With the exception of the full accounts of Roan Antelope, the results of all the principal concerns associated with copper mining in Rhodesia are now available, showing that the earnings of all four operating companies increased. Despite this, Mufulira and Roan Antelope, both under the chairmanship of Mr A. Chester Beatty, passed their dividends, with the result that Rhodesian Selection Trust, whose main interest is in Mufulira, was forced to do the same. Rhokana, however, raised its dividend from 15 to 25 per cent, and the holding company, Rhodesian Anglo American, distributed 6½ per cent against 3½ per cent. The fourth operating concern, Nchanga Consolidated, enters the dividend earning list for the first time and uses a very substantial balance to wipe out the old debit. The cut in the Government's purchases which is to be spread over the current year will only affect this company to the extent that the projected expansion will be abandoned for the time being. The reason given by Mr Chester Beatty for the non-payment of a dividend in the case of Mufulira is shortage of ready money, a chronic state with this company so far as can be judged from the published figures. Possibly the same reason applies in the case of Roan Antelope. It is not apparent from the figures provided that Rhokana is in much better case, but the whole matter depends on the actual dates at which the provisions under taxation reserve fall due to be met and the extent to which the companies can rely on disposing of their stocks of copper at the end of the war. This is, of course, a factor which enters into the computation of the liquidity of all concerns working on a large scale for the authorities. If their stocks are to be purchased at existing prices, their positions will in most cases be extremely liquid. On any other supposition, they may be very short of funds. Is there any reason to suppose that the copper companies will be worse off than other concerns? If so, it should be clearly stated. Mr Chester Beatty is preoccupied with the question of stocks, for he foresees a considerable and possibly protracted slump in the demand for newly mined metal after the war, owing to Government stocks of virgin copper and accumulations of scrap and secondary metal. These will easily be sold if the price is low enough, and the Rhodesian mines are among the lowest cost producers in the world; but it may well be that there will be a period during which

output will run very much below recent levels. In these circumstances conservation of resources seems to be the better policy.

### Miners' "Personal" Bonus

The future of the output bonus scheme has been somewhat obscured by the recent uncertainty about the adjustment of the anomalies under the National Tribunal's weekly minimum wage award in the coal mining industry. In its fourth and final report the Greene Board of Investigation recommended previously the substitution of an individual pit scheme for the district scheme, and estimated its cost at £3½ millions, against about £600,000 per annum under the existing scheme. Subject to the appointment of the regional controllers as the reviewing authorities, and to an undertaking by the industry to accept their decisions as final and binding, the Ministries of Labour and Fuel agreed to make the change and to bear its cost if the employers and workmen were also favourable to the adoption of the proposal. The Miners' Federation agreed to the change; the Mining Association, however, adhered to its original opinion that a pit scheme would lead to difficulties and grievances which would be detrimental to output. As an alternative incentive it suggested an amendment of the 1s. per shift attendance bonus which had been operative since June, 1941, by the granting of an extra 2s. 6d. for attendances on Fridays and Saturdays, making a total bonus of 10s. 6d. for a full week's work. During recent discussions one or two variants of this proposal have been considered, and on February 9th last the colliery owners and the workmen's representatives reached an agreement, subject to the approval of the Minister of Fuel and Power, on the basis of the payment of a personal bonus of 2s. 6d. for the fifth shift worked, another 2s. 6d. for the sixth shift worked, and a further 1s. for additional shifts worked in the week. It is intended that these new bonuses shall be paid in respect of time actually worked and not of time paid for; that they shall not be affected by the recent overtime and week-end awards of the National Reference Tribunal; and that they are to be payable in addition to the existing 1s. attendance bonus and to payments under the district output bonus scheme. Moreover, short Saturday shifts and week-day shifts for which the guaranteed wage under the Essential Work Order is payable, are to count as full qualifying shifts under the new scheme. In the case of juveniles, the rates are to be the usual proportions of the adult rates. The cost of the 1s. per shift attendance bonus has been averaging between 9d. and 1s. per ton, representing approximately £8 to £9 millions per annum, and by the supplementary "personal" bonus now contemplated this cost may quite possibly be increased to well over £10 millions per annum. The scheme, however, has not yet received the approval of the Ministry of Fuel and Power.

### Swedish Credit Policy

The latest annual report of the Svenska Handelsbanken to reach this country throws interesting light on the credit policy by which Sweden has endeavoured to insulate herself from the inflationary impact of the belligerent world around her. The main potential of inflation in Sweden has been the volume of foreign—especially German—purchases, the inability to import goods to a corresponding extent, the consequent increase in the gold and foreign exchange reserve of the country, and the volume of additional currency and credit built up, largely by external expenditure and backed not by additional goods, but by these metallic and paper assets of the Riksbank. To counter these inflationary forces the authorities in Sweden have adopted all the correct orthodox devices, plus a few of questionable orthodoxy, but undoubted efficacy. The main task has been that of mopping up redundant purchasing power. In the first place, the Government has borrowed above its current needs, and has done so by raising the price of its borrowing slightly above the market rates current when the new operations were launched. The Riksbank has requisitioned some Kr. 500 millions of Treasury bills from the National Debt Office and has used these as a fund for feeding open-market sales of securities. Government expenditure has been reduced wherever possible, and by postponing Government payments under supply contracts forced loans have, in effect, been extracted from the contractors concerned. The sale of Government securities outside the banks has been encouraged and, as a stimulus to the canalisation of a larger flow of savings to the Govern-

## ... but STILL, it's a compensation

This famous British Table Water—in Sparkling form—has disappeared for the moment but it will return with victory. An understanding public will appreciate our difficulties.

Meanwhile—as a compensation—sufferers from Rheumatism, Sciatica and allied complaints will be glad to know that Bath Spa Water in STILL form, with all the curative mineral properties of the best Continental Spas, is still obtainable.

## NATURAL BATH SPA WATER

THE SPRINGS, STALL ST., BATH

## Never again

OF COURSE you remember, in those far-off days before the war, the glare and dazzle of on-coming car headlights. You also remember the way you closed your eyes, kept the wheel as steady as you could, and hoped for the best.

All that is over. When this war is finished, headlight glare will be a thing of the past. Polaroid will allow you to stare into approaching headlights as the eagle is said to stare unblinking into the mid-day sun.

Polaroid has made other miracles possible—for example, the projection of three-dimensional cinema pictures in full colour, anti-glare sun glasses, non-glare reading lamps and a multiplicity of optical instruments.

Polaroid is made possible by the use of iodine. It is but one instance in a great field of development. New uses for iodine are constantly being found in medicine, agriculture and industry. So many new facts have been brought to light in the last hundred years that it has been necessary to set up an organisation to disseminate this knowledge. This organisation is the IODINE EDUCATIONAL BUREAU. It was formed in 1938. The services of this Bureau are available free to any industrial or commercial undertaking with an iodine problem.

## AND WHEN THE WAR IS WON?

Back to "go-as-you-please"

.... or all pull together?

Team work is winning the war. Men and women of the United Nations all over the world are thinking, working and fighting as members of one family with one common goal... a just and durable peace. But peace cannot endure in a world marred by starvation, misery and disease. There must be prosperity, "one and indivisible"... prosperity secured by sustained industrial team work after the war is won.

What has been done in war can be done in peace. When reconstruction begins it will be the privilege of democratic world-industry to co-operate in the great project of "setting up house" for this "world family of democratic nations"... so that, in the words of Lord Woolton, "We may all work together in industrial harmony in this task of moving from the destruction of our enemies to the construction of our domestic life and international trade."

★ ★ ★

This Statement is issued in support of the principle of continued industrial collaboration between the United Nations after the war. Announcements by the International Nickel Company of Canada, having the same purpose, are appearing in Canada and the U.S.A.

Wine Merchants to H.M. the King 95 Wigmore Street, W.1

ment, the National Debt Office has created a new type of savings account, on which  $3\frac{1}{2}$  per cent interest is paid provided the deposit remains undisturbed for at least six years; if it is withdrawn before that period has expired the holder gets no interest and is charged 2 per cent of the amount withdrawn.

### Another Premium Loan

The most interesting of the unorthodox anti-inflationary devices has been the issue of a Government Premium loan. The total interest cost of the loan to the Government is 3.3 per cent. Of this, 2.1 per cent is paid by way of interest and the balance is distributed as prizes for which periodical drawings are made. The initial amount of this loan was Kr. 150 million, but such was the public response to it that this total was doubled. The popularity of the issue may be gauged by the fact that since the lists were closed the Kr. 50 bonds of the loan have risen to a premium. The second part of the loan was actually issued at the price of Kr. 52. The response to the loan was such that the National Debt Office had to institute a rationing scheme which prevented a single subscriber buying up a whole series of Kr. 100,000.

### Bank Note Rates

Exchange controls, even in their war-time rigour, have not banished all free exchange dealings. Among the more interesting survivors of the dwindling species are the rates quoted for bank notes in the Swiss market. The accompanying table shows the highest and lowest quotations for dollar and sterling notes in 1942 and a fuller list of quotations for February and November, 1943. The official rates are given as a measure of the deviation of these rates. In

| Reichsmark (per 100 RM)        | 172.50        | ...   | ...  | 15    | 12.25 | 80.00               |
| Belgian Fcs. (per 100)         | 70.00         | ...   | ...  | 3.50  | 4.50  | 217.00              |
| Gulden (per 100)               | 230           | ...   | ...  | 55    | 22.50 | 43.50               |
| Lire (per 100)                 | 22.67         | ...   | ...  | 2.20  | 1.72  | 570                 |

the final column the sterling cross rates indicated by the November, 1943, quotations have been calculated. Although the Swiss is probably the widest of the remaining free exchange markets, undue importance should not be attached to the quotations which it makes. Nevertheless, the indications it provides are of significance as being the outcome of a freely moving market and thus reflecting an unbiased consensus of opinion. The bank note rates diverge considerably from the official rates, because, in all cases shown in the table, the notes cannot be freely sent to their country of origin and there be converted into national currency, which in its turn can be reconverted into Swiss francs. In most cases the influence of a double smuggle must be allowed for in the rates. Most of the buying of sterling and dollar notes is probably being made for investment purposes. The buyer in the case of sterling notes takes a view on the future exchange value of sterling and on the relaxation of the restrictions which now prevent the entry of Bank of England notes into the country. To the extent that notes up to a maximum of £10 may be brought into this country, the free market may feed an entirely legitimate demand. This is, for example, the case in the New York market, where sterling notes are available at a rate of about \$3.10.

### Woolworths Redivivus

Both the full accounts for 1943, analysed on page 254, and the accompanying statement of the chairman, Mr W. L. Stephenson, confirm the impression given in *The Economist* of January 29th that Woolworths have weathered well their current difficulties and can look with confidence to the future. Gross trading profit, at £5,595,339, is lower by about £500,000, but this fall is more than offset by a large reduction in the amount needed for current taxation. The company, however, obtained a large refund of EPT which will not recur in 1944, and in view of this fact a provision of £300,000 has been wisely made towards 1944 taxation. Thus, because of the cut of 10 points in the total dividend for the year to 40 per cent, the usual allocation of £250,000 to the buildings reserve can be afforded, the carry forward increased, and the taxation position strengthened. With a shortage of merchandise such that a whole month's quota will sell in one hour, it is inevitable that trading profit should be lower; but the nadir of supplies has probably now been reached, and, if this is so, a minimum dividend of 40 per cent, together with an improvement rather than a deterioration in the liquid position, can hardly be considered a bad wartime record. The company itself is clearly preparing for the post-war market. To this end, stock on hand has already been reduced by about £1,500,000, so as to avoid entering the peace burdened with wartime products, while cash in hand, in readiness to produce goods of higher quality, has been increased by almost £2,500,000, including the current appropriation. A reserve of £1,600,000 has been accumulated towards the building and re-equipment of the stores, which will begin as soon as circumstances permit. Considerable post-war activity is thus being taken for granted, and the chairman is able to assure employees in the Services that there will be ample room, and indeed need, for their energies. Woolworths have taken every precaution to shine in the same way after the war as before it in the chain-store firmament. The extent of their success will depend largely on a reasonable equality in the distribution of income and a plentiful and varied supply of suitable goods.

### Building Good Houses

The building industry shows signs of setting its house in order in preparation for heavy post-war demands. An important problem is how to establish a standard of quality which shall be at once a criterion and a guarantee of good building. The recommendations made by the National Federation of Building Trades' Employers follow the lines of voluntary registration already exemplified in the National House Builders' Registration Council. The Council contained, before the war, about 1,200 members, but those included the majority of the larger firms. The National Federation wishes the industry to continue to legislate for itself, but this would be done by means of a new registration Council, permissive in character and established by Statute in the same way as the Architects' Council. Such a Council would include contractors as well as speculative builders, and would issue certificates of quality based not on particular products, as is done by the National Council, but on the general standard of work. In other words, it would offer a general guarantee that the work of a particular undertaking was good, which would be based in the first place upon its past record, but it would not lay down technical specifications to be followed. It is maintained that it would in any case be impossible to tie a firm working on contract to particular ways of building, and for those consumers who sought a guarantee that their house itself was built to a recognised standard, there would remain in existence the National Council, which would act as a smaller, more specialised, and complementary scheme to the new registration Council. Meanwhile employees are as anxious as employers for precautions against jerry-building, but, healthily, they have greater doubts about whether the industry should be a law unto itself. The National Federation of Building Operatives, in a recent pamphlet, urge that a scheme of registration should be introduced under the direct auspices of the Ministry of Health. There can be no doubt that the participation of the Government in some form or other would be essential, and any statement on technical specifications should have the benefit of the knowledge accumulated by the Ministry of Works. It is equally important that the function of any comprehensive scheme of registration should be merely to judge

the quality of any and every firm which presents itself, and not either to restrict entry into the trade, to restrain competition, or to establish some kind of quasi-monopoly.

### Transferred Workers' Allowances

The Ministry of Labour has issued a leaflet setting out the various allowances which are available to transferred industrial workers. Transfers are taking place on an increasing scale, and they are a potential source of discontent; so it is desirable to know exactly what the transferred worker is entitled to. He (or she) receives a free travelling warrant to the new area, together with a travelling allowance of 5s. for a journey of not less than four hours, and 10s. for a journey of more than 4 hours. A man, unless he is entitled to a lodging allowance, may receive a "settling-in" grant of 24s. 6d., to assist him to meet the special difficulties that may arise from taking up a job in a new area; a woman or girl can receive a similar grant of 10s. on arrival, followed by payments of 15s., 20s., 15s., and 10s. for the first four weeks of her employment. A worker who needs money to tide him over the first week until wages are paid can borrow up to £1 from the Ministry. A married worker is entitled to receive a lodging allowance at the rate of 24s. 6d. a week, but an unmarried worker can only receive one if he shows that he maintains at least one dependant. A worker can apply for assistance to meet household removal expenses, and the fares of dependants joining him in the new area will be met. When his dependants have joined him, he will no longer be eligible for lodging allowance, but he can claim an allowance up to 24s. 6d. a week for continued commitments in the old area, such as rent, rates, mortgage interest, storage of furniture. Workers can also apply for cheap travel facilities to visit their homes, and for special assistance in cases of illness or domestic emergency. The sum total of the facilities available is thus considerable.

### BOAC Expansion

The returns for the British Overseas Airways Corporation, summarised in the accompanying table, reflect a substantial growth of traffic between 1942 and 1943. The fleet at the disposal of BOAC now broadly equals the combined pre-war fleets of its constituents, Imperial Airways and British Airways, and it includes a number of modern British and American aircraft, such as the "Avro York" and the "Mosquito," and the "Douglas Dakota." It also had 10 Short Sunderland III flying-boats at the end of last year. The number of miles flown last year was about 50 per cent, and the ton mileage more than 100 per cent, greater than before the war.

|                          | 1942       | 1943       | Percentage Change 1942/1943 |
|--------------------------|------------|------------|-----------------------------|
| Passenger ton-miles      | 9,154,409  | 11,252,868 | +22.9                       |
| Mail ton-miles           | 3,318,250  | 3,094,235  | -6.8                        |
| Freight ton-miles        | 4,760,398  | 7,886,809  | +65.7                       |
| Total traffic ton-miles  | 17,233,057 | 22,232,912 | +29.0                       |
| Total miles flown        | 9,967,379  | 12,481,485 | +25.2                       |
| Total passengers carried | 49,847     | 65,667     | +31.7                       |
| Mail carried (in tons)   | 1,093      | 1,271      | +16.3                       |
| Freight (in tons)        | 2,139      | 13,975     | +55.8                       |

BOAC operates two Atlantic services—that is, the North Atlantic Return Ferry and a flying-boat service between the United Kingdom and Baltimore, in the United States. There are services from this country to West Africa and to Egypt, two trans-African services, a long-distance service from Durban to Calcutta, and others. Its total traffic, however, is still small, both absolutely and in relation to post-war possibilities.

### Rates of Hire for Tramps

Increases in the rates of hire for requisitioned tramp ships of 5,000 tons deadweight and over have been agreed between the Chamber of Shipping and the Ministry of War Transport; they are to apply from October 1, 1943. The last increase took effect on February 1, 1943. As before, the higher rates are designed to cover increases in the operating costs of shipowners and do not alter the basic principle of requisition payments. This principle is that, on the average, the rates should reimburse shipowners for the running costs for which

ISSUED BY THE MINISTRY OF FUEL AND POWER

# Plain words on FACTORY COAL

## Immediate measures

### THE POSITION

At this moment, when we are preparing for new military operations on a vast scale, demands are being made on transport and on coal output that are without precedent in history. *Come what may, those demands have to be met.* Industry is directly concerned. There has been an inevitable decline in the Industrial coal supply position and any day may bring a further decline.

### INDUSTRY'S PROBLEM

Already factories have had their coal allocation cut by 10%. There can be no guarantee that even the reduced allocations will be delivered regularly, and there will be increasing difficulties with transport.

No one in industry can fail to see the significance of these facts. *Only the immediate personal attention of factory management can safeguard the position.* Drastic steps will have to be taken within the plant to reduce daily coal consumption still further.

### IMMEDIATE STEPS TO BE TAKEN BY MANAGEMENT

This is a time for individual effort — and for plain speaking. Call together your departmental heads. Leave them no room for doubt regarding the gravity of the situation. Give them full authority to use every expedient in cutting down *at once* — at every point of usage — the consumption of coal, steam, oil, electricity and gas. Tell them to be ruthless with waste, no matter how trivial it may seem. Industry without coal is *powerless*, and you are asked to see that everyone in your charge realises this fact and begins a new and more rigid regime of fuel saving. **COAL MUST BE SAVED — AND SAVED NOW.**

Every fresh economy NOW is a vital step against a further decline in the supply of coal to the factories. Every wagon cleared in quicker time eases the increasing transport difficulties.

they are responsible (mainly crews' wages, stores, upkeep and marine insurance premiums at the pre-war rates) and allow a profit of 10 per cent per annum on the ships' capital values, of which 5 per cent is for depreciation. Though it is worked out in different ways, the same principle applies to all classes of privately-owned shipping. The detailed requisition arrangement set out in the "Memorandum on Wartime Financial Arrangements between His Majesty's Government and British Shipowners" (Cmd. 6218), published in August, 1940, still holds good. The White Paper stated that

the rates of hire may be reviewed by either side at any time, and in particular if the circumstances change so materially as to create a new situation so far as rates of hire are concerned. The object of the review, whenever it takes place, will be to ascertain whether the rates require alteration by reason of changes in the level of the costs of ship operation, but it will be open to each of the parties to re-examine, if they so desire, any of the matters covered in the discussions from which the present rates have emerged.

So far as deep-sea tramp ships are concerned, the rates, which began at 5s. 7d. per ton per month for the "basic" vessel of 8,000 tons deadweight and over, have gone up since March 1, 1940, in six stages, at some of which various changes in their composition were introduced. The latest schedule of rates covers the same items as the previous schedule. For the majority of sizes of ships into which the schedule is divided the increase amounts to 4d. per ton per month—about 3-4 per cent. For the first time, however, separate rates have been introduced for vessels between 8,000 and 9,500 tons deadweight, which are now subdivided into five tonnage categories; the rates range from 7s. 11d. for the largest vessels to 8s. 3d. per ton for ships of 8,000 tons. Though the full schedule provides for eleven other variations according to size, the great majority of deep-sea tramps actually fall within the range covered by the innovation, which will ensure greater equity between ship and ship, since all tramp ships of 8,000 tons and over have to bear practically the same operating costs. Thus the largest benefits from the new rates will be gained by vessels of between 8,000 and 8,500 tons; for some of these they will mean an increase of about 7½ per cent. The current rate for ships taken over by the Ministry of War Transport on "bareboat" basis, the Government paying management fees and all operating costs, is 1s. 10d. per ton per month for large tramps.

### Deeper Darkness

The decision of the board of the San Paulo (Brazilian) Railway Co. to discontinue publication of its weekly figures of gross traffic receipts is regrettable. The reason given—that in view of the changes in costs the gross figures may be misleading—is far from adequate. It has never been the case that gross traffic figures were an index of distributable profits and no one of the slightest experience ever supposed that they were. In normal times that would be a reason for demanding the publication of net traffic month by month, as is done by the Canadian lines and as has been done at various times by other concerns. It may be admitted that, in view of the arbitrary actions of the local Government, it might not be worth while to attempt the task of a monthly assessment of net figures, but that is no reason for withdrawing the modicum of information provided by the gross intake. Apart from the fact that it is indicative of a number of other things, it is a not unimportant factor in determining probable net results. The withdrawal of such information is either the result of a desire to avoid trouble and expense, or it rests on the assumption that total ignorance is better than imperfect knowledge. Since it will always be difficult, if not impossible, to know the whole of the facts relating to any matter of ordinary complexity, this is an argument for the total suppression of statistics and has been used to that end with dire effect in many fields. One of the matters in which this country has lagged most behind its competitors is the provision of adequate tools, and the shortfall is even greater in the case of mental work than of manual. The San Paulo blackout may be a small matter, but the principle of the need for more information must be established.

### Correction

In a Note on coal on page 218 of *The Economist* of February 12th it was stated that the Coal Charges Order Fund was then fed by a levy of 5s. a ton on every ton of saleable coal; in fact, the levy has been at the rate of 8s. per ton since the beginning of this month.

## Shorter Notes

The number of people registered at unemployment exchanges as unemployed on January 17th was 79,037, an increase of 5,101 since October 18, 1943. A table giving detailed figures of unemployment at October 18, 1943, and January 17, 1944, appears on page 256.

In a Note on page 113 in *The Economist* of January 22nd it was stated that the United States Customs Court had decided against the inclusion of British purchase tax in the assessment of import duties on goods from the United Kingdom. The decision, however, was not final; in fact, the Government of the United States has filed an appeal against it. The issue, therefore, is still undecided.

Much against the expectations of the market, the Southern and the LNER are paying higher dividends on their marginal stocks for 1943 than for 1942. The Southern is paying 2 per cent on the deferred, compared with 1½ per cent for 1942. The net revenue for 1943 is returned at £6,999,186 and compares with £6,913,514 for 1942. In the case of the LNER, the dividend on the second preference stock has been raised from 2½ to 2¾ per cent, although the net revenue is shown to have fallen from £10,700,599 in 1942 to £10,655,441 in 1943. The increased payment is partly explained by bringing into the accounts for 1943 a profit of £135,419 on realisation of investments.

## COMPANY MEETINGS

### GENERAL MORTGAGE BANK OF PALESTINE, LIMITED

#### CONVERSION OF OUTSTANDING DEBENTURES

#### STRONG CASH POSITION

The twenty-second annual general meeting of the General Mortgage Bank of Palestine, Limited, was held on the 6th instant at the bank's offices at Tel-Aviv.

Mr S. Hoofien, M.B.E. (the chairman), in putting the directors' report and accounts for the year 1943 before the meeting, said: The main feature of last year's business was the successful conversion of the bank's outstanding debentures. The amount involved was about £2,000,000, of which nearly a quarter of a million 6 per cent. debentures have been converted into 5 per cent. and nearly 1½ million 5 per cent. debentures have been converted to 4 per cent. It was found desirable to carry through the transaction in stages, and it has been successfully completed on the local market. The large cash balance held by the bank enabled it to dispense with the services of underwriters. The 1943 balance-sheet does not reflect the full results of the conversion, as the last stage was completed only in January.

Borrowers have been notified that as from July 1, 1944, interest charges on outstanding loans will be reduced; and the bank is, of course, able to accept new business at lower rates of interest. However, so long as the enforced cessation of building activity continues, the directors do not expect that new business is likely to counterbalance the repayments resulting from the unusually liquid position of many customers.

Attention had already been drawn last year to the large cash balance held by the bank, and during the year under review it has further grown. It now stands at over £650,000. This large balance constitutes a heavy burden on the profit and loss account, but it enables the bank to look with confidence into the future and provide the possibility of availing itself of the first opportunity that will present itself after the war for the extension of its business.

#### POST-WAR HOUSING

The importance of making timely preparations for post-war popular housing is gaining general recognition, and the directors at a recent meeting decided to commit the bank to a modest participation in the capital of a Housing Association which hopes to be among the first in this field of work. They have likewise undertaken to participate with a similar amount in the capital of a mortgage company which will specialise in second mortgages on dwelling houses.

House property in Palestine, Mr Hoofien continued, has suffered no damage from enemy action during the year under review.

Payments are coming in with great regularity and arrears have again been lower than last year. No interest in arrears, as shareholders will remember from previous reports, is taken to profit, but nearly all arrears put to reserve in last year's accounts have been collected in the course of the year.

The reduced amount of outstanding loans and the large cash balance carried have somewhat influenced the net balance of profit. Dividends on the preference and ordinary shares are maintained at the same level as in the last eight years, viz., 6½ per cent. and 7½ per cent. respectively; but the allocation to the reserve account is £10,000 (bringing it up to £140,000), as against £15,000 last year.

The report and accounts were unanimously adopted.

## BRITISH-AMERICAN TOBACCO COMPANY, LIMITED

### SATISFACTORY RESULTS

#### SIR HUGO CUNLIFFE-OWEN ON POST-WAR PROBLEMS

The forty-first annual general meeting of British-American Tobacco Company, Limited, was held, on the 14th instant, in London.

Sir Hugo Cunliffe-Owen (the chairman), who presided, in the course of his speech, said:

The accounts show a net profit for the year, after deducting all charges and expenses for management, etc., and providing for taxation, of £3,321,735, an increase of £256,387 over the net profit for the previous year. Last year we carried forward a balance of £2,442,729. To this must be added the profits for the year as previously mentioned, £3,321,735, less the dividend on the 5 per cent. preference stock of £225,000; on the 6 per cent. second preference stock of £360,000 and the two interim dividends paid during the year on the ordinary stock amounting to £1,979,813, leaving a disposable balance of £3,199,651.

Out of this amount the directors recommend the distribution on March 31st next of a final dividend (free of United Kingdom income-tax) on the issued ordinary stock of 6d. per £1 of stock amounting to £593,944, and the allocation of £100,000 to "Employees Benevolent Fund," leaving £2,505,707 to be carried forward.

In view of the difficult conditions prevailing in practically every country in the world, I trust you will consider the results for the year to be satisfactory.

The favourable results are largely due to the good management and efficiency of the boards of directors of the subsidiary and associated companies, and I am sure you will join with me in congratulating them on the successful results they have achieved, frequently in the face of very real difficulty.

Conditions are likely to remain as difficult as ever during the present year, and our business will continue, no doubt, to be subject to the restrictions necessitated by contemporary conditions.

#### THE FUTURE

As regards the future, the prosperity of the company is dependent on the sensible solution of the political, economic and social problems which are rightly exercising the minds of all thinking people.

It seems to me that the most vital necessity in post-war reconstruction is the stable background of an enduring peace. Therefore, I say that after this war is over there should be a suitable form of national service for every boy and girl, regardless of rank, for the period of one year. Such a nucleus of trained man- and woman-power, with an efficient Navy and Air Force, and small up-to-date modern army, would prove a good insurance. This must be coupled and run along with an allied international policy designed to maintain peace.

#### QUESTION OF CONTROL

Then we have to repair the damage done to our economic structure. In order to get this in train, we must have an orderly and gradual demobilisation from the armed forces. In my view it is important that the Government should give priority to the key men required for industry. To follow, for reasons of sentiment, a "first in, first out" policy may well be to the real disadvantage of those members of the forces on whose behalf such policy is being pressed.

In order to ensure a smooth transfer from a war to a peace economy, many controls, will, no doubt, be essential for some time after the war. Furthermore, it is essential that the Government hereafter should take the necessary action to maintain full employment. Measures can and should be

taken by the State to encourage capital expenditure on appropriate occasions and there is a sound case for a scientific wages policy.

Within this framework, there must be a system which produces the highest industrial efficiency aiming to secure minimum cost by maximum output, a system which will provide exports at competitive prices sufficient to pay not only for essential imports but for other imports which make for a decent standard of living, and a system built on a full understanding between capital, management and labour.

#### PLEA FOR INDIVIDUAL ENTERPRISE

My personal belief is that this cannot be, in the long run, under any system of Government ownership or control. Such a system must necessarily be co-ordinated centrally, and with all the good will in the world, this must result in the slowing down of the machine. Moreover, the political consequences, rather than sound commercial principles, would tend to be considered in relation to every major decision. A private individual can make his all on the success of an invention or an idea in which he has faith, notwithstanding that his faith is not shared by others. Often he may be successful, to the great benefit of the nation and himself.

I discard, as inimical to the future prosperity of the country, both nationalisation and public ownership on a wide scale—at any rate, until such time as humanity has reached the limits of material progress, which surely is not yet.

There must be a system of taxation which will encourage individual initiative and allow it to gather the fruit of its enterprise—even if the fruit were to be taken away in death duties in a couple of generations or so. Control for the sake of control, high taxation and, in particular, excess profits tax, bureaucratic interference, the principle that success is a form of crime to be punished by transfer to State ownership, are some of the things to be avoided. In short, we must get back in fact as well as in name the democratic liberties for which we have sacrificed so much.

#### NEED FOR INTERNATIONAL CO-OPERATION

We are interested in all measures designed to increase the purchasing power of the peoples of the world, and I would stress the importance of co-operation and consultation between the United Nations to this end and, in particular towards stabilisation of exchanges, which is essential to healthy international trade. It cannot be too often repeated, so that the truth in this regard is constantly kept before the public, that, unless the country's export trade is greatly increased to make up for the loss of the country's foreign investments, the improvements in conditions and the maintenance of, or improvement in, the average standard of living in this country, which everyone wishes to see after the war, are quite impossible of attainment.

I now beg formally to move the adoption of the report and balance-sheet for the year ended September 30, 1943, including the payment on March 31st next of a final dividend (free of United Kingdom income-tax) on the issued ordinary stock of 6d. per £1 of stock.

I may also mention that the directors have declared for the year 1943-44 an interim dividend of 10d. per £1 stock (free of United Kingdom income-tax) also payable on March 31st next, so that the ordinary stockholders will receive on that date 1s. 4d. per £1 stock.

The report and accounts were unanimously adopted.

# RADIO RENTALS, LIMITED

## RECORD PROFIT

The seventh annual general meeting of Radio Rentals, Limited, was held, on the 6th instant, in London, Mr H. F. Hunt (the chairman) presiding.

The chairman, in the course of his speech, said:

This year our trading profit is shown at the figure of £112,658, as compared with £76,590 last year. After providing for taxation we are left with a substantial higher distributable profit of £23,116, as compared with £13,400 last

year. This very considerable difference results largely from agreement having been reached with the tax authorities.

Your board, in recommending that the total dividend for the year on the ordinary shares should be raised to 20 per cent., are proposing to distribute less than one half of the year's profits available for the ordinary shareholders, carrying the balance forward with the rest of our undistributed surplus, now amounting to £44,027.

The accounts show the company to be in a strong financial position. On the balance-sheet the special cash deposit account of £100,000 may be noted. Your board are fully alive to the necessity of obtaining new stock, and contracts for the supply of

new radio sets are already being negotiated.

The resolutions with regard to an increase in the company's authorised share capital and the borrowing power of the directors are part of our planning for the post-war years. We do not propose to issue any of the shares at present, but have every confidence that in the early post-war period we shall be able to employ with success additional funds thereby obtainable.

The report and accounts were unanimously adopted and resolutions were passed increasing the capital from £250,000 to £350,000 by the creation of 400,000 further ordinary shares of 5s. each and sanctioning the extension of the borrowing powers of the directors.

# RECORDS and STATISTICS

## INDUSTRY AND TRADE

**Austerity Suit Coupons.**—The President of the Board of Trade is now to replace in full the loss of coupons which retailers will suffer as a result of the down pointing of austerity suits from 26 to 20 coupons. It was first announced that no replacements would be made; and, secondly, that applications in cases of hardship would be considered. The decision to replace in full is the fairest one that could be made. It will be some time before non-austerity ready-made suits will be available for sale. It is announced that some austerity suits will be bought by the Government for post-war European relief.

**Cotton Exports.**—According to Board of Trade returns published this week exports of cotton cloth from the United Kingdom in the fourth quarter of 1943 were smaller than in any previous three months since the outbreak of war, the total being 80,899,000 square yards, against 102,881,000 square yards in the third quarter and 114,810,000 square yards in the fourth quarter of 1942. Total shipments in 1943 were 374,323,000 square yards, compared with 484,230,000 square yards in 1942 and 1,393,038,000 square yards in 1939. Exports of yarn in the fourth quarter of 1943 were 4,840,000 lb., against 4,896,000 lb. in the third quarter and 4,499,000 lb. in the last three months of 1942. During 1943 shipments were 19,196,000 lb., compared with 18,738,000 lb. in 1942 and 113,604,700 lb. in 1939. No cloth allocations were issued by the Cotton Board for the three months ended December 31st, and this factor may account for the small total. There should be some improvement in shipments during the current quarter, since at the end of December the Cotton Board provided merchants with allocations for the first three months of 1944.

## FINANCE AND BANKING

**THE MONEY MARKET.**—The position in the money market has been comfortable this week. The impact of revenue payments has lost some of its previous force and the early February dividend payments have come to the help of the market. Although the banks had to pay £70,000,000 against Treasury Deposit receipts, or £20,000,000 more than the effective maturities, they have been sufficiently well supplied with funds to buy a fair volume of bills from the market. At no time during the week, therefore, has the market needed any special assistance. The easing of the position is reflected in the Bank return which shows bankers' deposits at £167,411,000, an increase of £5,430,000 on the week. As against this, Public deposits have fallen by £2,573,000 and Government securities have risen by £2,680,000, these two movements providing the bulk of the counterpart to the rise in bank cash.

**MONEY RATES, LONDON.**—The following rates remained unchanged between Feb. 11th and Feb. 17th:—

Bank rate, 2% (changed from 3% October 26, 1939). Discount rates: Bank Bills 60 days, 1½%; 3 months, 1½%; 4 months, 1½%; 6 months, 1½%; 12 months, 1½%; Treasury Bills: 2 months, 1½%; 3 months, 1½%; Day-to-day money, 1½%; Short Loans, 1½%. Bank deposit rates, 4%. Discount deposit at call, ½%; at notice, 1%.

**Exchange Rates.**—The following rates fixed by the Bank of England remained unchanged between Feb. 11th and Feb. 17th. (Figures in brackets are par of exchange).

United States. \$ (4-86½) 4-02½-03½; mail transfers 4-02½-03½. Canada. \$ (4-86½) 4-43-47; mail transfers 4-43-47. Switzerland. Francs (25-22½) 17-30-40. French Empire. Francs 1937-2000. Syria. p. 8-81-85. Sweden. Krona (18-139) T.T. 16-85-89. Dutch West Indies. Florin (12-11) 7-58-62.

(Continued on page 258)

## GOVERNMENT RETURNS

For the week ended Feb. 12, 1944, total ordinary revenue was £94,243,000, against ordinary expenditure of £110,909,000, and issues to sinking funds of £235,000. Thus, including sinking fund allocations of £11,662,000, the deficit accrued since April 1st is £2,419,746,000 against £2,488,431,000 for the corresponding period a year ago.

A change has been made in the method of showing in excess of Post Office Expenditure over Post Office Revenue. Such excess is now included as ordinary expenditure (under "Total Supply Services") instead of being shown, as up to July 24 inclusive, as a deduction from ordinary revenue.

After decreasing Exchequer balances by £230,599 to £3,168,067, the other operations for the week (no longer shown separately) raised the gross National Debt by £12,472,325 to £19,255 million.

**The Defaulters' Record.**—The first instalment of the seventeenth report of the Council of Foreign Bondholders, covering the developments of 1943, is now available. Following the wartime practice, the statistical sections will follow later. Last year brought no further default, but it did bring the notice of redemption of the principal Egyptian loans and the Brazilian debt settlement, the terms of which are set out in some detail. The Council lays stress upon the great attention paid to the encouragement of our export trade and the lack of general appreciation of the need to maintain and increase our invisible exports, including reasonable payments on our foreign investments.

## Showing the Flag

IN years to come Mr Churchill's periodic panoramas of the war will be remembered as milestones. His statement in the Commons on Tuesday was the first for several months, and gained in freshness and force thereby. No man has ever been so able to tell a crowded world tale so plainly and yet so vividly, so downrightly and yet so picturesquely and with so much inner meaning. Mr Churchill always answers the question persistently in men's minds: "Where stands the war?"

The aim of the tale he told this time was twofold: to deny false hopes of quick, smooth victory; and to counter doubts, wherever they may have appeared, about the British contribution to what has been, and will be, won. It seems that both he and President Roosevelt, with their advisers, have lately had qualms about complacency among their peoples. Whatever the mood in America, it must be questioned whether false hopes have really any footing here, in the fifth year of war; probably only the same tiny few who wrang their hands too soon in 1940 have shown the slightest inclination to ring bells too soon more recently. The people of this country are resigned to whatever length of battle may be still to come. They want peace more than anything else; but it can almost be said that peace has become a myth, a golden legend. Five years may have caused fatigue, but they have at least killed fickleness of spirit.

How needful it is, at this stage, to show the British flag and recount British war achievements. Mr Churchill, who talks ceaselessly with other countries on Britain's behalf, knows best. If there are doubts, among any Allies, about the British contribution to world salvation in every element of war-making, the Prime Minister's shrewd figures from the air and sea wars, which might have been multiplied by a host of other instances from more than fifty months of unbroken fighting, should have laid even their ghosts. There is a fantastic view, on the one hand, that Britain will not really be qualified to be a full Ally until the Second Front has been begun. There is, on the other, a view no less distorted—that the American share in Europe, now equal to the British both on land and in the air, and soon to be bigger in both, measures not so much America's great strength as Britain's weakness. Mr Churchill did well, without argument, to take his stand upon the record and the facts. This is no balance-sheet war, no occasion for sharing out laurels on a basis of weight and numbers. Britain did no sums of this sort in 1940. Then, as now, the only criterion could be, for those at war, "from each according to his capacity"; by this test of utmost effort Britain will not be badly judged.

What of the future? Mr Churchill laid awful stress upon the Allied air bombardment before invasion, and almost equal stress upon German strength. Invasion stays

the key to victory, the mortal blow. The task is still, while wearing down the enemy, to bring him to decisive battle. In the east, he is at grips with the advancing Russians and can neither shake off pursuit nor escape great losses. In Italy he has deliberately engaged many picked and precious men in a slow fire which, however delaying in time, eats away his resources. In the air, the battle is now directly between the attack, growing in weight, and his reserves of defence.

Yet the Second Front remains the one piece that can throw all the others into pattern. The leaders, fighters and people of this country know it no less than the Russians and perhaps more than the Americans. Time is on no one's side; it is "Now or Never," grim words but true. Every month added to Europe's agony will increase, in geometrical progression, the burden of rebuilding civilised life and work. Those who have pressed upon the Government the claims of postwar policy are not peace-mongers; but they know that the longer the war lasts, and the harder and grimmer its final stages, the more urgent, the more desperate, indeed, will be the need for ready plans and programmes as soon as first aid and recovery can begin. This is equally true of both home and

foreign policy. The criterion of action, here and abroad, must be, as Mr Churchill repeats, the aid it gives to winning the war; but the war will be won or lost, not in its final battles only, but in the first tests of peace. A policy which sees the war through but leaves Europe open to chance or catastrophe, economic or political, would be defeat. The diplomatic issues discussed in another article on this page give only one instance of the truth that, whether success in the field is near or far, to make right decisions at right moments is essential to avoid eventual and final failure.

So Mr Churchill can and will be given, beside the gratitude that is always his, a firm and heartening response. The people of this country are prepared, as they always have been, for the worst or the best that may befall. But, if only because of all the hard lessons they have learned since 1939, they are deeply aware of the need for speed in making an end of all this beastly business; and of the certain immediate need when it is over for bold, workable policies, fully prepared and decided. Britain knows well what Britain's part must be in the race, which is still on, with disaster; it is in this mood that it is good, at this stage, to show the flag.

## The Test of Poland

SINCE the turn of the military tide in Russia, one factor in the involved problem of Poland's eastern frontiers has not changed—the attitude of the Soviet Government. Officially and unofficially, it has been repeatedly stated that, while, as Marshal Stalin told Mr Churchill, Russia is

resolved upon the creation and maintenance of a strong, integral, independent Poland as one of the leading Powers in Europe,

the frontiers of 1940, with certain modifications, are regarded as final. To this the Russians have added the suggestion that the Poles should be compensated, in the north and west, with German territory.

The Poles have thus been faced with two possible alternatives: to refuse the Russian claims and adopt a policy of hostility and suspicion; or to accept a modification of their frontiers and work, say, on the Czech model for close understanding with Russia. The decision always has been and is incredibly difficult. The whole history of Russo-Polish relations is deplorable, and the most recent history of all, the Soviet occupation of 1939 and 1940, has left ineffaceable memories. But the need to choose remains; and, from the day of General Sikorski's visit to Russia late in 1941, after which he said:

The Poles have so far been known as a romantic people in policy. Now, however, we enter this sphere of real politics when only facts count and new facts must be created

down to the recent Polish agreement to negotiate on the eastern frontier question, a potentially strong and responsible element among the Poles has realised that, in the choice between Germany and Russia, Russia's friendship must unreservedly be preferred.

This attitude has not been shared by a powerful section among the Poles, particularly in the Polish Army. For them, compromise with Russia was and is unthinkable. Their political position was strong enough for them to exercise deep influence on Polish policy. The degree of freedom naturally accorded to the military forces made possible the public expression of their views. The result has been that the desire of one group of Poles to secure understanding with Russia has constantly been negated by the counter-pressure of the Russophobes.

Against this background, the efforts of the more moderate Polish statesmen to secure better relations with Russia have invariably come too late. Concessions which, if made six months or even three months earlier, might have created an entirely new situation—the agreement to negotiate over the eastern frontiers, for example, or

the latest instructions to the Polish Underground—have failed to arrest the drift towards unmendable disaster. At present, since the Polish Government, it seems, will now not accept the Curzon Line as the basis of negotiation, there is deadlock—as the Red Army presses into Poland.

It would be most unjust to lay at the door of the Poles sole responsibility for a crisis which threatens the foundations of future peace. Even if their leading military personalities have contradicted the conciliatory intentions of their statesmen, even if they have behaved ambiguously and uncertainly, they have had no help from their Russian ally. Only during the first dark and doubtful months of 1941 did the Russians really go halfway to meet the wiser Poles. Since the first military victories their attitude has become more unbending. Relations were suspended in 1943 with suspicious haste. The Polish offer in January to negotiate was dismissed on the pretext of a misreading of the Polish text. That the Russians had much cause to doubt the intentions of some Poles is only too true. But the contrast between Russia's great strength and small patience has been enough to create a counter-suspicion that claim to the Curzon Line might be only the first and not the last of the demands on Polish independence.

Happily, Mr Churchill tells us that this is not so. "I am convinced," he said, "that they [the declarations on Polish independence] represent the settled policy of the Soviet Union." There is thus still a chance of conciliation. The British Government can, perhaps, even at this last hour, make good the blunders and misunderstandings of the past months, blunders for which British policy, too, must bear a heavy, perhaps even a major, share of blame. In a sense, the choice before British foreign policy in the last two years has been the choice that confronts the Poles. If the Russian claims to Eastern Poland were thought to be unreasonable or to be in any case only a preliminary to further demands, then the British Government could logically have supported an ambiguous, even a hostile Polish policy, the policy, in a word, of the convinced Russophobes. But logically, too, the end of that policy would have been the acceptance of estrangement with Russia. If, on the other hand, the British Government knew a war with Russia to be impossible—which it did, and does—if it valued Soviet friendship and believed the Russian claim to be not only final but, in Mr Churchill's words, "reasonable and just," then it should have been made absolutely clear from the first that this was the British attitude and that British policy would be conducted in accordance with it.

What has, in fact, occurred? It is only to-day, at the

eleventh hour, that a clear statement of policy has been made. Previously, the Foreign Office's attitude was consistently ambiguous. The Poles were given vague assurances and urged to leave the matter for British mediation. This vagueness encouraged the Polish Russophobes to believe that, in reality, they had official British backing in their intransigence. The result has been that British mediation has hitherto been too ambiguous to secure any good will from the Russians and too disillusioning now to secure anything but obloquy and charges of betrayal from the Poles.

Once more a tragic failure in the long-term consideration of policy is pushing Britain into a crisis from which neither its interest nor its honour is likely to emerge unscathed. As in so many other departments of the war effort, it is only Mr Churchill's last-minute intervention that has secured a clear-cut decision. In this case the decision is justified, but the time and manner of its formulation are nothing short of disastrous. Perhaps no section of the Government service suffers so acutely from *laissez aller* and procrastination as does the Foreign Office. Nowhere are major decisions of policy so easily shelved and day-to-day tacking and shifting accepted as a substitute. In the protracted Russo-Polish crisis, policy which should have been the basis for action, particularly for action as delicate as mediation, has been announced long after all the decisive actions had been taken, empirically, under the pressure of day-to-day events. Only a drastic revision of the methods of conducting diplomacy and a reshuffle of the men responsible

for it can prevent a series of further crises in foreign affairs, each as damaging to British prestige. Mr Churchill is an admirable *deus ex machina*, but it is only the most bungled type of drama that requires such a *denouement* to close every act, even every scene.

Now that the British attitude is at last clear, it is possible that another attempt at mediation may be successful. The Russians can have no excuse for suspecting that the Western Allies are using the Poles as a smoke screen for an anti-Soviet plot. The Polish extremists cannot use the possibility of Anglo-American support as an excuse for refusing all further attempts at understanding. The British course is at last, thanks to Mr Churchill, clear—to persuade the Poles to accept the old Sikorski view that facts must be allowed to count in reaching a settlement; to make it clear to the Russians that, while their claim to frontier revision stands, the creation in Poland of rival Governments, or the reversion to arrests and deportations on the 1939 model, will undermine the foundations of friendship in the post-war world.

A divided and hostile world will be as disastrous for Russia as for the other United Nations. Only this week the Russian press has for the first time announced Russia's need for economic aid in the shape of long-term credits after the war. Such aid would naturally flow from a "prolonged, intimate and honourable association." But the association must in fact be prolonged, intimate and honourable. Mediation, frank and firm to both sides, should go on. Mr Churchill has shown that he can be frank. It is his turn now to be firm.

## Assumption B

SLOWLY and painfully the Government is being delivered of a policy on the proposals and the assumptions of the Beveridge Report. It has still to produce a White Paper showing how far its deliberations on a social insurance scheme, the main theme of the Beveridge Report, have gone; and though it has accepted Assumption C—the maintenance of employment—it has not yet formulated a policy for achieving it. But Assumption A—children's allowances—has been accepted in principle, though with modifications of the Beveridge proposals; and last week a White Paper (Cmd. 6502) was issued which embodies plans for a comprehensive health service, available and free for all members of the community—Assumption B.

The "national health service" which the Government proposes has been drawn up by the Ministry of Health and the Department of Health for Scotland, after discussions with the medical profession, including representatives of the voluntary hospitals, and the major

local authorities. But though, as a result, the scheme shows marks of a compromise, it is not a weak compromise based simply on something which would be acceptable to two opposing views. It is rather a compromise which genuinely hopes to preserve the good features of the existing health services and to make them available to all members of the community, irrespective of means. The basis of the White Paper's proposals is that

It is feasible to combine public responsibility and a full service with the essential elements of personal and professional freedom for the patient and the doctor and that

Organisation is needed to ensure that the service is there, that it is there for all, and that it is a good service; but organisation must be seen as the means, and never for one moment as the end.

To maintain these principles it is proposed that central responsibility should lie with the Minister, who

War-time conditions have proved the advantages of appointing the "Royal Exchange" as Executor and Trustee under a Will. This ensures a permanent and expert administration and can be associated with a private co-trustee.

Head Office at the Royal Exchange, London

is to be a real Minister of Health at last. Beside him but independent of him, there is to be created a statutory body called possibly the Central Health Services Council, which will be made up from the medical profession and from members of the hospital, nursing, dental, pharmaceutical services and so on. This body, it is said, will be independent of the Minister and will be consultative and advisory, not executive. Its function will be to give the expert view on technical matters, not to press professional interests; and it will be entitled to advise the Minister, not only on the matters he refers to it, but also on any question on which it feels it right to express an opinion. The Minister will be required to submit an annual report of its work, but there is one small, but very important, omission here. If the Council's independence of the Minister is to be assured and complete, it ought to have the right to publish its own statement on any occasion when its advice to the Minister has been rejected.

Also at the centre there is to be set up a Central Medical Board, which unlike the Council will have executive functions, though it will be subject to the general directions of the Minister. Its purpose is apparently to meet the objection of many doctors to being salaried officials of the state or—in their opinion, worse—of local authorities. Thus, it will be created mainly from the profession itself, though with some lay members, and will be in practice the employer of any general practitioner entering the new service, though the local authority will be joined in the contract when the doctor elects to work in a health centre. Its local boards will replace the present local insurance committees of the national health insurance scheme. It is here maybe that the danger of self-government for the medical profession enters in, and the Board could be so constituted and so uncontrolled as to bar progress in favour of vested interests. But there is no reason, as the scheme stands, why this should be permitted; and it can, and should, be made plain from the outset that the Board is the servant of the community alone.

#### Joint Boards

Locally, the new health service is to be based, as was to be expected, on the local authorities. But it has been recognised that many local authorities are too small, both in area and in resources, to have imposed upon them responsibility for all branches of the health service. It is, therefore, proposed that the existing county and county borough councils should combine in joint boards to operate over larger areas whose boundaries will be settled by the Minister.

The new joint boards will have the power, and the duty, of assessing the needs of their areas with regard to the health services as a whole. They will be the planning authority and will be required to submit to the Minister for his approval a plan for a comprehensive health service. They will also be responsible, not only for planning, but for administering a hospital service on which a new consultant and specialist service will be based. To a certain extent, they will be responsible for the administration of other services as well—for instance, the tuberculosis dispensaries and mental clinics, which are really offshoots of the hospital service—but in other cases, notably those belonging to the general practitioner service, such as maternity and child welfare clinics, and health centres where they are set up, the administrative responsibility will rest with the county and county borough councils.

This, in brief, is the organisation proposed by the White Paper "to ensure that the service is there." How far does

it maintain the Government's declared principle that public responsibility and a full service should be combined with personal and professional freedom for patient and doctor? So far as both are concerned, there is no compulsion on them to use the new service. A doctor may continue to practise privately, or to undertake a combination of public and private work, and members of the public may continue to see their doctors as fee-paying patients—and, whether they elect to do so or not, will still have the right to choose their doctor, and change him, subject to the fact that a doctor who undertakes to work wholly or partly in the public service will have a limitation imposed on the number of non-paying patients he can accept. Presumably, too, the patient like the doctor can be part public and part private, that is, can see his general practitioner privately but have his hospital and consultant facilities free—though this is not specifically stated in the White Paper. But when he elects to have these latter facilities free, he will not be allowed to exercise freedom of choice. People who wish to choose their own hospitals and consultants will have to do so by paying fees—thus the system of pay beds in voluntary hospitals will be maintained—or by voluntary insurance.

#### Professional Freedom

The doctor will continue to have much the same amount of professional freedom as he does at present. Where he undertakes to work in the public service, he will, it is true, have to observe the terms of his contract, as he does now under the panel system; but the contracting authority will be a body of his peers, and even where the county or county borough council is a party to the contract—as in the case of doctors working at health centres—he will not be subject to outside interference in the treatment of his patients. Moreover, the existence of the central advisory council, and of similar local councils whose views the joint authorities must consult before framing their area plans and which will also have the right to initiate advice, should ensure that the professional viewpoint is given full consideration. The only real hindrance on his freedom—apart from the limitation on the number of his patients—is that when he wishes to work, whether wholly or partly, within the public service, he will not be free to do so where he likes. A doctor engaged entirely in private practice will still be able to set up where he chooses; but a doctor remunerated from public funds will have to obtain the consent of the Central Medical Board before he takes up or takes over a "separate" practice, and the Board will consider whether the area is fully manned or over-manned before it gives its consent. Similarly, the Board will be the agency for appointments to a "grouped" practice such as a health centre. With the present shortage of medical manpower some such control over distribution seems inevitable.

However attractive the scheme may seem on paper it still remains to be considered whether it will work in practice. All this is machinery. The connection between it and the health insurance system is merely financial, and the White Paper is an explicit and final admission that the generation-old objective of National Health Insurance—to build up "a sufficient and comprehensive system of national treatment"—has entirely failed. This is a new start—back to 1911. Will the results prove any better? A great deal, for instance, will rest upon the joint boards, which will be responsible not only for administering the hospital and consultant services but for planning and estimating the needs of their areas for the health service as a whole. No amount of combination of authorities will make the scheme a success if their staffs are not adequate for the job, and it might have been far better to have grasped the nettle firmly and centralised the service completely rather than to place such heavy responsibilities on bodies which may turn out to have all the old weaknesses of local authorities without even the virtue of being directly elected. At the very least, the Minister should lay down minimum standards for the area plans in respect of, say, the number of hospital beds, the number of consultants and the number of health centres.

Minimum standards cannot, it is true, be laid down

until it is known what resources at present exist. A hospital survey of the needs of different areas is at present being carried out. The deficit of consultants and specialists will be estimated after the Goodenough Committee has reported on the medical schools, but even allowing for the fact that it is difficult to plan without a basis, the whole question of the consultant service—and of the future of the voluntary hospitals—seems to have been left regrettably vague. A Committee under Lord Teviot is investigating the supply of dentists, but the White Paper frankly recognises that it will be some years before a full dental service, and a full ophthalmic service, can be assured for the whole population.

Unfortunately, the shortages that will undoubtedly exist seem to have led the Ministry of Health to underestimate the cost of the service. Its budget of £132 million for England and Wales and £15.8 million for Scotland is well below the tentative estimate given in the Beveridge Report of £170 million for Great Britain. Of the £132 million for England and Wales, the expenditure of the new joint authorities would be £70 million, which would be met to the extent of £28.4 million by direct Exchequer grant, leaving £41.6 million to be met by the ratepayer under precept. The direct expenditure of the county and county borough councils is estimated at £22 million, towards which there would be direct grants or grants-in-aid of £15.6 million. The Exchequer grant to the voluntary hospitals in respect of the beds which they make available for the joint authority under the scheme is estimated at £10 million, and payments from central funds to general practitioners and chemists are put at £30 million, compared with £10.8 million under NHI in 1938. Thus, whereas the sum to be found by the ratepayer will rise from £40.3 million for the incomplete services provided in 1938-39 to £48 million, the proportion will fall from 74 per cent to 36.4 per cent. The taxpayer's contribution will rise from £14.2 million to £84 million, or from 26 per cent to 63.6 per cent; but if allowance is made for NHI in the earlier year and for the Beveridge proposals under the new scheme, of his contribution, £35.7 million (27 per cent) will be

accounted for by social insurance, against £11.2 million (20 per cent) in 1938-39.

The policy of placing the main cost of the new services on central funds rather than on the rates should be warmly welcomed. But this welcome must be qualified by the consideration that all these estimates are largely guesswork, and that the Ministry seems to have budgeted for what can be achieved within the first few years rather than for what is eventually desired.

This under-budgeting, if it is the case, will be bad tactics for another reason. So long as private arrangements are still permitted—as they should be—there will be an inevitable tendency for people to think that they will get better treatment by staying out of the new service than by coming in, just as at present many compulsorily insured people still prefer to pay a doctor privately than to go on a panel. This tendency can only be countered if the public service is made attractive enough to encourage the good doctors to enter it, and this in its turn means that there must be no niggardliness in settling their remuneration. Emphasis is laid in the White Paper on "proper" remuneration and on the need to recognise "extra qualifications and extra energy and interest," matters which are to be discussed with the profession itself. This is all to the good, but with the example of the Burnham scale for teachers before them, doctors can hardly be blamed if they suspend judgment until the Ministry comes down to actual figures. If the terms proposed are such that the best doctors, including consultants, will be better off under private practice than in the new service, all this planning will come to naught and the health services will remain incomprehensive and anything but available to all. Wise spending, not false economy, is necessary to ensure that the national service is so attractive that private arrangements will wither away.

For a second time in a generation all the political and professional controversies that surround the science and art of medicine, and impede its social use for the benefit of everybody, have been turned over and rearranged in a fresh pattern. It remains to be seen whether, this time, the goods will be delivered.

## The Cost of Food

THE Parliamentary debate on agricultural prices a month ago has apparently succeeded in its primary purpose of removing the sense of crisis between the Government and the farmers. It is probable that the Government's schedule of farm prices for the current season will now be accepted without much more ado. But the real and major issue was never this year's prices. The crux lies in the future. What is the Government's policy to be for the after-war years? Will it guarantee prices? And, if so, what sort of prices? The farmers' spokesmen, who always use strong words, have made it clear that they will consider farming to have been "betrayed" if any prices substantially lower than the present are incorporated in the Government's permanent policy, or if they are made to apply to substantially smaller volumes of produce than are now being raised from the farms of this country.

But there are two sides to this question. To the farmer, prices represent income. To the rest of the community, they represent cost. The other side of the question is the cost of the nation's food, and it is essential that it should be very fully considered before agricultural policy is decided upon. If, in wartime, the farmers get the impression that money can be found for them out of a bottomless exchequer, when their own incomes can be increased without loss to anybody else, they can perhaps be forgiven for suffering from a delusion that afflicts many others beside themselves. But, of course, it is not so, even in wartime. The real national income may be larger than in peacetime, but it is still finite, and more for A always necessarily means less for B. In peacetime, these problems of allocation and distribution are vitally important.

The purpose of this article is not to question the moral desirability of the farmers having a somewhat larger share of the national income than formerly, but to examine some of the material consequences that would flow from such a re-allocation.

Expenditure on food represents by far the largest single component of the total economic activity of the nation. In 1938, expenditure on food (excluding drink and tobacco) came to £1,198 million; it was nearly 30 per cent of the total of all personal consumption expenditure, and over 23 per cent of the total net national income. No other activity approaches it in magnitude. How the total was made up can be very roughly indicated as follows:

| (£ million)                                                                           |       |
|---------------------------------------------------------------------------------------|-------|
| Value of produce sold off farms in the United Kingdom plus subsidies .....            | 290   |
| C.i.f. value of food imported (excluding feeding stuffs, beverages and tobacco) ..... | 350   |
| Total "wholesale" cost .....                                                          | 640   |
| Distributive margin (inc. taxation) .....                                             | 560   |
| Total "retail" cost .....                                                             | 1,200 |

Examination of what has happened to these figures since 1938, or of what would happen to them in some hypothetical future year, is obstructed by two difficulties—first, the change that has occurred in the general value of money; and, secondly, changes in the quantities of food grown at home and imported from overseas. Nevertheless, in spite of these difficulties, it is possible to give some indication of the orders of magnitude involved. If the money cost of food goes up in the same ratio as the

#### PRINCIPLES OF TRADE: A PAMPHLET

The series of eight articles on The Principles of Trade which appeared in *The Economist* during the months of January and February this year are being reprinted in a pamphlet (Price 2s. 6d., post free), which will be available shortly.

general level of prices, then no real change has occurred at all. For example, if the average British citizen receives, for a day's work or a unit of effort expended, 20 per cent more money than he used to get, and if he has to pay 20 per cent more for food, the apparent change is purely nominal. It is only if the money cost of food rises more than the general price level that there can be a "real" increase in the cost of food. This result could be produced in four ways:

1. A more-than-average rise in the prices paid for agricultural produce grown at home.
2. A more-than-average rise in the prices paid for imported foods.
3. The replacement of some food previously imported by food grown at home (on the very reasonable assumption that imported food will always be cheaper than home-grown, which is presumably the reason why it is imported).
4. A more-than-average rise in the distributive margin.

The first two factors are those governed by agricultural policy. According to the Ministry of Agriculture's index number, the prices paid to farmers are now about 80 per cent higher than in 1938. This is certainly above the average of wartime price rises; but by how much? The general level of prices is an elusive concept, but it seems probable that the money valuation put upon a unit of effort was about 40 per cent higher in 1943 than in 1938. If this is so, then a 40 per cent rise in farm prices would have just kept pace with the general average; the remaining 40 per cent represents a "real" increase in the cost of home-grown food to the rest of the community. In terms of 1938 money it is just about £115 million.

On the cost of imported food no information at all is available. Indeed, none could possibly be available on the aspect of the matter that is of greatest concern—namely, the probable cost of imported food after the war. The war has brought a shortage of food, as well as a shortage of transport to carry the food, and prices have everywhere risen. It cannot be expected that normal conditions will re-assert themselves very quickly, and world food prices must be expected to rule high—that is, high relative to other prices—for some years after the fighting stops. Whether they will eventually—say by 1950—settle down at about the same relationship to the money value of British labour, or higher or lower, is anybody's guess. A great deal depends upon the degree of success that attends full employment policies in the different industrial countries and the schemes for international management of prices that are now maturing as a result of the Hot Springs Conference and other initiatives. The guess may be hazarded that world food prices are not likely to be any lower, relatively to British incomes, in 1950 than they were in 1938. But whether they will be any higher is quite uncertain. Every one per cent by which the rise in the average of imported food prices exceeds the rise in the average value of British labour will cost the British community a volume of real income equivalent to three-and-a-half million 1938 pounds.

The cost of a shift from imported food to home-grown food is quite impossible to estimate, since it depends, first, upon the extent of the shift, and, secondly, on the relationship between domestic and imported prices. The extent to which imported food can be replaced by domestic is probably much more limited than is usually supposed. Even in wartime, when considerations of cost vanish, and when methods can be adopted that would not be followed in peacetime, the shift has not been very large when measured either by nutritive value or by money value. (The large increases frequently quoted are measured in terms of weight.) The growing at home of 10 per cent more of the total supply than was grown in 1938 is probably the outside measure of what is permanently practicable. If this involved paying prices one-third higher, the real cost of the shift would amount to about twenty million 1938 pounds.

Finally there is the distributive margin. It is a matter almost of common agreement that the cost of distribution

of food is too high. A practical plan for reducing it, however, has yet to see the light of day. On the contrary, whenever the state, or some such state agency as a Marketing Board, has intervened, the result has usually been to stabilise margins and, by stabilising them at a high figure, to increase them on the average. Any attempt to deal radically with the problem would conjure up all the political difficulties of dealing with the countless thousands of small traders and shopkeepers. It would be wrong to be defeatist about the possibility of reducing distribution costs. But it would also be wrong to cherish the illusion that they are likely to be any lower in the years immediately ahead.

Let us now bring these various estimates together in the framework of a set of reasonable assumptions—hypotheses would be a better word—about the post-war world. Let it be assumed, first, that the present level of farm prices is maintained—or, rather, that their further movement is proportional to the movement of the general price-level; secondly, that world food prices are 10 per cent higher in relation to British incomes; thirdly, that 10 per cent more of the total British consumption of food is grown at home; fourthly, that the prices guaranteed to British farmers are, on the average, one-third higher than imported prices; and, finally, that there is no change in the real cost of distributing food. The extra real cost to the consuming public of all these charges would be about 170 million 1938 pounds.

In comparison with the large figures of war finance, this may seem to be a small sum. But its real dimensions are large. With a reasonable measure of optimism, the real national income of the United Kingdom may be expected by 1950 to be about 10 per cent larger than in 1938. Some economists have estimated slightly larger figures, but only at the cost of somewhat hazardous assumptions. A 10 per cent increase would provide £500 million (measured at 1938 market prices) as a fund on which there are already a number of claimants. It appears to be agreed that the permanent defence forces should be larger in the future than they were in the past; the additional cost cannot surely be put at less than 100 million 1938 pounds. Other forms of Government expenditure will also rise. Social security and the National Debt, being transfers from one set of British pockets to another set and using virtually no real resources, do not count in this connection; but the Education Bill calls for an additional expenditure of some 70 million 1938 pounds and the National Health Service will require a further sum of about 60 million 1938 pounds. Then there is the need for a faster rate of replacement and increase of the community's capital resources, at home and abroad. If all these things are to be done without trenching on the level of consumption, they must be fitted into a total of £500 million. Can the non-farming community, on the top of all this, contemplate paying an additional sum that may well be in the neighbourhood of £170 million for its food—not for any more food, or for a better nutrition policy, but simply for the food it consumed in 1938? Or, to put the same question in another way, if the non-farming community has to pay £170 million more for its food does it not follow that other constituents of the standard of living will have to be reduced?

It is no part of the purpose of this article to pursue the argument into the contentious regions where words like "betrayal" are used. The argument must be so pursued at some other time, for it is one of the most essential for the well-being of the British people. But before that argument can be joined, the protagonists should realise what it is that they are arguing about. The purpose of the present article is to provide some of the basic data; and also to remind all those concerned that the question of farm prices is not a game of "thinking of a number," played between the National Farmers' Union and the Treasury, but a highly intricate matter of balancing gains to the standard of prosperity of British farmers against the standard of feeding of all other members of the British community.

## NOTES OF THE WEEK

### Unconditional Surrender

Ever since the first promulgation of "unconditional surrender" at Casablanca, some ambiguity has clung to the phrase. Does it mean no negotiation of terms? Or no terms at all? Or even a free hand to the victors to take what vengeance they see fit? The Italian collapse clarified the position, for it was clear that "unconditional surrender" meant the unconditional acceptance of terms imposed by the Allies and not the absence of any terms. Mr Churchill has now confirmed that, in the case of Germany, there will be no bargaining over terms, nothing to correspond with the appeals to Wilson's Fourteen Points after the last war. But his definition gave little but negative information about the kind of terms which would, in fact, be imposed. The Atlantic Charter is not to apply to Germany "as a matter of right." Frontier changes and transfers of population may be carried out without the consent of the people concerned. The Allies, however, will not regard "unconditional surrender" as licence "to behave in a barbarous manner nor . . . to blot out Germany from among the nations of Europe." Mr Churchill's statement clears up a few doubts. It leaves, however, a great vacuum into which Goebbels will pour unimagined horrors to stimulate German resistance. Now that the Atlantic Charter has been disposed of for the German people, the Allies' urgent need is to substitute at least as clear a statement of the terms of German surrender.

### Omnes v Omnum

It is probably a symptom of the fifth year of war, and of the eleventh hour before the Second Front, that perspective should be so astonishingly lacking in so much present public discussion. The course of events at recent by-elections, for instance, is being discussed on both sides with a sound and a fury worthy of some much more militant department of the war effort. This is not to say that the trend of voting against official candidates is unimportant. It expresses a triple impatience; impatience with "take it or leave it" candidates; impatience with the attitude of mind of the professional politician who only remembers, it seems, that freedom of election is not one of the famous Four Freedoms for which we are formally fighting; and impatience with the inability of a Coalition Government to make greater pace in reconstruction. But, so far, the breezes are only local. The great mass of electors are not yet involved one way or the other in these controversies; and, except for the obvious fact that the old political parties will have to work very hard to get and keep new votes after the war, there is still no firm pointer to the actual outcome of post-war elections. Almost certainly, there is a leftward tide, but the Conservatives, if they will, are just as capable of catching it as any other party. The West Derbyshire by-election has been greeted as a national portent with gloom or glee, to taste, by the official and opposition pundits, while in fact it was one of the most delightful, amusing and characteristic vignettes of English political life that fact, as distinct from the fiction of Dickens and Trollope, has ever produced. Here was no fight between the machine carpet-bagger and the local stalwart. Both candidates were richly local, and the contest was between two local traditions, status and standing. Standing, in the person of Alderman White, won, not so much because status, more callously represented, was nationally sponsored, as because status was ducally pressed. This is no plot against Mr Churchill or the war effort; it is the fine old healthy—and earthy—spirit of radicalism which, if things go well, may, when the war is over, again have a chance to influence affairs.

### War Reports

The same fine indifference to real values which built up the West Derbyshire by-election into a sort of Second Front all of its own has made the reporting of recent fighting in Italy a matter for the most fearful international anger and rebuke. For a time, reporters in the Anzio beachhead were forbidden to say what they thought about what was going on, despite the fact that nothing of what they themselves

had said previously had been untrue. The reporters were, in fact, made the scapegoat for jitters in the most distinguished quarters. Mr Churchill was entirely justified, a fortnight ago, to tell the world that the situation in the beachhead was not so desperate as some people were saying. General Alexander was equally justified to back this up with encouraging words of his own. But neither the Prime Minister nor the General, nor anyone else, was justified in suggesting—as, indeed, Mr Churchill admitted on Tuesday—that the reporters on the spot had been responsible for the words of woe which were going round. The gloomy conclusions had been drawn very many miles away from the battlefield, largely (apart from the headquarters pundits in North Africa) by speakers in North America who should have been sufficiently well informed to avoid this kind of scare-mongering for which the correspondents' own cables, realistic and sombre though they were, gave no good ground. The lesson of this episode seems to be, not that war reporters cannot be trusted, nor that the public at large, here or across the Atlantic, cannot stand grim things, but that a few individuals in positions of authority are now so impressed by the immensity of the battle still to come, and so anxious to leave no chance alone of pointing the difficulties still to be overcome, that they cannot refrain from taking every piece of realistic reporting and using it as a peg for some hortatory sermon. Perhaps, when the biggest fighting in the west starts, the rebukes will be sent to the right addresses. It is a bad thing, and weakening to confidence, that war reports should be vetted "for policy"—and entirely unnecessary. It would be a very good thing, on the other hand, if the professional speakers, rather than professional writers, could be induced to weigh their words with much more care, however heavy their burdens or high their state of pre-invasion nerves.

### Finland in Suspense

The unofficial Russo-Finnish negotiations in Stockholm have not so far produced any spectacular result. But there is no lack of indications that M. Paasikivi's mission has not ended in failure. The Russians have apparently decided to take a more moderate attitude towards the Finns than, say, towards the Poles. It is believed that their territorial claims do not go much beyond the frontier settlement of 1940, though it seems that Moscow may now insist on the possession of the Hangö base, which was then only leased from Finland. Similarly, the claim to Petsamo, which was dropped by the Russians during the peace negotiations in 1940, is now likely to be renewed—though this is not certain. No change in frontier on the Karelian isthmus is envisaged, but immediate interest in Finland itself is now centred, not so much on the likely peace terms, as on the terms of the armistice, since it is during the period of armistice and Russian occupation that the most decisive "accomplished facts" may take place. So far the Russians do not seem to have made a drastic reshuffle of the Finnish Government a condition for the conclusion of an armistice. The Swedish Communist paper *Ny Dag* has even gone so far as to say that Russia will treat with the Helsinki Government as at present composed. The fact that the famous Kuusinen, head of the Soviet-sponsored puppet Government of 1939-40, has so far been kept out of the picture, is another hopeful sign. Even so, uncertainty and anxiety still prevail in Finland; and heavy Russian air raids on Helsinki do not cool the atmosphere.

### General Simovich's Mission

Last Saturday, General Simovich, who was head of the Yugoslav Government which brought Yugoslavia into the war on the Allied side in 1941, made a declaration in which he condemned the attitude of General Mikhailovich and called his countrymen to support Marshal Tito's guerillas. General Simovich's statement probably marks a turning point in Yugoslavia's domestic policy. The conflict between Tito and Mikhailovich has now definitely gone beyond the limits of a political controversy. Antagonism between the various Southern Slav nationalities has now become

the dominant factor. General Mikhailovich appears to have given up any attempt to speak on behalf of Yugoslavia as a whole. What he now claims to fight for is the reconstitution of Serbia or Greater Serbia. On Tito's side, the anti-Serbian bias is very strong, if only because of the prevalence of Croats and Slovenes in the partisans' movement. Formally, however, Tito professes to aim at the rebirth of a federated Yugoslavia. The deep and bitter antagonism between Serbs, Croats and Slovenes will make the revival of the Triune Kingdom after the war extremely difficult, to say the least. General Simovich is probably the only Yugoslav personality who may still try to reconcile the Southern Slavs and thus to save the kingdom from wreckage. To the followers of Mikhailovich he represents, more than any of the leaders connected with Tito, fidelity to Serbia and to the dynasty. In the eyes of the Croats and Slovenes, his name may be associated with the principle of federation as distinct from the policy of Serbian centralism. General Simovich may also try to reconcile the King with the partisans. His mission seems to deserve the fullest measure of Allied support, and it may well be that it is not unconnected with the correspondence between Mr Churchill and Marshal Tito which the Prime Minister mentioned in his statement on Tuesday to the House of Commons. But it would be foolish to underrate the difficulties in the way of Yugoslav reconciliation.

### "Cautious Welcome"

The British Medical Association's first reaction to the White Paper on the health services (discussed in a leading article on page 263) is, in its own words, "one of cautious welcome." Such a reaction was only to be expected. The welcome was bound to be given because for many years the BMA has declared itself in favour of the principles that the health services should be comprehensive and that there should be no economic bars to their availability. These principles were reaffirmed by the Council of the BMA as recently as last August, after preliminary discussions had taken place with the Minister of Health. It was then also recommended that a central administrative body should be set up, responsible to a Minister who would be advised by a committee representative of the medical profession, which would be responsible for all the civilian health services; and that locally there should be new administrative bodies to cover wide areas, which would be representative of the community and the profession. The White Paper rejects these administrative proposals, though it has accepted the machinery for receiving expert advice centrally and locally. It has also rejected the principle that the central department should be responsible for all the health services, since industrial health matters and the school medical service are to continue to be the responsibility of the Ministry of Labour and the Board of Education respectively. Nor, locally, is there to be complete integration of the health services, for it is apparently intended to keep the maternity and infant welfare clinics, for instance, separate instead of including them in such health centres as are set up. But it is difficult to understand why the BMA is apparently objecting to the proposed Central Medical Board. It states that it will be "a wholly or mainly Civil Service structure," whereas the White Paper expressly says that it will be created from the profession. The retort which this criticism asks for is that the public might be afraid lest the new Board be a replica of the BMA itself. On the question of the payment of doctors, the White Paper goes some way towards meeting the BMA's views in that it still allows private practice and therefore private fees. But whereas the BMA would prefer all public practice to be on a capitation payment basis, the White Paper will only allow this for "separate" practice. Practice in health centres will be paid by salary.

As there is now a long waiting list for *The Economist*, subscribers who wish to renew their subscription are advised to do so before the date of expiry. If they fail to do so, their subscriptions will be automatically cancelled as soon as that date is passed, which will mean a gap of many months before the despatch of copies can be resumed.

### The Voluntary Hospitals' View

The first reaction of the voluntary hospitals is more one of alarm. The White Paper says that the Government wishes them to play a part—for which it will make them an annual grant of £10 million—in the new service without loss of identity or autonomy; but that for this it is necessary that they should still look to private support for the greater part of their funds.

If once the situation were to arise in which the whole cost of the voluntary hospitals' part in the public service . . . was repaid from public money, or indeed in which it was recognised that public funds were to be used to guarantee those hospitals' financial security, the end of the voluntary movement would be near at hand.

What is very naturally worrying the voluntary hospitals is that no mention is made in the White Paper of the future of the hospital contributory schemes, which is one of their most important sources of finance. The schemes cover between ten and eleven million wage earners and produce more than £6½ million a year for the voluntary hospitals. If, however, treatment in a hospital is to be free for all, as the White Paper envisages, or rather is paid for by the taxpayer or from a compulsory social insurance contribution, there will be no need for a voluntary contributory scheme, except for the relatively small numbers of people who wish to enter hospitals of their own choice and make their own arrangements for consultant and specialist advice. It is not surprising, therefore, that the voluntary hospitals are concerned, not so much lest they should wither away as that they should be squeezed out.

### More Power to Tojo

For months now the Japanese have been steadily and unsuccessfully on the defensive in the South-West Pacific. The army and navy which two years ago were startling the world with the skill and audacity of their amphibious advance have lately seen their forces outfaced, outmanoeuvred and outfought in every operation. In Tokyo anxiety has been rising with each reverse and the latest political changes there can be traced to their beginnings in the unsuccessful fighting in New Guinea and the Marshall Islands. The naval and military Chiefs of Staff, Admiral Nagano and Field-Marshal Sugiyama, have been relieved of their posts, and General Tojo, Prime Minister and Minister for War, takes over Sugiyama's post, while the Navy Minister, Admiral Shimada, is to combine this office with that of Chief of the Naval General Staff. This change has naturally excited speculation. It is a sign of crisis and urgency; even so, it can be seen as part of a much longer process of centralisation whereby General Tojo has brought the various branches of the Japanese war effort under his own personal and direct control. Six months ago it was war production which was centralised. Now it is war strategy. This concentration is a feature of most war economies; General Tojo has assumed rather late in the war the kind of functions which have been Marshal Stalin's and Mr Churchill's practically throughout the conflict. The surprising thing is not that new powers should be assumed now, but that they should not have been assumed long ago, especially when it is remembered that General Tojo, unlike many high-ranking Japanese, is temperamentally inclined to welcome responsibility. However, even if the changes are part of a shifting of power inevitable in a total war economy, the fact that the change has happened now is significant. There has been no bold Japanese counterstroke to offset the depressing sequence of defeat running from Guadalcanal to Truk. The beleaguered Japanese outposts have fought delaying actions until wiped out. The American Navy has ranged through the Pacific islands meeting no serious opposition from the Japanese fleet. While any comment on the military and naval reshuffle at this stage must be largely speculative, it seems probable that the differences between the dismissed chiefs of staff and General Tojo are concerned with strategy—not politics as has been suggested—and in particular, with the strategy of naval warfare. It is a sound maxim that a fleet must be kept "in being," but there comes a time, as the Kaiser discovered in the last war, when the policy of preserving the fleet at all costs makes its preservation impossible—or futile. The Japanese cannot afford, without any counter action, the loss of base after base in the Pacific.

### Economic Enlightenment

Most of the recommendations made by the committee of the Federation of British Industries on international trade policy, in a report published on Wednesday, can go without comment into any collection of latter-day aphorisms on twentieth century politics and economics. Again, as in every document of this sort, "We are all agreed" is the burden. A sufficient international force must be maintained to curb aggression; "the justification for private enterprise lies in its efficiency and its contribution to the community's welfare"; post-war trade policy must frame "a system of world trade aiming at the maximum degree of prosperity for all peoples"; "a general expansion of world trade is needed"; each country must pursue a policy of full employment in its own affairs; "an international policy of long-term investment in those countries most in need of development seems imperative": no creed could be more catholic, more up-to-date, more enlightened—or more general or more abstract. The FBI has certainly gone some way—in its thinking and phrasing, at least—since its first frightened, old-fashioned, defensive, restrictive wartime thoughts about post-war prospects.

### Planning Trade

It is not, however, unduly cynical to ask what the FBI's new economic enlightenment in principle is likely to mean in practice; or unduly sceptical to suggest that, in its specific proposals, the FBI's report on international trade policy shows signs of applying good principles in quite the wrong way. Yet again, the only useful job of the commentator analysing economic projects is not to record agreement with other projects, but to seek out and show the practical disagreements which will make all the difference in the actual making of policy. The best example of what the generalities of the FBI report appears to mean is the one specific proposal made, which is for an International Economic Council, "the nucleus of which might be found in the existing collaboration between the United Nations." What would this body do? Here is the test of what the FBI means by planning. It would "estimate the needs of, and possibilities of, supplying the different countries in principal commodities"; "guide world trade to channels where it would most benefit producer and consumer"; and so on. It, or some similar body, would make and co-ordinate international arrangements for the "orderly" production and exchange of foodstuffs, materials and goods. It would, in effect, place imports and exports, leaving it only to "private enterprise" to deliver the goods and collect the guaranteed proceeds. If this means anything, it means that all the specific processes of exchange would be planned or guided—and this is precisely what planning should not mean if the FBI's own stated objective, maximum enterprise and efficiency, is to be achieved. The proper work of planning, internationally as well as nationally, is not to run the engine but to take off the brakes, not to arrange trade transactions in a set pattern but to create the conditions, the atmosphere, in which the total of trade transactions, of whatever sort, will be at its maximum. It is, in Sir William Beveridge's apt phrase, not to plan supply but to plan demand.

If the FBI's answer is that this is what it really means, then the suspicion that the committee on trade policy has not been fully at home in its use of the new economic jargon is reinforced—a suspicion which must be aroused, if by nothing else, by the uncompromising and unqualified statement that "no commitments on international exchange problems should be allowed to conflict with a policy of full employment." At best, this must surely be taken as a very inverted and very misleading way of saying that each nation's first and undoubted duty to employ all its resources fully includes, as part of the same task, the duty to make possible the maximising of the wealth of all nations including its own, by the fullest possible mutual trade. For the FBI, speaking for trading England, to call upon other countries to cultivate their own gardens as they will, regardless of international commerce, would be as astonishing and as simple-minded as it is for this representative industrial association, yet again, to produce a report which says next to nothing about productivity or output per head upon which, in any arrangements, the sales of British manufactures will continue to depend. The truth is that British industry, though cheered a little by new notions, is still much afraid, unnecessarily, of the future—and in search therefore, somewhat pathetically, of stays to hold it up.

### Fair Deal for Farmers

The need for short-term programmes which will increase still further the country's agricultural production continues to be emphasised, but its background is shifting from beleaguered Britain to starving Europe. Mr Hudson, at Taunton last week, outlined what farmers must aim to accomplish this year, the first of his own four-year plan. He pointed out that the supply of labour and of machinery was approaching its limit; on the other hand, land under the plough, which had increased since the war by nearly five million acres, continued to expand, and this year farmers would be faced with the difficulties of cultivating a larger area with an almost unchanged labour force. Some farmers have recently deplored a wartime policy which has allowed the number of livestock in the country to fall so low. This was inevitable in wartime when the production and importation of food for direct human consumption had necessarily to come first, before feeding stuffs. And it remains inevitable for the same reason. But notice should be taken of the recent warning of Colonel Llewellyn that the post-war world will be faced with an acute shortage of meat and dairy products, and that supplies may not be restored for five or more years—and the situation in Europe will, of course, be made much worse if the Germans destroy the herds in their retreat. Farming policy is a case where the transition from war to peace, from siege to specialisation, will come some time after the war is over. An article on page 265 shows how big an item the cost of the nation's food will be in the postwar standard of living. As the experience of wartime has shown, ordinary economic farming is much distorted and enlarged by extraordinary requirements. It is desperately important, for the sake of farmers as well as of the community, that plans should be laid now to go back to more normal ways, on a guaranteed basis, when the need declines. If this is not done, wartime prices and quantities will come to be regarded as peacetime rights; and when the Government discovers that they cannot be afforded without reducing the standard of living, the farmers will inevitably regard themselves as having been betrayed. Mr Hudson would do well to make all this very plain. Farmers are much more worried about their future than about their present; and if Mr Hudson's Four Year Plan, which is an extension of wartime farming, is allowed to appear as a peacetime policy, their ultimate disillusionment and anger will be immense. Mr Hudson should say here and now, as the Hot Springs Conference did, that there is a direct contradiction between wartime and peacetime farming, in cost, quantities and products; and that this nation can only permanently underwrite a peacetime programme which is related to peacetime needs. Mr Hudson, in his work on guaranteed post-war prices, must make it clear that it is to-morrow's farming and not to-day's that will be guaranteed.

### Delegated Legislation

The movement in Parliament to control the growing tendency of government by regulation is gaining ground. A motion has been tabled by as many as 138 Members to the effect that a Select Committee should be set up with the duty of examining all Statutory Rules and Orders and other instruments of delegated legislation presented to

## The BRITISH MUTUAL BANKING COMPANY LIMITED

Founded 1857

By reason of its organization, this old established Bank is able to provide prompt and individual service for all classes of sound business, and customers in all parts of the country express their appreciation of the facilities provided.

LUDGATE CIRCUS, LONDON, E.C.4

Parliament and to make weekly reports on any such instrument which it considers should be brought to the attention of the House. There is a certain amount of confusion in the opposition to delegated legislation. Some would go to the extreme of abolishing it altogether; others hold that it may be justifiable in war, but not in peace. But most people agree that, in the day-to-day administration of a great deal of modern legislation, Ministers must be given a considerable amount of latitude, which government by regulation allows them. This discretion, however, immediately involves the danger that regulations will slip through which the House would have questioned if it had had the opportunity to scrutinise them—a danger which has become much clearer with the new wartime procedure of allowing such regulations to have effect unless they are expressly challenged by the House within a limited time. This procedure has been followed in what are clearly peace-time measures—the Disabled Persons (Employment) Bill, the Education Bill, and the Reinstatement in Civil Employment Bill are three good examples—and it has been suggested that, where the need to allow such regulations is recognised, the wording of the clause should be changed so that they cannot have effect until they have been approved by the House. Probably, the proposal for a Select Committee is more practicable, provided it does not hold up administration needlessly. In any case, it is right that Parliament should have a conscience in this matter. Ministers may protest that their extraordinary powers are only for the duration, but after the last war DORA was used for many purposes other than the defence of the realm.

### The Polish Underground

The Polish Government has now radically modified its instructions to the military underground in Poland and has ordered unconditional co-operation with the Soviet armies as they advance into Poland. The previous Polish orders, issued on January 5th, made co-operation conditional on the resumption of diplomatic relations between Poland and Russia. It could easily have been foreseen that an attitude of "non-co-operation" would be quite untenable right from the beginning, and that it would merely further embitter Polish-Soviet relations. Under the new orders the commanders of the Polish underground organisations are obliged to report to the Soviet commanders on the spot and to declare to them, first, their loyalty to the legitimate Polish Government in London, and, secondly, their willingness to co-operate with the Red Army. The new instructions should go some way towards reassuring the Russians—if that was needed—about the determination of the Poles to fight together against the common foe. But it is clear that they also expose the Poles to considerable risks. How will the Russians treat the representatives of the Polish underground? If they come into the open in towns situated to the east of the Curzon line, the Russians might possibly treat them as the agents of a foreign Power on their soil, with all the harsh consequences which this would entail. But even to the west of the Curzon line there is still no guarantee that the Poles will be treated as allies and friends by the Russian commanders. Two conclusions seem obvious: first, that the Russians should make a definite statement that there will not be the deportations and political persecutions of the Poles that there were under the Soviet occupation between 1939 and 1941; and, secondly, that the Polish military organisations should restrict their independent existence and activities to the areas situated to the west of the Curzon line.

### Divided House in Argentina

The Argentine Government is now openly divided against itself. When the Ramirez regime seized power nine months ago, it was a rather motley coalition of soldiers and politicians—moderates such as Santamarina, the first Minister of Finance; responsible military and naval officials of the standing of General Rawson, General Ramirez and Admiral Storni; and behind them, the xenophobic fire-eaters of the *Gruppa Oficiales Unidos*, the GOU, an intensely nationalistic movement among the younger officers, in character and rank rather resembling the notorious "young colonels" of Japan. Each group represented a different reason for dissatisfaction with the previous Castillo regime—

the moderates probably believed quite genuinely that a change of government would put an end to political and economic abuses. The more responsible officers were disturbed at the growth of Lease-Lend aid to the other Latin American Republics. The wild young men found even Castillo's isolationism too moderate. Since June, 1943, the Santamarina group have withdrawn, leaving the Government covertly divided between the two army groups, the Ramirez group, hoping to improve Argentina's position by drawing the country away from isolation, the young colonels by pushing it deeper in. In October an attempt to get American aid without abandoning neutrality failed and Admiral Storni resigned. His successor, General Gilbert, represented the Ramirez line of understanding with the United States. The least irresponsible members of the Government, General Ramirez and General Gilbert, decided to break off relations with the Axis. The firm attitude of the Allies after the Bolivian coup d'état and, possibly, the discovery of how widespread and active was Axis espionage in Argentina, helped to stiffen the President and the Foreign Secretary in their decision. A part of the Cabinet—the Young Colonels led by Colonel Peron, the Under-Secretary for War—appear to have opposed it and, in the event, the break was made very hastily and was covered by an intense smoke screen of Axis spy rings unearthed, espionage nets brought to light, and *agents provocateurs* caught red-handed.

Immediately after its abandonment of neutrality the Argentine Government pursued two entirely contradictory policies. On the one hand, firm steps were taken to implement the new policy and even extend it. The German military attaché, General Wolf, was arrested for espionage together with two Japanese attachés. The violently pro-Nazi newspaper, *El Pampero*, was suppressed. Non-belligerent facilities were given to the American nations at war, including Canada, and it was understood that United States warships might now use Argentine bases. Only a very narrow margin seemed to separate Argentina from full belligerency, and when it became known that Berlin had sent a very rude Note about the treatment of General Wolf, the general assumption was that war would be declared in a matter of days. The observers forgot the influence and determination of the Young Colonels. Soon after its suppression *El Pampero* reappeared, almost undistinguishable from its old self, save for a new title, *El Federal*. The democratic and pro-Allied *Argentinisches Tageblatt* was suppressed. On February 15th a group of young officers forced their way into the Foreign Office and arrested the Foreign Secretary, General Gilbert, and his Under-Secretary. Later their "resignations" were announced. Other changes followed, and after the coup there was no further question of a declaration of war on the Axis; and, significantly, General Wolf is again at liberty.

### Turn of the Screw

More men are being called up from industry for the Forces, the mines or the Merchant Navy. Some people have expressed surprise that full mobilisation can now be made fuller still in this way. Actually these men, whose ages range in different occupations from twenty to forty, have already been counted in the degree of mobilisation claimed. They are men whose call up has been deferred beyond the general limit because of the particular jobs they were doing. It was known that this spring they would be called up. Some will come from the munitions industries themselves, a sign that in certain branches stocks are reckoned sufficient for the full scale fighting ahead. Some may be kept at work a little longer, for employers have the chance of appeal to retain individuals. But most of them will go to the stations for which, in the statistics of the master plan, they have, for some time, been earmarked. There may, indeed, be doubts whether, in this or that branch of the national activity, staffs have not already been cut too low; but these doubts apply, not to the new call up, but to the wider policy and programme, made last year, of which this call up is only the latest reflection. Nor has the calculation been a purely national one. The mobilisation of British and American manpower depends upon the combined strategic arrangements of the two countries—and allows, inevitably, for the different degrees of mobilisation which have so far proved tolerable, politically, to Britain and

the United States, and to the very different industrial situation which in the United States, as a correspondent from Ohio points out on page 272 is permitting, even compelling, some return to civilian production. It would be no bad thing, in the undercurrent of argument about the respective shares of Britain and America in the final battles of the war, if the astounding tightness to which the manpower screw has been turned here were made much more public and plain on the other side of the Atlantic.

### The Use of Resources

One lesson which critics find hard to grasp, despite so much experience since 1939, is the fact that plans once made are vastly hard to alter. It is not possible, for instance, if only for industrial reasons, to alter the types of either tanks or aircraft which will be engaged in the Second Front. Nor, to take a more comprehensive example, would it be possible, before the matter has been settled one way or the other, to alter the allocation of Allied resources between air and land warfare. The process of making and carrying through a vast production programme is a commitment which cannot be reversed. Only the events of this year can tell whether the placing of so high a proportion of manpower, material and plant in aircraft manufacture relative to the manufacture of warlike stores has been wholly wise, economically or strategically. Probably, even then, the historians will disagree. All that the watcher can say is that judgment will depend upon the combined swiftness and completeness of the victory. For better or worse, all sails have already been set for 1944. Nor, to the outside eye, unless jaundiced, can there be reason yet for misgiving. Bombing is rising to a new pitch; invasion, it is understood, is already poised. Only if bombing failed and invasion did not happen could the direction taken be proved definitely wrong.

### Pay-As-You-Earn

During the committee stage of the Income Tax (Offices and Employments) Bill on Thursday of last week the Chancellor of the Exchequer at last promised to recognise and redress the grievance of temporary servants of the Crown—that is, civil servants and members of the armed forces.

Where two conditions are fulfilled, where there has been an overlapping tax payment and where the tax holiday to which they were entitled to look forward has been withdrawn from them as a consequence of this legislation, (they) shall receive a cash payment sufficient to relieve them of their disability.

It would have been disingenuous, indeed, if administrative difficulties had been allowed to stand in the way of rectifying an intolerable injustice to temporary servants of the Crown. But the phrasing of Sir John Anderson's statement—though he said it was "precise and free from ambiguity"—does not indicate clearly whether this legitimate grievance is to be redressed to the full. Redress is to be given, not by an amendment to the Bill, but by some special arrangement, "much the same way as post-service credits to Service men are dealt with"; there is to be a cash payment "on a corresponding occasion." Final judgment has to be deferred, pending a precise definition of the words "sufficient" and "disability."

### The Siege of Haute-Savoie

The partisan bands of Haute-Savoie, though threatened by encirclement and starvation, have so far eluded the round-up conducted under the orders of Joseph Darnand. German troops cannot apparently be used to blot out the source of so much irritation and anxiety for fear of provoking a much more general revolt. On the other hand, the French Militia, Garde Mobile and police forces now being employed, with reserves of about 6,000 men, are naturally less ruthless in their liquidation of their countrymen than the Germans would be. Vichy's relatively passive policy has further undermined Frenchmen's waning fear of the effectiveness of the Vichy machine. Darnand has not learnt, apparently, the lesson that the only way to success in repression is by success. Repeatedly expiring ultimatums which bring no remorseless drive against the

maquis are as little likely to discourage the partisans as the "promises" of a general amnesty. If the patriots can hold out through the winter, when lack of food, warmth and shelter are their greatest enemies, with the approach of spring and of the Allied invasion, the supplies of arms and explosives dropped by Anglo-American aircraft will greatly assist an expansion of their activities. The existence in Western Europe of this nucleus of organised resistance, however small, may play an important part in Allied invasion.

### De Mortuis Nil

Mr Molson raised again in Parliament last Tuesday the old and odd question of whether and when it is legal to insure the life of another. There is a steady tradition of opinion, dating back to the Gambling Act of 1774, that policies of this character, to be proper, must be based upon "an insurable interest," which can only be taken to mean that expenses will be incurred in connection with the death or burial of the insured person. The Assurance Companies Acts of 1909 and 1923 reiterated this condition, and the Industrial Assurance Commissioner, giving evidence to the Cohen Committee in 1931, said that the latter Act clearly intended that future insurance of this kind should be for funeral expenses only. But the large volume of business done by industrial life offices in life-of-another policies does not seem to have been affected in any way by these enactments; so much so that the recent report of the Tory Reform Committee expressed surprise that no attention should have been paid by the offices to the clearly expressed intention of Parliament. It is obvious that a great number of policies, perhaps the majority, are taken out by people who will in fact incur no obligation, legal or personal, upon the death of the insured—but who do so, usually, simply as a convenient though not cheap way of saving. But in any single given case it would be hard to prove that there is no death interest. Who can be denied the privilege of burying any individual—and what is a reasonable cost of burial? The spirit of the law may clearly be contravened, but its letter is very far from clear. Mr Assheton, in replying to Mr Molson, could only plead legal obscurity. He added that the whole position would need to be clarified in the light of the fact that the Government had accepted the Beveridge proposals to include burial insurance in the statutory scheme. If, when this scheme is implemented, any case at all can be made out for the continuation of life-of-another policies, Parliament should, in logic at any rate, make it clear that all such are to be policies of indemnity, and that only those expenses can be insured against and claimed which are actually incurred.

### Shorter Notes

In a Note on Manx Home Rule in *The Economist* of February 12, 1944, it was stated that the income-tax rate in the Isle of Man ranged from 9d. to 2s. 7½d. in the pound. This statement was unfortunately based on out-of-date information. The rate has now risen to between 3s. and 5s. 3d. in the pound. In addition, it should be noted that, since 1939, the Manx Government have made voluntary gifts to the Imperial Exchequer amounting to £1,000,000.

The following table gives the number of civilian casualties in air-raids since September, 1939:—

|                         | Killed | Injured and Detained in Hospital | Total Serious Casualties |
|-------------------------|--------|----------------------------------|--------------------------|
| Sept., 1939-Aug., 1940. | 1,494  | 1,980                            | 3,474                    |
| Sept.-Dec., 1940.....   | 22,282 | 28,522                           | 50,804                   |
| Total, 1941.....        | 20,863 | 21,839                           | 42,702                   |
| Total, 1942.....        | 3,221  | 4,149                            | 7,370                    |
| Total, 1943.....        | 2,357  | 3,462                            | 5,819                    |
| October.....            | 118    | 283                              | 401                      |
| November.....           | 119    | 238                              | 357                      |
| December.....           | 10     | 41                               | 51                       |
| 1944—                   |        |                                  |                          |
| January†.....           | 107    | 270                              | 377                      |
| Totals to date.....     | 50,324 | 60,222                           | 110,546                  |

† Those killed last month included 45 men, 39 women, and 23 children under 16.

# AMERICAN SURVEY

## Less War Work

(By a Correspondent in Ohio)

Cleveland, January 1, 1944.

LAST autumn, this industrial area began to approach its maximum output, given the supply of labour as it then existed. Now it appears that this peak is not far below the largest production to be expected from the area for the entire period of the war.

Though the crisis of tightness in labour supply is still officially dated for next March, both nationally and in this industrial district, the number of revisions and cutbacks in war orders is at present increasing faster than new requirements are materialising in additional hirings of labour. The consequence is that industry has had posed for it within the last month a series of totally unexpected problems—of unemployment—laying off workmen and deciding what to do with idle industrial capacity. These problems are by no means serious, as yet, but their arrival some time before the industrial effort was expected to be at its height is leading to much public discussion.

It is beginning to be surmised that the nation's industrial output as a whole has been growing too fast for the fighting fronts to consume it, after allowing for certain bottlenecks in distant transport. The existence of surpluses in a number of specialties, such as tanks and anti-aircraft guns, was recognised months ago. A number of ammunition plants have been closed recently. Several aluminium fabricating plants have been slowing down; now the primary production of the metal is being cut back before it reaches the continental rate of 1,300,000 tons annually which was scheduled for the year-end. Airplane engine parts have been accumulating to the point where one of the largest Cleveland works is laying off 1000 men next week and reducing its working hours to 41½ a week. Sunday work is being cut out in shipyards all over the country, and the Cleveland yard has had a cancellation of part of its order book.

Many of the revisions appeared to result from distortions somewhere in the production flow, or from over-supply of this or that special article. But the changes in shipbuilding and airplane manufacture cause surprise. Taken together, the cutbacks are believed in some industrial quarters to indicate that war production in general has overshot its mark. Manufacturers are looking to Washington to tell them how soon and how many should be allowed to reconvert to civilian goods, and by how much. For these reasons one Cleveland newspaper stated in a year-end edition that 1944 would be, in industry, "a year of training for an outbreak of peace... a rehearsal of postwar."

### Back to Civilian Manufacture

Companies in this district have received few permissions from the War Production Board to return to peacetime lines of product as yet, except in motor lorries, but releases are beginning to be made elsewhere. Electric irons and bathtubs will be manufactured shortly for the first time in two years. Canada is about to make washing machines again. More railroad and farm equipment is to be made this year, too, but this is itself closely related to the war.

Unless the recently cancelled orders in Cleveland are replaced by new ones, or the factories allowed to turn quickly to their old lines of work, numbers of people are going to be out of jobs in manufacturing. Though they can find plenty of employment in the depleted trades and services, they, like their employers, are left uncertain whether they should shift at once, or wait and see what happens.

The procurement agencies of the Armed Forces have the habit of ordering these cutbacks without notice, on the supposition, it is said, that to give advance word would lower the production rate as soon as it became known. A few plants here have lately felt a drop in efficiency, but others are having exactly the opposite experience, as the fear of lay-offs gets around. One concern sought to cut its production 10 per cent by lay-offs, but increased efficiency (mainly reduced absences) almost made up for it.

In the closing months of 1943 the entire civilian population of this metropolitan district was employed for the first time to the fullest extent of its desire to work. In a county of 1,200,000 civilians, only about 150 unemployed employable persons remain known to employment agencies, with the exception of several hundred recently employed who are looking for new places. At the same time many thousands of the employed would like to retire or to return to housework. The fact that everybody who was willing to work was not able to find a job until the working force included many who preferred not to work, was due, in considerable measure, to the presence of a large Negro population—87,000. This population may be said to be employed in full for the first time since the last war. Its female members formerly supplied the majority of the house servants; now servants are almost non-existent.

### "First to be Fired?"

The members of the coloured population have long considered themselves "the last to be hired and the first to be fired" in industry, and the whole truth of the saying seems on the point of being demonstrated once again. As manufacturing plants begin to lay off men and women, Negroes are among the first to be dismissed where plants strictly follow rules of seniority in lay-offs. Labour unions are insisting up on lay-offs by seniority, and though some employers without agreements are able to make dismissals on the basis of family status, the pressure of organised labour is in a direction which will disemploy the Negro population first. (Labour opposition, whether through the unions or otherwise, was the reason most often given by employers for their reluctance to hire Negroes.) In a few Cleveland plants, chiefly in the blast furnace and foundry industries, Negro workers have been employed almost as long as whites. They will not be disturbed by seniority rules. A number of employers say coloured workers are in general as good as white, particularly on hard and hot jobs. In work requiring manual dexterity, they are sometimes superior. They have a high absentee rate, however, and they get into money trouble about twice as often as white workmen.

The migration of Negroes from the south was resumed a year or two ago after a long period of movement in the other direction; most of the Negroes of working age in Cleveland came here either during or shortly after the last war, filling in for the shortage of foreign immigration. Relatively few of them, however, were employed in manufacturing. Most of them did outdoor work, including building construction, and the long depression threw the majority of them on relief. The Negro population has now re-established itself. Its members are conspicuous buyers of merchandise in stores catering to all levels of buying power.

Race relations within the plants of this area have, in general, been tranquil, almost as much so as in the community as a whole. The coloured workers are said to get along least cordially with Polish and Czech workmen and white men recently from the south. They do best among Italian workmen, and men of Italian descent compose the group making the most numerous complaints, next to the coloured, of inability to get jobs in industry because of race or nationality. But complaints of this nature have almost died away.

The city life of Cleveland is deeply affected by the presence of racial, national and other minorities, with descendants of the original New England settlers composing one of the smaller minorities. Political and economic changes are complicated by the presence of innumerable tribalisms. These are likely to increase the difficulties of descending gracefully the staircase by which the community moved into full military production and partially out of civilian work, and it appears that a beginning of the return may have to be undertaken before long.

# THE WORLD OVERSEAS

## The Northern Flank

(By a Correspondent)

N EARLY four years ago, in the spring of 1940, Nazi Germany disclosed its western strategy by the surprise invasion of Norway and Denmark. By this move its northern flank was secured from the North Sea to the Arctic. Without adequate naval bases and fortifications, the long coastline of these two countries was open to invasion, and therefore something of a liability. The Germans have tried, therefore, throughout the whole time of their occupation, to strengthen this flank by all the means at their disposal. Naturally the need for fortifying the two countries has not always been equally urgent. Nazi propaganda has frequently obscured these activities, exaggerating or belittling them as the general situation demanded.

The economic resources of the two countries are not normally sufficient to sustain the population. Moreover, the Nazis faced the problem of integrating the Norwegian and Danish economy into the German war effort without the confidence or full support of the people. During the four years of occupation, both countries have been forced to change their economy in order to meet German demands, and to sustain their own populations on a minimum diet and the barest necessities of civilised life. Original German plans for expanding the industrial capacity of Norway were unsuccessful. In Denmark, over-all industrial activity was maintained at a high level, but agricultural production, particularly of livestock and livestock products, which were largely dependent on imported feeding stuffs, suffered a sharp decline. The extremely efficient Danish agriculture, organised on a co-operative basis, was not able to maintain its pre-war acreage. But after a bad harvest in 1941 crop yields in 1942 and 1943 improved considerably, and the 1943 harvest is estimated to have yielded 110 per cent of the harvest of 1942. The herds of cattle have been maintained at their pre-war strength, but dairy cows are 10 per cent below the number in 1939. The number of pigs, which at one time had been reduced to under 50 per cent of the 1939 figure, increased again at the end of 1943 to 78 per cent, but the number of poultry is still only slightly more than 50 per cent of the last pre-war year.

In spite of heavy exports of foodstuffs to Germany, Norway and Finland, Denmark is still a comparatively well-fed country. Conditions in Norway, however, are different. There, agricultural production was much smaller and the nature of the country makes agricultural self-sufficiency impossible, even for the supply of minimum wartime rations. The most sustained effort achieved only a 15 per cent expansion of the total acreage. Significantly, the acreage under potatoes increased by 58 per cent, and the area under cereals by 12 per cent. The cattle population has almost been maintained, but the milk production decreased considerably because of the lack of high-quality feeding stuffs from overseas. The output of feeding cellulose has now reached roughly 200,000 tons annually, but it is a poor substitute. The number of pigs, on the other hand, has been reduced to one-third of the pre-war numbers. Agriculture in Denmark and in Norway suffers the typical continental wartime shortages of labour, draught animals, oil for tractors, and fertilisers—particularly phosphates.

In Norway, it is impossible for the army of occupation and the large labour corps of the Todt Organisation to live on the resources of the land. In Denmark, however, a much larger army of occupation could be sustained by Danish agriculture if exports were stopped. These are naturally important questions for an army that must expect an invasion attempt, but this is to some extent offset by changes in the civilian population, which are different in each country. Norway has lost a considerable part of its

population; at least 150,000. Norwegians are reported to be employed in Germany and a small number of soldiers and officers are still prisoners of war. There has been a constant trickle of refugees from Norway, especially to Sweden, and also to Great Britain, while a few thousand Norwegians are fighting in Russia as members of the SS Viking Division. The number of Danes employed in Germany is, on the other hand, extremely small and there are relatively few Danish refugees.

### Industrial Differences

The industrial and manufacturing capacities of the two countries have been fully utilised during the whole time of the occupation, on German orders. Yet no expansion of the overall production has been possible, chiefly because of the lack of fuel, raw materials and labour. This raises another important difference between the two countries which will become apparent during a possible invasion. Norway's industry supplied mainly industrial raw materials, such as iron ore, pyrites, ferro alloys, and so on. The manufacturing industry is relatively small. In Denmark, there are no industrial raw materials, but a well-developed manufacturing industry, especially shipbuilding and the machine industry. A modern army of occupation can make good use of a manufacturing industry for repairs, whereas the production of industrial raw materials is of no use for the army on the spot.

Germany's dispositions in the event of an invasion are naturally unknown, but the "Wehrwirtschaftskommandos," which followed in the wake of the occupying German armies, are still functioning and doubtless form an important part of the preparations against an invasion.

In Norway, the construction of fortifications, roads, aerodromes and naval bases has been continuous, and the increasing threat of invasion has caused only an intensification which meant further demands on the supply of Norwegian labour in 1943. Much of the sporadic political unrest in Norway was the result of this demand. The nature of the Danish coastline excludes the building of fortifications on a large scale. Roads and communications are well developed, and the construction of aerodromes is much easier than in Norway. Consequently, during the first years

of the occupation there was little German activity in fortifying vulnerable points of the coast. The Germans were more interested in increasing the fishing industry; this is shown by record catches, the greater part of which was undoubtedly exported to Germany. Early in 1943, however, the fortification of the Danish coast became imperative. At this time, Germany had to be very careful of its labour and material resources, and the army of occupation was thus forced to find the labour and most of the building material on the spot. Long stretches of the coastline, particularly the more densely populated parts, had to be cleared at the same time, and this produced the first real resistance of the Danes to the army of occupation. German labour demands were not met. Strikes were declared, and the Germans resorted, as usual, to force. The situation deteriorated rapidly, at the same time as Denmark was slowly beginning to feel the privations of an enforced war economy.

The rapid disruption of economic activities in the event of an invasion will probably be greater in Denmark than in Norway. Denmark's economic organisation has not been changed under German occupation. The broad foundation of decentralised agricultural co-operatives is still intact. Industrial federations, employers' associations, and, above all trade unions are still functioning, though heavily restricted. In Norway, on the other hand, the Quisling Government has changed the entire economic organisation to the Nazi model. An important point is that much of the new organisation is purely nominal, and it can be said that the remnants of the old democratic organisation and the new Nazi organisation exist side by side. The administration is, however, closely controlled by German commissars, which means that it will probably be more easily maintained during the first phases of an invasion.

## Malnutrition in Dublin

[FROM OUR DUBLIN CORRESPONDENT]

THE prevalence of a considerable amount of malnutrition in Dublin has long been known to exist by all social workers and by the medical profession. It has not, however, been the subject of any detailed statistical investigation apart from some pioneer work by Professor Fearon. No surveys of the type made in London, York or Merseyside have been undertaken in Dublin. An inquiry recently made by Dr Clancy Gore and communicated to the Statistical Society of Ireland throws much new light on the subject. The inquiry covered a hundred working class families on a new housing estate. The hundred families contained a total of 684 persons, an average of almost seven persons per family. This is larger than the average for the whole city. The families belonged to a relatively high wage group of the working classes, and all the heads of families were in regular employment. It follows that if the conditions found to exist in this sample were unsatisfactory, the conditions in the working class population generally must be even less satisfactory.

Each family was assessed on its needs, namely, food, fuel, light, clothes, cleaning, materials, shelter, compulsory insurance and transport to work. The minimum, not the optimum, diet laid down by the British Medical Association was adopted as the basis of the investigation. This diet understates needs. It does not provide enough milk, especially for children, no extra allowance is made for lactating or pregnant women or for invalids, and it assumes that all housewives obtain their supplies at the lowest possible price. The amount needed to provide this diet for a man for one week in Dublin was found to be 14s. Male-equivalents based on food requirements were calculated for the other members of the family—for example, 83 per cent for a woman between 14 and 65. Minimum amounts were calculated for expenditure on clothing, fuel, light and cleaning. The net incomes of the families were calculated by deducting rent, cost of transport to work, and compulsory insurance from the gross income, which consisted of the wages earned by every member of the family together with pensions, unemployment money and any other income received. In calculating net income no allowance was made for conventional necessities, or for the repair or replacement of furniture.

A comparison of needs with net incomes clearly proves that the standard of living mainly depends on the size of the family. The total number of persons above these needs

is 170, of whom 72 are children. The number on the border line is 55, of whom 28 are children. The number below the minimum standard is 459 persons, of whom 248 are children. Thus, out of a total of 348 children, 21 per cent are above, 8 per cent are on the margin and 71 per cent are below the standard. Classification based on the size of families brings out the fact that the larger the number of persons in the family the greater are the chances of net income falling below minimum standard needs. This insufficiency of means cannot be overcome by the housewife. It can only be overcome by an increase in wages or by some type of supplementary allowance in cash or in kind.

### Household Budgets

A further inquiry investigated the amount spent on food in relation to minimum dietetic requirements. A calculation was made of the housekeeping money, that is the amount spent by the housewife when allowance is made for sums kept back by the wage earners for drink, tobacco and recreation. The expenditure of the housewife on articles other than food was deducted from the housekeeping money and a comparison was drawn between the amount so shown to be available for food and the cost of the standard minimum diet. The result was that, of the total of 684 persons included in the inquiry, only 22 are above the level of minimum dietetic adequacy. Of those, ten are adults and twelve children. The large families are again the most severely affected. At the lowest end of the scale are 109 persons, of whom 64 are children, with between 2s. and 3s. 11d. per male-equivalent for food per week. The largest group of persons is to be found on the level between 4s. and 5s. 11d. Out of 348 children, 336 are below the level of adequacy.

An examination of the weekly income and expenditure of the hundred families, classified according to the size of the household, reveals that the expenditure on bread as a percentage both of total expenditure on food and of wages increases as the family increases in size. The expenditure on milk as a percentage of wages shows no significant variation, but when expressed per head shows a diminution as the size of the family increases, ranging from 2s. 1d. to 10d. per week per head. The expenditure of the larger families on milk is hopelessly inadequate and is far less than the amount spent by the public assistance authorities. If the entire income of those with nine or more in family were devoted to food, it would fall short of the minimum necessary expenditure. Families of seven or eight could just buy sufficient food and pay rent. No money would remain for other expenditure.

### An Understatement

This appalling picture understates the malnutrition of the Dublin poor, since it refers to a group of well-paid workers in full employment. It is true, of course, that the inquiry was made at a time when the cost of living was abnormally high on account of the war, but a fall of food prices to normal would not materially reduce the degree of malnutrition. The only palliatives in operation or in contemplation are the extensive alms administered by the great charitable societies for which Dublin is famous, and the weekly family allowances of 2s. 6d. for each child under sixteen in excess of two. The addition to working class incomes thus brought about is obviously insignificant in relation to the needs of the community. It is easier to expose the perennial problem of poverty in Dublin than to suggest a cure. The establishment of communal feeding centres would prove useful within limits, and the provision of free meals for school children and cheap milk for mothers and children are clearly desirable. Meanwhile, the problem stares every social worker in the face—the problem, in the words of Dr Clancy Gore, that “children are being adversely affected during a most critical phase of their life with regard to health and physique.”

# Russia at War

## Federal Finance

THREE weeks ago *The Economist* discussed the War Budgets of the USSR. Since then the Supreme Soviet has raised the total from 245 to 249 million roubles, which makes no significant difference, and almost all the items of the budget estimates for 1944 have been passed without any criticisms or alterations.

Also, the federal reforms in the Soviet Constitution have been announced, and it may be of some interest to analyse briefly the budgets of the sixteen federal Soviet republics which have also been passed by the Supreme Soviet. The passing of these budgets has nothing to do with the constitutional reforms. Even before, the sixteen budgets were published with the general Union Budget, of which they were parts.

This year's budget estimates for the republics are somewhat puzzling, however, because no provision has been made in them for the special expenditure as a result of the setting up of their own Commissariats of Defence and of Foreign Affairs. It looks as if the extra cost will, at least this financial year, be carried on the Central Budget.

### The Republics' Expenditure

The total of the sixteen budgets of the republics is 36 billion roubles, that is, about 15 per cent of the All-Union Budget. In the last pre-war Budget (1940) the proportion was considerably higher—23 per cent. The republics cover from their own budget the cost of local administration. They also finance the development of their own light industries, while the development of their heavy industries and transport is financed exclusively from the Central Budget. This financial arrangement reflects the difference in the organisation of the respective industries.

Heavy industries and transport are controlled from Moscow. The Republican administration is responsible for food, clothing and footwear and, generally speaking, for the production of consumers' goods.

The following table compares the Republican Budgets for 1944 with those for 1940—Budgets for the intervening years have not been published:

| (In billions of roubles)      |        |        |
|-------------------------------|--------|--------|
| Republics                     | 1940   | 1944   |
| Totals                        | Totals | Totals |
| Russia .....                  | 25.1   | 24.2   |
| Ukraine .....                 | 8.0    | 3.6    |
| Byelorussia .....             | 2.1    | 0.4    |
| Azerbaijan .....              | 1.0    | 1.0    |
| Georgia .....                 | 1.2    | 1.2    |
| Armenia .....                 | 0.4    | 0.5    |
| Turkmenia .....               | 0.5    | 0.4    |
| Uzbekistan .....              | 1.4    | 1.9    |
| Tadjik .....                  | 0.5    | 0.5    |
| Kazakhstan .....              | 1.6    | 1.6    |
| Kirghizia .....               | 0.4    | 0.5    |
| Karelo-Finnish Republic ..... | —      | 0.1    |

The greater independence which the constituent republics have now been nominally granted finds no reflection in the estimates. Most puzzling is the drastic reduction in the sums for the Ukraine and Byelorussia, the two republics which have suffered from war devastation. Sixteen billion roubles were allocated for rehabilitation purposes in this year's Central Budget; but since this allocation does not appear in the budgets of the republics, the conclusion may be that the work of reconstruction in the Ukraine and Byelorussia is going to be carried out from Moscow. A Committee for Rehabilitation has, in fact, been formed by the various economic Commissariats of the Central Government.

(Continued on page 276)

## TARGET FOR TOMORROW

*A series of books on post-war planning*

So much is being talked and written about post-war questions that the layman, however anxious to understand, is bewildered by the controversies between planner, counter-planner and anti-planner.

This series sets out to guide the reader through this blizzard of words and paper. It is a working rule that authors should not take sides until the final pages, where they state their Target.

An objective, scientific treatment and a high, impartial standard is guaranteed by the Editorial Board. Among the authors are some famous names, and some brilliant young contributors who will be famous tomorrow.

Editorial Board: SIR WILLIAM BEVERIDGE,  
DR. JULIAN HUXLEY, SIR JOHN BOYD ORR  
Editor: CHARLES MADGE

Already Published: *Industry After the War: Who is Going to Run It?* by Charles Madge. *Food and the People* by Sir John Boyd Orr. *A Plan for Town and Country* by Phæbe Pool and Flora Stephenson. *Civil Aviation* by Michael Young. Appearing Shortly: *Remobilisation for Peace* by Sir Ronald Davison. *The Future of the Colonies* by Julian Huxley and Phyllis Deane. *The Nation's Health* by Prof. MacIntosh. *The Beveridge Report on Social Security* by François Lafitte. *Old Age in the New World* by E. D. Samson. Later Issues will include: *The Lesson of Last Time* by Sir William Beveridge. *The Future of Germany* by Tom Driberg, M.P. *Freedom from War* by Air Vice-Marshal Bennett.

Some score of other volumes are under commission dealing with such subjects as The Birth Rate, Education, Full Employment, Agriculture, The Housing Problem. Illustrated with photographs, maps and diagrams. Future issues will be bound in cloth. Price, 4s. 6d. Fuller details can be obtained in a leaflet, post free, price 2d., from the publishers.

## HISTORY, CURRENCY, AND PROPHECY

Before the War, when quality was what we cared to make it — we at Rowntrees made it high. You will remember Black Magic — Chocolate Crisp — Aero Milk Chocolate. These were typical of the standard at which all our production was fixed.

During the War, quality can be only what we are able to make it. Nevertheless, we find, somewhat to our surprise, that in spite of Hobson's choice in the matter of ingredients, we are able to make Chocolate and Clear Gums which the people who eat them are kind enough to call excellent. Even so, owing to Zoning we can sell them only in certain parts of the country, mainly in the North and East.

After the War, when at length the quality of our products again comes completely under our own control, we shall make our post-war products to our pre-war standards. Unhurriedly, as the right materials come into the country, we shall again produce Black Magic, Chocolate Crisp and the others — and sell them from Penzance to the Pentland Firth. And that's a promise.

ROWNTREES

## AN ESSENTIAL OF WARTIME DIET

Stored in this tiny capsule are two vitamins without which it is impossible to maintain health. They are 'protective' vitamin A and 'sunshine' vitamin D and, unfortunately, they are not always readily obtainable in a wartime diet.

A daily dose of Crookes' Halibut Oil—one of the richest natural sources of these vitamins—will build up your resistance and stamina and prove of inestimable value during this fifth winter of war.

## CROOKES' HALIBUT OIL

Obtainable only from chemists

CAPSULES—PER BOTTLE OF 100—8/6

LIQUID—PER PHIAL—ENOUGH FOR 16 DAYS 2/-

### Sources of Revenue

What are the revenue sources of the republics? They are grants from the All-Union Budget. These grants take the form of commissions for the local collection of taxes done by the financial machinery of the Republican Governments. Thus the republics receive 10 per cent of the income tax collected by them; 90 per cent of the taxes is transmitted to Moscow. Only Tadjik, Armenia and the Karelo-Finnish Republic retain the full 100 per cent of the tax. The republics also receive a 25 per cent commission on agricultural taxes, 5 per cent of loans raised by them and unspecified percentages of the turnover tax. But a very high proportion of the sums sent to Moscow is reinvested in the heavy industries of the republics, and in some republics money thus invested may much exceed the sums transferred to the centre. Apart from this, the republics also receive 25 per cent of the income of the machine tractor stations.

The republican budgets, in their turn, consist of two parts: the Budget of the Republic and the local budgets. Union republics consist of "autonomous" republics and autonomous regions with their own administrative machinery. The autonomous (but not "independent") areas make their local budgets and receive grants from the Commissariat of Finance of their republic. In some instances such grants absorb a fairly high proportion of a republic's revenue, for instance, more than one-fourth of the Russian Republican Budget and nearly one-half of the Ukraine's and Byelorussia's budget. Nominally, the principle of decentralisation has been applied very consistently, though the real relation between the various Commissariats of Finance is characterised by the highest possible degree of centralisation.

The crucial feature is the total financial and economic control of all key industries by Moscow. There has, however, been no evidence of any basic opposition to that control from the various republics. The view that planned economy and intensive development of heavy industries require control and co-ordination from the centre has never been challenged since the beginning of the experiment in planning.

Finally, an interesting point in the Budget decrees of the Supreme Soviet is the instruction to the Council of People's Commissars of the USSR to "consider the budgets of Moldavia, Lithuania, Latvia and Estonia for 1944."

### Shorter Notices

"An Atlas-History of the Second Great War." By J. F. Horrabin. Vol. VIII, January to August, 1943. Thomas Nelson & Sons, Ltd.

"The Oxford War Atlas." By Jasper H. Stenbridge. Vol. II, September 1, 1941 to January 1, 1943. Oxford University Press.

The first of these atlas histories is an old favourite. Mr Horrabin's maps of the different campaigns of the war, including the air offensive on Germany, have now reached an eighth volume and are still unrivalled in their clarity. This volume also contains the usual diagrams showing some of the economic aspects of the war. Of particular interest are those illustrating the Budget White Papers' estimates of national income and expenditure and one comparing price movements in the two Great Wars.

The Oxford War Atlas is only in its second volume and therefore has to cover a great many more campaigns. This has inevitably led to a certain amount of overcrowding, especially by comparison with Mr Horrabin's austerity of outline, but in spite of this handicap Mr Stenbridge has been able to give a very complete pictorial history of the fighting in the different theatres of the war. He also goes in for economic diagrams, but here again the long period which the Atlas covers detracts somewhat from their value. At this stage of the war, for instance, a comparison of the raw material position of the United Nations and the Axis seems out of date and unreal. There is, moreover, an error in the diagrams of Britain's war effort which should not go uncorrected. The impression is given that 23½ million out of the 33 million people aged 14-65 are either in the forces or in direct war work, whereas this figure includes all those in the work and covers those still following their peacetime occupations. The 10 million whom Mr Stenbridge puts in "other (i.e., non-war) occupations" are part-timers and housewives.

# THE BUSINESS WORLD

## Outlook for Tobacco

TOBACCO, with beer, the "pictures" (and, one might add, newspapers) has been one of Britain's official *circenses* in this war—the morale-sustainers, the conventional necessity whose sale without ration book or points has been permitted by the authorities on a scale equal to or exceeding the pre-war level. The state has taken its *quid pro quo* from these favoured industries, and where tobacco is concerned, the levy has been particularly heavy. The Exchequer has not been content merely to slice off all increased profits under EPT: it has multiplied special taxation by customs and excise duties and, in addition, has insisted on the industry's financing from its own resources the increased value of the heavy tobacco stocks which it has maintained by virtue of the Government's own arrangements.

Nevertheless, even under these handicaps, the tobacco industry has scaled new heights of prosperity and gone far, ostensibly, to vindicate its claim to be the rarest of all trades, the demand for whose product is, within all limits so far reached, completely inelastic—or even "inversely elastic," since consumption has actually risen despite all wartime price increases. This, naturally, has enhanced the appeal to the investor of representative shares in an industry with a long pre-war record of efficiency, good labour relations, high earning power and compact organisation. Are there any less pleasing possibilities, however, in the post-war picture? That is the question which the present article sets out to answer.

The wartime position is clear enough. The tobacco duty was raised immediately before the war, and has been increased no fewer than four times subsequently. Before the first of the two budgets of 1939 it stood at 9s. 6d. a pound; the present figure is 33s. 6d. From the viewpoint of successive Chancellors of the Exchequer, this draconian policy has amply justified itself. Before the last war, the yield on tobacco taxation was £17 million. In 1939-40 it was nearly £118 million and in 1942-43 (with a duty 6s. below the present level), tobacco produced £304 million for the Exchequer. In the quinquennium before 1914 retained imports of tobacco averaged 93 million lbs a year. Between 1934 and 1938, they averaged 177½ million lbs. During this war, consumption figures given by the Chancellor have shown a rise from 190 million lbs in 1940-41 to 236 million lbs in 1941-42 with a slight setback to 229 million lbs in 1942-43 after the raising of the duty by 57 per cent in the budget of April, 1942. In terms of the latest available figures consumption is nearly two-and-a-half times as large as it was thirty years ago, although the duty is ten times as high.

During those thirty years, the ordinary stock of the Imperial Tobacco Company (of Great Britain and Ireland) has

Its wartime profits trend is not readily discernible, on a first inspection, from its annual published figures, which the company (whose accounts until quite recently have been among the least informative in the gamut of British concerns) has been accustomed to show only after deduction of income-tax. Seven years' published profits, earnings and dividends are given in the preceding column.

The figures as they stand suggest that there has been a considerable fall in earning power since the war. That impression, however, is wholly erroneous. In its latest accounts the company has broken with tradition by revealing the amount of its provision for income-tax. This confirms the view that, although the company's income includes dividends from concerns operating outside the United Kingdom, the amount of Dominion income-tax relief is very small and, for broad comparisons, can be disregarded. If the figures in the preceding table are grossed up, at the standard income-tax rates applicable to each period, the resulting picture is very different:—

(Figures subject to income-tax.)

| Years (to October 31) | Profits After<br>Prof. Divs. | Earnings for<br>Ordinary | Paid on<br>Ordinary |
|-----------------------|------------------------------|--------------------------|---------------------|
|                       | (£'000)                      | %                        | %                   |
| 1937                  | 13,200                       | 35.2                     | 33.3                |
| 1938                  | 13,400                       | 35.9                     | 34½                 |
| 1939                  | 14,400                       | 37.9                     | 35.4                |
| 1940                  | 14,000                       | 37.2                     | 34.8                |
| 1941                  | 14,200                       | 37.8                     | 35                  |
| 1942                  | 14,300                       | 37.8                     | 35                  |
| 1943                  | 14,700                       | 39.0                     | 35                  |

After making allowance for the steep rise in tax since 1937, it will be seen that the earnings and dividend record of Imperial Tobacco have been extraordinarily stable throughout the war; that profits, in the three war years 1940-42 were somewhat above the average for the three immediate pre-war years 1937-39; and that for the latest year, 1943, they have shown a slight but appreciable further rise. If the 1938 profits are represented by 100, those for other years come out as follows:—

|      |     |      |     |      |     |
|------|-----|------|-----|------|-----|
| 1937 | 97  | 1940 | 103 | 1942 | 105 |
| 1939 | 106 | 1941 | 104 | 1943 | 108 |

Dividends have been virtually stabilised around 35 per cent, subject to tax, throughout the war period. Altogether, the remarkable stability of the gross figures suggests either that EPT has imposed a very effective upper limit on distributable earnings or that the directors of Imperial

(All figures shown free of income-tax.)

| Years (to October 31) | Profits After<br>Prof. Divs. | Earnings for<br>Ordinary | Paid on<br>Ordinary |

|                       | (£'000)                      | %                        | %                   |
| 1937                  | 9,898                        | 26.4                     | 25                  |
| 1938                  | 9,834                        | 26.2                     | 25                  |
| 1939                  | 9,368                        | 24.9                     | 23                  |
| 1940                  | 8,021                        | 21.4                     | 20                  |
| 1941                  | 7,119                        | 18.9                     | 17½                 |
| 1942                  | 7,108                        | 18.9                     | 17½                 |
| 1943                  | 7,542                        | 19.5                     | 17½                 |

attained an investment status which, among purely British equities, is almost unrivalled, and certainly surpassed by none. The company, originally formed in 1901 as a merger of most of the largest and oldest established British tobacco concerns to meet a challenge from the American manufacturers, has shared its growing market with a number of competitors (some of whom have risen to major status) without losing its position as the most powerful organisation in the industry, or suffering any but temporary setbacks to the growth of its profit-earning power—even in the fiercest phase of the "coupon war" in the early 1930's.

Tobacco, as a matter of policy, bring into the holding company's accounts by way of dividends from subsidiaries only as much of the latter's earnings as they have previously determined to dispose of, *coram publico*. Both explanations may hold: until the company decides to follow the advice in the latest series of recommendations of the Council of the Institute of Chartered Accountants, and includes a consolidated profit and loss account with its annual report, stockholders will have no means of knowing what the group's earning power is. It seems entirely safe to assume, however, that, before, all taxation, Imperial profits are certainly no lower than in pre-war days, and may well be appreciably higher.

The ordinary stock units, at 159s. 4½d., yield 4.392 per cent gross, which for a company with Imperial Tobacco's record is not unduly low. Indeed, it appears to include quite a fair allowance for postwar contingencies, and, undoubtedly, some allowance under that head is necessary. The tobacco trade itself does not share the popular view that consumers' demand is virtually inelastic. The rise in consumption during the war has owed a good deal to special wartime factors, including higher incomes and the nervous strain which wartime factors like longer working hours and greater personal danger impose on large numbers of people. Even so, the increase of 10s. a pound in the tobacco duty in the 1942 Budget was followed by a decline in per capita consumption from 5.02 to 4.87 lbs., and it remains to be seen what effect the further rise of 6s. in the duty last year has had. The Chancellor's interest and the industry's in this matter are not identical. The Exchequer is satisfied if a higher duty brings in a higher total revenue; the industry is concerned with the residue left over after it has handed on the Treasury's share of the total proceeds of each packet. The latest Imperial figures do not in themselves suggest any serious setback to consumption last year, but rather the reverse. Nevertheless, as alternative attractions become available, and especially if there is any significant fall in workers' earnings after the war, it may be impossible to ignore the implication of the fact that, with cigarettes selling at 2s. 4d. for 20, a smoker of, say, anything between 100 to 150 a week, whose weekly wage is, say, £6, may hesitate before allowing as much as 10 to 16 per cent of his income to go up in smoke. Tobacco shareholders, certainly, would not welcome any further increase in the duty in the forthcoming Budget.

The Government's fiscal policy, with the stock-carrying

arrangements imposed on the industry, has involved a strain on its finances in another way. Before the war, Imperial Tobacco's balance-sheet was exceptionally liquid. In its 1937 balance-sheet, stock in trade was valued at just under £36 million, and the company had Government and other marketable securities, loans to corporations, etc., and cash, to a total of over £11 million. At the date of the last balance-sheet, however, stock in trade was nearly £51 million, securities, loans and cash had fallen to £2½ million and the company had a bank overdraft of over £11 million. The group, obviously, has substantial amounts at stake as a result of Government policy, and it may be worth asking whether some kind of guarantee against possible future loss from conditions outside the company's control might not reasonably be requested.

On a long view, the prosperity of the British tobacco industry appears as reasonably well assured as anything can be. Tobacco smoking, to its devotees, is not easily shaken off. Unquestionably, there are more smokers in this country to-day than ever before, and the great majority of the wartime increase in their numbers will be retained in days of peace. But the increase in taxation has been so steep, and retail selling prices, now, are consequently so high, that some fresh stimulus to total demand may well be required if consumption under peacetime conditions is to remain anywhere near 5 lbs. per head. Such a stimulus might come from a lowering of the duty, and there will certainly be considerable pressure for this when the time for lowering indirect taxation burdens come. Past experience, however, is not very encouraging; the history of both the beer and tobacco duties, in fact, seems to suggest that they go up by yards and come down, if at all, by inches.

In the past, the impressive rises in tobacco profits have followed major developments, like the "invention" of the cigarette and, later, the growth of smoking among women. The scope for further changes of this order now appears much more limited, and any future increase may be dependent on more intensive exploitation of a market which now, probably, includes virtually all the potential "smoking population" of the country. Despite all impressions to the contrary, that is likely to be a development in which the price factor will play a considerable part. In the last resort, the industry's future may be bound up with the prospect of at least a moderate reduction in the tobacco duty—and that may involve decidedly hard future bargaining with the Treasury.

## Business Notes

### Looted Gold

The British, United States and Soviet Governments have this week issued a stern warning to neutral countries not to accept gold from Germany in payment for debts owing by that country. In view of the well-established fact that the Axis countries have looted the gold reserves found in all occupied countries,

the Treasury formally declares that it does not and will not recognise the transference of a title to the looted gold which the Axis at any time holds or has disposed of in the world markets. It further declares that it will be the policy of the Treasury not to buy any gold presently located outside the British Empire from any country which has not broken relations with the Axis or from any country which after the date of this announcement acquires gold from any country which has not broken relations with the Axis, unless and until the Treasury is fully satisfied that such gold is not gold which was acquired directly or indirectly from the Axis powers, or is not gold which any such country has been or is enabled to release as a result of the acquisition of gold directly or indirectly from the Axis powers.

In other words, the onus of proof that gold held by neutral countries is "clean" will rest with the holders. Unless they can satisfy the Allied Powers on this score, they may find themselves at best with a frozen gold holding and, at worst, with an asset liable to legal claims for restitution of stolen property.

It is known that at the outbreak of the war Germany held the equivalent of about \$200 million of gold, including the metal taken from Austria and Czechoslovakia. The sale of the whole of this reserve has been accurately traced, and it follows that any additional sales of gold by

Germany must consist of gold looted since the outbreak of the war. A certain amount of Belgian gold was obtained, thanks to the complicity of the Vichy authorities, and, more recently, some £30 million of Italian gold has been transferred to Germany. The principal neutral countries have, for some time past, seen the red light in this problem of gold traffic with the Axis and have been very careful not to accept gold in payment for commercial debts. Sweden has endeavoured to maintain a strict balance in its commercial transactions with Germany, and Switzerland has only accepted gold where such payment is prescribed, as, for example, for all international Red Cross payments. Portugal has accepted a considerable amount of gold from Germany in preference to seeing its clearing credits increasing, and is a country where the warning uttered by the Allied Powers may be needed. One of the results of the Allied move may be to create a special market in tainted gold, all gold being so regarded except specific bars covered by an Allied certificate of purity. The problem is one of exceptional complexity, given the ease with which gold bars can be re-melted and with which earmarkings in neutral markets can be effected. It cannot be tackled with hopes of complete success in tracing all looted gold. The best approach to its solution is that which has been chosen, namely, that of placing the onus of proof about the innocence of the gold on the neutral holder.

### Feeding the Sparrows

The bulk of the month of February has passed without producing any chance of real importance in the general trend of stock exchange quotations. The rise in the curve

of both industrial equity and fixed interest prices has tended to flatten out still further, but it has continued. Outside these two classes, there have been substantial fluctuations in most speculative sections, with a rather marked recovery in Brazilian bonds. In view of the many uncertainties and the rather small volume of business, it is sufficiently remarkable that prices should rise at all. Some, of course, have fallen and the meagre net improvement is a resultant of a continuance of quite considerable adjustments such as occurred in January. According to some sections of the market, the relative stability of prices is due to the fact that the selling comes mainly from large investors who are prepared to lighten their commitments provided they can do so without depressing prices. This view receives some support from the circumstance that most of the price movements, whether up or down, are in market leaders and that the lesser known shares, which incidentally give higher yields, attract an even smaller proportion of the total business than is usually the case. The view that conditions are governed by the sales of large investors does not, however, explain the rising trend, unless the large investor is putting his money back into the market, which conflicts with the hypothesis of reduced commitments. Whether the rise can be expected to continue, even at the recent reduced rate, is a matter of some doubt in view of the general development of the war and of the approaching Salute the Soldier savings campaign, which will momentarily distract attention from existing securities.

### Profits—No Change

The latest computation of industrial profits (given in detail on page 290) shows that the last quarter of 1943 brought no significant change in the story of the last three years. There is a further modest increase in gross profits; Table I shows that 550 fourth quarter companies raised their gross profits from £57,489,000 to £61,634,000 in the latest year. But this 7 per cent increase seems to be primarily due to a further slight relaxation of the austere reserve policy of 1941, when many items of wartime cost could only be estimated on a basis which has since proved over-cautious. The bulk of the increase has been set aside to free reserves and other savings, and although about £1½ million (subject to deduction of tax) has been added to ordinary dividends, the equity shareholder has actually received a smaller proportion of gross profits. As yet, the record of gross profits earned by companies whose accounting periods ended in 1943 is less than half complete; 1,106 reports have come in to date, showing a 3 per cent increase in gross profits from £123,768,000 to £128,575,000. But this result, and the rise in the index of gross profits in Table III (which is based on it) to the wartime record of 104.0, must be regarded as provisional. These figures refer to gross profits; the corresponding figures for reported profits (Tables IV and VI) on which shareholders, stock-brokers and most financial commentators base their views, show little enough movement. Table V gives the record of earnings and dividends (on a gross basis) for the whole of 1943. Ordinary shareholders have in fact fared slightly better; they received 57.7 per cent of available profits (against 56.8 per cent); earnings on their capital represented 14.5 per cent against 13.9 per cent, and ordinary dividends were correspondingly increased from 10 per cent to 10.6 per cent. Compared with the inflation of other incomes, such increases are of little consequence.

### Shipowners' Views

The annual report of the Chamber of Shipping of the United Kingdom and the annual address of its president—delivered on Thursday by Sir Leighton Seager—represent the views of a large proportion of the shipping industry. This year they are of special significance in that they reflect the industry's views on post-war problems. Both the report and the address emphasise three points. First, a large and efficient mercantile marine will continue to be essential to this country. Sir Leighton Seager expressed the view that large though the British merchant fleet was before the war, it should be larger still in peace if, as he hopes, there will be an expansion in the volume of international trade. The report suggests that, while in the ocean trades the problem is largely one of replacing liners and tramps, a determined effort should be made to increase the volume of the smaller vessels engaged in the coasting and near Continental trades. Secondly, both the address and the report stress the advan-

tages of private enterprise in British shipping. But, suggests the report,

it has a right to ask, even when demanding the fullest measure of freedom compatible with national needs, that it shall not, alone and unaided, have to fight against state-subsidised foreign competition, if that should recur, nor yet struggle to maintain its services in a market flooded with surplus ships built for the purpose of war.

Sir Leighton Seager holds that it may be necessary for the Government to provide, or to assist shipping companies to obtain, any capital in addition to their own funds that ship-owners may need for the replacement of tonnage. He stressed the need for collaboration with other maritime nations to secure international standards of conditions, of remuneration, of fair trading, and of safety of life at sea. Thirdly, both the report and the president restate the claim of shipowners for participation in post-war air transport. The industry holds the view that air transport should be allowed to develop through private enterprise with only "such governmental regulation as is necessary to avoid redundancy and ensure efficiency and safety." Two groups—the lines interested in the South American trade, and the Coastal and Continental shipping companies—have already announced their intention to operate air services through separate companies "where the necessary consents and machines can be obtained." The three remaining groups—the North Atlantic, the Eastern and the African—are expected soon to declare their intentions.

### Railway Revenue and Distributions

Pending any further light which may be shed on the position by the full accounts, it appears that the net revenue of the four main line railways was appreciably more than £2,000,000 in excess of their shares under the pool, showing a net rise on the year of £144,000 odd to £40,283,000. In addition, the LNER, which suffered a fall in net revenue from normal sources, made £135,000 odd on the sale of investments. It was this which enabled it to raise its dividend on the second contingent preference by one-eighth point to 2½ per cent. As already announced,

"Well, to tell you the truth, it was Robinson who started me off. He's a pretty successful man and I noticed he always read it. So I began, largely out of curiosity. Then I found its judgments were pretty shrewd, its opinions authoritative and trustworthy. So I've kept on with it ever since. "As you know, I've got a finger in many pies and it is essential for me to know what the North is

thinking and doing. I get to know by reading The Yorkshire Post. "Another thing. Northern industries, politics and finance are more closely linked up with the rest of the country nowadays, and reading The Yorkshire Post helps me to see national questions in better focus. "I also rely on The Yorkshire Post to give me full reports on man northern industrial meetings that I cannot get elsewhere."

Great Western and LMS pay the same, while Southern's net figure rose by rather more than enough to cover the additional  $\frac{1}{4}$  point on the deferred stock. LPTB, however, which is paying a further  $\frac{1}{4}$  per cent on its "C" stock, does so in part out of an adjustment of 1940 net revenue and in part by a draft on the amount carried forward to the credit of "C" stock interest fund. The details for the five lines are set out below:

|               | Share in Pool | Year's Net Revenue | Change in Year | Other Revenue | Cost of Div. Increases | To Res. and Carry Forward |
|---------------|---------------|--------------------|----------------|---------------|------------------------|---------------------------|
|               | £'000         | £'000              | £'000          | £'000         | £'000                  | £'000                     |
| G.W. ....     | 6,671         | 6,940              | + 7.2          | ...           | ...                    | 8.4                       |
| L.M.S. ....   | 14,750        | 15,686             | + 96.0         | ...           | ...                    | 392.0                     |
| L.N.E.R. .... | 10,136        | 10,655             | + 45.2         | + 135.4       | 82.7                   | 201.6                     |
| Southern ...  | 6,607         | 6,999              | + 86.0         | ...           | 78.7                   | Dr. 4.4                   |
| Total ...     | 38,165        | 40,284             | + 144.1        | + 135.4       | 161.4                  | 597.6                     |
| L.P.T.B.†     | 4,636         | 4,658              | + 19.7         | + 57.5        | 64.2                   | Dr. 20.8                  |
| Total ...     | 42,821        | 44,942             | + 124.4        | + 192.9       | 225.6                  | 576.8                     |

† Reduced by £179,000, estimated saving on conversion of "T.F.A." stock.

It may be doubted how valuable the above figures are as a guide to the actual position of the companies. In most cases the fluctuations in the net revenue are due to adjustments in the controlled revenues. The reports of the LMS and Great Western reveal only trifling changes in excluded revenues. But, whatever the nature of these adjustments, it is clear that existing payments have little or no connection with what will be available for distribution under peace-time conditions. Two years ago the yields on the "equities" of the main line companies were, on the whole, over 11 per cent, with the distributions at a lower level than to-day. Now they range from rather over 8½ for "Berwick" second preference to almost a point less for Great Western ordinary, with Transport "C" giving a return of just over 4½ per cent. Despite the very sharp fall in yield on the main line securities, the return is still very high, a reflection of the uncertain future of the railways in the post-war scheme of transport.

### Claim to Independence

The British Rayon Federation, which includes all sections of the rayon industry, from the producers of rayon yarn and staple fibre to the merchant converters, reacted strongly to the proposal of the Cotton Board Committee that the post-war Cotton Board should include in its "constituency" firms "wholly or partly engaged in spinning rayon staple fibre, weaving rayon yarns, finishing rayon goods and merchandising rayon goods." It puts in a strong claim for independence.

There seems no parallel in any other important country for the principle that the policy of one large textile industry should be determined by an authority dominated by another such industry. The United States, Germany, Italy, Japan, all had large cotton industries long before the advent of rayon; in none of them is the rayon industry subject to the direction or control of a predominating cotton authority.

This claim to independence is undoubtedly justified in principle; it would be most unfortunate if the development of a new and expanding industry were cramped by an old and declining one. The apprehensions of the rayon industry, whether justified or not, can be readily understood. The production of rayon and staple fibre is mainly a chemical process, and because of its chemical basis the industry is not only capable of great expansion, but is subject to constant and far-reaching changes resulting from the progress of chemical knowledge. Hitherto, as the report of the Federation points out, the rayon yarn and staple fibre produced in this country has had to be made in forms appropriate for manipulation on existing machines; while supplies of these are likely to continue, there will be a growing need for machinery specially designed to suit the fibres. In other words, the rayon industry should be allowed to develop freely

if its technical possibilities are to be fully realised at lowest cost. Even now, the manipulation of rayon is by no means confined to the machinery or area of the cotton industry. The users of rayon include the wool industry of Yorkshire and other areas, the Irish linen industry, the silk industries of Cheshire, Staffordshire and elsewhere, the hosiery, warp knitting and circular knitting industries of the Midlands, the lace industry, the ribbon and smallware trades, the furnishing fabric industry; the use of rayon is growing in the tyre industry and extending in the manufacture of carpets and in electrical insulation. It is realised, however, that during the period of transition from a war to a peace economy the cotton and rayon industries will have problems in common which should be dealt with—as during the war—by a single executive authority. But ultimately the rayon industry wishes to pursue its own path.

### Research in Industry

The spate of reports on applied research in industry issued by trade and professional organisations is encouraging. It reflects a more progressive attitude towards the problems of production and marketing. There is a danger, however, that words may not be followed by deeds on the scale required if British productivity is to be raised to the needed height. Although the Government can do much to stimulate and assist research—as, in fact, it is doing—the main responsibility will continue to fall upon industry itself, through individual and collective research. Some industries, indeed, are fully alive to the need for overhauling and expanding their research facilities, but others still show little sign of making plans commensurate with their needs. In many industries, the problem is not one of spending a little more on research in the "backroom," but of assigning to it the part and status in the organisation that it deserves.

### Coalowner's Sound Advice

In a statement issued with the annual accounts of the Bolsover Colliery Company, Limited, the chairman, Mr N. B. Brooks, emphasised strongly the need for technical reorganisation in the coal-mining industry.

It is an urgent necessity that its structure should be examined and re-designed where necessary to meet the demands which will be made upon it. To achieve this, past prejudice must be swept aside, and maximum efficiency with the minimum of delay must be the guiding principle. . . . Our own opinion is that the number of undertakings must be substantially reduced, and that this should be effected by suitable amalgamations. It is our hope that coalowners as a body will publicly declare their acceptance of this principle, and their intention to apply it.

Technical reorganisation is the only solution of the coal problem, the only way to combine high wages and good profits with cheap coal. It is encouraging to find this solution advocated by the chairman of one of the biggest colliery undertakings in Great Britain. The record of the Bolsover Colliery Company gives additional weight to his forthright advice. Wages are relatively high; in 1943 the average wage per shift of coal-getters was £1 14s. 7d., equivalent to more than £10 a week on the basis of six shifts. Profits are also good; they have shown a steady increase during the thirties, and have enabled the company to pay regular dividends—these amounted to 15 per cent on the ordinary shares during the past five years—besides putting aside substantial amounts for development, a feature of its policy. The cause of the company's prosperity is to be found in the successful application of the policy of technical reorganisation which its chairman advocates for the industry as a whole; its output per man-shift greatly exceeds that of the industry as a whole. No doubt the conditions for mechanisation are not equally favourable at all other collieries; but this merely strengthens the case for the concentration of production. Will the industry as a whole heed the advice of Mr Brooks and voluntarily redesign its structure "with the minimum of delay"?

### Design in Industry

Industrial design has been a neglected art in this country, but recently there has been evidence that its importance is being recognised. Apart from improving the

and raise wages by increasing the productivity of labour. In essence, the job of the industrial designer is to produce an article in such a way that its prime virtue is its fitness for purpose. He pays attention to the appearance of the article, but his success in making his design beautiful depends on how far it embodies his first principle. Simplicity is his watchword. Wartime experience in all branches of industry has revealed the advantages of good designing. To take an example from civilian goods alone, utility furniture (apart from the raw materials used) is better in appearance than pre-war furniture of comparable price. Clothing and pottery, too, have been forced to pay more careful attention to design. The education of public taste has quickened with the results of wartime necessity. The improved appearance which accompanies simplification of design has been welcomed. It is realised that design is a factor which has a part to play in reducing prices and bringing semi-luxuries within reach of all who want them. Cheapness need not in the future be synonymous with bad design and ugly appearance. The cost of design is a negligible item when spread over a large number of units. English industrial design lags behind that of America and other countries. Too little attention has been paid to the subject by industrialists. In America the profession of industrial design consultant is an established one whose services are considered vital. The consultant is able to turn his hand to any product—he is not a specialist in any one industry—and his work may range from motor-cars to clocks. In England no such profession exists, although efforts are being made to establish a chair of industrial design at a university. Designers are an integral part of industry, and their services should be used to a far greater extent than in the past. They can play an important part in revitalising production for the home and export markets.

### For Residents Only

Parana Plantations have now concluded negotiations for the sale of their two Brazilian subsidiaries, of which they are the holding company, to financial interests within that country. If shareholders agree, the purchase price will be £1,620,000. This sum, together with net liquid assets of £307,000, is sufficient to ensure the repayment of the company's shares at par, with a margin to spare for expenses. It cannot be considered other than satisfactory that the 5s. shares, which for the last ten years have fluctuated in a speculative manner at prices usually well below par, and sinking as low as 3d. in 1939, should at least be redeemed at their original value. It also seems clear that the terms of repayment in the case of this private company are surprisingly better than those which could be obtained, under the recent settlement, for holders of official Brazilian bonds. But cause for congratulation ends there, and it is hard to judge how far the price is a reasonable one for the assets of the land company and the railway company. For many years their accounts showed a considerable deficit, but there has been a fair improvement since the introduction of a reorganisation scheme in 1937, and in 1942 there was a figure of earned for ordinary for the parent company of 3.2 per cent, which fell back, however, to one of 0.1 per cent for the year to June 30, 1943. The company has never paid a dividend, but it seems likely that it has reached the stage where its activities warrant some return, which would, however, be handicapped, perhaps fatally, by the incidence of local restrictions and the weight of double taxation. The real reason for advising the voluntary liquidation is, in fact, summed up by the directors who point out that:

While no less impressed by the intrinsic merits of the properties than when the company was formed, they have been led by political and financial developments of recent years, which could not have been anticipated, to revise their estimates of the value of the properties as an investment to non-residents in Brazil.

The sting of this statement lies in the phrase "non-residents in Brazil." It is a poor comment on international co-operation in industrial development that it should be possible to congratulate investors on suffering no worse a fate than the loss of all return on their capital for almost twenty years.

### Building Labour

In earlier articles in *The Economist*, the importance has been stressed of increasing the productivity of the

Vitamins are physical substances that can be seen, touched and tasted. Here you see, magnified about thirty times, crystals of Vitamin C (L-ascorbic acid).

## CLOSE-UP OF A VITAMIN

AMONG the uninformed, vitamins are conceived to be anything from a mere meaningless word, coined to bemuse the unscientific mind, to a quality (like volatility, for example) or even a function—anything, that is, but physical matter that can be seen, touched and tasted. But vitamins are actual physical substances.

Above is a photomicrograph of Vitamin C (L-ascorbic acid), a colourless, water-soluble, crystalline substance, magnified thirty times. This substance was synthesized by Haworth in England and Reichstein in Switzerland in 1933, and is now produced on an industrial scale by Roche Products Limited.

Perhaps the most important advance of recent years in applied dietetics is the achievement of the organic chemist, who, working in collaboration with the pharmaceutical industry, has made large-scale production of vitamins possible.

Since 1912, when Sir Frederick Gowland Hopkins' writings and work adduced convincing evidence for the necessity of the "accessory food factors" (vitamins), not only in the maintenance of health, but of life itself, progress has been rapid.

Take a single example. Only ten years ago the available supply of synthetic Vitamin C (or ascorbic acid) was contained in a laboratory test-tube. Today Vitamin C is synthesized on a large industrial scale.

Roche research chemists and their collaborators accomplished this important task. Today tons of

Vitamin C are produced in Roche chemical plants every month. Many elaborate processes are involved, taking many weeks from start to finish.

To this vast production many brave men already owe their lives. In the last war, during the siege of Kut, General Townsend had nearly 1,100 cases of scurvy among his fighting troops. In this war, during the siege of Tobruk, our men, although deprived of the natural sources of Vitamin C (fresh fruit and vegetables), received synthetic Vitamin C to make good their loss.

Vitamins B<sub>1</sub>, B<sub>2</sub>, C, E and K (analogue) are now all synthesized in this country by Roche. To meet the needs of the nation, many of these vitamins are produced on a large scale. Roche have changed the gramme in the test-tube to a ton in the industrial plant. Scientific knowledge, technical ability and the most modern chemical engineering have made this possible.

ROCHE PRODUCTS LIMITED

### IS THIS MAN YOU?

A persuasive speaker in public, a cool, calm thinker, never embarrassed, a good loser, a good mixer, making friends without effort? If not, you need RAPIDISM, the fascinating new course, endorsed by leading psychologists. Write now for free Booklet to: THE RAPIDISM INSTITUTE, 212, TUITION HOUSE, London, S.W.19.

building industry, if post-war housing needs are to be adequately met. There has so far been little indication from the operatives' side of a realisation of what this means, or any concrete suggestions of how it could be achieved. Building workers tend to cling rather tenaciously to their craft traditions, of which they are justifiably proud, and to regard bricks and mortar as the main ingredients of a housing programme. The British building operative could learn a great deal from a study of the methods used in the United States. Although wages of craftsmen are more than three times as high as in this country, the cost of building is not appreciably higher and average output per man-hour is greater. The Bossom Mission was particularly impressed with the interest which the American operative took in his output, the full use he made of the better organisation and tools provided, and the various schemes in existence for encouraging incentive and good craftsmanship. It is necessary to encourage similar interest and adaptability among building operatives in this country, quite apart from any incentive which may be provided through piece-rates. Building labour has gained important advances since the war, and one of the most important steps has been its decasualisation. Between the two wars an average of about 15 per cent of the labour force were out of work. It seems likely that the unions will insist on the maintenance after the war of some form of the Essential Work Order, which provides a guaranteed week and payment for "wet" time. Another wartime development has been the introduction of joint production committees on some building sites. But if these and other improvements are to be retained, building operatives must accept the introduction of new methods and new materials, and discard any ideas that technical progress is their enemy.

### The Cinema Empires

In reply to a question in the House on Tuesday, Mr Dalton revealed that there has been a further development in limiting the expansion of the cinema empires. On this occasion it is Associated British Picture Corporation which has been asked to restrain its activities, but it must be admitted that the restraint imposed is not likely to prevent a very material further expansion in this group's dominion. According to their own statement, they now own or control 450 cinemas, while the corresponding figure for the Gaumont and Odeon groups together is 607. The terms of the new restriction are that ABPC shall not own or control, directly or indirectly, more cinemas operated in the United Kingdom than the companies controlled by Mr Rank, and that the ABPC "A" circuit cinemas, either in London or in the country as a whole, are not to exceed a figure agreed by the Board of Trade as corresponding to the effective booking strength of Mr Rank's largest circuit either in London or in the country as a whole, respectively. It is impossible without inside knowledge to say exactly what limits are imposed by the latter provisions, but it is clear that there is room for very considerable further expansion by ABPC. The joint managing director of that group, Mr Max Milder, has, however, expressed the view that there will be no rush to achieve the permitted parity, but that the corporation may very well concentrate upon improving its existing houses. The idea of preventing monopoly by giving official sanction to two empires of equal size appears to contain certain dangers. The two empires have agreed not to combine, but it is difficult to see how they can be restrained from co-operating, if that policy should at some future date seem good to them. Ownership and overt control are not the sole factors in securing and extending empire over the exhibiting side of the cinema industry. There is also the question of bookings. Further, one side of the industry cannot usefully be considered in isolation from the others. Possibly, as the Earl of Selborne, Minister of Economic Warfare, said in the House of Lords on Wednesday, there is nothing to prevent this country from turning out films as first-class as those of any other country. The fact is that, hitherto, they have been few in number. It is for the sub-committee of the Films Council, which Mr Dalton has invited to look into the whole matter, to investigate and make recommendations designed to improve the quality and volume of the film industry's output.

### Chinese Exchange

Further concessions announced this week in the rate at which certain remittances may be made to China draw

attention to the parlous state of the Chinese monetary situation. The official rate for the Chinese dollar has, since the beginning of 1942, held rigidly at 3.3 13/2d. This rate of exchange, low though it be in relation to the former Shanghai parity, has long ago lost all touch with the purchasing power of the Chinese national currency. The official statistics show the Chungking cost of living index number in August last—the latest date for which figures are available—as 6,074, taking the first half of 1939 as equal to 100. In August, 1942, the figure stood at 2,249. The Chinese authorities are undoubtedly using the printing press—or rather the planes which bring the new notes from abroad—as an instrument of taxation. If they can keep the measure of inflation and the cost of living rising by about 10 per cent per month, they reckon to be keeping the situation well under control. The latest evidence, however, suggests that this rate of price inflation is being steadily exceeded. The result of this steep increase in the price level and of the rigid pegging of the exchange rate has been to create serious difficulties to those persons in Chungking whose purchasing power is derived from external remittances. The difficulties became sufficiently acute last autumn to call for a special exchange concession of 50 per cent on a large array of remittances from Great Britain to Chungking. These included remittances to diplomatic, consular and military personnel, and a number of private remittances, including those to charities and newspaper correspondents. The further concessions recently announced double the discount on Chinese dollars for all remittances for personal expenses of British employees in China, for emigrants' remittances and for relief and charitable payments. For these payments, therefore, the effective rate of exchange becomes 1 1/2d. per dollar, or exactly half the official rate. Even this figure is completely out of touch with the true parity, which itself is changing almost daily and always in the same depreciating direction. The difficulties of the foreign community in Chungking are partly eased by the use of United States dollar notes, which provide one of the principal means of remitting funds to Chungking. A very active black market in these notes operates in Chungking at rates far more unfavourable to the Chinese currency than the most liberal concession rates for remittances. There have been demands from Chungking that this market in United States currency should be suppressed, because it is alleged that such operations are creating chaos in the Chinese monetary situation. This is to mistake the symptom for the cause. If the unregulated issue of paper money is continued, the Chinese national currency may ultimately become worthless—a process for which the West provided some illuminating precedents after the last war.

### Montreal Debt Agreement

Although full details are not yet available, it now appears certain that the labours of the London Committee to secure fair treatment for holders of City of Montreal stocks have been successful at almost every point. Not only is there a radical change in the position of the British investor as compared with that under the offer of two years ago, but the same is true, in some degree, of that of the Canadian and US holders, while the whole structure of the City's finances has been placed on a surer basis. This is, of course, due in large measure to the fact that the lapse of time has improved the standing of the City's credit, but that is an argument against taking hasty decisions without due consultation. The London Committee took their stand on the right of all investors to have the terms of their contracts taken into account in any composition with creditors which might prove necessary. The three main points were, the repayment of debts as they fell due, the maintenance of contractual rates of interest until maturity and full recognition of the relative rights of different classes of stock to redemption, however much or little the actual date of final repayment might be deferred. All these points have now been conceded, and in this concession Montreal has recognised that there is real validity in what may sometimes appear to be the rather tiresome detail of London arrangements and that a contract, however intricate, must be honoured. Short of specific performance, which was never demanded, and subject to the details of the serial redemption provisions being satisfactory, the Montreal settlement shows a respect for the rights of the individual contractors which is in striking contrast with several recent plans of foreign borrowers.

# BENEFACTORS OF MANKIND

CHARLES FRANCIS BRUSH (1849-1929)

*His outstanding work was in the field of light, a subject, akin to life itself, which still engages the seeker after scientific truth, and awaits final definition. In his great old age he was described as "A Pioneer of Light". Could any epitaph be more honourable?*

5-127

# Pioneering

THIS brilliant American scientist interested himself in the study of gravitation and molecular physics, but his great obsession was electricity. He lived through the progressive stages of candle light, lamp light and gas light, and then he contributed the electric arc lamp to the amenities of civilisation, bringing noon-day light at midnight to city squares, boulevards and broadways. His inventions include a dynamo, and he claimed the lead storage battery as one of his original conceptions. The Brush Electrical Engineering Co. Ltd., which bears his name, sprang directly from his activities, and has carried on the tradition of his pioneering through half a century of progress.

# IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED

## INCREASED PROFITS—SALES WELL MAINTAINED

### LORD DULVERTON'S STATEMENT

The forty-second ordinary general meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held, on the 22nd instant, in Bristol, the Rt. Hon. Lord Dulverton (the chairman) presiding.

The secretary (Mr G. W. Anson) read the notice convening the meeting and the auditors' report.

The following is the statement by the Chairman, which was circulated with the report and accounts and taken as read:—

In the directors' report you will have seen that we have had to record the death of two directors—Mr E. G. Mardon and Mr J. D. Macdonald. I must also refer to the death of Mr H. W. Gunn, the first secretary of the company and later its deputy-chairman, whose resignation from your board was mentioned in my statement two years ago.

Three new directors—Messrs A. G. Thomson, R. S. W. Clarke and B. H. Harrison—have recently been appointed. They have all for many years been actively engaged in the company's business.

### ACCOUNTS

I would draw your attention to the form in which the accounts are presented. Last year some alterations were made in conformity with modern practice, and this year we have made further changes. In particular, we have separated reserves and surplus from current liabilities and provisions: we show the provision made for income-tax beyond the liability for the current fiscal year; and we state the amount of income-tax charged on the accounts on profits for the year. For comparative purposes last year's figures have been adjusted to the basis adopted for this year.

On the balance-sheet the first important variation is in stock-in-trade, where this year's figure is £7,012,714 more than last year. To a minor extent this is due to a rise in the price of leaf tobaccos; but the major factor is the additional rate of duty imposed by the Chancellor of the Exchequer in April, 1943, bringing it to the formidable figure of 35s. 6d. per pound, compared with 9s. 6d. at the beginning of 1939. As I explained last year, this means that duty-paid stocks carry a very much higher value.

### FINANCIAL POSITION

Debtors are up by £4,987,353, the reason being the advance in prices caused by the increase in duty to which I have referred.

The tax reserve certificates, which at October 31, 1942, stood at £7,000,000, were surrendered during the year against our liabilities for taxation.

Bank balances and cash in hand show a reduction of £2,779,497, to which it will be more convenient to refer when I comment on the bank overdraft.

On the capital and liabilities side, creditors, taxation, etc., are down by £2,180,488, owing mainly to the fact that our estimated outstanding liability for excess profits tax unpaid at October 31, 1943, was less than the corresponding figure at October 31, 1942.

Bank overdraft appears at £11,373,121, against £7,500,000; but if we deduct from each of the two years' figures the amount of bank balances and cash in hand it will be seen that the net increase in our indebtedness is £6,652,618. This increase, which would have been much greater if we had not used our tax reserve certificates

to meet taxation liabilities, is the direct consequence of the increases in stocks and debtors, the reasons for which I have already explained.

### ALLOCATION OF PROFITS

In the profit and loss account the profit for the year appears at £15,562,242, an advance of £411,904 on last year's figure. Against this are charged directors' fees (£10,000), income-tax on profits for the year (£7,775,000) and an allocation of £100,000 to widows and orphans' benefit account. This account, set up in 1929, had almost become exhausted, and your directors therefore have thought it prudent to replenish the account by the sum named, with the result that (as shown in the balance-sheet) the account now stands at £131,622. The balance brought down at this stage is £7,677,242, to which must be added the balance brought forward from the previous year £1,701,032, making a total of £9,378,274. Out of this sum £500,000 has been transferred to general reserve (bringing it up to £10,000,000), leaving £8,878,274 available for distribution. The proposed disposition of this balance is clearly shown both in the directors' report and the accounts.

### GIFT TO STAFF AND WORKPEOPLE

For many years past we have thought it well to mark our appreciation of the loyal and willing service of our employees both at home and abroad by a gift over and above the ordinary salary or wage. I am sure that once again stockholders will endorse the decision of your board to make a gift to the staff and workpeople of a sum equivalent to 16 per cent. of the total salary or wage received from the company during the twelve months ended October 31, 1943. The general conditions of the gift are the same as in previous years.

### GENERAL COMMENTS

Our sales have been well maintained. Reference has already been made to the increase in the tobacco duty imposed in the Budget of April, 1943. That this fresh addition has not resulted in a severe fall of consumption is due to three factors—the insistent demand of the public for our goods, the high wages now generally prevailing, and the curtailment of many other forms of expenditure.

In previous years I have referred to the invaluable work done by Sir Alexander Maxwell, the Tobacco Controller. It is a source of great satisfaction to the tobacco trade that his services have been recognised by His Majesty, from whom he received the honour of knighthood last summer.

I do not propose to make any forecast as to the future and will content myself with saying that within the limits of our manpower and womanpower we shall endeavour to meet the high level of demand both from the Forces and the civil population.

The report and accounts were unanimously adopted, and a final dividend of 7½ per cent., together with a bonus of 2½ per cent., both free of income-tax, was declared on the ordinary stock, making a total distribution for the year of 17½ per cent.

The formal business having been transacted, a hearty vote of thanks to the chairman, directors and staff concluded the proceedings.

# TEMPERANCE PERMANENT BUILDING SOCIETY

## DIRECTORS' REPORT FOR THE YEAR ENDED DECEMBER 31, 1943

The board of directors have pleasure in submitting the 90th annual report and statement of accounts.

**President.**—The directors report with deep regret the death, on August 10, 1943, at the advanced age of 92, of the Society's president, Mr William Bingham, J.P. Elected to the board in 1910, he served as chairman from 1927 to 1939. By his wise discernment, business capacity and sterling integrity he rendered distinguished service which has been unparalleled in the Society's long history.

**Shares and Deposits.**—The combined share and deposit receipts for the year under review exceeded the total of the preceding year by £207,834. As withdrawals from share and deposit accounts continued below normal the amount standing to the credit of shareholders and depositors at the end of the year was increased by £291,923 to £5,317,598.

**Mortgages.**—The growing demand for mortgage facilities, to which attention was called in the previous report, has continued. Advances completed during the year, £460,623, showing an increase of £246,822. It is gratifying to record that borrowers' repayments continue to be well maintained and that the number of cases to be included in the statutory schedules has been substantially reduced.

**Assets.**—The total assets amount to the record figure of £6,554,670, representing an increase during the year of £325,935.

**War Damage.**—The Society's scheme for financing repairs to mortgaged properties, which have been subject to air raid damage, continues to prove of valuable assistance to borrowing members.

**Profit and Loss Account.**—The balance of profit for the year, after making due provision for all ascertained liabilities, including income tax and national defence contribution amounting to £89,007 and interest due to shareholders and depositors, was £24,877, to which has to be added the balance of £23,137 brought forward from last year's account—a total of £48,014.

This amount, together with a further sum of £1,823, arising from the recovery of amounts written off in previous years, has been appropriated as follows:—

|                                  |        |
|----------------------------------|--------|
| Addition to general reserve fund | 15,000 |
| Addition to contingency fund     | 11,205 |
| Balance carried forward          | 23,632 |

**Reserves and Liquidity.**—The combined total of the general reserve fund, contingency fund and balance of profit carried forward now amounts to £1,123,632, representing 21.13 per cent. of the aggregate share and deposit capital. In this respect the Society continues to occupy the premier position among large building societies.

As cash and investments now total £1,095,886 the balance sheet discloses a substantial degree of liquidity. During the year investments in Government securities totalled £250,000.

**Post-war Organisation.**—The directors have taken steps to ensure the adequacy of the Society's internal organisation by acquiring during the year, on favourable terms, commodious premises in Regent Street. When reconstructed the building will provide the Society with a conveniently situated and attractive centre for its post-war activities.

The year's steady progress justifies the directors in their confidence that the Society will play its full part in the work of post-war reconstruction.

On behalf of the board of directors,  
CYRIL W. BLACK,  
January 17, 1944. Chairman.

# JOHN WHITE (IMPREGNABLE BOOTS), LIMITED

## A SUCCESSFUL YEAR

### MR. JOHN WHITE ON POST-WAR PROSPECTS

The tenth annual general meeting of John White (Impregnable Boots), Ltd., was held, on February 24th, at the head office of the company, Higham Ferrers.

Mr John White, the chairman, presided.

The chairman said,—Gentlemen: I am again pleased to report that your company has enjoyed another successful year. This is particularly gratifying in view of the fact that the turnover is necessarily down somewhat on account of the continued withdrawal of young labour, both men and girls, to the various Services.

The year under review was the twenty-fifth anniversary of the foundation of the business. Had conditions been normal we would have celebrated the Silver Jubilee in some suitable manner, but this must perforce be postponed until more favourable times, which we hope may not be too far distant.

I am also glad to say that your company has continued to work on the happiest possible terms with the various Ministries responsible for the control of supplies, prices, etc., of the commodities we use. I must repeat what I said in my speech last year, that I should be lacking in my duty if I failed to compliment those responsible for the manner in which these departments have supported manufacturers generally in these difficult wartime circumstances.

### NO NEED FOR PESSIMISM

As the war progresses and the horizon brightens, the question of reconstruction is occupying the attention of most business people, and this period is being given constant, careful thought by your directors, and although we realise the magnitude of the task generally, I do not think the boot trade need be unduly pessimistic.

Through dire necessity the warring nations have built up a vast industrial machine to produce the enormous supplies of arms and equipment necessary for this global war. When, as one day will be the case, these enormous resources are turned to the supplying of the needs of a peacetime world, we may be surprised how quickly these needs will be provided for. Our shipping will be free to carry the raw materials we require. There will be a scarcity for a time, but I believe we are entering an age when this scarcity will be supplemented by scientific productions which will be used in ever-greater quantities. While I believe there is nothing like leather for the production of footwear, our industry lends itself to the use of rubber—both natural and synthetic—plastics, fabrics, etc., and I feel these will help at least to bridge the gap that might otherwise exist between the time of scarcity and plentiful supply of the natural commodities. For this reason I take a more optimistic view than is generally taken of the time that will elapse before the return to normal conditions.

### OPPORTUNITIES FOR YOUTH IN THE INDUSTRY

There is one aspect of the future, however, that will require special attention. That is the means to be adopted to attract young people to our industry. The fine opportunities the boot trade offers to ambitious youth should be much more generally known. Conditions and wages are good and the hours are reasonable. Opportunities for advancement to the highest executive positions are open to those with ambition, and particularly to those who take advan-

tage of the facilities for technical education now available and which will be very greatly improved as soon as circumstances permit. To provide full scope for the development of these opportunities, I consider we must continue with a system of robust and healthy private enterprise, as under such a system the avenues for advancement and the necessary incentive for the development of latent talent are broader than they could possibly be under any system of bureaucratic control.

### THE QUESTION OF CONTROL

While I realise that some measure of control may be necessary for a period after the war, I hope that when the purposes for which these measures were instituted have been served they will be discontinued at the earliest possible moment. It would probably be as well to remind those advocates of semi-permanent control that that country where private enterprise has the fullest scope and encouragement is able to give its citizens the highest standard of living in the world. As to its performance under such a system, one has only to remember the production of one hundred thousand aircraft a year and the colossal output of the Kaiser shipyards, without which things might have been very different indeed for the people of these islands.

### NEED FOR DEFINITE STANDARDS IN FOOTWEAR

There is, however, one important point upon which I would like to see control continued, and that is the restriction or total prohibition of very cheap or shoddy footwear. I would advocate that all footwear be made to definite standards—the present "Utility" specifications might be maintained or perhaps improved upon. So far as wages and conditions go, my views are too well-known to be reiterated here. Our work for the Ministry of Supply has been recognised and we have received congratulations from the highest authority. When I am able to tell the full story I may be able to reveal a prodigious record. Our factories have been honoured by a visit from H.R.H. the Duchess of Gloucester, who expressed great interest in our works and to whom long-service employees were presented.

### ADDITIONAL CAPITAL REQUIREMENTS

You will notice we propose to increase the authorised Ordinary capital by £125,000. The company, due to its steady expansion and the higher prices prevailing in recent years, requires for its efficient operation more and more capital. Its bankers, the National Provincial Bank, Ltd., have been most helpful to us in this respect. A time will come, however, when the company's coffers must be replenished and the bank accommodation repaid. The Treasury will not at the moment allow us to make a substantial issue of further capital. We are, however, taking the necessary preliminary steps so that when either the restrictions are lifted or the Government thinks it wise to allow a company such as ours to increase its cash resources, we shall be ready. We shall need to be in a strong capital position in the post-war world.

The report and accounts were unanimously adopted, the retiring director, Mr B. M. Lindsay Fynn, F.C.A., re-elected, and the auditors reappointed.

# SUN LIFE ASSURANCE SOCIETY

## GRATIFYING IMPROVEMENT IN RESULTS

### MR. W. M. PRYOR'S STATEMENT

The annual general meeting of the Sun Life Assurance Society will be held at 63 Threadneedle Street, London, E.C. 2, on Tuesday, March 14, 1944.

W. M. Pryor, Esq., D.S.O., D.L., chairman of the Society, has issued a statement to shareholders, which in outline is as follows:—

### CHANGES IN DIRECTORATE

As you will have already learned, the Society suffered the loss by death in June last of Sir William Goschen, who had been chairman of the board for 25 years. Throughout that period he unreservedly devoted himself to furthering the progress of the Society. He will long be remembered with affection by all of us who had the privilege of working with him. Also, during the year, the death of Mr Sale deprived us of a colleague who was respected by all, and who took the greatest interest in the Society's welfare throughout the 22 years for which he was a director.

I am pleased to report, however, that Mr C. G. Randolph and Mr J. R. Abbey have joined the board, and you will be asked to confirm their appointment at the annual general meeting.

### NEW BUSINESS

The new life business secured during the year was 15,389 policies for sums assured of £10,453,000. This shows a gratifying improvement upon the results of the previous year, and it is particularly encouraging that our numerous clients have shown an increased preference for assurances with participation in profits, the sums assured under which were nearly 14 per cent. greater than those for the year 1942. The facilities which the Society offers under its system of assurance without medical examination appear to be more than ever appreciated by the assuring public in present circumstances.

New business under the Society's house purchase scheme continues to show a steady improvement, and it may be confidently expected that after the termination of hostilities the public demand for house purchase facilities will lead to a rapid expansion of business under this heading.

### FUNDS, INCOME AND OUTGO

The total funds of the Society increased by £2,514,000 during the year, and as at December 31st last stood at £55,282,000, of which £49,687,000 represented the funds of the life assurance account. The life premium income at £5,520,000 showed an increase of over £223,000. The gross interest income of the life account was £1,933,000, the net interest income being £1,489,000. Death claims were £1,363,000, including war claims of about £185,000, a total which is somewhat below that for the year 1942. Claims by maturity were £2,396,000, a figure which is materially in excess of that for the previous year. Surrenders at £188,000 again showed a reduction and were in fact the lowest since the year 1926.

The gross rate of interest earned on the life assurance fund was £4 1s. 3d. per cent. per annum, as against £4 3s. 6d. per cent. per annum for the previous year. The continued fall in the gross rate of interest combined with increased taxation has made it necessary for us to contemplate still further strengthening the Society's valuation basis.

### REVIEW OF ASSETS

The total of the assets of the assurance funds has increased by £2,500,000 and now amounts to over £55,500,000. Many of our sources of investment outside Stock Ex-

change securities, such as the scheme of house purchase and loans to local authorities, are now somewhat restricted, and, moreover, the present low rates of discount among the Society's policies and the reduction in the total of loans in force on policies, though in themselves excellent and healthy signs, increase the money which must seek investment.

The existence of these unusually large sums for investment does, however, give us the satisfaction of making generous contributions to new Government loans. As a result the principal alteration in the distribution of our Stock Exchange securities is again the large increase in British Government securities, which at £22,535,000 show an expansion of over £3,500,000 and are equal to 40 per cent. of the assets. The Society's investments in new British Government issues since the outbreak of war now amount to £10 million. A geographical analysis shows that nearly 98 per cent. of the assets are now located within the British Empire, and defaults which have occurred in this group since the outbreak of war have been few and insignificant. The upward trend of market prices which continued in 1943 in most sections apart from British Government securities has substantially increased the already large margin by which the market values of our Stock Exchange investments exceeded the figures at which they stood in the balance sheet at the end of 1942.

#### TRIBUTE TO THE STAFF

Before concluding these remarks I desire on behalf of the board to pay a sincere tribute to the loyalty and efficiency with which our much reduced staff have carried out their duties during the past year. I also extend our best wishes for the welfare and safe return of all those of our staff who are serving in H.M. Forces or who are engaged in any other form of national service. Finally, I offer our deep sympathy to the families and relatives of those who have lost their lives in the service of their country.

### THE ENGLISH ELECTRIC COMPANY, LIMITED

#### INCREASED PROFIT

The 25th annual general meeting of The English Electric Company, Limited, was held in London on the 24th instant. Sir George H. Nelson, M.I.Mech.E., M.I.E.E. (chairman and managing director), in the course of his speech said:—The increase of £41,972 in the issued Ordinary Stock is a result of the completion of the exchange of shares with the holders of Ordinary Shares in D. Napier and Son, Limited.

(Continued from page 282)

#### Marine Insurance Company v. Grimmer

Much interest has been taken in marine insurance circles in this case, which raises the question of the interpretation of the words "and/or steamer or steamers," added to a named vessel, in a reinsurance contract. The circumstances were briefly as follows. In the spring of 1942 the Marine received under an open cover with a firm of sugar merchants a declaration of £23,000 per the steamer *Cavalier*. On June 2nd a further declaration of £50,000 was received, per an unnamed steamer from Jamaica to Montreal, and the Marine decided to effect a special reinsurance for £20,000 in respect of this shipment. Inquiry of the merchants' London agents elicited the information that the consignment would "almost certainly" be sent in the *Cavalier*, and reinsurance was arranged accordingly, but the next day the Marine took the precaution of having the words "and/or steamer or steamers" added to the cover. It later transpired that the £50,000 consignment had in fact been shipped in the *Western Head*, which was torpedoed and sunk, the loss being known at Lloyd's on June 1st. The reinsurers argued in the High Court that the phrase "*Cavalier* and/or steamer or steamers" meant that the cargo was intended to be shipped in the *Cavalier*, but that cover would apply if for any reason a change had to be made to another vessel; the words could not, it was

Creditors and reserves are up by £402,427; this is largely due to additions to our reserves for taxation, which fully cover all taxation liabilities on the profits up to the date of the accounts under review.

Our liquid assets amount to £2,987,603, which is slightly in excess of last year and is fast approaching the £3,000,000 mark. The general reserve has been increased by a further £100,000 and now stands at £900,000. Fixed assets are practically the same at last year after applying the depreciation of £100,000 shown in the profit and loss account.

The profit carried to the balance sheet is £11,786 greater than in the previous year. Once again we have only been able to place £100,000 to general reserve. The present incidence of taxation prevents any further allocation.

He referred to the activities of D. Napier and Son, Limited, particularly with regard to the successful production of the Sabre engine which is fitted to the Typhoon aircraft.

In conclusion, on behalf of the Stockholders, he conveyed their sincere thanks to the staff and workpeople with a special word for the committees of the staff and workpeople.

The report was adopted and a dividend of 10 per cent. on the ordinary stock declared.

### BARROW, HEPBURN AND GALE, LIMITED

#### POST-WAR PROSPECTS

The 23rd ordinary general meeting of Barrow, Hepburn and Gale, Limited, was held, on 24th instant, in London.

Mr. George W. Odey (chairman and managing director) said that the accounts for 1943 showed profits for the year, after making reserve for taxation, of £55,313, as compared with £66,878 for the previous year. Taking into account interest on Tax Reserve Certificates and allowing for various reserves, and appropriations, £38,575 was carried to the balance sheet as compared with £48,320. There had thus been a reduction of approximately £10,000 in the net divisible profits. The trading profits of the company, before making provision for taxation, were in point of fact reduced and unfortunately their standard profit for E.P.T. purposes was a low one. The net profit left to the shareholders was little more than a tithe of the total profits earned by the company.

#### TRADING ACTIVITIES MAINTAINED

Their total stocks had risen from £599,588 to £664,695, which was an indication that the trading activities of the

company were being maintained. Their raw materials were in fact in better supply, and, apart from the hazards of war, they might hope to maintain their turnover in 1944.

Their margin of profit had been greatly reduced by the introduction of a Government scheme of control applied to the sole leather industry in which the company had a substantial interest. In the first year of the stabilisation scheme the prices at which hides were charged had been fixed at a level which subsequently had to be adjusted, involving a rebate to the Ministry, which would have the effect of adjusting the industry's profit to the margin permitted. Those rebates were, in fact, taxation under another form and it was a great misfortune that the whole question of surplus profits could not have been left to be taken care of by E.P.T.

In view of the hardship that E.P.T. at 100 per cent. must inevitably inflict on companies such as theirs, it was to be hoped that there would be some flexibility in its application. An increasing rigidity had, on the contrary, been introduced. In spite of these difficulties, however, the directors did not anticipate any difficulty in maintaining the ordinary dividend at its present rate. They did regret, however, their inability to plough back into the business the amount of profit that they would do in normal times.

#### CLAIMS FOR E.P.T. REPAYMENT

The balance sheet showed a large goodwill item of £190,851. In view of the substantial amounts the company had paid in E.P.T., they could look forward to a large claim for repayment after the war. The Government had as yet given no indication as to the conditions which would be attached to that repayment, but it was possible that such an item might commend itself to the Government as being a suitable object for the utilisation of such tax repayments. Funds utilised for that purpose would in no way increase any inflationary tendencies which might obtain in the post-war period, but they would effect a substantial improvement in the financial resources of the company and lay the foundations of its future prosperity.

With regard to the post-war position, they anticipated little difficulty in turning over from war to peace. As far as leather was concerned the war had proved how much it was preferred as material for footwear by the general public. There was, of course, some danger of a world wide shortage of hides due to the destruction of the herds in the areas where fighting had taken place, but apart from the difficulties of raw material, the future would seem to hold out good prospects for the industry.

The report was adopted.

contended, encompass the case where, as the evidence clearly showed, the merchants never intended the sugar to be consigned in the *Cavalier*. This construction was rejected by Lord Justice Atkinson, who found that the words meant that the cargo was "expected" by the assured (i.e., the Marine) to go in the named vessel, that the Marine had reasonable grounds for expecting the sugar to be shipped in the *Cavalier* and was justified in naming the ship. His Lordship held, however, that the cover must be deemed to include the £23,000 consignment actually shipped in the *Cavalier*, as well as the £50,000 expected to be sent in that ship, but in fact consigned in the *Western Head*, and gave judgment for 66 per cent, a *pro rata* proportion, of the amount claimed by the plaintiffs. The case, although an interesting and important one from the professional viewpoint, may prove to have but limited value as a precedent, since the circumstances were such as could hardly arise otherwise than in time of war.

#### South Africa's Budget

South Africa is budgeting for a total expenditure of £180 million in the year 1944-45; of this £102,500,000 is to be spent on defence. Mr Hofmeyr, who introduced the Budget in Capetown this week, proposes to cover £58

million of the total expenditure by borrowing. This leaves a gap of £5,300,000, on the basis of the estimated revenue from existing taxes. That gap is to be filled by increased death duties to the amount of £1,150,000, by higher customs and excise duties estimated to bring in £2,125,000, and the balance by reducing the super tax limit from £2,000 to £1,775, by increased charges on stock exchange operations and by raising the special tax on diamond mines profits from 3s. to 4s. in the £. The taxation on gold mines is unchanged, the rate of special contribution remaining at 22½ per cent. Mr Hofmeyr pointed out that in framing the revenue estimates for the coming year he had been compelled to allow for a further reduction of £1,400,000 in the proceeds of the tax from gold mines, not in consequence of any concession to the industry, "but as a result of the inescapable fact that the industry's output and profits have, as a result of war conditions, declined very considerably, and are still declining." The increase in the diamond tax, said Mr Hofmeyr, is fully justified by the prosperity of the industry. The increased taxation on stock exchange operations takes the form of a special wartime surcharge on the transfer duty, estimated to bring in £1,100,000, and a stamp duty on brokers' notes which should yield £200,000. Since stock exchange operations form one of the basic, and at present most active, South African industries, these additional imposts appear to be shrewdly chosen. The one fault which will be found on this side with the latest South African Budget is that Mr Hofmeyr has not seen fit to remove the discriminatory income tax levied on non-resident shareholders, the one blot in the Union's fiscal record.

| Stocks and work in progress | 4,426,406 | 4,906,050 | 4,641,673 |

In 1942, English Electric acquired 90 per cent. of the ordinary shares of D. Napier and Son, the latter company exchanging their holdings for ordinary capital in English Electric. Since then the remaining shares have been acquired. These transactions explain the increase in the cost of a 10 per cent. dividend for 1942 and 1943, as well as the increase in the inter-company items for those years. The profits for 1942 and 1943, also, include dividend receivable from D. Napier and Son.

The £1 units of ordinary stock, standing at 50s. 9d., yield £3 18s. 10d. per cent.

### FINANCE AND BANKING

**THE MONEY MARKET.**—Supplies of credit have been abundant in the money market this week. Though tax revenue has again taken a heavy toll of resources, Government expenditure has also been on a fair scale. Floating debt borrowing has been small, the TDR payments of £45,000,000 required from the banks this week representing rather less than £10,000,000 of fresh money. The discount market obtained the relatively large allotment of 27 per cent. of its quota applications at last week's tender for Treasury bills, but it has found the outlet for bills with the clearing banks more than adequate to make room for the new bills taken up this week. The clearing banks have begun to buy April bills, this representing the longest maturity of paper bought from the market for some time past. The easier money market position is reflected in the exceptionally high total of £200,318,000 of bankers' deposits in this week's Bank return. This is an increase of £32,907,000 on the previous return, a movement balanced by an increase of £34,935,000 in Government securities. The explanation of these two movements may be sought, firstly, in the fact that transfers of revenue payments from the banks to the Exchequer tend to be made in the second half of the week; secondly, in the possibility of heavy Government disbursements being made rather earlier than had been planned, and therefore, requiring special assistance from the Bank. The consequent abnormal expansion in bank should be remedied within the next few days.

**MONEY RATES, LONDON.**—The following rates remained unchanged between Feb. 18th and Feb. 24th:—

Bank rate, 2% (changed from 3% October 26, 1939). Discount rates: Bank Bills 60 days, 1½%; 3 months, 1½%; 4 months, 1½%; 6 months, 1½%; Treasury Bills: 2 months, 1-1½%; 3 months, 1-1½%; Day-to-day money, 1-1½%. Short Loans, 1-1½%. Bank deposit rates, ½%. Discount deposit at call, ½%; at notice, ½%.

**Exchange Rates.**—The following rates fixed by the Bank of England remained unchanged between Feb. 18th and Feb. 24th. (Figures in brackets are par of exchange).

United States, \$ (4.863) 4-024-034; mail transfers 4-821-034. Canada, \$ (4.863) 4-47; mail transfers 4-43-47. Switzerland, France (25.224) 17-30-40. French Empire, France 1974-2004. Syria, 16-81-85. Sweden, Krona (18.159) T.T. 16-85-95. Dutch West Indies, Florin (12.11) 7-58-62. Portugal, Escudos (110) 99-80-100-20; mail transfers 99-80-100-30. Panama, 54-02-04; mail transfers 4-02-04. Brazil, 83-64½ cr. (buying); mail transfers 83-56½. Uruguay, 7-6597 p. (buying).

**Fixed Rates for Payment at Bank of England for Clearing Office.** Spain Pesetas 44-00. Turkey, Piastres 520. Italy, 71-25 lrs.

**Market Rates.**—The following rates remained unchanged between Feb. 18th and Feb. 24th.

Egypt, Piastres (97½) 97½-98. India, Rupee (18d. per rupee) 17½-18½d. Belgian Congo, France 1764-1. China, National 43-3½. Iran, Rl. 124-130.

**Special Accounts** are in force for Chile, Peru, Bolivia and Paraguay, for which no rate of exchange is quoted in London. Rate for payment into Argentine special account: 16-01 pesos.

**Forward Rates.**—Forward rates for one month have remained unchanged as follows:—United States, ½ cent. pm.-par. Canada, ½ cent. pm.-par. Switzerland, 3 cents pm.-par. Sweden, 3 ocs pm.-par.

A change has been made in the method of showing an excess of the Office Expenditure over Post Office Revenue. Such excess is now included as ordinary expenditure (under "Total Supply Services") instead of being shown, as up to July 24 inclusive, as a deduction from ordinary revenue.

After decreasing Exchequer balances by £8,106 to £3,159,961, the other operations for the week (no longer shown separately) raised the gross National Debt by £34,157,590 to £19,289 million.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |     ## THE ECONOMIST PROFIT FIGURES

The defects of company accounts and the complications of income-tax make it impossible to present statistics of profits in a simple, standardised form. The following definitions may assist the reader:—

(a) **Gross and Net Profits.**—Gross profits are profits before payment of standard income-tax (but after such other taxes as EPT and NDC). Net profits are profits after tax. In many cases, figures of gross profits can be calculated only by adding back what appear to be the appropriate amounts of tax to the net figures published.

(b) **Accounting Period and Reporting Period.**—Company reports are published some time after the end of the period in which the profits were earned. The figures can be grouped by the quarter in which they are published (i.e., by the reporting period) or by the quarter in which the company's financial year ends (i.e., by the accounting period).

(c) **Old Basis and New Basis.**—On the old basis the net profit consisted of preference and ordinary dividends as published, whether gross or net, plus actual allocations to free reserves. Total profit was the largest figure of the profit and loss account, excluding capital profits and transfers from reserves. The figure was struck before depreciation if that was disclosed. On the new basis no net profit figure is provided. It can be obtained by deducting from the gross the appropriate rate of tax. The gross profit is the gross total of interest and dividends plus additions to free reserves and other savings, both grossed up at the stated rate of tax.

## COMPANY RESULTS (February 9, 1944, to February 23, 1944)

## The Parties' Dilemma

THE Independent candidate did not win the by-election  
at Bury St. Edmunds. But she gave the official  
nominee a run for his money and polled 44 per cent of  
the votes cast. The result will not do very much to alter  
the atmosphere of latent crisis in party circles—an atmo-  
sphere that has rather been heightened by the long  
deliberations of the Labour Party executive and by the  
open declaration of the newly-elected Liberal President  
in favour of ending the party truce.

As is always the case in party warfare, the words that  
are being used bear only a distorted relation to the truth.  
There is, for example, much talk of "disloyalty," when  
all that is in question is the best way of giving expression  
to the will of the people. Much play is made with the  
pleasure that the election of such-and-such a candidate  
will give to Dr Goebbels, or alternatively to Marshal  
Stalin, when none of the contests has shown any likelihood  
of altering the action of Britain towards either its allies or  
enemies. There is, finally, much invocation of "national  
unity." This is the most curious cry of all, for if by unity  
meant complete agreement on all political questions  
manifestly does not exist and cannot be created by  
refusing to admit the fact, while if by unity is meant united  
concentration on the primary aim of winning the war, no  
one but the fanatics is trying to disturb it.

The real explanation of what is happening is not to be

found in such high-falutin' phraseology; it is more simple.  
The party politician is caught in a dilemma. On the one  
hand, the leaders of all the major parties in the country  
are in the Government, and no one wants them out of the  
Government. It is a necessary part of the mechanism of the  
British constitution that they should be supported by their  
parties. But, on the other hand, the electorate shows a  
distressing tendency to vote against the candidates put  
forward by this all-party Government. It is not merely the  
nature of the politician to seek votes, but his duty, and he  
is naturally disturbed by the evidence that the voter does  
not like what he is doing. Just what it is that the voter  
objects to is not quite so clear. Like Alice, he is in that  
state of mind that he wants to deny something, only he  
does not know what to deny, "a nasty, vicious frame of  
mind," the Red Queen called it. So the party politicians  
run round like the mice in some of the psychologists' more  
tantalising experiments, very worried but unable to find  
the way out.

The *malaise* affects the politicians of the Left in the  
greatest degree. For whatever may be obscure about the  
public mood, it is clearly one of reaction against the habits  
of mind and action that ruled the country in the twenty  
years between the wars—in short, against Baldwinian or  
Chamberlainite Toryism. The Left parties consequently  
think that they have nothing to lose and much to gain

from a resumption of party politics, and though the party leaders are standing very firm, there is an increasing number of breakaways—by-election candidates who are orthodox Liberals or Labour men save for the formal label of "Independence" they hang round their necks.

But it would be wrong to suppose that the Tories are wholly on the defensive. There is, admittedly, a trend away from Baldwinism. But that does not necessarily mean that there is a trend to Labour. There are two possible cleavages of opinion—between the Right and the Left, and between the Old and the New—and there is some evidence that the voter's objection to Old Guard Toryism is not that it is Right, but that it is Old. It is certainly true that there are no signs of any enthusiasm for Labour. On one of the few occasions when the matter has been tested, at Kirkcaldy, very nearly as many electors voted for an extreme brand of Scottish Nationalism as for the official Labour candidate. And certainly, if the question is between the Old and the New, there can be nothing much Older than the Labour Party—unless it be the Trade Unions.

Moreover, the practical politicians of the Conservative Party have another argument. It is one thing to vote for the Independent at a by-election, or to vote Labour rather than Conservative in a Gallup Poll. It would be an entirely different thing to vote for Attlee rather than Churchill, which would be the issue at a General Election. The Tories are watching the tricks being taken against them, and their trumps can be played only in a General Election. So they, too, are getting restless.

Several ingenious compromise plans are being put forward. For example, it has been suggested that the parties should fight each other in the by-elections, but continue to collaborate at Westminster. This, it is true, appears to be what the electorate wants the politicians to do. But it is asking too much. It would work only if contested by-elections did not usually result in any change in party representation. But if, as seems probable, contested by-elections in present circumstances led to heavy losses of seats by one party (whether or not they were won by the other), the basis of the coalition at Westminster would certainly be undermined. Another proposal often put forward (though more frequently for application immediately

after the armistice than while the German war is still going on) is that the coalition should be dissolved, a general election held and the coalition promptly reformed. But, apart altogether from the inevitable post-election recriminations, how is it supposed that this would alter anything? Can it be imagined that some re-shuffle of the party representation in the Commons and the Government would effect any change in policy? The Labour Party may be able to win more seats, but what it needs is more characters.

There is, in fact, no escape from the dilemma. Either the coalition and its necessary counterpart, the electoral truce, will continue, or else there will be a return to one-party government with a General Election to settle which party it shall be. It is highly unlikely that there is any way of evading this dogmatism. What is not quite so certain is which of the two is preferable. It has always been asserted, as a matter that required no proof, that an all-party coalition is the proper form of government for war-time. But of all the democratic belligerents, Great Britain is the only one to prefer this solution. A return to party government would probably not be an unmitigated disaster. But it would certainly have its disadvantages. It would be a pity to lose Mr Bevin and Mr Morrison or Mr Eden and Sir John Anderson, let alone the Prime Minister himself. Though there can be no certainty, there can be very little doubt that a continuance of the present coalition, at least until Hitler is disposed of, is the best procedure.

This means that the electoral truce must be maintained, and that anyone with any sense of responsibility should assist in its maintenance. It does not mean that the electorate can safely be treated in the contemptuous way that has been all too frequently in evidence; they must be given good candidates and a policy of more than hero-worship. Nor does it mean that the present arrangement either can or should continue beyond the German armistice. Nor, least of all, does it mean that the two major parties should comfort themselves with the belief that the future lies between them. For the real root of the dilemma lies in the fact that there is no party in the land which in policy and personalities, in creed and competence combined, meets the wishes of the people.

## A Policy for Germany

MR CHURCHILL'S statement to Parliament on February 23rd suggested—what was in any case the general assumption—that the Conference at Teheran discussed the peace terms to be imposed on Germany. It is reported, too, that the European Commission is at work on the formulation of agreed terms. Obviously, the policy adopted towards Germany will be the core of the peace. Germany's central position between eastern and western Europe will give it ground for balancing and manoeuvring between Russia and Great Britain, if by the end of the conflict they have failed to concert their policy. After the last war, there was suspicion and misunderstanding between France and Britain from the first days of the peace because the attempt to achieve an agreed policy broke down. There were ambiguities in the Treaty—or at least there were serious differences between the interpretations put upon it by the British and the French, and when, in 1923, the French, acting, as they maintained, in accordance with the Treaty, imposed sanctions single-handed in the Ruhr, they aroused a storm of righteous indignation in Britain which Hitler was still able to exploit thirteen years later when he remilitarised the Rhineland. Nothing undermined the Anglo-French entente so potently as the growing divergence of views over Germany in the two countries. If Russia, Britain, and the United States fail to agree on their treatment of Germany, if they fail to embody that agreement without ambiguity in a treaty, and if they fail to enforce the treaty they have written, then the second German Peace will go the way of the first.

It is not merely a matter of agreeing on the terms of a treaty at the moment of signature. Much more vitally,

it is a matter of securing agreed enforcement of those terms. The settlement with Germany will be built to last. Its terms will have to stand the test of ten, twenty, thirty years' change in mood and power. If the peace settlement is such that by 1955 or 1965 any one of the victorious Great Powers is unwilling to use force to resist its violation, the tragedy of the 1920s and 1930s will be repeated. The need for mutual enforcement removes the problem from the plane of the imponderables—the degree of guilt of all Germans or most Germans or some Germans, their "rights" or lack of rights—and brings it down to a level on which the British politician is completely at home. For one of the limiting factors on mutual enforcement is what the British people are likely to accept in the burdens of enforcement. The politician is dealing here with something of which he has twice had experience in thirty years—the degree of willingness of the average citizen to go to war, and his views, when he is at peace, on what constitutes a reason for going to war or preparing for war. This is the test to which the peace terms for Germany must be submitted—the foreseeable reactions of ordinary people in ten years' time. Sixteen years after Versailles, they would not go to war to prevent the rearmament of Germany. Seventeen years after Versailles, they gave Hitler some emotional support when he reoccupied the Rhineland. The British mentality—and to a lesser extent the American—has no doubt been modified by the horrors perpetrated by Hitler. The British would now resist some infractions of the settlement which they previously treated with complacency. But how many? And in how many would they get support from America? For how many things will

it be possible to get the two peoples to take up arms when some new Baldwin sits in Downing Street and some new Coolidge in the White House? The answer will be somewhat different in the 1950s from the 1920s, but there is no evidence to suggest that the British have made the kind of mental somersault that the maintenance of a really Carthaginian peace would entail.

Those who support a Carthaginian peace sometimes argue that enforcement is no longer the crucial problem, because Russia will do the enforcing, however brutal the terms. This argument begs any number of questions. Will Russia be willing alone to maintain large armies of occupation in other lands and to divert any energies from the tremendous task of internal reconstruction? Would British or American failure to participate in the enforcement be accepted in Moscow as an amiable foible—or as ground for suspicion that Britain and America were more interested in coming to terms with Berlin than in enforcing the treaty? Would the domination of one Power over the whole of Germany be acceptable, in the long run, to the rest of the world? The terms for Germany must not only be agreed mutually. They must be capable of mutual enforcement.

When the Allied statesmen meet to discuss the peace terms for Germany—in the momentous atmosphere of Teheran or the leisurely atmosphere of St. James's Square—the British delegates should have the device "Remember the Rhineland" pinned to their desks. If that historic example of British preference for non-intervention is taken as the yardstick to judge the practicability of the terms, if nothing is put in the treaty that is not enforceable, it is possible that the settlement will last out this generation. It will not be a lenient settlement, for undoubtedly the general attitude towards Germany is stiffer than it was in 1919. It is not inconceivable—indeed it is probable—that in ten or twenty years' time the British would be prepared to go to war to enforce German disarmament or to prevent the coming to power of a militarist clique. They might well be persuaded to use force to maintain some territorial rectifications, although the size of the transfers and the manner in which they were effected would naturally influence the British attitude. They would very possibly be ready, in the first few years after the war, to intervene for the purpose of collecting reparations, provided that the method of collecting them did not obviously flout all common sense. It is even possible that the British would fight in ten or twenty years' time to keep Germany's major industrial areas under some system of international control. The strict maintenance of terms such as these would certainly cripple Germany's power to make war, but it would give the mass of the German people a reasonable chance of making a living and ultimately settling down with their neighbours. And the certainty that any infringement of the terms would be met instantly by armed force used in concert might have a stabilising effect.

But it is most unlikely that the British or the American

people would be ready to perpetuate, if necessary by war, anything resembling the system of forced labour which is very generally regarded as one of the worst features of totalitarian tyranny. They would hardly be ready to destroy Germany's industrial system and crush all attempts to rebuild it, since such a policy would impoverish Germany's neighbours quite as radically as Germany itself. Above all, can it be thought likely that they would fight a war in ten or twenty years' time to prevent Bavaria rejoining Saxony or the Rhineland rejoining Prussia? The dismemberment of Germany is of all policies the one on which the Allies are least likely to be agreed after the passage of years and least likely to uphold by force. And it should be borne in mind that the more the settlement itself is accompanied by massacres, exterminations and violence against German civilians, the more the resolution of Britain and America will be at the mercy of German propaganda later on.

Mr Churchill's statement in the Commons suggested that the yardstick used at Teheran was neither the practicable test of enforcement nor the impracticable test of the merits and demerits of the Germans. It suggested a new and very unhappy expedient—that the terms for Germany are being worked out by the negative process of fixing all the Allies' claims on Germany—to security, to reparations, to manpower, to land—and then accepting the aggregate as the basis of the final settlement. Mr. Churchill endorsed the principle of territorial compensation for the Poles, then passed on to the general principle that Germany could not claim "as of right" to be covered by the Atlantic Charter with its renunciation of territorial transfers made without the agreement of the people concerned. It is true that the German people have forfeited any claim to have their "rights" considered. But if this is put forward as the only principle of the settlement, the final result is not very likely to stand the only really valid test of a wise and enduring settlement—the readiness of the victors to uphold it not only on the morrow of victory when the German people will in any case be powerless, but ten or twenty years later on when, for good or evil, the Germans will have recovered from the prostration of defeat.

There can be no question of condoning the Germans. The peace terms must be severe and public opinion is ready for severity. But the limits of severity must be fixed not by the goodness or badness of the Germans but by the firmness and resolution of the victors. In all the discussion of German peace terms, the debate has always raged over the symptoms and diagnosis of the patient. Little thought has been spared for the skill and decision of the doctors. Now at last they have come together for consultation—first in Teheran, now by proxy on the European Commission. If they can agree on a cure and know that in 1955 and in 1965 they will still be as fully resolved to continue the treatment, Europe may be spared the inanities and tragedies of the interwar years.

## South Wales in Transition

THE effects of the war on former "Special Areas," in Scotland and on the North-east coast, have been discussed in recent issues of *The Economist*. In South Wales the position is fundamentally the same. A highly industrialised area, depending largely on heavy industry and the export trade, it suffered acutely during the Great Depression. In 1936, 141,770 workers, 34.2 per cent of its insured population, were unemployed. To-day, as a result of armament production, it is experiencing conditions of full employment. Its concern is how to maintain this level of work when the war is over.

Wales, however, has certain characteristics, both positive and negative, which distinguish its position from that of the other Special Areas and make its problems in some respects easier, and in others more difficult, to solve. A sheltered and mountainous region, Wales has received a proportion of new war industry which seems lavish by comparison with the more vulnerable North-east coast. Nothing precise can be said about the numbers engaged in war production, but the figures are very large. Nearly a dozen Royal Ordnance factories, employing many thousands, manufacture shells and explosives, guns, small arms and ammunition, and fill shells. A number of engineering and electrical firms have been evacuated to Wales, or have established daughter plants there. Imperial Chemical Industries has opened a metal works in a town where nearly three-quarters of the insured population were out of work before the war. A new development has been the introduction of light alloys, magnesium and aluminium, though production has recently been curtailed. The trading estate at Treforest employs three times as many workers as before the war, and has switched wholly from the production of light consumer goods to war work. A most significant and novel feature has been the tremendous increase in the number of women employed.

The questions generally asked are whether the wartime plants can be used in peace and whether the evacuated firms will remain. The purely engineering ROFs could probably easily be converted to the production of light engineering goods, such as household equipment and fittings. The enormous capacity of shell-filling and explosives factories presents a more difficult problem. If they cannot be converted, some could be retained for storage or for arsenals. But in many cases the ROFs have been located, for strategic reasons, in remote sites and they involve a great deal of travelling.

In a sense South Wales is experiencing a foretaste of its transition problems. The curtailment of the Ministry of Supply programme has already led to a reduction in the labour force of certain ROFs and to the transference of mobile labour—a very sore point with the Welsh, who have bitter memories of industrial transference during the depression. There are still pockets of immobile labour, largely married women and semi-fit miners, and Wales is anxious to receive any new war work that may be planned. But it is difficult, at this stage of the war offensive, to envisage the establishment of new war industries on a scale sufficient to absorb the existing pockets of surplus labour. The decision to curtail the production of magnesium and aluminium—dictated by economic-strategic reasons at the highest level—has been received with apprehension. Certain evacuated firms are understood to be seriously contemplating permanent settlement in Wales. Their managements are enthusiastic about the quality and adaptability of the labour, though less so about the area's amenities and social life. It is obvious, if new industry is to be attracted to South Wales, that there will have to be a bold programme to improve amenities and communications and to build new houses, while shortage of suitable factory premises may be a serious deterrent.

The Welsh Reconstruction Advisory Council, under the chairmanship of Principal J. F. Rees, of University College, Cardiff, has just presented a memorandum to Sir William

Jowitt on the problems and future needs of South Wales. The Council has been limited by its terms of reference, which commit it to proceed at the Government's reconstruction pace. Until, therefore, the Government announces its decision on the planning and location of industry—the trinity of Barrow, Scott and Uthwatt—local effort must be frustrated. The Council, it seems, has also been hampered by a certain reluctance on the part of leading industries to give evidence or put forward concrete proposals. Their excuse is plausible: that the future of the coal and iron and steel industries cannot be determined locally; and with no knowledge of the plans for international trade or the terms of the peace settlement they cannot estimate their capacity or plan their organisation. They, too, are waiting for a lead from the Government.

South Wales is dependent on heavy industries. Before the war about a third of its insured population were employed in coal and about 11 per cent in iron and steel and tinplate. Whatever new industries may be developed or directed to the area, they will be subsidiary to the basic industries and cannot take their place. It is here that the negative features emerge; they concern efficiency and technique. The tinplate industry, which is practically confined to Wales, is a case in point. Its problems and prospects require separate examination, but they can be briefly indicated here. The industry, even before the war employing about 25,000 workers and producing 905,000 tons annually, was only working at 70-75 per cent of nominal capacity. Since the war, production has been concentrated, and about two-thirds of the mills have been closed or used for storage. Many will never reopen. It is generally accepted that the Ebbw Vale strip mill, with two or three other plants on the same lines, could supply all the tinplate needed. The old-fashioned, high-cost method of production is finished. Moreover, it is impossible to estimate the likely post-war demand for tinplate—half of the South Wales output is normally for export—especially if the use of plastic substitutes is developed. In any case, however, technological improvements and reorganisation will create unemployment, and work will have to be found for displaced tinplate workers. The short-term outlook for steel is more encouraging. There is bound to be a large demand for steel for post-war reconstruction in Europe and at home, and to implement the Government's policy of pre-fabricated temporary houses.

Of greater importance, and even more uncertainty, is the future of coal. South Wales is an old coalfield and technically less efficient than many other districts. The extent of mechanisation is relatively small, owing partly to geological difficulties and also to lack of capital investment. Some of its pits are already being financed as "necessitous undertakings." The manpower situation is acute. The numbers employed fell from 250,000 in 1924 to about 130,000 to-day, and are still declining. Some thousands are expected to be certified by medical boards as suffering from pneumoconiosis, and therefore to leave the industry—unless measures both for rehabilitation and for allaying coal dust are extended and accelerated. The position is particularly serious in the anthracite pits of West Wales. Lack of labour will make even more acute the pressure for efficiency in technique, for reorganisation and larger output per worker.

Immediately after the war, of course, there will be an enormous demand for coal, especially if Europe's pits are put out of action. The tendency to push coal exports, to counterbalance the loss of foreign investments, may be inevitable, but it can hardly be relied upon in the long run. The importance of efficient coal utilisation and of the development of coal by-products is now widely recognised. A first step should be a comprehensive survey of the area's coal resources, and eventually the aim should be the development of an integrated policy for the exploitation of the nation's fuel resources as a whole. A decision is required about an oil-from-coal industry in South Wales,

where the steam coal is particularly suitable for the Fischer-Tropsch process. There is already a low temperature carbonisation plant at Pencoed, which could be extended. Colonel W. C. Devereux, Chairman of International Alloys, Limited, has put forward an ambitious scheme for developing electrical and chemical industries, based on coal. But these are not questions to be settled simply on technological or social grounds. They are economic problems. To build up high-cost activities in Wales or any other Special Area, simply to keep work in the region, might be nationally disastrous and locally a very grave delusion. The cost of generating electricity from coal, for instance, may be prohibitive, especially if the upward trend of coal prices continues. It is uncertain whether the necessary finances would be forthcoming or whether such a project could be realised within the framework of private enterprise.

Part of the answer may be the Severn barrage. The scheme has considerable support locally, where it is represented as promising to do for South Wales what the Dnieper dam did for the Ukraine, the Tennessee Valley Authority for the Southern American states, and what the Hydro-electricity Bill may do for Scotland. The project would hardly take less than ten years to complete, but ten years is a short time in a long-term plan. It is also argued that work on the barrage might hold up the building of the Severn bridge, which has been approved by the Government and for which there is immediate need.

The whole question of improving transport and communications of South Wales is crucial. While the Severn bridge would provide a link with Bristol and the West of

England, there is an equal need for a road to join North and South Wales. Local railway services need to be overhauled, and the electrification of the lines running up the valleys deserves to be considered. The dock and harbour facilities are modern and could take greatly increased shipping, not exclusively coal. Before the war the six main Great Western Railway harbours between them handled nearly 28 million tons. Wales is hoping to get its share of transatlantic air transport, and it also aims at catering for an expansion in tourist traffic. In both these respects Wales is a rival to Scotland, but, if there are to be developments in civil aviation and universal holidays with pay, the rivalry could be friendly, and the criterion of success not national charity but local efficiency and adaptability.

In a limited space it is impossible to do more than draw attention to the most important needs. Wales's great resources cannot be too strongly emphasised. The prime necessity of the future will be to develop technique and encourage research, especially in coal utilisation and coal getting, and to increase the adaptability of labour and the mechanisation of methods. Some two million people cannot again be condemned to live in idleness and squalor; but they can only be given the work and opportunities they are entitled to within a policy of national full employment and productive efficiency, not regional protection. Each of the Special Areas is, understandably, pushing its wares and staking its claims; and while there are Special Areas, there can be no Full Employment. But the only right and economic way in which to proceed is to plan for each so that its resources will fit in best with the maximum national advantage.

## Army Education

IF the man in the street were asked "What is Army Education?" he would probably reply, if at all, "ABCA." This is partly because the Army Bureau of Current Affairs came in for much publicity at the time of the ban on Sir William Beveridge's summary of his report on social security, and partly because the method of ABCA, by discussion groups, has become increasingly popular. But ABCA is only a small part of the whole scheme of Army Education, and a very recent innovation.

Army Education is actually more than a century old. The first regimental school was established in 1811, and the rank of schoolmaster sergeant was created by Royal Warrant in 1846. There developed a special corps of army schoolmasters, whose function it was to provide recruits with an elementary standard of education. It is true that the early Army Education bore very little resemblance to the present system. Recruits were rough, rude and illiterate, fitted for nothing better than to take the King's shilling, and their schoolmasters were content to teach the three Rs, and inculcate the doctrines of sobriety and obedience. It was not, in fact, until the end of the last war that the modern scheme of Army Education began to take shape. Voluntary schemes for lectures and classes were provided for the troops in France, and these were co-ordinated and extended in 1918 under Lord Gorell.

After the armistice, a committee on adult education was appointed by the Ministry of Reconstruction, and its report set down as a guiding principle that

educational training must form an integral part of the daily life of members of the forces of the Crown.

The result was the formation of the Army Education Corps, charged with the soldier's general education, the provision of tests and examinations, the elementary education of his children, where civilian schools were not available, and provision for the education of officers. But the reforms were short-lived. Army Education was one of the first victims of post-war economy. For nearly twenty years, schemes for democratising the soldier's education stayed in cold storage. The personnel of the Army Education Corps tended to revert to the old

"army schoolmaster" type. Education, apart from technical instruction, remained a sideline to military training.

The outbreak of the present war provided an excuse for suspending education activity. Most of the members of the AEC were transferred to "other duties," and as the *Times Educational Supplement* commented:

It seems almost incredible that in these days, when the mental qualities of an army are as important as its military equipment, the Army Education Corps should have been disorganised and many of its personnel transferred to other duties.

It was left to the universities and voluntary bodies to provide some kind of educational facilities for the growing civilian army. Makeshift machinery was evolved for providing lectures, courses and classes on all sorts of subjects, some good, some bad, very many indifferent. In March, 1940, a committee was set up under General Haining, to investigate the problems of welfare, education and recreation for the army in wartime. It approached its task in much the same spirit as the earlier committee, and reported that

The first business of the army is to make a good soldier, but it is just as important to look after health of mind as health of body.

A civilian director was appointed to the War Office, and the AEC was expanded. The basis was laid for the present developments.

These developments have, on the face of it at least, been most remarkable. The modern soldier has a range of opportunity for learning and self-expression which would have been thought impossible in the last war. He can—in theory, at any rate—ask for and receive instruction on any subject, ranging from bee-keeping to astronomy, or how to play the trombone to the constitution of the United States. Lecturers, drawn from the panels supplied by the Regional Advisory Committees, travel round the country and lecture even to the most isolated units. Under the Winter Scheme, introduced in November, 1942, three hours a week out of training time are devoted to education. One hour is for "education as

oldier"—this includes such subjects as map-reading, mental history, calculation and message writing. Her hour is for "education as a citizen"; the object of the "citizen's hour" is to show the soldier what he is fighting for, to tell him something about his own country, and to equip him for taking an active part in democratic citizenship after the war. The series of pamphlets issued under the general title of "The British Way and Purpose," dealing with the British political and judicial system, economic organisation, social services, Imperial and foreign relations, and such subjects, provide the factual basis for discussion. In the third hour—"the soldier as an individual"—he can do more or less what he likes—handicrafts, languages, music, painting, or informed discussion. He can follow the numerous correspondence courses which have been organised under the education scheme, or undertake vocational training for the profession of his choice. In addition to the Winter Scheme, there is ABCA, one hour a week's compulsory discussion on current topics, between the officer and his unit.

The scheme is thus comprehensive and positive, in contrast to the early stages, when Army Education was primarily regarded as a means to relieve boredom. The returns of attendance at lectures, classes and correspondence courses are very large. But, though there is real interest, there are many limiting factors. One, probably the most important, is due to the shortcomings of the educational system which took boys and girls away from school at 14 and plunged them into industry, many of them in blind-alley jobs, which allowed no opportunity for further training or advancement. With such a background, it is not surprising to find indifference, ignorance and lack of interest among a considerable proportion of serving men and women. The officers who are responsible for instruction in the units may themselves be uninterested or unqualified. The idea of ABCA is to tighten the bonds between an officer and his men. This may work, but it may also have the opposite effect. It may often happen that men in the units have more knowledge of a subject than their officers. Adult education is a specialised job, for which some people have a gift, and others have not.

More scope could be given to the actual members of the Army Education Corps, which might well have the independent status, say, of the RAMC—a step which would follow logically from the Haining Committee's recommendation to treat health of mind on a level with health of body. Outside lecturers should get to know far more what kind of audiences they will have, with what

mental backgrounds, and what the intention of their talks is to be. There is still too much formal pretence, too much rhetoric, too much preaching and teaching above troops' heads and away from what they themselves really want and understand, too much organisation and administration, form-filling and statistics-taking, and too few real concrete results in terms of worth-while education. There is always the suspicion that in large part Army Education, apart from the straightforward schoolmastering of the AEC, tends to become the invention of those whose job it is to run it.

How far can the troops, in any case, hear or say what they wish? Is discussion free? In theory there is no ban on controversial subjects, and in practice many units do discuss freely all manner of contentious issues, political or religious. But, locally, lecturers have been withdrawn because their politics are not acceptable, and inevitably, perhaps, certain Commanding Officers have banned certain speakers or subjects. One CO barred a discussion on equality of opportunity in education as "sheer Socialism"; another refused a suggested course on the comparative theory of fascism, democracy and communism as "political" and "controversial." These examples are not typical, but censorship of this sort by local "Blimps" cannot but be harmful. It must increase the cynicism there from the start in the men's minds. Are they being given what they want to talk about, or what is good for them? Inevitably, COs have a dominating influence in their units; but it is desirable that, within the limits dictated by genuine military considerations, as much latitude as possible both in subject and discussion should be allowed.

As the end of the war approaches, Army Education assumes increasing importance. It will be crucial in the demobilisation period, as was seen twenty-five years ago. Apart from vocational training, which is important and popular, the ideal to be kept in sight is that every man and woman should come back to civil life better, not worse, equipped to contribute to the work of a democratic society in the post-war world. The army to-day is interested mainly in the problems of demobilisation and jobs after the war. It would greatly help the tasks of the Army Education authorities if closer links could be established between them and the various Government departments actively engaged in the making of post-war plans. Mr. P. R. Morris, who took up his appointment as Director of Army Education this month, enters the field at a crucial time. He will need the fullest co-operation from the army authorities, the civilian education departments, and from the men in the Forces themselves.

## NOTES OF THE WEEK

### Time in Finland

The Soviet Foreign Office has published the armistice terms for Finland which were communicated to M. Paasikivi in Stockholm. The Russian proposals have been almost universally recognised as reasonable and generous. The official Soviet statement puts particular emphasis on the fact that the Soviet Government has not demanded Finland's unconditional surrender. Nor is an occupation of Helsinki and other Finnish towns by Soviet troops envisaged. More surprisingly still, Moscow has not made the re-shuffling of the present Finnish Government a condition for negotiations, though the official communiqué stresses the Russians' distrust of that Government, and qualifies the agreement to negotiate with it by a clause which speaks about matters "concerning the cessation of hostilities." Once this objective is achieved—it may be deduced—a reconstruction of the Government in Helsinki may again be demanded. The more immediate demands presented to the Finns include: the rupture of relations with Germany and the internment of German troops in Finland, the latter to be carried out by Russian forces if the Finns consider this task to be beyond their powers; the re-

establishment of the Soviet-Finnish Treaty of 1940 as well as the withdrawal of the Finnish troops to the 1940 frontier; and the immediate repatriation of Soviet and Allied prisoners of war and deportees. The demand for the internment of German troops in Finland meets with considerable sentimental opposition from the Finns; an attitude with which there can be no sympathy in Allied countries. Should the Finns agree to this demand, Russian military action in Finland may be confined to the northern areas where General Dietl's seven or eight divisions are concentrated. The Finns would in this case be spared a massive Soviet occupation which they may have some ground to fear. It is in Finland's own interest not to give the Germans the time to switch their forces to the centre or to the south of the country. Three further issues—demobilisation, reparations for damage and the status of the Petsamo area—are to be left for negotiations in Moscow. What form of reparations the Russians will propose is not known, but they may very well wish to take over the Hangoe base permanently instead of leasing it from Finland. Facilities for Russia in the Petsamo area—if not its transfer to Russia—may also come under the heading of reparations.

Any forecast of peace terms is, however, speculative. What matters at this stage is that the Russian armistice terms imply no direct or indirect threat to Finland's independence, and that they have been worked out in agreement with the other Allies. The Finns—so it seems at the time of writing—have not yet made up their mind about their reply. The Diet has passed a vote of confidence in the Government, and the press is talking of difficulty in accepting the terms. But this may be only an attempt to play for time. Time, however, is an essential factor in strategy, as last summer's events in Italy have proved, and the Russians cannot be expected to be too generous about delay. A quick and comparatively lenient settlement with Finland would have a great effect on the other satellites. Bulgaria is already feeling its way towards an armistice. But the dilemma of all the satellites is the same: if their defection would be sufficiently valuable to the Allies to secure them lenient terms, it would also be sufficiently damaging to the Germans to make them resist it by all the means in their power.

### Frontiers and Independence

The crisis in Poland is rapidly developing to a climax. In January, a National Council, which is to rival the Polish National Council in London, was formed inside Poland by pro-Soviet groups; and now a pro-Soviet Commander-in-Chief—as rival to General Sosnkowski—is reported to have been appointed by that Council, and has already started his activities under the pseudonym of General Rola. The Polish underground organisations have reacted to these developments with a statement which amounts to a declaration of civil war. The analogy between Poland and Yugoslavia is almost self-evident. Yet, there are some important differences, too. The feud between Marshal Tito and General Mihailovich is predominantly a domestic Yugoslav issue, only indirectly connected with foreign policy. The cleavage in Poland is immediately and directly an international affair, because of the advance of the Soviet armies into Poland. The following of "General Rola" is probably not very large now. But it may become much larger in the not too distant future, for military if not for political reasons. "General Rola" will be able to arm his guerrillas from Soviet ammunition dumps, while the official Polish underground is only very inadequately armed. In a country which is the object of invasion and counter-invasion the ability to supply weapons to men who are eager to fight is in itself a potent political argument. If with the help of such "arguments," and of the advancing Red Army, the pro-Soviet military organisation in Poland asserts itself against the official Polish underground, then the independence itself of Poland may become little more than an appearance. "General Rola" has so far not received any official Soviet backing; and his appointment may still be a tactical move made in order to increase the diplomatic pressure on the Polish Government. The present tactics of the Polish Government, however—its refusal to consider a frontier settlement on the basis of the Curzon line—seem to bar the way to a compromise. By fighting for Poland's pre-war frontiers, M. Mikolajczyk's Government may well forfeit Poland's independence. Under such circumstances the rather bellicose speeches made by General Sosnkowski are of very doubtful service to his practical object; while they certainly provide Moscow with excuses for all sorts of action in Poland.

### Church Schools

The atmosphere in the Commons, during last week's debates on amendments to the Education Bill, appeared somewhat self-consciously tolerant. Most speakers were at pains to emphasise their sympathy with those of other convictions, and the desire on all sides to prevent a political scuffle which might endanger the safety of the Bill as a whole happily overcame, in most cases, the instinct to exploit sectarian differences and emotions for political ends. Chief among the proposed amendments were those arising from Nonconformist and Catholic interests. For the even tenor of the discussions in the Committee, it was a singularly fortunate coincidence that the question of Anglican schools in rural areas where no others are available for the children of non-Anglican parents should have arisen first. It was a matter which did not reveal such an unbridgeable cleavage of opinion as exists between the Catholic conscience and the Puritan's very different notion

of a fair bargain, and; by starting with the lesser question, the Committee was able to proceed with a little moralisation to the greater. The Nonconformist amendment was sought to secure, in substance, that in areas where there is only one school, it should be transferred from denburt to tional to local authority control. The difficulty of the school area was generally recognised, but members went concerned to see that any change-over of an auxiliary school to a controlled status—that is, from church school to local authority school—should be carefully undertaken so as to avoid the bitterness of local grievance against central coercion. It was pointed out that many Anglican schools will have to be handed over to the control of local authorities under the Bill as it stands, and that this may very largely end the problem of the single-school area. But it was also clear that there are some persons to whom a "single county school" area will be as distasteful as the "single church school" area is to the Nonconformists. Where the Anglican parents in one locality found the agreed syllabus unacceptable, to compel a transfer of authority would not only savour of compulsion, but would also take no account of the debt owed by the State to the work and sacrifice of the Church in building the schools—particularly village schools—which the Government has clearly recognised. It was clear that the interest shown by Parliament in the minority claim would necessitate a further reconsideration, before the Bill in its final form would be acceptable. On condition that the amendment would be dropped, Mr Butler has now promised to confer with interested members with the object of finding some other compromise, so that the question may be reconsidered when other relevant clauses (27 and 53) come up for discussion.

The discussion on Catholic schools and their claims on the community was in some ways only a preliminary canter, since Clause 14 does not offer the best opportunity for a debate on the respective liability of Government and denominational managers, and all reference to the actual proportion of liability was declared out of order. Both counter-proposals to the Bill made last week were considered to have grave disadvantages as methods of solving the Catholic problem. The first called for a stabilisation of the churches' liability at the 1939 figure, any excess over this being paid out of public funds. This was rejected on the grounds that an assessment of the 1939 liability would be open to criticism as to its accuracy, which would not be desirable. The second proposal was that certain schools with teachers wholly of one denomination should receive a 100 per cent. grant from public funds, thus lessening the total liability of the Catholic community. This was discussed concurrently with the first, but Mr Butler felt that it, too, placed too heavy a charge on the Government for denominational education. Thus the questions at issue between the Churches and the Government are still unsettled. However, some of the main principles of strategy on either side have now been made clear; Mr Butler has reiterated yet once more that Catholics cannot demand increased aid for their auxiliary schools that would not be extended to schools of other denominations, while any

aid to all the auxiliary schools would destroy the balance of the whole system. The Government consider arguments and proposals within limits, but clear that it would prefer to fight rather than injure by major amendment. Finally, the amendments are abandoned, but only as a mere outwork of the system of defences. The matter will come up again, perhaps more than once or twice, and it is not likely to be fought over with any less determination.

### RAF Report

Sir Archibald Sinclair has taken the opportunity of his annual report on the work of the Royal Air Force to announce a reorganisation of the original functional divisions of Allied Forces in the air. This step deserves particular comment only because it marks a further achievement in the gradual welding of a fighting weapon which will truly combine operations into a single striking force. The distinction between forces which are offensive and defensive in function is now the only one which is nominally preserved and even here there will be a unity of control at the highest levels of defective strategy, since both will be combined under the name of the Allied Expeditionary Air Force. For the defensive arm of the combined organisation, the old title of the Air Defence of Great Britain has been revived, to cover all units of Allied Air Forces which are responsible, by day or by night, for repelling enemy attacks on this country. More important, the offensive arm, now combining the 2nd British Tactical Air Force with the 9th American Air Force, is to be relieved of all defensive duties formerly undertaken by the old Fighter Command and Army Co-operation Command, and is now entirely free to attend to offensive operations over Europe. Coastal Command and Transport Command, apparently, will continue their separate, somewhat specialised, work, to which Sir Archibald paid generous tribute in his report. On the whole, the successes won and the progress achieved by the Royal Air Force in 1943 made good hearing for the Commons. The level of air warfare which the Allies are able to undertake on their own initiative is, more than anything else, an indication of growing power and increasing strength in every theatre of operations.

### Monte Cassino and After

It is useless to suppose, after the experience of Monte Cassino, that any individual building or monument can be spared, once it has come into the front line of battle. The military commanders showed the greatest forbearance; even so, the monastery could not be divorced from the Germans' general defensive position on the hill. The dilemma of Monte Cassino will be repeated all up the Italian peninsula and it is not a pleasant one. The Germans and the Mussolini government bear the first responsibility for exposing the treasures of Italy to destruction; but history tends to remember the immediately and not the ultimately responsible. It is, of course, possible that decisions on grand strategy will spare the country beyond Rome. Other fronts will be opened and it is unlikely that Italy will see the decisive action of the war. The Allied armies are already containing a superior number of German divisions and the Germans' long communications southwards to Rome are an added strain on their overstretched transport system. It is true that, for political as well as military reasons, the capture of Rome is the immediate objective of this campaign. An advance on Rome must mean fighting in Rome and if the battle rolls forward to the city it will be as impossible to spare Rome, building by building, as it was impossible to spare Monte Cassino. If, therefore, the greater strategy of the war dictates the advance to Rome and beyond, the only way of saving some of the treasures would be by a specific

As there is now a long waiting list for *The Economist*, subscribers who wish to renew their subscription are advised to do so before the date of expiry. If they fail to do so, their subscriptions will be automatically cancelled as soon as that date is passed, which will mean a gap of many months before the despatch of copies can be resumed.

agreement on neutral zones. It is difficult to say whether the Germans would make such a proposal, or even agree to it if made by others. But an attempt could be made through the Vatican to ensure that Rome itself and other areas of overwhelming cultural and historical importance be made into open cities or surrounded by properly supervised neutral areas—from which, of course, all hostile troops would have to be withdrawn. In this case, the Vatican and the neutral governments represented at the Vatican provide the machinery, not only for receiving such an offer, but for seeing it carried out by an impartial authority.

### Yet Another Argentine Regime

General Ramirez, the President of Argentina, has followed his Foreign Minister, General Gilbert, into "retirement." The circumstances surrounding the "resignation" of both generals were very similar. In both cases, their offices were surrounded by soldiers, the resignations occurred at an early hour in the morning and the new officials were in power before Buenos Aires was properly awake. The Young Colonels of the *Grupo de Oficiales Unidos* did not apparently wish to raise the question of the legitimacy of the new regime, for they announced that General Ramirez was resigning because he felt "tired" and had constitutionally handed his powers over to the Vice-President, General Farrell. General Ramirez, however, undermined the constitutional basis of the proceedings by sending his letter of resignation to the president of the Supreme Court, Justice Reppeto. Here there was no question of ill-health and weariness. The General blamed his resignation on "the force of circumstances," and there can be little doubt that force in this context was more than a turn of speech. The GOU and their leader, Colonel Peron, are the backbone of the new Farrell regime. Colonel Peron is acting War Minister, and a notorious pro-German. General Pistarini, has succeeded Admiral Sueyro as Minister for Marine. The supply of complacent admirals has, apparently, run out. That the Peron grouping are violently nationalist with Axis leanings is notorious, and although the Government has guaranteed that it will honour all its obligations, it is significant that the only two signatories of the decree breaking off relations with the Axis, Ramirez and Gilbert, have now "resigned." Naturally, the United States Government must reconsider its policy. The overthrow of General Ramirez by force brings the Farrell regime within the terms of the recent pan-American resolution not to recognise changes of Government brought about violently. Any action taken by the United States and Britain will presumably be concerted with the other Latin American governments. Without the backing of these states, there is always a danger that diplomatic action will be interpreted as "interference" and actually strengthen the regimes it is supposed to upset. The international implications of the new Argentine Government should not, however, be exaggerated. It is true that the Peron-Farrell group are nationalist and on the whole anti-American. Yet the military are now violently divided among themselves. Yet another attempted coup by yet another officer has apparently followed the setting up of the Farrell-Peron regime. Until these splits and quarrels are ended, no stable government and no consistent policy will emerge.

### A Difficult Course

The Consultative Assembly at Algiers began its third session on Tuesday last. Its debates centre on two major issues: the organisation of the Government and the status of the press in liberated France. The scheme for the organisation of the French Government has now been revised by the Committee of Liberation. It provides for three phases. In the first stage the Consultative Assembly is to continue in existence and to be enlarged by fourteen members from each liberated district. Communal elections will not be held at this stage; and the local councils will be appointed by the prefects who will be nominated by the National Committee. At the next stage a Provisional Assembly will replace the Consultative Assembly. It will consist of 440 members, the majority chosen in indirect elections by municipal bodies, the rest appointed by the National Council of Resistance. The powers of the Provisional Assembly are to remain chiefly consultative, though they are to be larger than those proposed in the earlier

Liberation in January. The Provisional Assembly will finally work out the electoral law for the Constituent Assembly, which will be chosen as soon as the return of prisoners and deportees to France allows for normal elections. The scheme for the organisation of the press is a peculiar novelty in legislation. Each region is to be allowed to have only one daily newspaper "obliged to publish all official announcements and a certain minimum of news." All political parties are to use the columns of this *journal unique*. Only in Paris will each of the political groups be allowed to start its own organ. Vichy publications will be stopped; newspapers are to be obliged periodically to reveal all sources of their income; the institution of *gérants* or figureheads to conceal the real control is to be abolished; and the publication of foreign advertisements is to be allowed only by special permission. The discussion on both these projects is sure to be lively. The Consultative Assembly has once again to steer a difficult course between the Scylla of quasi-totalitarian aspirations and the Charybdis of democratic weakness.

### Coal Consumption

The Minister of Fuel has imposed further limitations on domestic coal consumption. The quantities of house and kitchen coal and coalite available for the month of March are restricted to 4 cwts. in London and the south, and to 5 cwts. in the north. This is actually the same as the present maximum, but for the first time restrictions on coke supplies have been introduced. A maximum of 10 cwts. of coke, small anthracite, Welsh dry steam coal and manufactured fuel (other than coalite) is imposed. The official statement emphasises that these restrictions do not represent a ration, but a maximum. This method of limiting consumption certainly does not fulfil the same functions as rationing, since it does not carry with it equality of sacrifice. Under the present arrangements, householders who were in a position to lay in stocks in the early part of the autumn and winter will not be affected in the same way as smaller householders, without any cellar space. The man whose house is warmed and lit by gas or electricity will be better off than if he has an open fire, since there are no restrictions—other than voluntary effort—on gas and electricity consumption. The Minister admits that there are difficulties, and that stocks in some areas are insufficient to provide the maximum. It has been said that in these cases preference would be given to the small consumer without means of storage, but in practice the small consumer is the one who suffers. There are cases of working-class flats in London which have had no more than 1 cwt. of coal since Christmas—and rural dwellers have been very badly off. This winter has been much colder than last year's, and such privations may cause real hardship and illness. The Ministry may claim that it attempts to secure equitable distribution, and it may achieve it so far as the coal merchants are concerned. But there should be some means of securing equitable deliveries by the merchants themselves. Nobody will question the need for economy in fuel consumption, in order to provide coal for operational purposes, and the public willingly puts up with hardships in wartime, but it likes its hardships to be equally distributed. Lord Woolton's popularity as Minister of Food was largely due to the public's recognition of the fairness of food rationing. The moral, that it would have been better to ration fuel in 1942, has been repeated *ad nauseam*, but if the Beveridge fuel plan had been introduced then, or even last year, the situation might have been very different to-day.

### From War to Peace

Many thoughtful suggestions for overcoming the difficulties of the immediate transition period after the war are put forward by Sir Walter Citrine in his review, "The TUC in Wartime." Demobilisation, which he describes as "one of the biggest of the preliminary tasks of reconstruction," may also turn out to be one of the most controversial. Mr Bevin has stated that length of service is to be the sole criterion for the release of men and women from the Forces, and that industry will have to adapt itself accordingly. Sir Walter Citrine writes that the simple formula "first in, first out" will not work, and that certain grades of industrial workers must have priority of release, whatever their length of service. He sensibly suggests that the Government should draw up a schedule of reserved occupations in reverse. Perhaps the answer lies somewhere

between the two points of view. The experience of the last war showed that scientifically planned demobilisation was unworkable and that unplanned demobilisation was disastrous. The right policy would seem to be to adopt the length-of-service criterion as far as possible, but to release, according to carefully prepared priorities, those workers whose services are essential to the re-establishment of the national economy and, above all, to explain frankly the reasons for the policy. Sir Walter Citrine urges the Minister of Labour to take a census of people employed, to find out how many will want to stay in industry after the war. He also asks the Minister of Production, through his regional machinery, to undertake an immediate survey of all factories, to find out how long they will take them to re-tool and re-equip their plants and their likely requirements of raw materials and new machinery. This seems an essential step, and it would be surprising if it were not already being done.

On the long-term prospects, Sir Walter Citrine makes the first and most frank statement yet published about the trade unions' attitude to internal post-war reconstruction. He asks that control over labour should be kept at a minimum and that direction to work should be used only where necessary and after consultation with both sides of the industries concerned. He suggests compulsory registration, and the retention of certain parts of the Essential Work Order, such as the guaranteed week and the appeals machinery. The proposal that any unemployed worker who "unreasonably refuses to accept employment in an industry which the Government considers vital" should be deprived of unemployment benefit, represents a striking departure from previous trade union attitudes. Equally important, and new, is the recognition of the fact that "Industrial labour must be more mobile. . . . Immobility on the part of workpeople might handicap the achievement of full employment." To achieve such mobility may entail some relaxation of trade union demarcation rules, which were imposed "because of economic insecurity." The TUC, however, will not commit itself in advance on this issue, until it knows the policy and methods proposed for achieving full employment. Sir Walter renews the demand for public ownership of certain industries, and some degree of regulation of all industry, though he does not go into detail. If the trade unions at their Congress this year accept many of their General Secretary's recommendations, and carry them out in practice, they will be proving that the Left, as well as the Right, has, after all, learned something from the war.

### Care for the Aged

The Nuffield Foundation has decided to undertake a survey into the problems of old age, and for this purpose has set up two committees, a Survey Committee and a special sub-committee for medical research. Despite a sentimental wish that old people should not be deprived of tobacco and other comforts, which is shown in the strong pressure for higher pensions exerted by public, press and Parliament from time to time—especially after any rise in the cost of living—comparatively little attention has been paid in this country to the scientific welfare of the aged. Indeed, except when he is involved in personal difficulties as a result of the lack of suitable facilities, the average citizen knows very little of how this large part of the community lives—a part that is rapidly expanding, since the pensionable proportion of the population has nearly doubled

## THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

since the beginning of the century and is likely to increase still faster in the future. With the old it is doubly a truism that money is not everything; what many of them need is not so much extra comforts as skilled attention and care. But the privilege of being looked after can, in so many cases, only be bought at the cost of despondency—either upon relatives and friends or, more humiliatingly, through residence in a public institution. Independence is strongly cherished by the old. There is a great and growing need for facilities to enable those who wish it to live on their own, while at the same time having certain services done for them, and with medical attention to hand. One solution to the problem lies in the building of blocks of flats or similar centres for the aged which are specially constructed for their needs, and where appropriate welfare services are available; these could be rented at moderate and perhaps inclusive charges, and there would, of course, be no interference with the individuals' independence. Experiments along these lines have already been successfully undertaken in Scandinavian centres, and a welcome feature of the Nuffield survey is that it will examine the provisions for the aged instituted by those countries which have given special consideration to the subject. Another way of meeting the needs of the solitary aged lies in bringing new social services to their door; for instance, by extending the powers of local authorities to appoint "home helps," so as to cover the aged as well as expectant mothers. Whatever the solutions eventually adopted, there can be no doubt about the importance and urgency of the problem. Mediaeval social services grew out of a formalised society in which each class had its recognised place, its reciprocal rights and duties. It is due to this tradition that many English villages and market towns contain almshouses for the aged, which may provide as well a varying degree of individual welfare; but the large centres and industrial towns are shamefully devoid of any such gentle bounty. The doctrine that *noblesse oblige* has necessarily given way to the belief that the state, as representing the whole body of its citizens, has a duty to those in need; and old people have an obvious call upon its protective arm. But private organisations have still their own special contributions to make to the welfare of the aged, and the Nuffield Foundation is surveying this field, not only in order to analyse the need and point to remedies, but also in order to be well equipped to take further action itself.

#### A New Means Test

In the debate on the Address last year, the Chancellor of the Exchequer promised to introduce legislation to cover the case of the Crown and local government pensioners, whose pensions, almost alone among all the salaries and pensions paid wholly or in part from public funds, have not been increased to offset the wartime rise in the cost of living. Sir John Anderson then said that attention would be concentrated on "cases of real, grave hardship," which should have warned the champions of these pensioners that the promised legislation would not be over-generous. The Pensions (Increase) Bill, which was introduced last week, certainly justifies the warning. Its main proposal applies to civil servants, teachers, police and firemen, the Royal Irish Constabulary, local government officers and "certain Collectors of Taxes." These will be granted increases of 25 per cent in cases where the pensioner is married, or has a dependant of under 16, and has a pension not exceeding £150 a year, and of 20 per cent where the pension is between £150 and £250. For pensioners who are unmarried or have no dependants the increases will apply to pensions up to £100 and £175 respectively. Thus, this particular clause only affects the pensioners at the bottom of the scale, and even they will have to satisfy certain conditions as to age and infirmity and to undergo a means test—no increases will be granted which, when added to a pensioner's other income (less the first £52), will bring his total income up to more than £250 a year if he is married or has dependants, or £175 in other cases. The Bill also contains another scheme which applies only to ex-civil servants and certain retired officers of the Forces for whom pensions are payable in respect of death or retirement after February 21, 1922. These pensions were liable, in respect of the bonus element in them, to variation in relation to the cost of living and were finally stabilised in 1935 in relation to a cost-of-living index of 155. Persons in receipt of these pensions will be given increases, irrespective of their means, varying from 10 per cent where the pension is £200 a year or less to 5 per cent for pensions between £400 and £600. The Bill is unlikely to have an

easy passage; in fact, a motion for its rejection has already been tabled. The Government may be justified in refusing to tie the pensions of state servants to the cost of living, if only because of the difficulty in reducing them when prices fall. But, since it has countenanced wage increases greatly in excess of the wartime rise in the official index and war bonuses in respect of the salaries of state servants, it can hardly be surprised if it has to face pleas for similar treatment for its pensioners.

#### The Academic Chairs

An extraordinary situation is developing in the profession of academic economics. The Professorships of Political Economy at both Oxford and Cambridge are falling vacant this year through the retirement of Professors Macgregor and Pigou. The Cambridge vacancy has already been filled—and most admirably filled—by the election of Professor D. H. Robertson, who, in spite of his brief *hegira* to London, is not only a lifelong Cambridge man, but also one of the founder-members of the Cambridge School of Economics, very well worthy to carry on the line of Sidgwick, Marshall and Pigou. The Oxford vacancy has yet to be filled. Moreover, Professor Robertson's departure from the London School of Economics leaves a gap there, and the Adam Smith chair at Glasgow is also empty. Furthermore, there are other Professorships of closely related subjects vacant. The Chairs of Economic History at Oxford and London, of Industrial Relations at Cambridge, and one of the Chairs of Commerce at London, are all empty. On top of this, many of the holders of other chairs are on leave of absence for Government service, and it may be that not all of them will wish to return to academic life. Add to this a few more chairs that will be vacated within the near future by the arrival of their occupants at the retirement age, and a state almost of academic vacuum is created. The Government, which has absorbed so many economists, will not disgorge them all after the war. It seems probable that there will be both a Central Statistical Office and an Economic Section of the Cabinet Office, and they will be in direct competition with the Universities for their staffs. All in all, it is apparent that the demand greatly exceeds the supply. It remains to be seen whether the aspiring young men have sufficient faith in their own doctrines to insist that this disparity be allowed to have its classical effect.

#### Shorter Notes

In replying to the debate in Parliament last week upon the Anglesey County Council (Water, etc.) Bill, Mr Willink reiterated his promise of the appearance, very shortly, of a Bill to facilitate the supply of piped water to rural areas, and of a White Paper to cover the whole question of the measurement, supply, and distribution of water. The Scott Report estimated that one-seventh of the rural population were still without a supply of piped water, but the fact that the majority of these are living on farms points to the seriousness of the position. Further assistance from the Exchequer to rural authorities—£1 million has already been made available under the Rural Water Supplies Act of 1934—is to be expected, but the cost of supplying outlying farms and hamlets will clearly be considerable. It may be doubted, indeed, whether some of the smaller and poorer authorities are suitable statutory undertakers. The debate in Parliament showed, not a critical attitude to the proposals for Anglesey, but impatience that it was still necessary to tackle the problem piecemeal.

Up to February 18th, according to a parliamentary answer, 1,806 appeals had been heard by the war pensions appeals tribunals; of these, 395 had been allowed and 1,128 had been refused.

The amalgamation of the BBC's Forces programme and the General Overseas Service into a General Forces programme has now been in operation for a week. Presumably, the BBC has a better knowledge of what the Forces, at home and abroad, like to listen to than the average home service listener; but the new programme appears to be divided into an extraordinarily large number of small items, and it may be doubted whether the frequent readings of news and news headlines are really necessary.

## AMERICAN SURVEY

### Water in Dry Land

(By a Correspondent in Colorado)

Denver, January 15th

THROUGHOUT the vast arid and semi-arid regions of the world, where the scanty rainfall will not grow crops year in and year out, the limiting factor of human expansion has been the amount of water that may be made available by storage, to be parcelled out according to the communally wisest use. The pattern has persisted through the ages: "Thus saith the Lord, Make the valley full of ditches." The economics of the Bible are fully to be grasped only by those who have lived long in a rainless land.

Despite popular insistence on the tradition of the cowboy and the gold-pro prospector, the true story of the development of the American West is largely that of the engineer who plans, builds and operates great dams, and of the irrigation farmer who sloshes in hip-boots along his fertile furrows with a shovel, apportioning the "rain" he has ordered by telephone, and on which he can draw as long as he has a balance in the water-master's account. The stage is mighty—it comprises 40 per cent of the nation's land area west of the 100th meridian, over almost all of which there are only from three to 20 inches of precipitation yearly.

Four hundred and three years ago, Coronado found the Pueblo Indians building crude dams to divert water to their little fields of maize. Later, when the gold-seekers rushed into the semi-arid lands, they were followed closely by farmers who found more gold in diverting the waters to grow vegetables than in prospecting. Whole communities were founded by colonists from the East; places where water could be stored for large-scale irrigation replaced the fading gold camps as the region's potential population centres. Many large irrigation projects were constructed by private capital, such as those of the Imperial Valley and the lower Rio Grande. However, the projects most easily built, and those that, because they would repay their cost through irrigation alone, were profitable for private development, have long since been completed.

Through various Acts, over the years, the Government sought to encourage development; but it was not until the Newlands Act was passed in 1902 under Theodore Roosevelt, that the Federal policy took its finally effective form, creating the Bureau of Reclamation and, later, authorising "multiple-purpose" projects; among these are Boulder Dam and Grand Coulee, the latter the planet's most massive masonry structure. Boulder, in storing enough water to cover the face of England nearly a foot deep, performs three functions: the water is used for irrigation and domestic purposes as far away as Los Angeles; for power; and for control of the vicious floods that used to ravage the lower Colorado River valley. In regions where there is navigation by river, stored water also aids that enterprise. By apportioning the cost among such objectives, a dam can be usefully built where a one-purpose structure would be uneconomic; thus practically all the great dams are "multiple-purpose."

#### Power for War Industry

Throughout the years, as the irrigation farmers have run into difficulty in repaying their share of costs, repayment features have been modified until now the standard agreement is that they pay back the original cost in 40 years without interest. Thus the Federal Government actually bears about half the expense; though the revenue needed largely comes from the West by way of royalties on mineral lands, etc., this policy is often under attack in the East, especially in those regions with whose products the irrigation-grown products compete; but Westerners find its justification in the general strengthening of the nation's economic structure, beside the increase in regional population and resources.

For example, the tremendous expansion in war industry on the Pacific Coast might have been much more difficult, if not impossible, had it not been for a tremendous contri-

bution of hydro-electric power from dams owned by the Bureau of Reclamation (the Bureau is now the nation's single largest power-purveyor with a capacity of 2,060,000 kilowatts, and an expected output of 18,000 million kwh in 1944), and of food grown near the West Coast cities on irrigated farms. Yet, according to a study of the Office of Defence Transportation, the West as a whole failed to meet its own food requirements in 1942 by 38,000 railroad carloads. So there is still room for expansion of the farming programme.

The cost of the whole irrigation programme in the West now approaches two billion dollars, of which the Bureau has contributed nearly one billion—which will be doubled when present plans are completed. Acreage with a present whole or partial artificial water supply from public and private sources is about 20 millions, or slightly more than half the whole acreage of England; another 20 million acres are held to be ultimately irrigable. The largest single enterprise now definitely under way is for the irrigation of 1,200,000 acres below the Grand Coulee dam, across the Columbia River in Washington State.

#### A New Frontier?

Here and in similar projects is a "new frontier" for returning US Service men, according to Secretary of the Interior Harold L. Ickes, overlord of the Bureau. Reclamation enthusiasts talk about spending half a billion dollars a year after the war to provide such projects for the men now in service.

Three trends may be discerned for the immediate future:

1. So far as the Far West is concerned, the water resources have been fairly well apportioned for present and future use. There will be no more Boulder or Grand Coulee dams.
2. But some water will be drawn across the Continental Divide by means of tunnels driven as far as 20 miles through the living granite, to be used in the Mississippi and Rio Grande basins instead of the Colorado.
3. States sharing a river-basin will play a larger part than at present in sharing its water among themselves, through interstate compacts approved by Congress, thus shouldering the federal government out of direct control. The pattern for these agreements is the Boulder Dam compact dividing up the Colorado's waters, which is about to be finally approved by all States after a long inter-state war—Arizona has held out for more than 20 years, claiming the original compact would have strangled development.

The most promising region for future development is now thought to be the vast High Plains, which slope from the Rockies down to the Missouri and Mississippi Rivers. Particularly has the Missouri Basin, comprising 528,000 square miles, been characterised as our least-developed major basin. In its mid-region rainfall is sufficient in wet years to grow crops without irrigation, but during a drought cycle the states here suffer terribly—six of them lost population during the decade 1930-40, the "dust bowl" decade.

There is, however, a forthcoming conflict of interests. For generations the Corps of Army Engineers has developed the lower rivers for navigation and flood control, and the Bureau of Reclamation has built its irrigation works above. Now the Bureau has moved so far into the lowlands, and the engineers so far into the highlands, that they are often rivals for the same regional development. On the lower reaches of the Missouri and the Arkansas lie large cities amid a humid environment, which insist on development for flood control, navigation, and sanitation, under the Army Engineers. Higher up, such states as North and South Dakota, Montana and Wyoming see their best (and almost their only) chance for continued large development in the use of these same waters for irrigation and power, and they prefer the Bureau of Reclamation as the master-planner. This serious clash of interests probably will be resolved in compromise, but only after a long struggle.

Incidentally the Great Plains states are after 70 years coming around to the viewpoint of John Wesley Powell, first man to run the Grand Canyon of the Colorado, and economic seer of the West, who said the states would try for generations to get along without irrigation, but would finally come to it. A proper system of irrigation development, says the Bureau, could make room for half a million more people on the land of the Missouri Basin alone.

As a war instrument, the lands served wholly or in part by Bureau installations grew \$272 million worth of food in 1942; and half the power used in the war-plants of the West Coast came from Bureau hydro-electric projects, which

more than doubled in capacity between 1941 and 1943.

To round out the picture: people from the humid East find themselves, in the arid West, in a topsy-turvy land where, instead of following the riparian doctrine of an equal share in public waters, the use of the waters goes first to the first beneficial user, who can monopolise the whole supply if it is no more than his water-right calls for. An intricate system of law, administered by "decrees" granted by district courts, has thus grown up, under which in drought years only the owners of lands with the oldest or "firmest" water-rights can get water, and "junior appropriators" are willy-nilly reduced to the hazards of dry-land farming.

## Uncertainties About Labour

(From an American Labour Correspondent)

IN the rather confusing labour picture in the USA, the strike issue is at the centre of prevailing disturbance. Is the strike situation threatening, or not? Is war production being impeded because of many strikes or many days of work lost? Is labour's insistence on adjusting pay to rising living costs justified; are its demands as they are being made fair? Is labour abusing its power when it threatens a strike, and achieves an adjustment in consequence of such threat, even though the strike does not, and often is not even expected to, materialise? The public gropes for answers.

Primarily, it is the strike issue, not the wage angle, that lies at the core of public anxiety. On the face of visible facts, anxiety even on the score of strikes would appear to be unfounded; a loss of some 14,000,000 working man-days in 1943, one-third of one per cent of the nation's working man-power, is not enough to cause real concern. Yet discussion of the matter is getting to be progressively more heated, and labour's "public relations" have appreciably deteriorated in recent months. The causes of this phenomenon, like those of other developments in complex social circumstances, derive from more than one source. For one thing there is the conscious whipping up of public indignation against "the rising power of labour," with the accompanying charges that "its leaders are reckless," etc., coming from quarters antagonistic to labour unionism, and more particularly to its growing political assertiveness. In the United States, recognition of the status of organised labour still remains something one goes out of his way to grant.

A further factor is the widely felt undercurrent of insecurity as to whether there will be a ready responsiveness to the demands on labour that are certain to be tremendous when the invasion of the European continent passes from the planning and preparatory stages. Complicated by the tensions of an election year, this sense of insecurity is spreading and communicating itself to men in the armed forces. Undoubtedly, it is reflected in the President's call for a National Service Act at this time.

Then there are two long-term causes of the disturbance in the public mind about the labour situation. One, derives from the structure of the American labour movement, the other from the average unionist's community background. American labour has no political party to act as its spokesman, and to give voice to labour's attitudes on matters which are of national importance, and which go beyond strictly union affairs. Pronouncements, either by the AFL or by the CIO, on extra-curricular issues, are not always a safe gauge of what labour may actually think or do. They are at best "gentlemen's agreements." For these federations of labour themselves are not only not tied by mutuality of outlook or bound by an opinion that may have majority weight; beyond the clearly definable domain of common union organisation issues, the constituent national unions of each federation are free to formulate their own attitudes, or not to have any at all. And so, in turn, are their respective sub-divisions or local units.

This explains in part why public opinion may, under certain circumstances, feel thrown out of gear by the action of a single union, regardless of its importance in the whole field or of how much out of tune with the rest it may be. The jitters of the general public were quite understandable when Mr John L. Lewis staged four week-end "stoppages" of his 400,000 coal miners, and incidentally accounted for the heaviest part of the 14,000,000 working man-days lost last year. The importance of the coal industry in the war

effort, and in every other way, invited such concern. But that fear was augmented by the expectation of what others might follow the example set by Mr. Lewis. Undoubtedly, the Lewis performance, and the gains he was able to wrest, have tended to deteriorate the strength of labour leaders of a more positive brand.

Perhaps the most puzzling part of labour behaviour is the seeming disparity, if not contradiction, between the record of war production at home and fighting fire on the war fronts, and the picaresque, often petty, attitude toward matters of public, social and national policy, observable in the same workers. The public cannot see how John Doe can at once fight unselfishly for flag and country and insist tenaciously on the "maintenance of membership clause," the "union agreement," revision of the "Little Steel" formula, etc.

The discrepancy is implicit in the co-existence, in John Doe, the average American worker, of several parallel personalities. But on close examination, this trait is hardly the peculiar propensity of John Doe, the trade unionist. It is largely also the picture of John Doe, the average American. As union member, John Doe is wage-conscious. He did not join the union for his health, even as neighbour Richard Roe did not enter business for such reasons. John Doe wants his union to push for him during the war—to better his earnings even as Richard Roe's trade association aids him to profits in war business. He wants as good pay as the traffic will bear. At the same time, as an American in his community, John Doe does all the regulation wartime chores: contributes to war charities, the Red Cross, the Blood Bank. When he is called into service and gets to the front he fights to win.

There is something else too, which is quite American, and that is the isolation from the main highways of world-wide living which derives from past history, and from the general nature of American economic and political reality rather than from specific group orientations. The disappearance of both isolation and isolationism seems to be an unavoidable consequence of United States participation in world-wide, total war, the toll of human lives the war is taking, the bringing together of the various peoples of the four corners of the world as partners in the struggle to save and preserve humanity as an integrated whole. But influences so deeply rooted in the national character die hard. The rather caustic remark made by Mr John H. Jones, a British unionist on exchange visit in the US, about some of the American labour leaders: "They are like a kid in a sixty horsepower automobile, who ought to be riding a bike," correctly depicts an existing disparity between courses of action and requirements of the emergency. These men are patriotic Americans. But they have a tendency to act at various times from the various personality units that somehow continue to co-exist, independently of each other, in the traditional producer, wage-conscious unionist, American.

American labour leaders have not done overmuch to help integrate the split personality of their followings. Some who rose to power in an America that is no longer, though they still continue, may not know that such a problem exists. Some may not have seen anything wrong about it. Some certainly sought to exploit the situation. Comparatively few have given effective leadership in the battle against surviving yesterdays. Yet there is new leadership. Indication of the newer leadership, and assurance that new forces are rising to the needs of the situation, is to be found in the fact that the "no-strike" pledge was kept in 1943 to the extent of 99½ per cent.

## American Notes

### Congress vs. President

From its first meeting the keynote of the present Congress has been its desire to free itself from "Executive domination." But in the long series of engagements between the White House and the Capitol, none has stirred up more noise than last week's battle over the Tax Bill. The Bill had been passed by Congress in a form that increased the burden of taxes by only some \$2 billions, instead of the \$10 billions that the President asked for or the still larger sums that would have pleased the economic realists. Rather unexpectedly, the President vetoed the Bill. This, in itself, was provocative, since by long-standing convention taxation is a Congressional matter. But Mr Roosevelt added to his offence by a very sharply worded veto message, in which he accused Congress of being more concerned with the greedy than with the needy. The result was an explosion. Senator Barkley, Democratic leader of the Senate and hitherto (in the idiom of American politics) a "faithful wheel-horse," resigned his office and made a spirited protest. The Bill was promptly re-passed by 299 to 95 in the House and by 72 to 14 in the Senate. The necessary two-thirds majorities were easily secured and the Bill thus becomes law; 99 Democrats in the House and 39 in the Senate voted against the President.

These events are sensational in the form they took: it is not every day that the public is treated to hot words between the President and his chief lieutenants. The Republicans and all the President's enemies are naturally jubilant, and some ingenuity is being shown—for example, by Mr Willkie and the *New York Times*—in arguing that the President was wrong in vetoing, and the Congress right in re-passing, a Bill that is by general admission hopelessly inadequate. (Mr Willkie was calling only the other day for additional taxes to the tune of more than \$16 billion.) But in spite of all the sound and fury, it is doubtful whether anything has been changed. Mr Barkley has been re-elected to the leadership of the Senate, and has expressed his affection for Mr Roosevelt. If he is now to be regarded as the representative of the Democratic Senators vis-à-vis the President, rather than of the President to the Senators, that is merely a recognition of a long-established fact. The President has never been in control of this Congress, in spite of its Democratic majorities. Nor does it affect the election prospects. There is no chance of the Democratic party nominating another candidate if Mr Roosevelt wants to run again, and almost no chance of the Democratic Senators doing anything but support the party nominee. To a British observer it is all very puzzling; but the clue lies in the sharp distinction that the American politician draws between office-holding and policy-making. A Democratic Senator is being perfectly consistent if he thinks Mr Roosevelt the best man to have in the White House and is also determined to keep him out of the legislative process.

### 1943 Films

The results of the twenty-second annual poll of motion picture editors, critics, commentators and columnists, by *Film Daily*, one of the motion picture industry's chief trade journals, showed the following vote on the "Ten Best Pictures" released in the United States between October 31, 1942, and November 1, 1943:

| Picture                            | Votes |
|------------------------------------|-------|
| 1. "Random Harvest" .....          | 305   |
| 2. "For Whom the Bell Tolls" ..... | 285   |
| 3. "Yankee Doodle Dandy" .....     | 285   |
| 4. "This is the Army" .....        | 276   |
| 5. "Casablanca" .....              | 259   |
| 6. "The Human Comedy" .....        | 241   |
| 7. "Watch on the Rhine" .....      | 220   |
| 8. "In Which We Serve" .....       | 208   |
| 9. "So Proudly We Hail" .....      | 210   |
| 10. "Stage Door Canteen" .....     | 162   |

The finding of a formula for pictures in war-time to meet the desires of the nation's 80,000,000 weekly picture-goers has led Hollywood through a period of trials and errors. Among the trials of the industry have been the change from costume to uniform of a considerable proportion of its male

actors, the restrictions placed upon new construction of sets and the limitation of supplies of film to about 76 per cent of a company's 1941 usage. Among its errors were what appeared from public reaction to be an overproduction of harrowing "war pictures" in the early months of America's participation in the conflict, followed by a compensator shift into the "escapism" of extravagantly frivolous farce. More recently something closer to a balance of entertainment has been struck. Few features are released that do not use the war motif in some way or other as story background, whether romantic, comic, melodramatic (the cops and robbers formula is always good), or occasionally tragic. In spite of the civilian hue and cry against "war pictures," such films share popularity equally with the "escapist" releases among men in uniform at the War Department theatres in training camps.

### Shorter Notes

Eleven states have now made it possible for soldiers to vote at primaries. Since Federal provisions for the soldiers' vote were turned down by Congress, responsibility now rests with the states themselves.

The Senate Committee of Agriculture has been told by Major-General Hershey, National Director of the US Selective Service, that 1.3 million more men are needed for the services by July, and many of the 240,000 to be taken each month would have to come from farm work. Farm organisations are protesting that this may denude farms of nearly half their essential young workers.

The Senate Banking Committee have approved a measure prolonging the life of the Commodity Credit Corporation till June, 1945. The Committee is the body through which the major part of Government subsidies in aid of the prices of foodstuffs have been paid.

## BEARING on your business future

● Your post-war organisation must run without friction. Drawers and doors must glide at the touch of a finger. The furniture must have precision and strength and yet must be good to look at, dignified and comfortable. How is it to be achieved? ● Sankey-Sheldon have a post-war programme for business furniture. This furniture is of steel, but contoured, coloured and covered to strike a new note of modern beauty. Sankey-Sheldon steel furniture will be a permanent solution to post-war problems of business equipment.

## A Fascist Swan Song

(By a Correspondent)

ON January 11th, the Republican Fascist Government, "under the Presidency of the Duce," proclaimed the principles of its new economic policy; on February 12th it passed the decree on the "socialisation of industry," which claims to carry the new policy into effect. The decree consists of three sets of measures: arrangements for the participation of workers in the administration of industrial establishments; provisions for the transfer of industries of national importance from private to state ownership; and regulations concerning the distribution of industrial profits between owners and workers.

The new decree has been hailed by the Fascist Press in German-occupied Italy as the return of Fascism to its "revolutionary origin," or—more grandiloquently still—as the beginning of the "Century of Labour" once promised by Mussolini. In Milan, Genoa and Turin, and in the other great industrial centres of Northern Italy, Fascist propagandists have been busily blowing all their "proletarian" trumpets and praising the decree as the act of final reconciliation between Fascism and the social radicalism of the workers of the north.

The actual text of the decree does not substantiate the claims of socialisation. The main emphasis has been laid on the overhaul of the administrative system in industry. Private ownership has been retained; but, nominally at least, it is to be further restricted in its freedom to draw profits from industrial activities. It is also to be compelled to share industrial control with the representatives of the workers.

The decree makes provision for separate administrative systems for businesses owned by joint-stock companies, by individuals, and by the state. Each joint-stock company with a capital of 1,000,000 lire or more is to have the following administrative bodies: the head of the concern, the Meeting, the Board of Directors and the Board of Auditors. The main innovation is that representatives of workers are now entitled to take part in the meetings of shareholders with a number of votes equal to the total vote of the latter. The Meeting thus composed elects a Board of Directors, on which again the workers' delegates are to have the same number of seats as the representatives of the shareholders. (The representatives of the workers on the Board are exempt from having to produce security deposits, an obligation which apparently continues to be in force for the representatives of the shareholders.) Similarly, provision has been made for the representation of workers on the Board of Auditors. In this way, the rôle of the head of the concern acquires a special importance, because it is he who has the

casting vote. Only in joint stock companies with a capital of less than 1,000,000 lire have the owners themselves the right to appoint the head of the concern. In all larger businesses, he is to be appointed jointly by the workers and the shareholders.

In businesses owned by individuals, the entrepreneur remains, under the new decree, the head of the concern. But he, too, is to be assisted by a Board of Directors on which the employees are represented by at least three elected members. The entrepreneur has to convene the Board at least once a month and to discuss with it all questions relating to production. At the end of the financial year he has to submit to it the balance-sheet and the proposals for distributing the profits. This provision applies to all private concerns with a capital of more than 1,000,000 lire and employing 50 workers or more. The decree does not, however, make it clear whether the Board of Directors has purely advisory powers or whether it has the right to veto the balance-sheet and the distribution of profits proposed by the owner.

In concerns owned by the state, the head of the business is appointed by the Minister for Corporative Economy; he is not elected by the general meeting, as in the case of joint stock companies. But here, too, provision is made for a Board of Directors consisting of representatives of the workers and technical staff, as well as of the delegates of the state's economic agencies. The balance sheets, however, and the proposals for the distribution of profits are to be drawn up mainly by governmental agencies; and, unlike the balance sheets of privately owned concerns, they are not subject to approval by the meetings in which the employees participate.

The reorganisation of all industrial enterprises in accordance with the new scheme is to be carried out within the next few months, and is to be completed not later than June 30, 1944.

### Expropriations Possible

The main feature of the new system so far is the establishment of dual control in industry. But some of the measures clearly open the door for expropriation as well. Thus, for instance, the owner of an industrial enterprise is personally responsible to the state for managing his business. "He may be removed and replaced . . . if his activity falls short of the production schemes of the state." In joint stock companies, both the shareholders and employees at the meeting and the Minister for Corporative Economy are entitled to remove the head of a concern if "he lacks responsibility and fails in his duties." In individually-owned enterprises, the owner can be removed by a sentence of the Labour magistratus, though he may appeal against the sentence. The removal of the owner may result in the transformation of a private enterprise into a workers' co-operative.

Article 30 of the decree provides that the state may take over the property of concerns of national importance. It also provides for the state's share in subscribing to the capital of private businesses. A special decree was issued on the creation of an Institute for Administration and Finance, which is to be responsible for the management of all businesses transferred from private to state ownership.

The distribution of industrial profits is subject to the usual wartime limitations. Apart from this, profits are to be distributed among manual workers, salaried employees and administrative staffs in proportion to their yearly wages and salaries. The profits thus distributed can in no case amount to more than 30 per cent of the wage and salary list of any given establishment. Excess profits have to be paid into the account of the Institute of Administration

and Finance to serve "social and productive purposes." It may be doubted whether these sensational reforms have more than propaganda value. The participation of workers in the control of undertakings is largely a sham, even from the letter of the decree itself. The workers have not been given an unconditional right to elect their representatives to the meetings or boards of directors of the "socialised" enterprises. They are only free to elect delegates from a list drawn up by the Fascist syndicates, and are not themselves allowed to propose their own candidates. This typical totalitarian technique makes the provision for "a secret ballot of all workers of the concern" altogether pointless, and the dual control of capitalists and workers over industry boils down to control by industrialists and Fascists, a state of affairs which is not very much different from the conditions prevailing even before the proclamation of the "century of labour."

### Shareholders' Panic

Even so, the announcement of the reforms caused an understandable panic among shareholders and industrialists in Northern Italy. Throughout January and part of February the Stock Exchanges of Milan and other Northern Italian cities experienced a sharp slump in quotations. Mussolini's Minister of Finance was compelled to counteract the panic by assurances in which he stressed the moderate character of the reform. He also pointed to article 46 of the decree, which says that the new measures "will become valid on the date to be fixed in a subsequent decree promulgated by the Duce of the Italian Social Republic." In the light of this escape clause, expropriation does not appear so imminent as it might have done at first sight. It seems that the only cases in which expropriations are really to be carried out at once are those where the owners of industrial enterprises are Jews. Almost simultaneously with the decree on "socialisation" decrees about Aryanisation were published.

The decree clearly represents nothing more than Mussolini's last attempt to regain political contact with the workers of Northern Italy, who were the first to turn

their backs on Fascism even before its collapse. The tactics of "Republican Fascism" are in a sense dictated by the political outlook in Southern Italy. The Allies have recognised the rights of the Italian dynasty. Fascism, deserted by the dynasty, has raised the Republican banner. Allied policy in the south seems to make the protection of property one of its objectives. Fascism, therefore, stages a theatrical attack on property—which it formerly claimed to protect against Communism. That the attack is merely demagogic is almost certain; but what is indirectly reflected in it is the social radicalism of the working classes in Northern Italy. That radicalism is very likely to survive the new version of Fascism with its sham socialisation. It is in this context that Mussolini's recent reforms may well acquire some new significance; they may easily provide the starting point for the programmes of the Left Wing in Italy after the country has been finally freed. The economic swan song of Fascism may echo long in the social aspirations of its prospective successors.

## Empire Wool Problems

[BY A CORRESPONDENT]

BEFORE the war Australia, New Zealand and South Africa accounted for about two-fifths of the world's wool supplies, and for more than three-fifths of its wool exports. In Australia, wool used to account for between 30 and 40 per cent of total exports; in New Zealand, between 20 and 30 per cent; and in South Africa, for more than 10 per cent. It is not surprising, therefore, that the future of the raw wool trade has for some time past been attracting great attention in the Empire producing areas. Recently, exchanges of views between the various organisations in the Empire have taken place, and, on the initiative of Australia, a full Empire wool conference is likely to take place within the next few months.

The position with which Empire wool producers are confronted is fairly clear. During the greater part of the

### HISTORY, CURRENCY, AND PROPHECY

Before the War, when quality was what we cared to make it — we at Rowntrees made it high. You will remember Black Magic — Chocolate Crisp — Aero Milk Chocolate. These were typical of the standard at which all our production was fixed.

During the War, quality can be only what we are able to make it. Nevertheless, we find, somewhat to our surprise, that in spite of Hobson's choice in the matter of ingredients, we are able to make Chocolate and Clear Gums which the people who eat them are kind enough to call excellent. Even so, owing to Zoning we can sell them only in certain parts of the country, mainly in the North and East.

After the War, when at length the quality of our products again comes completely under our own control, we shall make our post-war products to our pre-war standards. Unhurriedly, as the right materials come into the country, we shall again produce Black Magic, Chocolate Crisp and the others — and sell them from Penzance to the Pentland Firth. And that's a promise.

inter-war period, wool production and wool consumption, despite an increase in supplies in the two pre-war decades of almost two-thirds, were more or less balanced, so that surplus stocks in the autumn of 1939 were unimportant. Since then, the financial stability of Empire wool growers has been assured by the Imperial Wool Appraisal Scheme, which was introduced in the first few weeks of the war, and will remain in force for the duration and the first post-war wool season. Under this scheme, the Imperial Government agreed to acquire the entire wool clips of Australia and New Zealand, and since 1940 that of South Africa, at a fixed average price. This price was originally based on a rough average of market prices in the inter-war period, that is, roughly, 13.44d. per lb. in Australia and just under 12.25d. per lb. in New Zealand. From July 1, 1942, it has been increased by 15 per cent, owing mainly to wartime increases in production costs.

The appraisal scheme has brought a fair measure of prosperity to Empire producers. In the first four war seasons, Australia's wool receipts reached a total of £263,000,000, compared with £193,500,000 in the last four pre-war seasons. New Zealand's combined "wool cheque" advanced simultaneously from £43,900,000 to £71,200,000. [Figures expressed in Australian and New Zealand currency.] These increases were only partly due to the higher prices; they also reflected the larger production achieved since the autumn of 1939. There are, indeed, indications that the world's production of raw wool has risen to a new record level during the war. It appears to have reached an annual average of slightly over 4,000 million lb., compared with the pre-war record of 3,930 million lb. reached in 1938-39.

Against these increased supplies, world wool shipments and consumption have been seriously dislocated during the war. The shipping shortage limited exports from the producing regions, while the shortage of machinery and manpower enforced stiff restrictions on wool manufacture for civilian purposes. Simultaneously, the blockade of the Axis and Axis-controlled areas, which own probably as much as one-half of the world's wool manufacturing facilities, has had a considerable effect on wartime world consump-

tion. Stocks of wool have consequently been accumulating on a very large scale.

As official data on stock movements have been withheld since the outbreak of war, and private estimates differ very much, the probable size of the post-war wool surplus cannot at present be assessed. It may be mentioned, however, that the New Zealand Loan and Mercantile Agency Company, in its recently published and carefully prepared review on wool, arrives at the conclusion that by the end of the 1944-45 season (June 30, 1945), the raw wool surplus in the chief producing areas and the United States (where the British Government has accumulated a large reserve of Empire wool), "will certainly exceed 3,000 million lb., and may even exceed 3,500 million lb." The latter figure is roughly equal to a year's world consumption at the last pre-war rate.

### Marketing Problems

It is obvious that the liquidation of such an enormous surplus in the face of an increased current supply of new wool will cause great difficulties. After the last war, for instance, the British-Australian Wool Realisation Association required three and a-half years to liquidate a surplus of no more than 800 million lb. The position after this war, apart from the much increased raw wool surplus, will be aggravated by the fact that rayon and staple fibre have become very important factors in textile raw material supplies, and compete to no mean extent directly with wool. According to *Rayon Organon*, the world production of rayon and staple fibre, which was virtually non-existent after the last war, amounted in 1942 to no less than 3,473 million lb., and a new increase has taken place in 1943. This means that the world's production of these processed fibres has now almost reached the total weight of world wool production. The great bulk of the rayon and staple fibre is produced in wool-importing countries like Germany, Japan and the United States. These three countries alone before 1939 used to import up to 800 million lb. of wool per annum, or almost two-fifths of world exports, a fact which is likely to impede the readjustment of the world wool market after the war.

The problems with which the Empire's wool trade, and, indeed, the whole world wool trade, will be faced after the war will thus be extremely difficult. The first preliminary to the restoration of a normal market is an orderly liquidation of the accumulated surplus. Discussions on this point appear to have taken place already, although details have not been made public. But even if the surplus supplies are liquidated with care, a bigger market for wool is required to absorb the growing supplies from new production.

The problem of extending the post-war markets for wool has occupied producers in the Empire surplus areas for many months past, and a course of action has already been proposed after consultations between the woolgrowers' organisations of Australia, New Zealand and South Africa. Measures so far suggested by the Empire wool trade include the improvement of the health of the sheep flocks and in the quality of raw wool, the improvement of the quality of manufactured wool, and market development both in advanced and in backward consuming countries. They also include proposals to increase the competitive strength of wool through the rationalisation of both raw wool production and wool manufacture. These are measures which cannot be solved by individual producing areas, but require world-wide co-operation not only of wool producers, but also of wool manufacturers. The planned Empire wool conference, therefore, is likely to be only a preliminary to a world conference. Whether the moves so far proposed will succeed in re-establishing a balance of the world wool market after the war depends very much on the general trend of the world's post-war trade.

## Letters to the Editor

### How Many Houses?

TO THE EDITOR OF THE ECONOMIST

SIR,—In the interesting article "How Many Houses?" in your issue of February 5th one statement at least calls for amendment, viz., that "there are some 4,000,000 houses over 80 years old" (page 187). The number of houses more than 80 years old now standing could not be larger than the total enumerated in 1861, which was 3,924,000 houses. Of these, however, a considerable number has been demolished since to make room for railways, gas-works, factories, schools, blocks of flats and so forth, by slum clearance and through air raids.

The demolition rate between 1861 and 1921 may be assumed to have been something like 20 or 30 per cent of houses erected. (In Glasgow, demolitions between 1871 and 1914 amounted to over 40 per cent of houses built, but this is probably higher than the average for England and Wales.) The number of houses pulled down may be estimated at 200,000 between 1921 and 1931 and at 300,000 between 1931 and 1939. The air raids destroyed approximately 250,000 houses.

On the assumption that 90 per cent of the houses demolished and 75 per cent of the houses destroyed by air raids were standing in 1861, the number of houses more than 80 years old would by now have been diminished by 1,550,000 to 2,200,000. This means that only between 1,725,000 and 2,375,000 of these old houses are still standing.

A factor whose size is unknown and which is not accounted for above is the conversion of old houses into several flats since 1921. (In 1911, the number of structurally separate dwellings exceeded that of houses by approximately 140,000.) Structurally separate dwellings created by conversion are included in the number of "houses built." The total of existing dwellings in old houses is therefore somewhat higher than the total of old houses. This understatement is, however, to some extent counteracted by the discontinued use as dwellings of houses turned over to non-residential users.—Yours, etc.,

KATE LIEPMANN.

85 Holland Park, W.11.

TO THE EDITOR OF THE ECONOMIST

SIR,—Miss Liepmann has been good enough to send me a copy of the letter which she sent you and in which she commented on your article "How Many Houses?" (February 5th), and on the estimate in my *Agenda* article that at the outbreak of the war there were approximately four million dwellings which were at least 80 years old. May I comment on her suggested corrections?

1. Her figure of 3,924,000 houses in 1861 relates not to Great Britain, but to England and Wales. With the inclusion of Scotland the total houses recorded at that census was 4,591,000.

2. My own estimate relates to dwellings (in the customary sense). In 1861 the census enumerators dealt with "houses" and not dwellings; that is, a block of 100 tenement flats would be recorded as one unit and not as 100. On the basis of the 1911 census the Registrar-General has converted "houses" into "dwellings," and if we use the relationship established for that year, then it is highly probable that in 1861 there were roughly 4,750,000 dwellings in Great Britain.

3. Miss Liepmann's assumed rate of demolition seems to me to be much too high. At September, 1939, there were approximately 12,850,000 dwellings in Great Britain—an increase of 8,100,000 since 1861. If we adopt Miss Liepmann's assumption that the number of houses demolished in the period equalled between 20 and 30 per cent of the dwellings erected, then the number of dwellings erected was 10,800,000 (75 per cent of 10,800,000 plus 4,750,000 equals 12,850,000); and the number demolished was 2,700,000—or an average of 35,000 per annum. Such a figure is highly unlikely. In the years 1921-31 approximately 20,000 dwellings were pulled down annually—and this reduction was being made from a stock of over 12 million dwellings; during most of the period under discussion we are dealing with a stock of 6 to 7 million dwellings. In the light of these figures it would be reasonable at least to halve

Miss Liepmann's rate of demolition and place the total at 1,250,000 pulled down during the years 1861-1939. (This is, of course, a very conservative reduction in Miss Liepmann's rate of demolition. It is much more likely that her suggested rate should be reduced by two-thirds.)

4. It must be remembered that some of the houses demolished in the past 80 years were built after 1861. If we assume that 90 per cent of all demolitions were of pre-1861 construction, then about 1,100,000 of the 4,750,000 dwellings standing in 1861 have been demolished. This leaves standing in 1939 at least 3,650,000. We say "at least," since a high proportion of the houses which in the '20's and '30's were sub-divided so as to turn one-family structures into multiple-family structures, were houses which had been built in the middle of the nineteenth century. A survey carried out in London in 1937 showed that 70 per cent of all working-class families in London occupied sub-divided nineteenth century structures.—Yours, etc.,

M. A. ABRAMS.

110 St. Martin's Lane, W.C.2.

### Miners' Earnings

TO THE EDITOR OF THE ECONOMIST

SIR,—There is one passage in the interesting article in your issue of February 19th upon which I should like to make an observation. You state that weekly earnings in the coal industry were about 111s. 6d. in January, 1943, "compared with 148s. 7d. in motor vehicle and aircraft manufacture, 130s. 8d. in shipbuilding, and 126s. 3d. in electrical engineering."

But these figures include overtime earnings, which are substantially higher in the engineering and munition industries than in coal mining. In the latter they average 9s. 6d. a week as compared with about 25s. in the engineering industry (see figures given by the Amalgamated Engineering Union during discussions with the engineering employers in March last).

Moreover, in *The Times* of February 22nd Mr J. Tanner, the President of the AEU, is reported as saying that average piece-work earnings in the engineering industry are 97s. 6d. for skilled workers. This figure excludes overtime, and compares with 126s. 3d. for 5.1 shifts per week for piece-work coal-getters in the coal-mining industry.

Actually, taking into account the known increases in earnings per shift that have taken place since June, 1942, but before the Porter Award, the figure of average weekly earnings in coal mining became 115s. 6d. for all adults and 118s. 6d. for adults employed underground. Allowing for overtime earnings, these figures compare favourably with those in other industries.—Yours, etc.,

H. J. GILLESPIE.

The Mining Association of Great Britain.

### Powell Duffryn Amalgamation

TO THE EDITOR OF THE ECONOMIST

SIR,—I am surprised that in your issue of February 12th you should be in agreement with the principle of the recently announced Powell Duffryn amalgamation terms. It would appear that this is a direct challenge to the rights of preference shareholders of all companies who might find in these days of cheap money that they have inconveniently high prior charges which they would like to liquidate. If this scheme goes through without very strong opposition and proves to be the precursor of similar schemes in other directions, I think it will deal a very severe blow to the confidence of the investing public and to the sound principles which have always been the basis of British company finance.—Yours etc.,

J. H. WILLIAMS.

"Cobnor," Cimla Road, Neath.

[The meeting to consider the amalgamation scheme, held on March 1st, passed the resolutions with only two dissentients. Preference shareholders had no right to vote.—Editor.]

## NEWS of WHITE HORSE

No. 3

### Providing for to-morrow as well as to-day

Suppose that good fortune has brought you a bottle of White Horse, as sometimes it may, even in this fifth year of war.

You pour out a modest measure of this genial spirit into your glass. What is your immediate reaction? First you recognise the delicate and distinctive aroma of the White Horse you have known in times of peace. Then, you raise the glass to your lips and at once your palate confirms your first impressions—that White Horse Whisky was never better than it is today.

This is quite true, and here is the reason. The White Horse Whisky in your glass is a whisky of the past and was growing old when this war was young. Stocks laid down long ago, matured and maturing, provide the White Horse supplies for tomorrow as well as today. Whisky as great as the White Horse you knew in time of peace, whisky which will always be 'fine as a fine liqueur.'

The present system of regulated supply is an essential provision to ensure for you the enjoyment of really good whisky both today, and in the years to come.

MAXIMUM PRICES: Bottles, 25/9d. Half-bottles 13/6d.  
as fixed by The Scotch Whisky Association.

# THE BUSINESS WORLD

## Relics of Dear Money

DISCUSSIONS of British credit and monetary policy all too often assume that the fight for cheap money has been won and won for ever. They ignore the fact that over a wide part of the structure of interest rates the benefits of cheap money have scarcely penetrated. In the money market, in the issue of securities by the Government and other trustee borrowers, in the yields which industrial debentures command, in short-term finance for certain privileged classes of commercial and industrial borrowers, the price of borrowed money has established itself at a level which deserves the adjective "cheap." But at many points at which the interest rate touches the private individual borrower, money still remains comparatively dear. Four types of credit operations may be mentioned where rates currently quoted do not adequately reflect the cheapening of basic interest rates which occurred twelve years ago and which, but for a slight aberration in the few weeks that straddled the outbreak of the war, has held ever since. They are bank loans and advances, building society mortgages, hire-purchase operations and advances made by life-assurance offices in respect of premiums on their own policies.

The rule, in the case of bank loans, is to charge "what the traffic will bear." The terms on which such loans are given, still adhere to a long-established traditional formula: "one per cent over Bank rate with a minimum of five per cent." If the traffic will bear 5 per cent, that is the rate which will apply. Admittedly, the traffic often refuses to bear this rate. In practice, the rates charged may vary from 5 per cent to 2½ per cent. The monster industrial concern, compelled to borrow from its bankers for a few days over the turn of the financial year, or at some similar season of stress on its liquid resources, will pay little more than the money market price for such accommodation. Certain industrial advances guaranteed by one of the supply departments will be charged at 3½ per cent. The general run of industrial advances will bear interest at 4 to 4½ per cent. Any individual who can influence business or who has the required pertinacity may succeed in beating down his overdraft rate below 5 per cent. But the vast bulk of personal overdrafts (and they are still the main constituent of the banks' advances) and the loans made to small shopkeepers and industrial borrowers of the same calibre, will pay 5 per cent however good may be the security behind them. Taking the whole of the banks' loans and advances, excluding from this total those on which temporary default may have occurred, and dividing it by the banks' gross revenue from this source, the average will probably work out at about 4½ per cent or slightly under that figure. For the large majority of the banks' borrowers, who still pay 5 per cent for their accommodation, the Bank rate might still be at 4 per cent, for if it were, they would still be charged the price they are now paying. The personal borrower perhaps does not deserve special sympathy, particularly at this time when every effort is being made to discourage private spending and consumption. The 5 per cent rate imposed on his overdraft cannot convincingly be defined as a burden on industry, though it must not be forgotten that this rate also applies to a large number of modest industrial and commercial borrowers. Except for a select class of borrowers, bank advances are still comparatively dear.

In recent times interest rates have found their most direct and visible impact on the general public through the charges on building societies' mortgage loans. These rates have not made a startling response to the cheap money revolution, though there have been recent stirrings of some such adjustment. Until the last few weeks, 5 per cent was still the representative mortgage rate. It is now settling down at 4½ per cent and the adjustment is being made to apply to old as well as to new mortgages (the latter are virtually non-existent). Even the lower rate may still seem comparatively high when viewed in the context of post-war

rehousing policy. It cannot be reduced without some lowering of the rates at which building societies raise their funds, which themselves are somewhat out of line and might well stand a further cut. But the main hope for substantial lowering of building society mortgage rates must lie in the grant of central or local authority guarantees for approved housing projects. Such guarantees would enable the building societies to raise funds far more cheaply than they do to-day and would, in their turn, make possible a further lowering of the mortgage rate. The difference between, say, 3½ per cent and the present 4½ per cent, translated into terms of weekly rentals, is enough to have a considerable effect on the scope of the post-war rebuilding programme. The building societies are *par excellence* the channel through which to bring cheap money to the people.

Hire-purchase interest rates may not have great relevance to the present-day cheap-money problem. Hire-purchase business is virtually at a standstill and is formally forbidden over large types of transactions in which it flourished before the war. After the post-war period of transition and scarcity, during which it will still be necessary to discourage consumption, hire purchase will undoubtedly come into its own again. The rates of interest applied in hire-purchase business vary within extraordinary margins, and their movements in the decade before the war bore little relation to the lowering of basic short-term and long-term interest rates. The true interest rates applied in such transactions might range from 7 to 30 per cent and the variations were largely explained by the great diversity of the risks involved in this business (some articles depreciate far more rapidly than others) and by the even greater diversity in the standing of the many firms engaged in the trade. The normal hire-purchase contract made no mention of a rate of interest, but merely provided for repayment in a number of equal periodical instalments. The curious buyer inquiring about the charges he was bearing was probably given a notional rate of interest which at first may not have appeared unreasonable. For example, an article with a cash price of £20 may have been sold on hire purchase repayable over five years in quarterly instalments of 27s., the hire-purchase price thus amounting to £27. The hirer might in such a case be told that he was paying 7 per cent interest, since £20 at 7 per cent for five years would amount to £7. Since, however, he was repaying capital steadily at the rate of 20s. per quarter throughout the period, the true rate of interest would in effect be double the notional rate, or 14 per cent. Admittedly the rates charged had to allow for costs of collection and for comparatively high credit risks. But these reservations cannot obscure the fact that the effective rates charged in certain hire-purchase transactions were very high indeed. At present the matter is regulated by the Hire Purchase and Credit Sale Agreement Charges Order. This forbids hire-purchase and credit sale transactions except in certain specified goods and requires that in such cases

the total sum payable under the new agreement to complete the purchase of goods comprised therein does not exceed the amount outstanding under the original agreement together with an amount not exceeding 10 per cent per annum calculated on such outstanding amount.

This maximum notional rate of 10 per cent is an indication of the rates that normally prevailed before the war. There is a strong case for perpetuating an even more stringent form of control over hire-purchase agreements after the war than was provided by the Hire Purchase Act passed in 1938. In addition to specifying the cash price of goods covered by a hire-purchase contract, the true rate of interest should be given.

The final example refers to a much smaller sector of the credit structure, namely the advances made by life assurance societies to finance the payment of premiums by their

own policy-holders. In most cases such advances can be arranged at a rate of 5 per cent per annum. This may not seem unreasonable, though it should not be overlooked that in such cases the companies are in effect lending against the security of their own policies. No lender could desire more familiar and solid collateral; 5 per cent for such advances seems high remuneration. But any unreasonableness of this rate is insignificant when it is compared with the rates that emerge from arrangements for staggering yearly life insurance premiums into half-yearly or quarterly payments. Here, again, the contrast between the notional and the true rate of interest may be striking. A typical example in which one of the most reputable life offices is concerned may be mentioned. The annual premium of £80 on a life policy is, by arrangement, paid in two half-yearly instalments of £41. The additional payment of £2 a year on a premium of £80 may, at first sight, appear a very moderate interest charge. Closer investigation does

not confirm this impression. The company is, in effect, lending slightly less than half the premium for six months. Instead of taking £80 on January 1st, it takes £41 on January 1st and £41 on July 1st. In other words, it lends £39 for six months and takes £2 as the price for this accommodation. This works out at £10 5s. per cent per annum. Allowing the 5s. for the additional expense of collecting the premium half-yearly instead of yearly, this still leaves the rate of interest at 10 per cent, which, for this type of accommodation, is not cheap money.

These diverse examples suggest that the battle for cheap money has only been half won. There are large and important sectors of the interest-rate structure where the benefits of cheap money have not percolated sufficiently. Before the battle for the perpetuation of cheap money after the war is joined, some thought and effort might be devoted to completing and consolidating the victory already achieved.

## Business Notes

### Banks and the Small Trader

Since Lord Wardington made his interesting remarks on the desirability of British joint stock banks granting longer-term loans to industry after the war than had hitherto been deemed proper for deposit banks, there has been much questioning whether in fact a new chapter in the history of British banking was to be opened. Speaking last week at a meeting in London of the British Chamber of Commerce of Paris, Mr Colin Campbell, president of the British Bankers' Association, made it clear that any such venture by British banks would only be concerned with the provision of capital for the small man. It would be the bankers' job, he said, to put the merchant and the small trader on their feet again after the war "for it is they who can best carry on private enterprise." He instanced the type of business which before the war employed a small staff and which because of war service or damage had virtually closed down and would have little capital left at the end of the war. A six-months loan from a bank would be of little use to them; they would need money for several years in building up their businesses again.

The banks, therefore, are carefully considering the practicability of making the required advances and of allowing the small trader to pay them back by instalments spread over a reasonable number of years.

The one idea which is evidently not in the bankers' mind is the provision of finance—whether directly or indirectly—through actual participations in the equity of industry. On this point Mr Campbell was quite categorical.

The banks have no intention of adopting the fatal Continental system by which the banks became shareholders in almost every industrial concern.

It therefore appears that there will be no new chapter in the history of British banking. The long-term advances to the small man would represent no innovation. What will be new is the interesting motive with which such accommodation will be granted, namely the upholding of private enterprise by those best calculated to carry its standard.

### Industrial Banking in Canada

Canada shows the way in planning the financial structure for post-war industrial development. A Bill has been introduced in Parliament at Ottawa to incorporate an Industrial Development Bank. This institution is to be a subsidiary of the central bank, the Bank of Canada. It will have a capital of \$25,000,000 and is specially designed to assist small industries in re-establishing themselves after the war. It will thus implement the promise made in the Speech from the Throne as part of the programme of reconstruction. Although the new bank will be a wholly owned subsidiary of the central bank, its character and the proposed scope of its activities should not be confused with the Bankers' Industrial Development Company, the industrial subsidiary of the Bank of England. That organisation was essentially an instrument of salvage. By choosing the objects of its rescuing operations well, by putting the right man in charge and by exercising due patience, the BID has done excellent work. But it would not be proper

to regard it as an instrument of constructive industrial policy. It may re-emerge as such in the distant post-war years. Meanwhile, it will be interesting to note the career of the new official industrial bank in Canada. It will tackle a new field for this kind of enterprise and the precedents it will create are bound to prove both interesting and valuable.

### "Blitzed" Equities

The doubts expressed last week whether the upward movement in British industrial equities could be expected to continue, even at the reduced rate then ruling, have been justified by events. The resumption of bombing on a rather increased scale and for five nights on end was sufficient to cause, certainly not a rush of selling, but a general drying-up of business and a cautionary marking down of prices. As a result the index of *The Financial*

### FIXED INTEREST AND EQUITY SECURITY MOVEMENTS (July 1, 1935 = 100)

Financial News Indices of 20 fixed-interest securities (converted to new base) and 30 ordinary shares.

*News*, which had touched 104.6 on Friday, February 18th, the highest for four months, was on Monday last down to 103.0, the lowest for over two months. Since then there has been some recovery, but it has occurred mainly in the shares which were most heavily depreciated by the "blitz," that is entertainment shares, public utilities, including the railways, and London property and brewery shares. The general tone of the market shows little improvement and it is a reasonable assumption that it is the impending invasion, the imminence of the Salute the Soldier weeks, the expectation that there will be in the near future some further light on post-war policy and similar matters which are the real determinants. Bombing is a mere last straw, an added annoyance and uncertainty

which, considered in isolation, is likely only to affect certain specific securities, mainly in the groups already mentioned. How long these factors will be sufficiently powerful to counteract the effects of the rising tide of savings, some of which must always be invested outside the gilt-edged market, is not easy to say. In each of the past three years, the upward trend was resumed before the end of the first quarter, but in each of those years there was a February setback which came earlier in the month than on this occasion. Meanwhile, the expectation, since confirmed, that there would be no change in the terms of the Government "tap" issues, has had a slightly depressing effect on the Funds. This, coupled with some doubts about the value of prior charges in railway and London property and brewery companies, may account for a slight weakening in the fixed interest index of *The Financial News* from 135.4 to 135.0.

### Location of Industry

Since Mr Dalton's somewhat inconclusive statement in the House of Commons on December 8, 1943, there has been no further announcement by the Government on the subject of the location of industry. Barlow, Scott and Uthwatt remain part of the stock-in-trade of the cartoonist and the comedian. The absence of a statement of policy does not mean, of course, that the location of industry is not given the consideration it deserves; on the contrary, it is understood that policy is being shaped. To ask for a detailed statement of policy at this stage, for a blue-print of the future industrial map of Great Britain, would be asking for the impossible. But the time has surely come when the principles that are to guide the distribution of industry should be formulated and submitted to Parliament and the public for discussion. True, the problem of industrial location is a political no less than an economic and social and even strategical one; it raises the large issue of the freedom to trade and manufacture in any part of the country. But it would be a pity if the formulation of a body of principles were delayed at the political level. Industrialists, public utilities, local authorities, and indeed Government departments, can hardly plan ahead in confidence without at least some general guidance about the intentions of the Government. If, for example, the aim is to ensure the fullest possible geographical freedom to trade and manufacture consistent with the need for avoiding pockets of long-term unemployment, it would be necessary to combine a measure of controlled location of new works with greater mobility of labour. New enterprises would have to be induced to go to areas containing declining industries and any remaining surplus of population would have to be induced to move to other areas. Such a policy would involve a minimum state interference with the free re-distribution of industry. If the aim is to maintain the existing distribution of the industrial population, the geographical freedom to trade and manufacture would have to be severely limited; except insofar as transferred war workers would wish to return to their homes, plant and machinery would be the only mobile element. The location of industry is only one aspect of economic policy, but it is one that should be clarified without much more delay. An article on page 295 shows how the absence of a decision on location is impeding the progress of plans in an area—South Wales—where unemployment was higher before the war.

### Advertising in the Press

The accompanying table, compiled by the London Press Exchange, Ltd., compares expenditure on press advertising by industry in 1938 and 1943. Its most significant feature is not that total expenditure has been halved, but the difference in the cut by various industries. These differences cannot be attributed to any single factor, such as the reduction in the supply of the products or services offered by the various industries. Some of the industries which have had to reduce the volume of sales substantially have also cut their advertising expenditure drastically; but others have only slightly reduced their advertising expenditure, and the footwear industry has actually spent more. Again, industries which now operate in a seller's market have by no means pursued similar policies. The tobacco trade, for example, has drastically cut its advertising expenditure, but cinemas and theatres have reduced theirs only slightly. Another factor that has probably influenced expenditure is the Excess Profits Tax; com-

panies whose earnings exceeded the pre-war level and which were subject to EPT, especially those that operate in a competitive market, have probably been more disposed to maintain a high rate of expenditure on press advertising than others. Apart from the difference in the rate of the cuts, many industries have obviously been able to reduce their costs quite appreciably, often more than proportionate to the fall in the volume of their sales. Insofar as the reduction in costs has been reflected in selling prices it has been of advantage to the consumer.

COMPUTED PRESS ADVERTISING EXPENDITURE

### In Defence of Mr Rank

During the debate on the film industry in the House of Lords on February 23rd, Lord Selborne, Minister of Economic Warfare, rose to the defence of Mr Rank. In his view the country owed a "very great debt of gratitude" to Mr Rank for the services he has rendered to the film industry. He was the type of man that industry required, particularly the film industry. Neither the Board of Trade nor the Government was antagonistic to Mr Rank, but—this is the crux of the whole matter—he added that the Government would like to see several Mr Ranks. The domination of an industry like the film industry by a single personality or firm would be disastrous; the emergence of a number of strong personalities or firms, competing with each other, might put the industry on its feet. But even then there should be opportunity and scope for the small producer and exhibitor. The Government cannot create a vigorous film-producing industry in this country; but it can at least ensure the conditions of healthy growth.

### The Indian Budget

The Indian Budget proposals should be judged by one overriding criterion: the manner in which they set out to absorb the inflationary potential which now dominates the economic situation in India. Sir Jeremy Raisman's Budget, opened before the Central Assembly this week, does not pass this test with striking success. True, additional taxation is proposed which should raise the equivalent of £17,600,000. This, however, will still leave a prospective deficit of about £41 million for the coming year on the Indian Government's estimated expenditure of £272,380,000. This is quite apart from the expenditure of the British and United States Governments, for which, of course, no provision is made in the taxation proposals, but which are again likely to exceed the whole of the Indian Government's outlay and which, therefore, promise to provide the main source of monetary inflation. The main additions to taxation come from an increase from 20 to 50 per cent in the customs surcharge on tobacco and spirits and from increased duties on tea, coffee and betel nuts. The supertax is to be increased on incomes over £2,625, but since the tax exemption limit on incomes is being raised from £112 to £150, the charges in direct taxation are not likely to prove very helpful in mopping up redundant purchasing power in the hands of the population. The deficit for the year now ending is £69,320,000, compared with the estimate of £30,440,000. The difference between these two figures is wholly due to increased defence expenditure. Next year's expenditure is estimated at £272,380,000, and with taxation on the existing basis this would leave a prospective deficit of £58,600,000, a figure which is being reduced to £41 million by the proposed additions to taxation. The Finance Member evidently relies for his main anti-inflationary solvents on the sale of Govern-

ment securities, which should be stimulated in the coming year by the issue of new premium bonds, and on official sales of gold. On the latter subject, Sir Jeremy Raisman made the interesting revelation that the gold now being sold on official account is being acquired from the United States as well as from Great Britain and that this metal is being provided by these two Governments towards meeting their rupee expenditure.

### The Client's Interest

The recent alteration in the rules of the Stock Exchange, London, so as to make it obligatory for brokers to deal with fellow members, unless they can do the business more profitably for their clients outside, has caused a considerable stir. According to some critics, the effect is to set up a monopoly and to substitute protection of the London jobber for the duty to the broker's client. Admittedly, there is an element of protection for the London jobber in the arrangement since, if the price outside is as good as that inside, the latter must be accepted. But that is surely not unreasonable, and it is hard to see how it injures the client. He has now, as he always has had, the right to complain if a bargain is done at a price which he considers unreasonable. If he complains to the Committee for General Purposes, they will investigate and take disciplinary action if that is called for. They will take this action irrespective of whether the bargain was done inside the market or else-

where. The objects of the new rule are two; to ensure that all bargains, other than those done on foreign exchanges, are marked and to diminish the temptation which a broker might feel to place orders with an outside firm, which could give him business, without checking whether he could not deal to as good, or even better, advantage within the market. The question has particular reference to dealing in Canadian securities in which the volume of business is scarcely sufficient to make operations through two sets of channels, the London jobbers and the outside houses, lucrative. There would appear to be no reason why one should invariably be cheaper than the other, and there is a good deal to be said for keeping both in being, but it must be realised that the outside house relies to some extent upon being able to square its position by dealing in the official markets at either end when that is convenient.

### February Debt Changes

Although revenue continued at a high level during February, it was not sufficient to repeat the January feat of exceeding expenditure and allowing debt to be repaid. In the four weeks ended February 26th, a net amount of £99,741,000 was raised by the creation of debt, of which £68,740,000 represented the increase in the floating debt. Since ways and means advances alone yielded £81,970,000 during this period, the borrowing made no direct encroachment on market resources; on the contrary, it was expan-

### REPORT OF THE AUDITORS TO THE STOCKHOLDERS.

We have audited the above Balance Sheet and Profit and Loss Account with the Books, Vouchers and Securities in Head Office, and with the information, received by cable or the Returns from the Branches. No verification or valuation of assets at Branches in enemy-occupied territories can, under present conditions, be obtained. Subject to these remarks, in our opinion, such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

LONDON, 1st March, 1944.

R. C. K. STILEMAN }  
Chartered Accountants.

sionist in its effect. Some £32,250,000 of the money raised in ways and means advances represented direct borrowing from the Bank of England; this largely explains the exceptional expansion in bank cash revealed in last week's Bank return. There was a net repayment of £14 million of Treasury Deposit Receipts last month, thanks to the pre-encashment of no less than £39,500,000 of these securities by the banks. By far the biggest flow of new subscriptions to any of the Government's tap loans was directed to Tax Reserve Certificates, of which £51,300,000 were taken up; but no less than £85,908,904 of these certificates were used in the discharge of tax liabilities, a monthly total only once exceeded, namely by the January, 1944, figure of £100,087,870. The present issue of 2½ per cent National War Bonds which brought in £22,750,000 and of 3 per cent Savings Bonds which yielded £17,650,000 last month are to continue on unchanged terms, despite the fact that each series has now reached another interest date. The National War Bonds issued after March 1st will be designated "A" series, the present 1952-54 bonds having been on tap since last September. The Savings Bonds now in issue will be called "D" series since the original series of 1960-70 bonds has already been followed by three others, "A," "B" and "C," each covering a period of six months.

### Department Store Results

Preliminary announcements have now been made in respect of the year to the end of January by five of the London department stores and by Lewis's, Ltd. Except in the case of the last of these, it is not possible to arrive at any detailed conclusions on the figures available, but the general picture is sufficiently reassuring to controvert the statement of the Jeremiahs who were a year ago preaching an immediate and startling fall in earnings. It is true that, with the exception of Lewis's, Dickins and Jones and, possibly, Whiteley, the net profit figures are rather lower on the year, but Lewis's, Harrods and Whiteley are all distributing more, while Barkers and Swan and Edgar maintain their payments, the former out of rather reduced earnings on the equity capital. The Whiteley distribution is still restricted to clearing off preference dividend arrears, but this year the payment is two year's dividends, bringing the position up to date, against 18 months arrears in each of the two preceding years. Of the three London stores which have declared ordinary dividends, Barkers yield £3 6s. 8d. per cent, or some 2s. 8d. more than eleven months ago, and Swan and Edgar £4 6s. 6d. per cent, or 7s. 6d. less than a year ago, while the return on Harrods, which alone of these three have raised their distribution, is £3 4s. per cent, against only £2 12s. 2d. per cent in April last. When it is remembered that the results of a year ago were extremely good, those now disclosed are all the more encouraging. The reasons for the maintenance of earnings in the face of progressive austerity are presumably three: the further curtailment of the service element in the costs of the stores, the expansion of London's population and the rapid rise in prices of all uncontrolled goods. This rise seems to be in direct proportion to the growth of control. The retail trade statistics of the Board of Trade show a fall in total sales, including food, of 1.8 per cent for the eleven months to the end of December, but the London Central and West End have consistently made a better showing than the aggregate figure. At the same time, most of the large centres of population will probably be able to show results not markedly inferior to those of London, and some may do at least as well.

### Crosses and Winkworth Scheme

The original scheme for the capital reconstruction of Crosses and Winkworth was defeated at the end of last year because it failed to obtain the three-fourths majority of preference votes by a narrow margin. Now, after a delay of only two months, the board is submitting an alternative arrangement. This leaves the position of the "Heaton" debenture holders unchanged; they receive no compensation for accepting preference capital instead of their prior charge, and they obtain in satisfaction of arrears of interest the net amount in ordinary capital of the company at par. The new scheme provides, however, that the contribution of the existing equity holders to the satisfaction of the debenture holders shall be increased and that of the preference holders reduced. The latter, having accepted conver-

sion of their holdings into ordinary shares and a 33½ per cent writing down, were to abandon £276,902 worth to the old debenture holders. This is reduced to £239,421, while the contribution of the old equity holders is raised from £187,406 to £224,887. The net result of these changes is that, whereas under the old scheme the preference shareholders received some 30 per cent of the equity under the new capitalisation, they now obtain 34.5, while the share of the old equity holders falls from 13.7 per cent to 9.1 per cent—that is, by one-third. The existing debenture holders in each case obtain 56.4 per cent. Granted that they are satisfied with the position, there can be no valid objection to the further recognition of the contractual rights of the preference shareholders which the adjustment has brought. Both classes may, indeed, be regarded as fortunate to secure such good terms.

### Road Transport Organisation

The efforts made to organise the road transport industry on a national basis appear to be making headway. In 1942 seven independent associations set up the Road Transport Organisation Joint Conference under the chairmanship of Lord Perry. In a first report issued a year ago it was proposed to create national associations for each of the three sections of the industry—the road hauliers, who carry goods for others, the "ancillary users," that is firms carrying their goods in their own vehicles, and passenger vehicle operators. These three associations, it was suggested, should combine to form a National Road Transport Federation. After the publication of the report, shadow councils were set up for each of the three proposed associations; these, in turn, created planning committees to work out the details of the scheme. In a second report, now published, the Joint Conference urged that the new organisation should be set up as soon as possible; it is understood that it will be formally constituted within a few months. The report also contains a preliminary statement of the policy of the proposed National Road Transport Federation. Among other things, its aims would be:

To secure the recognition by the Government of the Federation with its constituent organisations as a competent authority to speak on behalf of the industry.

To encourage the principle of self-government within the industry; to secure official recognition of that principle; to obtain such statutory enforcement as the industry finds necessary; to oppose unregulated re-entry into the industry after the war as a means of avoiding the chaotic conditions and unbridled competition which would otherwise result.

To press for a modification in the incidence of commercial motor taxation, to secure that the whole of the motor vehicle taxation and fuel duties are to be re-allocated towards the cost of road construction, improvement and maintenance, and to oppose the principle of imposing taxes which discriminate against the whole or any part of the industry.

To confer with other forms of transport to secure that state of inland transport that will afford the maximum benefit for the public at large.

There is, of course, no reason why the road transport industry should not set up a strong national trade association; indeed, there is much that such an organisation could do to further the interests of the industry. But the creation of a private road transport monopoly, armed with statutory power, would be highly undesirable.

### Heating the Home

In an address to the Fuel Luncheon Club, on February 18th, Mr J. G. Bennett, Director of the Coal Utilisation Research Association, made some interesting comparisons between coal, gas and electricity as a means of heating the living room in a small private house. He pointed out that, from the point of view of coal conservation, it is at present almost a matter of indifference whether the living room is heated by coal, gas or electricity. The net efficiency factor in all three methods of heating is about 16 per cent. Commenting on improvements in utilisation that are either in sight or have reached the experimental stage, he estimated that the working efficiency of coal could be raised to 45-50 per cent, and those of gas and electricity to about 33 and 24 per cent respectively. In other words, Mr Bennett expects far greater progress in the efficiency of the utilisation of crude coal than in those of gas and electricity—the great difference between present methods and expectations is another reflection of the past neglect and future importance of research. But efficiency in utilisation, as he was quick

# FACTORY COAL URGENT announcement

The industrial coal situation is extremely serious. Nothing short of drastic measures can meet the emergency.

Demands of military operations on a vast scale are putting an acute strain on transport. This is aggravating the fuel position, already critical.

Managers in industry now have two immediate responsibilities: to reduce their daily coal consumption still further, and to set rail trucks free with the least possible delay.

### How managements should act

- ★ Call together your departmental heads. Get at once a list of all possible savings of coal, steam, water, oil, electricity and gas that may be made in their departments. Impress upon them that industry is faced with an emergency.
- ★ Make it your personal duty to see that every point of heat usage is checked for unnecessary consumption. Space heating, in particular, is making heavy demands on the coal supply: great savings are possible in mild weather.
- ★ Tighten up your Fuel Watching System. Encourage co-operation, keenness and ingenuity.
- ★ Do not delay another day in carrying out the recommendations made by the Regional Fuel Efficiency Committee Engineers who surveyed your factory.
- ★ Search through the Ministry's Fuel Efficiency Bulletins for every economy suggestion which can be put into practice immediately. There are many.
- ★ Your next consignment of coal may be held up for those wagons standing in your works. Release them quickly.

Every fresh economy now is added provision against a possible further decline in the coal supply position.

to point out, is not the sole determinant of demand. Both gas and electricity are more convenient in use, but they are also more expensive. Quoting from his own experience, Mr Bennett said that he was paying 3d. per therm for coal, 1s. 6d. per therm for gas, and 4s. 8d. per therm for electricity. If these figures are broadly representative of relative prices of coal, gas and electricity, and if Mr Bennett's estimates of the relative increase in their efficiency of utilisation are soundly based, the elimination of coal as a means of heating the living rooms would considerably add to the cost of living of those who now use it. Clearly, there should be freedom of choice for the consumer, which will continue to be governed by relative costs and convenience. The problem of smoke abatement should be solved—and it can be solved—by burning coal without smoke in the home, as is done in modern power stations and factories.

### Miners' Welfare

Steady progress continues to be made by the Miners' Welfare Commission in improving conditions and amenities at the pits. By the beginning of this month, 96 per cent of the men were catered for in 881 colliery canteens, while a further 46 under construction or in course of preparation brings the total to 712,418 men or 98 per cent. Of the canteens in operation, 441 provide full meal service, covering 395,745 miners, while a further 157 under construction or in preparation would bring the total serving full meals up to 598, to cover 72 per cent of the miners. Most of the canteens in the latter category are developments from the "snap or snack" service which has in the past been provided. Progress has also been made in the provision of rehabilitation centres for injured miners, and during this month, when the centres in the Northumberland and Durham coalfields will be ready, the main coal producing districts will each have a rehabilitation centre or arrangements with the local hospitals. The most up-to-date figures show 455 beds in existence, sufficient for 488,100 miners or 67 per cent of the men employed, 212 in course of provision for 200,600 miners, or 27 per cent (this includes Northumberland and Durham), and 28 under consideration which would provide for the remainder. The work of the Commission in these spheres is not only of the very greatest wartime importance in maintaining and restoring the industry's manpower, but has a long-term importance. The miners, and indeed the public, will insist that the recent improvements are maintained after the war.

### The Herring Industry

The acceptance by the Government of the recommendations of the Herring Industry Committee in their report (Cmd. 6503) would provide a most hopeful sign that the decisions of the Hot Springs Food Conference are to be given reality. The herring is one of the most valuable foodstuffs and rich in protein content, yet, observes the Committee, "it is doubtful if consumers in some large centres of population ever have known what it is to enjoy a herring in the very best condition." Home consumption of herrings before the war was only about half what it had been in 1913, and in Scotland, the home of the industry, an average of only one herring per person was eaten in a year. The Herring Industry Board, set up in 1935, was mainly concerned with reviving the export trade, and its attempts to increase home consumption were very limited. The present Committee, wisely, takes the view that, in the long run, the industry must "look to increased sales at home to compensate for the contraction which may be ex-

perienced in exports," though immediately after the war enormous quantities of herrings will be needed to relieve hunger in European countries. As a first step towards the rehabilitation of the industry, the Committee recommends the reconstitution of the Herring Industry Board, with wider powers. It should be enabled to operate boats experimentally; to buy, sell, process and export herrings and herring products; to dispose of surpluses and arrange for the manufacture of herring products; to arrange pooling schemes and fix differential minimum prices; to prescribe standard brands for pickled herrings; and to develop home markets and promote marketing schemes. Fishermen should be given financial assistance for buying boats and gear, and arrangements should be made now to ensure the availability at the end of the war of an adequate fishing fleet and sufficient manpower, and to improve the pay and conditions of fishermen, whose low earnings were one of the features of the depression. The Committee also recommends the setting up of a joint industrial council for the industry.

### Canadian Company Profits

Of the British investor's many interests in the Americas, only those in Canada stand at a substantial proportion of their pre-war value, as judged by current quotations. In all other cases, either vesting or continued default has reduced the current value very heavily. It is now possible to carry the story of Canadian company profits up to the end of 1942. The figures of the Bank of Canada, covering all important companies which publish accounts and 100 smaller concerns—a total of 628—show a further rise in net operating profit from \$905 million to \$1,013 million. This increase compares with \$150 million for 1940 and \$190 million for 1942, so that the indications of the general indices of business activity are confirmed by a substantial slowing down in the rate of increase. No figures of operating profit are given for separate industries, but the net distributable profits now show a decline in six industries, namely the extraction of gold and of coal and petroleum, both of which fell in 1941, and four new industries, pulp and paper making, paper products, non-ferrous metals, excluding gold and electrical, and chemical manufacture. No profit figures are available for any part of last year, but the indices of business activity are either lower for the twelvemonth to October last than in the calendar year 1942, or only very slightly higher, with the exceptions of electrical distribution and aggregate payrolls. While in Britain the profits after tax showed a modest increase in 1942, in Canada the improvement was from \$606 million to \$645 million. Owing to heavier depreciation charges and other writing off, the net figure available for distribution and reserves fell from \$380 million to \$360 million, but of this fall virtually the whole \$19 million is accounted for by additional EPT refundable after the war. In the event, the amount distributed fell by only 2.1 per cent, managements having, it would seem, regarded the refundable EPT as available for addition to reserves in due course, a significant difference from the practice in this country.

### East African Currency Board

The report of the East African Currency Board for the year ended June 30, 1943, shows all the familiar symptoms of steadily expanding currency circulation and of increasing sterling assets backing that circulation. The expansion in circulation last year amounted to £7,063,000, which is the highest annual increment yet recorded. The

expansion is attributable chiefly to the continued military expenditure in East Africa and to the use of the Board's currency in occupied territories in East Africa. From a figure of £8,223,000 on June 30, 1941, the Board's circulation in notes and coin had risen to £21,118,000 by the end of last June. As a result of this expansion the Board was able to increase its sterling investments by £6,943,000 last year, bringing the total up to £15,560,000. The report states that, owing to certain technical difficulties in the minting of East African silver coin, the Board were faced with the possibility that supplies of one-shilling coins might not be available in sufficient quantities. Arrangements were therefore made for the printing of a supply of one-shilling notes to supplement the silver coinage if necessary. The return of currency in circulation on June 30th last shows that 4,094,000 of these one-shilling notes were outstanding at the time, but that the whole of this amount had been issued to the Occupied Territories Administration. This report adds its small but significant quota to the mounting evidence of sterling debt being accumulated here in favour of Empire countries.

### Rubber Supplies

Last week-end the Combined Raw Materials Board issued a timely reminder that it is essential to exercise the greatest possible economy in the use of natural rubber and that every step should be taken to increase the amount of natural rubber available to the United Nations. Production of synthetic rubber in the United States is rapidly attaining large proportions. According to Mr Bradley Dewey, US Rubber Director, production in January totalled almost 50,000 long tons, against an average of 41,000 tons in the fourth quarter of 1943; it will reach 75,000 tons per month by the second half of this year. Although synthetic rubber can at present replace natural rubber to the extent of 70 to 75 per cent, substantial supplies of natural rubber are still necessary, and their procurement remains one of the chief material problems of the United Nations. As stocks of natural rubber in the United States and the United Kingdom have been drawn upon, tyre manufacturers will this year be more dependent on current supplies. Production in Ceylon last year appears to have approached 125,000 tons, against 90,000 tons in 1941. There have been sizable supplies from a number of African regions, although the total is unknown. In Latin-America, however, hopes for an output of 50,000 tons and more have been disappointed. Brazil produced in 1943 under 30,000 tons, of which just over two-thirds appear to have been shipped to the United States. In other Latin-American countries, too, production has remained well below expectations. Recently a new agreement has been signed between the Brazilian Government and the official United States Rubber Development Corporation, which provides that the country's output should be raised to 40,000 tons this year, to 50,000 tons next year, and to 60,000 tons in 1946. Even if this 1944 goal is reached, supplies of natural rubber, including the sizable supplies of shrub rubber, will remain short. A new attempt is being made to step up production in Ceylon, the only important source of natural rubber left at the disposal of the Allies. The Ceylon Government, acting on behalf of the Colonial Office, recently announced price increases ranging from 2d. to 6d. per lb. over the present basic price of 1s. 2d. per lb. The increases are in the nature of production premiums and will be paid only if the individual plantations exceed their basic production. The new price scheme will be treated as an alternative of, and not a supplement to, the slaughter tapping compensation scheme by which the Government pays an allowance of £45 per acre towards the cost of replanting trees exhausted within the next two years owing to excessive tapping. The higher prices will probably not fail to stimulate production, although Ceylon plantations have frequently complained that war taxation largely counteracts the effects of higher prices. The future top price in Ceylon, 1s. 8d. per lb., equals roughly the base price of 34 cents per lb., which the United States' Government originally agreed to pay to Brazilian producers, who are working under much less favourable conditions than Ceylonese plantations. The actual cost of Latin-American rubber to the United States, however, is far higher. If all the United States capital investments in Latin-American rubber developments—about \$83 million until the beginning of this year—are taken into account, the cost per pound is between twice and three times the new Ceylon top price.

### Another Brewery Conversion

The process of converting brewery debentures to lower rates of interest continues, the latest concern to benefit being Peter Walker (Warrington) and Robert Cain. They propose to repay £2,086,633 of 4½ per cent debenture stock on June 30th next at 105 and to offer holders the right to convert, pound for pound, into a new issue of 3½ per cent stock offered at 98 and redeemable by a 1 per cent sinking fund between 1945 and 1988. The stock may be repaid in whole after 1959 at 101. The amount of this new issue is to be only £1,800,000, so that the debt will be substantially reduced out of existing security holdings, while the rate of both interest and sinking fund charges will be diminished. This should result in appreciable benefit to the ordinary shareholders, who have, however, in front of them £2,000,000 of 8 per cent cumulative preference stock. The terms of the offer give the rather meagre flat yield of £3 11s. 5d. per cent, but there is a minor speculative attraction in the possibility of a capital profit of two points on redemption at an early date. Arrangements have been made for any stock not accepted in conversion to be taken up.

### Shorter Notes

In a Note under the heading "Licensed Stock Dealing" in *The Economist* of February 5th it was stated that membership of the Association of Stock and Share Dealers would confer the right to a licence, under the Prevention of Fraud (Investments) Act, without further investigation. This does rather less than justice to the Association, which is recognised under the Act, so that no application for licence is necessary. Particulars of the statutory declaration required by the Board of Trade from applicants for a licence show that a very detailed questionnaire has to be completed. This requires details of the whole business history of the applicant, details of business associations over the five years prior to application and certain personal information.

A claim for a flat rate increase of the war wages of all railway workers is being presented collectively by the three railway trade unions—the National Union of Railwaymen, the Associated Society of Locomotive Engineers and Firemen, and the Railway Clerks' Association. The claim affects about 450,000 workers in all grades. The last advance to railwaymen was made last summer, when an additional 4s. 6d. a week to men and women workers was granted, bringing the war wage up to 20s. 6d. Increases in the minimum rates of workers in retail drapery, outfitting and footwear trades have been announced by the trades' National Joint Industrial Council. The increases, which will take effect on March 13th, amount to 4s. a week for men and 3s. a week for women workers.

Gas consumption has increased by 16 per cent since 1938, and if allowance is made for the decrease in street lighting, the rise is about 21 per cent. In 1938, 340,000 million cubic feet of gas was made. In 1940 it was 334,000 million, and it has increased year by year since then to 395,000 million cubic feet in 1943.

## POWELL DUFFRYN STEAM COAL COMPANY, LIMITED

### SCHEME OF AMALGAMATION APPROVED

#### CAPITAL STRUCTURE SIMPLIFIED

#### MR E. L. HANN'S STATEMENT

A separate general meeting of the holders of the ordinary stock of the Powell Duffryn Steam Coal Company, Limited, was held, on the 1st instant, at the Incorporated Accountants' Hall, Victoria Embankment, London, W.C., to consider a scheme of amalgamation with the Welsh Associated Collieries, Limited, and the Powell Duffryn Associated Collieries, Limited.

Mr Edmund L. Hann (chairman of the company) presided.

The secretary (Mr Alfred Read) having read the notice convening the meeting,

The chairman said: Ladies and gentlemen, you have all received details of the scheme of amalgamation which has necessitated the calling of this meeting. You have also been furnished, through the circular letter which accompanied the scheme, with explanations of the necessity for the scheme and the form which it is to take. These explanations are so complete as to make it unnecessary for me to amplify them, and it is my intention only to refer to certain criticisms which have arisen since the notices and circulars were sent out and to emphasise the necessity and urgency of the proposals therein contained.

The board of your company welcomes criticism and suggestions from its members at all times, but whilst much has been said by and on behalf of holders of different classes of the company's shares and stock, I am able to say that nothing has been suggested either as an amendment or as an alternative which was not thoroughly investigated and considered during the preparation of this final stage of the amalgamation.

#### DIFFICULTIES OF PRESENT CAPITAL STRUCTURE

I need not dilate upon the difficulties of our present capital structure, but I think I should make it clear that it is not only a source of constant confusion to the average investor, but that it constitutes a grave embarrassment to the development of the organisation. The inability to issue equity capital in the operating company means that any expansion of its activities has to be financed out of additional priority stocks, which rank in front of the whole of the capital of your company, or else out of its liquid resources. Thus in 1938 £500,000 of the company's unissued debenture stock was issued to provide additional working capital. Again in 1942, when the opportunity arose to purchase the very valuable business of Cory Brothers, the purchase price was found by the issue of a further £500,000 in debenture stock and by £1,250,000 from liquid resources. It is obvious that development cannot be financed indefinitely in this manner.

It is, I think, everywhere admitted that a scheme for the simplification of the complicated capital structure of our group of companies is necessary, but it has been suggested that it might have been left until some later date. In fact some critics have said that it is an amalgamation of expediency and not one of necessity.

#### A VITAL AND URGENT NECESSITY

On this point I should make it clear that your directors regard the amalgamation scheme as being something very much more than a desirable simplification in the capital structure. They regard it as being a vital and urgent necessity. Were it not so your directors would most certainly have postponed it until after the war, as they realise that in war conditions it is difficult for

shareholders either to give the necessary time to master the details of the scheme or to attend the meetings at which the scheme is to be put forward and discussed.

The coal mining industry is the subject of many conflicting views and political influences, and it is expected that far-reaching changes in the organisation of the industry will be called for and that these changes may be imminent. With our present capital set-up it would be difficult, and it might be impossible, for us to co-operate in a course of action which may be urgently required in the national interest and in that of your organisation.

We who are responsible for the administration of the affairs of this great undertaking realise that many difficulties lie ahead of us and that we must be prepared to meet them if, as we desire, we are to retain any measure of control of our industry. It is our intention to play our proper part in the furtherance of plans for intelligent and manageable grouping and, with practical experience in matters of this kind, we believe that we shall be able to play as important a part in the future as we have been privileged to play in the past.

#### POSITION OF PREFERENCE SHAREHOLDERS

Criticism has principally been directed to the treatment of the two classes of 6 per cent. preference shares in your company and the 5½ per cent. cumulative preference stock in Welsh Associated Collieries. The necessity for the liquidation of the two holding companies required that the most careful consideration should be given to the treatment of these preference shareholders.

On the one hand there is the legal position, that every person who buys preference shares buys them with the knowledge that they confer upon him certain contractual rights as regards dividend and as regards capital on a winding-up—an event which may occur at any time when the shareholders holding the requisite voting power so decide. If this view were rigidly maintained there could be no justification for the preference shareholders receiving anything more or less than their strict contractual rights on a winding-up of the company—in this case repayment of capital at par.

On the other hand there was the feeling that it would not be in keeping with the reputation and standing of Powell Duffryn to enforce these strictly legal rights against the preference shareholders, whose goodwill and interest in the organisation we wish to maintain, but that some regard must be had to current market quotations for these preference shares. It was thought, moreover, that the ordinary shareholders would support the directors in this view, although it was clear that any extra benefit accorded to the preference shareholders must be directly or indirectly at the expense of the holders of the ordinary shares.

#### EQUITY PROSPECTS

Your directors have had the opportunity during the past three weeks, in the light of support and of criticism, of reflecting upon the proposals submitted to you. We did not consider ourselves justified in asking ordinary shareholders to make any sacrifices greater than those they are asked to make under the provisions of the scheme, and we are now more than ever convinced that these proposals are the most equitable that could have been formulated.

It has, however, been suggested from some quarters that the Scheme of Amal-

gamation should have provided that the holders of Preference Shares in your Company and in Welsh Associated Collieries should, in the liquidation of those two Companies, have been given the right to exchange into new Preference Shares of a class or classes to be created in Powell Duffryn Associated Collieries. Alternatively, it has been suggested that in the liquidation of the two Companies these Preference Shares should be repaid with cash premiums, or that holders should have been given the choice of those two alternatives. Other critics have said that the rights and priorities of the different classes of fixed interest stocks, including the 5 per cent. Preferred Ordinary Stock in your Company, should have been exactly reproduced in the capital structure of Powell Duffryn Associated Collieries.

#### DIFFICULTY OF EQUATING RIGHTS

I propose to deal first with this point. The difficulties of equating and satisfying the respective rights and priorities of these four different classes of shares have not been fully appreciated. On the present capital structure the full dividend on the two classes of 6 per cent. Preference Shares in your Company is earned before 1 per cent. is earned on the 5½ per cent. Preference Stock in Welsh Associated Collieries. The dividend on the 5 per cent. Preferred Ordinary Stock in your Company is earned in full when only 2 per cent. is earned on the 5½ per cent. Preference Stock in Welsh Associated Collieries. Before the full dividend is earned on these Preference Shares in Welsh Associated Collieries a dividend at the rate of more than 1 per cent. is earned on the Ordinary Shares in your Company. On the other hand, of the four Preference classes concerned, the 5½ per cent. Preference Stock in Welsh Associated Collieries, though the last to get its dividend in full, is the only one with cumulative rights.

This makes it clear that it would have been impossible to reproduce existing rights and priorities in a simplified capital structure.

#### A SUGGESTION NEGATIVED

The suggestion that a new class or classes of priority shares should be created in Powell Duffryn Associated Collieries, into which holders of existing priorities should be given the right of exchange, was negatived by your directors on the ground that in their opinion it would be contrary to the best interests of the organisation. There are already in Powell Duffryn Associated Collieries more than two and a quarter million pounds in 4 per cent. debentures and three and a half million pounds in 4½ per cent. cumulative preference stock. The creation of a further two million pounds preference share capital in Powell Duffryn Associated Collieries would have served to perpetuate the present high ratio of priorities to equity in the group—in the opinion of your directors one of the weakest features of the present capitalisation.

The alternative suggestion, that in the liquidation of the two holding companies the preference shares should be repaid with a cash premium to represent current market values, was considered unacceptable. Your directors felt that they could not properly recommend to you that you should agree to make cash payments to individual classes of shareholders which are not provided for in the articles of association and for which there is no known precedent in a scheme of this nature.

I hope that I have dealt fully and fairly with the points raised by those who have adversely criticised the scheme. Other critics of at least equal standing have acclaimed it for its fairness having regard to the admitted necessity for the liquidation of the two holding companies.

#### ORDINARY SHAREHOLDERS' PROSPECTS

Your directors in recommending the scheme were fully conscious that ordinary shareholders might think the terms too generous to the holders of priority shares. They did not lose sight of the fact that the ordinary share capital of Powell Du-

March 4, 1944

March 4, 1944

fryn Associated Collieries would be some two million pounds greater than the present ordinary capital of your company, and that if profits justify the continuance of ordinary dividends at recent rates, it will cost more to pay such dividends on the additional shares than it costs to pay the priority dividends. At the same time they thought the terms of the offer would not be considered unreasonable by the ordinary shareholders and would not impose an undue burden on the company. In assessing the prospects of the ordinary shares I would mention that shareholders have so far derived no benefit from the acquisition of Cory Brothers.

The response from ordinary shareholders has completely endorsed the views of your directors. As you are aware, the forms of proxy were issued in a form that is new. Shareholders were invited, at their choice, to vote for or against the adoption of the scheme. There has been an overwhelming majority in favour of its adoption, and it is clear that the ordinary shareholders of the company regard the scheme as being in the interests of the organisation, and confirm the action of your directors in recommending it for your adoption.

The chairman concluded by moving the resolution approving the scheme.

The Right Hon. Lord Brassey seconded the resolution.

Mr A. J. Miller, representing the Prudential Assurance Company, Limited, then put forward the company's reasons for opposing the scheme, and pointed out that he represented the views also of the Investment Protection Committee of the British Insurance Association.

The resolution was carried on a show of hands.

At an extraordinary general meeting which followed all the resolutions in connection with the scheme were carried and the proceedings terminated with a hearty vote of thanks to the chairman and directors.

## POWER SECURITIES CORPORATION, LIMITED

### MR WILLIAM SHEARER'S STATEMENT

The twenty-first annual general meeting of Power Securities Corporation, Limited, was held, on the 2nd instant, in London. Mr. William Shearer, the chairman, presiding.

Before commencing the business of the meeting, the chairman referred to the great loss the corporation had sustained by the death on February 25th of Mr William C. Lusk.

The following is an extract from the statement by the chairman, circulated with the report and accounts: Our activities and those of our subsidiary companies have again been almost entirely directed to the execution of works of national importance. The works handled during the year aggregated in value some £3,000,000.

When the present emergency has passed there should be many opportunities of developing, not only at home, but in various parts of the Empire and certain foreign countries, projects of a type similar to those in which we have hitherto specialised.

The gross profit for the year is £113,631, a reduction of £4,860. Administration expenses and directors' fees amount to £10,996, against £11,565 last year. The figure of income-tax is £49,802, or a reduction of £6,460 on last year, leaving a net profit of £52,834, an increase of £2,170.

After crediting the amount brought forward from last year, and debiting the dividend on the issued preference shares and the proposed dividend of 6 per cent. on the ordinary shares, the resultant balance to be carried forward is £49,737, an increase of £11,334 on the amount brought in.

You will not expect me to make any forecasts as to the future, but I can say that we have a considerable volume of work on hand which will keep us fully occupied for some time.

The report was unanimously adopted.

THE ECONOMIST

319

## CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

### MR. V. A. GRANTHAM'S STATEMENT

The ninetieth ordinary general meeting of the Chartered Bank of India, Australia and China will be held at the bank's head office, 38, Bishopsgate, London, E.C. 2, on Wednesday, the 15th instant, at noon.

The following is the statement by Mr V. A. Grantham (chairman) circulated to the shareholders, with the report and accounts:—

The stockholders will doubtless realise that we have had many difficulties to contend with, and that with the further surrender of men called for during the year, added burdens have been cast upon those left with us. These burdens, I am happy to say, have been shouldered without complaint, and on your behalf, as well as on behalf of the court of directors, I extend thanks to all concerned. A special word of praise is due to the officers and local staffs of the bank in the Indian zone, who have rendered ungrudging service during an exceptionally busy period.

In accordance with the resolutions passed last March, our £5 shares have been converted into stock, and our hope that this change would lead to greater convenience and a saving of labour has been amply realised.

The total of the balance-sheet at £88,918,258 shows an increase of £2,943,064. On the liabilities side, current and other accounts are up £1,774,138 and deposits £1,344,973. On the assets side there are increases in cash, securities, and bills discounted and loans, of £1,005,357, £3,576,916, and £1,142,300 respectively. The last item shows that our business in India is progressing satisfactorily. Bills of exchange and Treasury bills are down £1,801,636, and the balance of head office and interbranch remittances, drafts, etc., in transit is down £956,647. These two items reflect the lesser volume of trade financed by means of bills, owing largely to Government regulation. The percentage of cash to call liabilities to our depositors is just over 20.1 per cent., and our increased investments in Government securities are largely held in short-dated stocks. The total of these investments represents 58.1 per cent. of our call liabilities to our depositors, and it will thus be seen that the liquid position of the bank is exceptionally strong.

#### PROFIT AND LOSS ACCOUNT

In view of the disabilities under which we are suffering, I think the profit of £314,239 16s. 11d. will be considered satisfactory. Including the balance brought forward from last year, we have a total available of £671,372 1s. 11d., out of which an interim dividend at the rate of 5 per cent. per annum was paid last September. We propose that a final dividend for the half-year to December 31st last at 5 per cent. per annum should be paid, costing £75,000, that £50,000 be transferred to officers' pension fund, and £100,000 set aside on account of contingencies, leaving £371,372 1s. 11d. to be carried forward.

Until we are safely out of the wood in the Far East, we still consider it prudent and advisable to strengthen our internal funds by every means possible.

#### INDIA

The past year has been a favourable one in the economic development of India, where the bank's operations abroad are mainly centred at present. Industrial expansion has proceeded apace under the stimulus of the war effort and as a result of restrictions upon the free movement of cargoes from the United Kingdom and other former sources of supply, while, on the other hand, there has been a continuous

and urgent overseas demand for most of India's raw products and manufactures. Under these conditions India has prospered greatly, but this prosperity has not been free from monetary inflation and heavy rise in prices, so that the incidence of prosperity upon the population has been unequal and has marched hand in hand with real distress. The increased purchasing power which found its way into the hands of many of the people was aggravated by the shortage of goods on which it could be spent. In the absence of more extensive loan programme or heavy taxation, some relief might have been obtained if it had been possible to increase agricultural production, but, in fact, local crop failures, coupled with transport difficulties, brought famine to certain areas. The food situation is now happily much improved, mainly through imports of wheat, and measures have been instituted to control further inflationary tendencies including sales of gold, but it is hoped that early and adequate steps will be taken to increase the output of food crops within India, for it is certain that India must, in future, to a greater degree than ever before feed herself.

#### INDIGENEOUS BANKS

A feature of the rising tide of prosperity in India has been the founding of a considerable number of indigenous banks. Some of them, having highly influential and representative boards and satisfactory capital structures, have already made marked progress. There is, of course, a wide and growing field for their operations, but apart from this, the great increase in the note circulation which has taken place has rendered the extension of banking facilities throughout the country desirable as a means whereby the control of the currency may be more effectively exercised. Managed conservatively and with vision, these banks will doubtless attract some of the existing surplus purchasing power into Government loans, while helping at the same time to serve the growing needs of industry and production, and thereby assisting to bring about that balanced economy which must be one of the aims of the post-war period.

#### CHINA

Turning to China, it seems appropriate to mention the visit of the Chinese Goodwill Mission, which aroused a new interest in China throughout this country. Last year we sent representatives to Chungking to open a branch of the bank, and although, owing to the lack of any means of transport between China and the outside world, except by air, there is practically no trade to finance at present, the opening of this branch has greatly assisted us in considering the problems which face us in our post-war future in China.

The question of the reconstruction of our branches at present in enemy occupation engages our constant consideration and plans are steadily being worked out against the day when it will be possible to return to them. In the greater field of effort covering the reconstruction of British trade, dependent as we are upon imports for our very livelihood, it has been held that no task is more important than the re-establishment of the export trade of this country. The agencies and branches of this bank, stretching as they did from Bombay and Karachi, eastward across the world to New York, were indispensable links in that trade, and it is my earnest hope that the time is not far distant when they will again fulfil the function for which they were originally opened, and which they so faithfully performed in the past.

## BOOKER BROTHERS McCONNELL AND COMPANY, LIMITED

### DIVIDENDS MAINTAINED

The annual general meeting of Booker Brothers, McConnell and Company, Limited, was held, on the 25th ultimo, in London.

Sir Alfred Sherlock (chairman and managing director) presided.

The following is an extract from the chairman's statement circulated with the report:—The profits for the year amount to £141,601, which I think you will agree is very satisfactory, although approximately £18,000 less than the previous year. They are, however, equal to the results of 1941. The net result is that after having reserved £10,000 against goodwill, the reserves and surplus otherwise than for goodwill have been increased by £5,000. In other words, we have been able to maintain our dividends out of earnings and put aside something like £15,000.

Prospects for next year are not so good, because we shall undoubtedly receive smaller dividends from our sugar subsidiaries. We expect our crop will be reduced by something like 33½ per cent. There should, however, be some relief from taxation.

Once more I would like to record our deep appreciation of the services rendered by our staff overseas and at home in the face of great difficulties, and our gratitude to the Government authorities on this side for the help they give us. It is unfortunate, however, that we do not seem to have been

able, in recent years, to obtain in Demerara, either from the labour leaders or from the local administration, the degree of co-operation without which it seems to us it is impossible to make much progress as regards the welfare of the Colony. The report was adopted.

## GENERAL INVESTORS AND TRUSTEES, LIMITED

The thirty-seventh annual general meeting of General Investors and Trustees, Limited, is to be held on the 9th instant at 68, King William Street, London, E.C.

The following is an extract from the statement of the Chairman (Mr. W. C. Cripps) circulated with the report and accounts:—The revenue has been well maintained, and allows us to repeat once more the dividend of 9 per cent. on our Ordinary stock; and the improvement in the capital position, which has been shown for the last year or two, has continued. The valuation of our portfolio shows that during the year there has been a further increase in values of approximately £175,000, so that we are able to say to-day that not only is our capital intact with a small margin, but that the reserves, totalling over £319,000, are also intact. And I would remind you that this very substantial amount of reserve has all borne tax.

This is the thirty-seventh annual report of the company, and, with the dividend recommended to-day, we shall have paid to our Ordinary stockholders dividends aggregating 330 per cent., or almost exactly an average annual dividend of 9 per cent. That is a record of which I think we may be justifiably proud.

## THE STERLING TRUST, LIMITED

### BRAZIL AND HER CREDITORS

The annual general meeting of the Sterling Trust, Limited, was held, on the 29th ultimo, in London.

Mr. Richard S. Guinness, the chairman, presided, and, in the course of moving the adoption of the report and accounts, said: I am glad to report an increase of over £13,400 in gross revenue. The average yield on our total investments is over 4 per cent., and we are thus enabled to meet all charges and maintain the same dividend as before, viz., 4½ per cent. upon the ordinary stock.

The book value of investments is shown at £4,481,600, after allowing for contingencies fund. In 1941 the depreciation, as compared with their market values, was 21 per cent., in 1942 the depreciation fell to 11 per cent. and to-day I am able to report a further reduction to 4.65 per cent. From the capital standpoint then, we show a progressive advance on valuations. We can anticipate an increased margin in net revenue in the current year.

I can only express a hope that possibly in the not too far distant future the unhappy position as to revenue returns both from South America and from Europe may show prospects of gradual improvement. In such event our revenue will materially increase.

Last year I enlarged upon the importance of the political and financial developments in South America. The whole-hearted assistance that Brazil is affording to the Allied cause and the impulse given thereby to her trade position has caused a growing improvement in her finances. The report and accounts were adopted.

## GOVERNMENT RETURNS

For the week ended Feb. 26, 1944, total ordinary revenue was £77,692,000, against ordinary expenditure of £130,257,000, and issues to sinking funds of £75,000. Thus, including sinking fund allocations of £12,167,119, the deficit accrued since April 1st is £2,503,126,000 against £2,559,146,000 for the corresponding period a year ago.

## ORDINARY AND SELF-BALANCING REVENUE AND EXPENDITURE

| Revenue                            | Estimate 1943-44 | Receipts into the Exchequer (£ thousands) |                          |                          |                          |
|------------------------------------|------------------|-------------------------------------------|--------------------------|--------------------------|--------------------------|
|                                    |                  | April 1 to Feb. 27, 1943                  | April 1 to Feb. 26, 1944 | Week ended Feb. 27, 1943 | Week ended Feb. 26, 1944 |
| ORDINARY REVENUE                   |                  |                                           |                          |                          |                          |

A change has been made in the method of showing an excess of Post Office Expenditure over Post Office Revenue. Such excess is now included as ordinary expenditure (under "Total Supply Services") instead of being shown, as up to July 24 inclusive, as a deduction from ordinary revenue.

After decreasing Exchequer balances by £240,204 to £2,919,757, the other operations for the week (no longer shown separately) raised the gross National Debt by £53,486,387 to £19,343 million.

New York Agency: 65, BROADWAY, NEW YORK CITY

Drafts are granted on the Bank's Branches throughout the Australian States and Dominion of New Zealand. Telegraphic Remittances are also made. Commercial and Circular Letters of Credit and Travellers cheques issued. Bills are purchased or sent for Collection. Deposits are received for fixed periods on terms which may be ascertained on application.

PICCADILLY CIRCUS BRANCH, 18/18 PICCADILLY W.

(1943 Accounts)

## ESTABLISHED 1843

# ONE

TELE.: TEMPLE BAR 3316.      ANNUAL SUBSCRIPTION £3.

# The King's Shilling

THE strike of the majority of Welsh coal miners, claiming all-round increases in piece rates to match the new higher minimum wage, has supplied an ironic comment on the Government's claim that no substantial increase can be made in Service payments without upsetting the delicate balance of wages and prices. The question whether, if civilians received or spent less, serving men could not be paid and spend more is inevitably being asked. There is no obvious reason why soldiers, sailors and airmen should be put alone in the front line against inflation as well as against the enemy. The fact is that the Government is paying for past errors: for the failure, in civilian work, to round off, with the trade unions, a consistent wages policy; for the failure, in coal mining, to begin the long-overdue complete overhaul of the industry; for the failure, in the Services, to solve the problem of pay and allowances at a much earlier date, instead of conceding, always grudgingly, a series of piece meal and minimum increases. On the question of Service pay, indeed, the Government's position is just confused. Rightly, Ministers resist the very large claims made for an increase to industrial or American levels, though they give the wrong reasons. Quite wrongly, despite all the evidence in favour of some changes, they wrap a stubborn reluctance to consider any increases at all in a mist of jejune economics. On the other side, Labour votes made

up nearly three-quarters of those cast against the Government on Thursday of last week in the debate on Service payments. But the trade unions have never shown any positive concern for Service earnings ; and, in their own industrial provinces, they have rested content with sectional claims and competitive gains.

It is lamentable that the Second Front should be prefaced, simultaneously, by a serious strike of key workers and an angry dispute about the payment of the troops who will do the fighting. It is deplorable that, at this moment, the attempt should again be made, however well intentioned, to identify Service payments, which are living allowances, with industrial earnings, which are still ostensibly based on supply and demand, skill and output. Very likely the miners will get substantially what they want, however disguised ; the situation in the coal-fields has already been allowed to drift too far. Very likely the troops will be given only a small part of what has been suggested. A bitter taste will be left ; but the bitterness will be only partially justified. It can be argued that, in total war, workers and soldiers should be placed on the same financial footing. But this is not the decision that, in total war, workers and soldiers should be placed in line with industrial earnings, which both for all workers and for adult men have risen by three-quarters since 1938, but whether the living allowances

paid to men and their families are adequate; and there is a strong presumption that the lowest are not.

It is natural enough that some civilians at this solemn moment, with the near prospect of heavy casualties, should look for means of rewarding the men from whom the fallen will come. But there is little good counsel to be got from a purely emotional approach. Lives and limbs cannot in any case be paid for in advance at so much a day. The debt cannot be so easily discharged; it can only be met, when the fighting men have paid the price, by the establishment of world peace, national safety, full employment, ample and equal opportunity and security for all families against misfortune.

Service men, while the nation is fully mobilised, are not professionals or mercenaries, but citizens performing a civic duty. In the interval between the end of the German war and the end of the Japanese war, a different situation will arise. It will be halfway house, in which the nation will be half mobilised. Some men will be kept to fight while others return to work and civilian pay. They will be kept compulsorily, and will be entitled to a large premium for their services. Later, after all the fighting ceases, the situation will be different again. Large forces of the best men will still be needed. But most will come home to their civilian work while a minority continue to stay. Soldiering will become an occupation by the side of other occupations. The Services will only be kept together in the required numbers and of the required quality if competitive wages are paid. But, while mobilisation is complete, the question is simply whether Service men or their families have grievances concerning their living allowances which should and can be redressed.

Blame for the present untimely dispute must be shared between the Government and its critics, the Government for offering too little, the critics for asking too much. Parliament was very hostile to the Government last week. Even after Mr Eden had promised further consultations with Members, a critical amendment was beaten by only twenty-three votes. Every speech in the debate was in favour of an increase in pay and allowances, and many more Members abstained than voted. But the Government's case was not so bad as this might suggest. Ministers were certainly right to object to the various proposals made in the debate that basic Service payments should be brought up to the average level of earnings in industry—£6 1s. 3d. a week last July for all adult men (as shown in a table on page 356)—or to the still higher earnings of Allied troops. The comparison with industry is neither relevant nor possible; and, even if it were valid, it would obviously be unreasonable to raise the lowest Service payments to the average in industry. The pay of Allied troops is set by their own home standards.

It must be admitted, however, that Ministers made their case badly. Astonishingly, they were taken unawares by the attack that developed. Once again, they managed to convey the impression that any concession, however small or justified, would only be wrung from them at the pistol point. In addition Sir James Grigg grossly overstated the economic argument for refusal. He spoke of "inflation on the wildest scale"; he asserted that "the whole range of wages would be out of focus." As many economists have already pointed out, in the press and in private, this is overdoing it: £200 million a year is less than five per cent of total personal expenditure on consumption; since the war started yearly wage payments have been increased by £500 million; without producing more than the tamest inflation; essential goods are rationed and price-controlled; there is no reason, apart from unpredictable aberrations on the part of the trade unions, why increases in Service pay should lead to fresh wage claims; in short, inflation in the sense of a swift upward spiral of prices and wages is only a remote possibility. Nevertheless, Sir James Grigg's argument has some substance. No one who has witnessed the effect of the spending of overseas troops and war workers on the prices or supply of unrationed goods and accommodation can really argue that an increase in spending power of this magnitude would be without its ill effects. Any large increase in purchasing power—and this argument applies even more to workers in industry—must increase

this scramble for goods and services "on the fringe."

But when all this has been said, the problem remains. Is the allowance made to serving men for their out-of-pocket expenses, over and above their keep and clothing, sufficient? More important, in fairness and in the eyes of the men themselves, are their families provided with sufficient money to meet all their reasonable needs? So far as the lowest paid troops are concerned, the answer to both questions is in the negative. The basic weekly pay for such a soldier in the Army—where they constitute about 5 per cent of the total—is now 21s. a week, of which, if he is married, 3s. 6d. is compulsorily allotted to his wife. His wife receives, in addition to this 3s. 6d., 21s. 6d. a week, making a total of 25s.; 9s. 6d. is given for a first child, 8s. 6d. for a second. No one can claim that 17s. 6d. a week for the married soldier's out-of-pocket expenses is generous. Before 1942 he allotted 7s. of his pay to his wife; then the War Office took over half this allotment; it might not be unreasonable to ask the authorities to assume the whole. But the argument that a single man is entitled to more money to spend is a strong one; and the straightforward way out is surely to increase basic pay by 6d. or 1s. a day. Nor does a total family allowance of £2 3s. a week for a wife, two children and the upkeep of the home seem an adequate living allowance. The lowest paid officers, with their families, are, on account of their greater expenses, in a similar plight. Increases in basic pay and allowances will involve increases at higher levels, though not necessarily in strict proportion. It should be emphasised that these lowest paid cases are not representative of the financial position of serving men. At the other end of the scale, in the non-commissioned and other ranks, there are warrant officers who receive £282 or £255 a year in basic pay, not counting family allowances. The average in the Services is very much closer to the industrial average than any of the critics have recognised.

Thus there is a case for increases in both pay and allowances, though it has been much mis-stated. The problem is surely very simple. It is to prevent any single instance of poverty, privation or humiliation among Service men and their families. Nor do special hardship grants meet the case. These are rights, not concessions to be given of grace. Ministers and Members might do well to consult representative Service men themselves. It is to their honour that, however strong their feelings may be in the matter, Service men have behaved unexceptionably well, avoiding agitation and showing no signs whatever of unrest or discontent. They should be called in to advise. They can best say whether an extra 6d. or 1s. a day is needed to supplement the spending money of the lowest paid soldier; they can best say how much is needed to make up the lowest family allowances to a reasonable level; here the discussion should range between an extra 6d. or 1s. a day for the wife and an extra 6d. or 1s. a week for each child. Unfortunately, it is by no means clear what the Government is prepared to consider. On Tuesday Mr Churchill suggested that the Government's intention in seeking this breathing space was rather to shorten its lines than to retreat. He implied that no increase in basic pay could be considered. Whether Parliament will be satisfied is still uncertain. The crisis is by no means over.

Nor should the implications of the crisis for the course of civilian earnings be underestimated. Two things were plain in September, 1942, when the last concession in pay and allowances were extracted from the Government: first, that the concessions were probably too small; and secondly, that if the rise in civilian earnings continued, the whole question would inevitably be re-opened. This is precisely what has happened. True, civilian earnings rose between July, 1942, and January, 1943, by under 9 per cent; but this rise has been sufficient, with the advent of many more free-spending troops from overseas, to re-awaken the sense of injustice, however wrongly it may be based. It is plainly the duty of the Government to remove at once every trace of niggardliness in the 1942 award. It is no less its duty to realise, in its solemn contemplation of the general economic equilibrium, that what is sauce for the soldier is sauce for the civilian as well.

## Presidential Progress Report

WITH the first party primaries in the individual states, the American Presidential election is moving into a new phase, which will end with the two conventions in June and July. This is the period of choosing candidates and defining issues.

On the Democratic side, nothing has happened in recent months to alter the fact that Mr Roosevelt is the only possible candidate. It is generally accepted that no other Democrat would have any chance at all of being elected, and since no Democratic politician has anything to gain from a Republican victory, even Mr Roosevelt's worst enemies within the party must necessarily line up behind him in the election—if he will consent to be a candidate for a fourth term of office. This is what deprives the spectacular quarrel between Mr Roosevelt and Mr Barkley of any decisive influence on election tactics. In American politics, policy is one thing and elections are something quite different. There are, in effect, not two parties but three—Northern Democrats, Southern Democrats and Republicans—of which the first two act in concert at elections, the last two (frequently) in Congress. It is not in the least inconsistent to support Mr Roosevelt for re-election and to vote against all his policies. Indeed, the chief result of the Roosevelt-Barkley split has been a suggestion that the Senator might make a very acceptable Vice-Presidential running mate for Mr Roosevelt.

It is over the second place on the "ticket" that the chief Democratic competition is raging. Mr Wallace, the incumbent, was pronounced politically dead several months ago, but he refuses to lie down, and in frequent speeches has established himself as the acknowledged leader—under, alongside, or, on some issues, in defiance of Mr Roosevelt—of all those progressive, left-inclined views known collectively as the New Deal. But the politics of the election would seem to dictate that Mr Roosevelt's running mate should be a Southerner and a Conservative, as in 1932 and 1936. The choice will be made by Mr Roosevelt himself and, like his decision on his own candidature, will not be known until the Democratic convention meets in July. The choice will be made with one object only—to collect votes—and the personality of the Republican candidate, who is to be chosen a few weeks earlier, will be one of the factors to be considered.

The Republican contest is still very open. The last few weeks have seen a steady rise, in the party, of Governor Dewey's popularity and a steady fall in Mr Willkie's. This is certainly true of the active politicians of the party, and it is also the evidence provided by the various public opinion polls, which are usually fairly reliable on clear-cut political issues, whatever they may be on less definite topics. Nor have any other candidates emerged with any clarity from the serried ranks of the

dark horses. The names most frequently mentioned are those of Governors Bricker and Warren, of Ohio and California respectively, of ex-Governor Stassen of Minnesota and of General MacArthur. But none of them, at the moment, can be conceded more than an outside chance. Moreover, there is the complicating fact that Mr Dewey still says he does not want to be a candidate and has asked that his name should not be put forward in the state primaries. He may be sincere; or his intention may be (as has been suggested) to say "No, No, 999 times No." In either case the wisecracks reflect that, in all American history, the redoubtable General Sherman was the only man who persisted in a refusal to answer his party's call. But Mr Dewey's coyness is a confusing circumstance, and the decision of a nominating convention can rarely be predicted with safety. Mr Willkie is by no manner of means out of the running.

Some months ago, Mr Willkie warned the British against any attempt to interfere in the election. It was a surprising warning, but that it expressed a real touchiness in the Republican ranks was shown by the ridiculous fuss made by the *New York Herald-Tribune*, some weeks later, over a comment made in a British ecclesiastical journal. It is certainly true that any hint of partiality by the British Government would be most improper. Opinions expressed by private British individuals are perfectly permissible—freedom of international comment is not a one-way privilege—but if they are made in such a way, or in such places, as to look like attempts to influence the American voter, they would perhaps be tactless. But it is neither right, nor if it were right would it be possible, to put a ban on all British discussion of an election whose result will be just as important for the future of Britain as for the future of America.

Mr Willkie's warning was presumably based on the assumption that "the British influence," if it were used at all, would be cast into Mr Roosevelt's scale. And indeed there is a certain tendency in this country to take it almost for granted that, though there are shades of difference between the Republican candidates, none of them would, from the viewpoint of the British interest, be so acceptable as Mr Roosevelt. But this can certainly not be taken for granted, and it may not even be true at all. It is clear that Mr Roosevelt, if he is re-elected, will be re-elected on the strength of his foreign policy and of his conduct of the war, and that his domestic policies have lost the confidence of the American people. That means that he would have to deal with a Congress certainly less tractable than the present legislature and possibly even more openly hostile. An attempt would doubtless be made to keep the main principles of strategy and diplomacy above the party fight. But the truce would

no more apply to the details of either than it does to-day—and the result might be the same. From the point of view of other nations, a President, however perfect in himself, who is constantly obstructed by Congress may be less acceptable than one who can secure support for his policies. If the Republican candidate is a man whose general approach to world problems is similar to Mr Roosevelt's, and if he can win the election with such a margin that Congress will accept his leadership, there is no specifically British reason why his election should be deplored. If the argument is pushed any farther *The Economist* will be accused—though not perhaps by Mr Willkie—of improper interference. Let it therefore stop at the conclusion now reached, that British opinion, in its own interest, can well afford to be neutral.

It can hardly, however, be a silent neutrality. For it is already clear that Britain and British policy will be issues in the election. The average Englishman is at a loss to understand how it can be considered smart politics to indulge in constant sniping at an ally who has been fighting in the common cause at least as hard and for twice as long as the United States. But the connection is both simple and inevitable. The main lines of the President's foreign policy and strategy cannot very well be attacked. But the President is (or probably will be) also a candidate, and a candidate cannot be beaten by agreement with his policies. The execution of those policies must therefore be attacked, and much the easiest line of attack is to claim that Mr Roosevelt, in executing his policies, has paid far too much attention to the wishes of his subtle, clever and aggressive allies and not nearly enough to the interests of the United States. Hence the continuous stream of allegations, proposals, demands, most of which seem to the Englishman to be either

ignorant or insulting or both together. Hence also the stiffening in the attitude of the Administration itself, the very evident determination now appearing in a number of directions to drive far too hard a bargain rather than run any risk of being accused of making a concession. Hence what appear to be the aggressive American policies on such post-war problems as oil, civil aviation and foreign trade.

It would be wrong to take all this as seriously as its surface appearance might suggest. American policy is not always to be deduced from what is said in Washington, nor even from what is done in Washington in an election year. That policy has been eminently reasonable in the past and will be eminently reasonable in the future, and though the quadrennial silly season is a nuisance, it should not be taken as reflecting permanent conditions. But that principle works both ways. It means that the British should refuse to take offence at what is said in the heat of political battle. But it also means that care should be taken not to compromise any permanent principles in the same atmosphere—the principle, for example, that none of the United Nations entered the war on a basis of limited liability, or the principle that the financial contributions made to the war are no basis for priority claims on the fruits of victory. As often as possible, the British cue should be to say nothing and wait patiently. But if it is sought to press any of these issues to a conclusion while the air is so heavily charged with domestic politics, there is nothing in the posture of Anglo-American relations to prohibit, and much to encourage, the public and forceful statement of the British view. It is wrong that British interests should influence the American election. But it would be equally wrong for the American election to muzzle British policy.

## America in the Middle East

THE American interest in the affairs of the Middle East, which has been so much in evidence in recent weeks, is no new thing, though its history has been somewhat spasmodic. American missionaries and educators have long worked in the Levant and have created such great centres of beneficent American influence as Robert College at Istanbul or the American University at Beirut. There are also long-standing commercial contacts, and even American interest in Middle Eastern oil is not new. In 1919 and 1920 American opinion, as now, was concerned with the threatened exhaustion of petroleum reserves in the United States, and the Anglo-French "monopoly" in the Middle East caused hot indignation until American interests were able to secure a quarter-interest in the Mosul field. Moreover, at the close of the last war, in the atmosphere of Wilsonian enthusiasm, the American Government showed great political interest in the Middle East and even contemplated undertaking a mandate for Armenia. But all desire for political responsibility vanished in the post-Wilson retreat and the later development of larger and larger oil holdings took place under British administration and the general safeguard of the British Navy and the British Middle Eastern Air Force. Relations between the American oil companies and the British authorities were uniformly cordial, and the island of Bahrain, where American capital developed the oil and a British Resident kept the peace, was the happiest possible symbol of an unconscious but working partnership.

The present war opened a new phase in American interests in the Levant. Even before the entry of the United States into the war, supplies of American munitions were going to the British forces in the Middle East and were co-ordinated through the Middle East Supply Centre. Once the Americans were in the war, they entered the Supply Centre as full partners and, from May, 1942, it became a joint Anglo-American agency for dealing with most of the economic problems raised by

the war throughout the Middle East. The value of this partnership was and is considerable. The solid joint political and economic power of Britain and America underpinned the structure, and the Middle Eastern states entered into closer economic relations with each other than ever before. It is no coincidence that a real advance in the plans for Arab Federation dates from the establishment of the Supply Centre. It is a model of how two Great Powers can work together without friction and in accordance with the interests of a whole region composed of different sovereign states. It was not unreasonable to hope that it might be typical of the co-operation which would be possible after the war in the Middle East.

Now in 1944 two events have occurred which make the issue much more doubtful. First, on February 7th, Mr Ickes announced that the end of the war would see a shortage in American oil reserves. He had therefore set up for the Government a Petroleum Reserves Corporation and this body had negotiated an agreement with the two big companies controlling the American concessions in the Gulf and Arabian areas, the Arabian American Oil Company (a subsidiary of Standard Oil of California and the Texas Company) and the Gulf Exploration Company (a subsidiary of the Gulf Oil Corporation). Under this agreement the United States Government would construct a pipe line from the Persian Gulf area to the Mediterranean. Secondly, at about the same time, identical resolutions were introduced in both Houses of Congress, calling on the United States Government to use its good offices to secure the free immigration of Jews into Palestine and the reconstitution of "Palestine as a free and democratic Jewish Commonwealth." The resolution was referred to the Foreign Affairs Committees for discussion. There followed a storm of protest from the Arab world. Egypt led the way with a protest; six other Arab states followed suit; and Iraq protested twice. Congress was surprised. Representative Celler denounced the Arab protests as a British plot. Senator Wagner declared that the Senate would not tolerate interference in its "inter-

nal affairs"—by which he presumably referred to Palestine. The discussions were cut short by General Marshall, who asked for the postponement of the resolution since it would jeopardise the military situation.

These two sudden American incursions into Middle Eastern politics are so out of keeping with the line of close co-operation with the British, and with the regional discussion of difficulties hitherto pursued through the Combined Boards at Washington and the Supply Centre at Cairo, that they raise in a very urgent form the question of what post-war course the Americans will follow in the Middle East. The first possibility is, of course, a return to isolation. The oil arrangements are to a large extent in the old pattern of American economic expansion. The Arabian concessions are not new. It is perfectly possible that the United States will revert to the old dispensation, under which Great Britain shouldered the political and military responsibility in this region and the commercial interests looked after the oil. The existence of a government-constructed pipe-line would not necessarily tie the American Government's hand any more than did the Armenian Mandate after the last war. Nevertheless, there are definite signs that permanent intervention in the affairs of the Middle East is intended. The pipe-line is one. The wide scope of General Royce's Military Mission to Saudi Arabia—it covered petroleum extraction, communications and public health—is another.

If the Americans adopt a policy of intervention after the war, its value as a stabilising factor in Middle Eastern politics will depend on its manners and methods. The general case for the Americans accepting definite responsibility is, of course, obvious. But if their intervention is to be unilateral, spasmodic and uninformed, the final result will be worse than straight isolationism. Unhappily the two recent excursions into Middle Eastern politics show little sign of forethought and even less of any desire to co-ordinate American policy with that of Great Britain. There is no threat to British oil interests in the proposed pipe-line, if it is made available to other countries on equal terms. Marketing agreements already cover most of the British and American oil companies, and the development of new fields in Saudi Arabia will not affect the holdings of the Anglo-Iranian Company. Yet the manner in which this American pipe-line scheme was made public showed that there had been no prior consultation with the British nor any attempt to relate the new scheme to the interests of the Middle East as a whole. Such unilateral action is of course the norm in purely commercial dealings. Here, however, the American Government is involved; and the proposed development scheme, when completed, may well be on the scale of £300 million. Automatically the Government's intervention raises the question to the political level. It is not unreasonable to suggest that other Governments should have been consulted.

The case of Jewish immigration is much more serious. The problem of a Jewish National Home is not a single question unrelated to any other military, political and economic problem in the Middle East. Its solution depends upon such matters as Arab federation, soil fertility, rising living standards, freedom of emigration to other parts—indeed, it is as much a world problem as a problem for Palestine alone. This fact is implicitly recognised by American Jewry, which is split on the Zionist issue, many American Jews preferring the normal safeguards of citizenship in their country of residence to the creation of a "national dumping ground" elsewhere. In discussing the resolutions on the White Paper, Congress has afforded itself the luxury of criticising where it has no intention of constructive action and proposing positive solutions which it has neither the power nor the intention to enforce. If this is to be the model of American intervention in Middle Eastern politics, then from the point of view not only of Britain, but of all the Middle Eastern peoples, an American withdrawal from the whole area, on the analogy of the last war, would be a more manageable outcome of this war.

Yet such retrogression would be tragic. However much the British may resent uninformed or irresponsible or uni-

lateral action, they welcome eagerly and wholeheartedly any possibility of Anglo-American co-operation for the long-term tasks of peace. They do not wish to see the United States retreat from its wartime involvement in Middle Eastern politics. They hope, on the contrary, that the American Government will advance to a position of full understanding and co-operation—understanding of the problems involved, co-operation with all the nations concerned. The Middle East Supply Centre has shown how far a policy of straightforward collaboration can advance the interests of the whole region. The need will be greater, not less, after the war. To take only the two instances raised in recent weeks—oil and Palestine—there is no really satisfactory solution for the problems they raise on any other than a co-operative basis. The building of the pipe-line, the construction of more refineries, of "oil towns," the development of harbour facilities will radically affect employment, immigration, living standards and social services throughout the Middle East. The manner in which the growing oil industry is developed can be a vital factor in determining whether the economic expansion of the area goes forward on regional or on narrow nationalist lines. This in turn may well decide the rate of possible immigration into the Levant and is thus inseparable from the very vexed problem of a National Home for the Jews.

There are solutions, military, political, and economic, for the difficulties of Middle Eastern development, but it is absolutely certain that they will be found only if Britain and America work together and plan their policies to meet the interests of the whole area. Mr. Stettinius is to visit London and oil talks are to begin in Washington. Both conferences will vitally affect the Middle East. It is to be hoped that the statesmen will abandon the dangerous and unprofitable unilateralism of the last few weeks and by following the wartime methods of close Anglo-American collaboration, make the Middle East the world's new model of Great Power understanding and Small Power prosperity.

### The scene changes

LITTLE more than a hundred years ago Britain was an agricultural island. Its resources were undeveloped, its roads often incredibly bad; power-operated machinery was almost unknown . . . but the invention of the steam engine was destined to change the scene and by the middle of the nineteenth century the tide of industrial development was in full flood. In almost the span of a lifetime, Britain became the centre of the world's trade and in this vast change the Westminster Bank (founded in 1836) played its part, providing—as it does today—a complete banking service for industry and the individual.

## What is a Great Power?

THERE is much talk, in current discussion, of the Great Powers and of the rôle that they will have to play in the post-war world. The fighting, so long as it continues, will be almost entirely a Great Power affair. The course of events in the last four years has demonstrated most dramatically how the gulf has opened up between the military strength of a Great Power and that of a small nation. In this war, there has not been a single small country which has been able to stand up to the direct attack of a Great Power for more than a very few weeks. In all previous historical ages, two half-size powers were the equal (or almost the equal) of one full-sized power. But that is not so today; when it comes to fighting, it is a matter for the Great Powers alone. This is a new fact in world politics, and it will have its effect. It is responsible for the great debate now raging, in which views can be heard extending all the way from the one extreme of those who believe that, because only the Great Powers can wage autonomous war, they alone should take political decisions in peacetime, to the other extreme of those whose passion for the sovereign equality of all nations would lead them to ignore strategical facts completely. But there has been very little attempt to define what a Great Power is.

Sir Walter Layton had something to say on this subject in his Sidney Ball Lecture on "The British Commonwealth and World Order" at Oxford last week. Sir Walter's chief purpose was to plead for British initiative and leadership in setting up regional federations, and particularly a European Federation, within the framework of a wider association. But, in his approach to this issue, Sir Walter collected together a number of interesting data bearing upon the definition of power.

The most familiar and obvious way of assessing the effective size of nations is by comparing their populations. As a graphic method of illustrating this comparison, the imaginary map on this page has been drawn. It shows the world as it would appear if the area of each country were exactly proportional to its present population. Sir Walter Layton presented the same comparison in a different way. He pointed out that the total population of the world,

about 2,200 million, could be divided into five roughly equal groups as follows:—

|                                                      | Millions |
|------------------------------------------------------|----------|
| I. The Big Three (USSR, USA, UK and Dominions) ..... | 390      |
| II. China .....                                      | 460      |
| III. Europe .....                                    | 360      |
| IV. India and Burma .....                            | 404      |
| V. Rest of World .....                               | 586      |

The fifth group can be subdivided into independent areas (Japan, Latin America and others, mainly Moslem) with 345 millions and dependent areas, with 241 millions.

But these figures by themselves demonstrate that it is not population alone, or perhaps even population mainly, that makes a Great Power. Nor, still more obviously, is it mere extent of territory, as shown (though often very inaccurately) on the familiar geographical maps. In this day and age, economic resources are of at least equal importance. Sir Walter Layton dealt with this by giving figures for five basic materials and for three measures of commercial activity:—

|                                                                | WORLD RESOURCES |       |        |                 |               |        |
|----------------------------------------------------------------|-----------------|-------|--------|-----------------|---------------|--------|
|                                                                | The Big Three   | China | Europe | India and Burma | Rest of World | Total  |
| Coal (million metric tons, 1937) .....                         | 859             | 37    | 385    | 25              | 62            | 1,368  |
| Steel (do.) .....                                              | 85.4            | 0.4   | 42.6   | 1.0             | 6.0           | 135.4  |
| Iron ore (do.) .....                                           | 57.3            | 0.2   | 29.8   | 1.9             | 7.4           | 96.6   |
| Crude petroleum (do., 1939) .....                              | 202.0           | ...   | 7.9    | 1.4             | 74.0          | 285.5  |
| Imports and Exports (millions of old gold dollars, 1938) ..... | 9,690           | 548   | 10,188 | 925             | 5,857         | 27,208 |
| Trade per head (old gold dollars, 1938) .....                  | 24              | 11    | 30     | 21              | 10            | 12½    |
| Merchant shipping (thousand gross tons, 1939-40) .....         | 32,504          | 258   | 26,363 | 238             | 8,934         | 68,297 |
| Gold production (thousand kilos, 1938) .....                   | 855             | ...   | 19     | 10              | 264           | 1,148  |

The same comparison, though in a more comprehensive form, is shown in the second imaginary map on the opposite page, which is drawn as if the area of each country (or, in some cases, of each continent) were proportional to its pre-war national income.

(Areas are based on figures in Mr Colin Clark's "Conditions of Economic Progress.")

The facts of the political world as we know it begin to emerge from this map. But even national income, all-embracing though it is as a measure of economic wealth, is a poor guide to degrees of power. For some part of a country's national income, even in wartime, is mortgaged by the necessity of keeping its population alive. In countries like India and China, almost the whole of the national income is needed for this purpose and the volume of power that can be projected outwards is very small. In Great Britain it would appear, from the experience of the present war, that the community can, if it must, live on about half of what it produces and use the other half for enforcing its national policy. A closer measure of power would be the amount of national income in excess of the minimum of consumption set by physical or political considerations. Unfortunately, this cannot be calculated.

Economic resources, however, are not by any means the whole story, even when thus qualified. Strategical position is obviously important; a country whose resources lie in a single area, behind easily protected frontiers, is obviously stronger than one whose resources are scattered, or which depends upon the maintenance of vulnerable communications. The system of government is relevant, and so, most decidedly, is national character.

It is thus difficult to put into a single sentence all the reasons that make a country a Great Power. But the result can be fairly succinctly defined. A Great Power is a country capable of waging active and autonomous war against another Great Power. The words "active" and "autonomous" are both essential to the description. It is not enough to sustain a passive defence, even for a long time, if it cannot eventually go over to the attack. And for a country to be beyond question a Great Power, it must be able to fight with its own resources—not necessarily with those to be found in its own territories, but with those that it can rely on being able to procure.

How many Great Powers are there, within this definition? There are three which enjoy the status beyond question. The first is the United States, potentially the greatest of all. The second is the Soviet Union. The third is Germany—it is extremely unlikely that the post-war settlement will succeed in removing Germany from the Great Power category for more than a short time.

Britain is a conditional Great Power. The conditions are that the British Commonwealth and Empire continue to act together as a unit, whether or not the constituent parts promise to do so beforehand, and that the communications between them remain open. It is probably also a condition that the United States should not be actively hostile. But it would be wrong, because of the existence of these provisos, to rate Britain anywhere below the front rank of Great Powers. If the conditions

are observed, Britain can rank with the mightiest. The question marks are larger in the case of Japan. That Japan is a Great Power at the moment is all too painfully apparent. But will Japan again be a Great Power after its coming defeat? Is its present Great Power status based on the inherent facts of its position or the result of an adventitious structure built up with much skill in the face of indifference or preoccupation on the part of other countries? Is it, perhaps, the right judgment of Japan that it can sustain active and autonomous warfare with other Great Powers only if it starts fighting ten years before they do?

In the current alliance of the United Nations, China is counted as one of the Big Four. It may be that China's inclusion is based on considerations other than Great Power status. China has been at war longer than any other of the United Nations, and has suffered more than any. It is the only country, other than a Great Power, that has sustained the direct attack of a Great Power without being finally defeated. There are obvious advantages in having a spokesman for the coloured peoples in the inner councils of the Alliance. But China is not a Great Power, and will not be a Great Power for many decades to come, even if the internal coherence and the economic development of the country, in the post-liberation years, are all that is now hoped. There would be dangers if the present inclusion of China in the Big Four were to lead to China being classified as a Great Power and reliance being placed on a strength that does not exist.

Moreover, if a special category is to be created for countries that are not in themselves Great Powers, but which sit in council with the Great Powers, then there will be other candidates. After the misfortunes of 1940, France can hardly claim to be a Great Power of the first rank. But France will once again be a rich, populous, well-industrialised country with responsibilities extending across the globe. A liberated and restored France will not be willing to rank lower than fourth among the United Nations in external power. And there is also Canada which, in the attack on the common enemy, has ranked fourth (and well ahead of the field) in the provision of munitions and materials.

It is no part of the purpose of this article to discuss what the rôle of the Great Powers should be in the world order of the post-war years, but only to suggest that, if there is to be any such rôle, some careful thought would be given to the identity of the nations included. It would be difficult to say which, in the past, has proved to be the more grievous mistake, the inclusion in the inner councils of the mighty of those who were, in fact, weak or the exclusion of those who were, in fact, strong.

## NOTES OF THE WEEK

### Finland and Italy

The unexpectedly protracted negotiations on the terms of armistice between Russia and Finland have not yet brought any definite result. At the time of writing, the Finns are reported to have submitted their own counter-proposals. They are said to have objected to the Russian demand for the internment of the German forces in the north of Finland, and to have suggested the postponement of the demand until after the conclusion of the armistice. They also object to the repatriation of 75,000 Ingermanlanders who fled to Finland from the Soviet occupied part of the Karelian isthmus in 1940, though it does not seem likely that the Russian demand for the repatriation of Russian and

Allied prisoners of war and deportees includes those refugees. The course of the negotiations so far shows that the formula of unconditional surrender has been set aside altogether by the Russians. *Pravda* has made this very clear in an article addressed to the Finns, in which the differences between the Allied terms of armistice for Italy and the Russian proposals for Finland are brought out most emphatically. The Italians were asked to surrender their air and naval bases, and to hand over their fleet to the Allies. The Finns have not been presented with any such demands. The internment of the Germans in Finland—as *Pravda* points out with a

patience altogether unusual in its columns—has nothing to do with unconditional surrender. It is an elementary demand which any belligerent Government would be compelled to make in a similar position. This is undoubtedly true; though it is equally true that the difference between the treatment of Italy and that of Finland is due, not so much to the insistence on unconditional surrender in one case and its abandonment in the other case, as to the difference in the strategic position of the two countries at the time of the armistice discussions. The surrender of naval and air bases in Italy was as essential to Allied military plans as the internment of General Dietl's divisions in Finland is for Russian strategy; and the formula of unconditional surrender did not prevent the Allies from granting to Badoglio's Italy the rights of co-belligerency.

### Finland and Poland

While the Soviet press takes pride in the fact that Moscow has not applied the formula of unconditional surrender to the Finns—a virtually defeated enemy—an ultimatum of unconditional surrender has again been presented by the Russians to their Polish allies—for that is what the new Soviet note in reply to the Polish proposals virtually amounts to. The Poles, it will be remembered, proposed the postponement of the final settlement of the frontier issue until after the war, when they will be able to submit any territorial changes for ratification by a properly elected government. In the meantime, they suggested a temporary demarcation line which would leave Lwow and Vilna under Polish administration for the duration of the war. The Russians insist that this demarcation line should be more or less the same as the Curzon line. Mr Churchill has made it clear that he considers the Russians' territorial claims to be "just and reasonable." But it ought to be equally clear that territorial claims are one thing, and the way in which they are laid and enforced is quite another. Even if it is granted that the Russian demands are well justified, it does not follow that they

temporary demarcation line. If the Russians can agree to leave their claims to Petsamo for the final peace negotiations, why can they not do the same with Lwow? Similarly, if Moscow can negotiate with a government which includes Marshal Mannerheim and Mr Tanner, why must the re-shuffling of the Polish Government be made a *sine qua non* of resuming relations between Russia and Poland?

### The Military Argument

The Russians' reason for not treating their ally Poland on the same footing as their enemy Finland is presumably that military operations do not compel them to enter Finland, whereas they must march into Poland. This being so, they are entitled to insist on full military and political security behind their fighting lines in Poland, a security for which the Polish Government as at present constituted gives no guarantee. The argument is, admittedly, a weighty one. But it was partly met by M. Mikolajczyk's Government when it issued instructions to the Polish military underground to co-operate unconditionally with the Soviet armies. The important point now is to ensure that these instructions are really carried out. General Sosnkowski, the Polish Commander, has chosen to interpret the instructions in a sense which seems to differ from the Polish Government's intentions. He has made Polish co-operation with Soviet forces in Poland conditional on Soviet recognition of Polish sovereignty over the whole territory which belonged to Poland before 1939. It is true that, under the Polish Constitution of 1935, the Government has no control over the policy of the Commander-in-Chief. The Polish Government must make up its mind on this point. It must either invalidate those articles of the Polish Constitution which give the Commander his independent position or it must part with the present Commander-in-Chief. The Constitution was, after all, only the product of a *coup d'état*. Either action would subordinate military policy to the Government's control. Where the Russian demands are dictated by military reasons, they must be met. Only when this has been done can the Polish Government defend its legitimate political rights with full effect.

### Coal Crisis

The Government has announced its proposals for a revision of the wage structure of the coal industry which, if accepted by both sides and promptly applied, should go some way to allay the discontent that has arisen in the coal-fields over the Porter Award. (Piece-workers are up in arms against the Award, which established higher minimum wages, but gave them no increase and upset the ratio between their wages and those of day workers in certain districts.) A mass coal strike is developing in Wales. By Thursday, 75,000 men at 135 pits were out, and it is feared that the stoppage may spread to the remaining quarter of the coalfield's miners. In Durham the device of go-slow and restriction of production has been carried so far that the Ministry of Fuel's Regional Controller threatened to close Easington Colliery—the centre of the trouble—though admittedly an efficient pit, and transfer the men to other mines unless they go back to normal working methods. The discussions about the "general overhaul" of the wage structure have thus begun in an atmosphere of urgency and crisis. Broadly, the Government's proposals amount to a simplification and consolidation of wages, and to the introduction of greater incentive by establishing a closer relation between wages and output. Details are given on page 348. The Government suggests that the new rates should operate until December, 1947, and undertakes to continue a system on the lines of the Coal Charges Account and to maintain the price of coal "at a level which would ensure a reasonable credit balance for the industry." Major Lloyd George will, quite justifiably, not discuss South Wales' special grievances until the men return to work. Both strikes and ca'canny are intolerable at a time like this. The miners have

taken blatant advantage of their scarcity; their services cannot be dispensed with. Their leaders in Wales and Durham have condemned them and appealed for a resumption of work and full production, but so far without effect. It is not a question of whether the miners have, or have not, some legitimate grievances; there are constitutional means of dealing with them. As it is, they are wilfully flouting both union agreements and union authority; and they are holding up production on the eve of great military operations. This cannot be condoned. But the ultimate blame must be shared. It was the miners' leaders themselves who led the men to expect that their demands would be met. It is the owners who have encouraged the district divisions and retarded the reorganisation of the industry. It is the Government whose facile optimism about the state of the coal industry, in spite of repeated warnings, has allowed a potentially dangerous situation to drift into a major crisis.

### Mr Morrison's Retort

Mr Morrison took the opportunity of a speech at Bradford last Sunday on the Parliamentary system to send cold shivers down the spines of many Members of Parliament. For some time, a campaign has been going on in the Commons to reduce the liberty allowed to Ministers by statute to make orders and regulations with the force of law. On Sunday the Home Secretary, whose own powers are never far from the mind of the critics of delegated legislation, said outright that more, not less, of this kind of Ministerial law-making will be necessary in the future. Loud outcries from Westminster have enquired whether Mr Morrison was voicing the view of the War Cabinet. Obviously he was not. He was, as always at the week-end, voicing the view of Mr Morrison; and on this occasion he perhaps laid on the colours deliberately thick, maybe with the mischievous intention of making the flesh of his critics creep. In this he apparently succeeded. In one respect, Mr Morrison is undoubtedly right. Parliament has neither the time nor the competence to legislate in detail for all the matters which come within the province of twentieth century government. Inevitably, gaps must be left to be filled in during the process of administration. This is no new discovery. The delegation of power to legislate on details was an integral and indispensable part of Parliamentary government before the war. It is equally true that, if programmes and policies are to be carried through, the function of initiating legislation must belong to the Government. Parliament, in fact, neither governs nor legislates; it supports or opposes, approves or criticises. The sanction of its ultimate authority on behalf of the people, is that no Government can continue without a Parliamentary majority; it can turn the Government out.

### Parliamentary Sanction

Does the fact that Parliament can neither govern nor, in the full sense of the word, legislate mean, as Mr Morrison suggested, that it will in future have to confine itself, in addition to its scrutiny of all financial proposals, to approving or criticising what he called "broad principles" and "fundamentals"? Is it true that *all* the details of legislation must be left to the Executive? Where and how is the line between principles and details to be drawn? Mr Morrison's argument for this drastic short cut to the simplification and shortening of Parliamentary discussion was that of time. While Bills are discussed on the floor, clause by clause, it will not be possible to get through in any session the amount of legislation desired; in the present session, with time further restricted by wartime conditions of working, it would not be possible to get through more than one or two major measures of reconstruction, even if the Government produced the Bills. The painful progress of the Education Bill, much less controversial though it is than it might have been, is a proof of this. But it is wrong for Mr Morrison to deduce from this that time is completely on the Executive's side. Parliament might work longer hours, even in wartime; it might well restore and develop the Committee system so that several Bills could be considered at once. Mr Morrison has not proved that only the mere chapter headings of legislation should be open to Parliamentary debate; and in one respect, his critics have a very strong case. The demand that, however much delegated legislation may be unavoidable, it should come under the effective scrutiny of Parliament, where

necessary, order by order and regulation by regulation, is unassailable. Mr Morrison admits this, but only as a complement to "Parliamentary legislation on broad lines and a large use of delegated legislation by the Executive." But effective scrutiny is essential, whether Mr Morrison's proposal to cut down Committee time is accepted or not. The real domestic problem of Parliament is to find means of making much better use of its time, so that it can, without holding up the process of Government, simultaneously approve and criticise legislation, pass Government policy under continuous review, watch over the public interest, and protect the rights of individuals and minorities. Delegated legislation may increase, and with it the powers of the Executive. But Parliament will abandon its central duty if it allows any of the essential controls over Executive action to pass out of its hands, simply for lack of working efficiency or ingenuity in its organisation.

### To Fight or Not to Fight?

The Allies have decided to cut down drastically their supply of arms to Turkey. This decision, following within three months the cordial exchange of views between President İnönü and the Allied leaders of the Cairo Conference, has come as a surprise to the British and American people. Yet it is a natural consequence of the policy the Turks have pursued ever since the beginning of the war. Turkey is a satisfied power. The chief aims of its diplomacy are independence and security. The Turkish leaders have always known that only an Allied victory would give them independence. The sincerity of their alliance with Britain reflects this knowledge. But they have been as unready as any other state—great or small—to risk war with Germany and certain devastation to ensure an Allied victory. There was never any question of Turkey entering the war. The arms they asked for and were promised—in particular at Adana—were only to ensure effective defence against a German attack. At each crisis in Allied fortunes—in June, 1940, in March, 1941—when the possibility of Turkey's entry into the war came up, the Turks refused to be involved. Throughout 1942 and 1943 their policy

## IT ISN'T RATIONED

No matter how much or how little you already have, so long as you are a healthy life you can always apply for more LIFE ASSURANCE.

And in most cases this Society's "W" plan covers CIVILIAN WAR RISKS WITHOUT EXTRA CHARGE.

Head Office:  
9, St. Andrew Square  
Edinburgh, 2

was unchanged. They wanted the Allies to win; they would use Allied arms to fight Germany if the Germans attacked. And that was all they would do. A new situation has arisen with the clearing of the Mediterranean and the crumbling of German power in the Balkans. The Allies told the Turks that the risk of German attack had passed, and pressed them for facilities—airfields, bases—similar to those granted by Portugal in the Azores. The Turks denied that the risk of German attack was passed. The German counter-stroke in Leros and the other Aegean islands showed, they argued, how vulnerable Turkey still was, and how little effective help the Allies could give. The concession of air bases, which might invite a German counter stroke, could be granted only if the Allies would immediately, and vastly, increase their supply of all weapons to Turkey. At this point somebody seems to have realised that the Turks did not mean to fight anyway. The arms are accordingly to be sent somewhere where they will be used to fight the Germans. The Turks can hardly feel aggrieved. Nor, however, can they be blamed by other states for pursuing a policy of national self-interest. But one may ask whether they have not managed, in the process of bargaining, to receive a quite disproportionate share of the Allies' arms supply.

### Pan-American Split

The Farrell-Peron Government cannot be said to be firmly in the saddle in Argentina, but it has at least kept its seat during a very restive week. Opposition to the new régime comes from the Army and the Navy. A minor putsch has been attempted by the supporters of General Ramirez among army officers; dissident admirals are reported to have protested against the "delegation" of power to General Farrell; and no admiral has yet been found to take over the Ministry of Marine. But the opposition groups are feeble and divided. The only man among the officers commanding any degree of loyalty and cohesion is Colonel Peron with his GOU. Effective opposition could only come from quite different quarters—the anti-militarists and democrats among the people at large, who have been silenced by the steady increase in fascist control since June last year. The masses are apathetic, by tradition certainly, but also by reason of the relative prosperity and security enjoyed by the country at the moment. The Farrell Government has repeated its determination to honour General Ramirez's foreign policy, but this seems to mean little more than that they will not actually reopen relations with the Axis. The letter will be observed; the spirit is far more doubtful. The Argentine police have produced no further reports on Axis spying activities. There appears to be no question, for the time being, of extending military and naval facilities to the Allied belligerents. There are even reports from Buenos Aires of interference with the American news agencies. The letter without the spirit will, as Mr Stettinius pointed out in a Washington Press conference, be of little use to the Allies; and the United States and British Governments are delaying their recognition of the Farrell regime until further definite steps are taken to implement the policy of joint American defence. Unhappily, it has not proved possible to secure a united pan-American policy on this question. The kindred militarist Government of Bolivia has naturally enough recognised the new regime; but so has the democratic Government of Chile, and there is reason to suppose that Paraguay and Uruguay may follow suit. The failure to isolate Argentina inevitably weakens the Allies' diplomatic pressure.

### Urgent Housing

On Wednesday, Mr Willink, Minister of Health, announced the Government's housing programme for the first two years after the end of the war in Europe. In contrast to the vague pronouncements of the past, Mr Willink's was a definite statement of intentions. First, the object of the programme is to meet the urgent needs of

those who have no homes of their own; it covers what *The Economist* has called the emergency programme that will have to be fulfilled as quickly as possible at all costs. Secondly, the programme sets a definite target of construction. Some 100,000 houses of the permanent type are to be completed or under construction by the close of the first year and a further 200,000 by the end of the second year. Since a total of 300,000 houses will be inadequate to meet the most urgent needs, and as the capacity of the building industry may make it difficult or impossible to meet all needs by the construction of permanent type dwellings, the deficiency is to be met by a "substantial amount" of emergency housing; such emergency housing will be provided by adapting existing houses and by constructing temporary dwellings of various kinds. Thirdly, to enable local authorities to prepare for a quick start on construction, the Government has decided to introduce temporary legislation extending the present scope of housing subsidies to houses built to meet general needs; and local authorities will be enabled to buy in advance land required for the fulfilment of their programmes, by compulsory powers if needed. As a statement of intentions, Mr Willink's announcement is encouraging in that it suggests a bold approach to meet emergency needs as quickly as possible; it took five years to build 300,000 houses after the last war. But it is the performance that counts.

### Aspiration in India

The fifteen-year plan for reconstruction put forward lately by a group of Indian industrialists seems to put the cart before the horse. In the first place, the vast scale of the plan, which envisages investment in industry to the tune of 10,000 crores (£7,500 million), presupposes the existence of a strong central government capable of implementing it. In itself there is nothing wrong with this political conception; independent India will need such a government. But, in spite of a considerable and spreading disillusionment with the negative tactics and manoeuvring of the established political groups, there is still little evidence of a real and practical readiness among Indian politicians to make the concessions and reach the agreement that are indispensable if a workable constitution, let alone a strong central government, is to be established. Maybe it is hoped that planning for reconstruction may be a rallying point for the undoubtedly considerable body of Indian opinion that is seeking for new ways out of the old dilemmas. But all this is still very tentative and beneath the surface of politics. The old parties and old leaders are still in the saddle, and will not ride together. The Congress party remains immovable, while Mr Gandhi and the rest are in prison; and the Government has found no safe formula for their release. To all appearances, the centrifugal forces are still in charge, however centripetal the undercurrents. Moreover, this industrial plan is open to economic as well as political objections. It is a plan for Big Industry and high protection. Indian agriculture, which has suffered during the war as much or more than Indian industry has gained, and upon whose functioning depends the very existence of the vast majority of her millions, has surely the first claim on post-war resources. The mechanisation of agriculture, the improvement of transport, and the development of public works will for some time require the lion's share of capital investment; the expansion of local industries can only be done *pari passu*. Pittsburghs and Boltons and Birminghams and Detroits and Magnetogorsks cannot be built overnight and in isolation. It is a matter of priorities, and the makers of this grand plan seem oddly forgetful that India's grinding dependence upon a soil poorly and inadequately tilled cannot simply be brushed aside to make way for an industrial India. The plain fact is that, knowing industry to be the basis of modern power and national independence, they have decided, in the naivest way, that India can be made into a Great Power by 1960 by large-scale industrialisation. In the same way they are led into a kind of economic chauvinism that would throw away most of the benefits of foreign investment in Indian development, in order to cap political with economic independence. They propose a degree of autarky that would compel India to make its own way by its own resources, and restrict its income accordingly. They will not allow advantage to be taken either of foreign capital or of the international division of labour. They propose an impossible task, and make it doubly impossible by the means they propose to achieve it. Certainly

plans for India's future, both political and economic, must be bold and imaginative. It is encouraging that the makers of this plan should set themselves so high an aim, but before they run they must walk. There are no short cuts to national independence and greatness; mostly, they are blind alleys.

### Enterprise

The Minister of Production is one of the few Ministers who find time to talk about public policy and take the trouble to do it well. Addressing London University Conservatives a week ago, after a conventional and somewhat inconsequent preamble reciting the defects of state trading, he tried to define the right relation between private enterprise and "the organising power of the state." Mr Lyttelton believes that, with the right relation between these two, it will be possible for Britain to take conscious control of its own economic and social destiny in a way never known before. "The question whether we are to be a poor nation or a rich nation depends entirely upon whether we use our brains or not." Basically, brains will be used best if the enterprise and initiative of the individual are given full play. But Mr Lyttelton does not believe that private enterprise, in every activity, is an end in itself. The task is to make the most of the nation's resources for the communal benefit; "if a company is given by Act of Parliament the right to levy a rate upon a section of the community, I think it inevitable that the state should also have some right of control over it"; "again, there are a number of public services from which most of the risks have been eliminated which could well be handed over to the state"; "it would be profoundly stupid for a Conservative not to pay due attention to the organising power of the state to provide common services at cheap prices to all and sundry of its citizens." The problem for the future, as Mr Lyttelton rightly says, is to get the right balance between public and private enterprise, not to mix them in a system of checks and balances, but to separate them in a joint programme of full employment and full efficiency; and, having decided where national needs can best be met by public enterprise, "to leave the whole field where risk has been run to private enterprise, allowing that private enterprise, having run the risk, to reap the profit." This is encouraging common sense at a Conservative meeting. But it needs a rider. This was provided by the Home Secretary in a speech the day before. Private enterprise must be private enterprise; it must not be monopoly or restriction masquerading under that name. It must run risks and show ingenuity; it must, as Mr Lyttelton himself put it, use its brains "to supply a new world with new goods, to fill a new demand with a new product." "We must bend our minds to increasing the national income and we must be very wide-eyed in the process."

### Matchek a Quisling?

Mr Churchill's statement on the Yugoslav question, made in the House of Commons on February 22nd, seems to have shaken King Peter's entourage in its utterly unreal self-confidence. Reports from Cairo foreshadow a reshuffle of M. Puritch's Government or, alternatively, the dismissal of M. Puritch himself and the formation of a Government less obsessed by Pan-Serbism. A Government composed of federalists, representing all the Yugoslav nationalities, might perhaps help to overcome the deep cleavages that exist in Yugoslavia itself. But will King Peter go so far as to dismiss General Mikhailovitch? If so, will General Mikhailovitch's influence in Serbia itself not prove strong enough to obstruct real unity? The position in Yugoslavia itself is still very obscure, in spite of the steady liaison between the Allies and Marshal Tito's headquarters. Allied opinion is hardly enlightened by the spate of mutual recriminations which emanate from the various propaganda centres. The radio station "Free Yugoslavia," for instance, which is said to broadcast from Soviet territory, has now blamed Matchek, the leader of the Croat Peasant Party, as a "quisling." Now it is true that Matchek's rôle in Yugoslav politics has been passive during the critical years of occupation. This, in itself, discredits an outstanding political figure like Matchek. But Radio "Free Yugoslavia" is reported to have accused Matchek, not of passivity, but of active co-operation with the Germans. Ironically enough, similar accusations came from Pan-Serb sources some time ago, and caused much indignation among pro-Tito Croats. Should the charges

prove to be true, and not merely the product of Communist persecution mania, they would make a sad and discouraging picture. The events of the last years have broken many characters and discredited many of the once outstanding political leaders on the Continent. But have they bred new leaders to take their place?

### Middle Eastern Co-operation

While Mr Ickes and Congress were, as discussed in an article on page 328, playing variations on the theme of isolated and competitive American action in the Middle East, American officials in Cairo were working with their British colleagues on the Middle East Supply Centre to organise the third of a series of regional Middle East Conferences. Over a hundred delegates met to discuss agricultural problems common to the whole area. They exchanged views on irrigation, dry farming, land reclamation, soil erosion and agricultural education; and, as in the previous conferences, the delegates showed a very obvious desire to build up some permanent organisations for joint research and action. A Middle East Statistical Service was proposed at the Statistical Conference held in November. The latest conference has recommended the establishment of a Middle East Agricultural Council, and a committee was set up to draft its constitution. Throughout the Conference it was clear that the Middle East Supply Centre alone made this type of co-operation possible. Indeed, if there were no Centre, it is doubtful if the Middle East states would co-operate at all. Whether it will continue after the war will be the principal factor in determining whether the life of the area will go forward along co-operative lines to the benefit and enrichment of all the states or along lines of exclusive and sterile nationalism. The question is already being asked in Cairo: "Will the Supply Centre be continued?" Unhappily the Public Relations Officer of the MESC was reported in the press to have said that the Centre would not continue after the war. Still more unhappily, the same view was attributed to Lord Moyne, Mr Casey's successor as Minister of State. In both

## WILL'S THREE CASTLES CIGARETTES

### PRINCIPLES OF TRADE: A PAMPHLET

The series of eight articles on The Principles of Trade which appeared in *The Economist* during the months of January and February this year has been reprinted in a pamphlet (Price 2s. 6d., post free), which is now ready and can be obtained from *The Economist*, Brettenham House, London, W.C.2.

cases, the statement was later denied as an error in reporting. It would be disastrous indeed if the experiment were to be wound up—as some inveterate enemies of any form of control seem to desire—now that the war is moving away from the Middle East. Questioned in the Commons, Mr Eden said:

While it would be desirable to continue after the war some part of the very useful work for which the Middle East Supply Centre has been responsible, I should not be prepared to pronounce finally on the best machinery for this.

This cannot be called a satisfactory assurance. In the universal poverty of international life, the best machinery is the machinery that exists. A better machine might indeed be imagined, but it might never be built.

### The Population Enquiry

The names of the members of the Royal Commission on Population were announced at the same time as the news that it had held its first meeting. The Royal Commission itself consists of eight men (including the Lord Chancellor as chairman) and eight women. It is a distinguished and representative group, covering a wide range of experience and authority; and, what is more important in this particular case, on equally wide range of ages. In addition to the Commission itself, there are to be three technical committees, of which the chairmen only are members of the Commission. The chairman of the statistical and economic committees are Mr Carr-Saunders and Sir Hubert Henderson—two admirable choices—and these two committees between them include an impressive number of the statisticians and economists who have given attention to population problems, including Dr D. V. Glass, Mr R. R. Kuczynski, Mr H. Campion, Professors Gray and Hicks, Mr W. B. Reddaway and Mrs Joan Robinson. There is also a strong biological and medical committee under the chairmanship of Professor A. W. M. Ellis. All this is highly satisfactory; the names are a guarantee of a really thorough and authoritative enquiry. It remains only to hope that these authorities will not be secured at the cost of time. Population trends move slowly, but Royal Commissions sometimes move more slowly still.

### Production in 1944

Mr Lyttelton marshalled an impressive array of facts and figures to illustrate the scale and magnitude of Britain's present production of offensive weapons. But his review of past achievement should not lead to a sense of complacency. Last year was a year of extensive programme changes with emphasis on the production of heavy bombers and fighters. The changes were carried out, on balance, with the minimum of friction, and the numbers actually unemployed on December 31st for a month or more as a direct consequence of the adjustments were as low as 600—though the degree of working time lost as a result of this kind of change-over, in war conditions, with Essential Work Orders in force, should properly be measured also by idleness and short-time working inside establishments. As new labour entered the factories and was "run in" and as a result of improvements in organisation and methods, output per head in the aircraft industry over the last six months increased by 2 per cent per month. The outstanding task in 1944—the year in which great battles will be joined—will be to maintain and expand the 1943 level of production, possibly with a reduced labour strength, if the military call-up is accelerated and casualties develop. Apart from maintaining transport, which may prove to be the biggest bottleneck, the key to the problem lies in increased efficiency, and the economic machine will have to become more flexible and adaptable, to meet rapidly changing operational requirements. As far as possible, the Government is aiming at occupational rather than physical transfers, at taking the work to the worker rather than the worker to the work, by diverting production within a factory rather than closing it and transferring the workers and at making the burdens of the changes fall least heavily on the former depressed areas. Thus the mobility of industry will be determined, so far as possible, by the location of labour. But there are limits to this policy, at a time of excessive manpower stringency, and the coming period may see increased dislocation in individual cases. That is why it is so important to explain frankly to the workpeople the reasons for the changes, which otherwise may have some unfortunate effects upon the attitude of a people already severely strained in the fifth year of war.

### Low Countries Customs Union

In spite of many practical and political difficulties, negotiations for a customs union seem to be proceeding well between the Netherlands and the existing Belgo-Luxembourg union. A successful outcome would not only ease the difficulties of the immediate problems of reoccupation, but would be of obvious value to both parties in the long run. There can be little theoretical argument, at least, over an economic union between two countries so largely complementary in their economic character, and the necessity for complete reorganisation of both countries' economic life after the war will present an opportunity for getting over many of the practical difficulties which might be insuperable in normal times. Problems raised by the fact that both countries have large colonies are not to be allowed to hamper the union since it is designed to affect only the metropolitan part of each country. Technical difficulties will require some ingenuity and mutual co-operation. The existing tariffs of each party are normally based on conflicting criteria, the Dutch is calculated principally on the value of goods, the Belgian on their weight, and there are also differences of classification. However, a temporary compromise is suggested which should provide a common basis agreeable to both sides. The Dutch are to use the League of Nations nomenclature, while the Belgians adopt an *ad valorem* tariff. In any case, the agreement will only be provisional and limited to the period of relief, so that adjustments can be made later on to suit particular post-war circumstances. These negotiations once more underline the anomalous position, in international law, of all such agreements. Twelve years ago, in 1932, the Netherlands and the Belgo-Luxembourg union negotiated a similar, though much less far-reaching, agreement in the Ouchy Convention. On that occasion they proposed not to abolish their duties on each other's trade but to reduce them very severely. But the Ouchy Convention came to grief because the other nations, and particularly the United States and the United Kingdom, refused to abandon their most-favoured-nation rights and demanded to be given the concessions that Holland and Belgium were offering each other. But if the proposal is a complete customs union, the most-favoured-nation clause, by general admission, does not apply, although the damage done to the rights of other countries (to employ the usual vocabulary) is presumably still greater. Tariff reduction, it will appear, is to international law what suicide is to domestic: the attempt is a crime, though full success is not.

### Shorter Notes

On Friday of last week the Pensions (Increase) Bill (discussed in *The Economist* of last week, page 302) was given a second reading in the House of Commons. As was expected, the Bill was received without enthusiasm; but Mr W. J. Brown's motion for its rejection, on the ground that it failed to restore, in the light of the increased cost of living, what was taken away from pensioners on account of earlier decreases in the cost of living, and applied the means test to pensioners, was negatived without a division.

As a result of the Supreme Court of Judicature (Amendment) Act, discussed in *The Economist* of January 29th, page 140, three new appointments have been made to the High Court of Justice. In accordance with the Lord Chancellor's direction, they will be attached to the Probate, Divorce and Admiralty Division, so that when provision has been made for the hearing of defended divorce suits at assizes, the increase in the strength of this division will enable divorce suits to be tried by divorce judges instead of by judges of the King's Bench as part of their assize work.

A Bill has been introduced into the Australian House of Representatives to place the income-tax on a pay-as-you-earn basis from July 1st.

On April 2nd, the cheese ration will be reduced from 3 to 2 oz a week, and during April it is expected that the ordinary consumer's milk allowance will be increased from 2 to 2½ pints a week. To compensate for the reduced cheese ration the four-weekly allocation of points will be raised from 20 to 24, and more canned meats and fish will be available. The points ration has remained remarkably stable, and this will be the first change in the number of points per ration book since July 26, 1942.

## AMERICAN SURVEY

### Watch Texas

(From a Correspondent in California)

TEXAS will gain most from the war. It will wrest old industries from the states on either side of the Appalachian Mountains and draw new ones away from California. In the long run it stands to gain even more than the Pacific Northwest. It will become the world's greatest centre of chemical industries. Not even Russia will have a single centre comparable to Texas. For no one part of Russia has what Texas possesses in superabundance: petroleum, natural gas, cotton, pulp timber, potash, sulphur, salt, limestone and Jesse Jones. The last-named natural resource is a catalyst: it starts things happening by its mere presence.

#### First of the Forty-Eight

Texas and her fringe areas hold 70 per cent of all the petroleum, 85 per cent of all the natural gas and 30 per cent of all the cotton in the United States. Since 1935 Texas has ranked first of the states in the value of mineral products. Since Pearl Harbour, the Lone Star State has completely out-distanced all others in availability of these assets: Pennsylvania to-day is a poor second, and by 1950 will hardly deserve "Honourable Mention." Basic reserves throughout Appalachia are dropping fast. A West Virginia factory must now pay three times as much for natural gas as a Texan pays. A Pennsylvania user pays five to seven times as much. But natural gas is being discovered throughout the Southwest and Gulf region much faster than it is being used, even by the giant war factories. So the chemical industries which must use the hydrocarbons in natural gas will turn from Appalachia to the Texas area. To-day men are laying a pipe-line from Corpus Christi to West Virginia to deliver 207 million cubic feet of Texas gas a day over 2,000 miles.

Industries making viscose rayon, certain plastics, pulp products and paper favour Texas, because the state can produce in perpetuity six times as much pulpwood as the whole nation needed before the war. In the warm, moist climate of the East Texas pulpwood area, trees grow from three to four times as fast as in the far Northeastern United States and Canada. Cotton linters, used by some of these same industries, notably the viscose plants, will always be at hand in abundance. Texas has hardly begun improving her immense cotton yields through scientific plant breeding and farming. It is well within reason to hold that, if the market justified it, Texas might treble her fibre output within a few years.

The key to most chemical industries is the heavy alkali and chlorine plant. Texas holds that key firmly. Since 1930, thanks largely to the keen and potent Jesse Jones, more and more corporations have been tapping the inexhaustible salt beds and brine wells and sulphur and limestone of the Gulf coast, to make soda ash, caustic soda, chlorine, sulphuric acid and other chemicals needed in vast quantities by the makers of pulp and paper, glass, petroleum derivatives, aluminium, rayon, plastics, pharmaceuticals and so on.

There they will find a further advantage in ocean freightage. West Virginia and Pennsylvania are inland. Even with the best use of the Ohio-Mississippi waterways, the costs of delivery to foreign customers must remain much higher than the cost from Houston or Beaumont. In the long run, then, it would appear that Appalachia will retain firmly only those chemical and other industries which depend upon her stupendous coal reserves, the world's greatest and best.

As the end of the European war approaches, the last great natural resource of Texas will be tapped: Jesse Jones, Texan and US Secretary of Commerce. War plants must close. But which? Other plants must be reconverted.

But which? The Federal Government will decide. And that means, in many instances, that Jesse Jones will decide. For this amazing personality, when head of the Reconstruction Finance Corporation during its biggest years, became the world's greatest money-lender. As such, he learned the most intimate secrets of more great businesses than have ever been known by any dozen bankers. And today he is the Government in many matters affecting business and industry.

Traditionally, on the grounds of the state capitol at Austin only the flag of Texas ever flies. Not wholly in jest did many Texans say, back in 1941: "If the United States declares war, Texas will go in, too." This state of mind will play a part after the war. For reconversion means a political fight of region against region. The Northeast will strive to hold its own. So will the Great Lakes states. The Pacific Northwest and California will strive to win new industries and fresh financing for peacetime ventures. How is each major region likely to fare?

The Northwest has a mighty fortress in Grand Coulee and the vast mineral resources lately found in Eastern Wyoming, Idaho, Washington and Oregon. Their hydro-electric power can hold its own against Texas gas. Many industries are sure to settle in the Columbia River Basin because cheap current and cheap raw materials are at hand. Then, too, the Basin does not compete against Texas measurably. Its products differ and so, too, will its markets.

#### California's Lone Hand

California's resources within her borders do not compare with those of Texas. She is highly dependent on her own hinterland and, to an extent some of her business men deplore, on the East. Furthermore, only since Pearl Harbour have people in Arizona, Utah, Nevada and New Mexico been very well disposed toward California; in the past, narrowly self-centred California leadership piled up a fund of ill-will in these states. On the other hand, California has developed an outstanding human resource in Henry Kaiser. He has proved his genius chiefly by making bricks without straw. Starting from scratch with no steel and no workers, Kaiser has created an amazing war industry on the Pacific Coast. Many factors point to an expansion of Western steel—in the course of time. But only a post-war boom in the West or unexpected markets in the Orient would justify short-term optimism. Furthermore, Californians have dreamed of setting up their own independent steel and shipbuilding enterprises. So they have collided with US Steel and other giant industries of the East. But Texas has the goodwill of most of the giant corporations of the Northeast and Great Lakes areas, thanks again to Jesse Jones. California still tries to play a lone hand. And with pretty poor cards at that.

If California had remarkable natural resources, these would surely aid Kaiser in his fight. But the state lacks such. No coal. Only one quarter as much available petroleum as Texas and only very deep drilling will bring in more at high cost. Natural gas enough for about 25 more years at the pre-war rate of use. Little or no potash, sulphur, brines for the heavy alkalies. California grows superb cotton, but vastly less than Texas, and most of it is much too good to use in making viscose rayon or plastics; it goes mainly into motor truck tyres. While the acre-yield runs high, all cotton land has to be irrigated, so the production cost is high. Finally, California has no vast stand of pulpwood; that lies to the north, in Washington and Oregon.

The truth is that California's economy has been shaped in part for a community of consumers, for the retired

well-to-do, for invalids, for playboys, for Hollywood, while Texas is all producers. Such folk offer little competition to the hard-riding Texans.

We said Texas will gain most from the war. Yes, but we did not say when. The impending presidential election may change the calendar of progress. The prospects of the Republicans sweeping the country are pretty good, though far from secure. Much will depend upon many little unpredictable events between now and next November. But if the Democrats lose, Jesse Jones's gigantic power will be broken. What great influence would displace him? A Republican Secretary of Commerce would, of course, favour big steel and other billion dollar Eastern corporations, and he would not favour Democratic Texas. But California is a Republican stronghold. Herbert Hoover, an ardent Californian, would at least have a place as a Republican master. He and Henry Kaiser would make a mighty team. Both might be expected to urge the need of a powerful pro-Western Secretary of Commerce to offset the current ascendancy of Texas. Then Texas would move toward her destiny much more slowly. But she will move.

## American Notes

### War Production Report

The third annual report of the Truman Committee of the Senate was presented last week. This Committee, which was originally merely another investigating group, has by hard work built itself a position in the American war machine similar to that occupied by the Select Committee on National Expenditure in the British. Both have the inevitable defects of committees of private members, but both also serve the purpose of keeping private members in close touch with the work of the departments. The present report is likely to be welcomed for the encouraging data it contains on the volume of material produced under the national defence programme, and for its indications that the peak of the industrial war effort will soon be past. Its practical proposals for dealing with the problems raised at this particular stage in the cycle of war production are likely to be less universally welcome, but its work of description, information, and analysis cannot easily be overvalued. To British eyes, the volume of war material produced since 1941, as calculated by the Committee, reads like a magniloquent fairy story; the equipment of 10 million men, the construction of over 153,000 aircraft, of over 20 million tons of merchant shipping in Liberty ships alone, and the establishment of plant facilities worth nearly \$20 million is beyond normal British comprehension. In face of such figures, it is not so surprising that the Committee is able to state, with some confidence, that

... the bulk of the initial equipment and supplies for the War Department will have been manufactured within 60 to 90 days and thereafter the job will be to supply the items of special need, and to replace materials that are damaged or destroyed and to improve the quality of war materials.

At this point the Committee is forced to admit an unsatisfactory lack of accurate information, and consequently of definite policy, with regard to the termination of contracts and the volume of surplus material available. Such uncertainty over future conditions will not make easier the task of reconversion to civilian needs.

For the same reason, the suggestions made by the Committee for regulating any such re-emergence of civilian production are limited in scope and structure to the view that the best methods of absorbing an uncertain and irregular flow of "free" materials is to leave it to industry to produce whatever it thinks fit, subject only to the prior demands of war production on material, labour or plant facilities. This view is evidently not shared by the War Production Board, nor by those industries which are most hard hit by the irregularities of war production. There has been general recognition of the need for a Surplus Property Administration. The Committee itself has expressed unqualified admiration for the work of the War Manpower Commission in controlling and perfecting, through some 1,500 utilisation studies, the methods and processes of war production so as to reduce wastage and increase efficiency. It is unlikely that similar problems and problems equally grave will not arise after hostilities have actually ceased. It would be unfortunate if the United States were to deprive itself of such methods as it has used with success in wartime to deal with the equally difficult ones arising in a transition period. Yet the Committee contend with some

determination that a pattern of "regimentation," however good the intention, would be undesirable for peacetime production because of the tendency for such regimentation to become permanent.

### Business in Backlogs

Called "the unhappiest industry in America," machine-tool production has begun to feel the pinch. As defence industries become securely established, the peak of inflated demand for machine-tools is passed and the prospect for peace is seen to be poor and unpromising. In the past three years, tools have been built and delivered at an average rate five times as heavy as that of any normally good peacetime year. Unlike the more specialised machines which they serve, many machine tools will be capable of transfer to peacetime production, and it is estimated that industrial demand for ten years or more can be satisfied by tools produced under pressure of war. An orderly disposal of the Government's stocks of machine tools is not perhaps all that can be done; but it is probably about all that can be planned in advance. Nor, of course, are machine tools the only items that are beginning to raise the question of surplus disposal. It is a matter of general interest. Side by side with the initial measure of appointing Mr William Clayton as Surplus Property Administrator, under the WPB, and on the recommendation of the Baruch Report, legislation is pending before Congress which will establish uniform methods of disposing of surplus goods under a central agency. A "surplus utilisation service" is already run by the WPB on a regional basis and through normal trade channels. The Surplus Property Bill aims at regulating this procedure and at preventing speculation and the feeding of surplus property to industry at a greater rate than it is able to absorb. It is an attempt to create a practical organisation which recognises the lesson of Government "dumping" after the last war. For the machine tool industry itself this can only be in the nature of first-aid. Its only real hope lies in a rapid development of new materials and processes in post-war industry, which would quickly put all tools made during the war out of the market.

### Planning World Economy

A comprehensive resolution dealing with the planning of American international economic policy was to be introduced into Congress this week. It is the product of the Citizens' Conference on International Economic Union, and calls for the creation of a commission representing the Administration, Congress and the interests of industry, agriculture, labour and the consumer to advise the President, who would be authorised to "work with other members of the United Nations on problems of post-war economic agreement." The specific terms of reference range from civil aviation to international cartels, from currency stabilisation to the exchange of scientific information. These, however, are only the glowing preludes to the imperial theme. Each, in its final determination, would depend on the settlement of tariff policy. The fate of the resolution is uncertain, but it is one more piece of evidence of the hold that the doctrines of international economic freedom have obtained over public opinion in America. The doctrine is vague as yet, and the cynic may hold that it is compounded in equal parts of American commercial self-interest and of the wishful belief that in economics there lies some magic key to world peace which will make painful political responsibilities unnecessary. But it would be a great mistake either to underrate the sincerity of this movement or the impetus that it is capable of working up. Something has been happening in America in the years of the Great Depression closely akin to what happened in England in the Hungry Forties, and if there is an element of enlightened self-interest in both movements of opinion, there is also a great deal of genuine idealism. That American minds should be increasingly turning towards freer trade is, of course, all to the good. Nor should it be impossible to get American recognition of the practical difficulties with which less fortunate countries are faced, provided their sincerity is apparent. The one attitude that would certainly be a mistake would be to treat such resolutions as of no importance or as unrepresentative of the main body of American opinion. The chief effort should rather be concentrated on securing the translation of these rather starry-eyed generalities into a practical programme of general acceptability.

## COMMON COLD

### Common sense...

THE common sense approach to the problem of the common cold is "Serocalcin" and people who maintain that colds are "inevitable" ignore facts. For more than eight years "Serocalcin" has been prescribed by the Medical Profession and the efficacy of "Serocalcin" for treatment or prophylaxis in some 8 out of 10 cases is now a matter of established fact.

"Serocalcin" (reg. trade mark) is a sulpho-guaiacolic plasma precipitate which enhances the resistive capacity of the body against invading organisms that cause colds. It is contained in small tablets, easy and pleasant to take.

Three tablets, three times daily, will usually clear up a cold in 48 to 72 hours. Two tablets daily, for 30 consecutive days, provide immunity in some 8 out of 10 cases for a period of 3 to 4 months.

There are no "drugs" in "Serocalcin" and consequently no unpleasant reactions. It can be given to children with perfect safety.

A treatment pack of 20 "Serocalcin" tablets costs 3/4½ (inc. tax). The full immunizing course of 60 tablets costs 8/5½ (inc. tax). All who suffer from the common cold are invited to send 1d. stamp (to comply with regulations) for booklet "Immunity from Colds."

### SEROCALCIN PREVENTS COLDS

Harwoods Laboratories Ltd., Rickmansworth Rd., Watford, Herts

## HISTORY, CURRENCY, AND PROPHECY

Before the War, when quality was what we cared to make it — we at Rowntrees made it high. You will remember Black Magic — Chocolate Crisp — Aero Milk Chocolate. These were typical of the standard at which all our production was fixed.

During the War, quality can be only what we are able to make it. Nevertheless, we find, somewhat to our surprise, that in spite of Hobson's choice in the matter of ingredients, we are able to make Chocolate and Clear Gums which the people who eat them are kind enough to call excellent. Even so, owing to Zoning we can sell them only in certain parts of the country, mainly in the North and East.

After the War, when at length the quality of our products again comes completely under our own control, we shall make our post-war products to our pre-war standards. Unhurriedly, as the right materials come into the country, we shall again produce Black Magic, Chocolate Crisp and the others — and sell them from Penzance to the Pentland Firth. And that's a promise.

**ROWNTREES**

## MEASURED TREAD

**RUBBER** is today a munition of war as well as a domestic necessity. It is as much an essential for air force or mechanised army as petrol, but no less than 90 per cent. of the world's supply of natural rubber is grown in countries now in Japanese hands. If the national effort is not to suffer, there must be the strictest economy in every use of rubber, from motor tyres to hot-water bottles. Old rubber must be collected as systematically as old iron. While we use our tyres carefully and send those worn hose-pipes to the salvage collector, we can be sure that the chemical industry is also working to help solve the rubber problem. First, the organic branch of the industry is engaged on the discovery, improvement and production of chemicals for one purpose or another. Secondly, the chemical industry is concentrated on developing the manufacture of synthetic rubbers of different types from common raw materials such as coal and oil. The Necessity of War will be the Mother of Invention. Research in the laboratory will enable chemical workers to produce a variety of synthetic rubbers, each having properties suited for one or more specific uses. May not the future of rubber lie in the laboratory and the factory instead of in the plantation?

# THE WORLD OVERSEAS

## The Pucheu Trial

ON March 5th the trial of M. Pucheu, Vichy's Minister of the Interior from August, 1941, to April, 1942, started at Algiers. At the time of writing, the court is still in session; but it is already clear that this is the most important political trial that France has staged since the trial of Dreyfuss. The problems posed by the prosecution as well as by the defence are likely to weigh on French political life for years to come. Already, during the first days of the trial, a sharp light has been shed upon the tangle of new divisions and cleavages which war, defeat and occupation have created in France.

On the face of it, the Pucheu trial may be seen as a puzzling dilemma between law and politics. The accusers of the former Minister of the Interior have spoken the language of politics. M. Pucheu was in charge of Vichy's police when the practice of shooting hostages became common; and it was Vichy's police who delivered the hostages to the Germans. Resistance to the invader was outlawed; dissidents were hunted down and maltreated in French concentration camps; and extraordinary tribunals were put to work, not only under the German occupation, but also in the so-called free zone. M. Grenier, the Communist deputy for Saint Denis, spoke on behalf of the victims of that policy; he listed facts and piled up charges. But he could not produce legal evidence for M. Pucheu's personal responsibility. Instead, he insisted on his political responsibility; and he undoubtedly expressed a genuine popular feeling prevalent in France when he exclaimed before the Court: "The whole French people knows what Pucheu has done!"

### Law and Politics

Another witness for the prosecution, M. Bosman, one of the leaders of the resistance in France and now vice-president of the Consultative Assembly, asked the Military Tribunal at Algiers to carry into effect the death sentence passed on Pucheu by the Council of Resistance in France. The dialogue between M. Bosman and M. Pucheu's defender throws a light on the motives of both sides:

I am speaking here on behalf of hundreds of executed militants, of thousands of prisoners, and of my own imprisoned wife. They have no lessons to learn from your client. It is not our fault that your client is still alive. There is something here very different from juridical questions; there is the will of the people.

—Yes, but now we are in the temple of justice.

The answer was undoubtedly a powerful one. The political charges against M. Pucheu could acquire legal validity in one way only; if it had been proved that the whole activity of the Government of which M. Pucheu was a member was illegal and criminal. From a strictly legal point of view this could not be proved; and M. Pucheu has implicitly based his defence on this circumstance. He pointed to the fact that the legality of the Government to which he belonged was recognised by two of the three great Allied Powers. When M. Pucheu was in office, Admiral Leahy still represented the United States at Vichy and M. Bogomolov Soviet Russia.

A divorce between political reality and the legal code is seen in an acute form. Activities that stand condemned in the light of genuine and popular patriotic feeling can appear unassailable from a strictly legal point of view. M. Pucheu's trial is the first instance; but the conflict between law and politics will recur at every stage in the French drama, for perhaps as long as the present actors are alive.

The dilemma goes even deeper. M. Pucheu has not only invoked law against political sentiment. His defence has clearly become the first great plea for *attentisme*—that is, the policy of waiting to see what would happen before coming down on the Axis or Allied side—as distinct from collaboration. He has defended, not only his own record, but also that of Marshal Pétain himself. Confronted with the cries "assassin" and "traitor," M. Pucheu eulogised the wisdom and the patriotic virtues of Pétain's wait-

and-see attitude. "Pétain (he said) directed us steadily to reduce collaboration with the Germans to a minimum." From this, he logically proceeded to the defence of the Armistice itself, which, he said,

made it possible to limit the number of the prisoners, to prevent the total and immediate occupation of France, and to shield North Africa from German invasion.

While M. Pucheu dwelt, with some disregard of the facts, on the benefits, genuine or illusory, of wait-and-see, his accusers insisted on the price paid for that policy.

The distinction between collaboration and *attentisme* is in many cases genuine; and it must be accepted. But what is the criterion on which this distinction can be based? Will not every collaborator be able to pose as an *attentiste*? And how can sincere *attentisme* be distinguished from its sham, the *attentisme* that grew out of a feeling of French weakness, and of a hope for recovery, from the *attentisme* that was merely an opportunist playing for time until events made it possible to pick out and board the victor's band wagon? The maze of evidence and counter evidence has already become complicated in the case of M. Pucheu. It is certain to become inextricable in other cases.

There has been no lack of evidence in favour of M. Pucheu. General Bethouard recalled that, nearly a year before the Allied descent on North Africa, M. Pucheu had persuaded him to join the dissidents in case of a German attempt to occupy North Africa. General Bethouard himself was imprisoned and court-martialled by Vichy men in Morocco, in November, 1942, at the time of the Allied invasion.

When I stood accused of treason and rebellion before the tribunal of Meknes I could not help recalling that the first person who had incited me to dissidence was precisely the Minister of the Interior.

The same testimony was given by General Giraud, who confirmed that in September, 1942, M. Pucheu regarded the *attentisme* of 1940 as dead.

But this evidence has not done away with the peculiar contradiction in M. Pucheu's *attentisme*. The witnesses for the prosecution as well as the witnesses for the defence have undoubtedly stated true facts. But each side has pointed to only one side of the medal. The logic of *attentisme*, even in its best version, must at some stage have led to collaboration with the invader, and to the suppression of resistance. This cannot be denied, and M. Pucheu has not been able to deny it. But the positive rôle which *attentisme* has played in weakening collaboration and sapping the Vichy regime cannot be denied either. What the trial at Algiers has brought into the open is the dual character of this political phenomenon.

### The Date of the Crime

Another feature of the trial can be described as the controversy over the date of the "original sin" in French politics. General Giraud chose November 10, 1942, the date of the total occupation of France by the Germans. Those who decided not to resist the Germans by that time were the Gauleiters of France. For the Gaullists who raised the banner of resistance in June of 1940 the origin of the sin goes back, naturally enough, to the birth of the Vichy regime. At the Pucheu trial, the two dates have been set against each other. To the outsider, this controversy may perhaps look like one more hair-splitting heresy hunt. But this is not so. Unfortunately, in French politics, the problem is very real. Too many passions, sufferings, hopes and frustrations have been tied up with the one date or the other. General Giraud's contribution to the trial was in essence a discreet but firm call to reconciliation on the basis of what may be called the November-1942-coalition. To the Gaullists the acceptance of this would seem a resignation from their proud birthright of resistance; the

trial of Pucheu is, in fact, an act in the defence of that birthright.

The controversy over the dates of the "original sin" of capitulation and defeatism does not end here. The Communists are the most uncompromising accusers of M. Pucheu and of *attentisme* at large. They base their right to act in this rôle on the indubitable and heroic contribution which they have made to the movement of resistance in France itself. But did not the Communists themselves play a blatantly defeatist part in 1939 and 1940? In his defence, M. Pucheu has, as might have been expected, used this argument. He admitted that he adopted stern repressive measures—special tribunals, concentration camps and executions—against resisters from the Communist ranks. But in doing so, he pointed out, he merely based his actions on the measures previously begun by Daladier's War Government. Again, M. Pucheu's reasoning has much legal force, however dubious its political validity. M. Grenier, on the other hand, concentrated on denying the "original sin" of the Communist Party, and on proving that Communist resistance to the invader had started long before Russia's entry into the war. The Communists, he said, fought the invader right from the collapse in 1940, and not from June, 1941, when Russia was attacked by Germany. This is no doubt true, if only because the Germans entered France with a Nazi distaste for Communists; but the fact remains that the defeatist propaganda of the Communists was one of the important factors which brought about the collapse itself. This passionate controversy over past failures and subsequent rehabilitation takes place against a background which is equally tragic to all sides. Accusers and defendant, as well as the witnesses for both sides, spoke about their families, now hostages in German hands. General Giraud appeared in the witness box immediately after he had received the news of the death of his daughter in German internment. M. Grenier told the story of Communist martyrdom in France, and demanded M. Pucheu's head, while M. Pucheu himself recalled the fate of his wife and children, now also in German hands.

The dilemmas can be seen clearly. There is the tangle of law and politics and of *attentisme* and collaboration; there are the contradictions in *attentisme* itself. There is the intricate controversy over past conduct. Out of each of these dilemmas divisions have arisen which cut across the whole political structure of France. But where is the way out? Very much will depend on the outcome of M. Pucheu's trial. The cry for justice is only too often mixed with lust of revenge; and the rejection of revenge may only too often mean a denial of justice. Yet some guiding principles can probably be set. On strictly legal grounds it may be impossible to punish any of the collaborators and traitors. On political grounds, it will be impossible to let them go unpunished. The punishment should therefore have a political rather than a legal character. It may be doubted whether courts and tribunals will be able to settle the problem without making a travesty of law. But a legislative body might probably solve it, for instance, by disfranchising all collaborators and the suspect *attentistes*. What is necessary to clear the atmosphere of French political life is not the guillotine and the concentration camp, but the thorough and radical elimination of the influence of guilty men in French politics.

## Impoverished Holland

[BY A CORRESPONDENT]

HOLLAND has been virtually turned into a province of Greater Germany. As such it is the most exposed province with a long, open coastline. The districts of South and North Holland with the towns of Rotterdam and Amsterdam account for more than two-fifths of the total population numbering roughly nine million. The district of Zeeland, on the other hand, consisting of numerous islands in the estuary of the river Schelde, is the most thinly populated part of Holland. In the east, the greater part of the Dutch-German frontier is moorland. From the west coast to the German frontier the average distance is under 70 miles.

During four years of occupation Holland's once famous wealth of agricultural and industrial production has gone. A large part of the rich pastures has been ploughed up for the cultivation of cereals, potatoes, sugar beet and oilseeds. The world-famous flower and flower bulb plantations have to a large extent been turned over to vegetable production. The oilseed crushing mills and the tin refineries dependent on overseas imports are no longer working. Generally speaking, the wartime

migration of European peoples from the west to the east actually begins in Holland. From chance disclosures it can perhaps be said that some 400,000, or even 450,000, Dutch persons are now employed in Germany, against some 300,000 at the end of 1942. Some 20,000 young Dutchmen are serving in various *Waffen SS* Divisions of the German Wehrmacht, and a few hundred Dutch peasants and artisans have been settled in the Warthegau, the Polish provinces incorporated by Germany. In addition, a considerable number of officers of the Dutch army are still prisoners of war in Germany, although it is said that only a small number reported to the German authorities in the spring of last year, when the Nazis ordered the re-internment of the released soldiers of the old army. Not all these figures, of course, are reliable. But they indicate that a considerable part of the active male population is no longer resident in Holland. Many Dutchmen have gone into hiding, though their numbers are probably exaggerated. Last year, the Dutch people openly resisted the Nazi occupation, and then the inevitable result was ruthless suppression followed by a period of apathy. The resistance tended to be directed against the total mobilisation order, which was to be enforced after the German model.

It has been apparent for some time that industrial activity declined steadily during the last year. Outwardly, there was a distinct tendency for small firms to be concentrated, which, however, in the case of the electrical and textile concerns was not followed by increased production. Although German sources no longer give any information about different industries, it can be assumed that industrial equipment is being steadily moved to the east, thus, in a sense, following the deportation of Dutch workers. In the event of the continent being invaded from the west, Dutch production would necessarily suffer. It is hardly possible to evacuate the population from the coastal districts unless the Nazis are prepared to move more than three million people from the provinces of South and North Holland into Greater Germany. No other part of Holland could take them.

This may explain the many contradictory statements made by the Nazi authorities about the evacuation of the coastal districts. At the same time, the armies of occupation have been engaged in fortifying vulnerable points of the long coastline. All men between the ages of 18 to 35 years are liable to compulsory labour; and it is reported that the construction of fortifications is particularly active in the provinces of Zeeland and South and North Holland. The sand dunes, characteristic of the Dutch coast, have become vast minefields and the low marshland could easily be flooded during an invasion attempt. The Nazis seem deliberately to be scaring the Dutch people with the threat of flooding.

As regards agriculture, vague statements were made that the 1943 harvest would provide supplies of foodstuffs sufficient for the present rations. The cultivation plan for 1944 again demands an increase in the acreage under flax, sugar beet and oilseeds. One thousand tractors have been adapted for the use of generator gas, and electric power has been used more extensively on the farms, especially for threshing. A shortage of labour and fertilisers is the greatest difficulty faced by agriculture. This cannot be overcome by the changes in agricultural organisation that have taken place. The "Landstand," equivalent to the Nazi "Reichs-

nachstand," has remained ineffective, whereas centralisation of the 4,000 different agricultural co-operatives seems to have made some progress under Nazi pressure.

In contrast to the lack of agricultural and industrial information, there is a comparative wealth of financial statistics. It is, however, significant that since the middle of 1942 no price indices have been published. The fixed prices, as reported by the price control departments, show curious differences in agricultural products. Increases range from 30 to 100 per cent during the period from 1939 to the end of 1942. For industrial manufactures a price stop has nominally been enforced. Quotations on the Amsterdam Bourses reveal extraordinary price anomalies in spite of the quotation stop which has been imposed after the German model.

At the end of 1943, the total national debt had increased to Fl. 10,303 million, against Fl. 8,509 million at the end of 1942 and Fl. 4,218 million in December, 1939. During the same period, the money in circulation rose from Fl. 1,152 million to Fl. 3,424 million, although in April, 1943, roughly Fl. 700 million in large banknotes were withdrawn from legal tender. The holdings of the Central Bank in foreign currency, mainly German Treasury bills, were roughly Fl. 3,000 million at the end of 1943. This is accounted for mainly by the cost of occupation and Germany's clearing debt. The commercial banks again showed a marked increase in deposits, and savings deposits in savings banks and post offices rose from Fl. 921 million at the end of 1942 to Fl. 1,295 million in December, 1943. This rise is in marked contrast to the decline in savings between 1939 and 1942, which was followed by a very small increase during that year. It indicates first that the supply of consumption goods decreased rapidly during 1943. Moreover, the withdrawal of large banknotes apparently induced many people to deposit their savings, which had previously been carefully hoarded. No definite conclusions can be drawn from these financial statistics. The activities of the bourses and the money markets are purely nominal; the fixed and stop prices are mainly fictitious. The rise in prices, as well as the increase in the notes in circulation, corresponds roughly to the situation in Germany, although the increase in the national debt is very much smaller. The figures indicate that, in spite of a large black market, financial and price control is not altogether ineffective. Yet there is no doubt that the process of impoverishment is continuing at greater speed. The Dutch have given an apt illustration of it by the phrase "Nieuwe orde, leegte borden," which means "New order, empty plates."

## Irish Mercantile Marine

[FROM OUR DUBLIN CORRESPONDENT]

It is rather curious that Ireland, an island situated in the main Atlantic trade route, should not have developed a great shipping industry. Compared with those of other countries similarly situated, the Irish mercantile marine is of very small dimensions. Among the published estimates of invisible exports no income is stated to be derived from shipping services, whereas considerable sums are derived from postal receipts from foreign shipping. Doubtless, from the point of view of pure money cost, in peacetime it is cheaper to employ foreign shipping than to build up an

Irish merchant fleet. In wartime, however, this dependence on external sources of transport has proved extremely dangerous. The country might have experienced the horrors of famine if steps had not been taken to acquire some Irish-owned and Irish-controlled ships.

By far the largest part of Irish external trade is with Great Britain. In respect of this trade little difficulty has been experienced. The cross-channel services have been adequately maintained. If imports from Great Britain, for example coal, are scarce, it is not due to lack of shipping. There is, however, considerable direct trade with overseas countries, and it was with the object of carrying on this trade that the Irish Shipping Co., Ltd., was formed in 1941. This company has purchased several ships, unfortunately at extremely high prices. In spite of the losses during the period, the net tonnage of steam vessels on the Irish register increased from 21,291 in December, 1939, to 34,208 in December, 1943. The ships owned by this company are responsible for the Transatlantic service, and are operated by three Irish managing companies, which use their own ships to trade with Iberian ports. On the whole, imports from overseas countries have been surprisingly well maintained.

The mere possession of ships is not sufficient to keep up trade. Many neutral countries are able to make only limited use of their abundant tonnage. The first need is adequate crews. It is impossible to praise too highly the Irish seamen, many of whom have sacrificed their lives at sea. Since the beginning of the war sixteen ships and one hundred and thirty-five seamen have been lost as a result of war conditions. The second need is fuel. Here again supplies have been secured only with great difficulty. The third need is facilities for repair. Irish Shipping, Ltd., realising that facilities available in Dublin would be inadequate, purchased a derelict dockyard and restocked it with machinery and equipment. This yard, which is operated by a subsidiary of the shipping company, gives employment to two hundred men. Another sideline of this enterprising concern is marine insurance. The experience gained in handling war risks has laid the foundation of an underwriting business of the highest standing.

### Prospect for Peace

The Irish shipping industry will not be allowed to decline to its pre-war dimensions when peace returns. Mr John Leydon, chairman of Irish Shipping, Ltd., has recently stated that the Government has decided to keep the company alive after the war, when it will be its function to maintain a fleet of modern ocean-going ships. Private shipping companies will also receive encouragement. Mr Leydon hoped for the development of an Irish Shipping Federation and a Maritime Board which would work in close co-operation with the corresponding bodies in Great Britain. A scholarship scheme, under the supervision of the Department of Education, has been established to ensure that there will always be available an adequate supply of deck and engineering officers. The Maritime Institute is doing much to arouse public interest in the importance of an Irish mercantile marine. It would appear that the lesson learned in the war will not be forgotten, and that Eire will not consent to depend in future on foreign shipping for her vital external trade.

# THE BUSINESS WORLD

## Is There Enough Oil?

THE United States is suffering from one of its periodic scares of impending oil shortage. The latest scare is perhaps the most serious; it has been fanned by Mr Harold Ickes, Secretary of the Interior and Petroleum Administrator. In an article entitled "We Are Running Out of Oil," contributed to the December issue of the *American Magazine*, he painted a hair-raising picture of the evils that might befall the United States if it did not make sure of adequate supplies of oil. Reserves in the United States would last for no more than 14 years. Without adequate precautions America would be unable to fight a third world war if it came. It would be necessary to conserve stocks at home, to make sure of larger supplies abroad, and to build up stocks at strategic points. In sum—the argument seems to run—oil is indispensable, among other things, as a fuel for the internal-combustion engine, as a lubricant and as a source of vital chemicals; since America's reserves may give out in a few years, it will have to draw supplies from abroad; and as supplies abroad are also limited, it will be essential for America to establish a prior lien on existing

14,000,000 elsewhere—the world would soon have pumped the last barrel of oil out of the wells.

There are many experts, such as Dr. Egloff, research director of the Universal Oil Products Company, who do not share the gloomy views expressed by Mr Ickes. The reserves that are widely used to calculate when supplies will give out are not the real reserves at all; they are merely "proved" reserves, that is supplies that have actually been located. Most of the world's great oil-bearing regions have been found around the margins of the seas that fill the depressions between continents where these approach each other most closely. The three most important of these regions are, first, the area lying between the continents of Africa, Europe and Asia, with prolific oilfields in Southern Russia, Iran, Iraq, Arabia and Egypt; secondly, the area around the Gulf of Mexico and the Caribbean Sea, with its great oilfields in the southern part of the United States, Mexico, Venezuela and Colombia; thirdly, the area between South-East Asia and Australia with the oil-rich islands of Borneo, Sumatra, Java and New Guinea. With the possible exception of the United States, these areas have by no means been extensively explored—and there may be others not yet discovered—and their proved reserves bear little relationship to actual reserves.

For example, Mr Wallace Pratt, vice-president of the Standard Oil Company of New Jersey, drew a picture very

resources as a measure of self-protection. The scare served as a prelude to the announcement a month ago that, by way of ensuring foreign supplies for the future, the United States Government would assist in the development of American concessions in Arabia by constructing, at its own expense, a pipe-line from the Persian Gulf area to a point on the Eastern Mediterranean. Some of the implications of this decision are discussed in an article on page 328.

Table I, submitted to a sub-committee of the Committee on Public Lands and Surveys of the United States Senate last August, appears to lend some substance to the scare. It shows that, on the basis of production in 1938, America's reserves in 1942 would last only for another 15 years and the world's total reserves for less than twice that number of years. On the basis of American production in 1943, estimated at about 1,500 million barrels, reserves in the United States would give out after 13 years, and, to give scope to imagination, if the rest of the world were to run as many motor vehicles as America—before the war in 1938 there were 29,000,000 vehicles in America and only

BANKING BUSINESS OF EVERY DESCRIPTION TRANSACTED AT ALL BRANCHES AND AGENCIES

different from Mr Ickes' in an article in the *Oil and Gas Journal* of December 30, 1943. He estimated the world's proved reserves at more than 100 billion barrels, comprising 20 billions in America, 45 billions in Russia and 40 billions in other countries within the world's three great oil-bearing regions. In his view, the world's actual reserves exceed many times the known supplies. In this context, the future may be envisaged as one of growing consumption and expanding proved reserves. There seems to be no need—even if this were possible—for an attempt to obtain a complete survey of the world's oil resources so long as proved

TABLE II.—ESTIMATED DISTRIBUTION OF CONTROL IN THE PRINCIPAL OIL PRODUCING COUNTRIES

(a) There are British interests in Colombia, but commercial production has not yet started.

(b) On basis of pre-war production.

(c) In addition, British-French interests controlled 12 per cent., Roumania 12 per cent., and other interests 6 per cent.

(d) Preliminary estimates by the *Oil and Gas Journal*.

resources are equivalent to the requirements of a generation. Such a survey, which would involve not merely prospecting but drilling on a huge scale, would be extremely costly, either to the consumer of oil or, if it is carried out by Governments, to the taxpayer. Further, in the midst of a period of rapid technical progress, such as the present, it is not impossible that the next generation may be able to "prove" oil reserves more cheaply or to tap different sources of energy. There seems no good reason, in fact, why the present generation should pay part of the fuel bill of the next.

Even in the United States, the supply position seems to be much less desperate than Mr Ickes suggests. In addition to the proved reserve of 20 billion barrels in the United States, there are, according to Mr Pratt, reserves of gaseous oil, or natural gas, equivalent to about 17 million barrels of liquid petroleum. Natural gas can be converted into liquid

fuel at costs only slightly higher than those involved in the conversion of liquid petroleum. America's proved reserves are therefore nearly twice the figure used by Mr Ickes for calculating the number of years' supply at current rates of consumption. And even in America, the volume of known supplies is by no means equivalent to actual reserves; these could be raised by the simple process of an intensification of drilling operations which have been severely reduced during the past two years.

There is, in fact, no justification for the oil scare. There is plenty in sight in the United States, and there is enough "proved" oil for the world as a whole, for more than a generation. Moreover, there is still great scope for technical improvements in the efficiency of utilising oil—much of which is still burnt—which will make each barrel go further. From an economic standpoint, there seems, therefore, no need for a scramble to secure a lien on part of the world's oil resources. Nor is there any justification for the United States to stake a claim for a proportion of the world's proved reserves equivalent to its present proportion of world consumption or to its share of the world's fleet of cars and trucks. Neither of these proportions is a static one, and it would be no more unreasonable for other countries to suggest the size of the population—that is, potential motor transport—as the basis of a share-out. In any case, as Mr Pratt suggests, America already controls 20 billion barrels of the world's proved reserves of 40 billion barrels outside the United States and Russia—13.3 billions in the Near East and 6.7 billions in Latin America. The other half of these proved reserves is controlled mainly by British and Dutch interests, either singly or in association. Table II, based not on proved reserves but on pre-war production or, if this is known, on current output, gives a rough and ready conspectus of the distribution of control over the world's oil supplies.

The greater part of the world's proved oil resources are controlled by five countries—America, Great Britain, Russia, Holland and Mexico. Three of them—America, Great Britain and Holland—control most of the supplies outside their own countries; at present control is in the hands of a few large companies—the oil "empires"—but apart from any informal understandings about marketing these pursue their own paths. In view of the great importance of oil as a key raw material in peace and in war, there is a strong case for an international oil policy embodying two major principles. The first is the principle of equal access to raw materials contained in article 4 of the Atlantic Charter; equal access, moreover, should mean access at reasonable prices to countries deficient in oil. The second is that oil-fields should be developed and exploited with due regard to the interests of the countries in which they are located. It is to be hoped that the international oil conference, to be initiated by discussions between the British and American Governments, will be guided by these two principles.

## Business Notes

### Railways and Co-ordination

Last week's addresses by Lord Royden to the stockholders of the LMS and by Sir Ronald Matthews to those of the LNER both serve to stress the abnormality of conditions prevailing and in consequence of both gross and net receipts under a regime of total war. Those who remember conditions of passenger travel before the war will not suppose that an increase of 146 per cent in the average passenger train load on the former line can be tolerated in peace-time, while the stress which both chairmen lay on the need for provisions against abnormal wear and tear is a sufficient indication that physical assets are being overworked. Incidentally, it is worth noting that, while Lord Royden gives the need for provisions additional to those permitted under the agreement as the explanation of the large appropriations to contingencies, Sir Ronald attributes the strain largely to the work done for the American army. He seems to infer that, since this was not in contemplation at the time of the agreement, special provision ought to be made by some amendment of its provisions. It is presumably because they foresee a very great change, once the period of emergency is over, that the companies are concentrating their attention upon discussions designed to produce a happier state of affairs for the main line railways after the war than have existed at any time since road transport offered effective competition. Very little is

said of actual desires or intentions, but both quote, with apparent satisfaction, Lord Leathers' statement that

whatever the merits of competition in stimulating enterprise and efficiency, it must be evident that, if it is carried so far as to undermine the stability of services essential to the community and to the commercial interests, its effect will ultimately prove damaging to the national interests.

With this end in view, Lord Royden asks for equality for all in any post-war legislation for transport. He states that "each type of transport should be so organised as to enable it to assume and carry out the obligations attached to the performance of public transport," but he makes no attempt to define what these obligations are. He makes only a passing reference to the conversations between various types of transport aimed at evolving an agreed policy, but Sir Ronald Matthews appears to deplore the existence in the road transport industry of so many small units, "most, if not all, with a highly individualist outlook." In this connection, Sir Edward Cadogan, addressing Wednesday's Great Western meeting, stressed the need for the assumption by all road hauliers, performing more than purely local services, of responsibilities appropriate to a public service.

These indications ought, probably, to be read in conjunction with the fact that both chairmen make a glancing

reference to the standard revenue. Sir Ronald accepts as helpful the resolution of the London and North-Eastern Stockholders' Association, whose declared aim is to obtain the standard revenue in post-war years, while Lord Royden reminds stockholders that the agreement provides that time will be given before the transfer to normal conditions to adjust the level of charges. Further, in this connection he mentioned that Parliament had placed on record the standard revenue provisions of the Act of 1921. It is certainly excusable if these statements conjure up in the minds of some observers a fear that the immediate objective of the railways is a closed transport industry, relying for its prosperity on high charges. Such an arrangement must not only be a deterrent to industrial development but, over any extended period, restrictive of the revenues of transport itself.

### BIS Activities

Apart from the wider sweeps of its economic review—these must be deferred for later consideration—the report of the Bank for International Settlements for the year to March 31, 1943, gives an interesting account of the current activities of the bank. The main feature revealed by the accounts is their contraction. The total turnover last year fell to about two-thirds of that in 1941-42. This was largely due to the scrupulous adherence by the Bank to the principles of strict neutrality applied since the outbreak of the war, and to the tightening of the economic control exercised by most countries. The most marked reduction occurred in the volume of gold operations. Within this contraction, however, there was a recrudescence of activity in the settlement of international postal payments against gold sight deposits maintained for this purpose with the BIS. Gold sight deposit accounts are in operation for twenty-six central banks or international institutions. They provide a machinery of high flexibility and great technical advantage since any fractional amount of fine gold can be transferred by a mere book entry. In solving the technical questions involved in operating these gold accounts, the BIS has had to take account of the fact that each gold commitment has to be locally defined, since gold in one centre cannot be regarded as exactly the equivalent in value to the same weight of gold in another centre. The BIS makes this important technical point in the hope that it may be of interest now that the idea of an international unit of account more or less connected with gold has again been put forward. Operations for facilitating the financing of international trade are still limited to small amounts, though the BIS has placed credits at the disposal of neutral central banks for this purpose. The BIS arranges reciprocal credits between different central banks, and these allow the covering of exchange risks which could not be normally provided by forward exchange transactions. The BIS hopes that these special arrangements may prove particularly useful in a disturbed post-war period before the ordinary credit machinery has begun to function regularly once more. The BIS acts as bankers for the Red Cross organisations. Such activities, restricted as they are to a place of absolute neutrality, are among those most in harmony with the general aims of the bank. In the field of statistics and economic studies, the BIS maintains its excellent work. In addition to its annual report, the BIS has continued to publish collections of exchange restrictions and other current regulations concerning monetary matters, and has found these publications to be in great demand.

### Bank Loans for Industry

The joint stock banks' concern with the problem of post-war industrial finance, which was apparent in a number of the chairmen's speeches published earlier this year, has this week taken rather more concrete form in a step taken by the Midland Bank. Some time ago this bank established an internal committee on post-war business problems. This week it announced the appointment of one of its joint general managers, Mr Alexander Woods, to take charge of this part of the bank's activities. The scope of his responsibilities was broadly indicated in the chairman's statement last January—namely

to furnish the fullest possible support for promising enterprises under good auspices—support which shall be based as much upon the character, integrity and business capacity of the borrower as upon the extent and nature of his own resources.

Facilities will be given for a rather longer period than the normal run of banking accommodation. They will not be repayable on demand and will command moderate rates of probably under 5 per cent. The principal objective will be to re-establish or to start in business the modest enterprise to which short-term finance would be of little use. The help will be given as part of the Midland Bank's direct service and not through a specialised subsidiary. It will take the form of loans and not of actual participation in equity capital. It is stated by the Midland Bank that the re-settlement in civilian life of men discharged from the Forces is already calling for such facilities and that in a number of cases such loans have been granted.

### Selling the Goods

The "take-it-or-leave-it" attitude in the marketing of British goods abroad, which persisted during the inter-war year, when other exporting countries adopted more modern methods, has no doubt been one factor limiting the volume of exports. The need for the introduction of more scientific methods and for paying greater attention in design to the tastes and requirements of prospective customers, has again been stressed in a pamphlet issued by Hambros Bank, Limited, on "Some Aspects of International Trade." It expresses the wholly legitimate view that there remains a wide range of British products which, if designed according to tastes and competently marketed, could command large sales in the United States. As a specific suggestion it is recommended that, in view of the size and geographical diversity of the market of the United States, British exporters should conform to the methods of American marketing experts and substitute zone marketing for the present practice of central marketing from New York.

In the United Kingdom there seems to be a widespread tendency to regard the United States as one market, capable of being worked by a single agent in New York. American manufacturers, however, who ought to know, think otherwise, and base their distributing organisation on the knowledge that the country comprises at least nine major and largely independent markets, each with its own characteristic and distinctive features.

The main significance of this common-sense suggestion is that it needs to be made.

### Joint Production Committees

Sir Stafford Cripps is a firm believer in "industrial democracy," and in an address to the Industrial Welfare Society on Tuesday he expressed the hope that the wartime joint production committees might become a means of realising this principle. It is difficult to make any generalisations about joint production committees. Some are good, some bad, and some—probably the majority—are indifferent. That is to say, they meet regularly, in accordance with the terms of their constitution, and discuss broad questions about output, welfare and factory discipline; but there may not be any real co-operation between managerial and workers' representatives, and no great success in enlisting the interest or support of the factory workers as a whole for the committee's work. Sir Walter Citrine, in the February issue of *The TUC in Wartime*, states that there are now about 3,000 committees in the country, and that, while many are doing excellent work, "sometimes the employers have side-tracked the committees on to questions of welfare and absenteeism." Such tendencies are unfortunate, not only because they tend to obscure the objects for which the committees were set up—to increase and improve output—but because they may make the committees unpopular or out of touch with the rank and file of the workers. The principles underlying production committees are excellent. Both now, and after the war, it is essential to raise productivity in British industry. Productivity is not only a matter of tools, but of human interest and incentives. The Bossom mission attributed the higher output per head in the United States building industry, among other reasons, to the greater interest which the American operative took in output. Great interest in production is found in the Soviet Union, where, indeed, individual enthusiasm has often outstripped technical efficiency. Production committees can play an important part in stimulating the individual worker's interest in output, and thereby increasing his efficiency, but it is essential that the workers' representatives on the committee should be taken into the manage-

ment's confidence, and enabled to act as an effective link between management and workers, with adequate methods of "reporting back" the decisions and deliberations of their meetings.

### Share Dealing Licences

As was mentioned on page 317 of *The Economist* last week, the regulations for the grant of a principal's licence to deal in shares, required by the Prevention of Fraud (Investments) Act, include an extremely searching questionnaire. There is considerable internal evidence that the Board of Trade has availed itself of the experience of the Stock Exchange in this matter, and there seems little possibility that truthful answers to the questions asked will fail to reveal any past or present actions or associations which ought to put the Board's representative upon enquiry. Question 15 requires the disclosure of any person, not a partner in the business, who will have any measure of control over the business. Any weakness in the position appears to arise from the difficulty of checking the accuracy and sufficiency of the statements made, and this is particularly true of the requirements of Question 15. It is probably not difficult to ensure that the past history of anyone known in the profession shall be available to the Board of Trade (the London Committee already requires members to obtain permission before signing references of an applicant for licence), but, unless a principal's licence is refused to those without a period of experience, it will be difficult to prevent those whom it is desired to exclude, from setting up people with no record, or an untarnished one, to trade for them. It is to be supposed, however, that the first effect of the new regulations will be to push those who are unable, or unwilling, to join one of the recognised Stock Exchanges to join the Association of Stock and Share Dealers. It therefore becomes imperative to make certain that this and any other bodies who are granted recognition under the Act, including, of course, the Stock Exchanges, shall see to it that the requirements for admission to membership and the conduct of their own members are maintained at whatever standard is considered necessary for the protection of the investing public.

### Electricity Distribution

The latest body to put forward views on the future organisation of electricity distribution is the London and Home Counties Joint Electricity Authority. Perhaps because it started the present series of recommendations with suggestions which were felt in many quarters to be little short of expropriation, it puts forward little in the way of new proposals. Its report consists mainly of a criticism of the memoranda of the supply associations and the Incorporated Municipal Electrical Association, recently published and dealt with in *The Economist* on December 4, 1943, and February 5th. Its most concrete suggestion appears to be that charges should be raised, or their reduction deferred, in areas at present possessing a sufficient service in order to finance the extension of supply to areas where supply is deficient. It expresses the view that it would be a grievous wrong to the public to suggest that a national or regional plan to bring an increasingly efficient and helpful electricity service to the whole nation should only be accepted upon the condition that it brought benefits also to existing areas. No responsible body appears to have advanced this suggestion. What has been stated is that sweeping changes ought to be made only if they will benefit the consumer and that it is impossible to contemplate with equanimity plans for the extension of cheap electricity to rural areas, at the cost of raising charges elsewhere. The standardisation

of charges for electric supply is definitely undesirable in the general interest. Compared with the vague aspirations of the JEA, the comments of Sir Alexander Roger to the shareholders of Midland Electric Corporation are refreshingly direct and helpful. He makes two main points. Having given general support to the McGowan Report, he says that an undertaking

should not be so large as to remove local interest and personal enthusiasm nor so small as to exclude the probability of a reasonable variety of load. Size of an area alone is not an adequate reason for change.

It appears that Sir Alexander is rather opposed to changes except insofar as it is necessary to secure areas of a size giving a sufficient diversity to keep charges low, but it is to be noted that he is averse to change *wherever the ownership and control now lies*. He sums up his attitude by saying free open and friendly rivalry is the ground where efficiency grows to the best advantage. Without rivalry efficiency dies.

### Retailers' Coupon Capital

Last week, in his remarks to shareholders, Col. Cohen, chairman of Lewis's, Ltd., made two allegations concerning a lack of balance in the clothing coupon scheme which call for consideration. The first is that down-pointing of articles leads to a cumulative diminution of the retailer's coupon capital; the second that insufficient allowance is made for the many sources of coupon leakage, and that there is a serious risk that the whole coupon system may be getting out of balance, there being too many coupons in the hands of producers and too few in those of retailers. This week Mr A. E. Cowper, chairman of Wm. Whiteley, states "no matter how carefully we allocate them (the coupons) we cannot avoid the risk from many sources of wastage and consequent loss of buying power." As to the first of Col. Cohen's suggestions, it is quite clear that the down-pointing of, say, stockings does not reduce the retailer's power to replace his stock of that particular article. It is only if he wishes to buy goods whose point value has not been reduced that the shrinkage in coupon capital affects the volume of his total purchasing power. As to the second allegation, it is perhaps not improbable that the various sources of leakage together account for losses in excess of the 2 per cent allowance made by the Board of Trade, plus additional special grants. But this leakage arises largely from carelessness or misfeasance committed by members of the retailer's own staff. It is a little difficult to see how the Board of Trade could be open-handed about granting allowances in respect of such losses as long as its object is, in fact, to reduce consumption. It would also appear improbable that, in view of the gradual reduction in the allocation of clothing coupons to each individual, the proportion between present stocks of rationed goods and current potential turnover can be markedly inferior to that which existed when clothes rationing was first introduced.

### Selective Buying

The rigid limitation of the coupon capital of the individual retailer has, of course, disadvantages for him which are not necessarily inherent in a corresponding limitation of the total of sales by all retailers. It imposes very strict limits upon the ability of one retailer to attract custom from another, and it means that the retailer who makes a "bad" buy has no reserve of coupon capital out of which to procure goods which are in greater demand until he has contrived to sell the unwanted ones. This factor has almost certainly been of growing importance during the past year. It seems that the first reaction of the public to clothes rationing was to buy what was on offer for fear that supplies should be shorter still. It was only after, what appears to many observers, an astonishingly long period that buying became highly selective. With a reasonable assurance that supplies would be maintained at or about the existing level, but that there was little hope of an increase in coupons, people became more insistent than ever upon quality, and at the same time regained part of their determination to obtain as nearly as possible just what they desired. This may mean, both that a larger part of the retailer's stock tends to remain with him, and that customers expect a larger selection than they did during the early months of rationing. If this is so, it would explain in part the belief of the retailer that he is short of coupon capital. But that is not to say that the Board of Trade scheme is in

danger of breaking down. So far as the public can be persuaded to accept them, it is, presumably, the intention of the authorities to make goods already in the shops attractive by withholding others, to avoid an increased use of goods and services. As soon as a more expansionist policy is possible, the Board of Trade can replenish the retailer's stocks by instructing the banks to grant credits of an agreed amount on all coupon accounts. As to the complaint that there are excessive goods in the hands of the producer, that may be an official miscalculation at this stage, but it will, sooner or later, be an essential preliminary to any expansion in the sales of rationed goods to the public.

### Clothing Trade Concentration

The concentration of clothing production has recently been reviewed, in view of current demand for labour. It has been decided that the clothing industry must release more of its workers for vital work. The average release of labour to be made by concentration was originally fixed, when the schemes began in July, 1942, at between 20 and 25 per cent of the numbers employed in June, 1942. This percentage is to be increased in all sections of the trade except children's wear. The system of designation of firms has been almost entirely superseded by the concentration arrangements. A small number of firms still remain on the designated list, but these, and undesignated firms, will now be able to apply for nucleus certificates, either individually or in groups. Only some parts of London are operating concentration schemes, but the rest of the area is to submit proposals, to bring the whole of London into line with the other clothing producing centres. The recent new call-up for the Armed Forces must inevitably be made up from civilian production, and some contribution should be made by the clothing industry. None the less, it is difficult to see why, in the light of these new arrangements, the restrictions in the design of men's clothing were lifted. Extra pockets and buttonholes need more labour, so it seems unlikely that these will appear at any rate in mass-produced suits. Possibly the customer will be content with his utility suit if it has turn-ups.

### Workers' Incomes

The February issue of the *Ministry of Labour Gazette* gives the results of the latest of the six-monthly censuses of earnings in industry relating to the first pay-week of July, 1943. A table on page 356 gives average earnings in different industrial groups for that week, and compares them with earnings in the same industries in October, 1938, and January, 1943. Average earnings in all industries rose by 6½ per cent between January and July, 1943, when they were 76 per cent above the level of October, 1938. Less than half the increase since October, 1938—in fact, only about 30 per cent—is due to higher wage rates. The remainder is due to longer working hours, the extension of piece-work and higher output, and changes in the proportions of men, women, boys and girls employed in different industries and occupations. Average weekly working hours in July, 1943—these are given for the first time since the outbreak of war—were 7½ per cent greater than in October, 1938; for men the increase was about 11 per cent, for women 5½ per cent, for boys nearly 5 per cent, and for girls about one per cent. Earnings have risen more than proportionately to the longer working hours which command special rates of pay. Changes in the distribution of employment—that is the movement of workers from relatively low-paid occupations into the more highly paid munition industries—also accounted for a substantial proportion of the rise in earnings; if the distribution had been the same in July, 1943, as it was in October, 1938, the average rise in earnings would have been 65 per cent, compared with the actual increase of 76 per cent. The importance of the difference between the rise in wage rates and actual earnings is that many of the special factors responsible for it, such as overtime, will cease to operate after the war.

### Retailers and Road Layout

A Retailers' Advisory Committee on Town Planning was formed recently at the suggestion of the Ministry of Town and Country Planning. The types of retail distributors represented are independent stores, department stores, multiple stores and co-operative societies. The committee's main

Throughout the world the name of MILNERS is a synonym for SECURITY. The same sound craftsmanship which has made MILNERS' SAFES and STRONG-ROOMS so universally respected is embodied in MILNERS' STEEL EQUIPMENT, which is designed to promote office and factory efficiency. When peace returns MILNERS' organisation will be ready to resume its world-wide service, using past experience to ensure efficient designs for the future.

report has not yet been made, but it has issued a memorandum for consideration by the Ministry of War Transport Committee on Design and Layout of Roads in Built-up Areas, of which Sir Frederick Cook is chairman. The report does not advocate any new or original design in the planning of shopping streets. Shoppers' convenience is the standard which best serves the retailers' end, and the recommendations do no more than embody features of existing shopping centres. Streets with continuous shops on both sides are preferred, and, despite the accident rate in such streets, the retailers want them to be thoroughfares. Arcades and shops grouped round open spaces and squares, and centres where access is on foot only are mentioned briefly and turned down. Retailers want main shopping streets to have public transport running through them; roads which are narrow rather than wide; foot paths between 8 and 18 feet wide; controlled crossings for safety; back service roads for loading and unloading; and provision for "standing" and parking cars. The main consideration of the shopping public is to see quickly what retailers in the locality are offering for sale before deciding on its purchases. For this reason, the more concentrated the centre, the better. Pavements should be wide enough to hold the shop-gazers and passers-by without overflow into the road. Perhaps the shop fronts could be arranged on each side of a continuous pavement, which would be closed to traffic. The principles of market layout could prove of value to the shopper, and his safety would be better safeguarded. The main reason for the conservatism of the report is the retailers' fear of the loss they might incur through inadequate compensation if fundamental changes were made in the layout of shopping centres.

#### Palestine and Iraq Currencies

The reports of the Palestine and Iraq Currency Boards, each covering the year to March 31, 1943, bring further evidence of the exceptional pace of monetary expansion in the Middle East. In Palestine, the circulation of notes and coins at the end of last March amounted to £26,487,674, compared with £14,216,635 a year ago and £8,541,635 in 1940. Accounting for this rapid expansion of the circulation the report states that

new high levels in industrial production were attained during 1942-43, while agricultural production was intensified in all directions . . . the dominating factor in the economic situation was the high level of expenditure of the Armed Forces, which resulted in an unprecedented boom in employment and industrial production.

The report goes on to admit that the supply situation was difficult throughout the year and that the shortage of goods, combined with the high level of aggregate money incomes, resulted in an inflationary tendency of prices; wholesale prices advanced by 22 per cent and retail prices by 13 per cent during the year. The expansion in circulation was balanced by an increase in the sterling investments of the Currency Board.

The gist of the Iraq Currency Board's report is almost an exact replica of the Palestine Board's. The circulation of notes and coin, on March 31, 1943, was 26,290,807 Iraq dinars, compared with 12,760,789 a year previously. The rate of expansion was therefore rather greater than in Palestine, namely a 106 per cent increase in the latest year, against 86 per cent. The report points out that

this very large expansion was due to an acceleration in the general rise in prices, combined with large capital expenditure by the Allied nations in Iraq and the tendency to hold larger cash reserves as a store of value. These tendencies were reinforced by the severe restriction in imports inevitably imposed by war conditions and the resultant speculation in available goods and property. The wholesale price index rose from 352 to 603 during the course of the year.

As in the case of Palestine, the increase in the Iraq currency was balanced by the Board's larger holdings of sterling securities.

#### Fiduciary Issue Raised

Another £50 million increase in the Bank of England's fiduciary issue was announced this week. This carries the total to £1,150 million. The note circulation had, by Wednesday of this week, reached £1,090,601,022, and but for the reinforcement caused by the creation of new notes, would have left the reserve of unissued notes in the banking

department at £9,640,696. The full list of changes in the fiduciary circulation since the beginning of the war is given in the following table:—

CHANGES IN FIDUCIARY ISSUE SINCE 1939

|                            | (£ millions) |       | No. of Weeks' Interval Between Changes |
|----------------------------|--------------|-------|----------------------------------------|
|                            | From         | To    |                                        |
| 1939—September 5 . . . . . | 300          | 580   | 40                                     |
| 1940—June 12 . . . . .     | 580          | 630   | 46                                     |
| 1941—April 30 . . . . .    | 630          | 680   | 18                                     |
| August 30 . . . . .        | 680          | 730   | 13                                     |
| December 3 . . . . .       | 730          | 780   | 20                                     |
| 1942—April 22 . . . . .    | 780          | 830   | 14                                     |
| July 28 . . . . .          | 830          | 880   | 18                                     |
| December 3 . . . . .       | 880          | 950   | 19                                     |
| 1943—April 14 . . . . .    | 950          | 1,000 | 25                                     |
| October 6 . . . . .        | 1,000        | 1,050 | 9                                      |
| December 7 . . . . .       | 1,050        | 1,100 | 13                                     |
| 1944—March 7 . . . . .     | 1,100        | 1,150 |                                        |

The interval between each increase has again been narrowing of late. The last £100 million, covered in 22 weeks, has been the speediest part of the wartime expansion in the fiduciary issue.

#### Coal Wages Proposals

The Government's proposals for the "general overhaul" of wages in the coal-mining industry have been announced. Under the new scheme, which will have to be accepted by both sides, the only flat rate addition to wages would be the cost of living bonus (at present 2s. 8d. per shift). Day wage workers would have the other flat rate advances (which at present amount to 4s. 6d. per shift) and the ascertainment and other percentages consolidated into the day wage. Piece-workers would have in addition to their basic piece-rate wages the existing ascertainment and other percentages, which would be further increased by the percentage which 4s. 6d. bears to the district minimum shift wage. The new piece-rate would ensure that, for the same output, there would be no reduction in piece-rate earnings: in most cases there would be an appreciable increase in earnings. The Government suggest that the revised rates and the existing minima should be continued until December, 1947, at which date either side might give six months' notice of amendment or termination of the agreement. The Government is prepared to give an undertaking to continue, for the period stated, a system on the lines of that now provided by the Coal Charges Order, and to maintain the price of coal at a level which would ensure a reasonable credit balance for the industry.

† Including credit in the Government tonnage replacement account of £394,600 in 1941, £475,200 in 1942, and £522,700 in 1943.

‡ In 1943 £100,000 was transferred from taxation reserve, previously included under creditors, to contingencies reserve which is, however, still classed as a current liability.

The additional 2 per cent dividend of 1943 is described as paid out of interest earned on unused insurance recoveries. It is only possible because earlier losses have reduced the necessary provision for depreciation and the decision to be liberal is of doubtful prudence.

The 6s. 8d. units of ordinary stock, standing at 14s. 7½d. dividend, yield £3 12s. 11d. per cent.

March 11, 1944

#### COMPANY MEETINGS

## LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY

### FURTHER INCREASE IN TRAFFICS

#### LORD ROYDEN'S SPEECH

The twenty-first annual general meeting of the London Midland and Scottish Railway Company was held at Euston Station, London, N.W. 1, on the 3rd instant.

The Rt. Hon. Lord Royden, C.H., chairman of the company, in the course of his speech, said:—

Turning to the results of the year's working which are set out in the report and accounts; the total net revenue of £15,686,000 for 1943 and that of £15,590,000 for 1942 are made up thus:—

|                                                                     | 1943<br>£          | 1942<br>£          |
|---------------------------------------------------------------------|--------------------|--------------------|
| Annual amount receivable under the control agreement . . . . .      | 14,750,000         | 14,750,000         |
| Dividends from investments in road transport undertakings . . . . . | 500,000            | 507,000            |
| Northern Counties Railway (Ireland) . . . . .                       | 237,000            | 259,000            |
| Sundry other items outside the control account . . . . .            | 199,000            | 74,000             |
|                                                                     | <u>£15,686,000</u> | <u>£15,590,000</u> |

Of this sum the amount receivable under the agreement with HM Government is at a fixed rate per annum and the dividends from road transport investments are fairly constant. These two items account for 97 per cent. of the total. The other two are more variable. The income from the Northern Counties Railway in Ireland has fallen a little below the 1942 figure, but is satisfactory when compared with the very poor results prior to the war. Sundry items are £125,000 better than in 1942. The possible variations in total year by year during the period of control are thus not important and the net increase of £96,000 over 1942 indicates this.

As in 1941 and 1942, the sum of £400,000 has been set aside for war-time contingencies, and after meeting debenture interest and dividends on the guaranteed and preference stocks, there remains a credit balance of £2,467,000. This enables the board to recommend to you a dividend of 2½ per cent. on the ordinary stock—the same as that paid last year—and to carry forward £87,000.

#### BALANCE SHEET ITEMS

The advance in 1942 of £4,000,000 from the Trust Fund for arrears of maintenance was repaid during the year, and the fund now stands at £21,700,000. It represents the estimated arrears of maintenance work which have accumulated during the war and is calculated on the average expenditure and provisions of the years 1935-6-7 varied by the appropriate alterations in quantities of assets and in prices, but at this stage without allowance for abnormal wear and tear due to additional usage and war-time conditions.

Under the Government agreement the allowance for abnormal wear and tear is not in the first instance charged against the control account. It remains for settlement after the period of control comes to an end. The sustained drive to meet the immense demands for transport has had its inevitable effect on our property. On repairs of vehicles alone we have spent to date a sum in excess of the amount due on the mere pre-war basis. This has substantially increased the num-

THE ECONOMIST

but they are held for specific requirements which will mature in due course.

#### LINE OPERATION

During 1943, traffic, both freight and passenger, has further increased in spite of even greater obstacles, such as increasing shortage of staff in the key operating grades, abnormal periods of foggy weather, and the epidemic of sickness that swept the country towards the close of the year. It is a remarkable proof of the efficiency of our organisation and it is a tribute to the devotion and loyalty of the vast majority of the members of our staff that they remained quite undaunted by these handicaps.

In 1943 we moved 10,600 million of ton-miles of freight-train traffic, an increase of 3,760 million over the 12 months before the war. This large increase is more readily appreciated if described as being at the rate of 10 million ton-miles day by day throughout the year. The loaded wagon miles for 1943 were 1,725 million, an increase of 410 million over the 12 months before the war. The empty wagon miles were actually less, the reduction being in part due to the fact that the wagons of the railway companies and those of private owners were used in common, and in part to a quicker turn-round of the wagons generally. I hope that the turn-round will be further improved this year, as every hour saved in loading and unloading a wagon is a valuable contribution to the war effort.

The passenger traffic also increased considerably, both in numbers and in length of journeys, the passenger-miles in 1943 being 70 per cent. greater than before the war. On the other hand, the passenger train-miles were 31 per cent. less than before the war, and so the average passenger train load was 146 per cent. greater.

Railway travel now places a considerable strain on one's physical powers of endurance, not to speak of one's powers of resistance to irritation. The figures that you

ADDITION TO FUNDS IN 1943

TOTAL FUNDS

**BONUSES.** In the Ordinary Branch a bonus of £1 per £100 assured was declared on policies entitled to participate in full profits that become claims by death or maturity during 1944. In the Industrial Branch a bonus has been declared on policies, with certain exceptions, effected before 1st February, 1937, that become claims by death or maturity during 1944. Up to date a total sum of over £7,430,140 has been allocated for bonuses to policyholders in this Branch. The bonus for 1940, 1941 and 1942 in both Branches is continued unchanged for claims during 1944.

### NATIONAL HEALTH INSURANCE

Our Agents acting for the National Amalgamated Approved Society made 1,501,369 benefit payments totalling £1,195,739 at members' homes during 1943.

Chief Offices :  
High Holborn, London, W.C.1.

President and Chairman :  
Sir George Tiffley, F.C.I.I.

have just heard not only explain the cause of this discomfort, but probably induce a feeling of wonder as to how the railways manage to carry on as well as they do in the provision they make for ordinary travel.

There is, however, another and a less pleasing side to the picture. The deterioration in moral standards continues. Theft shows no signs of decrease in spite of every precaution that we can devise. The black market and the receivers of stolen goods who keep it supplied are the principal cause. Thieving has reached such lengths that it is now impossible to provide any easily removable articles, such as towels and soap, without immediately losing them. Another regrettable and generally futile form of theft consists in taking the electric lamps, the voltage of which is so low as to make them perfectly useless for anything else but the work for which they are designed. It is just thieving for thieving's sake. Even more difficult to understand than that is the mentality of those who apparently find pleasure in slashing the upholstery and breaking windows and carriage fittings. The amount of such damage is very considerable indeed. It has now reached disturbing proportions, and so far we have not been able to find the means of stopping it.

#### LOCOMOTIVES AND ROLLING STOCK

I have mentioned earlier the heavy expenditure we have had to incur on abnormal

locomotive repairs in order to secure the maximum availability of locomotives. In 1943 the average net addition to our operating stock of locomotives to cope with the extra traffic was only 1.3 per cent., compared with the position at the outbreak of war, but we raise this to an effective increase of 6.7 per cent. by reducing the number out of service for repairs. This, I think, judged by any standards, a remarkable performance.

In order to secure the greatest possible measure of efficiency in all forms of transport, legislation for the post-war period should deal with transport as a whole and on a basis of equality for all. Such legislation should require, *inter alia*, that each type of transport should be so organised as to enable it to assume and carry out the obligations attached to the performance of public transport. It is also highly important that there should be equality of treatment in the incidence of track costs. Meanwhile the railway companies are discussing these and other matters with other transport undertakers with a view to the formulation of an agreed policy. A further question of first importance is that of common user of all wagons and discussions are taking place with the owners of the private wagons on how best common user can be achieved, whilst at the same time meeting the needs of the traders owning and using them.

The report and accounts were adopted.

## MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION LIMITED

### FUTURE OF THE INDUSTRY

#### NEED FOR AGREED POLICY

#### SIR ALEXANDER ROGER ON ESSENTIALS FOR EFFICIENCY

The forty-sixth ordinary general meeting of the Midland Electric Corporation for Power Distribution Limited will be held, on the 15th instant, at the Adelphi Hotel, Liverpool.

The following is the statement issued by the chairman of the company, Sir Alexander Roger, K.C.I.E., with the report:—

Publication of the company's accounts remains prohibited under the Defence Regulations, but permission is still given to shareholders to inspect a copy at the head office of the company after giving not less than seven days' notice in writing of their intention so to do.

The same regulations do not allow me to comment in detail on the past year's working, but I am permitted to give you the assurance that your company continues to make progress, and that the value of your investment has been maintained. The company's transmission and supply systems have been kept in good order, and proper provision has been made for depreciation.

#### DIVERGENT VIEWS

My comments last year included a general review of the steady development and wide expansion of our industry as a whole. They were characterised as a vigorous defence of private enterprise, which I based on an impressive record of accomplishment. I take no exception to this view. Since then suggestions have been made, from platform and press, for shaping the destiny of electricity supply, and various reports on the subject have been published. These reports agree that the industry as a whole is enterprising, is giving efficient service, and has made remarkable progress. There, however, agreement ends, and the suggestions for the

future show considerable divergence of opinion.

The future of electricity supply is an important question for industry generally, for the public, and for you as shareholders. I thought, therefore, that you would wish me to comment in a general way on some of the suggestions in the reports issued by associations and committees within and without the industry. The problem is not one of dealing with a moribund industry which requires to be brought up to a higher standard, but of examining an industry which has made rapid and efficient progress with the object of shaping it for national rather than regional or local use.

#### CO-OPERATION ESSENTIAL

There is nothing, however, to warrant the claims of those who advocate nationalisation purely as a political doctrine. Even in this connection it is interesting to note that different views have been expressed as to the methods under which nationalisation would operate if that should be adopted. Some suggest national control, others regional control, while some would retain existing controls with the addition of regional co-ordinating committees or boards.

It is perfectly natural that this industry, with its many problems thrown up by individualistic operation over years, should at this stage speak with diverse voices, but I believe that underneath it all there exists a sincere desire that agreed recommendations should be made to the Minister of Fuel and Power. Whatever the future may hold in the way of legislation, it is certain that maximum development, accompanied by maximum efficiency and highest service to the consumer, will not be possible in this country without the good will, active assistance, and full co-operation of the industry itself.

Compromise within the industry cannot be avoided if agreed recommendations are to be presented to the Minister, and in arriving at this essential goal each of us may have to give up something of our own policy and plans. Unless this is done, the Minister may have no alternative but to produce his own plan. In industry generally, we are encouraged by the Government to use our valuable fund of experience to make up our own minds and plans on post-war problems and their solution. The electricity supply industry cannot very well take exception to the Government making plans for it if they are not guided by a united industry. It is in the interests of all concerned, therefore, to try to arrive at an agreed policy and to persevere until this desirable end is achieved.

#### REPORT OF MCGOWAN COMMITTEE

The report of the McGowan Committee of 1936 remains the most complete and judicial report upon which to base future action within the industry, but, unfortunately, some of the recommendations are open to different interpretations. A notable example is the suggestion that changes of ownership of undertakings were to be based upon size alone, rather than upon both size and efficiency.

There is an optimum size for an undertaking. This should not be so large as to remove local interest and personal enthusiasm, nor so small as to exclude the probability of a reasonable variety of load. Size of area alone is not an adequate reason for change, but it should be sufficient to cover such diversity of load as is necessary to keep charges for supply at a low level.

#### CHARGES AND SERVICE

Efficiency should be determined by charges for supply in relation to the nature of the area and to service provided. It is essential that no change should be permitted unless it brings benefits to the consumers.

In my opinion the one outstanding thing required is to see that the industry, which has been so laboriously and efficiently built up, is not allowed to be made a political shuttlecock, that its future will be shaped and determined by enterprise in development, by efficiency of service, and low cost to the consumer. The best means of maintaining and perhaps speeding up these desirable results is to continue to permit different forms of control to exist. This will afford the opportunity for comparison so that each area of supply can measure its attainments by those of similar undertakings in the industry. I have not moved from my principle that free, open, and friendly rivalry is the ground where efficiency grows to best advantage. Without rivalry efficiency dies.

#### THE RECORD OF THE CORPORATION

We have the satisfaction of knowing that this company has a record well above the average, expressed in terms of service, development, efficiency, and low charges. The Special Order which we operate is essentially a partnership between local authorities, consumers, and the company, its main principle being freedom of management up to a permitted rate of profit, and thereafter additional profits are in effect divided in agreed proportions between the consumer and the company. I therefore see no danger of major disturbance of this undertaking.

In conclusion, I desire to express, on behalf of you all, my best wishes to the employees of the company who are serving with His Majesty's Forces in all parts of the Empire, and to those who remain to carry out the unsleeping duties of electricity supply. Our thanks are due also to our managing director, Mr Charles Heathcock, and to my other colleagues on the board, for their continued help and co-operation during the past year.

## GREAT WESTERN RAILWAY COMPANY

### RECORD TRAFFICS

#### BENEFITS OF PRIVATE OWNERSHIP

The annual general meeting of the Great Western Railway Company was held, on the 8th instant, in London.

Sir Edward Cadogan (the deputy chairman), in the course of his speech, said: With the balance of £275,077 brought forward from last year, the amount available for dividend on the consolidated ordinary stock is £2,225,291. We are able, therefore, to recommend a dividend of 2½ per cent. for the half-year ended December 31st last, making 4½ per cent. for the whole year, with a carry-forward of £293,453. The dividend is the same as for the previous year, when the carry-forward was £18,376 lower.

Payments to the trust fund set up under the Railway Control Agreement amounted at the end of last year to £11,702,385, an increase of about £3,200,000 over the previous year. The fund accumulates at interest, and will ultimately be available for overtaking the arrears of work when we are in a position to put them in hand.

#### ARREARS OF RENEWALS

Our arrears in complete renewals of the permanent way are at present equivalent to the total amount of renewal work we would normally carry out in a period of about 15 months. Our arrears in locomotive renewals represent a normal two years' building programme, and in passenger train vehicles a normal three years' programme. The position in regard to other maintenance work is somewhat similar. It is, I think, an eloquent testimony to our past efficiency and our recognition of future needs that the standard of maintenance which we adopted in pre-war years—several of them none too prosperous—was of such an order that we have been able to allow arrears of maintenance to accumulate so considerably without serious detriment to our operations, notwithstanding that throughout the war period the volume of traffic conveyed annually over the company's system has been far in excess of that carried in any pre-war year.

The achievements of the railways during the present national emergency are aptly summed up in the Prime Minister's message on the occasion of the twenty-first anniversary of the grouping in December last, when he expressed the nation's thanks for the highly efficient manner in which they had met every demand made upon them during the four years of desperate struggle with Nazi Germany.

#### POST-WAR TRANSPORT PROPOSALS

Owing to the radical change in the military outlook, our thoughts have naturally centred on the post-war position of the railways, and especially on the part which we shall be expected to play in connection with the solution of the problems that will confront us immediately upon the cessation of hostilities.

We fully recognise that when hostilities are concluded we shall have to plan and build anew; but if the objective is to secure the most efficient and economical use of all forms of transport with due regard to the requirements of industry and of the community in general, we support the conclusions reached by the Transport Advisory Council that the best line of approach to achieve this end is to secure for traders adequate alternative facilities with competition on fair terms. The problems we have to face cannot be solved by changes such as those advocated in some quarters for political reasons without regard to practical realities. In our view, the advantages derived from the present ownership and management of the main line railways as four separate statutory entities have proved to be far more beneficial than those likely to be derived under any form of public or quasi-public ownership.

#### ROAD-RAIL COMPETITION

The eulogy of the Prime Minister, to which I have already made reference, is a clear indication that the Government are now fully alive to the importance of the railways as a national asset. In the debate which took place in the House of Lords in October last, the Minister of War Transport, the Rt. Hon. Lord Leathers, referred to road-rail competition as the main problem to be solved. Parliament, by its discriminatory treatment in allowing road hauliers complete freedom to fix their own charges, has hitherto fostered competition against the older forms of transport, whose charges are subject to regulation. There may have been good grounds for adopting this course as a means of assisting the development of a new section of the transport industry in its early stages, but there can certainly be no justification for allowing that state of affairs to continue indefinitely, and, in our view, the first essential is that Parliament should legislate for the equal treatment of all forms of transport.

As I have already mentioned, the Government promised legislation immediately prior to the outbreak of war, to implement the principles of the Transport Council's recommendations on our "Square Deal" proposals. These proposals were, however, only intended as a stop-gap to enable the transport interests to prepare their plans for co-ordination within a limited period. As the Minister indicated in his speech, a more radical solution has still to be found, and we have, therefore, initiated discussions with other transport undertakings with a view to formulating an agreed policy.

We cannot resist the conclusion that Parliament will require road hauliers, other than those operating purely local services, to be so organised that they can assume the responsibilities appropriate to undertakings providing a public service. This must be an essential feature of any effective scheme of co-operation, and the obligations attaching to all such undertakings should include the provision of reasonable facilities for traders; the regulation of rates and their application without discrimination between traders and between routes.

It is equally essential that means should be found for removing the disability suffered by the railways owing to the present disparity of road and rail track costs.

#### TRACK MAINTENANCE

Another factor to be borne in mind is that the enormous volume of traffic ordinarily conveyed by rail represents a considerable saving in highway costs, and if, as the Minister of War Transport recently indicated, the post-war policy which he has in mind is a co-ordinated transport system which can provide the best possible service at the least real cost to the community, the sound solution in our opinion is to devise some means whereby the maintenance of rail tracks and canal waterways, while remaining in their present ownership, should be treated as part of the whole system of national highways.

Our carrying capacity in the immediate post-war years is likely to be very severely taxed, and there is a limit to the amount of constructional work which can be carried out at any one time without serious interference with the working of traffic. The first essential will be to overtake the heavy arrears of maintenance accumulating during the war period, and in carrying out this work we shall, as usual, incorporate any improvements which may be considered necessary or desirable.

The resolution for the adoption of the report and accounts was carried unanimously.

## LONDON AND NORTH EASTERN RAILWAY COMPANY

### POST-WAR TRAFFIC PROBLEMS

The annual general meeting of the London and North Eastern Railway Company was held, on the 3rd instant, in London.

Sir Ronald W. Matthews (the chairman) said in the course of his speech: The net revenue for the year 1943 was £10,655,441, which is a decrease of £45,158, or ½ per cent., compared with the year 1942. The directors recommend a dividend of 1½ per cent. for the half-year on the 4 per cent. second preference stock, making 2½ per cent. for the year, as compared with 2½ per cent. for 1942.

#### ABNORMAL WEAR AND TEAR

The volume of traffic that is being handled by the company under wartime conditions, and especially since America entered the war, is far in excess of the normal, and it follows that the wear and tear of a great deal of the company's property and equipment is very much greater than it was in pre-war years.

Whilst the control agreement affords us adequate financial protection in the matter of the normal maintenance of our assets, and the accounts show that a considerable sum is accumulating in the form of a trust fund representing arrears of maintenance, it makes no specific provision for abnormal wear and tear to be charged to the revenue account except so far as the Minister may agree to its inclusion. In view of the extra strain to which much of our equipment is being subjected under war conditions, the question is being borne in mind with a view to an approach being made at a later stage to the Government for special consideration.

I come now to the problems of transport after the war, or, more strictly speaking, after the lifting of the controls under which the various forms of transport are operating to-day. Lord Leathers, in the course of a debate on the post-war co-ordination and development of inland transport in the House of Lords on October 27th last, stated that the war had made it clearer than ever that the railways are a national asset which must be retained in full efficiency, and that their financial position must be firmly established. He indicated that the object in view was a transport system so co-ordinated and run that it would meet the needs of each separate industry or activity and provide the best possible service for the least real cost to the community.

#### NEED FOR CLOSER CO-ORDINATION

Lord Leathers referred to competition between road and rail as the main problem to be solved. The solution of that particular aspect of the problem lies, of course, outside the province of the railways. But there can be no doubt that some much closer form of co-ordination than exists to-day on the road side must be arrived at before the greater co-ordination between road and rail can be brought about. The railways feel that Parliament should pass legislation providing for the equal treatment of all forms of internal transport.

I believe most profoundly that the transport industry of the country can best serve the nation and the nation's trade in private ownership, and free from any suspicion of political pressure.

We stand to-day on the threshold of great events. Demands greater than ever before will ere long be made on the railways and all who serve them. They will do their job, men and women, tirelessly and courageously, and, doing their job, they will give the final incontrovertible proof that victory in war depends on a well-found, efficiently run railway organisation, a lesson which, I hope, will never be forgotten by Parliament or people.

The report was adopted.

## SOUTHERN RAILWAY COMPANY

### INCREASED TRAFFICS

The annual general meeting of the Southern Railway Company was held, on the 9th instant, in London.

Colonel Eric Gore-Browne, D.S.O., O.B.E., T.D., A.D.C. (the chairman), said that the balance available for dividend on the deferred ordinary stock was £715,407, which would enable them to pay a dividend of 2 per cent., compared with 1½ per cent. for 1942. He hoped stockholders would agree that that was not an altogether unsatisfactory result having regard to all the circumstances.

The freight traffic on their system still grew. Whether measured by the tonnage originating or by the loaded wagon miles moved, the increase over pre-war figures approached 50 per cent. The freight train miles run by the Southern Railway engines exceeded by 25 per cent the corresponding figures for 1938. That vast additional traffic could not have been handled unless in years before the war their resources had been devoted to the upkeep and maintenance of the undertaking, so that, when war came, it was in a condition to bear that unprecedented strain.

### PASSENGER EXPANSION

In addition the passenger side continued to expand. It was not possible at this stage to assess accurately what was the total increase in passenger movement; the traffic measured by a rough computation of the number of passengers multiplied by the miles they were conveyed was at the present time at least 60 per cent. in excess of that before the war. Yet they were doing that with a passenger train mileage which was over 30 per cent. lower than in 1938. Overcrowding and discomfort were, he feared, unavoidable.

As to the general policy in relation to the railways as an industry, they had all been heartened by the speech of the Minister of War Transport last October in which he had stated that the war had made it clearer than ever that the railways were a national asset which must be retained in full efficiency and that their financial position must be firmly established. He had gone further. The object in view was a transport system so co-ordinated and run that it would meet the needs of each separate industry or activity and provide the best possible service for the least real cost to the community.

### THE RAIL AND ROAD PROBLEM

The core of the problem was, of course, the relationship of the railways with other

forms of transport and in particular with road transport. Steps must be taken to bring about a proper balance between different forms of transport in their obligation to the public, their rates structure and so on.

Was it possible to achieve that balance and provide the nation with an efficient and economic system of transport whilst the railways continued as privately-owned and managed undertakings? There were some who offered them the panacea of nationalisation; others who would thrust on them the nostrum of the public corporation. Judging the record of the railways fairly, would they tell them in what way the railways had failed to meet the public need in peace and in war and give them evidence to show that any other system would be able to serve those needs better, or indeed as well, in the future? While they accepted the obligation of public service, they stood for private enterprise and only asked for fair dealing in the solution of their problems. Transport had an immense part to play in restoration and development after the war. It was therefore to be hoped that the transport industry would achieve a form of organisation which would obviate irresponsible competition and yet allow room for vigorous development and freedom of choice for the user.

The report was adopted.

## GOVERNMENT RETURNS

For the week ended Mar. 4, 1944, total ordinary revenue was £91,454,000, against ordinary expenditure of £143,737,000, and issues to sinking funds of £2,303,926. Thus, including sinking fund allocations of £14,471,045, the deficit accrued since April 1st is £2,557,713,000 against £2,601,386,000 for the corresponding period a year ago.

A change has been made in the method of showing an excess of Post office Expenditure over Post office revenue. Such excess is now included as ordinary expenditure (under "Total Supply Services") instead of being shown, as up to July 24 inclusive, as a deduction from ordinary revenue.

After increasing Exchequer balances by £4,754 to £3,004,511, the other operations of the week (no longer shown separately) raised the gross National Debt by £4,636,923 to £19,398 million.

## FINANCE AND BANKING

**THE MONEY MARKET.**—Freed from the effects of winnowing, the position in the money market has eased this week, despite a substantial contraction in the cash basis. Bankers' deposits are shown in this week's Bank return at £162,198,000, which is £17,718,000 down on the week. Part of this decline is accounted for by the continued expansion in circulation, the latest weekly increase amounting to £4,269,000 and carrying the total to the new record level of £4,269,000. In addition to the impact of a larger demand for currency, the cash basis was affected by a further contraction in the holding of securities. Government securities are £60,610,000 down. Of this, £50,000,000 is accounted for by the transfer of securities to the Issue department following the latest increase in the fiduciary issue. The balance probably represents the maturity of early March bills bought from the market by the special buyer in order to ease recent periods of stress. The banks have been diffident buyers of bills, since their Treasury Deposit Receipt

**The "Economist" Sensitive Index.**—There was no change in the index during the week ending March 8th. The complete index (1935=100) was 151.2; crops, 123.2; and raw materials 185.5.

**Vegetable and Tomato Prices.**—The maximum retail prices of some vegetables have been increased from March 6th to April 2nd to the following rates per lb.: savoy and cabbages, 4½d.; broccoli and cauliflower, 6d.; and swedes and turnips, 1½d. to 2½d., according to quality. Tomato prices for the 1944 season have been fixed between 1s. and 1s. 6d. a lb., according to the time of year. These prices are lower than those fixed for last year.

**Coal Output.**—The output of saleable coal in the four weeks ended February 19th averaged 3,769,000 tons, compared with 3,495,500 tons per week in the previous four weeks. Disputes accounted for an average loss of 91,700 tons a week.

## AVERAGE WEEKLY OUTPUT OF COAL

(Weekly Standard Tonnage 4,161,800 tons)

| Four Weeks ended* | 1942      | 1943      | Four Weeks ended* | 1942      | 1943      |

\* In calculating the averages for women and for all workers, given in this table, women employed as part-time workers for not more than 30 hours a week have been included, on the basis of two-part-timers taken as representing one full-timer. † The number returned in this group was very small. ‡ In the case of the Government industrial establishments, the comparisons between the average earnings in October, 1938, and July, 1943, are materially affected by the fact that the returns for the latter date covered a number of establishments, employing large numbers of workers, which were not in operation in October, 1938.

## THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

CAPITAL (PAID UP) - £3,000,000

RESERVE FUND - £3,000,000

Branches and Agencies throughout INDIA and the EAST. AFFILIATED BANK IN INDIA

THE ALLAHABAD BANK LTD., with 15 Branches &amp; Sub-Agencies. The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application. The Bank also undertakes Trusteeships and Executorships.

ALEXANDRIA, EGYPT.

NOTICE IS HEREBY GIVEN that the sixty-sixth ordinary general meeting of the shareholders will be held at the company's offices, 61 Avenue Fouda Ier, Alexandria, on Thursday the 6th April 1944 at half past four in the afternoon for the transaction of the ordinary business of the company pursuant to Act of Parliament and to fix the directors' remuneration.

Holders of share warrants to bearer desiring to attend or to be represented at the meeting must deposit their share warrants in London before the 23rd March 1944 or in Alexandria before the 3rd April 1944 until after the meeting, at the National Bank of Egypt, 6 King William Street, London, E.C.4, or at the National Bank of Egypt, Alexandria, or at some other approved bank in London or Alexandria.

By Order of the Board,  
T. D. KEY,  
R. WALTON, } Joint Managers.

Dated, Alexandria, Egypt, the 20th January, 1944.

## THE HONGKONG AND SHANGHAI BANKING CORPORATION

CAPITAL ISSUED AND FULLY PAID UP \$20,000,000  
RESERVE FUNDS STERLING - £7,125,000  
RESERVE LIABILITY OF MEMBERS - \$20,000,000

Head Office (temporarily),

9, GRACECHURCH STREET, LONDON, E.C.3.

Chief Manager: A. MORSE.

BRANCHES AND AGENCIES THROUGHOUT INDIA AND THE FAR EAST, Etc.

HONGKONG &amp; SHANGHAI BANK (TRUSTEE) LIMITED,

9, Gracechurch Street, E.C.3, a company incorporated in England and an affiliate of The Hongkong and Shanghai Banking Corporation, is prepared to act as Executor and Trustee in approved cases.

Full particulars may be had on application.

## COMMONWEALTH BANK OF AUSTRALIA

Guaranteed by the Australian Government. Branches and Agencies throughout Australia.

Banking and Exchange Business of every description transacted. Bankers to the Government of the Commonwealth of Australia, the Government of the State of Queensland, the Government of the State of South Australia, the Government of Western Australia, the Government of the State of Tasmania, Commonwealth Savings Bank of Australia, 3,921 Agencies at Post Offices in Australia.

## Irish Neutrality

FOR several weeks past, hints of a crisis in the relations between Eire and the United States have been leaking out through the censorships in Dublin, Washington and London, and over last week-end the whole story was released. On February 21st, the American Minister presented to Mr De Valera a note, couched in strong terms—so strong that the Irish Government did not know whether or not to treat it as an ultimatum—requesting that the German Legation and the Japanese Consulate-General in Dublin be closed down. The reason given was the leakage of military information via Dublin to the enemy. The United Kingdom Representative delivered a note on the next day in which the British Government stated that they had been informed of the American initiative and fully supported it. The Australian and Canadian Governments were approached (as friendly foreigners or as Sister Dominions?) to secure the withdrawal of the original note, but both refused to intercede. An explanation was, indeed, forthcoming from Washington that no use of physical force was contemplated. But the request was not withdrawn, and had to be answered. The answer was a refusal to infringe the strictest canons of impartial neutrality.

It is rarely that a clear-cut judgment is possible in any Irish affairs. On the one hand, there is no doubt that the overwhelming body of American and British opinion thinks that Irish neutrality is not only morally indefensible but also contrary to Ireland's own ultimate

interests. There has never been the slightest secret about the British Government's wish that Eire were in the war, that the enemy missions were expelled from Dublin and that naval and air bases were available all over Ireland, instead of in one corner of the country only. On the other hand, Irish opinion is even more nearly unanimous in support of the policy of neutrality and there cannot be any doubt that under international law or the Statute of Westminster—which ever is appealed to—Eire has a perfect right to her neutrality. The Irish believe themselves to be clearer-sighted about their own self-interest than any belligerent. And as for the morality of the matter, though there are signs of what looks like a tender conscience towards England and the European democracies, there is not even a hint of guilty conscience towards America. Is not Eire, the Irish ask, pursuing exactly the same policy as the United States did before Pearl Harbour? Were the German or Italian Embassies in Washington closed before December, 1941? And did America, before she was attacked, permit as much as one-tenth of her whole population to go abroad to fight or work for the United Nations?

The moralities are thus somewhat confused. And as for the practicalities, anyone in Washington or elsewhere who thought that there was a chance of inducing a change in the Irish attitude by anything short of force must have been sadly ignorant of the present posture of Irish public affairs. Indeed, an issue of this sort is just

what Mr De Valera needs for his domestic politics. He is, it will be recalled, in a minority in the Dail, and though he has never been very hard pressed, there is a gradual accumulation of grievances which might, at any time, lead to a combination against him. But he is now presented with the golden opportunity of once again standing up as the firm defender of Eire's rights, an issue on which the opposition parties can but applaud his action.

If there was no chance of a satisfactory response, why send notes? Why did Washington and London place themselves in the dilemma of accepting a rebuff or of having to go further? There is no obvious answer, and in both the timing and the wording of the British note there is more than a hint that London, while fully sharing Washington's aims, took a different view of the methods employed. The simple fact is that the only way of getting Eire to do what the United Nations want is to use force. In 1940, *The Economist* maintained that a forcible seizure of the Irish ports would be justified if it meant the difference between life and death. But the Battle of Britain and the Battle of the Atlantic were won without infringing Eire's neutrality. And if the inconvenience could be tolerated in that far greater emergency, would it not now be folly to lose all that had been gained by patience and forbearance? Similarly, the current talk about economic sanctions is the reverse of wise. The stoppage of virtually all traffic to Ireland is an obvious precaution against which no valid Irish complaint can be raised. But what purpose is it thought that economic sanctions would serve, since they would certainly not change Mr De Valera's policy?

The upshot of this minor crisis is thus likely to be that Eire's immediate position will be completely unchanged. But the sudden turning of the spotlight on Dublin has naturally brought up for discussion the position that Eire will occupy in the post-war world. Two years ago, it is now revealed, Mr Roosevelt warned Mr De Valera of the risk he was running of having no place at the peace conference table. But these warnings serve no purpose. The Irish know they are isolated. They like it—or at least they have liked it hitherto. There are, of course, inevitably some changes in the Irish attitude to the world as well as in the world's attitude to Ireland. There is a widespread and even grudgingly grateful recognition of the tolerant patience that British policy has shown. Since the historical tyrant is clearly not feeling tyrannical in the present generation, there is a growing willingness to admit that, after all, England and Ireland must live together and that the two islands are an economic and a strategic unit. General Smuts' suggestion of a possible association for defence between Great Britain and the small democracies of Western Europe was seized upon with some eagerness in Dublin, for it would enable Eire to admit the logic of facts without, in the act, declaring herself a British Dominion. But for one thing, it might be said that Irish opinion was moving back towards the Commonwealth.

That one thing is "Partition"—the existence of Northern Ireland as an integral part of the United King-

dom. To the inhabitants of Eire—or the great majority of them—the ending of Partition (which they look to the English to bring about) is a prerequisite of any closer association with England. First the ending of Partition; then they will talk about the details of External Association. But the prospects of ending Partition—if they ever existed—have, of course, vanished. The British attitude has significantly changed. It will be a very long time before there is any party in England or Scotland in favour of bringing the slightest pressure to bear on Ulster to leave the United Kingdom and enter Eire. And if, by some miracle, the inhabitants of Northern Ireland wanted to make the change, the behaviour of Eire during this war has demonstrated that the strategic interests of the United Kingdom would not permit it. The ports were ceded in the expectation that closer relations would follow: clearly no such risk will be taken again. The only weapon the Southern Irish have ever possessed has been their ability to make the English feel ashamed of themselves. And now it has been thrown away.

The only significant change in Anglo-Irish relations—and it may be very significant—is that it now seems to be the Irish who are the more anxious to reach an accommodation. If this is hardly true of Mr De Valera, it is likely to be true of any Government that succeeds him. The English have learned that the Irish problem, on which they have expended so much energy and passion in the past, really matters to them very little indeed; their new-found attitude is one of indifference. It is most unlikely that anyone in England, for many years to come, will lift a finger to meet Eire's own terms for re-entering the Commonwealth. Indeed, if any fingers are lifted at all, it is more likely to be to exact a price for Eire's continuing to enjoy the considerable material benefits of not being formally excluded from the Commonwealth. In other words, deadlock—a not unfriendly deadlock—will continue. To Great Britain, the damage will be slight—if, indeed, it is perceptible, since the only place where damage might have been inflicted was in honour or conscience, and that has been inoculated by the war. But to Ireland the damage will be considerable. Irish society will get steadily more isolated and inbred. The first masochistic raptures of deliberate isolation are passing, and the results are beginning to appear. A peculiarly narrow, bigoted and tyrannical form of Roman Catholicism gains new victories every day. The old slogan has been proved true: "Home Rule means Rome Rule," and in the archdiocese of Dublin the faithful have just been forbidden to attend Trinity College or to contact any form of mixed marriage, even if the children's upbringing is safeguarded. The censorship is arbitrary, erratic and ridiculously stringent, whether it be on political or on moral grounds. Twenty years of insistence by the politicians not merely on the teaching of Irish, but on the teaching of all other subjects in Irish, has reduced the Irish masses to a state that is bordering on illiteracy. Nothing of all this is likely to move the politicians. It cannot help but move the friends of Ireland.

## According to Plan

MR WILLINK, the Minister of Health, had a bad day in the Commons on Wednesday. He was unfortunate. He went down to the House to talk about his plans for building 300,000 permanent houses in the two years after the war; and his scheme is creditably ambitious in scope, in view of the inevitable difficulties of construction in the immediately post-war period. But he found himself violently attacked from all sides on the question of planning for which he is one of the few Ministers who has no personal responsibility.

Yet the critics are right. The Cabinet cannot complain, though Mr Willink can, of unfair treatment. It is impossible for local authorities to draw up and carry out even short-term housing programmes satisfactorily until Government policy is known on the location of industry,

the distribution of population and the enforcement of planning and, more specifically, on the powers of local authorities to buy land and the price they will have to pay. The Barlow and Scott reports on the control of land-use have been shelved; and the battle is at present raging around the proposals of the Uthwatt Committee to compensate the owners of land affected by planning schemes. It is fairly clear now that they have been rejected by the Government. The search is on again for some method of compensation sufficiently cheap, simple and effective, while being fair, to prevent planning from being held up as it has been in the past. The drastic solution of nationalisation is always just around the corner. Its logic was nearly accepted by the Uthwatt Committee itself when it proposed that, in the case of unbuilt-up land, the state

should purchase first the development rights and then the land itself when required for public purposes or approved private development.

The issue is, of course, far wider than the very technical and very complicated question of compensation. It is whether there is to be a plan to make the best use of the land in the interests of the community; and whether private ownership can be made compatible with such a plan. It is largely because of the failure to find a satisfactory method of compensating private rights that the slight and tentative amount of planning attempted in the past has been so effective. But the main reason for failure in the past was the absence of planning itself. Planning before the war was negative in aim as well as inadequate in methods. Local authorities could ban particular kinds of building in particular districts. But neither they nor the Ministry of Health, the responsible central department, could positively push forward desirable building, and they lacked even the financial resources required to make their prohibitions effective; their powers of purchase, as well as their means, were limited, and they could not meet the cost of compensating owners for the loss of the prospective increases in the value of their property that might have occurred had development been allowed. This unsatisfactory situation has not been altered. In general terms, the Government has decided to have a positive planning policy; but it has not decided what its policy should be.

The names of Barlow, Scott and Uthwatt are generally linked together like a famous half-back line. The contents of the reports associated with these names are very much less widely known. Early in the war, the Barlow Commission, having looked at the uneven distribution of this country's population into congested, depressed or despoiled districts, proposed that the Government should do something definite about it; that a central planning authority should be set up with at least the power to prevent industrial settlement in already crowded places. The Scott Committee was set up to make proposals to prevent rural land from being spoiled or wrongly used. The Uthwatt Committee of experts was appointed to tackle the problem of compensation.

Two things are needed if the use of land is to be brought under effective public control. They are, first, a planning policy; and, secondly, the means to carry it out, including a workable method of compensation. Both requirements pose the solution of nationalisation. From all past experience it is clear that even the mildest planning of the use of land cannot be effective without public control over the area of land affected by the plan; and all the ingenious and complicated efforts to combine public control with individual ownership, by solving the problem of compensation, have so far proved unavailing, both politically and technically. Local purchase is the only method that has so far been successful in ensuring that a local plan shall be carried out—though that does

not mean, as is often argued, that the building must also be done by public bodies. If the public has the landlord's rights, that is usually sufficient. Similarly, national purchase may well be the only workable way of national planning; but whether the actual building and other development, after the plan has been made, should be carried out by public or private enterprise is a matter for decision on the merits of each individual case.

The Government has had four years in which to make up its mind on the planning of land use. Over three years ago, Lord Reith accepted the principle of central planning. In 1942, after the Scott and Uthwatt Committees' reports, Lord Portal agreed that the control of land development should cover the whole country and that, as the Uthwatt Committee had recommended in its first and interim report, local authorities should be given powers to buy war damaged areas and "reconstruction areas" as a whole, in order that they should be able to make comprehensive local plans for rebuilding. In February last year, the Ministry of Town and Country Planning was set up. The new Ministry has inherited the old negative power of the Ministry of Health to record local plans; in addition, it administers the powers given by the Interim Development Act of last August to control building all over England and Wales until planning schemes are made and brought into force.

In all, there has been little change in practice, and none in principle. Control of building and other development, under the Act of 1943, is still negative, a way of preventing wrong development (provided compensation is paid), not of ensuring right development. None of the crucial decisions has, in fact, been taken; and, without them, "control of interim development" is just a cloak for the absence of a planning policy. There is no plan of control for the new Ministry to enforce, and no technical means to enforce it.

Compensation is the most critical item in the technical enforcement of planning. The Uthwatt Committee proposed that the state should buy the "development rights" in all land outside built-up areas, on payment of fair compensation. Owners would then be forbidden to build on or otherwise develop this land, except with public consent; and the state would have compulsory powers to buy the land when required for public or private building according to plan. Compensation for the owner's loss of the right to increase the value of his property by developing it should be paid, as in the case of coal-mining royalties, out of a global sum calculated on the total value of unbuilt-up land throughout the country, and not on the market price of each particular parcel of land at the time of planning. This method of compensation was devised to prevent the inclusion in compensation of what is called "floating value." The market price of all land, especially on the fringes of towns, is much affected by the expectation that building and other development will take place. But

### FIVE PER CENT

only part of the land will actually be built on or needed for roads, other means of transport or services. In the words of the Uthwatt report, "the sum of the probabilities greatly exceeds the actual possibilities"; the effect of this in inflating compensation claims has been a major deterrent to planning. For land that is already built-up, the Committee proposed a different procedure. There should be a periodic levy of three-quarters of all increases in site values in built-up areas.

It is hard to see why this long drawn out and complicated procedure should be necessary simply as a preliminary to public purchase, whenever effective planning is called for, which is in effect what the Uthwatt Committee has recommended. How is the line to be drawn in the meantime between building which the owner may be permitted to do and planned development which requires the state to exercise the rights which it has purchased? It all seems quite unnecessarily cumbersome. The chief political criticism that has been made of the scheme refers not to this crucial point but to the distinction drawn between unbuilt-up land and built-up land. Much of the increase in values due to development comes in the second or third stage after the development of an area has begun. There is no obvious reason why land in urban areas should command its full market value, while land in rural areas commands only a price based upon a somewhat arbitrary formula. This is the line of criticism adopted by the Tory Reform Committee which, in the first of a new series of bulletins, offers an alternative scheme. This provides that no development or redevelopment of land should be allowed without a licence; and that licences should be given on payment of a fee equal to three quarters of the difference between the value of the land for its present use and for its intended use. These fees should go into a fund from which owners who were refused a licence could claim compensation either for expenditure they have already incurred in preparing the land for development or to meet half the difference between the value of the land in March, 1939, and its reduced selling value as a result of new legislation. This scheme again is ingenious; but in its details it is much more arbitrary and complicated than it seems in outline. It is not likely to be more acceptable than the Uthwatt scheme either to the owners of property or to the legal and administrative experts. It does not solve the problem.

## Verdict on Munich

IT is five years this week since Hitler finished his assassination of the Czechoslovak Republic by occupying Prague; he slept in Hradcany Castle on March 15, 1939, and ever since then the Czechs have groaned under the brutalities of the "Protectorate." But this was only the killing stroke. The process had begun with the seizure of Austria in the spring of 1938, and the victim had been rendered helpless at Munich in September. British official apologists affected to regard the three incidents as isolated events—it was one of the weaknesses of British policy at that period that it would never believe what was obviously coming next—but they were in fact three consecutive stages of a single plan. And the decisive moment in the plan was at Munich, when it was made clear that Hitler would have no external interference to reckon with.

Lord Maugham, who was a member of the British Cabinet from the Austrian crisis to the Polish crisis, has written a book that is intended to vindicate the Munich policy.\* The book contains no new facts. Indeed, it contains no new arguments either, for Lord Maugham bases himself on the familiar contentions—that Czechoslovakia was hardly worth saving; that it was reasonable to expect that Hitler would stop when he had the Sudetenland; that the French were unwilling to fight; that no help could be expected from Russia; that Britain was still disarmed.

\* "The Truth About the Munich Crisis." By Viscount Maugham. 76 pages. 5s. net. (London) William Heinemann, Ltd.

It does not face the fact that, whenever public control has to be made effective for planning purposes, recourse must be had to public purchase.

No one would ask that the state should buy all land at a single stroke. The first requirement is a decision on planning; on the extent to which the location and mobility of industry are to be controlled; and on the extent to which the uses of land should be laid down by order. Then purchase and planning should march in step. What is needed at once is a short Act, declaring the state's intention of ultimately taking over all property rights in land, and its intention of paying for any land requisitioned, when that occurs, at its 1939 value only, with allowances for subsequent improvements and changes in the value of money. Land could then be bought piece by piece as planned development and the need for public control over its use require it. The necessity of controlling interim building would, of course, remain; but it would be exercised against the background of a known plan. Land bought would be leased to private or public developers; and its management would be in the hands of public trustees. Possibly, in addition, land could revert to the state, for purchase, on the expiry of leases.

This may seem a very radical solution. But all the technical requirements of planning point to it, as the Uthwatt analysis in effect proved. Nor would it be nearly so costly as is very generally supposed. According to Mr Campion's estimates, the total value of privately owned land in Great Britain in 1932-34 was about £620 million. The issue is fogged for the time being by the fact that the Government does not seem to have the faintest idea of where it wants to go in the matter of planning. Not even the pegging of land values to prevent speculation, although accepted in principle, has been done. Nor have local authorities yet been given any clear statement of what their powers and financial resources to buy land for rebuilding will be. Parliament's anger on Wednesday reflected a general mood of indignation. Lord Woolton promised a White Paper "after [last] Christmas." Perhaps in this White Paper the Government's goal will be made plain. If it is, it will also be plain, though maybe not admitted, that, if positive planning and public control are really intended, public purchase is almost certainly the only effective way of achieving it, besides being the most simple and the most direct.

Moreover, Lord Maugham's manner of arguing his case will not convert many doubters. He has the air of an innocent abroad in foreign affairs; he is capable of writing that "in September, 1938, Hitler had given few public examples of his talent for mendacity"; he calls Mr Lloyd George as an unbiased witness on Dr Benes, and the late Lord Rothermere as an impartial authority on the Hungarian claims. He sneers at "the more reasonable critics—who it will be remembered became critics after 'Munich' had removed the immediate danger." It will be remembered that it was just the same intolerant inability to concede that others could be intelligent and courageous—or even consistent—which most infuriated the opponents of Neville Chamberlain and, in the end, made him impossible as a war leader.

Nevertheless, Lord Maugham has served a useful purpose in bringing the subject up for review, for the time is approaching when it will be possible to pass a considered verdict on Munich. There are three possible lines of argument in defence of what was done at Munich. The first is that Hitler was right in his quarrel with Czechoslovakia. The second is that, though he was wrong, it was no concern of Britain's. The third is that Britain and France were compelled to buy time at all costs. Lord Maugham relies in part on all three.

The first contention cannot be sustained for a moment. It would not be sustained even if it could be established that Czechoslovakia was a worthless state. "The Czechs,"

wrote *The Economist* on March 18, 1939,

have made mistakes in their twenty years and four months of freedom. But the marvel is that a people with their history and their lack of national opportunities should have shown the energy, the humanity, the moderation, the liberal democracy, the manly decency—above all, the unexampled fortitude and silent courage—they have shown.

But even if this were not so, even if the Czechoslovakia of Masaryk and Benes were as worthless as, say, the Poland of Pilsudski and Beck, Hitler's action would still be a crime. The comparison is pertinent, for those of Chamberlain's apologists who take this line set themselves the task of proving that, while it was right—or at least not wrong—for Hitler to attack Czechoslovakia in 1938, it was sufficiently wrong of him to attack Poland in 1939 to warrant a declaration of war.

The second argument—that Hitler's action was wrong, but Britain was not concerned, that it was "a quarrel in far away country between people of whom we know nothing"—is also, in the light of subsequent events, early untenable. And even though subsequent events are not known in September, 1938, they were already showing their shadows sufficiently far in advance. Chamberlain and Lord Maugham may have been unable, or unwilling, at that time to see the obvious aim of Hitler's policy and the obvious consequences of the Munich policy. But plenty of other people could see them and laced their views on record. It simply is not true to say that Hitler's intentions were inscrutable and that one view, though it may since have been proved to be incorrect, was at the time as reasonable as the other. One view—that Hitler was aiming at world domination—was based on the available evidence and turned out to be correct. The other view was based on Micawberish wishful thinking and turned out to be dangerously wrong. It would be more careful on the part of the Chamberlainites to confess their mistake and acknowledge their error than to write books to repeat it.

Moreover, the argument of British unconcern, even if it could be sustained, is hardly a defence of Munich. If Britain was unconcerned, Britain should have stood aside. What fills so many Englishmen with a sense of personal shame when they remember Munich is not that the Czechs were allowed to face their fate without help—after all, that has happened many times before and since—but the knowledge that British policy held them on the operating table while Hitler carved them up. The essence of "Munich" as a term of general description is not merely the failure to help a small power against a large but also the placing of the smaller power in such a position that it cannot exist.

It is on the third argument—that Britain and France could not afford to fight—that any defence of Munich must alone rest. It is an argument of pure expediency, without any moral content, but that may not have prevented it from being of decisive force. Lord Maugham, however, overstates his case, for nearly all of his arguments—the weakness of France, the neglect of British armaments—would apply to 1939 as much as to 1938. It is the comparison of the two years that is decisive. Nor is it right to leap forward to 1940 and to say that the Battle of Britain could not have been won in 1938. Perhaps it could not have been won in 1939 either, and we owe our safety not so much to the year that Chamberlain bought at Munich but to the second year that Hitler gave us before launching the attack. Any defence of Chamberlain must establish that there were factors of weakness in 1938 that did not exist in such decisive measure in 1939.

The opponents of Munich take it far too much for granted that delay was in Hitler's interest and against ours. But it is a matter for delicate judgment, and a confident verdict will not be possible until all the archives are open. The margin by which safety was achieved was, as it turned out, a very narrow one, and it may be that the delay, though it certainly increased the absolute preponderance of German armaments, nevertheless made possible certain indispensable additions to purely defensive weapons on the Allied side. The Czech army and the Czech arsenals, it may be supposed, would have been lost within the first few weeks in any case. It is also possible that the shock of Munich was needed to bring the British peoples—not only in the United Kingdom but also in the Dominions—to the point of realising that there are some things more precious than peace.

All these are matters of speculation. So, too, is the final element in the problem. What would have been the attitude of Russia? After the event, it was confidently stated that Russia would have fought. But at the time all that M. Litvinoff promised was to bring the dispute before the League of Nations, and to give assistance to Czechoslovakia "by ways open to them." Czechoslovakia had no common frontier with Russia, and it may be doubted, in the light of all that has happened since, whether the Soviets would have declared war on Poland as well as on Germany. The purge of the Red Army was not long finished in September, 1938; and if Russia's need for time was so great as to require considerable complaisance towards Hitler in 1940 and early 1941, could war have been contemplated in 1938? This again is a question to which no answer can be taken for granted.

It may therefore be that there was a slight margin of military advantage in postponing the outbreak of war for twelve months. This by itself, it should be noted, does not excuse Chamberlain. He did not behave, after Munich, like a man who knows he has bought a very little time at a very high price. On the contrary, the whole attitude of the Chamberlain Government between Munich and Prague, from Chamberlain's own claim of "Peace with Honour" in October to Sir Samuel Hoare's prating of a new golden age in March, was that of men who thought they had passed the crisis. If Chamberlain did take the right strategic decision at Munich, he did it in ignorance and in miscalculation.

But if it was, on military grounds, the unavoidable, the compulsory decision, the effect is to shift the major blame from Chamberlain to other shoulders. If he was the uncomprehending victim of circumstances, who was responsible for the circumstances? That, of course, opens up the whole sad story of the bungling of international affairs from the Armistice of 1918 onwards. There are few citizens of Great Britain (or of the other democracies) who can escape some share of the blame for the fact that their countries approached the abyss with ineptness taking the place of policy and rhetoric that of arms. Mr Churchill and those who thought with him perhaps carry the smallest burden, though even Mr Churchill's record is not impeccable—on Russia and Spain, for example. Nor does the anti-Munich party—even those who, *pace* Lord Maugham, were anti-Munich when they knew it meant immediate war—came out of the enquiry wholly innocent. *The Economist*, for example, would not claim for itself more than that it woke up to what was happening before many other people did—and in any case, long before Munich. The Labour Party deserves almost no credit at all—it was still voting against conscription even after Hitler was in Prague.

But the biggest share of blame must undoubtedly rest on those who held the highest responsibility in the crucial years, on those who had the best opportunities for seeing what was happening, on those whose duty it was to give leadership to the nation. The crucial years were from Hitler's accession to power early in 1933 to the seizure of Austria in 1938. The men who had the responsibility in those years were two Prime Ministers, Ramsay MacDonald and Lord Baldwin, and two Foreign Secretaries, Lord Simon and Sir Samuel Hoare. Mr Eden was also Foreign Secretary for part of the period, but he redeemed himself in part—perhaps only in small part—by resignation. Neville Chamberlain was, of course, throughout the period a member of the Cabinet and for its last few months Prime Minister. He cannot therefore escape his heavy personal share of the responsibility. But in the final act of Munich, he was little more than the victim of circumstances that these others had created. It is not right that he, in the grave, should bear the blame for others who are still living.

## NOTES OF THE WEEK

### The Russian Offensive

The end of the winter sees the Russian offensive on the southern front still in full swing. German military commentators have been explaining Manstein's reverses by the need "to be strong in a vitally decisive sector," that is, in the west. German preparations to meet the threat of Allied invasion have undoubtedly weakened their strength in the east. The German High Command seems to have hoped that exhaustion would prevent the Russians from pressing forward, so that a relatively large no man's land would still lie between Germany and the Soviet armies. The calculation might not have been groundless had the Russians chosen only one route of advance westwards across Poland. The feature of their offensive in the last weeks was its decisive swing southwards which has brought the Russians almost to the gates of the Balkans. The major advantage which the Russians have derived from the swing southwards is the cutting of the Lwow-Odessa railway between Tarnopol and Proskurov. This in itself has sufficed to bring to a close that strange Dnieper-bend chapter. With his main line cut, von Manstein decided to fall back on the Bug. While he was carrying out this move, his right wing was outflanked by two Russian thrusts, one at Kherson and the other in the Uman-Gayvoron district. From Kherson on the Black Sea to Tarnopol in Eastern Galicia, the front runs roughly parallel to the Dniester, the river barrier that covers the old Roumanian frontier; but the distances between the front and the river vary considerably. The fighting for Tarnopol has not yet brought any conclusive results. For the time being, the Germans seem to be still in possession of the town. The Russians may well contemplate an outflanking move which would drive a wedge between Tarnopol and Lwow. On this westernmost flank of the Ukrainian front, Marshal Zhukov's armies have now approached the foothills of the Carpathians, one of the most difficult fighting grounds in Europe. Once the Carpathians are reached, the Russians may then concentrate on clearing the rest of the Ukraine and pursuing Manstein's armies over the Black Sea plains through Bessarabia into Roumania.

### Roumanian Peace Feelers

After Finland, it is the turn of Roumania to put out peace feelers to the Allies. The Roumanian Paasikivi is Prince Stirbey, who is now reported to have gone to Cairo in order to establish contact with Allied representatives and find out what terms of armistice the Allies would offer. That the Roumanians are acutely aware of approaching defeat is certain. Their desire to contract out of the war has now been greatly stimulated by the hope that the Allies will allow them to re-take Transylvania which they had to cede to Hungary under the Vienna Award of 1940. President Benes has now stated that this is, in fact, Marshal Stalin's intention. Roumania is thus in a unique position among Germany's satellites. Capitulation would entail for it, not only territorial losses but also gains. It does not seem likely that the Russian territorial claims here would go beyond Bessarabia and Bukovina, the loss of which would be offset by the re-acquisition of Transylvania. But in the endeavour to get out of the war Roumania will meet with much greater difficulties than Finland. The Germans may find it impossible to send reinforcements to General Dietl's armies in the north, but they are bound to put up the stiffest resistance in the Danube region. They cannot easily give up the Roumanian oil. Militarily, Roumania is an ideal buffer territory. The ring of mountains formed by

the eastern Carpathians and by the Transylvanian Alps is a formidable defence barrier inside the country. The short and convenient communication lines from Austria through Hungary would enable the Germans to reinforce Manstein's armies as they retreat from the Ukraine into the interior of Roumania. Prince Stirbey's peace mission to Cairo is no doubt symptomatic of the uneasiness which is growing in his country. But the position there is far too difficult to justify any hopes of a quick result.

### Secondary Schools

The Education Bill is still making slow progress through Committee. In spite of an attempt—resented in some quarters—to secure agreement to a time-table, only twelve clauses were disposed of in two days last week. The most interesting and important debate arose on the position of secondary schools. The Bill provides that every such school shall have an "instrument of government," which has to be approved by the Minister, and it was on this clause that the debate arose. Several members showed concern lest these instruments should make insufficient provision for the individuality and tradition of secondary schools, particularly of the old-established grammar schools, and they wished to be reassured that there would be provision for governing bodies independent of the local authorities and protection for the position of the headmaster. Mr Butler went a long way to meet these anxieties. He refused to amend the Bill, but he announced that he was in consultation with the interested parties on the principles that should be followed in drawing up these instruments of government, and promised to lay a White Paper on the subject, if possible before the Bill becomes law.

This disposes of the immediate point. But it was made clear in the debate, so far as the rules of order permitted, that it is only part of a wider question. There is a widespread fear that the old-established secondary schools will, in Mr Kenneth Lindsay's words, "be levelled down and degraded." This issue will come up in its most contentious form when the attempt is made to write into the Bill the principle that no secondary school in receipt of public funds shall be allowed to charge fees. What actuates those who advocate this principle is the passion of egalitarianism—a wholly worthy passion when backed by adequate logic. But in this particular application of it there seems to be some slipshod thinking. To abolish fees in secondary education, without compelling attendance at school over the whole of the years covered by the secondary schools, would be the reverse of egalitarian. It would amount to taxing those who cannot afford to keep their children at school until the age of 18 to subsidise those who can. Moreover, it is very doubtful whether the abolition of fees would in fact assist in bridging the gap between poor man's education and rich man's education which undoubtedly exists in this country—to its great harm and discredit. It is not the old grammar school foundations that create the gap, but the public schools. The public schools cannot be reached by the present Bill, since they do not receive public money. Whatever may or may not happen to the public schools, it is most unlikely that, within the next few years, they will either be abolished or absorbed from the necessity of charging fees. So long as the public schools exist, to make a radical change in the status of the grammar schools, which in so many respects—educational and social—stand midway between them and the county secondary schools, would not help to close the gap but to widen it. It is a legitimate aim for the educational reformer to wish to abolish distinctions of rank in the educational army; but it is silly to degrade the non-commissioned officers to the ranks, while leaving the colonels and the generals untouched. One typical grammar school in a large city, with a very high educational record, depends for about one-fifth of its income on a direct grant from the Board of Education, for about another one-fifth on endowment income and for the remaining three-fifths on fees. To

compel this school, because of its 20 per cent grant, to abandon its 60 per cent of fee income and seek compensation from the local authority, with the control thereby implied, is unquestionably to "level down," if not to degrade, its standards. A school like this would probably prefer to forgo all public money and depend entirely on fees. But in either case it would be compelled to move to one side or the other of the chasm that separates public from private education and it would cease to play its role as a bridge between them. Of all the varieties of schools in this country, it is probable that the grammar schools have more to be said for them, on a combination of social and educational grounds, and has less to be said against them, than any others. It is relatively to what can be said against them, than any others. It would be a tragedy if they were to be tampered with for purely ideological reasons.

### Married Women Teachers

Another interesting feature of the debates on the Education Bill was the Government's decision to accept the substance of an amendment providing that no teacher shall be dismissed solely on the grounds of marriage. There is little need for any comment on this other than to say that it is astonishing that statutory action should be needed to enforce a principle of such obvious rightness. There is rarely, if ever, the slightest sense in the old-fashioned prejudice against the employment of married women in any industry or profession, and it may be hoped that the war will finish the task of blowing away this particular cobweb. But in the schools, the general argument is reinforced by two particular considerations. The first is that any body of adults who are entrusted with the care of children are necessarily lacking in balance and width of experience if the only women they include are spinsters and widows. The second is that, for as far ahead as can be seen, there is going to be a crucial shortage of teachers, and it would be folly to exclude any class of women who can help to fill the gap.

### Stability and Efficiency

Perhaps the most irritating speeches are those which say all the right things on a subject and all the wrong things as well, without any attempt to relate them, or any admission that the parts do not fit. Politicians, whose job it is to please as many as possible of the people, for as much as possible of the time, are peculiarly prone to this kind of almsgivingness. Mr Hudson's speech to farmers, farm workers and land owners at Tonbridge on Wednesday was, admittedly, only a mild example of this habit. But it is so desperately important for the national wellbeing and political peace that agricultural policy should be worked out properly and frankly that it is impossible not to point out that, while the Minister stated several of the main issues rightly, he also begged most of the crucial questions arising from them. Agriculture, he said, is an industry. Its job is to produce food and raw materials for people, and "the customer is always right." The task of agriculture is to increase its output, the task of Governments to find ways of making human needs effective in terms of actual demand. Farming will stand or fall by its efficiency; Mr Hudson cited examples where British efficiency could be raised in marketing, breeding, milk production and the co-operative use of equipment by small farmers; the milk yield, he said, incidentally, is not higher but lower than before the war. All this is sound doctrine, so far as it goes. But interwoven with it was another speech, much less sound. Mr Hudson spoke of the common belief

that it is right for primary producers to receive a lower reward than those engaged in secondary or other industries. By this he was presumably referring to the fact that earnings are lower in agriculture than in industry, and, as he has often done, attributing it to "the doctrine of cheap food." The need for cheap food and cheap raw materials is no more immoral or anti-social or wrong-headed than the farmer's need for the cheapest possible farm equipment, furniture or clothing. To talk in this strain is to miss entirely the central fact that the rewards of all producers depend upon their productivity, which in turn is closely related to the amount of capital employed in the business. Again, after stressing the fact that farming must stand on its own feet and be "scientific" and efficient, Mr Hudson talked about the need to safeguard British agriculture against what he called

"the economic results of scientifically unsound systems in other countries." This is the old vague fallacy of "fair trade" in a new dress; it could be used to justify any degree of protection that is desired. Thus, the Minister tended to surrender in one sentence what he maintained in another, and left all the old loopholes for loose thinking and bad economics. The slogan he gave—"stability and efficiency"—is a good one. In return for real efficiency farmers are entitled to stability of prices and of prospects by public action. This is the point of the discussions which are going on between Mr Hudson and the farmers about guaranteed prices. But if Mr Hudson is no clearer in his mind than he was at Tonbridge about the basis for fixing guaranteed prices and for settling the amounts for which they would be paid, he is still capable of saddling the country with a burden which it will not be able to support without an appreciable reduction in the standard of living.

### Russia Recognises Badoglio

The news that the Soviet Government has decided to enter into diplomatic relations with Marshal Badoglio's Government has come as a surprise to public opinion in this country. Quite apart from the oddness of establishing normal diplomatic relations with a state still governed by an armistice, it was disturbing that no joint decision had apparently been taken by all three Great Powers on the timing and extent of recognition. But the real source of astonishment lies in opinion, not fact. Support or opposition to Marshal Badoglio has come to be regarded as a test of democratic good intentions. In the last few weeks, since Mr Churchill stated in the Commons that a democratic government might not have commanded the same loyalty among the Italian troops as the Badoglio Government, and might have been less ready to co-operate with the Allies, democratic indignation has been seething in Italy and, though in a milder form, in Britain and America. The six Italian parties first sought to express their resentment in a strike, and, when this was forbidden, they held a large protest meeting in Naples. In Britain, the names of Badoglio and Darlan have been freely coupled, and one of the most frequent reasons put forward for condemning Allied policy towards Badoglio was that it would outrage the democratic sensibilities of Russia. Now Russia has preceded its Allies in according recognition. The reason is not far to seek. It is the reason that dictated the Anglo-American arrangement with Darlan. On a calculation of military expediency, the Russians have decided that Marshal Badoglio is the only political figure worth reckoning with in Italy. Mr Vyshinsky has been back to Moscow to report, and it may well be that his account of conditions in Italy has discredited the political abilities of the Left.

The case of Marshal Badoglio is by no means an isolated instance in Russian policy. In their political handling of the problems raised by the war, the Russians have followed the line of expediency without any hesitation. Their equivocal attitude towards the Yugoslav problem reflects their belief that, while Tito does most of the fighting, Mihailovitch must not be driven into open co-operation.

As there is now a long waiting list for *The Economist*, subscribers who wish to renew their subscription are advised to do so before the date of expiry. If they fail to do so, their subscriptions will be automatically cancelled as soon as that date is passed, which will mean a gap of many months before the despatch of copies can be resumed.

th the Germans. Their readiness to negotiate with Finland's "arch-Fascist," Marshal Mannerheim, is simply an expedient means of getting Finland quickly out of the war. Their refusal to negotiate with Mr Mikolajczyk, leader of the democratic Polish Peasant Party, springs mainly from their distrust of the military policy of his Government, the Commander-in-Chief and of the Polish Underground. It may well be that in the long run the Allies' readiness to negotiate on a military and expedient basis will have a deplorable aftermath. All the arguments brought forward by convinced democrats—the disillusionment of the masses, the betrayal of the underground, the growth of cynicism and opportunism—all these arguments may prove only too well justified by the event. But one argument at least should be dropped from the democrats' armoury—the argument that there must be no parleying with Fascists because the Russian Government will not approve and may take offence. Ever since 1939 the Russians have been more consistently committed to military expediency than any of the Allies, and the case for dealing only with democratic forces in Europe must be based on something much more solid than apprehension of Russian displeasure.

### The Italian Fleet

When the Russians asked that some units of the Italian fleet should be used to make good the losses and deficiencies in the Red Navy, they asked for nothing which was not in justice theirs. But in practice the request was very difficult to fulfil. Italian ships are built for the relatively sheltered waters of the Mediterranean. Weight has been sacrificed to speed in their construction, and even the Nazis were never able to command or tempt their larger vessels out into the Atlantic. It followed that only in the Black Sea could they have been placed at Russia's disposal. Against this possibility had to be set the loss of efficiency which would have resulted from removing Italian units from the ports, installations and areas to which they were technically accustomed. Trained for the Mediterranean, it is only there that they can be used with the least margin of waste. But even if there had been no technical difficulties, there remained the political obstacle that without the express permission of Turkey, no belligerent battleship may pass through the Straits into the Black Sea, and it is quite likely that the Turks in their present mood of precise neutrality refused the free passage. Britain and America are to make good Russia's deficiencies out of their own more suitable stocks, and there is not much evidence to suggest that ideology, and not technicalities underlay the whole issue. Some observers are inclined to report everything in ideological terms, and Badoglio was rumoured to be on the point of resignation over the Russian demand and the Soviet Government cut to the quick over the Allied "refusal." If so, the two parties have quickly made it up.

### Health Questions

This week in Parliament has been called Willink week. Housing has been debated in the Commons. Both Houses are discussing the Government's proposals for a National Health Service. The commonest attitude, since the Health White Paper was published, apart from general approval of its aims, has been one of questioning rather than outright criticism. On the one hand, the leaders of the medical profession, though not many of the rank and file, have shown themselves very sceptical, almost aggressively so; on the other, people want to know much more precisely than the White Paper reveals how the comprehensive service will work in practice; what facilities it will provide, in addition to those already available; how long it will take to provide them; whether the division of administrative responsibility between Whitehall, joint boards and local authorities may not cause confusion; and how it will be possible for the local financial burden, on top of other old and new charges, to be borne. The doctors are rightly concerned about condi-

tions of pay and work, which must be adequate to bring in the best men, and permit them to do their best work. Their concern for professional independence is not entirely disinterested. If it is true, as it is, that the actual processes of doctoring should not come under lay control, it is also true that public policy in health matters should not be dictated by doctors' associations. The criticism that the White Paper is based too much on the assumption that local health centres, with teams of doctors, will be available and practicable at an early stage is probably sound. The claim that the powers given to the Central Medical Board to recruit doctors for the public service amount to "civil conscription" is surely overstated. Similarly, the doubts which have been expressed about the scheme's administration and finance are partly sound and partly exaggerated. The scheme is a compromise, not only between public service and private practice, but also between existing and new methods of administration. It is reasonable that local authorities should be left to administer the school and welfare services which they already operate, but unreasonable that local powers should be split between health and education authorities. With some striking exceptions, existing local areas are suitable for the organisation of all services which are essentially local, and must be near at hand. But hospitals and specialist facilities require wider areas for efficient and economical working; and these should properly be the business of joint schemes over regional areas. Moreover, the White Paper necessarily takes for granted, like the Education Bill, that no radical reform of local administration or finance is yet intended. The Government has said so—though, as new tasks and new costs accumulate, this view may well require sudden revision. Meanwhile, if the Government can fill in satisfactorily the many gaps left in the White Paper statement, there is no reason, apart from some sectional discontent, why general approval of the scheme should not become general acceptance.

### Voluntary Contributions

In a speech this week, Lord Nathan pointed out that it is somewhat misleading to describe the proposed National Health Service as free. For England and Wales it will cost £132 million (the White Paper figure) at least and probably considerably more; and this will have to be met out of taxes, rates and contributions to the comprehensive social insurance scheme of which this is presumably a first instalment. By the statement that the health service will be free is meant that the intention will be to provide sufficiently complete medical facilities for every citizen and family that, having paid the social security contributions, none need pay doctor's fees as well, except by preference. This prospect has caused the voluntary hospitals to take thought. They will still be dependent upon voluntary contributions for their income—the £10 million which they will receive from the Exchequer will be in respect of beds made available for the national scheme. Will their contributors go on contributing? The White Paper makes it plain that the Government's wish is for the voluntary hospitals to remain on their present basis, giving, as well as beds, advice and aid to the public service, from their great traditions and expert knowledge. But, in the voluntary hospitals' view, it does not make plain how they are to carry on financially if all would-be patients can obtain the treatment they require elsewhere in part return for the social security payment which they must in any case make. In the national scheme, though patients can choose doctors and doctors patients, patients cannot choose hospitals. The spokesmen of the voluntary hospitals claim that voluntary contributors to hospital associations should be given special facilities in these hospitals and the right to choose them in preference to other hospitals. In this way, it is suggested, contributors would be given a concrete reason for continuing to contribute and the hospitals' income would be protected. The claim is valid.

### "The Prevention of General Unemployment"

A group of Fabians have published the evidence they have submitted to Sir William Beveridge for his investigation of employment. The pamphlet serves as an admirably lucid summary of the stage that has been reached

\* *The Prevention of General Unemployment*, 20 pages. 6d. Fabian Publications, Ltd., in conjunction with Victor Gollancz, Ltd.

in the discussion of full employment policy by what may be called the moderate school of economists. The pamphlet starts with five propositions which the authors believe to be generally accepted:

1. The major argument is concerned with general unemployment. Structural unemployment is an important matter, but largely different both in cause and in cure.
2. The maintenance of purchasing power is the key to the prevention of general unemployment.
3. Total monetary expenditure can be influenced by increasing or diminishing the amount of money spent on consumption goods (both durable and non-durable) or capital goods. There is no general *a priori* reason for choosing one avenue of control rather than the other.
4. The Government should exercise its influence upon expenditure in an "anti-cyclical" direction, and it should do so both by stimulating (or restricting) private investment, and by altering the total of budgetary expenditure.
5. There should be a National Investment Board, charged not only with the negative duty of "vetting" new capital issues, but also with the positive duty of maintaining the appropriate level of capital expenditure.

From these agreed propositions, the pamphlet proceeds to five further and more debatable points:

1. Employment policy should not be confined to the task of combating the trade cycle. It should be possible to implement a programme of regular and smooth expansion.
2. But if anti-cyclical action is necessary, the weapon that will have the most rapid effect would be reductions of taxation, the universal income-tax that now exists being a particularly useful instrument for this purpose. Behind this there should be a concerted attempt to plan a flexible programme of investment and to get the legal and technical preliminaries out of the way beforehand, so that the programme can be rapidly implemented.
3. To facilitate this programme, it should be established that "the Government . . . must be in a position to borrow as much as it pleases, and on what terms it chooses, from the banks"—as is virtually the case in wartime. Government control of the flow of investment would also be facilitated by public ownership of the capital-using industries, though this is not strictly necessary.
4. There should be an extension of the Government's statistical service. In particular, information should be collected on probable future movements in the rate of private investment. [The pamphlet might have added information on the volume of, and fluctuations in, expenditure on the maintenance and replacement of existing capital—the most serious lacuna in British statistics.]
5. Such international endeavours as the relative stabilisation of rates of exchange and of primary product prices and the reduction of trade barriers are worth while for their own sake. But they do not directly assist, and may impede, stability in employment. It is therefore important that any measures that are concerted in the international field shall provide, not only for the making of loans to equal any credit balances emerging, but also for the positive stimulation of international investment. It should be recognised that a country has every right to raise its money income sufficiently to maintain full employment, and to vary its exchanges and import policy in conformity with that fundamental purpose. "Under no circumstances should we enter into any obligation to reduce substantially our internal money incomes in order to maintain stable exchange rates."

This second group of propositions may be more contentious than the first; but they would probably receive a majority degree of support. Possibly the most weighty criticism that can be made against the framework of policy suggested is that it does not sufficiently emphasise the necessity for seeing that an adequate part of the total of investment, public and private, is of a nature to increase the national income of the future—that is, investment that brings in a yield of measurable income rather than of immeasurable "welfare." The pamphlet also contains a somewhat more contentious appendix on some of the changes in financial institutions that the group deem necessary for the execution of their policy. But it hardly diminishes the pleasure that can be felt at the evidence provided by the pamphlet that employment policy can now be approached as a matter for technicians rather than for politicians.

### Far Eastern Fighting

Since the turn of the year, the Allies have been pounding away at the periphery of the Japanese defences and have achieved some important successes. In New Britain and New Ireland, Japanese resistance is nearing its end. The American Navy and Air Force so dominate the sea

approaches that few supplies can reach the beleaguered garrisons from the nearest important Japanese base at Wewak. Rabaul itself, though it is still in enemy hands, seems to have been rendered useless either as a sea or air base by continual bombing. The American attacks have ranged out beyond the Australian fringe. In the course of February, several of the Marshall Islands were attacked and occupied and air bases secured—the most westerly on Eniwetok. This has brought American aircraft within easier range of the Caroline and Mariana Islands, and after a smashing

attack on Truk on February 16th the Japanese themselves admitted the loss of two cruisers, three destroyers, 13 transports and 120 aircraft. Saipan and Guam have also been bombed and shelled. Meanwhile, on the further fringe of the Japanese advance, three concurrent actions are being fought in Burma. The offensive forecast for this winter has not taken place, but British and Indian troops have advanced to Buthidaung in Arakan, after destroying a Japanese force of 8,000, which threatened at one time to encircle and wipe out the British advance guard. The capture of Buthidaung may be a prelude to a new attempt to capture Akyab, but barely two months remain until the monsoon rains. It is thus difficult to guess the direction of the Arakan campaign, but at least it contains a considerable number of Japanese troops and relieves the pressure on the other Burma front. To the east, the Japanese are still dangerously lodged in the Chin Hills, but in the Chindwin Valley British and Indian troops have crossed the river and are advancing in support of Allied forces operating in the Hukawng Valley. Here American and Chinese forces under the command of General Stilwell have destroyed a Japanese division, which was presumably attempting to put a stop to the building of the new Assam (or Ledo) Road. General Stilwell's forces are a species of fighting vanguard for the army of men working on this road, which is designed to link Assam with the old Burma Road, by a vast detour behind the Patkoi Hills and down to Bhamo through Myitkyina. Behind the Stilwell forces are a mass of labourers with bulldozers tearing out the hillside and laying the road as they go; but the speed of their advance is limited by the speed with which the Japanese can be cleared from North Burma. The news of the latest victory in the Hukawng Valley is encouraging. It also shows how far there is still to go.

### A Common Strategy?

The fighting in the Pacific zone and the fighting in Burma are under two separate Commands. In Burma, Lord Louis Mountbatten is Commander-in-Chief both in Arakan and North Burma, with General Stilwell, C

**PRINCIPLES OF TRADE: A PAMPHLET**  
The series of eight articles on The Principles of Trade which appeared in *The Economist* during the months of January and February this year has been reprinted in a pamphlet (Price 2s. 6d., post free), which is now ready and can be obtained from *The Economist*, Brettenham House, London, W.C.2.

mandar-in-Chief of the American forces in China and Chief of Staff to General Chiang Kai-shek, as his Deputy Supreme Commander. In the Pacific, Admiral Nimitz is Commander-in-Chief, but General MacArthur's sphere must to some extent overlap with his along the outer island ring of Australia's defences. The only obvious link between the strategies of the two supreme commanders is that they are fighting the same enemy. It is relevant to ask whether their separate approaches do, in fact, add up to a single strategy. Lord Louis has not given any public expression to his general plan of action. General MacArthur has confined himself recently to scepticism about "island hopping." Admiral Nimitz and General Stilwell have both given a clearer idea of their strategic plans, and whether or not the two commanders are working on them together, the two plans can be made to fit. Admiral Nimitz's intention seems to be to drive on from island bases in the Marshalls, the Carolines, and possibly in some of the Dutch East Indies to an amphibious attack on the Philippines. From there, he would develop a new offensive to the coasts of South China, recapture Canton, and establish a big land base for the great assault on Japan. General Stilwell does not quarrel with the scheme; but he points out that a naval landing would be out of the question unless there were already strong land and air support from China itself. If there is a quarrel in this conception of a combined operation against Kwangtung, it is in priorities and timing. General Stilwell says that the first effort must be made to reopen a road to China and flood it with aircraft and transport. Would this compete with naval priorities for amphibious operations in the Philippines and elsewhere? With the defeat of Germany, the tightness of supply will presumably be relaxed. Nevertheless, a question of priorities will remain, and it is perhaps unfortunate, despite the great distances that separate the theatres, that no commander in the Pacific has the overall authority of General Eisenhower and his staff to ensure that military necessity alone decides the allocation of resources and the direction of the attack. On the other hand, even in Europe, there is no connection in command or in day-to-day planning between the Eastern and Western fronts; this is done by

periodic conferences. If there are anomalies in the counter-offensives against Japan, the causes and the cure must be looked for in Washington, where the Chiefs of Staffs do at least plan the whole of the operations from Burma to Australia and the mid-Pacific.

### Into Battle

The question is often discussed whether Sir William Beveridge will go into politics. In fact, of course, he is already there. Any day now, his report on Full Employment, which promises to be a notable document, will appear; and the Government is still deeply disturbed lest people should take it for granted that the report is official, as no doubt many will. But Sir William himself spares no pains to make it plain that he and the Government are horses of a very different colour. He always makes the relations or lack of relations between the Government and himself extremely clear. The remark of the Minister of Health that the Government's social security proposals would greatly improve on the Beveridge proposals for payments to pensioners has stung Sir William to retort. He points out that, in fact, it was not he who was niggardly, if there was niggardliness, but the Government; that the postponement of the introduction of an adequate contributory pension scheme for a transitional period of twenty years, recommended in his report, was due to the financial limitations implicitly, though not explicitly, put upon him by Government advice. As he put it in his report "every shilling added to pension rates is extremely costly in total." The Chancellor of the Exchequer was, so to speak, at Sir William's elbow, advising him, again to quote the report, to "avoid spending money which is urgently needed elsewhere or money on a scale throwing an intolerable financial burden on the community." So he proposed the transition period to permit "the national income of the community to be built up again after the disturbance of the war." There were, of course, other important reasons for the postponement, such as the need to adjust "the great variety of superannuation schemes now in existence" to the establishment of universal pensions for all, and the difficulty of solving the problem presented by the wide variations of house rents. The pension proposals of the Beveridge Report are certainly open to criticism, and have been criticised, on several counts. But Sir William's point, if polemically put, is well taken. It would really be wise, with Sir William already in the lists, for Ministers to avoid challenging his proposals by innuendo until their own alternative suggestions have, at long last, been made known.

### American Bombing

"Target: Germany," the story of the US Army Air Force's first year of bombing in Europe, has been published by the Ministry of Information, at a very appropriate moment. It is an exciting tale of apprenticeship and courage. It has taken longer than many people had expected for the weight of American bombing to be felt as a major factor in the strategy of the European war. Both official forecasts and unofficial hopes have had several disappointments. But this year expectations have suddenly and dramatically been realised. A mighty instrument of war, now skilled and experienced, and extraordinarily well equipped, has been created. All at once, after recent excursions into the heart of Germany, new and far-reaching possibilities have been opened up. In combination with the RAF, the USAAF has given at least a glimpse of the continuous concerted bombing which was promised so many months ago. Air correspondents who have the ear of British and American commanders have allowed themselves the most striking optimism. They talk, at least semi-officially, about the destruction of the German air force, in the air, on the ground, and in the factories, within the next one or two months. If this is not true or likely, it should not be said even on the highest authority. If it is true and likely, the whole picture of the war in 1944 may be changed. But the decisive effects of bombing, whether directed against a country's defences or its industrial life, are still an unknown quantity; and still less is known about the time it takes for a decision to be reached. It is not certain that a nation cannot learn, like an army, to fight much longer than might seem possible against complete air superiority. It would be rash indeed to regard the need

for the invasion of Europe, or its difficulties and dangers, as having yet been in any way lessened by the spectacular successes of the British and American bombers and fighters. It has still to be shown how a nation, fighting stubbornly and fatalistically in the last ditch, can surrender to an air force—and, indeed, how long the Luftwaffe may, despite all signs, linger on in being.

### Infant Mortality

Last week's debate on nutrition and infant mortality, which arose from Sir John Boyd Orr's report on infant mortality in Scotland, covered very little new ground. The main causes of a high infant mortality rate—poverty and bad housing—have already been established, and there was little that Government spokesmen could say other than that these evils were being tackled as part of the general reconstruction programme. But there is another prime cause to which not enough attention was given, except by Miss Horsbrugh, Parliamentary Secretary to the Ministry of Health, and that is apathy and ignorance. As she pointed out, fruit juice, cod-liver oil and vitamin tablets are available—free or at a very small charge—for expectant and nursing mothers and babies; but only 50 per cent take the fruit juices, 25 per cent the cod-liver oil, and 39 per cent the vitamin tablets. In the same way, the mothers do not trouble to attend the ante-natal and infant welfare clinics. A great deal of propaganda and education is necessary, in addition to the removal of poverty and slum life. Miss Horsbrugh also answered Dr Summerskill's blast on the subject of health insurance and expectant mothers. It is quite true that national health insurance is at present very inadequate where maternity is concerned. But Dr Summerskill spoiled her case by badly overstating it. It is absurd to say that the Ministry of Health's circular to the effect that pregnancy is not in itself a cause of incapacity for work, and therefore for sickness benefit, is "the death warrant for thousands of infants in this country." It depends, as Miss Horsbrugh pointed out, on the job, the woman, and the home conditions. Probably, many pregnant women do, for reasons of poverty, work in industry longer than health considerations should allow—the Ministry of Health has instituted an enquiry into the matter; but a doctor can, and does, give a medical certificate to a woman who, in his opinion, should give up work because she is tired or debilitated—an example of non-intervention and freedom from regulation with clinical treatment which Dr Summerskill should appreciate. To make pregnancy *per se* a reason for allowing sickness benefit would probably have a very small effect on the infant mortality rate. It is the thirteen weeks' maternity benefit proposed in the Beveridge Report, to prevent women from returning to work too soon, and thereby to encourage breast-feeding, which should be regarded as the absolute minimum.

### King's Pidgin

Basic English has been given a flying start. First priority on the time of very high and very influential Ministers of the Crown has been given to its claims. The claims have been accepted. The British Council, the BBC, colonial governments and diplomatic representatives have been charged with scattering the 850 words of this austerity language to the ends of the earth. Obviously, there are several things that Basic cannot do. The Committee of Ministers have suggested that it is merely one of several ways of learning English. It may reasonably be doubted whether it is at all a good way of doing this; nor should it assume literary aspirations. Its range is too limited, its verbs too few, and their structures too clumsy; it is far too isolated from the idiom of the real language. It is a pidgin English, except in the hands of those who already know English well and simply fall back into Basic for the sake of terseness, knowing already what is English idiom and what is not. But Basic must be judged, not by the wilder ambitions wrongly ascribed to it, but by its actual intentions, which are really quite modest. It is intended to provide just another auxiliary world language for facilitating intercourse and trade. It will not, of course, provide a world language of the "scientific" calibre of Esperanto or the more fabulous Interglossa; it does not search for common roots or look for a mean behind existing languages. But it has a definite function, that of being a Standard Pidgin for convenience of talking and writing between nations. It is a

code, not a language or an idiom. It must be judged by its usefulness, not by its elegance or its flexibility or even by the somewhat precarious introduction it gives to the rich English tongue. This being so, it is a valid criticism of it that it simplifies where English is already by far the simplest of the world's great languages—that is, in the structure of the language—and entirely fails to simplify where English is confused and complicated—in spelling. If we are to have a King's Pidgin let us do it properly. Basic will no doubt be given a fair trial. Mr Churchill himself has launched it. But its fate will be decided by how well it works in practice as a simplified means of communication. In matters of language at least—to quote Basic Latin (without any verbs at all)—*vox populi, vox Dei*.

### Shorter Note

The following table gives the number of civilian casualties in air-raids since September, 1939:—

|                         | Killed | Injured and Detained in Hospital | Total Serious Casualties |
|-------------------------|--------|----------------------------------|--------------------------|
| Sept., 1939-Aug., 1940. | 1,494  | 1,980                            | 3,474                    |
| Sept.-Dec., 1940.....   | 22,282 | 28,522                           | 50,804                   |
| Total, 1941.....        | 20,863 | 21,839                           | 42,702                   |
| Total, 1942.....        | 3,221  | 4,149                            | 7,370                    |
| Total, 1943.....        | 2,357  | 3,462                            | 5,819                    |
| October.....            | 118    | 283                              | 401                      |
| November.....           | 119    | 238                              | 357                      |
| December.....           | 10     | 41                               | 51                       |
| 1944—                   |        |                                  |                          |
| January.....            | 107    | 270                              | 377                      |
| February.....           | 961    | 1,712                            | 2,673                    |
| Totals to date.....     | 51,285 | 61,934                           | 113,219                  |

The total for last month, when there was nearly a week of night attacks on London, is the highest since May, 1941. Those killed included 350 men, 475 women and 136 children under 16.

### Pageant of the Past

When Rotten Row was frequented by 'all the talent, beauty, and celebrity of London', one went there to see and be seen. But on no account should one be seen smoking in the Row. Rules against smoking began to go out when Pall Mall de Luxe cigarettes came in. Cause and effect? Well, we leave it to you. A trial of this celebrated cigarette is a very pleasurable experience. Pall Mall de Luxe cost 12/10d. a hundred, and we shall be happy to supply you at any Rothman shop or (post free) direct from headquarters, Rothmans Ltd. (Folio ET 1), 5 Pall Mall, London, S.W.1. Duty-free parcels to Prisoners of War and H.M. Forces Overseas (including India). Ask for special order form which includes full particulars.

## More NEWS of WHITE HORSE

### Safeguarding the quality

Like many other good things, White Horse Whisky is not so easy to obtain as it was, and more people than ever are anxious for a share of the regulated supplies that are available.

But rarity lends an added charm. We enjoy good things even more when we get them only now and then. And how good is an occasional glass of White Horse Whisky in this fifth year of war. A whisky of rich fragrance, and full, round flavour, of rare delicacy and bouquet. A whisky in which all the qualities of great age are crowned by a genial, heartening glow with never a trace of fire.

Forethought and a provident care of stocks laid down in years of plenty have provided a modest supply for your pleasure to-day. But the supply is regulated. Regulated to ensure that, to-day and always, White Horse shall be the whisky 'fine as a fine liqueur.'

MAXIMUM PRICES: Bottles, 25/9d. Half-bottles, 13/6d.  
as fixed by The Scotch Whisky Association.

## AMERICAN SURVEY

## Contract Renegotiation

(From a Correspondent in Massachusetts)

Boston, February 14, 1944

A GREAT deal of heat has been engendered in Washington by demands from some sectors of business for repeal or radical change in the method evolved by the war procurement agencies to control profits on war contracts. First instituted by the War Production Board and later required by law to be included in all war contracts, a "renegotiation" clause allows for revision of prices to keep profits in line with the standards set by the price adjustment boards.

In the face of severe attack on the Act containing this provision, President Roosevelt was able in his annual message to show that more than \$5,300 million has been recovered through renegotiations of contracts. The complaint of some business men has been that government harasses them with "a swarm of auditors," that the renegotiation feature fills business with uncertainty, that the recovery of excess profits will strip industry of reserves needed for post-war reconversion of plants, and that the excess profits feature of the income tax makes the tedious renegotiations superfluous.

But it is gradually becoming accepted that some means of revising prices after the writing of war contracts is essential to the control of war profiteering. The prospect now is that Congress will seek to improve rather than to jettison the contract renegotiation statute.\* The debate has made the public conscious of the reasons the war procurement boards consider "renegotiation" essential to keep war costs within reason.

The war agencies had to have vast quantities of war material with all speed. Many of the products were new, or at least new to the contractor. Many were only blueprints when contracts were made. All were to be made in such great quantity as to make previous unit costs of little value in fixing prices. And changes in design based on war experience have changed costs, often unpredictably. Some costs have been cut, by the vastness of the volume, to one-tenth of peacetime figures.

## Danger of Scandal

Profits of some war firms doubled, tripled and quadrupled in their first year on war contracts. Much of this was unpremeditated and unexpected. Both the war agencies and their contractors early saw the danger of public scandals in such excessive profits.

Boards were set up at an early stage to organise the process of renegotiation. There were many thousands of contracts. To make the process simple, the boards handled their negotiations with contractors on the basis of their annual profit statements in an overall settlement, disregarding the number of individual contracts. This made it unnecessary to have many auditors.

When Congress set out to enact a law to fix a limit to

\* [This was one of the points at issue in the President's veto of the Tax Bill which was overridden by Congress after the dispatch of this letter. The procedure has been somewhat liberalised, but the principle of renegotiation remains.—EDITOR.]

war profits at 6 per cent, Mr Robert Patterson, Assistant Secretary of War, protested against it as unfair and impractical. Some concerns were largely financed in their war expansion by the government, others not. Some had made great contributions to the war by long and expensive development of vital war products. Some were less efficient than others, but all were needed. A sliding scale of permitted profits is now used, depending on many factors.

## Business Criticisms

Most settlements have been amicably reached. At least 70 per cent of the businesses "renegotiated" have been satisfied with the settlement. About 20 per cent more are businesses that have real worries about their financial condition after the war. (The whole airplane industry is in this situation.) Their problem is bound up with the larger question of taxes and the conditions under which the government will terminate their contracts at the end of the war. The remaining 10 per cent are the type of business men who resent any government regulation. Some of the criticisms of renegotiation which Congress has considered are:

1. That the government ought not to bother with a multitude of small contracts. Most government officials agree. The amendment in Congress to raise the minimum size of contracts subject to renegotiation from an annual business of \$100,000 to one of \$500,000 is generally accepted by the war agencies as practical.

2. Another is that the excess profits tax will get the money back anyway. But it will not do so in all cases. The excess profits tax may take up to 80 per cent of profits. But companies that have a "favourable" base for this tax may pay only 50 or 60 per cent. Some concerns with a more favourable pre-war base would be able to keep much more profit than others on war contracts. Mr Patterson has reported that at least \$1,500 million of the \$5,300 million so far refunded would not have been recovered by the excess profits tax. Beyond that, even a tax of 80 per cent may leave vast profits to firms that are doing a large business on a small capital.

3. That renegotiation interferes with the war effort. One widely published criticism claimed that 250,000 renegotiation auditors were infesting war plants. At that time there were fewer than 500 auditors employed or on call in all renegotiation. Critics have confused income-tax audits and cost-plus-fixed-fee audits with contract renegotiation. The cost-plus-fixed-fee contract is avoided by government and most businesses whenever possible as a cumbersome process. Renegotiation has made it feasible to award fixed price contracts on the great part of the war business by the saving clause that prevents excessive profits resulting from prices that could not be set scientifically. With this safeguard, it is always possible to fix a price high enough to protect the contractor.

4. That the contract renegotiators are unsympathetic to business. Actually they are business men and cost accountants whose whole career and expected future lie with business. The goal has always been the protection of costs in future contracts. Recovery of past excess profits has been incidental. Secretary Patterson, himself a business lawyer, told Congress that "any scheme to limit profits will be open to many objections. We think that this is open to the least."

5. A real anxiety exists in many business quarters about the danger of stripping industry so completely of its profits that it will be without reserves to reconvert and build a healthy postwar economy. A strong case for permitting wartime reserves to be built from profits is being made. But this concerns excess profits taxes more than renegotiation. And it concerns especially the final settlement the

Government makes with its contractors. Should the war last long enough, most companies will be left in a strong financial position. But sudden termination would leave many weak, especially in the aircraft industry.

Many have had to invest immense capital in inventory. Much of it is Government capital. But they have also invested their own. As they turn this inventory into finished goods, they turn it into profits. The speed with which the Government winds up its final contracts, makes its audits and removes its equipment to permit reconversion will greatly affect many concerns; if they have inventories left on their hands, however, they will depend upon the Government taking them over. Government policy in taking over surplus products and in making loans for conversion will be a great factor in keeping many war firms solvent. Very few unprejudiced students of this question would want to see postwar production financed by war profiteering of such dimensions as to be a public scandal. It would be costly to business in public confidence after the war.

The Government is already working on plans for the equitable termination of contracts and the transition to peacetime production. The special case of the aircraft industry arises from its own immense expansion on war orders. The value of the aircraft industry's output in 1939 was \$200 million, with many foreign orders. Last year it reached more than \$20,000 million. Four-fifths of the plant was Government-owned and three-fourths of the capital was Government provided. All the output was bought by the Government. If the contraction after the war is at the same rate, the vast airplane industry will have to be largely wiped off the slate as a resource for postwar jobs and a consumer of materials of other industries. The industry's own working capital is so slight a part of its present structure that unaided it could hardly finance the immense task of conversion to peacetime plane models. Its heavy inventory could largely wipe out its capital if the Government failed to accord liberal treatment in terminating its war business.

Industrial specialists at the Harvard Business School have just published a study of the financial position of the airplane industry. They find that the effect of taxation on the industry was far greater than that of renegotiation. Taxes took 75 per cent of operating profits, renegotiation 9 per cent. They urge, therefore, that either by tax-exempt reserves or conversion loans or other sufficient means which only the Government can provide, the war-made problem of this giant industry be met so that its vast potential may carry its full weight in the economy after the war.

In less vivid degree war industry generally will be dependent for its future on the contract-termination policy followed. This is a quite different question from that of not letting the largely accidental excess profits of war contracts stay in the laps of those concerns which have profited by the war.

## American Notes

## Kingpin of Victory

Lend-Lease once more occupies the centre of the stage. March 11th, the third anniversary of the Act's passing, was celebrated not only with oratory, but with the fourteenth of the President's detailed reports. Some of the figures in the report are of outstanding interest. Thus a total of \$19,986 million had been furnished by the United States under the Act up to the end of last year. Of this figure, \$1,244 million was supplied in 1941, \$7,009 million in 1942 and \$11,733 million in 1943. The percentage of munitions and weapons of war represented in this overall figure has risen from 22 per cent in 1941 to 67 per cent in 1943—the remainder being largely foodstuffs and raw materials. Lend-Lease has also appeared on Capitol Hill, for the Act expires on June 30th, and hearings are being held on a renewal Bill. The State Department, the War and Navy Departments and the Foreign Economic Administration have all given testimony on the familiar lines, that Lend-Lease is a "kingpin of victory" and that it has served America well. The growing anxiety of Congress to know what tangible benefits are being given in return was partly satisfied by Mr Leo Crowley, the Foreign Economic Administrator, who said that the value of Reverse Lend-Lease received from the British Commonwealth was now \$2,095 million, of which \$1,526 million came from the United Kingdom. These figures, as Mr

## AND WHEN THE WAR IS WON?

Every nation for itself . . .

or "Combined Operations"?

People at war soon learn that by becoming willing members of a co-operative fighting unit they not only help to win battles for their side but increase their own chances of survival. To-day, whole nations recognise that combined action, military and economic, is essential for the achievement of a decisive victory and a just and durable peace, with prosperity for all.

President Roosevelt has said . . . "The sufferings of the little men and women who have been ground under the Axis heel can be relieved only if we utilise the production of all the world to balance the want of all the world." It is the responsibility of Industry to see that its great productive powers are not dissipated by economic rivalry, but work together for the benefit of the whole human family.

## SPECIAL ANNUITY PLANS

Write for particulars to H. O. Leach (General Manager for British Isles)  
141 SUN OF CANADA HOUSE, PALL MALL EAST, LONDON, S.W.1

Crowley pointed out, may mislead more than they inform, as there cannot be, and should not be, any rigid balancing of accounts. But the notion of a dollar for dollar settlement is very deeply ingrained in the American consciousness, and it is doubtful whether all these disclaimers will get it out. This presumably was what was in Lord Halifax's mind in making a very frank speech at Boston this week, in which he roundly told the Americans that the British would never accept the doctrine that they owed a net balance of gratitude. This needs to be said, and Lord Halifax doubtless chose his moment carefully, but many Americans will be very displeased.

#### Senate Peace Survey

An organisation which has taken for itself the name of the US Federation of Justice has announced a survey of leading opinion on the problems of peace now engaging much American attention. This entirely unofficial project has gathered the support of Senators of high standing and both parties. Jurists, politicians and laymen will be consulted to find a "lowest common denominator" of agreement on the relation of an international organisation to the maintenance of peace. Besides current expressions of opinion, past statements by leaders of both parties, and agreed resolutions such as those known by the names of Senator Connally and Representative Fulbright will be taken into consideration. The project underlines yet again the contrast between the effervescent and confident organisations of nearly thirty years ago, of which the League to Enforce Peace was the most effective, and the more hesitant movements of to-day. That the shadow of the one now deters to some extent the activities of the other is inevitable, but the methods of attack are from different directions rather than of different force. The ultimate result, Senators Thomas and Austin believe, will be to reveal an unprecedented degree of unity in foreign policy among American political leaders. Such a prognosis may be correct, but the danger of "lowest common denominators" is that they easily become maximum common programmes. They emphasise the obstructing—or at least the diluting—influence of the minority even more than the constitutional rule of a two-thirds majority for treaties does. Nevertheless, a poor crop of concrete agreement is better than no bread; as long as the "hard core of ultimate choice" is both hard and finally chosen, something, however insufficient, will have been achieved. Moreover, by the same methods, the project cannot help but uncover points of difference between one section and another, points which otherwise might remain obscured by an alternative distribution of emphasis. For it

is what each will accept rather than the price of that acceptance which is ordinarily made clear. Possibly the Survey may clear the air.

#### Army Casualties

Battle casualties of the US Army since December, 1941, were announced at the last weekly press conference held by Mr Stimson, Secretary of War. Total figures were broken down into the various theatres of war, but it should be remembered that these figures are not truly representative of the distribution of the total American loss. For instance, it can be presumed that naval losses in the Pacific would be greater in proportion to those of the Army and Army Air Forces than in the North African campaigns. Nor does the inclusive total of all losses give an accurate impression of the total wastage from the Army. Over half of those wounded have now been returned to active duty or discharged from hospital. As of February 23rd, well over 25,000 have left hospital. Of the 26,000 odd prisoners it is clear that the figure of 1,673 which the Japanese report to have died of disease must be a ridiculous under-estimation, unless the recent stories of Japanese atrocities have been equally grossly exaggerated. Down to the end of January the casualties have been as follows:

| Operation Theatres          | Killed and Missing | Prisoners | Total (including Wounded) |
|-----------------------------|--------------------|-----------|---------------------------|
| Pacific and Asiatic.....    | 22,147             | 14,199    | 29,015                    |
| North African.....          | 11,412             | 7,361     | 49,051                    |
| Middle Eastern.....         | 1,050              | 294       | 1,576                     |
| European.....               | 7,041              | 4,542     | 13,797                    |
| North and Latin American... | 1,334              | 47        | 2,356                     |
| Total all Areas.....        | 42,984             | 26,443    | 95,795                    |

#### Shorter Note

The first state primary, held in New Hampshire, has resulted in the election of six Republican delegates pledged to Mr Willkie, as against two pledged to Mr Dewey and three uncommitted. (The Democratic primary was solidly in favour of Mr Roosevelt.) New Hampshire should not be taken as a typical state. In the latest Gallup Poll of Republican voters, Mr Willkie's vote has fallen to 27 per cent from 35 per cent in November, while Governor Dewey's has risen from 55 to 64 per cent.

## THE WORLD OVERSEAS

### After the Pucheu Trial

ON March 11th, the Military Tribunal at Algiers sentenced Pierre Pucheu, Vichy's ex-Minister of the Interior, to death. Pucheu has now appealed against this verdict to the Court of Cassation. His appeal is juridically based on technical failures in the proceedings before the Tribunal. M. Pucheu had asked for a number of witnesses, among whom Marshal Pétain was included, to testify before

the court; and his demand was disregarded. Those of the witnesses he asked for who were in Algiers did, of course, testify; those who were in France could not. If the Court of Cassation considers those technical objections valid, then a retrial will take place. If not, only General de Gaulle can exercise his right of mercy and commute the death sentence. Whatever happens, *Paffaire Pucheu* has clearly become an issue much larger than the defendant's personal fate.

The verdict of the Military Tribunal bears upon all the problems of the future in France of both collaborators and *attentistes*—those who have waited to see, since July, 1940, before choosing the Axis or the Allies. In spite of the vehement and wholesale political denunciations made by the prosecutor and his witnesses in the course of the trial, the Tribunal was careful to draw a distinction between collaboration and *attentisme*. The clauses of the verdict were formulated to avoid any impression that membership of the Vichy Government or *attentisme* in itself was regarded as a sufficient reason for the death sentence. M. Pucheu's counsel pleaded that the Vichy Government had been "a legal but not a legitimate government"; implicitly, this view has been embodied in the verdict of the Military Tribunal. The Tribunal replied in the negative to the question whether, at Vichy, the defendant had taken part

in measures contrary to the laws of the French state. M. Pucheu has also been cleared of the charge of having taken part in an attempt to overthrow or change the French Government by force.

The negative reply of the Tribunal to these questions is of a crucial political significance. The Military Tribunal has refrained, at least in the terms of its sentence, from indicting the Vichy regime as a whole, and from turning the Pucheu case into a wholesale trial of the system. The Tribunal also replied in the negative to the question whether, by provoking the arrests of Frenchmen, the defendant had made attempts against the individual liberty of his co-citizens. This was perhaps one of the most surprising replies given by the Tribunal to a question which had previously raised much anger and passion. The death sentence was based on two charges: first, on M. Pucheu's participation in the recruitment of the Anti-Bolshevik Legion which fought in Russia; and, secondly, on his policy of collaboration with the Germans. Both were judged to be co-operation with the enemy in time of war.

From a strictly legal viewpoint, solid arguments can be put forward in defence of the verdict. The recruitment of Frenchmen for a force fighting on the side of an enemy power can well be regarded as high treason. M. Pucheu himself said that his part in the campaign for the anti-Bolshevik Legion was very limited, but he did not deny it.

#### The Political Dilemma

But the underlying assumption of the argument is that France was really at war with Germany at the time when M. Pucheu was in office. The political dilemma which the Military Tribunal at Algiers had to face was not easy. From the point of view of the French movement of resistance, the assumption that France has never quitted the war is axiomatic. The moral and political strength of Fighting France is to a large extent based on this. M. Pucheu's defence was, on the contrary, based on the legal recognition of the armistice. Apart from the legal principle, there is the fact that the whole administration of Vichy has always been in steady contact and co-operation with the enemy. The verdict has therefore not, after all, cut, and could not have cut, the Gordian knot of law and politics. If the principle that France has never quitted the war were applied consistently, then the legal status of Vichy itself would come under question, and membership of the Vichy Government would in itself be regarded as a crime. The Military Tribunal has refrained from drawing this conclusion. If, however, the Vichy regime is regarded as "legal but not legitimate," then the question of what was and what was not legal in the activities of the Pétain administration—or of his Ministers—become almost insoluble.

M. Pucheu has been sentenced as a collaborator and not as *attentiste*. The fact that this distinction has been drawn by the Tribunal does not, however, help in the drawing of a precise line of demarcation between the two, between collaboration and *attentisme* on the one hand, and between *attentisme* and resistance, on the other. In the course of the proceedings it became painfully clear that, even in the court itself and even between defendant and prosecutor, the line was pretty twisted, if not blurred. M. Pucheu's defender stated an obvious fact when he claimed that, in the first months after the collapse, an overwhelming majority of Frenchmen stood behind Marshal Pétain. The confrontation with the past became even more dramatic when the prosecutor himself, General Weiss, was reminded by M. Pucheu and his defender that he, too, had shared their views in 1941. At that time General Weiss said:

We live in the first months of the National Revolution initiated by Pétain. French airmen have to take their part in this renewal which opens the gates to the future.

Pucheu went on to point out:

In February, 1941, when I was making an immense sacrifice, my Prosecutor spoke in favour of the National Revolution. . . . On October 28, 1942, eight days before the disembarkation, you went to parade and to pay honours to Darlan. On the same day I was hunted by the German police in Paris.

The list of M. Pucheu's witnesses further revealed how difficult it may sometimes be to trace the transition from collaboration to *attentisme* and from *attentisme* to resistance. M. Rollin, who is now at large in London, was one of the chiefs of M. Pucheu's police. He was in charge of the special brigade which was set up in order to fight against the resistance. General Bethouard is in command of French Forces and Admiral Fenard is heading a French military Mission in Washington, though both were as loyal or as

disloyal to Vichy as M. Pucheu himself. The statement that there are two distinct camps opposed to each other, one consisting of collaborators and totalitarians, and the other consisting of patriots and democrats, is a gross simplification. In the Gaullist movement itself, there is no lack of ex-collaborators who have become "patriots," and the men of Vichy hold no monopoly on totalitarian aspirations.

#### Another Dreyfus?

The repercussions of the Pucheu trial on future French politics can hardly be overestimated. Already in North Africa there has taken place a fusion between original Gaullists and many elements of the former Vichy administration. It would not be surprising if the fusion should continue and even grow on French soil. In this case, the suspicion may easily arise that, in the case of M. Pucheu, a scapegoat has been found, on whom the sins of the Vichy system have been laid in order to make easier the reinfiltration of the guilty men into French political life. This would inevitably breed frustration and cynicism. The consequences might be even graver if the number of the scapegoats picked out grows larger and if the choice of scapegoats is so much a matter of chance that there is little difference between the moral and political standing of defendants and prosecutors.

In his final words at the trial, M. Pucheu pointed to the prospect of a civil war in France that his trial may have opened up. This is probably an overstatement of the consequences. The Vichy men will certainly command too little respect and authority in liberated France to become the rallying points for any movement able to wage civil war against the combined forces of the resistance. But, if the threat of civil war is not very real, the Pucheu trial may well have begun a protracted moral and political crisis similar to that in which France lived through after the Dreyfus trial.

There is no need to expatiate on the differences between the two trials. In the case of Dreyfus, the innocence of the victim was beyond dispute. In M. Pucheu's record there is guilt and repentance inextricably mixed. In the Dreyfus trial, it was the Right and the Army leaders who staked their prestige. In the Pucheu trial it is the coalition of the Left and the leaders of the new French army. But, in some respects, the analogy between the two cases seems fairly close. Like the Dreyfus trial, *Paffaire Pucheu*, too, may become a festering sore in French political life. The Dreyfus trial and its aftermath brought about a radical realignment of the political forces in France. The prestige of the Army and the Church was undermined by the part they had played in it. The vindication of justice went together with the ascendancy of the Left, which had found in Jaurès, Zola and Clemenceau its spokesmen and fighters for justice. This is a lesson which the present leaders of the French Left ought perhaps to think over again. The Pucheu trial is in the long run more likely to strengthen the Right than the Left in France. Do the French Communists really consider revolutionary terror as an indispensable element in contemporary French politics? Only a short time ago their spokesman, M. Marty, stated that the Communists wanted for France the British Parliamentary rule and the British freedom of press, but not a Communist revolution. But revolutionary terror without a revolution is a sad contradiction.

## Canada's Imperial Relations

[FROM OUR OTTAWA CORRESPONDENT]

WHEN the speech made by Lord Halifax in Toronto on January 24th had been reported in the Canadian newspapers, a facetious comment made in Ottawa political circles betrayed the effect of it on Canadian politics as well as any lengthy and learned analysis could have done. "Fortune has smiled upon Mackenzie King again," said the pundits. The appearance of an issue, potentially explosive and likely to eclipse domestic issues in public debate, so the argument ran, would strengthen the position of the King Government. Never had that Government been so unpopular as in the later months of 1943. Never had public resentment against wartime controls of prices and wages been so evident as in the months since Parliament had met. The Government's supporters welcomed an issue in which foreign relations would engage public attention.

It is hardly likely that Lord Halifax would have chosen one of his not too frequent appearances in Canada for an expression of his views on British Commonwealth relations had he understood the background of Canadian politics. Whether or not Mr Mackenzie King, or any leader of a political party in Canada, would seize upon his proposal—that the British nations should have common policies in defence and foreign relations—as an issue of debate remained unanswered until the line-up of opinion became clear. Inside Canada, the basic factor involved in a discussion of Lord Halifax's views might easily become the surging nationalism that has grown strong during these years of war.

Speaking in Parliament on January 31st, Mr Mackenzie King dealt with Canada's national status in a review of imperial conferences since 1921. He quoted the Balfour Declaration emanating from the imperial conference of 1926, which described the relationships of Great Britain and the Dominions in the familiar words:

They are autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations.

Mr Mackenzie King said:

The position thus defined is the position which this Government accepts as the present one and which it desires to see maintained.

### The Four Power Theory

But it was not primarily upon the issue of Canada's national status that Mr King took exception to the common policy proposal. This is clear from a prepared statement which he read to Parliament, in which he dealt with the concept voiced by Lord Halifax, and, in measure also, by Field Marshal Smuts, that the preservation of peace in the future will depend upon the creation of a balance of strength between four great powers: the United States, Russia, the British Commonwealth and Empire, and China.

Not Great Britain only (Lord Halifax had said), but the British Commonwealth and Empire must be the fourth power in that group upon which, under Providence, the peace of the world will henceforth depend.

The Canadian Prime Minister took the position that the future peace of the world cannot, and must not, depend on a four power grouping of the world. The alternative, to which the present Canadian Government is committed, is the creation of an effective international system in which the collaboration of all states, large and small, shall be given freely. His view was given in these words:

What we must strive for is close co-operation among those great states themselves and all other like-minded countries. Behind the conception expressed by Lord Halifax and Field Marshal Smuts there lurks the idea of inevitable rivalry between the great powers. Could Canada, situated as she is geographically between the United States and the Soviet Union, and at the same time a member of the British Commonwealth, for one moment give support to such an idea? The Moscow declaration on general security forecast a system which would involve, for its effectiveness, firm commitments by all peace-loving states to do their share in preserving peace. . . . I maintain that apart from all questions as to whether or not such a system is enforceable.

effective world security, and therefore is opposed to the true interests of the Commonwealth itself.

### Collaboration or Common Policy

This declaration marked the final conversion of Mr Mackenzie King to the ideal of a world system of collective security. Meanwhile, the problem of a common British policy on defence, foreign affairs and related policies had become the subject of press discussion in Canada, as a result of the Smuts speech and the proposal of Mr Curtin, Prime Minister of Australia, for an Empire Council. Mr King, in his parliamentary statement, pledged the continuance of the closest collaboration on the part of Canada with other British countries. It will, he said, "continue to have a special degree of intimacy." This, without doubt, corresponds with the majority Canadian viewpoint, though with some dissenters in Quebec.

But the distinction between close collaboration and intimate consultation, and an agreed common policy, has been recognised. The loose unity which exists at present and which has been effective in this war has permitted, according to Ottawa opinion, scope for a dissenting opinion on the part of a British nation, as in the case of Eire, without causing a final rupture of the entire structure of the Commonwealth.

A country like Canada, it is recognised, possesses interests within its particular sphere which must be its own concern alone. This is the meaning of Canada's recent wide extension of its diplomatic relations with many countries, and the elevation to the rank of ambassador of its ministers to the United States, to Russia, and to Brazil. The proposal for a common policy in foreign relations would run counter to this development, making it impossible for Canada to avoid a misunderstanding of its position as far as friendly non-British countries are concerned. To the sort of Canadian thinking typical of Ottawa at present, this creates an insuperable obstacle to the common policy idea.

## Social Reforms for Portugal

[FROM OUR LISBON CORRESPONDENT]

THE Portuguese Government, at the moment, is mainly concerned with plans for social betterment. Important sums are to be allocated for road repairs and water and drainage in many up-country centres, and for an exhaustive scheme for the rehabilitation of ex-prisoners. In addition, there are two measures now before the National Assembly of particular importance. One deals with social assistance in general, a measure of co-ordination and extension, while the other lays the foundation of a nation-wide plan promoting the building of homes suitable for letting to people of small means. There is no question of direct subsidies; what is rather envisaged is relief from taxation, assistance with building loans made through approved channels at a maximum rate of 4 per cent, and provisions against shoddy building, profiteering, and general exploitation of the tenant or tenant-owner—all precautions very necessary at the present time.

### Hygiene and Homes

Large employers of labour, as well as co-operative bodies, are to be offered plans and technical advice. Local municipalities will be urged to assist with suitable sites, and great care is to be taken of the demands of hygiene. This aspect of the proposal is of great importance. The picturesqueness that goes with conditions considered adequate two centuries ago must be sacrificed to the needs of a growing population. The Portuguese Government is firmly striving to bring down the appallingly heavy figures of infant mortality and tuberculosis, both directly attributable to bad housing conditions which still exist, not only in parts of Lisbon but also throughout the length and breadth of Portugal. Incidentally, the bill stresses the desire of the Government to see "homes" built rather than great "hives" of so-called workmen's dwellings. That the measure will be accepted is a foregone conclusion; how soon real results will be seen depends, like so many other things, on private enterprise as influenced by the factor of a profitable return on properties equivalent to £25-£50 per annum.

### Is his office haunted...?

Indeed, no. It is fitted with a Modern Loudspeaker Telephone System, and therefore Principal and Employees are in instantaneous contact, just as if they were sitting at the same desk; all without leaving their individual jobs. Modern Telephones can still do this for you— with speedy installation if you are on essential work. Enquiries invited.

★ Systems available from three instruments onwards, installed and maintained for a weekly rental of a few shillings.

## TEMPERATURE CHAMELEON

Y You know the chameleon will change its colour according to the demands of the surroundings. But did you know that he can also register changes in temperature? How useful he would be for registering temperature changes in an engine under test. The problem of getting this little magician from Madagascar to sit still on a Rolls-Merlin engine would of course present its difficulties. The Ministry of Supply would hate the idea.

Fortunately, there is something else which will do this job much more effectively—heat-sensitive paints. These paints are on the market but their full commercial development is yet to come.

Some heat-sensitive paints contain iodine, an element which is playing an increasingly important part in our lives. New uses are constantly being found for iodine in medicine, agriculture and industry. Its field of application is so large that in 1938 the IODINE EDUCATIONAL BUREAU was set up in London to collate and distribute the mass of information on iodine which had accumulated in the last 100 years. The services of this bureau are available free to any institution or manufacturer with an iodine problem.

"At your service"

# THE BUSINESS WORLD

## The Future of the Railways

IN view of the severe strain to which the railway system has been exposed in the war years, it is not unnatural that the railway chairmen should have taken as one of their main themes in their annual speeches the excellent work which the companies have done in tackling the problems of wartime traffic. No one can deny the truth of this contention. Without the railways the wartime business of the country could scarcely have been carried on; the railways could not have done the job had they not kept their physical assets in full repair during the period of depression, and had the permanent staff not behaved in a way which has been conspicuously more co-operative than that prevailing in some other sections of the war effort.

Lord Royden disclosed that the LMS last year moved some 53 per cent more ton miles of freight traffic than in the twelve months before the war, while the increase in loaded wagon miles was 31.2 per cent, and the passenger train miles rose by 70 per cent. In the case of the Southern, loaded wagon miles were up by almost 50 per cent, and the freight train miles run by engines of that line had increased by half as much. Passenger miles on this line were up by 60 per cent. Mere figures do not necessarily give an adequate picture of the task performed, and Colonel Gore-Browne, of the Southern, stressed the point that much of the increase in freight traffic ran to destinations which were well off the sections of the line designed to carry heavy traffic in peacetime.

The increase in freight has been met only in part by better loads, but in the case of passenger traffic the Southern ran 30 per cent fewer train miles and the LMS 31 per cent fewer. This means increases of 129 and 146 per cent, respectively, in the average passenger train loads on these two lines. This result was secured in part by cutting feeding facilities to the utmost. Where refreshment was provided on 140 Southern trains daily before the war, the figure at the end of last year was three.

Even after the economy in passenger locomotives is taken into account, these results could not have been secured with the reduced supply of engines and rolling stock available in 1940. The Southern has been building engines for other lines as well as for itself, engines which are distinctly austere. Most of the lines have lend-lease locomotives of American design. The rate of repair has been substantially improved, and the pooling of all wagons has helped materially. Undoubtedly, the railways have been overstrained, but they have shown what they can do when the traffic offers. The moral seems to be two-fold. From the standpoint of the country as a whole, there may well be a case for the maintenance by a specific subsidy of certain lines and services which are not self-supporting in peacetime. From the standpoint of the railways, they must make their facilities available on terms which tend to minimise the traffic.

The results described have not been wholly paid for from year to year. One point on which each of the railway chairmen has laid great emphasis is the accumulation of arrears of wear and tear. The Railway Control Agreement provides for the establishment of trust funds, to which may be credited the difference between actual outlays on maintenance and the average charged in the accounts for the three years 1935-37. At the end of last year the trust funds of the main line companies amounted to some £72½ millions. But this figure includes nothing for the exceptional wear and tear arising from the present over-working of fixed assets. No estimate is available for the money cost of arrears of maintenance, normal and special, but Sir Edward Cadogan said that, in the case of the Great Western, arrears in complete renewals represented 15 months' normal work on the permanent way, two years in locomotive building, and three years in passenger train vehicles.

There is no reason to suppose that the position is radically different for the other lines, and it is not surprising that there should be some anxiety about the situation in which the companies will ultimately find themselves. This is clearly a point on which the agreement might well be

revised when it is possible to assess the total bill. Experience after the last war suggests that some allowance might possibly be made for work as it is done, and the Minister of Transport can, it appears, make such an allowance if he thinks fit. In this connection Sir Ronald Matthews made a point of some substance when he suggested that the work done for the American Forces in this country should form the basis for a special claim, in that such operations did not appear to be within the contemplation of either of the parties at the time the agreement was reached. This is at least ingenious, and insofar as circumstances permit, it would be reasonable for the authorities to make concessions, if the result will be the improvement of necessary capital equipment.

The matter of abnormal wear and tear is the only direction in which all the railways appear to favour amendment of the agreement. The impression created at the meetings of LMS and LNER was that the companies definitely lent support to the demand by stockholders for revision forthwith, and Colonel Gore-Browne also lent some support; but Sir Edward Cadogan argued that things had gone better than might have been expected in 1941, and that they might still be worse; that the agreement secures a fixed payment, however good or bad conditions are, and that it provides that

before control comes to an end time will be given for the adjustment of the level of railway charges to meet post-war conditions, bearing in mind the standard revenue provisions of the Act of 1921.

This statement is even more definite than those noted on page 345 of *The Economist* of last week, and it raises the critical question of what is really the post-war policy of the companies. It is difficult to read the above quotation as anything but an indication that the agreement gives the lines power to raise rates, and that such an advantage should not lightly be placed in jeopardy by calling for a revision at this juncture.

It has long been apparent that the railways wish to see established some road-rail agreement much more ambitious than the pre-war "square deal" arrangement, whose operation was deferred by the outbreak of war. The annual speeches show that a special drive is to be made to secure equality of treatment between various forms of transport for the repayment of track costs. In this connection Sir Edward Cadogan mentioned the proposal for a new Severn bridge. This, he said, would nullify the benefit which Parliament extended to the Great Western as an inducement to build the Severn tunnel. But the relevant Act is now 72 years old, and the cost should have been amortised long ago. Apparently this has not been done, and it was in this connection that Sir Edward advanced the ingenious suggestion that railway tracks and canal waterways should be treated, financially, as part of the system of national highways, while remaining in their present ownership. It is not clear from this statement—of which there was an even less precise echo in Lord Royden's speech—whether the cost of maintaining the roads, the railway tracks, and the canals is to be borne by the taxpayer or merely equalised over all forms of traffic. But in either case it would be a great competitive advantage to rail transport, in which trackage costs are naturally a higher proportion of total costs than in other forms of transport. Moreover, in strict logic, a necessary corollary of the scheme would be that the rail tracks should be open, like the roads, to the use of anybody who cared to put a vehicle on them. For this and other reasons, it is doubtful whether the argument is to be regarded as anything more than a clever debating point.

Read in conjunction with a certain insistence upon the "standard revenue," and the call for all road transport—other than that which is purely local—to be organised as a public service, and also with the lack of emphasis on costs, the speeches of the railway chairmen suggest an insistence upon improving the financial position of the lines by regulation rather than by increases in the overall efficiency of

national transport. Lord Royden concluded his address by saying that any attempt to water down the remuneration of LMS capital to the amount fixed by the wartime agreement would be sheer confiscation. It is doubtful whether it is useful to discuss the net revenue of the railways except against a background of the general level of prices, and the technical improvement which it is legitimate to expect. The fact is, however, that the wartime remuneration of the lines is well above the average for the pre-war decade. It is surely ridiculous in 1944 to insist upon the sanctity of

## Mining Wages

THE Government has lost little time in producing a scheme for the revision of coal-mining wages. Last week, owners and miners were presented with proposals, to be accepted as a whole, which would determine wages for 4½ years to come. The Government's intervention was timely; left to themselves, the two sides might have engaged in protracted and inconclusive negotiations. Equal promptness in facing the technical and financial problems of the coal industry at least two years ago would have saved the country much output and the industry much bitterness. And, inexcusable though the strikes have been, it was the Ministry of Fuel's ambiguous attitude in dealing with the so-called "anomalies" of the Porter Award that precipitated the present crisis, which has cost the nation at least half a million tons of coal.

Often confusing to the individual miner, coal-mining wages are baffling to the outsider. The industry's wage structure, largely for historical reasons, is the most complicated of any in industry, with the possible exception of cotton. The miner's wage is made up of two parts, a district basis rate and a percentage addition to the basis rate. The day wage worker's basis rate is a time rate for his class of work; the piece worker's is a price list for his colliery or seam. The percentage addition to the basis rate is determined for each district and varies according to the "ascertained" proceeds of the industry.

Since the war, a series of uniform flat rate advances have entered into the miner's wage in all districts. He receives a cost of living "war wage" now amounting to 2s. 8d. a shift; an "attendance" bonus, now an unconditional flat rate addition, of 1s. per shift; a 2s. 6d. a shift "Greene" wage; these advances together with a flat rate advance of 1s. a shift which was added in 1936 amount to 7s. 2d. a shift. There are also a number of special allowances, which vary in the different districts. Thus the South Wales miner receives extra money for working in water and in dust—the threatened non-payment of these allowances was the direct occasion of the present strike—house coal and, in some districts, a house, may be included. No two districts have exactly the same basis of remuneration.

The Porter Award established an over-riding national minimum wage of £5 a week for underground workers and £4 10s. for surface workers. This means that if a miner's basis rate plus percentage plus supplements falls below this figure, the difference is met from the Coal Charges Account. This is a central pool fed by an output levy—now of 8s. per ton—from which expenses in connection with wartime costs, such as the Greene award, assistance to necessitous undertakings and district output bonus, are met. Over and above the national minimum and everything else hitherto mentioned, there is the district output bonus.

The most complicated feature of the patchwork structure of mining wages is the so-called profit-sharing system which determines the percentage addition to the basis rate. The principle of the ascertainment in its present form was laid down in 1921, after a three months' stoppage. In 1926, after the prolonged coal strike, the ascertainment was placed on a district basis. The object of the 1921 Agreement, as defined by the Samuel Commission, was "to arrive at an objective basis of prosperity and adversity, so as to avoid blind bargaining or trials of strength." In practice the ascertainment has been a constant cause of contention, and, in recent years, its fluctuating "economic" element has been superseded by the introduction of flat rate standards.

Briefly, the system works as follows. The proceeds from the sale of coal for a given period, after deducting "costs than wages" (these include timber, stores, rates, insurance, compensation, directors' fees) are divided between the owners and miners in an agreed proportion. The ratio is usually 87 per cent to wages and 13 per cent to profits. An agreed

minimum percentage addition to basis wages, which varies in the different districts—in Scotland it is 100 per cent, in Northumberland 45 per cent, in Durham 70 per cent—is a first charge. If 87 per cent of the proceeds is not sufficient to meet the minimum percentage, it has to be paid out of the owners' share; in this way the "deficiencies" arise. The deficiency, the difference between the profits the owner actually receives and his full 13 per cent, is cumulated, and recovered before the miner can secure any increase over the minimum percentage. In some districts the deficiency is cancelled at the end of each year. The

### EXAMPLE OF GOVERNMENT PROPOSALS

| DAY-WAGE COLLIER                 |         |    |    | Proposed |    |

layman finds the paradox of co-existing profits and deficiencies somewhat difficult to understand.

In theory the principle of profit-sharing is fair, but in practice it has many disadvantages, and has tended to bring the whole idea of industrial profit-sharing into discredit. It has exaggerated the differences between the more prosperous inland and the poorer exporting districts, where it has operated to prevent wages from rising above the minimum percentage. The most serious criticism, however, is that the ascertainments do not take into account pro-

ceeds from coke and other by-product activities, which were specifically excluded—against the miners' wishes—under the Plender interpretation of 1921. The miners have always argued that if proceeds from the highly profitable by-product undertakings were included, wages would be able to rise well above the minimum percentages.

Under the Government's new proposals, the ascertained amounts would be "frozen" and the district minimum percentage additions incorporated in new basis rates, together with all the other flat rate advances except for the automatic cost-of-living addition, which would remain outside. The district output bonus scheme would be discontinued. One object of the scheme is to simplify the wage structure, by these consolidations. Another is to provide increased incentive for higher output. The proposals can be put most clearly by setting out in an accompanying table the examples shown by the Government. The effect of the change is to make earnings rise more rapidly as output increases. The worker who fills 4 tons a shift on the basis shown in the example would receive at present £5 2s. 6d. for a 5-shift week, and under the new scheme £5 8s. 9d. with 5 tons a shift, earnings would be increased from £5 19s. 2d. on the present scale to £6 12s. 7d.

It is difficult without precise figures to estimate the effects of the proposed new rates in the different coalfields. Pieceworkers, constitute between 36 and 40 per cent of the industry's manpower of 703,000, and it is estimated that about 200,000 miners would receive increases. It is clear that workers on or near the minimum would get little if any, increases, unless they were able substantially to increase their output, though they would have greater incentive to do so. But in practice nearly all workers will get some increase, since a piece worker is normally able to earn 20-30 per cent above the minimum. In the higher output districts, such as Nottinghamshire, piece-rate earnings would be substantially increased. Output per man shift at the coal face in Nottinghamshire is over 4 tons; in South Wales, largely owing to geological conditions outside the miners' control, it is only 2 tons.

The new scheme would seem to maintain, and possibly to accentuate, the existing differences between the districts. There has been a growing tendency to introduce national principles in mining with the fixing of a national minimum wage and the setting up of national conciliation machinery. These factors would, of course, be preserved, but competitive price-cutting between the different coalfields might still continue. The Government proposals would bring about a necessary simplification of wages and a better relationship between earnings and output, but they can hardly be described as a "fundamental overhaul." In engineering, a scheme for grading workers according to their skill is being worked out, and some similar method of grading might be introduced in mining. The definition and

position of a "skilled craftsman" in the industry has not yet been determined.

The most controversial feature of the scheme, and perhaps its most important, may be the provision that the new rates should remain in force until June, 1948. Neither side could give notice to terminate the agreement until December, 1947. In many respects the stabilisation of wages would be a great advance, and will be welcomed by the miners, who have long been pressing for greater economic security. At the same time, as the cost-of-living addition is to continue, it seems essential that the present cost-of-living figure should be made more representative. The owners will argue, with some force, that the pegging of wages for 4½ years may be inflationary and will place them at a disadvantage in the export trade. In peacetime, the mining industry can only pay the wages it can economically afford, or else mulct consumers, including the whole of industry, by onerous charges. The way to high wages is not via dear coal but by greater efficiency and higher productivity.

The Government is prepared to continue a system on the lines of the Coal Charges Account, and to "maintain the price of coal at a level which will ensure a reasonable credit balance for the industry." The levy for the Coal Charges Fund was recently increased from 5s. to 8s. a ton, and an additional 3s. added to the price of coal. The cost of meeting the Porter Award has been estimated at £5 million and the new proposals might involve a further £7 or £8 million. This means that the consumer will eventually pay for the increases, in the form of higher retail prices or increased prices for manufactured goods. Coal enters into the cost of production, to a greater or lesser degree, of every industry. In such industries as iron and steel it is one of the most important factors. Sir William Larke, Director of the British Iron and Steel Federation, recently pointed out that every shilling increase in coal prices added two or three shillings per ton at least to the cost of steel. Mr John Brown, the iron and steel trade union leader, gave the same warning in his journal *Man and Metal*.

But these arguments would only have force if the present structure and organisation of the coal industry is maintained. The extent to which prices will rise must depend upon the extent to which technical inefficiency is not eliminated. Higher wages must be matched by higher output, and there must be no subsidised inefficiency. The Government is apparently prepared to guarantee higher coal prices and higher wages. Logic, and the most pressing national interest, demand that it should carry its responsibilities further and secure a thorough technical reorganisation of the industry. This may involve changes in ownership, but, as *The Economist* has argued previously, if efficiency can only be secured through nationalisation, the price is not too high.

## Business Notes

### Civil Aviation

Like the debate on civil aviation in the House of Lords a fortnight ago, that in the Commons on Tuesday added nothing new to the discussions except a description by Sir Archibald Sinclair of seven types of civilian aircraft whose construction has been recommended by two committees under Lord Brabazon. The first is a big transatlantic aircraft designed by the Bristol Company; the second is a land plane of over 100,000 lb all-up weight capable of crossing the Atlantic with an interim stop at Newfoundland; the third is an aircraft of an all-up weight of 70,000 lb designed for use on travel routes in intermediate stages; the fourth is a two-engined aircraft of 40,000 lb all-up weight for use on the European service and for other short and medium range work; the fifth type, of which details are not yet available, is to embody the principle of jet propulsion; the sixth and seventh are smaller planes for use on feeder lines and for internal British services. This is an interesting array of types which, like a merchant shipping fleet, are designed to cater for a multitude of general and specialised services. But the description of these types does not mean that they will all take to the air in the near future or even at the end of the war in any large numbers. Sir Archibald was not even able to forecast the dates when they will be ready for service. His statement merely means that the Government has made a selection of types that will eventually constitute a merchant fleet of the air. It is still certain that Britain will be relatively very short of civil aircraft when commercial flying is resumed.

### Each to His Capacity

The war potential of a country is not measured by its total resources, but by the difference between them and the minimum necessary to keep its population in good health and its essential physical equipment intact. This margin is small in countries dependent on primitive methods of production, such as India, and large in countries where the number of human "hands" has been multiplied by the use of machines, as in the United States and in the United Kingdom. Moreover, the resources required to maintain a member of the civilian population in good health is not the same in all countries; it varies widely according to climate, customs and conventions. The accompanying statistics, given in an address by Mr R. A. Musgrave and H. L. Seligman before the National Tax Conference in Chicago last November and published in the January issue of the *Federal Reserve Bulletin*, reveal part of the picture of the comparative war efforts of the United Kingdom, the United States and Canada. They show taxation, Government expenditure and the national income before the war and in the latest year for which figures are available—the national income expresses in financial terms the sum total of individual and corporate effort in a given year—but they lack the final element in the comparison, that is an estimate of each country's war potential. The facts that these figures are not adjusted for differential changes in prices, and that the British and Canadian ones are converted into US dollars at the official—and somewhat artificial—rates of exchange renders the comparison of national incomes, Govern-

ment expenditure and taxation approximate rather than precise. But this qualification does not apply to the proportions. The increase, since the outbreak of war, in the

(a) United States, fiscal year 1940-41; United Kingdom and Canada, 1938-39.

proportion of the national income spent by the central Government—this broadly represents war expenditure—has been biggest in the United Kingdom; moreover, taxation absorbs a bigger proportion of the national income in the United Kingdom than in Canada and the United States,

and both the United Kingdom and Canada meet nearly half the expenditure of their central governments from taxation. In absolute amounts, the war expenditure of the United States in 1942-43 was more than treble those of the United Kingdom and Canada put together, but if war expenditure is expressed as a proportion of their national incomes Britain heads the list in 1942-43, followed by Canada and the United States.

### Credit Contraction

The seasonal contraction of credit which normally marks the last quarter of the financial year made further progress in February. The clearing banks' deposits fell from £3,962,175,000 to £3,896,801,000. This movement was accompanied by a general contraction of assets, the sole exception being an increase of about £11,000,000 in advances. This last movement may, in large measure, be accounted for by the customary increase of bank loans to finance tax payments at this time of the year. It may also represent a more interesting phenomenon, namely, the first fruits of the banks' well publicised concern for the needs of the small business. Treasury Deposit Receipts took the brunt of the deflation of credit last month, and fell by £41,000,000. Bills discounted and short loans also ran off during the month, and, in fact, the whole of the seasonal contraction in deposits was absorbed in the traditional manner by the cushion of quick assets. A further reduction of £7,558,000 in investments brings this item almost £26,000,000 below the level reached last November. The reduction is probably explained in large part by the banks' sales of Conversion 5 per cents, which have been keenly bid for by the Government broker ever since the announcement of the redemption of this loan was made. The banks may also be trimming their sails for further investment operations. In any case, the reduction in this item should be *reculer pour mieux sauter*, the next jump being called for by London's Salute the Soldier Week which opens on March 25th. Now that most of the banks are reputed to have lifted their earnings to about their EPT levels, the urge to go into gilt-edged

(The Bank of Nova Scotia is incorporated in Canada with limited liability.)

will have lost some of its earlier force; it is quite probable that further expansion in credit may be effected without further substantial incursions into medium-term securities. If the banks are, as recent evidence suggests, beginning to concern themselves more seriously with post-war problems, and, in particular, with the problem of liquifying their resources preparatory to increasing their loans and advances, a further building-up of quick assets would, in present circumstances, be the obvious course to follow.

### Canadian Pacific Results

Preliminary results of the Canadian Pacific Railway for last year show that, in addition to the increase of a million dollars odd in net railway earnings, there was a rise of \$410,000 in other income and a fall of \$1,194,000 in fixed charges and interest payable on "Soo" line stocks. This leaves some \$2,630,000 more available, which is, perhaps, rather better than was expected. The Canadian Pacific can, however, always be relied upon to have something up its sleeve and this year it has decided that the time is ripe to make provision for extraordinary retirement of rolling stock. This requires \$20 million and although the bulk is provided by the transfer of excess steamship depreciation reserve, \$3,350,000 odd is debited against the profits of 1943. Evidently, this sum should be spread over the war years. After making this and other miscellaneous deductions and providing for preference dividends, and the resumed payment of 2 per cent costing \$6,700,000, on the ordinary, it is still possible to increase the surplus by \$23½ millions odd on the year to some \$224½ millions. In attempting to assess actual earnings per share it should be borne in mind that the addition to the surplus is net of tax. The principal changes in other income are a rise of \$1,643,793 in earnings from hotels and miscellaneous properties and a fall of \$1,868,254 in those from shipping. These figures are before providing for depreciation, which is increased from \$1,738,804 to \$2,651,357 for hotels and reduced from \$3,105,034 to \$1,991,528 for shipping. It seems probable that this tendency will continue throughout the war and the question arises what policy the company will adopt as regards ocean steamships after the war. At the end of 1942 the steamship depreciation reserve amounted to almost \$46½ million, against a balance sheet valuation of ships of \$52½ million odd. Thus, these assets, valued at \$104½ million at the end of 1938, have been largely written off, even after making allowance for the draft on the reserve made to retire rolling stock.

### Powell Duffryn Issue

The offer of ordinary shares in Powell Duffryn Associated Collieries to holders of preference and preferred ordinary capital in the two companies placed in liquidation, namely, Powell Duffryn Steam Coal and Welsh Associated Collieries, has been accepted by holders of 74 per cent of the total of all classes of capital concerned. From the standpoint of the underwriters, this is considered very satisfactory. Having regard to the fact that there is always a proportion of holders who fail to accept even the most favourable offer, it will be difficult to maintain that the terms were not widely held to be superior to those demanded by the strict letter of the law. So far as this group is concerned, the matter is now settled, but those who feel that the preference shareholders have been given, at best, a very raw deal, by the companies being put into liquidation while they could still earn dividends, are still pressing their point of view. By referring the question to the Cohen Committee, Mr Dalton has ensured that this aspect of the rights of preference shareholders will not be overlooked. Pending a decision on the matter, it is relevant to point out that, whatever may be the proper procedure in the case where a reduction in preference charges merely adds to the ordinary dividend, any regulation which postponed their reduction until such time as the funds did not exist to meet them would be shortsighted from the standpoint of

the preference shareholders themselves and against the national interest. Each case should be decided on its merits, but it is clear that a board which defers necessary capital replacement merely with a view to meeting interest charges or dividends, whether preferential or not, is acting against the interests of creditors, shareholders, and the general public.

### Resistance to Progress

The future of Great Britain as one of the world's industrial power-houses depends on the ability and willingness of industry to keep abreast in the application of scientific and technical progress. Unfortunately the implications of this, the only sure road to higher productivity and a higher standard of living, are even now not fully realised. Above all there is need for a new attitude in industry, for a greater willingness to discard traditional methods and practices that may have served well in the past but are out-of-date in the twentieth century. That the need for a change in outlook is as necessary among workers as it is among industrialists was illustrated by reference to the shipbuilding industry by Mr J. R. Gebbie, President of the North-East Coast Institution of Engineers and Shipbuilders, in an article contributed by him to the *Shipping World*.

Due to the age of our British shipbuilding industry, we are hampered by a host of old customs and ancient agreements which are totally inappropriate to present-day—and still less to future—plant and methods of construction, but which the workers mostly refuse to have modified; this state of affairs will be still worse when further extensive new plant and completely different methods of construction are introduced in the near future.

As a typical example, Mr. Gebbie mentioned that a machine recently installed in a shipyard could, with a little practice, be operated by an unskilled worker. But when it was actually handed over to an unskilled worker all other operatives struck work on the ground that the particular operation had for decades been carried out on a machine which required a skilled worker. To insist on the principle that a particular operation that required a craftsman in the past should be carried out for all time by a craftsman, irrespective of the simplification of the operation, would be to put the British shipbuilding industry out of business and thus to deprive both skilled and unskilled workers in the industry of jobs. As Mr Herbert Morrison justly remarked in a speech in May last year,

Certainly the philosophy of monopoly may offer to a limited number of workpeople some relative stability of employment at a relatively satisfactory wage. But at what cost? At the cost of unemployment for the rest, of insecurity for the rest, of keeping down the national income as a whole by producing less than we could produce at higher prices than we need.

### Diamond Boom

There seems to be no limit to the wartime demand for diamonds, reflected in the boom in diamond shares. At a small "sight" held by the Diamond Trading Company in London in the course of the last few days some £1,200,000 worth of gem stones were offered, but applications for these stones by the trade reached a total of no less than £6,000,000. Further "sights" will be held at the end of this month and in April and it has already been announced that prices for uncut gem diamonds will then be raised by another 7½ to 10 per cent. While a shortage of expert sorters prevents the diamond syndicate from taking full advantage of the strong demand—industrial diamonds, which are still sold at pre-war prices, have a priority on sorting—this year's total sales may, on the present evidence, reach, or even exceed, the 1943 figure. Last year's turnover was recently stated by Mr Hofmeyr, the South African Finance Minister, to have been in excess of £20,000,000, compared with £10,500,000 in 1942 and no more than £4,250,000 in 1938. Although production in at least two of the South African gem diamond mines was resumed last year, current sales appear to be appreciably in excess of current production, so that further inroads into stocks will be made this year. As stocks have declined heavily since 1940, there are good prospects that the diamond syndicate will enter the post-war era in a very strong position. The heavy accumulation of stocks during the 1930 to 1933 slump period had proved a serious obstacle to the activity of the gem diamond mines, especially in South Africa, where most of the mines had to be kept idle over periods

of years, which resulted in serious repercussions on social conditions in the mining areas. The absence of heavy stocks after the war may enable the industry to secure more stable employment in mining. It may at the same time facilitate the solution of the problems connected with the necessary reorientation of the market for industrial diamonds. Although immediate post-war consumption of industrial diamonds is likely to be smaller than wartime requirements, it will certainly remain permanently far in excess of pre-war needs. As the wartime boom will probably use up the reserves of industrial stones, future production will have to be speeded up to meet all legitimate industrial demand. Since no diamond mine produces only industrial stones, supplies of gem stones will automatically become available in the production drive for industrial varieties. The heavy reduction in stocks of gem stones during the war may enable the industry to absorb these new supplies without undue pressure on the gem market.

### Sweden's Monetary Policy

In May, 1943, the directors of the Swedish Riksbank appointed a committee of experts to investigate the problem of the post-war value of the krona. The committee, which included the eminent economist, Professor Erik Lindahl, has issued a preliminary report. Without making specific recommendations on points of detail for which the necessary data are not yet available, the report lays down the tentative lines of policy which should be followed by Swedish exchange policy after the war. The approach of the Swedish experts is based on the following fundamental concept:

The aim of economic policy during the first post-war period may be stated in general terms to be to restore as rapidly as possible a satisfactory standard of supply and to maintain full employment along lines of production affording the most favourable conditions for the future of Sweden's industrial and economic life.

Even with the advantage of this reasonably firm start, however, the experts quickly become conscious of the fact that they are prescribing for a situation the main features of which they are at the moment quite unable to diagnose. They, therefore, adopt the principle of setting out a number of probable alternatives which Swedish policy will have to follow. The result is to give the report an unusually hazy and indeterminate appearance. The gist of the recommendations is that Sweden should, as far as possible, maintain after the war the price stabilisation policy which has for long been the basis of the conduct of her monetary affairs. The crucial question to be answered is whether the wartime rise in prices should be allowed to stand or whether the stabilisation policy should attempt to link up with the 1939 level of krona prices. The experts admit that a deflationary process brought about by monetary means, and based on a lowering of wages, would conflict with the full employment policy, but they appear ready to compromise with such a possibility "should the supply of goods again reach the pre-war level." The question of fitting Swedish exchange policy within an international framework is treated with understandable discretion. The desirability of monetary co-operation with the other Nordic countries is stressed. The integration of that Nordic bloc into a wider international scheme is regarded as desirable, though the importance of maintaining some freedom of action in regard to exchange policy is laid down, as unconditional pegging of exchange rates might be difficult or impossible to reconcile with the basic objectives of domestic monetary policy. The experts are convinced that, in any case, it would be necessary to maintain sufficient control over payments between Sweden and other countries to prevent extreme capital movements.

### Interest and Premium Rates

In a paper recently read by Mr E. F. Martin before the Insurance Institute of London, the interrelation between interest, premium rates, bonuses and valuations was discussed. Interest rates, it was argued, are the main unpredictable variable in the determination of premium rates charged and bonuses distributed by life assurance companies. Mortality can be accurately estimated, and expenses can be controlled. Interest rates had in the past remained outside the bounds of reasonably accurate prediction. Mr Martin traced the variations in life office fund yield since 1899, the year which saw the lowest level of average

net yield up to that time. The figure touched 3½ per cent in that year, but as taxation was then not much more than 1s. in the pound, the gross yield was only slightly higher. The opening years of the new century saw a gradual improvement in the net rate, and by 1914 many offices were obtaining 4 per cent, though the average may have been slightly under that figure. During the last war gross rates rose, but there was a steep rise in income-tax. It was during the twenties—the years which saw first the attainment, then the defence, of the nominal gold parity of sterling—that net yields reached their peak. Figures of 4½ per cent and over were recorded by most offices. With the arrival of cheap money gross yields began to decline and they reached their lowest by the end of 1935. Since the beginning of this war—despite the virtual stability of gross yields—there had been a rapid decline in net yields; the impact of the increase in the income tax was arrested at the figure of 7s. 6d. in the pound—the rate paid by life offices on investment income in respect of life policy holders. The yields on new money had been reduced by investment in Government loans bearing gross interest at 3 and 2½ per cent. Mr Martin thought that the first half of the century would have witnessed a full circle in the variation of life office yields. Many offices now are not earning much more than 3 per cent net on their total investments, and the margin between net yields and pre-war valuation rates (normally 2½ per cent) has narrowed seriously enough to render precarious any hopes of substantial bonuses in respect of the war period. Looking to the future, Mr Martin foresaw a further decline in average yields. This is likely to occur not through a further reduction in the rate available on new investment, but through the maturity of investments made in the past and the inability to reinvest these funds without loss of yield. On balance, Mr Martin looked for some improvement after the war, when a new cycle in interest rates should begin. He admitted, however, that it would be unwise to expect more than a very gradual and moderate rise in yields—if only because the present gap between the standard rate of income-tax and that levied on life offices' investments may mean that relief to these offices may not immediately follow a reduction in taxation.

### LPTB Stocks

The full accounts of the London Passenger Transport Board for last year add little to the story of the preliminary statement. So far as the "C" stock is concerned, it is now clear that, of the total dividend of 3½ per cent, almost ½ point was paid out of profits of earlier periods. This is made up of £57,487, adjustment of the 1940 figures, and £20,818, draft on the "C" stock interest fund. Receipts under the agreement are no more indicative of the earning power of LPTB after the war than those of the main lines, but the picture is not the less grim for the moment. Last year, the holders of senior stocks commenced to share in the disabilities which had previously fallen only on the "C" stock, for the period of suspension of redemption funds expired on June 30th. Contributions to these funds can, however, only be made after the standard rate of 5½ per cent on the "C" stock has been met, so that no money has been, or will within the visible future be, set aside for the repayment of the senior securities. It is impossible to base conclusions on wartime results, but it was already evident before the war that the granting of a monopoly would not ensure profitable operation on the existing capitalisation. Unless there is a drastic change after the war, it may be expected that all classes of stockholder will be dissatisfied with a position in which there is no effective means of exercising control, for the provision that "C" stockholders may apply to the Court for the appointment of a receiver had so far proved to be worthless.

### Caution Over Copper

Mr. A. Chester Beatty, the chairman of Roan Antelope, in his statement accompanying the publication of the full accounts for 1943, strikes a note of caution about the mine's post-war prospects, by way of explaining the company's non-payment of a dividend. The full accounts show, indeed, that, while both have risen, operating expenses have outpaced sales of copper, so that gross profits are slightly lower at £1,309,677; but due to a substantial saving on the amount needed for taxation, net profits are some £20,000 up at £584,022. Last year a similar figure was deemed good

ESTABLISHED 1824  
**SCOTTISH UNION AND NATIONAL**  
 INSURANCE COMPANY  
 ASSETS EXCEED £18,500,000  
 FIRE LIFE ACCIDENT MARINE  
 Edinburgh: 35, St. Andrew Square.  
 London: Northside House, 15-16, Moorgate, E.C.4.  
 and 45, Pall Mall, S.W.1.

enough to warrant a 10 per cent dividend, but, unfortunately for financial tranquillity, the war has progressed since that date and the rigours of peace lie closer ahead. Therefore, in order to strengthen the company's liquid position, the whole of the available sum of £584,022 has been consigned to the general reserve. Mr Beatty points out that the excess of free cash is only £399,019; on this basis of computation, that is exclusive of stocks of copper and of stores—excess of free cash in 1942 was only £96,189, while a comparable figure for 1941 would seem to have been negative; or, to apply this yardstick to another operating mine, Rhokana would seem to have afforded a 25 per cent dividend for 1943, also without possessing any balance of free cash. There can be no doubt, in fact, that Roan Antelope's net liquid assets have risen steadily in the last three years. The bogey in front of Mr Beatty is, of course, the large stocks of copper accumulating in the hands of various Governments. This factor will force down demand and prices after the war, in so far as its impact is not staggered, by arrangement, which to some extent it may very well be. Mr Beatty also revealed progress in the mine's technical reorganisation. During the last two years the scheme for filling in the hanging wall has been accomplished for one-half of the mine. This has caused some set-back to production and has increased current costs. The completion of this work after the war is likely to reduce production, conveniently enough, during just that period when stocks are being unloaded. This capital scheme represents the making good of a deficiency rather than the creation of new wealth. Nevertheless, Roan Antelope will leave the war much better equipped for production than it was immediately before it. Mr Beatty's remarks resolve themselves into a general lament upon the future of copper; and it is, of course, only one stage further for companies to base their actions upon general doubts about the future of trade.

#### Post-War Furniture

A useful and valuable interim report has recently been made public by the Furniture Industry Post-War Reconstruction Committee, on which employers and trade unions are represented. The report is a summary of one submitted to the President of the Board of Trade three months ago. Its main purpose is to sketch an approach to the problems of reconstruction on the manufacturing side of the furniture industry. The main recommendation is the substitution of "standard" for utility furniture. Standard furniture would embody all, or nearly all, the elements of control inherent in utility, with the important distinction that it would be designed for peace time. Utility furniture, while graceful in appearance, has no claim to lasting qualities. It is a makeshift which should be superseded as soon as possible. There are lessons for peace time to be learned from the utility furniture scheme. Despite its admitted imperfections, it is as good as if not better than the non-utility furniture of a similar price which was being manufactured just before its production began. The laying down of standards of quality of construction and materials, with prices controlled and free of purchase tax, is likely to eliminate "junk" furniture—an admirable post-war aim of the trade. It is proposed that a share of the available materials should be allocated to factories as they become ready for production. Those producing utility furniture would be treated in the same way. Firms would be licensed and would have to produce a certain quota of standard furniture. Adjustments in the quota as supplies increase is suggested to provide a smooth and gradual method of eliminating control. The report does not deal with the distribution of furniture and it is this aspect of the problem which is of paramount importance in the relaxation of control. There should be enough standard furniture to meet demand before its production is reduced. This principle is being applied in the utility scheme, and only this week, it was announced that couples married after September 1, 1939 (it was previously January 1, 1941), could now apply for permits. On the whole, the report is a heartening one. No undue difficulties are envisaged in getting the furniture trade on to a peace-time basis.

#### Shorter Notes

After a lapse of thirteen years, the board of Bradford Dyers' Association have been able to recommend a dividend on the ordinary capital in respect of 1943. The payment is to be 4 per cent and this is rather less than market expectations, based on the fact that 1942 earnings covered two

and a half years' arrears of preference dividend with a modest margin. The £1 ordinary shares fell on the announcement, but at 21s. 6d. still yield only £3 15s. 9d. per cent. The preference improved on the news, but still yield appreciably over 5 per cent. The market value of the ordinary can only be justified on the assumption that there will be a further marked improvement in earnings over a protracted period. As it is doubtful whether this will materialise, many holders probably expect to be able to sell out during the period of post-war restocking.

Owing to a printer's error in the first of the two tables accompanying the article entitled "Is There Enough Oil?" on page 343 in *The Economist* of March 11th, the production of crude oil in the United States in 1938 was stated to be equivalent to 2.325 per cent of its "proved" oil resources. The correct figure is 6.325 per cent. Although the other figures in the table were given correctly and the error rectified in the later copies, the correct table is appended in full for the convenience of those whose copy contains the error.

TABLE I.—ESTIMATED WORLD RESERVES, 1942, AND WORLD PRODUCTION, 1938

|                                                            | World Reserves, 1942 (thous. barrels) | Percent. World Reserves, 1942 | World Production, 1938 (thous. barrels) | 1938 Production Expressed as Percent. of 1942 Reserves |
|------------------------------------------------------------|---------------------------------------|-------------------------------|-----------------------------------------|--------------------------------------------------------|
| United States of America .....                             | 20,000,000                            | 36.369                        | 1,264,970                               | 6.325                                                  |
| Union of Soviet Socialist Republics .....                  | 8,500,000                             | 15.457                        | 210,000                                 | 2.471                                                  |

† Including income from subsidiary and associated companies.  
‡ Gross profit for 1941 was £1,189,378, out of which £429,421 was allocated for taxation. For subsequent years, separate figures for taxation have not been given.  
\* No provision for sinking fund for the 5% Debenture Stock was necessary in 1943. (See below.)

Since the end of the latest year (September 30, 1943), an issue of 1,900,000 new ordinary shares has been made, at 27s. per share, and used to pay off all of the outstanding 5 per cent debenture stock (£3,031,560), at a premium of 5 per cent. The balance required for this operation has been met from the company's cash resources.

The ordinary shares of £1 standing at 26s. ex dividend yield £6 3s. 1d. per cent.

... but **STILL**,  
it's a compensation

This famous British Table Water—in Sparkling form—has disappeared for the moment but it will return with victory. An understanding public will appreciate our difficulties.

Meanwhile—as a compensation—sufferers from Rheumatism, Sciatica and allied complaints will be glad to know that Bath Spa Water in **STILL** form, with all the curative mineral properties of the best Continental Spas, is still obtainable.

## HISTORY, CURRENCY, AND PROPHECY

Before the War, when quality was what we cared to make it — we at Rowntrees made it high. You will remember Black Magic — Chocolate Crisp — Aero Milk Chocolate. These were typical of the standard at which all our production was fixed.

During the War, quality can be only what we are able to make it. Nevertheless, we find, somewhat to our surprise, that in spite of Hobson's choice in the matter of ingredients, we are able to make Chocolate and Clear Gums which the people who eat them are kind enough to call excellent. Even so, owing to Zoning we can sell them only in certain parts of the country, mainly in the North and East.

After the War, when at length the quality of our products again comes completely under our own control, we shall make our post-war products to our pre-war standards. Unhurriedly, as the right materials come into the country, we shall again produce Black Magic, Chocolate Crisp and the others — and sell them from Penzance to the Pentland Firth. And that's a promise.

**ROWNTREES**

## EXTRA VITAMINS ESSENTIAL TO HEALTH

Colds and influenza cannot be resisted when your diet is deficient in vitamin A: the daily dose of Crookes' ensures you the necessary amount. Adults cannot keep healthy and children cannot grow up with straight bones and strong teeth without sufficient vitamin D: the daily dose of Crookes' keeps your supply well above the safety level.

This extra supply of vitamins A and D will work wonders in building up your resistance and stamina through this fifth wartime winter.

## COMPANY MEETINGS

SCOTTISH LIFE ASSURANCE  
COMPANY, LIMITED

## GRATIFYING INCREASE IN FUNDS

## SIR JOHN MACLEOD'S SPEECH

Sir John Lorne Macleod, chairman of the board of directors, presided at the annual meeting of the Scottish Life Assurance Company, Limited, held, on the 15th instant, in Edinburgh.

In moving adoption of the report and accounts for year 1943, the chairman said:

In 1943 we issued 867 new life policies for sums assured of £787,983 gross, or after allowing for sums reassured £729,791 net. This is a slight advance on the figures for 1942. So long as present conditions continue we cannot expect much further expansion in the new business field. We have neither the men nor the opportunity to make personal approaches to possible proposers among the assuring public. Reliance has to be placed on existing connections for most of the business secured. Too seldom does the initiative come from the prospective assured himself, so that full credit must be accorded to our few remaining representatives for having placed about three-quarters of a million pounds of new sums assured on the books during the year.

## PREMIUM INCOME WELL MAINTAINED

The premium income is being extremely well maintained. The revenue figure of £645,495 includes renewal premiums of £608,489, which is an advance of nearly £8,000 on that of the previous year. This is one of the most satisfactory features of the accounts. Purchase money for the sale of annuities is not at present, as it used to be, an important item of receipts owing largely to the disadvantages attaching to annuities from the taxation standpoint. The existing rules place unduly onerous burdens on the recipients of life annuities especially during a time when the standard rate of tax is high. There is a case here for rectification of the law.

Claims by death totalled £267,000 in round figures, and claims by survivorship were £418,000. I would like to draw attention to the comparatively low figure of death claims. Before the war we were experiencing a mortality strain on the funds which approximated closely to the strain expected by the standard tables. During the four years of war the actual strain under all death claims, including war casualties, has amounted to very little more than the amount anticipated by the mortality table on which calculations were based before the war. When it is considered that over the four years 1940/1943 the total strain has been only 102 per cent. of the expected and that the figures are known to include many deaths of young lives on active service which would not have occurred but for the war, it is clear that the mortality of the general body of policyholders must have been exceptionally light for the period.

Commission and expenses of management have contracted by a considerable amount, the actual ratio relative to premium income being 12.5 per cent. as against 13.3 per cent. the year before.

## INTEREST REVENUE

The interest revenue shows a yield on the invested funds for the past year of 4 11s. per cent. before deduction of income tax, and 3 7s. 6d. per cent. after deduction. These rates are increases of 11d. and 1d. respectively on the gross and net figures of the previous year. The net yield on the funds for the three years of the current quinquennium has approximated closely to 3½ per cent. throughout. It will be difficult even to maintain this rate so long as Government long-term credit is stabilised, as it seems to be, at about 3 per cent. gross. By way of comparison I may recall that we earned about 4 per cent. net for the period which ended

with our last quinquennial investigation. A main feature leading to this decreased earning power is of course the steep rise in the standard rate of income tax in recent years.

The increase of £130,000 in the life funds during the year is gratifyingly substantial. The whole of this sum has been invested in 3 per cent. savings bonds, and an additional £130,000 as well. Twenty-seven per cent. of the office portfolio of investments is now represented by British Government securities. With regard to this portfolio I may say that the values of investments entered in our balance sheet are in the aggregate well below their current market values, and if "current market value" can be taken as synonymous with actual worth we have a substantial undisclosed reserve to set against possible future depreciation.

The motion having been seconded by Sir Iain Colquhoun, Bart. of Luss, K.T., D.S.O., was adopted.

NATIONAL PROVIDENT  
INSTITUTION

## FAVOURABLE MORTALITY

The following is a summary of the address to be submitted by the chairman, Mr Vincent W. Yorke, at the annual meeting of the National Provident Institution for Mutual Life Assurance to be held, on the 21st instant, in London.

The distribution of profits made a year ago gave great satisfaction to our members, and nothing has happened since to cause us to alter the decision then announced to allow interim bonuses on all full profit policies becoming claims either by death or maturity before the next distribution of profits is made. At the present time these interim bonuses are calculated at the rate of 30s. per cent. per annum in the case of whole life assurances, while in the case of endowment assurances the rates vary with the maturity age, but average about 24s. per cent. per annum.

In spite of a sadly depleted "field" staff, our new business shows a useful, if moderate, increase as compared with that of the previous year. Our death claims, which include some £40,000 in respect of war casualties, are very moderate, with the result that in spite of war conditions we have earned a good mortality profit. If deaths due to war are excluded the ordinary claims for 1943 amounted to only £253,700, a figure which is lower than any comparable figure (with one exception) during the past 50 years.

And what of the future? I believe that we are affording a public service of the most valuable kind in the efficient and economical management of our business of mutual life assurance; for life assurance will still be wanted to supplement whatever other provision for dependents or old age a man may make or have provided for him by a kindly and bounteous state, and what better form of life assurance can there be than mutual life assurance?

## BOVRIL LIMITED

The forty-seventh annual general meeting of Bovril, Limited, was held, on the 15th instant, in London.

The following is an extract of the statement by the Lord Luke (chairman) circulated with the report and accounts:—The demand and supply of Bovril have been maintained at a very high level. If the supply has not everywhere satisfied the demand, the reason is that priority has gone to the Services; in all other respects an equitable distribution has been our constant aim, as in all the war years.

Your board has given much thought and consideration to plans for the company in the post-war period. Prominence in our post-war plans is given to (1) research in the spheres of food, health and public tastes; (2) modern production; (3) sales both in the United Kingdom and particularly overseas.

CO-OPERATIVE PERMANENT  
BUILDING SOCIETY

## DIAMOND JUBILEE MEETING

The annual general meeting of the Co-operative Permanent Building Society was held, on the 9th instant, in London.

Dr Albert Mansbridge, C.H., in his presidential address, said: At the commencement of its sixty-first year the society is confronted with a housing situation aggravated by a destructive war. Given wisely conceived plans for the housing of the people, this society can and will contribute powerfully to their consummation. This is clearly demonstrated by the balance-sheet and report.

Sixty years ago the society was like an acorn, became a sapling in 1894, and has flourished as a great oak tree. It is a good thing that this balance-sheet is one of the very best the society has ever shown and is a remarkable achievement after 4½ years of war. It is a matter for congratulation that the society can face the future with that feeling in their heart and mind.

## GROWTH IN WAR YEARS

With this balance-sheet the society has now completed four full years during which the country has been at war, and in this period of 48 months of emergency it is found that the membership has increased by 15,000 to 153,600. Assets have grown by £3,600,000 to £34,800,000 and share capital by £3,750,000 to £25,000,000. Mortgage advances, necessarily restricted by the special conditions, amounted to £3,800,000. Equally satisfactory is the return of £200,000 to borrowers by way of mortgage interest rebate and the crediting of £2,250,000 interest on shareholders' accounts. The public revenue has received from the society £1,600,000 in taxation, while liquid funds have risen by £5,400,000 to £6,900,000. These real evidences of the virility of the society operating in time of war are a direct result of the invaluable and continuing support of members, aided by an efficient body of agents and staff.

The directors are taking every possible counsel from skilled people and seek to take full advantage of guidance towards the promotion of the building of the best types of houses, and to enable the ordinary man and woman to purchase them and to own them under fair and equitable conditions.

## GOOD HOUSING ESSENTIAL

It is not possible yet to say what the governing conditions will be; good housing is essential in the interests of human life, whether expressed in physical, intellectual or spiritual terms. Bad housing has been a disease poisoning the whole body politic. In order to take its part the society has published 30 influential booklets in a "Design for Britain" series. These have been welcomed by all concerned with better housing, whether Cabinet Ministers, ecclesiastics, architects, builders, or the people in general. For the rest, it has secured as consultants leading architects and economists.

We were born of the co-operative movement, we have been true to the co-operative movement in every possible way ever since the foundation of the society, and we are determined to develop in our operations the full spirit of that magnificent co-operative ideal which 100 years ago—this is its centenary—was put into practice by the Rochdale co-operative pioneers. That was a great day in the history of England. England has not yet realised what a great day it was.

## AMENDMENT OF RULES

We have taken definite steps in bringing before you proposals for amendment of certain rules. We want to have the full stream of the co-operative power in this building society in the future, and when

the rules are passed we shall be able to appoint representatives of the societies or the governing bodies of the societies in affiliation with the Co-operative Union. The first step will be to invite the English and Scottish Co-operative Wholesale Societies to come into the picture so that we will be strengthened for the great task of the future.

The society has also taken joint action with the National Federation of Housing Societies, which has expressed and tried to express in all that it has done the kind of thing which we stand for here. None of us can predict the future; we may have terrific problems to face which we will meet with full strength and courage.

Mr Jas. C. Cessford (director), in a supporting speech, stated that co-operators could provide £100,000,000 a year for a 10-year programme on rehousing the nations, with facilities for furniture purchases included in the mortgage.

The report and accounts were unanimously adopted and the recommended alterations in the rules of the society, enabling directors of the English and Scottish Wholesale Societies to sit on its board, were approved by the members.

JEREMIAH ROTHERHAM  
AND COMPANY, LIMITED

The forty-sixth annual general meeting of this company was held, on the 13th instant, in London. Mr Joseph Hockley (chairman and managing director) presiding.

The following is an extract from the statement by the chairman circulated with the report and accounts: The balance-sheet now submitted shows a trading profit of £65,261 for the year ended January 15, 1944, before provision is made for excess profits tax.

The net profit amounts to £91,854. To this sum must be added the balance of undistributed profits brought forward from 1943—namely, £24,913, making a disposable total of £116,767. We propose allocating this sum as follows: To provide for income-tax a sum sufficient to cover the estimated liability on profits earned to January 15, 1944, £21,000; to general contingency account, £5,000; to employees' benevolent fund, £5,000; to year's Preference dividend to January 15, 1944, £10,000; to dividend on the ordinary shares of 5 per cent. for the year to January 15, 1944, £30,000; to bonus of 2½ per cent. on the ordinary shares, £15,000; and to carry forward £30,767.

The report and accounts were adopted.

CONSOLIDATED MINES  
SELECTION COMPANY,  
LIMITED

The forty-eighth ordinary general meeting of this company will be held, on the 21st instant, in London.

The following is an extract from the statement by the chairman, Mr S. S. Taylor, C.M.G., D.S.O., circulated with the accounts: The customary valuation made as at December 31, 1943, showed that the total value of the company's holding was £1,768,419, against the book value of £760,096. Revenue from interest and dividends was £7,696 higher. The net profit for the year was £81,604. The dividend recommended is 12½ per cent. actual, equivalent to 1s. 3d. per 10s. unit of stock, less income-tax.

The company's holding of shares in the Anglo American Corporation of South Africa, Limited, which for many years has constituted one of its major assets, was increased to a moderate extent during the year. The corporation's main interests are in gold, copper, and diamond mining industries. It is quite evident that it is in a very favourable position to take advantage of future developments in that part of the Orange Free State where prospecting for gold has already provided data of an encouraging nature.

DORMAN, LONG AND  
COMPANY, LIMITED

## IMPROVED FINANCIAL POSITION

## LORD GREENWOOD'S STATEMENT

Statement by the chairman, the Rt. Hon. The Viscount Greenwood, P.C., circulated with the report and accounts for the year to September 30, 1943, in place of the customary speech at the annual general meeting.

For reasons previously explained, it was not possible for our report and accounts to be completed in time to hold our annual general meeting during 1943.

As usual, taxation has been provided on all profits to date.

Additions to capital expenditure amount to £20,215 and realisations aggregate £18,296. So far as circumstances would permit, we have continued to make improvements to our plant and equipment and to maintain it in a proper state of repair.

Provisions for renewals, relinings, repairs and for other purposes show a substantial increase arising from provisions for necessary expenditures at the iron and steel works and collieries, accruing liabilities for surface damages at the collieries and ironstone mines and other contingencies.

In November, 1943, the company's issued share capital was increased by the issue of 1,900,000 new ordinary shares at 27s. per share. The proceeds of the issue were applied towards the redemption (at a premium of 5 per cent.) of the outstanding 5 per cent. debenture stock of the company on January 17, 1944, the balance required for the redemption of the 5 per cent. debenture stock being provided out of the company's cash resources.

A marked improvement in the company's financial position and credit has been effected by repaying and discharging over £3,000,000 of 5 per cent. debenture stock and bringing the ordinary share capital into reasonable proportion to the total of the company's share and loan capital. As a result of these arrangements the financing of further improvements and developments at the iron and steel works and other departments, as well as long-term contracts for structural engineering and bridge-work at home and abroad, will be greatly facilitated.

Although it is not permissible for me to give particulars of production figures, our company continues to make an outstanding contribution to the war effort.

Over 5,000 of our employees are serving in His Majesty's Forces.

There has been a further increase in the number of our employees participating in the National Savings Movement during the past year. The company provides facilities for the collection and recording of savings at all departments.

An allocation of £15,000 under the heading of pension fund is recommended. It is intended to devote part of this to augmenting the staff pension scheme.

Our thanks are due to the management, staff and all employees for the excellent services they have rendered under harsh war conditions.

(The adjourned fifty-fourth ordinary general meeting of the company will be held at Winchester House, Old Broad Street, London, E.C. 2, on March 23, 1944, at 12 o'clock noon.)

Question Master: CAPTAIN ALAN GRAHAM, M.P.

LANCASHIRE STEEL  
CORPORATION, LIMITED

## RESERVES STRENGTHENED

The fourteenth ordinary general meeting of the Lancashire Steel Corporation, Limited, was held, on the 14th instant, in Manchester.

Mr John E. James (chairman and managing director) said that the directors had given consideration to the dividends which might be declared and had decided to recommend payment of a dividend at the rate of 5½ per cent. per annum, less tax, on the Five-and-a-Half per Cent. Non-Cumulative Redeemable Second Preference stock, and at the rate of 7 per cent. per annum, less tax, on the "A" and "B" Ordinary stocks, both dividends being for the period of 10 months. £170,000 had been laid aside for central reserves for depreciation of the fixed assets of the group, while £50,000 had been added to the general reserve and £65,000 to the reserve for deferred repairs.

It would not be appropriate for him to discuss matters relating to the corporation's affairs or subjects of general interest in the steel industry. Since they had last met great changes had taken place in various theatres of war. The crisis of the struggle with Germany was approaching, but if they in the industrial field continued to give their utmost support to their armed forces and those of their allies, they might, with confidence, look forward to complete victory over Germany and Japan. Great efforts would require to be made by all classes in industry in this country during the reconstruction period, but the successful conclusion of the war would, he trusted, serve as an inspiration to the people, in association with their allies, to give all the assistance in their power towards the creation of better and happier conditions, not in this country alone, but throughout the world.

He paid tribute to the valuable services rendered by the staffs and works employees of the corporation and its subsidiary companies.

The report and accounts were adopted.

## BECALMED

"As idle as a painted ship upon a painted ocean"—without the motive power of wind the sailing ship is useless. Without adequate funds the Christie Hospital, the largest Cancer treating hospital of the Empire, is unable to extend its increasing fight against Cancer. # RECORDS and STATISTICS

## INDUSTRY AND TRADE

**Retail Trade.**—The accompanying table shows the percentage changes in the average value of retail sales from the preceding years for the last four years. During 1943-4 retail turnover as a whole suffered its first contraction since 1941-2. In that year the lower sales were due in no small measure to bombing. During 1943 the shortage of supplies was increasingly felt, and it was only in the departments which are mainly free of price control that turnover was higher. This does not, of course, apply to the major part of the food and perishables section, but flowers and some vegetables which are not controlled in price were more expensive than in the earlier war years.

### PERCENTAGE CHANGES IN AVERAGE DAILY VALUE OF RETAIL SALES FROM PRECEDING YEAR

|                       | Food and Perishables | Non-food Merchandise | Total |
|-----------------------|----------------------|----------------------|-------|
| Feb., 1940-Jan., 1941 | +2.7                 | +4.2                 | +3.3  |
| " 1941- " 1942        | -1.5                 | -5.4                 | -3.2  |
| " 1942- " 1943        | +3.5                 | -0.1                 | +1.9  |
| " 1943- " 1944        | +2.0                 | -6.0                 | -1.5  |

The table below sets out the average value of retail sales for the months of November, December and January, compared with the corresponding months of the year before.

**Demobilisation Outfits.**—It has been announced that on demobilisation after the war male members of the armed forces will be provided with an outfit of civilian clothes consisting of the following items: one suit, one shirt, two collars, one tie, one pair of shoes, two pairs of socks, one hat, one raincoat, one set of back and front studs, and one pair of cuff links.

**Radio Sets.**—During 1943, about 55,000 radio sets were put on the civilian market. The distribution will shortly begin of 25,000 sets from the United States. As they become available, they will be released to the trade through British radio manufacturers and the pre-war importers, and will reach the public through normal trade channels. It is hoped that they will be evenly distributed throughout the country. Each set is tested on arrival, but none will be guaranteed. Prices have been fixed for each of the four grades. The range is as follows: on sale to a wholesaler (excluding purchase tax), £5 17s. to £8 11s.; on sale to a retailer (excluding purchase tax), £6 16s. to £9 19s.; on sale to the public (including purchase tax), £11 14s. 2d. to £17 18s. 8d.

### THE "ECONOMIST" INDEX OF WHOLESALE PRICES (1927=100)

|                       | Mar. 31, 1937* | Aug. 30, 1939 | Mar. 9, 1943 | Feb. 22, 1944 | Mar. 7, 1944 |
|-----------------------|----------------|---------------|--------------|---------------|--------------|
| Cereals and Meat      | 93.0           | 66.9          | 109.7        | 109.0         | 108.6        |
| Other Foods           | 70.4           | 61.1          | 107.3        | 107.3         | 107.3        |
| Textiles              | 74.2           | 54.3          | 92.2         | 92.6          | 92.5         |
| Minerals              | 113.2          | 95.4          | 135.9        | 140.1         | 139.7        |

**"The Economist" Sensitive Index.**—There was no change in the index during the week ended March 15th. The complete index (1935 = 100) was 151.2; crops, 123.2; and raw materials, 185.5.

## FINANCE AND BANKING

**THE MONEY MARKET.**—Conditions in the money market were difficult at the beginning of the week, but eased progressively. On Monday some assistance had to be given to the market by way of official purchases of Bills, and on Tuesday supplies of credit were only just sufficient to go round without further official help. The drain on bank cash was probably due to a temporary disturbance of the balance between Government outgoings and income. How rapidly it was remedied is shown by the latest Bank return, which reveals bankers' deposits at the relatively high level of £178,929,000, or £16,731,000 up on the week. The main counterpart to this movement are increases of £13,535,000 in Government and £4,416,000 in Other securities. The banks were this week called upon to pay £100,000,000 against Treasury Deposit receipts, but maturities were heavy and only £30,000,000 of fresh money was disbursed in this way. The discount market obtained a 31 per cent. allotment for the bills to be taken up this week. The help it received from special quarters in paying for them is evidenced by the rise in the Bank's holding of Government securities.

**MONEY RATES, LONDON.**—The following rates remained unchanged between Mar. 10th and Mar. 16th:—

Bank rate, 2% (changed from 3% October 26, 1939). Discount rates: Bank Bills 60 days, 1½%; 3 months, 1½%; 4 months, 1½%; 6 months, 1½%; Treasury Bills: 2 months, 1½%; 3 months, 1½%; Day-to-day money, 1½%. Short Loans, 1½%. Bank deposit rates, ½%. Discount deposit at call, ½%; at notice, ½%.

**Exchange Rates.**—The following rates fixed by the Bank of England remained unchanged between Mar. 10th and Mar. 16th. (Figures in brackets are par of exchange).

United States, \$ (4-862) 4-02½-03½; mail transfers 4-02½-03½. Canada, \$ (4-862) 4-43-47; mail transfers 4-43-47. Switzerland, Francs (25-23½) 17-30-40. French Empire, Francs 197½-200½. Syria, p. 8-81-85. Sweden, Krona (18-168) T.T. 16-85-95. Dutch West Indies, Florin (12-11) 7-58-62. Portugal, Escudos (110) 99-80-100-20; mail transfers 99-80-100-30. Panama, P.A. 02-04; mail transfers 4-02-04½. Brazil, 83-64½ cr. (buying); mail transfers 83-66½. Uruguay, 7-6597 p. (buying).

Fixed Rates for Payment at Bank of England for Clearing Offices. Spain Pesetas 44-00. Turkey, Piastres 520. Italy, 71-25 lire.

**Marked Rates.**—The following rates remained unchanged between Mar. 10th and Mar. 16th.

Egypt, Piastres (97½) 97½-98½. India, Rupee (18d. per rupee) 17½-18½. Belgian Congo, Francs 176½-178½. China, National 33-3½. Iran, RL 128-130.

A change has been made in the method of showing an excess of Post Office Expenditure over Post Office Revenue. Such excess is now included as ordinary expenditure (under "Total Supply Services") instead of being shown, as up to July 24 inclusive, as a deduction from ordinary revenue.

After decreasing Exchequer balances by £244,013 to £2,760,498, the other operations for the week (no longer shown separately) raised the gross National Debt by £54,517,116 to £19,453 million.

## Dictated Diplomacy

A RECENT motion, supported by nearly a hundred Members of Parliament, expressing sharp dissent from the Prime Minister's recent remarks on Germany and the Atlantic Charter, was treated by him as a vote of censure, and was therefore not pressed to a debate. This was doubtless the proper Parliamentary strategy, both on the critics' part and on Mr Churchill's. But it has the unfortunate result that one of the major questions of the day, on which opinions are very divided and minds very troubled, cannot come under discussion in Parliament.

It would be very foolish of the Prime Minister, or of anybody else, to ignore the grave disquiet with which certain recent developments of British diplomacy—so far as they can be half-seen through the veil of secrecy—have been observed in very wide circles. Some of this disquiet relates to the evidence there has been that the three major Allies are by no means as united in their policies for winning the war as was officially maintained after the conferences at Moscow, Cairo and Teheran. To take only one case of policy towards Italy: Mr Churchill has said a few words about the King and Marshal Badoglio; Mr Roosevelt has announced decisions on the disposal of the Italian Navy; and Marshal Stalin has resumed full diplomatic relations with the Badoglio Government. It has been made clear that each of these steps was taken without prior consultation, and that each of them has annoyed the consulted partners.

These things are serious enough; but they can be regarded with exaggerated gravity. The need to win the war is so clear, and the necessity for winning it in unison is so obvious, that these surface tactlessnesses will not be allowed to interfere with the basic policy. There is far more serious ground for dissatisfaction, not with the partners' occasional failures to agree, but with some of the matters on which, it would appear, they are in full agreement. Decisions are apparently being taken that will govern the shape of world affairs for many years to come. It is impossible to feel happy either about the decisions taken or about the way in which they are being taken.

In the direction of active hostilities, the case both for trusting one man to make decisions, and for allowing him to keep his decisions secret when made, is clear and unassailable. There can be no doubt that the British people want Mr Churchill to run the war and trust his judgment in doing so. When it comes to armistice terms, the supreme military commander should also have the largest say in determining what is necessary and practical. But the long-term conditions of peace are a different matter. It is wrong that commitments should be made in secret and by one man, however eminent, that will bind the whole nation for many years to come. The mandate of confidence does not extend as far as that.

It is not merely constitutional punctilio that is at stake. In any case, the British constitution very rightly concen-

## MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION LIMITED

NOTICE IS HEREBY GIVEN that the TRANSFER BOOKS of the company will be CLOSED from the 1st to the 14th April, 1944, both dates inclusive, for the preparation of Preference and Ordinary Share Dividend Warrants.

Warrants will be posted on April 14th.

By Order of the Board,

F. W. CATER, Secretary.

Toll End Road, Tipton. 15th March, 1944.

38. *ates the fullest responsibility on the Government; they would be well within their rights in taking decisions on any subject they choose and challenging the dissenters to unseat them in Parliament. It is not the rights of the Government that are in dispute, but their good judgment in exercising those rights. The success or failure of the peace that is written after this war will not depend on the diplomatic situation now or at the time it is written, but simply upon whether the peoples, of whom the British people will be one of the most important, will maintain it. This is a truth on which *The Economist* has insisted before and will insist again and again. The test of any provision that it is sought to include in the treaty is not the logic behind it, or the strategic or diplomatic justification or its morality or justice, except in so far as any of these factors bear upon the central issue. And that central issue, so far as the British people are concerned, is this—will they be prepared to maintain the treaty in force, at the cost of any inconvenience to themselves, when they have returned to the material comforts and moral lassitude of peacetime? The only test by which peace-making can be judged is this popular one. It follows that it is not wrong so much as foolish to make commitments without consulting public opinion.*

The issue has arisen, for the moment, on Mr Churchill's reference to the Atlantic Charter, which is unfortunate, since neither the Charter nor the Prime Minister's reference to it is very clear. What the Prime Minister said was:

The term "unconditional surrender" does not mean that the German people will be enslaved or destroyed. It means, however, that the Allies will not be bound to them at the moment of surrender by any pact or obligation. There will be, for instance, no question of the Atlantic Charter applying to Germany as a matter of right and barring territorial transference or adjustments in enemy countries.

This might mean two things. Some of Mr Churchill's later sentences and his answer to a question this week would suggest merely a determination not to permit the Germans to take any bargaining stand on their fancied "rights," such as the play they made after the last war with the famous Fourteen Points. It might mean, that is to say, that though the principles of the Atlantic Charter were to be applied to Germany, it would be *ex gratia* and not of right. If so, that would be a simple counsel of prudence with which few would wish to quarrel.

But it was clear from the rest of Mr Churchill's remarks that this is not what he meant. He meant that, in the case of Germany, the principles of the Atlantic Charter were to be infringed, so that territories inhabited by Germany could be handed over to Poland in compensation for an alteration of the Polish-Soviet frontier. Mr Churchill said that this was agreed between himself and Marshal Stalin. There is a further topic on which no statement has been made, but on which circumstantial rumours are afloat. These rumours say that it was also agreed that an effort should be made to destroy the unity of the Reich and

to partition Germany into a number of independent states.

The question arises whether Great Britain is to be regarded as being committed to either or to both of these proposals, without open discussion or any consultation of public opinion. For itself, *The Economist* avows its open and decided hostility to both of them. That opposition is not based—though it possibly could be—on moral grounds. It is not based on any tenderness for the German people or any respect for German "rights." It is based on the most strictly realistic of all grounds, that no treaty so based stands any chance of being upheld by the British people once they have fallen back, as they inevitably will, into civilian habits and instincts. When it is considered how much opposition was aroused, and how quickly, to the infinitely more lenient terms of the Treaty of Versailles, it is quite out of the question that the British people would, in ten or twenty years' time, lift a finger to prevent the reunion of a partitioned Germany or remain unresponsive to the complaints of a Germany that had been robbed of indisputably German lands. It might be argued that, if these clauses of the treaty would not in fact be enforced, there is no harm in agreeing to them now if it smooths the immediate path. To this there are two answers. The first is that nothing is better calculated to cause discord with our friends than to mislead them on our intentions. Better by far to state the truth as we see it now than to foster the growth of delusions, those great breeders of wars. The second is that if one clause of the treaty is allowed to go by default others cannot be retained. The only true bulwark of a peace settlement is the willingness of the people to maintain it, and if matters are included that impose too great a strain on the resolution of the British people (and, for that matter, of the American people), the result will be that the whole treaty, including such essential elements as the disarmament clauses, will be reduced to a mockery as rapidly as Versailles.

Are we, then, committed? Those who, like *The Economist*, see in an annexation of East and West Prussia and in the partition of Germany the certain seeds of an inevitable third German war cannot say for certain that they interpret the British people more correctly than Mr Churchill. They can only say that British public opinion has not been consulted, and should be. This is not, of course, to suggest a Gallup Poll or a plebiscite—nothing could be more ridiculous. Nor is it to detract from the right and duty of His Majesty's Government to take responsibility and give leadership. Nobody in this country would suggest that we should have a rule requiring a two-thirds majority for the ratification of international undertakings. But it is to suggest that binding commitments on these supremely important topics should not be taken in small and secret groups, however responsible and however eminent. No country in the world is better equipped with means by which the Government can take counsel with public opinion, with proper weighting for knowledge, experience and responsibility. There will never be a stronger case for using them.

## War in South-East Europe

SOUTH-EAST EUROPE is now in the hands of the war god. Whatever political manoeuvrings there may be in the course of the next few weeks, it is the pressure of the Russian armies against the Carpathians and the German counter-defence that will shape events and hammer out the fate of the satellites on the anvil of battle. The German occupation of Hungary and the defence-measures taken in Roumania and Bulgaria resemble the occupation of Southern France after the Allied landings in North Africa. Then Hitler rushed southwards to slam the Mediterranean door. To-day there are doors to secure in Hungary, beyond the Danube and below the Carpathians, and they open not on to an outer ring of defences, but on to the inner citadel itself.

As usual, the German High Command are reacting

swiftly, but their ability to restore their damaged position is growing daily more cribbed and confined. The Russians are reaping the full benefit of the Germans' insensate decision to maintain their position in the Dnieper bend long after they had been outflanked. The German southern army has been split in two. Half of it, presumably under Manstein, is falling back on Lwow, the other half under von Kleist retreats in disorder into Roumania. New and more scattered fronts have opened, and the Germans are in a weaker position to reinforce them than they were to hold their earlier Russian line.

Hungary must be held in the first place. It is the Germans' base for all the fighting to the South-East. But the Russian advance on Lwow suggests that Hungarian-held Ruthenia may be in the front line of the fighting before

long, and the task of the German divisions in Hungary is as much to reinforce Manstein's retreating armies as to secure complete German control of Hungarian communications. One must suppose that the defence of Roumania is to be left to von Kleist, and he will presumably establish a line between the Carpathians and the lower reaches of either the Pruth or the Danube in order to protect Ploesti and the oil wells, which are on the wrong side of the mountains for the Germans. But his army is so shattered that it will be no light task to establish a new defence line.

It is also uncertain how many more divisions the Germans can throw into their South-Eastern front. Three divisions are said to have been withdrawn from the Zagreb area. This suggests that the new line can be held only by denuding the front against Tito. Even more significant is the report that ten divisions have been switched from the central reserve in Austria. If this is so, the German High Command has been compelled to draw on reserves destined to be used only when, with the opening of the Second Front, the German army will be fighting on two fronts. If to all this is added the fact that no great defence works or supply bases have been built up behind the new fronts, the picture of the German defence position is gloomy enough. However, there can be no retreat. The Carpathians are the essential bastion of the Reich. The double Russian threat—in Galicia and Roumania—must be held, and the Germans will not withdraw from the South-East without fighting every step of the way.

It follows that much of the speculation about political manoeuvres among the satellite states, Hungary, Roumania and Bulgaria, has a somewhat academic interest. Misleading comparisons with 1918 have been made. Then the crumbling of the South-Eastern front was the prelude to a German collapse. To-day there is no organised opposition in any of the satellite states. The desire of national self-determination which split open the Austro-Hungarian Empire is confused and spent. In Germany itself there is no democratic parliamentary opposition. In the European wilderness of totalitarian government, secret police, and cowed and apathetic peoples, the one decisive factor is the Nazis' will to resist and their ability to ensure that their yoke is not thrown off. Hungary is already occupied. The Prime Minister Kallay has resigned rather than co-operate with the German demands for "greater collaboration." In his place, Hitler has compelled the Regent Horthy to set up a government of pro-German puppets under the leadership of the Hungarian Minister to Berlin, Doeme Sztojay. This shadow regime makes no difference at all to the substance of German control. Roumania is in process of becoming a battlefield, and will therefore pass under direct military administration. Hitler has apparently decided to keep Antonescu, but the question is unimportant. However much the Kallay Government or the Antonescu Government may have

played in recent months with the idea of a separate peace—the Social Democrats have been allowed more prominence in Hungary and the Roumanian Government did permit the Stirbey peace mission—Hungary and Roumania are now German-occupied territory and their rulers have as much freedom for manoeuvre as the Republican Fascists in Northern Italy.

Only in Bulgaria is the case different. It is true that the Germans are already securing their lines of communication, but Bulgaria is on the extended limit of German occupation and is accessible to the Russians by sea and to all the Allies by air. Another vital military factor is Bulgaria's strategic situation. Unlike Hungary and Roumania, it does not lie on the main line of the German-

Russian clash, and as the Germans are compelled more and more to concentrate on the primary struggle, they may not have reserves for sideshows. It is also significant that alone of the satellites, Bulgaria has kept its army intact. If the Bulgarians could succeed in changing sides at this point, the military results would be far-reaching. The Germans would lose a secure base on which to build up their Danube-Carpathian defence line. Their flank would be turned and a withdrawal to the Iron Gates would be an immediate necessity. If political warfare has any part to play at this point in the campaign, the stage is set for it in Bulgaria alone. The favourable factors are its geographical position, the relative light-

War-time conditions have proved the advantages of appointing the "Royal Exchange" as Executor and Trustee under a Will. This ensures a permanent and expert administration and can be associated with a private co-trustee.

ness of German control already mentioned, the people's sympathy for Russia, the fact that relations between Sofia and Moscow have never been suspended. The chief obstacle is the anti-Russian sentiments and fears of the Regency. A change in the Bulgarian Government is almost certainly an essential preliminary to a drastic change in policy. How can it be brought about? A popular uprising is probably out of the question. However strong the pan-Slav feelings of the peasants, however widespread the hold of Communism, the Bulgarians are far less organised for action than, say, the workers in Northern Italy. The Government, backed by the Germans, can certainly keep them in order.

The change could only come from a palace revolution, a reshuffle of the kind that brought Badoglio to power in capitulating Italy. The possibilities of such a change have been in the wind for some weeks now, and the name of M. Kiosseivanov has been mentioned in connection with peace feelers. Bulgaria's relatively favourable strategic position provides the background, but the issue finally turns on the Regency's political decisions, and nothing is likely to be done so long as Bulgaria is uncertain about the intentions of the Allies. It is here that a joint political strategy might have its effect. The main decisions in this area naturally lie with Russia, politically as well as militarily. The degree of assistance Britain and America can offer is limited militarily by their concentration on the Second Front. Politically,

however, they can be a major reinforcement to Russia's political warfare. What is needed at this juncture is a solemn guarantee given jointly by the three Great Powers that they will respect and uphold the independence of the Balkan peoples. A more detailed statement of policy is, of course, impossible. Frontiers, minorities, confederations—these questions can only be decided after the war. But that the Allies intend to guarantee and maintain the independence of the Balkan States can be said now, and it may well be that such a joint guarantee, given at this time, would swing the Bulgarian Government into a new channel and radically effect the military position in South-Eastern Europe. Political warfare cannot do much. The decisive factors are the Russian advance and the German retreat. But this much at least it might accomplish, and the effort should be made.

Unhappily, events since Teheran do not suggest that the machinery of Allied consultation is working swiftly enough for such a decision on joint political strategy to be taken in time. The result is a serious loss to the Allied cause. The war machine is decisive, yet its victories might be swifter and the cost it exacts less terrible if the Allies were wielding their political arm in unison and strength. Control of the Bulgarian base is a big stake, and it is hard to avoid the conclusion that the German propagandists have played their political trump of anti-Bolshevism more skilfully than the Allies have played their hand of Great Power co-operation and Small Power survival.

## Public and Private Practice

DISCUSSION of the Health White Paper has turned almost entirely on one question. Is the establishment of a public medical service compatible with the continuance of private medical practice? On one side it is said that the consequences of such a dual system must be the withering away of private enterprise in medicine. On the other, it is said that the only true public service would be a public monopoly, with private practice forbidden; otherwise, it is argued, there will still be two nations, those who are well doctored because they can pay extra fees and those who are badly doctored because they cannot.

Very much this point has already arisen in the case of education. It will be ever-present throughout discussions of reconstruction policy. Both sides to the controversy believe that a system, like a society, cannot live half slave and half free. They believe this in spite of the fact that this nation has lived largely in this condition for a very long time. In education the argument takes the form, on the side of the levellers, of the demand that the public (properly private) schools should be "liquidated" and that fees should be abolished for all children in all secondary schools. In medicine, it takes the form of a demand that doctoring should be solely a state salaried service and that all hospitals should be publicly owned and publicly controlled. The answer to this argument in the case of education has been stated several times in *The Economist*. The only case for the abolition of either public schools or secondary fees would be if their maintenance in itself deprived other school children of facilities which would otherwise be forthcoming. If their abolition would not in fact raise standards elsewhere, the consequence would actually be the opposite of what the levellers intend. By paying very high charges for private, public and grammar school education, as well as rates and taxes for the state schools, parents give to the state system without taking in return. If secondary school fees were abolished, those who cannot afford to keep their children at school until the age of eighteen would be taxed to subsidise those who can. It is a question not of principle but of supply. If the total facilities for education can be made adequate to meet the needs of all children at the required standard, it is a help and not a hindrance that those who can pay extra fees should choose to do so.

The same argument applies to medicine. It is again a question of supply. If the maintenance of fee-paying prac-

tice meant, as Lord Nathan put it in the Lords last week, that "the cream will be skimmed off and the public service left undernourished in personnel, equipment and facilities," it could not be reconciled with the aim of making "the whole range of health care available to every person." At present, the Secretary for Scotland admitted in the Commons, "we are short of doctors, of ophthalmic surgeons, of all sorts of specialist consultants and of nurses" and "we shall be short of dentists for many years to come." These shortages have been used as an argument against a public service. Actually they are the strongest argument for it. They show the need for a national minimum of medical service, for rationing to enforce it and, above all, for an expansion of facilities with all the weight of the state behind it. But to argue from these present shortages that we should, therefore, abolish private practice and concentrate all our limited resources in the public service is a defeatist solution. It is, in effect, restrictionist. For it would not, in the end, solve the problem; the shortages would remain. The task is not to root out private practice and create a monopoly, but to increase the supply of medical manpower and equipment, specifically for public uses. To pull down Harley Street or submerge the great free hospitals in the newer local system might be as bad for medicine as the abolition of the public schools, the world's best, would be for education. The grievance of the many is not the good treatment of the few but their own bad treatment. The proper course for democrats, who believe in both freedom of choice and minimum standards with equal opportunity, is to increase the public's means, not to decrease private facilities. And the argument that the removal of independent opportunities might itself reduce the supply of able and enterprising doctors and researchers is, in existing conditions of medicine, by no means groundless; the best doctors should still be able to take the highest fees from the richest people, so long as services no less good are freely and adequately available to the poorest. The positive approach to this problem, even for the most egalitarian, is to make the public's doctors, and the public's hospitals—and the public's schools—so good and so well provided that the gap between them and the higher-priced private article is removed.

The aim is good doctoring for all. There is no reason why, if this is achieved, the rich should not pay extra for

their fancy. The proposed national service, Mr Johnston said last week, is designed to ensure

that the care of patients in the new public arrangements does not suffer in quality or quantity by reason either of private commitments or other public arrangements.

If the scheme were being made from scratch with no existing system of doctoring in operation, the case for an exclusive state service might be very strong. As things are, it is unsound practically and impossible politically. The White Paper plan, in Mr Willink's words, is a compromise "to produce a scheme that will work, and into which every one of the present elements can put their best."

It aims "to build a system which will grow out of the old." The objective, which will not in any case be achieved for a considerable time, is a complete range of personal health services for every man, woman and child. There will be a general practitioner service; a consultant and specialist service; hospital treatment; and a dental service. Some doctors will work whole-time in public service, others part-time, some not at all outside their private practice. The general practitioners will be directed from the centre. Local services will be run by local authorities, regional services, such as hospitals, by joint boards. Simultaneously and in addition, the old arrangements between doctor and patient will go on for those prepared to pay fees over and above their social security contribution. It is reasonable that the public work of doctors should be restricted according to the number of their private patients, to ensure that time and energy are left to treat public patients properly. It is unreasonable that, as some critics have suggested, doctors paid out of public funds should be forbidden to undertake private practice. This would make precisely the kind of separation that would permanently divide patients and doctors into two classes—the former into privileged and unprivileged, the latter into good and bad. The left-wing critics would at least be on firm logical ground if they proposed the prohibition of private practice—though, of course, they would stand no chance of carrying their point. But so long as private practice remains, to insist on a rigid separation between it and public practice is the reverse of egalitarian.

Far too long has been spent in controversy over the political theory of the scheme; certain doctors in particular have turned a good case for professional independence in professional matters into intransigence and obscurantism. The patient, as Mr Johnston said the other day, has been forgotten, the consumer overlooked. The real question is whether the scheme will do what it is intended to do—provide a comprehensive medical service in terms of actual treatment.

The plan is not a revolutionary or dramatic break with the past. This is so much so that its chief risk may be that of being too like the present system. In contrast with the National Health Insurance, the chief advances are that

treatment will now be uniform and, it is hoped, sufficient for everyone, and that the families and dependants of workers are brought in, which makes up a long standing lack. In addition, there is no longer the upper income limit of £420 a year; those who earn more than this figure are brought in, not only for their own security, but also to give assistance by their contributions to those in more need. In other words, the scheme will have to do much more for many more people than the existing one, and do it better. The "shortages" are much the biggest obstacle to be overcome.

The scheme starts off with the advantage that the combination of private practice and public service is already embodied in the tradition and conduct of British doctoring and in the panel system. Medical ethics already require that the most skilled surgeons and physicians should give part of their time, free if necessary, for part of their career to the service of the needy sick. In practice the conditions under which this is done make it seldom possible for treatment of the poor to compare with treatment of the rich. The panel system in National Health Insurance is similarly unsatisfactory. Whatever their inclination, doctors have not the time or the inducement to give equal treatment to public and private patients. This, not the old weary disputation about free and unfree medicine, is the crux of the matter. Can equal treatment for all be ensured by organisation? If the number of doctors, consultants and specialists, as well as general practitioners, can be raised to the numbers needed without reducing their professional quality, and if they can be given for their public work the conditions and the time to treat each patient to the best of their ability, doctoring can be given the chance to rediscover that sense of service which has become dimmed by circumstances. It is the doctors' great opportunity. Paid properly—without, as Mr David Eccles argued in the Commons last week, establishing a situation in which they would earn less money as a body for more work—they can do unequalled work for public and private patients alike. And if their public work becomes so good that their private practice dwindles naturally, no one will be a real loser.

But even this is only a step on the road. The White Paper plan is for a medical service, not for a health service properly so called—though it does embrace the welfare activities of local authorities. By itself, in the words of Mrs Hardie, it regards the nation as "a nation of invalids." It requires a much wider context of prevention instead of a cure. An essential part of reconstruction will be the betterment of the environment of the people. Good housing and steady work are first needs. So, too, is good nutrition. The public health services of local authorities can be the basis, with the health centres proposed in the White Paper, for a positive policy. It is by strides in these directions that the Ministry of Health can justify its title.

## NOTES OF THE WEEK

### Finland Refuses

German diplomacy has scored a notable success in Finland. The negotiations for an armistice between Russia and Finland broke down when on March 17th, the Finnish Government gave its negative reply to the Soviet armistice terms. The proposal to start direct negotiations with the Russians before accepting any armistice terms was apparently made by the Finns in the hope of securing better conditions, and they officially described the Russian demands—such as the withdrawal of the Finnish armies to the 1940 frontier and the internment of the German forces in northern Finland—as "harsh and unacceptable." The Russians have now put an end to the Finnish Government's attempt to play for time and have placed on it the responsibility for the breakdown. Several reasons may have accounted for the Finnish refusal. Public opinion in Finland is particularly ill-informed and misled by a muzzled or strictly censored press, and shows no awareness of the

gravity of the country's military situation. Since 1940 it has been fed on the myth of German invincibility and has not been in any way prepared for the rude awakening. The Finns also hope that, as long as Russia has its forces engaged in the great battles in the South, Finland will enjoy a prolonged military respite. Finally, there is the fear that acceptance of the Russian terms would leave Finland in a completely helpless condition and compel it to accept any further demands which the Russians might raise. It is upon this fear that Hitler was playing when he said that the Russian "intention is simply to place the noose round the victim's neck and to tighten it properly when the time comes." The Finnish hope for a military breathing space is likely to be exploded very soon. The campaign in the South is not likely to prevent the Russians from waging a short and decisive campaign against Finland, now that the Finns have lost the protection of the severe northern winter.

## Lend-Lease and Exports

A considerable flurry seems to have been caused in Washington by the discovery that the so-called British "Export White Paper" is the subject of negotiations between the two Governments. This White Paper, it will be recalled, was a unilateral undertaking given by the British Government in the autumn of 1941. Its terms were detailed and complicated; their general purport was that the receipt of lend-lease goods from America should not be allowed to accrue, directly or indirectly, to the post-war benefit of the British export trades. American goods, in short, should not be used to filch American markets. This is an entirely reasonable principle, with which nobody in this country would wish to quarrel. It is in the application of the principle that trouble has arisen. The original American insistence on having a complicated set of rules could be put down to the professional prejudices of lawyers. But, even so, the White Paper as drafted was an unnecessarily restrictive document which prevented many quite legitimate British exports rather than allow the suspicion of an improper use of lend-lease materials to arise, and which subjected British activities to an unnecessarily humiliating process of seeking consent. The White Paper is believed to have been personally negotiated between the American Ambassador and the late Sir Kingsley Wood, and is known to have been regarded by many official American, as well as British, quarters as far stricter than it need have been. But on top of the defects of the document itself, it has been administered by the Americans with surprising rigidity.

Strong justification for revising it can be adduced. Even if it had been perfectly adjusted to the circumstances of the autumn of 1941, many things have changed since then. America is now a belligerent, and Lend-Lease is by no means a one-way flow. The combined allocation of scarce materials has now been carried so far that the use of these materials (whether obtained on lend-lease or not) for other than approved purposes is well nigh impossible, without specific restrictions on exports. The American Administration, however, has been quick to deny that the principle of such restrictions is being abandoned. That, apparently, is more than could be tolerated by a Congress that is astonishingly quick to believe the worst of its allies. But if the principle is to be retained, it is to be hoped that the same restrictions will be placed on American exports as are placed on British. They are much more likely to be necessary in the case of a country that still has goods to spare. The only industry for which figures can be quoted is that of cotton goods. In 1942, British exports were cut down to just over 25 per cent of their 1937 volume. American exports in 1942 were over 190 per cent of the 1937 figure. Much the same is probably true of other industries. Any statement that the war is conferring advantages on British exporters at the expense of Americans is not only untrue, but the exact reverse of the truth.

## Canadian Mutual Aid

Mr Mackenzie King announced in the Canadian House of Commons on March 16th the signature of "Master Agreements" governing the provision of Canadian Mutual Aid to the United Kingdom, the Soviet Union and Australia. Similar agreements are being negotiated with China, the French Committee of National Liberation and other countries. There are strong resemblances between these agreements and the American "Master Agreements." For example, the only return to be made by the recipients that is specified (if "specified" is not too strong a word for the rather vague terms employed) is that they shall co-operate to establish a liberal regime of international trade. But if there are similarities with the American "Master Agreements," there are also differences. As Mr Mackenzie King pointed out, the American Lend-Lease Act was originally passed when the United States was still a neutral, and its philosophy was different from the purpose of Canadian Mutual Aid, which is "that Canada should make the utmost contribution to the victory of the United Nations." The Canadian agreements are intended not merely to prevent the accumulation of large war debts, but also to prevent any indeterminate obligations of any sort being left at the end of the war. Accordingly they specifically provide that, with certain exceptions, no materials provided under Mutual Aid shall be returned to Canada. The signature of these agreements provides another opportunity for recognising not only the very large scale, relatively to its resources, of the aid that Canada has provided for its allies, but also for the generous spirit in which it has been given.

## Burmese Operations

The fighting in Burma is taking on definite shape. It is no longer a question of scattered columns fighting in isolation along the Burma-India frontier. The various forces are part of a combined operation to clear the Japanese out of North Burma and open the way for the junction of the Ledo and Burma Roads. The Arakan forces are trying to take the flat land between Buthidaung and Akyab, for here it will be possible to establish airfields and intensify the attack on Japanese communications in Central Burma. To the east, three Allied columns, two of them operating along the Chindwin, are forcing the Japanese back from the Hukawng Valley, and an airborne force has been landed somewhere in the Japanese rear to cut them off in their retreat towards Myitkyina. An encouraging feature of the campaign is the mobility of the fighting groups and the

audacious use made of them. The Japanese have been put on to the defensive, surrounded and surprised in their own chosen jungle battlefield, and new methods and new tactics now appear to be the monopoly of the Allied commanders. Another significant fact is the close co-operation between the different columns. Two services and four nations are acting together with the greatest precision and resource. The landing of the airborne force was a model of effective planning, and was a joint venture of army and air force and British, American and Indian troops. But in spite of the new Allied initiative, the Japanese are still pushing forward strongly towards the Indian frontier. Between Tiddim and Tamanthi they have crossed the Chindwin and are advancing in the direction of Imphal. This town in Assam is the key to the Allies' communications behind their various Burmese fronts, and unless the Japanese column is checked, it will interfere with the whole strategic plan for clearing North Burma before the summer rains.

## France and Europe

In his address to the Assembly on March 18th, General de Gaulle gave the first official French reaction to the suggestion for a West European bloc brought forward by General Smuts last autumn. The French reply is favourable. The need is felt in France, as well as Britain, to reinforce national independence in a larger unit and, without defining precisely its limit, General de Gaulle suggests a "kind of Western grouping," of which "the Channel, the Rhine and the Mediterranean would be the arteries." His angle of approach is in one respect wider than that of General Smuts, who suggested a bloc almost purely in terms of strengthening Britain's position. France, too, needs reinforcement, but General de Gaulle insisted far more strongly on the need to restore Europe as a whole to the influence and power in the councils of the world to which it is entitled by its history, its skill, its resources and population. This insistence on Europe as an entity, coupled

with the choice of Channel, Rhine and Mediterranean as arteries, not frontiers, of the Western bloc, suggests that the French envisage something more than a "Western fringe" and are anxious to play a leading part in working for a confederation of all or most of Europe. General de Gaulle touched, too, on other points of cardinal importance—the extension of the co-operative principle to the colonies of Europe and co-operation between France and Britain to create an Arab confederation in the Middle East. These various projects add up to a serious attempt to outline a new basis for French foreign policy. The extent to which in expression and intention it overlaps the interests of Great Britain is remarkable and encouraging. General de Gaulle announced that

the French Government is ready from this very moment to undertake in co-operation with other states all the studies and negotiations necessary.

One would like to feel that the British Foreign Office were equally ready.

## France—Still Absent?

Memories of the period when the United States still recognised the Vichy Government have apparently not faded altogether in Algiers. Suspicion that the State Department might still try to do a deal with Vichy when the invasion starts has apparently been voiced again recently in connection with American criticisms of the Pucheu trial. Misgivings among Frenchmen were probably strengthened by General de Gaulle's recent emphatic complaint about "the relative absence of France" from the councils of the Allies. Mr Cordell Hull's strongly worded denial of "absurd rumours and reports" on the State Department's intentions has come just in time to stop the spread of these fears.

No loyal supporter of the Allied cause would make the ridiculous charge that the United States Government... would have any dealings or relations with the Vichy régime except for the purpose of abolishing it.

Whether this denial will be enough to make Frenchmen feel quite confident about the form of government or the personalities whom the United States may eventually support in France is another question. Mr Hull's statement was purely negative. It contained no positive sign that the United States is now more ready than before to give exclusive recognition to the National Committee of Liberation. The time for recognition has almost certainly come. It would be absurd to call upon the resistance movement in France to co-operate with Allied armies and at the same time not to acknowledge the authority of the only body that directs it. The trial and execution of Pucheu, whatever its unwisdom, or any other dubious policies pursued by the National Committee, ought not to be used as arguments against the leading rôle of the National Committee in the rebirth of France. If Algiers is not recognised the invading commanders may be tempted on grounds of expediency—whatever the Allies' decision on principle—to work with the administrators on the spot—and with Vichy.

## Time-table for Education

There are signs that the lost art of voting is being rediscovered at Westminster as well as in the constituencies. On Tuesday, as many as 137 Members voted against the Government; the Government's majority was only 35. The bulk of the votes were Labour; but the Tory Reformers took this chance of reasserting their integrity as reformers. The occasion was an amendment to fix a definite date for raising the school-leaving age to 16. No one in the debate disagreed with the view that the school-leaving age should be raised first to 15, for which 1945 is fixed in the Bill, with an escape clause, and then to 16 as soon as possible. Nor, on the other hand, did anyone question the difficulties listed by Mr Butler; the shortage of teachers and school buildings are chief among them, and the first step of raising the leaving age to 15 will itself make very big demands. Nevertheless, those who supported the amendment—which proposed, in effect, to raise the leaving age to 16 not more than four years after it had been raised to 15—were perfectly right. If a set date could be stated in the Act, then the Government would either have to follow instructions or else come to the House and prove to Members' satisfaction that the law could not be carried out. All experience of past Education Acts proves abundantly that such a spur is imperatively needed. Unless a definite timetable can be laid down, and

the onus placed upon the Government always to show reason why it cannot be duly implemented in this or that direction, the way will still be open to the old delays. It already appears that the Government is preparing a second line of defence if raising the leaving age to 16 proves too difficult. Mr Butler pointed out that, if the age could not be raised as soon as is hoped, there would still be the Young People's Colleges for pupils between 15 and 18, which are to be a first charge in the second stage of educational reconstruction. But the Young People's Colleges, with attendance only one day a week, are no substitute at all for raising the school age to 16. Considerably larger attendance at the Colleges is required to make them valuable; and, in any case, both steps are equally urgently needed.

## Forward by the Right

Tuesday's big vote against the Government on the Education Bill will probably not be the last, without support for the war and Mr Churchill being in any way weakened. The many Members of Parliament who believe that their duty is to press the Government on to bolder deeds in home policy are slowly realising that strong words and inaction in the lobbies go ill together. It is only an accident that education rather than land planning provided the occasion for the first demonstration.

We accordingly state as our conviction that only by creating effective machinery for the three main objectives agreed upon unanimously by the Barlow Commission, and by solving in one way or another the problem of compensation and betterment, can the Government lay the foundation of a successful long term housing policy.

In the absence of a single comprehensive policy on the issues of the location of industry and the protection of agricultural land we see no alternative to the continued promiscuous growth of our cities and the drift of our people from the countryside, and to an aggravation of the evils that must inevitably result.

These words, which are strikingly to the point, come not from some Opposition document, but from a report of

## HALIFAX BUILDING SOCIETY

## INCREASED ASSETS

Extracts from the 91st Annual Report to be presented to the Shareholders at the Annual General Meeting at Halifax, on Monday, April 3rd, 1944.

BRANCHES THROUGHOUT THE KINGDOM

the Conservative Party sub-committee on housing published this week. They are an apt answer to Lord Woolton's curiously disingenuous contention in the Lords on Wednesday that serving men want "houses, not Uthwatt." In fact, they need both, for the provision of sufficient good houses in the right places is impossible without planning. The strong words of the Conservative sub-committee bear the marks of the views of Lord Balfour of Burleigh, who this week stated very trenchantly over the air his opinion that not even the shortest term programmes of housing can be properly drawn up and carried out without the introduction of a planning policy. But this is a Party, not a personal, report. It bases its demand for a right foundation for housing upon the impending decline in population and "the urgent need for a thriving industrial economy, including agriculture." It states the view that workers desire and deserve homes near to work, church, school and shops, accessible to the open country, simple in design and with sufficient space, within and without, for decent living. It votes strongly for houses against flats. It believes even more strongly, that "housing is bound up indissolubly with the location of industry and the availability of transport": and states the view that "national action in the planning of town and country is a vital necessity" and that

uncertainty as to Government policy on the vital question of compensation and betterment is having a deadening effect upon initiative.

### Oligarchy

Lord Woolton said on Wednesday that certain "proposals" on planning are nearly ready. But if it is true that the Government's intention is still simply to produce—"after Easter"—a Bill for the public acquisition of land in bombed areas and a White Paper arguing yet again about planning problems, this will clearly not satisfy the Conservative Party sub-committee. That it will not satisfy the other parties is already established. The likelihood is that, if the opportunity for a division could be found, the Government would be beaten; and the question arises, since all parties are agreed upon the need for prompt action in this matter, who it is that is holding up decisions. Obviously, this is a case of rule by a small and recalcitrant minority—which is what Coalition almost inevitably means when it seems to have attached to it the proviso that action is only possible on the basis of complete agreement. In other words, something like a *liberum veto* seems to have been imposed upon this branch at least of domestic reconstruction. Lord Woolton's naïve revelation that he has found it much more difficult to get decisions on planning than he expected when he became Minister of Reconstruction is no doubt true.

### The Civil Estimates

With the approach of the end of the financial year, most of the estimates for civil expenditure in the forthcoming year have been published, and from the Vote on Account the gaps can be filled in for all but the details. For the first time since the war began, the first estimates for the new year are higher than the estimates, including the supplementaries, for the year drawing to a close. At the beginning of the war, an attempt was made to cut down the Government's civil expenditure, and at the same time only token votes were given for the war services of the civil departments, which have since been met from the votes of credit. Nevertheless, since 1939-40 even the civil expenditure for which details are given has in the end been far larger than the estimates, in spite of the big, consistent fall in unemployment assistance. The estimate for the Assistance Board for the coming year is only £5,380,000, compared with a final estimate of £6,455,000 in 1943-44, and an actual appropriation of £5,804,000 in 1942-43 and £17,601,000 in 1940-41. By far the greater part of the rise in the total civil estimates in 1944-45—from £450,785,000 in the current year to £469,912,000—is accounted for by the considerable increase in the Government's expenditure on social services other than unemployment assistance. Thus, the estimate for the Board of Education has gone up from £60,076,000 to £64,898,000, not for any reason connected with the new Education Bill but mainly because of higher grants to local education authorities for the school meals service and the milk in schools scheme and also for the increase in the teachers' war bonus. The estimate for teachers' pensions has also gone up by £845,000. But, especially when com-

pared with pre-war expenditure, the change in the civil estimates that dwarfs all other is the new item of supplementary pensions. When assistance for needy old age pensioners and needy widows receiving pensions under the contributory pensions Acts was transferred from the local authorities to the state in 1940, it was not realised what an important part of the pensions system the supplementary pensions would form. In the coming year, however, expenditure on this item is estimated at £54,930,000, against £46,250,000 in the current year and against an actual expenditure of £15,566,000 in 1940-41. It is fast approaching the estimate for old age pensions themselves, which is £56,000,000 in 1944-45, and it compares with an estimate of £22,525,000 for expenditure under the contributory pensions acts.

### Rural Slums

Between 1921 and 1938 the numbers employed in agriculture fell by 276,000, or about a third. At the beginning of the war, before the Essential Work Order was applied to agriculture, a further 70,000 workers left the land to find work in better-paid and more congenial occupations. Mr Gooch, President of the National Union of Agricultural Workers, addressing the Farmers' Club on Monday, gave a warning that the drift from the land will continue after the war, unless something radical is done to raise the standards of the agricultural worker nearer to those of the industrial worker. A great many villages, though picturesque, are no better than slums. Mr Gooch quoted cases of

cottages in which the rats scampering about the bedroom floors keep the children awake and . . . in which it is part of the household routine in wet weather to put umbrellas over the beds or to evacuate the bedrooms altogether.

Not even the fringe of the housing problem has yet been touched. Of the 3,000 cottages promised by last harvest, only some 700 have been completed. Refhousing, however, is not enough; the countryside needs piped water supplies, sewage systems and electricity, and improved amenities. In 1939, out of 11,186 parishes in England and Wales, 3,432 were without proper water supplies and over 5,000 were entirely without sewage systems. Farm workers feel very strongly about the tied-cottage system, which limits their freedom and security. A report in 1937 estimated that 500,000 houses were occupied by agricultural workers, and that 200,000 of these were "tied." The abolition of this feudal system was recommended by the Scott Committee. The real fundamental need is that farming should be in a position to afford higher standards for its workers. The Scott committee assumed that, compared with before the war, agriculture would be much expanded. If it is, it will almost certainly be unable to afford more than poor conditions for farm labour. Either its size will be limited roughly to the extent to which it can farm efficiently, in competition with overseas products, in which case it will be able to afford good standards for a limited number of workers. Or it will be dependent on public charity, at the expense of the standard of living, to raise the standards and keep the services of a much larger number. Whether agriculture can pay high wages must depend on its productivity. This is partly a question of applying scientific methods and improving technique, partly of comparative costs.

### Business or Profession?

The public has been told what medical services it may hope to receive after the war. The Secretary of State for Scotland put eye specialists high among the shortages that will considerably delay complete fulfilment of the plan. The time is opportune for the consideration, already overdue, of the persons and qualifications entitled to give eye treatment. In the treatment of defects of the eye the old problem—who is a physician and who a quack—still arises in a modified form. Do opticians constitute a business or a profession? Twice opticians have sought official recognition through state registration. Both times the draft Bills failed. Now they are likely to try again. Opticians do not necessarily have any medical qualification. Their original job was merely that of making glasses in accordance with the prescription of an oculist or doctor; and the medical profession claims that they should confine themselves to this. But in actual fact the majority of people with faulty vision go straight to an optician without consulting an oculist. It is very much cheaper and there are seven opticians to every one oculist. If it is merely a matter of "needing glasses," the optician may be competent to prescribe. The trouble arises in those cases

which need something more than glasses, people who are suffering from some disease of the eye, which the optician is unable to cure and very likely will not detect. The crucial question is how many such cases are at present "dead-ended" at the opticians and receive no treatment or the wrong sort. It is not likely that such cases constitute a high proportion of the opticians' turnover of patients. But, however low the proportion, it is clearly undesirable that any statutory recognition should be extended to opticians which would leave in being this serious gap in eye treatment. The alternative is difficult to find. Oculists are still very much too few in number and, for most people, too expensive. It would be wasteful to lose the skill in sight-testing acquired by many opticians. Under National Health Insurance, a few approved societies invariably direct applicants for ophthalmic benefit to a medical practitioner and pay his fees. But the majority of the insured have to make do entirely with attention from an optician. If the new National Health Service allows this state of affairs to continue—as it may have to for a time—it is at least essential that the public should realise what they are getting. It should be clearly understood and stated that the optician can only deal with errors of refraction, and that only by means of glasses. He may know more, but there is no guarantee.

### Economic Man

It is very human for men to cry their own wares. Mr Dalton, once a student and teacher of economics and now, as President of the Board of Trade, head of an economic department, appears to have fallen into this trap. There is in any case very little comfort in his statement on Tuesday that "our post-war international planning is going ahead much faster on the economic plane than on the political plane," which is a comparison between two very slow motions. But his rider to the effect that "this is thoroughly healthy, and I hope it will go on" is most alarming and quite misleading. He added that "between the wars there was too much politics and too little economics." In fact, of course, there was much too little of both; will and skill were both lacking. But, if there is one thing which the record of this age proves, it is the primacy of politics over economics. If Mr Dalton really believes that the world's problems of peace and prosperity can simply be solved by economists proposing the right policies at the right time, he is barking up quite the wrong tree. The expert's proposals have to become policies and for them to become policies involves political decisions. There is, indeed, abundant room and urgent need for the right solution of technical problems by up-to-date economic experts—some of whom would much disagree with Mr Dalton when he says that "full employment cannot be got by any one nation acting alone." But to suggest that the mere working out of these solutions could succeed in removing our difficulties without the all-important process of political persuasion, conviction and acceptance is as misguided as to say that, because the modern world is based upon science, science, too, must come before politics in the making of national and international policies. Mr Dalton might argue that he qualified his remarks by the phrase "by the nations acting together." But this begs the question and gives away his case. It is not possible in the nature of human society to "keep politics in a rôle in which primacy is given to economic endeavours and co-operation," unless, as seems most unlikely, Mr Dalton is thinking about some kind of dictatorship in which the economists themselves would be the political dictators.

### Experiment in Regionalism

The first report of the Anglo-American Caribbean Commission gave the interesting news that a regular system of West Indian conferences was to be set up in order to associate local opinion with the work of the Commission itself. The first of these conferences is being held this week in Barbados, and is being attended by two delegates from each British and American territory—Puerto Rico, the Virgin Islands, Jamaica, Barbados, Trinidad, British Guiana, British Honduras, the Windward and Leeward Islands and the Bahamas. The agenda covers nutrition and food production; the reabsorption of labour into civilian jobs; public works; health; and industrial development. Like the Commission itself, the conference, which, though not composed always of the same people, is to be a standing body, will for the time being be purely advisory, but—in

the words of the Commission's report—

it would be open at any time to the interested Governments to agree . . . to delegate to it any specific powers which they might think desirable.

Thus, the progress of this first meeting of the conference will be watched with interest. It is an attempt to reconcile good government with self-government, and to keep the advantages of regionalism and international co-operation in colonial policy without sacrificing the principle of colonial responsibility—without, that is, depriving the colonial peoples of the right to pin responsibility on to their own overlord. The choice of delegates to the conference is not altogether satisfactory—there is to be one official delegate and one unofficial who is to be nominated by the Governor—but, provided the delegates are representative of progressive West Indian opinion, a better method of election can wait until the usefulness of the conference can be judged. It should be a promising experiment both in regionalism and in self-help.

### Apology to Indian Planners

The full text of the Fifteen Year Plan for the economic development of India which was recently prepared by a group of Indian industrialists and economists makes it evident that an injustice has been done. The Note on page 334 of *The Economist* of March 11th was based on what now prove to be quite inadequate cabled summaries, and gave a wrong impression of the Plan. So far from ignoring the fundamental position of farming in Indian economy, the authors put the need for more food first in their calculations, and propose that the net agricultural output should be more than doubled. The first aim of the Plan is in fact to establish a minimum standard of living. At present the great majority of Indians have not enough to eat; they are ill-clad, badly housed, ridden by disease and poorly educated. Poverty is the fundamental fact of Indian life; and the Plan devotes most of its text to detailed calculations of the requirements

"When  
your  
tobacco  
smokes hot—

take my advice  
and cool it down with Grand Cut"

**Grand Cut**

2 oz. for 5/-

Obviously a pipe of GRAND CUT alone  
smokes even cooler and more slowly

ISSUED BY GODFREY PHILLIPS LTD. IN THEIR 100th YEAR

of food, housing, clothing, public health and education. The second aim, which is to be pursued in step, is to increase Indian industrial potential, and so make the country capable of affording this higher standard of living. Again first things are put first: power, transport equipment, fertilisers, necessary consumption goods; and emphasis is put upon small-scale and cottage industries to be part of the raising-up of village life. If the Plan is to be criticised, as it must, it is for its omissions rather than for any of its specific statements. It is not true that, as was said in our Note, it definitely advocates a policy of self-sufficiency and high protection. But it is true that several sentences place much emphasis upon the need to be as independent as possible of foreign imports, especially of capital goods. It can fairly be said that the authors of the Plan are disinclined, on political grounds, to permit India to participate to its greatest advantage in the international division of labour—but no more.

### The Means of Development

The model for the Indian Plan is Russian economic development in the twentieth century rather than American economic development in the nineteenth. But it is explicitly admitted that India lacks either the resources or the willingness to go the Russian road and finance its economic development out of the forced savings of its people; the "sufferings" that would be involved cannot be contemplated. India's large and growing sterling assets would be used, in the Plan, to bring in imported goods, mainly capital equipment. Borrowing abroad for development would not be "unwelcome," provided it could be done without foreign influences and vested interests. But the capital that would be needed to accomplish the plan, and the extent to which its benefits would be wasted in increased population, have both been under-estimated. Nor is it said how the investment would be carried out, by state or private enterprise. There seems to be, it is fair to repeat, bias towards a policy of economic nationalism, which should be very carefully watched for the sake of the Plan's own aims. But to say that this is a plan for autarky is to say more than its authors have said. The large figures in the Plan are illustrations rather than precise estimates; and many of the crucial questions—replies to some of which were taken for granted in *The Economist's* Note on March 11th—are in fact left unanswered. But it is good news that the Plan may soon be available to a wide reading public in this country. It may be that, as was suggested in *The Economist's* Note, the Plan will prove to be a rallying point—for British as well as Indian well-wishers of India.

### Policy for Police

The Home Secretary's speech at Torquay last week served not only as a reminder of what the police services of this country have done, but also as a question mark as to what they are going to do in the future. Mr Morrison did little to answer his own questions. But his speech may have drawn public attention to yet another variation on the theme of central and local authorities, in relation to the administration of public services. Some wartime expedients which have increased efficiency in police methods or have released trained men from clerical drudgery need not be abandoned when the war comes to an end. Others, which have involved the administrative arrangements amalgamating certain local forces under the Chief Constable of the County (*The Economist*, November, 1942, p. 760), have posed the question of whether a National Police Service is intended or desirable after the war. Mr Morrison denied that there is any such intention. With goodwill, he said, there is no reason under peacetime conditions why the local system should not operate efficiently. On the other hand, Mr Morrison also said that

the days have gone when each unit of administration could be an independent entity.

The task is to secure adequate uniform standards of personnel, training, office organisation and administrative as well as technical efficiency. If opposition or obstruction from local authorities, from watch committees in particular, is too great, some compromise between local and national control is necessary, even if a National Service is ruled out.

### Merrie England

The Government's friendliest critics admit that its progress in tackling the major tasks of reconstruction is slow. But while the famous half-back line of Barlow, Scott, and Uthwart stamp their feet to keep out the cold, and Beveridge—popularly placed at centre forward—has temporarily been deprived of the ball, in other and lesser fields of planning the whistle has blown and—in Parliamentary terminology—progress is reported. The softer contours of our sport and culture are being drawn. Land use, full employment, the location and control of industry—on these subjects the many alternatives have produced headaches and not decisions. But for Basic English, county cricket, turf racing, there are clear cut and far-reaching plans. In only one of these, of course, the first, is the Government itself concerned. Nor are the three subjects connected; unless it can be held that a cricket match is the one place where conversation is already confined to Basic English. Still, taken together, they add up to a pleasing panorama of the diversions of peace. But even here the market realities break in. There is a financial aspect to even the lighter side of English life. Even the sport of kings is in need of a major financial reorganisation. Before the war only a few of the many racecourses could afford to pay dividends. In its plans for the future, the Jockey Club has shown a thoroughgoing business spirit. A company has been formed to promote a partial concentration of racing, which will mean the closing down of redundant and inefficient courses. It is very much to the good that sport should plan ahead to reduce its economic cares. Only so can the public look forward confidently to the renewal of their recreation and amusement, which bulk so very largely in the peace aims of most of us. What sort of England will emerge from the war is anybody's guess; but there is comfort to be found in the assurance that, whatever else may be lacking, horses will run and cricket will be played—and both activities are likely to be more efficiently managed than in the past.

### King Willow

The return of peace would be incomplete without the renewal of first-class cricket. A select committee of the Marylebone Cricket Club has made its suggestions for the game's revival. County cricket was beginning to suffer before the war from two associated troubles—waning public interest and waning financial resources. The way out is believed by many to lie through a more ebullient and more carefree playing of the game. The MCC recognise this need, but, probably wisely, they remain conservative—cricket is a conservative game, and few of those likely to support it would wish it otherwise. Cricket, of its nature, is leisurely, and its adherents will always be found among the leisurely minded, among those who feel the game's affinity to "the murmurous haunt of flies on summer eves." For finding its full public and for maximising its gate receipts, quality is more important than quantity. Over-long matches, an over-weighted fixture list, and wickets "doped" to play slow in the interests of economy—and of batsmen—these conditions defeat their own objects. They do not bring in the money. The MCC reject the idea of a time-limit for each innings, but in other ways—by proposing a new ball every 55 overs, the suspension of the eight-ball over, the elimination of appeals against the light, by allowing declaration on the first day, and by urging that fast wickets should be prepared—they give some allegiance to the brighter cricket movement. If other methods fail, there remains the suggestion—made in *The Economist* on May 27, 1939—that an endowment fund should be formed by appealing to the game's well-wishers. The suggestion is not so radical as it seems, because the core of the counties' finances has always in the past been members' subscriptions, in character largely the donations of local well-wishers, which before the war were falling off. But it would obviously be better if the game did not have to be bolstered in this way like a declining industry. The right way is to increase efficiency. The MCC's proposal for a knock-out competition is designed to bring new money into the game and to contribute to a central fund for affording overdue benefits to professionals. The pay and conditions of workers are important. But the only sure way back to public enthusiasm lies in good cricket, played with boldness and enterprise. For the future, even at Lord's, élan needs to replace éclat.

## AMERICAN SURVEY

### The President's Budget

(From a Correspondent in Washington)

IN sharp contrast to the middle thirties when the "spending budgets" of the US Government excited widespread comment in the press and elsewhere, there has been little public discussion of the \$100 billion budget recently proposed to Congress for the fiscal year beginning next July 1st. Two years of acclimatisation to expenditure programmes running into the tens of billions is partly responsible for the calm acceptance of a budget which contemplates the absorption by the central Government of about one-half of the total national production for the fiscal year 1944-45. War expenditures, which constitute the overwhelming proportion of the current budget, are accepted as a high-water mark of production to be achieved rather than as a restrictive limitation on the amount of the nation's resources to be put at the disposal of the Government. A more fundamental explanation lies in the fact that the real battleground of fiscal policy has shifted from expenditures to revenues, and, contrary to British practice, the American Budget is not the vehicle for proposed changes in the revenue system.

Major divisions in public opinion and the Congress on fiscal policy now concern the size and character of the tax and borrowing programme, and these have as a matter of custom developed in other channels than those controlling the development of the budget, although there is some evidence that in the course of time, tax programmes may occupy a more important place in the budget.

But despite its slight reference to revenue policy, the 900-page budget document is of fundamental importance as a picture of the size and scope of the American war effort, and also as a reflection of certain basic relationships and trends in the governmental structure.

#### The Bureau of the Budget

Executive formulation of a comprehensive budget did not become an established procedure in national government until 1921. Under the 1921 Budget and Accounting Act, the President was given authority to review and revise the appropriations estimates of Executive agencies and was directed to prepare each year a comprehensive budget for submission to Congress. Prior to that time, expenditure proposals, although submitted to Congress through the Treasury Department, were not centrally reviewed and co-ordinated. Congressional consideration was equally diffuse. In each House a number of separate Appropriation Committees working independently of one another made recommendations for legislative action on individual segments of the proposed activities for the year. Establishment of a single Appropriations Committee in each House of Congress brought about some co-ordination within the legislature at about the same time that the major move was made toward integration on the executive side.

The full significance of this milestone can be understood only in the light of the formidable obstacles that stand in the way of unified and integrated government in the United States. The divergent sectional characteristics of the country are reflected in the organisation of Congress by states and districts. Strong and conflicting group pressures make themselves felt in major departments and agencies—Agriculture, Labour, Commerce, among others—and in the corresponding sub-committees of the House and Senate appropriations committees. Furthermore, the Federal Government, like the nation itself, is widespread and sprawling.

Under these circumstances, it is no mean task for the Bureau of the Budget to serve as a co-ordinating and harmonising influence in the executive branch of the Government. Originally a small unit in the Treasury Department, the Bureau, in 1939, was made an integral part of the Executive Office of the President, thereby giving more reality to the President's central managerial responsibilities. During the early years of its existence the Bureau concen-

trated on the development of the procedures for the formulation of the budget, a process that begins a full year before the appropriations take effect. The agencies prepare their estimates in the late summer; informal hearings and consideration by the Bureau of the Budget takes place throughout the autumn; in December the President makes the final determinations; and in January the whole is presented to Congress. (The unpredictable character of Government programmes during war has necessitated some adjustment in this procedure. At present, the budget document contains detailed figures for normal Government expenditures only. War expenditures are presented in summary; the detail is supplied later following an abbreviated period of preparation and central review.)

But lately the Bureau has done more than give guidance to the central financial planning of the Government. It has operated as an instrument for central control and co-ordination of all Government policies and programmes and for general managerial oversight of organisation and administration. In this developing rôle, the Bureau of the Budget has characteristics in common with the British Treasury and the Offices of the War Cabinet.

The Bureau advises departments on the policy of the President regarding legislation which they desire or with which they are concerned. The Bureau assists the President in the preparation of executive orders relating to governmental organisation, practices and procedures. All governmental reorganisation matters pass through its hands. During the war period, the Bureau has been particularly active in connection with the establishment and organisation of emergency agencies. Recently, recognising that material and manpower, rather than money, are the currently significant limitations on national productivity, Congress gave to the Bureau a central control over Government employment. Each quarter, the Director of the Bureau establishes a maximum limitation on employment by each executive agency. This supplements the traditional limits placed upon expenditures by means of appropriations and accounting devices. By another recent piece of legislation, the Bureau was also made responsible for the review of all questionnaires proposed by executive agencies engaged in gathering information from the public, as a means of eliminating expensive and annoying duplication of statistical inquiries.

These new and expanding activities of the Bureau of the Budget include intensive work to improve the Government's internal administration. Although important improvements in Government management had been instituted in earlier years, progress had been slow and piecemeal. Recently the Bureau has organised special programmes to stimulate better organisation and management in individual agencies and to bring about Government-wide improvements, such as better accounting terminology and classifications, standard methods of compiling fiscal reports, and simplified personnel and fiscal procedures.

#### Executive Control

The present authority of the Bureau of the Budget to exercise control over the use of executive appropriations and to strengthen the Chief Executive in his guidance of governmental operations have not gone unquestioned and has been challenged in Congress. Three new *ad hoc* committees—two in the Senate and one in the House—have given further evidence of Congressional resistance to the trend toward increased central executive co-ordination, review and control. For ten years the Bureau has exercised the power to "reserve" parts of appropriations for unforeseen future needs or to remain unobligated. Later in 1943 a proposal was made to transfer this responsibility to the Congress, to be exercised on the basis of agency statements rather than on the basis of central executive authority. The proposal was, in the end, defeated, but only after a sharp debate.

The complexity of the American budgetary process, of which this is only one illustration, contributes to Congressional-Executive differences on questions of fiscal administration. A specific authorisation by Congress is required before executive agencies can incur obligations (through order, contract, employment or some other committing action). This authority is normally provided by an appropriation, which covers both the authorisation to incur the obligations and also the actual disbursement of funds up to a stated limit. Unlike the British budget, which relates simply to disbursements, the American budget must therefore make a clear distinction between the money amount of proposed new appropriations and of estimated disbursements from both these and previous grants. As a consequence, in wartime, when huge military programmes involve the letting of contracts long before resulting outlays are made, the fiscal records seem to show tremendous balances of money "on hand," even though new authority to incur obligations may be simultaneously requested.

A general tendency to substitute direct Congressional action for Presidential responsibility for management appears in the activities of three Congressional committees established to investigate, respectively, war expenditures, employment and personnel costs, and "the reduction of non-essential expenditures." Each of these committees has expressed scepticism about the sincerity of the Chief Executive in promoting economy and efficiency. For example, one predicted that unless the Bureau of the Budget uses more drastically its power to set personnel ceilings for the various executive agencies, Congress will itself step in to make arbitrary reductions.

There is little doubt, however, that the President will increasingly be recognised as responsible for the formulation of a consistent body of policies of Congressional consideration and for effective supervision of the work of executive agencies. In the Bureau of the Budget he has the means of making effective his rôle as general manager of the Federal establishment.

## American Notes

### Feeding the Fighters

One of the granaries as well as the arsenal of the democracies, America has announced a "food programme for 1944." The fact that one-fourth of US food production will go to Government procurement is part of a report prepared for the Director of War Mobilisation, Mr James F. Byrnes, by the War Food Administration. The programme reviews the problems of production, and of distribution between military, lend-lease and civilian requirements. In the first place, the resources to be distributed have been considerably increased by the efforts of the farmers, especially through an extension of crop acreages. But a jump in production of one-third over pre-war averages will still not be sufficient to meet growing demands. Total needs have risen over 1943 by something like 6 per cent for meat, 11 per cent for fats and 14 per cent for potatoes. Civilian consumption will absorb the major part of supplies. On the whole it is likely to be stabilised at the 1943 level, though this, especially in meat and fluid milk, is well above pre-war consumption. There is no suggestion that food supplies for US civilians should be cut down at all by means of stricter rationing. On the other hand, it is argued that the amount exported to other countries under Lend-Lease is limited more by restricted shipping-space and by military considerations than by the amount of food consumed inside the United States. This applies particularly to Russia; the quantities sent are to be increased in 1944, but will still be very small relatively to the needs. Meanwhile food supplies shipped to Britain are to remain, on the average, on a level equal to that of 1943. Generally speaking, the time when the difficulty will be to find the demand and not to find the supply is likely to be more distant in agriculture than in other industries. On the contrary, the effort for some time to come will be to live up to the high ambitions of feeding the world which have been professed in America.

### Palestine Resolutions Shelved

The resolutions in both Houses of Congress calling for the right of free entry for Jews who wish to immigrate to Palestine and expressing disagreement with the provisions of

the British White Paper have now been pigeon-holed. This temporary agreement to let the matter rest has been made on the recommendation of the War Department. A note from Mr Stimson has suggested that acrimonious discussion of British policy in Palestine at the present moment would be likely to foment trouble in the Middle East rather than contribute to any ultimate settlement of the problem. The strategic sagacity of this view need hardly be stressed. But it should not be imagined that it disposes of the matter. Only military necessity could have adjourned the discussion, and it should not be assumed that even considerations as strong as these will necessarily keep the matter in abeyance till after the armistice. Among people whose interest in the hardships of the immigrant is heightened by the bitter experience of past generations an issue such as this cannot but command attention. Nor will the politicians of an election year be easily persuaded to drop so valuable a weapon, no matter which party they represent. The "Jewish vote," split though it is on the issue of Zionism, is one which no party would care to alienate. Nor are these the only voters who might be moved to united action if they thought the Administration was subjecting a fundamental principle of the American way of life to the "imperialistic" interests of Britain. Whatever the outcome, it is unlikely that the motions, strongly backed as they were in both Senate and House of Representatives, have been adjourned with very marked willingness.

### The Soldiers' Vote

The President is still making adroit political use of the soldiers' vote issue. Congress, it will be recalled, refused to accept his recommendation of a Federal ballot by which all men and women in the forces could express their choice in the Presidential election without having to find their way through the complications of each state's electoral law. The Bill which passed both Houses confined itself, in substance, to providing Federal assistance for the transmission and collection of State ballot papers. How many soldiers would actually record their votes would, therefore, depend upon how many states made arrangements to use this procedure. This Bill is now before the President for signature or veto and he has taken the step, both obvious and subtle, of asking the 48 Governors to report on their states' intentions. The answers are revealing what the President's Congressional opponents conspired to forget—that the procedure will not work. The majority of states could not count ballots so collected and less than half propose to take any steps to legalise them. In only 10 states out of 48 is it reasonably certain that the plan would work. In view of this, a veto seems likely. The President will have the satisfaction of killing a plan that he will have proved dishonest, but it is very doubtful whether he will get one that he likes better. And it is, therefore, unlikely that anybody will ever know whether the politicians are right in the assumption that underlies the whole dispute—namely, that a large majority of the 10,000,000 electors in uniform would vote for Mr Roosevelt if they had the chance.

### Foreign Policy

The long-continued criticism by the most authoritative American publicists of the policy, or lack of policy, of the State Department has drawn from Mr Cordell Hull a statement of the guiding principles of the policy he intends to pursue. The statement neither has in it, nor purports to have in it, anything new. On the contrary, it has the character of a number of abstract aphorisms culled from the Secretary's pronouncements of the last few years. It is therefore unlikely to pacify the critics. Nevertheless, certain conclusions of value, even though of negative value, can be drawn from it. It is a great advance on Kellogg Pactism to read that "some international agency must be created which can—by force if necessary—keep the peace among nations." But this realism is diluted by the statement that the force is to come from the co-operation of nations whose armaments have been "reduced to a minimum," and that all "spheres of influence, alliances, balances of power or any other special arrangements" are to be eschewed. In short, Mr Hull's policy is Wilsonian universalism. The official policy of the State Department stands at 1919. One can rejoice that it does not stand at 1914; but some recognition of what has happened since 1919 would also be an advantage.

# THE WORLD OVERSEAS

## Czechoslovakia Turns East?

ON the eve of the Fifth Anniversary of Hitler's march into Prague, the Czechoslovak Government in London called its people to prepare for armed struggle against the invader. President Benes himself made this appeal very strongly in his recent message to the Czechoslovak State Council.

The Czechoslovak people were recently reproached with some frankness by authoritative Soviet quarters for "lagging behind" other invaded nations in resistance to the Nazis. The President of Czechoslovakia, who is now closely associated with the Russian Government, has therefore summoned his countrymen to make up the leeway and not to wait passively for the rebirth of the Republic.

### The Memory of Munich

The fact that the Czechoslovaks have in a sense "lagged behind" cannot be denied. But it may be questioned whether they really deserve severe censure on this account. The peculiar background of the post-Munich period in Czechoslovakia did not favour the emergence of a popular and nationwide movement of resistance. The passive capitulation into which Czechoslovakia was forced in the autumn of 1938 inevitably bred much apathy and a feeling of prostration. The long years of Allied military reverses that followed could hardly have shaken the mass of the Czechoslovak people in its political lethargy.

There was a passive struggle up to a point. But individual acts of anti-Nazi resistance, such as the assassination of Heydrich in 1942, remained more or less isolated events. The German repression which followed the assassination of Heydrich undoubtedly weakened Czechoslovak resistance further. The year 1942 marked the ebb of the movement. The memory of Munich had bitten deep. The people who had been deserted by the rest of Europe when their own existence was at stake remained more or less apathetic when the rest of Europe was fretting angrily at its chains.

Another legacy of Munich which damped down national energies was the Hacha Administration. It came into being as the constitutional successor to the Benes Government. True, the Government of President Benes was revived in exile. But the fact that it was President Benes himself who delegated his powers to Hacha could not so easily be effaced from the people's memory. This implies no reflection on President Benes' conduct after Munich. Perhaps no other course of action was open to him after the catastrophe of September, 1938. But a major consequence of the catastrophe is the existence of a Government claiming legal rights and collaborating with the Germans. This cannot be overlooked.

The legality of the Hacha Government has been rightly challenged by President Benes himself. He has pointed out that his successor violated the constitution when, on March 15, 1939, he acquiesced in the occupation of Bohemia by the Germans. Moreover, the Presidential term lapsed on December 18, 1942. As no election of a President has since taken place, it is argued, the old President, that is Dr Benes, now exercises his powers legally on the basis of Article 58 of the Constitution. But however strong the legal force of this argument may be, the fact that the origin at least of the Hacha Government was constitutionally unimpeachable cannot fail to have influenced the attitude of the Czechoslovak people.

Moreover, the geographical position of Czechoslovakia has probably been a decisive handicap to the resistance movement. Because of the central position of their country, altogether surrounded by enemy territory, the Czechs have found it more difficult than the resisters among other nations to establish contact with political centres abroad. This may now change. The Soviet armies have nearly reached the sub-Carpathian Ukraine.

The response inside Czechoslovakia to appeals for armed resistance will depend very largely now on the closeness of the contact between Czechs and Russians. Even so, the fact that Czechoslovakia stretches from the eastern fringe of the Carpathians to the heart of Germany makes the prospects for armed struggle different in different parts of the country. The rumbling of Russian guns on the other side of the mountains may be a signal for guerrilla fighting in the sub-Carpathian Ukraine. In Bohemia and Moravia the conditions are certainly less favourable. In Slovakia, situated in the centre, the response to the call to fight will largely depend on whether the Slovaks have really had enough of their "independent state" under Tiso.

Czechoslovak policy in exile has concentrated on undoing the effects of Munich. Yet some of those effects are still there; and to some extent they still colour the political ideas that prevail among the Czechoslovak emigration.

The catastrophe of September, 1938, has not left the democratic tradition of the Czechoslovak Republic altogether intact. Disappointment with democracy and parliamentary rule was, naturally enough, fairly strong among the Czechoslovaks when all their democratic virtues would not save them from national disaster. At some time even the belief in a single party system seemed to be striking root. Quite recently, President Benes outlined a new scheme for a three-party system:

All our reliable reports from home state that the great majority of our people . . . are convinced that we shall not return to the former party system after the war, and that we shall set up a new Republic, more consolidated, and less complex. This means that we shall create a new party system comprising only three parties: a party of the Left, a party of the Centre and a Conservative party. . . .

President Benes has not made it clear by what means he intends to limit the number of parties. One of the chief obstacles to setting up a three-party system after the war may be the multi-national character of Czechoslovakia. This difficulty may be overcome by giving each of the three parties some sort of a federal structure, with national subdivisions in each. Even so, the restraint of parties is a dangerous road for democrats to travel.

### Frontiers and Policy

But the most important issues with which Dr Benes' Government has been grappling are the reconstitution of Czechoslovakia with its pre-Munich frontiers, and the formulation of a programme of foreign policy. The two issues are interrelated. All the Allied Governments have declared the Munich Agreements null and void. But the most explicit assurance of the restoration of Czechoslovakia in its pre-Munich form has so far been given by the Soviet Government. Soviet influence will undoubtedly weigh in the scales when the time comes to settle Czechoslovakia's complicated minority problems again.

The Sudeten-German problem comes first in importance. Czech policy seems to favour a drastic solution in the shape of a transfer of most, if not of all, of the Sudeten Germans to Germany. On the wider German problem, President Benes has sided with the extremist adherents of a "Carthaginian peace." In his message to the State Council, he said:

In my opinion a nation which has been responsible for two such abominable evils (that is, two world wars) merits the desolation which will fall upon it after the present war and really deserves to undergo a great national decline for centuries to come.

The problem of Slovakia is less acute but not less difficult. Discussion turns on whether the Slovaks ought to be given autonomy within the framework of the reconstituted Republic. During the course of the first world war, the Czechs and Slovaks concluded the Pittsburgh Agreement, under which the Slovaks were promised wide autonomy. It was this agreement that the Slovaks later invoked in support

of their claims. In the course of this war, Dr Benes has consistently refused to give any similar pledge. Until recently he spoke, on the contrary, in favour of more centralisation than before the war. He re-stated this view somewhat emphatically on the twenty-fifth anniversary of Czechoslovakia's independence last November. But in the message which he delivered on his return from Moscow in February he put on record a revised view.

There will be no disputes regarding the decentralisation of the State. I, myself, believe that the decentralisation of Bohemia, Moravia, Slovakia and Carpathian Ruthenia—to the degree that will be especially necessary in Slovakia—is a matter of course.

### The Pull of Moscow

From this it may be deduced that the future structure of Czechoslovakia was one of the topics discussed during President Benes' visit to Moscow. While Soviet policy is committed to the reconstitution of Czechoslovakia in its pre-Munich form, it appears at the same time to favour a solution on federal lines. This is probably especially so in the case of the Sub-Carpathian Ukraine, the only Ukrainian (or Ruthenian) territory which will be left outside Russia, if the Polish Ukraine is absorbed by the Soviet Union.

Finally, there is the problem of the part of the Teschen province that was incorporated by Poland shortly after Munich. Poles and Czechs claim the province, and no agreement has so far been reached. On this question, too, there has been some difference between the British and the Russian attitude. Both the British and Russian Governments have denounced the Munich Agreement. But Britain has so far not definitely sided with either Czechs or Poles in the dispute over Teschen, while Soviet diplomacy fully supports the Czech claims.

A survey of the issues arising out of the reconstruction of Czechoslovakia explains in part the strongly pro-Soviet character of President Benes' policy. There can be no doubt that this policy is in harmony with a widespread feeling in Czechoslovakia itself. The tragedy of Munich has made Czechoslovakia turn its eyes from the west to the east, because in the eyes of the Czechoslovak people Russia does not share the blame for the dismemberment of Czechoslovakia. There is, in addition, the old Pan-Slavist tradition, always strong in Czechoslovakia and now immensely invigorated by Russia's triumphant part in the war.

President Benes' policy, however, is in the last resort based not so much on historical memories as on the new facts in eastern and central Europe. That eastern Europe is going to be a Russian sphere of influence has been unquestionably accepted by Czechoslovakia's leaders in exile. But the question of what rôle Czechoslovakia may play within that sphere remains open. The peculiarity of the position is that, while the Czechs have definitely turned to the east, they are still in essence the most western-minded nation among the Slavs; and in the somewhat longer run they would hardly be willing to sever their links with western Europe.

The question which is vital for Czechoslovakia's future, and, indeed, for the future of all its neighbours, is by what methods Russia is going to exert its influence over its prospective sphere. The Czechs set their hopes on a Russian good neighbour policy. While they welcome Russia's economic, political and military preponderance in eastern and central Europe, they hardly think of this in terms of exclusive hegemony.

## Belgium's Fourth Year

DURING the fourth year of German occupation, Belgium's food supply situation improved slightly. The daily bread ration for normal consumers was increased in August, 1943, from 8 ounces to 8.8 ounces and in January, 1944, to 10½ ounces. It is reported that the home production of bread cereals increased from 205,000 tons in 1940, when the fighting reduced it sharply, to 425,000 tons in 1942. In 1943 the harvest seems to have been roughly the same as the year before, although another increase in the acreage under bread grain was reported.

The few acreage and harvest statistics that are available are, however, contradictory. From what is known about Belgian agriculture before the war, it would not be possible to enlarge the area under cultivation very much or to increase the yield per acre; both were among the highest

in Europe. The bigger bread rations have obviously been made possible by larger imports of grain, probably from Hungary and Roumania. The extremely small meat and fat rations were maintained largely from home production, and here it seems that heavy pressure on farmers has resulted in larger deliveries. As in other occupied countries, potatoes show the largest expansion. From 1940 to 1943 the acreage under potatoes increased by three quarters.

Before the war, Belgium had the largest consumption of beer per head of the population in the whole world. At present beer output has been reduced to three-fifths of pre-war production. At the same time, its quality has declined.

The diet provided by the rationing system is extremely monotonous. Formally there is a considerable differentiation between different groups of consumers; but extensive thefts of ration cards and a large black market show that the main concern of all Belgians is to improve their diet. Flemish farmers are credited with delivering their quotas more adequately than the Walloons. But this is obviously German propaganda. It seems also obvious that political reasons were mainly responsible for an increase in the bread ration. Peacetime necessities like tobacco have become luxuries and are entirely distributed in the black market; all German attempts to control this market have been a failure.

### Much Reduced Output

In industry, German and collaborationist efforts are no longer directed at bringing industrial output back to the pre-war level. The pretence has even been given up that coal output is as large as before the war. It is admitted at present that coal output can only with difficulty be maintained at four-fifths of pre-war. Only fractions of the steel capacity are reported to be working. The largest coal and steel concern, the SA Augrèe Marihay, has reported that, during the business year 1942-43, only 27 per cent of its steel capacity was in production.

Restrictions on every kind of civilian production have not availed to keep up the output essential for Germany's war industry. Production has stayed stagnant at a low level. The concentration of firms has continued, particularly in the glass industry, which was mainly an exporting industry before the war. In all industries any expansion of productive capacity is prohibited. The restriction of building activities decreed in 1942 was again tightened in 1943. Private building is at a complete standstill.

In modern industry stagnation inevitably results in decline, and this process is accelerated if resources of labour and material are taken to work outside the country or in the construction of fortifications and military installations. During 1943 more workers were sent to Germany, and the numbers now employed in Germany probably exceed 500,000. At the same time, more Belgian labour has been forced to work on fortifications at the coast. The Belgian coast-line extends, however, only over some 40 miles, and it can be assumed that Belgian workers are employed in this work outside Belgian territory. Conscription of labour led to a resistance movement and the flight of workers into the mountainous regions of the Ardennes. The actual extent of this flight is very obscure. There seems no doubt that fugitive conscript labour moves all over the country, especially in the eastern provinces.

### The Export Drain

The much reduced industrial production is not available for home consumption. The export drain has continued and increased steadily. In 1938 the value of total exports amounted to 91 per cent of imports. In 1941 it had increased to 157 per cent and in 1942 to 261 per cent. There seems to be no doubt that during 1943 exports may have reached at least three times the value of imports.

Reduced industrial activity is also shown by a considerable decline in transport activity. The movement of goods on the extensive inland waterways amounts to only one-third of the pre-war transport. The carriage of goods by rail fell by 12 per cent in 1942 compared with 1941. During 1943 a slight increase was reported. Naturally a considerable part of transport facilities is used for German military purposes; these movements are not shown in the statistics. The efficiency of the railways must have greatly declined; the personnel of the state railways has increased by 3 per cent. During the occupation of the last war rail-

way services were manned by German personnel; this time Belgian workers are still employed. There are as yet no indications that any changes are contemplated as part of the preparations against the invasion.

### Financial Expansion

Financially, there was another expansion in contrast to the industrial stagnation. Control measures seem to have been used drastically. The following summary of the annual increases in the most important financial items shows the general trend:

| In million Belgian francs. |                            |                                                           |                  |                  |
|----------------------------|----------------------------|-----------------------------------------------------------|------------------|------------------|
|                            | Notes<br>in<br>Circulation | Central<br>Bank Credits<br>to the<br>Banque<br>d'Emission | National<br>Debt | Total<br>Revenue |
| 1941.....                  | 18,823                     | 8,799                                                     | 17,939           | 12,283           |
| 1942.....                  | 19,451                     | 16,817                                                    | 20,482           | 13,824           |
| 1943.....                  | 16,298                     | 22,770                                                    | 23,546           | 15,189           |

The relatively small increase in total revenue shows again the general stagnation of the economy. The increasing costs of the occupation, as well as the mounting German clearing debt, are clearly reflected in the rising credits of the central bank to the Banque d'Emission. The rise in the national debt is correspondingly large. There is, however, the interesting fact that the increase in notes in circulation was smaller in 1943 than in 1942. This corresponds with the equally interesting fact that total deposits in commercial banks and savings banks showed an increase which exceeded the rise in the notes in circulation. There is only one conclusion possible; banknotes which had been hoarded have returned to the banks in greater numbers. The inactivity of the Bourse, the stop on dividends and wages and so on have been partly responsible for this. But the main reason seems to be the impossibility of spending money and the standstill of private credits to industry. Generally, the figures reveal that, even with the most extreme reduction of economic activity, administrative measures can prevent or at least arrest acute currency inflation of the type that happened after the last war on the Continent.

## Letters to the Editor

### Relics of Dear Money

TO THE EDITOR OF THE ECONOMIST

SIR,—In the article in your issue of March 4th reference is made to the common practice of Life Offices whereby a half-yearly life assurance premium is arrived at by adding 2½ per cent to the yearly rate and dividing by two. An example is given which alleges the true effect to be a loan by the office of part of the year's premium at a rate of interest equal to 10 per cent per annum, thus suggesting that the office is charging an unconscionable rate of interest. This suggestion is not correct. If it is really intended that the extra cost incurred in collecting and accounting for two premiums instead of one shall be computed at 5s per cent per annum, i.e., at 2s. 6d. per £100 premium per annum, the obvious reply is that such cost could not be so covered. If, on the other hand, a constant charge of 5s per annum per policy is intended, then in relation to the average amount of new premium per annum encountered in practice namely, £14, the interest yield works out not at 10 per cent but at 3 per cent per annum.

Moreover, these considerations take no account of an additional point which applies in the majority of cases, viz., that the 2½ per cent charge covers not only additional collection and accounting costs and loss of interest, but also the chance of losing the second half-yearly premium altogether, if the life assured should die within six months of the yearly renewal date.

The comment in the article on the charge in respect of overdue premiums should also be considered not with reference only to rates of interest, but with reference to the combined effect of interest and expenses.—Yours etc.,  
A. SHREWSBURY.

The Life Offices Association.

[The 10 per cent rate admittedly covers an insurance risk as well as an interest charge. The insurer is, in fact, covering the life of the assured for six months of each year

at half the premium. The actuarial expression of this risk will vary with the expectation of life of the assured. For life policies as a whole it can hardly account for more than a small fraction of the 10 per cent rate. The fact that this rate has remained unaffected by the downward movement of interest rates over the past 13 years is in itself strong evidence that it must be judged high and a "relic of dear money" in the present-day context.—EDITOR.]

## Jews in Hungary

TO THE EDITOR OF THE ECONOMIST

SIR,—In the letter published in your February 5th issue, Lady Listowel asks *The Economist* not to relinquish its splendid standard of accuracy; but she herself makes several inaccurate observations.

1. The number of Jews within the present frontiers of Hungary was 724,000 according to the official Hungarian Census in 1941—not 900,000.

2. There are at the moment five, not sixteen, Socialist Members of Parliament, and, as none of them belongs to the 1942 Committee, which for all practical purposes replaces the legislature, it is difficult to see how they can be the influential party which she describes.

3. Since the time of Bela Kun the Communist Party has been persecuted with unequalled relentlessness. To imply that individual Communists have no trouble if they behave nicely does not make sense.

I was in Hungary from October 1939, to June 1940, working for Polish refugees, and in the course of my duties made several visits to the Budapest Detention Prison. Here I found hundreds of innocent Jews, suspected Communists, fugitive Czechs, etc., living in conditions which were a disgrace to a civilised country—without soap for washing or change of linen, crowded a hundred to a cell without a bench to sit on or any stick of furniture. Many whom I talked to had been there for months without trial. What Lady Listowel calls Hungarian democracy has indeed its limitations.—Yours, etc.,  
FRANCESCA M. WILSON.

5, Downshire Hill, N.W.3.

## "WHAT! Another of those 'Zoning' advertisements?"

TO be in the fashion, we ought to say "Some of you can't get our splendid chocolate now. We are sorry for you! All this zoning, you know."

And we say phooey.

If we were still making our pre-war chocolates — Black Magic, Chocolate Crisp, Aero Milk Chocolate, Dairy Box, Smarties — there would be something in it.

But we're not.

We're making good chocolate, but so are other people. If you can't get Rowntree's, you can still get your ration of good chocolate.

"Good" was not quite our idea of what chocolate should be when we had a free choice of ingredients and all the skilled workers we needed. "Good" would not have satisfied us then. Nor would it have satisfied you.

Perhaps it doesn't now.

But there's nothing to be done about it till the war is won.

Then, when we are again free to set our own standard, we are going to set it higher even than before; for we're still learning. If then you couldn't get the things we shall be making, you might well think yourself hard done by. But for the present, we won't say we're sorry for you.

To be absolutely honest, we're more sorry for ourselves.

ROWNTREES

# THE BUSINESS WORLD

## Wartime Savings in America

(From a Correspondent in Washington)

ONE of the outstanding developments affecting post-war business conditions in the United States is the enormous quantity of liquid spendable reserves accumulating in the hands of individuals as the result of wartime saving. This is indicated in the following tables:

INDIVIDUAL SAVINGS (ESTIMATED BY THE DEPARTMENT OF COMMERCE)  
(Billions of dollars)

|                                                            | 1940 | 1941 | 1942  | 1943 |
|------------------------------------------------------------|------|------|-------|------|
| Total income payments to individuals                       | 76.5 | 92.2 | 115.5 | 142  |
| Direct personal taxes                                      | 3.3  | 4.0  | 6.6   | 16   |
| Disposable income                                          | 73.2 | 88.2 | 108.9 | 126  |
| Spent on goods and services                                | 65.7 | 74.6 | 82.0  | 90   |
| Savings of individuals (including unincorporated business) | 7.5  | 13.6 | 26.9  | 36   |

INDIVIDUAL SAVINGS (ESTIMATED BY THE SECURITIES AND EXCHANGE COMMISSION)  
(Billions of dollars)

|                                                                         | 1940 | 1941 | 1942  |
|-------------------------------------------------------------------------|------|------|-------|

(a) For dwellings, equity represents the difference between the value of buildings and the value of the mortgages; for private insurance it represents the difference between the value of the policies and the value of the loans for which they serve as security.

The significance of these large accumulations can be better appreciated by referring them to certain benchmarks. (1) If the war lasts through 1944 total savings for the three years 1942-44 will be substantially larger than the total income of individuals in the best pre-war year. (2) Never before 1941 did the annual savings of individuals exceed 10 billion dollars. The average for the previous decade was less than 5 billion dollars. In 1943 they will probably

exceed 35 billions. (3) Additions to individual holdings of these liquid assets in the one year 1943 will be larger than both individual and corporate accumulations for the two-year period April, 1917, to June, 1919.

Perhaps even more important than the increase in the total savings of individuals is the distribution of these savings among income classes. Since most of the instalment and other purchase debt was owed by people with relatively modest incomes, the liquidation of this debt represents savings by these individuals. Of still greater significance is the accumulation of liquid reserves of buying power in middle income groups. In the three years ended on December 31, 1943, individual holdings of currency, bank deposits and Government bonds probably increased by roughly 60 billion dollars. Part of this total will be held by unincorporated business enterprises—producers rather than consumers—and by the very wealthy, whose spending habits it will not greatly affect. Most of it, however, possibly 35 to 45 billion dollars, will be owned by consumers whose incomes are now less than \$10,000 per year. Such a large increase in their liquid reserves can be expected to exert a profound influence on their post-war spending decisions.

The very fact that these large holdings of liquid assets have not led to a ruinous price inflation during the war is an indication that people have preferred to save rather than spend their incomes. There are special reasons for this preference; it is important to understand them in appraising the possible post-war effect of wartime savings.

Normally, people save for one or more of three purposes: (a) Investment either for income or for appreciation; (b) planned future expenditures that cannot conveniently be made out of current earnings; (c) protection against various contingencies that may result in a loss of income or in extraordinary expenses. Though it is difficult to distinguish these motives—let alone measure them accurately—they do form a basis for analysis.

It is reasonably certain that the investment motive in wartime savings has not been important. While the return on war savings bonds if held to maturity compares quite favourably with that on other securities, it is not, for most people, sufficient to induce the foregoing of current expenditures. The second motive for saving, for planned future expenditures, is more important today, especially since many of the things people would like to buy are just not available. But it is the third group of "rainy day" or "just in case" savings that are undoubtedly the most important. To these normal motives for saving may be added the rise in holdings of "ready cash" as current income increases and, finally, patriotism.

In the post-war period, however, these motives may be considerably weakened because of the fact that individuals will have had unparalleled opportunities during the war to act upon them. Patriotism will no longer be so compelling, nor does it seem likely that the investment motive will be a more important influence after than during the war. Then, too, the spending of reserves on the objects for which they will have been accumulated should more than offset any savings by other consumers out of their current income to finance future purchases.

The inflationary potentialities are obvious. Any attempt of producers and consumers to spend, on balance, substantially more than their combined income can lead to a very large post-war price rise. This could destroy the buying power of these reserves, their adequacy as protection against future contingencies, and therefore their influence on the expenditure decisions of consumers, just as effectively as though the dollar amounts were dissipated.

But the large increases in liquid savings need not augur badly for the post-war world. An individual with sub-

stantial holdings of cash and Government bonds is much more likely to spend his weekly earnings than when his holdings are in his estimation inadequate. He is potentially a better market. The enormous wartime accumulations of liquid assets should greatly enhance his confidence as a consumer. If inflation is avoided, wartime savings can be

much more than the basis for a temporary replacement boom after the war. Their presence and the confidence they inspire could serve to weaken the propensity to withhold earnings from the income stream. In short, they may do much to increase the size of the over-all market for consumers' goods and services.

## Business Notes

### Coalowners Decide

On March 16th the Mining Association—the coalowners' collective organisation—issued a dramatic statement. Its Central Committee had recorded agreement on a proposal

to establish in each district a scheme designed to secure the maximum efficiency of production in the district as a whole, and in that connection to facilitate the concentration of control in the hands of a smaller number of undertakings.

The decision is to be welcomed, even if it merely acknowledges what has long been public knowledge, namely, that the problem of combining good wages and profits with reasonable coal prices can only be solved by technical reorganisation. Hitherto all attempts to secure voluntary reorganisation on the scale required have foundered on the rock of uncompromising individualism, with disastrous effect in the present war. The low level of productivity is probably the major, if not the only, cause of the shortage of supplies. Moreover, in the absence of an improvement in productivity, the raising of wages to a level more in accordance with the nature of the work, and with earnings in other heavy industries, has lifted the price of coal at the pithead well above its price in other industrialised countries, such as the United States; wages paid per ton of coal disposable commercially rose by 86 per cent between 1939 to 1943, from 10s. 10.73d. to 20s. 3.05d. It is hardly surprising that the delay of technical reorganisation has given rise to impatience, and, against the background of unsatisfactory labour relations, to a demand for its achievement through nationalisation. The impatience was shared by some of the more enlightened coalowners. For example, Mr N. B. Brooks, chairman of the Bolsover Colliery Company, Ltd.—one of the biggest in Great Britain—publicly announced the need for redesigning the industry, and called upon coalowners to declare their acceptance of the principle of reorganisation, and of their intention to apply it. The more progressive section of the owners has evidently carried the day, assisted by the growing public demand for nationalisation. Sir Evan Williams, who has been president of the Mining Association for 25 years, is understood to have expressed his desire to retire; there is to be a full-time chairman, to be selected outside the industry.

### A Programme of Action

A statement of good intentions, however, is not enough; by itself it carries no guarantee of speedy action. Indeed, the time has come when only a definite programme of action, with time limits, can be regarded as adequate. As a first step the coal mines should be surveyed by a committee of experts, if existing surveys are incomplete or out of date. Next, plans should be prepared for the technical reorganisation of existing coalfields; they should be worked as single units, which will involve the closing down of some pits and the development of others. Thirdly, the plans for individual districts should be related to the industry as a whole in order to ensure the highest overall productivity. Production plans should provide for the use of the best processes and methods within the limits of technical knowledge. Such a scheme would inevitably come up against the financial problem of widely diffused ownership, one of the impediments to progress in the past. But finance should be made to fit the technical plans, not to obstruct them. The solution of the problem is to be found in some form of financial pooling. The danger is that the difficulties of valuation may be made the excuse for further delay. Obviously, the owners of a coal mine with good prospects, but not yet fully developed, would not care to accept past earnings as a basis of valuation. But a perfect valuation is impossible, and it should be possible, in conjunction with the preparation of plans for technical reorganisation, to prepare a formula that would do rough-and-ready justice. In sum, the test of the

owners' intentions is not the acceptance of technical reorganisation as a principle, but the elaboration, without delay, of a detailed programme of action. Of this there is as yet no sign.

### More Discount Market Capital

The discount house of Jessel Toynbee and Company is about to double its issued capital. At present this capital amounts to £300,000, the whole of which is in ordinary shares. The increase is to take the form of 300,000 redeemable preference shares of £1, bearing interest at 4½ per cent. These shares will be placed on behalf of a syndicate by the New Trading Company. It was this company which figured in the £115,000 increase in the ordinary capital of the company about a year ago, and the syndicate for which it acted on that occasion was understood to include insurance companies and other interests. Their intrusion in the discount market was purely in the nature of an investment operation and did not affect the control of the company. That is more than ever true of the impending issue of preference capital. The development is of special interest on two counts. First, it breaks the tradition of the 5 per cent rate at which discount houses have recently been issuing preference shares. That had all along appeared to be an excessive price to pay for additional capital in so well-protected an organisation as the discount market. That the tradition should be broken by one of the smaller firms in the market is doubly significant and welcome. Secondly, the coming increase will have raised the capital of every discount house above the figure of £500,000 which for some time has been held by the Bank of England as the desirable minimum for firms in this market. There is perhaps a solitary exception to this rule in the highly specialised firm of Secombe Marshall and Campion, but as the official agents of the Bank of England this firm is rather outside the rules. The process of consolidation and capital development in the discount market appears, therefore, to have completed an important phase.

The operations that have concluded this phase have shown how abundant is the capital seeking investment in the discount market. Rather less dignified evidence of this attraction of the discount market for investable funds was recently provided by advertisements appearing in a number of daily newspapers offering to purchase in part or in whole any

well-established discount house. That was the first time Lombard Street had appeared in the "small classified ads," where it hobnobbed with mink coats and second-hand denures. The attraction of the discount market for capital can be readily understood. In no other section of the British financial and commercial system does a given amount of capital immediately acquire such high gearing by forming the basis of additional loans from the banks. The short loan fund in London is still increasing, partly as a result of the persistent expansion of clearing bank credit, but more especially owing to the accumulation of abnormal sterling area balances in London. For the moment, therefore, this gearing up of the book of a discount house whose capital is increased need not react adversely on the funds lent to the rest of the market. But insofar as the market is building up its books and especially its bonds on the basis of these overseas funds, it is building on rather impermanent foundations.

### Bradford Dyers Revival

As was pointed out in a Shorter Note on page 380 of last week's *Economist*, Bradford Dyers' Association re-entered the dividend-paying list with a distribution of 4 per cent on its ordinary capital of £2,250,000 odd after a break of thirteen years. This caused no surprise. The company had more than covered its debenture charges for four years and in three of them had paid off ten years' arrears of preference dividend, calling for £1,274,618 gross. Earnings on the ordinary, after charging one year's preference dividend, exceeded 18 per cent in 1940 and half that figure in each of the two succeeding years. Last year they rose again to 9½ per cent. But since the payment of the previous ordinary dividend, reserves and carry forward had fallen from £930,000 to £235,000 for 1943. Even so, the consolidated balance-sheet of the group showed net liquid assets of £2,850,000 odd, against total gross assets and liabilities of £8,873,300. The fact that the ordinary shares stand at a modest premium suggests that results at least as good as those of the past three years are expected for some time to come, and no doubt there will be a very large demand for textiles during the restocking period after the war. It is evident, however, that the monopolistic position of the group has long ceased to afford it an assurance of earnings on its ordinary capital, which was inflated by a 60 per cent scrip bonus in 1925. The difference in the experience during the two wars is a striking comment on both the decline in the importance, for the world at large, of the British cotton industry and the extent of the mobilisation of resources for the war effort. War brought improvement this time as last, but five years' equity earnings 1939-45 amount to only 48.9 per cent, or 78.2 per cent on the 1913 capital. Actual payments on the ordinary for 1915-19 amounted to 165 per cent and the earned percentage must have been materially higher. Despite misfortunes in the spinning and weaving sections, the virtual monopoly which the Association had enjoyed since its formation in 1898 enabled it to earn reasonable, if lower, dividends until the collapse of 1931 came in sight.

### Cartelisation in Cotton

In view of the nature of the Cotton Board's report, dealt with in *The Economist* of January 29th, it is not surprising to find Mr G. Douglas, chairman of the Bradford Dyers' Association, advocating a very close corporation for the finishing sections of the industry. He would like to see the general adoption of standard prices, to be fixed periodically by Board of Trade costing accountants. Only those undertaking to adopt these prices and to subscribe to other rules, including the payment of standard wages, would be allowed to engage in the industry. The reduction in capacity—which is admitted to be necessary, although the Bradford Dyers' Association has enjoyed a dominant position in this section for some 45 years—would be carried out by buying out redundant firms. The necessary money would be provided by the banks. Mr Douglas would not formally debar new entrants, but he thinks that they might be required to pay a levy, additional to that required to liquidate the above-mentioned bank loans. For the rest, although it is possible that

the universal application of standard prices . . . would call for the continuance of the quota and compensatory payments in certain sections,

he believes that there is nothing in these arrangements

which need constitute any hindrance to rivalry in quality of production, time of delivery and service generally. It is a little difficult to understand the value of standard prices which take no account of quality of production, and it is equally difficult to believe that competition in services would be effective in concentrating production in the hands of the more efficient, which is the only basis upon which this country can hope to secure a high standard of living. Clearly, however, Mr Douglas believes in the general efficacy of charging a high price to one's own people so as to be able to sell cheaply overseas. As to any possibility of the public interest being protected by the provisions for new entrants, the hope is surely illusory under the plan put forward. The new entrant would not only have to make his own way while both his selling prices and his wage-rates were fixed, but he would have to do this while paying an additional membership charge, whose amount would be fixed by his established competitors.

### International Statistics

The presidential address that Dr E. C. Snow read to the Royal Statistical Society this week was the first since 1939 and contained a welcome report on the Society's wartime activities as well as a discussion of "The International Comparison of Industrial Output." Dr Snow took as his text the article in the *Economic Journal* of March, 1943, in which Dr Leon Rostas made certain comparisons of industrial productivity in the United Kingdom, the United States and Germany, based on the pre-war censuses of production in those countries. Dr Rostas reached the conclusion that productivity per head in this country was only about equal to that in Germany and rather less than half that of the United States. Dr Snow's paper pointed out the large number of statistical difficulties involved in any such comparison and threw considerable doubt upon the conclusion reached. Dr Rostas was successful in rebutting most of these criticisms, and the general result of the discussion was to leave the broad conclusion standing, though also to emphasise the difficulties in the way of making it precise. There is no doubt that American *per capita* productivity is, on the average of manufacturing industry, at least double British, and that is the main point of public policy emerging.

This controversy, however, was subordinate to the main point of Dr Snow's paper, which was to urge the importance of establishing an international statistical body capable of making these international comparisons on a basis of strict comparability. Dr Snow appeared to doubt whether the existing International Statistical Institute would serve the purpose, and it is certainly true that it is the results of statistical work rather than the methodology that are of most urgent interest. Dr Snow did not mention the League of Nations' Conference on Economic Statistics. Whether this is the right body or not, it is certainly necessary that very much more attention should be paid to international comparisons. Not only are they entering into treaty relations—as witness the decision of UNRRA to base its levies on national incomes—but they could also be used to throw much light on purely domestic economic problems. It is obvious, of course, that valid international comparisons can only be based on good national statistics. It is therefore encouraging to know, as was stated at the Statistical Society's meeting, that the Board of Trade is laying its post-war plans on the basis of an annual census of production with a more extensive range of information than the quinquennial pre-war censuses.

### Shipping Replacement Charges

It has been increasingly apparent in recent months that the main preoccupation of managers and shareholders of shipping companies is the level of replacement costs and the adequacy of existing funds to meet them. A year ago the Liverpool Steam Ship Owners' Association had hopes that costs might be kept within reasonable limits. This year they make the inadequacy of existing provisions the principal plank in their annual report. While reasserting their conviction that subsidies are harmful, they claim that the Government can

properly be asked to assist in the replacement problem, at least insofar as it is aggravated by war-created levels of costs.

It can scarcely be gainsaid that low shipbuilding costs are

eminently desirable, but it is very doubtful whether more than a fraction of the existing rise can be offset by technological improvements. There will be some increase against pre-war, but it is at present quite impossible to assess its extent. Further, the need of assistance will vary in each individual case. Insofar as insured values took account of obsolescence already provided, total depreciation plus receipts for ships lost will fall short of replacement cost, on the basis of prices ruling at the time of insurance. But that basis has risen progressively. Those who lost ships in 1940 will be far worse off than those whose fleets remained intact until 1943. Very possibly, those who lose none during the war will suffer the heaviest financial detriment. The British mercantile navy must be rebuilt, although there may be argument as to its exact size and nature. And there is no justification for the view that shipping should suffer heavier capital destruction than other industries; rather the reverse. For what it is worth the LSSOA estimate that ship repairing costs are now some two and a half times pre-war levels. That will, presumably, not be the level of post-war building costs, but it is an indication that the gap may be considerable. The LSSOA ask for adjustment of the Government Tonnage Replacement allowances and of tax assessments, coupled with low interest loans repayable over a reasonable period within the life of the ships built. Only the second of these concessions would bring in any money at present, but what the shipping companies need now is not cash but a reasonable assurance that they will not be prevented by wartime losses alone from possessing efficient fleets built at costs which are reasonable within the framework of post-war prices.

### Preparing to Salute

The banking system has been well prepared to meet the impact of London's Salute the Soldier Week, which, by the end of next week, should have netted more than £165 million in subscriptions to the Government's tap loans. In the first place, the decks have been cleared by sales of Conversion 5 per cents on the part of the clearing banks. These operations have been largely responsible for lightening their investments by £26 million over the three months to the end of February. As regards more immediate preparations for next week's effort, the authorities have seen to it that an ample supply of bank cash is available. Their Treasury deposit receipts call this week amounted to £80 million and was approximately balanced by the effective TDR maturities. The preparatory easing of the credit position is reflected in the latest Bank of England return, which shows bankers' deposits at the high level of £198,794,017. The banks will contribute substantial quotas of direct investments toward the target figure of £165 million. They have also been enlisted in the London drive by way of sending out exhortations to their depositors to subscribe as much as possible to Government loans next week. The impact of direct and customers' subscriptions on the bank cash situation will be largely cushioned by the pre-encashment of TDRs. As these securities will be encashed in substantial amounts next week, it is probable that the Treasury will abstain from fresh TDR calls during this period. The technical credit position is therefore well braced for the coming shock of this sudden and heavy canalisation of funds to Government accounts.

### Conflicting Views on Electricity

As was to be expected the electricity supply industry has not found it possible to speak with one voice on its future. At one time a large measure of agreement seemed possible, for a joint report was presented to the Minister of Fuel and Power by the Incorporated Municipal Electrical Association, the Provincial Electric Supply Association, the London Electricity Supply Association and a group of Power companies from the Incorporated Association of Electric Power Companies. This report was based on the assumptions that the consumer should be able to choose freely the fuel service he wants and that no drastic alteration should be made in the ownership and organisation of existing undertakings unless these can be proved to bring substantial and permanent benefits to the consumer. It contained a scheme that, while retaining the present structure of the industry "so far as this may be efficiently utilised," provided for any inefficient undertaking to be "brought up to the required standard for the

area." A separate report, issued by the Incorporated Association of Electric Power Companies, is a variation of the main report, but both embody, broadly, the main principles of the report of the McGowan Committee, published in 1936, that is

the retention and utilisation, where possible, of the larger and more efficient of the existing undertakings—both public authorities and companies—and the absorption by such undertakings of the smaller and less efficient undertakings.

It is now reported, however, that the Incorporated Municipal Electrical Association has approved a supplemental memorandum advocating the principle of public ownership and, in particular, local authority ownership. A report issued by the Electrical Power Engineers' Association, an organisation representing the technical staffs of the industry, suggested a national board for the industry, including both generation and distribution. The Minister of Fuel and Power is, therefore, faced with a choice of advice ranged in favour, and against, private enterprise. His choice, surely, should be guided by technical rather than by political considerations and his aim the provision of electricity as cheaply and as efficiently as it can be had for given purposes.

### Canada's Sterling

Some remarks of Dr W. C. Clark, Canadian Deputy-Minister of Finance, on Canada's balance of payments and accumulation of sterling balances make interesting reading in the context of the new Anglo-Canadian Mutual Aid Pact, discussed in a Note on page 394. Dr. Clark emphasised the quite astonishing expansion which has occurred in Canada's foreign trade during the war years. That trade amounted in 1943 to \$5,000 million, which, on a per head basis, easily exceeds any comparable achievement by any other country in the past. More detailed figures suggest that the favourable balance of trade last year amounted to \$1,350 million, which is more than 12 times the favourable balance attained in 1940—the last year before Canada's exports came to be dominated by the gigantic industrial war effort of the Dominion. Although that favourable balance of payments,

### "Why do I read The Yorkshire Post?"

"I'm often asked that question. People are apt to think that because I hold an important London job I ought to be content with the news only as London sees it.

"I have never agreed with that outlook. I feel it is just as important—more so in fact these days—to keep well-informed of the ideas, developments and trend of political thought in other parts of the country, especially in the North. "Well, The Yorkshire Post gives me a clear idea of what people in

the North are thinking and doing. It's what I call a well-balanced paper, and its leading articles are written by specialists in the particular subjects. I know when I read it I'm sure of reading good sense well expressed."

so far as it is being fed by exports to the United Kingdom, is not finding any corresponding counterpart in accumulation of sterling assets, Dr Clark pointed out that as a result of such exports made before the Mutual Aid agreements had come into force, Canada had acquired substantial sterling balances. Between the beginning of the war and March, 1942, when Canadian Mutual Aid began with the first \$1,000 million credit, the excess of Canadian exports to the United Kingdom amounted to \$1,800 million. Of this total, \$250 million had been covered by gold shipments from the United Kingdom, a total of \$840 million was absorbed by the repatriation of Dominion sterling debt, and the remainder, equivalent to about \$700 million, which had been accumulated in the form of balances in London, was then converted into an interest-free loan for the duration of the war. This should still be the extent of Canada's sterling holdings. Canada, however, is evidently counting on this sterling as an offset against debts to the United States accumulated during the war years. Dr Clark pointed out that unless Canada could convert sterling into United States dollars and buy what she needed in the United States, its use "would be hard indeed." This is an interesting hint on one aspect of the dollar problem after the war.

### India's Contribution

More detailed reports of the recent Budget debate in the Indian Central Assembly are now available in this country. They provide interesting details of the manner in which the financial agreements between India and the British and American Governments are operated. Sir Jeremy Raisman, Finance Member, explained that India bears no part of the cost of operations beyond its frontiers and only part of the cost of its own defence. The cost of British and Indian troops serving in Burma is borne by the British Government, and that of the American forces by the American Government. Forces raised in India and maintained there for local defence are paid for by the Indian Government, and so is their equipment insofar as it is produced in India. But the heavier equipment which has to be imported for the defence of India is provided on lend-lease terms if it comes from the United States, or is given outright if it comes from Britain. India is providing some reciprocal aid to the United States, but not to Britain. India only pays for the cost of airfields constructed in India if they are regarded as necessary for the local defence of the country. The airfields constructed in connection with the major operations of the South-East Asia Command and those which are used by British forces are not provided for in the Indian Budget estimates. This repatriation of financial costs—the true costs are in any case borne currently by India—was agreed upon before Japan entered the war and before the scale of military operations in and around India could possibly have been foreseen. The financial agreements can hardly have contemplated a situation whereby the expenditure of the British Government alone in India would very considerably exceed the total Indian Government Budget. This discrepancy between local Government expenditure for which some effort at compensation through taxes and loans is made, and external Government expenditure, which is financed by direct borrowing from the Reserve Bank and by the expenditure of rupee notes, is bound to increase as the scale of operations of the South-East Asia Command increases. Unless India can be flooded by consumers' goods, or unless the rupees created by British and American expenditure can be mopped up through taxes and loans, it would seem that the phenomenon of Indian inflation is only in its very early stages. The official gold sales and the issue of premium bonds have so far only touched the fringes of the problem, and in view of the prospect of a considerable increase in the flow of inflationary material the outlook is one that must cause misgiving.

### A Policy for Rayon

The full accounts of Courtaulds for 1943 show that gross profits after depreciation continued to fall, and that the figure before that provision was even more heavily down. The change in net profit, previously slight, was quite appreciable last year, and the accentuation of the shortage of labour, already acute, threatens further declines while the emergency lasts. The investor is, however, less interested in current results than in the eventual return on net liquid assets, now exceeding £42½ million, resulting from

the sale of the American Viscose Corporation. Mr Samuel Courtauld has consistently refused to bind himself in any way on the use to be made of this money, but this year he gave a very strong pointer about what he will not do with it. His statement is the corollary of the British Rayon Federation's protest against the Cotton Board Committee's suggestion for bringing rayon within the control of the cotton industry. He said rayon should stand on its own feet, that it is

a new and rapidly changing industry in competition with the whole world; whereas old English textile industries are fettered by old rules, methods and machinery, which are very much out of date. The extent to which Courtaulds, Ltd., are prepared to invest their funds in developing their textile business in England will obviously depend very much upon whether or no they see before them a free and unfettered field.

This is excellent, and if Government pressure is exercised it should be in the direction of stimulating cotton and wool to new efforts, not in that of regimenting rayon. But Mr Courtauld's own words show that rayon itself must not be closed to new entrants, to new ideas and to new efforts.

### British Celanese Borrowing

It may be recalled that two years ago British Celanese took power to issue £550,000 new 4 per cent debentures and actually issued £400,000 of them. The funds were required for a war development and the debentures were charged upon certain fixed assets with a floating charge over others. The total to be created was limited to £1,500,000. The company now requires a further £600,000. It proposes to convert the existing issue into an equal amount of 4½ per cent second debentures, and to issue in all £1,000,000 of them, carrying a general charge ranking after the £2,500,000 odd of first debentures. The final redemption date remains 1968 and the limit of issue £1,500,000. The additional £600,000 is to be provided in full by Morgan Grenfell in consideration of a commission of 1 per cent. Holders of the existing 4 per cent debentures are being invited to sanction the change, and acceptance of the scheme will amount to acceptance of conversion into the new stock. On balance-sheet values, the second debenture will be well covered by assets and the addition of a half point to the rate of interest is likely to prove decisive in favour of accepting the change. The equity holders are, however, likely to view the creation of fresh prior charges with some doubts, the more so as there is no intimation about the purpose for which the new money is required. It is generally assumed that the sum raised two years ago was for a new synthetic rubber plant, for which the Government granted the company a licence, and it is quite possible that the new loan is for the same purpose.

### A Renaissance in Design

"Colour, design and style—and prosperity" was the title of an address given by Sir E. Raymond Street, CBE, chairman of the Cotton Board, in Burslem on March 17th. He pointed out that without success in this field there could be no prosperity. Overseas markets will not buy British products unless they compare favourably with those obtainable elsewhere; and so far British goods are not renowned for their colour, design or style.

British productions (he declared) should be characterised by a skilful, attractive use of colour, by designs combining true artistic beauty and charm with functional efficiency, and by that indefinable combination of all these qualities with novelty and the spirit of the times which we call style.

The mediocrity of design which has hitherto been accepted will not do. Sir Raymond called for "a great renaissance" as the "only salvation." British design must be a reflection of the British way of life. Partly for this reason, the first requisite towards attaining better standards in industrial products is that the home market should want better standards. A process of education among the public is clearly desirable. Sir Raymond suggests a campaign to stimulate public discussion which would pave the way for the naissance of new ideas on style and design. His second requisite is that a sufficient supply of good designers should be available—and he puts more emphasis on their quality than on their numbers. Thirdly, manufacturers should support a policy of good design, and, fourthly, British achievements should be made known. The textile in-

dustries are well aware of the importance of the questions Sir Raymond raised. The Cotton Board's Colour Design and Style Centre, which was set up in Manchester in 1940, has been doing pioneer work in stimulating design, in fostering co-operation between all sections of the industry, and in providing information from overseas. Sir Raymond's address has significance for all sections of industry, and especially those producing consumer goods. He made the valuable suggestion that there should be more co-operation between various related industries, and he instanced particularly furnishing textiles, pottery, furniture, paint and wallpaper. There are many isolated examples of good design in every industry. The aim should now be to eliminate products which do not conform to the characteristics laid down by Sir Raymond.

### "Civvy" Clothes

One post-war anxiety of the Armed Forces was allayed last week, when details were announced of the civilian outfit to be given on demobilisation. Women are to be given the equivalent of the men's outfit in cash and coupons. The men's civvy clothes will consist of the following: one suit, one shirt, two collars, one tie, one pair of boots or shoes, two pairs of socks, one hat, one raincoat, one set of back and front studs and one pair of cuff links. The suits—non-austerity—are of a quality equal to the best utility, and they are made in a wide variety of fittings and designs. The soldier is to be provided with the basic elements of a civilian outfit. No one would expect more than a minimum set of clothes, and it may be due to lack of imagination rather than parsimony that only one shirt is included. The demobilised soldier will be allowed to keep parts of his uniform—possibly a battledress, underwear, socks and Army boots. All these he can find a use for, but the new civilian will want other equipment. Extra shirts, pyjamas, a dressing-gown, slippers, an overcoat, gloves, pullovers, handkerchiefs—the list will vary according to his taste and what he has left in his civilian wardrobe. Only a small percentage of the Armed Forces are likely still to possess an adequate stock of civilian clothes in wearable condition. Soldiers discharged during the war are provided for by grants of clothing or cash, and in addition they may obtain coupons in the same way as people who have been bombed-out. This is fair, and such a system could be applied on demobilisation. The number of applications, however, will be so large that administratively it is likely to prove simpler to give a block of coupons to each man, in addition to the outfit. Manufacturers will be anxious to know well in advance what the effective demand of the returning soldier is likely to be in order to prepare for it. The production of uniforms is now slowing down and capacity may become available for post-war needs. Contracts for relief clothing are being placed. Before the ordinary civilian ration of clothing is raised, attention should be concentrated on meeting the prospective needs of the demobilised members of the Forces. The clothing the soldier will want to buy should be in the shops on his return, and the coupons which will entitle him to buy it in his hand.

### Industrial Catering

In accordance with the recommendation of the Catering Wages Commission, the Minister of Labour is setting up a Wages Board for industrial and staff canteens. The Board will follow the normal trade board pattern; it will consist of equal numbers of employers' and canteen workers' representatives with three independent members, one of whom will be chairman. Its functions will be to fix wages, prescribe meal and rest intervals and provide for holidays with pay. It can also make recommendations to the Commission for improving the health and welfare of canteen staffs and their conditions of employment, and for developing industrial catering generally. The Board will cover about 16,000 canteens, employing nearly 200,000 workpeople. Works canteens fall into three main categories: they can be run directly by the employer, by an outside caterer or by a joint committee of management and workers or a workers' committee. About 2,500 canteens are run by contractors; the majority of these belong to the National Society of Caterers to Industry, which employs about 20,000 workers. The advantages and disadvantages of

# G.E.C.

## IN WAR—AS IN PEACE at the service of the Empire

Before the war the G.E.C. planned and installed lighting equipment for tens of thousands of miles of streets and thoroughfares, and pioneered many new developments in this important lighting field. The success of these installations, in all parts of the world amazingly varied in climate, conditions and facilities, stands as a solid demonstration of the Company's immense planning, organizing and manufacturing capacity.

To-day, however, the resources of the G.E.C., the largest British electrical manufacturing organization in the Empire, are devoted to the war effort of the United Nations. In surmounting the innumerable problems that have arisen in all applications of electricity, including the important one of electronics, the Company's technical experience and scientific advancement have been enriched to a degree that will be of incalculable benefit to all electrical services after the war. Then, just as the resources of the G.E.C. have been available for the war effort, they will be at the disposal of all concerned with reconstruction plans in any part of the world.

### ELECTRIFICATION SCHEMES

G.E.C. Electrification Schemes have been applied to all industries, including: Aircraft Factories; Chemical Works; Collieries; Food Factories; Gold Mines; Iron, Steel and Copper Works; Locomotive and Railway Carriage and Wagon Works; Motor Car Works; Oil Refineries; Ships and Shipyards; Textile Mills, etc., etc.

# G.E.C.

## ALWAYS IN THE FOREFRONT OF ELECTRICAL PRODUCTS

employing outside caterers have been widely discussed. While some firms prefer to leave their canteen in the hands of outside experts, the experience of many factories, as was shown in the latest report of the Chief Inspector of Factories, is that the best results are obtained where the workers themselves are associated with the running of a canteen. Apart from the joint industrial council for canteens run by outside caterers, the Catering Commission found a complete absence of any voluntary machinery for regulating wages and conditions in works canteens. Indeed, they report that

in certain of the highly organised major industries there is opposition on the part of the recognised employers' organisations to the idea of bringing catering workers within the scope of the negotiating machinery.

The setting up of a Wages Board should introduce a degree of uniformity into wages and conditions, which are at present widely divergent. Past experience has shown that Trade Boards are valuable in raising standards throughout an industry and that they need not impede the development of voluntary joint negotiating machinery. The next stage of the Commission's work, the consideration of wages and conditions of work in hotels, restaurants and similar establishments, will prove more difficult and far more controversial.

### No Nemesis for Nickel

The International Nickel Company of Canada, by paying a dividend of only \$0.40 for the first quarter of 1944, has broken the tradition lasting from 1937 of quarterly payments of \$0.50 on the common stock. Last November the chairman, Mr Robert Stanley, warned that earnings were falling and might involve a cut in the dividend. Despite this his statement accompanying the report for 1943 is firmly optimistic about future prospects. It is true that the amount earned for common stock in 1943, at exactly \$2 per share, is rather lower than the \$2.15 earned for 1942, and only exactly sufficient to maintain the dividend. In view of this, although profits for the last quarter of 1943 were in point of fact some \$870,000 above those for the corresponding period of 1942, it is not surprising that the dividend level can now be kept up no longer. However, production at the companies' mines continues at a high level, and—were it not for the shortage of manpower, which made itself strongly felt during the latter half of last year—would be appreciably higher. Copper has been subordinated to nickel production. Comparing 1943 with 1939 deliveries of the two metals, there has been a fall of 69 million pounds in copper against a rise of 55 million pounds in nickel. The whole production programme is of course geared to wartime needs, and details cannot be given. It is revealed that deliveries of platinum metals and the output of nickel-copper alloys have reached their highest level in the company's history. If present activity is high enough, Mr Stanley paints an encouraging picture of the future:—

Your company's cash position is excellent, it has no fixed debt, its plants are in good repair and are equipped for low cost production, and measures have been pursued to retain the goodwill of consumers of nickel. In comparison with its position after the first world war, the present status of the company is much sounder in many particulars.

After hearing those encouraging words, the shareholders may be equipped to face the \$0.10 cut in this quarter's dividend with Spartan fortitude.

### Production Balance Sheet

A number of Government statements made in recent weeks show the present scale of Britain's output of aircraft and other munitions of war. Mr Lyttelton has given details of production from the beginning of the war to the end of 1943. For the RAF 90,000 aircraft of all types were built. The Army was supplied with 83,000 tanks, armoured cars and carriers; over 115,000 guns of over 20 mm.; 150 million rounds of ammunition; 5½ million machine guns, rifles, sub-machine guns and automatic pistols; 7,000 million rounds of small arms ammunition. Over a million wheeled vehicles of unarmoured types for various war purposes were manufactured. Similar achievements were recorded in shipbuilding; 70 per cent of new construction is now estimated to be naval construction. Mr Churchill recently stated that this country's output of aircraft—bombers and fighters—exceeded that of Ger-

many, equalled in numbers that of Russia, while American aircraft output was double or treble the German figure. The increase in British aircraft production, it is claimed, has been achieved as a result of improved all-round efficiency, and greater economy in the use of labour. Thus the number of manhours taken for the manufacture of a Lancaster bomber has been reduced by 38.2 per cent in the last 12 months, and for the manufacture of a Spitfire by 27.5 per cent between 1939 and 1943. The aircraft industry has probably reached the peak of production in terms of numbers of aircraft, though the maximum in terms of operational strength has not been passed, since more labour will be put into the production of heavy bombers. The limits of industrial recruitment have probably been reached, but there is still room for further improvements in efficiency, and for an extension of part-time work. The outstanding needs of the forthcoming period will be to maintain quality and to increase flexibility, without sacrificing output. Operational requirements may necessitate further changes which may involve the slowing down of some factories and temporary "redundancies" in the industry. It is satisfactory to know that steps have been taken to make the reasons for these changes known to the workers in the industry.

† After paying all taxation on earnings of subsidiaries.  
‡ Profits for 1941 are shown net of all taxation.  
\* Representing 24 years payment of dividend. In 1942 payment on preference stock (which is cumulative) was brought up to date.  
A On assumption that only the current preference dividend had to be met.  
B Figures for 1942 and 1943 separate the reserve for deferred repairs and the provision for taxation not immediately due from the total of sundry creditors, in which both items were previously included. The former item has been knocked off the figures for net fixed assets for 1942 and 1943. This reform of the balance sheet means that the figure for net fixed assets is relatively higher—and more accurate—for 1942 and 1943 than for 1941.  
C Including loans to employees of £14,677 in 1941, £10,298 in 1942, and £6,777 in 1943.

The £1 units of ordinary stock, standing at 21s. 3d., yield £3 16s. 10d. per cent.

## COAL FOR FACTORIES

Coal allocations to the factories have already been cut by 10%. Yet coal consumption in the factories has fallen by only 5%. Let us face it. We are eating into essential reserves.

### THE SUPPLY POSITION WILL GROW TOUGHER

♦ There can be no certainty of regular deliveries in face of the mounting military demands on transport—demands that will grow ever more insistent as the moment of all-out attack approaches.

♦ There is one way out. *The immediate personal attention of every factory management in this country can save the day.*

♦ See that every worker in your plant understands the situation. Encourage the active co-operation of every 'man on the job.' Neglect no means to cut your daily consumption of coal, steam, oil, electricity, or gas—however trivial, however drastic.

Only further substantial fuel savings can now prevent factories closing. Only quicker turn-round of coal trucks can ease the delivery problem.

ISSUED BY THE MINISTRY OF FUEL AND POWER

## RATIONING MAKES EXTRA VITAMIN SUPPLY ESSENTIAL

The body must have enough vitamins A and D if it is to remain healthy. Before rationing most of us got sufficient of these in our ordinary meals, but wartime diets tend to reduce the vitamin value of our food.

A daily dose of Crookes' provides sufficient 'anti-infective' vitamin A to enable you to resist colds and influenza, it provides, too, the correct amount of 'sunshine' vitamin D to keep adults healthy and to allow children to grow up with strong bones and sound teeth.

## COMPANY MEETINGS

## THE BANK OF AUSTRALASIA

A VERY SATISFACTORY RESULT  
MR C. G. HAMILTON'S REVIEW

The meeting of the Bank of Australasia is to be held, on the 30th instant, at 4 Threadneedle Street, London, E.C., Mr C. G. Hamilton presiding.

The following is an extract from Mr Hamilton's review which was circulated with the report and accounts.

I hope you will consider the result for the year 1943 as very satisfactory. In the two preceding years we had to draw somewhat on the carry-forward in order to pay the dividend and last year we brought into revenue £20,000 from overprovision for income-tax. In the year under review we are not only able to pay the same dividend as last year without bringing into revenue anything from income-tax reserves but are able to add over £20,000 to the carry-forward. In my opinion there is no more satisfactory feature in a balance-sheet than a substantial carry-forward.

## BALANCE-SHEET ITEMS

Our balance-sheet shows a total of £74,244,914, an increase of £6,396,256 over the figures of 1942. On the liabilities side total deposits have increased by £4,329,514 and now stand at the record figure of £56,106,502. On the assets side, specie, bullion, etc., have decreased by £6,831,777. This is a large drop, but a not unwelcome one, as it is reflected in expansion of three out of the next four items all of which produce interest and are readily realisable. Treasury bills, Australasian and New Zealand, are £920,000 higher. Special war-time deposits have reached £11,999,000 and show an increase for the year of £8,964,000. British Government securities show a decrease of £743,841. This decrease was caused by the bank having to realise some of the British Government securities in order to provide sterling due to the Commonwealth Bank in respect of exchange operations. The balance-sheet value of our investments stands well below their market value. Advances to customers, usually our most remunerative source of income, and other accounts show a reduction of £673,487 to £31,266,739. This reduction is due largely to the lack of a demand for accommodation and also to the restriction imposed by the Government control.

## VERY STRONG POSITION

The balance-sheet shows that the bank remains in a very strong position. About 43 per cent. of our deposits are fixed for periods up to two years and therefore do not constitute an immediate liability. As security for the remaining 57 per cent. of our deposits, which are an immediate liability, we hold considerably over 100 per cent. in cash in hand, Treasury bills, special war-time deposits with the Commonwealth Bank and Government securities.

Since the last accounts were presented we have closed a number of our branches and agencies under the rationalisation of banking scheme in order to release manpower for national service.

The British Government's agreement to purchase the whole of the Australian and New Zealand wool clip for the duration of the war and one year thereafter has placed the wool industry on a stable basis for that period, subject, of course, to there being no substantial increased costs of production.

There has recently been signed an Australian and New Zealand political agreement which has been warmly welcomed in the press in this country and in the home Parliament. Mr Curtin and Mr Fraser are to be congratulated on their

notable achievement. The closer Australia and New Zealand get together the more it will be to their mutual advantage.

## THE OUTLOOK

As regards the general outlook in Australia and New Zealand the position has immensely improved by the removal of practically any danger of the invasion of either of these Dominions by Japan, who must now be bitterly regretting her piratical actions. Australia and New Zealand are to be congratulated on the splendid and successful efforts they have made with the immense assistance of the forces of the U.S.A. in bringing about this happy result.

It seems to me highly probable that after the war Australia and New Zealand will, besides enlarging their present industries, try to develop many new ones. If my view is correct this bank is, and will be, in a position to give most valuable financial assistance and advice in helping to promote such developments. We hear in this country much talk about helping in the future the small man in his business career. Here I know from my experience as a London bank director that far more is done to help the small man than is generally recognised, and I feel that our new superintendent will not overlook the claims of the deserving small man.

BRITISH ASSETS TRUST,  
LIMITED

## SATISFACTORY RESULTS

## MR W. H. FRASER'S ADDRESS

The forty-sixth annual general meeting of British Assets Trust, Limited, was held at 9, Charlotte Square, Edinburgh, on the 23rd instant, Mr W. H. Fraser, chairman of the company, presiding.

In moving the adoption of the report and accounts,

The Chairman said:

In 1932 the ordinary stockholders received a dividend at the rate of 20 per cent. for the thirteenth consecutive year. In 1935 the company passed its ordinary dividend for the first and up to date the only time since its inception. The cause of this sudden decline in the company's fortunes was the world-wide depression of the early Thirties, aggravated, partly by the fact that the ordinary capital of the company represented a very small proportion of the total loan and share capital, and partly by the reduction from the same causes from 15 per cent. to 2½ per cent. of the dividend on our holding of 333,495 £1 ordinary shares of Second British Assets Trust. Since that time the investment status of the ordinary stock has been materially improved by retention of a substantial proportion of our earnings in the business both by this company and by Second British Assets Trust. This has necessitated a conservative dividend policy and we have postponed raising the dividend on the ordinary stock until our available income had reached a figure which seemed to justify expectation of its maintenance in the absence of unforeseen and abnormal conditions. Even should such conditions emerge, our Income Equalisation Fund, now amounting to £165,000 and invested separately in high grade and readily realisable dated securities, will enable us to maintain the present dividend during any but a prolonged setback in earnings.

## THE DIVIDENDS

For the past year our gross income, after allowing for interest on temporary loans and Dominion and Foreign taxation, but before deducting British taxes, amounted to £351,940 against the previous year's figure of £343,691. After providing for taxation, expenses of administration, interest and Preference Stock Dividends, there remains £51,513, equal to gross earnings on the

ordinary stock of 21 per cent. against 19.6 per cent. for the previous year. We recommend a dividend of 15 per cent. compared with the 12 per cent. dividend paid for each of the past four years. At the moment we see no reason to expect that our income for the current year will show any marked variation on that of the year under review. We look forward to resuming the payment of interim dividends, but under present conditions the call for paper economy renders this undesirable, and shortage of staff impracticable.

## THE INVESTMENTS

The capital position is again encouraging, but under existing financial conditions we cannot assume that, as has usually happened in the past, a rise in the value of our investments will be followed by a rise in income. The general rise in prices has, however, given us a favourable opportunity to re-organise our list, and throughout the year we have been reducing individual holdings, which, at present values, represented an undue proportion of the total, or which appeared to stand at unjustifiably high levels. Part of the proceeds have been placed in short-dated securities, the ready realisation of which will enable us to take advantage of investment opportunities more in our normal line of business which may arise during the post-war re-organisation of industry. I may say that in arriving at the valuation of our investments, we have again valued our holding in Second British Assets Trust Ordinary Shares at par, though at 31st December last their Break-up value was 63s. 9d.

I think I may be permitted to repeat what I said last year, that while we must from time to time expect setbacks and difficulties, I feel confident that these can and will be overcome, and that in regard to the company's future I have no reason to be pessimistic.

The report and accounts were adopted.

BRIGHTON, HOVE AND  
WORTHING GAS COMPANY

## FUTURE OF THE INDUSTRY

The annual general meeting of this company was held, on the 17th instant, in London.

Mr A. M. Paddon, M.Inst.C.E. (chairman of the company), in the course of his speech, said: Certain policies and certain suggestions are very prominent nowadays as to how the industry should be conducted, or should conduct itself, in the future. All sorts of suggestions have been made. One is that we have been hitherto subjected to legislative restrictions which are anachronistic and should be done away with. Statutory regulations and restrictions, although they do impose limitations, also afford a very great measure of protection, and that seems very largely to have been lost sight of.

Another school have pointed out that we should in future endeavour to reconstitute ourselves upon the "basis of integration." I can only say that that process, to my certain knowledge, has been in existence for the last 50 years; but if it is to be adopted as a blind perfunctory policy of compelling different undertakings to be merged in each other without their mutual consent or without the justification of economic conditions, then I think it promises a very large measure of disaster. It must be remembered that already the industry is under almost every form of practical regulation at the present time, and has been for at least a hundred years.

There is a very great difference between statutory regulation and nationalisation, and I cannot help thinking that many of those who advocate a rather more active programme with regard to legislation have as their ultimate object nationalisation. That cannot constitute any improvement upon statutory regulation because it is subject to revision from time to time.

The report was adopted.

UNITED KINGDOM PROVIDENT  
INSTITUTION

## SATISFACTORY MORTALITY EXPERIENCE

## THE FINANCE OF POST-WAR INDUSTRY

## SIR ERNEST BENN'S STATEMENT

The annual general meeting of the United Kingdom Temperance and General Provident Institution will be held at the head office, 196, Strand, London, W.C., on the 29th inst.

The following is the statement by the chairman, Sir Ernest J. P. Benn, Bart., circulated with the report and accounts:—

The one hundred and third report and balance-sheet discloses a big rise in our holding of Government securities and a satisfactory reduction in the expense ratio. The claims by death are given in total, but members will be interested to know that claims from war deaths, after four and a-half years of total war, still fall short of those suffered in 1914-1918 and that our general mortality experience in the year has been highly satisfactory.

## INVESTMENTS

At no period in our long history has so large a proportion of our funds been invested at so low a rate of interest. That is the overriding consideration in a proper study of our accounts. As emphasised in all my war statements, the board has followed in the letter and the spirit the war-time monetary policy of the Government. Members should, however, be made aware that if such a policy is continued far into the days of peace, it will be impossible to escape drastic revisions in our premium rates or in our benefits for new entrants. Your assets are still entered in your balance sheet at 1938 values, except in the case of new or changed investments. We continue for yet another year to ignore the large paper appreciation in the value of securities brought about by the cheap money policy. 1944 is the second wartime valuation year, and it is surely permissible to hope that by its end we may be able to see rather more clearly the future trend of values and decide how far any of this paper profit may be taken into consideration.

For many years the international situation has driven the board to keep the funds of the institution as much as possible at home and within the Empire. In considering the practical problems of the post-war period, we should recall the happier times when your chairmen year by year took credit for the safety of your funds by reason of their widespread geographical distribution. Investments in a devastated world will require to be made with great caution, but it may help the world, as well as bring pleasure to ourselves, to contemplate a future in which overseas investments will act as the acid test of the quality of peace and good will.

## NEW BUSINESS

Our figures of new business follow the trend of the market and are better than last year. Our improvement is rather above the average, although we are among the most conservative of life offices. We have, for instance, resolutely refused new policies to cover the civilian war risk and yet a million and three-quarters of new business has come to us, all of it of the highest class, carefully scrutinised by your skilful officials. I attribute our leading position, even in these war days, to the fact that we sell "security" and in the estimation of the insuring public there is no higher grade of that commodity than this old institution can provide. Our policies range from £100 to very large sums, but it is the quality rather than the amount that matters and we always give the same careful consideration to all applicants for membership whatever their social or financial status.

## CHILD'S OPTIONAL POLICIES

We are very proud to have made a number of losses on a special class of claim

of which our members will be glad to hear. The amounts are not large but the circumstances are interesting. When a child's option matures, the parent having paid a small premium for perhaps 20 years, the child, now grown to manhood, even in war time, has a contractual right to a larger policy free of all restrictions. So some of our wonderful young airmen, just like all our pre-war members, are fully covered and some of these policies have become claims.

## FINANCING INDUSTRY

Our great bankers in their annual speeches were all at pains to show how the banks are making preparations to finance the turnover of industry from war to peace conditions. These speeches taken together form a practical contribution of the highest order to the coming work of reconstruction. I would like to add a footnote from the insurance market, for the bankers can only modify, they cannot change, the first rule of banking, to lend on short term and to maintain a high degree of liquidity. By distinction a life assurance fund aims at lending on long term and we therefore provide a supplementary service likely in some cases to be suited even better to the needs of the industrialist.

## INSURANCE MINDED

I have another postscript to these invaluable bankers' speeches. All of them made some reference to the danger of inflation and the chairman of Martins, in a happy phrase, asked the public to become still more "banking-minded." By keeping our money in the banks, instead of in our pockets or our stockings, each of us can help to lessen the risk of inflation and also help to provide, through the banks, the resources upon which both Government and industry must rely. This argument can also be extended to cover the insurance market. After the war the temptation to spend will accentuate the danger of a boom and the risk of a subsequent slump. The national good will be served by all those who have the wisdom to defer their spending until the tendency to boom and boom prices has evaporated—and life assurance is the very highest form of deferred spending. The benefit is national as well as personal, for a premium paid to an insurance office, like a deposit in a bank, adds to those large accumulations of resources without which much necessary reconstruction cannot proceed. I therefore ask the public to be more "insurance-minded."

## FIRE AND ACCIDENT

The United Kingdom Fire and Accident Assurance Company—now in its fourth year—continues to give us satisfaction. The loss of motor business, due to petrol restrictions, has been handsomely balanced in other ways, and we see no reason to modify the high expectations we entertained when entering, in a safe and modest way, the general insurance market.

## STAFF

Our obligation to our officers and staff has never been so heavy. Every remaining member, from the highest to the lowest, has carried burdens beyond anything previously thought possible. The work of maintaining the institution, and presenting its accounts almost as promptly as ever, will be appreciated by large numbers of our members engaged in business and struggling with similar difficulties.

SCOTTISH AMICABLE LIFE  
ASSURANCE SOCIETYSATISFACTORY INCREASE IN  
NEW BUSINESS

## LORD ELGIN'S STATEMENT

The 118th annual general meeting of the Society was held in Glasgow, on Wednesday, the 22nd instant, The Rt. Hon. Sir J. Milne Barbour, Bt., D.L., M.P. (president of the Society), presiding.

The Rt. Hon. The Earl of Elgin and Kincardine, K.T., C.M.G., LL.D. (chairman of the Ordinary directors), in moving the adoption of the reports and accounts said: The net sums assured for the year amounted to £844,788 (including £253,600 assured under new Group assurance schemes), an increase of £212,649 as compared with 1942. Owing to the absence on National service of almost the whole of our outdoor staff we have not been able to give to our connections the close personal service to which they have been accustomed in the past, and the achievement of this increase in the new business is therefore all the more satisfactory. It reflects great credit on our agents and those of our members who have brought the Society to the notice of intending assurers, and we confidently rely on their continued good offices towards promoting the prosperity of the Society by recommending it to their friends and connections.

## FAVOURABLE MORTALITY EXPERIENCE

The mortality experience continues to be favourable. The claims by death, including War claims of £42,705, amounted to £390,754 which, although nearly £100,000 more than in the preceding year, is still only 89 per cent. of the amount expected according to the mortality tables.

The interest revenue at £629,311 represents a return on the funds of £4 9s. 10d. per cent. gross and £3 6s. 3d. per cent. net after deduction of income tax.

There has been during the year an excess of income over outgo of £454,948, so that the Life Assurance and Annuity Funds, including the General Reserve of £250,000, now amount to nearly £14,500,000.

With regard to the investments, the principal change has been an increase of over £600,000 in our holding of British Government securities, which now amount to over £5,000,000 and represent 41 per cent. of our Stock Exchange investments. During the year the market value of our holding in Stock Exchange securities advanced substantially and further widened the margin by which it exceeds the book value.

## MORE FAVOURABLE INTERIM BONUS

In October last the directors had under review the question of the Interim Bonus and after careful consideration they withdrew the existing scale and substituted for it a scale on a more favourable basis. The new scale provides that all ordinary With Profit policies which become claims by death or survival during the period from October 10, 1943 to December 31, 1945, will receive an interim bonus addition at the rate of 20s. per cent. per annum compounded in respect of each year or fraction of a year after December 31, 1935, for which premiums have become due (or assumed due) and have been paid. Under the new scale the interim bonus will increase with each premium payment, and in no case will the amount be less than under the old scale. In addition, new With Profits policies effected since October 9, 1939, will now be entitled to share in interim bonuses. In adopting this improved scale the directors have been careful to ensure, as far as can be foreseen, that the strong financial position which has been built up will be fully maintained.

The report and accounts were unanimously adopted.

## MIDLAND COUNTIES ELECTRIC SUPPLY COMPANY, LIMITED

### POST-WAR PROBLEMS

#### MR WILLIAM SHEARER'S VIEWS

The thirty-first general meeting of the Midland Counties Electric Supply Company, Limited, was held, on the 10th instant, in London.

Mr William Shearer (chairman of the company), in the course of his remarks, said: The accounts before you today reflect the financial stability of the company and will, I feel sure, be regarded as amply justifying the confidence you have invariably shown in its direction and management.

The non-publication of detailed information and the absence of statistics during the war period, indicative as these are of the immense contribution the industry has made in the country's emergency, have no doubt somewhat assisted the exponents of State or Regional control in their endeavours to lead public opinion along their chosen paths. Some people would go the whole hog in abolishing private enterprise in every field of business activity and of eliminating the so-called profit-motive.

Others without real appreciation of the issues involved, or it may be with greater subtlety, in the first instance would introduce the thin end of the wedge only, limiting State control to certain specified industries. For some reason or other they do not show any particular desire to drive the wedge further in at the moment.

#### RECORD OF PRIVATE ENTERPRISE

We are attacked as having a free field, no competition and a statutory right to charge for the commodity we sell. Have we no competition? You are well aware that there are several competitors in the field for heating, cooking and power purposes, some of them powerful, highly developed and with ample resources. As to charges for current supplied, this matter is already the subject of statutory control, as is also the limitation of dividends payable to shareholders. If in certain cases existing safeguards of this kind are found to be not altogether effective there is no difficulty in altering or extending them by simple means.

But not a shred of evidence has been adduced to prove that what is commonly called private enterprise, but which more fittingly might be described as business management, as applied to our industry has failed, nor has any information been given as to precisely how the proposed octopus machine in practice would benefit the public, that is, the consumer, the employee, the taxpayer and the investor.

The case for the continuance of business-managed, self-supporting tax-paying companies in the electricity supply and passenger transport fields is contained in their record of achievement, and that case, if honestly considered, is unanswerable. I sincerely believe that if the subject is studied dispassionately and removed from a biased political atmosphere, any thinking person who has observed and studied the working of the State Trading Machine during the war years will infinitely prefer the present system, with such faults as it may possess, and be convinced that the interests of the nation can best be served with a minimum of bureaucratic control.

It is, however, ultimately a matter for the Government of the day to decide what the future of our industry is to be, but so far as we are concerned, I feel confident that you will support us in contesting with all the strength at our command the proposals involving the revolutionary changes now being advanced.

As I have said on previous occasions, the companies have no desire to stand still, and fully recognise that there are many improvements which can and should be effected as soon as practicable by evolutionary means

within the industry itself, assisted by some relatively simple legislative measures.

The most important of these would remove the threat of purchase by local authorities, which overhangs company-owned undertakings operating under a limited tenure.

The majority of the power companies cannot to this day give a direct supply to consumers solely for lighting purposes. They therefore to a large extent operate for domestic and small power supplies through the ownership of Electric Lighting and Special Orders. No one, aware of the position, can dispute the fact that by experienced business management these few power companies—they number about 20—have built up, within the limits of somewhat hampering legislation, highly efficient public spirited undertakings, and it is to them that the enormous development of electricity supply outside the larger towns has been due.

Surely then it would be a retrograde step to allow the disruption of these successful units to materialise.

#### STANDARDISATION OF TARIFFS

Next in importance is the question of greater uniformity of tariffs and some standardisation of low-voltage distribution systems and voltages. Neither presents insoluble technical difficulties, but both involve material financial considerations, which, however, I feel sure can be overcome in a businesslike manner without recourse to anything akin to nationalisation of the industry.

I am pleased to tell you that as from July 1st last we introduced a modified scale of charges which not only compares favourably with the existing tariffs of other undertakings (not excluding many of the larger towns), but is of uniform application to directly supplied consumers throughout the whole of our area embracing some 2,400 square miles. The reductions made benefited consumers of all classes in varying degrees, and in the six months ended December 31st resulted in a saving to them of approximately £133,000. I mention this matter now to show that the question of standardisation of tariffs is in fact an issue which has been under our constant consideration for a long time, and that it requires no bureaucratic measures to see the issue brought to a practical conclusion whenever circumstances permit.

#### NO NEED FOR NATIONALISATION

I think it is a fair conclusion from these observations that there is no need for nationalisation of electricity supply in any form or for universal dislocation of the industry, irrespective of needs or consequences by the inauguration of regional or public boards or the municipalisation of company undertakings. Let us rather concentrate on correcting some of the outmoded provisions of 50-year-old legislation and on removing the few commercially and technically inefficient undertakers by absorption or amalgamation, be they company or municipally owned.

Those responsible for the future of the company-owned side of our industry have a difficult task ahead, but if we all stand united, displaying the same vision and applying the same energy with which we approached and solved our earlier problems, I believe that a satisfactory solution will emerge, not only satisfactory to stockholders and consumers, but beneficial to the future welfare and prosperity of the country.

The report and accounts were unanimously adopted, and a final dividend of 5 per cent., making 8 per cent. for the year, was approved.

## METROPOLITAN ELECTRIC SUPPLY COMPANY, LIMITED

### ALL DEMANDS MET

The fifty-seventh ordinary general meeting of the Metropolitan Electric Supply Company, Limited, was held, on the 21st instant, in London.

Major H. Richardson, M.C., J.P. (chairman and managing director), said that in spite of difficulties in the existing circumstances all demands had been met adequately, the plant and supply had been maintained efficiently, whilst progress had been satisfactory.

The number of schemes for post-war planning in practically every branch of national life showed but little diminution and the so widely varying degrees of responsible and practical experience in their authorship created a danger of the few essential and attainable proposals being obscured by the fog of so much impracticable idealism. The directors were still of opinion that the only unbiased authoritative and clearly constructive report in existence on the subject of the development of the electricity supply industry was that issued in 1936 by what was known as the McGowan Committee. The adoption of that report would establish the conditions necessary to the cheapest possible supply with the highest service.

There had been some publicity given recently to an idea that competition between distributors of the principal fuels, particularly gas and electricity, should be restricted and possibly eliminated. That could not fail to be a serious retrograde step, and the supporting and obviously inspired arguments that fuel, etc., could thereby be saved were mere sophistry. Any attempt to dictate to householders as to which commodity they were to use and for what purposes would be strongly resented by the public, even if such a proposal were entirely practicable.

The report was adopted.

## LANCASHIRE ELECTRIC LIGHT AND POWER COMPANY, LIMITED

### POWER COMPANIES' RECORD

The annual general meeting of the Lancashire Electric Light and Power Company, Limited, was held, on the 23rd instant, in London.

Sir Joseph Nall, D.S.O., M.P., the chairman, said that with the balance of £15,415 brought forward from the previous year they had available a total of £198,227 compared with £198,165 in the previous year. They proposed to pay dividends at the same rates as last year.

The spate of critical and mostly political views on the future of electricity distribution continued unabated. The electrical supply industry had met every call made upon it for war purposes and, almost alone among the great employing industries of the country, had done it with singular freedom from troubles common in certain quarters.

He had referred last year to the fact that their tariff was entirely uniform over widely varying urban and rural areas which they were supplying direct and compared favourably with the charges made by adjoining authorities. Room for minor adjustment there might be, and the desirability of achieving a more uniform basis of tariff for domestic supplies was freely admitted and was under diligent consideration by those most competent to deal with it.

Public ownership was no certain road to the immediate availability of public service, as was clearly indicated in other parts of the country where scores of parishes were still thirsting for a public supply of water, although they had already got, or in a very short time could have, a supply of electricity from an authorised undertaking already in a position to give it the moment circumstances permitted.

The report was adopted.

## BORAX CONSOLIDATED LIMITED

### NEW USES FOR BORON PRODUCTS

The forty-sixth ordinary general meeting of Borax Consolidated, Limited, was held, on the 23rd instant, in London, Mr D. Abel Smith, M.C., the chairman, presiding.

The following is an extract from the chairman's statement, circulated with the report and accounts: The net profit for the year under review amounts to £398,453, representing an increase of £30,795 over last year. Adding to the above profit the amount brought forward from 1942 the total to be dealt with is £659,452. From this we have to deduct provision for British taxation £279,670, consisting of an appropriation of £190,920 from profits, together with the sum of £88,750 to be deducted from the dividends paid and proposed. This leaves a balance of £379,782.

#### DIVIDENDS OF 7½ PER CENT

We have already paid the sum of £44,000, less income tax, on the 5½ per cent. cumulative preference stock. Also an interim dividend of 3 per cent. on the preferred ordinary stock was declared on October 26, 1943, and paid on December 3, 1943, absorbing £18,000 less income tax, and we now propose the payment of a final dividend of 3 per cent. on the preferred ordinary stock, which will absorb a further £18,000, and to pay a dividend of 7½ per cent. on the deferred ordinary stock, representing the sum of £97,500, less income tax.

The figure of trade creditors, increased by about £73,000, includes current taxation, whilst to comply with the recent recommendations of the Institute of Chartered Accountants we have this year provided for all taxation as far as can be ascertained on profits earned up to September 30, 1943, setting up a separate provision for future taxation which represents one full year's estimated tax liability and amounts to a very considerable figure, namely £314,989. For this purpose the sum of £100,000 has been transferred from reserves for exchange and contingencies set aside in past years and no longer required.

Costs of production both at our mines and refineries have steadily increased—an inevitable sequel to wartime conditions. In the face of these handicaps and the competition we are called upon to meet you will, I am sure, share our satisfaction at the results achieved. Fortunately, on the other hand, under the spur of war exigencies, scientific research has led to the application of Boron products in entirely new directions, some of which we have reason to believe will prove capable of considerably wider development for industrial purposes when the wheels of commerce revolve again freely.

#### IMPORTANCE OF RESEARCH

Much attention has been focused recently on the vital need of promoting research in industry. It has been suggested that a Central Research Board should be established, and also that a very substantial sum be allocated by the Government to enlarging and equipping the technical

training centres and considerably increasing the number of research fellowships. If carried out, this scheme should ensure a steady and increasing supply of skilled laboratory technicians. I venture to submit that it would prove a great incentive and encouragement to all concerned in this research movement if the authorities would take the initiative and permit such expenses devoted exclusively by private firms to research to be freed from taxation. In the end the benefits derived therefrom are bound to redound to the advantage of the Exchequer.

#### BORAX IN AGRICULTURE

Satisfactory progress has been maintained. The interdependence of mineral elements required by plants is becoming increasingly appreciated; this will lead to a greater demand for balanced fertilisers and therefore for Boron products.

#### UNITED STATES POTASH COMPANY

That company has been working throughout the year to capacity and readily disposing of its production. We are proud to report that the "E" Award was recently conferred by the U.S.A. Army and Navy authorities for the excellence of its services and we have every reason to express our appreciation of the very capable management of this important undertaking.

#### FUTURE PROSPECTS

So far as the current year is concerned, trading to date has started satisfactorily and, unless any disturbing features intervene, should so continue. As and when peace conditions prevail and the present barriers are removed I believe we can anticipate with confidence a marked impetus to the demand for our crude and refined materials in all the released markets which have so long been denied. In addition we can look forward to the resumption of activities in many channels at present controlled or restricted by rationing.

The report was adopted.

## ANGLO-FRENCH EXPLORATION COMPANY, LIMITED

The fifty-fourth ordinary general meeting of this company will be held, on the 29th instant, at Winchester House, London, E.C.

The following is an extract from the report of the directors for the year ended December 31, 1943, which incorporates the information given in normal times at the annual meeting by the chairman, Mr F. A. Robinson: The net profit amounts to £59,237. There has been written off on account of depreciation of certain holdings £17,550. Your directors recommend the payment of a dividend of 5 per cent., leaving a balance to be carried forward of £23,764.

The dividend is subject to income-tax at 6s. in the £. The net dividend represents the equivalent of 7 per cent., less tax at 10s. in the £.

The net cash assets after deducting current liabilities amount to £170,462, and the company is thus in a position to take advantage of opportunities for investment in suitable undertakings as soon as conditions permit.

## RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED

### REVENUE PROSPECTS

The thirty-fifth ordinary general meeting of this company was held, on the 22nd instant, in London, Mr H. J. Welch (the chairman) presiding.

The following is an extract from the chairman's address circulated with the accounts:—So far as can be foreseen the annual revenue likely to be received under present conditions will be more than cover annual expenditure. Although the "Trust" has £50,000 to the credit of its dividend equalisation reserve and has increased its "carry forward" much above the normal, the board does not, in the existing very abnormal conditions, feel justified in recommending payment of a dividend.

The Ministry of Food have continued to purchase the entire quantities of tea available for export from India, Ceylon and East Africa. Production has continued on the largest possible scale, but owing to shortage of manures and labour, crops will not reach the record figure attained in 1942.

Although strenuous efforts have been made to increase the output of crude rubber, the new supplies during the past year have not exceeded the quantity estimated. Stocks of crude rubber have therefore been drawn upon considerably, and as natural rubber is still required for all goods subjected to heavy wear and tear, it is vitally necessary that every effort should be made to increase the output. Naturally a cause of anxiety to plantation producers is the future competition of crude rubber with synthetics.

Whilst doubtless there are very difficult times ahead for the rubber plantation industry, I have no doubt it will find means to survive them successfully, and that once again it will take its useful place in the world's economy.

The report was adopted.

## LONDON AND RHODESIAN MINING AND LAND COMPANY, LIMITED

The adjourned ordinary general meeting of this company was held, on the 21st instant, in London, the Right Hon. Viscount Elibank, the chairman, presiding.

The following is an extract from the statement by the chairman circulated with the report and accounts:—There has again been an increase in our gross revenue, which, this year, is approximately £16,000 higher. The net profit is £86,136, which compares favourably with the previous two years; in 1942 the profit was £70,777 and in 1941 £55,715. The financial position shows a considerable improvement.

Our interests in Southern Rhodesia are widely spread, so that the amount which we have already contributed, and are contributing, directly and indirectly in taxation is very considerable. We are growing very anxious about the future and the result which this heavy taxation will have on the postwar position, in regard to capital assets and liquid resources.

The report and accounts were adopted.

# RECORDS and STATISTICS

## INDUSTRY AND TRADE

**Tea Crop Purchases.**—The Combined Food Board has agreed that the Ministry of Food shall be the sole purchaser of the exportable surpluses of tea in 1944 from India, Ceylon and East Africa, following the practice of last year. The purchases will be made by the Ministry on behalf of the Dominions, the Allies and of neutral countries, and through the Combined Food Board allocations will be made to all the countries concerned.

**Building Industry Training.**—The Board of Education has asked education authorities, in view of the importance of an increased supply of well-qualified recruits to the building in-

dustry, to explore the possibility of establishing new junior schools for building and enlarging existing schools, and, wherever wartime difficulties of staff and accommodation can be overcome, to have the arrangements for the new or additional intake ready as soon as possible this year. The transfer to the teaching service of suitable men born on or before June 22, 1910, at present employed in the building and allied trades will be facilitated. Pre-fabricated huts will be made available. The age of entry to the schools is about 13 years, and the courses are of two or three years' duration. Before the war the annual intake was about 300 boys. This figure has been raised to about 4,000

(Continued on page 416)

in the last two years, and it is hoped that it will reach 10,000 when the war is ended.

"The Economist" Sensitive Index.—There was no change in the index during the week ended March 22nd. The complete index (1935 = 100) was 151.2; crops, 123.2; and raw materials, 185.5.

## FINANCE AND BANKING

**THE MONEY MARKET.**—The position in the money market has been exceptionally comfortable this week. This largely reflects preparations for London's Salute the Soldier Week, which are discussed in a note on page 407. The banks have been so well supplied with funds that despite the imminence of heavy calls on their resources, they have been persistent buyers of bills. These purchases have helped the market which obtained a 31 per cent. allotment at last week's Treasury Bill tenders. The Bank return shows an increase of £18,120,000 in Government securities. This movement symbolises the preparatory expansion in the cash basis. Of the expansionist effect of this increase and of a £2,000,000 rise in Other securities, £2,159,000 has been taken up by a further expansion in the note circulation. This, however, has allowed bankers' deposits to rise by £19,865,000 over the week.

**MONEY RATES, LONDON.**—The following rates remained unchanged between Mar. 17th and Mar. 23rd:—

Bank rate, 2% (changed from 3% October 26, 1939). Discount rates: Bank Bills 60 days, 1½%; 3 months, 1½%; 4 months, 1½-1¾%; 6 months 1½-1¾%. Treasury Bills: 2 months, 1-1¼%; 3 months, 1-1¼%. Day-to-day money, 1-1½%. Short Loans, 1-1½%. Bank deposit rates, ½%. Discount deposit at call, ½%; at notice, ¾%.

**Exchange Rates.**—The following rates fixed by the Bank of England remained unchanged between Mar. 17th and Mar. 23rd. (Figures in brackets are par of exchange).

**United States.** \$ (4-86½) 4-02½-03½; mail transfers 4-02½-03½. **Canada.** \$ (4-86½) 4-43-47; mail transfers 4-43-47½. **Switzerland.** Francs (25-22½) 17-30-40. **French Empire.** Francs 197½-200½. **Syria.** p. 8-81-85. **Sweden.** Krona (18-159) T.T. 16-85-95. **Dutch West Indies.** Florin (12-11) 7-58-62. **Portugal.** Escudos (110) 99-80-100-20; mail transfers 99-80-100-30. **Panama.** \$ 4-02-04; mail transfers 4-02-04½. **Brazil.** \$ 83-64½ cr. (buying); mail transfers 83-56½. **Uruguay.** 7-6597 p. (buying).

**Fixed Rates for Payment at Bank of England for Clearing Offices.** Spain Pesetas 44-00. **Turkey.** Piastres 520. **Italy.** 71-25 lire.

**Market Rates.**—The following rates remained unchanged between Mar. 17th and Mar. 23rd.

A change has been made in the method of showing an excess of Post Office Expenditure over Post Office Revenue. Such excess is now included as ordinary expenditure (under "Total Supply Services") instead of being shown, as up to July 24 inclusive, as a deduction from ordinary revenue.

After increasing Exchequer balances by £19,448 to £2,779,946, the other operations for the week (no longer shown separately) raised the gross National Debt by £72,155,120 to £19,525 millions.

## THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

**CAPITAL (PAID UP) - £3,000,000**  
**RESERVE FUND - £3,000,000**

Branches and Agencies throughout INDIA and the EAST  
**AFFILIATED BANK IN INDIA**

**THE ALLAHABAD BANK LTD.**, with 15 Branches & Sub-Agencies  
The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application. The Bank also undertakes Trusteeships and Executorships.

**Head Office: 38, BISHOPSGATE, LONDON, E.C.2**

West End Branch:

**28, CHARLES II STREET, HAYMARKET, S.W.1**  
Manchester Branch: 52, MOSLEY STREET

New York Agency: 65, BROADWAY, NEW YORK CITY

## NATIONAL BANK OF INDIA LIMITED

Bankers to the Government in Kenya Colony and Uganda.

**Head Office: 26 BISHOPSGATE, LONDON, E.C.2.**

**BRANCHES:**  
Aden and Aden Point (S. India) Madras Mandalay Nalrohi British E.A.  
Bombay Colombo Nuwara Eliya Nakuru E.A.  
Calcutta Kandy Rangoon Entebbe Uganda  
Cawnpore Karachi Tuticorin Jinja Kampala

## Permanent Defence Policy

WHILE the House of Commons has been surprising itself by defeating the Government, the House of Lords has been debating post-war defence policy. The discussion was started by Lord Chatfield, whose concern was chiefly with the constitutional machinery by which defence policy is governed. Perhaps this was a pity, for there are issues in the content of a permanent defence policy which much more badly need discussion than the machinery, important though it doubtless is. If the public and Parliament are ready to accept and act upon a consistent long-term policy, there will be such a policy, if not, it cannot be created by devices of constitutional machinery such as Lord Chatfield's suggested National Defence Council.

It will be more difficult after the forthcoming armistice than it was after the last to believe that war has been banished from the earth; and we have had a terrifying lesson in the speed with which the defeated enemy came and in the difficulty of overtaking him if he is to secure a start. Though the determination to a system of international security is no less than last time; it is rather more wary, and disarmament victors in this war will be regarded as the last, not the first, in its attainment. For all these reasons perhaps most simply of all because we have all been badly frightened—it may be taken for granted that a vigorous and more consistently planned defence

policy will be desired after this war than after the last.

The question is one of ways and means. In some current discussion, a great deal of nonsense is talked about the possible size of British peacetime armaments. A few figures provide a useful corrective. In the summer of 1939, after an intensive recruiting campaign that had extended over many months, and in the face of an obviously threatening international situation, there were less than 600,000 men in Great Britain serving full time in all three services put together. This figure may be regarded as the limit of what can be achieved by voluntary recruitment for long-term service. Pay and conditions of service could, of course, be improved, but the probability is that not very many recruits would be added by any practicable increase. Moreover, the field for recruitment is shrinking as the birthrate falls; and if there is to be conscription, the number of voluntary enlistments can be expected to fall. The principle of conscription has received widespread support in all parties and there is a fair chance of its adoption as a permanent policy. But nothing that has been said justifies the assumption that men will be conscripted for more than twelve months' service. The average number of male births in Great Britain in the five years 1925-29—the men who will be from 20 to 25 years old in 1950—was 394,000 a year. In the five years 1930-34 the figure

was 361,000; in 1935-39 it was 359,000; and in the four years 1940-43 it was 374,000. When deaths and medical deficiencies are allowed for, the "yield" of a year's class will be barely 300,000 men. Volunteers and conscripts together, it is unlikely that British defence policy can be built upon more than 750,000 to 800,000 men in all three services at any one time, except in war.

Since armed forces are not maintained as instruments of social education or of processional elegance but of national power, the basic problem of British defence policy will be to create the most effective possible striking force out of this limited body of men. The conditions of the problem would seem to suggest two fundamental principles. The first is that there should be the greatest possible degree of mechanisation. This applies, of course, most strongly to ground troops, but it also has its application to the Air Force and even to the Navy. The reasons for the prescription are fairly obvious. It is not merely that mechanised troops (always provided they are not "so mobile that they cannot move") have a higher striking power—that is now an accepted doctrine that no country would challenge, even apart from any manpower limitations. But also, if the British forces are limited to 750,000 men in peacetime, they must be so organised that they can be rapidly expanded in wartime. Even in peacetime, the Services should have not merely a rifle for every man who would rejoin in wartime—that in itself would be more than existed either in 1914 or in 1939—but also a high proportion of the automatic weapons, the artillery, the tanks, the vehicles, the landing craft, the fighters, the bombers, the transports, the destroyers and the escort vessels that would be needed in time of war. The peacetime services should not merely be mechanised, they should be over-mechanised, and kept up to date in every technical respect.

The second consequence that the layman would, with some assurance, draw from the conditions of the problem is that there should be not three services but one. Many of the keenest minds among the younger men in the services—regulars as well as temporaries—have been brought to this conclusion in the present war, and Lord Cork showed in the Lords debate that at least one senior officer of the most exclusive of the three services is of the same mind. The decisive argument against amalgamation during the war has been, of course, the lack of time. But there will be plenty of time in peace, and it should be part of the deliberate policy of the country to move towards an amalgamation of the higher commands—that is, of all officers of flag, field or air rank—of all three services. Strategy, like war and peace, is indivisible. There is rather less difference between a naval and a military gunner than there is between a navigator and an engineer.

The double principles of mechanisation and expansibility have certain natural consequences in the field of industry. If the forces are to have equipment for much more than their peacetime establishment, and if the standard of equipment per man is to be much higher than

ever before, it follows that the peacetime munitions industry will necessarily be larger than it has been in the past. But even so, the placing of orders should be designed to make possible a rapid expansion in time of war. The policy, beloved of service departments, of concentrating orders on a small group of specialist contractors, is obviously wrong. The object should be to spread the "know-how" as widely as possible. In the particular cases of tanks and aircraft—and perhaps in others as well—some permanent version of the shadow factory scheme will have to be worked out.

Behind industry is the supply of materials and components, and here again there need to be some applications of deliberate forethought. This island can never hope to be self-sufficient either in war or in peace. If it were ever successfully blockaded—that is, if a time were to come when a certain minimum of traffic could not be carried over the most essential route, that of the North Atlantic—it would have to sue for peace. A self-sufficient policy is an utterly unrealistic one. Even too close an approach towards self-sufficiency would be a mistake, since it would lock up more of the manpower which is already the scarcest resource. We cannot insure against the closing of all the sea routes to this island. But we can insure against the closing of some of them and against the restriction or temporary interruption of the others.

The policy should therefore be a policy of limited insurance. The best insurance, of course, is ships, both fighting ships and carrying ships. The second line of defence—strangely neglected in the past—should be the storage in this country of vital materials and foodstuffs, which, as Lord Keynes has pointed out, could serve an economic as well as a strategic purpose. But even beyond this there are certain essential materials and components of which it is desirable that there should be at all times a certain minimum production in this country. The list need not be long—machine tools, aircraft and aero engines, motor cars, alloy steels, aluminium, refined petroleum, synthetic rubber and certain other chemicals—there are doubtless a few other items that should be added. Nor need the domestic production be very large—enough to secure that there are people in the country with the "know-how" and with the ability to expand. Nor, finally, need the assistance be given by the clumsy method of a protective tariff; subsidies, where necessary, will be much more effective. But some sort of industrial insurance policy is clearly needed.

This is, of course, no more than a sketch of the chapter headings of a permanent defence policy. The financial cost cannot be forgotten, and it would be heavy. But there are few costs too heavy to bear if they succeed in delivering the country from the dreadful dilemmas of 1938, 1939 and 1940. The link between defence expenditure and national safety is an effective foreign policy, and that is another story. But if a defence policy does not of itself lead to a foreign policy, it is an essential prerequisite.

## Deadlock in Palestine?

ACCORDING to the White Paper on Palestine, issued in 1939, free Jewish immigration to Palestine was to cease on March 31, 1944, and was thereafter to be subject to the Arabs' consent. This week has thus become the focus of very strong emotional reactions throughout the Jewish world. In a widespread campaign to induce the American Government to intervene and secure the abolition of the White Paper, American Jewry has kept the date March 31, 1944, very much to the fore. In Palestine itself, there has been an outburst of Jewish terrorism. Several British policemen have lost their lives, and this week may well bring more violence and bloodshed. Actually March 31st no longer has any immediate significance, for the time limit has been extended. Of the 75,000 Jews who were to be admitted between 1939 and 1944, 30,000 have still to reach Palestine, and last

November Colonel Stanley announced in the Commons that immigration would continue after March 31st until the full quota fixed in 1939 has been reached. However, the question is only postponed. Unless some new approach is adopted towards the Palestine problem, another March 31st will come and bring with it all the irreconcilable policies and plans and actions which would have made the 1939 White Paper unworkable already, had not the war postponed the issue.

The problem has not changed since 1939. Now, as then, the Arabs of Palestine want independence in a state which will not, sooner or later, include a Jewish majority. Now, as then, the Jews refuse the status of a permanent minority and seek by means of immigration, land purchase and economic development to become the dominant group. The attempts made between 1936 and 1939 to work out

a solution on the basis of partition proved technically exceedingly difficult and were rejected by both parties. In 1939 the British Government came to the conclusion that until the Arab fear of a Jewish majority was banished, there could be neither peace nor progress towards self-government. The White Paper accordingly limited immigration and proposed a ten-year transition period during which Jews and Arabs, in proportion to their numerical strength, would be more and more fully associated with the government of the country. At the end of ten years, the British would hand over the government to the Palestinians, Arab and Jew, in the hopes that their ten years' experience would have taught them to work together. Nothing in the reception of the plan suggested that this would be the case. The Arabs were only partially satisfied. The Jews were naturally uncompromising in their refusal to accept what seemed to them the status of an "oriental ghetto." All over the world, Zionists prepared to oppose the plan. In Palestine, the Jews took a leaf out of the Arab book and began to organise themselves for resistance. By 1943, two para-military movements, the *Haggana* and the *Irgun*, counted thousands of volunteers and, by means of smuggling and illicit purchases, had become very well armed.

The war years have in many ways intensified the political divisions between the Jews and Arabs of Palestine. On the Arab side, the desire for independence has grown more insistent. Syria and Lebanon are now within sight of full freedom. The Palestine Arabs feel that, were it not for the Jewish problem, they too would be almost quit of the Mandate and ready to stand on a footing of equality with the neighbouring Arab states. At the same time, the desire of Jewry to establish some territory under its own complete control has grown more desperate as a result of the ghastly pogroms in Europe. It is not so much as a national state or a homeland but as a secure refuge against murderous anti-semitism that Palestine bulks largest among Jews and among their liberal supporters everywhere. Many of them are pessimistic about any decline in anti-semitism after the war and they wish Palestine to be ready as a potential refuge for Jewry's scattered millions. The emotional importance attached to Palestine is thus sharper to-day than in 1939. The deadlock is more complete and the psychological background more grim.

If these were all the changes brought by the war, the problem of Palestine would be more insoluble now than in 1939. Happily the changes in the Middle East have not all made for further deadlock. Two factors, one political and one economic, can perhaps become the starting-point of a new approach. The first is the great increase of support for the idea of an Arab confederation. The more ambitious schemes for the unity of all the Moslem states in the Middle East are likely to come to grief on the rivalry between the more powerful Moslem nations, but a limited scheme for restoring the unity of old Syria by bringing together Syria, Lebanon, Palestine and Transjordan has gained the unofficial support of the Iraq Govern-

ment and has won approval in all the Arab states. It has also become the basis of plans drawn up by a group of Jews and Arabs under the leadership of Dr Magnes. The significance of Arab federation for the Palestine problem lies in the fact that by closely associating the Arabs of Palestine with an Arab community of some 5,000,000, it meets their fear of being outnumbered by the growing Jewish community. It makes it possible to envisage the continuation of Jewish immigration and settlement, which in some form or other all Jews agree to be the irreducible minimum on which agreement can be based.

The actual form of association could take various forms. The most satisfactory would probably be the reconstruction of Palestine as a plural community or bi-national state within the larger federation. The Arab and Jewish populations could be grouped on Swiss lines in Arab and Jewish cantons, with wide measures of local self-government but with a number of common interests reserved for a central government in the federal capital of Jerusalem—which would be a canton in itself. General economic policy, defence and foreign affairs would be controlled by the federal government of reconstituted Greater Syria. Under such a scheme the Jewish population could first be allowed to increase until it equalled the Arab population in Palestine and could then increase with any further rise in the Arab population. At present there are roughly a million Arabs to half a million Jews. An immediate addition of half a million Jews would be possible, and since the Arabs increased by nearly half a million between 1919 and 1942, the maintenance of the same rate of increase would ensure a steady growth of the Jewish community in the future. It is true that this proposal does not meet the full Zionist demand for unrestricted immigration, but no solution acceptable to the Arabs can ever meet the Zionist case, which aims quite unequivocally at the transformation of the whole of Palestine into a Jewish Commonwealth.

It may be that the Jews cannot be persuaded to accept the cantonal scheme. The difficulty does not come from the local communities, where co-operation between Jew and Arab goes on day by day in an effective and unsensational manner. The difficulty arises at the highest level. Most Jewish leaders are unwilling to abandon the demand for unrestricted immigration and Jewish control of immigration and land policy. If their opposition cannot be overcome, the only possible—though very unsatisfactory—solution would be a return to partition. The Arabs of Palestine would join the Arabs of Syria and Transjordan in a federated Greater Syria, while a separate Jewish state would be made from the areas of predominantly Jewish settlement in Palestine together with such undeveloped areas as the Negeb. In their own state, the Jews would naturally have full control over immigration policy, and it would be limited only by the economic capacity of the community to absorb more immigrants. But this solution would neither be easy to bring about nor likely to be acceptable to either party.

The question of economic capacity is crucial to any solution—whether by federation or by partition—of the Palestine problem. The Jews claim that millions more immigrants could be brought in if only they were allowed to carry out their development schemes. The transformation they have brought about in Palestine is indeed remarkable, but on the pre-war basis of their economy, it cannot be absolutely proved that the country was capable of absorbing millions more. Imports already greatly exceed exports, and the question of expanding economic capacity turns on the question of markets. There might have been a large local market, but Arab living standards were not rising to keep pace with the new development, either in Palestine itself or in the neighbouring Arab states. And by adopting such measures as a partial boycott of Arab labour, the Jewish community lost the chance of countering political suspicion by genuine economic collaboration.

The war has changed the economic background of the Middle East and opened up new and hopeful possibilities of development. Economically as well as politically, regionalism is the only way out of the Palestine deadlock. The various conferences organised by the Middle East Supply Centre, in particular, the agricultural conference held a few weeks ago in Cairo, show that Jews and Arabs can come together to discuss schemes of regional development. If joint plans are elaborated for raising the living standards of Jew and Arab alike, much of the friction and distrust can disappear. For example, American economists have devised a plan for developing the resources of the Jordan Valley which would concern every state member of a Syrian confederation. Another range of possibilities is presented by wartime experiments in "agricultural industry"—the production of chemicals, plastics and rubber from industrial crops. If all the states were concerned in such schemes, if the living standards of Arab and Jew were rising together, if a new technical and professional class were growing up in each community and were working together in regional development schemes, there can be no doubt that there would be freer air to breathe throughout the Middle East, and the desperate sense of struggling for survival in a shrinking *lebensraum* would give place to new possibilities of toleration and economic and political co-operation.

## Civil Aviation

THE public discussions of the last few months on the subject of civil aviation have not succeeded in producing very much clarification of the matter. On the contrary, the general impression of confusion has been heightened, not least by the two recent and most inconclusive debates in the House of Commons. The ordinary layman has the greatest difficulty in discovering what all the argument is about. The trouble is that there are several different arguments going on at once, all of them complex and interconnected and all of them using terms that are very ill-defined. Very broadly speaking, the arguments can be sorted out into two main categories. First, the assumption is very generally made that there should be an attempt to negotiate an international air convention; as part of the general peace settlement. Such a convention would presumably set up international standards for safety regulations, traffic rules, meteorological services and other aids to flying. But beyond that the convention should also attempt to determine some general principles on the admission of foreign civil aircraft. The position between the two wars was that every nation had absolute sovereignty over its own air. Foreign aircraft had no rights to land, or even to fly over, a country except such as they could secure by direct bilateral bargaining. The proposed convention would substitute for this anarchy some system of general rights. The argument is, what system? Secondly, within each country there is a purely domestic argument about the management of civil aviation. The answer to the first question will

These, then, are the new opportunities for statesmanship in the Palestinian dispute; but it is certain that the Jews and Arabs, if left to themselves, will not discover them. The extremists on both sides are better organised, and in their thunderings the still small voice of the moderates cannot make itself heard. The only way in which a solution on the lines of federation or a workable partition will be reached is through the decision and action of the British Government. At the moment a great uncertainty prevails. The Foreign Office has vaguely blessed the idea of Arab federation. Both in Palestine and Transjordan, the impression prevails that in some form or another the White Paper of 1939 will be modified, but how and in what direction no one knows, and between the policy of the Foreign Office (if it has one) and of the Colonial Office (which probably has none) there is a great gulf fixed. It is a depressing and indeed frightening prospect. The Middle East is vital to British interests. It is a hub of Empire communications. It contains most of Britain's oil supplies. It is, moreover, an area in which British influence and prestige are great and could be far greater. But the situation must deteriorate past curing if Palestine is to be allowed to slip into a state of perpetual civil war. The duty of the British Government now is to state its policy on the association of Palestine with a Syrian federation, on regional economic development in the Middle East and finally on its own plans to safeguard the military security of the whole area by entering into treaty relations with Greater Syria on the lines of the Iraq and Egyptian Treaties. There is a strong likelihood that France could be associated with such a policy—General de Gaulle has already outlined a very similar approach—and American opinion would be compelled to abandon its attitude of condemnation and political irresponsibility if the British Government put forward specific proposals to secure America's military and economic co-operation. The White Paper of 1939 was unworkable because it considered only Palestine—a framework too narrow to provide a solution. But the procedure of announcing a policy was correct. What is needed now is a new White Paper, conceived on regional lines, incorporating all the experience gained in the course of the war and backed by Great Britain's full determination to spare no military and economic effort to make it work.

determine where British civil aviation will have the right to fly. But what is "British civil aviation"? Is it the "chosen instrument" of British Overseas Airways Corporation alone? Does it include the railway and shipping interests? Or is it a free-for-all competition? And by what Government department should civil aviation be supervised—by the Air Ministry as at present, or by an expanded Ministry of Transport, or by an entirely separate Ministry of its own? It is these latter questions that have aroused most Parliamentary interest. But the present article is chiefly concerned with the very complex matters coming under the first head.

There are eight possible main varieties of conditions under which international civil aviation could be conducted after the war. Arranged in what would be a descending order of preference to a philosopher (or idealist, which in the present connotation is the same thing), they are as follows:—

1. *Internationalisation*. This would presumably require that all civil aviation other than purely domestic should be in the hands of an internationally owned and internationally controlled monopoly or possibly a series of monopolies for different regions of the world.

2. *Freedom of the Air*. The phrase has been much abused, but taken literally it would mean that any operator of any nationality could fly, and carry payloads, from anywhere to anywhere, subject only to licensing on the ground of safety, reliability, etc. Specifically, British air lines could engage in American domestic traffic, and American lines

could fly anywhere within the British Empire. It is worth pointing out that this is the principle that has always been applied by the United Kingdom (though by few other countries) to shipping, and that it was also British policy—as a matter of practice, though not perhaps of right—in respect of aviation before the war. There was a foreign air line which carried passengers between two points in the United Kingdom itself, and many in the Empire.

3. *Freedom of International Air without Reservation of Cabotage*. If full freedom of the air, as defined above, goes too far, the next step is "freedom of the international air." This would appear to mean that the aircraft of any nation would have the right to engage in traffic between one or more nations and to land and take off as necessary for that purpose. Thus not only British and American, but also Dutch and Russian, airlines would have the right to fly the North Atlantic route and to land both in England and in the United States to pick up or set down passengers or freight. "Cabotage" is a shipping term meaning coastal traffic; by extension to aviation it means traffic between two airports of the same country. Thus if there were freedom of the international air without reservation of cabotage, British air lines would not only have the right to fly across the United States on their way to Australia, but to land in several American cities and take passengers, say, from New York to San Francisco, always provided that the internal service was part of an international service.

4. *Freedom of the International Air with Reservation of Cabotage*. This would be a slight but important variation of the preceding case. Still taking a British line to Australia as an example, it would have the right to set down payload at an American port provided it came from abroad, or pick it up provided it were going to abroad, but not to carry it between two American points. It would probably be held that the setting down must take place at the first port touched, and the taking up at the last—that is, that the only payload that could be carried in British aircraft from New York to San Francisco should be through traffic. (There would, of course, be nothing to prevent wider rights being secured by specific agreement.)

5. *Right of Innocent Passage*. This would mean that the aircraft of any country should have the right to fly over other countries on lawful occasions. This would carry with it the right to benefit from directional beams, etc., and the right to land in emergencies. It might also include the right to land for refuelling. But there would be no general right to put down or take up payload; this would have to be secured in each case by direct negotiation. This Right of Innocent Passage may seem small enough, but it did not exist in the inter-war years, and the development of British imperial air routes was severely hampered by the refusal of Italy, for example, to permit it.

6. *Division of Traffic*. If all the above systems failed to secure agreement, it might be possible to persuade the nations to agree to the general principle that a proposal of one country to fly a service to another should not be refused by the second provided that the traffic were shared between the two countries either equally or in some other equitable proportion. This would confine the operation of a route to the countries touched by it—for example, Russia could not fly the North Atlantic route, or America the London-Paris route.

7. *Spheres of Influence*. All else failing, the major countries would agree among themselves not to enter certain areas. For example, Great Britain might agree not to run services in South America in return for an American undertaking not to enter the Indian Ocean.

8. *Complete Sovereignty*. Finally, there is the present situation, in which each nation is sovereign and there are no general principles governing the bargaining that has to precede the establishment of every service.

Not all of these plans are mutually exclusive. For example, an international monopoly in Europe could be combined with Freedom of the International Air or with the Right of Innocent Passage in other parts of the world. Alternatively, the big countries could apply the principle of Division of Traffic to the major routes, while engaging in competition under the Freedom of the International Air elsewhere.

The above arrangement would, to repeat, seem to a philosopher to be one of descending order of preference. It would follow that, as a theoretical matter, the higher up the list the international agreement can be pushed

the better. But that does not mean that the higher solutions are very likely to be reached. It should be remembered that it is the last that represents the present state of international law and that, apart from enemy countries, any general restriction of existing sovereignty would require the agreement of all parties, not only the agreement (as is sometimes assumed) of the major powers only.

Agreement even among the major powers may not be very easy to secure. Internationalisation would find favour neither in America nor in Russia nor with a majority of at least the present House of Commons. Freedom of the Air, though it has been British policy hitherto, is most unlikely to be acceptable. Even if completely free entry of American air lines into the British Empire would be tolerated, it is certain that British competition for domestic American traffic would not. It is almost certain that cabotage would be reserved by most countries. The region of practicability is reached with solution No. 4 (Freedom of the International Air with reservation of Cabotage) and No. 5 (Right of Innocent Passage). The latter may be regarded as the minimum that ought to be secured by international convention, and the former as the maximum that is likely to be secured. Between them and their different variants lies the field for fruitful negotiation.

American desires are rather hard to disentangle, the more so since so many American spokesmen seem to think that it will be possible to secure more favourable terms for American airlines in other countries than will be granted by the United States to foreign operators. This underlies, for example, the well-known demand to be allowed to use bases that have been constructed with American money. In its most extreme form, this would entitle American civil aviation to fly almost anywhere in the world, without any reciprocal privileges being given. There is no justification for this in the philosophy of Lend-Lease. The proper question to ask of American spokesmen is not what they want in other countries but what they are prepared to grant in the United States, because that will govern the general system to which their agreement could be secured. President Roosevelt has said that he and Mr Churchill were in general agreement on what sounded like the Right of Innocent Passage. It is possible that America could be brought to agree to the Freedom of the International Air provided that cabotage were reserved.

Russian intentions, as usual, are inscrutable. But it may be taken for granted that the Soviets will wish to reserve the whole of their domestic traffic to themselves, and it may even be doubted whether they would be willing to agree to the Right of Innocent Passage over the whole of their territory.

For Britain, a further set of questions has to be decided before an attitude can be defined. In preceding paragraphs, mention has been made of nations or countries. But what, for this purpose, is a country? It might be held to be any one of the following:—

- (a) An area under one Government, not including its dependent colonies unless they are contiguous.
- (b) A metropolitan area and its dependent colonies wherever situated.
- (c) Any number of countries under a single allegiance (e.g., the whole British Commonwealth of Nations).

And when a country has been defined, is it to be free to make bargains, going beyond the general international system, with such other countries as it likes? For example, suppose that the international convention prescribes the Right of Innocent Passage, and that landing rights are therefore a matter of specific bargaining. Which of the following principles are to apply to the subsequent bargaining:—

- (i) Any privilege accorded to one country must be accorded to all. This would be the exact equivalent of the most-favoured-nation clause in commercial treaties. It would clearly be unworkable if applied to aviation in a general way. But it might be held that any country which accorded rights of cabotage to another should extend them to all.
- (ii) Contiguous countries can enter into agreements which need not be generalised.

- (iii) Countries standing in certain political relationships to each other (e.g., the Dominions of the British Crown) can make agreements which need not be generalised.
- (iv) All bargaining to be free of any obligation to generalise.

Clearly, British policy must depend on a determination of these points. Some American spokesmen, including official ones, have appeared to propose a combination of (a) and (i), which would restrict British cabotage to the United Kingdom itself and admit American competition on the Empire routes. This is most unlikely to be acceptable to the British Government, which would prefer that the whole Commonwealth of Nations—or at least the greater part of it—should be treated as a unit, either by being so defined at the start—that is, (c)—or else as a result of specific inter-imperial agreements—that is, a combination of (b) or (c) with (iii) or (iv).

The attitude that the British Government would adopt

## NOTES OF THE WEEK

### Eastern Sedan?

The events of the last fortnight on the Russian front may well go down in history as the "Eastern Sedan." In quick succession the Russians have crossed three rivers, each of which was regarded as a strong defence line—the Bug, the Dniester and the Pruth. The crossings were not followed by the usual slow and elaborate operations to establish and consolidate bridgeheads. Instead Marshal Konyev's armies have driven forward with amazing speed to Jassy. On Marshal Konyev's right, Marshal Zhukov's forces have crossed the upper reaches of the Dniester and the Pruth, and, capturing Kolomyja, they have approached

the Jablonica Pass, which leads across the Carpathians into Slovakia. In their advance, the Russians have bypassed and left behind German pockets in the Kamenetz Podolsk area, just as the German armies used to by-pass and to leave behind similar pockets in the days of Blitzkrieg. With the fall of Kolomyja, contact between the German armies in Poland and those in Roumania and around Odessa has been definitely cut. From now on the Polish and the Roumanian fronts are two separate theatres of war for the Germans, but not for the Russians. How the Russian High Command will exploit this major strategic advantage cannot yet be forecast with any certainty. There is clearly room for a number of alternative operations. The Russians may either envelop and unhinge the Southern German front, or they may outflank the Polish front from

on the wider questions of organisation is likely to turn very largely on this question. If the Commonwealth is treated as a unit and the reservation of cabotage means the reservation to British aircraft of all traffic that both begins and ends at British ports, then there will probably be a willingness to go as far as any other country towards the Freedom of the International Air—combined perhaps with some division of traffic on the major routes in the early years. But if the United Kingdom is treated as a unit in itself, the British Government's policy—like that, it may be suspected, of other small countries—will favour the utmost freedom of bargaining. Perhaps the best of all possible solutions from the British point of view would be the Freedom of the International Air, with the Commonwealth treated as a unit, and with a mutual sharing of imperial cabotage rights with the French and Dutch Empires. But by the same token, such an arrangement is unlikely to be acceptable to the Americans.

the south along the Lwow-Cracow road, which leads straight into Upper Silesia. An advance into Roumania would allow them to benefit from all the confusion that Marshal Konyev's sudden break-through must have caused there. An advance across Poland might possibly be more difficult, but its success would bring more decisive strategic results. For the time being it looks as if the armies of the two Russian Marshals are concentrated in the southward direction. But fierce fighting in the streets or on the outskirts of three important Polish towns—Tarnopol, Brody and Kovel—may foreshadow the resumption of the westward drive. A simultaneous drive across Poland and Roumania might, of course, involve grave risks, as the Germans learned when, in the summer of 1942, they struck simultaneously towards the Caucasus and the Volga. The prospects of a double Russian offensive depend on the degree of disorganisation in the German rear. So far the German defence in Poland has been conspicuously stiffer than in Roumania. Another possibility is that Marshal Zhukov may try to force the Carpathians between Kolomyja and Stanislawow, and strike into the heart of Hungary. The difficulties need hardly be stressed. But Marshal Zhukov could count here upon the assistance of guerilla fighting. He is only thirty miles from Sub-Carpathian Ruthenia, where pro-Soviet feelings are traditionally strong and where the terrain is very favourable for partisan warfare.

### Balkan Politics

While the military consequences of the new, swift Russian advance are still undecided, the political crisis in the Balkans seems to have come to a temporary lull. Antonescu, Roumania's Conducator, has come back unscathed from the Fuehrer's headquarters. No re-shuffle of his Government has so far been foreshadowed, although Mikhail Antonescu, the Conducator's brother and deputy Prime Minister, seems to be regarded with some suspicion by the Germans. A call-up of fifteen classes has been announced in Roumania, and defences are being improvised around Bucharest and Ploesti, but these measures of defence have probably come too late to save Roumania. The main German effort continues to be concentrated on Hungary and Transylvania. It is now pretty clear that last week's political crisis reflected a split in Hungary's ruling group. One section had apparently made up its mind to break away from the Third Reich. Another section decided to follow Hitler into defeat. While no fewer than five Ministers of Kallay's Government joined Sztojay's Cabinet, Kallay himself has sought asylum in the Turkish Legation at Budapest. This gesture was followed by the resignation of Hungarian diplomats in Sweden, Turkey, Switzerland and Finland. Admiral Horthy himself seems to have wavered for a while between the two factions. Finally, he reconciled himself to the *fait accompli* of German occupation and gave his blessing to the new Government and to the massacres of Jews and the persecution of the Left that have already started. There seems to be a similar split

in Bulgaria's ruling group. It would not be surprising if the adherents of a separate peace proved luckier in Sofia than in Budapest. Bulgaria can still count on the good offices of the Soviet Union, with whom it is not at war, and the journey to Moscow of M. Lavrentev, the Russian Ambassador to Bulgaria, may possibly be connected with more serious peace feelers than those that have come from the Balkan countries so far. The Bulgarian satellite is now in the outer orbit of the Nazi solar system. Whether it will break out depends on the speed of the Russian advance into the Balkans.

### Equal Pay

The Government's defeat in the House of Commons on Tuesday came on an amendment moved by Mrs Cazalet Keir providing that, in approving salary scales for teachers, the Minister should not differentiate between men and women solely on the grounds of sex. The voting was 117 votes to 116—a majority of one vote against the Government. In addition to this small majority it was clear that many members were in favour of the principle even though they did not vote against the Minister. It was equally clear that though the amendment was supported by the Labour Party and by Liberal and Independent members, it would not have been carried without the organised efforts of the Tory Reform Committee. The case which Mr Butler put against the amendment rested on two separate arguments. The first was that the amendment would destroy the form of machinery on which the determination of teachers' salaries had depended for so long, and that a decision by the House should not be forced upon the existing machinery of the Burnham Committees. The second argument was that the principle of equal pay was of such wide application, reaching far beyond the payment of teachers alone, that it could not be built into the provisions of the Bill before it had been decided as a matter of national principle. In the first argument, few members were able to find much satisfaction. Mere machinery cannot be of first importance, however valuable it may have proved itself and however great the technical difficulties of change and reform. The second of Mr Butler's arguments contained a great deal more of practical validity. As Mr Greenwood put it, speaking after the division, Mr Butler as Minister of Education was not the person to decide a matter of policy which would affect all state servants. The critics would doubtless reply that a beginning must be made somewhere and that a better case could hardly be found than the teaching profession. The consequences of the Government's defeat were made clear by the Prime Minister on Wednesday. Mr Churchill is evidently in no mood to bow to the wishes of Parliament even on an educational question, and, as is his undoubted constitutional right, he is going to compel the House to reverse itself. The whole clause in dispute was on Thursday (after *The Economist* went to press) to be removed from the Bill, in order that it might be reinserted in its original form on the report stage. Both steps will be treated as matters of confidence, and failure to accord the Government not merely a majority, but an "adequate" majority, would entail "the usual constitutional consequences." This will decide the matter. The advocates of equal pay will not get their principle written into the Bill. But they will have succeeded in putting it on the urgent list for public discussion and Government decision.

Such a discussion could not in any case be long deferred. The general principle has been one on which there has been a concentration of popular interest and of growing agreement. Just as the last war led to the extension of equal civil and legal rights to women, so this war has brought a demand for equal economic rights. The principle that any discrimination in pay between men and women is permissible only if it is based on the quality or quantity of the work done and not on the sex of the worker is one which seems to most people nowadays to be one of common sense and plain justice. The citadel of the anti-feminists is a sorry and crumbling edifice at this stage of the war, and there are few who would deny the validity of the principle. The only major differences which remain are between those who see more or less difficulty in its practical application. It may be, for example, that in some occupations a forced payment of women at equal rates would operate against their employment. The prospect of keeping an employee

permanently in his job is obviously greater with a boy than with a marriageable girl. Insistence on a rigid application of the principle of equal pay might therefore lead to unemployment among women or to the closing to them of avenues now open. Another objection is that some institutions which contribute materially to the welfare of the nation (not to mention a number of industries) are founded on female labour and would have their economic basis completely upset if they had to face a large and sudden increase in their pay-rolls. But this can only be a temporary objection. What would seem to be right is that equal pay should become the general principle, to be applied as soon as possible except in those cases where it would not be in the interests of the women themselves. And in furtherance of that principle, the state, which is now almost the worst discriminator, should throw the whole weight of its example and its influence in favour of equal pay.

### Telling the World

The Prime Minister's broadcast last Sunday was the first public rumbling of the storm that broke about the heads of Members of Parliament on Wednesday. The speech was not one of his best. He has set his standard too high. No doubt he had his own reasons for deciding that the speech was needed. No doubt it was important that he should pay tribute again to the decisive effects in Europe of Russian victories; and that he should again reassure American doubters about the British determination to put every needed force on land and sea and in the air into the war against Japan—which Mr Churchill now believes will end sooner than he thought a year ago, owing to the American amphibious triumphs. But it was not in these passages that the Prime Minister seemed to give, by tone and emphasis, the reason for his decision to speak. This came at the end, when he turned with irritation to his critics at home. His answer to requests that short-term reconstruction should be set in a context of decisions on long-term policy carried the discussion no further—except to show to the world that the Prime Minister is apparently much more put out by domestic "prods" than he need be. It would be a pity if this speech, together with the insistence on a vote of confidence, spread abroad the impression of a disunity that does not in fact exist. The "prods" will no doubt go on. The demand that the old pledge to peg land prices should be made law will continue. The view will still be stated that the very considerable work which Mr Churchill claims, with justice, is already being done on reconstruction problems should be done in a proper and effective way. It is not a question of whether there is time in war to consider these things, as Mr Churchill tends to argue. They are being considered already, as he himself insists; the question is how to get the best results in the shortest possible time. This is the point that Mr Churchill misses in the current criticism. But there is no disunity. This country, on the eve of the biggest battles, is as united as any Ally, including Russia. The Prime Minister should not think otherwise.

## Another Coal Crisis

The fate of the Government's scheme for the revision of coal mining wages, which was accepted last week by the owners' and miners' representatives pending the decision of the districts, hangs in the balance. This situation in the coalfields may once more be very serious. South Wales and Scotland will almost certainly reject the scheme. If Yorkshire adopts a similar attitude, which is not improbable, these three districts would outweigh the favourable votes of the North-Eastern and Midland districts. Even if the scheme were approved on a national ballot, there would be a large discontented minority, and almost certainly further stoppages. The main reasons for the South Wales Executive's recommendation to reject the scheme are understood to be objection to the pegging of wages for four years and the disappearance of some of the wage gradations for skilled and semi-skilled men, for which the advance to skilled craftsmen of 1s. a shift would not compensate. The principal objects of the Government scheme were to stabilise wages, except for the cost of living addition, in the miners' own interests, and to provide greater incentive to output. Both sides to the discussions have pledged themselves again not to support strikes or lock-out. But in view of the attitude of the rank and file and the alarming spread of the Yorkshire "house coal" strike, it is difficult to be optimistic. The illegality of strikes and the pledge to accept arbitration awards have not so far worked out well, though not so badly as some conspicuous episodes have suggested. The union leaders have not been able to keep their men to their bond. Certainly, rejection of the Government's scheme would be exceedingly short-sighted. It offers stability and guarantees the national minimum wage, which might prevent a repetition of the 1921 experience, when the owners were able to cut wages and drive the miners back to district agreements. The four-year period would give a breathing space in which to carry through the thoroughgoing reorganisation of methods, which is necessary if the industry is going to afford to pay these higher wages in peacetime. If the agreement breaks down, now or later, the resulting strife may be greater, not less, than a quarter of a century ago.

## Demobilisation

Mr Churchill spoke, as he claimed, with authority when he referred in his broadcast to demobilisation. It fell to him, as Secretary for War and Air, to clear up the mess created in the winter of 1918-19 by the attempt to release men from the Forces ostensibly according to the needs of industry. Instead they were released, very rapidly, according to length of service, the principle they themselves claimed. This time the Prime Minister has promised that the men's rights will be the overriding criterion from the outset. The Minister of Labour, he says, has worked out a plan on these lines, with the modifications and exceptions that cannot be avoided; and the plan is to be kept secret, and not apparently even discussed, for fear that people abroad should think that this country is looking too much towards peace before the battle is won. The trouble is that this procedure, however well contrived Mr Bevin's plan may be, offers no assurance that there will not again be disappointment and dissatisfaction when it is made known and put into force. Demobilisation is going to be much more difficult, psychologically and personally, after this war, than it was after the last. This is because there are two wars in one, and the Japanese war is still likely to last some time after the Germans have been beaten. That is to say, demobilisation will have to be "staggered." No sweeping solution like that applied so successfully by Mr Churchill in 1919 will be possible. The exceptions and modifications to the principle of "first in, first out" may have to be considerable. It will not be possible for the Services to keep for the Far Eastern fighting only the men who have served least long. Military and geographical considerations will rather require them to retain many men who have been serving almost since the beginning of the war; an appreciable number of the troops trained in jungle fighting come into this category and could not be dispensed with, any more than certain units and individuals of the Navy and RAF. Partly, this difficulty is being overcome by the request for volunteers to sign up for longer service. But it remains true that, if men are told simply that "first in, first out" is to be generally applied, they will not be pleased, to say the least, if they find that the demands of the

Japanese war and, possibly, of occupation commitments elsewhere, have made necessary a sizeable limitation of the principle. The only sensible course is to talk frankly to them and to the public, which includes their families, about the problems which will be involved—whatever other people in other countries may think.

## Ex-Service Industries

To decide who goes home first from the Forces does not mean that the problem of demobilisation has been solved. The easy solution of 1919, when 3-4 million men were brought home and found work, was deceptive. By 1921 there was large-scale unemployment. Success in demobilisation depends upon success in providing jobs that will last; and success in providing jobs that will last depends, in turn, not only upon the decision to pursue an effective full employment policy, but also upon the principles and order of priority of industrial reconstruction. The re-equipment of basic industries is as important for the future of ex-Servicemen as the building of their homes. Both must go forward together; and nothing could be more harmful to ex-Servicemen than the uncontrolled expansion of any and every consumption goods industry in a premature boom that would inevitably collapse and leave a regiment of workless men. Whatever the determination, on the very best grounds of justice, to apply the principle of "first in, first out" and avoid the old "key men" racket, the cardinal importance of industrial policy in the transition from war to peace must require some exceptions; it is hardly conceivable that many builders can be kept in the Forces, however short their service, while the Two-Year Building Programme is proceeding. Moreover, industrial demobilisation, too, will be "staggered." Some firms will stay on war work until Japan is beaten, while others take up the civilian threads again. The treatment of ex-Service industries raises as ticklish problems as the treatment of ex-Servicemen.

## Plain Speaking

The Bill to extend the Lend-Lease Act beyond its present date of expiry on June 30, 1944, has been considered by the appropriate Committee of the House of Representatives and reported favourably, subject to an amendment transferring from the President to Congress the right to approve any agreements that may be come to with the beneficiary nations about the return to be made for Lend-Lease. This amendment is said to have the President's approval. It is, of course, a wholly American concern. None of the beneficiaries has any right to feel aggrieved that the Americans should change their minds about which organ of the American Government shall have the final say. Nevertheless, the beneficiaries are put upon notice that the final settlement will not be as easily arrived at as was expected when Lend-Lease was born, and that the post-war argument will be more remarkable for its similarity to the old War Debts controversy than for its differences. This being so, it is the more urgent that the British side of the argument should receive much clearer and more frequent statement than it has. Lord Halifax indulged in some salutary plain speaking a few weeks ago; but in general the British line has apparently been to allow a distorted view of Lend-Lease to grow up rather than incur any displeasure or ripple any smooth surfaces by speaking out. The results hardly justify the policy. The conditions of Lend-Lease have been successively tightened up, while the American public's expectations of post-war returns have been allowed to rise. The policy of silence, it may be hoped, will now be reversed. There can surely be no harm in saying that, when the Lend-Lease Act insisted that its purpose was solely the defence of the United States, the British people paid Congress the compliment of believing that it meant what it said. Can there be any harm in continuing to say that British opinion will not be content with any ultimate settlement which fails to take into account the dollars spent by Great Britain in supporting American munition factories in the days of Cash and Carry? Or can there be any harm in making it plain that, since America has not handed over in Lend-Lease any of her capital assets but only the current output of her factories and farms, there can be no question of any handing over in return of any British capital assets, whether they are strategic islands or oil reserves or indus-

trial securities, and that repayment—if any material repayment is made at all—can only be in the current output of British factories? It is quite clear that the whole problem of repayment will have to be faced sooner or later, and to allow delusions to grow will only make the ultimate settlement more difficult.

It is not only in respect of Lend-Lease that some plain speaking is necessary. The process of making the British the scapegoats of the American election is going merrily forward. For example, Mr Cordell Hull, who is under very heavy fire for his conduct of American diplomacy, is trying to defend himself by saying that anyhow he is better than the British. In the last few days, Congressmen, emerging from a conference with him, have reported him as saying that London is not on speaking terms with Moscow. He has denied that restrictions placed on the transmission of political news from London to Washington were done at his request—the implication being that it was a British desire. And he has complained about the leakage of information in London. It would be very foolish to get annoyed about these incidents. Anybody who understands the anatomy of American politics appreciates why they happen. But silence may be dangerous, for it implies agreement and will be used to build up a case against the British in the American mind. The fact is that, if London has had to argue with Moscow over the Polish and Finnish cases, it is because Washington held views even further removed from the Russian. If Mr Hull did not want a political censorship in London, he should have explained himself more clearly, for the British authorities were certainly under the impression that they were acting at his request. And if there are mores of leakage in London's eye, there are beams in Washington's. Recrimination among Allies, even on minor points, is a sad spectacle. But one-sided recrimination is not merely sad; it is dangerous. The British Government cannot expect to retain any initiative in world affairs if they are constantly willing to be forced on to the defensive. They may rightly shrink from official *dénégation*, but there are other ways of letting the truth be known. The sealed lips policy is a failure; it should be reversed. Is there, for example, any possible objection, at this stage of the war, to countering all the American talk of British export-pushing by publishing the figures, which would show American exports (apart from Lend-Lease) sharply up and British exports sharply down?

## Salute the Soldier

London this week has been Saluting the Soldier. It is right that the Army's turn should come, and nothing but good will be done to the morale both of soldier and of civilian by the very impressive displays of military might. But the primary purpose of these Weeks is to collect national savings, and as each of them comes round it is impossible not to wonder once again whether their promoters have ever got their logic straight. The target has once more been raised, and will, no doubt, once more be triumphantly attained. But what do these gigantic figures mean? They mean, for one thing, that there is no call on the banks this week to lend money to the Government against Treasury Deposit Receipts at 1½ per cent—in order that they may increase their subscriptions at higher rates of interest. They mean, for another, that all sorts of industrial and financial institutions are put under pressure to invest in the course of a single week funds that would have been invested in any case over a longer period. Nobody nowadays believes that the amount subscribed will have any effect on the production of munitions or on any other physical aspect of the war effort. The official defence is that the Weeks are a necessary part of the whole campaign to persuade the public to reduce its consumption. It is true that this method of restricting consumption having been entered upon, it cannot now be abandoned or even relaxed. It is true that, if the soldier is to be saluted, he had best be saluted with full success. But the object of the whole procedure—it cannot be insisted upon too often—is to persuade people to consume less, and the degree of success attained will bear no ascertainable relation to the £165 million collected. It is impossible to fight down the reflection that this result could be better achieved by methods that were more direct, less ambiguous, and less charged with pure illusion.

## Germany's Balkan Losses

Between 1940 and 1943 it was the melancholy duty of journalists to record at regular intervals the profit and loss account of some new advance by Germany or Japan. To-day the direction is reversed. The Germans—and the Japanese, for that matter—are steadily losing the gains of earlier conquests. Now that the Russian advance has penetrated into areas which have for long been under complete German control as fully integrated parts of the *lebensraum*, it is time to get some idea of the cost to Germany of the loss of South-Eastern Europe. It is hard to say how quickly the German retreat will continue. In the last war, the fighting was more or less stationary throughout 1917 on a line running from Czernowitz and Tarnopol to the Danube Delta. It may conceivably be that the German armies will be able to hold a large part of Roumania and keep the Russians out of Transylvania and Hungary. In that case, the only important loss will be the extensive oilseed crops of Bessarabia. If, however, the Russians clear the Germans from Roumania, and the Balkans are lost, which seems much more likely, very serious losses are certain. The loss of oil can be exaggerated. Roumanian oil amounts to 5.5 million tons annually, and is roughly one-third of all the natural and synthetic oil available in Europe. About 2 million tons of Roumanian oil and oil products go to Germany and another million to satellites and neutrals. The loss of 2 million tons need not necessarily be a crippling blow. Germany's synthetic oil production is still expanding. There are new plants in Upper Silesia. In 1939, synthetic oil production was only 1.8 million tons. In 1943 it had risen to nearly 6 million tons. It is thus possible that even without Roumanian oil the Germans can carry on through 1944, especially since all their lines of communication will have been enormously shortened by their retreat.

Food losses are serious, but not so serious as they would have been if Roumanian harvests had at any time come up to expectation. Poor harvests in 1941 and 1942 meant a very small exportable surplus, and the Germans have not been able to rely on big supplies. Yet the loss of all the Balkan countries would mean that, although no single loss—whether of wheat or maize or fruit or vegetables—was crucial, the combined effect would throw an unbearable strain on Germany's delicately balanced supply position. Another embarrassment would be the loss of many industrial raw materials, such as manganese from Roumania and some copper, molybdenum and chrome from the other Balkan states. The chief source of bauxite lies in Hungary, and the loss of Yugoslavia and Greece would not be decisive. To sum up, the loss of South-Eastern Europe would not, from a purely economic standpoint, put the German war machine out of gear. Some advantages would even be gained from the shortening of lines of communication and the lightening of some strain on Germany's overworked transport system. But all this depends upon holding the Russian advance and building up a new line between which the work of reorganisation can go on. The Germans' energetic measures in Hungary show that they mean to re-

7, CHANCERY LANE, LONDON, W.C.2

organise, but it does not look as though the Russians will give them much time.

### Second Thoughts on Trade

During the past ten years, the process of modifying old views about the practice of trade, if not about its principles, has been painful for many people. On the face of it, the process has not been so painful for Political and Economic Planning as for some. The latest PEP broadsheet (No. 219, published by PEP, 16 Queen Anne's Gate, S.W.1) is an appendix to the large Report on International Trade, produced just under seven years ago. Then, while recognising that quotas, licences, clearing arrangements and exchange controls were, in fact, putting serious restraints upon world commerce, PEP's recommendation was not that regulation should be swept away, but that it should be used by Governments for the purpose of expanding trade instead of restricting it. The specific proposal, made in 1937, of "low tariff groups" of nations pledged to maximise the exchanges between them, at the expense even of modifying the most-favoured-nation clause, has many more supporters in 1944.

### New Views

The smoothness and continuity of PEP's progress of ideas on international trade are, however, deceptive. The authors of the latest broadsheet again ask either for "an efficient international monetary exchange clearing system in which all nations have complete confidence" or, if this cannot be got, for the "low-tariff club . . . by which nations most dependent on international trade can secure the benefits of multilateralism on a limited scale," as they did in 1937. But they also ask, quite newly, for "the maintenance of full employment within national economies" as the qualification for membership. In fact, PEP's views on the causes and cures of trade ills have undergone a radical change—they are not, of course, alone in this. In 1937 PEP still believed that the chief cause of trade restriction was trade barriers. Now it is believed that the main deterrent of international trade activity is the state of national employment. Trade barriers thus become symptoms, not the disease. Not American tariffs, but American slumps become the foe to be feared. So PEP reflects the recent general shift of emphasis in economic discussions. But in one way PEP does not alter. The 1937 proposal to substitute "planned trade" for the freedom of intercourse of individual traders was described in *The Economist* as showing "an excessive faith in planning, and regulative machinery." In 1944 the same faith is no less excessive; and the same criticism is no less valid. Trade will still be carried on by individual traders if freed enterprise, in the proper conditions provided by public policy, is to bring about the fuller trade that PEP looks for.

### Treating the Offender

The Home Secretary announced in the House of Commons last week that an Advisory Council is to be constituted to assist him in drawing up a programme of reforms in the methods of dealing with offenders. It will be a varied body,

including not only those who have been associated with the work of the courts and with the treatment of offenders, but others who may approach this problem with fresh ideas and broad sympathies gained in other spheres of work.

There are roughly three ways of regarding the treatment of an offender: it can be punitive, deterrent or re-educative. In this country public opinion has largely dropped the first, except in crimes where popular emotions are aroused, and is slowly swinging round to an acceptance of the third, though with the firmly held proviso that the community should not be allowed to suffer for treating the offender too lightly. It is gradually being realised that it is not the punishment that deters a potential criminal so much as the fear of being found out; deterrence is the function of the police rather than of the sentencing judge. But to make re-education the principle of treatment is extraordinarily difficult, because it means that offenders cannot be dealt with in bulk, or even in large groups, but require a large measure of individual attention—in itself a danger to the type of offender who is prone to self-pity and to the idea that it is the

community, not he, who has erred. Where, however, re-education has the greatest chance of success is among the young, because of their greater adaptability and because, in being made subject to discipline and restraint, which they are still experiencing, or have but recently shed, at school and home, they do not experience the same damage to pride and prestige as do adult first offenders. The fact that the new Council is to give "special and early attention" to the problems connected with juvenile delinquency is therefore significant for a deeper and more permanent reason than the wartime increase in young offenders. Any practical advice which the Council is able to offer must include aspects of the treatment of offenders ranging from the court-room to the planned and up-to-date prison building. The physical condition of prisons has not kept pace with the progress in public opinion. Some of the problems involved were dealt with by Mr Morrison in a speech at Birmingham on Tuesday. A passing reference to the Criminal Justice Bill (1938), which was dropped at the beginning of the war with undue haste and under-estimation of its great value, made it clear that Mr Morrison aims at an even wider reform than that covered by the Bill. Competition for Parliamentary time and for the materials of necessary physical reconstruction, between housing, hospitals, schools and prisons, for instance, will be great. Mr Morrison at least cannot be charged with under-emphasis on long term problems arising in his own department.

### The Health of Luton

Vital statistics are a branch of science from which misleading comparisons more than usually tend to be drawn; and the offenders in this respect are sometimes the very people who produce the statistics. The Medical Officer of Health for Luton, Dr Grundy, in a memorandum upon the borough's vital statistics, shows a healthy and refreshing understanding of the circumstances which must affect any such comparisons. He points out that a comparison of the vital statistics of one borough with another, or with the whole of England, does not indicate in any way the efficiency of the local health services. Local statistics are affected by the local age structure of the borough in question and are also governed, more heavily and more intangibly, by local environmental factors. A striking illustration of this is found in the fact that the infantile mortality rate at 3-12 months in county boroughs varies almost exactly with the average density per room in the borough. Dr Grundy is able, in some instances, by comparing Luton's own deaths from a given cause over different periods, to isolate improvements for which the borough's health services may be taken to be chiefly responsible. Thus the startling fall in the maternal mortality rate between 1938, when it was considerably higher than the average for England and Wales, and later dates, when it has fallen considerably lower, is due to the institution of a municipal maternity hospital and midwifery service. The period of comparison is very short; but there is a lesson to be learnt from the fact that a very low maternal mortality rate should be experienced in a borough in which, in 1942, three-quarters of the births taking place were dealt with by the public services. Dr Grundy is convinced that environmental causes, including mainly conditions of life about which the doctor has no direct say, are the chief determinants of mortality rates, and is sure that the main task of Medical Officers of Health lies in prevention and positive health.

### Right of Asylum

It is reported from Ankara that the Bulgarian ship *Milka* has arrived at Istanbul with 243 Jewish refugees from Constanza on board. They have requested the Turkish Government to allow them to go on to Palestine. If the passengers have permits from the British authorities to enter Palestine, there will presumably be no difficulty. But, unhappily, it is not certain that they have. One might have reasonably expected that any Jew escaping from the death-camps of Eastern Europe could count on a safe conduct to Palestine, but the horrible incident of the *Struma* in 1942 is a warning that this is not the case. The *Struma*, after long delays and desperate attempts to secure permission to land in Palestine, foundered off Istanbul with some 700 Jewish refugees on board. The same tragedy occurred at Haifa in the case of the refugee ship, *Patria*.

The British Government has admitted that there are still 30,000 places open in Palestine under the schedule laid down in the 1939 White Paper. Mr Eden told the Commons that the only difficulty in filling them was the refusal of the Axis authorities to let the Jews go. This may cover the Jews who have not been fortunate enough to escape, but it has no bearing on the *Struma* or *Patria*. Nor has the other line of Government defence, that the shipping is not available to transport thousands of refugees to the Levant. The Jews on the *Struma* and *Patria* and now on the *Milka* had already found their ship. The danger that Fifth Columnists might be among the refugees could be met by segregating them in camps on their arrival. There is thus no conceivable reason why the tragedy of the *Struma* should be repeated. The *Milka* will not be the first ship to bring refugees from the new areas which the Balkan campaign has opened to Nazi savagery. A terrible pogrom has already started in Hungary. It is imperative that the Government should give a guarantee now that any Jew escaping from South Eastern Europe shall be admitted to Palestine so long as the 1939 quota is still unfulfilled.

### France's Future

After a protracted, somewhat confused and inconclusive discussion on post-war government, the French Consultative Assembly at Algiers has now passed several important resolutions. The election of a Provisional Assembly is not to be delayed until after the return of four million prisoners, deportees and refugees to France; it is to take place as soon as possible after liberation. French women will be given the right to vote; and soldiers of all ranks will go to the polls. The Provisional Assembly will not make constitutional reforms, which will be left to the Constituent Assembly. The decision not to wait for the elections until the return of the prisoners was taken by a majority of 38 votes to 32. The opposition came from Socialists and Communists. An election in which the most active and politically important section of the French people will not take part and in which the weight of the female vote will be felt for the first time, may result in an artificial and unrepresentative Assembly. Against this, the argument has been set that the precarious international position of France will demand quick elections. Concern about the degree of recognition or non-recognition accorded to the Committee of Liberation by the Allies seems at present to overshadow all discussion at Algiers. The proposal that the Allied Commander-in-Chief should be free to negotiate with whatever groups he may choose has satisfied nobody. General Eisenhower himself is said to have objected to a proposal which would burden him with a major political responsibility; and the French fear, with some reason, lest the fate of their country should be left to the uncharted chances of expediency. General de Gaulle's policy is, however, somewhat inconsistent. Last week he declared his willingness to start immediate negotiations for the formation of a grouping of Western Powers. In a speech to the Assembly this week he appealed to Frenchmen not to pay any heed to foreign criticisms. It is a truism that Frenchmen alone should decide the forms of their Government. But it is wrong to say that problems of French domestic policy ought to be taboo to public discussion in Allied countries. Certainly, disregard for Allied opinion is not the appropriate accompaniment to negotiations for a Western bloc.

### To Adjust or To Cure

In last week's *Economist* it was pointed out that eye treatment was a branch of medicine which is labouring under special difficulties. Between optician and oculist—technician and specialist—there is a great gulf fixed, with no one in the middle to perform the omnibus functions of a dentist or a general practitioner. A theory which has received much recent publicity claims that all defects of the eye are curable by means of exercises and other devices. Whatever the truth about the particular theory held by Dr Bates and publicised by Aldous Huxley, it is in any case hardly revolutionary to suppose that the eye, like other physical organs, can be nursed back to normality. Eye exercises have long been part of the normal treatment of eye specialists, and some advanced medical opinion even holds that all, or nearly all, defects of the eye—including apparently constant errors of vision—are pathological and susceptible to curative treatment. The important point is

that glasses merely adjust; they cannot cure. Yet the optician can do no more than provide glasses. The glasses may prove perfectly satisfactory and vision may deteriorate no farther; but the fact is becoming increasingly apparent that they leave untouched defects that are probably removable. Moreover, their use tends to create the impression that cure is impossible or unnecessary, besides making it—through pressure of habit—more difficult. To cure is plainly better than to adjust. The need for more fully qualified oculists who shall be more easily, more generally, and more cheaply available has been thrown into relief by the new health plan; it is an apt time to survey all possible modes of treatment.

### Shorter Notes

On Wednesday, Mr Seymour Cocks drew the attention of the President of the Board of Trade to the high price and inferior quality of men's braces. He might have added the inexplicable fact that almost all the pairs available, even at full stretch, have obviously been made for a race of dwarfs. The "close specifications" to which Mr Dalton said braces are subject, as well as price control, must be very close indeed.

The Colonial Office has announced the appointment of a joint development adviser for Northern Rhodesia and Nyasaland. He will be Mr G. F. Clay, at present director of agriculture in Uganda. The appointment is of interest, not only for the future economic and social development of the territories, but also for the fact that they are, for this purpose, being treated as one. It is another step towards functional regionalism in the colonies. The Bledisloe Commission opposed the amalgamation of the two dependencies with Southern Rhodesia, until a common native policy had been achieved. But no such inhibitions impede a closer union between the two dependencies themselves.

### The scene changes

LITTLE more than a hundred years ago Britain was an agricultural island. Its resources were undeveloped, its roads often incredibly bad; power-operated machinery was almost unknown . . . but the invention of the steam engine was destined to change the scene and by the middle of the nineteenth century the tide of industrial development was in full flood. In almost the span of a lifetime, Britain became the centre of the world's trade and in this vast change the Westminster Bank (founded in 1836) played its part, providing—as it does today—a complete banking service for industry and the individual.

LIMITED

# AMERICAN SURVEY

## Zionism in America

MOST Jews in the United States are not Zionists—that is to say, they are not actively interested in making Palestine a Jewish Commonwealth. They think of themselves as Americans, not Jews, and their chief political interests lie in the United States, not in the Middle East. A substantial, hardworking and vocal minority are, however, actively Zionist, and in the last twenty years they have built up a number of active and effective Zionist organisations in America. The American Jewish Congress, under the leadership of Rabbi Stephen Wise, is the most influential, and it tends to dominate the World Jewish Congress whose head offices are in New York. Another influential body is the Zionist Organisation of America. Two organisations are concerned with the economic aspects of Zionism, the Jewish National Fund of America which raises money to buy land in Palestine, and the Palestine Economic Corporation, which is a channel for the investment of American capital in Palestine. The Hadassah is the women's Zionist organisation. Then there are a number of extremist bodies, among them the New Zionist Organisation. The result of this degree of organisation has been the creation of a quite powerful lobby. Non-Zionist opinion is not a political factor, because it is not vocal. Zionist opinion has political influence because it can influence voting. It follows that, when Congress considers the problem of Palestine, it does so from the Zionist standpoint. This tendency is reinforced by the fact that the sympathies of most American Jews, whether Zionists or not, naturally lie with their fellow Jews in Palestine. And there is no Arab minority living and voting in the United States. The "traditional" policy of Congress has thus been to endorse the demand for a National Home in Palestine.

Although non-Zionist Jews are not so highly organised, two bodies of some influence do not share the full Zionist faith. The American Jewish Committee is important because most of its members are wealthy and in positions of influence, the Jewish Labour Committee because of its great following among organised workers. These two bodies are split on the issue of Zionism, since, like most inarticulate American Jews, they are unhappy about the racialism inherent in the Zionist approach. They deny that there is a Jewish "nation," and wish the Jews to be absorbed into the various communities in which they live. They argue that the insistence on Zionism tends to make non-Jews think of Jews as a separate racial community, and that once a Jewish Commonwealth has been created, non-Jews will reject the idea of assimilation and try to compel all Jews to go and settle in the Commonwealth. The Jewish Labour Committee have an additional reason for anti-Zionism in that they concentrate on divisions of class, not race, and underline the common interests of all workers, Jewish and non-Jewish alike.

### Anti-Semitism Grows

In recent years, the question of Zionism in the United States has been affected by two new factors—the growth of anti-Semitic feeling in the United States, and the launching of the Nazi policy of unlimited terror against the Jews in Europe. In 1942 it was estimated that over one hundred different organisations disseminated violent anti-Semitic propaganda, and although some of these consisted of only "a fanatic and a letterhead," there was a continuous percolation of poison through the mind of the public. Anti-Semitism was one of the less advertised but more pernicious planks of the fanatical isolationists. In his Des Moines speech in the autumn of 1941, Colonel Lindbergh accused the Jews of plotting to bring America into the war. The seeds of anti-semitism sown in countless little sheets of "smear material" began to spring up into acts of violence. In the autumn of 1942, hooliganism broke out in the Bronx and Brooklyn, synagogues were desecrated in Cleveland in 1943, organised groups broke up Jewish shops in Boston in the same year. This was the background of opinion in

America when in 1941 and 1942 the horrible facts about the Nazi pogroms in Europe began to reach the outside world. The cry for asylum had to be raised, but here was the dilemma. Could more Jews be brought to the United States without strengthening the forces of anti-Semitism? Responsible Jewish opinion thought not. As the *Detroit Jewish Chronicle* put it in August, 1941:

In principle we dare not abandon the request that as many Jews as possible be permitted to settle here. . . . Practically, however, we should recognise the advisability of creating new avenues of escape for the millions of persecuted Jews, and on this score Palestine looms big on the horizon.

Thus, in the first months of America's entry into the war, the issue of Zionism became inextricably entangled in the problem of finding a refuge for the Jews of Europe. It was no longer a racial issue: Are the Jews a nation and should Palestine be their nation-state? It was a humanitarian issue: How can the Jews of Europe be saved? To which American Jewry added the unspoken rider, "without increasing anti-Semitism in the United States." On the issue of helping the Jews, all shades of Jewish opinion were united, and the appeal of Zionism as a solution of the Jews' plight in Europe spread far beyond the limited circle of convinced Zionists. In the course of 1942 and 1943, Jewish and non-Jewish opinion in America has become far more conscious of Zionism as an issue, and in the progress has been convinced that the British Government, by refusing to "open the doors of Palestine," is the chief obstacle to saving Europe's Jews from liquidation.

### The American Jewish Conference

Throughout 1942 and 1943, advertisements have appeared regularly in the American newspapers calling for the admittance of all Jewish refugees to Palestine. The following extract from an advertisement issued by the American Committee for a Jewish Army is typical of the extreme versions given of Great Britain's reasons for refusing to rescind the White Paper of 1939.

Palestine is one of the most strategic points . . . of the British Empire, and the Colonial Office considers it easier to control a semi-desolate, scarcely-populated, half-civilised Palestine rather than an industrious progressive Jewish State of several million souls. . . . America is not asked to open her doors to the uprooted Jewish millions. She is asked to right a great wrong.

In preparation for 1944, the "year of decision," the various Zionist organisations strengthened and concentrated their leadership. Dr Israel Goldstein, president of the Jewish National Fund, and Dr Abba Hillel Silver became co-presidents of the powerful Zionist Organisation of America, and Dr Stephen Wise, the most influential Zionist in America, took over the chairmanship of the Emergency Committee for Zionist Affairs—which had been set up in 1939 to co-ordinate all Zionist activities. Plans were drawn up for holding an American Jewish Conference. The aim of its organisers was to secure the representation of all American Jews and to achieve an agreed statement of policy on the assistance to be given to the Jews of Europe. Actually, the organisation was in the hands of the Zionists, and even before the conference the American Jewish Committee made reservations—for example, that no organisation was to be bound by the Conference resolutions, if it decided otherwise. The Conference was held between August 29 and September 2, 1943. Five hundred elected delegates attended, and all the Jewish organisations of America were represented save one or two extremely conservative orthodox societies and the Communists, who were excluded.

The Conference concentrated on the Zionist issue. In various resolutions it demanded the rescinding of the White Paper and the transfer of the control of immigration into Palestine to the Jewish Agency. With only four dissentient

votes, it called for the "re-creation of the Jewish Commonwealth." An interim committee was set up to carry on the work and prepare for another Conference. Yet the results were not altogether satisfactory. Neither the American Jewish Committee nor the Jewish Labour Committee would vote on the Jewish Commonwealth resolution, and the American Jewish Committee formally withdrew from the Conference on the grounds that

the salvation of the Jews in Europe cannot be achieved through Palestine alone and certainly not through over-emphasising Palestine's political constitution.

Jewish Labour leaders complained that the conference had "despaired of European Jewry." Meanwhile a violently anti-Zionist body, the American Council for Judaism, had been revived and, while the American Jewish Conference was actually in session, the *New York Times*, whose owner, Mr. A. H. Sulzberger, is a leading Jewish anti-Zionist, published an attack on the Zionists for their "racialism." There are thus signs that the increased activities of the Zionist organisations are stirring the non-Zionists to become vocal in their turn.

Nevertheless, only Zionist opinion is sufficiently organised to be politically effective. The Zionist campaign of the last year has naturally been directed mainly to non-Jews and particularly to Congress. Mr Willkie and Governor Dewey have sent messages of sympathy to various Zionist meetings. In December, 1943, 62 senators and 181 representatives signed a declaration pledging their support for "the traditional policy of the United States in favour of the restoration of the Jewish National Home in Palestine." Later in the month a non-Jewish Committee, the American Palestine Committee, was set up to work in co-operation with the Zionists to secure the abolition of the White Paper. It included such influential people as Senator Vandenberg and Senator Pepper, Mr Philip Murray (President of the CIO) and Mr Eric Johnston (President of the Chamber of Commerce of the US). At the

same time, plans were made for introducing resolutions into Congress calling for the creation of a Jewish Commonwealth in Palestine. This was done early in February, 1944. On March 9th President Roosevelt received Dr Silver and Dr Stephen Wise and authorised them to say that the United States Government had never given its approval to the White Paper of 1939.

Yet on the non-Jewish front, as on the Jewish front, opinion is divided. The State Department takes a very cautious line on Zionism, and Mr Cordell Hull's statements on the Jewish problem have been couched on very general lines—justice for Jews everywhere, fuller, freer life for all. In May, 1943, Dr Silver complained that

within the last few months . . . there has set in a very definite and noticeable withdrawal on the part of our official family in Washington from anything that might remotely suggest an . . . endorsement of the Jewish homeland.

The growth of American military, political and economic interests in the Middle East through such projects as the proposed pipe line has had marked influence in official circles. Giving his evidence to the Foreign Affairs Committee of Congress, Mr S. K. Twitchell, who recently conducted an agricultural survey in Saudi Arabia, asked whether the United States would be ready to fight the Arabs to set up a Jewish Commonwealth. And General Marshall had the Congress debate postponed indefinitely for reasons of military security.

It is difficult to sum up the state of American opinion on Zionism. The persecution of the Jews in Europe has gained it great support in non-Jewish circles, and election year has given organised Zionist opinion exceptional opportunities for lobbying. But it is hard to believe that in a non-election year Zionism will loom so large. Most American Jews are assimilationist. Most Americans are not very interested in the Middle East. If the British Government worked out and carried out a compromise solution, there is little doubt that they would receive moral support from America.

## Front in the Orient

(From a Correspondent in Oregon)

Portland, March 1, 1944

THE Pacific Northwest is gathering its strength for its second great lunge of the war.

Early in the conflict the British helped initiate the wartime industrial mobilisation of the region by opening negotiations for the development of large-scale shipbuilding operations here. The programme was taken over from the British at an early stage by the United States Maritime Commission. The Pacific Northwest's exuberant breaking of all previous shipbuilding records (climaxed by the launching and completion of twenty-four ships in one month at the eleven-way Kaiser Oregon Shipbuilding yard) is well known. Figures are not released on the output of individual airplane plants, but the size of the friendly daylight bomber fleets over England gives an indication of the production skill of the Pacific Northwest, where the home Boeing plant is located.

The Pacific Northwest's first great surge of war production extended from early 1942 to mid-1943. It consisted of a record output of lumber and aluminium, in the raw-material field, and of ships and bombers, in the fabricated-products field. After struggling up an escarpment, the region reached a plateau of production in mid-1943; since then it has been able to maintain its pace with somewhat less strain.

This first stage of war production was aimed primarily against Germany. The second is in production directed against Japan.

The Maritime Commission is switching its emphasis locally to the construction of armed transports, as well as to Victory freighters (considerably faster than the Liberty ships they replace); and both the transports and the fast freighters are expected to receive greatest usefulness in the Pacific. One large Maritime Commission shipyard is being continued on its oil-tanker programme, and this type of ship, too, is needed most urgently in the action against Japan.

All the local "Navy yards" (private shipyards operating on Navy contracts) have been put to work building various types of landing craft. The highest manpower priorities

have been given these operations, and the Navy yards are drawing workmen from the Maritime Commission enterprises. Midsummer is the "deadline" for the completion of present major contracts for landing vessels, and every pressure is being exerted to meet the Navy's requests, because of the general understanding that the craft will be used soon in what is widely labelled "The Big Push" against Japan.

In addition, repair facilities are being enlarged substantially to care for wounded ships that are expected to limp back from future offensives. These new facilities include several large drydocks. Currently the repair establishments are engaged to capacity in rebuilding out-of-date Russian ships, supplying routine "voyage repairs" to more modern Russian ships, and inserting steel stiffening members in all Liberty Ships engaged in Russian lend-lease trade.

The Pacific Northwest is making provision, too, for the special demands of aerial warfare in the Far Pacific. There, the need is for heavy bombers with a far greater range even than that of the craft now freighting bomb loads deep into the Reich. The region believes it has the answer to the problem, in the Boeing Superfortress, details of which are carefully guarded from the public.

While Boeing's main plant at Seattle meets ever-increasing schedules for B-17 Flying Fortresses, the company's huge new plant in the town of Renton, Washington, originally scheduled to build twin-engined "Sea Ranger" navy patrol planes, has been tooled up for quantity production of B-29 Superfortresses, and deliveries have started. In addition, Boeing's large Kansas factory is progressing satisfactorily on its production schedule, and even in these preliminary stages Boeing is delivering considerably more Superfortresses per month than it delivered B-17 Fortresses in the entire year 1939.

Specific performance data on the B-29 may not be printed, but the censorship authorities recently permitted the *Portland Oregonian* to say: "On the basis of present information, it is probable that the B-29 will be able to blast Tokyo from the outermost Aleutians. It is certain that they will be able to leave bases in Free China and dump their full quota of a half-carload each on to the industrial heart of the Japanese war machine in the Tokyo-Osaka area." The Northwest's estimate of the new aircraft and of its future assignments is indicated by the popular nickname given it, "Tokyo Bomber."

The region's preparations for "The Big Push" include a major enlargement of freight-handling capacity. Many miles of rail holding-tracks and many acres of warehouse space have been provided. When the westbound flow of material reaches proportions greater than the seaports can

handle immediately, the flow is diverted into these freight reservoirs. This system is proving highly successful in keeping Puget Sound and Columbia River seaports in a "fluid" condition.

During the past year more lend-lease commerce to Russia has been shipped through Portland than through any other North American port. During the past several weeks the Russian traffic has dwindled, but it is understood that it will resume in full force in early spring. A sidelight on the international situation is the respect with which the Japanese Navy is treating the Red-flagged ships (many of them fresh from United States shipyards), sailing through the Japanese islands straight to the port of Vladivostok. The Japanese Navy, which last year did not hesitate to stop and search the Russian ships and sometimes detain them for considerable periods, now passes the ships after a routine exchange of flag signals.

While Portland has been the prime port for Russian trade, Seattle has concentrated on supplying Alaska. Until the Japanese were cleared out of the Aleutians, a torrent of supplies poured through Seattle northward. But now that the Japanese pressure has been removed on the northern garrisons, this traffic has greatly lessened.

Changing the direction of a war is a ponderous operation, but that portion of the US war effort which hinges on the Pacific Northwest is definitely undergoing the transition in anticipation of "The Big Push" in the Pacific.

## THE WORLD OVERSEAS

### Canadian Army Policy

(From Our Ottawa Correspondent)

THE annual debate on army policy contained a special feature this year in the controversy over the retirement of Lt-Gen. A. G. L. McNaughton from the command of the First Canadian Army. The controversy was of short duration, which obscured to some extent the fact that the Canadian Army has become a symbol of national stature and, as such, an object of zealous praise and criticism. It is difficult to understand much of the argument that has raged around the Canadian Army without relating it to deeper currents of feeling than the customary criticisms of politics. "I never realised," said Mr Ralston, when his estimates for the department of national defence were before the House, "how the policy of having a Canadian Army had taken on in Canada, until the events of the last six months had occurred."

The events to which the Minister referred were the retirement of General McNaughton, who, as creator and commander of the army, had become a national figure, and the transfer of a corps of Canadian troops to the Italian front. This transfer caused the mistaken belief to spread that the First Canadian Army was being broken

up. On the contrary, it will remain part of the Allied order of battle in Western Europe, though it will comprise other divisions besides Canadian to replace the corps now serving in the Eighth Army in the Mediterranean.

By common consent, the Canadian Parliament has agreed to dig no deeper than the official explanation that General McNaughton's retirement became necessary for reasons of health, though Mr Ralston showed himself willing to deal fully with other elements in the situation. Mr Mackenzie King, the Prime Minister, twice intervened in the discussion to warn members that disclosure of details relating to military and other factors would not be in the public interest. The crucial document produced was a letter dated December 7th from General McNaughton to Major-General J. P. Montague, senior officer of Canadian military headquarters in London:

The experience of the past few days has shown me conclusively that I have not the strength left to look after the army properly, and to do, with the required effect, the many things that need to be done from day to day [he wrote]. I think the general interest requires that someone else should now take charge, and that I must and will accept the situation with the best grace I can muster.

#### Army Reorganisation

Only since an announcement by Mr King on January 26, 1942, has the Canadian army been a true army formation. Up to that time the various divisions and brigades, in Britain and Canada were spoken of collectively as "the army." Later the popular designation of the army formation created in 1942 was "the big army." The official announcement had said: "During 1942 it is proposed to create overseas a Canadian army of two army corps: one army corps to comprise three infantry divisions and two army tank brigades; the other to consist of two armoured divisions." While the basis of organisation has remained five divisions, this original grouping has since been altered.

Recalling past criticism of the army programme, Mr Ralston said he had not heard much applause for it anywhere. There was a good deal of newspaper criticism, and some thought the army beyond Canada's means. Early in 1943, for instance, the *Globe and Mail* said: "We have continuously expressed a preference for Canada maintaining overseas a strongly reinforced army corps rather than a

weakly reinforced army, and confidently await the march of events to demonstrate the soundness of this view." The *Winnipeg Free Press* was consistently critical of the army plan.

In practice, the manpower required for the army has been raised easily, although the general war effort of Canada has experienced acute manpower problems. The weight of argument will show that no essential production has suffered while the army has been created and maintained. The army intake was 185,000 men in 1942; 100,000 in 1943; and the 1944 estimated requirement is 60,000. These figures include men enrolled for home defence. In the general service category, enlistments in 1943 were 74,000, and the number despatched as reinforcements to the overseas army was almost the same. The fullest assurance that ample reinforcements have been raised and trained was given by Mr Ralston.

A criticism that the big army plan was too rigid, and would bring Canada's troops into battle without a stiffening of veterans with previous experience, has been met by the transfer of a corps to the Eighth Army. Had the second front come in 1943, as many Canadians expected, the Canadian army would have had its baptism of fire with relatively few battle-trained ingredients. In the interval this situation has been cured.

The decision by which the First Canadian Army remains in the Allied line-up, although at the time of writing no permanent appointment in succession to General McNaughton has been made, corresponds with the hopes of the Canadian people. With a self-contained corps as part of the Eighth Army, another corps in Britain, and a full army formation established, the army has expanded far beyond the limits of the last war when Canada maintained a single corps in France. The lean days when the Canadians stood idle and on the defensive in Britain are over. The army of Canada is a people's army that bears the affection of a nation. It is true, as Mr Ralston noted in Parliament, that the old cynicism has now faded which described the First Canadian Army as "a structure of gingerbread, with a little bit of frosting."

### Destitute Greece

LAST November the Minister of Supplies in the German-Greek puppet Government declared trade in foodstuffs free from any restrictions and regulations. This declaration carried with it the assurance that no attempts would be made to fix maximum prices. Last December the same Minister introduced a system of permits for trade in all other commodities. At the same time the central bank reported that the total of notes in circulation had reached the fantastic figure of Dr. 1,276,000 million. Students of the classical inflations on the continent after the last war will recognise the familiar portents in the following figures.

| NOTES IN CIRCULATION<br>(In Million Drachma) |           |
|----------------------------------------------|-----------|
| End of 1939.....                             | 9,454     |
| " 1940.....                                  | 15,369    |
| " 1941.....                                  | 48,798    |
| " 1942.....                                  | 306,000   |
| " 1943 (Sept.).....                          | 1,276,000 |

In four years the total of notes has risen a hundred and thirty-five fold. Before the German occupation the rise was in line with similar increases in belligerent and even neutral countries. Now, however, this one hundred and thirty-five fold increase compares with a three to five-fold increase, on the average, in most of the belligerent and occupied countries. Why has the German economic commissar, in collaboration with the puppet Government, failed so conspicuously in Greece to stabilise the currency at a level convenient for the exploitation of Greek economic resources. As in other occupied countries, the Germans were at first only interested in stocks of commodities, factories and mines; and it was thought that, with a stop on prices and wages and general financial control as practised in Germany and other countries, stabilisation could be effected at a level not detrimental to German interests.

The fact that this has proved utterly impossible in Greece has political as well as economic reasons. The administration set up under German-Italian occupation was quite inadequate for the task of introducing a comprehensive rationing system. Greece at the time of the occupation was an authoritarian state; but the Administration broke down after the military defeat. A simple grafting of the German control system on to the existing Administration was not

possible. German and Italian views were at variance, and the economic situation was allowed to drift.

#### The Black Market

Economically, a comprehensive rationing system could not have been made effective in the Greek countryside. It would, however, have been possible to make earlier attempts to ration the supply of commodities in big towns. But this was delayed because of the inadequacy of supplies. Thus the price stops and other control measures which were promptly decreed, resulted in widespread black market activities. There, prices rose unrestricted. The heavy costs of occupation and the unbalanced state budget were financed by resorting to credits from the central bank, which supplied them by printing banknotes.

Last summer the official maximum price for one kilogramme of black bread was Dr. 275, compared with Dr. 7 before the war. Bread supplied by the Red Cross, however, was sold at Dr. 4,000 per kilogramme. One kilogramme olive oil sold at Dr. 12,000, compared with Dr. 35 in 1939. Maximum prices were entirely fictitious. Wages and salaries had been increased in the spring of last year by 50 per cent on the average, and a skilled worker in the Athens area could earn from Dr. 1,800 to Dr. 2,880 a day. Wages were thus insufficient to buy even bread; industrial workers had to be fed at their factories. The organisation of retail traders in Athens made a co-operative effort to reduce prices; and in the autumn the Government simply decreed that all prices had to be reduced to the level of early September. Attempts to skim off surplus money were repeatedly made. Banks were forced to offer 50 per cent of all security holdings as a loan to the Treasury; 20 per cent had already been given up at the end of 1942. But there were not supplies enough of food and commodities to save Greece from tragic dearth whatever the price level.

The supply situation may be judged by reports which suggest that the number of livestock has been reduced by 70 per cent, and that agricultural production is not more than 60 per cent of pre-war production. Germany is obviously trying to exploit magnesite, manganese and chromium resources to the utmost. The tobacco industry, food factories and railway and shipping repair shops have to be maintained if the occupation is to remain effective. Some stability in the supply of foodstuffs and materials is therefore necessary.

#### Trade with Germany

The German device for maintaining these services which cannot go on without foreign trade between Germany and Greece is the "German-Greek Commodity Equalisation Company." This company, shortly named "Degrises" in Germany, was founded in December, 1942, and is domiciled in Berlin. Branches have recently been opened in Athens, Salonika, Volos and Patras. The company's task is to equalise the prices of German imports and Greek exports. The official rate of exchange between Germany and Greece is Rm. 1.67 for Dr. 100; this rate was fixed in June, 1941. In other words, Greek importers paid nominally ridiculously low prices for German imports, whereas Greek exporters received fantastically high prices for their exports. Almost no transactions were made under these conditions. During the first period of the occupation goods were simply requisitioned against the costs of occupation, but the problem of equalisation arose when Germany was forced to supply manufactured articles for maintaining the economic basis of the occupation. There is no way in Germany's totalitarian economy of altering exchange rates in accordance with price changes in occupied or satellite countries.

The "Degrises" attempts, therefore, the equalisation of two different price levels. The prices for imported commodities are fixed for the Greek importer at the inflation level. The difference between the price based on the official rate of exchange and the price for the Greek imports is paid into an equalisation fund, out of which the Greek exporter is paid the difference between the internal price and the price that a German importer can pay. During 1943, the first year of its activities, the "Degrises" regulated German exports to Greece amounting to 34,216 tons of a value of Rm. 87.4 million. No information has been given about the corresponding Greek exports to Germany. In pre-war values these German exports may be estimated at no more than 15 per cent of total Greek pre-war imports.

Food supplies imported by the Red Cross are relatively

small, which means that the country lives in destitution. Organised economic activity is confined to centres important for German military purposes; and the main German concern is to prevent economic disorganisation from spreading to other occupied countries and finally to Germany.

## Feeding Switzerland

[FROM OUR GENEVA CORRESPONDENT]

THE depopulation of the countryside, which has been going on for over forty years, greatly complicates the wartime economic problem of Switzerland, which is compelled to live on her own soil. A programme—known as the "Wahlen-Plan," after its promoter—was at once started at the outbreak of war with the object of making the country almost self-supporting in food supplies. The progressive closing of all frontiers, and the consequent difficulties of the import trade, made it imperative to extend the plan in order to prevent the population from being underfed. The results have now shown that, on the whole, the plan has been carried out successfully.

Before the war, the area under cultivation amounted to 460,000 acres; by the end of 1941, it had been increased to 770,000 acres, and to 900,000 acres the following year. The Government has now authorised—and can even make compulsory—the clearing of a number of forests, which, in 1944, will add another 20,000 acres to the cultivated area, and, with other additions, will make the round million acres.

In spite of the dearth of fertilisers, new methods of cultivation and the development of mechanisation have substantially increased the output per acre. As a result, Swiss agriculture in 1943 was capable of meeting 80 per cent of the country's needs, against about 45 per cent before the war.

While home production of vegetables and fruit is almost sufficient, that of wheat cannot meet the needs of the population, which has to rely on uncertain and insufficient imports for part of its supplies. Since the start of the war, home-grown wheat has represented a yearly quantity of about 12,000 wagons (16,300 in the record year 1938), while pre-war imports reached about double that figure. Though Swiss ships are being used for carrying wheat, imports are every month more difficult and expensive. That, and the fact that the Government is wisely maintaining and even increasing its grain reserves, explains why bread is now to contain a certain amount of potato flour, which will make it possible to avoid a reduction in the monthly ration.

Prices for agricultural products are still mounting. The yearly yield of Swiss agriculture, which ranged between 1,200 and 1,500 million francs before the war, has risen since 1938 as follows:—

| 1939  | 1940  | 1941  | 1942  | 1943  |
|-------|-------|-------|-------|-------|
| 1,289 | 1,508 | 1,707 | 1,784 | 1,800 |

Thanks to the efforts of the Government, peasants and voluntary workers, Switzerland can still manage to provide reasonably adequate supplies of food for her population and for the further 100,000 refugees from all countries now living inside her frontiers.

## Germany at War

### Total Control

THE development of Germany's totalitarian economy has been a long and varied process. Throughout, from the limited control over imports of raw materials exactly ten years ago to the present state of air-war economy, economic discussion has been made a matter of ideology or, to use the Nazi term, of *Weltanschauung*. The impact of the air-war economy on the circulation of money, on the position of the entrepreneur, the private investor and the small business men, and on wage-earners and housewives, together with the astonishing accumulation of all sorts of principles of regimentation, has led to another discussion which tries to work out the basic theory of pure totalitarian economics.

German economic papers at present abound with the technical terms which played a major part in the discourses of the classical economists of the nineteenth century. The value of money, the meaning of productivity, the rôle of banks and of the bourse are being written about with apparent frankness and apparently without restraint. But this freedom of discussion is illusory. The technical terms have assumed new meanings, and the discussion is not being carried on between independent thinkers, but between the servants of the economic administration and its auxiliary compulsory organisation.

The plainest statement of the complete control and regimentation that derives from the exclusive power of the Nazi State is perhaps the new interpretation of the value of money recently given in a broadcast speech by Dr Funk, the Minister for Economic Affairs.

The value of our money is not determined by the policy of an autonomous central bank but by the autonomous will of the people expressed by the authority of the State and the social duty of the People's community.

Not long ago the same Minister was convinced that Germany's currency was a "labour-value" currency, with "labour" having mysteriously replaced gold as cover. Now political necessity has compelled Dr Funk to state clearly that a totalitarian currency has no "impersonal" value at all, and that its internal value depends entirely on the decisions of the economic administration. What is true of currency is true also, in the Nazi State, of all other economic activities. There is no economic freedom or independence whatsoever now that the stage of total control has been reached.

Abrupt changes in Germany's war economy have been frequent. Stage by stage these changes have affected the whole of the economic structure, from the top down to the smallest factory and shop. Hundreds of thousands of small business men have been conscripted either for military service or for compulsory work. Innumerable concerns, including large firms, have been concentrated. Production secrets and patents have been made available to competing firms. But official policy always combined this intensification of controls and regimentation with some apparent compensations to the independence of the entrepreneur and private companies.

These compensations are more formal than real. Superficially there are; perhaps, at present, proportionately more private firms in Germany than in Britain or in the United States. But none of these private firms can exist outside a compulsory organisation which is itself closely linked to the central and regional economic agencies of the Government. Formally independent, they are actually dependent entirely on central and regional control.

The position is no doubt confusing. Employers, industrialists, directors, and managers are asked to use their initiative, while at the same time they have to comply with complex regulations which cover every one of their activities. They are, in fact, simply agents of the Government administrators. One pointer, perhaps, to the fact that their independence has become formal, is the constant interchange of jobs between civil servants, on the one hand, who go to work in private concerns and directors, managers and private business men, on the other, who are moved to positions in public administration.

It has frequently been remarked in German economic papers that firms note with dismay, after completing the year's balance sheet and profit and loss account, that profits came out too high. On the basis of the costing and bookkeeping regulations set out in detail by the authorities for the different sections of industry, the profit should have been such-and-such; 'disconcertingly, it was more. In these cases, an explanation has to be given to the taxation authorities and still more elaborate costing methods are the sequel. In effect, the entrepreneur is entitled to a set reward or fee, set by the Government's expert regulations; the term "entrepreneur wages" is actually used by those responsible for costing in the engineering industries. The conception of the entrepreneur as a paid servant of the state is thus recognised.

But the pretence is continued that German business men are still being remunerated for initiative, efficiency, risk-taking and the rest. Actually the only individual initiative left is reserved for a relatively small number of engineers and scientists who display their ingenuity in increasing the range of substitute materials and processes.

In these conditions of central control and complete regimentation, the problem of responsibility inside the factories takes on, perhaps, a crucial importance. Under the leadership principle, employers became "factory leaders." This was all right in small firms; but in the large concerns the question arose of who the "factory leader" was—director or production manager and so on. The situation is extremely muddled. The latest ruling is that in a private firm the owner, and in a joint stock company the board of directors, is the "business leader," responsible for everything ordered by the Government or by the compulsory economic organisations.

The introduction of technocratic control by Minister Speer put most of the factories under the direct control of outside engineers, who usually appear as organisers of new production methods. Their activities are frequently criticised openly in the papers, but criticism is not directed so much against the control itself as against individual controllers who have failed. These several thousands of engineers have levelled production methods and equipment all over the country. Factory installations and machinery have been

made as uniform as possible. Considerable progress has been reported in making workshops, machine tools and processes interchangeable, especially since large-scale bombing became frequent. Here the independence of the individual firm or employer is undermined for purely technical reasons. What is left to the firm or employer is the task of obtaining the necessary factory sites, machines, materials or labour, and this is largely a matter of putting in an indent, according to requirements laid down by the controlling engineers, and getting it sanctioned by some official.

Largely, these developments are the logical upshot of a totalitarian economy at war. All the changes have been introduced as simplifications designed to minimise friction and increase output and efficiency. In discussion it is doubted whether all the controls should be retained after the war. A distinction is drawn between the "steered economy" that existed in Nazi Germany before the war and the present fully controlled war economy.

One interesting instance of the contradiction between the formal independence of private industry and its actual dependence on the state is the fact that shareholders' meetings have been suspended. Consequently there are to be no elections to boards of directors. The publication of prospectuses, which was compulsory, has been abolished. Interest payments on fixed interest securities are to be made only once a year. The issue of Treasury bonds and loans has been restricted to large parcels subscribed by banks, insurance companies and co-operatives. With the introduction of stop-quotations for shares, the bourses have practically come to a standstill.

In other words, the capital market has been virtually closed. The financing of the war has become a matter of administration. Money, prices and wages are maintained as convenient symbols. The stability of money, prices and wages simply reflects the policy of the economic administration which controls and regulates all activities. Inflation in the classical sense of the word cannot arise. But, if the present administration is broken, financial stability will break with it; and, if a return to a free market economy is attempted, money will have to be reinstated as a measure of values, and the present fictitious prices and values will have to be replaced by values and prices arrived at on the basis of actual economic facts.

## THREE NUNS SAVES MONEY

—because of its  
SLOW-BURNING CUT

There are two special reasons why 'Three Nuns' Empire Blend Tobacco saves the smoker money. It is scientifically cut to burn slowly, each ounce lasts longer, you smoke fewer ounces a week. It is made from fine leaf which is favoured by the lower duty on Empire Tobacco. To enjoy the fullest pleasure of smoking at a moderate cost, take to 'Three Nuns' Empire Blend.

## Steel Shares

TO generalise on either the short-term or the long-term prospect for steel shares is a hazardous process. For one thing, the "Iron, Coal and Steel" category in the Stock Exchange List is a grand portmanteau into which anything from ore-mining to the making of specialised machinery may be thrown haphazard. The industry, in any case, lends itself to vertical organisation. Most steel companies of substantial size, whose names are familiar to investors, own coal, mines, and a large number have interests on the steel-processing side, but the pull which the finishing interests exert on the results of the entire undertaking is anything but uniform. Some major concerns are pre-eminently steel-makers; others are engineers making their own steel. Some, even now, make products which, with very little change, can be used to satisfy post-war demand; some are turning out large quantities of specialised armament products. Some companies' profits are a function of their ability to maintain a large continuous output of steel, while others have built a reputation on special steels (including many new alloy steels during this war), hand-tailored and finished at, naturally, widely varying unit costs. Only a few years ago one would have mentioned another method of differentiation, according to whether a company had or had not passed through the furnace of capital reconstruction, but today there are practically no substantial concerns which have not put that ordeal safely behind them. But, in certain instances, it is not irrelevant to make a classification into companies which have reorganised their works and installed new plant in the last ten or eleven years, those that have not, and those that had half completed the transition when the war came.

None of these differences can be lightly passed over; for each, in its own way, has a direct bearing on the problems which individual steel-making concerns will face after the war. And, if one thing is certain above another, it is that post-war conditions dominate the minds of investors in steel shares today. The market has had ample opportunity to sort out its ideas, and its verdict is expressed in the fact that the average yield demanded from a steel share is about 1½ points more than on industrial shares in general and about 2 points higher than on favourite "recovery" shares. In other words, the market is classifying the equities of the leading companies in an industry which, in the years immediately before 1939, was making reasonably satisfactory profits, among the "war trades," whose outlook after the war is, perhaps, only one degree more promising than that of, say, the aircraft companies or the railways.

The reason for the investor's attitude needs closer examination. Obviously, British steel-makers will have complex transitional problems to face, but analogies with the last war may be misleading. Between 1914 and 1918 there were large plant extensions in the industry proper, whose ingot capacity increased by about 50 per cent. The extensions were owned by individual companies and

financed by bank loans, which were subsequently funded when interest rates were at their highest in the post-war inflationary period. Since 1939, however, new additions have been chiefly at the finishing end, or on the engineering side, and many of them are Government-owned and operated by the companies for a management fee. A great vertical combine like Vickers has, of course, been compelled to switch the main emphasis of its production over to armaments and will, undoubtedly, have formidable adjustments in the reverse direction to make after the war, though it will have the invaluable experience gained between 1920 and 1930 to guide it. But Vickers is an engineering group, using the products of its efficient steel enterprises as raw material, and the impact of war conditions on steel-making companies proper has been rather different.

In their case the war actually interrupted a process of plant extension and modernisation on a fairly large scale, which had started about 1933 and included many of the largest concerns like Stewarts and Lloyds, Dorman Long and Guest, Keen, Baldwins in its scope. During the war, plant has frequently had to be flogged to meet output demands, without full normal maintenance and replacements, and to treat raw material of inferior or changed quality. When the war is over there will be arrears of depreciation to overtake, but the main object will be to resume and carry through the wider programme of modernisation for increased competitive efficiency which the war abruptly checked. The industry, in short, will need substantial fresh capital over a period of some years. Its ability to obtain this capital may depend, ultimately, less on the changes in its own structure brought about by the war than on its environment and working conditions.

Financially, the industry will not start without certain positive advantages, as may be seen from the figures appearing in the table at the foot of this page. All the companies included in the table are steel-makers whose direct interests on the finished side are mainly in products like tubes, bolts, nuts, rails, etc., which have no really elaborate "engineering" content. (There are exceptions, of course, particularly in wartime, but the rule holds generally.) It will be seen that, usually, their capital is surprisingly low-gear. Between the two wars the industry, with much trouble and difficulty, succeeded in clearing itself of a large part of the burden of debenture charges which in the 'twenties hung round its neck like a millstone. Today anything from two-fifths to three-quarters of the issued capital of nearly all the companies in the table is in Ordinary shares.

Even by 1935, when recovery and reorganisation had gone only a moderate way, the earnings position of many companies was reasonably satisfactory. Wartime financial policy has been conservative. Dividends are "sound" but not spectacular, and are well within the limits of earnings, which themselves appear to be computed with a fair margin for eventualities. There has been a strong upward trend in depreciation allowances, though it has not always been

STEEL COMPANIES: SOME REPRESENTATIVE FIGURES

possible fully to apply the amounts set aside. Generally, the industry has profited by lessons learned in the hard school of adversity.

In another way, also, something has been learned. How far the realisation that the steel industry can best play its part in a post-war national export revival by striving to lower rather than raise selling prices has permeated downward from the highest councils to individual managements, only time will show. In the last two or three years before the war, that fundamental doctrine was just beginning to be appreciated—but hardly even beginning to be applied. After the war steel-makers can help the steel-consuming industries, whose part in any export programme will be indispensable, by encouraging them, among other things, to avoid unnecessarily wide variation in specifications which, by interrupting long continuous running, add so considerably to cost. The industry will have an impressive range of steels to offer, including many special steels and alloys giving exceptionally high tensile strength with reduced weight. But much new plant will have to be installed before certain even of the most advanced concerns have finished the programmes they started before the war, and still more before the standard of the least efficient units has been brought nearer to the most efficient. And there may be more horizontal mergers to come—the industry with a production around one-seventh of America's may never reach American figures of output per head, but there are still very substantial economies to be achieved by closer organisation.

The investor's cautious approach to steel shares may, in short, be based in part on past analogies which no longer

completely hold. The real difficulty, however, in evaluating the post-war steel investment prospect is that the industry had only begun to grapple with its overdue task of catching up lost ground when war came. The results it might have achieved and the extent to which all concerned had accepted certain of its more essential implications were not by that time very clear. And in the interim background conditions have changed, in some ways unhelpfully. There will, of course, be a strong demand for British steel after the war, for many purposes besides temporary re-housing, Mr Churchill's reference to which caused a mild flutter of buying of steel shares early this week. But the price at which steel can be produced and sold will be the all-important factor, and the industry is seriously exercised by current developments such as the steeply rising trend of the price of coal (its bulkiest and costliest raw material), by the prospect of stabilisation of coal wages for, perhaps, the next three years at their highest wartime levels, and, after the war, by the possibility of increased transport charges. Steel wages before the war were not low by Continental standards, but their wartime rise has been no more than proportionate to the cost of living.

All in all, the yield premium on steel shares, as compared with the general run of industrial investments, may be justified in terms, less of the industry's immediate transitional problems after the war than of its post-transitional outlook. Perhaps the premium is exaggerated—if the outcome depended alone on what the best minds in the industry wished to do, share prices might stand higher. But the industry has had to give a number of hostages to fortune, and some allowance for them is reasonable.

## Business Notes

### Mr Churchill on Housing

The only postwar subject on which Mr Churchill spoke at length during his broadcast was housing. He not only insisted, unconvincingly, that short-term housing programmes can perfectly well be drawn up and executed without any planning policy; he also drew a sharp distinction, very rightly, between the short-term problem—that of providing a dwelling of some sort for every family as soon as possible—and the long-term problem of improving the general standard of housing. The first is to be tackled resolutely. First, the repair of war damage is to be pushed ahead while the war is still on; it is hoped "to have boken the back of it" by the end of this year. The Government is planning to build, or at least to have under construction, 200,000 to 300,000 houses of a permanent type by the end of the second year after the defeat of Germany, and, in addition, to erect up to half a million factory-made emergency dwellings. Thus the Government is working on the assumption that 700,000 to 800,000 extra houses will be needed at once to reach the shelter-per-family standard—an estimate which roughly corresponds to that given in an article in *The Economist* on February 5th. The question is how adequate the temporary houses will be as dwellings. Mr Churchill gave a few interesting details about them. They will remain the property of the Government, and the intention is to scrap them when they have served their purpose. In the Prime Minister's view, they will be much superior to the ordinary cottage as it exists to-day.

Not only have they excellent baths, kitchenettes, gas and electricity, and refrigerators, but their walls carry fitted furniture—chests of drawers and tables—which to-day would cost £80 to buy. For the rest of the furniture, standard articles will be provided and mass-produced, so that no heavy charge will fall on the young couples and others who may become tenants of the houses.

This can be the beginning of a drive to cheapen the all-in cost of housing as a contribution towards a higher standard of living. On the longer-term problem of improving the general standard of housing, Mr Churchill had, naturally, little to say. But he did emphasise the desirability of a measure of stability.

We do not want a frantic spurge of building to be followed by a sharp contraction of the trade and he recognised that "the most robust treatment of housing and all its ancillaries" might assist in checking the decline in the birth-rate. All that remains in the shorter

term is that both the temporary and permanent houses imperatively needed after the war should be actually built to schedule. It is never wise for either Ministers or their critics to take for granted that what has been projected, however admirably, will therefore happen to time without constant pressure.

### Opposition to Progress

The disclosure by the Prime Minister of the Government's plan to meet the post-war housing emergency by novel, unorthodox methods—that is, by the erection of factory-made houses, has brought upon him a sharp attack from Mr R. Coppock, secretary of the National Federation of Building Trades Operatives. During a speech at a luncheon of the National Federation of Demolition Contractors on Tuesday, he accused Mr Churchill of having solved the problem of pre-fabrication with words, adding that normal houses could be constructed at the rate of half a million units if requested. No doubt such a rate of construction could be attained—after an interval of several years from the end of the war required to bring the capacity of the building industry up to the requisite level. But the shortage of houses after the war will be acute, and if Mr Coppock meant to imply that "normal" houses could be constructed as quickly as a corresponding number of temporary factory-made houses, he was singularly unconvincing. The choice is not between normal houses and an equal number of emergency dwellings, but between solving a pressing shortage of accommodation as quickly as possible

or at a more leisurely tempo. Unless Mr Coppock can prove that "normal" houses can be built as rapidly as factory-built ones, his outburst should be treated as the kind of opposition to progress that should be ruthlessly fought and overruled wherever it occurs if the British people are not to become the plaything of vested interests. But Mr Coppock, as reported in the press, went further by saying that "the merchants . . . are expecting to make a packet of money out of pre-fabrication." This comes close to an attempt to prejudice the public not merely against the proposed emergency houses, but against pre-fabrication as such, a loose term for the application of modern technique as a means of reducing the cost of houses, which is the only way to an improvement in general housing standards. It is difficult to resist the conclusion that the secretary of the NFBTO is more interested in maintaining a monopoly in methods of building than in a speedy solution of the housing problem.

### Railway Revenue and Costs

The figures of revenue and expenditure for the main line railways and the LPTB for last year have now made their appearance as a White Paper, Cmd. 6512. The expansion in receipts has, of course, continued, and, as in previous years, it has been greatest, both absolutely and relatively, in passenger takings. This is because of the gradual transfer of passenger traffic from road to rail and also because large consignments of passengers tend to pay the same rate per head as the individual. At this point the similarity with earlier years ceases. Apart from miscellaneous receipts, the rate of increase in takings and in expenditure declined on the year, as did the fall in the expense ratio and the rise in the absolute amount accruing to the Government under the agreement. Absolute net receipts, after deducting the usual adverse balance on the working of non-railway assets, are only £105,568,000, which is appreciably below the figure anticipated. The following table gives the published figures for all periods since the inception of control.

| (In millions of pounds) |         |         |         |         |         |
|-------------------------|---------|---------|---------|---------|---------|

| Expense ratio .....     | 81.8    | 82.1    | 77.1    | 73.3    | 71.3    |

† Year rate obtained by multiplying figures for closing four months by three.

Gross receipts are, of course, no guide to what may be expected in normal conditions, but it would be interesting to know how far the rise in costs is likely to be an indication of post-war levels. No up-to-date figures exist, but a report of the Select Committee of National Expenditure—the third of the current session—dealing with rail and road transport, shows an increase in wages and salaries paid from £122 million in 1938 to £170 million in 1942. This occurred despite a drop in total numbers employed from 668,398 to 654,491 and despite the fact that these figures included only 26,500 women in 1938 and no less than 112,000 in the later year. Coal costs between 1938 and 1942 rose from £13.3 million to £21.2 million, or 59.4 per cent, but the consumption of coal was only 900,000 tons higher. The Ministry of Labour Gazette shows an increase in earnings of 53 per cent for men between March, 1939, and March, 1943, and this is made up of rises of 75 per cent for shop and artisan staff, 46 per cent for conciliation grades and 57 per cent for other staff. The figures suggest an appreciable element of overtime, but it is impossible to determine what rise in wage costs it would be reasonable to expect to endure after the war.

### Road Haulage Criticised

The third Report from the Select Committee on National Expenditure also contains a review of the long-distance road haulage scheme, introduced by the Ministry of War Transport in May, 1943, with the object of con-

serving rubber and oil. The achievement of this aim meant, first, that no traffic that could be carried by other forms of transport should be carried by road, and, secondly, that the remainder should be moved as economically as possible—that is, with a minimum of lorries loaded as near to capacity as possible. The organisation set up by the Ministry is based on the larger haulage concerns; these provided the unit controllers—there are some 360 units—and are responsible for conducting the traffic efficiently and economically, for settling haulage charges, and for providing the necessary staff. Administrative control is exercised through divisional road-haulage officers—there are twelve divisions, coinciding with the civil defence regions—and by these through subordinate area road-haulage officers in the 54 areas into which the twelve divisions have been sub-divided. Since a large-scale transfer of traffic from the road to other forms of transport was rendered impossible by the growing volume of total traffic and the consequent congestion on the railways, and as, in fact, the movement was in the reverse direction, the task of the haulage organisation was to concentrate on economical operation. It is on this point that the scheme has been severely criticised by representatives of the road-haulage industry. It has been submitted to the Committee that the individual units are too large, that many unit controllers are unsuitable for their present duties, that vehicles are not operated economically, that not sufficient use is being made of the higher executives in the industry, and so on. The Ministry of Transport has dismissed these complaints as being exaggerated, but, after giving due consideration to its defence, the Committee reached the conclusion that "the volume of evidence is too great to be dismissed as originating from a factious few."

### Water Supplies

One of the most pressing reconstruction needs is the provision of adequate and pure water supplies. Lord Beaverbrook announced in the House of Lords last week that the Government will publish a White Paper next month, and that an expenditure of £20 million on water and sewage in rural districts alone is contemplated. The Government's water policy will be awaited with interest. The existing arrangements, largely because of their haphazard development, are uneconomic and defective, and many areas are already facing a serious drought. Two plans have recently been put forward for conserving and organising the nation's water supplies, one by the Labour Party, the other by the British Waterworks' Association. Both condemn the inadequacy of the present organisation and the lack of co-ordination, and point to the dangers to national health of impure and polluted water. The Labour Party states that water supply is in the hands of 780 local authorities, 48 joint boards, 173 companies with statutory powers, about 80 other companies and more than 1,000 private proprietors. The undertakings vary greatly in size and efficiency, and there is not enough effective co-ordination between them. The Waterworks' Association observes that, in addition to the Minister of Health, the Ministers of Agriculture, Transport, Fuel and Home Security are all involved in water supplies. Both reports are therefore agreed in demanding a unified national control, and, as a first step, a comprehensive survey of the nation's water supplies and requirements is needed. The Labour Party recommends that the control of water supplies, drainage, rivers and water utilisation should be vested in a National Water Commission, and that local supplies should be undertaken by publicly-owned and controlled water boards, with regional commissions and joint boards of local authorities, to ensure democratic control at the local level. The Association goes further and urges the appointment of a Minister of Water, exercising broadly the same functions as the Labour Party's proposed Commission, and with district water authorities and district public water supply boards. A National Commission rather than a separate Ministry would seem the more appropriate form, though it is essential that there should be adequate Parliamentary check on its activities. But whatever the machinery of organisation, water, which is the classic example of a "natural monopoly," should be subject to unified public control. Both socially, in order to improve public health and raise rural standards, and industrially, as a basis for developing hydro-electricity and electrically-based industries, a national plan, to utilise a national asset, is overdue.

### Bombay Bullion Boom

Japanese infiltrations into India across the Burmese frontier have been followed by an abnormal demand for silver and gold in the Indian market. This is a traditional sequence of cause and effect in India, but its potency on this occasion must be explained in terms of the inflationary situation which exists in India to-day. The sudden intensification in the Indian "safety first" demand for the precious metals merely accentuated a previous trend deriving from the persistent inflation of currency and the shortage of consumer goods. The effect of the intensified hoarding of gold and silver has been most apparent in the higher turnover in gold and the rise in the price of silver. Gold continues to be sold through the Reserve Bank for account of the British and US Governments, and during the first part of the week it was made available at 71 rupees per tola and in sufficient quantities to keep the market price at around that figure, or £14 2s. per ounce. The official sales required to keep the price at this level soared to new record level. On Friday of last week the offtake in the Bombay market amounted to 281,250 ounces and since then the daily turnover, though not equalling this record, has been maintained at an exceptionally high level. There is, of course, no shortage of gold to meet this demand, which, however, must be absorbing a substantial proportion of production in Allied countries.

### Gold Price Raised

On Wednesday the Indian Reserve Bank raised its selling price for gold from 71 to 72 rupees per tola and, moreover, began to restrict its sales more severely than on previous days. The maximum offered for sale on that day was 37,500 ounces, or well below the recent average offtake of official gold. The immediate result of this restriction of official sales was to create a wide margin between the official selling price and the market price for gold. This opened on Wednesday at 76 rupees per tola, equivalent to £15 4s. per ounce. The restriction of gold sales and the consequent disparity between official and market prices will create a difficult problem for the authorities. The favoured buyers from the Reserve Bank will be given a handsome profit on their resales in the market, and the grant of buying priorities must give rise to much friction and discontent. The policy of the authorities in holding the official selling price for gold well below what the market would quote is open to serious question. If the selling price were held at the London and New York parities there might be a logical case for pegging. But as the official quotation has been allowed to rise to nearly twice this parity, it is difficult to understand why it should have been arrested there and not allowed to rise still farther. The double objective of these gold sales is to mop up redundant purchasing power in India, thus reducing the inflationary potential, and to reduce the growth of sterling debt to India arising from British Government expenditure in India. Both these objectives would be better served by allowing the rupee price for gold to rise as high as possible. This reasoning appears to have occurred to the authorities and by the end of the week the Reserve Bank was selling gold by tender.

### Persian Silver Sale

The Indian scramble for bullion has been more apparent in the prices quoted for silver than in those for gold. This is partly because silver is the traditional hoarding medium of the poor peasant, partly because as yet the rise in the price of this metal has not been held in check by any official sales of the metal. Thus, from a quotation of Rs. 128/9 on March 16th, the Bombay price has risen to Rs. 140 at the end of the month. The possibility of official sales of silver is, however, conjured up by the reports that the Iran National Bank has sold 500 tons, or about 16 million ounces, of silver to the Government of India and that the silver is already on the way to India. No official details of this transaction have yet been published, but it is permissible to suppose that it is, in fact, being financed by the British and US Governments. These Governments have been selling gold both in Persia and India. If the demand for silver in India has become particularly urgent and silver is available in considerable quantities in Persia, it would be reasonable to buy it from Persia in exchange for gold, and perhaps with an option to re-

# A message

from

The Rt. Hon. Sir John Anderson

G.C.B., G.C.S.I., G.C.I.E., M.P.

Chancellor of the Exchequer

"... I am proud to send you my best wishes for the success of the 'SALUTE THE SOLDIER' campaign. I ask all our people to seize this opportunity of paying their tribute to the British army, which has achieved so much and will achieve so much more. Our soldiers, for their part, expect us to back their efforts with all the financial resources at our command. In answer to this double call, let our tribute take the form of the fullest possible measure of saving and lending. In that way our savings will play their indispensable part in the fight for victory and freedom.

## SALUTE THE SOLDIER

Issued by The National Savings Committee.

purchase after the war, when US stocks will again be freely available to reconstitute the depleted Persian reserve. If the silver in question is to be used to satisfy the demand in the Indian open market, it is to be hoped that the authorities will not be inhibited by any regard for the London and New York parities in deciding the price at which they will sell. The open market Bombay price has already risen above the equivalent of 5s. per standard ounce and is two and a half times the London parity. There is no reason why it should not climb to three or four times that parity. The higher the price the better a given quantity of metal—whether silver or gold—will do its anti-inflationary work. To sell below the market price will merely be to subsidise hoarding. But this is not equivalent to saying that by selling gold and silver at high enough prices a cure for inflation will have been found. Those high prices will merely be one of the many symptoms of inflation, the causes of which are by now self-evident.

### Ultimatum to Alberta?

The continued absence of any suggestion from the Province of Alberta for the revision of its debt payments has long caused regret. This has grown to surprise owing to changes in the local Government and the altered attitude of Montreal. It is, therefore, scarcely surprising that the Alberta Bondholders' Protection Committee has addressed to the Provincial Government a letter which reads rather like an ultimatum. Resentment is certainly justified, but it may not have been in the best taste to show it. Alberta ceased to pay full interest rates in 1936, as a result partly of losses on its corn crop and partly of the currency experiment in social credit. Twice legislation was passed to authorise a 50 per cent cut in the interest rate of the principal bonds, twice the Alberta courts declared such measures to be *ultra vires*, and on the second occasion their decision was upheld by the Judicial Committee of the Privy Council. Backed by this weight of legal opinion and by the advice of their Protective Committee, only a comparatively small—though not negligible—proportion of bondholders agreed to accept half a loaf instead of a whole. The rest have waited in vain since 1936 for any settlement to be offered. Meanwhile, the financial embarrassment of Alberta has changed into a substantial surplus—over \$7 million in 1942 and \$6 million in 1943, representing an average of nearly a quarter of the total ordinary revenue—and the Provincial Treasurer has become profuse in expressing his kind feelings for the bondholders. Why, despite these facts, Alberta has taken no action to honour a clear-cut and self-acknowledged obligation, laid aside under stress of circumstances, it is hard to say. At any rate, the Protective Committee of the bondholders has now put forward demands which amount in effect to the full honouring of all claims, both past and future. The maturity date for all issues is to be extended by ten years; the overdue interest is to be met half in cash and half by instalments over forty years; and future interest upon all securities is to be standardised at 4 per cent, with compensation for holders of stock carrying higher rates. It is suggested that, should these terms prove unacceptable, Alberta should send representatives to negotiate in London; and a warning is added that no illegal or dictated settlement will be accepted. It is difficult to disagree with the complaints and claims of the Protective Committee, although it may seem regrettable that they feel the need to address a Canadian province in far icier terms, and with far more thoroughgoing demands, than are ever made to foreign debtors.

### The Banks' Salute

London's "Salute the Soldier" week has affected the City not merely as an occasion of pageants, bands and loud speakers, but as an immense task of credit management. On most days of this week the total credit turnover, as between the Government's and the banks' accounts, has exceeded £100 million, and the task of ensuring reasonable equilibrium and leaving a sufficient supply of credit in the money market has been fraught with considerable difficulty. That the task has been accomplished with only trifling open-market intervention by the Bank of England is a token of the pitch of efficiency which the technique of credit management has reached. The task of equilibrating credit supplies has been considerably eased by the balancing of Treasury deposit receipt maturities and pre-encashments against payments of subscription moneys to Government

tap loans. The end of March debt return, which will show the position at the close of London's week, should reveal a record volume of TDR pre-encashments. The fact that the banks will once again have converted part of their 1½ per cent bearing assets into 2½ per cent investments will no doubt raise the customary criticism. This is a criticism which is difficult to understand. The Government, faced with exceptional receipts from its tap issues, as it has been this week, must perforce use this excess of income over expenditure in repaying floating debt. The only alternative would be to build up huge Exchequer balances and thus immobilise credit unnecessarily. That process of floating debt repayment is achieved in the most economical and effective way by TDR pre-encashments.

### Vickers Limited

Vickers Limited, whose accounts for 1943 were issued this week, is the nucleus of the British armaments industry. A holding company, it controls a large proportion of the professional skill, "know-how," and capacity in the manufacture of munitions through its main subsidiary—Vickers-Armstrongs Limited—and its two important associated companies—English Steel Corporation and Metropolitan-Cammell Carriage and Wagon Company Limited. In the absence of consolidated accounts it is impossible to obtain a precise picture of the group as a whole; nor is it possible to assess its quantitative contribution to the total output of the munitions of war. The accounts, as published, disclose no major changes from the preceding year. The net profits of the holding company show a slight increase; from £962,600 in 1942 to £984,119 in the past year; earnings on its ordinary capital are up from 21.1 per cent to 21.8 per cent, and the dividend is repeated at 10 per cent. Both Vickers-Armstrongs and English Steel Corporation show slightly higher profits in their accounts. The increase in the net profits of the holding company is explained by the increase in the dividend declared by Vickers-Armstrongs, from 5½ per cent to 6 per cent tax-free. Although full information is withheld, the accounts suggest that the group has accumulated substantial reserves to smooth the transition from war to peace conditions. The main interest from the investor's standpoint is in the post-war earning capacity of the group. This will depend on the size of the flow of munition contracts and on the group's ability to make goods for peacetime use. On the first point it is impossible to attempt a definite forecast. Nevertheless, it is pretty certain that defence expenditure after the war will be more in line with British commitments—that is to say, as an article on page 421 shows, it is likely to be appreciably higher than in pre-rearmament years. Moreover, since many industrial concerns now engaged in the manufacture of munitions will automatically revert to the production of motor cars and other goods of peace, the reduction in defence expenditure after the war will not involve a proportionate cut in the contracts given to the Vickers group. On the second point—the ability of the group to manufacture civilian goods—the experience gained during the inter-war period would seem to indicate a more favourable prospect than 25 years ago.

### Shipbuilders' Wages

On Wednesday the National Arbitration Tribunal heard the claim which the Confederation of Shipbuilding and Engineering unions presented to the Shipbuilding Employers' Federation for a "substantial increase in wages." No specific figure has been mentioned. Shipbuilding workers last received an increase in December, 1942, when 6s. was added to their war bonus. This increase was arrived at by direct negotiation and not by reference to arbitration. The rate for a fully skilled shipyard worker is now 89s. 6d. a week, made up of 50s. basic rate and 39s. 6d. bonus; an unskilled worker receives 70s. 6d., of which 31s. is the basic rate of 39s. 6d. bonus; there are varying rates for semi-skilled grades. Actual earnings of shipyard workers are, of course, appreciably higher. In the first pay week of July, 1943, according to the February *Ministry of Labour Gazette*, men's earnings averaged 143s. 1d., those of women 71s. 11d., and those of all shipyard workers were 125s. 4d.; shipbuilding was the highest single group in the survey. In their present claim, the unions are presumably hoping to consolidate their wartime advances in the permanent wage structure of the industry. Shipbuilding workers are concerned lest their standards should be depressed, in face of

## AND WHEN THE WAR IS WON

Trade feuds, booms and slumps  
or . . .

co-operation, expansion,  
security?

Are trade slumps necessary? After the war world-industry will have on its hands the biggest job of reconstruction in history . . . the job of helping to redeem the pledges of the Atlantic Charter. Anything approaching a "slump" either in the production or the distribution of vital supplies will not only block world-recovery, but will mean starvation and death for countless people who have suffered bitterly in the same cause as our own. If we are to 'iron out the bumps' in the upward curve of world prosperity we must first check the irregularities of international trade . . . replacing economic rivalry with collaboration, merging self-interest in mutual benefit, and harnessing rugged individualism to the disciplined purpose of a new "combined-operations" of world-industry.

This Statement is issued in support of continued industrial collaboration between the United Nations after the war. Announcements by the International Nickel Company of Canada, with the same purpose, have appeared in Canada and the U.S.A.

Vitamins are synthesized by nature. Now they are also synthesized in the Roche plants in Britain. These vitamins are identical with the natural vitamins.

## HOW VITAMINS ARE MADE BY THE TON

PERHAPS the greatest forward step in the application of new-found knowledge in the science of nutrition has been the advance that has made possible the production of synthesized vitamins. It is difficult to emphasize too much the importance of this great advance. It has brought to society the findings of pure science by making it possible to produce vitamins by the ton. This has entailed the isolation from natural sources, the elucidation of chemical constitution, the synthesis, and subsequently the production on a commercial scale.

It is interesting to follow the history of Vitamin B<sub>1</sub>. Only within very recent years has this vitamin been available. In 1926 Jansen and Donath isolated Vitamin B<sub>1</sub> in minute quantities from rice polishings. A few years later, from the work of three different teams, a practical method of synthesizing larger quantities of Vitamin B<sub>1</sub> was developed. It was then obvious that large-scale equipment and chemical engineering skill would be required to produce this vitamin on a large, economical scale.

Many technical difficulties were encountered in the synthesis. The first gramme of Vitamin B<sub>1</sub> is reputed to have cost more than £50,000. But even before the war, in the Roche plants, Vitamin B<sub>1</sub> was being produced in quantity at a price that made it economically available to all.

Vitamins are physical substances that can be seen, touched, tasted. Above is a photomicrograph (enlargement approximately 30 times) of Vitamin C—a crystalline, water-soluble chemical compound.

And since the war began, the price of Roche Vitamin B<sub>1</sub> has been further reduced by 62½%. This saving is, of course, a result of the greatly increased use of Vitamin B<sub>1</sub>.

Man-made vitamins have played a considerable part in keeping Britain in good health during the war years. Also, our fighting forces and our prisoners of war in enemy hands have these synthesized vitamins. Many Red Cross parcels contain jams and other products fortified with synthesized Vitamin C. Among the relief consignments that we have been able to send to our men in the hands of the Japanese were supplies of Vitamin B<sub>1</sub>.

Not only our own men who have suffered privations, but vast numbers of the peoples of occupied Europe may find that their hope of future health lies in the scientific achievement which has made it possible to produce vitamins by the ton.

ROCHE PRODUCTS LIMITED

foreign competition and of a possible slump in the industry, as they were after the last postwar boom. A number of other important wage claims are pending. The railway workers have asked for a 12s. a week all-round increase in their war wage. The employers' reply to the claim of the National Engineering Joint Trades movement for an increase of 10s. a week on basis rates for both time and piece workers, will be given on April 5th.

### Whaling Agreement

War conditions have interrupted whaling, and the depletion of stocks which took place before the war has been arrested. The world position of oils and fats makes the resumption of whaling an urgent necessity after the war. The Governments who were signatories to the 1937 Whaling Agreement and the 1938 Protocol met in London early this year and the results of their deliberations have been published in a White Paper (Cmd. 6510). The Conference agreed that all possible measures should be taken to increase the supply of whale oil, but that any relaxation of the pre-war agreements, designed to avoid extermination, should be only for a limited period. They are rightly anxious to do nothing to deplete existing stocks of whales by slaughter methods. The limit to the catch in the first season is fixed at 16,000 blue whale units—about half the average pre-war catch. But in view of the shortage of vessels even this total may be difficult to attain. The Governments of the following countries are parties to the agreement: the Union of South Africa, the United States of America, the Commonwealth of Australia, the United Kingdom, Canada, Eire, New Zealand and Norway. Japan and Germany might both be included after the war.

### Unit Trust Constitution

The Unit Trust Association has now circulated a revised constitution, prepared in September last in view of the probability that official action will be forthcoming in the not distant future for the regulation of the movement. From the standpoint of the public the important section is that devoted to Rules of Management, and it must be admitted that these remain disappointing. There appears to be no change in the all-important matter of the price to be charged to the buyer of sub-units, or to be given to the seller. The "rounding off" is still to be done to the nearest 1½d. or 3d. as the case may be. Under the latter provision, the average paid by the public will be 1½d. per sub-unit, and as a number of these have prices in the neighbourhood of 5s. this means to the managers a net profit, for no service rendered, of some 2½ per cent. This is probably more than the gross payment per annum for management, and is certainly excessive. The rounding-off charge ought to be limited to about ½ per cent, even if this means that sub-units have to be increased in value to the neighbourhood of one pound. More general weaknesses of the document are that the introduction to Section 28 appears to suggest that membership may be extended to a unit trust, although its trust deed prevents it from complying with the provisions of the constitution, while Section 29 removes most of the protection which the foregoing regulations are designed to extend by permitting special bargains between the managers and the sub-unit holder. But if the regulations appear inadequate, it is the adequacy with which they are enforced which is even more important for the public. Possibly wartime conditions are not a fair basis for assessment, but it has seemed more than once that existing prices gave the managers a larger margin than that prescribed. Certainly the provision for the publication of accounts already contained in the 1939 constitution has not been enforced up to the present. In fact, it is very difficult to find any real improvement in the new document or any hope that it will prove an adequate protection. A number of matters, such as the proper basis for remuneration for managers, the true yield, after making all allowances for wasting assets, purchases cum dividend and a number of other matters, need to be thought out and laid down clearly and their observance made a statutory duty.

### US National Income

The January issue of the *Survey of Current Business* contained figures, partly provisional, of the gross national product of the United States in 1943. The salient figures are as follows:

| (In \$ billions)                   |      |      |       |       |       |
|------------------------------------|------|------|-------|-------|-------|
|                                    | 1939 | 1940 | 1941  | 1942  | 1943* |
| Government expenditures:—          |      |      |       |       |       |
| War                                | 1.4  | 2.7  | 12.5  | 49.3  | 83.7  |
| Other                              | 14.6 | 14.0 | 13.1  | 12.4  | 11.7  |
| Total                              | 16.0 | 16.7 | 25.7  | 61.7  | 95.3  |
| Output available for private use:— |      |      |       |       |       |
| Consumers' goods and services      | 61.7 | 65.7 | 74.6  | 82.0  | 90.5  |
| Private gross capital formation    | 10.9 | 14.7 | 19.0  | 8.0   | 1.0   |
| Total                              | 72.6 | 80.4 | 93.5  | 89.9  | 91.4  |
| Gross National Product             | 88.6 | 97.0 | 119.2 | 151.7 | 186.8 |

\* Provisional.

The gross national product for 1943 reached the almost incredible figure of \$186,800 million, representing an increase in twelve months of \$35.1 billion. How much of this increase was due to a real rise in the quantum of output and how much to a rise in money values is not apparent from these preliminary figures, but will presumably be made known when the Department of Commerce releases its usual annual study. It will then also be possible to give a figure for American net national income roughly comparable with the British official figures. (Gross national product consists, roughly, of net national income plus the inflating effect of indirect taxation plus expenditures made to maintain existing capital.) The *Survey* also contains a summary of the distribution and employment of individual incomes (i.e., excluding the income of corporate bodies). This is given below, together with figures of estimated corporate profits, before and after taxation:

| (In \$ billions)                                |      |      |      |       |       |
|-------------------------------------------------|------|------|------|-------|-------|
|                                                 | 1939 | 1940 | 1941 | 1942  | 1943* |
| Income payments to individuals:—                |      |      |      |       |       |
| Salaries and wages                              | 45.7 | 49.8 | 61.4 | 79.9  | 100.6 |
| Direct and other relief                         | 1.1  | 1.1  | 1.1  | 1.1   | 0.9   |
| Social security benefits, etc.                  | 1.8  | 2.0  | 1.9  | 2.1   | 2.8   |
| Dividends and interest                          | 8.9  | 9.2  | 9.7  | 9.3   | 9.8   |
| Entrepreneurial income, net rents and royalties | 13.4 | 14.5 | 18.1 | 23.1  | 27.8  |
| Total                                           | 70.8 | 76.5 | 92.2 | 115.5 | 141.9 |
| Disposal of individual income:—                 |      |      |      |       |       |
| Taxes                                           | 3.1  | 3.5  | 4.0  | 6.6   | 17.8  |
| Consumption expenditure                         | 61.7 | 65.7 | 74.6 | 82.0  | 90.5  |
| Net savings                                     | 6.0  | 7.5  | 13.7 | 26.9  | 33.6  |
| Total                                           | 70.8 | 76.5 | 92.2 | 115.5 | 141.9 |
| Corporate profits:—                             |      |      |      |       |       |
| Before taxes                                    | 5.3  | 7.4  | 14.4 | 19.0  | 22.8  |
| After taxes                                     | 4.1  | 4.8  | 7.3  | 7.4   | 8.2   |

\* Provisional.

It will be noticed that while total individual income rose by \$71.1 billion between 1939 and 1943, and labour income by \$55.7 billion, personal taxes rose by only \$14.7 billion. This last figure does not, of course, include indirect taxation, but as a method of war finance indirect taxes suffer from the defect that they do not absorb purchasing power until after it has been spent. The total of income available for spending rose from \$67.7 billion in 1939 to \$124.1 billion in 1943. In view of this, the wonder is that there has not been much more inflation in the United States than has yet become apparent.

### US Manpower

The *Survey of Current Business* also contains a table showing the distribution of the labour force in the United States. This can be summarised as follows:

| (Millions)                          |            |            |            |             |
|-------------------------------------|------------|------------|------------|-------------|
|                                     | Jan., 1941 | Jan., 1942 | Jan., 1943 | Jan., 1944* |
| Armed forces                        | 1.0        | 2.1        | 7.0        | 10.4        |
| Civilian labour force:—             |            |            |            |             |
| Agriculture                         | 8.4        | 8.2        | 8.7        | 8.7         |
| Munition industries                 | 5.0        | 6.5        | 9.1        | 9.9         |
| Government war service              | 0.2        | 0.5        | 1.5        | 1.5         |
| Food processing                     | 1.2        | 1.3        | 1.3        | 1.6         |
| Textiles, clothing and leather      | 2.7        | 2.9        | 2.8        | 2.7         |
| Transport, fuel and utilities       | 3.9        | 4.1        | 4.2        | 4.5         |
| Construction and building materials | 2.6        | 2.6        | 2.3        | 1.4         |
| Trade and service                   | 10.5       | 10.9       | 10.6       | 10.6        |
| All other                           | 10.8       | 11.9       | 10.5       | 19.5        |
| Total employed                      | 45.3       | 48.9       | 51.0       | 49.7        |
| Unemployed                          | 7.7        | 4.3        | 1.4        | 0.8         |
| Total labour force                  | 53.0       | 53.2       | 52.4       | 50.5        |
| Total labour force                  | 54.0       | 55.3       | 59.4       | 60.9        |

### COMPANY MEETINGS

## THE CLYDE VALLEY ELECTRICAL POWER COMPANY

### FUTURE OF THE INDUSTRY

### EFFICIENCY OF PRIVATE MANAGEMENT

### McGOWAN COMMITTEE'S REPORT

### MR. R. ROBERTSON'S VIEWS

Presiding at the annual general meeting of the Clyde Valley Electrical Power Company, in Glasgow, on the 28th ultimo, Mr Robert Robertson, LL.D., the chairman, said:—

Ladies and Gentlemen,—The restrictions on the form of the report of the directors are still applicable, and I am again debarred from discussing the operations of the company during the year covered by the period of the accounts.

We have made provision for taxation, contingency fund and war damage insurance.

### FUTURE OF THE INDUSTRY

It will, perhaps, be useful and of guidance to the stockholders if I add to the observations which I made last year on the controversy which was then, and still is, taking place regarding the future of the electrical industry. I may say in passing that there is a tendency to lose sight of the real question—the best interests of the consumers—and by that I mean all consumers and not merely one section.

While these discussions in part deal with development, particularly in regard to certain technical and other questions, including rural development and a universal tariff, they centre mainly on the question of ownership. It is contended in certain quarters that expropriation of the company rights and transference of the whole industry to what is described as "public ownership" would so improve the industry as to bring electrical energy to every dwelling-house, however remote its situation, at a price comparable to the lowest presently charged in urban areas and without effecting any increase in these prices.

### PUBLIC OWNERSHIP

What constitutes public ownership differs according to the political outlook of the speaker, but even so it appears to be accepted that ownership by the State should be avoided, obviously because it is recognised that the general public, after its experience of bureaucratic control since the commencement of the war, would not tolerate such form of control any longer than is necessary. I pointed out last year the weakness of one type of control then suggested—the "non-profit-earning board"—and how there was no prospect of such control effecting a reduction in the cost of electricity supply. Nothing has transpired since then to warrant any modification of the views I then expressed.

### MAKE-UP OF THE INDUSTRY EXPLAINED

During the past year the discussion has continued unabated. I notice that a great deal of the criticism directed to undertakings such as ours is based on a lack of understanding of the make-up of the electricity industry, and for your information I would like to explain very briefly

how it comes about that the industry is operated partly by local or public authority and partly by company administrations. Our industry is not unique in this respect, as other public services are similarly operated.

### LOCAL AUTHORITIES AND PRIVATE ENTERPRISE

In the early stages the legislative intention was that the industry should be developed by local authorities, but if they failed to do so private enterprise was permitted to operate subject to the very serious handicap, however, that after the lapse of a certain number of years the undertaking could be acquired by the local authority at the then value of the physical assets and without any compensation either for losses in the earlier years or for future profits. In the comparatively few cases where the local authority commenced operations they confined themselves to the densely-populated and easily-developed areas, where success was assured, and neglected the sparsely populated areas where there was any risk of failure. Private enterprise was disinclined to invest money because if the enterprise were successful it would be taken over by the local authority on the unsatisfactory terms to which I have referred. To their credit I may say that some bold spirits did face these risks, but in the main development was slow and unsatisfactory and in areas outside the towns practically non-existent.

Accordingly Parliament changed its policy, and by the Act of 1899 authorised the formation of what is known as "power companies." These companies were given the right in perpetuity to generate and sell electricity over wide areas for power purposes and in bulk to authorised distributors. In most areas where the local authority did not themselves afford electrical supply, that is, mainly in rural areas, other companies were formed either by the power companies or by other interests to obtain the necessary permission from Parliament by means of Provisional or Special Orders to supply energy, an example being our associate company, the Strathclyde Electricity Supply Company, Limited.

### THE STRATHCLYDE ELECTRICITY SUPPLY COMPANY

In our case the associate company is operated in conjunction with the power company as one entity, which forms an economic and efficient method of affording supply to every class of consumer in the area. Happily, too, the greater number of local authorities in our area recognised the wisdom of supply being afforded in this comprehensive manner, and many years ago either consented to the right to supply being obtained by the Strathclyde Company or themselves obtained such rights and entered into agreements with us for long periods, by which we operate their powers in conjunction with our own undertaking. This helpful collaboration on the part of these authorities contributes to our being able to afford supply throughout the whole

of our area on standard tariffs which are so favourable to our consumers.

### EFFECT OF PURCHASE BY LOCAL AUTHORITIES

As I have said, the Orders held by the distribution companies, both in our areas of supply and in the areas of supply of other companies, are as they expire subject to purchase by the local authority, and as only those which are remunerative will be acquired the power companies are faced with the gradual loss of the most prosperous portion of their business. It is elementary knowledge that the revenues from the better areas enable supply to be afforded at the present prices in the leaner areas, and accordingly we shall be in the position that we can no longer continue our policy, and the price to the leaner areas must rise and future development must be restricted.

The power companies therefore, having taken the risk of developing the leaner areas in question, have suggested what I think is eminently reasonable, that this obsolete legislation be revised, and that these purchase rights be abolished, so that they can proceed with the further development of the leaner areas and maintain or even reduce their charges.

### McGOWAN COMMITTEE'S CONCLUSIONS

This was one of the problems considered by the McGowan Committee. State ownership and regional boards were some of the remedies urged upon them, but after hearing evidence from every quarter the Committee reached the conclusion that the abolition of the rights of purchase and the consolidation of the power companies' areas afforded the most satisfactory solution.

Owing to the form of legislation in the early years a great number of small undertakings came into being. One of the findings of the McGowan Committee was that these smaller undertakings should become merged in the larger undertakings, so as to provide more efficient single units.

Obviously, those views are not acceptable in some quarters which might be affected by them, and these objectors are to-day allied with those whose political views are hostile to what is known as "private enterprise," so that we have various views presently being urged: those who desire the continuance of the present position, those who favour the absorption of small undertakings by large undertakings, either company or public authority, and those who desire such absorption but with the control removed from private enterprise to public bodies. Dealing with the last of these, private enterprise is now represented by its opponents as some indeterminate but small section of the community exploiting everyone solely for its own gain, irrespective of the rights or interests of others. It is overlooked that private enterprise comprehends practically the whole-business community, on which the prosperity of the nation depends. In our area alone we have about 20,000 commercial consumers—the vast majority of whom represent private enterprise. We have 9,600 stockholders, also representing private enterprise. Fifty-five per cent. of the stockholders each own only £200 or less of stock.

### RATES IN DENSELY AND SPARSELY POPULATED AREAS

One of the arguments urged against the companies is that public authorities sell at a lower average price than do the companies, and the erroneous conclusion is drawn that if the companies were eliminated the lower rates said to be charged by the public authorities would extend to all areas. Even if the premises were sound, that conclusion does not follow. Because an undertaker can sell at a certain price within a densely-populated area it cannot be said that it can sell at the same price when an area which is sparsely populated is added

to it. The development of the industry outside the large cities has in the main been the work of the companies. In Scotland, for instance, the company areas are together more than four times greater than those of local and public authorities, while 58 per cent. of the population is concentrated in the areas of the public authorities. Somewhat similar conditions prevail in England. Accordingly, as the companies operate more sparsely populated areas, where the expanse of distribution is obviously greater, it might be expected that the cost to their consumers would be very much higher. But figures recently published show that the average price per unit received by public authorities throughout Great Britain from all their consumers was only 5 per cent. below the average price received by the companies, both distribution and power, but if the distribution companies are left out, the 'power companies' selling price to their consumers was actually 15 per cent. below that of the local authorities.

#### COMPANIES' CREDITABLE CHARGE FIGURES

In light of these observations I think these figures are a great credit to the company interests and support the contention of the companies that they are conducted efficiently and in the best interests of their consumers, besides being a refutation of the argument that the transference of the industry to public or local authorities would be to the benefit of the consumer.

In view of the achievements of the companies, it is obvious that if the companies had been allowed to develop the areas now served by local authorities along with their own areas it would have been to the benefit of the consumers.

Various bodies have prepared memoranda on these questions, including the Incorporated Association of Electric Power Companies. That association, of which we are members, supports the findings of the McGowan Committee, which so far is the only authoritative and impartial document. This committee heard evidence from every source before reaching its decision, and any other expression of opinion on the question is subject to the criticism that it is sectional and based either on the personal interests or the political views of the authors, and that none of them can claim to have the impartiality of the McGowan Committee.

#### QUESTION OF RURAL SUPPLY

Apart from observations on the major questions affecting the industry, there have been various criticisms during the year directed in the main at the company interests which are responsible for the great bulk of rural supply. Some of the criticisms suggest that there should be a general pooling of supply, and that the same charges should apply throughout the country. This view was much canvassed some years ago, and the Post Office cited as an example of what could be done, but it emerged that the charge for the telephone service varied according to the density of the population and the situation, of the subscriber, and the only argument now put forward is that of the penny postage. Well, penny postage is now 2½d., while during the past twenty years the cost of electricity has dropped enormously, and where there has been any increase in the charge for electricity since the war began it has been small. But it should be observed on the question of postage that the transmission side of the mail service represents a very small portion of the total cost, round about 10 per cent. If I remember rightly, whereas distribution costs for electricity form a high proportion of the selling price. In our case the capital expenditure on distribution is about twice that on generation. Moreover, rural residents are not afforded the same service by the Post Office as are urban. In many rural

areas there is only one distribution of mails per day, whereas in the cities there are, or were before the war, several. In our case, no matter how remote the consumer he must get the same supply as in the city. We cannot devise a scheme whereby he gets a fraction of the service afforded to the urban consumers, as is done by the Post Office.

#### NATIONAL UNIFORM TARIFF PROBLEM

While we charge the same rates throughout our area this policy cannot be extended throughout the country. A national uniform tariff without a corresponding unification of local rating and other varying charges would be an injustice to the consumer. Our consumers would do well to keep a careful watch on this particular agitation because our average selling price is well below the average selling price of the whole country, and if any such scheme is brought about they must be prepared to face an increase in charges of at least 33½ per cent. without taking into consideration the increased cost which would be incurred if such a scheme were brought into operation. If other areas are to be subsidised at our expense it is only equitable that we should get the benefit of the lower local rates prevailing in other areas.

Rural electrification is now being urgently canvassed, and I suspect in some quarters for political reasons. Rural supply has long been steadily developed by the companies. One would infer from some critics that public authority development is in advance of that of the companies, but the percentage of premises in our area to which electrical supply is afforded is well in excess of the corresponding figures in many of the urban areas supplied by public authorities. For a number of years we have been urging farmers to electrify their steadings, but economic circumstances in many cases prevented them. Since the commencement of the war, however, farmers in general are coming to us to aid them in the troubles which they now experience from shortage of labour.

There are other public services which more urgently require extension than electricity, particularly water. Their provision is in the main the duty of the local authority, and it is now being realised that these services are in many areas not nearly so well developed as is electricity.

When these facts are examined it will be seen that the company interests have shown much more enterprise in carrying out their duties than have many local authorities, and that transference of the electrical industry to public or local authority ownership will not mean increased efficiency or reduced charges, but the reverse.

I am satisfied that interference with the company interests to which I have referred would have a most unfortunate result for the consumers and for the country.

#### TRIBUTE TO STAFF

During the year under review the operations of the company have been carried on under the most strenuous and difficult conditions, due to the war, and I desire on behalf of the directors to express our cordial appreciation to our colleagues, the managing director, and all the heads of departments and members of the staff and other employees working under them. I am sure that the stockholders present will concur in this appreciation.

I now have pleasure in moving that provision be made for the dividend on the six per cent. cumulative first preference stock for six months to April 30, 1944, and that a final dividend of 5 per cent. on the ordinary stock be paid, which together with the interim dividend of 3 per cent. paid in September, 1943, makes a total of 8 per cent. for the year, subject to tax.

The report and accounts were adopted.

## THE NORTHMET POWER COMPANY

### POST-WAR ELECTRICITY LORD ASHFIELD'S SPEECH

The ordinary general meeting of the Northmet Power Company was held at Caxton Hall, Westminster, S.W. 1, on the 29th ultimo. The Rt. Hon. Lord Ashfield, P.C., Chairman and Managing Director, said:

I am happy to say that, despite the existence of various factors such as the fuel economy campaign of the Government and increased coal and labour costs, your directors are able to recommend for the year a total dividend of 7 per cent. on the ordinary stock.

When I addressed you last year the Minister of Fuel and Power had asked the industry through their representative Associations to place before him their views on the future of the industry. In response to this invitation memoranda have been prepared by these Associations, and, in addition, there has been what I might well describe as a "flurry" of reports, newspaper articles and publicity.

#### JOINT AUTHORITY'S COMMENTS

Observations have been made by the London and Home Counties Joint Electricity Authority on the memorandum of the Association of Electric Power Companies. The Authority have stated that if the proposals set out in that memorandum are applied the loss to the public would be considerable, and instance the difference in the average selling price of electricity to consumers, particularly for domestic purposes, between undertakings owned by public authorities and by companies. Given like conditions, the cost per unit of electricity supplied by companies' undertakings compare favourably with that supplied by undertakings owned by public authorities. For example, the area of supply of your company can, I think, be compared with that of the area supplied by the London and Home Counties Joint Electricity Authority, and it is illuminating to find that the average revenue per unit for lighting, heating and cooking received by the Authority for the nine months to December 31, 1937, the latest period available to me at present, was 20 per cent. higher than that of your company.

The company's area is diverse in character, 22 per cent. of the total area is urban, whilst the remaining 78 per cent. is rural. Notwithstanding this extensive rural territory, the system of supply and voltage throughout the area is almost entirely standardised. It has been necessary to lay or erect a main transmission system of 1,256 miles, a distribution network of 3,349 miles, and 1,391 sub-stations, and I may add that, despite the widely diverse conditions out of a total of 137 townships and parishes in the area, the Northmet service is available in no less than 131, leaving a small margin of less than 5 per cent. still to be provided for.

#### PHENOMENAL DEVELOPMENT

From the commencement of supply by your company there has been a phenomenal development, and this amazing growth can, I suggest, be attributed in part to the settled policy of your company which has operated over a period of years.

The basis on which improvements in the distribution of electricity should in the opinion of the power companies proceed is not by any revolutionary change in the constitution and management of the undertakings, but by the retention and utilisation, where possible, of the larger and more efficient of the existing undertakings, whether privately or publicly owned, and the absorption by such undertakings of the smaller or less efficient undertakings.

The proceedings terminated with a vote of thanks to Lord Ashfield.

## NORTH-EASTERN ELECTRIC SUPPLY COMPANY, LIMITED

### CHAIRMAN'S COMMENTS ON POST-WAR REORGANISATION OF THE ELECTRICITY SUPPLY INDUSTRY

During the course of his remarks at the annual general meeting of the North-Eastern Electric Supply Company, Limited, held in Newcastle-upon-Tyne on the 22nd ultimo, the chairman (Mr R. P. Sloan, C.B.E.) said:

I would like to refer briefly to the question of post-war reconstruction of the electrical industry. Much publicity to this subject has been given in the Press and many references to it have been made elsewhere.

Schemes have been submitted to the Government by Associations representing various interests in the industry. These schemes differ widely in their recommendations. Some favour leaving things as they are, some municipalisation, some the expansion of joint electricity authorities; then there are others who favour the implementation of the McGowan Report, while there are those who recommend nationalisation of the whole of electricity distribution throughout the country.

#### NEED FOR COMMON POLICY WITHIN THE INDUSTRY

It is unfortunate that there should be such a wide diversion of views within the industry itself as to what should be done, as this may well create the impression that it is failing lamentably in its service to the public—which is, of course, not the case. If some common policy cannot be evolved by those engaged in the industry, it may result in some scheme being imposed upon it by Parliament.

As long ago as 1926 reference was made to our company in Parliament by the then Parliamentary Secretary to the Minister of Transport (speaking for the Government), who stated "that is a model which we should like to see the whole of England follow." Our own view is, of course, in harmony with this, and we feel that our organisation is of the type, and covers the size of area, which can economically be operated to the advantage of all concerned.

We have over a long period of years concentrated on the co-ordination and development of the distribution of electricity and the standardisation of charges within our wide area and have met with a considerable measure of success in this direction, but we realise that there remains room for improvement both here and elsewhere.

#### NEED FOR ONE CONTROL OVER DISTRIBUTION AREAS

There are to-day, within what I may describe as "our area," quite a number of distributing authorities each operating independently, and it is our conviction that the best service could be given to the public generally if all their distribution areas came under one control. But there are formidable difficulties in the way of bringing about any such consolidation. They were revealed at the time of the publication of the McGowan Report and they now again become apparent in the avalanche of Memoranda which has been submitted to the Government. Nevertheless, it is our view that these difficulties must be faced and that they might be overcome in the best interests of consumers by a scheme which would associate with the control, representatives of all the local interests concerned.

It is along these lines that we believe a solution of the problem can best be found. It would be premature for me to say more on this subject at the present stage, except that the company has not signified agreement with any of the schemes so far submitted to the Government.

## BRITANNIC ASSURANCE COMPANY, LIMITED

### INDUSTRIAL ASSURANCE DEFENDED

£447,550 ALLOCATED TO POLICYHOLDERS

#### MR J. A. JEFFERSON'S SPEECH

Mr J. A. Jefferson, F.I.A., chairman and general manager, presiding at the seventy-eighth ordinary general meeting, after referring to the retirement of Mr S. J. Port, vice-chairman, and the election to the board of Mr F. A. Powell, F.C.A., formerly secretary of the company, said:—

Since the outbreak of war we have released for service with H.M. Forces or for other work of national importance nearly 2,100 of our indoor and outdoor staff. We wish them good fortune, and look forward to their return as speedily as possible.

#### "INDUSTRIAL ASSURANCE EXPLAINED"

At the beginning of this year the industrial life offices issued under the title of "Industrial Assurance Explained" a short booklet explaining in non-technical language our much-maligned and misunderstood business. It is one of the trials of our business that we seem fated to attract adverse criticism, sometimes emanating from well-meaning reformers whose knowledge of the business appears to be in inverse proportion to their ardour for their cause. One of our critics is reported to have said of the booklet, "It is the old familiar thing." Until now we have remained silent in the face of hostile and ill-informed criticism, so it is difficult to follow this remark, but I am pleased to say that the booklet has had a good reception, not only from those engaged in the industry, but also from those engaged in other branches of insurance and from reasonable and unbiased persons everywhere.

#### QUESTION OF "ILLEGAL POLICIES"

Recently another critic has suggested in questions asked in Parliament that the offices have been issuing since 1909 large numbers of "illegal policies." I deny this absolutely, and apparently the grounds for this allegation are that the words "funeral expenses" mean only the actual cost of burial, and this I dispute. May I point out that no single policy has ever been declared illegal by the courts on these grounds, and one High Court judge has said that the term "funeral expenses" should be construed with some latitude? The question of funeral expenses policies was considered by the Cohen Committee, who came to the conclusion that there was a justifiable public demand for policies which covered such additional expenses as the cost of mourning and travelling to the funeral or to see the dying person. Judging from the reply of the Financial Secretary to the Treasury to a question on this subject, the Government would also appear to support this view.

The suggestion had been made that the offices encourage, and members of the working classes indulge in, gambling on the lives of near relatives. Actually in their own interests the offices do everything possible to prevent speculation of any kind. As regards our policyholders, how can they, by the wildest stretch of imagination, be accused of gambling because they make provision for funeral expenses by the payment of a premium of a few pence per week? On the contrary, I claim that it is only common prudence; it avoids running into debt when death occurs in the family, and I regard such an accusation as a slander on the working classes. If the working man desires to gamble he can, and does, find easier and

quicker methods than a funeral expenses policy.

#### MAGNITUDE OF THE COMPANY

As illustrating the magnitude of the company's operations, I would mention that we have now in force over 5,700,000 policies, assuring £120,000,000. The total premium income increased during the year by £452,000 to £6,897,000, while our funds at £43,441,000 showed an increase of £3,089,000. War claims in the life branches during 1943 amounted to £89,677, against £68,472 in 1942, bringing the total since the outbreak of war to £335,691.

#### ORDINARY AND INDUSTRIAL BRANCH RESULTS

The premium income of £1,992,000 showed an increase of £160,000, and the fund amounted to £15,315,000, an increase of £987,000. The net rate of interest was £3 7s. 11d. per cent., a fall of 8d. per cent. Death claims at £235,000 were £24,000 more than in 1942. The expense rate at 11.72 per cent. was moderate, and was 0.79 per cent. less than in 1942.

The premium income increased by £291,000 to £4,897,000 and the fund by £1,811,000 to £23,604,000. The net rate of interest earned on the fund at £3 12s. 8d. per cent. showed a reduction of 2s. per cent. Death claims were heavier by £97,000 than in 1942, and amounted to £1,319,000. The expense rate was 27.98 per cent., and was the lowest ever achieved in the history of the company. It represented a reduction of 1.62 per cent., and followed a reduction of 0.94 per cent. in 1941. Reductions such as these provide the best possible answer to the view expressed by one of our critics that no further substantial reductions are likely to be seen.

#### THE ASSETS

Our assets now total £44,156,000, having increased during 1943 by £3,197,000. Actually £4,278,000 has been invested in British Government loans during the year, bringing our total subscriptions since the outbreak of war to £12,500,000. At £18,597,000 British Government securities amounted to 42 per cent. of our total assets. Our assets show a substantial appreciation over balance-sheet values, but we recommend transfers to the investment reserve funds of £250,000, bringing them up to £2,750,000.

#### ANNUAL VALUATION OF LIABILITIES

The strength of the valuation basis has been further increased. The policy liabilities under Britannic contracts were valued by the net premium method on a 2½ per cent. interest basis, the latest available mortality tables again being used. In the ordinary branch a surplus of £592,197 was disclosed, while in the industrial branch a surplus of £1,074,452 was disclosed. The directors have allocated £227,550 out of the ordinary branch surplus to policyholders, which has enabled them to declare a bonus addition to all with-profit policies in force on December 31, 1943, of £1 per £100 sum assured. Out of the industrial branch surplus they have allocated £220,000 to the policyholders, which has enabled them to repeat the present bonus scheme for a further year. Increased balances of £250,875 in the ordinary branch and £391,952 in the industrial branch are being carried forward undivided.

## MERCANTILE BANK OF INDIA, LIMITED

### IMPROVED ECONOMIC SITUATION

#### SIR CHARLES INNES ON POST-WAR PROBLEMS

The annual general meeting of the Mercantile Bank of India, Limited, will be held in London on the 18th instant.

The following is an extract from the statement of the chairman, Sir Charles A. Innes, K.C.S.I., C.I.E., circulated with the report and accounts for the year ended December 31, 1943:—

The balance-sheet continues to reflect war conditions. The totals on either side show an increase of nearly £2 millions over the figures of last year. On the liabilities side the increase is due mainly to an expansion of our current accounts. This is a feature common to all banks. In our case the increase has taken place principally in India. India is a vital supply base for the Allied nations in the East. The volume of contracts placed by the supply department continues to expand, and the increasing payments received from His Majesty's Government on account of the supply of war materials and services have led both to a growing accumulation of sterling balances and to large issues of currency for immediate payments in India. It is not surprising therefore that the demand liabilities of the scheduled banks have now risen to more than 500 crores, compared with 123 crores in August, 1939.

#### INCREASE IN LOANS

In the last year, too, there has been a welcome improvement in the loans and advances of Indian banks, though the increase has not kept pace with that of deposits. The proportion of loans and advances of all deposits with the scheduled banks is still only 27 per cent., compared with 47 per cent. in August, 1939. The balance-sheet again shows a contraction of bills receivable. I explained the reasons at some length last year, and need not repeat myself.

Briefly, the decrease is due partly to Lend-Lease arrangements, partly to the restriction of imports, and partly to the fact that as the war goes on more and more business tends to be diverted from the usual commercial channels into the hands of Government. There has been a reduction of nearly £2 millions in our cash, but it still stands at the substantial figure of £64 millions. On the other hand, we have increased our holding of Government securities by nearly £3 millions.

#### INFLATIONARY TENDENCIES DECREASED

The inflationary tendencies in the economic situation brought about in India by the war have long been obvious, and at one time it looked as if the situation might get out of control. In particular, owing to constitutional and other difficulties, which admittedly in India are very great, the Government of India and most of the Provincial Governments were slow in dealing with the most urgent problem of all, namely, that of ensuring that available supplies of foodstuffs should be fairly distributed at reasonable prices. One result was the severe famine in Bengal; another was a steep rise in the cost of living all over India.

Now the situation has improved. There has been an excellent harvest in Bengal, and all Governments are encouraging the growth of food crops and are introducing procurement and rationing schemes. Moreover, the Government of India have introduced in the last six months a number of measures designed to check speculation, profiteering, hoarding and inflation. Of the last class of measures the most interesting has been large sales of gold by the Reserve Bank.

#### THE FUTURE

In the past year we have devoted much thought to post-war problems. No one at this stage can foresee what the pattern

of international trade will be after the war or whether by concerted action the nations of the world will be able or willing to alter the policies and remove the obstructions which a few years ago threatened almost to stifle it. Nor do we know for how long after the war it will be necessary for the Government to maintain control of imports, exports and foreign exchange and to continue to make bulk purchases of food and raw materials. All that can be said with confidence is that this country, if it is to keep its imports of food and raw materials at the level necessary to maintain the standard of living, must largely expand its exports, and I hope that this bank will be able to play its part in this process.

#### STAFF PROBLEMS

Our immediate post-war problem and the one to which we have devoted most thought will be that of reopening our branches in the countries which have been overrun by Japan. We have already made such preparations as are possible, and it is already clear that our main preoccupation will be that of staff. An exchange bank must have a highly-trained staff, and in this respect the position is bound to be very difficult in the immediate post-war period.

Those that are left to us have had a long term of continuous service in the East. Most of them are badly in need of rest, and it would be a great help if the Governments of India and Ceylon would allow them to take home leave in rotation. We also hope that His Majesty's Government will take steps to release a proportion of trained bankers from the Forces well in advance of the reoccupation of Burma and Malaya. Some measure of this kind is indeed essential if the banks are to play their part in the rehabilitation of the economic life of the countries released from enemy control. It must be remembered that unless banking facilities are available trade and commerce cannot revive.

## BRITISH ROPES, LIMITED

### PROFITS MAINTAINED

The annual general meeting of British Ropes, Limited, was held, on the 30th ultimo, at Leeds.

Mr Herbert Smith (the chairman), in the course of his statement, said: Taxation occasioned by war conditions has the effect of limiting to a certain degree the profits available for dividend and reserve purposes. The profits earned for the year ending December 31, 1943, subject to income-tax, have been virtually maintained at £355,741, and, after providing £200,000 for income-tax, as compared with £225,000 in the previous year, the net balance available amounts to £155,741, as compared with £134,510 for 1942. We are thus able to maintain our dividend at the previous level of 12½ per cent., but this year we propose to increase the transfer to general reserve from £25,000 to £50,000, which will leave the substantial balance of £215,873 to be carried forward to next year's accounts.

The balance-sheet continues to show a strong liquid position, which is very satisfactory and augurs well for the future of your company. Your company's plant and machinery has, so far as circumstances permit, been maintained in an efficient state of repair, and all possible steps are being taken to ensure that post-war demands will be met.

The output of all manufacturing units of your company in wire, wire rope, hemp rope and binder twine has been maintained at the high level of the last three years; all departments are working to full capacity on Government or other work of national importance. Needless to say, we have record outputs, and are employing more female labour than ever before. Our subsidiary and associated companies are in the same posi-

tion, and have been very successful during 1943.

The supply of raw materials to our South African and Canadian factories has been difficult, but the managements at these units have obtained their requirements and have maintained full outputs.

The future of our export trade is being investigated both on our own account and also by the various trade associations of which we are members. The strong trend towards the industrialisation of primary producing countries seems to be strengthening under the stress of war, and there appears to be no doubt that at the end of the war this tendency will be accelerated.

I feel I must express the thanks of the board and myself, as well as of the shareholders, to the staff and workpeople, especially the women who play so large a part in our activities, for their ungrudging and loyal service to further the war effort.

The report was adopted.

## SAN FRANCISCO MINES OF MEXICO, LIMITED

### A RECORD YEAR

The thirty-first ordinary general meeting of San Francisco Mines of Mexico, Limited, was held on the 29th ultimo, in London, Mr C. T. Pott presiding.

The chairman, in the course of his statement, said:—

The past year was a banner one. Records of one sort or another were established in so many directions that I will only enumerate a few. The tonnage milled reached 615,000 and the metals contained in concentrates reached 35,000 tons lead, 33,000 tons zinc, 3,500 tons copper, 2,400,000 ozs. silver and 18,000 ozs. gold. These figures are about 30 per cent. above last year, and are a measure of the strenuous efforts we have made to provide the United Nations with the maximum amount of metals which our mines were capable of producing. To support this programme of maximum output underground development was accelerated to keep in step. The satisfactory nature of the year's development may be judged from the record ore reserves of 3,135,000 tons, which are some 400,000 tons in excess of a year previous. In as much as some 600,000 tons were milled during the year, the new tonnage blocked was upwards of 1,000,000 tons. The 3,100,000 tons in the reserve had a combined lead zinc copper grade of 16.39 per cent., compared with 2,300,000 tons with a combined grade of 16.10 per cent. at the beginning of the war.

#### SATISFACTORY DEVELOPMENT

During the sixteen years beginning September, 1926, we have milled close upon 6,000,000 tons of sulphide ore having a combined mill assay for lead zinc copper of 16.29 per cent. I give you these figures to illustrate that laterally and at depth development continues on the whole to be satisfactory, so that the life of our properties can be regarded with some optimism.

The board has appropriated £50,000 for the establishment of an exploration and development reserve and now recommend that a dividend of 3s. per share be paid for the past year, and I ask you to confirm that. This will leave £39,339 to be carried forward. I am in no position to make any forecast as to what we can expect in the coming years. Wide and rapid fluctuations in profitability of a base metal project I am sure are well understood by you all. We must expect ups and downs.

Resolutions for the adoption of the accounts and payment of a dividend of 3s. per share, and for the conversion of the issued shares of the company into stock, were unanimously passed.

## THE NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

### MR K. A. E. MOORE'S REVIEW

The annual general meeting of the above Society was held, on the 29th ultimo, in London.

Mr K. A. E. Moore, F.C.A. (the chairman), in the course of his speech, said: The accounts which are before you to-day are of particular interest in that they show how the society stands, after nearly five years of war, on the occasion of a quinquennial valuation. The satisfactory position disclosed is gratifying indeed at the end of a period so full of anxieties and uncertainty.

#### VALUATION REPORT

The actuary's valuation report accompanies the accounts, and it is unnecessary for me to go through it in detail. I may mention, however, that it is based on what is known as the "bonus reserve" method, as distinct from the "net premium" method used by the majority of life offices. For many years now the society has been one of a small number of life offices employing the "bonus reserve" method, which implies the calculation of the reserves for the contractual sums assured and existing bonuses, utilising for this purpose mortality tables, rates of interest, and expense provisions as close as possible to the anticipated future experience. To these contractual reserves are then added a specific reserve (on the same basis) for future bonuses on the whole of the existing business.

In our own case we have greatly increased the stringency of the basis employed in 1938 by reducing the rate of interest from 3½ per cent. for assurances and 3½ per cent. for annuities to 3 per cent. for the whole business. The combination of this and of the other factors operates to produce a basis which is believed to be the strongest the society has ever employed, and on top of it, as you will see, we have set aside £150,000 for possible heavy war claims in the later stages of the war and £100,000, equal to the cost of still further reducing the rate of interest, should that be necessary, from 3 per cent. to 2½ per cent.

We have thus set out to calculate our reserves on an exceedingly strong basis, and at the same time to provide additional reserves for all foreseeable contingencies. Even after doing this there remains, as shown by the actuary's report, a net surplus of £569,000, which includes the sum of £178,000 brought forward from the preceding valuation in 1938. The disposable surplus earned in the five years is, therefore, £391,000.

Despite the uncertainties of the future, we take the view that this sum of £391,000 should not be withheld from distribution among the members. Accordingly we have decided to declare compound bonuses at the following rates for the five years 1939-1943:—

Whole life policies with full profits, 25s. per cent. per annum.

Endowment assurance policies with full profits, 20s. per cent. per annum.

Low premium policies with reduced profits, 7s. 6d. per cent. per annum.

This distribution will cost £397,000, leaving £172,000 to be carried forward to the next valuation, a sum very little less than the sum brought forward in 1938. It is very gratifying to the board, as I feel it will be also to the members, to produce in war-time so excellent an account of the society's progress during the past five years.

I should add that interim bonuses on claims will be paid until further notice at the same rates as are now to be distributed.

#### WAR RISKS SCHEME

Since the early part of 1940 the society has operated a unique and highly popular scheme for covering war risks in this country without extra charge. Under this

## KEMSLEY NEWSPAPERS, LIMITED

### INCREASED TRADING PROFIT

The 20th annual general meeting of Kemsley Newspapers, Limited, was held, on the 29th ultimo, at Kemsley House, London, W.C.

Lord Kemsley, the chairman, in his speech to the shareholders, said: The increase in the trading profit for the year is absorbed by the addition to the reserves for taxation and contingencies, leaving the net profit at £471,173, or £1,086 more than last year.

The dividends on the Six and a-Half per Cent. and the Eight per Cent. Preference stock and 4 per cent. interim dividend on the Ordinary stock are the same as last year, leaving a balance of £412,181 available for distribution. The directors recommend that £100,000 shall again be added to the general reserve, making that sum 2½ million pounds, and that a final dividend of 4 per cent., less tax, should be paid on the Ordinary stock of the company, leaving the balance carried forward of £262,181, compared with the amount of £246,008 carried forward last year.

#### THE YEAR'S ACTIVITY

In normal times on this occasion I am accustomed to give you a review of the year's activities in our various publishing centres. In war time, owing to controls and restrictions which, unwelcome as they may be, are admittedly essential, there is no great scope for enterprise or new development. I have in consequence little of interest to report under this head.

I can perhaps best summarise the position by saying that, like so many other concerns, we are carrying on to the best of our ability. Advertising still plays a vital part in the transformed economic life of the nation. It is performing a great work in ensuring that the civilian population plays its part in this unprecedented kind of warfare which we call total war. Experience has strongly emphasised the power and value of advertising when it is rightly used. Our great regret, as newspaper publishers, is that we cannot provide all the space our advertising friends would like to have.

Your directors are naturally grateful that the accounts and report which you have before you are so satisfactory. The war is not yet over, but I think I can claim that we have weathered the storm in a manner which few could have expected in 1939. I should tell you also, at this time when post-war reconstruction is in so many minds, that we are looking forward to the day when we can complete the expansion and renewal of plant and buildings which was interrupted by the outbreak of hostilities.

#### FUTURE DEVELOPMENT

All our plans for future development will, of course, largely depend on the "controls" which remain after the war. We hope that most of them will be lifted, and that only those which are absolutely vital, as a few of them will be, will remain until the conversion of our national economy from a war to a peace footing is completed. We express this hope, not selfishly for ourselves, but in the interests of the nation at large, since we most sincerely believe that the less the bureaucracy interferes with commerce and industry the better. It is on that account, and on no other, that Kemsley Newspapers have consistently opposed the post-war retention of controls for the sake of controls. I think we can claim to have been among the first to draw public attention to the evil, and it is gratifying to see that the country generally now seems awake to it.

The report was adopted.

## LONDON AND LOMOND INVESTMENT TRUST, LIMITED

### IMPROVED REVENUE AND CAPITAL POSITION

The thirteenth ordinary general meeting of this Trust was held, on the 29th ultimo, in London, the Hon. W. B. L. Barrington (the chairman) presiding.

The following is taken from the chairman's statement, circulated with the report and accounts:—

The total revenue for the year under review amounted to £78,497, an improvement of £2,534 as compared with the previous year. The net revenue, after expenses of management, interest and income-tax, was £25,498, an increase of £1,068. The dividends on the Preference stocks require £9,175, leaving £16,323 available for the Ordinary stock, which is equivalent to 12.9 per cent. before deduction of income-tax. The directors have placed £20,000 to general reserve, bringing it up to £100,000, and now recommend payment of a final dividend of 5½ per cent., making a total of 8 per cent. for the year. There remains £7,196 to be carried forward, as compared with £20,997 brought in.

The market value of the investments exceeds the figure at which they are stated in the balance-sheet by £261,468. The position may be summarised as follows:—

|                                            |          |
|--------------------------------------------|----------|
| Appreciation in value of investments ..... | £261,468 |
| Capital reserve .....                      | 127,613  |
| General reserve .....                      | 100,000  |
| Carry-forward .....                        | 7,196    |

£496,277

Each £100 of Ordinary stock, therefore, was represented as at January 31, 1944, by net assets of approximately £307.

As to the current year, present indications are that our income will be maintained.

The report and accounts were unanimously adopted.

## THE SCOTTISH PROVIDENT INSTITUTION

### RESULTS OF QUINQUENNIAL VALUATION

#### MR. A. H. BOWHILL'S REVIEW

The 106th annual general meeting of the Scottish Provident Institution was held in Edinburgh on the 28th ultimo. The chairman, Mr. A. H. Bowhill, after referring to the increase in new business last year and to the slight excess of outgo over income in the life and capital redemption funds, due to a larger amount having been paid under matured endowment assurances, spoke of the increase in the gross rate of interest by 2s. 6d. per cent. to £4 4s. 2d. per cent., though accompanied by a fall of 4d. in the net rate to £3 os. 8d. per cent. He then passed to the results of the quinquennial period which ended on December 31, 1943.

#### QUINQUENNIAL VALUATION

On the assets side a general reserve of £250,000 has been created in the life funds and security values, which have been written down by £600,000, stand in the books much below their present market values. The total funds amount to £24,736,552, and 42 per cent. of the Stock Exchange securities are in British Government issues, the contributions to new War Loans exceeding £2½ millions. The liabilities have been valued by the latest mortality tables at 2½ per cent. interest, while the reserves have been further increased by valuing 2½ per cent. select net premiums for assurances and by assuming annuitants to be a year younger than their actual ages. On these assumptions a surplus of £493,500 is disclosed, and in view of the uncertainties of the future this sum is being carried forward. The fall in surplus compared with the amount available five years ago is entirely due to war causes, of which increased income-tax, war claims and the strengthening of the valuation basis consequent on the fall in the net rate of interest are among the most important.

#### INTERMEDIATE BONUS

Meantime, as explained in the report, the payment of intermediate bonuses at £1 per cent. per annum to policies in the special endowment fund is to be resumed, with the further proviso that any policy becoming a claim is to receive not less than the maximum amount which would have been payable had the claim arisen in the period 1939-43. Common fund policies which qualify for their first bonus under the Institution's distinctive system in the current quinquennium, and thereafter become claims, will receive special intermediate first additions at the rate of 15s. per cent. per annum (old series) and 10s. per cent. (new series) for their full durations from date of entry, excluding war years. The question of resuming ordinary intermediate additions to common fund policies will not arise until the end of 1944, when it will receive favourable consideration.

#### CONFIDENCE IN THE FUTURE

In concluding, the chairman, after making reference to the large number of the staff on active service and the additional duties being undertaken by those who remain, looked forward with confidence to the future and to the enlarged service to present and future members which the strengthening of its position would enable the Institution to render. The report and accounts were adopted.

## EQUITY AND LAW LIFE ASSURANCE SOCIETY

### TRIENNIAL VALUATION RESULTS

#### INTERIM BONUS RESUMED

#### SIR GEOFFREY ELLIS'S SPEECH

The annual general meeting of Equity and Law Life Assurance Society was held on the 30th ultimo at the Law Society's Hall, Bell Yard, London, W.C.2. Sir Geoffrey Ellis, Bt., M.P. (chairman), presided. The chairman said:—

Gentlemen:—I rise to move "That the report and accounts for the year ending December 31, 1943, be received and adopted and entered on the minutes." These have been in your hands for some days and I assume may be taken as read.

Since our last annual general meeting the Society has suffered a great loss through the death of Mr. H. M. Farrer. Mr. Farrer joined the board in 1929. We valued greatly his quiet counsel and guidance and we mourn the loss not only of a colleague but of a friend.

Within the last few weeks an extraordinary general meeting of the society has been held, and the articles of association have been amended to enable us to appoint an executive official to the Board without disturbing the prescribed proportions of legal and non-legal directors. Following upon this alteration in the articles the directors have appointed Mr. R. J. Kirtton, the general manager of the society, to a seat on the Board. We feel sure that you will welcome his appointment and will agree with the Board that it will be all to the good of the Society.

#### TRIENNIAL VALUATION

In my remarks to-day I propose to deal mainly with the results of the triennial valuation made as at December 31st last, and with the triennium ending on that date; the results for the year 1943 do not in themselves call for comment.

You will recollect that, at recent annual general meetings, I have referred to the improvement in the Society's position during the past triennium. I referred also to the need for strengthening the actuarial valuation basis. The valuation of our assets as at December 31st last showed that this improvement was continued during 1943. Of the appreciation, realised and unrealised, on Stock Exchange securities, the sum of £1,665,000—being a portion of the amount available—has been credited to the Life Assurance and Annuity Fund. The whole of this sum of £1,665,000 has been applied to strengthen the actuarial valuation basis. We have thus achieved a more even balance between the margins which exist in the valuation of our assets and those which exist in the valuation of our liabilities. So far as can be foreseen at present, the margins contained in the new actuarial valuation basis should lead, when more normal conditions return, to the emergence of a satisfactory trading profit from year to year and to the declaration of a stable and reasonable scale of bonuses on the Society's With-Profit policies.

#### INTERIM BONUS

Since the triennial valuation made as at December 31, 1940, no interim bonus has been paid in respect of current claims. The world outlook is to some extent clearer than it was three years ago, and in the light of the results of the present triennial valuation your directors have decided that interim bonus should now be paid in respect of With-Profit policies which became claims by death or maturity in the years 1941, 1942 and 1943. This decision involves the re-opening of over 600 claims, but bearing in mind equity as between one generation of policy holders and another, we consider that it is the only fair course

to take in regard to the policy holders concerned and their dependants.

#### QUESTION OF VESTED BONUS

The degree of uncertainty still attaching to the world outlook—I need only mention the possibility of heavy mortality claims in the near future—leads us to refrain from declaring a vested bonus at the present time. The surplus of £555,476, of which £133,566 was brought forward from the previous triennium, will therefore be carried forward as a Special Reserve, which may be available at a later date, if circumstances are favourable, for the declaration of a vested bonus in respect of the past triennium. Meantime, interim bonus—allocated in respect of each year's premium falling due on or after January 1, 1941—will be paid in respect of claims arising on With-Profit policies during 1944.

#### THE DIVIDEND

The rate of dividend which the directors recommend for the current year is 2s. per share, subject to deduction of income tax. This dividend is justified by the present position of the Proprietors' Fund. It will be recognised that, while the declaration of vested bonuses remains in suspense, the Proprietors' Fund receives no share of the profits arising from life assurance, annuity or capital redemption business, other than a one-tenth share of the relatively small amount of profits utilised for payment of interim bonus.

#### LARGE HOLDING OF BRITISH GOVERNMENT SECURITIES

During the triennium our holdings of British Government securities have increased by about £5,000,000, and they now represent nearly one-third of our assets. Corresponding decreases have taken place in other categories of investments. The investment policy pursued by the Society has been in keeping with the Government's finance of the war, and has also, we think, provided us with a portfolio of investments well suited to meet the uncertainties of the immediate future.

#### INTEREST RATES

The gross rate of interest earned on our funds has shown a tendency to fall during the past triennium, but the full effect of the changes which have been made in the distribution of our assets has not yet become apparent. We estimate that, allowing for the increase in the funds resulting from the various transfers made as at the end of the year, the gross rate of interest now being earned on our funds is approximately £4 9s. per cent. The equivalent net rate of interest, taking into account the differing taxation bases applicable to our various funds, is approximately £3 9s. per cent. In the light of these estimates, we consider that the actuarial valuation basis employed is fully justified and that it contains reasonable margins. We must bear in mind, however, that a continuance of low rates of interest on Gilt Edged securities may make it desirable that some further strengthening of the actuarial basis should be effected at succeeding triennial valuations.

#### MORTALITY RESULTS

The other main factor with which our Life Assurance and Annuity business is concerned is mortality. During the three years of war which form the triennium under review, mortality in respect of assured lives has been slightly greater than

that expected according to the mortality tables used; had it not been for deaths on active service there would have been a substantial profit from this source. Our mortality experience in respect of annuitants has been rather less favourable.

#### SOCIETY'S CENTENARY

The centenary of the Society occurs later this year—on August 1st to be precise. We embark on our second century in troubled waters but well rigged for the voyage. In due course—after the war—we hope to publish a small volume giving something of our history over the last 100 years, but we feel that it would be out of keeping with the times to mark the occasion by anything in the nature of a conventional celebration.

The confidence of our founders has been amply justified by the growing recognition of the merits of life assurance—as a safeguard and as an investment. These merits are at least as great to-day as they have ever been during the long lifetime of our Society. Under war conditions our branch organisation is very severely depleted and, on this account, we must ask the indulgence of our agents and policy holders in many parts of the country where we are temporarily unable to maintain personal contact. We hope, however, that those interested in the effecting of life assurances or of annuities will bear in mind the attractive terms and conditions which we offer. We can still provide quality of service even though its extent is, for the time being, limited.

Before concluding by expressing our thanks to the staff, I have to report with deep regret the deaths of two members on Active Service—Darrell Hall and Walter Moore. The former was in the R.A.F. and is the son of a member of our staff, the latter was in the Army. To the parents of both we tender our most sincere sympathy.

#### TRIBUTE TO STAFF

The periodical valuation of a life assurance office is a heavy task even in peace time, and the fact that we are able to hold our annual general meeting in March is a tribute to the speed and accuracy with which the results have been brought out. Our thanks are due to all concerned, and not least to our general manager, actuary and secretary, investment manager, and that small body of key men who remain with us and whose difficulties can well be imagined.

The report and accounts were unanimously adopted.

## BRITISH TYRE AND RUBBER COMPANY, LIMITED

### DIVIDEND OF 11 PER CENT. MAINTAINED

The annual general meeting of this company was held, on the 28th ultimo, in London, Sir Walrold Sinclair, K.B.E. (the chairman), presided.

The following is an extract from the statement of the chairman, which was circulated with the report:—

The net profit (subject to income-tax) amounts to £200,963, against £204,115 last year. In both years the main governing factor was the excess profits tax standard. The large assessments of E.P.T. so far suffered provide a considerable potential against the possibility of lean years during the currency of the tax. After the necessary appropriations of the net profit, chief of which is for income-tax, the directors have devoted £50,000 to strengthen still further the company's resources; £25,000 goes to general reserve and £12,500 each to contingencies and special depreciation. The distribution to the ordinary shareholders is again 11 per cent. As this year provision is made for the full year's dividends, the carry-forward of £74,408, which is £1,970

higher than last year, appears on the balance-sheet.

The final result has been satisfactory and fully in accordance with expectations.

Considerable progress has been made in the utilisation of synthetic rubber, and continuous research is being actively maintained to establish and extend its usefulness over the wide range of products in which your company is interested.

The current year, in so far as volume of business is concerned, is running well to average, and although full consideration must be allowed for the uncertainties incidental to war-time conditions, the general outlook can be regarded with a reasonable degree of confidence.

The report and accounts were adopted.

## HOOVER LIMITED

### RECORD TURNOVER

The ordinary general meeting of Hoover Limited was held on the 25th ultimo at Perivale, Greenford, Middlesex.

Mr. C. B. Colston (chairman and joint managing director), in the course of his speech, said: It is certain that in the not too distant future we shall have to devote some of our energies to peace-time products.

What, then, is going to be the position of your company during the transitional period and thereafter? When war broke out your company was engaged entirely upon its peace-time products. The only thing we manufactured and sold was the Hoover electric cleaner, and sometimes it has been said that this field was too narrow.

Nevertheless, during these peace-time years we created a highly efficient manufacturing organisation and built up a fine production team with the most modern equipment at its disposal. We also succeeded in building up a strong research and development department. Our engineering skill and knowledge and our experience of mass production methods were of the greatest value when war broke out.

I may say that our change-over to war production was smooth and rapid. We have manufactured a variety of war products, very different from our peace-time production. Our manufacturing costs have compared favourably with other companies. We have made a number of striking contributions in the field of design, and have instituted economies in manufacture which have saved the Exchequer very substantial sums indeed. Your company has gained an enviable reputation with the supply departments, and I believe we have earned a leading place in the light engineering industry.

When the country has come victoriously through this long period of struggle your company will be faced with an enormous task. We shall have four or five years' normal replacement sales to catch up, and many users who have rightly refrained from having their machines serviced will require service. I am confident that we shall be able to change back to peace-time products with the same speed as we switched over to war production.

This year our turnover is a record many times our pre-war turnover. But your company has not become liable for E.P.T. owing to the very small margin of profit which has been made (and rightly so) on the war goods we manufacture.

The policy of the board all through the war with regard to dividends has been conservative, and although we have not added to our general reserve we have built up our income-tax reserve to one year ahead of legal requirements. During the war the amount of profit which has been retained for this specific purpose amounts to no less than £262,500. I am sure that the action to which you have agreed in retaining profits for this purpose will eventually be rewarded.

The report was unanimously adopted.

## JOHN WRIGHT AND SONS (VENEERS), LIMITED

### ACTIVITIES FULLY MAINTAINED

The eighth annual general meeting of John Wright and Sons (Veneers), Limited, was held, on the 24th ultimo, in London.

Mr. L. C. W. Jenkins, F.C.S. (chairman and managing director), expressed sincere thanks to the staff and workpeople of the company for yet another year's real hard work and loyal co-operation, which had enabled the company to grapple satisfactorily with the tasks imposed upon it. He wanted also to thank his colleagues for their unselfish and untiring devotion to their duties and for their ever-willing assistance in the manifold problems which occurred day by day. He also paid tribute to the late Sir William Mallinson, who, with his father, was with the company until 1936.

Continuing, he said that the balance-sheet indicated that the activities of the company had been fully maintained and that it still was in a very healthy condition. The result of the eighth year's working showed, after providing for E.P.T. and War Damage Contribution, a profit of £40,217, which compared with £35,556 in 1942. The board, having in mind the small variation, considered that the amount available for the year under review should be dealt with on similar lines to the appropriations made in 1941 and 1942—namely, that £5,000 be placed to general reserve and £1,000 added to the reserve for doubtful debts, making a total reserve for doubtful debts at the date of the balance-sheet of £8,000.

After those appropriations had been made there was now, at the end of the eight years' working, a general reserve of £40,000, and, with the addition of £1,467 in 1943, there was an unappropriated balance of £9,272 carried forward to the credit of profit and loss account.

The report was adopted, and the proposed final dividend of 5 per cent., making 7½ per cent., less tax, for the year, was approved.

## BECALMED

"As idle as a painted ship upon a painted ocean"—without the motive power of wind the sailing ship is useless. Without adequate funds the Christie Hospital, the largest Cancer treating hospital of the Empire, is unable to extend its increasing fight against Cancer. Don't let our work falter or fail from lack of your help; send a donation to-day.

**CHRISTIE CANCER HOSPITAL**  
&  
**Holt Radium Institute**  
MANCHESTER, 20

(Continued from page 444)

Of the increase of 6.9 million in the total labour force since January, 1941, it is stated that less than two million has been derived from the normal growth in population and the remaining five million from persons not normally seeking employment. Even so, there are stated to be still 3.5 million urban housewives under 45 years of age without children who are not employed. Of the current total labour force of 60.9 million, 20.3 million, or exactly one-third, are in the armed forces and the munition industries. Comparable figures for the United Kingdom have never been published, but it is probable that the proportion of the employed population in this country in the armed forces and in munitions production is also about one-third. But it is also probable that, owing to the intensive employment of women, a higher proportion of the total population is employed here than in America. The American figure of 60 million is about 44½ per cent of the population. The British figure has been stated to be about 22 million, which would be 47 per cent of the population. Broadly speaking, however, the manpower pictures of the two countries are very similar.

## Census of Production

It is encouraging to know that, as stated in a Note on International Statistics in *The Economist* last week, the Board of Trade is laying its plans for an annual census of production with a more extensive range of information than the quinquennial pre-war censuses. Moreover, the Board of Trade is rendering the statistician a service by making available, in galley form, sections of the Final Report of the 1935 census of production that would have been published had the type not been destroyed. The first section to be made available, at 15s. a set, is that relating to the building and building materials trades. Since the number of galley

proofs to be reproduced will depend on ascertained demand, the Board of Trade is anxious that those who wish to purchase a copy should inform the Assistant Secretary, Statistics Department, Board of Trade, Romney House, London, S.W. 1. The results of the 1935 census of production will be indispensable as a basis of comparison with post-war figures.

## Company Result

## Associated Electrical Industries.

## FINANCE AND BANKING

**THE MONEY MARKET.**—The Bank return reflects the efficacy with which the exceptional movement of funds during the week has been neutralised in its impact on bank cash. Bankers' deposits have fallen by £10,000,000, but this movement still leaves them at the comparatively comfortable level of £188,794,000. No part of this decline in bank cash is attributable to the immobilisation of funds in Government accounts, and Public deposits are virtually unchanged over the week at £7,107,000. In fact the whole of the decline in bankers' deposits is balanced by a further expansion of £11,013,000 in the note circulation. This movement is accounted for by end-month influences but it makes a singularly unfortunate appearance in the middle of London's Salute the Soldier Week. The position in the money market has been kept fairly taut, but only small official assistance has had to be given. The banks have been helped by the absence of TDR payments against which there were about £30,000,000 of effective maturities and even more TDR will have been pre-encashed.

**MONEY RATES, LONDON.**—The following rates remained unchanged between Mar. 24th and Mar. 30th:—

Bank rate, 2% (changed from 3% October 26, 1939). Discount rates: Bank Bills 60 days, 1½%; 3 months, 1½%; 4 months, 1½%; 6 months, 1½%; Treasury Bills: 2 months, 1½%; 3 months, 1½%; Day-to-day money, 1½%. Short Loans, 1½%. Bank deposit rates, 1%. Discount deposit at call, 1%; at notice, 1%.

**Exchange Rates.**—The following rates fixed by the Bank of England remained unchanged between Mar. 24th and Mar. 30th. (Figures in brackets are per of exchange).

(a) From March, 1942, figures are exclusive of men classified as unsuitable for ordinary industrial employment, and women unsuitable for normal full-time employment. Since January, 1943, the figures have been published at quarterly intervals. (b) From January, 1940, includes former Southern and South-Eastern divisions. (c) Includes Southern division before January, 1940. (d) From September, 1939, Grimsby and Lincoln included in North Midlands instead of N.E. England. (e) From December, 1941, High Peak Parliamentary Division of Derbyshire included in North Midlands instead of N.E. England. (f) Ordinary and self-balancing revenue and expenditure. Annual figures are totals for financial year, beginning in year shown. Monthly figures are cumulative. (g) Average of weekly figures. (h) Annual figures for 1929 and 1932 do not include District Bank.

The Royal Mint has not yet issued any figures of the coins struck in 1943, but it is probable that the quantity of silver coin issued during the four years ended June 30, 1943, was about £28 million. Of this total rather less than £3,500,000 has been retained by the banks. In the same four years about £800,000 of bronze has been issued—chiefly farthings and halfpennies; no pence have been struck since June, 1940. The whole of this has been passed on to the public, together with nearly another £1,000,000 of the banks' pre-war stocks of bronze. The banks' holdings of nickel 3d. bits shows a relatively big increase from £224,461 to £833,772. In the four years to June 30, 1943, the quantity issued by the Mint was around £2,500,000; the bulk of this has therefore gone into circulation. In considering these figures it should be remembered that June 30, 1939, was a Friday, a day on which the coin holdings of banks are reduced by heavy withdrawals for wage payments.

## INDUSTRY AND TRADE

Closed Shops.—The latest figure for retail shops closed down during the war on the Board of Trade's Register of Withdrawing Retail Traders was given as 11,490 by the Parliamentary Secretary to the Board of Trade to the House of Commons on March 28th. The list consists of 2,663
