted by the Memorandum of Association.

The establishment of an automotive industry has been a long felt need of the country. If it is needed for defence purposes it is equally a necessity for the intensification of agriculture. It is thus no longer a luxury, but an essential factor in the modern economics which no nation can afford to ignore. It is to fulfil this want that the Directors have undertaken this venture. If the post-war period with further industrialisation and growth of internal trade, construction of new roads and higher standard of living there is a certain likelihood of a continuously growing demand for cars and trucks. A ready market for the sale of the products therefore may be expected. Further, India is not lacking in natural advantages needed for the success of the industry. Iron, Steel and other necessary raw materials are in the country. Labour is intelligent and is available in plenty and can be trained as has been observed from experience during war time. These factors will go to indicate that there exist reasonable chances of the success of the industry in India. But this industry like some pioneer industries cannot be called, at any rate, in the initial stage an easy money making proposition. It is a project which could be built up only on a long range policy. Before final success the industry may have to pass through vicissitudes. The Board therefore without giving any high hopes to the investors of brilliant results in the initial stage can only promise to put forward their best efforts to make the industry a success and with normal good luck they hope to achieve the object.

MANAGING AGENCY AGREEMENT.

Messrs. Birla Brothers Ltd., are the Managing Agents of the Company by the Managing Agency Agreement, dated the 4th July, 1944, as approved by resolution of the Company, dated 12th June, 1944, on the following terms and conditions amongst others:—

(a) Messrs. Birla Brothers Ltd. are appointed as Managing Agents of the Company for a period of 20 years from the 1st July, 1944.

(b) The remuneration of the Managing Agents shall be (i) an allowance of Rs. 4,000 per month; (ii) a commission of 10 per cent on the net annual profits of the Company.

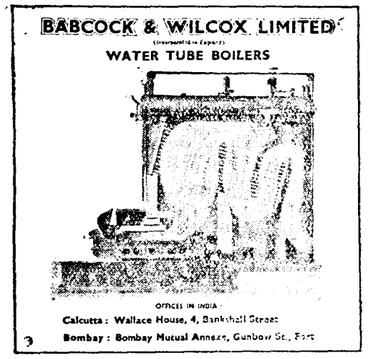
The term "net profits" means profits of the Company calculated after allowing for all the usual working charges, interest on loans and advances, repairs and outgoings, depreciation, bounties or subsidies received from any Government or from a public body, profits by way of premium on shares sold, profits on sale proceeds of forfeited shares or profits from the sale of the whole or part of the undertaking of the Company, but without any deduction in respect of income-tax or super-tax or excess profits-tax or any other tax or duty on income or revenue or expenditure by way of interest on Debentures or otherwise on capital account or on account of any sum which may be set aside in each year or half-year out of the profits for reserve or any other special fund.

(c) *The Managing Agents have informed the Directors that they will not charge to the Company any commission or allowance till the Company starts paying a dividend to its Shareholders.*

EARLY EXPENDITURE.

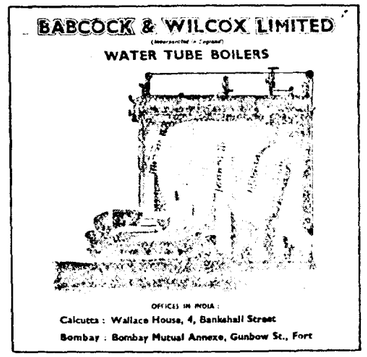
The Government of India have permitted early expenditure up to Rs. 60,00,000 for purposes connected with the proposals set forth in the Company's application for consent to the issue of Capital as stated in the order passed by the Government of India.

BROKERAGE.



Brokerage will be paid at four annas per share on allotment made in respect of applications through approved brokers.

SUBSCRIPTION LIST.



The subscription list will open on 17th July, 1944 and will close on 22nd July, 1944 or earlier at the discretion of the Directors.

APPLICATION.

Applications should be submitted for a hundred or multiples of hundred shares through the Company's Bankers and their Branches. Application form and full prospectus can be had from them.

Editorial Notes

International Monetary Conference

The Brettonwoods Conference seems to have, both nationally and internationally, a sombre political background. The American Senate, Mexico and the silver interests in the States. Russia and the Asiatic countries as a whole all have reason to think that the proceedings of the conference are not in accord with their expectations. Mention of a virtual ultimatum to Russia, though modified later by some officials' statements, sounds somewhat ominous. Russia's participation in the Monetary Conference was claimed by Mr. Cordell Hull as one of the principal gains of the Moscow Conference; and the presence of representatives of Soviet Russia at Brettonwoods, despite discouraging reports of Russia's preference for a pure gold standard, should be deemed encouraging. The reasons for the ultimatum, or some variant of it, which is now reported to have been sent to Russia, are not known. The hitch with Russia may be got over. But American Senators, who have it in their hands to reject any arrangements with foreign countries, have made it clear that an agreement based on the original statement of Mr. Morgenthau would be unacceptable to them. Silver is their primary preoccupation; and it remains to be seen whether China's indifference to bimetallism expressed by the delegate at the Conference will have any adverse effect on the strength of the silver bloc and its influence on opinion in Congress and in the country. If Congress ratification of the international financial agreement is in doubt, the failure of the Brettonwoods Conference to reassure the backward nations of the safety of their interests may be viewed even more seriously. China, in her present position, naturally shies at open differences with the U.S.A. and Britain. But both Egypt and India have by their amendments exposed the weak spots of the projected international organisation. The only bright spot is the decision, yet unconfirmed, of including India and China among the "Big Six" of the members of the International Fund, the other four being the U.S.A., Britain, Russia and France. India's contribution, it is said, is 300 million dollars instead of the 347 originally contemplated. Comment on details must be deferred.

Trade With The Empire

India's trade with the British Empire underwent few changes in 1943-44. Imports fell owing to obvious reasons, the exceptions being Australia and unspecified British possessions. Imports from the U.K. increased in value by only Rs. 24.37 lakhs as compared with 1942-43. The increase under imports from Australia is primarily due to wheat imports occasioned by famine in India. Since imports of manufactures fell off in 1943-44 it is clear that the new policy of encouraging imports of consumer goods did not produce substantial results, the increases under chemicals, dyes and machinery notwithstanding. The really significant increases in 1943-44 are the increased intake of mineral oils, cotton and raw wool. The increases are certainly advantageous to Indian industry. The Empire's share in total imports was less than that of foreign countries, not only because imports from Iran increased from Rs. 17.74 crores in 1942-43 to Rs. 27.55 crores in 1943-44 but because imports from the U.S.A. were kept up at a fairly high level. The increase under cotton accounts for the increase in imports from both Egypt and Iraq.

Trade with non-sterling areas in relation to total trade still remains small though Indian exports to the U.S.A. rose on account of the increase in shipments of jute manufactures. The fact that the U.K. took Rs. 60 crores out of the Rs. 128.51 crores (total value of exports to the Empire) deserves notice. Imports from the Empire amounted in value to Rs. 51.01 crores while exports amounted to Rs. 128.51 crores. The accumulation of sterling is thus partially independent of the Allied war expenditure in India. Exports to foreign countries, excepting the U.S.A., declined as compared with 1942-43. India's trade with Russia, contrary to expectations, was negligible. Exports to the Middle East decreased substantially owing to the restrictions on export trade. Colonial markets generally reduced their purchases of Indian products and the increase in Indian exports last year is entirely attributable to the increase in trade with the U.K. and the U.S.A. These two countries besides spending money locally took over half the total exports from India last year. Their views as to the disposal of India's overseas assets certainly matter at present even more than the majority vote at Bretton Woods against the claims advanced for India. The increase in the active balance of trade with the U.S.A. is going to help in the creation of a dollar reserve as promised. But more important for certain reasons is the fall in trade with all European countries except Turkey. There is no guarantee that ordinary trade with the Continent would recover to former proportions while British export revival may really help Indian exporters in Colonial markets as well as the principal market for Indian exports, namely, the U.K. The increase last year in India's trade with Kenya and Tanganyika indicates that trade expansion in East Africa rather than West Africa is to be expected after the war. On a rough estimate over 75 per cent of India's exports go to sterling countries and some familiar arguments as to the rupee-sterling link requires revision in the light of the seaborne trade figures for the last fiscal year.

Technical Advice

The advent of a Mission leads to the setting up of a Committee in order to simplify the work of the former. The Government had to get technical advice regarding the manufacture of fertilisers. Local knowledge or available experience is probably not enough to warrant brave new plans. It has been explained in connection with the mission that orders for machinery etc., are to be placed only after the report is submitted and the problem is largely one of siting. The tour and enquiries in progress are thus concerned with examination of sites in relation to raw materials, power etc. In a sense, the appointment of a mission is an admission of the technical inadequacy of Indian enterprise, but it may be noted here that in the case of electricity as well as iron and steel foreign assistance had to be secured, and it is not possible for private industry to obtain in wartime such expert advice as is possible in peace. The suspicion that without non-official assistance the mission wil not accomplish much has been expressed. But it may be doubted if non-officials could claim to be free from local or sectional preference or prejudice. Since the Government of India has made it clear that advice alone is wanted and the Government would deal with the Mission's recommendations the Legislature should be able to obtain much information before the project actually takes shape.

Inspection of existing plants may not yield the information required, but the question of a subsidy or bonus for production over a certain limit in regard to sulphate of ammonia cannot be disregarded. What is more important is the allocation of fertiliser quotas for food crops and a ban on exports of all manure. If it is a question of developing phosphates the justification for the outside mission is ample, for chemistry in relation to minerals has so far played an insignificant part. Previous enquiries and the results obtained are likely to be placed before the Mission by the official reception committee. There is an impression that concession-hunting is an object of the Mission but the mineral concessions obtained in the past bore entirely on the venture already launched and a technical mission linked with a local Committee can have no part in commercial diplomacy. Requirements in regard to fertilisers have been duly set out in the Gregory Committee's report. Inability to import is certainly proved over a long period. As to the schemes prepared or to earlier proposals to use molasses or other locally available materials to enrich the soil, the Mission would probably pay little attention, for its terms of reference are known. The first reports mentioned Government's intention to set up its own factories. The probable participation of private interests was not mentioned. Whether a State monopoly is desirable in regard to fertilisers despite the working of the Chilean nitrate export cartel is not an immediate issue. Since the

development plans for Indian agriculture are all connected with the Central Government the more important question is really in relation to acquisition of factories producing fertilisers. This is a matter of policy for which the Mission will bear no responsibility. But the circumstances indicate that the Central Government with its experience of food supply and distribution is free to go into the fertiliser business.

Underfed, Not Ill-Fed

Inadequate food as a cause of disease does not require special notice in view of the wave of epidemics that coincided with the Bengal famine. Dr. Aykroyd in a recent Oxford pamphlet notes that infantile mortality is due in some cases to vitamin deficiency. In the Northern Circars where beri-beri is prevalent, deaths of breast-fed infants in the third and fourth months of life have been attributed to the lack of vitamin B1. Malnutrition of mothers lies at the back of the abnormal infant mortality recorded in India. Lack of milk is not merely due to high maternal mortality but to the low yield of Indian cows. But any rise in income should lead soon to correction of diet. Though there are difficulties in making estimates, Dr. Aykroyd suggests that 30 percent of the population is underfed in normal times. He argues that enough food takes precedence over the right kind of food. When imports fall shortage is accentuated and a recent manifesto has called again attention to the need to bring more grain to India. The fear of a wheat shortage this year has not passed and the rise in prices, during and after April, indicates how crop news propels prices upward. The world's exportable surplus of wheat however, must be smaller than usual. The need to import is however established by reference to the Gregory Committee's recommendation regarding food reserves. The location and distribution of reserves is unimportant as compared with the allocation of shipping. War needs, however, must have increased and the problem remains much where it was in 1943 with the difference that the country most obviously able to export is Argentina where a change of government has created difficulties leading to the return of Sir David Kelly for consultations in London almost at the same time as the return of Mr. Norman Armour to Washington. If the question of food imports is temporary there is no doubt as to what India needs. Cereals and tubers alone require to be developed because milk cattle and fruit orchards take a long time to secure. If more food is available, a decrease in dificiency diseases like rickets is to be expected. Dr. Aykroyd refers to keratomalacia being rife in South India and elsewhere. Nutritional oedema is commonly seen and various kinds of anaemia are highly prevalent in certain areas and groups. An increase of 15 to 20 percent in the production of cereals is prescribed, as also an increase in the production of pulses by 15 to 25 percent. But India according to Dr. Aykroyd is not the only country with a serious problem of nutrition. Planning for agriculture has more impressive objects at present but Dr. Aykroyd's modest limits obviously escaped notice in 1942.

Cloth Scarcity

The formal reviews of cloth and yarn control have duly appeared last month but great interest naturally attaches to the Textile Commissioner's own account of the efforts to reduce cloth prices and increase supplies during 1943-44. But prices of both yarn and cloth as fixed by Control are substantially higher than in August 1939 because there are two important new factors, the disappearance of imports and the large increase in exports. There is also the increase in raw cotton prices and the rise in manufacturing costs. While price control is largely determined by the Board on which manufacturers are strongly represented, the main advantage has really been derived from the break-up of hoarded stocks. But its effect on prices cannot be great. The estimates of production and consumption in India—6,800 million yards out of which 1,200 million yards are taken for exports and Defence requirements leaving 5,600 million yards for civilian consumers as against 6,400 million yards before the war—suggest that a certain degree of scarcity will be stabilised even by control. Whether special measures in regard to coal supply would yield real results cannot be ascertained. Raw cotton at the official minimum prices is obtainable, but coal supplies present a graver, and more pressing, problem for mills. The end of the black market alone will not bring about the increase in supplies. There is a yearly increment to the population and the cure for cloth shortage in the future is not import but a bonus to production. Direct control of certain mills by Government may afford guidance as to likely targets for mills. While benefits obtained under the Control Order are many and obvious, the Textile Commissioner endorses the view that the supply of cloth, especially, of superior varieties, is limited in relation to the present supply of money. While the Indian cotton mills under official direction have concentrated on coarse and heavy goods, the need to check consumption by a system of rationing has only lately received notice. The Textile Commissioner's opinion as to the probable pressure on textile supplies is substantially in accord with that of Sir V. N. Chandavarkar who suggested that the U.S.A., India and Britain must co-ordinate textile exports after the war since the pent-up demand for cotton goods after the war cannot be satisfied in any part by Japan, admittedly the biggest exporter of cotton goods before the war.

Special Handicaps

At Philadelphia Indian labour's lack of organisation and other difficulties were described. The lack of protection through I.L.O. conventions for workers in Indian States was made known by Mr. Jamnadas Mehta while Mr. R. R. Bhote complained that till Dr. Ambedkar took office the problems of Indian labour received insufficient attention. The Philadelphia charter having been accepted, the three years' lethargy of the I.L.O. has been overcome. Mr. Phelan hopes that regional conference would be summoned after the war. Asia is to have a separate conference since Mr. Prior accepted the suggestion regarding employment during the transition to peace on behalf of the Government. It is proposed that material should be collected in advance. Though Russia stands outside the I.L.O. because of the provision for separate representation of employers the tripartite representation is going to be retained. The I.L.O. gets only a million dollars for its work as its budget is halved by the war. Larger contributions appear desirable to the Director who described the tasks awaiting the I.L.O. after the war. The return of the Indian delegates has led to no special declaration as to what may be expected. Postwar relief in Occupied territories should cover the introduction of minimum standards. The Colonial labour problem requires special expenditure on social services. But only self-governing institutions can vote the funds. Promise of co-operation by China is important since Chinese immigrant labour has been a factor in many countries from Manchuria to Australia. What may be done for raising efficiency is independent of measures for protection merely duplicating the prewar practice. The claim for equal wages for all immigrants may be advanced. An unpolitical labour movement has no chances of survival in Asiatic countries so that the tripartite organisation to be grafted in every case, will encounter some hostility. If the Director is hoping for good results in every case the wartime experience of Indian labour in regard to wages, conditions of work and welfare arrangements has not been fully described. A decline in real wages in the case of Bombay mill workers has not altogether escaped notice. The I.L.O.'s authority to enforce conventions is more than doubtful so that more depends on local organisation than on outside goodwill.

THE FRAGRANT WEED

TOBACCO-SMOKING is said to have been introduced into Britain by Sir Walter Raleigh. How many of the millions of smokers to-day realise how much the satisfaction of their desire for a "smoke" depends upon the chemist? Tobacco is a crop which no less than wheat or coffee needs appropriate fertilisers. The tobacco plants are liable to pests and diseases, many of which must be fought by chemical weapons. The curing and preparation of the tobacco present chemical problems of unexpected complexity. The leaf must be kept in condition from the time it is shipped to its final cutting and blending. The cigarette paper must pass stringent chemical tests. Tobacco by itself, whether in pipe, cigar or cigarette, is of little use without the means to light it — as we are coming to realise wherever matches get more difficult to obtain. A box of matches is a triumph of chemical investigation. The striking part of the ordinary match contains a compound of phosphorus and of potassium chlorate. Gum, sulphur, colouring-matter and impregnating substances for the stalk are among other chemicals needed for the manufacture of the humble match and provided by the British chemical industry. It is further to the credit of the industry that as matches get scarcer, cigarette lighters increase in quantity and efficiency. These are a further tribute to chemical research and production from the mixture of cerium and other rare metals in the so-called flint (natural flint does not give nearly enough spark for modern needs) to the material of the ribbed wheel and the petrol refined from natural mineral oils or even, it may be, derived from British coal by the hydrogenation process.

PARTICULARS OF THE ESTATE.

The particulars of the estates being acquired are as follows:—

	Kedamakal and Koojamalai.
Rubber area	815.21 acres.
1940 Budded Rubber Plantations	55.86 „
Total ..	871.07 acres.
Building Sites, etc.	6.93 „
Reserve Land and Option available for Reserve Land	1,122.00 „
Total ..	2,000.00 acres.

CROP—PAST AND POTENTIAL.

The crop has been increasing year by year excepting when abnormal conditions prevailed as in 1943.

The following are the crop figures for the last three years:—

1940-41	Rs. 2,41,006
1941-42	„ 2,62,716
1942-43	„ 2,40,339

As far as far as future potentialities are concerned the valuation report says:—"Though the maximum crop yield as yet harvested was only 2,62,716 lbs., I feel confident that by a change in the system of tapping and in the blocking of trees which has been successfully adopted in recent times in other estates we can reasonably except more than 2,75,000 lbs. of rubber and I may add that Mr. White agreed with me in this statement and when new clearing comes into yield we can reasonably except 40,000 lbs more".

Post-Famine Policy

Food policy in Bengal adopted under the Central Government's direction is not going to change in any important respect to judge by the Governor's review of the position. The extension of rationing to Chittagong lately shows that control is still meant to counter shortage. Prices are to be lowered before and after the next harvest as the statutory price control system is now general over India. For several years more the Bengal Government will be in the grain business. The consequences are unimportant for the taxpayer but the Government would certainly borrow large sums from the Bank or Banks. The larger subvention available will not reduce dependence on the market for funds, and the cold weather may therefore be marked by more than seasonal increase in the actual demand for funds. The degree of autonomy enjoyed in regard to procurement and disposal will remain, though imports will be the concern of the Centre. The ban on rice exports from Bengal will probably continue, for Bengal's position as a deficit province is implicitly acknowledged by the provision of food supplies at present for Greater Calcutta. The Governor's broadcast on July 10 did not, however, mention anything more than the transport facilities. Changes are probable after the monsoon but how much Government bought, and how much is held, what this year's carry-over will be are now secrets denied to the trade for Government's main interest is a progressive reduction in prices—the latest reduction in paddy and rice prices being ordered on June 15. The probable results of the Minister's new food plans were left out of account though their scope and purpose was described but the chances are that when distribution and consumption alike are regulated, the increase in supply will have its own effect while the probable loss on purchases, sales and stocks (accepted in the 1944-45 Budget as inevitable) may not at all increase. The enhancement of the sales tax and the introduction of the agricultural income-tax have been described as a means to the strengthening of the financial position of Bengal. Bengal's deficit for 1944-45 is not met by the increase in the subvention (procured by the Governor's representations added to the Ministry's). Should public expenditure on health and agriculture in Bengal increase further new taxation must be deemed permanent. There is also the problem of irrigation and drainage to which the Governor alluded, for soon new capital expenditure would have to be undertaken. The progress of rehabilitation rather than the validity of objects of new expenditure may well be regarded by some as the real test of intentions and performance. What the Head of the Province had to say about corruption in the Public Service may therefore be treated as a postscript to the account of remedial and preventive measures adopted after the famine.

THE BANK OF JAIPUR LTD.

THE MERCARA RUBBERS LTD., ANNOUNCEMENT—Contd.

ESTIMATED YIELD AND PROFITS AT BASIC RULING PRICES.

	Rs.
2,75,000 lbs. at 77 cents per lb.	2,11,750
Less—Cost of production on above at 30 cents ..	82,500
Nett yield available	1,29,250
Interest on 2,50,000 debentures at 5 per cent ..	12,500
Debenture redemption fund	16,700
Dividend on Rs. 2,50,000 Cum. Pref. shares at 6 per cent	15,000
Managing Agency Commission at 5 per cent ..	6,250
Total ..	50,450

This leaves a balance of Rs. 78,800 which indicates a nett return of more than 24 per cent on the Ordinary Capital of the Company. But a production bonus scheme has recently been announced under which bonus payment will be made for rubber ranging from Rs. 11-1-9 to Rs. 33-5-3 per 100 lbs. over the existing price based on the production achieved during each quarter. This scheme is in operation from 10th April, 1944 to 30th June, 1945 and even if only the present minimum crop bonus of Rs. 11-1-9 per 100 lbs. is taken into account, the net profit should be increased by approximately Rs. 30,000 which, however, has not been taken into the profit figures but it should bring the percentage available for Ordinary Capital **to 33 per cent instead of 24 per cent.**

BUDDED AREA.

The new clearing of 55.86 acres was predominently budded in 1940 with T. J. R. I. Clones and has not yet come into bearing. These trees are expected to come into tapping from 1946-47 onwards. When this area reaches full maturity a crop of about 40,000 lbs more per year is expected—a very substantial addition.

VALUATION.

	Rs.
815 acres at Rs. 700 (Rubber area)	5,70,500
55.86 acres Budded Rubber area at Rs. 1,000 ..	55,860
Buildings—2 Factories, including Smoke Houses—Manager's Bungalow, etc., Cooly Lines of about 90 rooms, 4 Writers' Quarters, Store Rooms, Dispensaries, etc.	85,000
Reserve Area and option available for reserve areas—total acreage about 1,122 acres	10,000
Total ..	7,21,360

As against the valuation of the Estate Rs. 7,21,360, the purchase price is Rs. 7,05,000. The Directors are of opinion that the price is reasonable.

Today's Prospectus

The prospectus of the Mercara Rubbers, Ltd. of which the Oriental Investment Corporation are sponsors refers to the issue of both Ordinary and preference shares in the company which is taking over a rubber estate in Coorg. The highest rubber yields in India have been noted in Coorg where the rainfall stimulates vegetation. The capitalisation per acre in this case invites special notice like the fact that the price payable is below that fixed by valuation. A very handsome return on capital is looked for especially as the ordinary capital will be moderate as compared with the prior charges. The issue is one connected with a wellknown firm of plantation managers whose commission is fixed at 5 per cent. It may be noted that the latest departure in underwriting would create great interest in the work of the issuing house generally. The advantages are obvious to both promoter and investor in this case and what may be expected in respect of attention to promising industries like rubber of the new trust launched by Mr. K. U. Advani last year is inferrable from the prospectus.

Bengal Central Bank Limited

In 1943 the Bengal Central Bank's deposits rose substantially and the balance-sheet published to-day bears ample testimony to the efforts made by the Board to raise the Bengal Central Bank to its proper position as the oldest Bengali scheduled Bank. If there is no change in dividend (10 per cent less tax, payable on application) despite the rise in profits the appropriation to Reserve Fund is as much as Rs. 2 lakhs out of the profit of Rs. 4,21,947-10-1 returned for the year.

CHAMPAGNES, WINES AND SCOTCH WHISKY ALWAYS AVAILABLE

At long last, the Indian National Congress bids fair to move out of the doldrums. Mild ripples are visible on the surface of the waters; and the sails seem to fill. Will fair weather and a gathering breeze take the ship to port? Premature optimism may increase the bitterness of disappointment. And where there is hard work to do and need for skill and hearts at once warm and stout, it is far better to concentrate on the position and the tasks on hand than to direct the mind to a pleasant contemplation of results. What has happened since the bleak days of Gandhiji's apparently futile fast to stir the country out of its resigned torpor? Flow of time, in the first place. In the second place, change of Viceroys. Time alters everything; brings to an end even the Viceroyalty of Lord Linlithgow. His exit meant a great deal. And the advent of Lord Wavell even more. Lord Wavell's admiration of Lord Allenby comes from a genuine kinship of spirit with his old chief. Sterile political triumphs have no appeal for him. His mind works in terms of development, of concrete work, of doing good to the people in his charge, without harm, it may be, to those who sent him out to India. He threw himself into famine relief, into post-war reconstruction and held out his hand to those ready to work for similar ends. It cannot be said of his speeches and actions that, from the Indian point of view, they leave nothing to be desired. But they are precise, they indicate in outlines drawn with a firm hand the large area in which he would welcome the co-operation of popular parties.

There was no mistaking the genuineness of his regret that popular parties kept aloof from the Government of the country or the sincerity of his appeal for the co-operation of the Congress in preparing for the future. Public opinion in India, long trained to look at official statements only from the point of view of the demands of the moment, missed the significance of Lord Wavell's address to the Central Legislature. It looked for a promise of the release of Gandhiji and the Congressmen and when it found it missing brushed the speech aside as of a piece with the speeches of Lord Linlithgow. In the comments on that speech which appeared in these columns, attention was drawn to two points, the abandonment of the old demand for the formal withdrawal of the August resolution as a condition precedent to the release of the Congress leaders and the shifting of the emphasis from the formation of a National Government in the present conditions of discord to co-operation in the constructive tasks of the future. I said at that time that the alternative to taking advantage of such a speech was "to hug the putrid corpse of the August resolution." This view was not current. The correspondence between Gandhiji and the Viceroy at that time showed a depressing pre-occupation on the part of the former with dead yesterday, while Lord Wavell was concerned with its liquidation. The speech did not appreciably bring the release of Gandhiji and the Congress leaders nearer. But malaria has proved to be the deus ex machina. Thanks to it, all the innumerable hurdles to the release of Gandhiji were got over. Gandhiji found himself again a free man. "Medical grounds" sufficed whether for face-saving or for genuine explanation. Gandhiji's convalescence provided the much-needed armistice.

* * *

Negotiations for the peace treaty have followed in due course. When Gandhiji was released, no one was deterred by the Government's emphasis on "medical grounds" from indulging in optimistic speculation. It was widely believed that sooner or later, somehow or other, attempts would be made to bridge the gulf that divided the Congress from the Government and other parties. That expectation has now proved right. It is not possible to trace the stages by which Gandhiji effected his mental adjustment to the needs of the new situation in the country. Judging by his correspondence with the Viceroy, it looks as though it is by no means old. Mr. Rajagopalachari's letters to the President of the Muslim League show that Gandhiji's acceptance of Pakisthan in principle is much older than his acceptance of a National Government which will cooperate with the war effort. But whatever it is, the statements which he made or authorised during the week show that the process of adjustment is now complete and leaves little to be desired. It may be that Gandhiji, with that subtlety which, in some strange way, is part of his transparently honest nature, pre-determined the stages by which this conversion should be made known. One can have nothing but admiration for the manner in which so dramatic a change in his views has been presented to the public as a normal, natural and almost foregone conclusion.

* * *

Some credit is certainly due to Mr. Stuart Gelder, the Correspondent of the News Chronicle, for his part in bringing about these momentous developments. I can well believe that, as he told Gandhiji at one stage, he acted not so much as a journalist working for a chief who is far away, as like one who was anxious to do his best to resolve the present political deadlock. Without a warm interest in the ultimate result of the interview, he could not have put the questions which, more than others, have clarified Gandhiji's present position beyond the least possibility of interested misrepresentation. Exceedingly pointed questions were needed to bring out a clear disavowal of all intention to restart civil disobedience during the period of the war, an affirmation of the will to help and not hinder the war effort and a readiness to be content with complete control of the civil administration leaving the military in the hands of the Viceroy and the Commander-in-Chief. It is no small gain for the British and Allied viewpoint that in case of conflict between civil and military needs, Gandhi-

ji can conceive of a situation in which preference must be conceded to the military. Gelder, then, has cut the ground from under official propaganda in the United States and elsewhere. He has made it clear that National Government in India, with Congress taking its share therein, has no dangers whatsoever for the prosecution of the war. On the other hand, the war effort will be reinforced by the enthusiasm of a people rescued from a paralysing sense of national frustration and imbued with a consciousness of higher destinies awaiting them.

* * *

It is worth while examining at this stage the position now taken up by Gandhiji and, as a matter of course, by the Congress, vis-a-vis the Government. From the Government point of view the August resolution was the head and front of the Congress' offending. The August resolution is dead as a doornail. According to Gandhiji, the authority vested in him lapsed, the moment he was arrested. He is functus officio, so far as the movement is concerned. Since no one else has the authority to conduct it, it is factually and legalistically dead. The second principal charge was sympathy for the Japanese; and next in the order comes the responsibility for the August disturbances. Of both these disturbances, the Viceroy and the Secretary of State have acquitted the Mahatma. Apart from the specific charges, there are other matters which keep them far apart. One such is the fear that a National Government will hinder the war effort. There is now Gandhiji's word—and no man's word is more reliable—that it will not. Another fear, though it is only a variety of the former, is that, though the National Government may not hinder the war effort, it will not give adequate help where the interests of the civilian population are seriously affected. Here, too, Gandhiji has afforded a reasonable assurance. What more can the Government ask for?

But is a National Government feasible? It is here that Rajaji's efforts in getting Gandhiji's approval to his offer to Mr. Jinnah are important. What has happened during the last one week is a tribute to the astute and indefatigable leader from the South. That Mr. Jinnah has refused to accord his personal acceptance, which, Rajaji insisted, must precede his formal submission of the proposals before the League, can hardly detract from the credit due to C. R. Mr. Jinnah's action must be judged by its ultimate consequences rather than by the non-chalance which characterises it now. The simple fact that League policy has been based on Congress opposition to Pakisthan and that such opposition has been withdrawn is there for all to see, for the rank and file of the League as much as other factors in our national life. It is not alone the League that has made much of that opposition. The Government based their case against the Congress, to a very large extent, on this single point. By this means, more than any other, they retrieved their good name before the bar of American and world opinion. And it was because the Government continued, on the strength of this, to detain Congressmen in jail, that the League wore on its brows laurels of others' winning. The withdrawal of Congress opposition to Pakisthan cannot possibly leave the position of the League unaltered. The pressure from the rank and file for a change in League policy was increasing even before C.R. released for publication his correspondence with Mr. Jinnah. The events in the Punjab, the demand of the Khakhsar leader and the growing awareness of the importance of a National Government in solving problems of mere existence for the people, all these were so many waves lapping at the feet of Mr. Jinnah, while he was sternly ordering them to roll back. Schism, while it may be caused by propaganda, cannot withstand the powerful forces of unification which the sufferings of the war period have released. In the matter of food, the country is by no means out of the wood, while other commodities like paper, for instance, are coming into the list of shortages. The problem of post-war reconstruction is coming to the fore. The spectre of post-war slump has to be turned into the angel of planned prosperity. The famine was not cognisant of communal differences; and the Muslim masses in Bengal are aware that the presence of League Ministers in Writers' Buildings did not make much difference to their sufferings. The League cannot thus shut its eyes to the need for a revision of its policy. Whether it will be done under Mr. Jinnah's aegis or some others is of little importance to the larger dialectic of national destinies. Mahatma Gandhi has been compelled by the force of events to adjust his pacifist creed to the realities of national requirements. It is hard to believe that Mr. Jinnah's views are more disinterested or are more passionately held.

Whatever that may be, Gandhiji's statements as they have been elicited from him by Mr. Gelder are such as to render the positions taken up by the Government and the League no longer secure. No longer can the Government argue that Congress is opposed to the war effort, that Congress will not treat with the League and that therefore nothing can be done. Likewise, the League cannot refuse to consider a National Government because a National Government would prejudice the Pakisthan issue. Either or both will have to disavow the whole idea of a National Government if Gandhiji's statements are to be reduced to a matter of infructuous opinion. The Government have for their part affirmed at every stage that the Cripps offer stands. What Gandhiji has done is to revitalise it. As Mr. Gelder says in his despatch published by the "Times of India",

> I do not wish to place myself in the position of a political commentator, but only a journalist who has discussed the situation fully and intimately with Mr. Gandhi, and for what it is worth I would record my impression that the Government now has a better opportunity than at any time since Sir Stafford Cripps landed in India to put an end to the deadlock and create an India which, instead of being half-hearted or sullenly indifferent, is enthusiastically on the side of Britain.

With a realism that is his real strong point, C.R. has told Mr. Gelder that "it may not be necessary for the British war effort to go out of the way to befriend him (Gandhiji); but for the future of Indo-British relationship which is not unimportant, such befriending is necessary." The immediate future depends on how far the British Government will accept and be actuated by this view. Gandhiji has said, according to Mr. Gelder, "with deep disappointment, but no bitterness" that "Mr. Churchill does not want a settlement. He wants to crush me." To have bracketted Hitler and Gandhiji together in his desire to crush—that is the singular achievement of Britain's greatest individual. Nothing can be done if Mr. Churchill refuses to change his mind or if the British people continue to be overawed by his antagonism to Gandhiji, the Congress and India. But within this country Gandhiji's statements cannot but make a big difference. For the position he has now taken is so obviously a rallying point for all men of goodwill that differences will perforce be minimised. One may recall in this context that the Viceroy's Executive Council contains more than one member who have publicly expressed their readiness to yield place to the ministers of a National Government. Sir Jwala Prasad Srivastava stated recently that only a National Government could deal with the problem of post-war reconstruction. Sir Ardeshir Dalal in a recent speech at Jamshedpur said that he would be glad to vacate his place in favour of a member of the National Government. The general consensus of opinion about the need for a National Government is so much strengthened by Gandhiji's gesture that the Government cannot ignore it.

* * *

July 4th the aptest of dates for a declaration of industrial independence by India has been chosen for the issue of an announcement relating to Hindusthan Motors Ltd. The capacity of the market to-day to digest an issue of any proportions is established. The timing is important more than the conditions under which the issue takes place. It must be remembered that the groundwork has been prepared by the company in being for over two years. The translation of the intentions into practical efforts towards completion of the automobile factory project will be deferred by the capital issues control in force, but it is important to note that objections to the creation of an independent native industry have been withdrawn. The old arguments pro and con have not been revived. For us the announcement as well as the association of such leading figures as Sir P. Thakurdas and Mr. N. R. Sarker with the Birla project alone matters. As to the prospects for tractors and vehicles the announcement is definitely optimistic. Assurance as to early return is neither offered nor expected, and the provision in the managing agency agreement as to payment of allowance or commission only when dividends to shareholders are paid is an act of faith for which credit is certainly due. The risk-taking is certainly not confined to the investors for whom the announcement is an invitation to subscribe between July 17th and 22nd July for it may be noted that existing shareholders and friends have taken up 70 per cent or 350 lakhs of the issued capital of Rs. 5 crores—a proportion higher than that mentioned previously.

The available information as to the Port Okha plant may suggest that considerable and prompt participation by American interests has been secured while it may also suggest that assembly of imported chasses and ports would be undertaken before manufacture takes place. The prospect of competition would not at all diminish the market for tractors or trucks if Indian industrial progress is accelerated by other means. What is most encouraging is that in advance of the 1,000 crores project for agricultural development private enterprise is directed readily towards the production of tractors. This alone must more than stimulate the imagination of investors to whom the Indian-made car has so far been a pipe-dream. For the present it is even more important to note that Rs. 60 lakhs will be devoted by permission to the laying down of the foundations for the motor industry. That should assist the completion of the project for which the plans have been drawn up on the basis of wartime industrial progress.

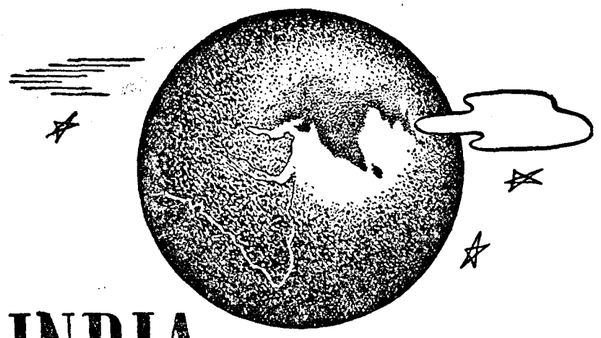
New Delhi, July 10.

THE political horizon has grown still darker. Together with the receding of all prospects of a political settlement, the chances of an early communal understanding too seem to have vanished. Mr. C. Rajagopalachariar who, it is now revealed, has been working for over a year secretly to get a common formula for communal settlement, based on self-determination after the war for predominantly Muslim areas, accepted by both Mahatma Gandhi and Mr. Jinnah has failed in his attempt. He was able to secure Gandhiji's assent to his communal settlement plan, but Mr. Jinnah was not prepared to accept the formula which to all appearance went almost the whole way to meet the League viewpoint. Mr. Jinnah's intransigence is hardly explicable and it is difficult to foresee a more reasonable basis for any communal settlement. Recent reports from the Provinces, particularly Sind and U.P., show the "beginning of a popular revolt against the vested interests which have so far appropriated the League leadership. It remains to be seen if this popular revolt assumes proportions big enough to force the present leadership to take the initiative for an honourable compromise on the communal issue. Meanwhile the disclosure about a letter that President Roosevelt wrote to Mahatma Gandhi, a year ago, and which was never delivered has caused a big sensation here. The vague New Delhi 'official' denial is not convincing for the only people who can authoritatively deny the story are still silent.

* * * *

There is an almost general demand here for the recall of the Indian delegation from the Brettonwoods Monetary Conference. The summary way in which the two vital proposals of the delegation from this country have been disposed of, together with a prompt rejection of the Egyptian proposal to incorporate machinery to release blocked sterling balances in the projected International Exchange Fund, has confirmed the fear, already entertained here, that India shall gain little from participation in the proposed Fund unless the concrete proposals ensuring an orderly liquidation of her sterling balances and expansion of her industries in the post-war period are accepted. The Indian proposals are also regarded here as a test case for Anglo-U.S. sincerity in developing industrially backward areas. The attitude of both British and American delegates has clearly shown that they are more interested in the problems of their own post-war economies and post-war restoration of their own trade rather than in helping the undeveloped areas of Asia. If prosperous nations persist in this attitude, the chances of genuine international collaboration will be as remote as before the war.

There is no confirmation here yet of the recent London reports of a possible expansion of the Viceroy's Executive Council in the near future. According to these reports the expansion will aim at including a representation of trade unions in the council. It is mentioned in this connection that the labour movement in this country has so far gone unrepresented in the Executive Council. Non-official circles here believe that if the Viceroy does decide to include a labour man, it is more likely, as the London reports say, that it will be Mr. M. N. Roy or another I.F.L. representative. For the Government's recent policy has tended toward a boosting of this labour organisation at the expense of the Trade Union Congress. The recent nomination of I.F.L. men to the International Labour Conference confirmed this view. The Government stuck to their decision despite widespread public protest. It is also understood that Mr. Kirby, former Food Rationing Adviser to the Government of India, is again returning to Delhi on a higher salary. Two more British experts, one for storage of grains, will also be appointed, it is learnt. Dr. P. J. Thomas will be appointed as Director of Research in the office of the Controller of Capital Issues.



* * * *

Latest reports received here from the coal producing centres indicate a deepening of the coal crisis. It is feared that if the Government do not take prompt steps to remedy the situation, the country will have to face a coal crisis more disastrous than last year's. It is refuted that as matters stand at present there is not the remotest chance of even the low production target of 23 million tons (production in 1941 was 28 million tons) being reached. The new mining labour that has replaced the workers who have migrated to areas where higher wage rates prevail is mostly unskilled and there has been no appreciable rise in the production in the Bokaro coalfields in Bihar which fell from 2.2 million tons in August 1942 to 1.3 million tons in August 1943. In the Giridi coalfields it fell from 0.7 million tons in August 1940 to 0.5 million tons in December last year. It is felt here that the Government still fail to realise the gravity of the situation which threatens to affect the country's economy so adversely.

* * * *

The food situation is still causing great anxiety here. While there are reports of rising rice prices in certain Bengal districts, the ravages of epidemics and a renewed influx of destitutes in Calcutta, the officials here are complacent about the situation, assuring the public that there is no danger of famine. The Food Member has come out with the explanation that the 400,000 tons of wheat to be imported before October is only for the second quarter of the wheat

(Continued on page 80)

INDIA AFTER THE WAR

A spectre haunts India, the spectre of post-war depression. What will be India like after the global war? Will our country be an inferno in the grip of a terrible economic dislocation or will it see a new dawn? We have to answer this supreme question. We can fight off the looming spectre of depression if we hammer out a new India through a supreme industrial effort. But the way to industrialisation lies through Banking. Banking will play a decisive part in post-war reconstruction.

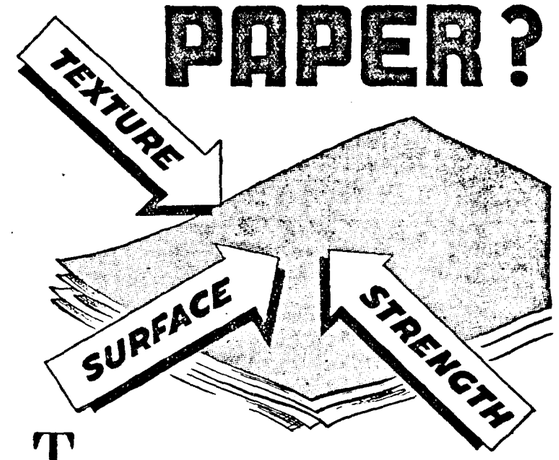
(FROM OUR CORRESPONDENT)

Bombay, July 11, 1944.



THE monsoon has begun late but well, and it has been raining heavily in the city for the past one week. The hierarchy of officials of the Commerce and Industries Departments are here in connection with the Cloth Export Control Scheme and Paper Control Order. July is not a month for conferences, but neither the venue nor the timing of the meetings has been a matter for choice. The final series of meetings between government and the export trade in cloth concluded yesterday and the scheme formulated by the government will be brought into force from the middle of the month. An ordinance has already been issued to provide for a Cotton Textile Fund to be built out of the proceeeds of a new customs duty of 3 per cent of the maximum ex-factory price fixed for the time being for the particular description of cloth or yarn exported. The ordinance takes effect immediately. Of course, the new duty will not be levied on any cloth or yarn exported under a contract entered into previous to the ordinance. The trade does not altogether fancy the levy, and the Indian Merchants' Chamber has opposed it pointing out the possible adverse effects on the export trade. Government would appear to have held out the hope that if the levy is found irksome to exporters, the cess may either be scaled down or abolished in the light of experience of its working. In view of the great demand for Indian Textiles abroad, it is not expected that the export trade will be appreciably retarded and the Indian exporter does not stand in serious danger of being ousted for some time yet.

On the other hand, what is really important is that malpractices should cease and the cloth or yarn exported must conform to the standard expected by the importer. The present export quota of 600 million yards will remain unaffected though efforts to increase the quota are being made. Under the present arrangement, export prics at which goods are now sold in India, including the 3 per cent cess, which will cover the expenses of inspection, a 7 per cent margin to the manufacturers and 10 per cent margin to the exporters to whom licenses will be granted on the basis of their previous quotas.

The agitation against the Paper Control (Economy) Order 1944 has moved to a climax and printers, publishers and the numerous other interests affected by the Order are meeting Sir Akber Hydari, Secretary of the Industries and Civil Supplies Department today. Few can deny that some features of the Order are extremely difficult to work in their present form, not to mention the strangulating effect which the Order will have on many publications. Every point of view will be placed before the government, and while it is perhaps unwise to expect any considerable relaxation of the Order, government's readiness to go some way in meeting the wishes of the public without departing from the basic principle of the order is taken for granted. The numerous representations addressed to the Paper Controller will be considered and a sympathetic hearing is expected to be given by the government spokesmen. It is probable, as *Eavesdropper* wrote last week, that the government have not much choice in insisting upon the essentials of the order, in view of the very acute supply situation. Expectations are that concessions may be given in individual cases. The pity of it is that government are fully alive to the unfortunate repercussions which the order will have all round, but are not in a position to help it.

The Indian Merchants' Chamber's representation to the Central Board of Revenue to sanction relief to the assessees who suffered losses on account of the recent explosions and fires has borne fuit. The Board has agreed to extend the concession to the assessees whose principal place of business is in the affected areas and has also agreed to put off pending cases till the end of August 1944 or until payment of compensation by government. Income-tax officers have instructions to consider favourably requests for recovery of tax in easy instalments in the case of those affected. The Central Board has also pointed out that the extension of time limit for appeals is a matter with the discretion of the Appellate Authority, but that the Department will not raise any objection to the relaxation of the time limit in the case of victims of the tragedy.

HOW DO YOU JUDGE PAPER?

The Master Printer knows how to select his paper for a particular job. Not so, the layman and yet he needs good paper. Surface, Texture and Strength determine the Quality of paper. It is not true that a smooth surface is necessarily better than a rough one or that a particular texture is superior to another or that the stronger the paper the better it will be, under all circumstances. It all depends on the nature of the job for which the paper is required. It is possible to-day, with the highly developed modern machineries, to manufacture paper to suit every purpose.

S. G. P.—10

South India

(From Our Correspondent)

MADRAS, July 10.

The industrial future of South India is intimately linked with hydro-electric development and company promoters should be particularly enthusiastic over the recent activities of the Governments of Madras, Orissa, Mysore, Hyderabad, Travancore. Cochin and Jeypore regarding the projected plans of fuller exploitation of South Indian water power. Reports are streaming in about the earnest attempts of the Madras Government in speeding up the preliminary steps for the early realisation of three important hydro-electric projects so that when war ends this Province would be fully equipped with motive power for starting new industries. As a result of a conference between Mr. S. V. Ramamurti, Adviser to the Governor of Madras and Sir C. P. Ramaswami Iyer, Dewan of Travancore, the pending dispute over the Periyar Project Agreement has been brought to a successful termination and investigation into the possibilities of the hydro-electric power in Periyar and Cardamon Hills has also been undertaken. This is the logical sequence of the recent discussions on the report concerning the development of electrical power submitted by Sir Henry Howard, Electrical Adviser to the Governments of Madras and Travancore. A Board consisting of the Chief and Electrical Engineers of the two Governments and Sir Howard has been formed to carry out the investigation of the proposed works and report in six months. It is stated that this joint venture would not affect the Travancore plan to harness the water power resources of Mudirapuzha river and questions regarding the joint initiation of power schemes, allocation of expenditure, division of power etc., would be decided after the results of the investigation are available.

The Tungabadra project, which has been the source of much criticism and heart-burning in the Andhra Desa particularly, is also coming to a hopeful stage. Since Mysore and Hyderabad have come to some agreement regarding the utilisation of the waters of the Tungabhadra, the Madras Government are now in a position to go ahead with their plan for the construction of a dam and a reservoir at Mallapuram with the co-operation of the Hyderabad Government. It is estimated that the scheme would cost Rs. 10 crores, calculated on the basis of present rates, and that work would be finished in eight years though water may be available for irrigational purposes at the end of the sixth year. The famine-ravaged areas of the Ceded Districts have every reason to be jubilant over this, because, besides the scope for industrial development, 4,00,000 acres in Bellary and Kurnool districts would be irrigated under the scheme. Ten per cent of the newly-irrigated area will be under rice and the rest would be utilised for millets, cotton, groundnuts, and garden crops. At the site of the dam hydro-electric power would be generated by Madras and Hyderabad Governments. The cost of the dam and reservoir will be shared equally by these governments and the engineers of the P. W. Departments of the two Governments would undertake the work jointly. Recruitment of the necessary staff will commence shortly and construction work will begin early next year.

A further step concerning the Doduma Project has been taken by the Government of Madras. It is reported last week that Madras Government have entered into an agreement with the Government of Jeypore in ratification of the terms already agreed to between them. The Orissa Government have not reacted favourably to this Madras-Jeypore agreement according to which 20 per cent of the power generated would be allotted to Orissa. Though a Press Note says that the Orissa Government are examining the "legal and other aspects of the position" there is no reason to believe that plans have been as yet finalised. The matter is still in the correspondence stage and though an understanding with Jeypore has been reached final arrangements will depend on the co-operation of Orissa. It is however believed that a happy solution would soon be arrived at.

Cochin does not lag behind other Governments in the earnestness with which hydro-electric plans are evolved for the industrial and agricultural progress of the people. At a recent conference between the departmental heads and the Dewan of Cochin held at Ernakulam it was decided that the skeleton plan regarding the hydro-electric project near Chalakudi prepared by the previous administration should be taken up for execution this year. If cannot be doubted that the methods of cultivation as well as the yield from land would show marked improvement if the scheme is put into effect and the food shortage can be relieved at an early date.

The Fertiliser Mission, which is now on an all-India tour, would find, when it comes to South India, that Travancore is fully prepared with schemes and has already gone a long way in establishing a fertiliser unit. The sponsors of the Travancore scheme have increased their authorised capital to Rs. 5 crores, and are awaiting the sanction of the Government of India and the grant of facilities for importing the required machinery. Experts from abroad—Mr. Pawley of the Inter-continental Corporation of America. and Mr. Mc Cartie and Mr. Brier, Chemical Engineers—are now in Trivandrum engaged in the selection of suitable sites for the proposed plants.

An illuminating review of the wartime progress of consumers' co-operation in this Province was given by Mr. K. Subramania Naidu, Joint Registrar of Cooperative Societies, at a conference of the Co-operative Stores in Chingleput District held here last week. From 85 societies with an annual turnover of over Rs. 25 lakhs Madras Presidency has to-day about 200 primary co-operative societies with a membership exceeding four lakhs and with business transactions for over 298 lakhs during 1943-44. Owing to the unsatisfactory nature of the methods adopted by private agencies the public have begun to join the movement voluntarily shouldering the responsibilities for the distribution of foodstuffs and other necessaries. Mr. Naidu pleaded for carrying over of forty to fifty per cent, instead of the usual 25 per cent, of the wartime profits for post-war stabilisation of the movement. Though the wartime record of the societies is excellent some of them may not survive when peace returns but if suitable steps are taken even now the situation can be greatly improved.

The Government of Madras have constituted a Provincial Post-war Reconstruction Committee of Industries to prepare plans for reconstruction based on available information and capable of being executed within five or ten years after the war. The Committee is purely departmental and consists of eight officials and Mr. S. V. Ramamurti as Chairman. The complete asence of non-officials will be very much regretted by the public.

(Continued from page 78)

crop year. Consultations with the British Government are to continue for the allotment of shipping for the third and last quarters of the wheat crop year, that is to say for the period October 1, 1944 to March 31, 1945. The Government still refuse to explain their failure to implement the Foodgrains Policy Committee's recommendation. Unless the committee report overestimated the country's needs, it is difficult to see how serious food shortage can be avoided without imputing the recommended quantity. The Government should issue without delay a detailed statement on the food stock position.

It is learnt here that Tatas have entered into an agreement with the Kashmir Government to undertake intensive industrial development of the State's resources.

Airway Port

(From Our Correspondent)

KARACHI, July 7.

Will the history of the Punjab repeat itself in Sind? This is the question that is being asked in political circles as the Sind Assembly session draws near. With the defection of the two Hindu Ministers from the Hindu Sabha fold, the Independent Hindu party is more united than ever and is out for the blood of the two Ministers who continue in office only because of the suffrance of the Muslims. In the League camp itself, differences are becoming pronounced. One wing is being led by Mr. G. M. Syed while Mr. K. B. Khuhro is trying to establish his domination over a section of the Assembly members. A no-confidence motion against Mr. K. B. Khuhro is to be tabled by Mr. Mahomed Soomro. Meanwhile, measures such as the Land Alienation Bill and the controversy over the electorate issue have added to the deepening tension. While there is no possibility of any overthrow of the ministry, there is bound to be a shifting of party allegiances. If the League party is completely demoralised, then Sir Ghulam would tear off the League label from his back and continue as Premier as an unattached leader of the Assembly party.

It is understood that the question of the revised land assessment rates for the Karachi district will not be taken this year. The reason for shelving this question for one year is stated to be non-availablity of water and the unsatisfactory conditions of the food crops in the district this year. It is therefore considered inadvisable to revise the rates under the abnormal conditions now prevailing in the district. There was strong opposition from zamindars of the Karachi district against the enhancement of assessment. Meanwhile, another report current is that Hindu and Muslim Ministers have effected a compromise over the question of Land Alienation Bill. It is understood that they will revert to the original draft bill and the Revenue Minister has given notice of amendments to be moved in the Assembly by which controversial clauses to which the Hindus had objected would be eliminated or suitably altered.

Mr. Lalchand Navalrai M.L.A. (Central) will preside over the Sind Hindu Panchayat Conference to be held at Mirpurkhas on July 8 and 9. The conference will frame a constitution for the Sind Hindu Panchayats and will define its attitude towards the present Ministry. It will also consider the activities of the wheat syndicate, which it is alleged is not dealing fairly with the zamindars.

The Sind Government will start a fertiliser manufacturing factory in the province as soon as the plant is available from the Central government. Only recently, the Central government had addressed to the provincial government advising them to collect data about the possibilities of manufacturing fertilisers in Sind in order to furnish the information to the United Kingdom Technical Mission, now touring India. It is stated that there is no possibility of running more factories due to scarcity of electric power.

I learn that more than 100,000 tons of rice are to be sent to Cochin and Travancore States from Sind during the current year under directions from the Central government. About half of this quantity has already been sent. Sind is also sending 70,000 tons of wheat to Bombay during the current year.

After protracted parleys, final arrangement has been reached between representatives of wholesale cloth dealers of Karachi and the Chief Controller of Prices. According to one of the clauses of the agreement, all wholesalers and retailers of the city are required to form panels. Any retailer who does not join the panel will not be entitled to get his goods from wholesalers according to the scheme. Any dispute or disputes between wholesalers and retailers will be referred to a joint committee consisting of two members from each panel to be formed for the purpose. The agreement further provides that all wholesalers will be required to report to the panel, details of stocks received by them within three days of receipt. No wholesaler can refuse goods to retailers according to the proportion fixed by the government.

INVEST IN KINDNESS

(We need Rs. 44 lakhs)

Forty-four lakhs is a large investment, but Bengal can *make it*. When stakes are high, intrepid investors of this Province are prone to lead the way.

Invest in Kindness! Put your money to work with those people, whose sole object in life is to relieve the distress and suffering of others.

No one can ask for richer dividends.

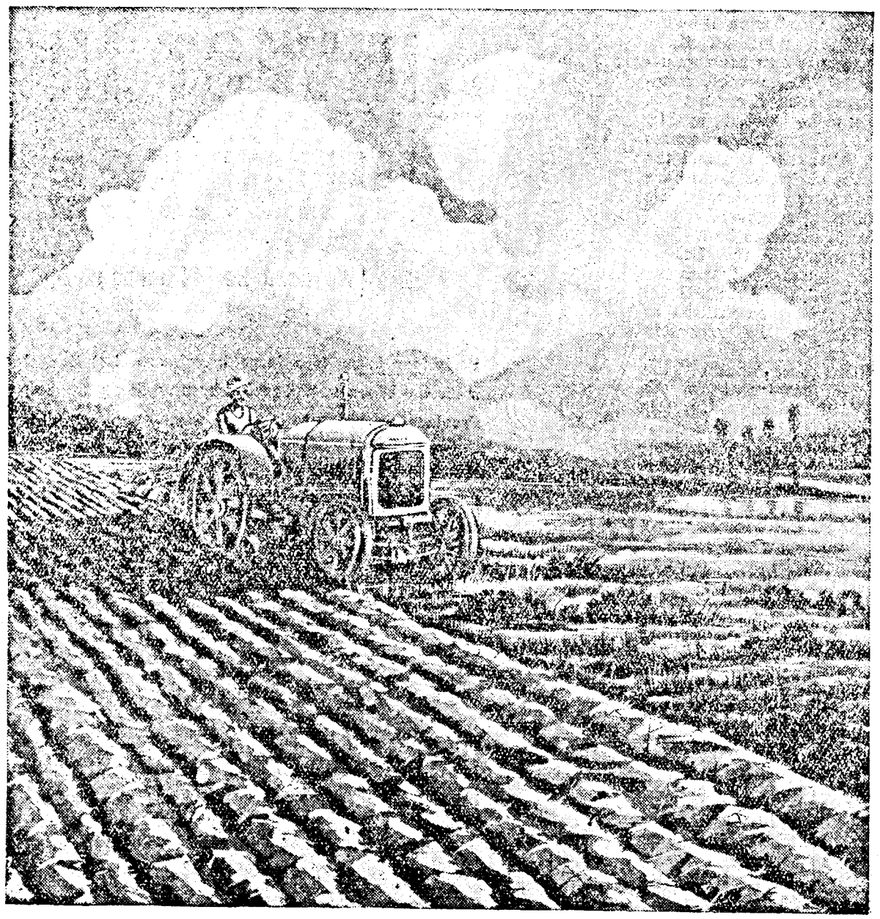
Invest your money in relieving the misery of Prisoners of War.

Buy a share in the comfort of sick and wounded soldiers.

Acquire now all the stock of kindness you can afford, by relieving the distress of the civilian population of Bengal.

All contributions should be addressed to the Hony. Treasurer, Indian Red Cross Appeal, Government House, Calcutta.

INDIAN RED CROSS



Invest in Kindness

IRC. 3751

SPACE GIVEN BY IMPERIAL BANK OF INDIA.

(*Continued from page 73*).

The advent of a new Director in Kumar Pramatha Nath Roy certainly makes 1943 a banner year for the Bank of which Mr. J. C. Das becomes Chairman in accordance with general and local anticipations. The Bank's position as at the end of 1943 may be gauged by the cash ratio of over 29 per cent (covering loans callable by the Bank) as well as the high proportion of investments to Advances and the absence of loan to Directors and officers of the Bank. The four-year plan adopted in 1940 to vitalise the Bank has clearly borne rich fruit to judge by movements in the balance-sheet between December 1942 and December 1943. The steady increase in paid-up capital has been a sustaining factor but the most outstanding feature—the rise in fixed deposits to a satisfactory ratio in relation to current and other deposits—is the tribute to a policy that has built the bigger and better Bengal Central Bank within four years. In proportion to Deposits totalling Rs. 423.6 lakhs Advances totalling Rs. 102.5 lakhs are moderate particularly as cash etc. exceed Advances in this case. The degree of liquidity calls for special notice because a forward banking policy after the war is dependent on preservation of readily realisable investments even more than the maintenance of over-average cash ratio.

For the Nation's Granary..

Obtaining an increased yield of crops from the land is a major item in the plans for the economic development of India.

By furnishing the essential modern implements of agriculture, transport communication and irrigation services the steel industry will help to transform arid deserts into smiling wheat and rice fields.

Resume of Commodity Markets

THERE are no important developments in the commodity markets during the past week. The raw jute market has turned quiet with the virtual cessation of buying by mills while the jute manufactures market has been very firm with the large increase in shipments and the fears regarding the possibility of a further decline in production. The raw cotton market is in a very confused state and is the victim of various rumours. Mills have not been buying freely in the ready market while Government buying has not been very helpful. In the piecegoods market conditions are getting normal and the policy pursued by the Government in the distribution of production at the requisitioned mills seems to have encouraged consumer buying. The bullion markets were steady for the greater part of the week, but towards the close prices are lower with the publication of the Government *communique* saying that the newly acquired silver would be utilised both for coinage purposes and for sale to the public, if required, in furtherance of Government's anti-inflationary policy.

* * * *

The weakness of the raw jute market would seem to have almost followed the publication of preliminary forecast figures showing a large increase in the licensed acreage in the jute crop. The weakness of the jute market, however, has no relation to the preliminary forecast figures, especially as the local stock figures of jute goods have shown a decline over the figure for May. The continued difficulty in respect of coal supplies and the fear that production at the electrically driven units too might be affected have been mainly responsible for the withdrawal of mills from the market. That the fears of a drastic reduction in production should have come about at a time when the new crop would begin to move is unfortunate. It is only to be hoped that mills will be enabled to work larger number of hours after October and that the loss in earlier production would be made up to a great extent. The efforts of the authorities to increase coal production should yield results before then.

* * * *

The improvement in the shipping position so soon after the Second Front would have come as a surprise to many for the reduction of over 25,000 tons in the stocks of jute manufactures held by the I.J.M.A. mills and Gagalbhai Mills at the end of June means that the total offtake during that month has been over 1,15,000 tons, a figure considerably in excess of the average for the previous three months. The total stocks at the end of June were nearly 1,96,000 tons so that mills have little more than two months consumption on hand. If in the next four months production declines by 15,000 tons per month stocks would come down to a dangerously low level and there might be a famine for jute goods.

* * * *

The raw cotton market is in the doldrums and pending a satisfactory solution of the various questions at issue there is no possibility of an early improvement in values. As a matter of fact, it is almost despaired that it would not be possible to maintain prices. Government buying during the past few weeks has come in for a lot of criticism. In the past few days Government purchases have been mostly confined to Jharilla variety and the rally in prices has been very feeble. Mill support is poor and sentiment is inclined to be very bearish. There are various rumours in the market and it is feared that trading in new crop futures will be at a lower level and that Government might agree to a downward revision of the minimum prices especially as they are anxious to discourage further cotton growing. The Karachi market also is prepared for lower minimum prices. When the position is so confused it can be hardly expected that there will be normal trading in the cotton market.

It is reported that Government has already given instructions to the officials concerned regarding the policy to be pursued in respect of the new crop and that these proposals would be placed before the Textile Control Sub-committee which is meeting in the middle of this month.

The gold market has been rather uninteresting with the quotation for ready fluctuating around Rs. 75. Above the Reserve Banks selling rate very few tenders were received and it is reported that small quantities of small bars have been sold at 2 annas premium over the quotation for gold ready in the market. As the Reserve Bank has not been offering freely there was no appreciable setback in prices. Only towards the close there is an easier feeling with the drop in silver prices.

Output greatly in excess of what was formerly considered possible — this is the report from industrial concerns all over the country. Good management & careful maintenance of plant play important parts in bringing about this excellent state of affairs, but the principal factor is the ability of the labour force to maintain continuously a high level of output. It is here that Indian Tea has helped in many hundreds of factories; tea served to the worker on the job is giving extra concentration and renewed energy, thus eliminating the fall-off in production usually noticed towards the end of a working period.

INDIAN Tea

Relieves the Strain of War-Level Output

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

The re-affirmation of the policy to be pursued by the Government in respect of the newly acquired U. S. lease-lend silver would have perhaps been welcomed by bears but it is still feared that there might be delay in effecting official sales. With the acute scarcity of stocks there is therefore an increasing tendency on the part of bears to cover their open positions. Bulls, on the other hand, are afraid that they would not be able to get their present prices for long and have been freely selling. Efforts are being made to improve the position in regard to ready supplies and a deputation has approached the Bombay Government for affording facilities to import silver from the Indian States. It is said that large stocks of silver have been absorbed by dealers in Indian States and that silver could not be exported from these States on account of restrictions, placed by the State Governments.

* * * *

An ordinance has been issued constituting a fund called the Cotton Textile Fund, to be built out of the proceeds of a new customs duty of 3 per cent of the maximum ex-factory price for the time being fixed for the particular description of cloth or yarn exported by or under any order for the time being in force made under the Defence of Indian Rules. The ordinance will come into force at once. A committee will be appointed by the Central Government to consider measures to supervise the export of cloth and yarn including measures involving capital costs in order to promote and increase the sale of Indian cloth and yarn abroad, and generally for the development of technical education and research relating to the cotton textile industry. The new cotton textile duty will not be levied on any cloth or yarn exported under a contract entered into before the commencement of this ordinance.

* * *

The Textile Commissioner announced on February 18, that manufacturers possessing 25 power looms or above as on January 1, 1944, and who do not spin and yarn would be required to stamp their products with prices from May 4, 1944. This date was subsequently altered to July 1, says a press note. Owing to practical difficulties in the preparations and publication of price-lists for all those power loom factories in time, it has now been decided to extend this date to August 1, 1944.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, July 13.

MILL stocks of goods at the end of June showed a reduction of 25,131 tons from the previous month's figures. While this looks eminently satisfactory, it would be well to await the production figures for June, which are not yet available, so that it can be seen to what extent the reduction is due to good shipments of goods and to what extent short production has accounted for the reduction. It is known that shipments were above the average and shipping space is still available in good quantity so that stocks may be still further depleted during the current month. On the other hand there have been frequent interruptions in production due to lack of coal and it remains to be seen to what extent the outturn of goods has been affected thereby. It is notable that the major portion of the reduction has taken place in commercial goods, Hessians being lower by 6,615 tons or 274 lakhs and Sackings by 10,484 tons or 288 lakhs of yards. Thus of the total reduction of twenty-five thousand odd tons, over seventeen thousand tons is accounted for by commercial goods. Government held stocks of Hessian cloth, bags and canvas were reduced by nearly 4,500 tons and Government stocks bags and cloth by some 3,500 tons. Stocks of Sandbags, it is interesting to note, are almost stationary. In the aggregate, Hessian stocks were lower by 11,961 tons or 450 lakhs yards, while Heavy Goods were reduced by 13,170 tons or 361 lakhs of yards. Total stocks of Hessians at the end of June were 3,217 lakhs yards of which 1,375 were on commercial account and 1,842 on Government account. The total of Sacking goods in stock amounted to 2,730 lakhs yards of which 2,4974 were on commercial account and only 234 on Government account. It is of interest to note that these are the lowest stock figures recorded for over two years.

Mention is made above of frequent stoppages for lack of coal. Last week was probably the worst on record for supplies, barley one-third of mills normal requirements having been met. And the position is not appreciably better this week. Even double shift coal consumers, who are allowed priority in supplies on account of their inability, because of the longer hours they are working, to make up any lost time, have been unable to keep going continuously, so what chance have those coal consuming mills which are still working single shift. It is indeed a dismal look-out for them. Rumours continue to circulate that a cut may be made in the hours permissible to mills drawing electric supply from public companies, but nothing definite is known yet on this subject. Details have now been published of the organisation set up under the Supply Department to deal with the production and distribution of coal. If the number of Deputy Coal Commissioners, and Regional Coal Controllers appointed is to be taken as a criterion; spectacular results should be looked for. Unfortunately the mere multiplication of officials does not necessarily mean automatic increase in efficiency. If it is now the conclusion of the Central Government that the new organisation will effect an improvement in the situation, it is surely to be regretted that these steps were not taken long ago. For the acute coal shortage is no new feature, but has been the bugbear of industry for well over a year and, so far as the Jute Industry is concerned, the Central Government cannot complain that this fact has not been consistently and continuously brought to their notice. It is to be feared, however, that it takes more hammering to get an idea into the Hydra-heads of Government than it proverbially does to hammer a joke into a Scotsman's.

The question of revising the quota system by which shipments of jute from up-country stations to mills and presses are controlled at present, has been raised, together with a proposal to pool all the carrying capacity available. The present quota is based on the quantities merchants shipped during the seasons 1939-40 to 1940-41. It is now suggested that the quota should be revised on the basis of shipments made during the season just finished. But it should be obvious that, if the existing quota has been fairly and equitably administered, there ought to be no difference in the quantity allotted during last season from what was shipped in seasons 1939-40 to 1940-41. Any difference, of course, can only be accounted for by shipments by lines of carriers outside the "Agreement" who, it is suggested, are always amenable to granting priority in their space if the freight rate is commensurately adjusted. Whether it is fair and equitable that such shipments should be taken into consideration in calculating a new quota basis is, to say the least, open to question. Only a few main shipping stations are now being served with freight at all and many old established shippers at outside stations which are now starved of freight, if supplied at all, have perhaps a definite grievance. But it does not appear so far that any sound reasons have been advanced for interfering with the present quota system and the general feeling of the interested Associations seems to be against any such interference. When it comes to the pooling of all the available freight resources, it is a somewhat different matter. All freight is now under the control of the Movements Control and all owners of cargo space must take instructions from that body. If therefore a real "pool" could be inaugurated and efficiently administered, much might be said for the idea. It is the questions of administration which will present the difficulty, for that could not be effectely done from Calcutta, but could only be carried out in detail in each separate up-country station, and by persons well acquainted with local business conditions, as well as being above reproach in integrity, if satisfactory results are to be achieved. There can be little doubt that the heavy end of the onus of the war effort has fallen on the old established large companies, while their newer fledged competitors in the jute carrying trade have benefitter by the inability of the older concerns fully to meet the demand. So it would only be just if the burden could be more equitably distributed by means of a "pool" of all the available shipping resources under proper and equitable administration. If Movements Control have a well thought out scheme to attain this end, it will certainly have the sympathetic consideration of the trade interests concerned.

Some activity has continued in the Export Jute market and prices, which in most instances had been sagging, show in the case of Daisee and Tossa descriptions, slightly steadier tone. White jute is, however, still a drug on the market and prices are hovering around minimum levels. Sales have been reported in Old Crop Dundee Tossa 4s for export at Rs. 80 and Rs. 80-8, while for New Crop of that description Rs. 81-8 was paid. New Crop Short Group Daisee has been done at Rs. 87, Rs. 87-8 and Rs. 88, while Dundee Daisee has hardened from Rs. 77-8 to Rs. 78. Mills have shown little interest thought business was reported in the end of last week in Old Crop Firsts at Rs. 82 and in New Crop at Rs. 84.

The coal situation has dominated the market for Loose Jute and Mills, with the future in this respect so obscure, have been showing no interest whatever. With no buyers in evidence, sellers have shown some anxiety to secure orders and have indicated their willingness to accept some reduction in price. But it is doubtful if a reduction of four annas would bring out buyers even to a limited extent, and until the extent of the crop is more clearly indicated, dealers would be rash to discount to any great extent. As we remarked last week the Official Forecast has thrown no light whatsoever on the position. At the time of writing the consolidated Forecast has not been issued, but whether this is likely to illuminate the obscurity is extremely doubtful. The Crop still has two hurdles to negotiate before it can be considered secure. One is a sufficiency of steeping water, which with the slow rise in river levels, is still a snag to be encountered. The other is the possibility of floods if the short rainfall is made up too copiously or too suddenly. Cutting is being accommodated to the rise of the rivers and has not proceeded to any great extent yet. Other things being equal, this will result in a heavier outturn, but it is not secured yet, though prospects generally are good.

There is no change to record in the Fabrics market. Ample buying interest is in evidence but mills in present circumstances of coal supply are not disposed to commit themselves for further sales till goods are actually manufactured and off the looms. Business is therefore restricted to whatever small balances of goods become available from time to time.

JUTE

(By Our Staff Correspondent).

Calcutta, July 13.

The raw jute market has been rather quiet during the past two weeks. With the deterioration in the coal position and the anxiety to await further arrivals, mills have virtually stopped their purchases in the market. With publication of the local stock figures of hessian and sacking revealing a big decline in stocks over the figures for the previous month, it would have been normally expected that mills would have been even more anxious to secure their requirements of jute. But at the present moment even the electrically-driven units seem to be threatened with a reduction in the supply of energy. In the circumstances with more arrivals of jute in upcountry centres and the satisfactory reports from the jute districts sellers have been rather eager to do business for the better grades. A discount has been offered for both old and new crops though for Jat varieties sellers are not prepared to reduce their prices. For district jute quotations are 4 annas to 8 annas lower according to districts.

In the loose jute section, business has been very restricted and small lots of Supervised Jat Middles and Bottoms were done at Rs. 16-12 and Rs. 13-12 per maund respectively. District jute were lower at Rs. 16-4 and Rs. 13-4 per maund for Middles and Bottoms.

In the pucca bales section the export business has been more brisk and business has been reported over a longer list. With the weakness of the loose jute section, however, quotations are lower. Short Group Daisee were Rs. 86-8 per bale, Dundee Daisee 2/3 Rs. 77-8 per bale and Dundee Tossa 4's Rs. 81-8 per bale. Old crop Dundee Tossa 4's were sold at Rs. 80 per bale for July shipment with sellers over.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, July 13.

In the jute manufactures market very firm conditions are noticeable and there are practically no sellers for deliveries for any position in 1944. The large decline in local stocks has created an impression that sooner than later a position would develop in the market in which great difficulty would be experienced for jute goods. A further drop in coal supplies and the reduction in supply of energy to the electrically-driven mills will only worsen matters. Quotations are nominally at maximum rates with no business of importance reported.

In the heavy goods section also sellers are very firm in their ideas with buyers prepared to enter into contract for delivery on any date at maximum rates. Only a very small business was done in standard goods.

Local stock figures for the month of June, 1944 make very interesting reading. The decline in respect of hessian stocks is as much as 11,961 tons and on account of sacking 13,170 tons. It is significant to note that of the total decrease in stocks, the offtake in respect of both hessian and sacking, on commercial account during the month has been larger. Hessian stocks on civil account at the end of May were 44,942 tons. They declined to 38,309 tons by the end of June. Stocks on military account were 48,383 tons and 43,037 tons respectively on these two dates. Sacking stocks on civilian account on May 31, 1944 were 115,608 tons and on June 30, 1944, 105,124 tons. On military account, 12,131 tons and 9,445 tons respectively. Owing to the difficulty in respect of coal supplies production during the month of June must have been lower but it can be safely said that the bulk of the decrease in local stocks was mostly on account of increased shipments. Stocks of manufactured goods at the end of the season June 1943-44 were thus at the lowest level for nearly two years. Figures are given below:—

Description		31-3-1944	31-5-1944

GOLD

(From Our Correspondent)

Calcutta, July 13.

Firm conditions prevailed in the Bombay gold market till Wednesday this week. Towards the close a slightly easier feeling was noticeable in sympathy with the decline in silver prices. It is rather surprising to note that in spite of the rise in the quotation for gold to above Rs. 75 the Reserve Bank has not come out as an active seller. Gold ready quoted as high as Rs. 75-6 and forward at Rs. 75-2. The close is lower at Rs. 75-1 and Rs. 74-12 respectively. The daily offtake is around 50 bars.

SILVER

(From Our Correspondent)

Calcutta, July 13.

The silver market was very firm. The artificial scarcity in the market has been mainly responsible for the recent upward movement in prices. It is reported that some merchants have represented the matter to the Bombay Government and have asked for facilities for importing silver from neighbouring states. If only it were possible to bring in supplies from Rajkot and Kathiawar markets it would be possible to bring down silver prices substantially. Meanwhile, the communique issued by the Government to the effect that the recent lend-lease supplies of silver have been acquired for both coinage and sale to the public has been welcomed and there has been a drop in prices to Rs. 133-12 towards the close from the highest level of the week of Rs. 137. Discount for forward over ready has narrowed to Re. 1-8 per 100 tolas from as much as Rs. 4 per 100 tolas last week.

COTTON

(From Our Correspondent)

Calcutta, July 13.

The Bombay raw cotton market was very weak early in the period under review with the stoppage of buying by Government agents. Mills automatically withdrew their support in the ready market. The resumption of buying in the latter half of the week, however, and the firmness of bullion prices have resulted in a slight improvement in rates. There has been selling at the higher levels. The close is quiet with Jharilla July quoting Rs. 401 and September Rs. 414-4. There was a rise in the quotation to Rs. 406 and Rs. 421 respectively in mid-week.

three passengers FOR EVERY SEAT

It is a long time now since there was a seat for every passenger. Now it's three passengers for every seat in nearly every compartment of every train that ever leaves a platform.

Add to that the difficulty of persuading a tonga or garri-wallah to take you to the station for twice the normal fare—of getting a ticket at a crowded ticket office—of finding your luggage and a porter to carry it, and you start to wonder whether travel is worth while these days!

For even when you are safely on the train, you have such difficulties as that of obtaining food at stations. It is neither as cheap nor as plentiful as it used to be. For women especially, travelling to-day is more uncomfortable than ever before. Women's compartments are fewer, and over-crowding for them is even worse than for men.

No, travel is not what it was. Nor CAN it be in wartime when the Railways have other important tasks. They have to transport food, clothing, fuel and other supplies for you in addition to military traffic.

Travel less

Vol. XXXIV. No. 2 SATURDAY, JULY 15, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

FURTHER RISE IN PRICES

It appears that the appetite of the speculator has been rather whetted by the recent decision of the Committee of the Calcutta Stock Exchange to restrict trading to 1½ hours per day as from this week. The rules regarding deliveries are strictly enforced and certain measures have been taken to prevent illegal trading. It was at first expected that the insistence on correct deliveries would eliminate weak holders and restrict speculative activity to a great extent. But beyond a slight reduction in the volume of business within the restricted hours there is no suggestion of any setback in prices. Rather after two days of hesitant trading the upward movement has been again resumed and at the time of writing on Friday quotations for some of the popular counters are at new high levels for the year. It is reported that there is a heavily oversold position in some of the counters. Accordingly, Indian Iron closed on Friday at Rs. 43-1, Burrakur at Rs. 44-12. Howrah at Rs. 85-4. South Karanpura at Rs. 26-8 and Steel Corporation at Rs. 36-8. It will be clear that the rise in prices in the last two days has been aggressive. A good proportion of the shares of the more important companies is held by strong bulls and they are determined to get as high a price for their holdings as is possible under the present circumstances. Bears have been obliged to pay a heavy penalty in the bargain. It is not clear at the present moment whether it would be possible to maintain prices at the higher levels after the technical position is adjusted. It might be that with the investment of black money there would not be any sharp setback in prices but genuine investors would do well to take their profit at every rise. It is rather significant to note that during the past four days not much of business has been transacted in the purely speculative counters.

* * * *

The accounts of the *Titaghur Paper Mills Company, Limited* for the half-year ended March, 1944 reflects in full the difficult conditions experienced by the industry both in regard to the supplies of essential raw materials like bamboos, chemicals and coal. While the scarcity of raw materials for production resulted in an increase in working expenses, the inadequate supply of coal restricted production seriously. Total sales in the six months were thus Rs. 30 lakhs lower at Rs. 1.33 crores. The reduction in sales, however, is to a certain extent due to the lower prices realised on Government sales. The net profit, before providing for taxation and depreciation, is only Rs. 40,47,926 against Rs. 79,70,680 for the previous six months. Provision for taxation is naturally lower at Rs. 24,56.169 against Rs. 53,30,000 while the amount set aside to depreciation is not very much changed at Rs. 3,65,538 (Rs. 3,52,395). The provision for Deferred Mill Renovations is Rs. 2 lakhs (Rs. 12,03,951) while the transfer to Debenture Redemption Reserve is Rs. 2.5 lakhs (same). Other funds receive Rs. 1 lakh against Rs. 1.1 lakhs. But for the reduced provision for taxation and Deferred Mill Renovations it would, perhaps, have not been possible to maintain the dividend on the 'A' and 'B' ordinary shares. The dividend of 8 annas per share, with the bonus of 4 annas per share, makes 12 annas per share, the same as for the previous six half-years.

* * * *

The outlook for the paper industry is rather confused at the present moment as the level of production is dependent upon the receipt of supplies of bamboos and coal in adequate quantities. The lower level of prices on paper supplied to Government departments should also affect earnings but in view of the fact that the dividend on ordinary shares has been earned many times over, even during the last accounting period, there should be no difficulty in maintaining the distribution at the same level.

* * * * *

Since the end of the half-year under review an arrangement has been made whereby the prices paid by Government for paper will be considerably reduced, but Government will make good any trading loss which may be incurred by the Company through causes not under its control in the event of its production of paper falling below four-sevenths of normal. As this will remove the greater part of the risk of loss arising from the possibility of shortage of raw materials the directors consider that the Company can afford to accept the lower prices offered by Government. The price reduction, effective during the nine months April to December 1944, will be about 15 per cent of the price received during the six months October 1943 to March 1944.

* * * *

B. I. Electric Construction Company, Limited has made very good progress in recent years. The net profit, before providing for taxation and depreciation, for the half-year ended December, 1943 is perhaps the highest in the history of the company, the same before providing for taxation and depreciation being Rs. 1,45,890 against Rs. 89,319 for the half-year ended June 1943. The increase in earnings, however, has not been of any advantage to shareholders as the bulk of the increase has been taken up by additional provision for taxation, the actual provision being nearly double at Rs. 1,03,000 (Rs. 50,800). The sum set aside to depreciation is Rs. 15,412 (Rs. 15,830). A sum of Rs. 5,000 was written off for goodwill in the previous half-year in addition. After transferring Rs. 25,000 (nil) to Stock Reserve the dividend has been maintained at 5 per cent. The amount carried forward is lower at Rs. 24,089 against Rs. 34,112 brought in. The works continue to be fully employed during the half-year and a satisfactory turnover was achieved.

* * *

The Chairman of Estrela Batteries, Ltd. a very thrusty infant whose growth may be judged duly by the results turned in last year dwelt on the company's sales policy and profit limitation by consent, as well as the prospects for motor car battery manufacture this year in the favourable circumstances. The paid-up capital of Rs. 5 lakhs for a company still in a dynamic stage appears small so that the impending issue is of great interest to shareholders. The dividend record (7 per cent again) is not the only material factor. Post-war prospects justify the adoption of a forward policy, to be financed as usual by the issue of new shares. The company has made a useful addition to reserve, and its report and accounts are commendably informative. The company's own contribution to war work in India certainly makes the issue more than a matter of local or particular interest and gross earnings on capital put at 30 per cent certainly put the company ahead of wartime concerns in point of performance and promise.

Bombay Investors and Indian Stock Exchanges:

TATA STEEL 1943-44 EARNINGS

TEXTILE ISSUES MOVE UP

(By ANALYST)

Bombay, July 13.

Due to talks of early termination of the war and some forecasts that the war will be over in October Steels and Cements were again in the limelight. *Tata Steel* deferreds were done up to Rs. 2,295 and ordinaries up to Rs. 436. For the year ended March 31, 1944, gross profits were substantially higher than those for the previous year but the net profit, after providing for taxation and depreciation of Rs. 120 lakhs, amounts to Rs. 2,86,29,145. It is stated in the report that Tatas have completed negotiations for acquiring mining rights over 13,000 bighas in order to ensure adequate supplies of coaking coal for many years and that a joint-stock company subsidiary to the steel company to operate the colliery involving an investment of about 40 lakhs will be registered.

* * *

The output of saleable steel during the year was the second highest on record and the output of steel ingots was the highest on record. As mentioned last week, the directors have recommended the maintenance of a dividend of Rs. 129 per deferred and Rs. 23 per ordinary share.

* * *

There was heavy gambling in Indian Irons and Steel Corporations due to continuous buying from Calcutta. Calcutta was always quoting eight to ten annas higher than Bombay since Calcutta brokers who have sold short were prepared to pay higher premium for immediate delivery. I prefer a switchover from Indian Irons and Steel Corporations to Tata deferreds. I would definitely recommend sales of Indian Irons and Steel Corporations at current levels and reinvest the proceeds in Tata Steel deferreds at a later date when there is a reaction in deferreds of about 100 to 150 points. Tata deferreds have moved up to Rs. 2,290. In the last two weeks due to heavy short position *budla* against the seller was Rs. 10 to Rs. 12-8 per share. But I find this week that the oversold position has been corrected and the budla rate has come down to Re. 1-8. Hence it is just possible that we might get the shares a little cheaper. But I would recommend investors to watch the market and buy Tata deferreds on every reaction in view of excellent post-war prospects.

* * *

I have several times mentioned that Cements are a cheap buy in view of the possibility of a building boom in the post-war period. *Associated Cement* were in good enquiry up to Rs. 235 as against Rs. 229 last week and closed slightly lower at Rs. 233. I recommend investment purchases around Rs. 230.

* * *

For substantial capital appreciation among Burma scrips, *Bombay Burmah* shot up to Rs. 490 and the new shares to Rs. 170. Despite this spectacular rise I feel these shares still have scope for substantial capital appreciation, particularly after the termination of hostilities. *Burma Corporation* also moved up to Rs. 4-8 and *B.B. Petrol* were done up to Rs. 3-11. *Indian Copper* seem to have got the fancy of the speculator suddenly. Last week itself, these shares rose by four annas and closed at Rs. 3-7. I look for a further rise in this scrip.

Textiles in Bombay also were in better enquiry. *Bombay Dyeing* were done up to Rs. 1,930 though they closed at Rs. 1,922½. *Kohinoor* moved up to Rs. 635. All other popular scrips are also better in Madras probably due to strength in Calcutta and Bombay. Most of the scrips moved up. *Lakshmi* were better at Rs. 197, *Sitaram* at Rs. 202, *Mettur Industries* at Rs. 283, *Vasanta* at Rs. 320 and *Buckingham* at Rs. 310. The only scrip that did not improve this week was *Madura Mills* which was steady around Rs. 69. This is due to the fact that there has been some selling on behalf of a deceased estate.

* * *

Mysore scrips, which had a severe decline due to the breakdown of the power plant, have again come into favour since investors have begun to feel that all the companies would be able to start work in a month or two. *Mysore Chemicals and Fertilisers* which declined from Rs. 41 to Rs. 33-12, are to-day in good demand around Rs. 37. *Mysore Manufacturers* having lost ground from Rs. 47 to Rs. 38 were in demand to-day at Rs. 42 with no sellers in evidence. A scrip like *Mysore Lamp* which was around Rs. 31 last week is reported to have changed hands around Rs. 36-8. This week, among other Chemicals shares in Madras, *Mettur Chemical*, after touching a low of Rs. 21, are again better at Rs. 22-8. I had sometime ago mentioned that somewhere around Rs. 20 they are a very good buy.

* * *

The Plantation section, which was lifeless up till now, has had some activity this week-end. Most of the popular scrips have moved up sharply in the A. V. Thomas Group. *Midland* on the declaration of an interim dividend of 6¼ per cent suddenly shot up from Rs. 14 to Rs. 15-8. *Rajagiri* also moved up from Rs. 15 to Rs. 16-8. As Rajagiri also paid an interim dividend of 6¼ per cent last month both the companies have a five-year dividend record. Among other shares in the plantation group *Cochin Malabar* were done up to Rs. 20. I still recommend retention of holdings since I expect a good rise in this scrip.

* * *

Among Teas, *Peermade* were in good demand up to Rs. 52. For conservative investors they are a good buy. *Haileyburias* were on keen demand around Rs. 38-12. It is reported that the new board of directors will declare a dividend of Rs. 3 per share next month. *Highland Produce* after declining to Rs. 36, are again better at Rs. 37. It is expected that the dividend for the year 1943 will be rather disappointing; might be only Rs. 2-8 to Rs. 3 as against Rs. 5 per share paid in the previous year. But I understand that the current year's working is excellent and, therefore, there is a possibility of getting a good interim dividend. If the shares should decline to Rs. 33 or so I would favour investment purchases.

* * *

Among new flotations, I mean companies floated last year, *New Glen Morgan Estates* are likely to pay a maiden dividend of 5 per cent. Whereas *Nelliampathy* might pay a dividend of 6 per cent in the Coffee Group I hear *Sheveroys* have done very well and that the directors might decide on a dividend of 7½ per cent tax-free after writing off a portion of the preliminary expenses, etc. *Nilambur Company* are reported to be issuing one share for every ordinary share held at Rs. 10 premium and at the same time two 6 per cent tax-free preference shares at par to the existing shareholders. *Nilambur Rubber Company* paid a dividend of Rs. 2-8 per share tax-free. Nilambur Ordinary shares have always been popular in the market as an investment scrip. They are quoting around Rs. 33. I recommend investment purchases of ordinary shares at Rs. 33 cum-right for the new ordinary as well as 6 per cent tax-free preference shares.

* * *

It is understood that the capital of the Travancore Fertilisers is going to be increased. Travancore is also contemplating the formation of a shipping company with a capital of ten lakhs.

BASANTI COTTON MILLS, LIMITED.

NOTICE is hereby given that the Eleventh Ordinary General Meeting of the above named Company will be held at the Registered Office, 14, Clive Street (Top Floor), Calcutta on the 15th day of August, 1944, at 11 A.M., for the following purposes:—

(1) To consider and adopt the Directors' Report.

(2) To consider and adopt the Statement of Accounts and Balance Sheet for the year ended 31st December, 1943.

(3) To sanction the declaration of Dividends.

(4) To elect Directors.

(5) To appoint Auditors.

(6) To transact any other business that may be transacted.

The Share Transfer Books of the Company will be closed from the 29th July, 1944 to the 15th August, 1944, both days inclusive.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 14.

VERY active conditions were noticeable on the Calcutta Stock Exchange in the early days of the week and a further rise in prices was recorded. Firm conditions have continued to prevail in the last three days though business has been restricted by the decision of the Committee to reduce the number of working hours to one and a half a day. As there was a large speculative business and considerable difficulty was experienced in regard to the adjustment of transactions, the Committee considered it necessary to square up existing business in order to comply with the regulations of the Ordinance promulgated some months back. It was at first expected that insistence on deliveries and the elimination of weak holders would result in a substantial decline in prices but for the more popular counters values have been fully maintained and, in some cases, new high levels have been registered. The undertone is very steady and it looks as if the upward movement will continue uninterrupted.

In the giltedged securities section firmer conditions have been noticeable with 3½ percent. Paper higher at Rs. 99-10. Among terminable loans 3 percent 1953-55 were Rs. 100-9, 3 percent 1951-54 Rs. 100-15, 3 per cent 1963-65 Rs. 99-4, 3 percent 1966-68 Rs. 98-6, 3½ percent 1947-50 Rs. 103-6 and 4 percent 1960-70 Rs. 112-10. 5 percent 1945-55 were very steady at Rs. 105. No business has been reported in Provincial Loans.

In the banking section, *Bharat Bank* Ordy. were quoting Rs. 116 while *Hind Bank* were crossed at Rs. 62-8. *Imperial Bank* Conty. were steady at Rs. 505 as also *Reserve Bank* at Rs. 136-8. There has been a sharp rise in the quotation for *United Commercial Bank* to Rs. 40 premium from Rs. 31-8 at the end of last week.

In the Coal section, enquiry has been sustained for the regular dividend paying shares though earlier in the week there was a slight setback in the quotations on the decision of the Committee to reduce the number of working hours. *Burrakur* came down to Rs. 40-7 from the highest level of Rs. 43 but the lost ground has been very nearly recovered and the quotation is around Rs. 42-12. *Equitable* came back to Rs. 65-14 but are now again higher at Rs. 68-12, *New Beerbhoom* are quietly steady at Rs. 41-5 while *Bhulanbararee* have been very firm at Rs. 32-12. *Bokaro & Ramgur* have not been very active being quoted at Rs. 44-12. *Central Kurkend* are a shade easier at Rs. 31. *North Damuda* were steady at Rs. 12-15 and *Raneegunge* at Rs. 52-12. *Standard* have recovered slightly to Rs. 40-2. *South Karanpura* fluctuated in very wide limits, the quotation at one time being as low as Rs. 24-4. They are now quoting Rs. 25-10. *Talcher* were sticky at Rs. 12-2 and *Bhalgora* at Rs. 18-12.

In the Jute section there has not been any appreciable change in prices. There is considerable anxiety in regard to deliveries of Coal to the jute industries. If only it could be assured that the level of production at the mills would be kept at a high level, there is good scope for an increase in earnings especially as jute prices are tending to be lower. *Anglo-India* have improved to Rs. 495 from Rs. 484 at the end of last week; *Adamjee* and *Agarpara* were unchanged at Rs. 39-8 and Rs. 39-12 respectively. *Barnagore* were quieter at Rs. 232-8 but *Champdany* were very steady at Rs. 274. *Ganges* have registered a rise of 20 points to Rs. 575 while *India* have been very active being done up to Rs. 725 from Rs. 680 on Friday last. *Howrah* fluctuated around Rs. 83 while *National* were Rs. 35-10, *Nuddea* Rs. 140 and *Presidency*

BHARAT STARCH & CHEMICALS LTD.

NOTICE is hereby given that the next Ordinary General Meeting of the Shareholders of Bharat Starch & Chemicals Ltd., will be held at the Company's Registered Office at 5, Royal Exchange Place, Calcutta, on Monday the 31st July, 1944, at 4 p.m. for the purpose of receiving the Directors' Report, adopting and passing the audited accounts of the Company for the year ended 31st January, 1944, for declaring dividends, election of Directors and for appointment of Auditors.

TEZPORE TEA COMPANY, LIMITED.

NOTICE.

The Twenty-sixth Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta on Thursday the 10th August, 1944, at 12 noon, for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the year ended 31st December, 1943.

(2) To declare Dividends.

(3) To elect a Director Mr. H. Rowan Hodge retires by rotation from the Board, and, being eligible, offers himself for re-election.

(4) To elect Auditors for the current year.

The Transfer Register will be closed from the 27th July, 1944, to 10th August, 1944, both days inclusive.

By Order of the Board,
SHAW WALLACE & CO.
Managing Agents.

Calcutta, 12th July, 1944.

Rs. 11-12. *Rameshwara* have been rather neglected at Rs. 20-4.

In the Engineering section, *Indian Iron* were fluctuating rather widely between Rs. 40-4 and Rs. 41-12. The close is very steady at the latter figure. *Sttel Corporation* have been in great demand and there has been a rise of 2 points in the quotation to Rs. 34-8. Even at this level there are unsatisfied buyers. *Bhartia Electric Steel* were quiet at Rs. 21-12; *Braithwaite* at Rs. 13-2; *Jessop* were very steady at Rs. 26-12 ex-dividend while *Marshalls* were a shade easier at Rs. 5-10.

Sugar shares are firmer with *Belsund* Rs. 17-8, *Cawnpore* Rs. 41-14 and *New Savan* Rs. 23-8. *Ramnugger Cane & Sugar* were not much higher at Rs. 15-4 while *Darbhanga* were unchanged at Rs. 35-4.

Business in the Tea section is rather restricted. *Tezpore* were Rs. 19-6, *Choonabhutti* Rs. 750, *Eastern Cachar* Rs. 14-4, *Gungaram* Rs. 583 and *New Terai* Rs. 28-8.

In the Miscellaneous section, *Burma Corpn.* quoted Rs. 4-10. There has been a sudden rise in *Indian Copper* to Rs. 3-8, *Karanpura Development* were unchanged at Rs. 39-8, *Assam Bengal Cement* Ordy. were a shade easier at Rs. 18-8 while *Dalmia Cement* were steady at Rs. 19-12. *Alkali & Chemical* were Rs. 38-7, *B. I. Corpn.* Rs. 6-10, and *British Ceylon Corpn.* Rs. 22-11. There has been a sharp rise in *Aluminium Corpn.* to Rs. 23-8. *Calcutta Trams* were a strong feature being done up to Rs. 45-14. *Rohtas Industries* were fluctuating around Rs. 40-8, *Midnapure Zemindary* have improved further to Rs. 193. Among shipping shares *I. G. N.* were crossed at Rs. 182. *Port Shipping* were very firm at Rs. 30-12. Among Paper shares, *Titaghur Paper* A and B were steady at Rs. 30-2, *Mysore Paper* at Rs. 32-4 and *India Paper Pulp* at Rs. 230. Business in preference shares has been rather small. *Steel Corporation* have risen to Rs. 137. Among jute mill preference shares *Bally* were Rs. 184, *Hukumchand* Rs. 169 and *Lawrence* Rs. 161-8.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. By order of the Board,
BIRD & CO.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, the 5th July, 1944.

COMPANY MEETING

ESTRELA BATTERIES, LIMITED

CHAIRMAN'S FORECAST OF PROFITABLE DEVELOPMENTS: 30% ON CAPITAL EARNED

The Fifth Annual General meeting of the shareholders of Estrela Batteries Ltd., was held on the 11th July, 1944 at the Registered Office of the Company. Mr. Choonilal Girdharilal, the Chairman in moving the adoption of the report, for the year ending 31st March, 1944, said:—

Gentlemen,

On behalf of myself and my co-directors, I have great pleasure in welcoming you to this meeting. The report for the period under review is circulated and with your permission I take it as read.

Your directors are fully alive to the necessity of planning before production. This is how we have succeeded in increasing quality production, both in variety and quantity. We have manufactured important Dry Batteries of complicated construction vital to Defence Communications, in spite of several handicaps which are peculiar to the Indian Industry due to wartime conditions. You will be glad to know that this has materially contributed to the increase of our production. Our efforts to evolve methods of manufacture of new types of batteries are going on in our Research Laboratory, and we expect further profitable developments. These batteries are such as are very likely to be in great demand in the near future for certain vital requirements.

The working of the Company during the period under review has resulted in a net profit of Rs. 1,31,123-1-11 after providing for all expenses of Manufacture, Management and maintenance, as well as Bonus and other welfare expenses for the benefit of operatives and the staff. At this stage I should like you to remember that your company is under the statutory control of the Department of Supply of the Government of India and is exclusively engaged on war production. Most of these orders are on cost plus profit percentage basis. This percentage as fixed by the Government for the period under review was appreciably lower than in the preceding accounting period. It is even lower than our usual standard of profit, and is accepted by your directors in a spirit of healthy co-operation, keeping future and peacetime prospects before view. For supplies to the Trade under a system of authorised releases, we have maintained our Policy of Standard Profit on Production cost in spite of all round very high price levels. This has been done because your directors have always kept the consumers' point of view before them while fixing sale policy and price. We are sure that this figure of net profit, when judged in the light of this explanation and in relation to our paid up Capital, will appear very encouraging.

We have recommended a dividend of Rs. 3/8/- per ordinary share standing from 1st April 43 and Rs. 1/12/- per share alloted on 14th September and participating from 1st October 43 which works out to 7 per cent. on the paid up capital. Like us, you all gentlemen are concerned with stability and steadiness of the policy of your company and will therefore easily appreciate our conservatism in this respect.

A few words here about the taxation policy of the Government will not be out of place. I have no hesitation in describing this policy as unscientific, and to say the least, devoid of any appreciation of the requirements of the industry in the postwar period: requirements which will become extremely pressing as a result of war-time working. There has been country-wide protest against such a policy but there is still no indication of any change. Let me strongly hope that the Government will realise before it is too late the harm that they are doing to the industries of this country. Let them also keep before them the experience of all prosperous countries that it is the industrial prosperity that will build up the national greatness of a country. It does not require much explanation from us to convince you that building up of reserves under such a mistaken policy of industrial taxation, is an extremely difficult process. Still I am glad to report that your directors have kept before them this necessity and in the current year, as in the previous years, have made provision for setting aside a reasonable amount for this purpose out of the profits in spite of the very heavy tax-burden. This amount is in addition to the Compulsory Deposit.

Gentlemen, I think you will like me to tell you the direction of our future progress and the planning that we are doing. Your directors have given information about this in their report now before you. Without taking your time by details, I may say in short that our immediate plan is that of expansion of our Dry Battery production to meet government requirements for which we have been given all requisite facilities. This has necessitated substantial increase of our Capital and our proposals to raise our capital to Rs. twenty five lacs, which have already been circulated to all the share-holders, will be placed before you immediately this meeting is over. The perusal of the last three years' accounts will show an average yearly net profit of about thirty percent on the Company's paid up capital for the respective years. Elsewhere in the speech, I have referred to our peace-basis price policy. I think I am not only voicing the feelings of my co-directors but also of you friends, when I say that we can look to years of steady progress in the present and in the peace period that will follow this greatest of all human tragedies the world has so far seen. All possibilities and expectations at reasonably valid considerations will be given in the Prospectus, and therefore I refrain here from taking your time. Our proposals have met with very encouraging response and I am glad to report to you that arrangements are complete to place the whole of our new Issue immediately it is sanctioned by you and placed on the market.

I should here not omit to mention the valuable co-operation of my friends on the Board. Very often this may have meant some inconvenience to them; but still they have given it willingly for the proper administration and benefit of the company and I must not miss this opportunity to thank them all here.

The staff and the operatives of the Company have done all they could to keep up production and progress in spite of several war-time handicaps. Our success is in no less degree due to their devotion to duty and I appreciatively record their performance in the period under review.

In my opinion, the report and these remarks of mine give you a fairly clear picture of our position and prospects. I now request you to adopt it.

Before I conclude, I have a sad event to recollect. We all deeply mourn, the sad demise of Seth Dhunji Devsey who joined the first Board shortly after its formation, and I appreciatively put on record his contribution to the well-being of the company as a director.

I thank you, gentlemen."

(Half-yearly General Meeting on 26th July, 1944 at 3-45 p.m. Transfer books closed from 12th July to 26th July, 1944).

Audited accounts for the half-year ended 31st March, 1944:—

After allowing for taxation, including E. P. T. etc there is a balance of Rs. 15,91,757-4-3. There has been set aside for Depreciation Rs. 3,99,458-15-5. Transfers have been made to:—Provision for Defd. Mill Renovations Rs. 2,00,000; Debenture Redemption Reserve Rs. 2,50,000; Labour Quarters and Welfare Rs. 50,000; Indian Workers and Mill Staff Pension Funds Rs. 50,000. The balance remaining after giving effect to these transfers is Rs. 6,42,298-4-10, which, together with Rs. 2,52,529-9-7 brought forward from last half-year, gives a total of Rs. 8,94,827-14-5.

It is proposed that the balance available for distribution be disposed of as follows:—

(1) In paying a Dividend on 1st Preference Shares at the rate of 8 per cent per annum, without any deduction for Income-tax paid by the Company Rs. 46,000. (2) In paying a Dividend on 2nd Preference Shares at the rate of 5 per cent per annum without any deduction for Income Tax paid by the Company Rs. 37,500. (3) In paying a Dividend on Preferred Ordinary Shares at the rate of 10 per cent per annum without any deduction for Income Tax paid by the Company Rs. 21,875. (4) In paying a Dividend on "A" and "B" Ordinary Shares of As. 8 per share, without any deduction for Income-tax paid by the Company Rs. 3,50,150. (5) In paying a Bonus on "A" and "B" Ordinary Shares of As. 4 per share, without any deduction for Income-tax paid by the Company Rs. 1,75,075. (6) In carrying forward Rs. 2,64,227-14-5. Total Rs. 8,94,827-14-5.

During the period under review the Mills were compelled to restrict production owing to shortage of raw materials, but particularly on account of the inadequate supply of coal to the mills. For this reason the mills are still producing less paper than in normal times and considerable anxiety is felt regarding supplies during the coming year.

Manufacturing costs show further increases due to the mills having to run below their full capacity and due to the further increases in the prices of raw materials. The demand for bamboos for constructional purposes continues, causing the price of this raw material to rise to further high levels. Only very small quantities of bamboos are now obtainable from the areas that in normal times supply the bulk of the Company's requirements, and supplies have, therefore, to be obtained from other areas over much greater distances, thereby greatly enhancing the problem of transport.

The Welfare Stores at each Mill continue to function satisfactorily and, since the introduction of the Government rationing scheme into the outer industrial areas, the shops have become registered Government supply centres and are called upon to supply a greater number of customers than formerly.

Negotiations have been proceeding with the Central Government for some time regarding paper prices. Since the end of the half-year under review, however, an arrangement has been made whereby the prices paid by Government for paper will be considerably reduced, but Government will make good any trading loss which may be incurred by the Company through causes not under its control in the event of its production of paper falling below four-sevenths of normal. As this will remove the greater part of risk of loss arising from the possibility of shortage of raw materials, the Directors consider that the Company can afford to accept the lower prices offered by Government. The price reduction effective during the nine months April to December, 1944, will be about 15 per cent of the price received during the six months October, 1943, to March, 1944.

The liability for Compulsory E. P. T. Deposit of approximately Rs. 12,00,000, has now been agreed with the authorities at Rs.11,75,701, which has been paid since the close of the half-year. A further sum will become payable when the liability to E. P. T. for the year to 31st March last is agreed. No credit has been taken into the Accounts for amounts which will be repayable by Government from E. P. T. on account of the Optional Deposit made in 1942 or in respect of Compulsory Deposits made or to be made. Further, no credit has been taken for the interest accruing on those deposits.

As hitherto, Rs. 50,000 has been allocated to Labour Quarters and Welfare Reserve and a sum of Rs. 50,000 for investment by the Trustees of the Mill Staff and Workers' Pension Funds. The nominal value of investments held by the Trustees on account of the two funds on 31st March, 1944, was:—(a) Indian Workers' Pension Fund Rs. 5,45,500. (b) Indian Clerical Staff Fund Rs. 2,38,700.

Managing Agents.—Messrs. F. W. Heilgers & Co.

Authorised, Issued and Subscribed Capital—Rs. 65,89,000 in 11,500, 8 per cent Cum. First Pref. of Rs. 100 each, 15,000, 5 per cent 2nd Cum. Pref. of Rs. 100 each, redeemable on or after 30th September, 1946 at a Premium of Rs. 51,75,000 Pref. Ordy. of Rs. 2-8 each, 3,50,000 'A' Ordy. and 3,50,300 'B' Ordy. shares, both of Rs. 5 each, all fully paid up.

Synopsis of the balance sheet as at 31st March, 1944.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD.

Audited accounts for the half-year ended 31st December, 1943:—

After providing for Depreciation and Taxation, the profit for the half-year was Rs. 27,477-14-4 to which is added the balance brought forward of Rs. 34,111-1-10, making a total of Rs. 61,589-0-2. Out of this amount the Directors have set aside Rs. 25,000 for Stock Reserve, leaving a balance of Rs. 36,589-0-2 available for distribution, which they recommend be dealt with as follows: Dividend at the rate of 5 per cent per annum Rs. 12,500 and Carry forward Rs. 24,089.

During the half-year the Works continued to be fully employed and a satisfactory turnover was achieved.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ltd.

Synopsis of the balance sheet as at 31st December, 1943.

HOOGHLY MILLS COMPANY LIMITED

Audited Accounts for the year ended 31st March, 1944.

The result of the year's working is a profit of Rs. 1,98,159-6-5 less provision for Income Tax and Super Tax Rs. 1,10,107-15-0, add Refund receivable on account of Excess Profits Tax Rs. 1,93,023, Surplus E.P.T. Reserve written back Rs. 874-11-0, Credit Balance brought forward from previous year Rs. 81,645-11-11 which leaves a balance of Rs. 3,63,594-14-4.

It is recommended that this should be disposed of as follows: (1) Preferential Dividend at 10 per cent. without any deduction in respect of Income Tax payable by the Company: Rs. 1,17,600, (2) Ord. Dividend at 40 per cent. or Rs. 4 per share without any deduction in respect of Income Tax payable by the Company Rs. 1,63,000; (3) Carry forward Rs. 77,994-14-4.

Jute in Stock and Process and Goods in Process have been taken into account at cost price and Manufactured Goods at contract rates or market value.

Under the Indian Jute Mills Association Working Time Agreement the mill was permitted to work the following hours during the year:—

1st April to 16th May, 1943, 60 hours weekly with full complement of looms.

17th May to 13th June, 1943, 54 hours weekly with 10% looms sealed.

14th June to 25th December, 1943, 54 hours weekly with full complement of looms and one week closure monthly.

26th December, 1943 to 31st March, 1944, 54 hours weekly with full complement of looms.

Owing to shortage of Coal and Labour, it was not possible for the Mill to work the full complement of looms and hours permissible under the Working Time Agreement and the average working of the Mill was 51 hours per week.

Managing Agents.—Messrs. Gillanders Arbuthnot & Co.

BANK RESULTS
THE BANK OF INDIA, LIMITED

The transactions of the past six months have resulted in a profit of Rs. 35,83,189-9-1 from which sum has to be deducted Rs. 16,50,000 for Income Tax, Super Tax and Excess Profits Tax, leaving a net profit of Rs. 19,33,189-9-1 for the half-year ended 30th June 1944. To this amount has to be added Rs. 9,85,827-4-5 brought forward from the last account making a total of Rs. 29,19,016-13-6.

This sum the Directors have disposed of as follows:—

In payment of an interim dividend at the rate of 11 per cent. per annum (Rs. 2-12-0 per share) free of Income Tax, on the Paid Up Capital of Rupees One Crore for the half-year ended 30th June, 1944 which absorbs Rs. 5,50,000; carried forward to the next account Rs. 23,69,016-13-6.

IMPERIAL BANK OF INDIA

We are informed that the Directors of the Imperial Bank of India at the Meeting of the Central Board held at Bombay on Monday, the 10th instant, declared a dividend to shareholders for the half-year ended 30th June, 1944, at the rate of 12% per annum, payable on and after the 17th July, 1944.

The profits available, including Rs. 47,30,500 brought forward from the previous half-year, amounted approximately to Rs. 92,32,700 which sum was disposed of as follows:—

	Rs.
I. Payment of a Dividend of 12 per cent. per annum free of Income Tax	33,75,000
II. Transferred to Reserve Fund	7,50,000
III. Transferred to Pension Funds	1,01,900
IV. Bonus to Staff	3,50,000
Carried forward to next half-year	42,55,800
	93,32,700

The average rate for Demand Loans during the half-year was 3½%.

THE CENTRAL BANK OF INDIA, LIMITED

The net profit of the Central Bank of India Ltd., for the half-year ended 30th June 1944, subject to audit, including the amount brought forward from last year's accounts, amounts to Rs. 46,96,409 which the Directors have resolved to dispose of as follows:—

	Rs.
To pay an ad-interim dividend at the rate of 10 per cent. per annum, free of income-tax for the half-year ended 30th June 1944	3,40,660
Bonus at annas 4 per share to Shareholders ..	1,68,132
To carry forward to next half-year's account, subject to provision for taxation	36,87,617
	46,96,409

PLANS FOR THE TRANSITION

(Special for "Indian Finance")

WASHINGTON, (*By Cable.*)

The Congressional Recess left only one measure enacted among the many necessary to readjust the nation's economy to peacetime conditions, but Congress through its Committees has instituted studies into virtually all phases of re-conversion. It is expected that when the National legislature reassembles it will increasingly pay attention to the means of cushioning the economic shock of transition.

The measure passed provides for an orderly method of terminating the multi-milliard dollar war contracts. There has been insistence, in the Nation's responsible press and in some areas close to the Administration, that Congress should adopt legislative policies for re-conversion on the ground that it must be planned well in advance of an actual return to peace. There is evidence that the downward trend in war spending has begun. In fact, Congress voted 67 billion dollars in new funds for the war during the last 5½ months whereas last year it voted 114 million.

Typical comment is that of the widely-read "Baltimore Sun" "Reconversion is not a future problem whose legislative aspects may be taken up in a leisurely manner. It is a physical fact already upon us, certain to increase in intensity, rising toward climax when Germany has been defeated, and even greater climax when Japan too is smashed into surrender." The master plan for reconversion is the Baruch-Hancock report, which many responsible circles feel that Mr. Roosevelt has not sufficiently backed. On the legislative side the report calls for measures dealing with surplus property, extension of price control law, priorities and allocations, powers of the War Production Board, assistance to small plants, the immediate enactment of post-war tax law, and public works. Most of these necessaries are being studied now by Congressional committees however and price controls are assured for another year.

The most important step toward the disposal of surplus property abroad meantime was taken by the Foreign Economic Administration which issued a report advocating that disposals on a world-wide scale must be undertaken on sound business lines by a corporation run on a profit-making basis. The report said that goods should be sold as much as possible for American Dollars but shorterm, credits should be arranged where advisabie. The Export-Import Bank could make loans to countries lacking foreign exchange, whenever it is in keeping with foreign policy.

TREASURY BILLS

Central Govt.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, July 18, 1944. Total amount offered was Rs. 9,07,25,000. Tenders at Rs. 99-14-3% were accepted in full and those at Rs. 99-14-0% were allotted approximately 39%. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-7-10% per annum.

Tenders for Rs. 4,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, July 25, 1944 in Bombay up to 11 a.m. (standard time) and up to the close of business on Monday, July 24, 1944, at other centres. Successful tenderers should make payment on Friday, July 28, 1944. Other conditions are as usual.

During the week ended July 14, 1944, Government of India Treasury Bills for Rs. 3,76,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Room for Hope?

The Bretton Woods Conference is apparently expanding on unpremeditated lines. Besides the International Monetary Fund, the international bank is also being considered by the delegates assembled at Bretton Woods. The broad problem of better regulation of international finance in the post-war period is being attacked from many sides; and the results are somewhat confused. News reports have perhaps added to, rather than minimised, the points of obscurity. There has been in some instances more than the usual chain of statements and contradictions. It is still too soon to say whether the Soviet delegation has agreed to give the figures of Russia's gold production. Strangely enough, little has been said of the fate of the references to Moscow, for which the delegates were reported to have been waiting anxiously. But it appears now that the earlier reports of disagreement between the Soviet and other delegations were exaggerated, if not wholly unfounded, and that the atmosphere is one of agreement on certain basic principles. Only on that basis could one understand the question of the International Bank being taken up and three commissions carrying on their deliberations at about the same time.

Sentiment in international conferences is more often than not misleading, either because it may be feigned or because it is unrealistic. If the view is correct that work in regard to the International Monetary Fund is far advanced and that the question of the International Bank is being taken up in the hopeful spirit resulting from the earlier success, it is necessary that we should not be misled by the sentiment which is said to prevail at the moment at Bretton Woods. Assuredly, the course of the International Monetary Fund has not run smooth. Apart from the lot of the Indian Delegation, which has turned out to be worse than we thought last week in a mood of forced optimism, the agreement which has so far been reached seems to be of the tentative and patched up kind. It is said that the question of national quotas to the Fund has been settled and that the commission feels like proceeding on this basis to the question of the constitution of the Executive. Of India, it may be said without hesitation that the quota fixed is clearly unacceptable, since it puts her outside the group of nations who have permanent seats in the Executive. If the Indian Delegation continues to participate in the conference, it can not be in any other spirit than that of exploring possibilities without commitments. Even were the quota satisfactory, the agreement is clearly subject to ratification by the Assembly. What is important is that India is not alone in this conditional agreement. Even over the American Government, hangs the Damocles' sword of the Silver Bloc in the Senate. The gold contribution of the occupied countries seems to be another source of disagreement. In any case, it is difficult to believe that the vexed question of quotas is so easily got over. No nation is likely to benefit by the superior wisdom affected by a news agency which observes that the Monetary Fund is a technical organisation in which votes are irrelevant.

On the basis of the quotas as at present fixed, the quotas of the United Kingdom and the Dominions are together less than that of the U. S. only by 800 million dollars. Five executive Directors are to be allocated to the five countries holding the highest quotas, namely the U.S.A., the U. K., Russia, China and France. "Two directors," it is said, "will be allocated to the American republics and the remaining five making a total of 12 will be decided by election." A comparatively less contentious matter is the creation of the gold reserves of the Fund. Fifty per cent of the gold earmarked for the International Monetary Fund will be stored in the U. S. Forty per cent will be stored in the United Kingdom, Russia, China and France, and the remaining ten per cent will be allocated between the other member States.

While India may not be very particular about the location of the Fund, she has every reason to disagree with the present allotment of quotas and the constitution of the Executive based thereon. Disappointment in this country must be keener because earlier reports indicated the constitution of a Big Six instead of the Big five that has now been decided on. Scrutinising the claims of the nations which have now been awarded permanent seats in the Executive, it will be clear that, while the importance accorded to France is out of the force of habit, the other four are only what are known as the principal allied nations pitted against the Axis powers. It will not, we trust, disturb the goodwill between India and China if we emphasise here that there is little or no reason for China having greater prominence or importance than India in the International Monetary Fund. Her foreign trade in the immediate pre-war years was a fraction of India's and even as far back as 1929, it was by no means equal to it. To-day, as a result of the protracted war with Japan, her currency system is disorganised. Inflation is on a much larger scale than in India. And in the post-war period China's position, financially or economically, will hardly bear comparison with India's. It seems to us that the only reason for including China in the Big Five is that she is considered to be one of the four anti-Axis powers. India is not, for the matter of that, less opposed to the Axis than China; nor is her war effort less considerable. In these circumstances, India can hardly consent to a lower quota and denial of a permanent seat in the Executive.

As for the amendments proposed by the Indian Delegation and rejected by the Conference, it would appear that Sir Shanmukham Chetty and his colleagues are still battling bravely for their acceptance by the Conference in some form or other. Indeed, India's position in this matter is so just and reasonable that it is impossible that it will not gain in general appreciation. In the case of the U.N.R.R.A., efforts were made by the Executive to accommodate themselves to the Indian contention. A similar development seems to have been afoot, though there have not yet been any appreciable results. In any case, the question of India's sterling balances has received publicity in a proper setting. And the need for this publicity has increased recently since in Britain, the Press and some Cabinet members, too, have succeeded in overcoming their initial qualms over partial or covert repudiation of the sterling debts owed to India. Since India is not the only creditor to Britain and since sterling will not be the only currency in which large balances will be held by foreigners, some reasonable provision for the liquidation of these war time balances is indisputably a matter of international concern. Those who talk in the House of Commons as if India's Sterling balances are a conditional gift of Britain's—the condition being non-use!—do not realise that their talk must in the end be as ineffective as it is now unedifying. This is not to say that India will be able to have unqualified command of her sterling balances. But opinion is growing that if the Indian amendment is thrown out, it is not because that war balances are not an international concern, but because the International Monetary Fund is concerned with current payments arising from international trade. This is more than implicit recognition that some international committee or other has to take up this question and arrive at a settlement which will be complementary to the agreements on the Monetary Fund. At the moment there is no room for hope that the Bank will take up what the Fund has left out. Lord Keynes is reported to have said that "the Bank will not compete with the U.N.R.R.A. because the Bank would enter the reconstruction picture after the U.N.R.R.A. had provided first aid. The United States may have to provide the cash but all the participating countries would share the risk." Financial reconstruction can, on this basis, be included within the scope of the Bank's activities and there is no reason why the Bank should not be called upon to assist the orderly liquidation of war time balances and thus help debtor, creditor and world trade, all alike.

Beyond the Shortage

More than one official conference relating to the coal industry followed the introduction of control which applies to prices as well as distribution. Interest more than usually attached to the schedule of prices fixed last month for all fields and most grades because it was assumed that the Board under the Coal Commissioner (for whom a new organisation within the Supply Department has been created) would make sure of an early increase in coal production. But almost at the same time appeared notices calling attention to the seasonal migration of labour and the imperative need to put the coal mines' labour requirements ahead of all others. So far the available information suggests there has been no real increase in raisings in the first half of 1943. The special measures including the suspension of the ban on female labour underground must be reckoned a qualified success. The last year for which coal statistics are available is 1938 and the wagon-loading figures of recent months afford no indication of what is happening in the industry. There is however the dissatisfaction of essential consumers and brief and pointed references to the jute industry's fuel problem have made it very clear that war work, which has suffered in the past, may suffer again. The adherence to old procedure in respect of quotas and distribution under the system of priorities and rationing suggests that other industries though not coal-mining may continue to experience difficulties.

This is certainly a discouraging background for the industiral development planned for India. How the coal industry works is known through the reports of two committees. How

mining labour has shared in the general improvement of wages and other conditions is even better known but caution against undue optimism given six months ago by the Indian Mining Association's Chairman and the Bengal Coal Co.'s Chairman appears fully justified. The warnings against immediate and considerable improvement in output and transport did not however deter investors from taking a very confident view as to coal prospects generally; for, the decline in the chief collieries' raisings and despatches did not affect the market view so much as the increase in dividend in two cases; the inaugural payment to shareholders after a long drought or the resumption of dividends in another case. The optimistic view certainly persists though explanations as to coal shortage, the labour supply scheme and food supply in the mining areas have not met fully the usual points raised previously as to the need to afford complete guarantees. It is difficult to believe that the usual calculation as to difficulties is offset by modifications in control organisation

Much of the discussion has avoided separate mention of the peculiar problems of small Indian collieries, while the kind of organisation adopted in Britain has escaped notice because of the view that re-organisation there is merely a result of labour disputes. There is perhaps no reason to suggest that royalties here complicate the position to the extent that the shortage of stores and spares does or the lack of mechanical coal cutters does. Why? Special lease-lend imports to the advantage of the mining industry have not been secured as in Britain. That may not claim so much attention (though only 203 coal-cutting machines were used in 72 mines) as the non-fulfilment of hopes that special military equipment would be released for surface mining. Various, fecund and plausible as rumours have been, none have referred directly to recent improvement in output. As to the course or quantum of profits in a period of rising costs (to which the new welfare cess must be added) evidence is scarcely available, and mere maintenance of dividends is, by no means, a clue to the changing fortunes of the industry. Though the industry has shifted rapidly away from the railway tenders and even more from the export trade, it is clear that when the war ends both will exert a determinate influence on coal prices and supplies. The very large increase in South Africa's coal output during the war should, however, be remembered; so also the Union Government's plans for state-owned shipping. There is also the further consideration that railway collieries producing more coal to order may limit the future demand for coal, apart from the increased use of oil, gas or electricity. What is however sustaining general faith in the coal industry's prospects is not the rise in prices (average for 1943 was Rs. 7-8 per ton against Rs. 4-14 in 1942) offset by equivalent rise in wages and other costs but the increase in industrial consumption. There may be no definite evidence as to this relating to the past year, but up to 1939 the takings of coal by brick-makers, iron and brass foundries and cotton mills showed a steady increase from year to year. The undeniable pressure on supplies from the middle of last year was due less to the permitted exports than to the lack of plans for fuel economy. But it is interesting to find even now that appeals for fuel economy are not official but are made by the industry directly to consumers. These appeals may reflect the stock position as well as the trend of production, for which reason alone it is necessary to say that improvement in transport may have taken place. But amalgamation and integration in the industry, as distinct from transfers of ownership has not been a direct result of control measures. If there are no special financial handicaps, it is essential to remember that long spells of depression were the rule, and temporary advantages obtained in respect of the bonus for production over a stipulated quota may count for little unless there is a distinct and separate assurance as to the 9 million tons (about 30 per cent of Indian coal production) that Government takes for the Railways. As the chief consumer, Government has taken direct responsibility for control measures in force but a system of regional subsides may be needed in the future to promote development of coal deposits in the Punjab and the Frontier. What reported occurrences are now to be called commercial, and why, concerns more than the industry at present. So far as can be seen the concentration or irregular distribution of coal resources is the original cause of the shortage and what mining finance is going to accomplish in this field is scarcely to be inferred from the changes in proprietorship for nothing quite comparable with the holding company and the international finance house that takes care of the gold-mining industry can be imagined.

The sweet little darling taking his first steps evokes joy to the loving hearts of his parents. But the life ahead of those tiny feet a long, long walk and the path is not easy. So it is important that the same loving care that guided his first steps may be extended to protect his future and here comes the question of Life Insurance for the parents.

Howrah Insurance, at the helm of which is KARMAVEER ALAMOHAN DASS, offers a genuine and careful service for planning the future of your children and its Policy Schemes combine all that is best in Life Insurance.

Editorial Notes

No Slow Growth

The Indian public will naturally feel a degree of impatience with the pace prescribed for the Indian aircraft industry by Sir Frederick Tymms in his address to the Delhi branch of the Institute of Engineers. Sir Frederick would seem to look at the question as a problem of remunerative business rather than as one of vital importance to the nation, from more than one point of view. In a vast undeveloped country like India, pins are not the only things which can be industrially produced with profits; and the days are long gone by when a nation's production schedule was determined solely by comparative costs and margins of profit. India will need a lot of persuasion to believe that her lot as a free nation will be cast in a more secure world than we have known till now. If, as Sir Frederick is reported to have said, a country which wishes to start manufacturing aircraft must first learn to use them, it is also true that both tasks can be attempted and accomplished in more or less the same time. In any case, difficulties can only dissuade those who are ready to succumb to them. An aircraft industry is a national necessity. Given that recognition, the stages indicated by Sir Frederick will regain validity. From servicing to assembling, to manufacture of various types of aircraft is a normal development, which does not however, preclude a forcing of pace.

Achievements of Textile Control

Judging alike by the experience of the average man and by the report of the Chairman of the Textile Control Board cotton cloth control is without question the best part of the present system of price control. In his report at a recent meeting of the Board at Bombay, Mr. Thackersey claimed not only a reduction in the price of cloth by about 60 per cent from the pre-control level, but also an increase in Indian cotton mill production to 4,800 million yards last year, as against the average mill production of 3,500 million yards prior to the war. Handloom production, too, has increased considerably and is expected soon to reach 2,000 million yards. Out of about 6,800 million yards of domestic production 1,200 million yards were earmarked for export and the defence services, leaving approximately 5,600 million yards for domestic consumption. That, Mr. Thackersey emphasised, "must clearly prick the bubble of cloth scarcity". For the period ahead, the Chairman of the Textile Control Board emphasised the importance of some provinces getting abreast of Bombay in the stiffening of control measures through prompt action against infringement of the rules. Some of the Indian States are notorious for serving as "a fertile field for fictitious transactions and benami sales by many traders and illicit exports". Not only should these loopholes be plugged, but care should also be taken against production being reduced by worsening of the coal position or by more serious scarcity of fuel. The repercussions of coal shortage are not easy to predict. It is to be hoped that before they become more serious and far-reaching, effective measures will be taken to prevent a fall in cotton cloth production. The success of cotton cloth control, which is in many respects a contrast to other control measures, is probably to be attributed to the fact that in this sphere the Government has had to deal in the main with an organised large-scale industry spread all over the country. What was at the beginning of control apprehended as a handicap has, in actual experience, proved to be a powerful help. If we may judge by the experience of the cotton cloth control, it would seem that in agricultural products control starts with a serious initial handicap.

Invasion Boom

The U. S. Congress, given a holiday to work for the party Convention, is likely to take little note of difficulties over prices and wages. The economical Convention equipped with female ushers is not going to be less important because Mr. Dewey has duly decided that the U. S. A. is more important than New York State. Share prices have risen steadily during June with U. S. Steel in the van because the Republican chances are rated high. The Administration is likely to use its war record to stay in office while the Republicans are likely to throw up the deficits of 12 years in the teeth of the electorate. Political markets do not mean any departure in policy but Mr. Dewey who is still vague about U. S. foreign policy did not show enthusiasm for Lease-Lend when it appeared. A Republican victory may not lead to unscrambling of policies applied, but U. S. tariff adjustments will not follow, and hard money men will be more influential. The silver bloc let down by the Treasury last year obviously got a hearing when the U. S. Government decided to lease-lend 100 million ounces of silver to India. The expected fall in silver prices has continued into this week. The bloc would certainly be weaker if the Democrats are beaten in this year's elections. What appears good for U. S. industrials may be bad for mining shares but U. S. markets of late go less by earnings statements than by political intelligence. The steady rise in Wall Street has been a material factor in raising prices of jute shares although it is known that manufacturer's difficulties are not limited to coal supply.

Demand for Doctors

In advance of the recommendations in regard to public health in India comes a demand for more doctors for India. Professor Hill's assumption that health comes before food or roads may be correct in cer-

tain respects but his forecast as to the report of the survey committee would be pretty drastic does not imply a demand for doctors. How far expanded military demands have restricted civilian's medical facilities must be understood before the usual comparison with Britain's health services can be made. The voluntary system is unknown outside Bombay. Hospitals are few in India because private enterprise in this field has been deficient. The demand for more doctors is, in the main, a demand for more medical colleges. When existing colleges suffer from handicaps accurately listed by visiting commissions, deputed by the body that can withhold recognition, mere multiplication offers few possibilities. Whether swift improvement in health would bring about an increase in real income also would appear debatable. The prescription that the food supply must be increased threefold in the interests of health points to a divergence of opinion between the Government of India and its quondum scientific adviser. The more important difference really lies in the approach. Prof. Hill advocates more education rather than the swift setting up of key industries in the immediate future. In the scheme of development, framed as an alternative to disaster, agriculture takes the first place; for, the population problem, in Prof. Hill's view, overshadows every other. In the official reconstruction plans the census results hardly find any mention though the soil comes before numbers. The effects of vastly improved health upon natural increase and the expectation of life in India are however likely to disagree with expectations. The full re-shaping of health policy is hardly required, for the Provinces have long accepted the duty to cure and prevent disease. Only the means in the form of doctors and medicines have been lacking. Development towards self-sufficiency in any respect is however a long way off, since the degree of educational advance that would increase the supply of doctors in India sevenfold cannot be expected, particularly when the funds and equipment are not available. Yet sincere advice may lead to real changes in the objects of public expenditure in the near future. Central grants proportioned to independent effort may be approved as correct, and farther demobilisation regulated in a way to promote public health besides road-making and road transport. A pamphlet last year put the facts as to health before the public and made it fairly plain that local autonomy was a danger. Concentration of control as well as unavoidable increase in expenditure may seem anything but a counsel of perfection.

Competition in Insurance

Figures as to competition in insurance business are always interesting and the 1942 yearbook makes it clear that 11 British life offices operating in India had more income in single premiums than in renewal premiums partly because annuity contracts were numerous in relation to total business, and partly because the class of client or policyholder is different. In relation to total new business the British life offices' Indian business is inconsiderable and only three offices issued policies exceeding 1000 in 1942. The average value of each policy was certainly higher than the average of Rs. 2,158 claimed for Indian insurers. The premium income of non-Indian life offices in 1942 amounted to Rs. 398.83 lakhs while their total assets in India namely Rs. 28.13 crores were approximately equal to 5 percent of their total life and annuity funds though the proportion must be really less as many offices do not give returns. The ratio of premium income to assets in India is relatively higher. But the leading Indian offices were ahead of non-Indian offices in 1942 as usual in regard to new business for the total for non-Indian offices was about Rs. 6.4 crores against Rs. 36.47 crores for the Indian insurers and in respect of the business in force also the totals are 14.6 million policies for the Indian insurers against 196,431 policies for the non-Indian offices which had Rs. 72.4 crores worth of business in force as compared with Rs. 250.68 crores worth of business—the aggregate total for the Indian insurers in addition to Rs. 15.92 crores worth of business in force outside India. It is only in respect of non-life business, particularly, marine insurance that the non-Indian insurers are definitely ahead of Indian offices. British offices obtained Rs. 364.2 lakhs out of Rs. 531.4 lakhs as premium in 1942, but the expenses and claims paid are not recorded in the yearbook. Non-Indian insurers held in India assets valued Rs. 33.15 crores while Indian insurers" assets at the end of 1942 exceeded Rs. 96.7 crores. The year-book records a noteworthy departure in marine insurance of goods and also of country-craft by several Indian companies following the special encouragement given to coastal trade by country-craft.

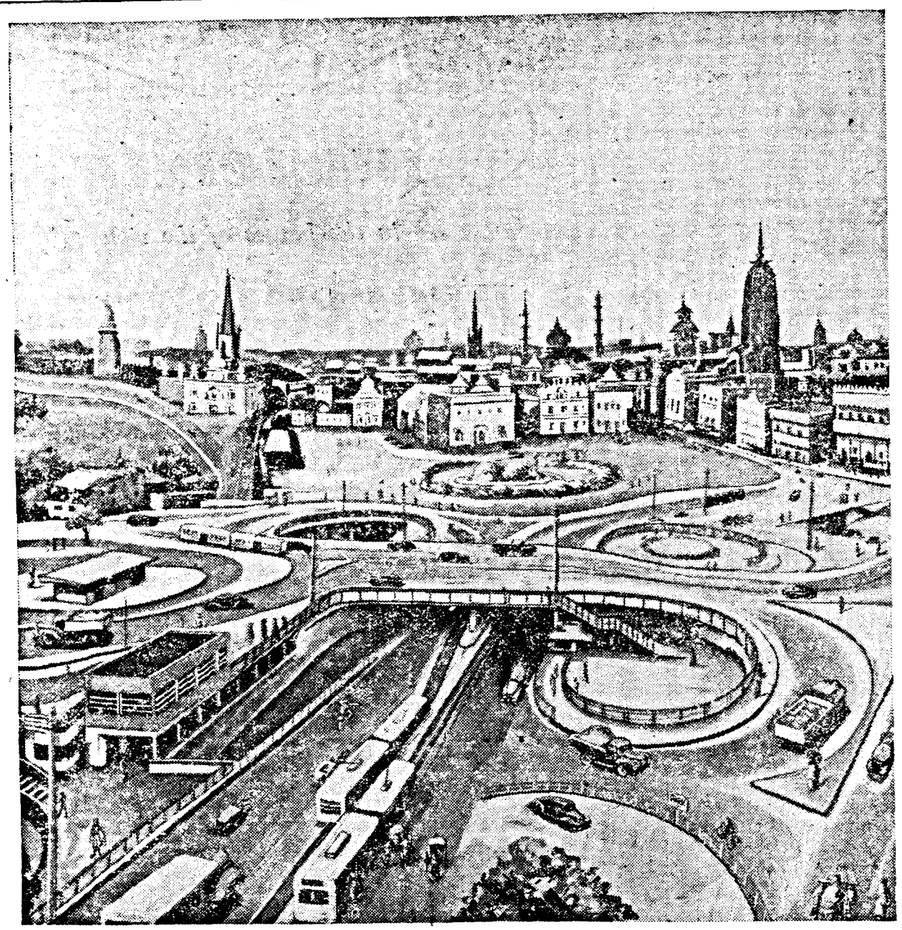
prevents want
in the homes of the poor

THERE was a time when we loved to entertain lavishly in fact, it was a sign of a large heart and a generous disposition. Indian hospitality was one of our greatest traditions which was cherished in thousands of well-to-do homes. But that time has now passed. Rationing, and all-round good management, are helping to relieve the food situation, but every extra economy still eases the plight of some hungry man, woman or child somewhere in India.

THIS is no time for feasts, and even in everyday life we can reduce the number of dishes served at each meal. This is our definite obligation to the less fortunate. By preventing waste in our homes we are doing something really useful. Let us intensify our efforts from to-day.



A.A.A. 781.

A symphony in safety first..

This type of road junction is already in use in the U.S.A. and Europe. Built of reinforced concrete and supported by bastions of steel, its smooth curves and steady gradients drastically reduce road accidents. No form of traffic can ever possibly meet head on.

The Economic Development of India will require many more thousand miles of highways of trade, linking the villages with industrial centres.

In bridges and in metalled roads steel will proudly play its part.

More Bases

The withdrawal of the Japanese fleet to the Philippines has helped the U.S. forces to conquer Saipan. Japan's bases in the Central Pacific have disappeared one by one and the attack on Guam means that the U.S. fleet is closing in on the Philippines. The Marshalls, the Carolines and the Marianas are part of Japan's pre-war possessions. Other islands, too, have been attacked of late and a second raid from China on Kyushu last week has been a reminder of the Japanese naval air-force's ineffectiveness at present. Before the war it was claimed that the Japanese Navy had 4000 planes to support a fleet not much inferior to the U. S. fleet in the Pacific. That claim is now without foundation since air losses (in the Marianas mostly) have been so heavy as to force the fleet to avoid a decisive action. There may be no immediate connection between the failure of the offensive in China and the loss of a valuable air base in the Central Pacific. The operation may, however, strengthen the U. S. claim to the use of islands taken over in war for the development of civil aviation. Every island gained makes the unofficial claim to maritime and air supremacy impregnable. The problem has not been solved by consultations in London though agreement as to the very limited propriety of subsidies has been apparently reached. The future value of airfields apart, the success of the U. S. Navy in taking over bases means that Japan's communications with her new territories are more precarious than ever. From the Kuriles to the Solomons there has been a piercing at vital points of Japan's only frontier, the Pacific Ocean. That may influence the course of the war in both China and Burma. The fact that over three weeks were needed to force the Saipan garrison to cease resistance does not imply that in the Philippines or the N. E. I. resistance will be on the same scale or in the same degree. In the Occupied regions (the islands of the S. W. Pacific are different) the apathy or hostility of the natives may compromise Japanese resistance.

Yet, this is exactly what happens every time you make an unnecessary purchase. The prices of most things are abnormally high and you lose money every time you buy something you do not really need. Be wise. Do not buy unless you must. Wartime prices are *bad* value for money.

You risk your money if you buy jewels, land, buildings, commodities or manufactured goods. Their prices are subject to fluctuations and make no mistake, the trend of prices is now *downward* and not upward.

These investments are both safe and profitable:

★ Insurance,
★ Co-operative Societies,
★ Savings Bank,
★ Post-Office Savings Bank,
★ Government Loans and
★ National Savings Certificates.

The returns on a safe investment may be smaller, but the capital is secure - and that is what counts during wartime.

Clive Street Gossip

Last week was released to the press the momentous correspondence in which the central figure was the Mahatma and the central theme was his reaction to the situation in 1944 as compared with the situation in 1942, and his attitude vis-a-vis the political deadlock. At will, Gandhiji can commandeer front-page prominence and headlines monopoly in the world press, excite universal controversy and compel comment in every paper which claims any status in any part of the globe. Sub-editors get excited, editors thoughtful, and even Eavesdropper serious. Thus it was that the week I spent in Bombay after a week in New Delhi, interesting though this fortnight was in many ways, did not figure in my last instalment of gossip. Mahatma Gandhi has followed up with further statements which are designed to clarify his views and reinforce the stand he has taken. In some quarters, however, these statements have not helped towards the clarification of matters; and, actually, the complaint is made that unnecessary confusion has now been created, the advice to the Mahatma from this school of thought being that, for the time being, he should hearken to the wise saying which stresses the golden virtue of silence. Space permitting, I shall deal, in a later context, with this week's remarks of Gandhiji. The opening paragraphs of today's gossip must, however, be devoted to the diary of events in Delhi and Bombay.

* * *

In the despatch I sent a fortnight ago from New Delhi, I had narrated the results of my discussions with Sir Akbari Hydari with regard to the relief which periodicals might expect in the application of the Paper Control Order. The subsequent developments in this matter imply a change of scene to Bombay where was held the conference of representatives of presses, periodicals and paper dealers. Before I take leave of Delhi, however, I must refer to the activities of the Department of the Examiner of Capital Issues, particularly as an interesting chapter of new work has opened for this department by the Government Notification specifying the conditions under which capital can be raised for issues connected with post-war enterprises. For the securing of Government's approval for the inclusion, in the scope of the capital control order, of concerns to be started during war time but for the launching of enterprises after the war, "Indian Finance" may claim some share of the credit as the Government communique is in line with the suggestions contained in our editorial on this subject. The regulation of capital as such has been a matter of much concern to "Indian Finance" which has always raised a plea against mushroom companies and against concerns whose bonafides in every way have not been fully proved. From this point of view, the inauguration of capital control was welcomed as likely to play an useful part, if wisely administered, in reducing the number of bogus new issues to a minimum. After a year's working, it is the unanimous verdict that Sir Alan Lloyd has wisely administered the control and sympathetically but firmly dealt with the cases that came up before him. Till recently, the point of view from which Sir Alan was called upon to administer the control order was the prevention of inflation. That is to say, capital control was introduced mainly from anti-inflationery objectives. A further responsibility has now been imposed upon him in so far as the examination of proposals for postwar enterprises raises considerations which are not directly connected with inflation. A new set of criteria is to be evolved, and one may be sure that Sir Alan will show the same judgment and insight in the devising of these criteria as he showed in the enunciation of principles from the point of view of anti-inflation. So far as I could gather, the applications already received in respect of postwar issues will involve a total capital of Rs. 25 crores. Sanction has been accorded for cases whose total capital will amount to between Rs. 10 crores to Rs. 15 crores. In the light of this record, everyone will agree that the original charge of sinister motives in the initiation of capital control has been totally falsified.

* * *

The conference convened by Sir Akbar Hydari in connection with the Paper Control Order was far larger and more representative than one would have expected. The big hall in the Textile Controller's Office was packed to the full; and there were representatives of all the organisations and interests affected. By universal accord, so to say, Mr. Manu Subedar, who attended the conference as the representative of the Indian Merchants Chamber, became the spokesman of the Opposition. Many speeches were made at the opening session, these leading up to the appointment of a committee for exchanging views and embodying final recommendations. This committee under the Presidentship of Mr. Subedar made a list of over a dozen recommendations. Sir Akbar and his official advisers attended the afternoon session of the committee and went in detail through the whole list of recommendations. On the following day, the full session was held again, at which Sir Akbari explained Government's final decisions on the recommendations of the committee. Some valuable reliefs have been promised. But, as one of the speakers wailed, "Sir, you have given us a kick, and you want to know whether it is a hard kick or a soft kick." Sir Akbar pleaded guilty to the charge of the kick but strove his utmost to make it as soft as possible. The meeting dispersed with a general feeling that Sir Akbar had gone as far as he could and that the control order would be operated rigorously but sympathetically.

* * *

The most important concession is this: While the over-all cut must be 30 per cent, individual cases will be examined on their merits and, where necessary, the cut will not be so severe. Sir Akbar made it clear that, deliberately, the Government had reserved discretion to reduce the cut to 40 per cent instead of 70 per cent. "It is up to each periodical to make out its own case, and we shall certainly be prepared to be less severe in deserving cases"—this was, in effect, the assurance of the Industries Secretary. The second point was that the quota allowed for each paper was not to be taken as a weekly or monthly quota as the case may be but the average of a quarterly quota. This should help a great deal in the adjustments which will greatly mitigate the severity of the cut.

* * *

Those papers who can change over from printing paper to newsprint are assured of a more generous treatment—this is the third important concession. It was pointed out to Sir Akbar that the new order must come into force from September 1. He could not agree to this suggestion but assured the members that, where immediate adjustment is not possible, each individual case on its merits will be given some reasonable latitude of time. At the same time, Sir Akbar also excluded uncompleted work from the operation of the order.

* * *

As the victims of the Paper Control Order met in the conference hall of the Textile Controller's Office, they had occasion to get a glimpse of the plight of the victims of another aspect of the dread control exercised by Sir Akbar. I could snatch only a few minutes to call on Mr. Vellodi and congratulate him on the expeditious and efficacious work which his department has done. But I could see that the organisation he is now the head of and the activities he has to guide and direct are sturdily growing bigger and bigger. The building adjacent to Sudama House has been requisitioned. Various technical officers and supervisory officers are busy as bees. I have no doubt that the black market in cloth as such in Bombay will, in a few month's time, be a thing of the past. One wishes that similar drastic administration is possible with regard to cloth in other parts of India.

* * *

There is an important point which I would like to commend to the attention of Sir Akbar and Mr. Vellodi. It is now proved that some influential persons have lent support and assistance to black market activities. The exposure of some of these individuals will go a long way to the securing of enormous public support against black market activities. Some of the cotton mills in the Western Presidency have been taken over by the Government in view of their past record as regards co-operation with the policy of the Textile Commissioner. I suggest that the books and records of these mills must be carefully examined by auditors and lawyers so as to find if they provide information about the wiles, strategems and manipulations which those associated with cotton mills have pressed into service with regard to the creation of black markets in money and in commodities. If the investigation of these records discloses any connection with individuals, however high-placed, any evasion of taxes or promotion of black markets, they should be sternly brought to book.

* * *

I find that I have still a little space left in which to redeem my promise to consider the political situation in general and Gandhiji's statements in particular. A week has sufficed to bring out to the public the wisdom of the move taken by Gandhiji and C.R. in relation to the Government and the League. Of course, in this country there never is a dearth of stupid or malevolent—the two are really not so different after all—criticism. But neither Gandhiji nor C.R. has to learn to deal with such criticism. Gandhiji's statements, as a rule, and particularly after he has made a historic decision, are a treat to the reader. Since he has thought out in advance all the connected issues, he has little difficulty in answering criticisms. He has only to lay bare the workings of his mind for his opponents to be discomfited. What is the difference between 1942 and 1944, ask many. Obviously, time. According to Gandhiji the two main differences are firstly that he has knowledge of the response which the people made to the call of the August resolution and secondly that he now knows, as he did not know before, the progressive starvation of the people. "I would be unworthy of my creed if I failed to make of use of all the resources of head and heart that God has vouchsafed to me for discovering a solution of the deadlock." "Enter with me" says Gandhiji to his critics, "into the sufferings not only of the people of India but of those, whether engaged in the present war or not, of the whole world." That is the answer to all the criticisms that have been made. It is justification of such changes as one may see in Gandhiji's opinions and attitude. It is a powerful plea for a National Government in India. It is the motive which should actuate other parties in the country. The intricacies of ordinary party politics are being attended to at the same time by C.R.

* * *

As I said, a week has sufficed to bring out the wisdom of the moves taken by the two great leaders. The League has been obliged to take informal notice of the C.R. formula. Resolutions are being forwarded to the League by individual members suggesting changes in the formula for consideration. The suggestion has been made that all Muslim parties should meet together to discuss the position. Mr. Jinnah's hauteur will be duly toned down. As for the British Government, Mr. Amery has had to meet more than the usual barrage of questions. And Mr. Eden has announced that the Commons will have a debate on India in a week's time. Meanwhile Lord Wavell has kept silent. I shall say no more than that Lord Linlithgow would have dealt a long rigmarole with the prior consent of his chiefs at home.

"EAVESDROPPER."

Estrela Batteries

As it was known recently that Estrela Batteries, Limited is increasing its capital the prospectus published to-day will quicken interest far beyond Bombay in the affairs of that very progressive concern. Though the present issue is offered in the first place to the Company's existing shareholders, intending applicants should do well to look over the audited figures of profits in relation to the tax-free dividend of 7 per cent paid for the last two years. The manufacture of dry cell batteries and sales under official supervision have been mentioned in relation to contemplated departures in production. Official encouragement in many ways, in ample measure is promised already to Estrela and the substantial increase in its paid-up capital now is meant to advance the successful pioneer's interests. Profits under control have risen steadily and the advantages promised to the country by developments in store should alone create special interest in the Company's new shares. The Directors and friends have taken up 8000 ordinary and 8000 preference shares out of the present issue of 20,000 ordinary and 20,000 preference shares. Since the shares are meant to develop a running concern whose wage roll and net sales figures for three years in succession are completely reassuring there should be very considerable support from investors who need not be reminded that electrical equipment shares generally are different from other industrials, being safer than most.

OBJECTS OF THE COMPANY.

1. The Company has been formed for the purpose of carrying out all or any of the objects set out in its Memorandum of Association and particularly to manufacture, sell and deal in Dry and Inert Cells and Batteries, Accumulators and Motor-Car Batteries, Flashlights and other Allied Articles and Materials.

The Battery Industry is a major industry of National Importance in every advanced country. The Dry Batteries are popular articles of daily recurring necessity, and are extensively used by every class of people in every city, town and village all over the country. The Car Batteries are indispensable to every type of Motor-Vehicle. The Batteries are used in Radio and other Communication sets, in signalling Instruments and Lamps, in Medical and Measuring Instruments and Apparatus, Railways, Telephone and Telegraph Services, Ships and other Sea-crafts and Air-crafts consume them in quantities. Besides their very extensive civilian use, these are amongst the vital requirements of Defence Services, both in peace and war times. The Flashlights and other Allied Articles that the Company proposes to manufacture have also very extensive use, both by the Civilian Population and the Forces. The peace-time yearly consumption of Cells, Batteries, Flashlights, etc., the products with which the Company engages itself, is very large and the bulk of this before the war was supplied by U.S.A., U.K., and other Countries. With further Industrial Development and with the 'Establishment of Motor Car' and other Industries in India, the yearly consumption will be increased considerably. Besides the requirements in Cells and Batteries is essentially of a 'Recurring Necessity' because of the very nature of these articles. The Industry has thus a very large and growing Home Market and bright Prospects.

SPECIAL ADVANTAGES.

2. The natural advantage to this Industry is that several of the Materials required in the manufacture are either available in our Country or can be made from basic raw materials obtained from indigenous sources. Manufactured components, such as Carbon Electrodes, can also be made from indigenous materials. The importance of the Industry can be judged from the fact that the Dry Battery Manufacture was one of the first industrial schemes to be tackled by the Council of Scientific and Industrial Research of the Government of India. The Company has acquired sole rights from the Council for the two processes worked out by them for the treatment of Manganese Dioxide and for the manufacture of Carbon Electrodes.

PRESENT POSITION.

3. The Company is the First Indian owned Company to manufacture successfully on a large scale Dry Batteries. Jasco Chemicals and Allied Industries Company, which was purchased by the Company in 1939 on its incorporation, was started in 1936 as a private firm and from that year upto the present, this Industry has made very satisfactory progress year after year which is in itself a testimony to the Importance and Soundness of this Industry. New machinery was installed after taking over Jasco and the production of Cells and Batteries was extended. The Company also started a Mechanical Engineering Department. To-day it manufactures Dry and Inert Cells and Batteries of all descriptions, Motor Car Batteries, Accumulators, battery-operated general purpose Lamps and self-igniting battery-operated Life-buoy Lanterns for all types of sea-crafts.

At present, the Company is entirely working on Defence orders under the statutory control of the Department of Supply of the Government of India. The requirements of Cells and Batteries, Lamps, etc., of the Army, Navy and Air Force are essential and enormous. The figures of this cannot be given here. The Supplies to the Trade are at present maintained under a system of release from the Statutory Controlling Authority.

DIRECTORS.

SIR HOMI MEHTA, K.B.E., J.P. Out of Profits

We beg to further report that we have prepared the annexed summarised Statement of Trading Results and all Charges and Expenses incidental thereto, marked 'A' of Estrela Batteries Limited, for the three Financial Years ending 31st March, 1942, 31st March, 1943 and 31st March, 1944, from the Annual Audited Statements of Account of the said Company submitted to the Shareholders and reported on by the Directors and find the some to be correct.

Yours faithfully,
CHANDULAL & CO.,
Incorporated Accountants,
Registered Accountants,
Auditors.

POLICY OF PROFITS

5. During the above three years under Auditors' report, the company has worked on Defence orders on a cost plus Profit-Percentage basis for most of the period; this percentage as allowed by the Government is low. For supplies made to the Trade under Government releases, the Company has maintained peace-time policy of profits on prdouction cost inspite of very high price levels in other markets. The Auditors' report refers to the Trading Results which were obtained under this Policy of Profits.

PROSPECTS

6. The Company is the First and at present the only Indian owned Company to supply the requirements of the Defence Services in Dry Batteries. The immediate expansion of production is undertaken to meet increased demands and necessary facilities are being given to the Company for this purpose. The present Issue thus finds immediate utility.

Being the First Indian owned Company in the country in the Dry Battery Industry, it has established several advantages in this Business. On completion of the expansion programme now on hand, it is proposed to take up the Manufacture of Carbon Electrodes and other carbon products for which the process and other requirements have been worked out. Also plans for the manufacture of other allied articles are under preparation, and their production will be taken up as soon as the circumstances will permit. Owing to the Importance of the Battery Industry both to the Civilian and Defence requirements, its needs have so far received and it is expected will continue to receive favourable consideration from the Government. Thus the immediate and the peace-time prospects of Industry are good and the return on invested capital will be satisfactory.

SITE & EQUIPMENT

7. A very suitable site admeasuring about thirty three thousand sq. yards has been purchased from the Bombay Municipality adjoining Andhra Valley Power Station near King's Circle Station to erect a modern factory to accommodate the various departments of the Company. This area leaves sufficient room for expansion. The Government will release and arrange early delivery of steel, cement and other building materials at controlled rates and construction will start as soon as these materials are received.

The Company's factory has production equipment which is sufficient for present output. New equipment for expansion of production is necessary. Arrangements are being made to import machinery for this purpose. There is a well-equipped Research Laboratory attached to the factory, wherein experiments are being carried out on indigenous raw materials, and on new processes for production.

4. REPORT OF THE AUDITORS UNDER SECTION 93(1A) AND (1B) OF "THE INDIAN COMPANIES ACT, 1913-1936".

Bombay, 12th July, 1944.

The Directors,
"ESTRELA BATTERIES LIMITED",
BOMBAY.

Dear Sirs,

We beg to report that the particulars with respect to profits of Estrela Batteries Limited in each of the three financial years ending 31st March, 1942, 31st March, 1943 and 31st March, 1944, rates of dividends paid by the said Company on each class of Shares in the said Company for each of the said three financial years and the soufces from which the said dividends have been paid are as follows:—

TECHNICAL EXPERT & STAFF

8. The Technical Adviser of the Company possesses high foreign technical qualifications and has long experience of this industry. The Company has a qualified experience technical staff, both for Production and Research.

ESTIMATED CAPITAL EXPENDITURE AND PROFITS

9. The following estimates show how the New Capital of Rs. 20 lacs will be employed:

Plant and Machinery	..	Rs. 6½ lacs.
Land with provision for future expansion and Premises	..	Rs. 6½ lacs.
Tools, Gas and Electrical installation	..	Rs. 1 lac.
Working Capital	..	Rs. 6 lacs.

It is expected that the yearly turn-over of the Company after present production plans are completed, will be about Rs. 50 lacs at an average net profit of about 20% on the paid up capital.

EXPENSES OF THIS ISSUE

10. No expenses were incurred in the subscription of the originally authorised capital. The estimated expenses of the present issue will not exceed Rs. five thousand exclusive of under-writing commission and advertisement expenses.

DIRECTORS' QUALIFICATION AND REMUNERATION

11. The qualification of a Director other than Ex-officio Directors, shall be the holding of shares in the Company of the nominal value of Rs. five thousand.

The remuneration of a Director is Rs. 50 for every meeting of the Board attended by him for the duties as defined by these Articles.

The Directors may allow and pay to any Director, who is not a bonafide resident in Bombay and who shall come to Bombay for the purpose of attending a meeting of the Board such sum for travelling and other necessary expenses as the Directors may determine, in addition to his remuneration for attending the meeting as above specified.

INTEREST OF DIRECTORS

12. L. C. Jariwala, D. Sc., a Director of the Company and a partner in the Managing Agents' firm will act as Company's Technical Adviser and is therefore interested accordingly.

Mr. Choonilal Girdharlal, Mr. Maneklal Choonilal and Mr. Bhogilal Kuberdas Patel are directors of Messrs Choonill Manilal Ltd., a private limited company which is a partner in the Managing Agents' firm of Messrs. Choonilal & Jariwala.

MINIMUM SUBSCRIPTION

13. Having considered the provisions of Section 101 sub-clause 2, the Directors have fixed the amount of the minimum subscription to be provided for at Rs. ten lacs.

AGREEMENTS

14. The following agrements have been entered into:—

(a) The Managing Agency Agreement dated 28th December 1939 and subsequently modified, between the Company of the one part Messrs. Choonilal & Jariwala of the other part appointing the latter their successors and assigns as Managing Agents of the Company for a period of twenty years from the Date of Incorporation of the Company. The said agreement inter alia provides that the Managing Agents are entitled to a monthly office allowance of Rs. 1,000 and a commission at the rate of 12½ per cent of annual net profits of the Company calculated according to the provisions of Section 87 C of the Indian Companies Act. The said allowance and commission is exclusive of all other expenses incurred for and on behalf of the Company.

Messrs. Choonilal & Jariwala as such Manging Agents have the right under Articles of Association and by the Managing Agency Agreement from time to time to appoint two Directors as the Ex-officio Directors of the Company.

DIVIDEND AND OTHER RIGHTS.

The said 20,000 additional Ordinary Shares shall rank for dividend and in all other respects *pari passu* with the existing Ordinary Shares except that they shall be entitled to the proportionate dividend on the paid up Capital from the date of Allotment or from the date of the passing of the Resolution for calls as the case may be.

The said Cumulative First Preference Shares shall confer on the holders thereof the right, out of the profits of the Company which is shall be determined to be distributed in dividends, to a fixed Cumulative Preferential Dividend at the rate of 5 per cent per annum on the capital for the time being paid up on such shares free of income-tax and the right in winding up, to payment of the capital and arrears of dividend whether declared or not upto the commencement of the winding up in priority to all other shares of the Company but shall not confer any other and further right to participate in the profits or surplus assets of the Company.

The Company shall be entitled to redeem the said Cumulative First Preference Shares at any time after 10 years by giving 6 calendar months' notice in writing to the holders of such shares to pay off the Capital paid up on such shares.

The said Cumulative First Preference Shares shall rank for dividend proportionate on the paid up Capital from the profits of the Company from the date of Allotment.

VOTING.

On a show of hands, every member present at a meeting in person shall have one vote and upon a poll, every member present in person or by proxy shall have one vote for every Ordinary Share held by him and shall have one vote for every 5 Preference Shares held by him.

No member shall be entitled to be present or to vote on any question either personally or by a proxy or even as a proxy for another member, at any general meeting, or upon a poll, or be reckoned in a quorum, while any call, or other sum shall be due and payable to the Company in respect of any of the shares of such member.

ESTRELA BATTERIES LIMITED
PROSPECTUS—Contd.

(b) The Technical Adviser's Agreement dated 5th July 1944 between the Company of the one part and Mr. L. C. Jariwala, B.Sc., of the other part appointing the latter as the Technical Adviser of the Company for a period of five years from 1st July 1944 on a monthly remuneration of Rs. 1,500 with such increments as the Directors may from time to time decide upon.

(c) Purchase Arrangement dated 11th June 1943 with the Bombay Municipality for the purchase of land adjoining Andhra Valley Receiving Station near King's Circle Railway Station, Dharavi Estate, Scheme No. 56, Plot No. 1 admeasuring about 33,000 sq. yards.

The agreements referred to above will be open to inspection at the Registered Office of the Company during the office hours on any week day during the period that the subscription list is open.

UNDERWRITING

15. The Bank of Jaipur Ltd., Bombay, have underwritten 12,000 Ordinary and 12,000 Preference Shares of the present Issue. In the opinion of the Directors the resources of the said underwriters are sufficient to discharge the underwriting obligations. The underwriting commission payable by the Company to The Bank of Jaipur Ltd., is 2 per cent on the nominal value of the said Ordinary and Preference Shares. Brokerage at four annas per share, either class, will be paid by the Underwriters out of their commission on shares allotted against applications received through recognised brokers.

APPLICATION FOR DEALINGS ON STOCK EXCHANGE

16. An application will be made to the Native Shares and Stockbrokers' Association, Bombay, for placing the shares on the list of shares for which dealings are permitted by the said Share and Stockbroker's Association.

APPLICATION FOR SHARES

17. Applications for Shares should be made on the Form accompanying this Prospectus which may be obtained from the Registered Office of the Company. They should be sent duly filled in accordance with the directions contained therein with the remittance of the amount payable on application to the Company. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance of the deposit will be applied towards the amount becoming payable on allotment and any balance thereafter remaining will be returned without interest. The Shares, when issued, will be subject to the Memorandum and Articles of Association of the Company.

GENERAL

18. Attached to this Prospectus and forming part of it is a Copy of the Memorandum of Association of the Company.

Dated this 15th day of July 1944.

(From Our Correspondent)

New Delhi, July 17.

Gandhiji's plan to end the political deadlock and C.R's formula for a communal settlement will only monopolise all discussions here. The two plans which go far to meet the British and League points of view have been generally well received by moderate elements in this country and the radical sections of the British and U. S. public. The only opposition so far has been from vested interests apparently keen on perpetuating the deadlock. The Government still maintain their sphinxy silence. Mr. Stuart Gilder who, it was supposed. will discuss the plan with Lord Wavell, has not done so. I learn just now that the enterprising "News Chronicle" correspondent has not even seen the Viceroy. An interesting story was related to me in this connection about one of Mr. Gilder's previous journalistic 'scoops' sometime back. While in Chungking. he had a long interview with Chiang-kai-Shek. heartily assuring the Generalissimo of a big campaign in the press of getting more effective Anglo-American aid to China. After that nothing was heard of Mr. Gilder for a long time. Though the Government has not yet officially committed to a rejection of the Mahatma's offer (including a virtual withdrawal of the August resolution). the vague hints dropped by Mr. Amery and the more definite semi-official pronouncements in the London Times suggest there is slender chance that the British will even resume negotiations on the basis of Gandhiji's seven-point programme. What the British have definitely set their face against is any transference of power (however limited) to a National Government during the war. The League Council is expected to consider C.R's formula but with Mr. Jinnah's silent opposition, there is little chance of the League officially agreeing to it. The present general feeling can therefore be summed up as Deadlock for the Duration.

* * * *

India's position at the Bretton Woods conference remains rather anamolous. It is felt here that but for the official majority in the delegation, the latter might have by now decided to withdraw from the discussions. The conference has so far been considering the postwar financial and monetary problems from the viewpoint of the big industrialised continues—anxious to reconstruct their damaged industries, restore their prewar trade and ensure markets for their goods. The viewpoint of the poorly developed areas like India, China and other Asiatic countries which are more interested in rapid industrial expansion and raising the woefully low standard of living of their masses has so far been ignored. The two concrete proposals made by the Indian delegates have already been rejected. It is doubtful if their third proposal to 'incorporate a postwar stabilisation fund clause that would put under-developed countries on the same footing as countries having large industries whose only need to be reconstructed" will meet with better reception. India's quota of contribution to the Monetary Fund has been fixed at two million dollars—a hundred million dollars more than what was expected sometime back. Surprise and resentment are expressed here that India has not been given even a statutory seat on the Executive Commitee of the Monetary Fund. According to present plans, it is quite likely that India will not get a seat on the Executive Committee at all. There will be ever so many candidates to fill the remaining seven seats. She will thus be precluded from having any effective share in the management of the Fund.

* * * *

That most of the industrial development during the war years has been of a haphazard and improvised nature and that careful plans by the Government will be necessary to consolidate the gains made and make the transition from war to peace rather smooth are the conslusions arrived at by Dr. P. J. Thomas who has recently completed a preliminary survey of war-time industrial development in this country. It is stated that most of the new production was undertaken at short notice to satisfy urgent industrial demands. Many of the old established industries like cotton textiles, woollen, silk and glass were greatly expanded and worked to their maximum capacity. War needs also compelled the utilisation of all national resources—minerals and vegetables and animal products—hitherto neglected. Most of the basic industries did not make any notable progress though the production of some chemicals like sulphuric acid showed a big increase. On the whole, compared to the Dominions, heavy industries remained neglected. Dr. Thomas thinks that active co-operation between the Government and industries is essential, particularly during the transitional period, to make the wartime gains permanent. The difficulties of the new industries are bound to increase with the disappearance of the markets guaranteed by war demand. Industrial circles here think that a more complete data than the present survey is essential for the framing of an effective policy and that the Government should take immediate steps to collect the data and decide about the policy to be followed.

* * * *

The Federation of Indian Chambers of Commerce and Industry in a repesentation to the Commerce Department indict the Government's policy of importing large quantities of consumer goods to the detriment of Indian industry. For example, 10,000 bicycles of inferior quality which could easily have been manufactured here were imported recently. Moreover, the Government are making no effort to make easy the task of the industries in switching over to the civilian market after the war. The present policy, it is urged, only helps foreign producers at the expense of Indian industry.

(FROM OUR CORRESPONDENT)

BOMBAY, 18th July 1944.

Two sessions of the conference convenened to discuss the Paper Control Order, a meeting of the Textile Control Board on the occasion of its 1st Birth-day, and a meeting of the Cotton Committee of the Textile Control Board form the highlights of the past week's developments. These meetings provided an occasion for the public to come into contact with officialdom and discuss the various control measures; and I would not be far wide of the mark in stating that, in spite of the severity and rigour of controls, the public has learned to admit and admire the sincerity of the various officials administering these orders. As Sir Akbar Hydari told the Paper Conference, "It is no pleasure fo me to give you a headache, but I hope that we will meet next time under more favourable circumstances", when he announced certain concessions in response to the importunities of the public. Indeed, if the concessions do not go very far in mitigating the hardships of printers and publishers, the insistence on an overall reduction in consumption of paper to 30% is responsible. Individual concessions have been promised. No doubt, the hard verities of the supply situation do not allow much scope for liberality. But it would be idle to overlook the obvious disappointment in many quarters that government could not be persuaded to modify the Order substantially. For the moment, hope must rest on imports. Sir Akbar's dignity, sweet reasonableness and quiet air of supreme self-assurance have, however, made him popular with the public although he has given them some bitter pills to swallow. Likewise, Mr. H. M. Patel, Joint Secretary, richly deserves the tributes paid by Mr. Manu Subedar, Chairman of the Committee appointed by the conference on the first day to consider the Control Order. Mr. Patel is the picture of efficiency and Sir Akbar has a worthy second-in-command.

The Commerce Department did not indeed lag behind and was able to give the finishing touches to the Textile Export Scheme. After a series of discussions with the mills and exporters, a few modifications were effected on the original scheme. The new scheme is embodied in the Order called the "The Cloth & Yarn Export Control Order". Government have also published a "Cotton Textile Fund Ordinance". The best feature of the new export scheme is that the Customs authorities will administer the Order. The export cess of 3% will be levied by them at the time of exports. The margin to be charged above the ex-mill price by exporters other than mills has been raised from 8 to 10%, though this is not allowed in the case of a manufacturer who is also an exporter. A feature of the Export Control Order (already published in the Gazette of India) is that the originally contemplated distinction in the matter of exports between countries favourable to India and others is now done away with. The Order also sets much store by the need for exported articles being properly packed and being upto the minimum standards and specifications. Out of the Customs duty of 6%, the Textile Fund will be established, but it is not clear whether Government would appoint a Committee to administer the Fund, nor is it clear whether an official or non-official will be the Chairman of the Committee. On the whole, the scheme should be acceptable to the trade, though in regard to the margin allowed to the exporters and other points relating to the price, criticisms from a certain section of mill-owners are anticipated.

Great credit is due to the Commerce Secretary, Mr. N. R. Pillai I.C.S. for rounding off the sharp edges of the original scheme and giving it its present streamlined shape. Mr. Pillai exudes a suavity and charm of manner which are irresistible, and he has a knack of being able to bring round the most stubborn dissentient to his proposals. The country could not have forgotten that it was he who ultimately was responsible for bringing standard cloth into existence on a nation-wide scale. Sir Shri Ram and Mr. Kasturbai Lalbhai have been elected to the Export Advisory Council.

Justifiable pride at the way in which textile control has been implemented in the past year and optimism about the future of cloth supplies and prices in the country were writ large in the speech of the Chairman of the Textile Control Board at the meeting held on Thursday. Mr. Krishnaraj M. D. Thackersey has presided over the activities of the Board over a crucial year, and it is not a little due to his immense influence over the Mills and a habitual power of persuasion which there is no resisting, that cloth shortage is being steadily overcome and prices steadily brought down. He claimed that the annual supply of cloth is around 5,600 million yards today, that prices have been reduced by 6%, and that these justified the confidence placed in the co-operative method of control. He informed the Board that further reductions in the price are under consideration and that the Industry Committee of the Board had certain measures ready; which, if put through, would improve supplies. Production would be running at higher levels but for coal shortage, in respect of which the Industries Department has indeed been making every effort to improve the position. The figures supplied by the Chairman are interesting. As against a pre-war production of 3,500 yards, Indian mills' production reached 4,800 million yards last year. Handloom production, according to Mr. Thackersey, would soon reach 2000 million yards, a figure that seems almost incredible in view of the great difficulty experienced by handloom weavers last year to get yarn. Out of the total of 6,800 million yards available, about 1,200 million yards were ear-marked for exports and the defence services. The remaining 5,600 million yards, if Mr. Thackersey's estimates are correct, should certainly prick the bubble of cloth shortage. No doubt, as he complained, transport difficulties and malpractices in the trade had often tended to nullify control, and certain Governments in the provinces and States have not so far taken strict and concerted measures to enforce control, as the Bombay Government has done, for instance. The Indian States in particular are becoming a cesspool for all sorts of illicit trading and are attacked by responsible quarters. Mr. Thackersey's warning to them errs, if possible, on the side of moderation. A heartening piece of information he gave out was that the transport position was a little better and that cloth movement had been arranged on a more rational basis. The members of the Board congratulated the Textile Commissioner, Mr. M. K. Vellodi, for his vigilant surveillance over black markets, but it is clear that all the provincial governments are not animated by the same zeal as Mr. Vellodi in enforcing the provisions of the Control order. This is a very regrettable situation. While one cannot minimise the difficulties of evolving an adequate administrative machinery throughout India to implement control, one cannot condone the slackness of provincial governments in this regard. The Central Government should take up the matter seriously.

As was generally expected in trade circles, the Government of India, following a meeting of the Cotton Committee of the Textile Control Board, have announced lower "floor" prices for the various descriptions of cotton, applicable for the next cotton year. By way of compensation, Government have decided to increase the trading range from Rs. 150/- of the past season to Rs. 200 for the next season. The official press note cites the main reason as the need for enforcing as large a switch-over from cotton to food crops as far as possible, and that, as there is surplus cotton, cotton floors should not provide more than a small margin of profit to cotton cultivators. By far the most important aspect of the raw cotton policy of the Government is that they will buy the various grades of cotton at the floor prices irrespective of the price of the hedge contracts. Government have announced also the conditions under which such purchases will be made. In view of the delinking of the purchase policy from the Contract, the new policy is expected to result in substantial support to the raw cotton grower and in more stable markets. A certain section of opinion, however, feels that the reduction in the floor price cannot be justified as it deprives the cultivator of the higher price to which he is entitled on account of the higher cost of living prevailing now. But if support from government is to be had to the cotton market, a certain amount of dictation from Government at the same time can hardly be helped.

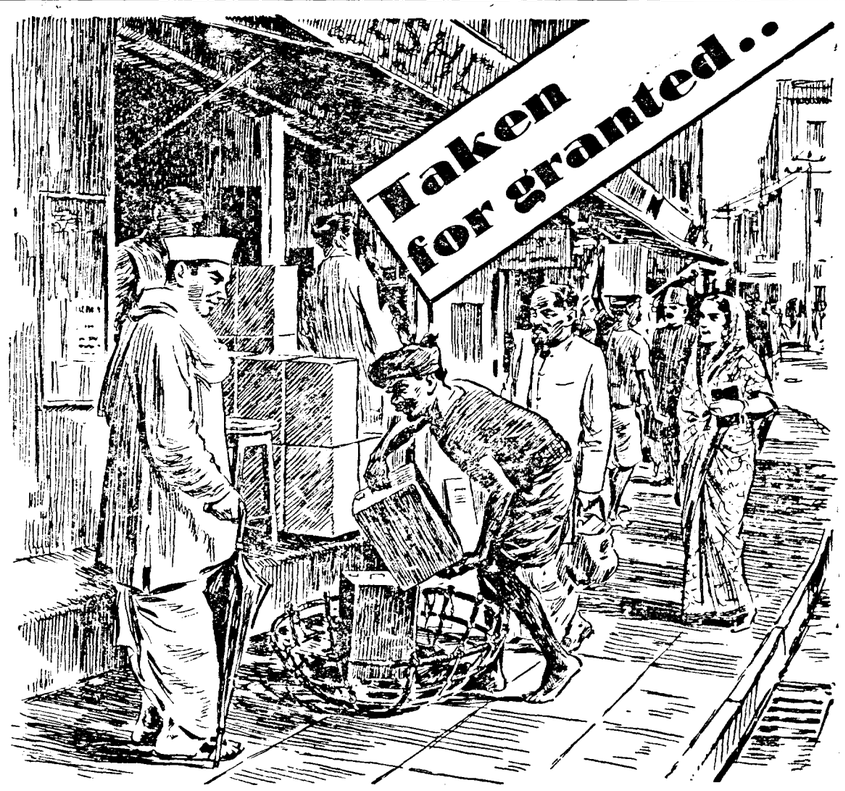
Health and Lands Department it was decided drastically to restrict the slaughter of cattle. Military authorities have agreed to increase import of frozen meat for army needs and provincial governments are being asked to ban slaughter of cattle fit for work or milk production between the ages of three and ten. It is proposed to employ adequate inspecting and veterinary staff to enforce the new regulations. A proposal is also under consideration to introduce meatless days. All the new measures it is thought will go a long way to conserve the country's livestock.



* * * *

While the Government remain strangely complacent about the food shortage reports from several distress areas, a big drive is on to Europeanise the Food Department. One Foodgrain Shortage Expert, Mr. Coyne, has already arrived while many more are expected to arrive soon. Every Regional Food Commissioner, it is learnt, will have a deputy and an assistant, most of whom will be Europeans.

HILL BIRD.

Rajendra Coffees

A coffee estate in Mysore belonging to British interests is to be taken over by a Company formed lately in British India. The prospectus of Rajendra Coffees Limited refers to the issue of debentures, Ordinary and Preference shares of the company, at par. Extracts from the report of the V. A. on the estate (of which the Mysore Government's experimental farm formed part) is given in the prospectus. The Managing agency is that of Associated Planters and in relation to the present issue of Rs. 3 lacs the capital cost per acre may be calculated easily after allowing for the value of buildings and machinery. As the estate is in bearing, and the condition is said to be splendid, the immediate return to the shareholders is assured. Coffee plantation shares in recent years stand at a substantial premium and the Indian coffee outlook also has changed radically since 1940. These two points certainly demand notice in commending the company's prospectus to the attention of investors. The list opens on July 28th and the public's share being limited to half the total it is quite clear that the response will be strong and prompt.

A typical bazar scene four years ago

Supplies of kerosine were available in such quantity that they were taken for granted. With Burma, India's main pre-war source of kerosine supply, temporarily in enemy hands, this product must now come in by sea from other more distant sources. Rigid economy is necessary to ensure that oil tankers can carry vital petroleum products to the many theatres of war in the vast quantities required. At sea today the hazards are great and constant. By practising rigid economy you are ensuring that they are not taken unnecessarily. You are also helping to release India's railway wagons for essential war needs. When the time comes Burmah-Shell will again strive to make kerosine readily available in ample quantities in the cities, and 700,000 villages of India.

(A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Mysore, Bangalore and a certified copy, as required by Law, delivered to the Registrar of Joint Stock Companies, Madras.)

(The Consent of the Central Government has been obtained for this issue under Defence of India Rule 94-A. and the consent of the Mysore Government have been obtained to this issue under Defence of Mysore Rule No. 94-A).

It must be distinctly understood that in giving their consent, the Government of India and the Government of Mysore do not take any responsibility for the financial soundness of any scheme or for the correctness of any statement made or opinions expressed with regard to them.

The Subscription List will open at 11 A.M. on 28th July, 1944, and will close at 5 P.M. on the same day.

PROSPECTUS OF

THE RAJENDRA COFFEES LTD.

(Incorporated in Mysore State under the Mysore Companies Act, of 1938).

Date of Incorporation 19th July 1944.

The Company has no place of business in British India.

CAPITAL:

AUTHORISED - - - - Rs. 5,00,000

Consisting of:—

60,000 Ordinary Shares of Rs. 5/- each „ **3,00,000**

20,000 Mysore tax-free Cum. Pref. Shares of Rs. 10/- each „ **2,00,000**

PRESENT ISSUE

10,000 6% Mysore tax-free Cumulative Pref. Shares of Rs. 10/- each AND

20,000 Ordinary Shares of Rs. 5/- each. Payable in full on application.

DEBENTURES:

Rs. 1,00,000 divided into 1,000 (5% Mysore tax-free Debentures of Rs. 100/- each). Payable in full on application.

The Signatories to the Memorandum the Directors and their friends have taken up Rs. 50,000/- Ordinary Shares and Rs. 50,000/- Preference Shares and Rs 50,000/- Debentures. Thus, the balance of Rs. 50,000/- Prefernece and Rs. 50,000/- Ordinary Shares and Rs. 50,000/- Debentures, are available for public Subscription.

The Preference Shares confer on the holder the right as and from the date of allotment to a fixed cumulative preferential dividend at the rate of 6% per annum, free of any deduction for Income-tax in Mysore State on the capital for the time being paid-up thereon and to a right in the event of winding up to payment of Capital and of arrears of dividend, whether declared or not in priority to the ordinary shares but shall not confer any right to participate further in the profits or assets of the Company.

The Debentures will be secured by a First Mortgage Charge on the properties and a floating charge on all the other assets of the Company. They are repayable on 1st January 1955. The Company, however, reserves to itself the option to repay the Debentures in whole or in part, and if deemed fit, by annual drawings on or after 1st January 1950. Interest on the Debentures will be paid half-yearly on the 31st March and 30th September of each year, the first of such interest payments will be made on the 31st March 1945, interest being calculated from the date of allotment of the Debentures. The Company will at the option of the holder issue Debenture bonds payable to bearer.

Further particulars of Debenture issue will be found in the draft of the Trust deed to be entered into between the Company on the one hand and Mr. P. R. Subramanyam, M.A., as Trustee for the Debenture holders and signed for purposes of identification by Mr. M. C. Pothen.

PROSPECTUS.

The Company has been formed generally for the purpose set forth in the Memorandum of Association which is annexed hereto and in particular for purchasing the Coffee Estate known as the "Guntanaik Coffee Estate" in Mysore State and for working the same.

Situation.—The Estate is situated in Kadur District, Mysore State and is within 40 miles of Chickmangalur, the premier Coffee Market of India, and is connected with it by the Chickmangalur-Koppa Trunk Road. It lies in the heart of a well-known Coffee area of Mysore and is adjacent to the Government Coffee Experimental Farm. The Farm originally formed part of this Estate and was specially selected by Dr. L. E. Coleman, Ph.D., C.I.E., and acquired by the Government. The Estate is about 3 miles from the Balehonnur Post and Telegraph Office.

Visiting Report.—Mr. G. V. R. Frend, Manager, Kurudy Khan Estate, and a well-known planter of Mysore, has furnished a report on the Estate and extracts from his report are added hereunder in inverted commas.

Title.—Free hold.

Elevation.—About 2,800 feet above mean sea-level.

Rainfall.—90 to 100 inches.

Soil.—Soil is fertile and is eminently suitable for Plantations such as Cardamom, Coffee, Pepper, etc.

Labour.—Average wages from 6 to 7 annas and labour available in plenty.

Water-supply.—Abundant and perennial.

Roads.—In addition to the motorable road upto the Manager's Bungalow, the Estate is well supplied with roads.

Building and Machinery.—"There is a well equipped Manager's Bungalow at the top of the hill which gives a fair view of the estate with out-houses, Stables and Garage. In addition to this, there are two staff quarters tiled and with stones and brick walls. There are 10 *cooly lnies*, 5 *tiled with stone* walls and the rest mud walls and grass roofing. The factory building and the paddy store are both substantially built. The buildings in all may be valued of Rs. 34,500".

"The Estate has a 8 H.P. vertical Petter Crude Oil Engine and William McKinnon & Co., Ltd., Huller, both of which are sufficient to meet the requirements of the estate in full swing. In addition, it has one D.S.P. Pump & Sprayer with all fittings. All these may be valued roughly at Rs. 2,500".

Acreage:

	Acres.	Acres.
Arabic Coffee ..	63	63
Robusta Coffee planted in		
1928 to 1933 ..	13	..
1934 to 1937 ..	137	..
1937 to 1938 ..	63	..
		213
Cardamoms	..	20
Paddy fields cultivated ..	..	14
Line site, Bungalow site, etc., and Reserve area ..	..	74
Total Acres ..	..	384

Paddy Area.—14 acres of paddy field are cultivated at present and further area can be developed. The paddy fields produce a substantial part of the supply required for the labour employed on the Estate.

Condition of the Estate.—The Estates are maintained in a splendid condition by the Agents in India of the Vendors Messrs. Peirce, Leslie & Co., Ltd., and the young trees are developing very good heads. Robusta bushes have by no means attained their full maturity and a progressively increasing crop could be relied upon. The condition of the plants is very healthy and they hold promise of excellent crops for the future. The nearness of the Coffee Experimental Station is a great asset since it assures expert advice on all questions connected with Coffee.

Valuation:

	Rs.
276 Acres Coffee at Rs. 680 per acre	1,87,680
20 Acres Cardamom at Rs. 500 per acre	10,000
14 Acres of paddy fields at Rs. 400 per acre	5,600
Building, Factory, Machinery, etc., valued in the report at Rs. 37,000	25,000
74 acres line sites, reserve area jungle, etc., at Rs. 100 per acre	7,400
	2,35,680

As against the valuation of the Estate at Rs. 2,35,680 the purchase price is only Rs. 2,25,000 and the Directors are of opinion that the price is very reasonable.

Crop: Coffee.

Past & Potential—

1940-1941 ..	Tons	31.9
1941-1942 ..	„	28.18
1942-1942 ..	„	38.00
1943-1944 ..	„	38.00
1944-1945 ..	„	45.00 (estimated)

The Valuation Report says.—"In considering past and future crops it should be borne in mind that a large proportion of the Robusta Coffee is not in full bearing and that a rapid steady increase may be expected. Between 1941-42 and 1942-43 crops, there was an increase of about 10 tons. Increase may be expected for some years. In my view, this estate with its good soil and climatic conditions may get an average of 6 cwts. of Coffee per acre when the plants attain their full maturity, say within a period 5/6 years. Hence under these circumstances, I am sure that you can expect a corp of 75 tons average when all the plants attain their full yielding age".

It will be noted that 137 acres were planted between 1934 and 1937, i.e., between 7 to 10 years ago and hence these plantations should give rapidly increasing returns during the next few years, Mr. G. V. R. Frend has made an estimate of the yield that could be expected and we give below his estimates of yield for the next 3 years:

1945-1946	55 tons
1946-1947	65 „
1947-1948	75 „

Considering the fact that neighbouring estates like Devadhanam Coffee Estate—which have not yet attained their full maturity are yielding more than the above crop, the estimate of 6 cwts. per acre can be accepted as very conservative.

Cardamom.—The 20 acres of Cardamom are of Mysore variety and are healthy and have sufficient shade. The yield is jumping up year by year and we could estimate a crop of at least 80 maunds during the current season.

Cardamoms:

1940-1941 ..	13.6	maunds
1941-1942 ..	35.25	„
1942-1943 ..	86.23	„
1943-1944 ..	86.23	„
1944-1945 ..	80 to 100	mounds.

Nurseries.—There are more than 25,000 Cardamom Nursery plants and so a new clearing may be made and the present 20 acres may be extended to 30 acres, leaving aside some for outside sale, if required. There are about 30,000 one year old Coffee Plants available for new plantations.

Estimated yield of profits at Ruling prices.—As already stated, the estimated yield of Coffee for next three years rises from 55 tons in 1945-46 to 75 tons in 1947-48 and of Cardamom, to 100 maunds. But in estimating the profits, the Directors have taken into account only a conservative assumption of 40 tons production of Coffee and 90 maunds of Cardamom.

	Rs.	A.
40 tons Coffee at Rs. 1,900 per ton	76,000	0
90 maunds Cardamom at Rs. 40 per maund	3,600	0
Paddy rental receipts from cultivators	500	0
	80,100	0

	Rs.	A.		
Less cost of production at Rs. 500 per ton	20,000	0		
Debenture Interest ..	5,000	0		
Debenture Redemption Fund	10,000	0		
Dividend on Preference Shares ..	6,000	0		
Managing Agents' Commission ..	6,000	0		
Total ..	47,000	0	47,000	9
Net yield ..			33,100	0

This shows a net return of 33 per cent on Ordinary Share Capital of the Company.

Preliminary Expenses.—The preliminary expenses inclusive of Conveyance, Registration, Printing and Stationery Legal charges, Advertisement, etc., are estimated at Rs. 28,000.

Minimum Subscription.—The Minimum Subscription is Rs. 2,00,000. The balance capital required will be covered by the Debenture Issue of Rs. 1,00,000, which has been under written as stated below.

Qualification and Remuneration of Directors.—The qualification of a Director, other than the Ex-officio Director, shall be the holding in his own name Shares to the face value of Rs. 2,000. Every Director shall be paid a sum of Rs. 25 for every meeting of Directors at which he shall be present in person irrespective of the number of days for which the meeting may continue consecutively and also a reasonable travelling allowance and other expenses.

Nature and Interest of Directors.—Messrs. M. C. Pothen and M. C. Cherian are the Directors and members of the Associated Planters Ltd., who are the Managing Agents of the Company and as such are interested in the remuneration payable to the Managing Agents. No other Director is interested in the promotion of the Company except to the extent of holding of the shares in the Company and the remuneration payable to him as Director.

Vendors and Disposal of Capital Moneys.—Out of the sum of Rs. 3,00,000 now raised by the present issue of shares and Debentures, a sum of Rs. 2,00,000 is payable to the Vendors of the property Mr. C.S. Crawford. A sum of Rs. 25,000 is payable to the Universal Planting Agencies of Kottayam, the option holders, as consideration for their agreeing to transfer their right in the option to the purchase of the Estate of the Company. The preliminary expenses including Stamp duty and Regstration fees, the conveyance of the properties and the Debenture Trust Deed etc., are estimated at Rs. 28,000. The underwriting commission will be about Rs. 12,000 and the balance of Rs. 35,000 is sufficient for working capital. The preliminary expenses will be borne by the Company.

An agreement dated 22nd April 1944 has been entered between Messrs. Peirce, Leslie & Co., Ltd., Calicut, Agents in India of Mr. C. S. Crawford, and the Universal Planting Agencies, Kottayam, whereby the former has agreed to sell o the latter the said 'Guntanaik' Estate for a sum of Rs. 2,00,000. A further agreement dated 15th May, 1944 has been entered into between the Universal Planting Agencies and Mr. M. C. Cherian, acting as Trustee for the Company, whereby the former has agreed to sell or procure the said Guntanaik Estate to the Company for a suf of Rs. 2,25,000.

Voting.—Each Shareholder shall be entitled to one vote on the show of hands and one vote for every share, Preference or Ordinary, held by him in the event of a poll.

Management.—The Company will be under the control and management of the Associated Planters Ltd., subject to the control of the Board of Directors. The Managing Agents will enter into an agreement with the Company whereby they will be appointed as Managing Agents for a period of 10 years from the date of incorporation of the Company, and will be paid a commission of 10% on the net profits of the Company together with such other additional allowance remuneration or salary as the Company may by special resolution at its General Meeting sanction from time to time. However, the above mentioned remuneration shall be exclusive of all expenses and salaries, rents and wages of Superintendents. Clerks, and other employees engaged on the estate or outside agencies employed by the Managing Agents for the Company's business and all remueration which shall be payable to Solicitors, Accountants, Auditors, Bankers, Experts, Commission Agents, Dealers, Brokers and other Officers, servants or workmen etc., who may be employed for the benefit and on behalf of the Company. The net profits of the Company shall be calculated as per provisions of sub-section 3 of section 87 (C) of the Mysore Companies Act of 1938. The Managing Agents are entitled to appoint one Director to the Board and in the event of the number of Directors being 6 or more the Managing Agents are entitled to appoint two Directors and such Directors shall be Ex-officio Directors.

The Associated Planters Ltd., are well-known to the public as promotors of the following companies:—

1. The Nilambur Rubber Co., Ltd.
2. The Cottanad Plantations Ltd.
3. The Devon Tea & Produce Co., Ltd.
4. The Balanoor Tea & Rubber Co., Ltd.
5. The Anaparai Estates Ltd.
6. The Mercara Rubers Ltd.

Agreements.—The Managing Agency Agreement between Company and the Associated Planters, Ltd. The Two Agreements already set out above for the purchase of the Estate. Underwriting agreement between Mr. P. R. Subramanyam, M.A., Stocks & Share Broker, Bombay, Messrs. Hindusthan Corporation, Share & Stock Brokers, Madras, Messrs. R. K. Murthy & Co., Stock & Share Brokers, Mysore and the Company. Debenture Trust Deed (Draft).

Inspection of Documents.—Copies of the above agreements, Visiting report, Memorandum and Articles of Association of the Company are available for inspection at the Registered Office of the Company during the usual working hours for the period, the Subscription list is open.

Memorandum of Association.—It is annexed hereto and forms part of this prospectus.

Brokerage and Underwriting.—Mr. P. R. Subramanyam, M. A., Bombay, Hindusthan Corporation, Madras, and R. K. Murthy & Co., Mysore, have between them underwritten the entire issue of Rs. 3,00,000 for an underwriting commission of 3½%. The Directors, are of opinion that the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

The Underwriters have agreed to pay a refund of 1% on allotments made on applications bearing the stamp of any certified broker.

Cheques and drafts must be made in favour of the Company. Copies of the Prospectus and Forms of Application can be had at the Registered Office of the Company or at the Office of the Underwriters Brokers, and the Mananging Agents.

Dated, 19th July, 1944.

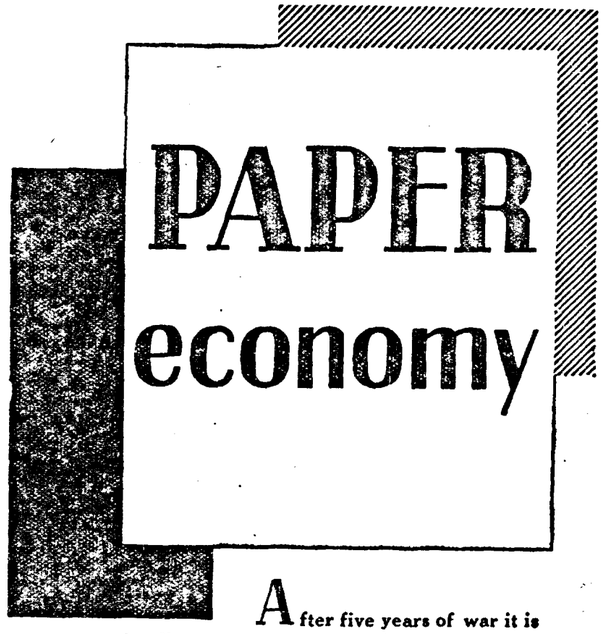
Resume of Commodity Markets

The important feature of the week is the announcement by the Textile Control Sub-committee regarding the revised minimum prices for 1944-45 cotton crop. The cotton market has not reacted to any great extent as it was generally expected that Government would decide on lower minimum prices for the next season. The raw jute market has been weak. The reports regarding the satisfactory progress of the standing crop and the very small buying by mills have been mainly responsible for the discount over maximum rates. The jute manufactures market has been very firm. It might well be that black market trade would be encouraged if production were not kept up at a higher level. Bullion markets have been uninteresting. In the piecegoods market generally easier conditions are noticeable and trading is more freely possible.

* * * *



The decline in prices in the raw jute market so early in the season might perhaps give rise to misgivings regarding the ability of the ryot to dispose of his crop at satisfactory prices. It will be remembered that the Government of Bengal, on the assurance of the Central Government, decided on the maintenance of the licensed acreage under jute crop for the current season at the level of 1943-44 against the wishes of the representatives of growers. It was pointed out that there would be enough demand for all the jute grown and that the Government of India would render financial assistance to the Provincial Government in case there was a decline in prices to below the minima fixed, due to lack of demand. The position in the jute market now, however, is rather confused. The recent decline in prices follows the publication of the preliminary forecast figures which do not give any indication of the actual size of the acreage under the crop, and the reports that further requisitioning and a drop in coal supplies might affect production seriously. So far as jute supplies for the current season are concerned it cannot by any means be said that they will be considerably in excess of mills requirements and exports if only the existing mills are allowed to work without any interruption. The prospect of large supplies of jute should be welcomed, especially at this moment, as it is expected that peace will be concluded at an early date. After the cessation of hostilities there will be large demand for containers and all the available jute supplies will be needed in that event. There is need, therefore, for a clear statement of policy in respect of requisitioning and coal supplies. It should be assured that a minimum level of production will be maintained by mills both in the interests of the producer of jute and the consumer of jute goods. That the Government of Bengal has an obligation to the grower of jute cannot be questioned while the need for maintaining production of jute goods at a high level cannot be over emphasised. If mill output declines further local stocks will be consumed at a fast rate and there might be a famine for jute goods at no distant date. Even at the present moment consumers are having great difficulty in getting their requirements. There are practically no sellers at the maximum rates.

* * * *

The raw cotton market has not been affected to any great extent by the decision of the Government of India to reduce minimum prices for cotton varieties for the next season. Jharilla, new crop, will have a minimum of Rs. 350 per candy for the next season as against the present price of Rs. 400. It is said that minimum prices for each variety will come into operation independent of whether the quotation for the Indian cotton contract or 4F in the Karachi market was below the minimum price. Government would arrange to purchase through their agents in mofussil centres at minimum prices whenever the quotation for anyone particular variety goes below the minimum fixed. In fixing the minimum prices for the next season, the authorities point out that the farmer should be discouraged to grow cotton in preference to food crops as the food situation in the country is still very grave and every effort should be made to increase the output of food crops. The following extracts from the communique issued by the Government will make the position clear:—

> The Government of India have for some time been giving serious consideration to the question of suitable floors and ceilings for cotton during the season 1944-45. While they recognise the claim of the cottongrowers to receive as large a return for their produce as is practicable, they have to view the future from the much broader aspect of the food problem and

(*Continued on page 133*)

After five years of war it is hardly necessary to emphasise the importance of economising in the use of paper. But it is worth your while to know how best to economise paper. The first point is, of course, to use only just the amount of paper which is absolutely essential and no more. The second, and no less important point is to use paper of a good quality which will enable you to write or type on both sides without affecting legibility.

Jute and Jute Manufactures

(By Our Jute Correspondent)

CALCUTTA, July 20.

Mill production of goods during June turned out to be better than was generally expected, considering that there had been quite a few stoppages on account of lack of coal. At 93,897 tons, production was only 3439 tons less than in May, or a reduction of only 3½ per cent. Comparison with a year ago is not so good however, the June 1943 figure having been 104,700 tons. The proportion of goods manufactured for Government account continues to decrease, in June the figure being 7158 tons or only 7½ per cent of the total. The aggregate of Hessian cloth manufactured was 1346½ lakhs yards of which 1262 lakhs was on Commercial account and 84 lakhs on Government account. Of the total of 1216½ lakhs of Sacking produced, 1118¾ was on Commercial account and 97½ on Government account.

The reduction in stocks of manufactured goods held by mills at the end of June, which amounted to 25,131 tons, taken in conjunction with the production figures noted above shows that the quantity of goods despatched by mills during June reached the very satisfactory figure of 119,028 tons, the highest recorded for many months and a long way above the total recorded for June last year which was only some 85,250 tons. The clearance of over 20,000 tons more than was manufactured is a vivid indication of the strong demand there is for all descriptions of jute manufactures, and it is most unfortunate that the coal situation has been allowed to get to such a sorry pass that this large unsatisfied demand cannot be met.

The end of June brings us to the end of another Jute seasonal year, and consequently to a few statistics. Total mill production of manufactured goods in the year ended 30th June 1944 amounted to 954,386 tons, which is the lowest recorded for five years, the shortage being partly accounted for by the requisitioning of many units for military purposes, and partly by irregular and inadequate supplies of coal. The years ending June 1943, 1942 and 1940 all recorded productions in excess of 1,200,000 tons or over 100,000 tons per month average. 1941 season's total was 984,000 tons. But it is pretty obvious that owing to demands for military purposes, the Jute Industry has been losing over the past year an average of more than 20,000 tons per month of production.

Despatches of goods in the season just closed were not so high as the 1,170,000 tons cleared during the previous season, but much better than 918,000 tons cleared in 1941-42. Relatively to production however, this season's despatches are very satisfactory indeed, being 80,000 tons greater than the quantity of goods produced. Last season despatches were short of production by 35,000 tons and the previous season production was over 300,000 tons in excess of clearances. Quite sufficient evidence surely of the inherent strength of the world demand for Jute goods when many markets are wholly or partially barred by war conditions, as also an indication of steadily improving shipping conditions.

To turn to figures of raw jute consumption, the season's production returns indicate a consumption of 53,40,000 bales of jute. This naturally is much below the figures for the previous two seasons which were 67,50,000 bales and 68,60,000 bales respectively. In a way it is perhaps just as well that Mill demands for raw jute during the past season were not greater, for during the same period only 54,74,000 bales of jute were received from upcountry out of the current crop. With something like 10 lakhs of bales accounted for by overseas exports, it is obvious that mills must have encroached on their stocks of jute in godowns to the extent of nearly 10 lakhs of bales despite their reduced requirements. But again there is perhaps a silver lining to this aspect of the situation, for Mills' storing capacity has probably been reduced by something like this figure by the requisitioning of godowns. Even as it is, not a few mills are complaining of difficulty in storing jute arriving, and if the full crop had come forward, there might have been difficulty and embarrassment in accommodating it.

Examination of the arrival returns for Jute for the season just closed reveals that all forms of transport fell short of the previous season's figures—River transport by 21 lakhs of maunds, Rail transport by 24 lakhs of maunds and Country Boats by 13 lakhs of maunds, the total short-fall amounting to 58 lakhs of maunds or some 12 lakhs of bales. For the first half of July arrivals are estimated to amount to 2,25,000 bales against 2,34,000 bales in the same period a year ago.

As we anticipated, the issue of the consolidated statement in connection with what is humourously described as the Preliminary "Forecast" of the 1944 Jute Crop, throws little more light on the position than did the figures issued for the various districts. The first para of the statement sounds like a contradiction in terms to us. It states "the preliminary forecast deals with "the area and the condition of the crop at the time of the publication of the forecast" and goes on to state that "the area shown represents the licensed acreage." Later it is admitted that "it is reported that a very considerable portion of the aforesaid licensed areas has been put under *aus* paddy instead of jute." The only figures of any interest or value are those of districts outside of Bengal, which show in the aggregate a shortage in area of 1,05,700 acres, or 22.7 per cent, as compared with last year. Once more, as on many occasions in the past, those interested will be well advised to fall back on the estimates issued by the trade itself which at least deal with actual conditions.

No improvement unfortunately can be recorded in the coal supply position. Of the coal consumers, only the so-called "foster" mills, (we have heard them described by a much more pungent epithet by some of the single-shift coal consuming mills) are able to keep going. The electric mills and the "foster" mills combined cannot represent much more than 50 per cent of the total loomage, so that something like half the looms on the river must be idle at present and the prospect of any improvement in the near future is far from bright, unless the newly constituted administration for the Coal trade can work some quite unlooked-for miracle.

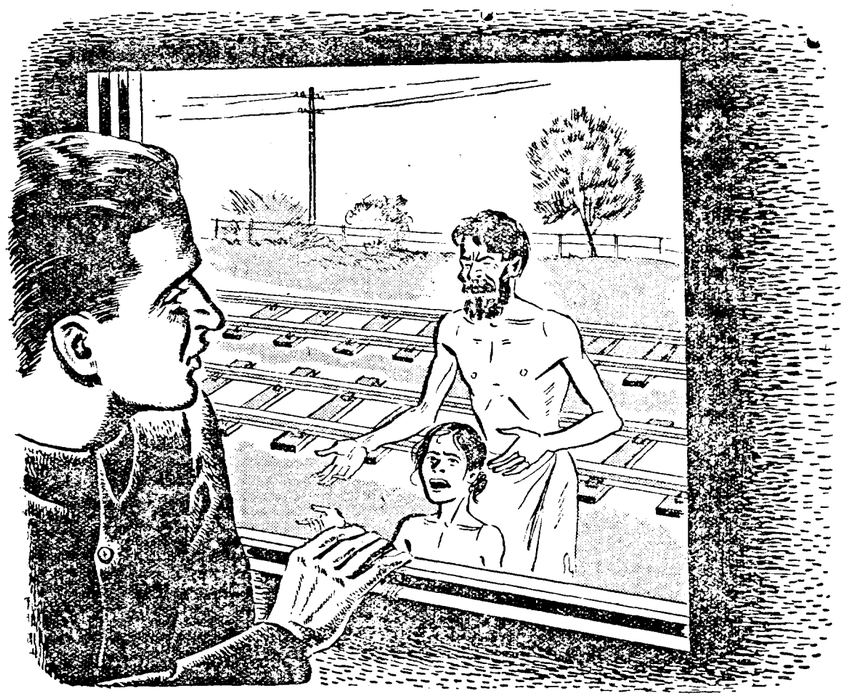
(Continued from page 131)

the absolute need to maximise food production during the coming season. In that regard, it cannot be denied that the relative cash returns received from cotton and food are a potent factor in determining the acreage planted under the various crops particularly in states and provinces where no legislation has yet been enacted to ensure a maximum switch-over from cotton to food and in the light of the absolute need to encourage food production and discourage cotton production. In so far as the latter is surplus to requirements, cotton floors should provide no more than a very small margin of profit to cotton cultivators.



There is, however, no reason to think that the market will ordinarily remain grounded at the floor prices for the various descriptions. Should it do so, the inference cannot be other than that in terms of supply and demand for floors are too nigh. The ideal is for prices to be maintained above the floor level by free trading on the basis of supply, demand and market sentiment and, by way of compensation for the lower floors, Government have decided to increase the trading range between floors and ceilings from Rs. 150 for 1943-44 season to Rs. 200. This increase should provide at least some compensation for farmers in the event of market factors taking the price to a higher level.

These prices are ex-godown Bombay ¼ per cent brokerage payable by the seller to the buyer and include the usual sample and stone allowances. In the case of American seed descriptions, Karachi equivalents of the floor prices are to be calculated as Rs. 18 per candy less than the Bombay price, i.e., Fine R.G. 4F, Punjab-American or Sind-American ¾ in. Floor price Rs. 370 less Rs. 18=Rs. 352 per candy=Rs. 37 per maund. Karachi equivalents of ceiling prices are to be calculated by deducting Rs. 21 per candy from the Bombay price, i.e., Fine R.G. 4F, Punjab-American or Sind-American ¾ in. Ceiling Prices Rs. 570 less Rs. 21=Rs. 549 per candy=Rs. 57-10 per maund.

The prices for Jharilla July and September have been fluctuating in narrow limits and there is very little interest in the market. Mills are naturally anxious to postpone their purchases as it would be possible for them to get new crop at lower rates. It is not clear, however, whether new crop prices will decline to around the new floors as it is said that just as in the case of piecegoods available supplies of old crop cotton would be absorbed at the higher rates.

* * * *

The full constitution of the Indian Central Sugar Committee which was recently formed on the lines of the Indian Central Cotton Committee, is now available. There will be 45 members in all, including the Vice-Chairman of the Imperial Council of Agricultural Research, who will be the ex-officio president.

THE CRY OF DISTRESS

Despite the very great efforts of the Railways; despite the co-operation of the agriculturists, of townspeople and of business men alike, there are still people in this country whose very lives are in peril.

Some of them suffer from food shortage, some from lack of other necessities of life. Mercifully, their number is getting less and less, but there are still many and their cry must not go unanswered. The Railways' first obligation is to them. The distribution of food and civil supplies must take precedence over passenger travel. So, if your accommodation is crowded—if tickets are difficult to buy—if travelling is uncomfortable, bear in mind those poor people. Appreciate the Railways' difficulties, and if you want to do your bit, stay at home and travel only when you **must**.

Travel Less

ISSUED BY THE RAILWAY BOARD

AAA 672

JUTE

(By Our Staff Correspondent).

Calcutta, July 20.

The raw jute market has been definitely easier in the past week and a further decline in prices has been recorded. Mills have taken very little interest in the market as with the fears regarding a further reduction in production and reports of requisitioning, there is no great anxiety to enter into fresh commitments. Production figures for the month of June also were not quite helpful. Sellers, on the other hand were anxious to do business and with large arrivals from upcountry centres, a substantial discount in prices has been offered. Small business has been reported in Supervised Jat Middles and Bottoms at Rs. 16 and Rs. 13 per maund respectively. Early in the week the quotation for Middles was Rs. 16-4. District Middles and Bottoms were done in midweek at Rs 16 and Rs. 13 per maund but the close is 4 annas lower. It is interesting to note that the premium for Supervised over District is only 4 annas against 8 annas formerly.

In the Pucca bales section values have been marked slightly lower in sympathy with the loose jute section though the decline in prices is not in proportion. Some business has again been reported for export, Dundee Daisee old crop Short Group being done at Rs. 85-8 per bale and new crop Dundee Daisee 2/3 at Rs. 77-8 per bale. Crack Daisee 2/3 new crop, were done at Rs. 85-8 per bale. Mills have purchased only small quantities of Firsts at Rs. 81 per bale and Lightnings at Rs. 78 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, July 20.

The unsatisfactory showing of the production figures for the month of June and the drop in coal supplies have resulted in the further reserve of sellers and very little forward business has been reported. There are buyers at maximum rates for all deliveries, near and forward, but sellers are very scarce.

In the heavy goods section conditions are unchanged and there are very few sellers at maximum rates. Only very small business in standard goods has been reported.

GOLD

(From Our Correspondent)

Bombay, July 20.

The Bombay gold market has been rather uninteresting during the past week. The improvement in the war situation and the reports regarding the possibilities of an early peace have checked speculative activity. In spite of the fact that the quotation for ready has been around Rs. 75-4 for sometime now there has not been any large demand for the yellow metal from the Reserve Bank and very few tenders have been received. Gold ready closed at Rs. 75-4 and forward at Rs. 74-15 against Rs.74-13 and Rs. 74-7 respectively last week.

SILVER

(From Our Correspondent)

Bombay, July 20.

The bullion market has been easy. Silver forward dropped from Rs. 133-12 on Monday to Rs. 130-10 on Wednesday on strong peace psychology. Bulls are realising their profits at top prices and supporting at low levels. A single operator owns 500 bars. Weekly arrivals are estimated at 70 bars. Ready commands a premium of twelve annas over forward.

The position in regard to official sales is not quite clear. The statement made by the American Senator that the lease-lend arrangement applies only to silver acquired for coinage purposes gives rise to the impression that the benefit of official sales will go to the U.S. Government as in the case of gold sales. It means that no large decline in prices can be expected and in the initial stages all supplies will be eagerly taken up at prices not very much lower than existing market rates. Bulls, are therefore, not very much worried about the possibility of an abrupt fall in prices.

COTTON

(From Our Correspondent)

Bombay, July 20.

There has been a mixed reception to the decision of the Government lowering cotton floors for new crop. Moderate opinion is inclined to blame the basis of contract rather than the lowering of minimum prices. In some varieties, for example Sind N.T. Punjab 289 F, the floors are considered too uneconomical. It is understood that the Government of India presented the Committee of the Textile Control Board with a *fait accompli* with little scope for changes. The floors have been fixed indiscriminately, sacrificing the interests of cotton-grower to the food moloch. Regarding new crop, forward trading is expected to begin from Monday next.

PIECEGOODS

(From Our Correspondent)

Calcutta, July 20.

The piecegoods market has been definitely easier. Even the Chairman of the Textile Control Board, reviewing the control operations in the past one year, said that despatches to Bengal were on a very large scale that that there was no reason for the existence of black markets. The Provincial Government authorities have been asked to take immediate steps in this connection. Already, the Provincial Textile Commissioner has taken measures to eliminate black markets and the licenses of several dealers have been cancelled. With the ban on postal parcel traffic and the rigorous control measures there has been greater willingness on the part of dearers to offer their goods at marked prices. Consumer buying has been on a larger scale.

EAST INDIAN RAILWAY

Items and Special items costing over Rs. 5,000/-Class I Contract.

Sealed Tenders are invited for the following and will be received in the Controller of Stores Office, East Indian Railway, 105, Clive Street,Calcutta up to 12 O'clock noon on the 16-9-1944.

Stock Markets to-day and to-morrow:

TATA STEEL 1943-44 ACCOUNTS

After the sharp rise in prices in the past three weeks the decline on the Calcutta Stock Exchange in the last two days is to be welcomed. The decision of the Committee of the Calcutta Stock Exchange to reduce the hours of trading did not check speculative activity to any great extent. Even in the early days of this week there was heavy speculative buying. Burrakurs, in particular, had a run to Rs. 50-4 from Rs. 42 last week and Rs. 36 three weeks back. Indian Irons registered a further rise to Rs. 44 and Steel Corporations to Rs. 37-12. Sugar shares received their share of attention and all the shares were two to three points higher. Textile issues also were firmer.

On Wednesday afternoon, however, there was a bout of selling on reports that General Tojo had given up his post as Chief-of-Staff. Other reports from the war fronts gave rise to the feeling that peace was not far off. As operators on the Bombay market were inclined to be of the same opinion there was hurried selling.

The reopening on Friday, after the holiday due to Solar Eclipse, was rather quiet and further selling, this time with the resignation of the entire Japanese Cabinet, brought down quotations for Indian Irons to Rs. 41-12, Steel Corporations to Rs. 35-12. Burrakurs to Rs. 47 and Howrahs to Rs 84-4. The drop in prices, however, has not been appreciable and there is no suggestion of weakness. There is a tendency to await further developments.

• • • •

The important features regarding the working of the Tata Iron and Steel Company Limited in 1943-44 were given by *Analyst* last week. The balance-sheet for the year ended March 1944 now available reveals that satisfactory progress was made by the Company and that output of saleable steel during the year was the second highest on record, being next to that achieved in 1941-42. The output of steel ingots was the highest on record. A record production of tools was also made at the Agrico factory.

Total sales during the year were Rs. 20.89 crores against Rs. 17.16 crores in 1942-43. The net profit, before providing for taxation and depreciation, was Rs. 7,60,61,407 against Rs. 6,36,73,525 in 1942-43. The earnings would have been very much more but for the fact that the loss on the supplies of foodstuffs and other commodities to labour was very nearly Rs. 70 lakhs. The higher level of earnings, however, has not been of any advantage to the Company as the provision for taxation is very much higher at Rs. 3.99 crores against Rs. 2.92 crores. The depreciation on block and collieries had to be reduced to Rs. 1.2 crores from Rs. 1.25 crores in order to make provision for the compulsory E.P.T. deposit of Rs. 57 lakhs and maintain the dividends on both the ordinary and deferred shares. The amount transferred to the reserve fund on the last occasion was Rs. 35 lakhs. The dividend on ordinary shares is Rs. 23 per share and deferred Rs. 129-8-9 per share. The amount carried forward is Rs. 8,57,545 agianst Rs. 9,43,102 brought in.

The directors are not quite optimistic regarding the prospects for the current year. With the deterioration in the coal situation there has been a contraction in output since the close of the accounts and the position may worsen in the coming months. The measures recently announced by the Government for the control of the commercial prices of steel in addition to existing control of war contract prices will be particularly felt during the current year. The prospect of lower earnings and the heavier tax payments will it is expected necessitate the raising of additional finance in the future.

The balance-sheet position shows a very strong position, as usual, but with the payment of large sums by way of taxation, the amount to the credit of the Reserve for Taxation being slightly over Rs. 4 crores, and the compulsory deposit of Rs. 57 lakhs a good portion of the cash balances will be used. It should be remembered in this connection that dividend payments will require nearly Rs. 2 crores. Investments on March 31, 1944 were Rs. 1.67 crores and cash and other balances Rs. 2.74 crores. With the reduction in stocks which were rather high at Rs. 5.34 crores on March 31, 1944, the ways and means position might be more comfortable but the reference to the floatation of a joint stock company subsidiary to the steel company to operate collieries suggests that there might be issue of additional capital at an early date.

In order to provide replacements for the gradual exhaustion of its coking coal reserves and to ensure adequate supplies for many years to come, the company has completed negotiations for acquiring mining rights over 13,000 bighas from the Bokaro and Ramgarh Co., and it is proposed to due course to register a joint stock company subsidiary to the steel company to operate the colliery. This transaction and the development of the colliery during the initial period will involve an investment of about Rs. 40 lakhs.

• • • •

The sale of coal lands by the Bokaro and Ramgarh Limited to the Tata Iron and Steel Company Limited, referred to by me a few weeks back, has thus been confirmed. There is no mention of the purchase money paid to Bokaro and Ramgur but if the sum of Rs. 19 lakhs mentioned in this connection is correct the shareholders will be benefited to a great

GOOD CHANCES IN TEXTILES

RUBBER OUTLOOK CLEARER

(By Analyst)

Bombay, July 20.

I mentioned last week that there was special demand for Steels and Cements due to hopes of early termination of hostilities. It is mentioned in the newspapers to-day that some members of the industrialists deputation, which will visit the United Kingdom and America in order to secure assistance in carrying out plans for post-war industrial development in India, met representatives of Commerce, Industries and Civil Supplies departments. It is happy to note that Government have taken to post-war planning rather seriously. It will not be a surprise if the war comes to an end very soon. I have many a time mentioned, particularly in the last two months, that before making investment we should first think about the post-war prospects for the industry. Of course, I have always stressed that even if the post-war prospects for the industry are rosy, the companies selected should have excellent standard profits in view of the heavy incidence of taxation.

After the recent budget proposals were announced I have been going round the leading broker offices and I find that investors have now begun to think of post-war prospects and have begun to make an intelligent switch-over from industries having no prospects to industries having excellent post-war prospects.

This week, Steels were again the centre of attraction. Due to hectic buying, *Indian Iron* and *Steel Corporation* have fluctuated widely and at the same place in the market transactions used to take place at varying rates. Broker offices who used to get Calcutta soon from Bombay made some money by buying in Bombay and selling in Calcutta. Looking to the rank speculation that has been going on for the last fortnight I believe the oversold position has been very nearly corrected and I would not be surprised if, in the coming week or two, there is a fall in Indian Irons and Steel Corporations. While wiring this Indian Irons have declined to Rs. 42-4 and Steel Corporation to Rs. 36-4. Tata deferreds, however, were fluctuating around Rs. 2,275 and ordinaries around Rs. 430.

Textiles, as usual, are quiet but there seems to have been some enquiry for shares having absolutely new machinery. In view of the fact that textiles having new machinery need not effect any replacement in the immediate post-war period while mills situated in Bombay and Ahmedabad will have to put in lot of money to replace the out-of-date plants and all the wartime reserves will be completely taken up. I think there is lot of sense in this argument and if an investor selects a good mill share judiciously and makes an investment in a weak market he would surely stand to gain. Since the textile industry should do well for a year or two after cessation of hostilities I would suggest buying *Bombay Dyeing* in a weak market, say around Rs. 1,850 and *Azamjahi* around Rs. 500.

In Madras, *Buckingham and Carnatic* look an excellent buy around Rs. 300 as against the present market price of Rs. 323. Last week, I recommended *Madura* around Rs. 69. *Mettur Industries* also deserve attention at the current price of Rs. 280 cum-dividend. *Vasanta* may be bought at a slight reaction. All these mills have fairly good standard profits and will be able to pay reasonable dividends in the coming years.

Investors in plantations will welcome the news that exploratory talks on post-war rubber problems, both crude and synthetic, would be held in London in the latter part of July between officials of the American, British and Dutch Governments. These officials will draft a programme as a basis for possible further talks and also discuss the desirability of establishing a committee to keep the rubber situation under survey. I, for my part, feel that synthetic rubber will never be able to compete with natural rubber and that synthetic rubber will only be complementary to natural rubber.

This week has been one of several new flotations, particularly, in plantations. I have already mentioned that Midland and Rajagiri issued preference shares to buy over Rani Travancore Estates. I understand that the issue has been over-subscribed. A couple of days ago another issue *Mercara Rubber*, was announced and the list opened and closed the same day i.e., on July 18, 1944. *Travancore Rubber and Tea Company Limited* has been formed to buy over the properties of Travancore Rubber Company, London, under the managing agency of Messrs. Aspinwall and Co. The managing agents are well-known. The flotation is a good one. The debentures and preferences are absolutely first class.

I had mentioned some time ago that investors should be very careful in making applications for new shares, particularly ordinary shares, in the plantation issues since most of these estates are being bought over many a time at rather fancy prices There are reports that about a dozen more companies will be coming into existence within a month. If the estates are good and the management also well-known investors can go in for debentures and preference shares of these companies.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

CALCUTTA, July 21.

After earlier firmness easier conditions have been noticeable on the Calcutta Stock Exchange on reports that the Japanese Cabinet has resigned and that there are prospects of a Sino-Japanese peace. The week under review is short of one working day, markets being closed on Thursday on account of the Solar Eclipse. Till Wednesday there was no suggestion of weakness in the market and the popular speculative counters were marked higher, *Burrakur* in particular being done as high as Rs. 50-4. It was towards the close on Wednesday that a drop of two to three points was recorded in Burrakurs, Indian Irons and Steel Corporations. The general undertone is very steady and it should be said that the decline in prices that was recorded in the latter half of the week is due more to bear selling than to any inherent weakness in the market. Cotton and sugar shares were inclined to be more active in the latter half of the period under review. But for the late decline in prices, closing quotations would have been at the highest levels for the week.

The giltedged securities section has been very firm with 3½ percent paper at Rs. 99-4. Business has been rather restricted in terminable loans with 2¾ percent 1948-52 at Rs. 99-13, 3 percent 1963-65 at Rs. 99-2, 3 percent 1949-52 at Rs. 101-8, and 3½ percent 1947-50 at Rs. 103-9.

Among Bank shares, *Reserve Bank* were Rs. 137, *Hind Bank* Rs. 63, *United Commercial Bank* Rs. 43-4 premium, *Calcutta National Bank* Rs. 14-8 and *Central Bank* Rs. 82.

After being neglected for a long time Cotton shares came into their own on Wednesday this week, *Cawnpore Textiles* being done as high as Rs. 15-2. There was a setback to Rs. 14-11 towards the close in sympathy with the other sections. *Bengal Nagpur* were Rs. 42-12, *Kesoram* Rs. 19-8, *Elgin* Rs. 69, and *New Victoria* Rs. 9-8. The rise in the quotation to Rs. 10 was not held.

In the Coal section, as pointed out above, the feature of the week has been provided by *Burrakur* with a rise in the quotation to Rs. 50-4 from Rs. 42-10 at the end of last week. Profit-taking at the higher levels has resulted in a decline in the quotation to Rs. 50-8 at the time of writing. *Bengal* were Rs. 685 against Rs. 672, *Bhulanbararee* Rs. 32 against Rs. 31-12, *Bokaro and Ramgur* were unchanged at Rs. 44 while *Equitable* closed at Rs. 68-12 after being higher at Rs. 70-12. *New Beerbhoom* were quiet for a time at Rs. 42-8. In sympathy with the rise in *Burrakur* there was an improvement to Rs. 45. They are now quoting Rs. 43-12. *Raneegunge* were very firm at Rs. 54, *South Karanpura*, after being higher at Rs. 27-12, came down to Rs. 26-12. *Talcher* were quiet at Rs. 12-1.

There has been no appreciable increase in activity in the Jute section. The only exception is provided by *Howrah* with a further rise in the quotation to Rs. 87. There has been a reaction to Rs. 85 towards the close. Other shares are lower on the fears that smaller coal supplies and further requisitioning might affect mill output. *Angu-India* were lower at Rs. 478, *Clive* Rs. 47, *Ganges* Rs. 562, and *Kankinarrah* Rs. 574. *India* registered a decline of more than 30 points to Rs. 700 while *National* were Rs. 35-4, *Nuddea* Rs. 135-12 and *Rameshwara* Rs. 23-8.

In the Engineering section, *Indian Iron* improved to Rs. 44 from Rs. 41-6 at the time of last writing. The quotation is now Rs. 42-8. *Steel Corporation*, likewise, were done up to Rs. 37-12, the quotation at the end of last week being Rs. 34-6. They are now quoting Rs. 36-8. *Indian Standard Wagon* were done at Rs. 94-8 and *Burn and Co.*, at Rs. 445. *Bhartia Electric Steel* were a shade better at Rs. 22-10 and *Braithwaite* at Rs. 13-7. *Jessop and Co.*, were Rs. 26-14 ex-dividend and *Kumardhubi Eng.* Rs. 13-4. *Textile Machinery Corpn.* were crossed at Rs. 28 ex-dividend.

There was a flare-up in prices of sugar shares. *Balrampore* being noted as high as Rs. 23-10. The quotation at the end of last week was Rs. 20-12. *Belsund* were Rs. 19-6 after being higher at Rs. 20-4. *Carew and Co.*, touched the highest level for the week of Rs. 35, from Rs. 30-12 last week. *Cawnpores* have risen by 4¼ points to Rs. 45-8 and *Champaran* by 5 points to Rs. 46-4. *Dharbanga Sugar* were very strong at Rs. 39-2, *New Saran* at Rs. 26-8 against Rs. 23-8 and *Partabpur* at Rs. 27-14 against Rs. 26-12. *Rampuggar Cane and Sugar* improved to Rs. 18-6 though the close is lower at Rs. 17-10.

The Tea section has been rather firm in sympathy with other markets but business is still restricted. *Terpore* were Rs. 91 against Rs. 19-8, *Hattikhira* Rs. 32-8 against Rs. 31-8 and *Sapoi* Rs. 23-8 against Rs. 22-12.

Among Miscellaneous shares, *Burma Corpn.* were steady at Rs. 4-11, while *Indian Copper* were very firm at Rs. 3-12. *Dalmia Cement* ordy. were sticky at Rs. 19-12 while *Aluminium Corpn.* were quieter at Rs. 23-4, *Calcutta Trams.* were relatively quiet at Rs. 45-8 while *Indian Cable* were firm at Rs. 30. *Indian National Airways* ordy. improved to Rs. 37-4 on the announcement of the new capital issue as also deferreds to Rs. 17-4. *Rohtas Industries* improved to Rs. 43-4, *Dehri Oil Refinery* were a shade better at Rs. 13 and *India Oil Plastics* at Rs. 11.

Among Paper shares, *Titaghur* A and B were Rs. 30-4. *India Paper Pulp* Rs. 226-8 and *Orient Paper* Rs. 34-5. *Midnapore Zemindary* were quiet at Rs. 194.

COMPANY MEETING

LAKSHMI MILLS COMPANY, LIMITED

RECORD NET PROFIT IN 1943-44

Speech made by Mr. T. T. Ratnasabapathy Pillai, the President of the Lakshmi Mills Co., Ltd., Coimbatore, on the occasion of the meeting of its shareholders on 9th July, 1944.

Ladies & Gentlemen,

I extend to all of you on behalf of the Board of Directors, the Managing Agents and myself, a very cordial welcome to this annual meeting. The Directors' report and the Audited Balance Sheet and Profit and Loss Account for the year ending 31st March, 1944 have been duly published and sent to you. I feel sure that all of you must have been impressed with the achievement of the Mills. The result of the year's working shows a record net profit of Rs. 73,22,708-13-7, after meeting expenses, taxes and depreciation on building and machinery to the extent of Rs. 1,74,085/-. The Board of Directors has recommended to you a dividend of 24 per cent per annum free of income-tax, allocating 55,68,000/- as reserve for taxes and Rs. 13,40,000 and odd as general reserve out of which the E.P.T. compulsory deposit will be paid. Compared to the dividend declared for the two previous periods, perhaps I may owe an explanation, why we recommend a dividend of 24 per cent. But any one who analyses our report will easily understand, that in view of the new rates of taxes and provisions to make E.P.T. compulsory deposits it is not a sound policy to declare dividends higher than the situation really warrants. We must appreciate the policy of the Government of India and its magnificient efforts by way of anti-inflationary measures. In my view this dividend of 24% must be considered very satisfactory. It is a matter for regret that as soon as it was known that the Board recommended 24% a firm of share brokers characterised the dividend as disappointing. However, another firm of share brokers came out with a report that the balance sheet of our mills revealed a strong position. In my view taking all factors into consideration this dividend should not be considered either as disappointing on law. It may, perhaps, be possible to encroach upon the reserve funds already accumulated and declare spectacular dividends. But it is my considered view that the adoption of such a course cannot be considered to be in the interest of the mills. I am aware of the circumstances that after the announcement of the dividend the market price of our shares came down. It is unfortunate that prices should be made to depend upon the dividends declared. Even at the present level of prices the dividend earned works out at the rate of more than 5 per cent. I wish sincerely that investors should study the working of the mills, its results, the capacity of the managing agents and its future prospects and form sound conclusions while assessing the worth and the value of any industrial concern and its shares and remember that high dividends is not necessarily an index of the strength of the concern. It will be gratifying to note that already we have deposited with the Government Rs. 8,00,339/- as excess profit tax refund deposit. We have set apart a sum of 13,40,000/- and odd as gnneral reserve from which E.P.T. compulsory deposit will be paid and when this deposits are returned by the Govt. together with a proportionate share the mills will be in a fortunate position of enjoying a grand reserve which will enable the mills to face the post-war period and the future with confidence. It may not aiso be fair to compare the dividend which has now been recommended for our mills with the dividends declared by a majority of the mills situated in Coimbatore because it has to be noted while those mills closed their financial year by 31st December 1943 our mills closed its accounts by 31st March, 1944. The excess profits tax deposit optional till April 1943, was made compulsory thereafter and so we had to deposit with the Government the said Rs. 8,05,339. Again notice must be taken of the increase in the proportion of the deposit of the E.P.T. made after 31st March, 1944. If conditions in respect of taxation and deposits remained as before it might have been possible to recommend a very high dividend. But we need not at all regret the circumstances in which we are obliged to recommend the dividend at 24 per cent, for the reasons I have already referred to in extenso.

You will be glad to learn that we are fortunate in that. Thanks to the successful working of the mills in the previous years and the recent increase in the share capital our mills have got a fairly high standard profit. But although the standard profit for our mills is comparatively high we have arrived at the rate of dividend recommended after providing for the income tax, corporation tax and the tax on dividends from the standard profit allowed for the mills. As regards the future prospects of the cotton textile industry, he must indeed be a bold man to prophecy. Eminent industrialists are not unanimous in their views. It is difficult to foresee and forecast with any amount of certainty the conditions which may arise as soon as the war is over. At this juncture it may not be out of place to refer to the remarkably favourable turn this Global war has taken for the United Nations. We find them victorious in every theatre of the war. Therefore we can reasonably expect the return of peace in the near future and with the return of peace mighty problems in all the fields of human activity, political, industrial, economic and financial will compel the attention of various peoples of world and demand solution; and until such solutions are arrived at and normality is restored every industry must be prepared to face a situation alternating with hopes and fears. Sagacity, therefore requires that our mills must be prepared for all contingencies. It is mainly in this view that the Board of Directors decided to recommend this dividend. But in view of the strong financial position of our mills its assets its resources and the remarkable efficiency of the Managing Agents, we can reasonably look forward to continuous prosperity in future whatever may be the difficulties which may lie ahead.

I shall be failing in my duty if I do not take this opportunity to express on your behalf and on behalf of the Board our sincere appreciation of the very efficient manner in which the managing Agents of our Mills have been managing the affairs of the mills. As far as my knowledge goes, they have discharged their duties concienciously and most ably. In short I am glad, to state they are worthily carrying on the traditions left behind by the late lamented Mr. G. Kuppuswamy Naidu. All the Directors of the Board have been jealously watching the interests of the Mills. A word of praise is also due to the loyal and the devoted service of the staff of the mills. I have now come to the end of my remarks. The audited balance sheet and Profit and Loss statement are as full as they can possibly be. Still if one is determined to, pick holes in the balance sheet and Profit and Loss statement it may not be impossible. We do not pretend to be perfect. But I am sure I do not have to face any such share holders. I would therefore presently consider the 1st item in the agenda. I request you to ask for any particulars or information, in respect of the balance sheet, if you require any and the Managing Agents will gladly satisfy you.

RESERVE BANK OF INDIA

Central Office
Bombay

Notice to Shareholders

In view of the restrictions imposed by the Paper Control (Economy) Order, 1944 it will not be possible this year to supply a copy of the report of the Central Board to each shareholder of the Bank. Only a limited number of copies of the Report will be printed, and will be supplied, until the stock is exhausted, to such shareholders as may be interested, on receipt of a written requisition to the Secretary of the Local Board at the place where the Register pertaining to the shares of the applicant is situate. Copies of the Annual Accounts will, however, be supplied to each shareholder.

C. R. TREVOR.
Deputy Governor.

12th July, 1944.

Announcement

For Shareholder's Information

(The consent of the Central Government has been obtained for this issue under Defence of India Rule 94-A.)

It must be distinctly understood that in giving their consent, the Government of India does not take any responsibility for the financial soundness of any scheme or for correctness of any statements made or opinions expressed with regard to them.

It is reported that *Alexandra Jute Mills Limited* has been requisitioned and that arrangements have been made with the Alliance Jute Mills Company, Limited, situated in the same area, to take over the orders of the Alexandra Jute Mills and execute them for the benefit of the latter under a special financial arrangement. Similar facilities have been given by the Bird and Heilgers group of companies for mills requisitioned in their group. The real advantage in the case of Alexandra is that there will be no difficulty in regard to labour and that the company's loom hours will be used by the Alliance Jute Mills which has been working very efficiently and which has a better earnings record. Alexandra will, therefore, have the benefit of both the compensation that will be payable by Government and the profits on the working agreement with Alliance.

Nilambur Rubber Company, Limited is issuing new shares for Rs. 4 lakhs, 10,000 ordinary shares of Rs. 10 each at a premium of Rs. 10 per share and 20,000 six per cent. Cumulative British India tax-free preference shares at par, forming part of the unissued capital of the Company. The additional capital of Rs. 4 lakhs on account of this new issue is required for the purchase of the properties of the Glencoorg Rubber Estates for a consideration of Rs. 2.9 lakhs. The income from the new property alone will cover the prior charge on the preference shares nearly four times. A dividend of 25 per cent on the ordinary shares in respect of the working for 1943 has been paid. With the bonus scheme in force it might be even possible to pay a higher dividend on the increased capital. The issue of Ordinary Shares on bonus terms and of preference shares at par should, therefore, be welcomed by shareholders. The present market quotation for the Ordinary Shares is Rs. 34 Cum. rights.

WATCH DOG.

VICTORY
LOAN 1957
3%
NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

(Half-yearly general meeting on 3rd August, 1944 at 4 P.M. Transfer Books closed from 25th July to 3rd August, 1944

Audited accounts for the half-year ended 31st March, 1944.

The Revenue Account after deduction of Interest, Commission, etc., shows a profit of Rs. 15,89,989-1-11, which the Directors recommend should be dealt with as follows: Depreciation Rs. 1,00,000, Reserve for Taxation Rs. 10,50,000, Paying Preference Dividend for the three half-years ended 31st March, 1944 at Rs. 7 per cent per annum, Rs. 4,20,000, leaving a credit balance of Rs. 19,989-1-11 to be adjusted against the debit balance of Rs. 8,37,652-4-4 brough forward from the previous half-year, leaving a nett debit balance of Rs. 8,17,663-2-5, to be carried forward.

During the half-year the mill has worked 54 hours per week. The Mill in common with all other Mills in the Membership of the Indian Jute Mills Association closed down two weeks in October and one week each in November and December owing to deficient coal supplies. The position with regard to coal continues to be precarious.

Managing Agents.—Messrs. Ramdutt Ramkissendass.

Authorised, Issued and Subscribed Capital—Rs. 70,00,000 in 4,00,000 Ordinary shares of Rs. 7-8 each and 40,000, 7 per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

PANBARRY TEA COMPANY (1926), LIMITED

Audited accounts for the year ended 31st December, 1942:—

The Revenue Account shows a profit of Rs. 28,426-6-0 and after deducting from this:—Manager's Commission on Profits Rs. 2,316-2-6, Managing Agents' Commission on Profits Rs. 522-14-3, Bonus to Indian Staff Rs. 253, Reserve for Taxation Rs. 5,000 and adding:—Interest on Investments (nett) Rs. 445-1-4, there is a nett profit for the year of Rs. 20,779-6-7.

After adding to this the credit balance of Rs. 12,843-0-3 brought forward from the previous year, there is a credit balance of Rs. 33,622-6-10 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—

Pay a Dividend of 2½ per cent, free of Income-tax, for Season 1943 Rs. 15,001-12-0, Place to Reserve Account Rs. 10,000-0-0 and Carry forward Rs. 8,620-10-10.

The Estimates for Season 1944 are made up for a crop of 2,700 maunds at a cost of Rs. 1,52,192.

Managing Agents.—Messrs. Octavius Steel & Co., Ltd.

Authorised Capital—Rs. 6,50,000. Issued and Subscribed—Rs. 6,00,070 in 60,007 shares of Rs. 10 each, fully paid up.

(Annual General Meeting on 4th August, 1944 at 12 Noon.

Transfer Books closed from 24th July to 4th August, 1944).

Audited accounts for the year ended 31st December, 1943:—

The Profit and Loss Account shows a profit of Rs. 30,931-8-8 on the season's working. After transferring Rs. 4,000 to Reserve accounts and also providing for taxation there is a credit balance of Rs. 26,608-8-7 out of which it is proposed to pay a dividend of 4 per cent, free of income-tax, absorbing Rs. 25,000 and to carry forward the sum of Rs. 1,608-8-7.

Prices generally were higher, but rising costs and the loss on foodstuffs supplied to labour at concession rates have greatly affected the year's results.

Managing Agents.—Messrs. Hoare, Miller & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 6,25,000 in 6,250 shares of Rs. 100 each, fully paid up.

Synopsis of the balance sheet as at 31st December, 1943.

(Annual General Meeting on 1st August, 1944 at 12-15 P.M. Transfer Books closed from 26th July to 1st August, 1944).

Audited accounts for the year ended 31st December, 1943:—

The gross profit for the year is Rs. 39,223-2-1, and after allowing for the adjustments shown, there is a nett profit of Rs. 36,275-14-1 and a final balance on this Account of Rs. 98,241-10-5, which the directors propose to deal with as follows:—Pay the Preference Dividend for 1943 Rs. 8,000, Pay a Dividend of 10 per cent on the Ordinary Shares Rs. 40,000, and Carry forward to 1944 Rs. 50,241-10-5. Total Rs. 98,241-10-5.

Allowances to labour and establishment necessitated by the increased cost of living, mostly incurred in the issue of cloth, rice and other essential foodstuffs at concession rates, amounted to Rs. 66,048; other costs continued to rise sharply and the total effect of this on the cost of production is accentuated, in comparison with the previous year, by the smaller crop made. The allowance received on the Government contract for this purpose was increased to 3½ pence a pound.

Despatch and disposal of the crop were much delayed by the lack of local transport and restricted river steamer freight.

Estimates for 1944 are based on a crop of 6,000 maunds at a total cost of Rs. 3,70,260.

Managing Agents.—Messrs. Davenport & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 5,00,000 in 40,000 Ordinary shares of Rs. 10 each, and 1,000, 8 per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

Synopsis of the balance sheet as at 31st December, 1943.

ESTRELA BATTERIES LIMITED

Audited accounts for the year ended 31st December, 1943:—

The total sales which worked out to Rs. 97,500 per month in the previous year, averaged Rs. 1,51,644 monthly, in the current year. The profit and loss account shows that this year's working of the company has yielded a profit of Rs. 1,31,123-1-11 after providing for all expenses including interest on loans, Depreciation, Managing Agents' allowance and commission and Bonus to the staff and the workmen. After adding the previous year's balance of Rs. 4,570-4-0 to this amount, the total works out to Rs. 1,35,693-5-11. The directors propose to make following appropriations therefrom: To provision for taxation and compulsory deposit Rs. 96,400, to reserve fund Rs. 10,000, which leaves a balance of Rs. 29,293-5-11 out of which the directors recommend that a dividend at 7 per cent per annum, proportionate to Paid up Capital on Ordinary shares, free of income-tax be paid to those shareholders whose names appear on the register of shareholders on 11th July, 1944. This will use up Rs. 28,000 leaving a balance of Rs. 1,293-5-11 to be carried forward.

The factory is under statutory control of the Government of India and the great bulk of production goes against Defence orders. In the Defence orders the percentage of profit on production cost in the current year is fixed appreciably lower by the Government than in the preceding year. This also explains why the profits in the year under review are not higher in proportion to the increase in production.

The increased production activities during the year as also plans of its immediate expansion, has necessitated further increase in the capital. Continuing the policy of raising more capital only as necessary, the directors have decided to raise further Rs. 20 lakhs divided into 20,000 Ordinary shares and 20,000 Preference shares of Rs. 50 each. The Examiner of Capital Issues was approached for necessary sanction which has already been obtained.

Managing Agents.—Messrs. Choonilal & Jariwala.

Authorised, Issued and Subscribed Capital—Rs. 5,00,000 in 10,000 shares of Rs. 50 each, fully paid up.

Synopsis of the balance sheet as at 31st March, 1944.

COCHIN MALABAR ESTATES LIMITED

Audited accounts for the year ended 29th February, 1944:—

Accounts.—Balance from last year Rs. 5,15,638. *Less* Interim Dividend of 15 per cent for 1942-1943 paid on 12th April. 1943 Rs. 1,07,311. *Less* 7 per cent Dividend on Preference shares for the year ending 28th February, 1943, paid on 30th June, 1943, Rs. 7,931. *Less* Final Dividend of 35 per cent for 1942-1943, paid on 20th July, 1943 Rs. 2,50,392. *Add* Nett profit for 1943-1944 Rs. 5,34,042. *Less* Interim Dividend of 7½ per cent for 1943-1944 paid on 22nd January, 1944 Rs. 67,008. *Less* Dividend due on 839 shares allotted on 5th February, 1944 Rs. 189. *Less* Second Interim Dividend of 15 per cent for 1943-1944 Rs. 1,34,394. *Less* Transfer to Taxation Reserve Rs. 15,600. *Less* Transfer to Dearness allowance Reserve Rs. 65,000. Leaving a balance of Rs. 4,01,855. Out of which the Directors recommend the payment of a Final Dividend of 35 per cent, free of income-tax Rs. 3,13,586. Leaving a balance of Rs. 88,269, which the directors propose to carry forward.

The Ordinary Share Capital has been increased from Rs. 7,15,407 to Rs. 8,95,959 so that although the total dividend recommended, at 57½ per cent, is the same percentage as last year, the amount to be distributed has increased by Rs. 1,03,817.

A sum of Rs. 15,600 has been reserved against Income-tax on the profits of Pudukad Estate which is situated in Cochin State. This reserve is shown as an appropriation of profits in the Balance Sheet and does not therefore appear in the Profit and Loss Account.

Managing Agents & Secretaries.—Messrs. Peirce, Leslie & Co., Ltd.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Conditions in the money market have ruled as easy as ever, with interbank call money quoting ½ percent in Calcutta and ¼ percent in Bombay. The rates are purely nominal. The bidding at the weekly auction of Central treasury bills showed a considerably wider interest; but the rate did not show any perceptible decline. Against Rs. 4 crores on offer, applications came to Rs. 12.43 crores as against Rs. 9.07 crores last week. The rate of accepted tenders was 7 annas and 9 pies percent per annum which shows a small decline of 1 pie. The offer for next week remains unchanged at Rs. 4 crores. The Assam Government have secured their short-term requirements for Rs. 2 crores at 8 annas and 11 pies percent per annum, which is about 1 anna higher than the Central treasury rate.

Our Bombay correspondent scents the possibility of the issue of a 3 percent 1958 Bombay Government Loan for Rs. 13 crores. We are not in a position to secure any confirmation of this report.

The returns of the Reserve Bank for the week ended July 21 disclose a rather sharp fall in active note circulation from Rs. 932 crores to Rs. 926 crores. This has meant an increase of notes in the banking department by Rs. 6.82 crores. Thanks to the substantial receipt of sterling payment for Rs. 13½ crores, deposits of the Central Government with the Reserve Bank are higher by Rs. 11.16 crores and has set up a new record at Rs. 83.43 crores. Deposits of member banks have also shot up to Rs. 98.48 crores, recording an increase of Rs. 6.35 crores.

In the last week's issue, we pointed out that, in the light of the conditions prevailing in the money market, the Finance Member might take up the question of issuing a new loan limited as to amount and the period during which the list remained open. There is another important matter which merits his serious attention in present conditions. This pertains to bullion sales. The Reserve Bank of India has been selling gold as agents of the Allied Governments for the past many months. These sales were ostensibly intended to offset inflation and bring down commodity prices. The sale of gold by the Reserve Bank as agent to the Allied Governments could not have full effect in this direction though the amount of gold sold so far must be something like Rs. 60 crores. The reason for the lack of full effectiveness in these sales of gold is that the Reserve Bank is not a free agent as to the price at which the gold is sold. Acting on behalf of the Allied Governments, one of the aims of the Reserve Bank must necessarily be to secure as satisfactory a price as possible for its principals. These sales of gold had two objectives: (1) to provide the wherewithal for Allied payments in India, and (2) to help in the anti-inflationary drive. The first objective has loomed larger than the second. This was inevitable as the Reserve Bank is only an agent in this matter.

The time has arrived for a shift of the emphasis to the second objective. The time has arrived in the sense that the Indian Government will shortly be having a considerable amount of silver to sell to the public in India. This silver has been given to India under lease-lend arrangement. The Indian Government are, therefore, completely free agents with regard to the price at which they may sell silver. While, thus, the Reserve Bank will be in a position to sell large quantities of silver at prices dictated by itself and suitable for maximum effectiveness as anti-inflationary measures, it is of the utmost importance that the Reserve Bank should have similar discretion with regard to the price at which gold can be sold. It is of paramount importance that both gold and silver should be sold; that gold and silver should be sold simultaneously; that gold and silver should be sold between now and October; and lastly, that gold and silver should be sold in such quantities, with such vigour and at such rapidly falling prices as to compel the price of gold to come down to, say, Rs. 65, and the price of silver to, say, Rs. 95. Once bullion dealers know that there is a new determination on the part of the Government in their policy and operations of bullion sales, and that this determination is backed by substantial stocks of gold and silver, there should be a precipitous fall in the bullion markets. Such a fall should induce a widespread unhoarding movement of bullion. If the price of silver falls below Rs. 105, many of the holders of rupee coins which have now been withdrawn from circulation but which have not returned to currency on account of their bullion value being more than their nominal value, will return a good part of the hoarded coins.

Sale of gold and silver between August and October will have the maximum effect as this is the time of the year when the demand for bullion is at the lowest. There are two seasons for demand of bullion in India. The first is the marriage season which is usually over by June; the second begins with Diwali in November. We are in the period in which the marriage demand is over and the Diwali demand is yet far away. To sum up, we suggest (a) not only silver but gold should be sold if bullion sales are to be really effective for anti-inflation purposes; (b) the objects to be kept in view are that the price of silver must be brought down to Rs. 95 and the price of gold to Rs. 65; (c) July-October is the ideal period during which the bullion sale policy can be most effective for the objects now in view; (d) everything possible must be done, once these objects have been achieved, to ensure that gold and silver in small lots are made available directly to the masses through branches of banks so that the abnormal profits made by bullion dealers and a whole tribe of middlemen are avoided.

The exchange market has been steady with business on a moderate scale.

Ofcourse, you need
LAL-IMLI
PURE WOOL
FABRICS

But the ARMY fighting for you must come first.

.... and so until the war is won all our output must be for the Troops. Then you will have entirely new ranges of the famous LAL-IMLI Pure wool Fabrics to choose from.

TREASURY BILLS

Central Govt.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, July 15, 1944. Total amount offered was Rs. 12,43,00,000. Tenderers at Rs. 99-14-3% were accepted in full and those at Rs. 99-14-0% were allotted approximately 27%. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-7-9% per annum.

Tenders for Rs. 4 crores of three months' Government of India Treasury Bills will be received on Tuesday, Aug. 1, 1944 in Bombay up to 11 a.m. (standard time) and up to the close of business on Monday, July 31, 1944, at other centres. Successful tenderers should make payment on Friday. Aug. 3, 1944. Other conditions are as usual.

During the week ended July 21, 1944, Government of India Treasury Bills for Rs. 1.42,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

The Exchange Bank of India and Africa Ltd.

Scheduled under the Reserve Bank of India Act, 1934
Commenced Banking Business on 5-3-1943
Head Office : Fort, BOMBAY

Bombay Plan—The Next Step

Though it is months since the Bombay Plan was made available to the public, its authors have not issued till now any of the publications with which they promised to fill in details or provide clarification of issues which had been touched on too lightly. The main reason for releasing the literature on the Bombay Plan in instalments is that the public mind must be properly conditioned to receive detailed proposals regarding specific aspects of the Plan now before the country. The very idea of planning, though, no doubt, familiar to students of economics, businessmen and administrators, had, so to say, to be sowed in the public mind and given time to germinate. Even the intelligentsia had not learnt to consider planning as a matter of practical politics—it had only regarded it as fad, fetish or an invigorating mental hobby. As for the Government, its gravitation towards planning is the result of forces which have less to do with the conversion of the public to the practically new cult. All classes had to be enabled to overcome their natural tendency to regard the big amounts that inevitably figure in a national economic plan as prima facie evidence of its Utopian character. In this respect, inflation has been a blessing in disguise. The order of figures in the statements of the Reserve Bank, in the budgets of the Centre, the Railways and the Provinces and, not, less, the scale of company profits and individual incomes, including those of the working classes, have cured the country of its mental anaemia in matters of finance. The Bombay Plan, which in any other setting would have left the country sorely sceptic and would in any case have been laughed out of scorn by unsympathetic foreigners, has now fallen on well-prepared ground. It has sprouted in the most heartening manner. The suitablity of planning on as large a scale as a disciplined imagination will permit has been accepted without question. And the public is eager, almost inpatient, to hear more of it, particularly about its part and lot therein.

Judging by such criticism as there has been within the country, it would seem that it is more important at this stage to clarify the system and principles of distribution under the Bombay Plan than to deal with the comparatively more technical issues such as the extent of capital requirements or the need for foreign borrowing. The authorship of the Bombay Plan is such that, while its prestige is helpful in ensuring its acceptance as a practical policy for the future, it also lends itself to sinister suggestions of its being motivated by capitalistic exploitation. Rival plans have been put before the country which steal the thunder from Sir Purshottamdas and his cosignatories but fail to throw on the landscape even a momentary flash. But the professed aim of making the people the principal beneficiaries of the Plan instead of the capitalist and business classes draws adherents and creates a bias against the Bombay Plan.

For our part, we have regarded the Bombay Plan in its present form as an impressionistic outline of what India can do if the people and the Government will accept planning as the best, if not the only, means of securing economic progress and popular well-being. Though points have been found therein over which to raise more or less exciting controversies, the initial publication was prepared with a view to minimise as much as possible room for differences of opinion. Except for the fixing of the minimum standard of living in terms of the necessaries and comforts of life, questions regarding distribution were not discussed. But it is not recognised as well as it should be that full employment, minimum individual income and production in adequate quantities of the necessaries of life constitute by themselves full assurance that the principal beneficiaries of planning are the people, whatever may be the scale of profits which the business classes may make in the conditions of such planned development. Problems of distribution, as a rule, give more room for loose thinking than problems of production, since in the latter the yardstick of money can be employed to greater effect. The Bombay Plan can be easily brought into disrepute by pointing to the incomes of its authors, since few people stop to think that the objects of the plan are better judged by the targets of production. The time has therefore come when problems of distribution as they affect the Bombay Plan have to be dealt with by its authors, both for the purpose of rescuing the masses from mendacious misrepresentations and for the purpose of convincing the more knowledgeable sections of the public that the system of distribution is correlated to the pace of progress as a whole and production in particular.

An attempt may be made here to indicate some of the main principles of distribution in the planned economy of the future. As hinted already, it is often thought that distribution offers greater freedom of choice and action than production. That distribution is closely linked to production, past and prospective, is often overlooked in an excess of zeal for equalitarian ideals. It is one thing to swear by the communist formula and adhere in all matters to communist principles, so that the adoption of a communist system of production will lead more or less automatically to a communist system of distribution. But it is quite another to accept planning with its ideological neutrality and to press for a system of distribution which will be lacking in accord with other parts of the plan which are concerned with production, saving, investment and further progress through later phases. Plans which profess to be more equalitarian than the Bombay Plan seek to gain their objects largely by changes in the relative appropriations for agriculture and industry, the assumption being that the outlay on agriculture goes more largely into the pockets of the poor than the outlay on industry. While this assumption is at best questionable, the belief which lies behind it, namely, that the relative importance of agriculture and industry is a question to be decided from the viewpoint of distribution, is wholly invalid. In modern conditions, agriculture and industry, far from being antithetical, are interdependent; and the balance of dependence is, if anything, on the side of agriculture rather than industry. For, agriculture cannot discharge its primary function of feeding the population and providing raw material for industry without letting industry get sufficiently ahead of it to hold out a helping hand through fertilisers and improved implements, not to speak of sufficiently remunerative prices for its produce.

The corrective to unequal distribution clearly does not lie in cold-shouldering industry as such. Nor is there ready to hand any patent remedy for the inequalities which a system of predominantly private enterprise is prone to develop and to accentuate. Given the fact that human nature is still not above need for special incentives to put forth the best effort and that planning is the only means available of having the best of both words, socialist and capitalist, the only course open to sincere, as different from sensational, equalitarians is to make the most of the already well-tried methods of smoothening the sharp edges and angles of an unequal system of distribution. A few decades ago, progressive taxation was the only method of reducing inequalities, barring, of course, voluntary charities, which one cannot usefully consider in scientific planning. To progressive taxation were added special levies such as death duties. In the conditions of the war period, there is the excess profits tax, though, it must be remembered in this connection, that some European countries had even during peace time a special levy on the profits of Government contracts. In India, taxation should occupy an even bigger place than in other countries in the reduction of economic inequalities. Next to taxation comes the introduction of social services borne in part by the Exchequer but largely by industry. When social services are run satisfactorily and education, public health and public services like transport are looked after efficiently by the State, they may be said to represent an addition to the income of the average citizen which can have a psychological significance as well, if the public can be educated to an intelligent appreciation of such services.

While it is true that a sound system of public finance and social services can go a long way to improve the incidence of unequal incomes on popular welfare, it cannot be said to constitute in itself an acceptable solution of the problem of equitable distribution. Technically regarded, any system of distribution has firstly to maintain consumption of goods and services at the levels indicated in the various stages of the plan and secondly to facilitate saving and investment on the scale necessary for the prescribed rate of progress. The former suggests the need for diffusion of income, while from the point of view of the latter, unequal incomes seem to have their soul of good. But the latter point is considerably modified by the fact that insurance and other co-operative activities of various kinds may be made to serve as a means of effecting compulsory saving on the part of even the lowest income groups. The dangers alike of uncertainty and meagreness of savings can thus be avoided. It is possible therefore to regard the question of distribution as largely a question of individual incomes since even the lowest income groups can be made to save and contribute to the total pool of savings. We have no desire to anticipate the proposals which we understand, the authors of the Bombay Plan will shortly be putting forward in regard to distribution. But if it is to be a planned distribution such as will refute the charge that the Plan is weighted in favour of big business, they will have to show by more or less accurate estimates that the common people will have at least a fair share of the benefits of increased production. The educated classes will look for a scheme in which the regulation of prices, wages and profits will be such as to promote a system of distribution which will ensure the minimum standard of living for all, do away with glut and shortage alike and leave the country with sufficient savings to take up with confidence each subsequent stage of the Plan.

be a Host to the Poor

INSTEAD of acting as a host towards your friends and business acquaintances who are as rich as yourself, why not be a host to India's poor? You can do this, with very little effort, in these three ways:—

1. Stop entertaining lavishly. The tradition of Indian hospitality is now out of date in a country in which food has to be rationed. You can still be hospitable without incurring unnecessary waste.

2. Economise in your home by having less dishes served. That is, do not serve a large variety of dishes many of which are not likely to be touched.

3. We nearly *all* eat more rice and bread than is good for us. It is a habit worth breaking for the sake of our health, as well as for the poor who need all the rice and wheat they can get.

IN these ways we can save hardship amongst the poor, who look to us, in time of trouble, for just this kind of practical help and support. This *is* the new hospitality!

Employment and Foreign Trade

Starting with the Prime Minister's prescription of Food, Health, Homes and Work for all made last year Britain has been presented with a proposal for full employment. Formal approval of public works is based on adequate international experience but other remedies applicable to a depression have also been propounded by the Minister for Reconstruction. Adjustment of taxation and the maintenance of low interest rates in order to stimulate investment have been promised along with a degree of control over both finance and industry. The main purpose is to avoid the cyclical fluctuations that compelled Britain to leave the gold standard and free trade, limit the benefits of social insurance and curtail oversea investments. If major fiscal changes are not promised for the future, social insurance is to extend greatly in scope. The national income is to be raised too in order to permit the payment of contributions and to reverse the unsatisfactory trend of population.

The consequences of such desired conditions for other countries need to be examined. Full employment, if it is different in nature and origin from the average boom or the mobilisation of men and materials for war, is likely to influence foreign trade to a great extent. Industries would require more raw materials, and if consumption is sustained by high wages, food imports, in spite of protection for agriculture, must increase. The means of payment for imports could come only from an increase in Britain's exports. So it is easy to relate the conclusions reached in the debate on inter-Imperial affairs to the domestic programme. In view of the loss of Britain's oversea investments by half and the increase in short-term debt coinciding with the rise in prices for all imports, the export problem will be of a special nature. Cuts in wages so as to reduce costs are repugnant to the whole doctrine of full employment which is indeed one of full consumption (slumps being ordinarily attributable to under-consumption). And if the maintenance of high wages to defend the standard of living easily spells protection, in the view of many, the obligation to increase exports, both visible and invisible, is superior to any consideration. But this implies that oversea customers must be in a position to take British exports. Programmes of industrialisation for backward countries must be of such a nature as to help British exports. If full employment in the capital goods industries raises the export of such goods, on the basis of exchange stability, the industrial development of countries taking loans for such purpose would proceed. Further, their own capacity to export would improve and the increased requirements of raw materials would be met. It is thus important to remember that full employment is not an incident of autarky but is the cause for a rapid recovery of international trade in the future.

Discussions concerning Britain's position in world trade preceded the formulation of the policy governing employment. During the monetary discussions the question was in the background but the main idea, namely, to stick to exchange rates ruling in July 1944, is not directly related to the preservation of the sterling group in its present form, but to the British need for imports in larger volume. Resources are limited; only imports can supplement them and keep up trade activity. This view may apparently conflict with controls adopted in war time to check both spending and imports. It has been urged that German practice especially from 1935-39 has no bearing on the policy to be adopted by Britain. On this view it is mainly to get away from autarky that Britain desires imports and seeks export markets. Autarky implies dependence on the home market, rise in the prices of materials as distinct from labour costs. The British market is too small in spite of pent-up demand for the majority of industries which are, besides, dependent on imports of raw materials. If agricultural wages and profits, etc., kept up by subsidies, are to be as part and parcel of the employment policy there is no real danger to imports of food, manure and machinery from overseas under full employment.

The outlook for many commodities entering into India's export trade is however independent on measures that may be adopted by Britain. But, at the same time, the greater dependence on the British market predicates a degree of vulnerability especially as Indian cotton may be expensive as compared with Brazilian and Indian groundnuts costlier than West African. What is said of British exports being able to stand a chance by their ability to compete certainly has a bearing on Indian exports. If Britain as a creditor may not be able to influence the direction of trade in respect of other countries to such an extent as in the past, the fact that in regard to linseed, groundnuts, hides, tea and raw cotton too, the British market is the only one that matters for India may influence the quantity of exports as well as the level of prices in the future.

Editorial Notes

No Change

The only doubt as to the value of the experts' agreement as to the international monetary fund meant to promote exchange stability is not in regard to the quotas or the seats on the directorate. The doubt will be occasioned by the non-fixation of any ratio between gold and foreign exchange in the foreign assets. It is perhaps meant to limit the demands for U. S. aid but the quotas fixed for Russia, France and Canada may be paid in part in gold whereas Britain and China in spite of the exchange controls and the proviso as to the shortage of earmarked gold can provide little or no gold and must probably put up instalments in dollars just in the same way as India. One and all have sterling, and very little dollar exchange or realisable investments, so that in the first stage, the chief issue will be the correct level for the cross-rate. The monetary conference left the question unexamined because of the previous understanding that rates ruling in August 1943 would be maintained in the event of an international agreement for which purpose the disposal of balances was left by the delegates to negotiation in the future. Whether dollars can be accumulated rapidly for deposit in the new Fund depends almost entirely on U. S. tariff policy since future loans under guarantee are to be made for reconstruction. But Britain's usual surplus of imports from the U.S.A. would be smaller while the surplus of exports from the sterling area may be larger if Britain's tariff policy in deference to existing obligations is recognised. It is quite likely that the obligations and the outline of British requirements given in April have been acknowledged. The deposits of earmarked gold in London would obviously affect the nature and purpose of currency reserves. India, for instance, may send gold out for being held in London. It is fairly clear from the special concern manifested for the French currency that wartime depreciation is ignored in order to keep up the exchange rates in force for four years. It is not surprising that a very conservative conference turned down the plan for recovering blocked balances.

Future Lending

The World Bank is to be set up not merely because the BIS is to be dissolved according to recent direction, but because the agency for making loans is as important for the future as the Fund to deal with short-term international balances. Longterm credits particularly in dollars are wanted. U. S. financiers, credited with a desire to lend to Europe after the war, have at hand a separate body to guarantee future loans for reconstruction. The paid-up capital of 8,800 million dollars will not be the limit of lending. The countries with a surplus of exports would be encouraged to lend on long term. Underwriting rather than lending probably will be the function assigned to the Bank. The World Bank's loans would probably not limit U. S. participation through investments in the development of resources. While agreement as to the contributions to the World Bank reduces credit status to a common denominator, preferences and prejudices will apparently persist. The other U. S. agencies *e.g.*, R.F.C. and the Export-Import Bank will probably stay in business as Latin America generally asks for more capital, not at all for repatriation of foreign capital. Perhaps the chief purpose is to drive out the old ideas as to autarchy and create favourable conditions for the export of U. S. machinery and plant to countries that cannot offer dollars. While contributions are fixed by agreement the Bank is not called upon to limit its loans or preserve special assets to meet deposits. If the domestic requirements of capital are satisfied by large corporate reserves or probable tax refunds in the U.S.A. the case for lending even at some risk is duly established. How much India could or should borrow for internal development still turns mainly upon the size of the export surplus, particularly, in relation to the U.S.A. But it is well to note that a dollar reserve set up in advance would remove outside anxiety as to debt services in respect of dollar loans contracted in the future by India. Needs rather than voting rights would determine the quantum or timing of loans made by the World Bank. In which case, available information as to India's resources and requirements may shape the World Bank's attitude to requests.

Prices and Progress

The Bombay Plan's estimate of resources available for development provided for a steady increase in the note issue. That assumption alone warranted the belief that prices in India would not decline and the costs of all

development schemes would exceed estimates. Yet the price problem here is mainly governed by the supply and transport situation in the case of grains, coal or cloth. If it is urged an expanding national income would naturally keep prices up, to go by U.S. experience alone, but the shortages of unrationed goods account for the rise in prices during full employment. A deflationary policy on the basis of sales of precious metals to the public would hardly be effective for the postwar level of prices rather than the demands of investment would promote realisation of hoards. But the process would help the execution of the plan in its first stage. Should agriculture be the first object the immediate return would meet recurring charges in the first stage. So far as can be seen, the moderate annual provision for grants to the provinces made in the Kharegat plan is based on the calculation of the return from the soil that would support in turn the development plan. Heavy industries may not bring immediate return; but larger yields and lower prices in the case of agriculture may have an effect opposed to that of the continuous increase in currency in India. The fixed, low rate of interest for new internal borrowing for development should ordinarily determine the ratio of costs to income derived. Should capital goods be unduly expensive, the order of development might conceivably change, while the major argument still to be used against the critics of the Plan is that prices here though not fully amenable to control have not risen uniformly, continuously or proportionately to the increase in note issue, so that a general assumption that postwar costs would be only double the prewar costs might be wholly correct particularly if the price-level for Indian exports during the war is compared with the prewar level.

Slacker Conditions

The progress of military operations explains the further rise in short-term borrowing in London. The treasury bill rate is left around 1 percent but the weekly tender is for £110 millions. The increase this year is a direct consequence of the increase in clearing banks' resources and the weekly takings of treasury deposit receipts have invariably been higher although the treasury's requirements are determined in both cases mainly by maturities rather than the supply of funds. The expansion of short-term debt strengthens the credit base but advances in proportion to bank deposits still remain moderate which is one reason for the absorption of bills on offer. That money conditions are unaffected by the stock exchange boom with investors turning to Continental bonds as well as Home Industrials is established by the report that call loans are to be had in London at ⅜ percent. The Exchequer returns do not indicate the net increase in debt but the disappearance of new issue activity is obviously a factor in the rise in listed securities, especially, of leading industrials in London. The City's belief in victory in 1944 accounts largely for the rise in Textiles and shipping

J. C. DAS, *Managing Director*

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

shares from Monday last. Since decontrol is promised Home Rails have been dull, while giltedged stocks have been standing at the same prices for weeks.

Quick Change

Japan's crisis ended as abruptly as it began last week. General Tojo's downfall, attributable to the reverses experienced from Assam to New Guinea, did not put the Army off its stroke. The new Premier is the Army's choice; so is the Governor-General of Korea and the Kwantung Army has nominated the Chief of Staff. If the complete withdrawal of General Tojo from politics is promised the advent of Admiral Yonai may give relief to Japanese business. Totalitarian regulations were never welcomed by businessmen who probably count on the Navy Minister and the Foreign Minister as Moderates balancing the Army's political influence. The widely expected restoration of Imperial authority has merely taken the form of de-concentration. But there is no return to the conditions of the 'twenties and Japan's Ministry has announced promptly that the alliance with Germany stands. The Japanese apparently have not such problems as have arisen in Germany and can confidently declare through General Koiso that the waging of war in East Asia is the only immediate purpose. But Tojo's resignation like the earlier resignation of Shimada proves that Cabinet stability rests on military success, and of the latter there is no sign. Defence of the homeland is ostensibly the first task of the new Ministry but defence measures are compromised by the acquisition of bases both in China and in the Pacific by U.S. air force. Hopes of a negotiated peace in China are not fully supported by Admiral Yonai's record as a War Premier and are neutralised by the assurance that the Allies would increase aid to China. The enlargement of the U. S. Navy by the President's order is the direct reaction to the changes in Japan and that is, by itself, a guarantee that the Chinese Government would not overlook today.

Self-Determination

The Cripps offer of self-determination has been accepted to the extent that Gandhiji, on behalf of the Congress, accepted the formula of partition put before Mr. Jinnah by Mr. Rajagopalachari. It is not quite certain that the Muslim League's Working Committee would look at it as a local version of the Cripps offer, as a prelude to independence and partition. The river basins scheme carefully framed by Sir Reginald Coupland in order to detach the Umballa Division which belongs to the Ganges basin has been ignored in the offer of a plebiscite to areas where the Muslims are in a majority. It is the projected Boundary Commission which must define the areas and arrange for a plebiscite. But the acceptance at the highest levels of the Pakistan demand three years after its formal enunciation raises questions not only as to the status of Baluchistan and the new State's relations with its neighbours Iran, Afganistan but as to the degree and kind of economic development planned for the Hindusthan and Pakistan of the future. While the formula promises continuance of the status quo in more than one respect, it is impossible to escape the conclusion that unequal progress would be the rule should partition follow plebiscites. The more important point that the political solution is still regarded as more important than a forced march towards State Capitalism will not altogether escape notice. A national government is not merely the means to planning. What Congress clearly stands for is independence on the basis of inter-communal agreement, not a special programme for accelerated industrial development. It is easy to add that it is not possible for the Bombay planners to win either the Congress or the League as a sponsor and the politics of the less practical will have a greater effect than the planner's formal commendation of a national government. Admittedly, immediate agreement in India as to Pakistan is far more important than the League's plan for ending exploitation in Muslim majority provinces. But the latter objective might lead to an outflow of capital and impair the taxable capacity of a new State. It is to guard against such foreseeable developments that the formula contains a proviso for retaining by agreement existing practice as to railways, customs, migration etc.

National Insurance Results

As new business rose by 100 per cent 1943 was a quite satisfactory year for the National Insurance Company, Limited whose annual report refers to the issue of 10,772 new policies assuring over Rs. 283.3 lakhs during 1943. Premium income for the year rose to over Rs. 66.6 lakhs while investment receipts improved from Rs. 15.05 lakhs in 1942 to Rs. 17.68 lakhs. Outgo in respect of claims decreased slightly as compared with 1942 while receipts for the year were supplemented by Rs. 6.82 lakhs from profit on the sale of investments and house property. The addition to the Life Fund is consequently higher than usual. The Life Fund has been raised from Rs. 386.92 lakhs to Rs. 419.31 lakhs. The balancesheet shows policy loans of Rs. 53.92 lakhs and investments totalling Rs. 276.8 lakhs nearly in approved securities in addition to ordinary shares accounting for Rs. 41.81 lakhs. Mr. J. Choudhuri while deprecating immoderate expansion of business referred in his speech at the meeting to the slight rise in the expense ratio and the prospective fall in the yield on the funds. The latter led to a revision of premium rates after the year closed, indicating that suggestions made this year have been anticipated by National in line with its own policy of seeking and getting the best.

Clive Street Gossip

Now that the Paper Control Order has passed into the stage of progressive enforcement on the merits of each particular case, it is necessary, both from the point of view of the authorities and from the point of view of the periodicals affected by the Order, to re-examine the position. For, the Bombay Conference, far from obviating the need for careful scrutiny of details, has actually enhanced it. The achievement of the conference is not such as can be described by any trite phrase. It is not as if the delegates succeeded in securing a revision of the basic cut or other specific concessions. The Committee, which was set up on the first day of the Conference, did good work and when the officials joined later, we knew that far more would depend on individual encounters with the authorities than what might be done in what remained of the conference.

The achievement of the conference, therefore, is the creation of a position in which each periodical can state its case clearly, refer to certain well-understood principles and obtain all the reliefs which are reasonably due to it in the prevalent circumstances. This, we must frankly recognise, is far different from what was expected by some of the more optimistic sections of the periodical press. There were some who thought that the order was self-condemned by the drastic nature of the cut that it imposed and that the delegates had only to bring home to the Government the enormity of the sacrifice called for to get the figure scaled down. It was on this point that Sir Akbar Hydari was totally unyielding. The argument that a 70 percent cut will kill the small and new journals carried no weight with him. I even suspect that in Sir Akbar's eyes this argument is in favour of, rather than against, the Paper Control Order in its present form. So that, on this question of the basic cut, Sir Akbar was unbudging. We had to seek reliefs in other respects.

* * * *

Here the Government were more accommodative. Perhaps, the Government knew from the beginning that some concessions would have to be made in matters other than the basic cut. They were not lacking in experience. As a matter of fact, paper control in regard to newsprint was in many respects even more complicated than in regard to white printing. The Government knew the difficulties of complying with the order at such short notice. And if they asked for the impossible, it was probably as a prelude to a hard bargain. In fact, when the Committee suggested that the enforcement of the order should be postponed to September 1, the Government were able to contend that a number of individuals had already started conforming to them and that the postponement would create more complications. Here, too, as in the case of the basic cut, the authorities were not prepared to change the order, but they offered instead to provide various reliefs. It was understood that in the initial stages no serious view will be taken of mere technical infringements, since the adjustment to the requirements of the order can be effected only over a period of time and not all of a sudden. Likewise, the cut will not be applicable to each issue of a journal — papers will be required to adhere to the quota within each quarterly period. The request that the period may be extended to a year was met by the contention that in that case, the authorities could have no clear idea of the requirements of paper in each area and for particular periods. A similar relief was also promised in regard to the rule which requires that there should be a fifty-fifty ratio between advertisements and reading matter.

* * * *

The result of all this is that both the Government and the periodicals have before them a number of small, minute problems to take up, one by one, and solve in a way that the ultimate total effect will be in conformity with the requirements of the position. Each periodical has to submit its case to the Department of Civil Supplies in order that it may get a definite order as to the exact percentage of the cut that is to be imposed on it. It has to make out a case for the grant of special reliefs. Mere personal hardship or inconvenience cannot, of course, constitute a case for a lower cut than what is provided in the Order. Reduced space certainly means reduced income. But that cannot be expected to weigh with the authorities whose job is to reduce the total consumption of white printing to well within the limits of available supplies. What the Department will agree to consider as a case worth hearing is a statement drawn up, not from the point of view of the proprietory or other interests concerned, but from that of the public at large. It is not true that all papers serve the public interest equally well, any more than that journals that do serve the public interest better than their contemporaries are run without motives of private profit. If the supply position allowed it, it would be satisfactory from every point of view to apply a low cut uniformly to all papers. There would then be no room either for a charge of invidiousness or for complacent assumptions of superiority on the part of some journals. But since the cut required is of the order of 70 percent, distinctions are unavoidable. And the Government have flatly refused to consider the demand for a lower cut to be applied to all papers equally. They have taken on themselves the responsibility of deciding the exact percentage of cut to be imposed in each case.

No discerning, dispassionate reader of periodicals in India will deny that a very considerable part of them is, from the point of view of the public, an utterly indefensible waste of paper, which is particularly criminal and sinful at a time like the present. Even in these conditions of serious shortage, there are weeklies which devote whole pages to matter which has already appeared in a score of dailies in all parts of the country. In India it is only too true that journals are started more by reason of the pull which their sponsors have with the advertisers or by their confidence in their power to blackmail them, than out of a feeling of special competence for serving the public at large or any one class of readers. This tendency, long inherent in Indian journalism, has been strengthened since the outbreak of war. Journals have been started, whose sponsors make no secret of the fact that their only purpose is, as they call it, to help the war effort. In their eyes, and in the eyes of those who afford them every incentive and encouragement, the war is an orphaned cause which must welcome any kind of help, at any cost. While the country was sliding down to the stage of requiring a 70 percent cut in civilian consumption of paper, there were publications galore every page of which was a reprint of what the Information Department had already distributed over all parts of the country. Advertisers have of late little incentive to limit their media —Sir Jeremy Raisman and his Excess Profits Tax have created an expanding fund for subsidising journals which the

public at any rate cares nothing for. I do not mean to question the right of these journals to live, though I have my doubts about it. But if at a time of acute paper shortage, consumption should be restricted, it stands to reason that the axe should fall first on such unwanted journals. At the Bombay conference, the suggestion was made that all journals which were started after a certain date should be compelled to stop publication. The Government have accepted the validity of this contention. But, then, no rule is sound, without certain judicious exceptions; and the Government has reserved the right to make such exceptions.

* * * *

The position, then, is this. The Government will seek to secure a considerable saving of paper through the stoppage of the small, new journals and through the insistence on a high percentage of cut in the case of a majority of the survivors. The minority which will comprise the journals with some valid claims to serving the public interest besides their own will be asked to exercise the utmost care in their consumption of this scarce commodity. The cut in their case will by no means be inconsiderable. A cut of 40 or 50 percent in the case of a journal which has, say, 70 or 80 pages per issue and has a circulation of thousands will effect a saving in paper which twenty small papers with a much higher cut cannot equal. But there are other considerations besides the quantity of paper saved. If, as I have emphasised at more than one stage, a low uniform cut is out of the question—and it is—the Government will not look at it—then there is nothing to be said for asking journals which have served the country through various trials and tribulations, to disable themselves in the name of a flat unprofitable equality, for continuing to serve the public as of old. Invidious as it may seem, it is substantially just to decide the extent of the cut in each case on its merits.

* * * *

We have to see the system work for some time before any reasonable or useful comments can be made. But there are some points which the authorities will be well advised to consider during this stage of the adaptation of the order to prevalent conditions. I have already referred to a journal, which devotes whole columns to matter which has appeared in the daily press, without a word of comment to give it a semblance of originality. Presumably, this journal has had a lower cut awarded to it. Is it not necessary in the prevalent circumstances to watch how journals which have had special treatment of this kind, are using the space thus made available to them? Another point is that most of the big advertisements appearing in the Press today are Government advertisements which, one would expect, would by now have been pruned to the new rates and regulations. The Paper Control authorities might well take up this matter with the Departments concerned. The third point is that the Government stipulation about a fifty-fifty ratio between advertisement and reading matter is rather a crude rule-of-thumb which is, no doubt, needed in the case of the kind of journals I have described at an earlier stage, but which would be unfair, futile and unnecessary in the case of reputable journals which would not like to see themselves reduced to mere chaotic catalogues. The editorial department in all journals of repute would only welcome every chance of adding to the reading matter. In fact, they have worked all these years almost in ignorance of the existence of such a rule; for it never touched them near. But conditions are different today. With types reduced and display eliminated, far more goes into a column than ever before. To have a clerk in the Post Office or the Paper Controller's pick up a footrule and take lineal measure of what we provide for the reader in this hard-pressed state is an indignity as galling as it is unmerited or unnecessary. For my part, I may assure the authorities concerned that nothing will please me and my colleagues more than to increase the amount of reading matter in the weekly issues of "Indian Finance". But where deviations from the fifty-fifty rule are forced on us that, I contend, should make a difference. I still hope that in this matter the Government will take into consideration other relevant facts such as size of type, changes in the lay-out of the pages and the like.

Olympus

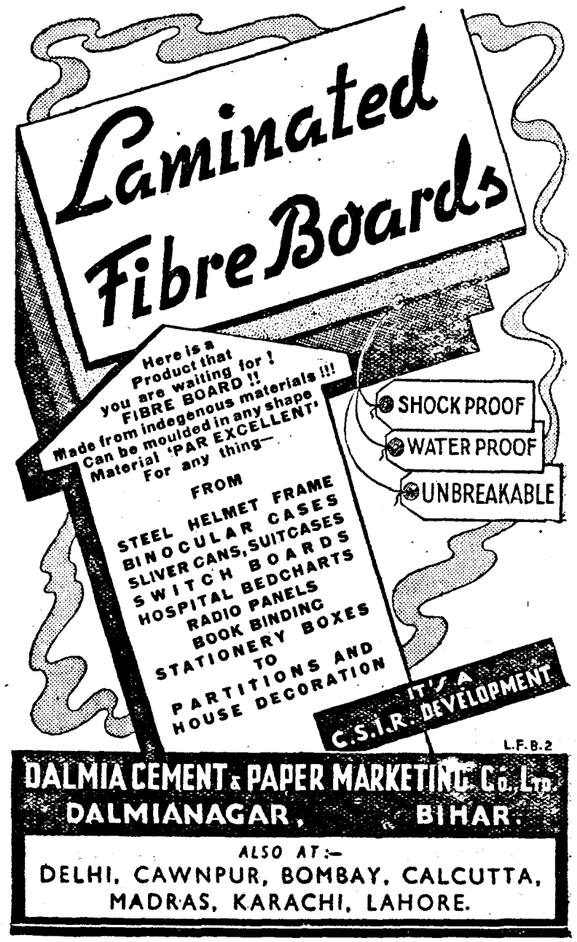
(From Our Correspondent)

NEW DELHI, July 24.

The events of the past three weeks have intensified the sense of political frustration here as never before and people are wondering as to what is the way out of the impasse. Mahatma Gandhi is busy interpreting his plan, replying to his critics and answering charges but has failed to evoke any official response. Political circles are awaiting the forthcoming Indian debate in the Commons when Mr. Amery is bound to state the Government intentions. But few expect any change in his 'do nothing' policy. Sir Tej Bahadur has made an earnest appeal to Members of Parliament to end the present sorry state of things. "We cannot live in the hope," he says "that some day after the war India will become free and get full self-government. Nor can we feel happy about big post-war reconstruction schemes being taken in hand when duly constituted representatives of the people have not the controlling voice in their shaping and direction. Nothing is more dangerous than to hold that political progress can safely be postponed until after the rebuilding of India's economic structure. No Indian of intelligence will take such a proposition seriously and indeed this is a policy which is calculated to rouse the gravest suspicion in Indian minds."

The announcement by Mr. Bozman in London that the Government of India may soon open publicity branches in Moscow and Chungking has caused grave apprehensions here. The record of the Government's Publicity Bureau in Washington has been too bad to give any hope that India's case will be honestly represented in these capitals. The only difference is that unlike U.S.A., China and Russia know the Indian case too thoroughly to be deceived by any British propaganda. Such propaganda by its very nature is bound to be suspect in the eyes of Chungking and Moscow. The report that the Government may encourage the starting of a chain of subsidized papers has also caused alarm and, if true, will be widely condemned.

The personnel of the Famine Commission is strongly criticised here for its official character and its almost total exclusion of non-officials. Opinion here tends to agree with Mr. Dange's remark that the findings of the commission are a 'foregone conclusion.' It is stated here that unless the Government were anxious to gloss over unpleasant facts, there was no reason why they should have fought shy of associating trusted public men with the enquiry. The very enormity of the disaster and the extent of the problem made it necessary for creating public confidence in the findings of the Commission.



The Central Food Advisory Council met here last week in a three day session. Except for the two official speeches the session, for some inexplicable reason, was not open to the press. Here again official anxiety to keep true facts regarding the food situation back from the public was only too apparent. There is hardly any justification for censorship of news regarding this vital matter. It is recalled here that official optimism only aggravated the famine situation last year and only increased the shock the country received when it suddenly found itself in the midst of an unprecedented food crisis. Sir J. P. Srivastava's speech was all right as far as general observations were concerned. But the test of any food policy, it is pointed out here, lies in the vigour with which it is enforced. The inadequacy of Government action is clear from the fact that even the moderate recommendations of the Foodgrains Policy Committee have not been fully carried out so far and it is almost one year since these were made. The Food Member pointed out that the next step we have to consider is Government monopoly purchase and this is being closely studied not only at the centre but also in the provinces. He also stressed the need, apart from increasing production, to improve storage facilities, extend rationing, and enforce a more equitable distribution of protective foods like milk. The conference passed a resolution asking the Government to secure from the United Nations help for an agricultural drive similar to that obtained by Russia and the Middle East. 'The supply of India's agricultural requirements,' it pleaded "should be treated as a part of the war effort and a high degree of priority should be accorded to them." The Government should also adopt a bold policy regarding minor irrigation projects.

Dr. Ralph Phillips of Washington's Bureau of Animal Husbandry who has been here studying this country's livestock problems is reported to have submitted his report (a strong indictment of the Government's policy) to New Delhi. Dr. Phillips thinks that the present organisation involves duplication of work and huge wastage. There should be a separate central department of Agriculture and all development and research work should be gradually put on a regional basis. He thinks that at present several I.C.A.R. projects were proving ineffective as they were not properly related to practical needs and possibilities and only those schemes should be encouraged which promise definite contribution towards a given set of objectives. He thinks that in a poor country like India with small individual holdings, any large-scale improvement of livestock can only be undertaken by the Government. He makes several suggestions for improving the livestock position including distribution of sires to villages, concentration on the most useful breeds and training of a large personnel to carry on the Government programme. He also emphasises the need to salvage milch cattle which are sent to the butchers after only one lactation.

The various Government price controls are reported to have come in for sharp criticism at the Consumers' Council which met in camera earlier in the week. It was pointed out that black markets flourished almost every where and some of the controls had proved absolutely ineffective. The inadequacy of the representation of consumer interests on the Textile Board was also condemned. The disparity in the profit margins between wholesale and retail prices in various categories of goods (ranging from 30 per cent to 10 per cent) also came in for some criticism. The Government spokesman explained the steps to increase the supply of kerosene and matches for civilian consumption. It is not known here why the proceedings were held in camera.

According to present arrangements, the B. N. Railway Company's contract will terminate on September 30 next. With the acqusition of this railway, the State would have acquired control of all the Indian railway systems in the country. The B. N. Railway Company will be paid, in addition to the value of their stock at par, a premium of £20 for every £100 of their share capital. The total amount payable to the Company will be Rs. 4 crores and Rs. 80 lakhs. The railway rolling stock programme for 1945-46 is estimated at Rs. 60 crores. The Standing Finance Committee which approved the programme emphasises the need to exploit the indigenous resources to the maximum in executing the programme.

HILL BIRD.

Gateway of India

(From Our Correspondent)

BOMBAY, July 25.

The Indian Central Cotton Committee is holding its monsoon meetings just now and the various sub-committees will be meeting till July 26. The Hon. Sir Jogendra Singh is expeceted to attend the meeting. The agenda includes a number of important subjects such as the laying down of a definite cotton policy to check the deterioration in the quality of various varieties of cotton and the production of cotton on an All-India basis according to a definite plan. The committee will of course survey the progress, achieved on the research, seed distribution and marketing sides. It is also expected that a resolution will come up before the committee as regards the quota of cotton exports which India should have in any international scheme of regulated exports. It is well that the Committee should press India's case since the Committee of the U. S. Department of Agriculture is reported to be trying to get a big quota for the U. S. so that it could again export half the production of cotton in a post-war international cotton cartel. The U. S. may even continue to subsidise its cotton exports after the war since Congress has enacted high guaranteed prices for U. S. cotton for two years after the war, and the farm *bloc* in Congress would like to raise this guarantee even higher. In view of these cross-currents, it is necessary that the case of India should be put forward with due weight so that her quota of export may be at least on the basis of pre-war *pro rata* per centages. What with the Government's new cotton policy and the need for curtailing the production of the undesirable shortstaple varieties, the Central Cotton Committee has quite an arduous responsibility.

Complaints from all over the country that cloth is not available have evoked from the Textile Commissioner a statement in which the procedure of cloth supplies is outlined. The position is that in Bombay all mills, merchants and dealers have to register their transport requirements with the Textile Commissioner stating the number of bales to be moved to each destination. These registrations are attended to in the order of rotation, and the mill or merchant is advised to deliver the goods to the railways which despatch them. It appears that in this manner every bale registered for despatch from Bombay to other Centre before May 5th has already been despatched, while the G.I.P. Railway has even dealt with registrations upto June 13. The transport block is not so serious now thanks to the efforts of the authorities, and upcountry merchants will at least know that if goods registered before the above dates for despatch have not yet reached them, the fault lies neither with the railways nor the Textile Commissioner. There are of course certain exceptions. For instance, no piecegoods or yarn are allowed to be dtspatched to Western India States, while consignments for Karachi, Sind and places south of Madras can only be booked by sea. The free flow of piecegoods has not yet been achieved since after all only a tithe of upcountry requirements are being moved out from Bombay every day. In the city, Government controlled shops are a great help, but in fine styles there is still scarcity. Merchants have been receiving goods as per quotas allotted, but these are below requirements. The bulk demand of consuming centres is being met from the production of the controlled mills, though the question of manufacturing piecegoods according to the requirements of different

INDIA AFTER THE WAR

A spectre haunts India, the spectre of post-war depression. What will be India like after the global war? Will our country be an inferno in the grip of a terrible economic dislocation or will it see a new dawn? We have to answer this supreme question. We can fight off the looming spectre of depression if we hammer out a new India through a supreme industrial effort. But the way to industrialisation lies through Banking. Banking will play a decisive part in post-war reconstruction.

centres is still presenting difficulties. In the metropolis, the backdoor trade is nearly eliminated, but it will take some time before the flourishing black-markets upcountry are eliminated. The profiteers have now turned to the yarn market to ply their evil trade. Hundreds of handloom weavers throughout the province are finding it next to impossible to obtain yarn, and since yarn dealers bolding quotas are for the most part in Bombay the bottle-neck must be caused by them. The drive against these yarn distributors has started and special police have been drafted to track down the profiteers.

Both at the All-India Manufacturers' Organisation's quarterly meeting and at the Association of India Industries annual meeting, the subject of postwar industrialisation received extended notice. Pompous platitudes were, of course, the order of the day, and while one may tolerate these innocuous delivery of hot air, it is not quite so easy to prevent a certain amount of chagrin at the way Captain J. D. Kothawala spoke. He deprecated the haste with which industrial concerns were being floated in the country at present and wondered whether they were good for the country. As usual, there was the faith in and appeal to the benign Government of India to guide the industries and to appoint a Priorities Committee to adjudicate the claims of various industrial concerns. The faith in Government's solicitude for Indian industries is touching, but the wonder is that these presumptions critics should take it upon themselves to advise those who may be presumed to know their job.

It was a refreshing contrast to turn from such fatuous criticisms as these to Prof. C. N. Vakil's lecture on postwar problems. He analysed the question in two phases—one

EVERY RUPEE SAVED NOW...

will buy more when the war ends. With prices as high as they are today it is plain commonsense that you are getting bad value for your money. Besides, remember that prices are falling. Compare the prices of cloth, foodgrains, medicines etc. a year ago with prices today. The wise man saved his money and can now buy cheaper than before. The wisest thing of all however, is to save all you can now in order to get twice as much for your money when peace returns.

Be sure that the money you save is safely invested. Jewels, Land, buildings, manufactured goods and commodities are bad investments these days. Their prices are abnormally high and you will certainly find one day that they are coming down.

For security and fair return put your money into Government Loans, National Savings Certificates, Insurance, Co-operative Societies, Post-Office Savings Bank or a Savings Bank Account

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

AAA 1113

South India

(From Our Correspondent)

MADRAS, July, 24.

There is a widespread impression that the north Indian provinces have advanced in the industrial sphere more quickly than Madras and if the industrial policy of the Government of India overlooks the claims of regional development this province would be sadly left behind in the race for industrial advancement. An excellent opportunity to know some of the main aspects of the Government's industrial policy presented itself when the Southern Indian Chamber of Commerce met the Supply Member here recently. Sir A. Ramaswami Mudaliar assured the Chamber that the Government of India were making every effort to plan post-war industrialisation with due regard to the needs of different provinces. If the standard of living of the masses of India should improve, not concentration, but a wide diffusion of the big industries would be essential. Regional distribution of the key and large-scale industries have an additional advantage of saving transport. Explaining the object of the Government behind the control of capital issues he said that the idea was not for getting subscription to war funds but to save the unwary public from the reckless adventures of unscrupulous company promoters. The conditio s of investment in war bonds during war time was to spong off surplus money with a view to preventing its flow into ill-advised enterprises and to assure the safe return of money to shareholders if at the end of war certain industries were not wanted. He made a vigorous defence of the control of capital issues and pointed out that it safeguarded all interests, prevented speculation and aided the anti-inflationary drive. An assurance from such a high authority that the Government's industrial policy is well intentioned is bound to be welcome. The public are aware that Indian industries have been suffering from numerous handicaps and the wartime industrial policy of the Government has resulted in the economic penetration of several foreign interests in India. Under the stress of short term demands for consumers goods the Government have preferred to allow imports instead of aiding indigenous production. India's industrial aspirations have been thwarted in several lines during the past four years and unless the Government adopts a more generous and active policy in strengthening Indian industrial structure to-day the post-war position would be a disappointment. The public still needs an assurance, followed by action as concrete proof, that the constitutional subordination of the Government of India to Britain will not result in helping foreign manufacturers against the legitimate claims of Indian industrialists.

The Gowing Mission on Fertilisers have conferred with Mr. S. V. Ramamurthi, Adviser to the Governor, and other high officers regarding the proposed manufacture of ammonium sulphate. Questions regarding the existence of gypsum at Trichinopoly and other places, availability of charcoal, electrical power, water and labour were discussed in detail. It appears that the proposed ammonium sulphate plant will be erected either on the banks of the Godavari or the Kistna on the one hand or at Mettur as an alternative. The Government are considering the feasibility of erecting a factory, with a capacity to produce 50,000 tons a year, in one of the two alternative places.

The Mysore Government have now issued a report on the progress of reconstruction planning in that State indicating the work already achieved or to be done in the sphere of industry, agriculture and trade. The State is blessed with excellent natural resources and also had the fortune of enjoying the services of a happy succession of far-sighted and able Dewans. The war has offered golden opportunity for the industrial progress of Mysore and the Government have not been slow to realise it. We are glad to hear that the Board of Industries and Commerce proposes to form a joint stock Company, with a capital of Rs. 10 lakhs, for the manufacture of machinery and spare parts, and the establishment of a company for manufacturing plastics and plastic products.

"BIG FLEAS HAVE LITTLE FLEAS....

.... upon their backs to bite 'em, and little fleas have lesser fleas, and so *ad infinitum*." The significance of this jingle should need no emphasis in war-time. Man is the recognised meat of blood-suckers like fleas, bugs, lice and mosquitoes, and his property and the crumbs that fall from his table feed an army of insect pests like houseflies, crickets, cockroaches and clothes moths. We are prone to dismiss them too lightly, especially at present. History shows plainly how parasitic insects have, for example, by spreading typhus and plague from rat to human being, caused death-rolls higher than the deadliest weapon of man's devising. We owe an immunity from such insect-borne diseases to cleanly habits, and the unremitting vigilance of health authorities, backed by the research of scientists and the products of chemical industry. Research has unravelled the mysteries of infection and the complex life histories of pests and parasites; the chemist has provided an extensive armoury of dusts, sprays, fumigants and disinfectants with which to attack them, either directly or by assisting man to keep his house, clothes and person clean and wholesome. War has intensified old problems and created new ones. Evacuation, congested camps, the dispersal of foodstuffs in store and warehouse, have all given pests better opportunities of contact and scattered them over wide areas. Air traffic has increased the danger of new pests and diseases. The health services are on their toes to protect the community. At their back the chemical industry is constantly at work to maintain the output of essential insecticides and to discover new ones in order to uphold the nation's immunity from insect-borne disease.

Resume of Commodity Markets

The talk of early peace has given rise to speculation regarding the outlook for commodities in the post-war period. It is perhaps too early to form any definite ideas regarding the prospects for India's principal raw materials, for international regulation might affect the course of exports. It is, however, generally accepted that the termination of hostilities would result in a large increase in demand for both cotton and jute and that bullion prices would decline rather abruptly with the greater facilities for freer movement of both gold and silver. As for oilseeds, it need not be emphasised that the prospects will be greatly improved as the European markets would again be open. With an appreciable increase in internal consumption there might not be any large surplus of any of the oilseeds.

• • • •

The strength of the raw jute market in the past week, however, has been due more to local factors than to any hopes of an early improvement in the rate of exports. Though it might be said that with the easier shipping position raw jute exports can be on a considerably large scale even to the existing markets, not to speak of the possibility of a large increase in demand for both jute and jute goods soon after the end of the war. Dealers do not seem to be very much worried about the prospect of a reduction in mill consumption with a further decline in coal supplies. It is pointed out that any short fall in production can be made up in the later months.

Exports of raw jute during the season 1943-44 amounted to 970,772 bales against 12,25,000 bales in the previous season, and 13,50,000 bales in 1941-42. With a steadier export market it can be expected that total exports during the current season will be very much higher and will more than offset the decline in mill consumption.

• • • •

There was a sharp rise in the Bombay raw cotton market early this week on reports of peace talks. With the higher prices for new crop cotton and the hopes that tenderable cotton for old crop September position would be rather small the quotation improved to Rs. 427 from Rs. 418. The fixation of lower minimum prices for the inferior varieties of cotton will, it is believed, discourage the production of these qualities of cotton to a great extent, and that there will be no large surplus.

Among the subjects which will come up for consideration at the monsoon meetings of the Indian Central Cotton Committee is a resolution to the effect that in any international arrangements for the production and export of cotton, India should have her quota of cotton exports on the basis of such prewar "pro rata" percentages as may be given to other cotton exporting countries, and that her production should be regulated on the basis of such export quotas plus internal requirements.

The deterioration in the quality of certain varieties of Indian cotton during the current season, the causes responsible for it and the measures to be taken to deal with the matter will also receive attention. The vexed question of the adoption of a definite cotton policy in Guzerat will again be before the Committee.

Another important subject that will come up for consideration is the question of the production of cotton according to a definite plan on an All-India basis with due regard to transport facilities so that it may fit in with the policy regarding food production, the object being to ensure that as far as possible the acreage under a desirable cotton is not unnecessarily curtailed and diverted to food crops if the requirements of food grains of that area can be met by imports from a conveniently located surplus area.

The main business of the meeting will be the scrutiny of the annual progress reports on the various research, seed distribution and the marketing schemes and the programmes of work for the ensuing season.

The Government of India have issued an Order requiring all persons having in their possession or control stocks of new, secondhand or reconditioned cotton spinning spindles to declare their stocks to the Textile Commissioner, Bombay before July 31. Cotton textile mills should not include in their declarations spindles in use on machines or new spindles but must declare their stock of secondhand spindles. All others must declare both new, secondhand and reconditioned spindles. Non-compliance with this order is an offence under the Defence of India Rules.

There was a decrease of 7 percent in area and 11 percent in the yield in the 1943-44 rape and mustard seed crop as compared with that of the year 1942-43 according to the final forecast of the winter oilseed crops of 1943-44 issued recently. The area under cultivation was 5,484,000 acres in 1943-44, as against 5,901,000 acres in 1942-43 while the yield was 955,000 and 1,070,000 respectively.

The linseed crop shows an increase of 3 percent in area and a fall of 4 percent in yield as compared with the year 1942-43. The area under cultivation was 3,518,000 acres in 1943-44 and 3,406,000 acres in 1942-43 while the yield was 395,000 and 410,000 tons respectively.

The condition of the rape crop, mustard and linseed appears to be fair on the whole.

Jute and Jute Manufactures

(By Our Correspondent)

CALCUTTA, July 27.

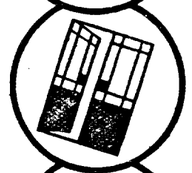
The dearth of coal supplies continues to be the dominating factor in all sections of the Jute Market. Deliveries have been a trifle more generous over the past week, but they are not in sufficient volume to justify any early expectation of the single shift coal consuming mills being able to resume regular working. These are not yet guaranteed more than sufficient to keep their maintenance services going, and to accumulate enough to justify starting up might well be a lengthy process.

Naturally enough the situation has revived discussions on the question of providing some sort of compensatory allowance for those mills which are kept idle through no fault of their own. They are committed by agreement along with their neighbours to pay the labour force an amenity allowance of Rs. 4/4 per week when the mill cannot provide them with work. But we do not think this agreement contemplated a situation where certain units would be able to work and certain others would not be provided with the wherewithal to keep working. One suggestion is that the Electric mills, that is those which draw their power from Public Supply companies, and which are still running single-shift, should be allowed to increase their working hours to the maximum permitted by the Factory Act, and that they should pay into a central fund so much per ton of their production, out of which fund the enforcedly idle mills would be provided with enough to pay the allowance to their unemployed labour force. The so called "foster" mills which are already working double-shift, cannot of course increase their working hours any further, and this levy would apply only to such units still on single-shift, as draw their power from public companies. This scheme does not contemplate the "electric' mills working more than a single shift at increased hours, nor would it absorb any of the idle labour. It is questionable also whether the enforced contribution to their unemployed brethren would escape taxation, so that the contribution might work out to considerably more than would appear at first glance.

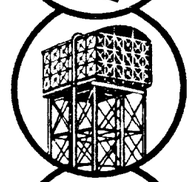
An alternative suggestion is that a coal consuming mill, which can get no coal, might lease out loom hours to an "electric" neighbour, and close down altogether for the time being. The "electric" mill could then work double shift to absorb the loom hours, at the same time finding work for the labour force discharged from the closed mill. In these circumstances the closed mill would be relieved from the commitment of having to pay the weekly allowance to its labour force and would at the same time receive an agreed rate of hire for the loom hours leased out, which income would at least provide for overhead and maintenance costs of the idle unit. Also the hire paid by the "foster" mill would be chargeable to revenue and would not be liable to taxation.

This second alternative involves displacement of the labour force of the closed unit which is not always an easy matter to overcome in this country. Any form of road transport is virtually unavailable and in any case would be beyond the means of the labour. There has to be considered also the unwillingness of the labour to walk any considerable distance to their work. A couple of miles is about the extreme limit which could be relied on. An unbridged river offers less obstacle to the movement of daily labour than does a few miles of level road, for over the former there is usually available some sort of ferry, which by gross overloading, will convey the labour at an infinitesimal fare per head.

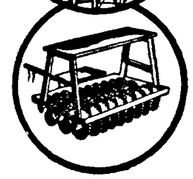
There are therefore many considerations to be pondered before any solution to the problem of getting the utmost production out of the restricted coal supplies can be arrived at. It is by no means certain that the public supply companies could or would agree to the increased load which double-shift working of the "electric" mills would entail. For coal enters into the problem somewhere, whether it is used to generate electricity in a public power house, or steam in a mill boiler house. It is the most economic use of the available coal that constitutes the problem, if this can be co-ordinated with the employment of displaced labour. The probability is that a scheme can be worked out for a proportion of the loomage threatened with prolonged idleness.



A rather feeble attempt at an explanation of the recent Jute Forecast fiasco has been published in the Press in a letter from the Secretary to the Government of Bengal in the Agricultural Department. This letter starts with the assumption that it is a law of the Medes and the Persians that the Preliminary Forecast must be published on the first Tuesday of July and the following four days. We do not know who would be thrown into jail or otherwise departmentally disciplined if this law were transgressed. But we venture to think that the omission would pass practically unnoticed these days so far as the Jute trade is concerned.



Sixty Years' Service



TO INDUSTRY

Our services to the Iron, Steel and other Indian Industries started sixty years ago at the growing port of Karachi, but today they spread all over India. As the largest engineering concern in North-West India, we have carried out many successful contracts both at home and abroad.

We manufacture:

Steel Doors and Windows; Pressed Steel Tanks; Equipment for Textile and Sugar Mills; Powerhouses and Factories; Garden Rollers; Water Supply Systems; Motor Launches; Plastiplug; Waterproofing, etc.

We stock:

Motor Trolleys; Marine Engines; Asphalt Boilers; Jenkins Clod Breakers; Structural and General Engineering Stores; Bitumastic, Pudlo and Solignum; Steel and other Metals; Cements, etc.

We can advise you on all your engineering and building problems; why not consult us without any obligation.

JUTE

(By Our Staff Correspondent).

Calcutta, July 27.

THE raw jute market was rather quiet last week with very poor support from mills and the discouraging outlook regarding mill consumption. The rise in rivers and reports regarding the growth of standing crop had a discouraging effect. In the past few days, however, sellers have been firmer in their ideas and there has been a recovery in prices as it is felt that with the prospects of an early peace and better export demand, there will be no difficulty in marketing all the jute. The deterioration in the position regarding coal supplies has not had any effect on raw jute prices. The smaller arrivals of new crop for the current season has also encouraged dealers. Late sowings and the lack of sufficient steeping water have delayed harvest to a certain extent.

In the loose jute section business has been very restricted. Mills kept out of the market for days on end. Sellers, however, have not been anxious to do business and quotations are actually higher. Supervised Jat Middles and Bottoms being done at Rs. 16-8 and Rs. 13-8 per md. with District 8 annas lower. Earlier in the week new crop European Middles and Bottoms were done at Rs. 16-12 and Rs. 13-12 per md. respectively.

In the pucca bales section steady conditions have prevailed and shippers have bought Dundee Daisee 2/3 at Rs. 79 per bale, Short Group Daisee at Rs. 86 per bale and Crack Daisee at Rs. 88 per bale. Business passing, however, has not been for large quantities. Mills are reported to have purchased old crop Firsts at Rs. 81 and Lightnings at Rs. 77 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, July 27.

In the jute manufactures market conditions have remained unchanged. It is pointed out that mills should be prepared for a further reduction in coal supplies and that steam-driven units would have to close down temporarily in order to accumulate coal supplies. It is hoped that only the foster mills would be able to continue production. In such a position, mills have been very reserved. No fresh commitments can possibly be undertaken as with the large offtake and the gloomy outlook regarding production it cannot be ensured that deliveries would be effected in time. Quotations are nominally at maximum rates.

In the heavy goods section also firm conditions have continued to prevail with very few sellers. Only a very small business in standard varieties has been reported.

COTTON

(From Our Correspondent)

Bombay, July 27.

Jharilla Cotton July contract terminated on Tuesday, the settlement rate being Rs. 405. The stoppage of Government purchases has weakened September contract which is quoting Rs. 415. The market is bearishly inclined and the rate is expected to decline further, although within discretionary ranges. Official buying is expected nearer Rs. 400 only.

Regarding new crop, Goverment is sticking firmly to announced limits despite strenous persuasion by the East India Cotton Association and others. The arguments that low floors may aggravate the mixing evil and that floors and ceilings should operate only together have been turned down. The chances of revision are poor.

BULLION

(From Our Correspondent)

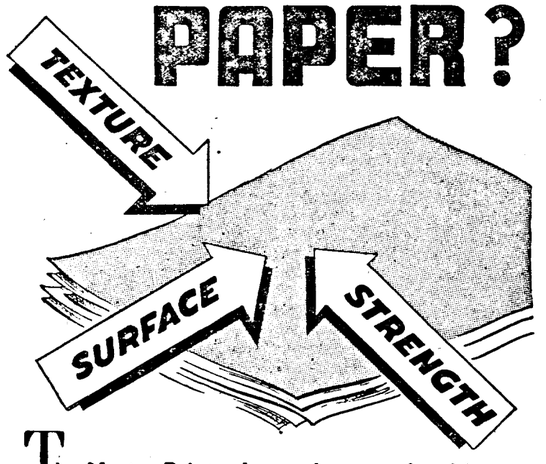
Bombay, July 27.

Ignoring developments abroad silver is exceptionally firm on technical factors. Bears squared commitments on Tuesday the last day for current settlement. On Wednesday silver ready quoted Rs. 140, a premium of Rs. 5-4 over settlement. Stocks are being despatched to upcountry. There is a tussle between bears and bulls over the penalty for carryover. The Board is considering representations. Bulls desire a free hand after the week until which the current penalty of rupee per week applies. They rigged ready yesterday in the hope of effecting a change over on the basis of the ready rate.

The gold market is steady with forward quoting Rs. 74-12. Demand is on an average 25,000 totals daily. The shortage of ready supplies obliged tht bazar to buy from the Reserve Bank 20,000 totals each day. The undertone is strong.

PIECEGOODS

(From Our Correspondent)



Calcutta, July 27.

The piecegoods market has been quietly steady with a larger volume of business passing at ceiling prices. The vigorous drive by Provincial Government authorities against black market operations is bearing fruit. Only during the past few days licenses of many dealers have been cancelled and their stocks confiscated as it was found that they were indulging in black market trading.

(Continued from page 166)

affecting the people immediately after the war and the other concerning the long-range aspect of planning. He referred to the 15-year plan and to the fear that what the planners had relied upon for the purchase of machinery after all had gone overboard. An interesting point emphasised by him in view of the virtual repudiation of the sterling balances is that the Government of India should insist upon Britain and her Allies raising the rupee resources for their requirements in India. According to him, the Government of India should refuse to finance the war by accepting payment in sterling for British war expenditure in India.

HOW DO YOU JUDGE PAPER?

The Master Printer knows how to select his paper for a particular job. Not so, the layman and yet he needs good paper. Surface, Texture and Strength determine the Quality of paper. It is not true that a smooth surface is necessarily better than a rough one or that a particular texture is superior to another or that the stronger the paper the better it will be, under all circumstances. It all depends on the nature of the job for which the paper is required. It is possible to-day, with the highly developed modern machineries, to manufacture paper to suit every purpose.

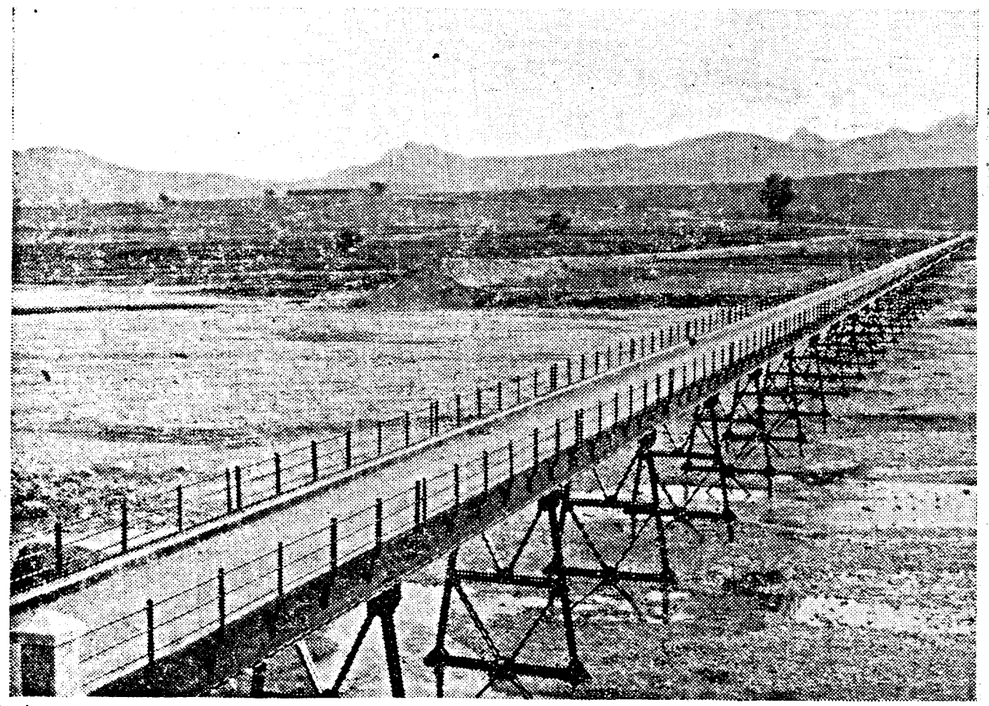
IDEA FOR

wedding present!

Instead of travelling long distances to attend weddings, why not send the cost of your railway tickets as a present!
However much the young couple missed your presence, they would realise that rail travel in wartime, is difficult and uncomfortable; and they would applaud your practical gesture.
It would help the Railways to maintain a constant and even flow of civil supplies including food-grains, fuel, clothing and other necessities of life; to keep our troops well supplied with weapons of war. These factors alone, dictate that passenger traffic must be reduced.
So, in saving yourself an inconvenient and uncomfortable journey, you will please both those you love, and those who serve you!



Travel less

ISSUED BY THE RAILWAY BOARD

The Japanese are not naturally religious or devout. They think nothing of embracing two or three religions at one time if it suits them. In modern times the only recognized religion in Japan is Shintoism—which is the worship of their Emperor. This is the religion they seek to impose on us.

Vol. XXXIV. No. 4 SATURDAY, JULY 29, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

LATE RALLY IN PRICES

THERE was a rather sudden decline in prices on the Calcutta Stock Exchange in the early days of this week on fears that peace was imminent., As there was an overbought position in certain counters bear selling brought about a decline by several points. But in the absence of any further developments suggesting that there would be an early peace fresh buying at the lower levels has resulted in a recovery in prices in most sections in the last two days.

From Tuesday this week trading is permitted between the hours of 12 noon and 3 pm. against 1½ hours only in the previous two weeks as it was felt that the position in regard to deliveries has become very much easier. Markets, however, will be closed on Saturdays until further notice. The larger number of hours of trading has resulted in expansion of business and fresh buying by prominent jobbers has brought about a rise in the quotations to very near the former levels. Thus Indian Irons recovered from Rs. 39-1 to Rs. 42-6 on Friday; Steel Corporations to Rs. 37-8 from Rs. 32-8 and Burrakurs to Rs. 46-4 from Rs. 42-14. Howrahs improved from Rs. 80-12 to Rs. 86. Cotton shares were in greater request while Sugar shares maintained their recent gains. The general undertone, however, is not inclined to be so optimistic and the close on Friday was rather quiet. It appears as if a further rise in prices will be contested and that it wil not be possible to stage a boom such as that occured two weeks back. As developments in the war situation point to an early termination of hostilities it cannot possibly be expected that there will be any appreciable rise in prices in the near future.

* * * *

Britannia Biscuit Company Limited, has done very well in the half-year ended March 1944 though the larger manufacturing expenses have resulted in a slight decline in the net profit. The figure before providing for taxation and depreciation is Rs. 11,32,271 against Rs. 13.33,639 for the previous six months. The provision for taxation is considerably lower at Rs. 7,93,432 (Rs. 10,13,470) while the allocation to reserve and other funds is Rs. 2,15,000 (Rs. 1,90,000). The amount set aside to depreciation is Rs. 58,917 (Rs. 57,628). The increased allocation to reserve and other funds is due to the higher compulsory deposit under E.P.T. which for the year ended March 1944 will be approximately Rs. 4 lakhs. The dividend on ordinary shares is maintained at 3¾ percent and bonus at 1¼ percent. The amount carried forward is Rs. 71,354 against Rs. 73,767 brought in. Prospects for the current year are satisfactory and the Company is assured of being able to sell all the biscuits that can be produced.

* * *

In spite of the record crop in the year ended December, 1943 the *Hasimara Tea Company Limited*, has not been able to maintain profits at the level of the previous year. In fact, with the lower average selling price and the increase in the working costs per lb. of tea produced the net profit, before providing for taxation and depreciation, is appreciably lower at Rs. 16,39,692 against Rs. 27,96,201. The transfer for Taxation is Rs. 3,98,442 against Rs. 6,96,616 while that to Reserve for Renewals and Additions is Rs. 3,10.940 against Rs 5,64,317 The sum of Rs. 2 lakhs was transferred to General Reserve, in addition, out of the earnings for 1942 Even with the reduced allocations, it is not possible to maintain the dividend on ordinary shares which is 55 percent against 65 percent for 1942. The amount carried forward is Rs. 4,40,333 against Rs. 4,11,023 brought in

The outturn of tea was 60,21,973 lbs. against 56,52,892 lbs. The average sale price was 11.37 annas against 13.68 annas for 1942 and the working cost per lb. 7.2 annas against 5.67 annas.

* * * *

The earnings of the *Reliance Firebrick and Potteries Company, Limited* for the half-year ended February, 1944, would have made better showing but for the heavy losses in foodstuffs supplied to labour. Sales were higher at Rs. 10.82 lakhs against Rs. 9.83 lakhs. The loss on foodstuffs supplied to labour was Rs. 1,81,984 against Rs. 97,687. The net profit, before providing for taxation and depreciation, for the half-year is thus Rs. 55,000 lower at Rs. 1,06,818 (Rs. 1,61,419). The amount set aside to depreciation is Rs. 27,700 (Rs. 25,000) while the provision for taxation is Rs. 50.000 (Rs. 1 lakh). The dividend has been maintained at 8 annas per share. With the introduction of rationing in the industrial area, it can be expected that the loss on foodstuffs supplied to labour will be smaller and that it will be possible to pay higher dividends to shareholders out of the earnings for the current half-year.

* * * * *

The accounts of the *Rameshwara Jute Mills Company, Limited* for the half-year ended March, 1944, make rather satisfactory showing. though the market was disappointed with the maintenance of the dividend at 2½ per cent. Larger supplies of coal during the half-year have resulted in an increase in the net profit to Rs. 2,31,451 from Rs. 31,157 in the previous six months. The provision for depreciation is higher at Rs. 70,000 (Rs. 40,000) while the reserve for taxation is Rs. 83,323 (nil). The dividend for the half-year ended September, 1943, could be paid only with the transfer of Rs. 75,000 from Taxation Reserve. The amount carried forward is higher at Rs. 39,969 against Rs. 32,842.

* * * *

It is now confirmed that the *United Commercial Bank Limited*, has decided on issuing new shares at par on the basis of one new share for every old share. *Analyst* construes this as a bearish factor. On the contrary, I look upon this as a bull point. With Rs. 1 crore as paid-up capital, the United Commercial showed Rs. 12 crores as deposits in the last published accounts. Doubtless, there has already been improvement on this figure. With Rs. 2 crores as paid-up capital, this bank should be able to mobilise far larger deposits. It may be taken as certain that the status as well as the earning power of the Bank is greatly increased by this capial issue. That the new share is being issued at par, means that the present premium of Rs. 42 on a share cum-rights works out really to Rs. 21 premium per share. Thus viewed there is, it will be agreed, good scope for capital appreciation.

WATCH-DOG.

PROSPECTS OF POST-WAR INDUSTRIES

FUNDAMENTAL VARIATION FROM LAST POST-WAR PERIOD

(By Analyst)

Bombay, July 28.

In the beginning of the week, looking to the wild rumours floating in the market, every one thought that peace would be a reality in a week's time and there was practically a kind of stampede to sell out shares, particularly Indian Irons and Steel Corporations which had shot up due to short-covering in the earlier weeks. The decline was rather sharp, as mentioned in my last week's gossip, to Rs. 39 and Rs. 32-8. Later on, market seems to have discounted the wild rumours; and, again on Calcutta buying, Indian Irons are to-day reported at Rs. 41-12 and Steel Corporations at Rs. 36-4. I have been noticing a lot of speculative buying and I hear much of this speculation being due to lot of black money in the hands of speculators in Bombay as well as in Calcutta. I have to stress the point that this is an opportune moment to sell overvalued scrips like Indian Irons and Steel Corporations and keep the cash liquid and watch for an opportunity to reinvest the same in Tata Steel Deferreds—I mean on a good reaction. We should take it for granted that the Allies will have victory very soon and, may be, peace might come within 3, 6 or 12 months. Every investor has, therefore, to think twice before making an investment in general.

There might be a reaction in all the markets on rumours of peace; and on the day the Armistice is announced, there might be some kind of panicky selling. But I feel that this will only be a temporary feature since I do not visualise any postwar depression. This war cannot be compared with the last war. This war has been a war of controlled economy and the Government have successfully manipulated the money market and made this war a three per cent war as against 6 to 8 per cent rate of interest ruling in the last war. In the last war, there being no control, there was a runaway boom immediately after cessation of hostilities. In the period after the last war, there was decreasing demand for consumer goods, the position being aggravated by the chaotic disposal of war surplus stores. Since Government are the principal buyer in the case of this war, consumers have been starved of their requirements despite their increased purchasing power. Hence, there will be sudden demand from the consumers who have the money to buy their needs and who will be in a position to get what they want in the postwar period when the Government no longer steps in as buyer. Further, Governments all over the world have seriously begun to think of controls and postwar planning. Even Government of India, are more seriously considering the question of how to dispose of the surplus stocks that will lie with them immediately military requirements come to an end. Very recently, there was a meeting under the auspices of the Supply Member to consider the question of disposal of used military trucks and lorries. In the postwar period, of course, industrial prosperity in India definitely depends on our getting some form of National Government. Assuming that we are going to have a sympathetic government, I feel the industrial future of India is definitely assured. Most of the industries have excellent postwar prospects but, of course, Steels, Cements, Jutes and Teas would probably have greater prosperity than other industries. Investors who have cashed in on my recommendation in the last four weeks need not be in a hurry to replace their holdings. I feel that the present is an opportune moment to put in a little money in first class debentures and preference shares with a view to earn at least a reasonable rate of interest till markets react and give us an opportunity to invest in industrial equities with scope for income as well as capital appreciation.

In Bank Shares, there has been great activity this week. Many sold out *United Commercial Bank* and switched over to *Bank of Jaipur*. *United Commercial* have declined from Rs. 94 to Rs. 90 while *Jaipur Bank* improved from Rs. 70 to 73-8. Now that the United Commercial Bank is increasing the capital by Re. 1 crore by issuing one share for every share held at par, the dividend prospects are not as rosy as they would be on the original capital.

On reports that Walchand is contemplating issuing debentures to the tune of Rs. 2 crores, Bombay Steams, were done upto Rs. 660 yesterday. They were marked down to Rs. 605 today.

Mr. Harold F. Copeman, the Chairman of the Rubber Growers Association, London, while discussing the question of Natural Rubber *versus* Synthetic Rubber, has mentioned that, in February 1944, the Combined Raw Material Board in Washington issued an announcement regarding the continued urgent need for natural rubber. In addition, the statements and booklets issued by British tyre manufacturers provide further evidence of the vital need for natural rubber. Later, quoting Lord Rothes, the Director of Tyres, Mr. Harold F. Copeman said that synthetic rubber at any rate so far as tyres are concerned is at present only a substitute for the real thing. It differs in many respects and calls for a special technique in treatment involving more time, more labour and more machinery. Continuing, he said: "I refer specifically to tyres because I believe that, in that sphere, at any rate, natural rubber will reign supreme. I do not desire to depreciate the wonderful achievements of the American in producing the enormous quantities of the synthetic product in so short a time or the inestimable value of that achievement to the United Nations nor do I close my eyes to the possibilities of still further improvements but let us not lose a sense of proportion. Every indication today points to the continued need after the war for natural rubber and in no mean quantities".

★ Details re. U. P. & Bihar Sugar Commission, Cawnpore.
★ Necessity of Regulation of Industry on All-India basis.
★ Discussion on Export Prospects, Sugar Control Policy, and Rationing.
★ Proposed Central Sugarcane Committee, 1944.
★ Comparative position of the Industry in various parts of India.
★ Capital and dividend Statement of Sugar Mills (Latest.)
★ *Complete and up-to-date list of Sugar Mills*, Working and projected, with addresses of Managing Agents, etc.
★ Contents and Bibliography.

Extract from Reviews of 1942 Annual

"The International Sugar Journal", London, March, 1944.

"Mr. Gandhi's annual volume is stocked with statistical and other information about the Indian sugar industry. A large part is devoted to the numerous and complicated legal enactments and Controller's Orders covering sugar production and sale in India, arising from the assumption of control by the Government of prices and distribution. The author also provides a good deal of comment on present problems of the Indian Sugar Industry and its future prospects."

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 27.

After earlier weakness the Calcutta Stock Exchange has been steadier in the last two days. The extension of time for trading by 1½ hours and the absence of further reports that peace is imminent have led to bear covering and a good portion of the losses has been recovered. Operators, however, are inclined to be more cautious though business passing is on a large scale. It is reported that the bigger speculators are not inclined to enter into any large commitments pending a clearer outlook. The close is quietly steady.

The giltedged securities section has been rather steady with a restricted turnover. 3½ percent Paper was unchanged at Rs. 99-11. Among terminable loans, business has been very small owing to the reserve of sellers. Reports regarding the possibility of a new loan on more advantageous terms to the borrower have had a steadying effect. 3 per cent 1953-55 quoted Rs. 100-8, 2½ per cent 1948-52 Rs. 99-11, 3 percent 1949-52 Rs. 101-5, and 5 percent 1945-55 Rs. 104-12. There are good buyers for the last mentioned loan.

Easy money conditions continue to prevail in the maket and there is a decline in the average discount rate on treasury bills to 7 annas 9 pies per cent per annum.

Coal shares have been erratic though towards the close the tone is firmer. Inspite of the late rally quotations are appreciably lower on balance. There is a feeling that the earlier rise in prices was exaggerated. *Amalgamated* were Rs. 49-2 after being lower at Rs. 48-12 while *Bengal* were Rs. 659 against the lowest quotation for the week of Rs. 646 and the price at the time of last writing of Rs. 677. *Bhulanbarares* were Rs. 30 against Rs. 28-8. *Bokaro & Ramgur* Rs. 41-6 against Rs. 43-4. *Equitable* Rs. 67-7 and *Dhemo Main* Rs. 26-6. *Burrakur* fluctuated in wide limits. There was a decline to Rs. 42-14 from Rs. 48-8 but the close is again higher at Rs. 46-2. *New Beerbhoom* came down to Rs. 37 from Rs. 42-8. There has been a recovery to Rs. 40-8. *North Damuda* were Rs. 12, *Raneegunge* Rs. 52 against Rs. 53-4 and *Talcher* Rs. 11-12. *South Karanpura* came down to Rs. 22-13 from Rs. 26-12. Nearly the whole of the lost ground was recovered and the quotation at the time of writing is Rs. 26-4.

Jute shares have not been much affected though in the early days a weak tone was noticeable in sympathy with other sections. The assured postwar prospects for the jute industry has prevented any appreciable decline in prices. Present quotations are even higher on balance. *Agarpara* were Rs. 36-10 against Rs. 35-10, *Alexandra* Rs. 380 against Rs. 375, *Champdany* Rs. 263 against Rs. 265, *Clive* Rs. 48 against Rs. 46-12 and *Kamarhatty* Rs. 678 against Rs. 671. *Megna* were rather quiet at Rs. 120-8 while *Nellimarla* were Rs. 34-4 against Rs. 32-7 *National* Rs. 33-10, *Nuddea* Rs. 132 and *Presidency* Rs. 11-12. *Rameshwara* declined to Rs. 20-12 but have recovered to Rs. 22-12 towards the close. *Howrah* were fluctuating rather wildly and the quotation was at one time as low as Rs. 80-12. There has been an abrupt rise in prices in the last two days and the quotation is at the highest level for the week at Rs. 85-14.

Business in preference shares has not been large Among first-class preference shares, *Alexandra* changed hands at Rs. 170, *Auckland* at Rs. 160 and *Waverley* at Rs. 91-8. *Dalmia Cement* were Rs. 149, *Steel Corporation* Rs. 137 and *Rohtas Industries* Rs. 187 exdividend. *Dunlop Rubber*, First pref. were Rs. 175 and Second pref. Rs. 122.

Cotton shares were inclined to be easier earlier in the week in sympathy with other sections but there has been a sharp recovery towards the close. *Cawnpore Textiles* were Rs. 14-10 ex-dividend. *Benares Cotton* Rs. 15-10, *Elgin* Rs. 71-8, *Kesoram* Rs. 19-12 and *New Victoria* Rs. 9-7. *Textiles* were done as low as Rs. 13-8 and *Elgin* Rs. 66 exdividend, *New Victoria* Rs. 8-12 and *Benares* Rs. 15-6.

Bank shares were very steady with *Reserve Bank* at Rs. 137, *United Commercial Bank* at

Directorate General, Munitions Production, Department of Supply Calcutta.

NOTICE

Under the present procedure, all orders for machine tools which require to be imported have to be placed upon the Machine Tool Controller, Calcutta, who thereafter arranges import on Government account.

Information has now been received from the Secretary of State for India, London, that, in future, metal-cutting machines only (excepting Bench & Pedestal Capstans & Centre Lathes and excepting also all Welding Machines) up to the value of £30 users prices, including standard equipment, in the supplying country, will be known as "Low-Cost" machine tools.

It has been decided that "Low-Cost" machine tools required by Industrial users in India may, in future, be imported through trade channels. Users desirous of importing "Low-Cost" machines may, therefore, in future, place their orders either on Machine Tool Importing Houses in India, or direct on the Supplier in the U. K. or the U. S. A. Applications for import Licences for "Low-Cost" machines should thereafter be made to the Machine Tool Controller by the Importer.

A list showing the broad classification of the different types of "Low-Cost" machine tools can be obtained from the Machine Tool Controller on request.

It should be noted that the above procedure applies only to "Low-Cost" machines required by Industrial users. "Low-Cost" machines required by Government Deparments will still be imported through the Machine Tool Controller, Calcutta.

THE SONAKUNDA BALING CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the abovenamed Company will be held at Chartered Bank Buildings, Calcutta, on Wednesday, the 23rd day of August, 1944, at 11 a.m., for the purpose of considerating and, if thought fit, of passing with or without modification the following resolution :—

"That the Directors be authorised to proceed with and carry out the sale of the immovable properties at Naraingaunge, Dacca, known as the Goodnail Agency, including all such Presses, Plant, Machinery and other equipment as may be found therein but expressly excluding Engines and Pumps with their fittings".

BY INVESTING IN WAR LOANS ASK YOUR BANK

Rs. 41-8 and *Hind Bank* at Rs. 66-12. There was again no business in *Imperial Bank* fully paids or Contributories. *Bharat Bank* were a shade easier at Rs. 115.

In the Engineering section, *Indian Iron* came down to Rs. 39-1 in Monday's session from Rs. 42-8 last week. They are now quoting Rs. 42-4. *Steel Corporation* receded to Rs. 32-14 on speculative selling. They are now quoting higher at Rs. 37-2. The rush for covering by bears has taken up the market by nearly 4 points. *Burn & Co.*, were Rs. 420 *Braithwaite* Rs. 12-10 and *Jessop* Rs. 25-12. *National Iron* were quiet at Rs. 14-8. *Kumardhubi Engineering* were as low as Rs. 11-4 earlier in the week. They are now quoting Rs. 12-6.

In the Sugar section there has been a tendency to resist selling pressure and the recent gains have been well held *Balrampore* were Rs. 22-4, *Carew & Co.*, Rs. 33-2, *Champarun* Rs. 47-12 and *Ramnugger Cane & Sugar* Rs. 16-10. *Samastipur Central* were Rs. 22-9 and *Belsund* Rs. 18-12.

Business in the Tea section was restricted though rates have been fully maintained. *Tezpore* were Rs. 21-8, *Huldibari* Rs. 18 and *Dhunseri* Rs. 9-8.

In the Miscellaneous section. *Burma Corpn.* were steady at Rs. 4-10 and *Indian Copper* at Rs. 3-9, *Assam Bengal Cement* were easier at Rs. 18-11. *B. I. Corpn.* were unchanged at Rs. 6-10 while *Aluminium Corpn.* improved towards the close to Rs. 22-1 *Calcutta Trams* were done as high as Rs 50-8 earlier in the week. There was a decline to Rs. 48-4 on selling and profit-taking at the higher levels. *Indian Cable* have been bought up to Rs. 32-4 while *Rohtas Industries* were very steady at Rs. 42-4 cum-dividend and cum-rights.

Among Paper shares. *India Paper Pulp* improved sharply to Rs. 242 on reports of a higher dividend while *Titaghur Paper* A and B were Rs. 29 ex-dividend. *Midnapore Zemindary* are now quoting Rs. 193 after being lower at Rs. 187.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

(Annual General Meeting on 3-8-44 at 4-30 P.M. at Bombay. Transfer books closed from from 7-7 to 5-8).

Net profits after providing for income-tax, super-tax and excess profits tax and after setting aside Rs. 1,20,00,000 for depreciation Rs. 2,86,29,145. *Add* Amount brought forward from last year's account Rs. 9,43,102. *Add* Income-tax deducted from dividends on Preference Shares (1942-43) Rs. 14,72,303. The amount available is thus Rs. 3,10,44,550. Out of which the Directors have transferred to the Reserve Fund Rs. 57,00,000 being the approximate amount required for compulsory E. P. T. deposit, leaving a balance of Rs. 2,53,44,550.

The Directors have determined to dispose of this amount as follows:—A. To Shareholders: (1) A dividend of Rs. 9 per share on First Preference Shares Rs. 4,50,000 (2) A dividend of Rs. 7-8-0 per share on Second Preference Shares Rs. 52,03,642. (3) A dividend of Rs. 23 per share on Ordinary Shares Rs. 80,50,000. (4) A dividend of Rs. 129-8-9 per share on Deferred Shares Rs. 63,15,625. B. To Employees:—Bonus under the Profit-Sharing Scheme Rs. 44,67,738 and C. Carry fornard Rs. 8,57,545. Total Rs. 2,53,44,550.

(Dividends on First and Second Preference Shares will be subject to deduction of Income-tax).

The Works profits for the year under review were substantially higher than those for the previous year, but after making necessary provisions for Depreciation, Taxes and E.P.T. Deposit, the balance available for disposal is artually lower than last year, and therefore only sufficient for the payment of the same Profit-Sharing Bonus and Dividends as in 1943. It is to be noted that the allocation to Depreciation has had to be reduced to Rs. 120 lakhs, and, at that figure, is no more than is absolutely necessary in view of the heavy wear and tear on the plant and anticipated need for replacements and repairs after the war.

In accordance with the Government of India Ordinance XVI of 1943, a compulsory deposit of Rs. 18 lakhs was made, during the year which brings the total deposit upto 31st March 1944, to Rs. 68.37 lakhs. This amount will be further increased by a sum of about Rs. 57 lakhs for which appropriation to Reserve has been made this year.

The provision in the recent Finance Act requiring the payment of current taxes under the "Pay as you earn" scheme over and above the taxes for the previous year, the compulsory E. P. T. deposit and the reduction in sales receipts consequent upon the reduction of output are being reflected in the Company's Ways and Means position. These factors coupled with the measures recently announced by Government for the control of the commercial prices of steel in addition to the existing control of war contract prices will be particularly felt durig the current year and foreshadow the need for raising additional finance in the near future.

In order to provide replacements for the gradual exhaustion of its coking coal reserves and to ensure adequate supplies for many years to come, the Company has completed negotiations for acquiring mining rights over 13,000 bighas from the Bokaro and Ramgarh Company and it is proposed in due course to register a Joint tStock Company subsidiary to the Steel Company to operate the Colliery.

This transaction and the development of the Colliery during the initial period will involve an investment of about Rs. 40 lakhs.

The output of saleable steel during the year was the second highest on record, being next to that achieved in 1941-42. The output of steel ingots was the highest on record. A record production of tools was also made at the Agrico factory. Owing to the deterioration of the coal situation, however, a contraction of output has since taken place, and the position may worsen in the coming months.

Steel by the Perrin process was made on a fairly large scale for the first time during the year. A wagon building programme was undertaken in the Structural Shops and a considerable advance was made in the production of special steels and alloys.

After providing Rs. 2,62,254-8-0 for Taxation and Rs. 89,135-13-0 for Block Depreciation, there is a balance of Rs. 1,68,775-12-0 at credit of Profit and Loss Account, which it is proposed be dealt with as follows:—Dividend on Preference Shares at 7 per cent per annum Rs. 7,000-0-0. Dividend on Ordinary Shares at 12½ per cent per annum Rs. 1,11,014-6-0 and Carry forward Rs. 50,761-6-0. Total Rs. 1,68,775-12-0.

In November 1943 the Company's Barmondia Colliery became flooded due to a sudden inrush of water from a neighbouring Colliery, consequently all plant and machinery had to be withdrawn and raisings ceased. Dewatering operations are being continued and it is hoped that coal raisings may again be possible after the present rains.

Towards the end of February, 1944 work was commenced on the sinking of two shafts in Panchgachia Mouzah which will be known as Barmondia No. 3 and 4 Pits. Sinking is being continued and various surface works including Siding accommodation are now in hand. This Cilliery will work the Deshergarh Seam Selected Grade Coal, and it is hoped that raisings from this seam will commence early in 1945.

The Revenue Account shows a profit of Rs. 1,56,572-8-2 and after deducting from this:—Manager's Commission on Profits Rs. 10,465-14-0, Managing Agents' Commission on Profits Rs. 2,864-4-0, Loss on Sale of Motor Lorry, Rs. 2,581-0-0, Reserve for Taxation, Rs. 37,500-0-0, Total Rs. 53,411-2-0 and adding:—Interest on Investments (Nett) Rs. 4,843-4-0, Dividend Account—Amount written off Rs. 50-0-0 there is a nett profit for the year of Rs. 1,08,054-10-2.

After adding to this the credit balance of Rs. 13,512-12-2 brought forward from the previous year, and deducting Rs. 16,000-0-0 being the amount of an Ad-interim dividend of 5% for season 1943, paid on 17th December, 1943, there remains a credit balance of Rs. 1,05,567-6-4 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—Pay a Final Dividend of 22½%, free of Income Tax (making 27½% for Season 1943), Rs. 72,000-0-0, Place to Reserve Account, Rs. 20,000-0-0 and Carry forward Rs. 13,567-6-4.

The Estimates for Season 1944 are made up for a crop of 7,500 maunds at a cost of Rs. 2,86,289.

Managing Agents.—M/s. Octavius Steel & Co., Ltd.

Authorised, Issued and Suscribed Capital— *Rs.* 3,20,000 *in* 32,000 *shares of Rs.* 10 *each,* fully paid up.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits have been, as in the past past many weeks, in plethoric supply, with interbank call rate quoting nominally ½ per cent in Calcutta and ¼ per cent in Bombay. Balances maintained by scheduled banks with the Reserve Bank continue to be at a high level, the latest figure being Rs. 97.21 crores. The Central Government have, for many a day, never enjoyed anything like the present affluence. The week ended July 28 sees a sharp jump in Central Government's deposits with the Reserve Bank from Rs. 83.43 crores to Rs. 102.08 crores. In spite of cash balances exceeding the Rs. 100 crore mark, treasury bills on the basis of Rs. 4 crores per week are still being sold, the reason being that proper use is being made of treasury bills as a money market instrument. On August 1, the amount of Central Treasury Bills on offer was Rs. 4 crores. Applications came to nearly Rs. 13 crores. The average rate of accepted tenders is unchanged at 7 annas 9 pies per cent per annum. The offer for next week is Rs. 4 crores.

The return of the Reserve Bank shows a further reduction in active note circulation. In the last week, active note circulation had declined from Rs. 932.22 crores to Rs. 926.16 crores. The week ended July 28 shows a further fall to Rs. 921.96 crores. As against this decline in notes in circulation, notes held in the banking department have risen by Rs. 5.17 crores. In the issue department, both sterling securities and rupee securities show no change. Rupee coin, however, shows an increase of Rs. 97.48 lakhs. Deposits maintained by all governments with the Reserve Bank show allround increases. Those of the Central Government are higher by Rs. 18.65 crores, those of the Burma Government by Rs. 1.13 crores and those of the Provincial Governments by Rs. 3.19 crores. Miscellaneous deposits also have gone up by Rs. 80.90 lakhs. In the case of the deposits of scheduled banks, there is a fall of Rs. 1.27 crores to Rs. 97.21 crores. Part of the increase in the Central Government's deposits is accounted for by the addition of Rs. 9.18 crores to foreign balances held in the banking department. The Reserve Bank has increased its portfolio of treasury bills by Rs. 69.96 lakhs.

From the point of view of active note circulation, July presents a significant reversal of wartime trend. Month by month, since the war began, active note circulation has consistently and persistently risen higher and higher. During July, however, there is a contraction in currency circulation by over Rs. 9 crores. Active note circulation on June 30, 1944 was Rs. 931.37 crores. On July 28, the figure was Rs. 921.96 crores. This contraction in active note circulation is all the more remarkable as there have been quite considerable additions during the month to the Reserve Bank's sterling assets. Foreign balances in the banking department rose by Rs. 32 crores from Rs. 173.74 crores on June 30 to Rs. 205.54 crores on July 28. As the notes held in the banking department stood at the high level of Rs. 23 crores on July 28, there may be no need for any transfer of sterling securities from the banking department to the issue department for the next two or three weeks.

The continued rise in the deposits of the Central Government raises an important point. The earlier practice of the financial authorities was to utilise a comfortable cash position for the cancellation of *ad hoc* treasury bills held in the issue department. As our readers will remember, *ad hoc* treasury bills for considerable amounts were issued in favour of the Reserve Bank in connection with every major repatriation of sterling loans. This addition to rupee securi- in the issue department generally took place in one lump sum. Over the succeeding weeks, it was the practice to cancel *ad hoc* bills in small amounts. On the redemption of the non-terminable sterling loans, large parcels of *ad hoc* treasury bills were created and handed over to the Reserve Bank. Treasury bills created for the special purpose of non-terminable loans have all been cancelled. Even so, *ad hoc* treasury bills created for the special purpose of non-terminable loans have all been cancelled. Even so, *ad hoc* treasury bills now held by the Reserve Bank in the issue department stand at Rs. 57.84 crores. Following the earlier practice, it should be possible, with Government's cash balances exceeding Rs. 100 crores, to wipe off the entire lot of *ad hoc* treasury bills. The question is: Why is this not being done? Are sterling securities in the banking department and Central Government's balances being allowed to pile up for the sake of any imminent payment to the British Government? It is known that the Government of India have adopted a scheme for what may be called the capitalisation of sterling pensions. The Government of India have made a definite decision in favour of this scheme. But the public in India have been against it. Does the accumulation of sterling balances in the banking department and of Central Government's deposits mean that the scheme is shortly due to be put into effect?

It is reliably understood that 3 per cent. 1958 new Provincial Loans will be issued shortly. Anyone conversant with new loan flotations during the last two years will have noted their recurring nature; indeed, the provinces have been told to pay half the amount of their consolidated debt to the Centre in three equal instalments, of which two have already been paid in the last two years. The third instalment is due now. The details of the new loans are: Bombay Rs. 344 lakhs; Punjab Rs. 270 lakhs; Sind Rs. 200 lakhs; United Provinces Rs. 350 lakhs; Madras Rs. 110 lakhs; Central Provinces Rs. 53½ lakhs. As happened last year, Bombay is likely to get the best rate and the Bombay loan alone may be issued at par, while Madras may have the issue price at Rs. 99-8 along with others excepting Sind whose issue price might be Rs. 98-8. A sum of Rs. 1,327½ lakhs is only a fraction of what the money market can now put up, and market circles expect that, this time at least, the several loans will be fully subscribed for, without resort to transfer of options or a call on the underwriters as happened in the case of the Bombay and Madras loans last year.

The exchange market has been moderately active in turnover and fully steady in undertone.

Bank's buying 90 days St. at 1s. 6 9/32d., for 1 and 2 months; Bank's buying 90 days/ St. at 1s. 6 5/16d., for 3 and 4 months.

Bank Advances up: Three Reasons

LONDON, August 2.

The monthly balance-sheet figures of the big commercial banks as at end of June show an increase of £15 million in banks' advances to their customers which now stand at £770 million as compared with £724 million last November. In view of the fact that Bank advances have steadily declined from the beginning of the war this reversal of the trend which started modestly in November has caused some comment.

Actually, the increase in bank loans does not mean increased business activity, as it would during peacetime, but simply that business firms have been forced to borrow owing to peculiar wartime exigencies.

In the first place, many firms have been utilizing as working capital moneys due to Government for taxes. There have been inevitable delays in ascertaining proper taxes, and when the final figure is established, many firms have been forced to borrow money from banks. Another force driving them to banks for loans is the new practice adopted by various Government departments of checking up the real costs of war supplies manufactured for them. In many cases Government departments decided that they paid overmuch for their goods and demanded a refund. Sometimes these refunds are substantial and firms have been forced to borrow temporarily. The third factor is that some astute accountants discovered that if a company borrows its tax money from a bank it can legally add the amount of that loan to its so-called "capital" for purposes of computing Excess Profits Tax. The larger its capital, the smaller the amount payable in Excess Profits Tax. Thus bank advances really reflect industry's relations with Government instead of the state of business activity.

The wellknown economist, M. Kalecki, writing in the Bulletin of the Oxford Institute of Statistics, challenges the claim made in the Government's White Paper that the share of wages in the national income has risen from 38 per cent in 1938 to 41 per cent in 1943.

He points out that the national incomes of two years are not strictly comparable inasmuchas the income in 1938 included a vastly larger income from overseas investments than did that of 1943. Another unusual element was the larger numbers employed as shop assistants in 1938 as compared with the later year. Their income is habitually classified as salary not as wage income. If income from overseas investments and the gross income from retail trade are deducted, then wages amounted to 51.9 per cent of the total income in 1938 and 48.5 per cent in 1943. This represents a decline of 3.4 per cent.

The Record of the Reserve Bank

The report of the Reserve Bank to the forthcoming annual meeting of the shareholders is of interest less to those it is primarily intended for, than to those who desire an increasingly clearer understanding of the various and complex experiences of our national economy during the war period. For the report is a comprehensive account of the salient features of our economic life in the year ending June 30 last. As an official document, it is strictly objective, though in the paragraph on sterling balances, the authors have tried to indicate policies which are, strictly speaking, beyond their province, as it is for the country at large to lay down the policy in this regard. But the report as a whole is an invaluable aid in putting together into a complete picture details which are either ignored or are not easily reduced to a common scale. The functions of the Reserve Bank are such as to induce its interest in every phase of the national economic life. Exchange, trade and trade balances are its constant concern. Government's borrowings and the fluctuations of its loans and, as connected therewith, those of industrial and other shares, the soundness and progress of banking and, as underlying all those, the economic conditions in the country at large—over all these the Bank exercises a careful watch. It is only to be expected that the general stress and strain of life for the masses yields the foreground of the picture to what may be termed the direct experiences of the Bank, which are unquestionably of the heartening kind.

In a time of war, the responsibilities of the central banking institution to the national economy are determined predominantly by its paramount obligation to assist the Treasury in financing the war expenditure. And in the special position of India today, this obligation extends also to the Allied Governments. With the result that the Reserve Bank has to be almost a passive witness to the limitless additions to the note circulation. The report points out: "The continued rise in war expenditure on behalf of His Majesty's and other Allied Governments, payments for which are made in sterling, resulted in a further increase of Rs. 260.54 crores in sterling securities from Rs. 567.79 crores to Rs. 828.33 crores. Except for one week, namely, the week ended the 19th November 1943, when sterling securities were transferred to the Banking Department in exchange for rupee coin taken over from Government, this item showed a continuous increase throughout the accounting year." The Report therefore seeks rather to emphasise the benefits that have flowed from this inflation and the ways in which its adverse effects have been mitigated. Of anti-inflationary measures, it is content to say that the public should "refrain from spending at a time when prices are abnormally high" and emphasises that "the main single item in Government's anti-inflationary campaign, apart from taxation, is borrowing and yet more borrowing". And it is here that the Reserve Bank comes in and it can justly take pride in its achievements. In the organisation of small savings by revising the inducements therefor, and in ensuring proper terms, variety of types suited to different needs of investors and proper conditions for the success of the loan programme, the Bank has played a creditable part. The total amount raised during the accounting year through all new issues and sales of existing loans amounted to as much as Rs. 282.80 crores. To this notable achievement must be added the fact that the year under review witnessed the final stage of the repatriation of India's sterling debt.

The raising of such huge loans implies the preservation of health and strength firstly, of the Government securities market and secondly, of all the other markets which are in various ways related to it. The Report points out that, except on occasions such as the last air raid on Calcutta and on Madras and the short-lived Japanese thrust on the Assam-Burma frontier, the sentiment in the giltedge market has ruled strong. On the strength of the increasing demand, the Government succeeded in raising by stages the selling price of 3½ percent rupee counterparts from Rs. 95 on July 5, 1943 to Rs. 97-8 on September 29. The general trend may be imagined from the fact that the 3 percent undated paper showed in June 1944 a rise of Rs. 9 over the previous year's closing. Industrial shares fared no worse during the period; even the Government of India's ban on budlee transactions or on transactions other than ready delivery contracts had only a temporary adverse effect. In fact, the Government's measures of control over other markets caused a flow of funds into the stock exchanges; and the Economic Adviser's index of variable yield securities rose by January last to over 200 (Base 1927-28=100).

As for the bullion market, the Reserve Bank may claim to have retained control over it during the whole period. The Bank's policy in regard to gold is too well known to be detailed here. Suffice it that, though the Bank had often to follow the market as, for instance, when it was forced to adopt the method of sales by tender, its policy was on the whole effective and the price at the end of June last was Rs. 73-12 against Rs. 82-11 a year before. Prices in the silver market reacted to the position in the gold market. When the price of gold was stabilised, the silver market remained subdued. But the rise of March and April was not reversed till lend-lease silver hove into view. Nevertheless, the ready quotation on June 30 stood at Rs. 131-8 as against Rs. 123 at the close of the previous year. For the smooth discharge of its day-to-day functions, the health of the stock and share markets and of the bullion market is next in importance only to the favourable trends of foreign trade and of trade balances. The latter, however, is so overshadowed by the continued accrual of sterling in large amounts, that one has hardly to think of it in the setting of our war economy. Nevertheless, it is noteworthy that, owing to the improvement in the shipping position, both imports and exports moved up during the year and the favourable balance of trade in merchandise stood higher at Rs. 66.13 crores as against Rs. 63.25 crores. The rupee-sterling market was featureless and the net purchases of sterling by the Bank during the year amounted to £101.4 millions as compared with £97 million in the preceding year. The reduction in dollar requirements as a result of lend-lease enabled an appreciable relaxation of the restriction of remittances of dollars, while exchange control as a whole continued in more or less the old form. It will thus be seen that the general conditions of war economy have helped the Reserve Bank in its routine functioning so that the results of the years' working appear highly credit-worthy. The net profits of the year amounted to as much as Rs. 10.26 crores which, after a payment of Rs. 20 lakhs to the shareholders, leaves Rs. 10.06 crores for the Central Government which is over Rs. 2 crores higher than in the previous year.

These figures may well be regarded in one view, as a deceptive facade hiding the reality of the stress and strain of the national economy as it affects the people at large. The Reserve Bank, it must be said to the credit of its authors, does not seek either to exaggerate the significance of the figures it sets out or underrate the importance of the shortages of goods and other disheartening features of the present position. It is content to set down, in somewhat cold terms, the achievements of price control and draw attention to the fact that, as a result of such control, the index of prices has gone down very considerably. It affords the information that the Governmental disbursements both on India's own and on Allied account amounted to Rs. 693 crores during the financial year 1943-44 and to Rs. 1,765 crores since the outbreak of war. It would be highly interesting to trace the course of this vast outpour of money in all its various branches within the country so as to give clarity to our ideas alike of idle money in the hands of investors and of what may be called futile purchasing power in the hands of the masses. Facile assertions are made in some quarters about the prosperity of the cultivator or the wage earner or the middle classes, when what has happened is only a reshuffle of the distribution of scarce stocks of goods among the various classes. So far as the Reserve Bank is concerned, the only benefit, to the masses from the plethora of money which it can point to is the provision of financial accommodation for one Provincial Cooperative Bank and the grant of loans at concession rates by another for financing seasonal agricultural operations. That the 1700 and odd crores of government disbursements have showered its deferred benefits on all is an assumption, which, no doubt, has its uses for many, but which is yet to be proved. From the standpoint of the nation at large, the one concrete symbol of it is our sterling securities which now amount to over Rs. 1000 crores, and the fate of which seems to hang in the balance. The Reserve Bank by itself can do little to shape that fate, since it will be determined by political and economic factors which the two nations concerned, jointly and severally, can alone can control.

But in so far as war expenditure has led to a plethora of monetary funds, which expresses itself in the urge to investment and in the expansion of banks and banking, the Reserve Bank has its tasks clear-cut. It can do not a little, while larger issues are nebulous, to make Indian banking more sound, orderly and efficient, to make the investments of the future better-planned and in closer touch with realities. There is every reason to think that the Bank is doing its part in this regard. It advises the Government on new issues of banks and insurance companies. It has persuaded the Government to take up without delay a new piece of banking legislation. And, above all, it is endeavouring to make the scheduling of banks significant and meaningful instead of the non-commital formality that it had been for a long time. But the major tasks of a central banking institution such as the final adjustment of wartime inflation and the rationalisation of agricultural finance still lie before our Reserve Bank.

A Policy for Cotton

(Contributed)

The Government of India's cotton policy suffers from the serious defect of being improvised and, perhaps, therefore, half-hearted. This is evident in the official policy as it was pursued during the 1943-44 season and as it is now announced for the 1944-45 season. Government show a serious inability to see the cotton problem in its true perspective, and their plan for cotton seems to have been dictated entirely by the food situation. Up to a point this is of course desirable and even imperative, but a policy which overlooks the fundamental realities of raw cotton has little to commend itself, however serious the food position may be. In the press note issued a fortnight ago, new floors and ceilings for the various varieties of cotton during the 1944-45 season were announced, but the Government made no secret of the fact that it deliberately subordinates the interests of the cotton grower to the necessities of food production in the country. Nor could it have been anything but clear to the Government that in fixing the new limits, they were virtually making it a loss for the cotton grower to grow cotton.

War has hit the Indian cotton-grower hard. It cut off his export markets. For close upon five years now, the unexported short staples have been piling up (estimated at 43 lakhs bales). Last season, the pressure of these orphans became so serious that the market at one time faced dire ruin. Clearly, Government had to discard the policy of 'laissez faire'. When new crop trading commenced, Government fixed floors and ceilings for all types of cotton and undertook to support the market if and when the I.C.C. Contract declined to Rs. 400 (subsequently modified to Rs. 400 plus 5%). The trade gave the government's pledge a practical interpretation and assumed that, if the market went down, the government would step in to maintain prices at least at the floors in order to prevent a steep decline. Prices reflected the confidence in the market brought about by the new policy and hardened in the early winter months. Later, the weight of the Broach and Surti crops imparted a sudden weakness to the market and prices sank below the floors. Mills withdrew and a point was reached when, with the middlemen also terrified, the market sank so low that official support was clearly necessary and was invoked. Government however remained unresponsive for a long time and it was only after a good deal of allround imploring that they could be persuaded to extend support. The condition that the Hedge Contract should touch Rs. 410 before the authorities would step in was ill-conceived and was responsible for the belated official support. Moreover, Government buying was confined only to tenderable cotton and not to those numerous other varieties in which really there had been a serious break in prices. Throughout the season, hesitancy and half-heartedness were writ large on the official buying operations. The Government's purchases during the season are estimated at 5 lakhs bales involving an investment of about Rs. 4 to 5 crores.

Last season's floors and ceilings were low enough in all conscience. But the new floors and ceilings announced by the Government in somewhat indecent haste, when in fact the representatives of the trade had requested for a postponement of a decision on the question until the planting season was over, almost seem to be intended to penalise the cotton-grower. They do not take into account the fact that the cost of cotton production has gone up owing to the higher prices of cattle and agricultural implements and that the cost of living is still higher. Representations are being made by the representatives of the cultivator and by the East India Cotton Association, but it looks as if Government have made up their mind that the new limits for cotton shall remain immutable. Meantime, a wholly vicious slander against the East India Cotton Association is being circulated by certain people that the E.I.C.A. is not pulling its full weight in getting the floors and ceilings revised. To lend colour to this libel, it has also been suggested that the E.I.C.A. has been bought over by the government with the offer of a sop in the shape of a larger trading range. These charges and the mentality which inspires them are to be deplored. There is the fact that last year, a marked reversion to cotton (2 million acres, more than two-thirds of it being in areas exclusively given up to the cultivation of short staple varieties) took place. It is government's intention that, of the 11 million acres under short staple cultivation, at least 30% should be producing food crops this season. The object is of course very sound, but the mode of realising it is belated and faulty.

The Government's responsibility for planning cotton cultivation in India does not end there. It should be part of a comprehensive plan to see that the evil of mixing of the various grades of cotton is stopped at the source. The recurrent weakness of the cotton market is not a little due to the malpractice of inferior varieties being mixed with the better styles of cotton, and the result is that much of the cotton tendered is not upto the standards required. The reasons for these are two. Firstly, there should be more of seed control and the cultivator should be supplied pure seed and directed to grow the various styles in compact blocks of land. For example, in the Broach tract this year, the seeds from strains so different as BD8, 1027, B6, Goghari were all sown together, and naturally the crop will consist of all these mixed strains. Experience all the world over shows clearly that proper control can only be effected through the supply of pure seed. And then when cotton is grown, India might follow the example of countries like the U.S.A. where cotton is classified by government men, who have no trading interest and whose certificate of quality will be of value in tendering cotton for delivery against contracts. It should also be noted that ginning and pressing factories are also responsible for the malpractice of mixing. Heavy penalties imposed on the people in charge of these operations might help to prevent mixing.

Reverting to the floors and ceilings for the new crop, criticism has naturally centred around the fact that the reductions from the current limits have been pretty drastic. The reduction is Rs. 50 only for fine Jarilla ¾ inch, but in many cases, the proposed floors and ceilings for 1944-1945 are much lower than those of 1943-44. Thus, in the case of Fine M. G. Upland, the proposed ceiling is Rs. 20 lower than even the current floor. The cuts vary widely from Rs. 50 to Rs. 220, and medium and long staples have been subjected to landslides. The latter fact exposes the hollowness of the pretension that Government is opposed only to the cultivation of the short staple varieties, and is all for the growing of better staples in India. As one cotton man observed, the Government have evidently arrived at the proposed ceilings and floors by taking prices at their lowest and then subjecting them to a ruthless axe, with less compunction than ever a Post-War Retrenchment Committee may be expected to show. A curious argument is trotted out in defence of the lowered floors. There is no reason, they say, why it should be assured that the market will remain grounded at the floors; and if it should do so, the inference can only be that in terms of supply and demand, the floors are too high. Such a defence takes no account of why minima are usually fixed, especially the psychological aspect of it in a declining market. One may rebut it by asking why, when fixing minimum prices for gilt-edged securities, Government fixed the minimum for Rupee Paper at Rs. 94 and not, say, at Rs. 50! Minimum prices are a safeguard against demoralisation in a time of crisis when abnormal factors supervene; and they are not to be regarded as representing an equilibrium between supply and demand. The official defence is, not sophisticated, but irrational. It may also be added that widening the trading range from Rs. 150 to Rs. 200 is no compensation for the farmer for a lower floor. Any such enlargement of the limits can be useful only if the ceiling is raised, but as it has not been done, the larger range may prove to be no more than grist to the speculator's mill. But it is to be hoped that the speculator will not ply his trade to the point of compelling the grower to part with his cotton at the floors.

Another objectionable feature is that ceilings are fixed for the 'orphans' like Bengals, Oomras, Dholleras, etc., but not floors. If Government cannot and do not want to help these varieties, where is the meaning in depriving them of the benefit of a possible rise (in favourable market conditions) by putting a lid on it? Cannot the weight of surpluses or the lower ceilings for higher grades be depended upon to frustrate an advance beyond limits that are considered safe for the food campaign? Is this not particularly wanton frustration, especially when markets have already begun to expect an early Peace, and if Peace comes, there will be a heavy demand for even the most forlorn of short-staples? It has even been suggested, no doubt uncharitably, in some quarters that Government are deliberately fixing the lower floors in order that they may buy low and sell later when prices move up at the close of the war. It seems ridiculous to suggest that Government are seeking capital appreciation on the amounts invested by them in cotton purchases, but even then, it would still be tax payer's money. After all, as Mr. Kasturbhai Lalbhai remarked some ago, there is a sum of about Rs. 4 crores, collected from the import duty on cotton in the last few years and the cotton cultivator has a prescriptive right to help out of a crisis.

Having abandoned 'laissez faire,' one would suggest that Government should make a good job of intervention, and make it as effective and salutary as possible, instead of tackling it in a halting, piece-meal manner. A rational control of raw cotton is not less necessary for the country than adequate food production. And then, cotton may be cotton for others. It is food for the cotton-grower.

A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Travancore and a copy so filed has been delivered to the Registrars of Joint Stock Companies, Madras and Bombay.

The subscription list will open at 10 a.m. on 3rd August, 1944, and will close as soon as it is estimated that the shares offered for public subscription have been applied for but not earlier than 7th August, 1944.

Consent of the Travancore Government and the Central Government has been obtained to this issue under the Defence of Travancore Rule 94B and Defence of India Rule 94A. It must be distinctly understood that in giving their consent, the Government of Travancore or Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any statement made or opinions expressed with regard to them.

This is only an Announcement and not a Prospectus

OBJECTS.

The Company has been formed for the purpose of carrying on all or any of the objects set out in its Memorandum of Association and in particular to acquire the buildings, machinery, equipment, accessories and stock-in-trade of The Sree Krishna Timber Works and Saw Mills in Quilon, and to carry on the business of timber-sawing, cabinet-making, manufacturing of Slate Frames, Photo Frames, Wooden Toys, Door and Window Frames and other allied wood Industries and also to deal largely as wholesale timber dealers.

It will not be out of place to mention here the enormous demand existing at present for timber and wooden articles of various description. The present conditions of demand will continue indefinitely during post-war period also because of the scarcity of timber resulting on account of the present large-scale exploitation to meet war demands. To gain a more lucid and clear idea of the place and status of timber during the post-war period and the post-war possibilities of wooden industries, it is worthwhile to look at the enormous building programmes now suspended all over India because of the restrictions imposed upon the import of other essential building materials and the control placed on the distribution of available stock.

THE FACTORY, PLANT & MACHINERY

The Sree Krishna Timber Works and Saw Mills is situated in Quilon, the biggest timber market in Travancore. The factory is situated in a spacious compound in the northern portion of Quilon facing the lake. The excellent situation has given numerous advantages to the business of the concern. Logs coming from various parts of the forests are floated through the lake to the premises of the Saw Mills by water, the cheapest means of communication. It is also worth mentioning that Quilon is connected to the harbour port of Cochin by water communication through the lakes in Travancore. This provides very cheap transport of timber and manufactured goods for shipment to the outside market. It may also be noted that Quilon is an important Railway Station on South Indian Railway and from time immemorial Quilon formed the supply base of timber to all the Tamil Districts in Madras Presidency, which supply is made by rail from Quilon, and as such Quilon has the double advantage for rail and water transport.

In regard to the proximity to source of supply of timber, Quilon is excellently placed. Many of the timber depots of the Government of Travancore are within 30 miles radius of Quilon by rail, water or road, which advantage has made Quilon the biggest timber market in the State.

The Factory is equipped with all modern arrangements for sawing and some allied wood industries. It contains about 26 circular saws with tables and allied machinery like planing machines cross-cut tables, etc. It also contains a complete equipment for the manufacture of Slate Frames and packing cases. The entire factory and machinery has been valued at Rs. 88,400 by the well-known Chartered Engineer, Mr. Mathew Phillip, B.A., A.M.I.E., but Mr. T. K. Alexander was able to take the agreement of sales from the vendors for a sum of Rs. 70,000 at which price he is passing on his rights to the Company without taking any margin of profit. The report is available for inspection at the Registered Office.

PROSPECTS

The Company now formed proposes to run two departments, viz., the Industrial Section and the Trading Section. The profit estimated, taking present production as basis, is as follows:—

The factory is capable of producing 1½ lakhs dozens of slate Clutch Frames in a year of 300 working days. The cost of producing 1 dozen Clutch Frames is around on a F.O.R. or F.O.B. basis Re. 1 to Re. 1-2. It can be safely estimated that a profit of As. 4 per dozen can be realised which would give a net yield of Rs. 37,500 per annum.

Another important work the factory handles at the moment is the production of packing cases. The average production per day is about 200 cases and the margin on that is about 4 annas to 6 annas per case according to specification of orders. Estimating an average production of 200 cases per day, the profit per day should be Rs. 50 and Rs. 15,000 for a year of 300 working days.

The factory also handles large-scale production of battens for Tea Chests and it can produce about 15,000 numbers battens per day. The average margin left should be about Re. 1-8 on 1,000 battens with the result the daily profit from the account should be about Rs. 25 per day and Rs. 7,500 for a year of 300 working days.

The profit from the Industrial Section with its present equipments works out to Rs. 60,000. It may also be noted that the production figures are calculated on a very conservative estimate of single shift working of 300 days in the year. Actually it should be much more when more shifts are resorted to.

THE TRADING SECTION

The Company proposes to do wholesale and retail trading in timber. The turnover expected is about 40,000 c.ft. per year and at 4 annas margin nett (the present rate of margin is very much higher) the profit from Trading Section should be around Rs. 10,000 nett.

The Industrial Section as equipped at present and the Trading section as detailed above should give a net yield of Rs. 70,000 per annum which works out to 35 per cent on the Capital outlay. The Company proposes to take over about 12,000 c.ft. of logs and 5,000 c.ft. of sawn sizes from the vendors and the price fixed ensures a decent margin of profit and that itself should enable the payment of a fair dividend very soon.

The Capital appropriation will be as follows:—

	Rs.
Consideration to Vendors for Factory Buildings and equipments	70,000/-
Do Do for stock ..	70,000/-
Underwriting commission Brokerage and preliminary expenses	13,000/-
Conveyance and legal charges	5,000/-
Working Capital	42,000/-
	2,00,000

GENERAL:

Applications for shares are to be made and forwarded with a remittance of the amount in full to the Company's said underwriters or Brokers or to the Registered Office of the Company's Brokers.

Copies of the Prospectus and application forms can be had from the Registered Office, the Brokers and Bankers of the Company.

Directors.

SEEING IS BELIEVING

falling prices prove the wisdom of saving for the future

If no one had saved money last year and early this year; if Government had not introduced strict price controls and increased the manufacture of bazaar goods, prices would still be fantastically high, as they were last year.

But private savings and administrative action by Government have brought prices down. People who foolishly invested in jewels, property, commodities and goods have seen their investments shrink before their very eyes.

And this is not the end. The downward trend will persist. Be wise. Don't be caught by falling prices.

These, as before, are today's best investments: every time prices fall an anna, these investments improve in value: Co-operative Societies, Insurance, Savings Bank Account, Post-Office Savings Bank, Government Loans and National Savings Certificates.

Do without luxuries. There is plenty of time after the war for new clothes, new furniture, new houses, new cycles and motor cars. Save money now to spend it then

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

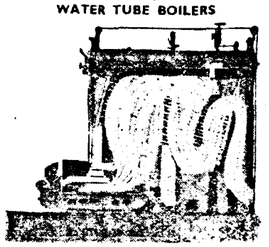
A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

Editorial Notes

Obvious Source

Another demand for a million tons of imported grain marks dissatisfaction with the two assurances given by the Food Member. It is not merely the gap between 800,000 tons and 1 million tons or even the lack of a stipulated reserve of half a million tons, but the general uncertainty surrounding shipments. The Central Food Advisory Council endorsed the earlier manifesto as to imports but refrained from indicating the source of imports. It is curious that Lord Faringdon's motion brought no details. The U. S. A. is known to be short of wheat and current pressure on Canadian supplies is a consequence of a shorter crop on a reduced acreage. No suggestion as to direct negotiation with the Argentine Government was made. The Punjab wheat forecast confirms anticipations of a shortage of wheat this year. Whether Argentina could provide the freight as well as the cargo need not be asked since the demand is for imports at any cost. But the political situation in Argentina since June last has not pleased the Allies (the recall of envoys is a straw in the wind) and the decree issued in April for the taking over of the British-owned gas company serving Buenos Aires was more than a sign of the times. There is also the question whether temporary custom would suit Argentina's Grain Board even if the Grain Board can get its scheduled prices (admittedly lower than U. S. and Canadian prices) and obtain jute manufactures in return. Barter deals negotiated with Spain last year made it clear that Argentina did not seek money so much as goods or ships; also that, except for Britain, no country could be regarded as absolutely necessary for Argentine exports. While trade openings for Indian exports have been investigated little is known about the chances of getting wheat from Argentina. A trade mission is not however indicated in this case, for, the real problem arises as to the guarantee of an import quota. Britain always could and did guarantee the Argentine a market for meat as well as wheat. The Indian Government should perhaps get a trade treaty ready before seeking Argentine help, partly because European demand may revive this year in volume rather unexpectedly and partly because an assurance of imports for a term of years at prices adapted to the Argentine growers' requirements alone would tempt Argentina to sell to India specially when inter-American trade is growing. Information as to exportable tonnage, carry-over etc., is available but over and above is the question of shipping so that the volume of imports would be determined by the demands of the Allied Expeditionary Forces. Probably, the debate on India will produce an outline of import possibilities more suited to the shortage that has kept wheat prices up since April.

Banking Expansion



Right through 1943 commercial banks in all countries reported an increase in deposits. Whether it was merely a consequence of the universal increase in note circulation or the result of accelerated private saving the increase is characteristic of all countries including neutral countries and those occupied by Germany. The symptoms of banking expansion are not limited to countries with increases in industrial production like the U.S.A. and Canada. Increases in savings deposits are not confined to countries at war but figures relating to Germany are not available. Where strain has militated against an increase in bank deposits, as in Finland, the situation is perhaps not different from that in Germany, but a point deserving notice is that where inflation has been acute as in Mexico and Iraq, the increase in bank deposits last year has been small as compared with countries where controls have been worked, though the increase in real savings may not be obvious in respect of the countries which accumulate, at rapid pace, sight deposits in banks. The continuance of the original trend into 1944 is not unexpected although the fall in aggregate deposits in the U.K. and Canada early this year implies that bonds rather than banks attract surplus cash this year. The general preference for liquidity is indicated by the relatively small ratio of term to sight deposits even in the case of countries like Sweden and Switzerland. Where banking is subject to special controls, as in Australia the increase in resources in 1943 has been less pronounced than in India or Palestine which experienced war prosperity in different ways or degrees. The increase in Britain over a year is not even £400 million whereas Scheduled Banks in India reported an increase of over Rupees 191 crores in a year.

Livestock For The Army

Livestock purchases for the Army are not limited to India. The Remount department looks to the border country for suitable animals and imports of living animals have been heavy as more than 30,000 animals have been imported from South Africa. The Remount department's interest is not limited to horses. It takes horses, camels, mules, bullocks and even dogs in its stride, and except for some animals trained by the R.I.A.S.C. the Remount department is directly responsible for the purchase, breeding, and training of all animals for the Army. Horse and mule-breeding are permanent interests of the Department which keeps stallions to serve brood mares belonging to private answers. Animal transport is still retained in order to save petrol. Bullocks have come back into favour after their adoption to jungle warfare. Battle training for the Army's animals is given at Saharanpur. The mules in France represented only the beginning of the Army's animal programme. Both animals and men were sent for oversea service. Selection is strict as may be inferred from the examination of 30,000 ponies of which 4,200 were accepted for the Chinese forces. Livestock prices in war have naturally been influenced by the Army's demand but breeders have gained in more than one way as more than 60,000 animals have been drawn off.

let the day of Blessing be a Blessing to the Poor

WEDDINGS are the gayest of all ceremonies and when you and your friends are so happy and radiant, it is a sad reflection that, so near your kind and generous lavishness, there is still so much real WANT. Yet it is so, and for this reason, socially progressive people no longer allow *waste* to mar the perfection of such occasions. They feast their guests well, but reckless waste is not permitted. In this way, without detracting in any way from the joyousness of the happy day, they fulfil an inescapable obligation to the poor—who still find food so hard to get.

WE ALL CAN, by reasonable economy, extend our blessings to the poor and needy without spoiling our own enjoyment. If we all follow this wise example, there will be fewer needy people in India who find food difficult to buy.

food for all

..but none to waste

Jute Industry's Prospects

In the Indian Jute Committee's bulletin for July appear two extracts relating to the Dundee jute industry. The future is not regarded as hopeful by Sir Stafford Cripps who asked Dundee to take to new industries in place of one hampered by lack of raw materials and labour at present. Post-war difficulties are obviously related to the fall of 50 per cent. in Dundee's production as compared with 1939. But Dundee manufacturers' intention to install new machinery does not accord with Sir S. Cripps' advice to Dundee to give up jute in favour of new industries. His advice however finds support in the evaluation of post-war prospects by Sir Eugene Ramsden. Sir Eugene told a company meeting that the U. K. industry's position will not be an easy one, particularly if India is still allowed to have a free market in the U. K. for her goods. It is no exaggeration to say that wages paid in India and production costs generally are such that we could not and in fact would not wish to compete with them or unless something is done, I am afraid, the principal industry of Dundee will gradually fade away." Indian jute mills' prospects are apparently better than presumed, and the confidence laterly manifested by Indian investors in jute shares can be related to the forecasts offered in the U. K. While the problem of substitute fibres is met by cheapening under control, the main factor is the decay of Europe's jute industry rather than the assured expansion of demand for relief purposes.

Preparing for November.

American policy despite a loyal Opposition has assumed a different aspect this month after Mr. Roosevelt's re-nomination. His foreign policy platform is of little consequence, for the Republican candidate also wants international collaboration. The decision reached at Chicago by the delegates was confidently anticipated by Mr. Roosevelt who took the failure of the Southern split as a sign of the Democratic revival of 1944. As Mr. Wallace is dropped, it is evident that Mr. Roosevelt along with Mr. Truman (the ardent investigator of the U. S. war effort) is going to stand on the war record, not on the promised new version of the New Deal. The Democratic platform is full of war and international affairs. Emphasis on defence probably means the continuance of conscription after the war. This might have large effects on production and public expenditure as well as employment. The President's failure in regard to the soldier's ballot hardly affects immediate calculations as to the undecided minority's view of the Fourth Term. Re-election is primarily the concern of the U. S. voter but for the Allies the President's re-election promises continuity of policy without any suspicion of a return to normalcy. The differences that developed between President and Congress this year over the Tax Bill, manpower etc., would cease to matter then. There is, however, little doubt as to Mr. Dewey being a strong candidate or as to the strength of the Republican party. The President's continued reliance on the labour unions and the Negro vote may be offset by the transfer of allegiance in many States to Republican governors last year. The campaign promises to be different from that of 1936 when only two States (Vermont and Maine) stuck to the Republican cause.

After The War

An ILO memorandum on Labour has dwelt on the shift of employment in wartime. Unemployment has passed away because 60 million men and women are now in the armed forces of several countries. The re-absorption of these in private civil employment after war ends is even more important than the stabilisation of wages. Public works construction would naturally claim some of the demobbed but not all while the young and overaged now at work may be removed to put back others in their place. Bills have been accepted by Parliament for taking back men to their old jobs, but the preference for veterans for all or most jobs can only be approved, if technical skill is duly associated. In the debate on full employment there was little about the principles involved because the Prime Minister defined in March the general conditions of the change-over. Policy in the U.S.A. will clearly be determined by the reconversion programme for employment in the U.S.A. outside agriculture is not very elastic despite the great dilution recorded. The payment of bonuses on discharge may help in procuring employment and the payment of gratuities to war workers deprived of jobs may appear more necessary than unemployment benefit. The U.S.S.R. may have fewer difficulties for private employment there has no place, and the State is the only employment agency. The tasks of Russian reconstruction may however strain the supply of skilled labour as well as available capital. The relation between employment (for supporting the scheme of social security provided after discharge) and the actuvated expansion of international trade is fairly clear; though the most important precaution adopted by agreement so far is that peace would not bring disarmament. Occupation of enemy territory and other tasks would certainly absorb some soldiers but the principle of national service would certainly be subject to a real test. Where conscription as in India does not obtain, the rule as to civil employment is already laid down though the expansion of some branches of the armed forces is widely regarded as permanent.

FOR THE DAYS TO COME . .

With a calm look ahead the wise farmer gathers his harvest—the fruits of his labour—to provide for the lean months ahead of him and against contingencies such as famines and floods. He does not wait for he knows too well that any dilatoriness on his part might prove fatal to him and his family.

The same sane attitude towards the future prompts the man who purchases life assurance when all is well. He knows that when danger threatens it may be too late to provide the essential protection for his family.

The General Assurance Society is in an ideal position to provide life and other assurances at low rates consistent with complete and absolute security. The new management of the Society is backed by a Board of Directors which includes Mr. B. N. Jalan (Chairman) and other leading members of the well-known house of Soorajmull Nagarmull, besides prominent personalities and businessmen of India. The immense financial reserves and expert organisation of the Society are your guarantee for the policies they have to offer.

Imperial Bank Of India

The rate of growth in respect of deposits has apparently slowed down during the first half of 1944 since the total deposits of the Imperial Bank have risen by Rs. 16 crores only and profits too are apparently running at the same level as before although a notable increase in Advances serves to remind that important changes noted in Britain extend to India. The increase in Advances totalling Rs. 66.35 crores in the latest balance-sheet as compared with Rs. 40.59 crores in the balance-sheet published in February gives the measure of the progress made even better than the decline in cash ratio although it is obvious that the Imperial Bank's cash ratio is higher than the present average for banks in India. Despite the drop under Investments it is clear that over half the assets are in giltedged. Again the Imperial Bank's ratio in this respect is better than that of any. The large shift in Advances has not led to any striking changes in the disposition of profits though the reduction in the carry-forward and the reduced allocation to Reserve (Rs. 7½ lakhs as against Rs. 10 lakhs previously) is attributable to the provision for a bonus to staff. From the balance-sheet it may be inferred that the Imperial Pank's investments in the slack season have not increased nor has its cash while its resumption of functions as Government banker is very clearly indicated in a note as to debts considered good but not fully secured.

Central Timber Corp. Ltd.

Announcing part subscription of the capital of Rs. 2 lakhs in ordinary shares only wanted by the Central Timber Corporation, Ltd., there appears on page 191 a note as to the property acquired in Quilon. What the factory produces and what profits can be expected by shareholders are duly indicated in the announcement. It is known that timber shares as a class are held in high esteem by investors and the prospects for the new Travancore company are very good because battens for tea-chests will always have a local market. With this issue is associated Mr. P. R. Subramanyam whose underwriting prowess may be gauged by his success in procuring over Rs. 50 lakhs for various companies launched this year. If he has not broken with precedent, he certainly has broken local records by skilful support of many South Indian companies whose shares are claiming the Bombay investor's attention, largely owing to the expert pioneering carried out. The most important results from the spread of investments and (of risks as well) are to be seen in the future, but the main feature, made clear by the introductions and placings of late, that Travancore like Mysore affords Indian investors good scope is almost entirely the creation of an individual broker to whom both promoters and investors must confess themselves indebted.

E F. U. Results

Except for the fall in marine premiums the 1943 results in regard to revenue and additions to the Funds were better for the Eastern Federal Union Insurance Co., Ltd., than the 1942 results. Net premiums in the Fire branch amounted to Rs. 11.24 lakhs. Claims took Rs. 2.76 lakhs and expenses took over Rs. 4.67 lakhs. There is an additional Reserve of Rs. 1 lakh and the surplus transferred to the Profit and Loss account is over Rs. 2.26 lakhs. In the accident branch premiums received totalled Rs. 1,35,457. The Combined Reserve is higher on the year, and the sum of Rs. 15,903-14-5 is transferred to profit and loss account. The net premiums in the Marine branch totalled over Rs. 6.93 lakhs. There is no transfer to Profit and Loss account but the Fund is again higher, being 90.67 per cent of the premium income for the year. Premium income in the Life branch rose as new business increased. The Life Fund has risen from Rs. 1,85,485-7-3 to Rs. 2,79,886-8-2 at the end of 1943. The increase in the provision for taxation has led to a reduction in the dividend payable to

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 30th June 1944.

We have examined the above Balance Sheet with the Accounts and Vouchers relating thereto of the Central Office and of the Local Head Offices and with the Returns submitted and certified by the Branch Agents, which Returns are incorporated in the above Balance Sheet, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion, the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-Laws of the Bank, and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

The audit of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. W. J. Younie, B. S. Billimoria and James Orr respectively.

W. J. YOUNIE,
B. S. BILLIMORIA, } *Auditors.*

U. S. CONGRESS PREPARES FOR RE-CONVERSION

SPECIAL FOR "INDIAN FINANCE".

WASHINGTON, Aug. 2.

The prospect that Germany may surrender unconditionally much sooner than has been expected spurred Congress to action on to the formidable problems of reconverting American economy. Its leaders decided to begin immediately when they reassemble this week the consideration of legislation to guide industry evenly into peacetime production, get Government out of business as soon as possible after the war ends, dispose of billions of dollars of surpluses, and provide for the future employment of 30 million Americans now either on war work or in uniform. Great consideration will be given to comprehensive reconversion legislation sponsored by Senator Kilgore who warned that unless immediate action is taken, the country faces "economic disorganization."

Expectation that Germany will soon collapse was reflected in the New York stock exchange where trading last week reached the lowest ebb since June 3rd. Wall Street is aware that the country is legislatively unprepared for a return to peacetime economy and operators regarded the news from Europe as an indication that reconversion problems are being brought closer daily. Sales dropped to 4,153,128 shares as compared with 7,510,850 shares in the previous week.

Congressional preoccupation with reconversion combined with the caution of an election year is calculated to produce the likelihood that the monetary agreement reached at Bretton Woods will not be considered, perhaps until after November or until the next U. S. Congress convenes in January. Senator Wagner, Chairman of the Senate Banking Committee said that he wanted the issue to be kept out of politics because it is far too important to the future of the world.

It is acknowledged that many bankers opposed this agreement; thus it might result in a political controversy. These bankers appear to favour unilateral action under which the United States would provide an example by setting its own financial house in order and making loans through private investors for reconstruction abroad. They contend that under the Bretton Woods proposals the United States would risk financing weak currencies. The *Washington Post* in an editorial doubted whether private investors would be prepared to make loans abroad immediately at the end of war and commented. "The bank is not an eleemosynary institution for the purpose of giving money away to mendicant borrowers. It is a necessary institution for reconstruction financing and industrial development in countries which after the war will urgently need foreign capital."

(Continued from first column)

shareholders—3 annas for Rs. 5 paid-up share for 1943 against 4 annas declared last year. The paid-up capital is again higher and since the close of the year the called-up capital has been fully subscribed. The Investment reserve of Rs. 61,000 like that for Contingencies and bad debts is practically unchanged on the year. But total Funds have increased by over Rs. 5 lakhs while Investments have increased by over Rs. 5.55 lakhs as compared with Rs. 3.44 lakhs in 1942. Investments including deposits are almost exclusively in approved securities except for Rs. 2.76 lakhs invested in Preference shares and Rs. 49,092-13 in Ordinary shares. Liabilities in respect of claims and sundry creditors are fully covered by cash balances exceeding Rs. 10.27 lakhs. The classified summary indicates that cash has decreased while the company's investments in Government securities have risen by Rs. 5.74 lakhs as compared with the position a year ago. This may operate favourably on the net yield on the funds for this year.

Gratitude to Godrej

Here are but three more of a large number of letters of appreciation of Godrej Safes, which rendered signal service during the conflagrations (and in the burning debris afterwards), that followed the nerve-shattering explosions in Bombay.

THAKER LILADHAR PURSHOTAM
GENERAL MERCHANT & COMMISSION AGENT
Kharek Bazar,
Bombay, 15th May, 1944.
Messrs. Godrej & Boyce Mfg. Co., Ltd.,
Bombay.
Dear Sirs,
We had purchased from you a fire-proof safe of size 35" x 24" x 24" about 20 years ago. During the twenty years that the safe has been in our daily use, it has not been repaired once and has given us most satisfactory service. After the catastrophe of the 14th April, the safe was trapped in the fearful fire which broke out in our premises at Mandvi. When after full 6 days of fighting the terrible fire our safe was removed and opened, to our great joy and surprise, we recovered in good condition all our currency notes and valuable documents which were in the safe. For this result we offer our congratulations, and wish ever increasing success to your enterprise.
Yours faithfully,
For Liladhar Purshotam,
Sd/- GORDHANDAS BHIMJI

SHA. NARANDAS VALJI
Mudi Bazaar,
Bombay, 9-5-1944.
Messrs. Godrej & Boyce Mfg. Co., Ltd.,
Bombay.
Dear Sirs,
Your safe has been instrumental in providing yesterday, an amazing incident, such as one rarely comes across. This safe was caught in the fearful, unforgettable fire which started from the 14th April, and it remained for several days more in hot debris. When the safe was removed from the debris yesterday, i.e. after full 25 days, it was so hot that it had to be cooled by pouring water over it. To our very great surprise, we found our ornaments, currency notes, etc. intact when the safe was opened.
We congratulate you on the service rendered to us by your safe.
Yours faithfully,
For Narandas Valji Marchavala,
Sd/- BHAGWANDAS VALJI

Gaiwadi,
Bombay, 28th April, 1944.
Messrs. Godrej & Boyce Mfg. Co., Ltd.,
Lalbaug, Parel, Bombay.
Dear Sirs,
I lost all things other than the contents of your Fire Proof Safe belonging to me during the disastrous fire which took place on the 14th instant. The safe was in the fire from 14th inst. to 23rd inst. and to my surprise I found the contents of the safe to be sound and safe.
I am indeed very much pleased at this discovery of yours and congratulate you for making such a fine safe.
Yours faithfully,
Sd/- G. V. PEDNEKAR

Clive Street Gossip

A hydra-headed change has come over the Calcutta stock exchange. Few people understand its nature or significance or magnitude or causes. It strikes me that it will amply repay the Finance Member of the Government of India and the Finance Minister of the Bengal Government to maintain a close watch of the happenings on the exchange and to make a careful study of the 'why' and 'what' of the changes that have come over the market. For the understanding of the new conditions in stock exchange activity, let me advance a few posers. Do you know that the price of a share of the Calcutta stock exchange, which was less than Rs. 30,000 a few years ago, is now quoting Rs. 90,000? Do you know that the din and roar and frenzy of the last few days is many times the din and roar and excitement of a few months ago? Do you know that the surging crowds on the pavements around the Exchange Hall are today six to ten times the crowd that used to haunt Lyons Range corner? Do you know that the gents who frequent the pavements have started a miniature stock exchange of their own? Do you know that, amongst the share brokers there is today none so poor as to count his daily income only in hundreds? Do you know that, if, as on the New York stock exchange, there were arrangements in the Calcutta stock exchange to keep an accurate record of the daily turnover of share transactions, the showing which our friends on the Calcutta market will make would not compare badly with the showing in some of the hectic days of the New York stock exchange?

The lay investor must have noticed, for some time, that the fluctuations that take place on the Calcutta stock exchange not only from day to day but in the course of a day's dealings have tended to be wild and wide. He is puzzled at these sharp gyrations in prices and cannot see any warrant therefor in the conditions pertaining to the industry concerned. Nor can war news by itself furnish an adequate ground for price-changes so violent. Uninitiated in the wiles and strategems of professional operators, the average investor reads the share quotations in his morning papers and cannot make out whether the spurt in the price of this share or that is due to bonafide causes or some encounter of the bulls and bears. He finds that the space occupied by the stock exchange report in the morning papers is growing bigger and bigger day by day; that the introductory report consistently refers to large turnover and active conditions; and that the price quotations for the more important shares disclose abrupt and sharp changes. He is befogged, on the whole happy that his shares are doing well, but sub-consciously uneasy as he cannot be sure whether this is only a temporary phase.

The volume of share transactions on the Calcutta stock exchange in the last few weeks is unprecedented. My readers will recall the hectic activity of Indian Irons boom in 1937; but that was nothing compared to the super-boom of today. I understand that the turnover of shares in the books of some brokers is nothing less than half a lakh shares in the course of a day. There is hardly a broker who does not make a few thousand rupees a month: there are some who make a few thousands every day. In ordinary times, it was the broker, his sub-broker and his assistant who ran after the clients in a manner not much different from that of the insurance canvasser after his prey. Today, the broker has a lofty disdain for clients. What does he care for business in which the brokerage is Rs. 6-4 or Rs. 12-8? It is now the turn of the clients to run after the brokers. Brokers have so much business on their own jobbing account and so much business on account of one or two selected big operators, that they have no time or inclination to deal with clients who have 100 or 200 shares to buy or sell. Even when Indian Irons rose in its majestic stride or fell in its pitiful anti-climax, the unit of transactions was 100 shares. It is a poor-spirited broker today who thinks in terms of 100 shares. The unit of transactions in Indian Irons or Steel Corporation or Howrahs or Burrakurs is now a thousand shares. It is not unusual for some of the brokers to offer to buy or sell in units of 5,000 shares or 10,000 shares. Thus has stock exchange activity multiplied tenfold and twenty-fold; thus has broking become a proud profession; and thus have brokers created conditions in which money-making on a fabulous scale has been rendered easy.

What is behind all this transformation? What is all this heady activity due to? The simple answer is that most other avenues for speculators have been closed, and speculators who had hitherto belonged to other fields have now all flocked to the Calcutta stock exchange. Most Futures markets have stopped functioning in Calcutta, either due to the action taken by the Government or due to the conditions that have been created by the war in regard to the commodity to which that market pertains. Moreover, thanks to the strict control now exercised with respect to commodity after commodity, traders do not find it easy or worthwhile to enter into large commitments in any commodity. The Jute Fatka market was closed long ago and has remained closed; and, owing to the fixation of maxima and minima prices for jute, it is no longer possible to enter into any large speculative commitments in jute. The hessian futures market has likewise been closed; nor is there much in the hessian trade to engage and hold the affections and activities of speculators. The speculator whose field was the piecegoods business is, so to say, out of employment, thanks to the draconian administration of Sir Akbar Hydari and Mr. Vellodi. Produces of every kind are, for the same reason, no longer suitable for the gambols of the speculator. While, on the one hand, these fields once beloved of the gambler are closed and barred, there has been, on the other hand, a considerable accession to the ranks of gamblers. Phenomenal profits have been made by merchants, traders, contractors and a whole army of parasites and satellites; and a greater part of these profits represents money made by questionable means or in black markets or through devices whose simple objective was evasion of tax. The owners of such black market money are legion; and the amount of such black money is in crores. That is to say, many of the old-time speculators find themselves driven out of the markets where they gambled and gamboled: and there is a large number of new rich men with vast new riches who

itch for some kind of gamble and gambol. The old speculators of other markets and the new speculators of the black markets have now all flocked to the Calcutta share market.

When you come to think of it, share transactions provide an ideal refuge and haven of safety for black market money. Can anything be easier or simpler than buying shares in a fictitious name or in the name of some nominee or nominees and keeping shares in the name of the nominee with blank transfer deeds signed by the latter for security? The money is safe; the investment gives a return; and the subterfuge of blank transfer makes the declaration of the ownership unnecessary.

The Government and the war, control and ordinances have, as I have explained, wrought a situation in which the speculative activity which would have been spread over several markets is now brought to bear in a concentrated and aggravated form on the Calcutta Stock Exchange. Some of those who were dealing in other commodities and other commodity markets figure now as members of the Calcutta Stock Exchange; a larger number do their operations through brokers. These were dealers to whom it was a routine matter to buy or sell ten thousand bales of jute or ten lakhs yards of hessian. With equal aplomb, they now deal in ten thousand or twenty thousand Howrahs, Indian Irons and Bengal Steels Result? With the slightest change in sentiment. lakhs and lakhs of shares are thrown on the market or taken off the market: an event which ordinarily would have meant a fluctuation of 4 annas or 8 annas produces, in present conditions, a rise or fall of as many rupees. The brokers are assured of a powerful body of clients to whom thinking in terms of big transactions is second-hand. Let us suppose that such a broker calls on the Saheb in charge of the coal department of an important managing agency house. The Saheb gives the broker an order to buy 500 shares of Kabardar Coal Company. The broker immediately buys 5,000 shares for himself and 25.000 shares for his other clients who deem it a tip straight from the horse's mouth. One big broker thus buying 30.000 shares, all the minor brokers follow suit. And it may well happen that the total number of shares bought and sold in respect of Kabardar Coal Company may far exceed the total number of shares in the capital of the company.

These operations of the Brobdingnags of the Exchange Hall are aided and abetted by the Lilliputians of the pavement bazar outside. A multitude of small dealers have now started what is known as the Katni market in shares. In this market, all transactions are closed the same day at the closing prices of the Calcutta Stock Exchange. How this market has been allowed to come into being and thrive under the very nose of the Calcutta Police is a matter that merits the attention of the Commissioner of Police. As for the custodian of India's finances, it is up to him to take steps that the colossal profits now made do not escape taxation in the same way as has the money which is the source and fountain-head of these transactions. It is up to the Steward of Bengal's finances to make sure that the stamps on the prescribed scale are affixed to each contract or purchase or sale. There are various other issues raised by to-day's selected boom; but the limited pressure on space necessitates me bringing my Gossip to-day to an abrupt end.

CHEVROLET TRUCKS — either chassis or with tarpaulin-covered load bodies built by General Motors India Limited — are now available at controlled prices under arrangements made by the Government of India. Chevrolet Controlled Vehicles will be released by Government for essential civil requirements only, special consideration being given to those who are prepared to operate them with an approved charcoal gas plant.

ADDRESS YOUR DEMANDS TO THE PROVINCIAL MOTOR TRANSPORT CONTROLLER OF YOUR PROVINCE.

Government appeal to all operators of motor vehicles to co-operate in:

SAVING PETROL — Use a good quality charcoal gas plant . . . one that has passed Government tests . . . and maintain it properly.

SAVING TYRES — Drive at reasonable speed . . . check your pressure . . . Apply the brakes gently.

SAVING SPARE PARTS — Don't neglect your vehicle . . . Have it checked up by the dealer who supplied it . . . Use good lubricants.

SAVING BATTERIES — Don't abuse the self-starter . . . Top up with distilled water only . . . Keep terminals clean and covered with vaseline.

(FROM OUR CORRESPONDENT)

New Delhi, August 1.

The British Government, as expected, have coldly rejected Mahatma Gandhi's plan for a settlement as not even offering a starting point for future negotiations. Both Houses of Parliament have discussed the offer. The general impression here is that there was a surprising similarity in the speeches, the difference between the diehards and labour spokesmen being one of emphasis. There was almost a concerted attempt to emphasise the need for economic reconstruction and the revising of the standard of living of the masses as if all this was even remotely possible without a popular government. Even the Bombay planners have removed all misapprehensions on this point, if the British spokesmen were really naive enough to seriously entertain such thoughts. They have made it clear that any large-scale planning can be undertaken only by a National Government.

* * * *

Though the prospects of a communal settlement are still bleak, the scene is not a complete black-out of all hopes yet. The rank and file, both in the League and in the Congress, are for a compromise the lack of which bars all political progress. Mahatma Gandhi and Mr. Jinnah when they meet next month to talk over things will be meeting under that sense of urgency of an understanding which their countrymen expect of them. This gives some hope that a way may still be found to bridge the gap. Mr. Mr. Jinnah's bitter analysis of the 'C.R.' formula has come as a surprise for Mr. Jinnah's attitude so far gave one the impression of neutrality rather than active hostility towards it. But his reply to the Mahatma is conciliatory, judged by his standards, and betrays that anxiety to reach an agreement which is essential if the communal deadlock is to be solved.

* * * *

The Government has after all come out with belated admission that the food situation is "still serious" in several parts of the country despite a record rice harvest and a marked improvement in Bengal. Even in that province there are local shortages in certain eastern districts, particularly Chittagong,where rice prices are admitted to be abnormally high. New Delhi has for the first time taken up the matter of shipping in right earnest with the British Government. The Food Member's warning that New Delhi will in no way be responsible for a repetition of famine, if Britain does not spare the shipping needed to bring in a million and a half tons of foodgrains to this country is generally welcomed here though it is felt that such a warning coming earlier might have been more effective with the blimps in London. Amery as usual tried to minimise the dangers of the situation, repeating the stock tributes to Viceroy Wavell's decisive intervention and Governor Casey's "grappling with the problem." The question of shipping priority for sending food to India, he indicated, was still under consideration. Political circles here doubt very much whether Britain will allocate the necessary amount of shipping for India's food needs as estimated by the Foodgrains Policy Committee and endorsed by the Food Advisory Council. Only eighty thousand tons of foodgrains have been promised so far while another 70,000 will be required to meet the country's needs. Prof. Hill's report to the Commons on the alarming state of India's health has emphasised the urgency of the problem. The testimony of several responsible visitors to Bengal's eastern districts including Mrs. Pandit, points to the signs of an 'approaching famine' and unless drastic steps are taken last year's horror may be repeated, though on a less intensive scale. But Eastern Bengal happens to be only one of the several threatened areas—Cochin, Travancore, Hyderabad (Deccan) and Bombay experiencing various shortages. The Government's significant statement that the declared surpluses will not fully meet the requirements of the deficit areas is really shocking. Firstly the Government refused to focus attention on this vital issue and persisted in its complacent attitude till public agitation forced it to take the people into confidence. Secondly, the rather naive admission that the statistical surpluses do not correspond with the reality means that either the statistics were deliberately inflated to mislead the public into a false sense of security or that the procurement policy has utterly failed and hoarding by profiteers is as rampant as ever. In either case the Government policy stands self-condemned. In such a matter half-measures and slight improvements won't do. What is required is the most energetic and prompt action to avert the famine danger. Non-official circles here still wonder as to the stand the Indian members of the Executive Council take on the food issue and the form their protest will take if the British Government do not accord the first priority to India's food needs as regards allocation of shipping. It is even doubted if the Food Member will be prepared to resign on the issue. For his warning is taken as nothing more than a rhetorical flourish.

* * * *

The great emphasis put on long-term agricultural planning by Government spokesmen, both here and in London, while dealing with the present shortage is regretted here. It is stated that these long-term plans cannot remove the present danger. The chronic slowness with which the Government have executed their agricultural plans like small irrigation projects and manufacture of fertilisers does not give any hope for future energetic action. Moreover post-war planning is a separate issue dependent on other factors, mainly political, for which a solution is nowhere yet in sight. The present need is to build an adequate central food reserve and even a beginning has not been made yet. Emphasis on post-war planning means and confuses the present issue.

* * * *

Sir Ardeshir Dalal is assuming charge of the newly created portfolio of Planning and Development on August 4. Sir Ardeshir's portfolio will be divided into two main sections—one dealing with emergency plans to mobilise the country's resources for war needs and the other concerned with long term post-war plans. A number of such plans are ready now and it will be Sir Ardeshir's task to coordinate and correlate them. Such coordination has been lacking so far. Another big difficulty experienced in making plans has been the lack of adequate statistics and Sir Ardeshir is expected to set up the necessary machinery to remove this deficiency. As one of the authors of the Bombay plan, Sir Ardeshir's views on post-war planning are well-known though it is not yet clear how far his colleagues on the Executive Council agree with the broad objectives of that plan. The second (and from the people's viewpoint more vital) part of the Bombay plan dealing with distribution objectives, it is expected, will be out soon. Sir Ardeshir's task is a difficult one and as is generally recognised here it will be almost impossible for him or anybody else to achieve any substantial result unless there is a National Government at the centre.

* * * *

Sir G. S. Bajpai, Sir Gurunath Bewoor and Sir Frederick Tymms will be Indian representatives at the bilateral informal talks with the U.S. Government on post-war civil aviation plans. The Government of India has come out with a statement of the broad aims of its civil aviation policy. It endorses the principle of the 'right of each country to reserve internal air services and determine the agency for the operation of its internal and external air services' and also concedes the principle of the reservation of traffic originating and terminating in the territory of one country—India like the Domiions being regarded a separate country." The enunciation of these general principles is welcomed here but it is doubted whether the three official delegates will be able to put this country's case fairly and strongly. What is essential is that India's prospects of having a wholly Indian network of internal air services should not be reduced. A vital factor in this connection is the starting of aircraft manufacture in this country about which nothing seems to have been done so far. Without such an industry it will be difficult for India to have any external services of her own and compete with foreign countries having well established aviation industries.

An everyday scene four years ago

Oil and its by-products contributed in many ways towards this scene. Petrol and lubricants in the car, solvent oil and carbon for manufacturing the tyres, bitumen on the roads.

Economy is a wartime necessity. Oil must go in ever increasing quantities to the war machine of the United Nations. By practising the most rigid economy, each one of us plays a valuable part in defeating the enemy.

When the time comes, Burmah-Shell will again strive to make petroleum products of high quality readily available throughout the length and breadth of India.

INSERTED BY BURMAH-SHELL

Gateway of India

(From Our Correspondent)

Bombay, 1st August.

Cotton continues to hold the stage. It is still the focal point of discussion in the city. The Indian Central Cotton Committee has added its voice to the general chorus demanding a revision of the floor prices for the 1944-45 cotton season. The Committee pungently state in their resolution that "the solution to the food shortage problem lies along the avenue of planned production and not in reducing the income of growers of non-food crops to a bare subsistence." They urge rightly that there should be legislation for controlling the production of cotton on an all-India basis. It is imperative that any such legislation should be enforced in the Indian States also, since the latter can upset any apple-cart. It is not commonly recognised that the States have contributed in large part to the overwhelming surplus of short staple cotton. Such surplus at the end of the current season is put around 26 lakhs bales, which is nearly two seasons' requirements of Indian Mills. A sub-committee will consider the planned production of Indian cotton. The vigorous advocacy of Sir C. B. Mehta in favour of higher price limits for cotton was a feature of the discussions. Unfortunately neither his crusading zeal nor the earnest appeals of the E.I.C.A. have availed with the Government who are adament on the question of prices. Government are standing pat on the twin arguments—greater food production and anti-inflation. They are not in a mood to listen.

* * *

The Municipal Corporation has put the seal of its approval on the Greater Water Supply Scheme submitted by the expert engineers, whereby an additional 35 million gallons of water per day can be had. Experts have been asked to prepare estimates of the cost of the scheme on the basis of prewar prices, existing prices and post-war prices. The Corporation would then decide whether the scheme might be taken up now or later in the light of its financial position. Indeed, the Municipal Commissioner has urged that on a question like this cost should not be a criterion since the Corporation could always meet the expenditure by increasing taxation and other measures. The scheme will cost over Rs. 2 crores, but it should be easy to float a loan for so laudable a purpose. The credit of the Corporation stands high in the market. When the scheme is fully developed, an annual profit of Rs. 33 lakhs on the water supply side is likely. The scheme is thus both an investment, as the "Times" here points out aptly. The scheme bears the impress of Sir M. Visvesvarayya's fertile brain. It has been under consideration since 1929. Latterly, the increase of 28% in the population in the decade 1931-44 and particularly the wartime abnormal influx of people caused a gap of about ten million gallons per day between demand and supply. The Bhivpuri scheme is an attempt to fill up the gap and it aims at supplying an additional 35 million gallons per day.

* * *

At the lunch party given by him in honour of Sir Ardeshir Dalal at the Taj the other day, Sir Purushotamdas Thakurdas gave the lie direct to the pernicious intimations in the British Press of new trends in Indian politics. Sir Purushotamdas affirmed in the plainest terms that a political settlement and a national government are indispensable pre-requisites for putting through any effective plan of economic development. Nothing can be more sinister than the suggestions latterly emanating from Britain—of which there is an echo in the recent debate on India in Parliament—that Indian industrialists have their axes to grind and do not bother about a political settlement in India. Both Mr. J. R. D. Tata and Sir H. P. Modi have categorically repudiated this gross libel on our captains of industry. The economic development of India, particularly rural India, in which Britain has started to evince such a burning concern and which also finds its reflection in the sudden decision to start fertiliser plants all over the country despite the handicaps of war, is clever red herring drawn across the trial of the political problem. Fortunately, people are awake and cannot be hoodwinked by such palpable manoeuvres. The forthcoming Gandhi-Jinnah meeting is looked forward to with great expectations.

* * *

Something like a deadlock appears to exist in the Bullion market. There is a tussle between the longs and the shorts about the penalty rates payable by the latter for the non-delivery of the actuals and change-over of transactions. The bulls want the present rate of Re.1 per week to be increased if not withdrawn altogether, so that they can dictate their own terms. Last week, the board of the Bullion Exchange considered the question and appeared to have decided to carry on with the present rate. The proposal of the bull choksey was defeated by 8 votes to 4. The bulls, however, are not disposed to abide by the decision of the Board and seem to have given notice to the short sellers regarding delivery. Strictly speaking, the Board's decision is final or ought to be, and yet the bulls seem to contest it. One cannot say whether the issue will produce a law suit. Indications are that fear of expulsion might deter the bull from flouting the Board's decision. With regard to your comments in the Money section, silver sales seem to be farther off than ever. If they did not materialise last week when Ready touched Rs. 140, when will they?—Oh. when! But then, anti-inflationary arguments are all reserved to be hurled in the face of the Indian cotton grower and his supporters, as we know only too well by now. What is sauce for the bullion goose is not sauce for the cotton gander.

Airway Port

(From Our Correspondent)

Karachi, July 28.

Short but remarkable was the session of the Sind Legislative Assembly which concluded this week. The outstanding features of the session were the survival of the Ghulam Hussain cabinet from apparent attacks on all sides, glaring lack of collective ministerial responsibility and the passing of one of the most controversial bills at break-neck speed. Earlier in the month, the working committee of the Sind Provincial Muslim League passed a resolution demanding the resignation of the ministry as it had failed to do anything constructive for the Muslim masses, during the 21 months it was in office. Its price control policy and creation of food syndicates were main targets of attack, and the misdeeds of certain ministers also came in for censure. But Mr. Jinnah pulled Sir Ghulam Hussain's chestnuts out of the fire by directing the president of the provincial council not to implement the resolution, particularly at a time when League ministries were tottering in other provinces and Rajaji's formula with the blessing of Gandhiji had put a new premium on the power and prestige of the Muslim League. The two no-confidence resolutions against the ministry were not ultimately moved and the ministry was saved. With the Congress Party members, either behind prison bars or under restraint orders, it was all a cake-walk for the ministerialists, but the day of reckoning has only been postponed.

There was a stormy debate over the Land Alienation Bill which was passed in the face of universal Hindu opposition culminating in the decision of the two Hindu ministers themselves voting against the bill. The main objection of the Hindus was in regard to the definition of agriculturists; those zamindars who did not derive the major part of their income from agriculture were to be excluded from being termed as agriculturists and under this clause came majority of Hindu zamindars and jagirdars. The League ministers stuck to their guns and refused to delete this clause, but the Premier, it appears, permitted the two Hindu ministers to vote as they liked. But the two adverse votes of the Hindu ministerialists brought no relief to Hindu minority. It is deplored in Opposition circles that the two Hindu ministers did not carry their decision to vote against the bill to the logical conclusion of resigning in protest of passing a bill which did not carry the approval of the minority community represented on the cabinet. Any alternative ministry would have been forced to meet the Hindu objection at least half-way if it desired the co-operation of the Hindus in the administration of the province. It is, however, held problematical whether the Governor would assent to the bill in view of the pronounced Hindu opposition.

Two occasions during this session brought into high relief the lack of homogeneity in the ministerial team. Apart from voting against the Government in the division on the Land Alienation Bill, the Hindu ministers showed their differences in regard to another official bill. Rai Sahib Gokuldas, Minister for Local Self-Government, refused to move the bill for re-allocation of seats in the corporation of Karachi as the question of giving weightages to the minority communities like Parsis and the Christians was still receiving the consideration of his colleagues and they had evidently taken no decision because presumably it had to be decided on an all-India basis. Further objections had been invited on the draft proposals of the Government for re-allocation of seats and representations had been made to the Premier by these interests. This dramatic *volte face* at the eleventh hour is clearly traceable to the growing divergence in the Ghulam Hussain cabinet.

During the session, the price control policy and the working of two food syndicates came in for lot of criticism, and serious charges were laid against the ministry that these were robbing the cultivator and consumer alike of their legitimate share. Allegations of bribery were also made and a demand was made that a thorough enquiry should be made if the ministers implicated in the allegations were to save their prestige and also the purity and integrity of the administration. Sir Ghulam Hussain, Premier, gave an assurance that syndicates would ere long be abolished.

What is the alternative? Commercial circles urge that a system of free trading should be introduced and license-holders should be asked to trade within the limits of the province and at controlled rates. As for export, it is suggested, that Government should fix quotas commensurate with the supply available, and do the trade either through agents or by issue of license to export traders.

Resume of Commodity Markets

Nothing of importance has taken place in the commodity markets during the past week. The raw jute market has remained steady while in the jute manufactures market business is difficult on account of the reserve of mills. The raw cotton market has been rather weak. The cessation of government buying and the refusal of the authorities to revise the minimum prices have been mainly responsible for the drop in prices. The bullion market has been uninteresting though gold prices are higher with some investment buying.

The raw jute market has remained quietly steady in spite of the fact that mills have not taken any interest in the market. In view of the uncertainty regarding the immediate outlook there is no inclination to effect fresh purchases of jute. The requisitioning of many units has made it very difficult for the foster mills to keep up the rate of production. The rationing of coal supplies and the need for maximum utilisation of available coal, on the other hand, have increased the difficulties of the steam driven units. It is reported that the various questions are being considered and some scheme would be evolved by which the inefficient members of the industry will not be unduly penalised. With the optimistic statements made by the Supply Member regarding the possibility of a satisfactory increase in coal production from the beginning of the new year it is hoped that the difficulties of mills would be temporary and it would be possible to step up production to a great extent in the later half of the season. There would appear, therefore, to be some justification for the liberal view taken by sellers regarding the ultimate outlook.

With a view to improving the conditions of jute growers the Government of Bengal have set up a new organisation for securing for them the highest prices for jute in parity with the maximum prices fixed by the recent Jute (Price Control) Order, 1944. The functions of the new department will be to disseminate prevailing jute prices among cultivators, supervise jute grading parties and set up warehouses in important jute-growing centres.

The raw cotton market has been apathetic. The East India Cotton Association has not approved of the policy of the Government. The Sub-Committee of the Textile Control Board also has pointed out that the floors for certain varieties are unduly low . The Government is, however, maintaining that in furtherance of the 'grow more food campaign' the ryot has to be discouraged from growing cotton.

At a meeting of the Cotton Committee of the Textile Control Board held on 24th July, the Textile Commissioner gave the following explanation as to how Government's plans for cotton during the 1943-44 season dovetail into those for 1944-45.

(i) As the 1943-44 Plan applies to cotton of that season, it will operate up to and including the date of maturity of the Indian Cotton Contract September delivery i.e. 25th September, 1944.

(ii) Thereafter, the 1944-45 Plan will operate for next season's crop only.

(iii) Once the 1944-45 Plan operates, no cotton of the 1943-44 season will be bought or requisitioned.

(iv) In Karachi, there is no 1943-44 futures contract after July. It would, however, be unfair to cease buying in Karachi while buying was continued in Bombay. Therefore, so long as buying is continued in Bombay under the main buying assurances purchases will continue to be made in Karachi as now. Should buying in Bombay cease, it will, of course, cease in Karachi also. In the event however, of buying being undertaken within the discretionary range in Bombay, Karachi's claims for discretionary purchases will not be ignored. Thereafter, should the main plan again come into operation, buying in Karachi will be renewed as now.

The Textile Commissioner also announced that stocks of cotton acquired under Government's undertakings to buy will be sold only in relation to the interest of the growers and the condition of markets. It is the intention of Government to treat with respect the views of the Cotton Committee in this regard and there is no desire on the part of Government but they reserve to themselves the right to sell such cotton if it is considered in the general interests to do so.

The stalemate in the silver market continues. In the absence of any official sales of silver bulls are in a position to dictate terms to those who have an oversold position. Prices have therefore been fully maintained. Gold prices would have been lower with the reports regarding early peace but the policy of the Reserve Bank in respect of gold sales has been baffling the market. That investment demand should persist even when it is clear that in the post-war period prices will be lower is perhaps an indication that the buyers are those who have large hidden sums of money.

The survey of the sugar position of all producing areas in India for the week ended July 7, 1944 shows that total production at 1,219,650 tons was 271 tons higher than the figures for the preceding week. Despatches during the week amounted to 20,216 tons making a progressive total of 583,592 tons compared to 20,412 tons and 563,376 tons respectively. The physical stock is thus lower at 615,842 tons. The percentage of progressive despatches to total production is shown at 49.9 per cent. against 47.9 per cent

A proposal to set up a Central Oilseeds Committee and the ways and means of financing will be considered at a meeting of the Oilseeds Committee of the Imperial Council of Agricultural Reaserch to be held in Bombay. The meeting will also discuss the question of export of oilseeds with special reference to groundnuts and the intensification of oilseeds crushing in the country

Jute and Jute Manufactures

(By Our Correspondent)

Calcutta, August, 3.

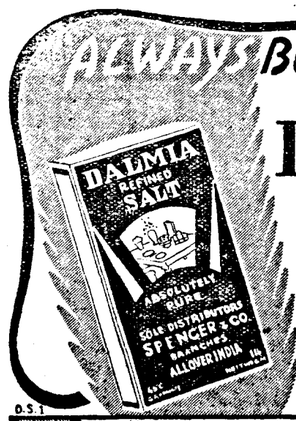
It is understood that the discussions on the subject of "subsidising" enforcedly idle mills, whether by reason of requisitioning or on account of coal supplies being lacking, have proceeded a stage further, and while no final agreement has yet been reached, the proposals put forward by the I.J.M.A. to meet the extraordinary situation have been generally favourably received. It must be borne in mind that, in spite of the considerable requisitioning of Jute mill premises by the military authorities, it is still the desire of Government that production of jute goods should be maintained at as high a level as possible, something in the region of 100,000 tons per month being the target aimed at. It must also be kept in view that, failing successful efforts on the part of the Industry itself to attain this end, it is quite on the cards that Government might step in and "rationalise" the industry on lines of its own conceiving—lines which might well be unpalatable to the industry. The problem to be solved, in its simplest terms, is how to get the maximum production of goods with the limited amount of coal available. As present prospects hold out little hope of coal supplies being sufficient to keep all the looms working for more than about 36 hours per week, it is obvious that the answer is to concentrate production as far as possible in the most economical units. If the Industry can effect this by arrangements acceptable to its members generally, then Government intervention can be avoided, which is of course a consummation devoutly to be wished. Therefore some form of domestic rationalisation is inevitable in the circumstances, but can be attained by the exercise of reasonable goodwill and accommodation on the part of member units of the Industry.

In these columns last week were roughly sketched certain lines on which the desired ends might be accomplished and it is believed that the proposals being considered by the I.J.M.A. do not differ very widely from these. It is proposed that a Central Pool should be formed into which should be paid all the monies received from Government as compensation for requisitioned premises. As is known, these payments are not on by any means a generous scale and will not go far to compensate the owners for loss of potential profits. Into this pool also it is proposed that all mills which continue working, whether continuously or only intermittently, shall pay a small cess for every loom hour worked. The combined total of these contributions should, it is estimated, produce sufficient funds to provide reasonable compensation for units either requisitioned or enforcedly idle owing to coal shortage. That is one part of the scheme. The other part is mainly calculated to maintain production at as high a level as possible in the most economical way. As things stand at present, mills which are enforcedly idle can accumulate the loom hours which they lose, to be worked off at such future time as circumstances permit, by working longer hours than the standard 54. If the present coal shortage is prolonged, and it would be rash to gamble on any early improvement, the accumulation of such credit balance of loom hours might become so unwieldy that the catching-up process might extend over years, and might react to the detriment of the industry as a whole. It is therefore undesirable that this accumulation should be allowed to reach unreasonable proportions. To this end, mills with loom hours to spare would be encouraged to lease out these loom hours to such units as could utilise them by increasing their present working hours. It has been estimated, and has in fact been found in practice, that the value of a loom hour is somewhere between nine and twelve annas. Worked on a large scale the [illegible] would perhaps not be quite so high. In any case it is likely that an arbitrary figure will be fixed to start with—perhaps eight annas —which would of course be amenable to adjustment in the light of experience. In this manner mills which cannot rely on continuous working could arrange every month to lease out so many of their loom hours as they could not expect to utilise, securing for themselves an income while they were idle, and at the same time helping vicariously to maintain production.

The Export Jute market has been featureless during the past week. Price levels on the other side are much lower than those asked by balers here, and until a closer parity is attained, business on any appreciable scale is unlikely. Local Mills have bought to a small extent Firsts at Rs. 83 and lightnings at Rs. 79 and there is a fairly constant demand for anything offering in Cuttings.

Slightly more activity has been recorded in the Loose Jute market. European packing has been reported in Jat jute at maximum rates again, Rs. 17 for Middles and Rs. 14 for Bottoms, and business was also reported at four annas less for combined Jat and District. Supervised and Bengali Jat marks sold at Rs. 16-8 and Rs. 13-8 for Mids and Bots and Indian Bottoms alone were reported at Rs. 13-11. Indian District Tossa was taken to a small extent at Rs. 16-4 and Rs. 13-4 for Mids and Bots.

Mofussil markets continue firm with imports insufficient as yet to meet the demand, and most of the imports coming in wet. It is regrettable that while Government are exhorting cultivators not to part with their jute at less than the equivalent of Calcutta maximum rates, and are disseminating prices in the mofussil in support of this propaganda, no warning is included that it is immoral, if not as yet unlawful, to adulterate their jute with water. River levels are tending to rise again which it is hoped will encourage further cutting and presently heavier imports. Crop conditions are generally satisfactory, and the quality of imports good, except for the moisture.



Little business appears on the surface of the Fabrics market, but there is steady buying by official agencies of almost anything mills care to sell up to March next year. In Hessians it is the U.S.A. agency which is buying and in Heavy Goods, mainly Liverpool Twills, it is the U. K. agency on behalf of South Africa. Prices continue in all cases at maximum levels.

JUTE

(By Our Staff Correspondent).

Calcutta, August 3.

The raw jute market has been rather quiet in the past week with a smaller amount of business passing. Rates, however, have been fully maintained. The absence of any large imports into mofussil centres and the delay in harvesting have been mainly responsible for the reserve of sellers. Developments in the industry, however, have not been encouraging for the jute dealer as with the decline in coal arrivals nearly all the steam-driven units are idle and it is feared that in the next three or four months production will be adversely affected. While it may be possible to ensure that the total available supplies will be consumed with intensified working in the later months of the season, large arrivals in the busy season might result in a seasonal decline in prices if mill buying is not adequate. Developments in the next few weeks will, therefore, be very interesting. Meanwhile, the Government of Bengal have given a warning to the ryots that they should not be in any great hurry to dispose of their holdings rather cheaply as there is every possibility that the whole of their jute would be taken at favourable prices.

In the loose jute section rates have remained at last levels, European Middles and Bottoms being sold at Rs. 16-12 and Rs. 13-12 per maund with Indian Supervised 4 annas lower. Business passing has been confined to immediate requirements and mills are not anxious to lay in further stocks. Indian District Middles and Bottoms were Rs. 16-4 and Rs. 13-4 per md. respectively.

In the pucca bales section export business has been rather small and shippers are inclined to await a decline in prices, their demand being satisfied for the time being. Only a small business was reported in Dundee Daisee 2/3 at Rs. 78 per bale and Short Group Daisee at Rs. 86 per bale. Mills are reported to have purchased new crop Firsts at Rs. 83 and Lightnings at Rs. 79 per bale. Balers are rather keen to accept business and are prepared to offer a slight decline in rates. There are sellers especially for Firsts as a good amount of business has been already reported in Lightnings and Hearts. Imports have been coming in on a large scale in the mofussil districts. Most of the jute, however, is wet and the quality poor.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, August 3.

In the jute manufactures market mills have been very reserved and quotations are nominally at maximum rates. Forward business during the week ended Saturday July 22 was rather on a small scale, the quantity of hessian, sold for forward positions being only 2.37 crore yards. Business in Twills and Plains was only 52.42 lakhs yards and 61.9 lakhs yards respectively. During the past few days business concluded has been still smaller. There is a tendency on the part of mills to await further developments. Discussions are going on for a more equitable distribution of available coal supplies at the same time maintaining the output of jute goods at as high a level as possible.

In the heavy goods section only a very small amount of business has been reported in standard varieties. Mills are not prepared to accept further orders.

COTTON

(From Our Correspondent)

Bombay, August 3.

The stalemate in the cotton market continues. Mill support is very poor and official buying has stopped. September is quoting Rs. 410. No decision regarding new crop trading is expected to be reached before the publication of the figures as to the actual area under the cotton crop.

BULLION

(From Our Correspondent)

Bombay, August 3.

The deadlock in the silver market continues. Bulls are insisting on delivery from bears whose lot is unenviable since supplies are poor. The Board has tentatively suggested that the present mode of *budli* business should be persisted for another ten weeks but bulls have issued notice of delivery to bears who have rejected the suggestions. On Monday, the market closed at Rs. 137-8 for settlement. The Board is meeting to-day. The climax is expected to be reached on Monday next, the last day for current settlement. Local stocks are estimated at 400 bars with an offtake of 40 bars daily.

The gold market is firm with enquiry at 35,000 totals daily. The Reserve Bank's sales policy is puzzling. On Monday when the bazar applied to the Reserve Bank sales were first made at Rs. 75-4. Then the rate was suddenly raised to Rs. 75-6 and thereafter progressively to Rs. 76-2, scaring dealers. Bears covered hastily and a large business was done. Two lakhs tolas were sold on Monday alone. Tenders have been resumed in the last three days at Rs. 75-6, Rs. 75-8, Rs. 75-4 and over. Total sales were about 3 and half lakhs tolas. Further purchases can be made on Monday next only. Local stocks are estimated at two lakhs tolas.

PIECEGOODS

(From Our Correspondent)

Calcutta, August 3.

The piecegoods market has remained quietly steady with a larger amount of business passing at ceiling prices. The efforts of the Provincial Textile Commissioner to eliminate black market trading are bearing fruit. In order to check effectively trading in the black market, it has been proposed that all consignments of piecegoods arriving at the railway stations should be cleared only after they have been duly notified to the Provincial control authorities. By this means it is felt that dealers could be held responsible individually for the proper disposal of their goods.

IT IS EASY not to travel

If you want to AVOID the discomfort and inconvenience of wartime travel, you can always think of an excuse.
If it's a marriage you should attend, you can send the rail fare as a practical present, but stay at home yourself.
If it's business, you can conduct it just as well by correspondence.
If it's a religious festival you can send an offering by money order.
If it's a holiday, no excuse is required.
Who wants to spend hard-earned leave, crushed into a railway compartment spending twice as much money as ever before on tongas, gharis and other incidentals? Spend your leave near home—get a real rest, and the maximum benefit from those precious days.
But if you want an over-riding excuse, it is that the Railways are **busy**. They have to feed all the people of India, and assure the supplies of other necessities of life. So great is their task that passenger travel **must** be reduced.

Travel Less.

Investor's Supplement

Vol. XXXIV. No. 5 . SATURDAY, AUGUST 5, 1944 Price Re. 1

Stock Markets to-day and to-morrow:

PEACE PROSPECTS & STOCK MARKETS

THE confident statements by Messrs. Churchill and Eden that there would be an early end of the European war and the cessation of all relations by Turkey with Germany have induced a definitely quieter feeling in the stock markets. With the dramatic developments in the war situation there was naturally heavy realisation on Thursday, operators being unwilling to carry over large commentments over the long week-end. Markets are closed on Friday on account of a Hindu festival.

It is significant, however. to note that there has been no appreciable decline in prices even with Turkey's decision to cut off diplomatic and economic relations with Germany. It is generally agreed that there is prospect of peace at an early date but opinion is divided regarding the effect on market values of the signing of peace. Business has tended to diminish at the lower levels and the bigger investors seem to be in no great hurry to dispose of their holdings. There are no alternative means of investment. There is such a large volume of surplus funds seeking investment that unless there is a boom in new capital issues and there is increased scope for spending, which too might not be of any great advantage to the wealthier section of the people, there does not seem to be any chance of an appreciable decline in share values. As has been pointed on earlier occasions, the decline in prices will only be gradual and spread over a long period.

It would, therefore, be advisable for the small investor to cash his profits and wait for further developments.

* * *

Under the present circumstances, Jute shares should have come in for greater attention. But the difficulties in regard to supplies of coal and the problems arising out of requisitioning have obscured the outlook for the jute industry. The sub-committee of the Indian Jute Mills Association is considering the question of compensation payable to requisitioned units and the proper utilisation of loom hours and the available supplies coal. It is expected that a scheme would be evolved by which members of the industry would not be badly affected. It is a pity that the jute industry should be facing so many difficulties at a time when the shipping position is easier and there is a large unsatisfied demand for jute goods. If it could be assured that there would be no further requisitioning, the moment there are reports about a good improvement in coal raisings jute shares are worth purchasing.

* * * *

A bigger crop has not been enabled the *Patrakola Company Limited* to report a higher level of earnings in the year ended December, 1943. But the smaller provision for taxation has prevented a big reduction in the dividend. The lower level of earnings for the year was due to the big increase in working expenses. The net profit, before providing for taxation and depreciation, is Rs. 16,80,086 against Rs. 20,48,372. The provision for taxation is lower at Rs. 5 lakhs (Rs. 7 lakhs) while the allocation to funds is Rs. 1.5 lakhs (Rs. 2 lakhs). The final dividend of 70 per cent, makes with the interim dividends of 20 per cent already paid, 90 per cent for the whole year against 95 per cent for 1943. The amount carried forward is lower at Rs. 5,89,592 against Rs. 7,11,507 brought in.

* * * *

Raneegunge Coal Association Limited has done very well in the half-year ended March, 1944. The earnings would have made better showing but for the loss of Rs. 1,35,500 on supplies of foodstuffs to labour. The larger earnings and the higher prices paid by the *Tata Iron & Steel Co., Ltd.* have been mainly responsible for the better showing of accounts. The net profit, before providing for taxation and depreciation, is Rs. 3,35,574 against a loss of Rs. 1,95,481 for the previous six months. The loss on account of supplies of foodstuffs to labour in the half-year ended September, 1943 was Rs. 1,18,400. The provision for depreciation is Rs. 1,17,397 (Rs. 79,578). A dividend of 5 percent is to be paid after the lapse of three half-years. The earnings for the latest accounting period includes Rs. 47,062 being the award by the Tribunal of Arbitration, Bengal Chamber of Commerce, for coal sales to the Tata Iron & Steel Company Limited for 1942-43 and Rs. 1,17,007 being the difference in the rate for the half-year ending September 30, 1943 recovered from Tatas.

With the possibility of an increase in raisings and a smaller loss on food supplies to labour, it can be expected that the earnings for the current half-year will make even better showing. The next dividend can thus be very much more.

During the half-year 292 bighas of coal land comprising part of Alkusa and Kika Mouzahs was sold and the sale proceeds have been credited to the Capital account. As a result the net block is lower at Rs. 14,81,371 against Rs. 20,88,583. With the large increase in earnings and the sale of coal lands the balance-sheet position is stronger than ever. Net liquid assets are as much as Rs. 14,75,049 against sundry liabilities of only Rs. 1,41,129. As on September 30, 1943 liquid assets were Rs. 7,76,078 against sundry liabilities of Rs. 2,65,548.

* * * *

As it is expected that the publication of the accounts of *Midnapore Zemindary Company Limited* will be delayed owing to the difficulty in ascertaining the liability (if any) under the proposed Bengal Agricultural Income-tax Bill the Directors have decided to pay an interim dividend of Rs. 4 per share. The announcement has not been well received by the market as it was expected that the distribution for the year ended April, 1944 would be as much as 12 percent. With the payment of an interim dividend of Rs. 4 per share, under the circumstances stated above, it cannot be expected that the total distribution for the year will be very much more than 8 percent.

* * * * *

The increase in costs of production and the frequent interruptions to working have resulted in a decline in the earnings of the *Agarpara Company Limited* for the half-year ended March, 1944. The net profit, before providing for taxation and depreciation, for the half-year is Rs. 11,00,058 against Rs. 17,22,869 for the previous six months. The amount set aside to depreciation is Rs. 1,06,086 against Rs. 1,09,625. The provision for taxation is lower at Rs. 8 lakhs (Rs. 12.5 lakhs) but nothing is transferred to General Reserve against Rs. 2 lakhs formerly. The dividend on the ordinary shares has been maintained at 5 per cent.

* * * *

Bararee Coke Company Limited has done very well in the half-year ended March, 1944. The net profit before providing for taxation and depreciation is Rs. 3,53,685 against Rs. 3,01,753 for the previous six months. No provision has been made for depreciation against Rs. 17,000. The provision for taxation is considerably higher at Rs. 2,38,300 (Rs. 1,78,000). The sum reserved for E.P.T. deposit is Rs. 42,000 (nil). The dividend has been maintained at 7 percent. The amount carried forward is lower at Rs. 18,430 against Rs. 29,045 brought in.

WATCH-DOG.

IMPERIAL BANK OF INDIA

Owing to the necessity for the strictest economy in the use of paper, the proceedings at the Annual General Meeting of Shareholders to be held on the 24th August, 1944 will not be published and issued to Shareholders.

PROSPECTS FOR CHEMICAL SHARES

(By Analyst)

Bombay, August 4.

Now that Turkey has broken off diplomatic relations with Germany it would not be surprising if Turkey joins the Allies as an active partner, in which case the European war is likely to be over very soon. Dalal Street was quiet with Tata Deferreds around Rs. 2.230.

In the Textile section, *Bombay Dyeing* were steady around Rs. 1.860. *Azamjahi* were quiet around Rs. 530. As for popular shares, there was very little change in the quotations.

B.I.C. were the centre of attraction this week due to sudden buying from Calcutta and were pushed up to Rs. 7-3. I think holders are getting a good opportunity to book their profits. I do not expect a dividend of more than 4 annas per share. Of course, the company's financial position may permit of a bonus issue but rumours of a bonus issue have been in the market every year at the time of dividend declaration and after the publication of the balance-sheet. *B. I. C.* usually have declined by more than a rupee per share.

In the Miscellaneous section. *Bombay Steam Navigation* closed quiet at Rs. 615. *Scindia* are weak at Rs. 34-15. *Brunton* in Madras were done at Rs. 15. *Alcock* remained unchanged at Rs. 487-8.

In the Sugar section, *Belapur* were steadier at Rs. 249 probably due to the strength of Calcutta Sugar shares which continued to attract attention this week also. *Raza* were done up to Rs. 48 but closed at Rs. 47, *Cawnpore* were steady around Rs. 45-12, *Champarun* were on enquiry at Rs. 47-12. I recommend purchases of *Buland* and *Raza* for income as well as capital appreciation in the long run.

Due probably to heavy profit-taking, Jutes were quietly steady with *Howrah* around Rs. 84. *Reliance*, however, improved from Rs. 65 to Rs. 69. As mentioned earlier, I would rather wait for a reaction before making commitments in Jute shares.

In the Madras textile group, *Rajalakshmi* should be able to maintain a dividend of at least Rs. 20 as against Rs. 30 per share paid last year. They are good for investment.

In the Chemical section, *Tata Chemical* were neglected at Rs. 27-12. *Mettur Chemicals* ordy. were sticky around Rs. 22 and deferreds. Rs. 10-2. It is reported that *Mettur Chemicals* is issuing 4½ per cent debentures to the tune of Rs. 16 lakhs. I would, therefore, suggest liquidation of Mettur Chemicals Deferreds. As against this year's dividend of 11 annas per deferred share I would not be surprised if there is a drastic cut in the dividend to be paid next year. The deferred shares, which are Re. 1 paid-up, quoting at Rs. 10-2 look overvalued. *Mettur Chemical* ordys., however, may be bought below Rs. 20 as long-term investment since I feel that *Mettur Chemicals* will be able to maintain a dividend of 10 per cent tax-free for some time to come. *Mysore Chemical Fertilisers* are rather quiet at Rs. 35-8. Since there are fears that Imperial Chemicals are likely to float a fertiliser company with the help of the Government there might be a sentimental decline in Mysore Chemicals & Fertilisers to about Rs. 30. If there should be such a reaction I would favour investment purchases. *Mysore Chemical Manufacturers* are quiet around Rs. 44-8. I have already mentioned that this scrip looks overvalued and would suggest booking profits.

It is mentioned in the "Planters Chronicle" of August that Russia has received more than 35,000,000 lbs. of tea from India and Ceylon up till now. Before the last war, Russia was a great tea drinking country and imported 140 million lbs. of tea annually. It is felt that there is greater opportunity after the war for developing the Russian market.

In the Paper section, *Titaghur Paper* were done upto Rs. 28-8 and *Mysore Paper* Rs. 31-12. *Orient* changed hands at Rs. 32-4 and *Star Paper* at Rs. 21. I prefer selling out all paper shares and wait for an opportunity to buy Mysore Paper in a weak market.

Among Banks in the Bombay market, profit-taking in *United Commercial Bank* continued. At the same time, on investment enquiry, *Jaipurs* were done up to Rs. 75 and closed at Rs. 74. *Central Bank* are fully valued at the current price of Rs. 82.

In the Insurance group, *New India* were done at Rs. 82-12 and *Jupiter* at Rs. 33-8. In Madras, *United India Fire* changed hands at Rs. 10-6 and *Prithvi Insurance* at Rs. 12-8. Both these shares deserve the attention of investors.

In the Rubber group, *Coorg* had a spectacular rise to Rs. 73 cum-dividend Rs. 4 (buyers). Since I hear that the company is likely to repay Rs. 50 cash along with a Portland ordy. share as free bonus and still continue to function I look for Rs. 20 rise in this share.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 4.

Rather steady conditions were noticeable on the Calcutta stock exchange in the earlier days of the period under review, but in the last two days definitely easier conditions have prevailed and the close has been very quiet. The breaking off of diplomatic and economic relations by Turkey with Germany and the persistent reports that there would be an early termination of hostilities have been mainly responsible for the easier tone of the markets .There has been no heavy selling however, as shares are held in strong hands. In the absence of any fresh buying, there is a tendency on the part of both investors and operators to await further developments.

Business has been rather restricted in the Giltedged securities section and 3½ per cent Paper has been quoting for most part of the week at Rs. 99-11. Among terminable loans 3 per cent Defence Loan 1949-52 were done at Rs. 101-8, 3 per cent 1966-68 Rs. 98-6, 3 percent 1963-65 Rs. 99-2, 5 percent 1945-55 were for a time higher at Rs. 105-4 but the close is easier at Rs. 104-11. Among Provincial Loans 3 percent Bombay 1955 changed hands at Rs. 100-1. Easy conditions continue to prevail in the money market though the Central Government has not been able to get a reduction in the average discount on treasury bills which has remained unchanged at 7 annas 9 pies percent per annum.

Among Bank shares *Imperial Bank* fully paids were done at Rs. 1,975 and *Contributories* Rs. 495. *Bharat Bank* were quiet at Rs. 115 while *Hind Bank* were in request at Rs. 63. *United Commercial Bank* fluctuated at Rs. 41-8 premium. It is reported that this Bank will be shortly issuing fresh capital for Rs. 1 crore in one lakh ordinary shares of Rs. 100 each to the shareholders in the proportion of one share to every share held at par.

There was a sharp improvement in prices in cotton shares earlier in the week. *Cawnpore Textiles* being done up to Rs. 15-2 and *Elgins* Rs. 76-8 but in sympathy with the other sections the close is easier at Rs. 14-2 and Rs. 74-4 respectively. *Kesorams* were steady at Rs. 19-12 and *New Victoria* at Rs. 9-3. *Benares* were crossed at Rs. 15.

Coal shares continued in request with *Amalgamated* being done at Rs. 52. *Burrakur* at Rs. 47-4 and *Bengal* at Rs. 690. The closing quotations however are lower in all cases, *Amalgamated* being Rs. 51-4, *Bengal* Rs. 679, *Bokaro & Ramgur* Rs. 41-8, *Burrakur* Rs. 45-12, *Equitable* Rs. 67-11 and *New Beerbhoom* Rs. 41. *North Damuda* have been sticky at Rs. 12, *Rewa* were marked higher at Rs. 46-4 from Rs. 44-14 but the close is easier at Rs. 45-4. *South Karanpura* were Rs. 24-9 after being higher at Rs. 26-1.

Business in jute shares has been rather restricted. While it is generally accepted that postwar prospects for the jute industry are encouraging in view of the present difficulties experienced by steam-driven units, there is a tendency to await further developments. The absence of any large fresh buying however has not resulted in any appreciable decline in prices. *Howrah* were done up to Rs. 86-2 earlier in the week but the close is quieter at Rs. 84-2. *Clive* suddenly improved from Rs. 47-8 to Rs. 52 but closed at Rs. 50-8. *India* were steady at Rs. 717 and *Kanknarrah* Rs. 565. *Megna* were four points lower at Rs. 116-8 while *National* were steady at Rs. 35-14 and *Nellimarla* Rs. 34. *Presi-*

THE RUTEMA TEA COMPANY, LIMITED—SYLHET.

Div. % Ord.	Nil	Nil	Nil
Div. % Pref.	Nil	Nil	Nil

"The disappointing results for the year are due to the considerably smaller crop harvested and the heavy loss incurred in issuing foodstuffs to the labour force at concession rates.

Notice of redemption was given to the debenture holders in Sept., 1943 and all the debentures outstanding at 31-12-43 were redeemed on 31-3-44 except 137 debentures standing in the names of two deceased holders. In view of the Company's cash position as a result of the redemption of debentures and disappointing results for the year no payment has been recommended for the existing arrears of preference dividends, but the position will be examined in December, when full consideration will be given to liquidating a portion of the arrears after estimating the results of the current year's working.

The estimate for 1944 provides for a crop of 6,500 maunds at a cost of Rs. 2,81,286 excluding Calcutta expenditure.

Authorised Capital—Rs. 6,20,000. *Issued—Rs.* 3,73,315. *Subscribed—Rs.* 3,63,790 *in* 39,930, 7 *per cent. Cum. Pref. shares of Rs.* 3 *each and* 46,897 *Ord. shares of Rs.* 5 *each, both fully paid up, plus amount paid on forfeited shares, Rs.* 9521.

Synopsis of Balance Sheet as at 31-12-1943.

Liabilities.	Rs.	*Assets.*	Rs.

Carry F'd	45,467	Investm't	500
		Cash	69,375
Total	9,17,864	Toal	9,17,864
		Liq. Assets	2,50,166

*Redeemable not later than 31-12-47.

dency were 6 anas lower at Rs. 11-6, *Nuddea* were unchanged at Rs. 130.

In the Engineering section *Indian Iron* and *Steel Corpn.* have been fluctuating in rather wide limits around Rs. 42 and Rs. 36-8 respectively on heavy profit-taking. There is, however, good resistance to selling pressure at the lower levels. *Indian Iron* after being done up to Rs. 42-4 closed at Rs. 40-10 and *Steel Corpn.* at Rs. 35-12 after being higher at Rs. 37-10. *Arthur Butler* were Rs. 22-4, *Burn & Co.*, Rs. 424 and *Kumardhubi* Rs. 11-4, *Jessops* were easier at Rs. 25-6. *Steel Products* Rs. 9-4 and *Textile Machinery Corporation* Rs. 25-4.

In the Sugar section there has been good buying of *Buland & Raza* and quotations improved to Rs. 43-4 and Rs. 47-4 respectively *Balrampore* were quieter at Rs. 21-4, *Belsund* at Rs. 17-14, *Carew & Co.*, Rs. 31-6, *Cawnpore* Rs .45-10 while *Champaran* were enquired for at Rs. 47-8. *Darbhanga Sugar* were Rs. 35-10 and *Murree Brewery* Rs. 37-4.

In the Tea section rates have been fully maintained. *Bishnauth* were Rs. 41-14, *Patrakola* Rs. 1,128. and *Tezpore* Rs. 21-4.

Among Miscellaneous shares *Aluminium Corporation* were steady at Rs. 23-4 while *B. I. C.* improved to Rs. 7-12 and *Calcutta Ice* to Rs. 27-8. *Calcutta Trams* were quiet at Rs. 44-12 as also *Rohtas Industries* at Rs. 40-15. *Indian Cable* were steady at Rs. 32-14. On the announcement of an interim dividend of Rs. 4 per share, *Midnapore Zemindary* have receded to Rs. 189 as market expectations were higher. *India General Navigation* were Rs. 172, *Bararee Coke* Rs. 35-8 and *Dehri Oil Refinery* Rs. 12-12. Among paper shares *India Paper Pulp* came down to Rs. 229, *Titaghur A & B* were Rs. 28 ex-dividend. *Alkali & Chemical* were quiet at Rs. 36-12. *Burma Corporation* were Rs. 4-8 and *Indian Copper* Rs. 3-6.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Interbank call money has ruled easy, the nominal rate being ½ per cent in Calcutta and ¼ per cent in Bombay. There was heavy bidding at this week's treasury bill auction and this has been construed by the authorities as a consideration to increase the weekly offer from Rs. 4 crores to Rs. 6 crores. Against Rs. 4 crores offered, applications came to Rs. 14.91 crores. The average rate of accepted tenders shows a decline of 2 pies to annas 7 pies 7 per cent per annum.

The return of the Reserve Bank in the issue department records an increase in active note circulation by Rs. 5.90 crores to Rs. 927.87 crores. There is more or less a corresponding fall in the notes held in the banking department, which stand at Rs. 16.95 crores as compared with Rs. 23.02 crores on July 28. The statement of the banking department discloses another new high for Central Government's deposits. These deposits have risen by Rs. 12.05 crores to Rs. 14.13 crores. This increase is accounted for by the addition of Rs. 19.35 crores to foreign balances which now stand at Rs. 224.89 crores. The increase in Central Government's balances would have been greater but for the usual month-early disbursements made during the week. Such disbursements account for a decline of Rs. 4.31 crores in Provincial Governments' deposits which now stand at Rs. 15.03 crores. There is a sharp jump in miscellaneous deposits which have risen from Rs. 5.60 crores to Rs. 12.82 crores.

The returns of the Reserve Bank for the week ended next Friday should reveal interesting transactions. Provincial Governments will be receiving Rs. 13 crores through subscriptions to the 3 per cent 1958 loan, the list for which opens and closes on August 15. Soon after the formalities connected with the subscriptions are over, the Provincial Governments will be transferring all of this Rs. 13 crores to the Central Government. There thus seems to be a prospect of Central Government's deposits exceeding Rs. 130 crores. In spite of this superaffluence, treasury bills sales are to be increased from next week to Rs. 6 crores. That is to say, sales of fresh bills will exceed maturities by a considerable amount in the course of August. This is also a factor conducive to further swelling of central treasury's deposits. Sales of silver are another avenue for cash replenishment.

On an earlier occasion reference was made to the course of bullion prices in recent months and it was suggested that the Reserve Bank should pursue a more active policy in regard to sales of silver especially as the white metal had been acquired by the Government of India from the United States on a lease-lend basis and there was no restriction in regard to the prices at which the acquired stocks should be sold to the public. It is therefore important to note that the Reserve Bank has made sales of silver in small quantities from the Bombay market this week and that the prices at which the first sales were made are nearly 10 points lower than the peak levels touched recently. The acute shortage of ready supplies in the Bombay market and the large absorption by upcountry centres have placed bulls in a very strong position and uncovered contracts had to be carried forward at a very heavy penalty. The position became so hot for bears that there was a tussle between the parties and the question of budli rates was referred to the Committee of the Bullion Exchange on many occasions. As no satisfactory solution was found, bulls insisting on their right to receive deliveries, business was suspended for a time. After three or four days transactions were again begun only after the Reserve Bank offered to sell 200 bars of silver. The sales so far have not been on a large scale and the authorities seem to be anxious that their stocks should not be cornered by strong operators and prices maintained at the present artificially high levels. While sales in small quantities to the public are to be appreciated it should be made sure that there is a continuity in sales at gradually lower rates. Otherwise, it would not be possible to bring down prices for both gold and silver to the levels suggested by us, namely, Rs. 65 per tola for gold and Rs. 105 per 100 tolas for silver.

The exchange market has been steady with a fair showing of bills.

Bank's buying 90 days St. at 1s. 6 9/32d., for 1 and 2 months; Bank's buying 90 days/St. at 1s. 6 5/16d., for 3 and 4 months.

B. C. rates T.T. 1s. 5 15/16d., B.C. rates D.D. at 1s. 5 15/16d. Bank's selling T.T. rates at 1s. 5 31/32d., Bank's selling D.D. rates at 1s. 5 31/32d.; Bank's buying T.T. at 6 1/32d. Bank's buying D.D. at 1s. 6 5/32d.

London-New York:—X rates $4.02½/3½; Bank's selling T.T. at Rs. 332¾; Bank's selling D. D. Rs. 332¾; Bank's buying T. T. at Rs. 329¼; Bank's buying D.D. at Rs. 326¼.

Deposits—¼ percent in Calcutta and ¼ percent in Bombay for call and one and two months; ½ percent for 3 to 5 months; ¾ percent for 6 to 11 months and 1¼ percent for 12 months.

A Correction:

In the balance-sheet of the Imperial Bank of India as on June 30, 1944, published in the issue of "Indian Finance", dated August 5, 1944, the investments of the Bank were wrongly given as Rs. 26.51.26.093-2-11 instead of Rs. 1.26.51.26.093-2-11. We regret the error.

In the event of any one or more of the loans being over subscribed, proportionate allotment will be made to the subscribers.

N. B.—Applicants tendering their applications at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras will, in the event of over subscription, be given the option of transferring their cash refunds to any of the other loans at the same or lower issue price which may not be fully subscribed, provided they complete and tender along with their loan applications, the SPECIAL OPTION FORM, copies of which are obtainable on application from the abovementioned offices of the Reserve Bank of India.

Copies of the Notifications and Application Forms may be obtained at any Receiving Office along with a copy of the Press Communique giving the financial position of the Provincial Government(s).

Industrial Profits

The impact of the war on Indian industries has varied so widely from industry to industry and from year to year that it is more than ordinarily difficult to estimate the course of industrial profits during the war period. There is, of course, in the background the complex problem of estimating the real gains, that is, as apart from the profits reckoned in terms of an inflated currency. Even apart from this, it is difficult to piece together the complex picture of Indian industry during the war. The war itself has seen much strange vicissitudes. Not all the belligerents of to-day entered the war at the same time. The interference with communications has not been a constant factor and the accessibility of foreign markets or sources of supply has varied from time to time. Likewise, the pressure for developing indigenous sources of supply or the need for what established Indian industries could produce changed according to the fortunes of the war or the changes in the relative importance of the various theatres. Generally speaking, the position of Indian industry during the present war became significantly different from that of the last war only with the constitution of the Eastern Group Supply Mission. The need for this Mission was acutely felt when France surrendered and the Mediterranean became closed to Allied shipping.

Before this position was reached, the role of Indian industry in the war effort was very much that of the last war. The demand was for jute goods and raw materials. Only when a certain degree of self sufficiency of supplies became necessary for the countries constituting the Eastern Group that the outlook for industry as such can be said to have improved. It should not be forgotten, however, that from the point of view of industry the Eastern Group Mission was in many ways a serious disappointment. Some sections of opinion in India hold that the Mission reduced rather than increased the scope for development of industry. But it is certain that its effects were slow. There was, indeed, great confusion in the five months ending April 1942 after the Japanese entry into the war. Confidence revived only after it was clear that the Japanese advance had reached its limits and allied war expenditure in India was to be increased manifold. It is only in the last two years, therefore, that there has been a steadily increasing volume of demand for all the goods that this country can produce. Thus, it is only in the fifth year of the war period that there was a total mobilisation of the industrial capacity of this country. Production of steel ingots in the iron and steel industry reached a very high level. Output of cotton goods rose to full capacity. The manufacture of sugar had to be curtailed only for scarcity of cane supplies. The engineering industry was so active as to feel at every point the difficulty of getting imported supplies of parts.

It will thus be seen that, while it took nearly four years, for full demand to develop, it did not take long for industry to feel the limiting conditions of increase in output and in profits. The nature of the curb on production has been indicated. In nearly every case, the available quantities of necessary raw material were strictly limited. Sugarcane in the case of the sugar industry, steel in the case of the engineering industry, fertilisers in the case of tea are all typical instances of this experience of industry. Where, as in cotton or jute textiles, raw material was in plentiful supply, there were other factors in play. In the cotton mill industry production was increased by addition to shifts rather than productive capacity. In the case of jute mills, not only was demand uneven, but the mills also suffered from requisitioning of premises. Over the whole range of consumer's goods, there was a notable famine, particularly in food. The effects of government and allied war expenditure in India aggravated the shortage by a wider diffusion of purchasing power than this country had ever known in all her long history. Industry, however, could not take advantage of either the rise in prices or the increased demand, as it had to function under a system of control which limited prices in the interest both of the Government and the consuming public. Prosperity thus had its flaws besides having but a short run. For, the last few months have seen a new threat to full production.

The coal position has seen a serious deterioration since the middle of 1943. The floods in the Damodar gutted several mines, and the breaches in the railways dislocated traffic considerably. Output at the coal mines dropped appreciably and the loss in raisings in the three months ending September 1943 is estimated at over one million tons. Simultaneously with the decline in raisings, there arose a need for a large increase in coal exports to the countries in the Middle East, which neither the United Kingdom nor the United States was in a position to meet. Apart from the question of conservation of coal reserves, which are admittedly short in view of the large programme of industrial development in the post-war period, the increase in coal exports from this country at the expense of Indian industries may well have far reaching consequences. What is important in this context is the forced fall in production.

At the present moment, the jute industry is working far below capacity, nearly 50 per cent of the looms being affected by coal shortage and requisitioning. An attempt has been made to utilise the lost loom hours of the requisitioned mills by working multiple shifts in the electrically driven jute mills, leaving the steam driven units idle. But there has been no net increase in production. Rather, production is below the required level and it is feared that there might be a further deterioration. Coal shortage has affected nearly all industries. There has been a drop in paper production by 30 per cent, while the output of piecegoods and yarn has been frequently affected in not a few places by the shortage of fuel. On more than one occassion the captains of industry have uttered the warning that, if cotton mills are not properly fed with coal, all the good work achieved by the control might prove to be in vain. Other industries affected by the scarcity of coal supplies are the rerolling and glass industries. A good number of the rerolling mills have been obliged to close down for the duration. There are even suggestions that the output of iron and steel should be reduced to relieve the coal situation. The directors' report of the Tata Iron and Steel Company Limited, points out that production in 1943-44 was adversely affected by the shortage of coal supplies.

It is in the light of these general conditions that the attempt to trace the course of industrial profits has to be made. Extremely slow increase in the initial stages in the demand made on industry, then a few big strides to total mobilisation, followed before long by a quick succession of adverse factors such as shortages of raw materials or spares, price control, and coal shortages—these form the salient features of the history of Indian industry during the war. On the top of these come the fiscal measures of higher taxation, E.P.T. and blocked profits. It is with this history in mind that the following table of industrial profits must be studied.

INDUSTRIAL PROFITS

		1942	1941	1940
		Rs.	Rs.	Rs.
Jute	(42) ..	4,51,78,685	1,90,41,702	2,26,67,341
Coal	(23) ..	31,64,794	27,02,607	32,51,623
Tea	(23) ..	42,91,796	29,13,109	28,55,221
Sugar	(3) ..	17,40,076	7,14,264	7,10,143
Eng.	(4) ..	8,71,45,830	7,15,56,607	4,94,18,038
Cotton	(18) ..	3,44,85,620	1,08,98,362	64,06,524
Miscell.	((17) ..	6,82,42,922	3,13,11,464	1,98,12,505
	(129) ..	24,42,49,723	13,91,38,115	10,53,00,127

		1944	1943	1942
		Rs.	Rs.	Rs.
Jute	(37) ..	2,68,36,594	4,01,47,544	4,30,66,134
Coal	(36) ..	60,10,765	50,19,481	65,98,507
Tea	(15) ..	20,59,674	28,82,990	17,34,524
Sugar	(4) ..	46,37,299	13,98,700	20,83,233
Eng.	(5) ..	7,72,32,117	6,64,60,385	8,66,91,012
Cotton	(15) ..	11,15,18,717	6,12,47,000	2,65,75,438
Miscell.	(22) ..	4,93,72,166	5,67,63,923	4,18,36,065
	(123) ..	25,76,67,332	23,39,20,023	20,35,35,113

By reason of the nature of the available data, two tables have to be given instead of one in which the figures for all the five years are on a strictly comparable basis. But they should suffice to show that the best year is not the same for all the seven classes of industries for which figures have been provided. For sugar and cotton textiles 1944 is seen to be the best year, while for jute engineering and coal, 1942 marks the heyday. Tea made its best showing in 1943. The total for all the industries is highest in 1944, but the position will be seen to be different if cotton textiles were left out of account. It should be mentioned, however, that the earnings shown under each year relate to the working conditions of the previous year.

The reasons for the difference in the experiences of the various industries are not far to seek and have indeed, been already indicated. The jute industry was the first to gain from the prevalence of war conditions. Thereafter shipping difficulties, cancellation of sandbag orders and loss of export markets resulted in a decrease in profits. The easier shipping position and the increase in overseas demand in later years, however, brought about prosperous conditions. At the present moment, the coal problem and requisitioning have created fresh difficulties for the industry. In fact, if the jute industry had worked as usual the total profits for 1944 would have made an even better showing. The coal industry was not faring quite well as there was considerable difficulty in respect of wagon sup-

Your Countrymen

Madam

MANY THOUSANDS of them are suffering daily from want which is the result of food shortage. Authorities have done, and are doing, all they can to assure that every man, woman and child in this country has enough to eat. But you, too, can help in this humanitarian task.

REDUCE your entertaining, but if you have to entertain, please see that no more food is cooked than is really necessary. You can also reduce your consumption of rice and wheat which is the staple food of the poor. Set an example to others in simple, but nevertheless healthy living, and earn the blessings of your less fortunate fellow-men. This is the least you can do.

plies. Now, however, the labour problem is acute and what time transport is available and there is a larger demand, the industry is not in a position to take advantage of the improved conditions. The Sugar industry was in the doldrums till the season 1940-41 and only after the Japanese war broke out did conditions improve. The cotton textile industry has had a similar experience. It might be said that the year 1943 witnessed the peak of industrial profits, since with uncontrolled prices for cotton textiles, a rise in exports of jute goods and tea and a large increase in iron and steel production there was prosperity alround.

Mica Piracy ?—Yes!

(Contributed)

Today, after 70 years of incredibly ruthless and unrestricted drain on the mica deposits of Bihar, the Government of India are at last becoming aware of the fact that these deposits have from the start formed, and are likely to continue to form, the backbone of the world electrical industry. For mica, is the indispensable insulator on which the world electrical industry is based and has been developed, and Bihar is its principal source. Without mica the £600,000,000 worth of electrical equipment now in use would cease to function.

The Axis Powers drew enormous quantities of mica from the Bihar micafield during their period of preparation for war, for both current needs and strategic reserves, and Britain and America in their turn have had to come to Bihar to secure even greater quantities.

The technical advance in warfare since World War I has rendered mica far more valuable, strategically, in World War II. Likewise, the quantities required have increased several fold. Within the next few decades further technical advance will have enhanced still further the strategic value of mica and created a need for still greater quantities.

In such circumstances, how can any Indian fail to perceive that India possesses in the mica deposits of Bihar a national asset of priceless value which many another nation would give a fortune to possess? Is it not clear that, for an India on the verge of political independence and on the threshold of an era of great industrialisation, there will be urgent need for unlimited quantities of mica with which to develop India's heavy industries and provide the technical equipment required by her armed forces for the defence of her frontiers?

Unfortunately, however, the mica required by India may not be available in time of need, for the failure of Government hitherto to understand and appreciate the priceless value of the Bihar mica deposits and their key role in war or peace has brought the Bihar mica industry today to a state of chaos. For, let there be no mistake about it, the Bihar micafield and its mica industry are being steadily, systematically and progressively destroyed by both MICA PIRACY and incompetent mining methods. For some inexplicable reason, it has been the policy of Government for 70 years blindly to allow anyone and everyone to engage in this industry, irrespective of the peculiar nature of the industry or of their character and competence.

Mica piracy is, of course, an old disease which has afflicted the industry almost from its beginning and mainly takes such forms as highway robbery, mining illegitimately in the property of others, and stealing from proprietors' mines and godowns in collusion with dishonest employees. Mica piracy, which has grown almost to the size of a major industry under the stimulus of a steadily rising market and of unrestricted facilities for the disposing of illicit mica. This apathy has led to the bankruptcy of several reputable mica mining firms, and to the withdrawal of others from the industry rather than risk bankruptcy.

In 1907 the Kodarma Mica Mining Association was formed by five Indian and five European firms for the express purpose of combatting the mica piracy from which they were then suffering and which had already attained large proportions. It was not until 1930 however that the Bihar Government finally took action in the form of the Mica Act of 1930. This Act, like the present Mica Control Order which was copied from it, was however basically unsound in that it did not aim at the suppression of the outlets for stolen mica, as represented by the class of small mica dealers. Instead, it attempted to stop thieving by licensing these dealers and obliging them to keep account books showing receipts and issues, in turn covered by passes showing transport and transfer. What Government failed to foresee was the ease with which so many dealers in illicit mica could cover the most outrageous transactions with perfectly falsified records.

In sum, Government has failed to understand that the suppression of mica piracy cannot be accomplished by the keeping of accounts or the employment of passes, and that it is utterly impossible of accomplishment unless realistically based on the conditions under which mica is produced in Bihar, the salient features of which are: (1) that the Bihar micafield covers 1,500 square miles of unpatrollable jungle area throughout which the mica mines are sparsely scattered; and (2) that mica, which is a semi-precious mineral, can be easily removed from this jungle, especially at night, in headloads of great value by countless footpaths. The police and other records of the industry are witness to the fact that there is no humanly possible way in which Government or mica mine proprietors can physically control this enormous jungle area or cope with the mica piracy which thrives therein, so long as outlets for illicit mica are allowed to exist.

In the absence therefore of all effective restraint on mica piracy, there has grown up in the Bihar micafield a vast vested interest in the form of an illicit mica trade conducted by a mica dealer class numbering well into the thousands, including their authorised agents. This class, moreover, has been allowed to scatter its godowns far and wide throughout the jungle, where they serve as facile collecting points for great quantities of mica stolen from the responsible mechanised miners, whose properties and equipment provide the sinews of production for not less than 90 per cent of all the mica honestly raised in Bihar and ensure the livehood of the 5 lakhs of Indians directly or indirectly dependent on them.

The curse of mica piracy is not only that it robs the responsible producers of the cream of their output and financially cripples them (for the thieves steal only the best quality and largest crystals) but it dumps this mica, which costs the thieves nothing to produce, on to the market at ridiculously cheap rates and forces honest mica to compete with it. As a result, foreign consumers of Bihar mica are able to buy at prices which represent a loss of many lakhs of rupees annually to the industry, and to India's economy. Destructive competition of this sort naturally has seriously retarded the development of the Bihar mica mining industry in the best interests of India, and unless and until the Government of India legally prohibit the unrestricted dealing in mica by suppressing the outlets for stolen mica, there is no hope of saving this industry from destruction at the hands of this parasitical class. The solution of this problem does not rest on whether a small dealer is honest or not; it rests on the fact that, irrespective of whether small mica dealers are honest or dishonest, they represent, as a class, an assured outlet for stolen mica, the trade in which cannot be suppressed until they are prohibited as a class.

Equally deadly in its effect on both the Bihar micafield (as well as Rajputana and Madras) and the longevity of its mica industry is the unrestricted destruction of surface deposits by surface scratchers who lack the financial and technical competence to develop a mica mine to depth or in accordance with scientific methods. This form of destruction has been proceeding without impediment for years for no other reason than that Government so far have failed to comprehend how imperative it is to confine the right to mine mica strictly to those who possess or command the requisite financial and technical qualifications to serve the interests of the State. For 70 years now, the Bihar micafield has been scratched over and gutted by this other form of parasite to such an extent as seriously to threaten its continued existence as an assured large-scale producer; and in the opinion of competent geologists and mining engineers this process of destruction has got to be stopped at once if the Bihar micafield is to conserved for the future good of India.

The responsible elements of the Bihar mica mining industry, on the strength of their practical experience and knowledge, have undertaken a crusade looking to the radical reform of this industry along the lines indicated herein. Fortunately, this crusade has encountered a prompt and sympathetic response from a Government and public press now fully alive to the implication of the current political and industrial progress in India, the necessity of conserving the Bihar micafield and protecting its mica industry.

It was to be expected that there should emanate from the opponents of conservation a spate of propaganda designed deliberately to invoke doubts in the official and public mind and to cause confusion by means of the most untenable and fantastic claims and allegations.

If the arguments so far employed by the opposition of conservation are representative of the best they can produce, then their case against the conservation of the Bihar micafield and the protection of its mica industry is not only hopeless, but self-condemnatory.

NO PROPHECY REQUIRED

You don't need a prophet to tell you whether prices are going to rise or fall in the near future The experience of 1943 is enough to convince all that the trend of prices is definitely downwards. All around us there is evidence of falling prices. Introduction of control on prices and vigorous prosecution of the profiteers have ensured it. Do not be caught by falling prices.

This is no time to lock your money in manufactured goods, commodities, land, buildings or jewels. Their prices are sure to fall as time goes by and Rs. 100 invested now might easily dwindle to Rs. 70 or less within a year.

Today's best investments are Insurance, Co-operative Societies, Savings Bank Account, Post-Office Savings Bank, Government Loans and National Savings Certificates.

Prices of cloth, leather goods, drugs, medicines, food-grains, etc. are falling. Control measures are being extended and rigorously enforced. Be sure, prices will come down further.

(FORMERLY CHEMICAL AND MINING INDUSTRIES (INDIA,) LTD.)

(Incorporated under the Indian Companies Act, 1913 at Delhi).

AUTHORISED CAPITAL - - - - Rs. 1,00,00,000

(Divided into 2,00,000 (Two lacs) shares of Rs. 50 each)

SUBSCRIBED CAPITAL Rs. 1,17,000 PAID-UP CAPITAL Rs. 1,17,000

PRESENT ISSUE - - - - Rs. 15,00,000

Divided into 30,000 fully paid up shares of Rs. 50 each of which Rs. 25 is payable on application and Rs. 25 on allotment)

Of present 15,000 shares have already been subscribed. The balance of 15,000 shares is now offered to the public

The Articles as to the Disrtibution of profits provide as follows:

The Profits of the Company subject to any special rights relating thereto created or authorised to be created by the Memorandum and the Articles of Association of the Company and subject to the provisions of the said Articles shall be divisible among the members in proportion to the amount of capital paid up on the shares held by them respectively.

Where the capital is paid up in advance of calls upon the footing that the same shall carry interest, such capital shall not whilst carrying interest, confer a right to participate in profits.

The Company may pay dividends in proportion to the amount paid up or credited as paid up on each share where a large amount is paid up or credited as paid up on some shares than on others.

Any General Meeting sanctioning or declaring a dividend in terms of the said Articles may direct payment of such dividend wholly or in part, by the distribution of specific assets, and in particular of paid up shares, debentures or debenture stock of the company, or in any one or more of such ways, and the Directors shall give effect to such direction and where any difficulty arises in regard to the distribution, they may settle the same as they think expedient and in particular may issue fractional certificates and may determine that cash payment shall be made to any members, upon the footing of the value as fixed in order to adjust the rights of all parties and may vest any such specific assets in Trustees upon such trusts for the persons entitled to the dividends as may seem expedient to the Directors. Where requisite the Directors shall comply with Section 104 of the Act and Directors may appoint any person to sign any contract thereby required on behalf of the persons entitled to the dividends and such appointment shall be effective.

PROSPECTUS.

1. The Company has been formed for the purpose specified in the Memorandum of Association (a copy of which is reproduced and in particular for the manufacture and sale of all kinds of Chemicals, heavy refined and medicinal and preparations and by-products thereof.

2. Immediate object is to set up a plant to manufacture 10 tons a day Sulphuric Acid, 8 tons a day, Copper Sulphate and 30 tons a day of Sulphate of Alumina (Ferric Alum). The annual consumption in India is 3,500 tons of Copper Sulphate and 25,000 tons of Sulphate of Alumina. Plants to manufacture Potash Permanganate, Potash and Sodium Meta-Bi-Sulphite are also being set up.

On July 2nd, 1943, the Company obtained a certificate to commence business. Since then, much progress has been made. More than half the issued capital has been subscribed. A site on G.I.P. Railway in Jubbulpore District has been selected and purchased. Raw materials necessary for this concern are available in the neighbourhood of the site selected. A portion of the machinery has already been transported to the factory site and arrangements are on hand for transporting the remaining machinery. Construction work on the factory building has begun—present plans are designed to complete construction of building and erection of plant as expeditiously as possible so as to secure the maximum advantage from early commencement of production.

N. K. CHEMICAL INDUSTRIES LIMITED—Contd.

CAPITAL EXPENDITURE

One 10 tons per day capacity Sulphuric Acid Plant ..	3,00,000
One 8 tons per day capacity Copper Sulphate Plant ..	1,50,000
One 30 tons per day capacity Ferric Alum Plant ..	2,00,000
One 1 ton per day capacity Potash Permanganate Plant ..	50,000
One 1 ton per day capacity Sodium and Potash Meta-bi-Sulphate Plant	50,000
50 Acres Land	50,000
Machinery Power Plant and Workshop Equipment ..	1,55,000
Working Mines (Copper and Bauxite)	1,00,000
Office Building and Quarters	50,000
Preliminary Expenses	20,000
Miscellaneous Expenses Expenditure	75,000
Working Capital and Laboratory	3,00,000
Total ..	15,00,000

ESTIMATE OF PROFITS

Cost of Production:—	
2,400 tons per year Copper Sulphate at Rs. 30 per cwt. ..	14,40,000
10,000 tons per year Ferric Alum at Rs. 100 per ton ..	10,00,000
200 tons per year Potash Permanganate at Re. 1-8 per lb.	6,72,000
150 tons per year Potash Meta-bi-Sulphate at Re. 1-8 per lb.	5,04,000
150 tons per year Sodium Meta-bi-Sulphate at Re. 1-8 per lbs.	5,04,000
Total	41,20,000
EXPECTED REVENUE:	
By sale of:—	
2,400 tons of Copper Sulphate at Rs. 40 per cwt. ..	19,20,000
10,000 tons of Ferric Alum at Rs. 150 per ton ..	15,00,000
200 tons of Poash Permanganate at Rs. 2-8 per lb. ..	11,20,000
150 tons of Potash Meta-bi-Sulphite at Rs. 2-8 per lb.	8,40,000
150 tons of Sodium Meta-bi-Sulphite at Rs. 2-8 per lb.	8,40,000
Total ..	62,20,000
..	21,00,000

GROSS PROFIT

Note.—(Sulphuric Acid manufactured will be utilised in the manufacture of Copper Sulphate and Sulphate of Alumina).

3. The Preliminary expenses of and incidental to the present issue (excluding the underwriting commission and brokerage) will not exceed in the aggregate Rs. 20,000.

4. The following agreements have been entered into:—
   (a) Managing Agents Agreement.
   (b) Agreement for Purchase of Machinery.
   (c) Agreement for Purchase of Land.
   (d) Agreement for Import of some Chemicals.

5. No Directors are interested in the formation of the Company otherwise than as shareholders except Mr. N. K. Chopra, who is a partner in the Managing Agents firm.

6. The qualification of a Director (other than an Ex-officio Director, Special Director, Debenture Director) shall be the holding of shares in the Company of an aggregate nominal value of Rs. 5,000.

The following are the provisions for the remuneration of Directors:—

(a) The remuneration of the Directors shall from time to time, be determined by the Board of Directors, but not exceeding Rs. 100 for every meeting and all actual travelling expenses.

(b) The Directors may allow and pay to any Director who is not a 'bonafide' resident of Delhi and who shall come to Delhi for the purpose of attending a meeting such sum as the Directors may consider fair compensation for travelling expenses in addition to his fee for attending such meeting as above specified, and the Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a committee appointed by the Directors in terms of the Articles of the Association and may pay the same.

(c) If any Director, being willing, shall be called upon to perform extra services, or to make any special exertion in going or residing out of Delhi or otherwise for any of the purposes of the Company, the Company shall remunerate such director either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his share in the remuneration above provided.

7. The following are the Articles relating to voting and restrictions thereof:—

Upon a show of hands every member entitled to vote and present in person or by an agent duly authorised under a power of Attorney or by proxy shall have one vote for every share held by him.

No member not personally present shall be entitled to vote on a show hands unless such member is present by an agent duly authorised under a power of attorney or unless such member is a corporation present by proxy or a company present by representative duly authorised under Section 89 of the Act in which case such agent proxy or representative may vote on a show of hands as if he were a member of the Company.

Subject to the provisions of the Act no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or attorney or as a proxy or attorney or for any other member or be reckoned in a quorum whilst any call or any other sum shall be due and payable to the Company in respect of any of the shares of such member.

Any person entitled under the Transmision Clause to Transfer any shares may vote at any General Meeting in respect thereof as if he were the registered holder of such share provided that at least 48 hours before the time of holding the meeting as the case may be at which he proposes to vote, he shall satisfy the Directors of his right to transfer such shares, unless the Directors shall have previously admitted his right to vote at such meeting in respect thereof.

The Articles provide that the Directors may at any time in their absolute and uncontrolled discretion and without assigning any reason decline to register and acknowledge transfer of any share and that such refusal shall not be effected by the fact that the proposed transferee is already a member.

No restrictions are imposed under the Articles of Association upon the Directors of the Company in respect of their power of management and borrowing powers and as are imposed upon them by the provisions of Law.

8. Mr. N. K. Chopra has been appointed the Managing Director for a full period of 20 years from the date of the incorporation of the Company upon the terms and subject to the conditions which are set out in the aforesaid agreement. The Agreement can be inspected in the office during working hours on any working day.

(b) Messrs. N. K. Chopra & Sons, have been appointed the Managing Agents of the Company for a period of 20 years upon the terms which are set out in the aforesaid agreement.

9. The minimum subscription upon which Directors will proceed to allotment and which in the opinion of the Directors must be raised out of the proceed of this issue in order to provide for the purchase price of priority machinery and goods required to be purchased for cash and to meet the preliminary expenses payable by the Company and the commission payable to the said underwriters under the said agreement and for the working capital is shares of the nominal value of Rs. 1,00,000.

10. The Articles of Association provide that the Company may at any time pay a commission to any person for subscribing or agreeing to subscribe (whether absolutely or conditionally) for any shares, debentures or debenture stock of the Company or procuring or agreeing to procure subscription or debenture stock of the company, but so that if the commission in respect of shares shall be paid or payable out of capital the statutory conditions and requirements shall be observed and complied with and the amount or rate of commission shall not exceed five per cent on the shares debentures or debenture stock in each case subscribed or to be subscribed. The commission may be paid or satisfied in cash or in shares, debentures or debenture stock of the Company.

11. Brokerage at the rate of Re. 1 per share will be paid by the Company to a recognised broker or firm of brokers on allotment made in respect of application bearing the stamp of such broker or firm of brokers.

12. No benefit has or shall be made by any of the promoters or the Directors for their services.

13. Applications for shares should be made on the form accompanying this Prospectus or on the forms which may be obtained at the Registered Office of the Company and sent in accordance with the direction contained therein with a remittance of the amount payable on application. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. Failure to pay any amounts due on shares allotted when due will render previous payments liable to forfeiture.

14. Attached to this Prospectus and forming part of it is a copy of the Memorandum of Association of the Company.

Dated, this 15th day of July, 1944

Editorial Notes

An Engineer on Planning Problems

The general stock of ideas on planning is leaving behind the stage of vague generalisations and acquiring rapidly a heartening degree of concreteness. At the annual general meeting of the Engineering Association of India, Mr. Driver, the President, dealt with seven specific problems of planning and provided ideas which by reason of their soundness are sure to enter into our final plans for the post-war period. Speaking, less as an engineer than as a keen student of over all planning Mr. Driver gave the utmost importance to the problem of over population and denounced the tendency to shirk the problem by looking to improved standards of living to act as a check on the high birth rate and indicated that the need for positive checks on growth of population cannot in the best of circumstances be obviated. As for industry, Mr. Driver draws attention to the lack of trained personnel both in the administrative services and in the organisation of our industries and favours the institution of an Indian Industrial Service. Rationalisation of industries of which we have now next to nothing must not be left to the sweet will of private owners. Coal requires by reason of its importance as a key industry special attention. The criminal waste of coking coal into effective service electric power must be stopped and to press low grade coal generated near the coal fields. The proposal of large thermal stations in the coal areas has of late been opposed on the ground of lack of large supplies of water. Not only Mr. Driver, but also Sir Padamji Ginwalla in a booklet reviewed below suggest as an answer the damming of the rivers of the area for the purpose. More of technical investigation will probably be required to lift this question definitely out of the sphere of controversy. But there can be no doubt that a large thermal station will solve many problems.

Heavy Chemicals

Sir Padamji Ginwalla's booklet on the Indian chemical industry is a timely effort to acquaint the public with the issues connected with this key industry. The progress of the British Fertilisers Mission and the antecedents of the Government of India in this matter make it more than likely that the country may be confronted in this sphere with a *fait accompli*, and that of the undesirable kind. The manufacture of heavy chemicals, besides being a key industry in the ordinary sense, also holds the key to the security of the nation as a whole, since it is closely linked with the manufacture of explosives. Sir Padamji rightly deprecates secret deals with foreign companies in so vital a matter and insists that no arrangement shall be made without the sanction of the Legislature, which must see to it that national possession and control are not impaired in any way. It is heartening to know that, while foreign co-operation is valuable and even indispensable, the chemical industry in India has no insuperable technical obstacles and that the outlook of the industry may be deemed as rosy as one would like. That heavy chemicals are needed in large quantities, no one would need to be told. The rice crop alone, Sir Padamji estimates, would consume per annum 10 million tons of sulphate of ammonia. The potential market for super phosphate also runs into millions of tons. In the case of nitric acid, though imports have been only about 100 tons per annum, the demand for defence purposes may be relied on to make the market adequate. The question, therefore, revolves round the location of the industry and the processes to be adopted. Sir Padamji holds that in the manufacture of synthetic ammonia electrolysis of water is the process most suitable to India; that on account of the initial capital cost, hydro-electric power will be far more costly than thermal and that therefore the heavy chemical industry should be located in proximity to an iron and steel works, in the great industrial area of Bihar and Bengal where a vast thermal station will provide the new industry with the requisite electric power. Sir Padamji concludes that no protection will be necessary for nitric acid but for ammonium products protection, particularly from unfair competition, will be necessary.

Price Control Extended

The Consumer Goods Distribution Order of 1944 which has been lately criticised by the Trades Association as not taking due note of dealers' difficulties was issued on July 15. The Order empowers the Industries and Civil Supplies Department to fix prices for special goods by notification and to direct sale on the basis of information as to landed cost, date of supply, and quantity available. Indigenous goods are also subject to the Order and local producers have to furnish returns. The schedule to the Order, which contains a clause for forfeiture of goods in case of contravention, is perhaps more important than the provisions. The list includes silk and rayon yarn and thread as well as pure and artificial silk fabrics, knitting wool and woollen fabrics, so that all textile manufactures come within the purview of price control. Wines, spirits and liquors, lead and slate pencils, toilet requisites, boot and metal polishes, steel pens, fountain pens and parts, umbrellas and parts, enamelled ironware, kerosene lamps, incandescent mantles, zip fasteners, razors and blades, cutlery, typewriters parts and ribbons, wireless sets and parts, cycle parts and accessories, photographic negatives and printing papers, clocks and watches, cartridges, crockery, spectacle frames, sanitary fittings, sports goods and grindery are among the 31 items listed. The shopping guide made available by the Industries and Civil Supplies Department appeared before the Order but the power now vested in the Department to keep track of stocks and sales in addition to fixing prices for such things as infant foods is probably needed to stimulate confidence in the efficiency of control, an indirect result being the reduction of demand for private hoarding purposes.

Milk and Fodder

Fixation of milk prices in various places in India is merely a consequence of shortage. Indian milk production and marketing have been examined to yield the conclusion that in normal years supply is not equal to demand though per capita consumption is greatly below that recorded either in the U.S.A. or Britain. In wartime liquid milk consumption has held up very well in Britain while the reverse may be true of India. The small yield of milk per cow is, of course, the chief factor in the depressing situation. But milk supply is dependent on the proper feeding of cows and increased fodder supply represents the first step towards improvement in the direction of better and bigger cows. The provision either of grain or concentrates for cattle would mean the reduction of cereals for humans, to be made good by milk in the future. Whether an increase in milk consumption, directly subsidised by the Government, would limit the supply of either ghee or other milk products need not be considered because the chief issue is that of raising the average yield per cow to that recorded during October 1931 in the case of Hariana cows bred in the Rohtak District, the highest being 22 lbs. per day and the longest period being 333 days. Climate has apparently little to do with yields, breeding being the

TN. 3744

most important factor, as Sindhi cows in Trivandrum showed milk yields as high as or higher than those noted in the Punjab. Suggestions as to better feeding of milch cattle have been made by Mr. N. C. Das Gupta who suggests that cane molasses can be mixed with oilcakes or grain. The admixture would prove useful like concentrated mixtures made up of rape cake, wheat bran, gram and barley or maize, the molasses to be added, if grain is not to be had. The current shortage of wheat bran can be made good by the husks of pulses. A further suggestion is in regard to the treatment of straw with diluted alkali (either solution caustic soda or quicklime) which can be used effectively on millet or other stalks.

Railway Development

The proposed outlay of Rs. 319 crores, of which Rs. 194 crores are to be raised by loan on railway construction and improvement, makes it desirable to examine the possible effects on industry. That the Railway Board is committed to the scheme for the manufacture of locomotives in India should neutralise doubts provoked by any lease-lend arrangement with Canada. Three, instead of two workshops, are to take to the manufacture of locomotives, and encouragement of boiler-making by private enterprise is part of the programme. If the locomotives are made in India the railways obviously can have the rolling stock needed for the additional mileage (about 2500 in the first 7 years). Power for the new routes would be available. A sufficiency of rolling stock is postulated by the plan for punctual, accelerated goods services. Sir L. P. Misra's outline of the postwar railway programme can be duly related to the prospects for the engineering industry. Machine tool manufacture developed for the war is expected to assist the expansion of workshop facilities. The deferred replacement programme might assist the future manufacture of machinery as well as boilers but direct assistance to any enterprise connected with the Railways is hardly contemplated. The depletion of the depreciation fund may have some consequences for the Central Budget. It is not unlikely that the indirect revenue derived from railway transport would be earmarked for the construction of a non-remunerative nature since an extension of non-commercial lines would have effects both on the operating ratio and the net yield when the capital at charge is increased substantially.

The Right Turning

Turkey's decision to break off relations with Germany has been admittedly a market factor since the anticipation, even more than the announcement, depressed the stock exchange. What the decision imports cannot be accurately indicated since a German attack is problematical. It is however clear that the longstanding German trade supremacy in Turkey is altogether at an end. To the extent that Turkish trade with the Allies increases in the future compensation may be available, especially, as efforts will be made to improve defence supplies. For the present no directions have been given since the decision to send back the German mission was that of the Turkish Cabinet endorsed immediately by the National Assembly on Wednesday. Turkey's defence is grounded in the alliance with Britain and France made in October 1939 but the closest parallel to her position to-day is that of non-belligerent Egypt. If Turkey's action impresses Bulgaria to a special degree the Allies' need for air bases has become less acute after Russian bases were acquired for U.S. planes. From the view of the Balkan States the Turkish decision implies that confederation plans are dismissed. There is no objection to a Russian sphere of influence either now or in the future. Mr. Churchill reminded the world that the Ataturk believed in Russian friendship and it looks as if Turkey's place in relation to the regional pact is dependent on the Russian view of Turkish policy. That the Allies are not moving into the Balkans has not prevented Turkey from breaking a pact, and possibly breaking off relations with Bulgaria and other countries. The only aspect of Turkish foreign policy that need be considered is the Balkan because the Arab countries are already with the Allies. It looks as if Allied plans for Yugoslavia and Greece are approved by Turkey while a Free Albania is not beyond consideration. Reports that Bulgaria is looking for a way out of the war have a connection with the decision announced this week. So may have the symptoms of dissatisfaction in Germany; von Papen's old ambitions may have been kindled by the failure of a mission.

Canadian Supplies

The report that the U.N.R.R.A. intends to procure food and other materials from Canada is of interest to others besides the Dominion's exporters. The mutual aid pro-

gramme is to be extended this year. But the Dominion's food supplies are not larger except in regard to dairy produce. The field crops of 1943 were smaller than those of 1942; below the 1937-41 average in some cases. Labour shortage (the supply of workers fell by 30 per cent nearly) was one reason, another was the weather. The increase in cultivation in the Prairie Provinces was offset by decreases in other areas. The point deserves notice in view of the clamour for food imports. If Canada shoulders obligations in respect of U.N.R.R.A. this year, there will be less to ship to Britain and to a purely temporary market like India which cannot offer dollars for wheat taken. It is essential to remember that shipping is not the only difficulty because pulp and paper from Canada may reasonably be regarded as a more pressing requirement at present.

food consumption in Canada may increase there may be less available for shipment though crop prospects in Canada this year may be better than presumed. The Canadian Government, however, is not likely to change its policy of encouraging production of other things than cereals. For the future is not very good for exports. British agriculture is assured now of something more than Protection; and livestock production is to be afforded special advantages as in Canada.

In view of the greater benefits promised by manufacturing activity which rose by 16 per cent in 1943 the Dominion's food exports, except those specially provided for by agreement, may be expected to reflect accurately the changes in production. The increase in farm income last year may even militate against an increase of exports except perhaps in the case of fish canned for export. The fact that Canada's export problem is latterly viewed as one of maintaining markets for heavy industries including automobile manufacture should not be overlooked. The shrinkage in the agricultural surplus is both desired and accepted in Canada because the European markets after the war will not be a permanent market for Canadian food exports whereas Canadian automobiles might command a large market as occupied Europe's motor plants have practically disappeared owing to the air raids. Canadian help may more often take the form of agricultural machinery, canned goods and seed. The scope for such exports in India is extremely limited. It is therefore wise to restrain hopes of large food imports across the Atlantic though the German submarine peril has vanished. A point that requires notice is that emphasis may be placed on minerals and metals in the future. Industrial progress in wartime demands not only progress in respect of petroleum (production in Alberta fell in 1943) but restoration of the export trade in precious metals. The drop in non-ferrous metals output last year suggests that steps would be taken to rectify that even before the war ends so as to promote more than a degree of self-sufficiency. The main changes produced by the war for example, the reduced importance of food and pulp and paper in the export trade are going to influence the quantum and direction of trade. The substantial decrease in Indian imports from Canada in 1943-44 certainly justifies the forecast that the source of food imports must be Australia or Argentina.

Marketing In India

The economic progress of a country depends greatly upon the success of its marketing organisation. Linking productive activities with the general consumers marketing discharges a vital role in national and international economies. Advance in marketing facilities usually results in greater production on the one hand and creation of new demands on the other. It is not an accident that the commercially advanced countries spend heavily on marketing organisations while undeveloped countries are devoid of skilful salesmanship. The public in India has not yet realised how far agricultural and industrial stagnation in this country is due to absence of adequate facilities for efficient marketing. Lack of roads, absence of credit facilities and the general ignorance of the ryots have arrested progress in tillage and contributed to the reduction in the purchasing power of the cultivators. Avaricious middlemen have sponged away the meagre income of the tiller and thus incentive for agricultural progress has been weakened. India's trade commissioners have uttered the warning that unless Indian exporters learn the art of selling better and grade their stuff foreign competitors would capture valuable markets almost permanently. The need to study all aspects of marketing is indeed very great and students of economics and post-war planners should be specially interested in knowing all about the present inefficiency of India's marketing organisations and the immediate needs of the future. Mr. K. L. Govil's "Marketing in India" (Gautam Bros. & Co., Ltd., Cawnpore, Rs. 7) would be an excellent guide in this respect. The author has culled all available information on the existing practices of marketing found in the Reports of the Agricultural Marketing Adviser and other sources. He has explained the principles of marketing and salesmanship and has brought out in detail the disabilities of the primary producers. Naturally merits of co-operative organisation have come in for due emphasis. Full particulars are given regarding the marketing practices concerned with wheat, cotton, jute and rice. An excellent chapter explaining market terminology adds to the usefulness of the publication. The nature and role of stock exchanges in marketing securities, etc., are fully explained in a separate chapter for the use of students and laymen alike. The book is a very valuable addition to the

THROUGH VICTORY ... TO FREEDOM

AAA 1818

THE JUPITER GENERAL INSURANCE CO., LTD.

SILVER JUBILEE BONUS TO SHAREHOLDERS CHAIRMAN'S SURVEY OF A SUCCESSFUL YEAR

The Annual General Meeting of the shareholders of the Jupiter General Insurance Co., Ltd., was held at the Head Office, Imperial Bank Buildings, Bank Street, Fort, Bombay, on 31st July, 1944, with Sheth Mathuradas Dwarakadas, the Chairman, in the chair. Addressing the meeting, Sheth Mathuradas Dwarakadas said:—

Gentlemen,

The Report and Accounts of the Company have been in your hands for some time, and with your permission I shall take them as read.

The premium income in the Fire Department amounted to Rs. 20,24,922. This figure shows an increase of Rs. 5,19,586 or 34.51% as compared with the premium income for the year 1942. The claims paid and outstanding together with commission and expenses of management amounted to 62.45% of the premium income, as against 75.50% for the year 1942. The underwriting profit of the Department without taking into account interest, dividends and rent credited to the account is Rs. 5,52,416 equivalent to 27.28% of the premium income for the year, against 17.83% for the year 1942. You will notice that in view of the good results shown, the Company has been able not only to provide for the required increase in reserve for unexpired risks necessitated by a substantial expansion in the premium income of the Department, but the additional reserve has been further augumented so that the Fire Fund now stands at Rs. 13,16,198 or is 65% of the premium income for the year. After making all these adjustments, a sum of Rs. 3,90,180 has been transferred to the Profit and Loss Account.

In the Marine Department, the net premium amounted to Rs. 7,42,292, as against Rs. 7,24,672 in the year 1942. The claims admitted and amounts reserved for claims together with the expenses of management amounted to 52.77% of the premium income, as against 43.08% for the year 1942. The increase in this percentage for the year 1943 is mostly due to an increase in the claims which is 32.54% for 1943, as against 23.57% in 1942, owing to present war conditions. However, in spite this increase the claim experience should be considered as satisfactory.

This year the Marine Revenue Account has been prepared in accordance with the amended provisions of Form F. of the Insurance Act. We have written off a sum of Rs. 1,70,266 being the major portion of the amount to be recovered from firms situated in enemy occupied territories. We have increased the Marine Fund from Rs. 9,96,976 to Rs. 11,13,438, which is 150% of the premium income for the year 1943, as against 137.57% for the year 1942, and thereafter transferred an amount of Rs. 85,961 to the Profit and Loss Account.

The premium income in the Miscellaneous Department showed a substantial increase from Rs. 1,71,904 in 1942 to Rs. 2,55,068 in 1943. The increase in the premium income has been due both to the development of direct and reinsurance business. The losses, commission and expenses of management amounted to 57.22% in 1943, as against 72.59% in the previous year. The Miscellaneous Fund has been increased to Rs. 1,75,997 or 69% of the premium income of 1943, as against Rs. 1,20,000 or 69.80% in 1942.

STEADY INCREASE IN LIFE BUSINESS

It is happy augury that in the Silver Jubilee year of the Company the total Life business completed exceeded Rupees One Crore. The Company issued 3,674 policies for a total amount of Rs. 1,11,08,658 (less reinsurances of Rs. 3,04,500), the average sum assured per policy being Rs. 3,024. The net premium receivable on the new business amounted to Rs. 6,46,730, in addition to single premiums amounting to Rs. 2,52,404. The total premium income of the Department, excluding reinsurance premiums, amounted to Rs. 17,30,857, which shows an increase of Rs. 8,35,873 over the premium income of 1942. Claims by death amounted to Rs. 1,41,464, as against Rs. 1,08,495 in the previous year, and claims by maturity amounted to Rs. 91,432/- as against Rs. 27,994 during the previous year. After meeting claims, commissions, expenses of management, surrenders, etc., out of the total income, there remained a credit balance of Rs. 8,87,416, which increased the Life Fund from Rs. 28,49,476 to Rs. 37,36,892.

The net interest income was Rs. 1,29,619, against Rs. 1,04,196 in 1942, and the net rate of interest earned after allowances for income-tax deducted at source was maintained at 4.01%, which was the same last year.

The lapse ratio, viz., the ratio of lapses to the mean business in force during the year works out at 7.2%, as against 7.6% in the previous year. The Mortality experience continues to show the same favourable results reported in the last General Meeting.

Renewal expense ratio, calculated in accordance with Insurance Rules 25 (b) Insurance Act 1938, has been reduced to 13.61%. This however has been calculated after including some short term policies issued during the year under report, but it would be interesting to note that after excluding such policies, renewal expense ratio calculated according to Insurance Rules 25(b) will be 20.3%, against 25.95% for the year 1942. It will thus be observed that the Management has made considerable efforts to bring down the expenses of the Department in spite of the expansion of the business.

As reported during the last year's General Meeting, the Board of Directors propose to call a meeting of the life policy-holders of the Company some time during the year, as provided for in the Insurance Rules.

Our investments, both in the Life and General Departments, have been shown at book value. The market value of these investments exceed the book value by Rs. 3,70,207 in the Life Department and by Rs. 4,60,961 in the General Department. Due to shortage of paper we have omitted the Schedule of Investments of the General and Life Departments from the Balance Sheet.

As a result of this year's transactions, the total of the various Funds of the Company, which stood at Rs. 77,76,746 in 1942 increased to Rs. 92,26,567 at the end of 1943.

One important point to which I would like to refer before concluding my comments on the Balance Sheet is that, as referred to in the earlier part of my speech, during the year under review we have written off a sum of Rs. 1,67,191 out of the balance due by Treaty Offices situated in enemy countries thereby consolidating our position.

I would like to refer to the problem of taxation. You will have noticed from the Directors' Report that in the General Department we have now made a provision for Taxation reserve amounting to Rs. 4,50,000 for payment of taxes. 'During the current year, we have received assessment orders for the years 1941 and 1942, but the whole question is still in abeyance owing to the present negotiations in regard to the extent to which additional reserves should be taxed. Further the question of finally fixing the standard profit for the purpose of E. P. T. has not yet been settled.

RECENT BOMBAY EXPLOSION

As you are aware, we are one of the many compares who have issued policies covering loss or damage to properties against fire in the areas affected by the recent explosion in Bombay. The Government of India have now assumed full resposibility for loss or damage to property which, at the time of occurrence, was subject of a fire policy. In view of the legal opinion that fire insurance policies exclude such loss, lengthy negotiations took place between the insurance companies and the Government of India, as a result of which it was finally decided that the Government would pay 100% of such claims and the companies would contribute to the Government sums equal to 12½% of such amounts. As regards Marine claims, the Government will contribute to the companies up to 40% of the claims paid under such policies, while their contribution towards claims paid under policies issued by the Accident Department will be 50%. Our share of the total claims due to the explosion will be about Rs. 2,50,000. We have contributed a sum of Rs. 5,100 to the Sheriff's Fund for the relief of the victims affected in the explosion, and I am sure you will approve the Board's action.

CHANGES IN THE DIRECTORATE

During the current year the Hon'ble Mr. M. N. Dalal, Rai Bahadur B. P. Srivastava and Mr. Tulsidas Gordhandas Khattau were nominated to the Board of Directors of your Company in place of Mr. Dharamsey Mulraj Khatau, Mr. Ramdas Kilachand and Mr. Chatrabhuj Gordhandas. I take this opportunity of placing on record our appreciation of the services rendered by Mr. Dharamsey Mulraj Khatau and Mr. Ramdas Kilachand, who did not think it fit to continue longer because of their interest in another company. Mr. Chatrabhuj Gordhandas, who was the Chairman of the Company since last year and who was connected with the institution since its inception, resigned as he expressed a desire to retire from business. The Board accepted his resignation with great regret. Mr. Chatrabhuj Gordhandas has been placing all his business with us, which will continue hereafter, and the Board wish to extend their grateful thanks for his continued support.

I would take this opportunity to convey our appreciation of the results of the work done by those connected with the Company, both at Head Office and Branches, and all our Agents, Brokers, and Clients, both in India and abroad, for the valued support they have continued to give to the Company. As you are aware, the Company completed the 25th year of its existence and the 19th day of May last marked its Silver Jubilee. During this period, it has passed through many vicissitudes usually experienced by young insurance companies, and you find today that it has become the second biggest composite insurance company in India. To mark the occasion, the Directors paid the staff two months' staff bonus and one month's 'Silver Jubilee' bonus. The Directors have also recommended a dividend of As. 14/-, and a special Silver Jubilee bonus of As. 4/-, per Ordinary share.

Now gentlemen, I beg to move:—

That the Directors' Report, Audited Revenue accounts, Profit and Loss Account and the Balance Sheet for the year ended 31st December 1943, which have been circulated to the shareholders, be and are hereby approved and adopted.

HEAD OFFICE:—IMPERIAL BANK BUILDINGS, BANK STREET, FORT, BOMBAY

DIRECTORS' REPORT

The Directors have pleasure in submitting their Report and Audited Accounts of the Company for the twelve months ended 31st December, 1943.

FIRE DEPARTMENT.—The net premium after deducting reinsurances amounted to Rs. 20,24,922/-. The losses (Claims paid and outstanding) came to Rs. 3,77,043/- which works out at 18.62 per cent of the premium income. The expenses of management and taxes amounted to Rs. 8,87,629/- which comes to 43.8 per cent of the premium income. The Fire Fund has been kept at Rs. 13,16,198/- equal to 65.00 per cent of the premium income. A sum of Rs. 3,90,180/- has been transferred to the Profit and Loss Account.

MARINE DEPARTMENT:—The net premium afer deduction of reinsurances. returns, discounts and commissions paid and recovered amounted to Rs. 7,42,292/-. The sums paid in connection with claims admitted and the amounts reserved for claims intimated, but awaiting particulars, and deducting from these the amount of estimated claims at the end of the previous year, make a net total of Rs. 2,41,758/- which is 32.54 per cent of the premium income. The expense of management amounted to Rs. 1,49,966/- which comes to 20.20 per cent of the premium income. The Marine Fund has been kept at Rs. 11,13,438/- which is equal to 150.00 per cent of the premium income. A sum of Rs. 85.961/- has been transferred to the Profit and Loss account.

MISCELLANEOUS DEPARTMENT:—The net premium income after deducting reinsurances amounted to Rs. 2,55,068/-. The losses (claims paid and outstanding) came to Rs. 76,922/-, which is 30.15 per cent of the premium income. The expenses of management including commission amounted to Rs. 69,003/- which works out at 27.06 per cent of the premium income. The Miscellaneous Fund has been kept at Rs. 1,75,997/- equal to 69.00 per cent of the premium income. A sum of Rs. 55,006/- has been transferred to the Profit and Loss Account.

LIFE DEPARTMENT:—During the year under report 4,290 proposals for assuring an aggregate sum of Rs. 1,32,17,382/- were received by us. Out of these and those awaiting completion as at 31st December 1942, 3,674 proposals have resulted into policies, and the remainder were either rejected, withdrawn, postponed or awaiting completion. The total business completed during the year amounted to Rs. 1,11,08,658/- (less reinsurances Rs. 3,04,500) the annual premium receivable thereon being Rs. 6,65,478/- (less reinsurances Rs. 18,748/-). In addition single premiums amounting to Rs. 2.52.404/- were received. During the year, claims by death for Rs. 1,41,464/- and Maturity for Rs. 91432/- (including Bonuses) were received. The total amount of claims and surrenders during the year amounted to Rs. 3,49,544/- including Bonuses.

Acual premiums received after deducting reinsurance premiums, amounted to Rs. 17,30,857/- Interest, Fees etc., amounted to Rs. 2,00,225/-. Claims commissions, expenses of management, surrenders etc., absorbed a sum of Rs. 10,43,666/- and there remained a credit balance of Rs. 8,87,416/-. Adding to this the sum of Rs. 28,49,476/- being the Life Fund at the commencement of the year. Life Fund at the end of the year stood at Rs. 37,36,892/-. The total assurances in force at the end of the year amounted to Rs. 2.80,30,245/-.

The gross rate of interest earned on the mean Life Assurance Fund during the year under review was 4.65 per cent while the net yield was 4.01 per cent.

PROFIT AND LOSS ACCOUNT AND PROFIT AND LOSS APPROPRIATION ACCOUNT:—Interest, Transfer Fees and Gain on sale of Securities etc., amounted to Rs. 2.78.258/- and a sum of Rs. 5.31,147/- has been transferred from Fire, Marine and Miscellaneous Revenue accounts. After adjusting loss on sale of Securities and deducting expenses etc., there remains a sum of Rs. 6,22,956/- which is carried to the Profit and Loss Appropriation Account. To this being added Rs. 10,285/- carried forward from last year's account there remains a sum of Rs. 6.33,241/- which the Directors recommend to be disposed off as follows:—

	Rs.
Taxation Reserve ..	4,50,000
To pay 25th Dividend on Preference Shares for the year ended 31st December 1943 free of Income-tax	32,478
To pay 14th Dividend on ordinary shares at 14 annas per share free of Income-tax	1,09,371
To pay a bonus on ordinary shares at 4 annas per share free of Income tax	31,249
To carry forward to next year's account	10,143
Rs.	6,33,241

The Funds of the Company stand as follows:

	Rs.
Capital	23,74,610
Application money on forfeited shares	190
General Reserve Fund ..	2,91,548
Investment Reserve ..	1,40,000
Building Depreciation Reserve ..	32,232
Fire Fund	13,16,198
Marine Fund	11,13,438
Miscellaneous Fund	1,75,997
Life Fund	37,36,892
Reserve for Bad & Doubtful Debts	45,462
Rs.	92,26,567

INVESTMENTS:—The American Exchange for the year under report, both for the value of Securities and interest income, has been taken at the figure of Rs. 272/- to 100 dollars and the Sterling Exchange at 1/6. It may also be menioned here that the official American Exchange rate on 31st December 1943 was Rs. 326½ to $ 100.

The Securities both Indian and American have all been shown at Book Value. The Market Value of Investments amounts to Rs. 98.04.146/- and the same is Rs. 8,31,168/- over the Book Value as on 31st December 1943.

DIRECTORS:—Mr. Chaturbhuj Gordhandas, Mr. Dharamsey Mulraj Khatau and Mr. Ramdas Kilachand resigned their seats on the Board of Directors in March 1944. The Board of Directors since then invited the Hon'ble Mr. Manockji Nadirshaw Dalal, Rai Bahadur B. P. Srivastava and Mr. Tulsidas Gordhandas Khattau to join the Board and these gentlemen accepted their offices as Directors.

In accordance with Article 99 of the Articles of Association of the Coimpany, the Hon'ble Mr. M. N. Dalal, Rai Bahadur B. P. Srivastava and Mr. Tulsidas Gordhandas Khattau now vacate their offices and being eligible offer themselves for re-election.

In accordance with Article 115 of the Articles of Association of the Company, Sir Jehangir B. Boman-Behram and Mr. Ardeshir H. Bhiwandiwalla retire this year, and being eligible offer themselves for re-election.

AUDITORS:—Messrs. Batliboi and Purohit, who have audited the accounts now submitted retire and offer themselves for re-election for the ensuing year.

The Directors take this opportunity of thanking all the Officers and Staff. Branch Managers, Agents and Brokers, both in India and abroad, for their co-operation.

MATHURADAS DWARKADAS,
Chairman.

Bombay, 1st July, 1944.

meagre literature on Indian marketing problems.

Benefit Extended

Employees of I. C. I.'s Dyes Department number about 698 as compared with 100 before the war. Acquisition of Chemdyes' factory at Sewri in 1940 accounts for the expansion based on additions to factory premises etc. Employees are on fixed scales of pay supplemented by dearness allowances but they asked in November 1943 for the extension of provident fund benefits. Adjudication under Defence Rule 81A followed in respect of three separate claims made by employees. The award of Mr. Wassodew enforced by order of the Bombay Government is published in the Bombay Labour Gazette. The sickness rate in the Dyes Department is low on account of the precautions in force despite the claim made by workers that the work is hazardous. But the adjudicator decided on the extension of contributory provident fund to low-paid employees over and above the special bonus paid by the company in accordance with the Board's decision in London. Rules for a provident fund for all employees based on a contribution (the compulsory minimum being 3 percent) were framed during the dispute. The scheme takes effect from March 1, 1944. The award provides also for the addition of temporary employees with one year's approved service to the permanent staff, for a minimum wage of Rs. 30 per month and regular annual increments of Rs. 1-2-0 and for a rule as to 14 days' notice in case of discharge or dismissal, the conditions for dismissal being duly specified. In the arbitrator's opinion the provident fund is meant to secure a permanent and stable labour force in office and factory alike.

Food for the Army

In the review of India's war effort in the fourth year of war mention is made of the canning progress and the development of dehydration. A special mission from Britain was invited to advise on the further development but the record is enough. Though canned goods are imported, production of jams and marmalade locally has increased. A canning factory for the preserving of peaches, apricots, pears and plums was started during the year and high quality was attained. The production of the factory in this season is expected to increase. Successful production of canned tomatoes has also been reported. The scarcity of tinplate, however, limits progress and dehydration to save both freight and packing material therefore remains important. Vegetables and fruits have been dehydrated on a large scale. There began also the dehydration of goat's meat for the Army. A satisfactory product for the Defence Services was secured and two factories turning out meat are to be supplemented by eight factories. Dehydrated fish also made its appearance and establishment of two factories is reported; one is in full production with an output of one ton of smoked dried fish per day. The production of biscuits, shakarpara and nut briquettes increased. These items form the basis of the present Field Service ration. Indigenous production of tinned cheese made a successful start, and the quality of the cheese drawn from the factory compares favourably with that of imported cheese. Factories for the production of rennet, yeast extract and egg powder have been set up and the first two are being produced on a commercial scale. While the scarcity of certain foodstuffs has encouraged independent production by the Army, the most that can be hoped for is the diversion of imports from abroad for civilian consumption. Price control in

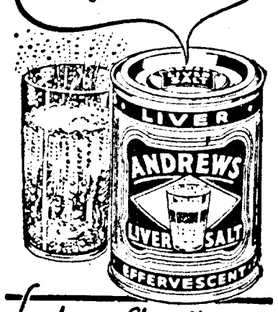
Clive Street Gossip

If peace comes to-morrow, what will happen in this market or that or the other? What will be the outlook for Indian industries? Can it be that some industries will be favourably affected and others adversely affected? If so, what are the industries with favourable prospects and what are the industries with unfavourable prospects? How will the share markets behave? What is the future giltedged outlook like? Will Governments be able to borrow as cheaply in the post-war period as they have been able to borrow during the war? Or will the relaxation of the control of the capital market raise the borrowing rate of the Government and thus cause a slump in giltedged securities? What about war taxation? Will the heavy war imposts be reduced or removed? How will the various commodity markets behave? What will be the state of employment? What will be the course of post-war prices?



These are some of the conundrums that are being set me in the last few weeks. Generally speaking, the average person has a more or less definite conviction that a slump in the post-war period is unavoidable; and, while he addresses these and similar questions to you and me and everybody, he has, so to say, already answered the questions himself. Posers like these are inspired by a vague curiosity and, oftentimes, put forward mainly with a view to secure confirmation for the answers already established in one's mind. In the discussions which I have been drawn into while tackling these questions, I have been struck by a circumstance which has a universal validity. There is, everywhere and in everyone's mind, a sense of the inevitability, in the post-war years, of a tremendous landslide in all kinds of economic activity. Everyone is expecting that prices of every share and every commodity will collapse the moment war comes to an end, that business and industrial regression will be as pronounced in the post-war years as industrial expansion has been in strident style during the war. Post-war slump may be said to be the universal popular psychology. This is is true not only of the average Indian but of people in most countries. The result is that, with increasing confidence in the early termination of war, businessmen and speculators all over the world are becoming inclined to take a despondent view of the future. It is in this setting that I have to undertake the solving of the conundrums that are addressed to me with urgent request for clarification.

In the past many months, I have been giving careful and constant thought toward gauging the kind of post-war world we may expect; and I consider this question to be of such vital and far-reaching significance that I propose to deal, in a series of articles, with the various aspects of the post-war economic world and post-war economic activities. At the commencement of hostilities in 1939, "Indian Finance" ran two series of articles on War Finance and War Industries. At the time when our views on these two problems were presented in the early stages of the war, we could not help feeling that most of our ideas were opposed to the general trend of opinion not only in lay circles but in authoritative circles. In the closing months of 1939, we came to the conviction that World War II would be different in every way from every other war in history. Starting from this premise, we constructed the pattern of war finance and war industries on lines totally dissimilar to the patterns of previous wars. Among the more important features we forecast at the time were the perfection of scientific control over money, trade, exchange and industry; cheaper and cheaper money; firmer and firmer giltedged; 3 per cent as the highest rate for defence loans; transformation of India from a debtor to a creditor country; and increasing strategic importance of Indian industry and Indian economy.

In this context, let me recite an episode to illustrate the vast gulf that separated the ideas and views of "Indian Finance" from the ideas and views generally prevalent in the country. Soon after the declaration of war in September 1939, there was a terrific crash in the giltedged market. 3½ per cent Rupee Paper suffered a catastrophic fall from over Rs. 96 to below Rs. 82. It fell to the lot of "Indian Finance" to castigate the financial authorities for their inaction while this steep decline occurred. We suggested that there was no justification for the panicky conditions then prevailing in the giltedged market; and we had no doubt that, if only the Government and the Reserve Bank had initiated right open market operations at the right time and in the right style, the debacle in giltedged would not have taken place. A few weeks thereafter, I was present at the St. Andrews dinner and happened to meet one of the architects of official policy. The conversation drifted to the war reactions in the giltedged market; and I again aired my complaint about the total lack of understanding and courage in Government's giltedged policy. My friend was fair to admit that a positive policy on the part of the Government would definitely have prevented the heavy landslide. He added: "You have been a correct prophet so far. 3½ per cent paper has now come up to Rs. 88. But, for Heaven's sake, do not try to push it up further". I retorted that it was not I that pushed up the securities market; it was what may be described as the natural forces—the natural forces in this war were 100 per cent favourable to giltedged. My explanation was not altogether convincing to my friend whose parting remark was that, if I believed that 3½ per cent paper might go higher than Rs. 90, I would be over-shooting my mark as a prophet. A good many other friends charged me with wishful thinking when I prophesied the miracle of India becoming a creditor country in the international sphere.

In the same way, in forecasting the shape of the post-war economic world, I feel that I shall put forward views and ideas which will not be shared by most people in this country. As I said, I propose to make post-war economy my main theme for the next few instalments of

VICTORY LOAN 1957
3%
NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

gossip; and I have to state my case and conclusions with some degree of thoroughness as they run counter to popularly held views on this question. As this series may run for a few weeks, there is urgency for my adopting the unusual procedure of stating at the beginning the conclusions that I shall come to at the end. Urgency in the sense that, by the look of things and by the observations of those in authority, peace may come this year, this month, this week. The well-informed "News Week" of America, in its air-mail edition of July 17, has this characteristic sentence: "The last 100 days of the war with Germany can begin to-day". Ernest K. Lindley makes a war analysis of the next 100 days and says: "The objective of the Allied and Russian High Command is to defeat Germany before snow flies again. With good fortune, victory may come as early as mid-October". While the plan of this series will embrace the points of contrast between this war and previous wars, the points of contrast between the post-war period on the present occasion and previous post-war periods, an outline of the post-war world, and, in the light of such a post-war world, examination of Indian economy, Indian money market, Indian industries and Indian economic conditions and developments, I shall, in to-day's gossip, indicate briefly my main conclusions.

1. The believers in post-war slump are guided by the thought that history repeats itself. Previous experience of wars has shown that, while business activity is stimulated by war conditions, post-war conditions induce and accentuate business depression. Neither is the present war like any previous wars nor will the post-war period be like any of its predecessors. For one thing, monetary technique and the technique in regard to various economic controls have, in gradual stages, reached perfection. Through these controls and through the adoption of the correct technique, the State is in a position now to make its policies fully effective. The policy of all Governments is to maintain the highest state of employment and to order economic management in such a way as to prevent depression. Post-war Governments have thus a clear perception of their policy and the knowledge and machinery to execute it. The words "slump", "depression", and "unemployment" may be said to have been eradicated from the dictionary.

2. A careful study has been made of the causes and circumstances which caused slumps after the previous wars. On the basis of this study, plans have been made to remove such causes and circumstances and to inaugurate conditions which will maintain full employment and production.

3. It was the chaotic disposal of war surplus stores that was one of the main causes of post-war slumps. Much thinking and planning have taken place with regard to the orderly disposal of surplus stores after this war. It may be taken as certain that there will be no dumping of these stores in a way that will cause a break in prices.

4. This war has wrought enormous havoc to buildings and factories. Over vast areas of the world, enormous rebuilding programmes have to be taken on hand immediately the war is over. The safest prophecy to make is that the post-war period will witness the biggest building boom known in history. As students of economics know, a building boom is the starting point of general booming conditions in business.

5. It is true that the large expenditures incurred by governments on account of the war are responsible for the greatly increased purchasing power in the hands of the population. But most of this purchasing power could not find a vent owing to schemes of control and rationing. A large proportion of the war-created purchasing power has thus been kept in reserve. With the Government's expenditure on war requirements drying up, its place will be taken by the release of the postponed purchasing power.

6. State control and regulation have come to stay. Cheap money is now a settled permanent policy. Cheap money will be the fountain source of accelerated business activity in every sphere.

7. For some months after the conclusion of peace, there will be a big spurt in the demand for consumer goods for the simple reason that consumer goods have not been available in adequate quantities for a number of years. The apprehension in the minds of people in this regard is that, when the expanded industries change over from war production to peacetime production, there will be a surfeit of con-

(FROM OUR CORRESPONDENT)

NEW DELHI, August 7.

People here seem to be getting bored stiff with the eternal talk of political deadlock. All the past four weeks of offers, proposals and settlement plans have seen the hopes of a triangular compromise recede farther and farther. The news of the Viceroy's rejection of a second request from Mahatma Gandhi for an interview, though officially unconfirmed, is believed to be true. The Government's negative attitude has made it almost clear that even if Mahatma Gandhi and Mr. Jinnah arrive at an understanding—which itself is a remote prospect—a fundamental change in the Government's outlook is most unlikely. Anyway there will not be any new development till the Congress and League leaders have met and discussed things. Recent news from Britain shows concerted attempts by some progressive groups (apart from the organised political parties) to mobilize public opinion in favour of immediate independence for this country. But it is realised here that British public opinion will not be able to assert itself on this issue before the end of the war.

* * * *

Post-war planning has again come into the news with the assumption of the charge of the new Department of Planning and Development by Sir Ardeshir Dalal last week. All plans emanating from the present Executive set up at the Centre will be suspect. First of all Sir Ardeshir will have to reconcile the various plans already prepared by central experts including the Khareghat plan for agricultural development, the Sargent plan for universal education and the ambitious road programme with the objectives of the Bombay plan with which he has already identified himself. The recent comment in financial and industrial circles in Britain on the plan has demonstrated the unjustified fear caused among British vested interests at the prospect of a rapid industrialisation of this country. Even the visit of Indian industrialists to Britain is being discouraged on the ground that very few British firms are in a position to talk confidently about production in the near future. The U. S. attitude on the sterling balances issue at the Monetary Conference was definitely disappointing. Americans hope that the agricultural and industrial development of India and China would provide a substantial market for U.S. capital goods in the years immediately after the war and from other exports, as the buying power of these two countries rises. It is realised here that British manufacturers alone will not be in a position to supply this country all the capital goods it will need after the war and that India may have to look to U.S.A. Russia or Germany for a large proportion of her needs. This country has already accumulated a 4,000 million dollar trade balance with England and which is at present in blocked sterling. In the interests of future Indo-American trade it is essential that India should be enabled to utilise this huge dollar balance for purchases in U.S.A. Till now even the financial implications of the Government's plans have not been fully worked out. All the broad financial issues have to be decided before the plans are framed on workable basis.

* * * *

The Famine Enquiry Commission has already—and with a surprising quickness unusual in such investigations—examined the officers of the Food Department, including Mr. Somerset Butler, Mr. Kinly and Mr. Chinstie. Sir Azizul Haque, the Food Member, General Hance, Director-General, Indian Medical Service and Mr. Buch, Director of Civil Supplies, Punjab, also gave evidence. As Sir John Woodhead had already explained to a group of rather shocked press representatives, the proceedings were held in camera. Only the briefest (a few lines) and most cryptic summary of the entire official evidence has been issued to the public all the vital and controversial details having been carefully weeded out. Thus Mr. Butler, who served in Bengal during 1942, is reported to have given his experience of the practical working of the denial policy which to all accounts aggravated last year's tragedy. The public is not told what Mr. Butler said and is therefore in no position to contradict any wrong facts or statements given or made. As the press feared, the whole purpose of the enquiry will be lost by a virtual ban on discussion of the evidence in public. The motive as generally feared is to shield the guilty officers who did not foresee the calamity and took no effective measures to check the disaster when it came. Sir John's explanation for the hush- policy that "it would be most unfortunate if the evidence given before us should lead to an atmosphere of controversy, prejudicial to our work and to the manner in which other witnesses give their evidence before us" is most unconvincing. The commission has invited memoranda from individuals as well as public bodies. Its terms of reference include the investigation of the possibilities of improving supply and distribution arrangements, provision of emergent medical relief, quality and yield of food crops and the diet of the people and, above all, matters relating to the prevention of famine.

* * * *

The Standing Finance Committee which met last week approved of a 7 crores subvention to Bengal (compared to last year's 3 crores), a Rs. 67 lakhs subvention to the U. P. Government to meet the cost of stabilising wheat prices in the province, a 4 crore programme to provide accommodation to Government employees in Delhi and the expenditure involved in creating several new posts including a Controller-General of Emigration and a High Commissioner for Australia. It is noted here that it is only recently (with all the Congress legislators absent) that the Government have started bringing big schemes involving matters of high policy before the committee to seek its approval. The procedure has become an easy way to avoid the trouble of getting the legislature's approval. It is felt here that such a matter as subvention to Bengal should be discussed in the Assembly and Government decision based on the views expressed there. The present procedure is highly arbitrary.

* * * *

Ambitious post-war plans for Indian railways involving an expenditure of 319 crores and including provision of new amenities for third class passengers, extension of railway services (on a competitive basis) to other transport services like road and air, manufacture of locomotives on a bigger scale and opening of new lines in undeveloped areas were explained by Sir Lakshmipathi Misra, member of the Railway Board. Sir Lakshmipathi wanted that as long as other transport services were not state-owned the railways should be allowed to compete with them. He visualised the evolution of a new rates' structure in accordance with post-war needs, reduction in number of classes in passenger traffic and a general improvement in goods, parcel and passenger traffic.

HILL BIRD

(*Continued from page 234*)

respect of certain familiar canned goods has appeared and a moderate improvement in imports of provision and oilman stores since September last is the main factor in the drop in prices.

A Chemical Company

The offer of 15,000 ordinary shares of Rs. 50 each in N. K. Chemical Industries Ltd. is directly due to the progress of the enterprise since July 1943, the site for construction of the factory near Jubbulpore having been obtained with an assurance of materials. The company intends to produce sulphuric acid, copper sulphate, sulphate of alumina and other essential chemicals of mineral origin. The juxtaposition of chemical and mining interests is both novel and important for it readily suggests that the true line of development has been reached in this case. Estimates of cost and profits appearing in the prospectus convey an assurance of a very satisfactory return to shareholders. Since the company's objects are identifiable with the public interest or rather the interests of a majority of Indian industries the addition to capital for carrying out the objects would give investors the opportunity to help the country even as they share in the prospect. Consumption of Indian-made chemicals is growing continuously and the company which commands expert technical assistance has, according to the prospectus, limited the preliminary expenses to a minimum while reserving funds for the laboratory and working capital.

Indo-Commercial Bank Ltd.

The promise of dividends on all classes of shares has been fulfilled in the case of the Indo-Commercial Bank which is paying an interim of 6 per cent free of tax. In the balancesheet as on June 30 appearing here the movements have been such as to support the growth of profits; and a considerable addition to General Reserve along with an increase in the sum carried forward marks the complete return of prosperity. Since the Bank's total deposits are over Rs. 2 crores denoting an increase of Rs. 75 lakhs in a year the change is easily measured. A fully liquid position is again indicated in the balancesheet as the cash balances exceed Rs. 69¼ lakhs. The fact that there has been more than proportionate growth of Advances these years accords with expectations of enlarged resources and improved profits. The further increase under Investments is another consequence of the addition to the Indo-Commercial Bank's resources. In the Madras Presidency the Bank has more than a score of branch offices and the banking outlook there may be determined with precision on the basis of results reported by all Indian jointstock banks including the Indo-Commercial.

Gaya Sugar New Issue

The offer at premium of shares in the Gaya Sugar Mills Limited, is connected with the plan to erect a second factory in South Bihar. There is adequate precedent for the extension as investors are aware. The J. N. group which runs the Gaya Mills have completed essential arrangements, and the prospectus appearing today is of special interest, for it outlines the Indian sugar industry's post-war prospects. Since Gaya Sugar shares officially listed in Calcutta carry a yearly dividend of 8 per cent free of tax, the premium asked for is small. The earnings (and dividend record too) is above the average, and the latest balance-sheet indicates that future policy will be correct in detail. There has been of late keen demand for sugar shares on a fresh estimate of chances for the investor, so that Gaya sugar shares should well repay attention.

ONE, THREE TIMES DAILY

THE patient of to-day takes his medicine in tablet or capsule. Gone are the unpleasant draughts and decoctions with which his grandparents dosed his father and mother. This together with the fact that healing specifics have now a far wider range and efficacy, is largely the work of the organic chemist and those associated with him. From earliest times man has known that remedies for many of his ailments were to be found in the roots, bark, leaves and berries of trees and plants. The curative principles of these became the subject of study and experiment by the alchemist, being mixed with searches for the elixir of life, the philosopher's stone, love-potions and poisons, much superstition and more quackery. Science recognised that these old herbal remedies were complicated mixtures in which small quantities of what mattered were swallowed together with large quantities of what did not! To the chemist fell the task first of purifying and dividing them into their constituents. Quinine (from cinchona bark), strychnine (from nux vomica seeds), morphine (from poppy capsules), cocaine (from coca leaves) and atropine (from deadly nightshade) are drugs isolated in pure form from plant sources. The chemist's second task was to find out the exact nature of each drug, and then to make or synthesise them in the laboratory, modifying them and improving them in collaboration with the pharmacologist. His third task was to chart and develop the enormous field of new healing drugs opened up by organic chemical research. This is the great field in which he is working to-day. The organic chemist is to-day the armourer of the medical profession, and through the pharmacist continues to provide our doctors with more and better weapons with which to fight disease.

(FROM OUR CORRESPONDENT)

KARACHI, Aug. 6.

Although Sind ministerial storm has blown over as a result of timely intervention of Mr. M. A. Jinnah, parliamentary circles still discuss the prospects of a reshuffling of the Ghulam Hussain cabinet. Sir Ghulam Hussain Hidayatulla, Premier, who had a prolonged interview with Mr. Jinnah on the Sind situation at Lahore last week, had taken with him a prospective ministerial candidate. Mir Ghulam Ali, leader of the Mir group in the Sind Assembly, who is expected to replace Khan Bahadur M. A. Khuhro, Revenue Minister, against whom, it may be recalled, there was a no-confidence motion during the recent session of the Assembly. The motion was later withdrawn, but opinion in the League circles is strong on the necessity of certain changes in the ministry for efficiency and purification of the administration.

In this conection, it is interesting to note that in the forthcoming Governors' Conference at New Delhi, Sir Hugh Dow, Sind Governer, will have discussions with the Viceroy on the complicated political developments in Sind.

The most important of the subject to be discussed will be the Land Alienation Bill which was recently passed in the Sind Assembly in the face of universal Hindu opposition with the two Hindu ministers of the cabinet themselves voting against the bill. Apart from the fact that such a step reduced collective ministerial responsibility to a farce, the Governor, who is entrusted with the special responsibility of protecting the minority interests, has been placed in a dilemma and naturally the Sind Governor would consult the Viceroy as to the desirability or otherwise of giving his assent to the bill.

It is also reliably understood that the Governor is contemplating an enquiry into the grave charges of corruption made in the floor of the Assembly against the ministry in general, and one minister in particular, by the leader of the opposition and others. Leaguers also support the Opposition on this issue and the Governor has no other alternative but to persuade the ministers to vindicate their integrity and prestige and the purity of their administration by agreeing to such an enquiry. Interesting developments are, therefore, in store in Sind politics.

The Department of Labour in Sind is starting a family budget investigation among the working classes in Karachi. Explaining the aims and objects of the investigation, Mr. L. G. Rajwade, Director of Information and Mr. A. P. LeMesurier, Labour Commissioner, said that the experiment was a step towards collecting data which could be utilised for the compilation of working class cost of living index number for Karachi. The process was irksome and laborious and a purely socio-economic activity of the Government.

Mr. Ghiasuddin, a member of the Central Assembly and one of the four members deputed by the Government of India to tour the United States and Britain to acquaint them with India's war effort, returned to Karachi last week-end. In the course of an interview, he said that both these countries were sympathetic towards India's political aspirations. He was confident that India would gain her freedom after the war and that, by that time, political parties should compose their differences and establish unity.

The possibilities of fish industry in Sind are being actively explored by the provincial government who have recently appointed as their expert adviser Mr. M. Ramaswami Naidu of the Madras Fisheries Department on a salary of Rs. 1,000. He took charge this week and will advise the Government on commercial prospects as well as research needs.

Though the Premier made a statement in the Sind Assembly last Saturday that he would abolish the food syndicates in response to the demand from all parties in the House, enquiries made show that so far no orders have been issued to the management of the syndicates concerned. The rice syndicate alone has at present stocks worth about a crore in hand while the wheat syndicate is believed to have even larger stocks and, even if the Government decide to abolish these syndicates, it would take some months before their affairs could be wound up and some new arrangements made for purchasing the food grains on behalf of the Government.

Every educated person of this country has started thinking now to stamp out the post-war Depression. War has opend hundreds and thousands of channels of income and for the present it has very successfully solved the problem of unemployment. But now as our victory is almost at sight this foundamental national problem must be solved. The only way to save millions of our youngmen from unemployment is to build more industries. India is rapidly industrialising herself and with the help of the growing National Banks it is sure to solve this problem of the hour.

(From Our Correspondent)

MADRAS, 8th August, 1944.

Among the obstacles in the way of provincial economic development the difficulty of reconciling the rival claims of neighbouring Provinces or States is by no means the least important. If one examines the inordinate delay in the execution of some of the South Indian irrigation and hydro-electric projects it is easy to find that it is not finance so much as want of administrative co-operation of neighbouring states or provinces which often postponed the execution of urgent schemes. The Doduma Project is only the latest example which threatens to create a dead lock in inter-governmental negotiations to the detriment of economic well-being of the people. I reported a few weeks ago that the Government of Madras are now engaged in pushing several important irrigation schemes to a stage of finality but that the Madras-Jeypore agreement on Doduma Project was still in the correspondence stage and that agreement could be finalised only when Orissa is satisfied. In a press note the Madras Government have made it clear that the scheme has by no means been completed. Yet agitation is being carried on in Orissa on the score that the Madras-Jeypore agreemet is illegal, and, if given effect to, would amount to a "national calamity in as much as it will permanently impair the prospects of economic development of the province". At a public meeting jointly convened by the different groups and parties in Cuttack last week a resolution was passed protesting against the agreement, supposed to have been entered into between the Maharaja of Jeypore and the Government of Madras, proposing "to alienate in perpetuity waterfalls, waterways and lands situated in Jeypore estate within the Province of Orissa, in order that the Government of Madras may work out as their own the Doduma hydro-electric poject." A plea was also entered for the development of the project as an important item in the post-war development plan for Orissa. Strong criticism may have been the result of suspicion in some quarters but it is certainly unfair to presume that either the Maharaja of Jeypore or the Madras Government would do anything to jeopardise the abiding interests of the young province of Orissa. Agitation about the Doduma project may be an excellent issue for party purposes but does not render justice to the Orissa Government who are already taking adequate steps for safeguarding the vital interests of the people of Orissa.

The job of creating adequate machinery for handling post-war schemes for this Province has been taken up in earnest by the Madras Government. Departmental schemes and collection of data have gone on very well and the need for a co-ordinating agency has been felt for some time past. The Government have now created the post of a Secretary for Post-war Reconstruction Co-ordination and appointed Mr. D.I.R. Muir, I.C.S. Collector of Coimbatore, for the post. It is hoped that this officer would examine the existing plans, hurry up the pending ones and evolve a detailed post-war plan for Madras specifying the various important schemes to be executed immediately after the war is over.

The policy to be adopted by the Madras Government in the matter of financing existing as well as new industries is outlined in a Press communique. It is stated that the Post-war Reconstruction Committee will prepare schemes for industries which are to be wholly financed, controlled and managed by the Government and also for those industries in which the Government will take a majority of the shares but will allow private management where necessary. Schemes will also be made for important industries in which the Government will take a fraction of the shares and will also have representation on the directorate and make them available to industrialists. Sub-committees have been set up to deal with industries connected with textiles, mines, machinery and machine tools, chemicals and agriculture. Technical assistance is also promised for private enterprises.

The Budget estimates for 1944-45 presented to the Cochin Legislative Council by the Finance Member, Mr. P. V. Raphael, a few days ago mark another year of administrative success. The revenue is estimated at Rs. 218.68 lakhs and expenditure at Rs. 202.09 lakhs leaving a surplus of Rs. 16.06 lakhs. Features like mounting expenditure and swelling revenues are not peculiar to Cochin and though peak figures are indicated the people of Cochin had to pass through a year of unprecedented crisis. Expenditure on Law and Order services have gone up obviously because hungry people require greater attention and help. The budget for the year ahead indicates liberal allotments to education, irrigation and public health. The abnormal increase in Excise revenue to Rs. 42.82 lakhs,—four times the prewar figure—is an eloquent testimony to the fact that the Cochin Government is not favour of prohibition. Increase under Excise is defended, as in Mysore, on the score of anti-inflationary drive and the Finance Minister has come forward to explain that the excise policy of the Cochin Government is not an exploitation of the poorer classes. Revenue from customs and forests have shown declines and the Hill Paddy Cultivation Scheme has not yet yielded substantial revenue. Cochin has a modest post-war fund and contemplates fresh taxation to implement vital development plans after the war.

Proof Positive
OF PUBLIC CONFIDENCE
—A PROMISE FOR THE FUTURE
1934-44—10 short years in which WARDEN has established a proud record and earned an honoured place amongst the seniormost companies.
The 1943 figures are a staggering, unbeatable record of progress and growth. This remarkable increase in business is secured by a reduction of expense ratio by 7% which now stands at as low as 22% thus speaking of the Company's conservative and economic management. The lapse ratio also is heavily reduced and it stands at 8% which is among the lowest in India.

Figures as on 31-12-1943		Increase over Previous year's figures.
New Business	63,00,000	137 per cent.
Assets	36,00,000	40 "
Life Fund	22,50,000	71 "
Income (Life)	10,00,000	52 "
Income (General)	7,50,000	80 "
General Fund & Reserve	2,60,000	200 "

We are proud of our record, but proud as we are, we are too busy looking ahead to rest on past laurels. In this aggressive, yet conservative Company, future opportunity is more important than past records
If you feel as we do—that it is the years to come that count, if you like a company with a concrete, practical plan for its future development, and if you enjoy working in an atmosphere of accomplishment, then you will like this GREAT COMPANY, NATIONALLY KNOWN FOR STRENGTH AND GROWTH.
LIFE-FIRE-ACCIDENT

Jute and Jute Manufactures

(By Our Correspondent)

CALCUTTA, 9th August

Stocks of manufactured goods in Mill godowns at the end of July were reduced to 178.492 tons, the lowest figure recorded since March 1942. This is a reduction of 17,146 tons during the month of July following a reduction to the extent of over 25,000 tons during June. These figures indicate a continuation of a good supply of shipping tonnage though during last month the production figures, when published, may show a considerable falling off on account of idle machinery due to lack of coal. At the same time, so long as the offtake balances or exceeds the production, there can be no doubt of the essential soundness of conditions in the Industry.

Examining the stock figures critically, every item shows a reduction to a greater or less degree. Commercial Hessians are down by 6,500 tons or 240 lakhs yards. Hessians on Military account are lower by 1600 tons. Commercial Heavy Goods show the greatest reduction in tonnage at 8,200 tons, or 182½ lakhs yards. Sacking on Military account is lower by 834 tons. The aggregate drop in stocks of Hessians is 308 lakhs yards or 8.115 tons, and in the case of Sacking goods 205½ lakhs yards or 9033 tons. Hessian stocks of all descriptions now stand at 2.907 lakhs yards or 72.844 tons. more than half of which is held on military account. Sacking stocks of all descriptions total 2524 lakhs yards or 105.648 tons, all but 200 lakhs yards being on commercial account.

The clearance of stock which has taken place in the past two months has been of considerable relief to many mills who had accommodation, normally allotted to jute Some other units, notably the "foster" mills are not in such a happy position regarding jute space, as their normal single shift jute storage space now has to cater for double shift working. This leaves little or no margin for stocks of raw material getting out of balance, a contingency which in ordinary times seldom caused a moments anxiety, but which now must be constantly kept in view.

The July issue of the Bulletin of the Indian Central Jute Committee had its usual crop of items of interest to the trade. The recently appointed Regional Port Director draws attention to the delay often occasioned to boats and lighters under load at mills. It is pointed out that few mills work overtime or on Sundays discharging boats, whereas ocean going ships in port work night and day and every day. Instances occur of lighters arriving with goods in the docks much earlier than is necessary before the export vessel commences to load. As the resources of the Lighterage Pool are limited, Mills are asked to assist in evoiding wastage of these resources by giving attention to all possible means of reducing delays.

That Post-War Reconstruction is not being lost sight of is evidenced by a request from the Government of India Department of Industries and Civil Supplies that Jute Mills contemplating a change over from their own individual motive power plants to public electric supplies should intimate their probable requirements of transformers and other necessary gear at an early date to secure priority of supply. It is intimated that public supply concerns have already anticipated such a demand and are making provision accordingly. In the meantime, mills with any Lancashire or vertical boilers to spare can find a home for them in the collieries where they are urgently needed in the effort to increase coal supplies.

It is of interest to note that Jute manufactures topped the list of Exports of Indian merchandise in 1942-43 with a total value of 49½ crores, compared with 36½ crores in the previous year, and displacing cotton textiles from premier position. On the other hand exports of Raw Jute dropped still further back and were valued at only 8.32 crores.

Reports from the Argentine state that there have been fewer complaints regarding shortage of bags, though this is due rather to farmers and dealers becoming reconciled to the situation than to any improvement in supplies. Energetic steps are however contemplated in the direction of erecting more grain elevators for the handling of the cereal crops. The old Board which was created many years ago for this purpose. but which was distinguished chiefly for its inactivity, has been dismissed, and a new Director-General appointed with instructions to push the matter forward with all speed. One plan has been already approved for the expenditure of the equivalent of approximately 87 lakhs of rupees during the current year on port and country elevators. Another scheme contemplates the expenditure of approximately 63 lakhs of rupees equivalent on the erection of some 800 elevators at railway points in the province of Entre Rios, to be ready for operation in time to handle the next grain crop. Apart from this there are already under construction over 700 underground silos for grain storage at various points in the country. All these activities are armed at independence from jute containers in which practically all the Argentine cereal crops were previously handled, and the second biggest market for Indian jute goods looks like being largely lost to the industry

WAR TIME *Saving Plan* FOR YOU

The first fourth of a man's income buys existence; the second quarter a few comforts; the third quarter lets him spread a bit; the fourth quarter should be used to guarantee the first quarter and as much as possible of the second and third.

THE GAYA SUGAR MILLS LIMITED

(Incorporated under the Indian Companies Act, 1913.)

REGISTERED ON THE 23rd MARCH, 1933.

(The shares of the company are listed in the Official Quotation of The Calcutta Stock Exchange Association, Ltd.)

AUTHORISED CAPITAL - - - Rs. 40,00,000

Divided into:—

2,000	Preference shares of Rs. 100 each carrying a fixed cumulative preferential dividend of 7 per cent. per annum tax-free	Rs. 2,00,000
14,000	"A" Preference shares of Rs. 100 each carrying a fixed cumulative preferential dividend of 5 per cent. per annum tax-free, carrying no voting rights. These shares rank both as regards dividend and repayment of capital after the 7 per cent. tax-free preference shares but in priority to the ordinary shares	Rs. 14,00,000
10,000	Ordinary shares of Rs. 100 each	Rs. 10,00,000
1,40,000	"A" Ordinary shares of Rs. 10 each ranking pari-passu with the present ordinary shares in proportion of the amount of capital respectively paid up thereon	Rs. 14,00,000

Previous Issue:—

115	7 per cent. cumulative tax-free preference shares of Rs. 100 each	Rs. 11,500
8,474	Ordinary shares of Rs. 100 each	Rs. 8,47,400
		Rs. 8,58,900

Present Issue:—

5,000	5 per cent. tax-free cumulative "A" preference shares of Rs. 100 each	Rs. 5,00,000
1,00,000	"A" Ordinary shares of Rs. 10 each	Rs. 10,00,000
		Rs. 15,00,000

The preference shares are being issued at a premium of Rs. 2 per share and the ordinary shares at a premium of Rs. 3 per share. The entire present issue has been subscribed for by the Directors and their friends and no application will be received by the Company for any shares.

Objects:

The main object of the company is to carry on the business of manufacturers, and refiners of and dealers in sugar and to carry on other allied business and industries.

Prospects:

The company is already the owner of, and since 1933 is running successfully, a Sugar Mill at Guraru (Gaya) having a daily crushing capacity of 350 tons of cane. The company also owns an agricultural farm of its own where a bolt and nut machinery plant, the second largest of its kind in Bihar.

The company has secured a license from the Government of Bihar under the Bihar Sugar Control Act for the erection of a sugar mill with a daily crushing capacity of 1500/2000 tons of cane at Warsaligunj Dist. Gaya, considered to be one of the best cane-producing areas in Bihar. The company has purchased about 28 acres of land as the site for the proposed factory and has already placed orders for the latest and most improved types of machinery with Messrs. MIRRILES WATSON of England, one of the best sugar machinery makers. The company will shortly start construction of buildings; and, subject to the exigencies of War, the machinery are expected to arrive in 1945 and the company hopes to catch the 1945-46 season.

Since the grant of protection to the sugar industry, it has achieved considerable success in India. The War has shown that there is still great scope for further development of the industry and that, for several years after the war, many countries specially Asia will be dependent on India for their supply of sugar.

With the above object in view, the company is installing a sugar producing plant which, it is hoped, will be one of the biggest single unit factory in the country producing the best quality of crystal sugar at a much lower cost. The plant has been so designed as to achieve 25 per cent increase in capacity by the addition of only some machines.

The company since 1934-35, has been regularly paying a dividend of 8 per cent on the Ordinary shares. An abstract of the Balance Sheet of the company for the year ending 30th September 1943 together with a synopsis of the progress of the company since its incorporation is given below.

Synopsis of Progress

Year:	Depreciation:	General Reserve:	Profit nett:	Divd. Decl.
1934-35	4,49,226 6 6	15,000 0 0	76,315 13 5	8%

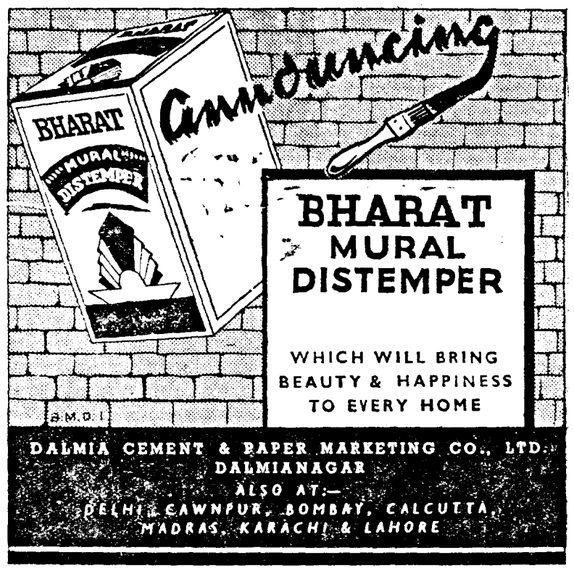
in post-war years, though the progress towards mechanical handling may not be so rapid as is optimistically hoped for owing to the difficulty in procuring the necessary equipment under war conditions.



The consumption of Indian jute in Brazil in 1942 was 15,411 tons, whereas an equivalent quantity of locally grown fibres, guaxima, caroa etc. was mixed in the manufacturing process, to produce some 138 lakhs yards of jute cloth and 440 lakhs of bags.

An echo of the recent abortive attempt at invasion of Assam by the Japs is now being heard in Calcutta. It would appear that certain merchants who were holding stocks of jute in Upper Assam were convinced early this year that the country would soon be over-run by the invaders, and apparently having some doubts as to the working of the Japanese Co-Prosperity intentions as it might be applied to their jute stocks, decided to cash in if at all possible. It is alleged that, in collusion with the local station-master, Rail Receipts were procured for the jute, the formality of handing over the goods to the Railway for despatch being waived in the urgency of the circumstances. These Rail Receipts were sent to Calcutta and payment received against them as tenders against contracts, as if the goods had actually been despatched. The failure of the invasion however to penetrate that far into Assam, threw the proverbial spanner into the works, and when no goods arrived against the Rail Receipts, enquiries instituted have, it is alleged, revealed the details of the enterprising scheme and steps are being taken to round up the delinquents. It is not improbable that the result may be a general tightening up on the irregular "facilities" sometimes rendered to importunate merchants by various carrying concerns.

The Export Jute market has not been active, there being a considerable margin against Calcutta in the rates ruling in Dundee. It is reported that the requirements of that centre will not be more than three and a half lakhs of bales in the coming season, not that there is any lack of demand for the products, but that the labour is not available to work it up. Not reported last week were sales of Old Crop Daisee at Rs. 86/8 to Rs. 86/-, also long Group Daisee at Rs. 77-8. Business has been reported in New Crop Dundee Lightnings at Rs. 10/- and in New Crop Dundee Daisee for December shipment at Rs. 79/-. That Dundee is not in urgent need of raw material is suggested by the transfer of freight space in steamers from Raw Jute to Gunnies. Local Mills are reported to have bought New Crop European packed Firsts at Rs. 86/- and Lightnings at Rs. 82/-.

The Loose Jute market has ruled dull and inactive though there is no give in prices due to the shortage of imports up-country and the extreme slowness with which the new crop is coming to market. In many mofussil markets the prices demanded for the limited imports are well above the equivalent of maximum landed rates in Calcutta. A small business in European Jat packing was reported at full maximum rates, but little else. Jute arrivals into Calcutta have already fallen behind last years figures by a lakh of bales, the estimate for the month of July being only 4,89,000 bales against 5,87,000 last year.

The only feature of the Fabrics market has been rather freer selling by mills. There is of course eager demand for anything offering and 11 porter hessians are reported to have been sold up to June next year. Much of the business is never reported, the principal outlets being the U.S.A. and U.K. buying agencies. Among the Heavy Goods sales reported were August Septr. Liverpools and January/March "B" Twills. All descriptions remain at maximum price levels.

JK. 90.

(*Continued from page* 237)

sumer goods. The point to be noted is that vast new consuming markets like China and the Middle East will require to be fed; and the surplus in productive capacity will be easily absorbed.

8. As for agricultural produce, the various schemes to feed the population in the enemy-occupied countries mean definitely that, for a long time to come, there will be a shortage rather than a surplus in world production of foodstuffs.

9. Turning to India, the main point is that booming conditions witnessed particularly in the last three years are due to the colossal sums spent by the Government on account of their own war expenditure and of the war expenditure of the Allied Governments. This may be said to amount to an average of, say, Rs. 500 crores per year. This disbursement in a year of Rs. 500 crores has ensured a good margin of profit for agriculturists as well as for industrialists. This country, has through this cause, more or less solved the problem of agricultural indebtedness which, for ages, appeared insoluble. Through the same cause, the problem of unemployment whether of clerical labour or industrial labour or agricultural labour, whether technicians or professionals, has also been solved. There is hardly any unemployment in India to-day. That is to say, if the continuance of an annual expenditure of Rs. 500 crores by the Government be assured, industries will continue to thrive, business will flourish and expand, there will be full employment, and the general purchasing power will be on a satisfactory level. I contend that the plans already evolved under official auspices and under non-official auspices for post-war reconstruction do guarantee the expenditure of, say, Rs. 5,000 crores in the decade following the termination of the war. In other words, the place of the annual war expenditure of Rs. 500 crores will be taken by the expenditure connected with the various plans that are sure to be put into effect.

10. The plans envisage an expansion of industry as well as the extension and improvement of agriculture. Thus a better balanced economy is the aim and object in view. This should greatly stimulate purchasing power of the masses.

11. In this country also, there is every prospect of a building boom heralding a more general boom. For five years, owing to the unavailability of building materials, every manner of private building activity has been kept in abeyance. There is, what may be called, the normal annual growth of buildings. In the postwar period, the leeway in this regard has to be made up. India is confidently expecting a building boom which will be greatly assisted by the colossal profits made both legitimately and illicitly in the war.

12. India's budgetary and financial position compares favourably with that of any other country. The Indian money market has developed vast resources, and, what is important, is thoroughly self-contained. Five years ago, "Indian Finance" predicted a 3 per cent war. I now predict a 2 per cent postwar period. The Indian Government should be able to raise money for its postwar schemes on a all-interest basis of 2 per cent.

13. In sum, I see a brave and confident Postwar India. I see her industries thriving and expanding. I see her agriculture coming into its own. I see her holding her head high as a creditor in the international sphere. I see the end of the chronic indebtedness of the agriculturists. I see quickened activity in shares and commodities. I see giltedged recording much higher levels.

14. At the same time, it will be folly to overlook the fact that universal sentiment construes peace as a depressing factor. This sentiment will undoubtedly cause near-panic conditions. But those who have shrewd judgment will see in this retrogression the best opportunity for picking good bargains.

15. There is no postwar slump. There may be a large, even serious, decline in prices on the immediate conclusion of peace. But this retrogression will prove a temporary phase.

"EAVESDROPPER".

Above OPTIMUM

Faced in 1939 with the production problem that he is today solving, the average Works Manager would have said 'Utterly impossible'. Everyday throughout India industrial concerns are achieving output far in excess of their normal capacity. Indian tea has played its part in this great achievement. Tea is known throughout the world as a harmless yet valuable stimulant and today, in hundreds of factorie in India, it is being served to workers on the job, giving them new energy, greater concentration and thus helping to keep output at a steady high level.

Fight Fatigue with

INDIAN TEA

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD IA 231

JUTE

(By Our Staff Correspondent).

Calcutta, August 10.

The raw jute market has been quietly steady with mills taking slightly more interest. With the new proposals by the Indian Jute Mills Association it is pointed out that production at the mills will not suffer unduly and that with the prospect of an early peace there will be good demand for all the jute offering. Arrivals in mofussil centres are on a rather small scale for this time of the year. Sellers are firm in their ideas. The level of the rivers is low for this part of the season. It is reported that in many places the standing crop is fully mature and if allowed to grow further there will be a deterioration in quality. Business has been on a moderate scale in the last two days and rates are mostly unchanged.

In the loose jute section business has been on a slightly larger scale in the latter half of the week. Sellers have not been keen to do business as mofussil markets have been firm and arrivals are being fully absorbed. European packing sold at Rs. 16-12 and Rs. 13-12 per maund for combined assortment and for Jat Middles and Bottoms alone at Rs. 17 and Rs. 14 per maund respectively.

In the pucca bales section shippers have not taken much interest though business has been reported in Dundee Daisee 2/3 at Rs. 78 per bale. Mills are reported to have purchased Firsts at Rs. 83 per bale and Lightnings at Rs. 79 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, August 10.

The jute manufactures market has been very firm during the past week. Business passing has been of very small dimensions as mills are very reserved. The publication of local stock figures for the month of July has had an encouraging effect on the market as for the second month in succession there is a big decrease in stocks. At this rate stocks would be consumed at a fast rate and there will not be enough reserve stocks. It is satisfactory to note that the industry has been making representations to the authorities for a liberal supply of coal and that a scheme is at present under consideration by which the more efficient mills would be worked effectively and production maintained at as a high level as possible. Quotations are nominally at maximum rates. It is pointed out that there is no incentive to switch over to the production of hessian for which there is greater demand but with the control rates the margin of profit is smaller on the manufacture of lighter fabrics.

The stock figures for the month of July show hessian stocks, cloth and bags, at 72,844 tons against 80,950 tons at the end of June, 1944. The decline is again pronounced in the case of stocks on commercial account. Sacking stocks, cloth and bags, were 105,648 tons against 114,681 tons at the end of June. Here again the offtake is greater on commercial account. The figures are given below:—

Total reported stocks of manufactured goods exclusive of Government Orders.

Description	30-6-1944	31-7-1944
Hessian cloth and bags—		
Yards ..	13,79,06,077	11,38,95,486
Tons ..	38,269	31,766
40 ins. 8 oz. Hessian (included in above)—

N.B.—July stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Kedarnath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of June 1944.

BULLION

(From Our Correspondent)

The Reserve Bank sold silver by tender 200 bars at Rs. 131 on Monday causing a decline of seven rupees in spot. After initial weakness, however, market steadied up, thanks to uncountry demand. Moreover, the Reserve Bank accepted tenders only for small quantities. 45 bars were sold on Tuesday at Rs. 130-8. Demand has improved since and 200 bars were sold at Rs. 131-2 on Wednesday and today 185 bars at Rs. 131-6. There will be no sales on Friday and Saturday. Silver ready is now quoting Rs. 132 for spot. The undertone is steady on the expectation that there will be good demand at reduced prices. As official sales are small, a big decline is discounted.

The dispute between bulls and bears in the bullion market is likely to be settled by arbitration. In sympathy with silver, gold ready dropped to Rs. 75-2. The Reserve Bank rejected tenders on Monday. There were no sales on Tuesday while a small lot was sold on Wednesday and 10,000 tolas today at Rs. 75-4. Offtake is moderate at 20,000 tolas.

In these three ways, you can save money, save time, save inconvenience, AND yet deserve the admiration of your friends.

Firstly, instead of attending distant marriages, fairs and holy places, stay at home and send the railway fare as a present or an offering, thus saving yourself an uncomfortable journey, and lending a practical and really welcome form to your sentiments.

Secondly, conduct your business from your headquarters. Do not tour extensively.

Thirdly, when you take a holiday, spend it at home or near home. Long railway trips are both inconvenient and expensive.

You cannot hope to derive the full benefit from a rest if you subject yourself to all the discomforts and annoyances of wartime travel.

In doing these three things, you will not only save yourself fatigue and worry; you will be helping the railways, whose primary task of distributing supplies to civilians and soldiers MUST come before passengers' comfort.

Stock Markets to-day and to-morrow:

EXCELLENT SHOWING OF BENGAL COAL ACCOUNTS

OPERATORS on the Calcutta stock exchange seem to be more inclined to the view that market values will be maintained at a high level even if there is an early termination of hostilities though the Bombay market has some doubts in this regard. For this reason, there has not been any appreciable setback in prices this week even on the reports that there have been some failures in the market and that the losses on account of these firms will amount to a considerable sum. The rapid developments in the war situation during the week have had practically no effect on the market. At the present moment operators are inclined to await the decision of the Committee of the Stock Exchange in regard to future market operations. It is said that all members have been asked to furnish a statement of their outstanding transactions to the Committee before Monday next and that there will not be any deliveries in the whole of next week in Indian Irons, Steel Corporations, Burrakurs and Howrahs. There is need for considerable adjustment in respect of the four counters mentioned above as transactions have been on a very large scale.

* * * *

The remarks of the Chairman at the annual general meeting of the Tata Iron and Steel Company Limited will perhaps strengthen the conviction of those who expect that, far from there being a slump in the post-war period, industrial activity will increase in the post-war years and that unless plans are made from now it will not be possible to meet demand. It will be relevant in this context to quote a passage from Mr. J. R. D. Tata's speech: "With the industrial development that lies ahead of us, I have great faith in the future of the steel industry after the war, but we shall fail to share in its prosperity if we do not lay our plans now to meet post-war requirements and to maintain high efficiency and low costs in our operations."

* * * *

The activity of the Steel industry, in normal times, can be said to be the barometer of the country's rate of industrial activity. Mr. J. R. D. Tata expects that "unless we are prepared to expand and modernise our plans and diversify our products we shall have to leave the field to our competitors" There is thus no need to fear about a post-war slump.

* * * *

That the present level of prices for various grades of coal admit of a good margin of profit is amply borne out by the accounts of the *Bengal Coal Company Limited*, for the half-year ended April, 1944. Even with the slight decrease in both raisings and despatches, it has been possible to report a substantially higher level of earnings. The net profit, before providing for taxation and depreciation, is Rs. 26,30,419 against Rs. 16,60,349 for the six months ended October, 1943. Raisings during the half-year were 7,62,537 tons against 7,54,398 tons and 9,33,626 tons in the preceding half-years while despatches, which include purchases of coal as usual, were 9,13,398 tons against 9,88,661 tons in the half-year ended April, 1943. Total sales of coal were 98.95 lakhs for the latest half-year against 78.05 lakhs in the previous six months and 64.13 lakhs in the corresponding period 1942-43. Working expenses were naturally higher, the increase being most pronounced under salaries and wages. Colliery expenses were Rs. 26,85,570 against Rs. 25,21,617 in the previous half-year even with the reduction in raisings while salaries and wages were as much as Rs. 22,17,886 against Rs. 17,21,716. It will, therefore, be clear that even with the higher level of working expenses, the margin of profit is quite satisfactory.

* * * *

Provision for taxation and cesses, out of the net profits is very much higher at Rs. 17,66,375 (Rs. 9,25,000) while the charge on account of depreciation is unchanged at Rs. 3 lakhs. The dividend has been maintained at Rs. 10 per share but the bonus of Rs. 2 per share is also to be paid. In the last three years no bonus has been paid out of the profits for the half-years ending April.

* * * *

The difficulties in regard to extraction and transport were mainly responsible for the lower earnings of the *Borooah Timber Co., Ltd.*, in the year ended March, 1944. Sale of sleepers, however, were very nearly maintained at Rs. 12.34 lakhs against Rs. 12.82 lakhs. The net profit, before providing for taxation and depreciation is lower at Rs. 1,59,622 against Rs. 1,93,545 for the previous year. The amount set aside to depreciation is Rs. 1,326 (Rs. 629) while the provision for taxation is very much lower at Rs. 35,000 (Rs. 63,693). The transfer to General Reserve is higher at Rs. 30,000 (Rs. 20,000). In the last half-year. The sum of Rs. 4,256 was written off against advances and another Rs. 10,000 was transferred to Reserve against Pine Consignment. The dividend has been maintained at 10 per cent.

* * * *

Forest working in general has been satisfactory although labour conditions proved difficult owing to the scarcity of food grains and to the large number of contractors placed by the State for urgent war supplies adjacent to the working area. Under the terms of the lease which is due to expire in February, 1946, the Company is allowed further two years to extract to Railhead all timber converted up to that date. There are sufficient timbers still avail to maintain normal output and as the Company has lately acquired five Lease-Lend trucks no difficulty is anticipated as regards extractions of the whole of output to Railhead by June 1946.

* * * * *

Control of cotton goods and yarn have not very much affected the earnings of the *Kesoram Cotton Mills Limited*. An increase in production and a decrease in working expenses have actually resulted in an appreciable improvement in the earnings in the half-year ended March 1944. The net profit, before providing for taxation and depreciation, is Rs. 40,00,102 against Rs. 30,15,188 for the previous six months. The amount set aside to depreciation is Rs. 3,03,986 (Rs. 3,38,649) while the provision for taxation is as much as Rs. 32.5 lakhs (21 lakhs). The dividend on ordinary shares has been maintained at eight annas per share.

WATCH-DOG.

KUMARDHUBI FIRECLAY AND SILICA WORKS LIMITED

NOTICE is hereby given that the Thirty-eighth Ordinary General Meeting of the Kumardhubi Fireclay & Silica Works, Ltd., will be held at Chartered Bank Buildings, Calcutta, on Thursday, the 31st August, 1944 at 4-5 P.M. for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 31st December, 1943, declaring the Dividends recommended by the Directors, electing a Director, appointing Auditors, and for transacting any other ordinary business of the Company.

Tata Deferreds Conversion Scheme

Managing Agents Keen on Completion

(By Analyst)

Bombay, August 11.

In the Iron and Steel section until last week, *Indian Irons* and *Steel Corporation* were the leaders and even *Tata deferreds* were neglected. Looking to the turnover in *India Iron* this week the tables have been turned. On selling pressure *Indian Iron* and *Steel Corporations* declined to Rs. 40-4 and Rs. 35-8 whereas *Tata Deferreds* suddenly came to limelight on continuous buying by Marwari operators and the *Deferreds* improved from Rs. 2,220 to Rs. 2,322-8.

It is reported that Tata Sons bought a few hundred shares from the market. It might be that the Management is trying to buy shares in order to win over the position from the deferred shareholders for the conversion scheme. Confirmation for this rumour is lacking but there has been substantial buying from the leading operators in the belief that the conversion scheme will be put through on the basis of six ordinary shares for every deferred share held. About two or three big holders of deferred shares, I hear, are standing in the way of the conversion scheme being put through. To a certain extent the argument from the deferred shareholders that the break up value of the deferred share is much more than six is correct, but I feel that deferred shareholders should also consider the question of further progress and expansion by the Company. The Chairman Mr. J. R. D. Tata rightly stressed in the annual general meeting follows: "Unless we are prepared to expand and modernise our plant and diversify our products we shall fail to meet post-war requirements and will have to leave the field to our competitors. With the industrial development that lies ahead of us I have great faith in the future of the steel industry after the war but we shall fail to share in its prosperity if we do not lay our plan now to meet post-war requirements and to maintain high efficiency and low costs in our operations". Continuing he said: "the desirability of conversion of deferred into ordinary shares in the interests of all concerned has been gone into fully in the past and the necessity of raising additional finance is a matter which can scarcely be disputed. Your Directors will put up the scheme if they are assured of a substantial measure of agreement and support from the shareholders concerned. Failure to secure a common measure of agreement on any scheme which may be put forward as a result of further consideration and discussion would be most regrettable and may compel your Directors to devise other means of ensuring the company's development which may be found to be less acceptable to the minority section that has been blocking the scheme upto now." It is therefore clear that Tatas will go ahead with the expansion programme even if the deferred shareholders do not agree with the conversion scheme but the result might be that the shareholders of Tata Iron and Steel Company might not get the benefit of the new issue. I, however, hope that the deferred shareholers will agree to the proposals of the management in order to enable the company to issue new ordinary shares in the ratio of one share for every three shares held and go ahead with the expansion programme. I continue to maintain that Tata Steel deferred is the cheapest share going in the market and I would even suggest a switchover from *Tata Steel Ordinary* to *Deferred* in view of the possibility of a substantial rise in deferred shares on the conversion scheme going through.

In an otherwise dull market *Associated Cement* forged ahead to Rs. 238-8. There are also rumours that the Company is contemplating issuing fresh capital either in the form of ordinary shares or in the form of debenture to the tune of about 2 crores and that this money will be utilised for expansion that is, having a few more factories all over India. Even without this news, the prospects for Associated Cements are exceptionally favourable. I have many a time tipped *Associated Cements* for substantial capital appreciation. I strongly recommend investment purchases.

In the Electric section, *Bombay Trams* sharply declined from Rs. 160 to Rs. 152 on continued selling from holders. *Tata Power* were steady around Rs. 1,907-8 and *Andhra Valley* at Rs. 1,897-8. *Tata Hydro* also kept steady at Rs. 206. I feel that all the three shares are fully valued and would therefore suggest booking profits.

Burma scrips were in the limelight and *Bombay Burmah* touched a high of Rs. 507-8 as against 490 yesterday and closed at Rs. 500 buyers. On the day Burma is reconquered I think there should be a spurt of at least hundred points in a scrip like *Bombay Burmah*. Even Petrols were marked upto 4-1. *Burma Corporation* were however sticky around 4/7.

There is nothing special to report in textiles, *Bombay Dyeing* were slightly better at Rs. 1.890. *Raza Textiles*, which were quoting around Rs. 105 last week, declined sharply on Delhi selling to 94. Around Rs. 90 they look a good buy and also look a good sale around 105.

In Calcutta, Jutes and coals were neglected *Howrah* declined to 83 *Reliance* were marking time at Rs. 67-9. West Jamuria declined to 58-8.

In the miscellaneous section, *Indian Coppers* which were very active in the last one month were rather neglected around 3-6. On a further decline, say, around 3-2, I would recommend speculative purchases for capital appreciation.

Madras evinced a sagging tendency almost in every scrip with the exception of *Coorg Rubber* which shot up to Rs. 75 buyers. With no sellers in evidence, I look for a substantial rise in this scrip. *Peermade* changed hands at Rs. 54-8 and *Haileyburia* around Rs. 39-12. All other shares in the plantation group declined slightly and closing quotations were practically the lowest for the week.

Among Banks, there were innumerable sellers of *Hindusthan Commercial* around Rs. 61 and without business passing the quotation declined to Rs. 59 sellers. *United Commercial* after touching Rs. 91 are again weak at 87-1. Bank of Jaipur are growing strong at 74-12; *Central* were steadier at Rs. 32-8.

The Insurance section also was better due to investment demand, *New India* firmed up to Rs. 82-12. *Jupiter* were slightly better at Rs. 33-1. *Oriental* were however, unchanged at Rs. 6.375.

The giltedged market was steady with paper around Rs. 99-9. All the provinces have come out with loans and the list will open on the 15th August. Looking to the money conditions, the issue will be oversubscribed.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 11.

Rather quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week. The rapid developments in the war situation and the reports regarding some failures in the market had a discouraging effect on market values though buying on account of some party resulted in a temporary rise in prices early in the week. The general undertone is easier and it is not clear as to what exactly will be the effect on prices if there is an early peace. Strong jobbers are on the bull side and they seem to be of the opinion that even if there is an early termination of hostilities there will be no appreciable decline in prices. As the week end is again rather long there was some liquidation in Thursday's session. Markets are closed to-day on account 'Janmashtami'.

The giltedged securities section has been firm with 3½ per cent. Paper at Rs. 99-10. The announcement regarding the flotation of the provincial loans has been well received by the market. Among terminable loans, 3 per cent. Defence Bonds 1946 were done at Rs. 102, 3 per cent. 1953/55 at Rs. 100-10 and 3 per cent. 1949/52 at Rs. 101-4. 3½ per cent. 1947/50 were done at Rs. 103-6 and 5 per cent. 1945/55 at Rs. 104-9.

The new loans are on account of six provincial governments and all the loans carry interest at the rate of 3 per cent. and are repayable at par in 1958. The issue price in the case of Bombay, Madras and C.P. and Berar is at par while in the case of the Punjab, U.P. and Sind is at half discount. The issue will remain open only for one day on August 15, 1944. Among Bank shares, *Calcutta National* changed hands at Rs. 14/6, *Hind Bank* at Rs. 60/12 and *United Commercial Bank* at Rs. 39/4 premium. *Reserve Bank* were steady at Rs. 137.

Textile issues have been rather quiet. The strength of Bombay issues towards the close should perhaps result in a firming up in prices next week. *Cawnpore Textiles* were Rs. 14/8 earlier in the week but there has been a decline to Rs. 13/4. The close was a shade better at Rs. 14. *Dunbar* were Rs. 307, *Elgin* Rs. 73/12 and *New Victoria* Rs. 9/4.

Coal shares have been weak and there is an all round decline in prices. *Amalgamated* were Rs. 49/11 against Rs. 51/4, *Bengal* were unchanged at Rs. 679. *Bhalgora* were one and a half points lower at Rs. 15, *Bokaro and Ramgur* were quiet at Rs. 40/8, *Burrakur* at Rs. 45 against Rs. 45/12 and *Equitable* at Rs. 66/2 against Rs. 68. *New Beerbhoom*

Calcutta, 28th July, 1944.

IMPERIAL BANK OF INDIA

NOTICE is hereby given that the 24th Local Meeting of the Shareholders of the Imperial Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, 3, Strand Road, Calcutta, on Thursday, the 31st day of August, 1944, at 10 a.m. (Standard Time), for the purpose of electing two persons to be Members of the Local Board to fill the vacancies caused by the retirement of Sir Birendra Nath Mookerjee and the Hon'ble Sir John Burder, who go out of office at such Meeting, but, being eligible, offer themselves for re-election.

Dated the 20th July, 1944.

By Order,
F. H. MOORHOUSE,
Secretary and Treasurer.

REPORT OF DIRECTORS
OF THE
KESORAM COTTON MILLS, LIMITED
FOR THE
Half-year ended 31st March, 1944.

To

THE SHAREHOLDERS,

GENTLEMEN,

The Directors beg to place before you the audited Accounts for the half-year ended 31st March, 1944, which show a gross profit of Rs. 49,26,203-15-2. After deducting Rs. 9,63,595-10-6 for Insurance, Interest and Commission, etc., and providing Rs. 3,03,985-15 for Depreciation and Rs. 32,50,000 for taxes and after making some sundry adjustments there remains a balance of Rs. 4,46,115-12-5. To this we have added Rs. 3,01,371-7-9 the balance brought forward from the previous half-year. Thus, there remains a balance of Rs. 7,47,487-4-2 at the Credit of Profit and Loss Account, which the Directors propose to adjust as follows:—

	Rs.	A.	P.
To pay Dividend on 20,000 Pre-ference Shares at 7 per cent per annum, free of Income-tax (or Rs. 3-8 per share	70,000	0	0
To pay Dividend on 800,000 Ordinary Shares at the rate of As. 8 per share	4,00,000	0	0
And to carry forward the Balance to the Current half-year's Account ..	2,77,487	4	2

The Directors regret very much to report the death of Syt. Murlidhar Somany, who served ably for many years on the Board of Directors. The Directors elected Mr. Hiralall Somany in his place in the month of March, 1944. His election is to be confirmed.

Messrs. Radhakissen Sonthalia and Hiralall Somany retire from the Board this time and being eligible offer themselves for re-election.

Messrs. Price, Waterhouse, Peat & Co., the Auditors of the Comany, also retire and offer themselves for re-appointment.

Yours faithfully,

Directors. HIRALALL SOMANY, B. KUMAR, P. D. HIMATSINGKA, R. K. BHUWALKA, D. P. KHAITAN,

8, Royal Exchange Place,
Calcutta, the 28th July, 1944.

N.B.—Mr. R. K. Sonthalia being away from Calcutta, has not signed the Reports and Accounts.

AUDITOR'S REPORT

I have audited the above Balance Sheet and Profit & Loss Account with the books of the Head Office, and all the branches in Madras and the certified returns from the other branches and sub-offices, verified the cash and securities at Mayavaram, and the Madras offices, and have obtained all the information and explanations I have required. I beg to report that the above Balance Sheet and Profit and Loss Account, are in my opinion, drawn up in conformity with the law, and that the Balance Sheet exhibits a true and correct view of the Bank's affairs as on that date, according to the best of my information and tht explanations given to me and as shown by the books of the Bank and that in my opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

MADRAS, 27th July, 1944.

P. S. SUBRAMANIA IYER, B.A., G.D.A., R.A., *Registered Accountant, Auditor.*

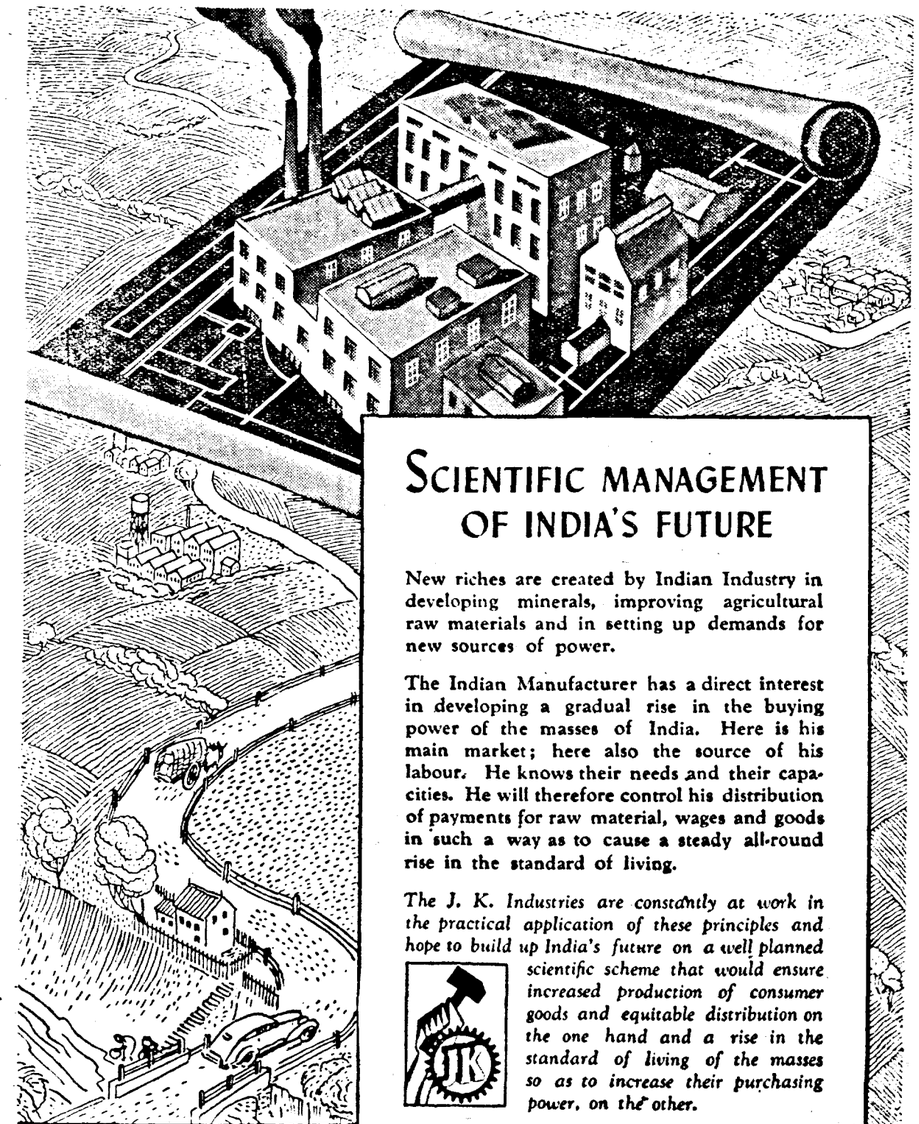
*In each case the closing quotation for each day and the highest and lowest quotations for the period are given.

(*Continued from page 251*)

were Rs. 38/4 *Raneegunge* Rs. 52/4 and South *Karanpura* Rs. 24/8.



Pending the announcement of the proposals of the new scheme there is no inclination on the part of both investors and operators to enter into fresh commitments in jute shares. It is said, however, that the proposal of the I.J.M.A. to form an industrial pool and divide profits on an equitable basis between mills which have been rendered idle for reasons beyond their control will affect adversely the companies which are fortunate enough to continue production. Quotations are slightly lower. *Anglo-India* were Rs. 454 against Rs. 458. *Clive* were steady at Rs. 50/12, *Howrah at* Rs. 83 and *India* at Rs. 690, *Nuddea* were unchanged at Rs. 130 and *Kanknarrah* Rs. 560. *Reliance* were easier at Rs. 66/8.

In the Engineering section, *Indian Iron* were lower at Rs. 39/10 but there was a subsequent recovery to Rs. 40/12. *Steel Corporation* likewise declined to Rs. 35. They are now quoting Rs. 35/10. *Kumardhubi Engineering* were better at Rs. 12/8, *Britannia Building and Iron* were Rs. 20 and *Bhartia Electric Steel* Rs. 21/9.

Sugar shares have shown a sagging tendency, *Balrampore* being nearly a point lower at Rs. 20/12. *Carew & Co.* were Rs. 31, *Cawnpore* Rs. 44 and *Champarun* Rs. 46/12 against Rs. 47/12. *Ramnugger Cane and Sugar* changed hands at Rs. 15 and *Dharbhanga* at Rs. 33/14.

In the Tea section a firmer tendency was noticeable. *Tezpore* were higher at Rs. 22 cum dividend while *Bishnauth* were Rs. 42/2 and *New Dooars* Rs. 1,370.

Among Miscellaneous shares, *Burma Corporation* were unchanged at **Rs. 4/8 while,** *Indian Copper* were quiet at Rs. 3/4. *Aluminium Corporation* were two points lower at Rs. 21/4 while *B. I. Corporation* receded to Rs. 6/12. *British Ceylon Corporation* were one point lower at Rs. 21/8. *Calcutta Trams* were steady at Rs. 45/2. *Indian Wood Products* Rs. 31/13 and *Rohtas Industries* Rs. 40/4. *British Burma Petroleum* were higher at Rs. 4/4 with the improvement in the situation in Burma. Paper shares were easier with *India Paper Pulp* at Rs. 223/8, *Sree Gopal Paper* at Rs. 22/14 and *Titaghur Paper* Rs. 27/9.

SCIENTIFIC MANAGEMENT OF INDIA'S FUTURE

New riches are created by Indian Industry in developing minerals, improving agricultural raw materials and in setting up demands for new sources of power.

The Indian Manufacturer has a direct interest in developing a gradual rise in the buying power of the masses of India. Here is his main market; here also the source of his labour. He knows their needs and their capacities. He will therefore control his distribution of payments for raw material, wages and goods in such a way as to cause a steady all-round rise in the standard of living.

The J. K. Industries are constantly at work in the practical application of these principles and hope to build up India's future on a well planned scientific scheme that would ensure increased production of consumer goods and equitable distribution on the one hand and a rise in the standard of living of the masses so as to increase their purchasing power, on the other.

J.K. INDUSTRIES

INDIA'S RECONSTRUCTION BY PRODUCTION IN INDIA

Uneasy lies
THE HEAD .....

If you are the head of the family, you must be feeling uneasy for the future. There will be so many problems to face and solve. You can at least solve your financial problems by saving while you are earning. Do it now through INSURANCE.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Money market has been very easy. Inter-bank call money is nominally quoting 1/2 percent in Calcutta and ¼ percent in Bombay. The state of glut in the market is emphasised by the phenomenally heavy applications for treasury bills this week. Against Rs. 4 crores on offer on August 8, applications came to Rs. 14.91 crores. The offer for August 15, had been raised to Rs. 6 crores. and tenders came to the large total of Rs. 19.25 crores. The heavier applications do not, however, disclose keener bidding. The average rate of accepted tenders shows actually a rise of 2 pies to 7 annas 9 pies percent per annum. The offer of three months Central Treasury bills for next week will again be Rs. 6 crores. In addition, the Bengal Government will be on the market on August 24 for Rs. 4 crores of three months bills. The Bengal Government should be able to secure accommodation at slightly less than 9 annas percent per annum.

The returns of the Reserve Bank for the week ended August 11 register an increase in active note circulation of Rs. 5.80 crores. Sterling securities and rupee securities in the issue department are unchanged but rupee coin shows an outflow of Rs. 62.90 lakhs. The effect of these changes is a decline of Rs. 6.43 crores in the notes held in the banking department. The deposits of all the Governments with the Reserve Bank have gone down during the week under review; those of the Central Government by Rs. 67.88 lakhs to Rs. 113.45 crores, those of the Burma Government by Rs. 13.02 lakhs to Rs. 1.51 crores and those of the Provincial Governments by Rs. 3.40 crores to Rs. 11.63 crores. Miscellaneous deposits have also registered a decline of Rs. 2.16 crores to Rs. 10.66 crores. Deposits of scheduled banks, however, have shot up by Rs. 6.60 crores to Rs. 104.22 crores. On the assets side, the only change worth noting is the increase of Rs. 7.69 crores in foreign balances which now stand at the all-time high of Rs. 232.57 crores.

With regard to Provincial loans, list for which opened and closed on August 15, our Bombay correspondent wires as follows: "All the Provincial loans were under-subscribed by the public. The underwriters had an unpleasant shock and had to make up heavy short-falls. The deficiencies to be made up by the underwriters were as follows: Sind 90 percent, U. P. 73 percent, Central Provinces 65 percent, Punjab 20 percent, Madras 15 percent. Even in the case of Bombay the unsubscribed portion was 20 percent." In the case of earlier Provincial loans also, the underwriters had an unfortunate experience. This raises the question as to whether the issue of the Provincial loans has been handled correctly. It is obvious that the Reserve Bank authorities have not been taking any special steps to prepare the ground for the Provincial loans. This may be due to two reasons. In the first place, the Reserve Bank might have argued that, as the total amount involved in all the Provincial loans was only a few crores, it would not be in accordance with a sense of proportion if elaborate steps by way of preparing the market were undertaken. In the second place, the Reserve Bank might feel that, having arranged for the underwriting of the loans, its responsibility was finished. If the loans were not fully subscribed, it was the funeral of the underwriters; why should the Reserve Bank be unduly concerned about it? The point to take note of in this connection is that, if Provincial loans prove recurrently to be a flop, the underwriters might fight shy of future issues or might demand more onerous terms. If our information is correct, the commission that has been agreed to for underwriting of the Provincial loans is 1/2 percent. Underwriting commission of 1/2 percent may not be considered adequate if, in the case of every Provincial loan, experience proves that half the issues is to be taken up by the underwriters. From this point of view, the responsibility of the Reserve Bank cannot be said to end with the conclusion of the underwriting agreement. As bankers to the Provincial Governments, it is the duty of the Reserve Bank to maintain the status of the Provincial Governments in the esteem of the underwriters.

But, really speaking, is there any need for underwriting? Has this system of underwriting been found to be a correct method? For our part, we are inclined to think that the cause of the under-subscription of the Provincial loans is the very fact of underwriting. The total issue of the Provincial loans is underwritten, not by a single party, but by a number of parties including bankers and brokers. Some of these bankers would themselves have subscribed for the loan in the ordinary course. But, as they were also underwriters, they did not subscribe on the date of the opening of the list, on the ground that they should keep a reserve for investment in case they were called upon to make up any deficiency in subscription. In other words, if there had been no underwriting, a good many of the underwriters would have figured as subscribers for the loan; and the loan would have made better showing. It is up to the Reserve Bank to examine the results of the loan from the point of view we have indicated. If our contention is proved correct, the logical procedure will be to issue the Provincial loans without any underwriting, the Reserve Bank keeping itself ready to take up the unsubscribed portion and sell it through the tap the same way as rupee counterparts of the Central Government are being disposed of on tap. The Reserve Bank must be more mindful of the financial interests of the Provincial Governments, of which they are the sole bankers. The two ways in which this mindfulness is particularly essential are in reducing the disparity between Central treasury bills and Provincial treasury bills to a *minimum and in enabling* the Provincial Governments to raise their loans on the best terms and with their credit improved by borrowing.

The exchange market has been dull but steady. There have been changes in the rates at which banks buy bills. The reduction has been effected due to the shorter time taken in transit from India to Burma. 90 days/st bills for 1 and 2 months are now quoting 1s. 6¼d., as against 1s. 6 9/32d.; and 90 days/st bills for 3 and 4 months are now quoting 1s. 6 9/32d., as against 1s. 6 5/16d.

NO CRITICISM FROM BANKERS

British Views on Bretton Woods

SPECIAL FOR "INDIAN FINANCE".

LONDON, (*By Cable*).

Lord Beaverbrook's paper, the Daily Express, surprised politicians by launching a vehement attack on the Bretton Woods agreements on the ground that it will make Britain "slave" to the Gold Standard. This is the only important newspaper to take an alarmist view of the new currency agreements, and the fact that other newspapers ignore the Daily Express' attack increases the general impression that Government will have little difficulty in securing Parliamentary approval despite any scheme giving gold a specific function in international trade.

Lord Keynes himself, it is pointed out, is not entirely guiltless of causing some confusion in the public mind. It may be recalled that Lord Keynes told the House of Lords that the new plan is the "exact opposite" of the gold standard and that it ratified Britain's "dethronement" of gold in 1931. Later, at Bretton Woods Lord Keynes reassured uneasy American bankers that the new plan gives gold "the status of a constitutional monarch in world economy and not the status of a tyrannical power." But the metaphor is confusing since dethroning the king is not the same thing as endowing him with the limited powers of a constitutional monarch.

However, actual facts are clearer than an unfortunate metaphor. It is pointed out that the new scheme escapes the fatal rigidity of the old style. Gold Standard since no country is obliged to make its currency freely convertible into gold. Furthermore, the provision enabling any country to alter the exchange value of its currency by upto 10 per cent would have enabled Britain to remain on the Gold Standard in 1931 (had the provision been in existence then) and therefore enjoyed full prestige.

On the other hand, gold still functions as the measuring rod of values since each country's currency must be "expressed in terms of gold" or alternatively in United States dollars. The United States and a large part of the British Empire—not to mention that important gold-producer, Russia—are directly interested in maintaining the prestige of gold as the popular "store of value" and it is believed the new scheme has made its due contribution towards maintaining that the lack of gold cause domestic havoc through unemployment in any specific country.

Thus far, British bankers have expressed no views despite certain vague uneasiness in many quarters regarding any scheme including its twin enterprise, the provision for an international bank. In this respect, they differ from United States bankers who still are campaigning to prevent Congressional approval. If British bankers have discovered any serious flaws in the two schemes they have not sought Press support for their views. In any case, they would be unlikely to start an agitation without the tacit approval of the Bank of England which they are extremely unlikely to secure in view of the Treasury's firm guidance of the Bank of England.

BOMBAY MARKETS

BULLION

(*From Our Correspondent*)

Bombay, August 17.

The Bombay High Court has granted injunction against the Board of the Bullion Exchange and a suit is proceeding. The forward silver market will not function probably for months until the suit is disposed. Spot silver is very steady on strong demand. The market is unaffected by military news. Reserve Bank's sales average 200 bars daily and are easily absorbed. Local stocks are scarce owing to heavy upcountry despatches. The spot rate is now quoting Rs. 133-12 against Rs. 131-12 at the opening on Monday. There is sustained firmness. The Reserve Bank's selling prices on Tuesday were Rs. 131-12, Wednesday Rs. 132-3 and Thursday Rs. 133-3, thus actually abetting inflation. There is a similar policy behind gold sales. Bazar demand is brisk, averaging 30,000 tolas, in face of which Bank's sales are inadequate.

Thus on Monday heavy accumulated demand materialised and the Reserve Bank sold a moderate amount at Rs. 75-4. Then the selling price was raised to Rs. 75-6 and Rs. 75-10. The market was surprised. Speculative buying pushed price up on Tuesday and tenders at Rs. 75-4 were refused. On Wednesday, tenders at Rs. 75-5 and below were refused. And today only tenders above Rs. 75-7 have been accepted. The fact that small amounts are sold at higher rates is construed bullishly. Spot is now quoted Rs. 75-9 and forward Rs. 75-8. Local stocks are about one lakh tolas. The offtake is 30,000 tolas daily. The market is firm.

Industrial Profits—II

In an earlier article, we examined the impact of war on Indian industry and the course of industrial profits in the first five years of war. The advantages derived in the earlier years of the war were confined to very few industries and the prosperity of the first few months proved to be short-lived. Only in the last two years, there has been a total mobilisation of industrial capacity for the country's war effort; and the limitations set by labour, spare parts and other technical difficulties have created bottlenecks in certain industries. There has been no large expansion of plant, though the steel industry might be said to be an exception, as increased output has been achieved mainly by multiple shifts. New industries have been started; but, as Dr. Matthai said recently, it is yet to be proved that there has been any accelerated pace of industrialisation in this country. It may be said, however, that, in the postwar period, productive capacity will be short of total demand; and, for several years this lack of balance between production and consumption will continue to be in evidence.

Within the limited scope for earnings and with the tremendous gearing-up in the war effort, through intensive working, it should be said that the earnings record of the last three years is impressive. The entrepreneur has derived great benefit while the State has gained immensely, the cotton textile industry, especially in the later stages, being a considerable tax-gatherer for the Government. In a country which is largely dependent for its capital goods on others, it is not quite correct to say that the earnings of industries represent a net gain as the question of replacement will prove to be difficult in the immediate postwar years and there is no certainty that prices will come down to anywhere near prewar levels. From this point of view, rigorous taxation measures have to be linked with provisions for relief. As we shall show presently, there has been an intrinsic strengthening in the financial position of companies; and the surplus funds might enable expansion or replacement less difficult. The shareholder has, perhaps, fared worst in the bargain as the dividends paid constitute only a very small proportion of total earnings. His main satisfaction is increase in equity value.

In last week's article, it was not possible to include an analysis of these aspects of industrial profits.

We give below three tables giving the earnings of groups of companies belonging to particular industries indicating the main heads of distribution of profits.

CUMULATIVE STATEMENT OF INDUSTRIAL PROFITS

1944

Name.	No.	Net Profit.	Allocations to funds including Dep.	Taxation.	Dividend Amount.	Carry forward.
		Rs.	Rs.	Rs.	Rs.	Rs.

It will be seen that the profits of jute mills show a downward curve. It should be said that the jute industry had the brightest spell of prosperity in the closing months of 1942 and in the early months of 1943 when there was a large increase in exports and production was at a very high level. Thereafter, shipping difficulties restricted exports. Recently, coal shortage has been mainly responsible for the troubles of the industry. The compensation to labour and increased working expenses have cut into earnings. Thus 37 companies reporting in 1944 had a net profit before providing for taxation and depreciation of Rs. 2.68 crores against Rs. 4.01 crores for the same number of companies reporting in 1943 and Rs. 4.31 crores in 1942. With a fairly high level of profits for the standard period, most companies were able to pay good dividends though it has to be noted that the allocations on account of income-tax and Excess Profits Tax were over 70 per cent of total earnings. It is interesting to note that while earnings have declined in two years by more than Rs. 1.6 crores, tax provision is lower by only Rs. 72 lakhs, testifying to the sharp increase in taxation in later years.

The coal industry did not experience any improvement in trading conditions till recently; but labour difficulty has seriously curtailed raisings and thereby prevented any large increase in earnings. That there is now slow recovery, will be noticed in reports published recently. The tea industry was on fairly even keel; and, with less onerous liability under E.P.T., shareholders were more fortunate. The flight of labour from the plantations and the sharp increase in working expenses have resulted in greatly reduced profits in 1943. The sugar industry has had one successful season so far. As for shareholders, the dividends paid in the earlier years of protection have not so far been possible.

The steel industry has done well throughout, though, from the point of view of earnings, 1942-43 was the best period. The cotton textile industry has experienced unprecedented booming conditions in the last two years. For many mills, 1943 earnings constitute a record. The net profit before providing for taxation but after providing for depreciation and preference dividend for nine companies was nearly 350 per cent of the paid-up capital. Out of the aggregate profit of Rs. 11.39 crores in 1944, Rs. 8.97 crores had to be set aside for taxation, and Rs. 58.27 lakhs for depreciation. The remaining sum, which was substantial, could have been paid by way of dividends except that a good part of the disposable sum had to be utilised for E.P.T. compulsory deposits. Ordinary shareholders got Rs. 92.86 lakhs or less than 30 per cent on the paid-up capital. The Managing Agents, on the other hand, received Rs. 1.15 crores which is more than what the entire body of shareholders received. The table shows that another set of textile companies (15) reported earnings of Rs. 11.15 crores in 1944 against Rs. 6.12 crores in 1943 and Rs. 2.66 crores in 1942. The sum of Rs. 7.28 crores was provided for taxation out of the earnings for the latter period while Rs. 2.90 crores was placed to depreciation and other reserves. Dividends were Rs. 1.05 crores or 9.5 per cent of total profits.

Taking the industries as a whole, 134 companies had an aggregate income of Rs. 27.91 crores in 1944 against Rs. 23.52 crores in 1943 and Rs. 20.85 crores in 1942. There has been a large increase in the provision for depreciation and reserves in 1944 to Rs. 7.09 crores from Rs. 5.97 crores in 1943 and Rs. 5.72 crores in 1942. Between 1942 and 1944, profits increased by Rs. 7.05 crores to Rs. 27.91 crores. In the same period, tax provision was higher by Rs. 7.72 crores at Rs. 17.29 crores. It is interesting to note that the improvement in profits of cotton mills was more than the increase in the aggregate profits of all the companies reviewed, there being a decline in the earnings of jute, tea and miscellaneous industries. If the growth in earnings were more even, the incidence of taxation would not have been so heavy. After the heavier depreciation and other charges, the shareholders' share had to be augmented by other means. While there was a good surplus after distribution in the earlier years, the large undistributed profits of the earlier years had to be utilised in the later stages for the payment of dividends.

As remarked earlier, the rigorous taxation measures, with the provision for refunds, have resulted in an inner strengthening of the financial position of companies. The accretion to published reserves has not been very large; but that there have been forced additions to reserves will be evident from the jump in allocations to funds other than depreciation from Rs. 2.76 crores in 1943 to Rs. 3.93 crores in 1944. The figure in 1942 was Rs. 2.77 crores. Though the practice has been latterly to show E.P.T. deposit allocations separately, in the earlier periods, optional deposits were included in the provision for taxation. It might thus be that a proportion of the sums shown on account of taxation are, to a small extent, on account of such deposits. Another important aspect of the question is that of tax refund. At the present moment, as readers are perhaps aware, nearly 20 per cent of Excess Profits Tax is to be kept as compulsory deposits while the tax refund is 6 2/3 per cent. Nearly one-third of the deposit will thus be received by way of refunds. These sums have greatly strengthened the position of companies and should provide the much-needed finance in the post-war period. One or two typical instances will make the position clear.

British India Corporation Ltd., had a gross block of Rs. 2.42 crores at the end of 1934. Net liquid assets were Rs. 1.1 crores. At the end of 1939, gross block was higher by Rs. 36 lakhs at Rs. 2.78 crores while net liquid assets were lower by Rs. 11 lakhs at Rs. 98.55 lakhs. At the end of 1943, however, even with the extensions to plant valued at Rs. 24 lakhs, net liquid assets were Rs. 69 lakhs higher at Rs. 1.68 crores. Thus, the increase in the surplus funds after meeting all liabilities and paying dividends to shareholders in the four years ending December, 1943, was as much as Rs. 67 lakhs against only Rs. 14 lakhs in the five years ending December, 1939.

The improvement in the financial position of Tata Iron and Steel Company, Limited, is even more impressive. In the last decade, the Managing Agents have vastly expanded the capacity of the iron and steel works. In spite of such extensions, there is a large surplus which, however, is considered inadequate as the directors contemplate yet further extensions on a large scale. On March 31, 1933, gross block was Rs. 24.25 crores and liquid assets were not enough to meet sundry liabilities including taxation, the deficit being Rs. 5.49 lakhs. On March 31, 1938, gross block was Rs. 25.59 crores or an increase of Rs. 1.34 crores. The shortfall in liquid assets over sundry liabilities including taxation and dividends had increased to Rs. 93.41 lakhs from Rs. 5.49 lakhs. At the end of March, 1944, however, even with the extensions to plant by Rs. 6.47 crores during the war period, there was a net surplus of Rs. 1.24 lakhs. In just over a decade Tata Iron and Steel Company has, therefore, been able to plough into its business sums amounting to over Rs. 8 crores. While the prosperous conditions in the steel industry have been mainly responsible for the very high level of earnings, the conservative policy of the directors and the immobilisation of excess profits have contributed to the retention of such a large proportion of total earnings with the Company.

Shipping Position and Chemical Industries

(Contributed)

While the improvement in the shipping position is to be generally welcomed, as affording considerable relief in the shortage of goods and in the fight against inflation, its effect on indigenous industry, particularly under conditions of import control, is apt to be overlooked. The comparative ease with which foreign goods can be imported has the effect of reducing the dependence on local resources for supplies necessary for the war effort. Given the Government's bias in favour of imports, a situation in which not only imports are available, but the Government continues to be the biggest buyer and to retain full control over trade, can conceivably have very adverse effects on the position of existing industries and the prospects of potential ones. In the first place, the urge to seek indigenous sources of substitutes for imports rendered inaccessible by the shipping position and the interference with communications will no longer be felt as of old. And in this context, it must be remembered that this search which began nearly three years ago has not made even progress in respect of all the requisite goods. In the case of some, the stage of actual production may have been reached; in others, it may have just have come into sight; in a few others, the enquiry may have branched out into other lines. The first effect of the improvement in the shipping position may therefore be to damp the enthusiasm for these efforts and to inaugurate a process of virtual liquidation of this part of the war effort. The authorities are apt to forget that this security of local resources and the attempt to utilise them to the best advantage, while they may have been motivated by the immediate needs of the war effort, have great importance for the future industrialisation of the country. There is need, then, for the authorities concerned to reassure the public that the improvement in the shipping position has not led and will not lead to this undesirable development.

The position of new industries established for the war effort and industries which have branched out into lines of production for the same purpose is not very different. Assurances have been held out, no doubt, from time to time that the Government will not lightly expose themselves to a charge of opportunism in their treatment of these industries. But the whole process of pressing Indian industry into the service of the war effort is such that industry rests for its successful working on innumerable Government props. Apart from the adequacy of orders to keep them going, there are a number of essentials for which industry has to go to Government. When the incentive to maintain production has weakened, a process of withdrawing these props, perhaps as unconscious as it is insidious and effective, sets in. The effects would be felt slowly but surely.

The position is aggravated by two factors. Firstly, the shortage of coal and the consequent curb on production of most industries. And secondly, the ease with which this reduced production can be used as a pretext for availing of the improvement in the shipping position for increasing their imports is taken to be axiomatic; since the public has been taught to think that, since inflation is inevitable, it is only the effects of inflation that can be fought with reasonable hopes of success.

There is good reason to think that the developments we have sketched above are already well advanced. It need hardly be said that we are not thinking in this context of razor blades and Scotch Whisky and other commodities in which profiteering has been rank and the pressure of new supplies will be welcome. Imports of consumer's goods which do not affect Indian industry are an acceptable reinforcement in the fight against inflation and may go some distance in softening the rigours of ordinary civilian living during the war period. But imports of chemicals, bicycles, bobbins and spares of staple industries which Indian industry has only recently begun to provide for itself are on an altogether different footing.

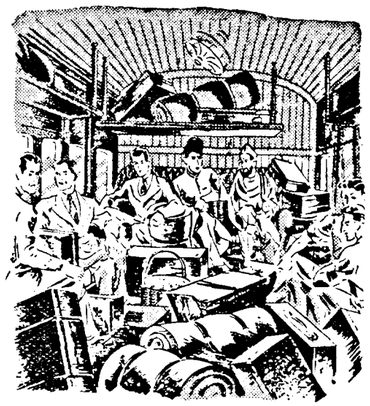
We understood that large quantities of Alumina Ferric, Sodium Sulphite, Zinc Chloride, Magnesium Sulphate, Calcium Chloride, Sodium Thio-Sulphate and Bichromates, etc., have been imported into the country in spite of the fact that the indigenous industry is capable of producing them in sufficient quantities, if certain basic materials, adequate quantity of coal and fuel and transport facilities are provided. As we have indicated already, shortage of coal was the first brake in Indian industry during the war, the quota allotted to chemical industries being extremely small. Little regard is being paid to the expansion in productive capacity. The manufacture of Alumina Ferric has, as a matter of fact, been considerably expanded in the course of this war. The unutilised capacity of the indigenous industry is to the extent of 5,000 tons, present production being to the tune of 10,000 tons per year. In spite of this, the Government, it is reported, are importing this commodity, without even lower prices to cite in defence of their action.

Sodium Thio-Sulphate (Hypo) is in some respects the worst instance since the production of this chemical was undertaken

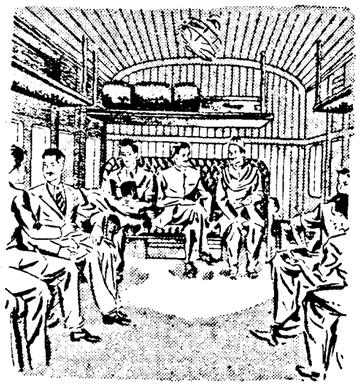
"WE WILL FREE INDIA"—chant the Japanese propagandists. A fine promise from a people who have never had any freedom in their own country! India aims at self-government and will have it after the war—she needs no help from a country whose militarist leaders intend not to liberate but dominate other Asiatic nations.

THROUGH VICTORY ... TO FREEDOM

U.A. 1019



in this Country at the instance of Government. The total requirements of the country is in the neighbourhood of 600 to 700 tons per year; and the productive capacity of the existing plants is much higher. In spite of this, Government have embarked upon the scheme of importing this chemical from abroad.



In the case of Sodium Sulphate, Government gave, in April 1942, an assurance that all assistance would be made available to this industry, such as the procurement of raw materials, fuel, etc., so that the local manufacturers could produce larger quantities for war purposes. The productive capacity today is in the neighbourhood of 500 tons per annum This chemical can be produced in the country out of the waste of the bichromate industry, which has been developed considerably during the war. In spite of this there is unhealthy competition created by the import of Sodium at low prices. Deposits of Sodium Sulphide are still lying unutilised, such as in Jodhpur State. The high prices for coal slack and high railway freights charged for the raw materials add to the difficulty in face of foreign competition.

Total production of bichromates in India is estimated at more than 5,000 tons per annum, which is sufficient to meet the country's requirements. The production can be increased further. Government have started importing this chemical from foreign countries. The industry is suffering from lack of Government aid in regard to raw materials and transport facilities. The bichromate industry which can produce certain valuable bye-products such as Chrome Alum, Chromic Acid, Chrome Pigments and Oxides, if Government give assurance of necessary assistance, has also had its outlook rendered black by the new import policy.

Heavy imports of Soda Ash have been arranged by Government recently, though there are three important chemical concerns in the country manufacturing Soda Ash. Likewise several large consignments of Copper Sulphate have recently arrived, though there is considerable amount of unutilised capacity within the country. Other industries too have begun to be affected adversely.

The instance we have cited in the foregoing should suffice to show the direction in which import control is moving. Particulars are not available for other industries as for the chemical industry; and we need hardly say that we shall be glad to find space even in these times of rigours of space economy for giving publicity to the grievances of other industries, if those who are directly concerned will express them with due support of facts and figures.

less luggage-

more comfort

If you MUST travel on India's crowded railways, take as little luggage as possible. The discomforts of travel are greatly increased when passengers take a considerable quantity of heavy luggage and several odds and ends. A small box and a bedding roll should be the limit. Particularly avoid taking baskets or bundles which carry little but take up a lot of space. Send your heavy luggage in the brake van. In co-operating over this, you can minimise your own discomfort and that of your fellow passengers.

IF YOU MUST TRAVEL-
TRAVEL WITH

Less Luggage

Editorial Notes

Compulsory Saving

The anti-inflationary borrowing in the form of savings certificates undertaken by the Hyderabad Government is to be supplemented by a compulsory savings scheme. Of course this is different from the advance payment of tax or the E.P.T. deposit already familiar to British India. Since jointstock companies are affected by the scheme, it is not merely meant for taking off the wage-earner's surplus income. As the exemption limit is as high as Rs. 6,000 a year, the savings scheme bears no real resemblance to those adopted in Britain or the U.S.A. where the Victory tax as well as pay-as-you-earn scheme is in force. As it is made clear that only those not subject to E.P.T. are to make deposits, the receipts will not be large. The percentage of income to be blocked for a short-term loan of five year's currency bearing interest at 2 percent is not indicated but it cannot be in any case larger than the proportion assigned for real savings, for instance, insurance premia and provident fund contributions now exempt from tax. Compulsory savings in relation to tax revenue or the so-called inflationary gap may be large though not in relation to gross income, and forced savings to the extent of Rs. 75 lakhs placed at the disposal of State may be regarded as an extra-budgetary fund whose application for public works construction in the event of a trade recession after the war may well provide an example. The exclusion of wages distinguishes the scheme from the system adopted in France under M. Daladier or the modified plan of deferred pay. The release one year after the war of deposits made would not entail the levy on capital that Lord Keynes proposed in connection with his plan for deferred pay. When capital issues are subject to control and avenues of investment are few, compulsory saving offering the saver as much as the rate on term deposits with banks may prove welcome to both companies and persons. As the Provinces do not have income-tax it is clear the imitation is hardly possible while the Centre having raised this year the surcharge on certain classes of incomes can scarcely try out a plan for adding to its current resources.

Economics Of Indian Agriculture

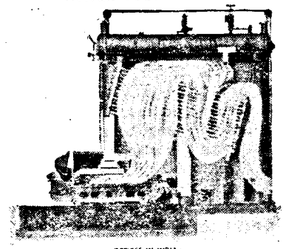
If the purpose of post-war development of India is to raise the standard of living of the masses the resuscitation of agriculture would feature all important. Even industries should primarily aim at absorbing surplus population from agriculture and offer more profitable markets for agricultural products. Indian agriculture has fallen on evil days owing to the combined onslaught of economic, social and even legal troubles. The public needs to be educated as to the why of the sorry state of our rural economy. Among the books which have recently appeared the two volumes on "The Economics of Indian Agriculture" by Dr. B. V. Narayanasamy and Mr. P.-S. Narasimhan (Rochouse and Sons, Limited, Madras. Volume 1 Rs. 3-8. Volume II Rs. 4. Pages 642) are admirably suited to the undergraduates in the colleges and to the general public who like to know the salient features of the different facets of agriculture. The authors have brought their theoretical knowledge to bear on Indian conditions and in twenty five chapters have presented the picture of present day ills of our agriculture and suggested suitable remedies. Agencies of rural credit have received emphasis and the authors believe that regeneration of rural life could best be done through cooperation. The record of the Reserve Bank in the matter of of helping agriculture is, according to the authors, not bright. The aim of the publication is to provide the background of Indian agriculture so as to help in defining a long-term policy after the war. The publication is a service to students in particular and is bound to be popular.

Desirable Development

The accelerated progress of medium and longstaple cotton cultivation in 1942-43 is one of the results of the war. The Indian Central Cotton Committee's latest report dwells on the fact that the proportion of cotton above ⅞" was 60 percent in 1942-43 as against 45 percent in 1941-42. The reduction under shortstaple led to an increase under Jarilla cultivation. The Indian cottongrower is believed to have benefited to the extent of Rs. 9.3 crores or Rs. 9 per acre on the average. The single largest variety of cotton grown in 1942-43 as well as the preceding year was Ameri can cotton with staple below 1 inch while Oomras, the chief variety between 1937 and 1942 shrank by over two-thirds. The cotton crops forecasts this year pointed to the continuance of the desired increase. The imports may be held a reason for such increases despite of ⅞" and above in 1942-43 rose by .45 million bales while their consumption of shortstaple cotton fell by .4 million bales has special relevance though the real increase in mill consumption was higher at 255,420 bales. Mill consumption in Bombay and Madras rose to a greater extent than in other Provinces or States, and the Madras figure is obviously higher than presumed owing to the proportion of loose (unpressed) cotton used by mills. The increase under consumption is greatest in respect of Madras. Though the area under cotton cultivation decreased, the cultivation of improved strains of Cambodia cotton increased during 1942-43. Seed distribution schemes were successful in respect of both Cambodia and Karunganni cotton which occupied over half the area under cotton in Madras.

Changes in Exports

Substantial changes in India's foreign trade during 1943 are indicated in the December survey of business conditions. Raw cotton exports started to increase in September while raw jute exports continued to decline. Exports of jute manufactures reflected the fall in mill production after August. Greater interest attaches to the exports of rice which for the nine months ended December exceeded the exports of 1941-42. The increase in value is greater, but the fall from July 1943 is apparent in this case. While wheat imports increased last year India's exports of wheat began to fall in May 1943 and the shortlived recovery in October did raise exports to the level of April 1943. A larger wheat crop last year thus did not result in increased exports. The other change to which attention must be directed is the slight increase under imports of iron and steel especially in December but the total for nine months was 39,0000 tons only. The pigiron exports during April to December 1943 were lower than in the preceding year; so also exports of iron and steel from India. Imports of protected iron and steel last year were below the level of 1942. Of greater importance from the investor's angle is the rise in prices of pigiron after October 1943. For ten months the prices of Foundry No. 1 and Fcundry No. 4 were unchanged, and prices then improved by over 10 percent. The increase may explain the decline in exports but implies for the producers the equalisation of prices and with costs. The decline in India's imports of iron and steel as compared with the prewar period is substantial. Exports of pigiron have declined substantially in consequence, and if the export figures of 1939-40 be taken as a guide, the quantity of iron and steel available for oversea customers, when Control is discarded, may be put at over 100,000 tons. The export figure may be reached easily when hostilities end, since Europe can sell little and Britain's stabilised iron and steel output may leave little for export. Coal exports fell last year; likewise imports. Prices began to rise in April last and the index for Jharia Grade No.1 stood at 260 in December as compared with 126 in January.



Sikh Claims

Sikh opposition to the C.R. formula and the demand for Pakistan has led to a concession of an expected kind. A separate Sikh State or a Province is to be set up to meet Sikh claims. The original solution to detach the Ambala Division, drawing its water from the Jumna not the Punjab's rivers, has been evidently discarded. It is not indicated at present whether the 1942 pact made with Sir Sikandar Hyat Khan by the Sikh parties is to be given up in favour of a new plan for a Sikh State. The assurance given in 1940 (after the Lahore resolution was adopted) by Mr. Jinnah to the Sikhs that nothing was to be feared from a Muslim Raj in the Punjab did not prevent the Sikhs from rejecting the Cripps proposals because they gave the Punjab the power to stay out of an All-India union. The Nuffield College report (p 86) suggested that the Punjab could be bisected by a line drawn from north to south through the Lahore Division. But Mr. Jinnah's offer contemplates the inclusion of the Sikh sub-nation in Pakistan with special safeguards not as new province joined to Hindustan. Congress acceptance of the partition formula, actual or potential, has raised the minority problem in its most acute form. The League presumably wants to secure a local compromise in advance of the other, wider compromise but future Sikh claims for a place in the interim national government may be based less on the fact that 5.2 million Sikhs live in the Punjab and the adjacent States than on the concessions that can be got because they have long held the balance in Punjab politics. Since the Sikhs cannot be coerced without the risk of a civil war, their demands, as contrasted with arguments advanced against Partition, must affect the outcome of the conversations between League and Congress. A smaller, wealthier province between the Hindu State and the Northwest Muslim State may modify the defence problem of Pakistan as well as the position of some Indian States to the east of the Sutlej.

Costs and Exports

The conditions under which British motor exports could recover quickly are ascertainable from representations to the Treasury as to tax relief. But tax relief by using a new formula to adjust the old horsepower tax would not improve the export outlook in relation to the biggest rival, the U.S.A. The main difference lies in costs of production. The home market may expand but the export market can be won, and kept, only by adjustment of costs. Since the U.S. annual output (determined by mass production) is ten times that of Britain, the main reason is obvious. But that is not the whole story. It is known that advantages of volume production as regards costs are secured at an annual output of 35,000 units. In the case of a motor vehicle labour and overhead charges claim 35 percent. of costs while raw and fabricated materials take 65 percent. The high level of U.S. wages did not raise costs there to any extent and it is only from a reduction in the prices of fabricated and raw materials that a fall in costs can follow. In a motor vehicle steel accounts for 27.89 percent and grey and malleable iron for 8.04 percent. U.S. costs in regard to hectals were substantially lower before the war because all materials including the sheets for the body were to be had cheaper in the U.S.A. Since many parts needed for automobile manufacture are controlled by monopolists or semi-monopolists, the difference in costs as between Britain and the U.S.A. can only be reduced by getting over the rings and combinations according to a recent account of the difficulties that must be removed. Britain's handicap in regard to supplies and costs are many. The glass accounts for 2.95 percent and the rubber for 1.95 percent. of the cost of manufacture. The major item, however, is fabricated assemblies including various proprietary articles. The relative importance of wages as compared with items like dynamos and carburettor may indicate that costs of semi-finished articles rather than the size of the local market is the determining factor in regard to the future of independent manufacture in India. If British costs are reduced by special efforts, and motor exports are enlarged in the future, the adjustments demanded of new manufacture outside Britain may be greater.

Claim For Gaul

A demand for the Rhineland to be occupied by French forces for many years has been included in General de Gaulle's outline of French national requirements. Agreement between the U.S. Government and the French leader on grave questions implies the acceptance of the demand which, in General de Gaulle's opinion, is necessary for French and international security. The allusion to a better understanding of common aims indicates that even more than the recognition of the provisional Government of France is the general retreat from the Atlantic Charter, for a definite territorial claim has been duly advanced on behalf of the Allies as well as France. The reoccupation of the Rhineland in March 1936 when the Italo-Abyssinian war was on stands out as a milestone in Hitler's career. France then could not, and did not, resist. That failure is to be retrieved by reproduction of old control arrangements. After the last war, the Rhineland was taken out of German control though the French claim to the Rhine frontier was negatived. The U.S.A. refused in 1920 to guarantee the French frontier, and German default led to the Ruhr adventure. It is not unlikely that international control of the Saar Basin is promised along with repudiation of the Nazis' own territorial adjustments since June 1940. The occupation of the Rhineland involves the economic disarmament of Western Germany, more particularly of the Ruhr basin. The beginning of the old familiar search for security indicates that the future government of France attaches no importance to Reparations but wants new territory, in a single unbroken line from Alsace to Holland. The defederalising of Germany as part of post-war settlement may help France to gain her point easily; and promised adjustments as in the case of East Prussia would materially strengthen the French claim. If General de Gaulle has taken over Poincare's ideas, the failure of the Locarno Pact which compelled Belgium to reconsider her position is sufficient reason for the demand now made. Though American assent is not indicated at present the British view may be determined by post-Munich developments. Germany's reactions to the demand do not require notice but it is important to note that the French claim may be supported by the Belgian and other governments.

Oil Agreement

An agreement between the U.S.A. and Britain relating to the production and distribution of oil is meant to show that the oil wars of the past can never recur. It is to the interest of the U.S.A. today to increase production by all means; the exploitation of the Elk Hills Reserve by Standard Oil has been authorised. An increase in oil production duly raises questions as to markets and fair prices. Hence the agreement with Britain over and above the agreement as to a pipeline or pipelines in the Middle East. The agreement does not cover Russia since it is clear that Russia will need all her oil for herself after the war. Outside Russian territory, there are no concessions over which negotiation is necessary. The agreement is directed towards making Latin American countries respect the rights of operating foreign companies. The status quo is to be maintained, but it may be asked if compensation in Rumania for lost assets is to be on a fifty-fifty basis. The immediate effect of the news last week that Lord Beaverbrook and Mr. Stettinius had reached a complete agreement was a rise in Anglo-Iranian oil stock. But this rise may be really due to the subsequent news item that a big, new refinery will go into operation by the end of this year. Though the other United Nations are to join because the further purposes of the agreement require agreement over the application of an oil sanction in the event of aggression, the main point to note is that British and American oil groups are to act together in exploiting new oil areas. If a U.S. company gets a footing in Canada, a British company has a hold on the Middle West. Since one of the purposes of the Atlantic Charter is to break cartel control in the future the agreement is concerned with supply in adequate volume at fair prices. There will perhaps be no curtailment of U.S. oil production for such reasons as those accepted ten years ago. The leading importer's (Europe's) requirements are taken note of, and a further intended result of agreement may be a decline in synthetic oil production. If the bulk of Britain's oil imports is going to come from the Middle East the U.S.A., too, is interested in the Middle East, and has an eye on Eastern markets.

The Famine Enquiry

The long stay planned by the Famine Enquiry Commission in one province is connected with its enquiry into the antecedents of the 1943-famine. Though the Ordinance leading to its appointment promised much, the enquiry itself appears to be a belated scrutiny of official machinery and measures in relation to food. That a verdict of officials and ex-officials alone on the happenings of 1943 can give little satisfaction is a truism but the Commission is empowered to pres-

SOMETHING "EXTRA" IN THIS INVESTMENT

Life insurance offers you an ideal investment proposition. Government Securities, Bank Deposits, etc., are First Class Investments, but certain New India policies afford better advantages. They are as follows:

- **Handsome Profits:** *At the end of the term, the policy returns the Capital invested with an yield in compound interest which is very often larger than the yield from the Capital invested in other securities.*
- **Full Life Coverage:** *In the event of early demise, the full sum assured (with or without profits) is paid out to the beneficiaries. Very often this means a return out of proportion to the Capital invested.*
- **Saving in Income Tax:** *To those who pay Income Tax, such policies are an added attraction as a substantial rebate is allowed on the premiums that are paid.*
- **No Depreciation:** *The Capital invested does not depreciate nor is adversely affected by market fluctuations*

The Capital may be invested by instalments or in a lump sum at a discounted rate. As the yield varies in each individual case according to age, term, income tax payable, etc., a detailed plan to suit your own needs will be furnished on request.

Business Figures

Total Premium Income	Total Claims Paid
Rs. 20,87,32,572	Rs. 10,47,44,878

New India's huge assets constitute an unimpeachable security. To-day this company can be proud of being the largest Indian Composite Insurance Organisation, transacting Life, Fire, Marine, Accident and other forms of insurance.

cribe measures of prevention so that it bears a resemblance to the earlier Famine Commissions set up without any special directions. Sir John Woodhead's outline of his tasks last month indicated that both Central and Provincial departments would have to submit evidence, likewise the Army. The meagre reports of the evidence placed before the Commission do not indicate the causes of the disaster or even the private opinion held as to the causes. Perhaps it is best to regard the famine enquiry as a late but expert appraisal of the entire system of procurement and distribution. If suggestions for improvement follow the Centre's policy may be stricter but it is doubtful if the Commission can add to the Gregory Committee's suggestions in regard to trade and production.

Puppet's Industries

Raids on Mukden by U.S. aircraft indicated that Manchukuo's industrial development by forced marches did not pass unnoticed in the war. The Japanese programme of development through a development company in which the Southern Manchurian Railway was interested turned on the iron and coal resources available. To work the iron deposits alone four new companies were launched. Zinc, lead and magnesite deposits also were located and developed and the coal-mining at Fushun was supplemented by the development of petroleum from shale. Though anthracite is very limited the mines in the southeast, notably the Fushun mine, belonging to S.M.R., have been successfully developed. The opencut mine, not far from Mukden, with estimated reserves of 950 million tons claimed an annual production of nearly .9 million metric tons. The Anshan iron mine like the Fushun coal mine is more famous than the rest because the Chinese were the original campaigners and work began in 1926. The Showa Steel Works run under a special statute is perhaps the most important enterprise launched after the conquest. Since Japan wants gold too placer-mining, for example, near Dairen, has figured in the imperialist's industrial programme. Copper, too, is among South Manchuria's minerals which include the cryolite required for aluminium production. Many manufacturing affiliates eg., cement and automile companies were set up by Manchuria's Development Corporation, which turned readily to the more recently conquered province of Jehol. The actual connection between the Manchurian Development Corporation which got half its capital from the Government and the five-year plan adopted to develop is plain, but the original inspiration in 1937 came from the Japanese Industrial Company.

The sweet little darling taking his first steps evokes joy to the loving hearts of his parents. But the life ahead of those tiny feet a long, long walk and the path is not easy. So it is important that the same loving care that guided his first steps may be extended to protect his future and here comes the question of Life Insurance for the parents.

Howrah Insurance, at the helm of which is KARMAVEER ALAMOHAN DASS, offers a genuine and careful service for planning the future of your children and its Policy Schemes combine all that is best in Life Insurance.

Plans for the Pacific

Mr. Roosevelt's visit to Honolulu last week was no premeditated surprise but part of his work as C-in-C proceeding to U.S. overseas territory. In his broadcast on return to the U.S.A. come two assurances that the war with Japan will proceed vigorously and that the U.S.A. wants more bases in the Pacific to make its hemisphere defence programme perfect. A chain of bases to defend the Pacific coast from Alaska to Chile is required. Though no claims to any other nation's territory has been advanced, the future of the islands transferred to Japan under Mandate is apparently settled. The U.S.A. evidently intends to keep the Marshalls and Carolines to make its supremacy in the North Pacific absolute. Mr. Roosevelt's broadcast dwelt on the prospective development of trade with Russia and China. In this case trade will not follow the flag, as the U.S.A. declines to take anything for herself on the Asiatic mainland. In the South Pacific the rule of open access is to be applied, but little was said about Southeast Asia. It may, however, be inferred that a condition of restoration of lost possessions would be the abolition of export duties on tin and rubber in British and Dutch colonies. If there is no threat to existing colonial possessions, the President's argument in favour of the Open Door in East Asia is directed towards tariff adjustments although China's foreign debt and the revenue are inextricably connected. The main result of a transfer of Japanese possessions to the U.S.A. would be limited liability for defence: and the defence budgets of both China and Siberia hence may show a change. The President's brief outline is less vague than that of Mr. H. A. Wallace since U.S. trade ambitions in the Orient are indicated as precisely as the defence requirements after the war.

Moderation For Victors

While the French are emphatic about the need to detach the Rhineland from Germany and the destruction of war potential, and the Soviet Union is credited with a plan to assign East Prussia to Poland the voice raised in favour of a moderate peace should not pass unnoticed. Whatever be the Allied Advisory Commission's recommendations as to a settlement it is urged that nothing like the Sudeten problem should be allowed to recur. The warning against Reparations has been sounded also. It is easy to link with the collective security conversations in Washington in which Russia is not participating. The collective security plan is meant to prevent war. But the best way to prevent it is by a moderate peace. The outline of peace terms merely suggests frontier rectification in the East.

That means the new Polish Committee's claim to a frontier on the Order does not meet with approval though the port of Danzig may be ceded to Poland. There is no objection to Austrian independence but the limit to territorial amputation is indicated again. Physical reparation mentioned as one of the terms of a peace imposed after victory, covers perhaps the transfer of railway equipments, ships and factories removed by Germany from the Occupied countries as well as the great pictures taken away on false pretences. It is clear that occupation costs cannot be recovered by the Occupied countries, and on the basis of past experience, Reparations in the form of ships or coal are deprecated. The smaller European governments may disagree with the Anglo-American view as to what can be without breach of promise made in the Atlantic Charter. After five years of total war there can be little to satisfy demands for full compensation. Further, Germany must support Central and South-east Europe as a market for raw materials and a source of manufactured goods. There is no longer any question of cooperation with German trusts but only that of limiting the relief requirements of the vanquished countries.

Sound Defence

While the air is thick with suspicion of trusts, cartels and combinations, it may be doubted whether proved competence in carrying out production and distribution would be an excuse for tolerance. Voluntary submission to wartime control does not detract from the usual vehemence of the arguments heard in the U.S.A. about the evil that trusts do. There is, however, no indication of special efforts to break up existing combines, and compromise holds the field, for reconversion hinges largely on the cooperation of private enterprise. In Britain the point as to price-fixing and limited production has been dealt with in relation to the cement industry whose resources, it has been explained, are quite equal to the demands of reconstruction. The defence of one form of private enterprise covers also the provision of goods at stipulated prices to Government during the war by firms working under agreement. That the revenue benefits, even where the larger closely-integrated firms earn larger profits, needs to be understood, although it may be suggested that such profits in some cases imply higher costs for other industries. On the basis of war effort the claim to live and let live has been advanced by firms accused of functioning in too close relationship with foreign cartels. Leadership in research is a consequence of foreign contracts, and large scale organisation is still directed towards world rationalisation of industry. In the annual report of I.C.I. there is a reference to the economic anarchy of cut-throat competition. That skill and ability in management are preserved is a claim supported by I.C.I.'s own record. An organisation with 180,000 stockholders and 100,000 employees in its home factories is said to be distinct from any profit-making enterprise since its customers and workers are considered as important as the proprietors. The case for leaving well alone leaves out the question of increasing production for adding to home employment, also the question of scrutinising costs and prices so as to prevent hardship for consumers. On both counts assurances will probably be secured by private and independent negotiation, and the decay of European cartels may create the conditions required for the development that would lower costs as desired. Where costs are ascertained to be low and the workers' position actually better than in industries that are not trustified the problem of control in peacetime resolves itself into a question of publicity for arrangements entered into with foreign industrialists.

The Feast of Shiraz

SHEIKH SAADI OF SHIRAZ, the celebrated poet of Iran, once visited a rich merchant in another town, where he was lavishly entertained. After meals, he frequently sighed and said "Ah, Dawat-e-Shiraz" (Ah, the feast of Shiraz). The merchant, scenting dissatisfaction, redoubled his efforts to provide fare worthy of his distinguished guest. But always after a meal it was the same "Ah, Dawat-e-Shiraz," and after three days the poet left. Later the merchant visited Shiraz and he determined to call on the poet and find out what made the feast of Shiraz so much better than his own fare. He was surprised, and even angry, when he received a modest meal. "This is but simple fare and costs so little that you may stay, if you like, for a year," said the poet. This, he explained, was true hospitality—embarrassing neither to the host nor to the guest. We, too, can prove ourselves good hosts by giving our guests simple food. We can make every meal "The Feast of Shiraz." Food is in short supply and it is the poor who suffer most. Now, more than ever, is the time to follow the advice of the wise poet of Iran.

W. G. GROUNDWATER, General Manager

Clive Street Gossip

For gauging postwar industrial and business trends and developments, it is important and necessary that we have, in our mind's eye, as clear an outline as practicable of the kind of postwar world we may expect. Those who believe in the inevitability of a postwar slump cannot understand or do not care to understand the significance of this question. They are content with the facile reasoning that whatever has happened before must happen hereafter. In their estimation, such of those like myself who indulge in visions of the future, are just grandiose and impractical theorists. They lay the flattering unction to their souls that they have a shrewder and surer grasp of the practical realities in the various markets. To the professional speculator, sufficient unto the day are the transactions thereof: the morrow can take care of itself. The amazing fortunes that have been made in wartime speculation have induced in the operators a sense of their infallibility. In their case, it may be said that nothing succeeds like success or excess. It is necessary to remember that it is these men who create market psychology and dominate market operations. From this point of view, it may be taken as certain that whatever may be the prophecies of students of economics like me and however correct these prophecies may be proved by future events, the immediate and near future will be largely governed and determined by the cumulative psychology and cumulative operations of those who have come to a rough-and-ready conclusion that postwar slumps cannot but be history that must repeat itself.

This is the second article in the series "If peace comes to-morrow."

The first article appeared in this Section in the issue of August 12.

While I am conscious that my views and conclusions will fail to have any effect on the immediate and near outlook governing market circles, I cannot help feeling surprised that the believers in a postwar slump have not realised the obvious necessity for understanding, even in the vague way, the outline of postwar world before appreciating postwar market trends and tendencies. I have used the word "obvious" advisedly for two reasons. Firstly, it is obvious that, even as this war has proved to be entirely different from previous wars, the imminent postwar period must prove to be different from its predecessors. In the case of earlier wars, it would be correct to say that the war as such came to a definite end, and peace time started with a definite beginning of its own. The lessons and plans of the war did not largely govern or influence the plans and purposes of peacetime. It is the unique feature of World War II that, even while the maximum planning and research and energy have gone to invest the war effort with the highest efficiency and effectiveness, there has been simultaneously active planning and thinking of the problems that will arise on the conclusion of the war. The result is that, on the present occasion, there would not be a break between the war period and the peace period. The change-over from war to peace is to be a deliberately planned transition. The lessons and plans of the present war are the inspiring forces behind the plans and purposes of peace to which so much thought is now being given by statesmen and thinkers all over the world. The peacetime we shall know at the end of this war will not be in the nature of something happening somehow, anyhow. Right at the present moment, while the war effort is yet at its peak, there are valuable data available for those who have eyes to see and brains to understand; and the latter can put together a picture of what the postwar world is obviously bound to be.

* * * *

In the second place, the market-place will do well to revive its memory of what happened at the beginning of this war. Most of the professional operators at that time took the view that giltedged would collapse and industrials would boom. Taking particularly the case of the United Kingdom and the United States, monetary technique and economic controls gave altogether a new pattern to this war. Industrials managed to be just about steady; and giltedged went from strength to strength. If, then, the rough and ready prophets of the market found things going against form and norm in this war, should it not be obvious to them that postwar trends also have every chance of proving a variant from the normal as we have *known from previous wars?*

* * * *

As I said, the postwar world is not going to be a total break or a complete departure from the war world. In various ways, the postwar world will be an extension and intensification of the more enduring purposes of this war. To visualise the postwar world, then, let us take a bird's eye view of the world of war as it has so far shaped itself.

* * * *

One of the most outstanding features of World War II is that, while, on the military front, Britain as the war began was just beginning to prepare herself, she started the economic front in a state of complete preparedness. During World War I, a number of experiments in the economic sphere had been tried and worked. In the same way, much progress had been achieved in war strategy and war equipments. After the peace, however, no progress was made so far as war strategy and war equipments were concerned. On the contrary, thanks to the universal propaganda for disarmament, there was actually much retrogression in this regard. This was not the case as regards experiments of the last war in the economic sphere. Monetary technique,

which was taking shape in World War I. had been brought to near perfection at the time World War II began. With the relinking of gold on the old basis in the mid-'twenties. Britain realised that the price she paid for this orthodoxy was increasing trade depression. The gold fetters were removed in September, 1931. And thus was rung out prudery and conservatism in finance. The British Treasury found itself increasingly master of the monetary situation: it discovered its freedom from the diehards and the tyrants of the City: it began to learn the invigorating effects of cheap money; above all, it grew more and more in monetary knowledge and in knowledge of its power to execute its will in the money market. This knowledge and power were reinforced by the establishment of the Exchange Equalisation Fund in 1931. The administration of this fund created and strengthened experience and expertness in the various rites and rituals of exchange. The 'thirties may be said to have provided the best training ground and opportunity for the British Treasury officials to evolve and perfect a comprehensive and, at the same time, an elastic and effective monetary technique. In the case of various economic controls such as stabilisation of prices and wages, building up of stocks and rationing of commodities, the experiments of the last war were closely and intelligently reviewed in the months preceding this war; and, at about the time the war started, the machinery and personnel and plans for bringing the economic controls into instantaneous operation had already been fixed up. Outstanding success has attended the British Government's monetary policy and monetary technique and operation of economic controls; and it may be claimed that, if the military front had functioned as smoothly and efficiently and in a state of as much preparedness as the economic front, Hitler and his satellites could have been defeated long ere this.

I have to pull up abruptly and I shall, in the next week, sum up the conclusions on Britain's war economy.

* * * *

The India Coffee House in Central Avenue is, I understand, under requisition. One cannot help remarking that this is requisitioning run mad. Apart from the Coffee House being a source of great comfort and company to the army personnel, it is one of the few places to which the civilian population can go now with an assurance of wholesome food in a clean environment. The Services have pushed out the civilians from most restaurants. The Coffee House is almost the only one place where the civilian of moderate means can take his friends and family and have a satisfying fare. The Coffee House in Calcutta as in Delhi and Bombay has become a public institution with an ever-increasing clientele. The requisition in the case of the Coffee House cannot be justified on any ground.

"EAVESDROPPER".

B. I. G. Progress

The outlook for the jubilee year was pictured by Sir H. M. Mehta at the annual meeting of the B. I. G. Assurance Company on August 10 when the year's results were reviewed and the jubilee bonus to shareholders was announced. The statement relating to the Reserve for unexpired risks in the case of insurance companies is closely connected with their claim for relief in regard to taxation of underwriting surpluses. It is clear that Sir H. M. Mehta voices general feeling in this regard. Attention may be drawn the increase of capital and the acquisiti of the Zenith Life Assurance Compan life business as landmarks in the B. I. C career. The Chairman looks for the c tinuance of satisfactory conditions on t basis of progress to date. The B. I. results in all departments are pronoun to be better than those of 1942. In t Fire branch premiums showing an crease of Rs. 7.5 lakhs, totalled Rs. 16. lakhs and claims took Rs. 5.415 lak After meeting expenses and commissio the Fire Fund was higher at Rs. 8.

THE BRITISH INDIA GENERAL INSURANCE CO., LTD.

TWENTY-FOURTH ANNUAL GENERAL MEETING

SIR HOMI MEHTA REVIEWS THE WORKING DURING 1943

Presiding over the Twenty-fourth Annual General Meeting of the British India General Insurance Company Limited held at Mehta House, Apollo Street, Bombay on the 10th August 1944, *Sir Homi Mehta, K.B.E., J.P. said:*

Owing to paper restrictions we were not permitted to print and circulate among you, the Directors' report upon the Company's 1943 working. The Annual Accounts and Balance Sheet have been in your hands for some time, however; consequently I presume that, as usual, you will take them as read. You have heard read the Directors' Report and the position is thus regularised.

I will now add my comments.

This Annual General Meeting falls during the Jubilee year of the Company. The 13th September next will see the completion of twenty-five years since the inauguration of your Company. That period has covered various vicissitudes causing grave anxieties from time to time but I claim that all those "teething troubles" have enabled us to approach our second quarter century on a solid foundation—fully equipped for whatever the future may hold. That future, as I see it, will produce steady progress and prosperity to our Company, for there is undoubtedly a splendid outlook for Indian Insurance if carried on under a sound policy and management. Because of this, and having had a successful and all-round progress in 1943, your Directors have pleasure in recommending the payment of a Bonus of 2½% to Shareholders over and above the Dividend of 7½%, to mark our Jubilee year.

The increased Capital, i.e., from Rupees Fifty Lacs to Rupees One Crore was duly sanctioned by Government during the period under review and it will be interesting to you to know that the offer to Shareholders to subscribe to the new Capital resulted in there being an over-subscription of 65%, and that, too, at a premium of Rs. 5 per share—Rs. 10 paid up. This indication of public confidence in your Company is gratifying.

Since 1936, when our Foreign Accident business was disposed of, progress has been steady and the "spring cleaning" then instituted has proved to be the most efficacious. 1943 produced results which continued the year-by-year improvement, it being the best in the career of the Company.

At last year's Meeting, I dealt with the hardships arising from heavy taxation of Insurance Companies. Although it is regrettable that, despite repeated representations to Government by various important bodies, no alleviation is yet forthcoming, I hope that further efforts will be successful. I would repeat that taxation relief is not sought to enable larger dividend-distributions but to improve the reserve positions of Indian Companies. I appeal to Government, once again, to sympathetically consider the subject, particularly since the unfortunate disaster of the 14th April, 1944—leaving behind the explosions such a tragic path of destruction—proves the call for greater reserves than those hitherto allowable by the taxing authorities. The 40% reserve allowed by the Government for unexpired risks is very inadequate and it must be raised to at least 100%.

Turning now to the Departmental Accounts, I would comment as follows:

FIRE DEPARTMENT

Results again give cause for gratification. Gross premiums increased by over Rs. 7,50,000 (say 39.4%), whilst net premiums show an increase of Rs. 3,35,000 (26.1%). The increases are largely from Indian business, as usual. The net incurred-loss ratio is satisfactory, at 33.3%, although 4% higher than in 1942. Full provision for outstanding losses has of course been included. We have increased additional reserves by over Rs. 1,12,000 The tragic occurrence of the 14th April has been justly indemnified to a large extent by Government and this Company's contribution is fortunately very small.

MARINE DEPARTMENT

Underwriting in this Department shows an improvement even upon the satisfactory outcome of the previous year's activities. The net premium income remains steady but reserves have been increased substantially, to 100%. The method of reporting accounts in this Department has been changed to conform to Schedule 'F' of the Insurance Act, and by virtue of the nature of our Marine business, is more appropriate.

ACCIDENT DEPARTMENT

The net income increased substantially over 1942 figures, the total premiums showing an increase of nearly two lacs of rupees over those for the previous year. The increase was actually 42.3%. In this Department, again, additional reserves were enhanced by Rs. 36,000.

Investments and cash balances increased during the year under report by nearly Eight Lacs of Rupees.

A satisfactory feature is the continued reduction in acquisition costs (Commission and Expenses).

During the last two years many new Companies have been floated. I welcome them and extend to them this Company's co-operation. Unity among us is a most desirable feature because, although competition is inevitable, it must be healthy, and it is only from unity that competition can be kept within the bounds of reason. I hope sincerely that we shall not lapse back to the pre-Act conditions when business was put on the books of so many Companies without any apparent regard to Acquisition Costs. A repetition of such conditions must be avoided at all costs, and, on a note of warning, I appeal to all Companies—and to Indian Companies in particular—to pursue their activities on fair and sane lines. This will naturally result in slower progress, but that progress will be sound.

The world war's position is getting clearer every day and I hope before this year is out we may see the end of the massacre and have peace and prosperity over the world—I am sure the Allied Nations will see that the peace terms give no cause to the conquerors or to the vanquished for heart burning and will be so fair to all that the seeds for another conflict may never take root. The world has suffered enormously by this war; the ruin that it brought about is so extensive that no one can express in adequate figures—the budgetary positions of all the countries are so shaken that it will take many years before they will have a breathing space—nevertheless I have confidence that the leaders of all countries will pave the way towards continuous world peace and prosperity hereafter.

I thank my colleagues—your Directors—for their continued support. Our thanks are extended in no small degree to our Agens, Managers and Staffs, by whose excellent work and loyalty our outstanding progress has been maintained.

I now invite comments on the Report, Accounts and Balance Sheet.

(From Our Correspondent)

New Delhi, August 14.

This week may make history for the Gandhi-Jinnah meeting has been fixed for August 19. But for the very slender chance of a communal settlement, the political prospects remain bleak. Even this slender chance of a League-Congress promise seems to be a nightmare to the die-hards in Britain who through *The Times* have frankly expressed their fear—hoping all the time that somehow Mr. Jinnah's ingenuity will avert a crisis which a communal settlement may mean. New Delhi as usual appears to be unperturbed. The Viceroy has flown back from his surprise trip to Imphal and most of the honourable crowd is here. Lord Wavell is reported to have taken his Executive Councillors into confidence this time on his most recent correspondence with Gandhiji. It is expected that the letters will be soon released to the press. There is hardly any indication of New Delhi's political strategy. Matters would of course be delightfully simple if the Gandhi-Jinnah talks fail. There would be nothing to be done then. But in case of a communal understanding, New Delhi will be faced with a dilemma. Of course there will be ever so many unappeased minority interests, though too much emphasis on that won't be convincing enough. The Viceroy in that case, it is expected will consult some half a dozen party leaders including Mr. Jinnah and Mahatma Gandhi—not the latter two alone. From messages all over the country it is clear that both Congressmen and Leaguers are equally anxious to see the communal impasse ended.

* * * *

New Delhi as yet doesn't seem to know anything about the impending Roosevelt-Churchill discussion on India reported in the official Soviet daily *Pravda*. As the end of the war in Europe draws near, Washington seems to be growing more apprehensive of an unnecessary prolongation of the war in the East due to the smouldering fires of political discontent in India. It is now beginning to be realised that this ferment may have incalculable consequences on future military operation. Whole-hearted Indian cooperation in the war effort may make all the difference in the duration of hostilities. An interesting light on official U. S. view in this connection is thrown by the report submitted by Mr. Phillips, Roosevelt's envoy in India, to the President. Extracts from Mr. Phillips' report have now appeared in some papers. "The British Prime Minister has stated that the Atlantic Charter is not applicable to India" says Mr. Phillips. "The Indian Army is mercenary. General Stilwell has expressed concern, in particular, over the poor morale of the Indian officers. Public attitude to the war is even worse. Lassitude, indifference and bitterness have increased by famine and the growing cost of living. But all have one object-eventual freedom and independence. There seems only one remedy to this situation wherein we unfortunately are seriously involved—to change the attitude of the people towards the war; make them feel that we want them to assume responsibilities and are prepared to give them facilities. Political conditions forbid improvement." Indian political circles here feel gratified that Mr. Phillips hasn't minced his words and has stated the truth boldly and honestly.

* * * *

While the Famine Commission is busy recording evidence in camera and is likely to find out that famine was rather inevitable in the war conditions prevailing in 1943, Sir Henry French, Permanent Secretary to the British Food Ministry, has arrived in India to carry on a separate investigation into the country's food needs. Sir Henry's mission is a little mystifying as there is no plausible explanation for his visit just now. It is stated that the Woodhead Commission's job will be to frame a long-term policy while Sir Henry will be concerned with a survey of the existing food stocks, the harvest prospects and the immediate needs. It has been quite clear for some time that the Food-grains Policy Committee's recommendation on the need to import a minimum of 1,500,000 tons has been causing a lot of embarrassment to the British Government. For if food exports to India fall short of the stipulated amount, the responsibility for another famine is likely to be foisted on London. It is in the light of the above facts that Sir Henry's mission is regarded here with some misgiving. For it is feared that Sir Henry's job may be to drastically revise the Food-grains Policy Committee's estimate and discover that India could very well get along with her present food stocks and the promised exports. There is also the likelihood that if Sir Henry has been sent here in a genuine attempt to assess the real food situation and if he comes to the conclusion that India needs more food imports than provided for at present, this country may get the much needed relief. Both Britain and the U.S.A. may be anxious to have a British expert's views before they release more shipping from the United Nations' pool to carry food to India.

* * * *

The urgent need to afford greater relief to industry, particularly smaller concerns, by a comprehensive revision of the taxation policy is urged by the Federation of Indian Chambers of Commerce and Industries in a communication to the Government of India. The Committee suggests to the Government to deduct a part of the capital expenditure from the profits (as has recently been agreed to in Britain) and to make allowances in respect of research expenditure. Referring to the increase in minimum standard by £1,000 in Britain the Committee points out that "it would benefit no less than 30,000 small business, 10,000 of which will pass out of charge of Excess Profits Tax. If such a relief is considered essential in the United Kingdom where small business is less numerous than in India it is far more important in this country, where small industries have been struggling for want of adequate relief. The Committee are of opinion that such relief is overdue because small business has suffered on account of hardships initially imposed under the defective minimum standard under the E.P.T. Act."

(From Our Correspondent)

BOMBAY, 15th August 1944

It was natural that the political question should bulk large in the Presidential speech of Mr. Pranlal Devkaran Nanjee at the second quarterly general meeting of the Indian Merchants' Chamber last Thursday. Mr. Pranlal traced the developments in the political situation since the release of Gandhiji and said that the plainest duty of government in the interest of the war effort itself is to set up a National Government at the Centre without more ado and to restore provincial autonomy in the provinces. *Apropos* the recent utterances of British politicians who see in the 15-year plan a deflection of the Indian mind from politics and the decline of Gandhiji's influence, he rightly characterised them as a case of wish being father to the thought. Mr. Pranlal made a stirring appeal to the public to remember and stick to the cult of Swadeshi and said: "it does not redound to our credit that, even though almost half a century has passed, it is still found to be necessary to appeal for patronage of and protection to Swadeshi industries". Many Indian industries in the post-war period, particularly textiles and other war babies, will need all the solicitude and patronage which the consumer can offer. Mr. Pranlal also referred to the formation of the Indian Banks' Association in June mainly on the initiative of the Chamber. A provisional committee with Sir H. P. Mody as Chairman is now drafting the constitution of the Association. The latter has been born none too soon; and before long, when the proposed banking legislation is introduced in the Central Legislature, it will have abundant opportunities of rendering signal service to banking in India. Mr. M. A. Master, Vice-President of the Chamber, in a characteristically pugnacious speech condemned the indifference and even obstruction of the government to the industrialisation of India.

The notice of motion taken out by Messrs. Chimanram Motilal against the Bullion Exchange authorities was part-heard by Justice Blagden at the High Court yesterday, and hearing continues. The defence arguments were mainly that, in passing the resolution dated July 7th whereby delivery of silver was postponed till October 18, the Bullion Exchange Directors and Committee were acting in the best interests of members. It was, therefore, requested that the motion should be dismissed with costs. Over the week-end, the chances of a compromise seemed bright, but the effort to refer the matter to arbitrators proved futile. The basis of compromise as suggested was that Mr. Motilal should withdraw the suit filed in the High Court and that he should agree to the squaring up of outstanding transactions at Rs. 132, which is the rate of the Reserve Bank's silver sales. There are 3 injunctions against the Bullion Exchange Board now, though, all three are practically on the same issue. The short position is about 6,000 bars.

The Indian Cloth Exporters' Association has discussed with the Textile Commissioner and the Chairman of the Control Board some of their difficulties. The exporters have not been receiving goods for export from the Mills both here and in Ahmedabad and it was suggested that Government should intervene to ensure a steady supply of goods. This will, however, not be quite desirable, especially as government have no powers to compel the mills in the matter. The attention of the Textile Commissioner has also been drawn to the fact that, as small exporters could combine their quotas, they could make direct purchases from the mills without paying any middlemen and thereby save 4 per cent of their profit margin. The exporters feel that if government or the millowners wanted these middlemen, the commission might be adjusted from the 7 per cent paid by exporters to the mills. This seems reasonable, since the mills, unlike the exporters, do not have to bear godown, insurance and other charges, all of which exporters have to meet from the 10 per cent profit margin allowed to them. It was also pointed out that the middleman in India was getting a margin nearly double that of the foreign agent. The exporters are prepared to pay nothing more than 7 per cent over the ex-mill price whether to mills or middlemen. Thirdly, the exporters wanted to be placed on the same basis as the local dealers in the matter of domestic quotas, which according to the Textile Control Order were allowed to all dealers who purchased from the mills in 1940-42. A subsequent notification introduced a distinction between the export dealer and the local dealer whereby the former could not draw his full domestic quota, while the latter could, even though he had also purchased for export. The Chairman of the Board promised to attend to any complaint in regard to the domestic quota, should any exporter find difficulty in obtaining it.

The Claims Committee has been in session to examine the claims put forth by the people who suffered by the explosions and fires, and it appears that only a few claims have come up. Failure to take war risks insurance is causing great difficulty in the case of stock-in-trade and merchandise, besides ironware, metal ware and other articles which were exempted from war risks insurance by government themselves.

Formed in 1927, THE CONCRETE ASSOCIATION OF INDIA acts as a Central Clearing House of information and technical data on all matters pertaining to the many uses of cement and concrete.

To help you to get the best out of concrete the Association:

(a) Maintains a staff of qualified engineers.

(b) Provides practical assistance on the actual job through trained Overseers and Mistries.

(c) Issues instructional brochures dealing with the various uses of cement.

(d) Arranges practical demonstrations—more particularly in small towns and villages.

(e) Supplies type designs which only need slight adaptation.

(f) Provides up-to-date information on latest developments for the benefit of everyone and thus avoids waste of time and money on unnecessary experiments.

In addition to their normal duties; the Association's staff are now helping the Fighting and Civil Defence Services to use cement in the most economical ways possible.

For further information and a complete list of over 50 pamphlets write to Dept. II The Concrete Association of India, Victoria House, Calcutta.

THE U. S. COTTON PROBLEM

SPECIAL FOR "INDIAN FINANCE"

Washington (*By Cable*)

THERE will be a record carry-over in the world of cotton at the end of the war, vastly changed conditions of demand as well as competition and price relationships affecting the sales of American cotton abroad. Some Governments and the best-informed commodity experts who are concerned with the present unpromising outlook for cotton after the war in regard to export business believe that the best external market for American cotton may be the Far East. The competition from low-priced foreign cotton and from synthetic fibres convince these experts that adjustments in general world trade policies and a lower price for American cotton are conditions for its survival in the world market. They feel that a major effort should be made in the Far East because of the prospect that the United States will purchase large quantities of raw materials there in exchange for which it could sell cotton and cotton products whereas it is dubious if the United States will purchase European industrial products. Thus it is believed that the Far East will be in a position to purchase American cotton, if Europe will not. This is by no means the universal opinion but one of the many thoughts expressed in quarters which seek solutions for the dilemma confronting the American cotton-grower.

Various Government officials feel that the only answer will be an international agreement setting up quotas for the exporting nations. Experts say that the United States will have to bring its cotton prices in line with foreign prices before other nations would be interested in such an agreement. Thus the United States faces the prospect that export subsidies may have to be established if its cotton is to be used in foreign markets. For the past five years America furnished 39 to 47 per cent of the total world cotton production whereas during the Twenties she furnished 50 to 63 per cent. The consumption of American cotton abroad has declined by 80 per cent since the Thirties. Although the existence of war factors must be acknowledged, it is pointed out that some of America's best customers have radically decreased their use of cotton goods; and Brazil, Argentina, India, Egypt, Mexico, Peru, Columbia and Persia have greatly increased their cotton production which is available to purchasers considerably under American production cost. The United States which has got cotton among its imports will continue to use Indian cotton in the opinion of experts who point out that in many instances the respective varieties are non-competitive.

Jute and Jute Manufactures

(By Our Correspondent)

Calcutta, 17th August.

As was to be expected with the large number of hours lost last month due to short coal supplies, the Mill Production figures for July show a sharp drop of 16% from the previous month. The total production was 78,961 tons, a decline of no less than 14,936 tons from June. Actually the loss in production is greater than 16%, for there was considerable loss of time in June, and the proportion of loom-hours lost in July due to intermittent working was stated by the Chairman of the I.J.M.A. to be 21½ per cent, against some 10 per cent in June. The quantity of goods manufactured on Government account was almost the same as during the previous month, but owing to the smaller total production, the 7,120 tons of Military goods represents 9 per cent of the total against about 7½ per cent in recent months. The production of Hessian was 1,115½ lakhs yards or 31,264 tons. Of this quantity only 74 lakhs yards was on Military account. The total Sacking production was 1,029 lakhs of yards, or 44,349 tons of which 102 lakhs yards was on military account. For the first time, 389 tons of Ropes and Twines, on military account, appears in the return.

With these figures before us and the 17,000 ton reduction in stocks of goods during July reported last week, it would appear that despatches of goods from mills during July amounted to 96,109 tons, quite a satisfactory total, but 22,917 tons or over 19 per cent less than the total for the previous month. July despatches in fact are the lowest recorded since April, though not unduly short of the target figure of 100,000 tons. Actual production however being 21 per cent below the target figure makes it a poor start for the new seasonal year.

The whole question of coal supply as it concerned the Jute Mill Industry was exhaustively discussed at a meeting between the I.J.M.A. Committee and the Hon'ble Member for Supply, the Secretary to the Supply Department and the Deputy Coal Commissioner (Distribution). The Chairman of the I.J.M.A. drew attention to the fact that the Industry, by their own efforts, had effected an economy in fuel consumption of 20 per cent, which was more than any other industry or undertaking, public or private, could show. In addition the Industry had undertaken the responsibility of compensating their labour force if they were enforcedly unemployed, as they often were, owing to the lack of adequate coal supplies. As noted above, over 10 per cent of loom-hours were lost in June and over 21 per cent in July owing to shortage of coal. Suggestions were made for the centralisation of Coal supplies at the Colliery end as well as at the Mill-end to reduce unnecessary haulage. The quality of the coal often supplied was also adversely commented on. The Member for Supply was careful not to commit himself to anything definite though he held out hopes that a target quantity of 45,000 tons per month for the Jute mills, sufficient to keep them fully employed for 54 hours per week, should be attained before long. He suggested that while July and August would definitely be bad months, September and October should show an improvement in raisings, though there was liable to be a falling off again during November and December. It would appear that, although the labour force at the coal fields was as large as it had ever been, much of it was as yet unskilled, and consequently raisings did not show a proportionate improvement. It was that mechanical aids for coal cutting would be available early next year but it was not stated how long it might take to train up workers to use such appliances. Altogether while lip appreciation was shown for the great contribution made by the Jute Industry towards the War effort, there was no guarantee that this appreciation would be translated into more concrete terms of increased coal supplies.

It is believed that almost unanimous approval has been secured for the proposals, recently outlined in these columns, for the subsidising or compensating of requisitioned mills, or mills enforcedly idle for want of coal, by means of a central pool. There had been demur from some quarters regarding the loom-hour cess which all mills working are to pay into the central pool. This cess, it is understood, is suggested to be two annas per loom-hour, or approximately 25 per cent of the profit value of a loom-hour. It does not seem an unduly harsh imposition to help brethren less fortunately situated from no fault of their own, and it is also an insurance for the fortunate ones against less happy days. It is pretty confidently believed that the scheme will ultimately be accepted.

We quoted last week a warning from the Regional Port Director regarding the delay to boats of the Lighterage Pool. He has not been long in taking drastic steps to bring the warning home and during the past week consignments of jute directed to mills have been landed at the Jetties in Calcutta for lack of boats to deliver the goods to the mills. It is to be hoped that some of the worst offenders in the matter of detaining boats are amongst the mills affected. It is understood that an amicable arrangement has been arrived at with regard to these consignments being delivered at their specified destinations, but it is to be hoped that the lesson will be taken to heart, so that it does not have to be repeated, through neglect by mills to release boats in reasonabe time.

Another instance of hasty and ill-considered regulations, promulgated presumably under the overworked D.I. Rules, is before us. This concerns the quantities in which jute is to be shipped by flat from upcountry stations. At present the minimum quantity which a shipping company will accept, except under excess freight rates, is 875 maunds. It is now ordered that the minimum should not only be increased to 1,750 maunds, but quantities in excess of this will only be accepted in multiples of 875 maunds. It is obvious on the face of it that this regulation has been issued in ignorance of the existing conditions, for two important factors have been overlooked or ignored, (a) Mills almost invariably purchase jute in multiples of 2,500 maunds—in 5,000 maunds lots or 10,000 or 25,000 maunds lots. (b) The vast majority of bales tendered for shipment from the steamer stations are 4 maund bales, while the figures quoted in the regulation are obviously based on 3-1/2 maund bales. Unless this regulation is modified it will be impossible for a dealer to complete a delivery of 10,000 maunds to a mill. He will be able to make a complete delivery of a 10,500 maunds contract, but not of a 10,000 maund contract, which as Euclid might say, is ridiculous. Fortunately an easy solution can be found by abandoning the basic figures of maunds and by substituting bales, whether of 3 1/2 or 4 maunds, starting with a minimum of 500 bales of either description and proceeding by multiples of 250 bales. But much time and annoyance could be saved in such instances if those in authority would only consult beforehand those who are in a position to give advice and only too ready to give it if asked.

(*Continued from page 272*)

lakhs. Since Government compensation for the docks explosion is assured the position is satisfactory. Marine premiums totalling Rs. 2.44 lakhs satisfied claims and expenses and provided Rs. 48,203 for transfer to the Profit and Loss account. In this branch also the Fund is higher being fully equal to the year's premium income. More pronounced progress in the Miscellaneous branch is reported by the revenue account which shows premiums of Rs. 6.6 lakhs and a Fund of Rs. 3.3 lakhs with a loss ratio of less than 40 per cent for 1943. Special interest naturally attaches to the fall in acquisition costs in relation to improved business and income. Sir H. M. Mehta draws encouragement from the business figures and the internal reserve available through the appreciation in the value of investments. In the balancesheet the Funds totalling Rs. 13.87 lakhs nearly exceed the paid-up capital of Rs. 10 lakhs and current revenue items exceed outstanding liabilities while the cash balances and deposits more than cover the sums payable. Total investments are distributed in approved securities.

JUTE

(By Our Staff Correspondent).

Calcutta, Aug. 17.

The raw jute market has continued quietly steady with prices at last levels. Mills are not anxious buyers and are inclined to await heavy arrivals in the busy season. Sellers, however, have not been keen for business as there has been a great delay in harvesting and it is said that rivers are very low for this time of the year. In many places the standing crop is fully mature and if it is allowed to stand for some time more there will be a deterioration in quality. Mills, however, do not seem to be worried about the deterioration in quality this season as there is an anxiety that there should be sufficient supplies of the golden fibre and a heavier yield from the crop would be very helpful. As against the experience of last season, when there was a great demand for bottoms and a premium had to be paid for inferior varieties, it is feared that this season the higher grades will command a premium and there will be no difficulty in getting bottoms and rejections.

In the loose jute section, European packing middles and bottoms were done at Rs. 17 and Rs. 14 per maund, and combined assortment at Rs. 16-12 and Rs. 13-12 per maund. District middles and bottoms were done at Rs. 16-8 and Rs. 13-8 per maund.

In the pucca bales section not much of business has been done for export. It is reported that new crop Dundee Daisee 2-3 were bought by shippers in small quantities at Rs. 80 per bale and Lightnings at Rs. 76-12 per bale. Mills are reported to have purchased Hearts at Rs. 73-12 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, Aug. 17.

Jute manufactures market has been firm though it is reported that rather more business was done, mills being inclined to accept orders for positions beyond December. It is felt that the formation of an industrial pool will ensure greater continuity of working and that with the assurance given by the Commerce Member, it will be possible to maintain output at the target level of 100,000 tons per month. Quotations are nominally at maximum rates and very little business on private account has been reported. Most of the buying was again on account of official agencies.

In the heavy goods section similar conditions were noticeable.

Production figures for the month of July are now available. The great difficulty in respect of coal supplies has resulted in an appreciable reduction in total output to 78,961 tons from 93,897 tons. The fall in output is more pronounced in the case of hessian, on civil account, the figure being 28,794 tons against 34,839 tons. Sacking on civil account also showed a decrease of 8,500 tons to 40,088 tons. The figures are given below:—

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS.

(By the mills in the membership of the Association and also by Gagalbhai Mills.)*

PIECEGOODS

(From Our Correspondent)

Calcutta, August 17.

Quite a difficult situation has been created in the yarn market by the direction of the Government to a larger number of dealers that no yarn should be sold without the previous permission of the Textile Controller. Business in the yarn market has thus been brought to a standstill. In the piecegoods market there has been greater demand and dealers have been more anxious to do business. The visit of the Textile Commissioner for India seems to have had a sobering effect on the market and there have been some fresh prosecutions. The further tightening up of control will, it is said, result in the complete elimination of black market trading.

Nearly 200,000 yards of cloth and 1,600 lbs. of yarn were sealed during last week in Bombay by inspectors of the Provincial Textile Controller's office who visited 270 shops and 68 godowns. Besides this, 17 raids were made as a result of which 46 bales of untex-marked yarn and 4 bales of unstamped cloth were discovered. During the week the account books of five firms were seized and orders under the DI rules were served on four others to produce their account books.

THE PUNJAB NATIONAL BANK LIMITED

(ESTABLISHED 1895)

YOU..

YOUR MONEY..

AND THE FUTURE

"My money is my own. Why can't I spend it as I like?" Of course you can. But if you have earned it by the sweat of your brow you would not like to *throw* it away. This is exactly what you are doing every time you buy needlessly and at inflated prices. Much better to postpone your purchases till prices are normal again.

And do not forget the future. When victory is won and once again India turns her energies and resources to the arts of peace she will need all the capital she can get for post-war development. Whatever you save now will make a firm foundation for your future.

Insurance, Government Loans, National Savings Certificates, Post-Office Savings Bank, Savings Bank Account and Co-operative Societies are good investments. Your money is safe and these investments give you a fair return

Prize Bonds

Prize Bonds are absolutely secure, yet owners have a chance of winning large cash prizes. Rs. 100 can win as much as Rs. 50,000 and the chance to win persists twice a year for the currency of the issue. Meanwhile the capital retains its full value and is repayable at par on or after 15th January, 1949.

You can get either a Rs. 10 or Rs. 100 Bond. There is no limit as to holdings.

Prizes are drawn half-yearly, on 15th January and 15th July. All bonds purchased before the 17th December 1944 will participate in the next draw on the 15th January 1945.

PRIZES ARE

All prize money will be free of Income-tax, Super tax, Excess Profits tax and Corporation tax.

Each series of 1 lakh pieces of Rs. 100 Bonds		
1 Prize of Rs. 50,000	Rs.	50,000
2 Prizes of Rs. 20,000	Rs.	40,000
2 Prizes of Rs. 5,000	Rs.	10,000
Total amount of prize money half-yearly in each series of 1 lakh pieces	Rs.	1,00,000

Each series of 1 lakh pieces of Rs. 10 Bonds		
1 Prize of Rs. 2,500	Rs.	2,500
2 Prizes of Rs. 1,250	Rs.	2,500
5 Prizes of Rs. 500	Rs.	2,500
10 Prizes of Rs. 250	Rs.	2,500
Total amount of Prize money half-yearly in each series of 1 lakh pieces	Rs.	10,000

Available at:—Any Indian Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury Business.
Prizes will be paid at all the above mentioned places and also at sub-Treasuries on or after the 15th August or 15th February following the date of the draw. Every Bond remains eligible for prizes at all drawings up to 15th January 1949. Payment of Prize money of the Rs.10 series will be made in cash; of the Rs. 100 series, half in cash and the balance in Government Loans.
Winning numbers will be published in the Gazette of India and the Press, before 15th August and 15th February following the date of the draw.

Stock Markets to-day and to-morrow:

STEEL CORPORATION 1943 ACCOUNTS

Stock markets, both in Calcutta and Bombay, have been rather weak. Allied landings in Southern France and the spectacular northern drive towards Paris have given rise to the feeling that the war in the West will be over by October. Heavier deliveries and some selling by genuine holders on fears that peace might result in lower earnings for the war industries, at least for sometime, brought about a decline in prices in almost all sections. It is significant to note, however, that there has been no panicky selling and that, having regard to the recent sharp appreciation in values, there has been no violent reaction. It is generally admitted that there would not be any big slump in prices and that when the postwar plans get into their stride there will be a fresh rise in prices.

As a matter of fact a leading broker of Calcutta, with whom I had a talk on Friday morning, was of the opinion that there will not be any further sharp decline in prices and that sometime after the signing of peace there might well be an industrial boom. All of which goes to confirm my view that the period after this war will be very different from the last postwar period.

* * * *

The accounts of *Steel Corporation of Bengal Limited* for the year ended December, 1943, have been published. It is very encouraging to note that the Chairman in his short statement to shareholders is inclined to take an optimistic view of the future. The profits for the year would have made much better showing but for the heavy loss on food supplies to labour and the higher cost of stores and raw materials. The war risk insurance premium also was Rs. 3 lakhs more than in 1942.

Testifying to the further expansion in the company's activities total sales in 1943 were higher at Rs. 4.35 crores against Rs. 3.68 crores in 1942. Raw materials and stores consumed were Rs. 1.56 crores against Rs. 1.03 crores while salaries and wages were Rs. 12.2 lakhs higher at Rs. 55.74 lakhs. This, in the main, is due to the supply of food at concessional rates.

After providing for repairs and renewals the sum of Rs. 37.47 lakhs (Rs. 38.97 lakhs), the net profit before providing for taxation and depreciation is Rs. 1,07,41,002 against Rs. 1,06,86,691 for 1942. The amount set aside to depreciation is unchanged at Rs. 35 lakhs, but the provision for taxation is higher at Rs. 42 lakhs (Rs. 39.5 lakhs). As the distributable sum was smaller and there was no large sum carried forward from the previous accounts the dividend for the whole year had to be reduced to 8¾ per cent from 10 per cent. The amount carried forward is lower at Rs. 1,78,266 against Rs. 2,53,228 brought in.

In regard to liability under E. P. T. the Corporation made a representation to the Government for special consideration of its case and some allowance was given. This allowance, though limited and restricted by statutory conditions, is appreciated and as it had retrospective effect from the commencement of the Excess Profits Tax Act, the year's Excess Profits Tax liability is less than it otherwise would have been had no allowance been granted. It is pointed out by the Chairman that the incidence of Excess Profits Tax in future year's accounts coupled with compulsory deposits and the provision of advance payments on ordinary taxation are, as Government intend them to be, matters which may have a retarding effect on future dividends.

During the year holders of £96,350, Guaranteed Convertible Mortgage Debentures exercised their option to convert their holdings into Ordinary Shares. This increased the Ordinary Share Capital by 77,080 shares, making a total of 28,90,370 Ordinary Shares subscribed, and reduced the Guaranteed Convertible Mortgage Debentures outstanding from last year's figure of £607,750 to £511,400. With this conversion, the surplus on conversion reserve has been increased from Rs. 6,16,967 to Rs. 11,30,834.

* * * *

Coal difficulties and the payment of compensation to labour during the period mills were idle have affected to a great extent mills earnings. But what will actually be the level of earnings of a company which was able to work without any interruption is borne out by the accounts of the *Kankinarrah Company, Limited* for the half-year ended June, 1944. The mills worked 54 hours per week throughout the half-year.

The net profit, before providing for taxation and depreciation is Rs. 18,85,921 against Rs. 5,32,933 for the previous six months. After charging Rs. 50,000 (same) to depreciation, providing Rs. 12.76 lakhs (Rs. 94,000) for taxation and allocating Rs. 2.52 lakhs to Reserve for E. P. T. deposit, the ordinary dividend has been maintained at Rs. 12-8 per share. The amount carried forward is lower at Rs. 1,25,718 against Rs. 1,72,797 brought in.

* * *

National Company, Limited also has done better though the accounts for the half-year April, 1944 had two months in which mills closed down for one week every month under the supplementary working time agreement. Besides the loss of 108 hours under the Supplementary Agreement, which cannot be made up, a further 216 hours were lost owing to lack of coal. The net profit, before providing and taxation, for the half-year was Rs. 1,81,913 against a loss of Rs. 3,49,825 in the previous six months. The provision for taxation is rather small at Rs. 10,000. After transferring Rs. 75,000 from the Dividend Equalisation Reserve the dividend of ten annas per share is again paid.

* * * * *

Bowreah Cotton Mills Company, Ltd., has been able to report satisfactory earnings for the half-year ending June, 1944. The net profit would have been even higher but for the reduction in ceiling prices on two occasions during the accounting period. Also there was some difficulty in disposing of goods with the introduction of the quota system. The net profit, before providing for taxation and depreciation, for the six months was Rs. 8,70,501 against Rs. 7,24,579. The amount set aside to depreciation is Rs. 1 lakh (Rs. 75,000) while the provision for taxation and compulsory deposit is very much higher at Rs. 7,10,000 (Rs. 5,50,000). With the increase in the provision for taxation the dividend on ordinary shares had to be reduced to Rs. 7-8 per share from Rs. 10 per share on the former occasion. The amount carried forward is slightly lower at Rs. 55,513 against Rs. 60,312 brought in.

* * * *

In 1943 the Calcutta National Bank's deposits rose very substantially owing to the increase in the number of branches and the spread of the banking habit. The figures published today point to the greatly accelerated progress of the Bank as well as the maintenance of customary proportions between Deposits and Advances, Investments and Cash balances. In his statement to shareholders Mr. S. M. Bhattacharjee points to the cash ratio of nearly 30 per cent in the balance-sheet as on June 30 and also to the high proportion of liquid assets to total deposits. Since the Bank's resources have increased by Rs. 1.65 crores as compared with a year ago, the Board's decision to increase the capital is in line with current doctrine and practice. The moderate improvement in the net profit is of less significance than the increase in the distribution to shareholders for the year. The dividend recommended in respect of 1943 is 6 per cent free of tax for the year so that past and present distribution alike should be considered satisfactory. The paid-up capital of Rs. 20 lakhs is supported by a Reserve Fund of Rs. 5.5 lakhs to which Rs. 30,000 from the year's profit is to be added.

The distribution of the increase in assets is less important than the evolution of the Bank into an All-India istitution with branches in all the major ports of India. If the foundations for development support the programme for raising the Bank's authorised capital to Rs. 2 crores, the more important changes in the balance-sheet as between 1942 and 1943, easily fall into place.

REACTIONARY MARKETS

BUT REACTIONARY PHASE ONLY TEMPORARY

(By Analyst)

BOMBAY August, 17 (By Wire)

Now that the Third Front has been opened in the South of France, even the speculators, who laughed at me only a fortnight ago and said that war would last for at least one year, have now changed their opinion. They seem to expect peace overnight.

Llyods (Underwriters), it seems, feel that war will be over by September, 15. It is no use trying to forecast a particular date but we can base our calculations on the assumption that prospects of an early peace are now bright.

Market reactions in Calcutta, Bombay and Madras today have been uniformally bearish. Calcutta scrips like Indian Irons, Steel Corporations and Howrah Jutes sharply declined to Rs. 38-12, Rs. 33-12 and Rs. 79 respectively. In Bombay, even a leader like *Tata* Deferreds suffered a slight setback at Rs. 2186-4 (X.D.). Only two scrips remained remarkably firm: *Associated Cement* closed steady at Rs. 239-8 and *Bombay Burmah* were in good enquiry at Rs. 542-8. But, of course, these being scrips with excellent post-war prospects, there is no surprise in their being very firm. On the other hand, they should improve sharply. Even Banks and Insurance shares were dull. 3½ per cent Paper was neglected at Rs. 99-8.

The Provincial Loans were not fully subscribed and the underwriters were called upon to make up hefty deficiency.

In Dalal Street, Textiles suffered a decline. In Madras, Textiles as well as Plantations continued to sag. I expect further decline of at least ten per cent all round in all the markets. And that would probably be the best time to have a select investment portfolio.

"Eavesdropper" has given the correct lead last week to the country; and I agree with him in toto that there are no chances of a post-war slump. On the other hand, we are likely to have a post-war boom for certain industries everywhere in India as well as outside.

Postwar reconstruction plans are being laid down every day. The Bombay province is allocating Rs. 50 crores for postwar reconstruction. Then, there is the news from Travancore. The Travancore budget shows a revenue of Rs. 532 lakhs (a peak figure never reached in the history of the State). The Financial Secretary, dealing with the expenditure side, said that Government have decided on a detailed post-war reconstruction programme and that, in the coming three years, about Rs. 14 crores would be spent on various works like the development of hydro electric power, furtherance of post-war industrial development, expansion of agriculture, increased production of food stuffs and co-ordination of transport facilities. That Travancore has decided to levy an excess profits tax, might be construed a bearish point for Travancore Industrials by the stock exchange operators this side. But the point to note is that the Travancore State is also going to contribute its share in the post-war reconstruction schemes. As for the Central Government, now that we have Sir Ardeshir Dalal as Minister for Economic Development, I look forward to concrete proposals in the coming months.

Those investors who have been patiently waiting for a decline will, I think, now get an opportunity, probably in a month or two, to invest their idle funds.

EAST INDIAN RAILWAY

TENDER-NOTICE

Annual Contract items costing over Rs. 8,000/- Class I.

Sealed Tenders are invited for the following and will be received in the General Manager's Office, E.I.Rly., 105 Clive Street, Calcutta on 22-9-1944 at 12 O'clock noon.

Tender No.Gb10/RI/1061 for supply of 2,500 tons Lime Stone.

Tender forms with full particulars can be had from the Controller of Stores' Office, E.I.Rly. Calcutta on payment of Rs. 2/- per copy to the Treasurer, E.I.Rly. Calcutta, and on production of his receipt when applying for the same.

THE CALCUTTA NATIONAL BANK LTD.

Increase in Working Capital by 1.65 Crores

CHAIRMAN'S REMARKS

Mr. S. M. Bhattacharjee, the Chairman in the course of his report to the Shareholders of the Calcutta National Bank Ltd. said:—

GENTLEMNEN,

I have great pleasure in presenting to you the audited Balance Sheet and Profit and Loss Account of the Bank for the period of twelve months ending the 30th June, 1944.

The period under review has witnessed the progress of the war in its fifth year which is now raging throughout the civilised world.

In Bengal the period under review, coincided probably with the worst period in the history of the province since the dawn of civilisation. In Calcutta, the second city of the Empire, thousands of human beings, men, women and children, died on the streets, pavements and King's highways from starvation and hunger, before the eyes of millions of inhabitants of Calcutta. It is estimated that more than twenty lakhs of people died in the province of Bengal from starvation, during the latter half of 1943. A great Muslim historian of the past described Bengal as a "Hell full of plenty". The year under review witnessed Bengal reduced to a hell, where all sorts of edibles were scarce. The reasons for the catastrophe of the period under review are now subjects of investigation. Crop failure in the usual sense, cannot be regarded as a reason for the famine. God did not create it. Greed, inflation and incompetence certainly played an important part in the sordid business, to the eternal discredit of all the parties concerned in the administration of the province during the period under review.

At one time, the price of rice rose up to about Rs. 50 per maund in Calcutta and Rs. 100 in Dacca and Chittagong. The Bank had to make arrangements in all its Bengal offices to supply food free to its employees during these months of crisis. The employees of the Bank combined to form a Relief Society to collect funds from persons connected with the Bank to distribute food to the needy in Calcutta. For over a period of two months, the employees of the Bank distributed more than a thousand loaves everyday on the streets of Calcutta. Our Bank and the employees of our Bank did whatever was possible to alleviate the unprecedented distress that prevailed at that time.

In spite of the unusual times that we witnessed, I am glad to report that our Bank has made substantial progress. The working Capital of the Bank has increased by more than one crore sixty-five lakhs of rupees, and it now stands at more than three crores and a half.

Capital—In view of the rapid expansion of the Bank's business throguhout the provinces of India, your Directors thought it desirable to request the shareholders to increase the authorised capital. Accordingly a meeting of the shareholders was held on the 15th July last, when the authorised Capital of the Bank was increased to rupees two crores, by the creation of 18,00,000 new ordinary shares of rupees ten each. Your Directors are taking steps to obtain the necessary sanction for issuing new shares. The shares of the Bank are now being quoted on the Stock Exchange at near about Rs. 14-8 per share.

Reserves.—The total Reserves of the Bank have been increased to Rs. 6,13,742 by transferring the available appreciation on Govern-Securities, Bullion and Stocks and Shares and by the transfer of Rs. 30,000 from the Profit and Loss Account. A Pension Fund has also been created with a sum of Rs. 10,000.

Deposits.—The deposits of the Bank have been more than doubled during the period under review and you will find from the Balance Sheet, that the total of deposist exceeded rupees three crores and two lakhs on the 30th June, 1944.

Cash Position.—Cash position of the Bank is exceptionally strong. From the Balance Sheet you will find that about 30% of the deposits is held in cash, and that the total of Cash, Bullion and Government Securities alone represent more than 63% of the total deposits.

Land & Buildings.—The book value of the Bank's investments in Lands and Buildings has been shown in the Balance Sheet, and the market value of these assets is now substantially more than the book value. The return from assets is also quite satisfactory.

Branches.—During the period under review, the Chowk (Benares) and Sheoraphuli branches were closed, and new branches were opened at Lahore, Madras, Karachi, Ajmer, Cantonment (Jabbulpore), Meston Road (Cawnpore), Cuttack, Ahmedabad, Meerut and Bareilly. I am glad to report that all our new branches are working quite satisfactorily. At present, our Bank has got its own office in all the major Port towns of India.

The number of offices of the Bank including the Head Office now stands at 36.

Profits.—Although your Directors are following a very conservative policy because of the prevailing circumstances, still the result of the working of this period must be considered satisfactory. The Profit & Loss Account shows a net profit of Rs. 1,62,162-8-4, which together with the sum of Rs. 31,474-15-5 (carried from the last year's account) amounts to Rs. 1,93,637-7-9.

Your Directors recommend that from this total of Rs. 1,93,637-7-9 the sum of Rs. 30,000 be transferred to the Reserve Fund, and that dividend at the rate of 6% (Free of Income Tax) be paid to the shareholders. This dividend distribution will take away the sum of Rs. 1,20,000 from the profits, leaving a balance of Rs. 43,637-7-9 which sum the Directors propose to carry forward.

I have to report with much regret, the untimely death of Mr. R. K. Choudhury, Director and Secretary of the Bank from its very inception, during the period under review. Mr. Choudhury was a very loyal and faithful officer of the Bank and a very good colleague to all of us. He died in August, 1943, due to an attack of appendicitis, at the age of thirty-eight.

Mr. H. C. Sarcar, B.Sc. Econ. (Lond.), has been co-opted a Director of the Bank, and Mr. Sarcar has also been appointed General Manager of the Bank. I hope, Mr. Sarcar will prove to be a great asset to the Bank.

In conclusion, I beg to put on record my appreciation and the appreciation of the other Directors, of the ungrudging services that have been rendered to the Bank by the members of the staff of the Bank, during these times of unusual strain.

S. M. BHATTACHARJEE,
Chairman of the Board of Directors.
The 31st July, 1944.

THE NEW MANBHOOM COAL CO., LTD.

A Dividend at the rate of 40 per cent per annum for the half year ended 31st March 1944 has been declared payable at once.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.
Calcutta, 8th August 1944.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 18.

RATHER weak conditions were noticeable on the Calcutta Stock Exchange during the past week. More regular deliveries and the rapid developments in the war situation suggesting that there would be an early termination of hostilities have been mainly responsible for the decline in prices. It is felt that the end of the war at an early date will have a depressing effect on stock exchange values at least for a short period and that with the insistence on regular deliveries business would be restricted. There is, however, a feeling that large scale postwar industrial development will be reflected in higher share prices. The undertone of the market is quiet and the present conditions might continue to be in evidence for sometime.

Coal shares in particular have been very weak there being a decline by as much as five to six points in some of the popular counters. Jute shares also came in for selling while in the Engineering section, Indian Iron and Steel Corporation shed some points. Sugar shares were weak but there was selective buying of tea shares.

The giltedged securities section has been quietly steady and the failure of the provincial loan flotations did not have any effect on prices. 3½ per cent Paper was unchanged at Rs. 99-9. Among terminable loans, 3 per cent 1949-52 were Rs. 101-4, 3 per cent 1953-55 Rs. 100-11 and 3 per cent 1963-65 Rs. 99-8. 4 per cent 1960-70 were Rs. 112-12 and 5 per cent 1945-55 Rs. 104-12.

The failure of the provincial loans is rather surprising especially as there was good demand for this class of loans and conditions in the money market were propitious. It is reported that the underwriters were called upon to take quite a good portion of the loan amounts.

Bank shares were steady for the major portion of the week. Towards the close, however, quotations are lower, *Reserve Bank* being Rs. 132, *Hind Bank* Rs. 58-12 against Rs. 61-4 and *United Commercial Bank* Rs. 36 premium against Rs. 39 premium.

Coal shares, as said above, have been very weak and the popular counters are lower by many points. There was heavy selling in this section as it was felt that the earlier rise in prices was rather exaggerated. *Amalgamated* have come down to Rs. 46-15 from Rs. 49-14 while *Bengal* were lower by more than ten points at Rs. 655. *Bokaro and Ramgur* were Rs. 38-2 against Rs. 40-2, *Burrakur* Rs. 41-12 against Rs. 45-15 and *East Indian* Rs. 30-2 against Rs. 35-1. *New Beerbhoom* were very weak at Rs. 35-8. The quotation at the end of last week was Rs. 38-12. *South Karanpura* were two and a half points lower at Rs. 22 while *West Jamuria* were three points lower at Rs. 57.

Cotton shares were weaker in sympathy with other sections but there has been a rally towards the close. *Cawnpore Textiles* declined to Rs. 13. They are now better at

ROPEWAYS
BY
BIRD & CO., Calcutta

Rs. 13-4. *Bengal-Nagpur* were Rs. 38-8, *Elgin* Rs. 72-12 and *New Victoria* Rs. 8-13.

Jute shares showed a tendency to resist selling pressure though the speculative counters were adversely affected. *Howrah* have come down by four points to Rs. 79-4, while *Clive* were Rs. 48-4 against Rs. 51-4, *Anglo-India* were Rs. 454, *India* Rs. 676 against Rs. 690 and *National* Rs. 32-10 against Rs. 33-14. *Nuddea* were rather steady at Rs. 139, while *Presidency* were eight annas lower at Rs. 9-13. *Rameshwara* were Rs. 20-4 and *Reliance* Rs. 65-4.

In the Engineering section *Indian Iron* have been heavily sold, the quotation now being Rs. 38-10 against Rs. 40-8 last week and *Steel Corporation* Rs. 33-8 against Rs. 35-8. *Kumardhubi Engineering* were done upto Rs. 13-4, but there has been a decline to Rs. 12-8. *Arthur Butler* also were bought upto Rs. 24. They are now quoting Rs. 23. *Braithwaite* were easier at Rs. 11-6 as also *Jessop* at Rs. 24-1. *Indian Standard Wagon* changed hands at Rs. 91. *Marshalls* were steady at Rs. 5-1.

Sugar shares were very weak with *Balrampore* done as low as Rs. 19. *Belsund* were Rs. 15-14 against Rs. 16-13, *Ramnugger Cane and Sugar* Rs. 13-13 against Rs. 15. *Buland* were steady at Rs. 41-12 and *Murree Breweries* at Rs. 26-6.

Tea shares have been relatively steady with *Bishnauth* at Rs. 42-2, *Tezpore* at Rs. 20 ex-dividend and *Jutlibari* at Rs. 18-4.

In the Miscellaneous section, *Burma Corporation* were easier at Rs. 4-5 and *Indian Copper* at Rs. 3-2. *B. B. P.* were steady at Rs. 4-4. *B. I. C.* were down by eight annas at Rs. 6-6 while *Aluminium Corporation* were Rs. 21-6. *Calcutta Trams* were steady at Rs. 44-6, while *Calcutta Ice* were Rs. 26 and *Rohtas Industries* Rs. 38. *Midnapore Zemindary* were more than ten points lower at Rs. 177 ex-dividend while *Assam Saw* were Rs. 5. Among Paper shares, *India Paper Pulp* dropped to Rs. 213-8 on the publication of the accounts while *Bengal Paper* were Rs. 224 and *Titaghur Paper* Rs. 26-12.

VICTORY LOAN 1957

3%

NOW AVAILABLE

Issued at par and redeemable at par on 1st September 1957. There is no limit to subscriptions for this loan which will be on tap until further notice. Interest is at 3 per cent per annum payable half yearly on 1st March and 1st September and is subject to income-tax and surcharge. Price of issue Rs. 100-7-4 from 22nd May to 27th May, and thereafter increasing by 8 pies per cent weekly until further notice.

Applications receivable at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras; at branches of the Imperial Bank of India at other places in India and at all Government Treasuries.

"Prospects of the coming year appear to be satisfactory. The Company have considerably extended their activities to different lines and have started and will start shortly manufacturing plywood, vegitable ghee, asbestos sheets, chemicals, playing cards, cardboard boxes etc. The Company have made large additions in their mechanical and electrical workshop, and have also equipped a laboratory for the manufacture of finer and purer chemicals."

Vol. XXXIV. No. 8 SATURDAY, AUGUST 26, 1944 Price Re. 1

Uneasy lies
THE HEAD .....

If you are the head of the family, you must be feeling uneasy for the future. There will be so many problems to face and solve. You can at least solve your financial problems by saving while you are earning. Do it now through INSURANCE.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market and call money is quoting nominally ½ per cent in Calcutta and ¼ per cent in Bombay. There has been no demand for funds for crop movement. As a matter of fact, the return of the scheduled banks for the week ended August 11, 1944 shows a substantial decrease in both advances and bills. At the auctions of treasury bills this week, however, the amount of applications was lower at Rs. 13.33 crores against Rs. 19.25 crores. There was a token increase in the average discount on treasury bills to 7 annas 10 pies per cent per annum from 7 annas 9 pies per cent in the previous week. For over five weeks now there has been only a fractional change in the average discount rate on Central treasury bills. Which makes it clear that banks are not interested in treasury bills at lower levels. The decrease in the amount of applications during the week only confirms the unwillingness of tenderers to put in large sums at lower rates. The offer for the next week has been maintained at Rs. 6 crores. The results of the offer of Bengal Government treasury bills for Rs. 4 crores are not yet available. Tenders for Rs. 5 crores are again invited by the Bengal Government and applications will be received at the office of the Reserve Bank Bombay and Calcutta up to Thursday August 31, 1944.

The return of the Imperial Bank for the week ended August 18, 1944 shows a further decline in deposits to Rs. 225.5 crores from Rs. 228.31 crores. There is an increase in investments to Rs. 136.66 crores from Rs. 135.66 crores while advances are lower at Rs. 57.71 crores against Rs. 59.45 crores. Cash, as a result, has declined by Rs. 2 crores to Rs. 40.94 crores.

We had occasion to make some observations regarding the failure of the provincial government loans last week. We pointed out that there was no justification for the failure of the 3 per cent. 1958 loans on behalf of the six Provincial Governments especially as the total amount involved was only slightly more than Rs. 13 crores. We are still of the opinion that the merit of the provincial issues have not been fully recognised and that proper publicity has not been given to the loan flotations. The underwriting arrangement has been more a hindering influence than a helpful factor as the large body of underwriters would, in the absence of such an arrangement, have themselves subscribed for quite substantial sums to these loans. It should be said that the credit of the provincial governments is even higher than the Central Government as the total of outstanding debts of the Provinces is only a portion of the revenues and most of the loans have been raised for productive purposes. It has also to be borne in mind that during the war period all the provincial governments have had surplus budgets and have added substantially to their reserves.

The Bombay Government has been able to transfer sums amounting to Rs. 4.72 crores to the Special Development Fund in the years 1938-39 to 1943-44. Sums amounting to Rs. 2.5 crores were transferred to the Revenue Reserve (postwar reconstruction) fund in 1942-43 and 1943-44. After transferring these amounts and investing a sum of Rs. 75 lakhs in long-dated securities, the free balance which stood at Rs. 63 lakhs at the end of 1936-37 rose to above Rs. 7.9 crores. The Government's net liability, as on March 31. 1944, was about Rs. 21 crores against an annual revenue of Rs. 19.82 crores on the basis of the last three years' actuals.

The total debt and other obligations of the Madras Government amounted only to Rs. 17 crores, that is only a little more than half the annual revenue of the provinces. The position of the other provincial governments also is similarly sound. If it is borne in mind that the recent loan flotations have been only for the repayment in part of the consolidated debt to the Central Government, prior to the inauguration of provincial autonomy, and that these loans provide for depreciation and sinking funds, one cannot understand how the response from the public could be so poor.

There has again no expansion of currency in the week ended August 18. The change in total notes issued is only due to the increase in the amount of rupee coin by Rs. 62.51 lakhs. Total notes issued were Rs. 944.82 crores. Notes in circulation, however, were lower by Rs. 4.31 crores. Notes held in the banking department showed a similar increase. There is no change either in sterling or rupee securities.

In the banking department. Central Government balances show a further sharp increase, the latest figure being Rs. 138.49 crores against Rs. 113.45 crores. Most of the increase in Central Government funds is perhaps due to the payments by the provincial governments from the proceeds of the recent loan issues amounting to slightly over Rs. 13 crores. As the bulk of the loan amounts was on account of underwriters there is a decrease in bank balances with the Reserve Bank by Rs. 11.17 crores to Rs. 93.05 crores. Other deposits are lower by Rs. 76 lakhs. As there have been continued sales of both gold and silver the Central Government might have received rupee finance from the Allied Governments. Other Government accounts are Rs. 22 lakhs lower at Rs. 11.41 crores. Foreign balances have steadily increased in recent weeks, the latest figure at Rs. 241.91 crores showing a rise of over Rs. 9 crores.

BOMBAY MARKETS

BULLION

(From Our Correspondent)

Bombay August 24.

The fall of Paris and Rumania's reported acceptance of Russian peace terms have caused heavy speculative sales in silver. Forward is now quoting Rs. 128-8 against opening quotation of Rs. 134 on Monday. Forward trading was resumed on Monday as a result of private understanding between parties who cleared outstandings at rates agreed upon informally. The Reserve Bank sold 200 bars on Monday at Rs. 134-8 and above and to-day at prices between Rs. 131-2 to Rs. 132-6. Market is quiet with the off-take poor about 90 bars daily. Local stocks are 500 bars.

Forward gold declined to-day from Rs. 75-1 to Rs. 74-8 and the Reserve Bank sold on Monday at Rs. 75-10. The undertone is steadier than silver on the presumption that the Reserve Bank will not sell gold below Rs. 75-4. Tenders have been called for tomorrow.

TREASURY BILLS

Bengal

Tenders for Rs. 5,00.00,000/- (Rupees five crores) of three months' Government of Bengal Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta upto 11 A.M. on Thursday the 31st August, 1944.

Successful tenderers will be required to make payment and take up their bills on Saturday the 2nd September, 1944.

Central Govt.

Tenders for Rs. 6.00,00,000/- (Rupees six crores) of three months' Government of India Treasury Bills were opened on Monday, the 21st August, 1944. Total amount offered was Rs. 13,32,50,000/- (Rupees thirteen crores, thirtytwo lacs and fifty thousand). Tenders at Rs. 99-14-3 per cent were accepted in full and those at Rs. 99-14 per cent were alloted approximately 42 (fortytwo) per cent. Total amount accepted was Rs. 6,00,00,000/- (Rupees six crores), the average rate of accepted tenders being Rs. 0-7-10 (Annas seven and pies ten only) per cent per annum.

Tenders for Rs. 6,00.00.000/- (Rupees six crores) of three months' Government of India Treasury Bills upto 11 A.M. (Standard time) and upto the close of business on Monday, the 28th August 1944 at other centres. Successful tenderers should make payment on Friday, the 1st September 1944 or on Thursday, the 31st August 1944 where Friday is a holiday. Other conditions are as usual.

Co-operation and Planning

Two conferences recently held in Bombay, one, of the Registrars of Co-operative Societies under the presidency of Sir Jogendra Singh and the other, of the committee of the All-India Association of Co-operative Institutes and Banks under Mr. H. L. Kaji, should serve to remind the country of the importance of the co-operative movement, when, by reason alike of its past failures and the present enthusiasm for planning, it is apt to be forgotten. As may be expected, the conferences registered a unanimity of opinion among those who attended them, on a few specific questions, in terms of which the problems connected with co-operation are usually discussed. It was agreed generally that it is desirable to use co-operative stores more freely for the distribution of foodstuffs and other controlled commodities. It was agreed, too, that consumer's co-operation had made good progress but that the development of small scale and cottage industries had been relegated to the back-ground. There was also general recognition of the fact that co-operation had touched only the fringe of the great problems of our rural economy. One may infer from this and from the frequent reference to the plan for comprehensive economic development of the country that the delegates were quite conscious of the vast difference between the strength of the co-operative movement as it is now and the needs of a promising plan for development.

Sir Jogendra Singh emphasised that it would be a tragedy "if the country sinks back into a state of dependence in spheres which co-operation can retrieve." But it is necessary to be clear in one's mind about such spheres. The achievements of co-operation in India compare so poorly with the enthusiasm of its votaries that scepticism about its value may not be without its uses. Enthusiasts for co-operation are apt to forget alike the sociological origin of the co-operative movement and the social and economic conditions necessary for its success.

Co-operation originated in the self-protective reactions of the small producers to the spectacle of expanding capitalist enterprise. They drew together in the face of a common danger. The general sentiment of western democracy was in favour of helping the small man in his fight with the big. And since co-operation offered a means of affording such help without detriment to the principle of laissez faire, the co-operative movement gained the support alike of orthodox theory and of state policy. It developed a number of facets; and the basic principle was applied to problems as varied as the marketing of eggs in a foreign country and selling town-made goods in the country at prices fractionally lower than those of the neighbouring shop. The co-operative movement undoubtedly grew and spread. Its problems became more well-defined. The constitution of a co-operative society, the framing of its rules and by-laws and the technique of its actual working to suit a given purpose became more and more technical and called for a degree of expertness. But the growth of different types of institutions and the differences in the relations between the State and these institutions in the various countries tended to obscure the importance of the basic conditions and to induce exaggerated ideas of the importance of differences of structure and of methods of working. The place of co-operation in a period of sharp change in the structure of national economies is more or less totally ignored, for the simple reason that undue obsession with technical issues prevents adequate consideration of larger social aims and purposes.

Co-operation in Western Europe at least, is, after all, a method of organising the lower strata of economic society in reference to the higher. Its main purpose was to provide a corrective and a check to a fast growing capitalism. It was expected to preserve the individual farmer or artisan as an integral unit in the productive organisation. But the social dynamic has swept far past these limited objectives. Economic totalitarianism, regarded not as a hateful invention of war mongers, but as a natural and inevitable trend in modern societies, has no respect for the susceptibilities of co-operators. Co-operation is the haven of the petit bourgeois, the lodestar of his hope of independence. It is wrong to identify in all conditions the interests of the masses with the progress of co-operation. Co-operation has done nothing to reduce the force of the demand for broader social reconstruction. Whether that demand leads to a kind of communism or to mere planning with due regard to popular welfare, co-operation, as it has been understood and practised till now, will find but a small place in the future scheme of things.

In India, the history of co-operation, its practical problems and its relation to our economic plans of the future have all alike been different from those of Western Europe. In its origin, it was a sop to the uneasy conscience of British officials who were too keenly aware of the economic exploitation of this country by Britain. It served their purpose admirably; for, not only could they claim that they were making genuine efforts to uplift the masses, but it cost them nothing to make these efforts and, what is more, it enabled them to display the weak points in the economic life of the country. Strictly speaking, there never was any reason to expect the co-operative movement to prove a success in this country. In the West, co-operation was practised by classes which had an economic consciousness which had, indeed, put up a tough fight against adverse conditions and naturally appreciated the value of banding themselves together. The basis of co-operation is the individual with a keen economic consciousness and economic and social conditions in which the individual can retain grip over his material fortunes. That basis, the co-operative movement in India has always lacked. It is, indeed, a lamentable confession of failure to mention the success of consumers' societies. For, the value of co-operation rests on whether it is an aid to better production and distribution. Credit societies have been dismal failures. For the simple reason, that the individual with a reasonable solvency and a reasonable determination to maintain solvency was wholly missing. Neither the social nor the economic milieu was helpful to the development of such individuals. The average man was born in debt and died in debt. The money lender never took a practical view of the question of recovery and his attitude varied from the most generous accommodation to the most rapacious or high-handed proceedings. Prices of agricultural products, not to speak of the prospects of the crop, fluctuated over a wide range. In such conditions, domestic budgeting was an utter impossibility. Co-operation requires in its members even more of character than the small scale independent businessman will find necessary for himself. No wonder co-operation was a failure and provided the occasion for sermons to the poor cultivator. Co-operators in India are attempting to square the circle when they try to make a success of co-operation with a poor, illiterate and chronically improvident cultivator or artisan on the one hand and an economic system which lacks both strength and control on the other.

It is no use suggesting that with better economic conditions co-operation can be made a success. For, that would be very much like begging the question. To create the conditions in which the individual cultivator is solvent and has both the desire and the means to keep himself solvent is, indeed, the crux of the national economic problem. And that is a task which only an all-out economic plan can achieve, and not mere improvements in the design of the co-operative machinery. It is the task of co-operators to show precisely what place the co-operative movement in its various branches has in such a comprehensive plan. The average man would rather think that, while co-operation in the technical sense can have a chance only when its main tasks have been accomplished by planning, co-operation in the broader sense of ability on the part of large numbers to pull together, to enthuse over common ends and to effect the requisite adjustment of larger and sectional interests has incalculable value in the success of a plan. It must be mentioned, however, that to the extent that the increased money incomes of the war period coming on the top of rural debt legislation has removed rural indebtedness, the chances of the co-operative movement have been rendered less sombre. But it would be dangerous to underestimate the ease with which the clean slate can be scribbled on all over again. The guarantee of solvency lies in the education of the individual on the one hand and the direction of economic policy with a view to ensure an even tenor of the national economic life.

Partition in Perspective

(Contributed)

On the eve of important negotiations conducted largely to establish the principles of compromise and consent in Indian politics, little can be said usefully as to the consequences of Separation on the basis of any formula. But those who remember that the Peel Commission's recommendations in favour of a division of Palestine into three unequal parts were negatived after further inquiry might well hope that actual negotiation might yield results different from anticipation. So also can those who hope that the co-operation in the transition to independence would bring about changes, having regard to Mr. Jinnah's suggestion to Hindus in April 1943, 'Let us sit down as two equals and come to a settlement.' There is little point in drawing parallels from Ireland's history or that of the Low Countries, when it comes to a question of examining prospects for Pakistan. The minority wants to exercise its

Invasion started two years ago—

ON PAPER

June 12th 1944.

THE Allied frontline is now about 85 miles long, and the situation is regarded as satisfactory at Supreme HQ, AEF. The Allies now hold between 600 and 700 sq. miles of French territory, almost exactly the area which was scheduled for "D-Day plus 7" when operations were planned two years ago

Few actions are fought in modern warfare which have not previously been fought on paper. Invasion plans, News Bulletins and Airborne landings begin on paper, and are to a general extent dependant on paper right through to their ultimate stages. Without paper, VICTORY would be beyond our reach—even to-day.

Consider these before ordering any printing or any other form of paper, both in office and in private use. Make every piece of paper do the work of two. Reduce your stationery to a minimum Do not have your purchases wrapped in paper if this is not strictly necessaty.

rights as a majority in certain areas. The return of the Congress to an active role has not modified the basis or scope of the Pakistan demand, or the other related demand for political progress before the end of the war.

The last Parliamentary debate merely skirting the issue of Partition late, rather than early, indicated to political India clearly that independence or a local solution is inescapable. Even the series of resolutions launched against the formula merely bring out the essential relationship between independence and self-determination. The obligations arising from the existing division into British India and Indian India require less notice than the possible effects of a division of India, and a further division of Pakistan into two zones. The case for a united India is frequently put forth. But the cost of partition seldom figures in the assumption that a union from which the Muslim majority provinces would stay out would be weaker than British India today. Whether a constituent assembly ratifies the plebiscite, or experience of coalition preserves the present framework, it is clear that the Act of 1935 affording no true balance at the Centre (even if federation is really attainable) requires drastic modification. The partition alone would secure it though a place for the usual safe-guards for minorities would doubtless be found.

Much has been made of an American geologist's estimate of minerals in Hindustan and Pakistan. The very important fact that oil is found only in the Pakistan areas is not to be brushed aside. Nor is it to be forgotten that Afghanistan's minerals may be readily available to the Punjab. Not long ago the Frontier, the Punjab and the Kabul valley formed one unit and Pakistan unencumbered by existing liabilities for defence even with a 'close border' might count on conditions favouring rapid development. In regard to food supply too Pakistan would be well placed, would actually have a surplus, and agrarian or agricultural progress there may be sustained by other conditions in addition to irrigation. In theory Pakistan would start with its share of the public debt balanced by a due share in the sterling assets. The apportionment would probably be carried out as it was when Burma was separated from India. Adjustments in regard to public debt and currency reserves would follow the treaty contemplated in the Panchgani offer.

In the most famous analysis so far made of the prospects for Pakistan reference is made to Sikh claims and the peculiar position of Calcutta. The defence problem for Pakistan would lose its importance in spite of the differences in revenue and outlay. That separation removes the difficulties arising from a federal Centre to which the States (if at all committed would be bound by instruments of accession) also the party struggle in all Provinces can be counted advantageous. It has been already made clear that economic planning finds a place in the League programme only on the basis of Partition. Tariff protection thus is not the issue but exploitation. In Bengal industrial development has been substantial enough to confer resources, but industrial capital belongs to the other State. Yet it may be argued without reserve that the view that cotton mills and sugar manufacture can develop in Pakistan is perhaps less important than the development of homogeneous armies for the two States. The presumption that Pakistan with an area of 300,000 square miles would be bigger than Burma and its population of 94.9 millions would be made up of 30 million Hindus and 7 million other minorities would not be the same as the existing Provinces since demarcation of non-Muslim areas, e.g., the Ambala Division, is contemplated though the Hindu voters' opinion may have to be learnt at the time of the decision along with that of Muslim voters.

That Sikh opinion as recently expressed constitutes an obstacle to Partition will be understood, especially, as the sub-national rights are not definitely outlined for their benefit. That transfers of population cannot take place easily in agricultural regions is equally understood but Assam logically would be brought within Pakistan as a Hindu majority does not obtain there.

Differences in revenue and expenditure as between the various Provinces have no particular significance for the partition issue. If it is urged that Partition would not lead to economy in administration the defence problem is mastered. Differences in taxable capacity would remain but inland customs might give Pakistan the money for subventions to both N.W.F.P., and Baluchistan. The railways might provide more than today and Karachi, developed as a port, might easily eclipse Bombay should be noted. Though it has been urged that frontiers would be a difficulty in the event of Partition Hindustan would gain when there is no threat from the north-west. Since economic self-sufficiency is desired for Pakistan secondary industry in other areas might have less scope. Capital, however, might migrate as easily as it does to the States at present. That the jute export duty can give Pakistan as much as the Central excises today is not the only point to consider in assessing the measurable outcome of partition. A uniform general sales-tax in Pakistan might prove as effective as the customs duties in the major ports that are assigned to the other State. The relative proportions of foreign capital might even suggest that the latest reference to British obligations might press less heavily on Pakistan than on the other area. Since Dominion Status or better is attainable by Pakistan at the same moment as it is by the larger State the differences in resources as compared with the other are not really relevant to the question of constitutional progress. In so far as the Congress has accepted Pakistan in 1943 through its endorsement of Mr. Rajagopalachari's plan to take self-determination as inescapable what may be called business considerations are out of count. The evolution of an agency centre to look after common interests may always be possible but no great attention appears to have been so far paid to the Hapsburg compromise with Magyar nationalism. A working solution may be still obtained from a study of what Deak said or did.

PAPER economy

After five years of war it is hardly necessary to emphasise the importance of economising in the use of paper. But it is worth your while to know how best to economise paper. The first point is, of course, to use only just the amount of paper which is absolutely essential and no more. The second, and no less important point is to use paper of a good quality which will enable you to write or type on both sides without affecting legibility.

Editorial Notes

More About Fertilisers

While the British Technical Mission on chemical fertilisers is touring, various suggestions regarding the control of fertilisers industry are put forward by the commercial bodies. The Indian Merchants' Chamber Bombay, in a telegram to the Supply Member refers to certain rumours that the Government of India seem to be committed with foreign vested interests in regard to the ownership, management and control of the proposed industry. Though the Government have stated that the industry would be a state managed one, doubts and apprehensions still exist. Sir P. Ginwala admits that the co-operation of the Imperial Chemical Industries would be beneficial in several respects but, since the chemical fertiliser industry is connected with the manufacture of explosives, caution is needed in concluding an agreement with this concern. He suggests that the I.C.I. should be employed only as consulting engineers and should be given no financial or managerial control over the industry even if the Government decide, at any time in future, to transfer the industry to private hands. He further urges that "full publicity should be given at every stage of the negotiations and to the arrangements finally reached". Mr. Madanlal H. Vakil in his presidential remarks at the meeting of the Committee of the Indian Chemical Manufacturers' Association with the Technical Mission held in Bombay a few days ago urged for extending the scope of enquiry of the Mission. After referring to the fact that the huge quantities of manures exported out of India contain precious phosphates he wanted the Mission not only to consider, the production of Sulphate of Ammonia but also investigate the availability of phosphates in various rock formations in India. It is also suggested that no delay should be tolerated on the score that questions like location of plants, availability of power and raw materials take time to settle. Already sulphate of ammonia is being manufactured at Mysore, in the coalfields and Jamshedpur. A start should now be made to increase production and technical questions may be decided after due investigations. The fertiliser industry as at present planned by the Government promises to be a big affair; and though the need to speed up the production of fertilisers is undoubtedly great, vital questions affecting the future industrial life of this country have perforce to be settled after careful examination.

The Rupee Abroad

Certain British colonies still use the Indian rupee. It may be generally known that Iraq and adjacent territories adopted the rupee for years when the old Turkish currency had not altogether disappeared there but the British Colonies which stick to the rupee today differ from German Tanganiyka which knew a silver rupee divided into 100 heller. The rupee group, as an article in the "Economic Journal" pointed out, consists of Aden and the Protectorate, British Somaliland, Ceylon, Mauritius and the Seychelles. From the 19th century the standard coin over a wide area was the rupee. Only in East Africa was the rupee demonetised and the florin took its place, to be displaced soon, by the shilling. The present rupee group is limited to areas where Indian notes and coins are in circulation. Aden has no currency of its own and only in the eastern part of the Protectorate some minor local issues of coin still circulate. British Somaliland until conquered temporarily in 1940 by Italy used only Indian notes and coins. Since it was re-occupied, East African currency has come into use. The Ceylon rupee directly linked to sterling, and based on both sterling and rupee assets, is now independently managed. But it has been noted that the silver rupee, half rupee and quarter rupee are legal tender in Ceylon like the local coinage of 50 cents and downwards. Ceylon's new securities can also be used as cover for the new note issue. The island's currency reserve in 1943 exceeded the total for notes in circulation but what proportion consisted of Indian coins is not known. In Mauritius where French influence is still strong in many ways as Mr. Ingrams noted the local rupee exchanging for 1 sh. 6 d. at par is divided into cents. The Seychelles use the Mauritius currency though a separate currency note is provided for the latter Colony. In the exchange standard adopted for certain Colonies the unit chosen is the rupee in preference to sterling. The majority of Crown colonies including those formerly on the silver standard adopted the British pound readily because trade is most easily carried on with sterling. But British Honduras accepted the U. S. dollar after trying the Gautemal dollar

The Indian Match Industry

An authoritative account of the Indian match industry must receive notice because it indicates how local manufacture has displaced imports. Japan at one time led Sweden in the matter of imports, but the tariff changes of 1916 paved the way for a local industry. When a specific duty was imposed in 1921 and soon raised in 1922 imports fell away substantially. In four years imports were halved and local factories soon began to capture the trade. Failures of course, were reported after the industry was born, but fairly soon the imports of foreign matches were restricted to foreign possessions. From assembly to manufacture was an easy transition and imports of splints etc. fell when a specific duty was imposed in the interests of the revenue. After 1924 the industry became self-contained, if not self-sufficient. The oldest Indian factories were set up between 1923 and 1926 and very soon the Swedish Match Company entered the field as six factories were set up between 1924 and 1925. The local factories overcame the tariff and rupee companies became the rule. Wimco with factories at Ambernath, Barielly, Calcutta, Madras and Lahore meets 80% of India's demand. The Swedish Match Company is interested in the Assam Match Company as well as the Burma Match Company whose factories at Mandalay and Kanaung were probably damaged beyond repair in 1942.

The Tariff Board's inquiry revealed that foreign example and influence had benefited the match industry which qualified for protection. After the Central excise appeared development was restrained; but since then prices have naturally followed the excise. It is noteworthy that the tax represents 200 per cent and more of the manufacturing cost and the match industry collects over Rs. 4 crores per annum for the Government of India. During this war splints from the Andamans are not available to Indian match factories and their timber consumption of over 5,000 tons of wood particularly simul has created a problem. In regard to chemicals also there have been difficulties as prices have risen inordinately. The same may be said of paper. It is only in regard to labour to enjoy. The cottage industry lingers in charges that match manufacturers continue South India only. The outlook is rated good as smoking spreads and matches cannot be reckoned dear. Export markets, for instance the Dutch East Indies, were secured during

maybe you know this already

If you have been on a journey by train recently, you need not read this announcement. You will find it only an unhappy history of your own experiences. You will know what it is like trying to get a conveyance to any of the main stations. You know how booking office windows are crowded these days, and what a struggle it is to get tickets. And you will have argued with porters who demand exorbitant payment for their work. And you remember how difficult it was to find space in the crowded train, and having found space, to KEEP IT ! Even food at Railway stations is not what it used to be. These difficulties made your journey full of trouble and discomfort. It was hardly worth it, was it ? For women especially, travel is unpleasant because of the congestion.

Travel Less

Remember next time you travel—it isn't the Railways' fault. They have important work to do. They have to transport huge quantities of foodgrains, fuel, cloth and other civil supplies. Be wise—stay at home.

ISSUED BY THE RAILWAY BOARD

AAA 900

this war, but they cannot be held. The problem of softwoods for splints will remain after the war, while Europe can count always upon ample supplies.

A New Civilisation

The subtitle of Mr. K. S. Hirlekar's volume on Soviet Russia (Avanti Prakashan, Bombay, Rs. 6-8) makes it clear that Russian successes are attributable to the Revolution and its effects. In this volume Russsia's spokesmen give an account of the resources and development and make it known that only the U.S.A. is ahead of Russia in important respects. The account is given by Russia's own leaders in their own way. Excessive compression, with statistics in reels, is a feature of more than one article dealing with progress since the Revolution. Marxist economics scarcely finds a place since the Constitution of 1936 is regarded as the groundwork of planned economy. The directory of Russian resources establishes the salient differences between Russia and India. If the end of Russian planning has been other than autarchy, the forces it has released, and the results it has secured are properly related to the Russian people's own part in planning which is described as not being the prerogative of any organisation engaged in abstract planning, because the purposes of planning have properly been exalted above the mere technique. The Russian people's own partnership in the plan accounts for the collectivist discipline that has raised the national income more than two fold between 1933 and 1938. Industrial development has been supported most by the home market and it appears as if Russia's freedom from economic crises is the cause rather than the consequence of planning. Dr. Jayakar in his foreword points to the Russian miracle as the fruit of unity in diversity and discusses also the lesson of putting economic democracy in the first, not the second, place.

Variations in April

Every drop in the cost of living index may be held up as proof of price control succeeding despite limitations. But food prices rose in April and the cost of living for workers in Bombay was higher than in March. Meat and fish were dearer like rice and sugar, to go merely by the movement in prices. Since food claims more than half the urban worker's expenditure, the absence of any change in rent and the cost of clothing does not count for much. But the rise in April does not seem to be greatly at variance with the previous trend. Prices rose steadily in 1943 and started to fall. The break in April may prove temporary and local because it is reported that the cost of living in Ahmedabad fell. Since December 1943 the working class cost of living has declined in Ahmedabad. An idea of prices current is afforded by rates given in the Bombay Labour Gazette, as. 8 per seer of milk, Rs. 4 per seer of ghee, Re. 1 per seer of chillies and annas 6 per seer of potatoes. Ahmedabad prices as compared with 1926-27 are distinctly higher particularly in respect of clothing and fuel. Regional differences apparently overshadow the general downward trend because the Sholapur index rose by six points. The April index there was 134 points above the pre-war index. Both food and fuel in April were dearer in Sholapur. The suspension of work in cotton mills arising from coal shortage may have influenced the Sholapur worker's earnings at the same time as the local rise in prices, but how far the worker can be protected from involuntary idleness by stimuli to coal production cannot be indicated by reference to the rise in the cost of living. The stationary index for Jubbulpore and Madras like the drop in Nagpur proves the persistence of variations from place to place in the same month. It is difficult to compare changes since the base years are different while the drop in the cost of living recorded since December is neither uniform nor continuous. But prices in Bombay city appear to have moved up least in comparison with 1935. Naturally labour disputes were fewer in April than in the past year and wages did not constitute the principal reason for disputes reported in Bombay.

BATTLE DRESS

TODAY the nation is in uniform — dungarees and battle dress for the fighting services, standard cloth for civilians. Yet though the gay colours, the frills and flounces of peace have temporarily gone, our war-time clothes still bear equal evidence of the work of the chemist. The raw textile fibres must still be cleansed, then treated with oils specially selected for each type of fibre. Otherwise they would be torn to shreds by the complicated machinery through which they must pass. And they must still be dyed and finished. This finishing or final dressing of wool, rayon or cotton is possibly even more important for battle dress than for peace-time clothes. Chemicals in huge quantities are still required by the textile industries of India. The processes devised and controlled by the chemist continue to work at high pressure. But many raw materials on which these formerly depended are no longer available. Extra effort must be made in the research laboratories to discover and develop fresh methods or materials. Out of this necessity will emerge not only the substitutes necessitated by war conditions but entirely new products, having novel properties which will ensure them a place in the post-war world. It is the chemist's privilege that in attempting to solve the problems of Today he frequently discovers a key to Tomorrow.

How often do you remember that . . .

in any convoy the tanker is singled out by the enemy for destruction because the loss of tankers is even more damaging to the Allied cause than that of other merchant ships? Nevertheless Merchant seamen continue to render steadfast and unstinted service aboard the tankers of the United Nations.

It is the duty of every petroleum user to make certain that the hazards to which the tanker is exposed are not being taken unnecessarily. And remember, every cargo of oil imported into India means two trips for the tanker. Twice must the gauntlet be run to carry only one shipment of oil because the tanker must return empty.

We urge every user of petroleum products to eliminate all wasteful and unessential consumption.

BSGR 70

Clive Street Gossip

Eavesdropper wires from Shillong:

Except for my commitment to continue the series on "If peace comes tomorrow", I should have liked to make Assam's strategic and economic importance the theme for this week. I am here on a consultation on miscellaneous matters including pyrethreum plantation and starting of an English daily which, if it materialises, will be the first and only daily paper for this province. Within the two days I have been here, I have met many high ranking officials and some of the public leaders and the one common topic in the discussions is the new strategic importance which the developments of this war have conferred on Assam and the many economic problems, present and prospective, which are sharply posed by this war. Until this war began, Punjab held the primary place in India's strategic map as being adjacent to the north-west frontier. Assam as the North-East frontier is the pivotal centre in this war. Punjab's high economic status was partly due to

This is the third article in the series "If peace comes to-morrow."

The first two articles appeared on August 12 and 19.

the fact that a good part of India's military budget was hitherto being spent within its borders. This war, crores and crores of rupees are being disbursed within Assam's borders. Assam is enjoying today undreamt of prosperity, but the question is: Are Assam and its population getting the maximum benefit from this prosperity? What steps must be taken to make this golden opportunity the foundation of enduring prosperity for the future? Are suitable correctives being administered to keep under check the inflationary forces which are inevitably associated with colossal war spending of this kind? Are Assam's special problems receiving the consideration and study which the present emergency and opportunity warrant? As I said, I can only pose the problems this week and must defer detailed consideration to a date when I shall be less preoccupied with the problems posed by peace prospects. Meantime, I may stress my concurrence with the observation of Mr. Havley, the young and versatile publicity officer of Assam, that "Cinderalla at the ball is destined to be a princess, she must not be allowed to revert to her humble place by the kitchen fire."

• • • •

"If peace comes to-morrow—" is the theme of this series of articles which began a fortnight ago. But the events of the week seem to suggest that it is by no means a big "if." Roumania has accepted the peace terms which Russia offered her after consultation with Britain and the U.S.A.; and she is now one of the United Nations on a footing similar to that of Italy. The liberation of France from the Nazi heel has progressed by leaps and bounds. The Maquis have, by their own efforts, freed Paris and restored to the world one of its historic centres of genuine culture. The Allies have made another landing in Bordeaux. The Russians are making more and more of their surprising turns of strategy. The futility of flying bombs as a means of retrieving a lost war is apparent. Germany is being gripped by the awful destiny which is of her making. If peace comes to-morrow—there is no "if." This series, if anything, is late.

* * * *

As an illustration of the preparedness and triumph in the economic front in this war, let us study more closely the effects of the British monetary policy in this war. The United Kingdom began the last war with a public debt of £750 million. The defence loans that were raised between 1914 and 1918 were over £6,000 million. In relation to borrowing on this stupendous scale, the initial debt of £750 million at the commencement of war was nothing. In spite of this factor, Britain had to pay well over 5 per cent to secure the defence loans. Britain entered World War II with a public debt of £7,500 million. That is to say, the United Kingdom started this war with a debt ten times the debt at the beginning of the last war. From this, one would infer that the British Government would have to pay far more onerous rates of interest to secure the defence loans in this war. On the contrary, Britain has been able to finance, by the cheapest means, a far heavier burden of expenditure than was incurred in the last war. Great help in the ways and means of war finance has been provided by the ever-increasing floating debt. The British Government are paying no more than 1 per cent on the large floating debt represented by the treasury bills. The defence loans are being raised at rates of interest not exceeding 3 per cent. Can there be a greater anamoly than this: Britain started the last war with a debt of £750 million and paid over 5 per cent on the defence loans—Britain starts this war with a debt of £7,500 million and is paying less than 3 per cent for defence loans. What has caused this marvellous transformation? Monetary knowledge has increased; and monetary technique has become hundred per cent effective.

• • • •

Or, take taxation. In the very early months of the war, Excess Profits Tax was levied; and the incidence of E.P.T. is hundred per cent. Steps were thus taken, without any loss of time, for the minimising of the growth of the disgusting breed of war-profiteers. In broad terms, it may be claimed that the taxation plans of this war have been fashioned on the most scientific and equitable lines. The higher grades of income are subject to stiffening grades of taxes. As for the lower grades of income, equally effectively have steps been taken to curb and immobilise surplus purchasing power through schemes of compulsory savings. War taxes in Britain have been devised in such a way that a population which is being more and more taxed asks cheerfully and patriotically: "Is this all?" The willingness with which onerous taxes have been accepted and the readiness and alacrity with which taxes are being paid are two outstanding traits of the British citizen in this war.

* * * *

With equal patriotism and cheerfulness (not mere resignation), the Britons have co-operated in the operation of the several schemes for control of prices and wages and for rationing of foodstuffs and commodities. On the one hand, this war has provided the Government with the machinery, personnel and administrative experience for devising and executing economic controls in the best interest of the greatest number of the population. On the other hand, the general population have learnt to appreciate and abide by economic controls and developed a new self-discipline, self-reliance and self-confidence.

Britain's war experience stresses the following conclusions:

1. Most of the features of the New Economics which I outlined in a series of articles some months ago have already found expression in practical form.

2. It is social good and not profit motive which must be the guiding factor of economic policy.

3. Towards this end, State control is now exercised in various ways and over most aspects of economic activity.

4. In this conception of social good, the place and significance of capital in national economy are changed.

5. The State is now in a position to create as much floating debt and incur as much funded debt as may be found necessary for projects and plans conceived in the spirit of social good.

6. The State as the borrower is in a position to dictate terms, a suitable monetary policy and correct monetary technique being greatly helpful in this regard.

7. The State is in a position to levy taxes on a scale which would have taken away the breath of people in the inter-war years. The taxes are willingly borne and readily paid.

8. Taxation is coming into its own as the best means of equitable distribution of wealth.

9. Heavy governmental expenditure can be spent without their having inflationary effects.

10. The Government have now the means and knowledge to stabilise prices and incomes.

11. Rationing can be so worked as to provide for the most equitable distribution.

12. Britain had, in pre-war years, depended on imports for over nine months of her food consumption. Yet, the British people, have, in this war, been better fed and keep better health, thanks to planning and research with regard to food production and storage.

13. Unemployment is a thing of the past. At the same time, there is a higher proportion of skilled labour.

14. This war has proved that it is continued and intensive research that keeps the military front at the highest pitch of efficiency. The war has won recognition for research in national life. Scientific advancement and human inventiveness have been so accelerated by the present demands of war as to concentrate in a quinquennium the achievements which ordinarily would have taken a century.

15. The very horror of this war and the way it has been brought home to the civilian population have, all the time, deepened interest and investigation in the problems and plans of peace.

16. In war as in peace, in industry as in trade, in capital as in money and exchange markets, the State has now so important a role to play that it can be said that free private enterprise and laissez faire are as dead as Queen Anne.

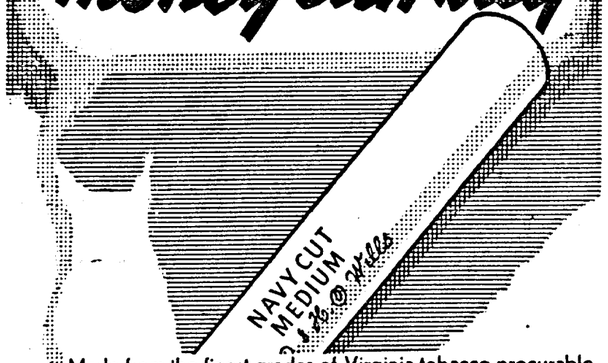
17. In marked contrast to the last war, this war has brought about, even during its course, universal acceptance of certain minimum standards of social security and individual well-being, mental and physical.

18. While the last war ended with an insensate passion for retrenchment of State expenditure, regardless of its effects on the economic life of the country, this war will end with a recognition of the importance of the scale and channels of public expenditure firstly, to warding off the post-war slump, secondly, to the contentment of the masses who played a glorious part in the war, and thirdly, to defining the larger communal needs which, far from being subordinated to a liassez faire economic policy, must determine the contours of the national economic system.

19. Instead of retrenchment of public expenditure which will accentuate the intrinsic tendency of a post-war period towards slump, there will be this time a very considerable expansion of normal public expenditure which will prop up purchasing power and set up peacetime targets of production in place of the war-time targets.

20. For almost the first time, public policy is shaped according to the concrete wants of the individual citizen, which it has been possible, in the circumstances of this war, to define without undue controversy. Freedom has been translated into the four freedoms; and one of them is freedom from want. Conscription, the exacting requirements of some of the fighting services and the need for food rationing to conform to the requirements of health have brought to the forefront the needs of adequate public health and mass education. Add these to the general requirements of social security and of plans calculated to meet nebulous demands for social reconstruction, and you will realise the importance of public expenditure as a factor in production programmes and as an agent of distribution.

21. Government budgets in the post-war period will thus be, by themselves, an indirect means of planning the national economy.



22. Schemes for ensuring adequate nutrition for the individual citizen will also ensure the provision, in adequate quantities, of the various kinds of food.

Olympus

(From Our Correspondent)

New Delhi, August 21.

New Delhi's eyes still remain riveted on the forthcoming Gandhi-Jinnah meeting. The talks were unexpectedly postponed at the last minute, but are now reported to be fixed for this week. The Government meanwhile has not been altogether idle. The latest correspondence between Mahatma Gandhi and the Viceroy was released to the press in all haste-even before the Mahatma had received the last letter. The Government as usual, disturbed at the prospect of a united front has been anxious to torpedo the chance of an agreement. At the time of the Cripps offer, the country was given to understand that even provisional communal settlement between the League and the Congress will suffice as a precondition to effect the necessary changes at the centre and restore popular ministries in the provinces. Now a new set of interests have been officially vested with the prestige of minorities which must be fully appeased before the present constitutional arrangement can be even slightly altered. Not only are these heterogeneous interests expected to arrive at a workable compromise; they must produce an agreed constitution which will replace the present one after the war. The Viceroy's plain-speaking has exposed the whole British game as never before. Not only does the promise of postwar freedom recede into an indefinite future; it is made absolutely plain that under no conditions-unity or no unity-will the Government agree to popularise the Central Executive. The Viceroy's statement was described as an "imperialist time-bomb" in one of the local dailies. The Viceroy's damper, however, has had the opposite effect to that intended. It has underlined the urgent need for a united front. Never before have the League and Congress leadership been subjected to such a mass pressure from the rank and file to reach a communal settlement.

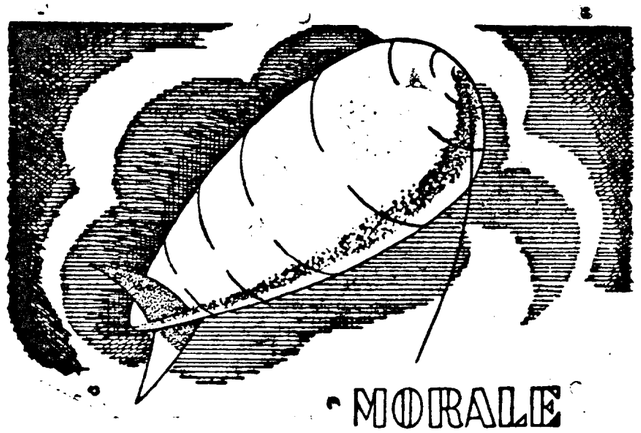
* * * *

Sir Feroz Khan Noon gave his own views about India's industrial future to a press conference here last week. He wants to absorb about 40 million Indians into industries (the present number is not even one-tenth of this figure). But, he thinks that we need not have any machine-tool industry of our own. For he promises the whole of the Indian market to British manufacturers of machinery for the next 50 years. Sir Feroz does not realise the obvious, that the degree of industrialisation which the 40 million figure envisages can not be achieved and, even if attained, will be lop-sided if India doesn't have an adequate machine-tool industry of her own. Sir Feroz expressed an equally paradoxical view about Indo-British partnership in the industrial development of this country, when he suggested that British and Indian industrialists should go fifty-fifty. "Sympathy is more easily excited", he said "if the idea of sharing profit is combined with it". Sir Feroz cited the example of the United States which had managed to raise the standard of living of her people to five times that of the British people. He forgot that the Americas did not achieve this result by "going fifty-fifty" with the British. The Defence Member was incredibly confused about the sterling balances issue. He claimed to have informed his British audiences that the sterling balances belonged to the Reserve Bank and that they shouldn't be afraid of Indian industrialists coming and placing orders in respect of that money. What he exactly meant was not clear.

* * * * *

Sir Ardeshir Dalal, the new Member for Planning and Development is busy with an initial survey of the situation. He has still to study the agricultural road-development and other postwar plans already drafted by Government experts and to revise them in the perspective of an overall plan. It is understood that the new Member is expediting arrangements to collect industrial statistics on which the postwar industrialisation plan has to be based. He is addressing the Provincial Governments to provide him with the necessary data. It is feared here that the reactionary views of some of Sir Ardeshir's colleagues are bound to detract from the effectiveness of any plans that are likely to emerge. Moreover, the obstructionist politics which Lord Wavell has now completely identified himself with gives little hope that his economic policies are likely to be more progressive. For it is recognised even by the present honourable member that only a popular government at the Centre can put through any large development scheme. I understand that the initial draft of the second part of the Bombay Plan dealing with the distribution of income, minimum wage standards and the distribution of industrial enterprises as between State-owned and privately-owned is ready and will be before the public in some weeks. The Bombay planners' proposals are, of course, not likely to be as progressive as radical opinion in this country would wish; but within the capitalist framework the authors, it is believed, do not take an entirely selfish class-view of things.

* * * *



It is learnt that the Central Government are after all responding to the agitation among government employees for an adequate dearness allowance. It has been provisionally decided to give a 20 per cent allowance to those getting up to Rs. 200 a month, 10 per cent for those drawing between Rs. 200 and Rs. 1.000 and 5 per cent for those paid between Rs. 1,000 and Rs. 1,500 a month. It has not been finally settled whether the allowances will be paid with retrospective effect. But it is quite likely that this may take effect from April 1 or even January 1, 1944.

* * * *

Sir Henry French, Permanent Secretary to the British Food Ministry, frankly admitted at a press conference here that one of his main jobs in visiting India was to recommend whether the quantity of imported foodstuffs should be increased or decreased. Obviously, the British Government did not take the Foodgrain Policy Committee's recommendation of 1½ million tons at its face value. The India Office did not possess expert knowledge of the subject, said Sir Henry, not realising the damaging implications of that admission after the most terrible famine in recent Indian history. Sir Henry intends to study conditions at first hand both in surplus and in deficit areas. Sir Henry throught that the rationing arrangements in the big towns satisfactory. The main difficulty in his view were "procuring and distributing food supplies".

The rationing in Delhi has had a smooth run so far as regards distribution; but the quality of the foodgrains has been deteriorating every week. The papers are full of complaints from consumers. In several cases, the rationed rice is unfit for human consumption. The sugar quota has been temporarily increased weekly by one *chattak*.

Hill Bird.

MORALE

THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in warwork or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

(From Our Correspondent)

Bombay, 22nd August, 1944.

The Bombay Government believes in keeping abreast of the times. It has published the cutlines of a 15-year-plan for the postwar development of the province in the non-industrial rural aspects. The plan leaves large-scale industry to the Centre whose concern it primarily is or ought to be. It envisages three five-year periods of development, of which the first alone is estimated to cost Rs. 50 crores. To begin with, the wherewithal for the plan will be the sum of Rs. 7 crores expected to accrue in the post-war reconstruction fund at the end of this year. Briefly, the plan postulates four categories: Special Priority schemes, All-province schemes, Particular schemes and Concentrated Area schemes. A detailed reference to all these is hardly possible here. But the plan has been aptly criticised by Sir Purshotamdas Thakurdas who has rightly said that "the effort to reward the returned soldier, neglecting the more needy civilian, cannot appeal to the public." He also urges the Government of Bombay to implement the recommendations of the Industrial Survey Committee of 1938-40, particularly in regard to minor industries. His caution that any new scheme should first instil confidence in the people from whom the finance for the schemes is to come is very apposite. Sir P. T. illustrated this by reference to the results of the provincial Loans. "The otherwise prospercus province for which the subscription was almost nil" is Sind whose Loan attracted only 10% of subscriptions from the public, to the bewilderment of the underwriters and the money market pundits alike.

* * * *

The September Jarilla contract is grounded at Rs. 400/- partly because the settlement is only a week ahead and partly because operators have no means of extending their commitments beyond September 25. A decision on the new crop trading is expected to issue from tht meeting of the Textile Control Board on August 28 and 29. The bazar expects that the E.I.C.A. will receive permission for trading in new crop from the middle of September. The fate of the May, July and September contracts, all of which went down to the floors, may cause the E.I.C.A. to propose to the Textile Control Board that, in the even of any new crop contract touching the floor level, cotton tendered thereafter should be tested on behalf of the government and purchased by them if the tests are answered. Official reactions will be known in a short time.

* * * *

The situation in the silver market is very confused. A lot of things have happened during the past week, but as the French saying has it, the more the situation changed, the more it remains what it fundamentally was—a deadlock. In the first place, the motion for issue of an interim injunction against the Board taken out by one of the bulls proved successful. The Board of the Exchange have, however, put in an appeal which will come up for hearing on Friday. Comment on the situation is fraught with risk if only because the matter is *sub judice*. Without however intending any contempt of Court, it may be mentioned that there are many parties—more than 100 members of the Exchange—whom the issue does not affect and who have already composed their differences on terms mutually agreed upon. These people would fain continue trading and ask why their business should stop because of the dispute of a minority. The legal aspect is by no means clear, and indeed one of the brokers threatened to bring an action for contempt of Court if trading was proceeded with. It is a highly ticklish situation.

So far as outstanding business is concerned, a large majority discussed the question informally on Thursday last and on the advice of a sub-committee they agreed to settle the transactions in respect of the August 2nd and August 9th deliveries at Rs. 135 and Rs. 134 respectively. All outstanding contracts were to be squared up at this rate by Friday, with trading to be resumed on delivery account strictly on the basis of 7 days' delivery. During the week-end, nearly ¾ of these accounts was cleared privately and the Board returned the cheques of members who had thus privately squared up their accounts. Those who had gone to Court naturally took noteworthy that the sales of silver by the Reserve Bank (200 bars per day) have, far no part in these transactions. but there are also some others who object to the rates fixed privately (Rs. 134 & 135) as being too high in view of the Reserve Bank's sales at Rs. 132-4. Some parties are doing scattered transactions on 7 days' delivery among themselves. but one swallow does not make a summer. The fact remains that regular trading for the settlement delivery remains taboo until the High Court decides the matter, which will naturally take some time. Until then, there can be no forward business in

Pioneers of India's Machine Age

Airway Port

(From Our Correspondent)

KARACHI, August 21.

Rain has been the big news in Sind during the past week. Not only at Karachi but throughout the province, there has been unprecedented rainfall, breaking the record of the last half century. From the familiar features of the weather, the overcast skies, absence of wind and the non-stop drizzles, it looks as though Sind has come under the monsoon belt. As against an annual average of ten inches, we have had so far over 25 inches of rain and we are not still out of the wood. This deluge created enormous problems for us. Hundreds of houses at Karachi and other mofussil centres have collapsed and thousands of people have been rendered homeless. Karachi municipality alone has sustained a loss of nearly ten lakhs of rupees caused by damages to roads and paths owing to a number of culverts having been washed away. The sanitary conditions in the city have become dangerous and at any moment, an outbreak of epidemic is feared. The poorer quarters in the city have borne the brunt of the rainfall and the plight of the labouring classes is indeed pitiable. Karachi Corporation authorised the Mayor to start a distress relief fund.

Food grains stocked in wayside railway stations have been damaged. Curiously enough, this year the river Indus also registered a rise and at Sukkur the peak level was reached. Meteriological circles are puzzled at this year's rainfall and are wondering whether these rains would be annual recurring features. In that case sanitary and housing conditions of Karachi would have to be realigned, as our houses and drainage system are never capable of withstanding heavy rains.

Sind government have withdrawn the restrictions imposed on the construction of buildings in this province and buildings can now be constructed without obtaining any permit. This does not however make any change in the procedure for procuring controlled materials such as steel and cement required for construction. Application for these have to be made to the respective controllers who are very chary of satisfying civilian requirements. No doubt we have a Dalmia cement factory working full steam in this city but all its output goes to feed military requirements. There is also plenty of steel lying idle but it is difficult to procure them for house construction activities. Moreover, labour is very dear and hence the people have resigned themselves to their present plight till the war is over.

The small savings scheme which was introduced in Karachi in April last has received very encouraging response and up till now about Rs. 18,00,000 have been invested by the public. The Sind government have therefore decided to introduce the scheme in the main district towns. If the scheme proves a success in the towns, arrangements will be made to extend it to the mofussil area.

Along with other provinces, the government of Sind too have notified the raising of a loan of Rs. 200 lakhs at three per cent interest, maturing after 14 years, in order to repay half the loans, excluding the Lloyd Barrage loan, taken from the Government of India before April 1, 1937, for financing capital expenditure. Though empowered by the Government of India to raise provincial loans in the open market, the Sind government had not till so far resorted to this on account of the satisfactory financial position of the province. The Barrage loan was not the only one which the government had to pay. The interest-bearing debt of the province on March, 31, 1944 consisted of 394 lakhs, the balance of the consolidated debt due to the Central government and an unfunded debt of Rs. 78 lakhs, involving an annual interest charge of Rs. 3 lakhs. Against this, the government have invested Rs. 65 lakhs in the Government of India securities, paying annually two lakhs of rupees. It is to wipe off all these debts that the new loans have been promoted. The budgetary position of Sind is very sound and the 1943-44 budget revealed a surplus of Rs. 398 lakhs. The province has also many remunerative assets.

Quite a storm of controversy is blowing in the local press over the Food Grains Syndicate. Mr. Nichaldas Vazirani has made more charges against the methods adopted by the Syndicate and has pleaded for a court of inquiry to go into the matter. Because of the monopolist position enjoyed by the Syndicate, activities of several Sindhi merchants doing import and export business has been paralysed and there is a feeling in local commercial circles that normal trade channels should be enabled to function.

Sir Henry French, Permanent Secretary to the Ministry of Food in London passed through Karachi. During his short stay at Karachi, accompanied by Mr. Jamshed Nusserwanjee, Sir Henry saw Karachi's rationing system at work. He also inspected the various yards where wheat and other grains have been stored. The arrangements for local distribution as well as export for deficit provinces were explained to him.

A glorious picture of the future of Karachi as a trade, industrial and communications centre was painted by Mr. Jamshed Nusserwanjee at a rotary lecture. This city had several advantages over Bombay and Calcutta. It could expand in all directions. But we certainly needed more roads and better medical facilities and better sanitary arrangements.

LOOKING BACK, YOU SEE THE FUTURE

There is hardly a commodity whether it be a necessity or a luxury, whose price has not risen several fold during the last four years. Control measures have checked the upward tendency of prices and in several cases they have actually come down. But if prices have to be lowered still further—and they must—something more is needed than Price Control. There is only one royal road to lower prices—SAVINGS.

Protect your savings: Land, buildings, commodities, jewels and manufactured goods are bad value for money. Their present prices are unreasonably high. Put your money in fixed investments. There are several. Invest in Insurance, Co-operative Societies, Savings Bank Account, Post-Office Savings Bank and best of all in Government Loans and National Savings Certificates.

SAVE ALL YOU CAN AND INVEST ALL YOU SAVE

Savings can be your safeguard in old age or your opportunity after the war. The man who does not save is missing a golden opportunity.

A NATIONAL APPEAL BY THE NATIONAL WAR FRONT

AAA 1117

Resume of Commodity Markets

The feature of the week is the attempt at settlement of the dispute on the Bombay bullion exchange. For a long time there has been considerable confusion in respect of transactions, in silver especially. With the delay in Government sales, there was a heavily oversold position. Bulls wanted to take advantage of the high level of prices and close the transactions. Bears, however, were not willing to concede the demands of bulls and there was a stalemate in the market. As a result of the settlement there has been a resumption of trading this week and the discount for forward over ready is only 10 annas against Rs. 6 per 100 tolas sometime back. The jute market has remained quietly steady while the jute manufactures market has continued firm. As for raw cotton, prices have been fluctuating in narrow limits, no great incentive being derived from the spectacular successes of the Allied armies on the continent.

The jute market has not been adversely affected inspite of the fact that the production figures for the month of July showed a reduction in total output by over 15,000 tons. As there is no prospect of an improvement in coal supplies in August and September, production in these two months also might be adversely effected. But with the end of the war in sight, and with the possibility of a substantial improvement in coal supplies after September, jute dealers have not been in any hurry to do fresh business and prices in upcountry centres have been fully maintained. It is now reported that the Industrial Pool Scheme has been very nearly completed and that the majority of the members of the industry are agreeable to the proposals outlined by the sub-committee of the Indian Jute Mills Association. The more efficient steam-driven mills should improve the rate of production though it may not be possible to make up completely the loss in production on account of inadequate coal supplies. The advantage of the scheme, however, will be realised only when the more efficient steam-driven units which are now able to continue production are helped to utilise the lost loom hours purchased from the industrial pool. It can be only emphasised that there is no fear of any appreciable reduction in mill consumption in the current year. With the possibility of a larger output in the later months of the season, it will be possible to consume all the jute grown during 1944-45 season.

In spite of the drop in production by over 15,000 tons the output in the last month was rather satisfactory at slightly above 96,000 tons. It would appear that shipments have been actually discouraged and that only immediate requirements are being attended to. There is anxiety that sufficient stocks should be kept on the spot for an emergency.

As pointed out above it is happy to note that after a long time the bullion dispute has been settled, and that a large number of dealers on the bullion exchange have agreed to adjust their outstanding transactions privately. Differences have been paid except in the case of a few operators who have been left to decide their cases in a court of law. Business was accordingly resumed this week. In spite of the adjustment of outstanding business, however, there was not any appreciable setback in prices.

Whether at this stage the Reserve Bank should encourage the buying of both gold and silver at the inflated levels is a question for which no satisfactory answer has been given.

The Textile Commissioner has ruled that persons who purchased cloth or yarn from the manufacturers during the three years ending 1942, for the purpose of executing contracts with the Government and not for the purpose of their business of selling them, are not eligible to quotas on the basis of such purchases. This ruling, however, does not cover those who besides purchasing goods for the execution of Crown contracts, bought cloth for the purpose of their business of selling them; they will be eligible to quotas on the basis of their purchases for sale.

According to the Bengal Cotton Cloth and Yarn Movements Control Order, 1944, promulgated by the Bengal Government under the DI Rules no person is allowed to move or cause to be moved, by rail, road or water any consignment of cotton cloth or yarn from any place in Bengal to any place outside the province, except under a permit issued by the Provincial Textile Controller in a specified form. No permits will be necessary for movement of cloth or yarn as personal luggage not exceeding 20 lbs in weight, and for movement by military personnel or under any other legally valid license.

Another order passed simultaneously under DI Rules lays down that no cotton cloth or yarn consignment arriving at any railway or steamer stations in Calcutta and the industrial area, shall be delivered to the consignee or any other person unless permitted by the Provincial Textile Controller by endorsement on the railway or steamer receipt, or any other document under which the consignment is deliverable. Such endorsement will not be necessary in the case of any consignment not exceeding 20 lbs in weight or booked under military credit note, or to an officer of the defence services by designation.

The survey of the sugar position of all proceeding areas for season 1943-44 in the week ended August 7, 1944 shows that despatches were 19,039 tons bringing the total of despatches for the season to 7,02,805 tons. Production upto that date was 12,20,788 tons. The percentage of progressive despatches to production was thus 57.5 per cent. The physical stock of sugar on August 7, 1944 was 5,18,683 tons. Balance stock of 1942-43 sugar on this date was 2,015 tons.

Jute and Jute Manufactures

(By Our Correspondent)

Calcutta, 24th August.

It is understood that the opposition to the Jute Mills Pool Scheme has now dwindled to a minority of one, and it is hoped that complete unanimity will be achieved within the next day or two and the scheme set in motion. The allowance to idle mills, which is reported to be fixed for the time being at twelve annas per loom-hour, seems quite a generous figure though no doubt it will be liable to adjustment in the light of experience. But it is to be hoped that some improvement in the coal supply position will lighten the demands on the Pool in its earlier stage so that some funds may be accumulated to stabilise it.

The air is full of ideas with a view to improving the transport position, particularly as it effects jute shipments to mills. Not all of these are propounded in the most practicable form and the trouble is that those invested with a little brief authority are not only prone to neglect to seek advice on matters with which they are not intimately acquainted, but are too often unwilling to admit having made a mistake when this is pointed out to them afterwards. There is yet no amendment of the recent order with regard to the minimum quantities acceptable for shipment by flat from uncountry though these were obviously based on three and a half maund bales, which have largely disappeared from the important shipping stations and have been replaced by four maund bales, which do not fit at all reasonably into the arbitrary maundages promulgated in the order and which, as was pointed out last week, would make it impossible for a dealer to complete delivery to a mill of a quantity such as 10,000 maunds.

The threat to discharge jute cargoes at the Calcutta Jetties if barges are not immediately available to transport the cargo to the Mill destination, is now somewhat modified by the proposal to utilise country boats to effect the transfer between the flat and the mill, instead of the steel lighters normally employed. In the first place it is very questionable whether there is sufficiency of country craft available to carry this idea into practice to any appreciable extent, and there is the matter of the transit insurance to be taken into consideration, for the risk in boating from flat to mill in country craft would certainly involve a higher premium rate than the standard, which contemplates that the transfer should take place in steel lighters.

The question of loading whole flats for one destination is also being enquired into and this certainly has its possibilities. To make it a success is largely a matter of proper coordination. While flat cargoes were not uncommon some years ago though of late they seem for some reason to have become much less so. Most mills have the capacity to unload a whole flat in quick time, with the added inducement of the discount on the freight for doing so, provided always that they are not expected to unload a swarm of cargo lighters at the same time. Many mills have had their handling capacity reduced by the fact that one jetty and crane has now to cope with the requirements of a double shift working, when it was originally designed to meet the demands of single shift only. But there is in most cases sufficient margin to overcome this disability. If it can be arranged that a mill to which a whole flat cargo is directed, is absolved from the necessity of attending to the unloading of cargo lighters simultaneously, then the receiving end of the scheme can be worked all right. With regard to the despatching end, other considerations have to be taken into account. Not by any means every upcountry dealer will be prepared to hold a stock of several thousand bales of jute at current prices so that he can load up a whole flat for one destination. An average flat load of around 15,000 maunds represents at present prices well over two lakhs of rupees in value. Except at the larger stations, few premises have the capacity to even store such a quantity to await shipment. But a system of nominated loading might be workable. The local steamer agent by keeping in touch with the various shippers can keep himself informed of the orders placed for delivery to mills and can notify shippers in reasonable time that a flat will be placed on such a date to load for such and such a mill only, and allot space from their quotas to those shippers with orders for that mill. A combined cargo for a single destination can thus be secured, the probable arrival date of the flat at destination pretty accurately estimated and notified to the mill in question so that they may be prepared for the necessary quick handling. A common complaint of mills is that their deliveries arrive intermittently; for days their jetty may be empty and their handling labour force idle, then a swarm of barges will descend upon them and they are expected to unload what may represent a month's consumption of jute in a few days. If despatches and arrivals could be so regulated as to avoid such jams, the problem would be much less acute.

A new source of raw material for mills is temporarily at their disposal. It is learned that Government is anxious to get rid of some 7,500 tons of hessian scrim camouflage strips and this material is being offered to mills at Rs. 10 per maund, much cheaper than any description of jute other than ordinary cuttings. The material, being in strips of only 3 inches wide, is of little use except for reducing to sliver again, and being dyed, it would only be suitable for sacking weft. This offer ought not to be taken as a pointer that the war is practically over. It is merely that a new system of more fast dyeing of these camouflage strips is now in vogue and the material dyed with fugitive dyes is surplus.

The Export Jute market is in rather a peculiar position. Prices offered from Dundee are lower than the minimum rates laid down here and business is consequently almost at a standstill. Old Crop Dundee Daisee for August sold at Rs. 75-8, but subsequently buyers could not get on at that rate for Septr., sellers having advanced their price a rupee. Short group Daisee for Septr. sold at Rs. 85. There are buyers of New Crop Dundee Daisee at Rs. 77-8, of Short group Daisee at Rs. 86-8 and of Dundee Tossa assortment at Rs. 87/-, but sellers ask Re. 1-3 higher. Mills have made small purchases of Dundee Daisee Old Crop at Rs. 79-12 to Rs. 78-12 and of Old Crop Lightnings at from Rs. 75-12 to Rs. 75/-. Small lots of Straight morahed Rejections were reported at Rs. 65/- for white and at Rs. 67-8 for Tossa.

There has been a very limited turnover in Loose Jute during the week, buyers for the most part showing no interest while there has been no pressure from sellers owing to the scarcity of imports and the high prices prevailing in upcountry markets. European Jat was reported done in low assortment at Rs. 17/- and Rs. 14/- for Mids and Bots, while supervised District and Northern jute also sold in low assortments at Rs. 16-4 and Rs. 13-4 with Bottoms alone at Rs. 13-4. Some Indian District Tossa was recorded at Rs. 16-8 and Rs. 13-8 Mids and Bots while Balers are offering Rs. 19/- for good Jat Tossa Tops. Conditions in the mofussil continue far from satisfactory in many districts owing to lack of sufficient steeping water which will inevitably affect quality of later arrivals. The fall in the river-levels also predicates "Bukchal". Arrivals of jute into Calcutta for the first half of August are estimated at 2,58,000 bales against 2,54,000 bales in the same period last year, but much of this must still be old crop jute. Total arrivals since the beginning of July are now 7,31,000 bales against 8,41,000 bales up to the middle of August last year.

Probably on account of the favourable war news, there has been a perceptible slackening of buying interest in the fabrics market during the past few days. Even Government buying agencies have pulled in their horns, doubtless on instructions from home, and mills anxious to dispose of goods have been reduced to calling in the Bazar again in the absence of shipper buyers. There is however no departure yet from maximum prices for all descriptions of goods with the exception of "B" Twills, which are rather a drug on the market and which quote Re. 1/- under maximum for Oct./Decr. shipment. Other Heavy goods have been sold for shipment January/June at ceiling rates, but so far as can be estimated, the turnover has been on a smaller scale than of late.

silver in the real sense of the term. It is noteworthy that the sales of silver by the Reserve Bank (200 bars per day) have, far from bringing down the price of silver, actually helped to keep prices up. Ready silver was quoted at Rs. 134-8 at the close of the week and went up to Rs. 135-4 yesterday. The Bank's sales were made at steadily rising levels of prices, from Rs. 131 on Monday to Rs. 133-12 on Friday. Yesterday, the Bank sold at Rs. 134-8. Such a policy only whets the appetite of the market for silver.

* * * *

Taking a leaf out of China's Industrial Book, certain public workers of the integrity and eminence of Mr. V. L. Mehta and other co-operative enthusiasts have formed an Industrial Co-operative Association. Its objects are to see that workers are spared the parasitic attentions of the middlemen, the company promoter and the greedy shareholder. Pandit Nehru has for long had ideas on the subject. Such an association of co-operative workers has a special function to perform in India, since it is claimed that the ratio of output to the capital investment in these co-operatives is nearly ten times the ratio obtaining in the case of large scale industries. War scarred China is reported to have kept its industrial front intact mainly by the working of myriads of these mobile co-operative units. It was found there that every dollar so invested led to an outturn of 20 dollars a year. It is true that this feature is a product of wartime exigencies for China, but there is no doubt that the "Indusco" has come to stay. The low initial capital required for starting these co-operatives is an added advantage in the case of the Indian worker. The activities of the Association are now confined to this province, and already a start has been made in organising co-operatives in the leather and hand-made paper industries.

Few organizations in India can claim to have put forth the case of Indian industries with as much insistence and clarity as the All-India Manufacturers' Association whose President is Sir M. Visvesvaraya, the doyen of industrialists. In its own unobtrusive but efficient manner, this Association has been doing very good work, as the proceedings of the Fourth All India Manufacturers Conference held at Nagpur in March last testify. The A.I.M.C. has from time to time published brochures on the economic aspects of the various industries in India. The president's address at the quarterly meeting of the Central Committee at the end of April stressed the need for having a series of small plans which should dovetail into the larger Fifteen-Year-Plan, with special reference to the setting up of regional units. The problems of industry are constantly kept before the public mind by a monthly News-letter issued by the A.I.M.O. to members. Of all the meetings which the Fertilisers Commission had with various public bodies in the country, perhaps that of the A.I.M.O. was the most significant. The members of the Commission faced perhaps the most searching inquisition from the representatives of the A.I.M.O. which had submitted a memorandum to the Commission setting forth its considered views. The A.I.M.O. has now issued a statement to the press in which it suggests protective tariffs, subsidies, guaranteed interest on invested capial and facilities for import of capital equipment, and pleads vigorously for maintaining the industrial potential of the country. It stresses the need for capitalising war-time gains. Mr. Sankalchand G. Shah is the Vice-president.

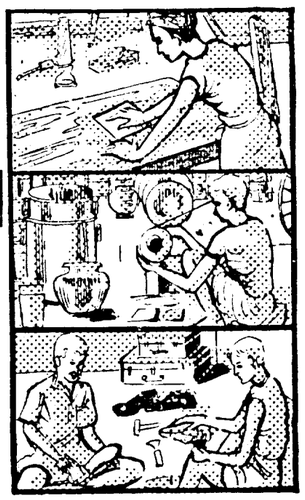
ALUMINIUM AND BRASS UTENSILS

Due to scarcity of metals difficulties in getting utensils of every day use are intensified. Output of Indian Aluminium, though large, is insufficient to meet essential needs. Scrap resources are being exhausted: Prices are very high.

To remedy this situation we arranged with difficulty, to import Aluminium: First consignment arrived but it has been used up for essential needs. Second lot, to arrive in two to three months, time, will increase supplies at much reduced prices.



Meanwhile, the Government has taken the important decision to supply about eight to ten lakhs pounds Brass utensils coated with pure Tin every month, through several factories in all Provinces.

These Utensils will be available everywhere at stamped prices from August onwards: Purchasers are requested to make sure of these stamped price, which in no case will be higher than Rs. 2/4/- per lb. for a suitably tinned article.

JUTE

(By Our Staff Correspondent).

Calcutta, August 24.

THE raw jute market has been quietly steady with a small amount of business passing. Mills are not anxious buyers and there is a tendency to await heavier arrivals later in the season. Also with the restricted working there is no need for immediate replenishment of stocks. Sellers, on the other hand, while keen to do business are not prepared to offer any discount in rates. Mofussil markets are still firm and in certain districts prices are above Calcutta parity rates. There is still an insufficiency of steeping water and harvesting has been very much delayed. Final forecast figures are expected to be published tomorrow and it remains to be seen whether the authorities make an attempt at an accurate forecast of both the size and area of the crop.

In the loose jute section no large business has been done but mills have been interested in lower grades. Indian Jat Bottoms alone being done at Rs. 14 and Districts at Rs. 13-8 per maund. Supervised Middles and Bottoms were done at Rs. 16-8 and Rs. 13-8 respectively.

In the pucca bales section shippers have been rather quiet as export enquiry from U.K. has not been quite large and there is a tendency to await further developments. Balers have been anxious to do business but in view of the strength of the loose jute section prices could not be discounted. Mills have purchased Firsts at Rs. 85, Lightnings at Rs. 79-12 and Hearts at Rs. 75-12 per bale. There was good demand for special Cuttings with buyers over and small business has been reported at Rs. 55 and Rs. 67 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent)

Calcutta, August 24.

The jute manufactures market showed no change in conditions. With the fears regarding the availability of coal supplies, mills are not able to enter into contracts even for forward positions. It is reported, however, that a larger amount of business has been done in the past one or two weeks though the bulk of the transactions have been on account of official agencies. It is reported that the Industrial Pool Scheme has met with general acceptance and that it might come into effect at an early date. Under this scheme it is proposed to make the best use of the lost loom hours and pay compensation to mills which have been affected adversely for reasons beyond their control. While this scheme will enable the less fortunate ones to keep their budget balanced, the more effective utilisation of lost loom hours should result in a higher level of production. The surplus production, it need hardly be said, is badly required.

PIECEGOODS

(From Our Correspondent)

Calcutta, August 24.

With the fears regarding the detection of black market trading, business in the piecegoods market has been passing rather more freely. Consumers have begun to take more interest in the market. The Puja season is drawing near and everyone is anxious to complete his purchases as early as possible. It is felt that the Control authorities might not effect any further decrease in ceiling prices atleast for some time to come. Efforts are being made to make the best use of available supplies. There is a shortage of the finer varieties. It is pointed out that recent arrivals are more than immediate requirements and that with an equitable distribution of existing supplies there could be no scarcity of either cotton cloth or yarn. The presence of the Textile Control Commissioner for India in Calcutta has had a sobering effect.

(Continued from page 303)

23. Considering the large scale damage to housing, and the part the State will have to play in the building programme of the post-war period, one may be sure that State policy in this regard will indirectly fix targets for the production of building materials of various kinds.

24. The revision of educational policy will regulate the labour market and maintain the purchasing power of those engaged in what used to be known as "Unproductive" work.

25. All these purposes of State policy, which were formerly regarded as impracticable on financial grounds are no longer so, since there is a financial technique which has worked well during the war and which may be made to work even better during peace.

26. The post-war period then need not, and will not, be the plaything of the forces of slump. There are resources, mental and material, for ensuring that to sign the peace is not to sign away prosperity.

* * * *

In this outline of the war world, I have made Britain the basis of my study. These features may be said to be true of all countries with a clear and clean financial system. They are true in a more or less degree—in more degree in the case of the United States and less degree in the case of India.

\- \- \- \-

It is my contention that no dark valley shall separate the present war from the imminent postwar period. We shall be led from the one to the other by a path which will be distinguished by definite landmarks to guide the traveller into the future world. Of the postwar world as arising from the present, I shall give a sketch in my next instalment of gossip.

"EAVESDROPPER".

J.K. INVESTMENT TRUST LTD.

The private investor, remote from actual market conditions, cannot select from a wide range of varied investments nor can he escape the risks which accompany such widespread interests. It is the function of an investment Company to offer the advantages of pooled operations in the financial field to private investors and the J. K. Investment Trust Ltd., will serve this purpose on a very large scale.

Authorised Capital	Rs.	5,00,00,000
Subscribed Capital	„	1,10,11,000
Paid-up Capital	„	52,55,500

Its Board of Directors consists of persons who possess vast and considerable experience not only in the matter of investments but also in Trade, Commerce, Finance and Industry. Some of them are closely associated with the famous Industrial Group of Thirty-two varied Industrial and Financial Enterprises, known as J. K. INDUSTRIES.

HERE ARE THE ANSWERS TO YOUR QUESTIONS ABOUT

Prize Bonds

"How much do they cost?" There are two denominations—Rs. 10 and Rs. 100.

"Where can I buy them?" At any Indian Office of the Reserve Bank of India, Imperial Bank of India, Government Treasury in British India or in an Indian State conducting Government of India Treasury business.

"What are the prizes?" The prizes are by series of 1 lakh pieces. For each series of Rs. 100 Bonds participating in a draw, 1st Prize Rs. 50,000, two 2nd Prizes of Rs. 20,000 each and two 3rd Prizes of Rs. 5,000 each. Total prize money, Rs. 1,00,000 for each drawing. For Rs. 10 Bonds, 1st Prize Rs. 2,500, two 2nd Prizes of Rs. 1,250 each, five 3rd Prizes of Rs. 500 each and ten 4th Prizes of Rs. 250 each. Total prize money Rs. 10,000 for each series.

"Once a Bond has won a prize I suppose it is withdrawn from all future draws?" Certainly not. Every Bond whether it has won a prize or not is included in all draws until 15th January 1949 and so can, if you are lucky, win more than one prize for you.

"Are prizes subject to a tax?" No. They are free of Income Tax, Super Tax, Excess Profits Tax or Corporation Tax.

"Where are prizes paid?" See question two. Prizes are paid at all the above mentioned offices and at Sub-treasuries also.

"Are Prize Bonds repayable?" Yes, at par on or after 15th January 1949. That is, you get absolute security for your money AND the chance to win one or more large cash Prizes.

Stock Markets to-day and to-morrow:

LATE RALLY IN PRICES

As the Fifth year of the war draws to an end it is more than ever clear that the Allies are assured of a complete victory. The progress of Allied armies in France has been rapid. The possibility of surprising developments in the Balkans leads one to think that the end of the war is not very far off. The reaction to the encouraging war news from the several fronts, however, has been different at different centres. Bombay was inclined to take a bearish view of the immediate outlook. The Calcutta market, on the other hand, has remained rather steady in the last two days and the adjustment of outstanding transactions, for which purpose the markets were closed on Monday and Wednesday this week, has not revealed any over-bought position, especially in the speculative popular counters. The prices at which differences have been paid have been suitable to both bears and bulls. If the committee of the Calcutta Stock Exchange had insisted on a similar adjustment a month back, bears would have been at a heavy disadvantage. It is said that there is still some oversold position, but with the present mood of operators no important rise in prices is expected, especially as the Puja holidays are drawing near. It is not clear yet as to what exactly is the Bombay view. No great decline in prices, however, is anticipated. With the continuance of cheap money share values could be maintained at fairly high levels.

* * * *

The rates at which the outstanding transactions in the four counters, Indian Irons, Steel Corporations, Burrakurs and Howrahs, have been adjusted by members of the Calcutta Stock Exchange are Rs. 39-4. Rs. 34. Rs. 42-8 and Rs. 81 respectively. Deliveries for other counters have been going on smoothly. Even with the large adjustments there has been no tendency on the part of holders to liquidate their investments. There is a disposition to await further developments.

* * * *

Bangalore Woollen Cotton & Silk Mills Company Limited, has been able to report only a lower level of earnings in the half-year ended June 1944. The increase in the cost of production and the lower average price realised have been mainly responsible for the decrease in earnings in the last accounting period., After providing Rs. 12.88 lakhs for taxation against Rs. 23 lakhs, setting aside to depreciation Rs. 4,04,776 against Rs. 5.48,404, the transfer to other funds is Rs. 75,000 against Rs. 6.25 lakhs. The dividend on ordinary shares has been reduced to 6¼ per share from Rs. 7-8 per share on the former occasion. The amount carried forward is substantially higher at Rs. 233,637 against Rs. 56,488 brought in.

* * * *

The smaller amount of sales as well as the relatively higher cost of production has resulted in a lower level of earnings for *Bisra Stone Lime Company, Limited*, for the half-year ended March, 1944. The net profit, before providing for taxation and depreciation, is Rs. 3,14,859 against Rs. 3,75,158 for the previous six months. The amount set aside to depreciation is slightly higher at Rs. 7,019 (Rs. 5,000). In spite of the lower level of earnings provision for taxation is considerably higher at Rs. 1,68,000 (Rs. 1,39,000). As a result, the dividend on ordinary shares has been reduced to Rs. 1-6 per share from Rs. 2-8 per share This is the lowest dividend in recent years

* * *

Acute shortage of coal supplies caused a reduction in the output of the *Bengal Jute Mill Company, Limited*, adversely affecting trading results for the halfyear ended December 1943. Gross profit was lower at Rs. 4,23,817 against Rs. 5.88,845 for the previous six months. After providing Rs. 84,195 (Rs. 87,746) for depreciation and Rs. 97,702 (Rs. 1.02,893) for interest, commission, allowance and other expenses, the provision for taxation is Rs. 1.25 lakhs (Rs. 2.4 lakhs). The dividend has been maintained at 8 annas per share while the transfer to reserve is lower at Rs. 25.000 (Rs. 50,000). The amount carried forward is Rs. 8,364 against Rs. 18.943 brought in.

* * * *

Indo-Burma Petroleum Company Limited, has earned a reasonable profit for the year ended December, 1943 but as the question of compensation for the loss of the Company's assets in Burma has still to be clarified and in view of the need for conserving the cash resources of the Company against future expenditure, which will be incurred on the company resuming activities in Burma, the directors regret that they cannot recommend the payment of a dividend on the ordinary share capital and after transferring the sum of Rs 11,00,000 to Reserve for Depreciation and Contingencies, they propose to carry forward to 1944 account the balance of profit and loss account amounting to Rs 2,38,339. Since the Company ceased to operate in Burma the sum of Rs 30,00,000 has been placed to Reserve against contingencies in connection with the re-assumption of business activities in Burma. The amount set aside for depreciation out of the earnings for the year was Rs 1,10,973 (Rs5,14,549) while the provision for taxation was Rs 15.5 lakhs (Rs 3.45 lakhs). The net profit before providing for taxation and depreciation, was Rs 30,04,661 against Rs 15,94,543 for the previous year.

* * * *

In spite of the increased manufacturing difficulties *India Paper Pulp Company, Limited*, was able to show a slight increase in production for the six months ended March, 1944 over the previous half-year. As manufacturing costs increased to a great extent and raw material prices were further higher, the net profit before providing for taxation and depreciation was very much lower at Rs. 9,66,658 against Rs. 16,24,297 for the previous half-year. The increase is mostly on account of higher prices for raw materials, manufacturing expenses being Rs. 20.26 lakhs against Rs. 16.68 lakhs. The low average price realised on sales to the Government on the other hand, was responsible for the reduction in the total value of sales in spite of the higher level of output, by nearly Rs. 3 lakhs. The amount set aside to depreciation is Rs. 1 lakh (Rs. 2 lakhs) while the provision for taxation is Rs. 6 25 lakhs (Rs. 11.5 lakhs). The allocation to reserve for repairs is Rs. 50.000 (Rs. 1 lakh). The sum of Rs. 15,000 has been placed to reserve for bad debts. The dividend on ordinary shares has been maintained at Rs. 6 per share only with reduced allocations. The amount carried forward is lower at Rs. 79,968 against Rs. 83,300 brought in.

Markets Slightly Reactionary

TATA OIL'S ENCOURAGING REPORT

(By Analyst)

Bombay, August 24.

Developments in France are heading to a climax and it looks as if the whole of the region south of the Seine will be freed before the Fifth Anniversary of the war. Bombay has naturally taken a slightly bearish view of the immediate outlook, though as has been pointed out by me on earlier occasions, there is no fear of any big slump in prices and it would be advisable for intending investors to pick up favourites at lower rates after some time. Tata Defds came down to Rs. 2,140 on heavy selling by Calcutta operators. The reports earlier in the week that the managing agents might decide on the issue of debentures to the extent of Rs. 5 crores in preference to the conversion scheme had also a discouraging effect. It is now understood, however, that the conversion scheme would be put through and that the majority of shareholders would agree to the conversion proposals.

Textile issues also have been easier, Bombay Dyeing being nearly 40 points lower at Rs. 1820. Activity in the textile industry might continue to be at a high level but it is felt that it would not be possible for mills to have the same margin of profit on sales and that earnings might be lower.

In the miscellaneous section, my favourite, Bombay Burmahs have improved further on encouraging reports from the Burma front. It will not be surprising if a further rise in prices is recorded. There are reports that the Associated Cement Companies might issue fresh capital on bonus terms to shareholders as the company is contemplating the erection of some more factories in order to be able to meet the large increase in demand for cement in the postwar period. The market does not seem to be very enthusiastic about these reports as it is pointed out that any increase in capital might be followed by a corresponding reduction in the dividend. I feel, however, that the long-term prospects are encouraging and with any proposal for an increase in the company's capacity the prospects are brighter.

The accounts of the *Tata Oil Mills Company Limited*, for the year ended March, 1944 make very encouraging reading. The earnings for the period are the highest in the history of the Company. The sales of the Company's products during the year have again shown a marked improvement creating a new record of Rs. 2.5 crores as compared with Rs. 1.8 crores in the previous year. The improvement was due partly to the increase in production and partly due to the higher prices prevailing in the market. There was a substantial increase in output of toilet soaps and other articles in the production of

DIRECTORS' REPORT
TO THE
SHAREHOLDERS
FOR THE
Half-year ended 31st December. 1943.

Gentlemen.

We beg to submit herewith the Balance Sheet and the audited statement of accounts of your Company for the period ended 31st December 1943 showing a Gross Profit of Rs. 4.23.817-5-9. After providing Rs. 84.195-1-3 for depreciation and Rs. 97,701-10-9 for Interest, Commission Allowance and other expenses, there is an available balance at credit of Profit and Loss Account of ... Rs. 2,41,920-9-9

To this should be added the amount brought forward from the previous half-year	„	18,943-7-4
Making a total of ...	Rs.	2,60,864-1-1
It is proposed to set aside as a Reserve for Taxation (Income, super & Excess Profit Taxes) ...	„	1,25,000-0-0
Leaving a balance of ...	Rs.	1,35,864-1-1

We recommend that this should be dealt with as follows

In paying a Dividend on 5½% per annum Redeemable cumulative Preference Shares for the half-year ended 31st December, 1943 (free of Income tax)	Rs.	27,500-0-0
In paying a Dividend on the Ordinary Shares of annas 8 per share (i.e. 10% per annum) free of Income Tax ...	„	75,000-0-0
Transfer to Reserve ...	„	25,000-0-0
...	Rs.	1,27,500-0-0
To be carried forward to next half-year ...	„	8,364-1-1
	Rs.	1,35,864-1-1

Mr. J. S. Ker in terms of the Memorandum and the Articles of Association of the Company retires this year from the Board of Directors and being eligible offers himself for re-election.

Messrs. S. R. Batliboi & Co., Auditors of the Company retire at this time and being eligible offer themselves for re-appointment.

Mr. Jugmohan Prasad Goenka being out of Calcutta has not signed the Report and the Accounts of the Company.

During the period under review, your Mills have worked in accordance with the working agreement of the Indian Jute Mills Association, but the acute shortage of coal supplies caused a reduction of output of the Mills adversely affecting the trading results.

We are, Gentlemen,
Yours faithfully,
M. L. JALAN
J. S. KER
NALINI R. SARKER
C. L. BAJORIA

INDIAN SUGAR ANNUAL .....

(The Indian Sugar Industry (1943 Annual). Messrs. Gandhi & Co., Bombay, Publishers. Pp. 350. Price Rs. 6-6).

The Indian Sugar Annual 1943, edited by Mr. M. P. Gandhi, contains valuable information relating to the Indian Sugar industry. The sugar industry has come into the picture only after the outbreak the Japanese war and it was only in the last season that the industry was able to take advantage of the improved conditions. Thanks to the more orderly distribution of sugar and the encouragement given to both the manufacturer and the ryot it was possible to avoid an acute shortage of sugar. The industry is passing through an interesting stage at the present moment. The Annual gives a complete and critical account of the happenings in the industry in the war period.

CALCUTTA STEAM NAVIGATION COMPANY, LIMITED

NOTICE is hereby given that the One hundred and twenty-fourth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company 5, Fairlie Place, Calcutta, on the 15th September, 1944 at 12 noon to transact the following business:—

To receive and pass the Directors' Report.

To pass the Accounts for the half-year ended 30th June, 1944.

To declare a Dividend. (The Directors recommend the payment of a dividend of Rs. 7-8 per share).

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 25.

The week under review is short of two working days, markets being closed on Monday and Wednesday for adjustment of outstanding transactions and payment of differences. In the short period markets remained open, a rather quiet tendency was noticeable and business passing was on a restricted scale. The favourable developments in the war situation and the absence of any outside buying enquiry had naturally a depressing effect on prices. Surprisingly enough, the reopening on Thursday was rather steady and as the session progressed, a firmer tendency was in evidence. All the losses in the earlier part of the week were regained. Closing prices on Thursday were at the highest levels for the week. This morning, also, a firmer tone is noticeable in spite of the Bombay market. Coal shares have registered a sharp rally while there has been general buying of Jute shares. Speculative engineering counters have been steadier while in the cotton section prices were very well held. Sugar shares continued weak.

A slightly firmer tendency was noticeable in the giltedged securities section earlier in the week, 3½ percent Paper being done up to Rs. 99-15. The failure of the Provincial loans, however, has induced a quieter feeling in this section and the quotation towards the close was Rs. 99-8. 3 per cent 1949-52 were Rs. 101-9, 3 percent 1953-55 Rs. 101-11 and 3 percent 1963-65 Rs. 98-8. 5 per cent 1945-55 were done at Rs. 104-7 and 4 percent 1960-70 at Rs. 112-5.

Bank shares have been rather quiet with *Bharat Bank* ordy., at Rs. 115, *United Commercial Bank* at Rs. 34 premium, and *Hind Bank* at Rs. 59-4. *Reserve Bank* came down to Rs. 130 but the close is slightly easier at Rs. 131-8.

Cotton shares were listless earlier in the period but towards the close they have steadied up, *Bengal Nagpur* being Rs. 38-8 and *Cawnpore Textiles* Rs. 13-10. *Dunbar* were quieter at Rs. 287 while *Elgin* had some enquiry at Rs. 71-10. *New Victoria* were a shade better at Rs. 8-14.

Coal shares were rather quiet in the earlier days of the week but there has been a good rally towards the close *Amalgamated* recovering to Rs. 48-4 from Rs. 46-15 and *Bengal* to Rs. 645 ex-dividend from Rs. 646 cum-dividend. *Bokaro & Ramgur* receded to Rs. 37-2 but closed steady at Rs. 38-8. *Burrakur* were pushed down to Rs. 41-12 but on reports that a satisfactory dividend might be paid for the current half-year, and that the coal industry would stand to gain to a great extent after Septr., there has been a recovery by 2 points to Rs. 43-10. *Dhemo Main* were Rs. 24-12; *Jainty Central* were quieter at Rs. 6-11 while *Katras Jherria* were Rs. 59-8 and North *Damuda* Rs. 11-4. *New Beerbhoom* improved to Rs. 37-12 from Rs. 36-8 and *South Karanpura* to Rs. 23-4 from Rs. 22.

Jute shares have been in good enquiry though no appreciable improvement in prices has been reported. It is generally expected that with the operation of the new scheme and the possibility of a large demand in the postwar period, jute shares will be marked further higher. *Anglo-India* registered a rise of 8 points to Rs. 455 while *Clive* improved from Rs. 48-8 to Rs. 49-8. *Howrah* were lower at Rs. 79-8 but recovered to Rs. 80-4, *India* were 10 points higher at Rs. 685, *Nuddea* were very steady at Rs. 26-12 while there was some buying of *Presidency* at Rs. 9-14. *Rameshwara* were Rs. 20.

In the engineering section there was some speculative selling of Indian Irons ad Steel Corporations and the quotation came down

THE STEEL CORPORATION OF BENGAL LIMITED

NOTICE

The Seventh Ordinary General Meeting of the Shareholders of the Steel Corporation of Bengal Limited will be held on Friday, 15th September, 1944 at 11 a.m. at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:—
