THE FRAMEWORK OF *India's Future*

The individual plans and dreams of a better world. May he plan ever so nobly, alone he can achieve little. But the industrialist is busy with his vision, resources and experience to create better living and to make the individual's plans a reality.

In Western India, the sixty-year old firm of Herman and Mohatta is busy too. Its vast iron and steel works are now engaged in such researches as will revolutionise the living of the common man.

Stock Markets to-day and to-morrow:

B. I. C. 1944 RESULTS

The initial reaction to the Budget proposals on the Calcutta Stock Exchange was quite favourable and a rise of 1 to 2 points was recorded by leading counters towards the end of last week. But the spectacular successes of Allied armies on the Western Front and the renewal of the offensive on Berlin by Russian armies have induced a note of caution, especially as Bombay and Madras markets are inclined to take a bearish view of the immediate outlook. In mid-week, it looked as if operators were revising their ideas regarding the course of prices in the event of the cessation of hostilities in the West. With the fears about a large increase in imports and a reduction in the war effort of the country resulting in a decrease in industrial profits, it was suggested that dividends might be lower especially as the Finance Member had estimated a decrease in the yield on account of Incometax and E. P. T. by as much as Rs. 20 crores. The decline in prices, however, has not been appreciable on the Calcutta Stock Exchange and there is still a feeling that with the continuance of cheap money conditions prices will be kept up especially as the reduction in war demands would be offset by an increase in demand from other directions and working expenses also would be lower.

* * * *

While there is every case for a general decline in the yield basis the factor that has to be reckoned with at the moment is the lack of scope for reinvestment and the particularly large volume of surplus funds which have to be kept in hiding and which cannot possibly be profitably utilised otherwise. Thus, as has been pointed out already, the decline in prices if anything would be gradual and that, too, over a period of years.

* * * *

The accounts of the *British India Corporation Limited*, as usual, make good showing. The results for the latest accounting period would have made even better showing but for the difficulty in respect of raw materials. Total sales were again over Rs. 10 crores though a considerable reduction in stocks on hand was reported. As there was a further increase in working expenses and total production was less than 1943, the net profit for the year ended December, 1944, shows a big decrease to Rs. 1,27,15,356 from Rs. 1,96,33,854 for the previous twelve months.

The figures regarding sales, stocks and profits for the last three year's are given below:

Year	Sales	Closing stock	Net profit
	Rs.	Rs.	Rs.
1944	10,25,29,400	2,23,23,006	1,27,15,356
1943	10,74,72,546	2,91,16,312	1,90,33,804
1942	8,28,34,868	1,59,07,221*	1,15,72,952

*Opening stock Rs. 98,74,438.

Profits are thus still higher than 1942. The provision for taxation is Rs. 85,25,000 (Rs. 1,35,00,000) while the allocation to Reserve against Compulsory deposit is Rs. 15 lakhs (Rs. 30 lakhs).

The amount set aside to depreciation is unchanged at Rs. 9 lakhs. The dividend has been maintained at four annas per share, for many years in succession. The amount carried forward is higher at Rs. 3,03,698 against Rs. 2,65,092 brought in.

* * * *

As the Corporation attained its silver jubilee on February 24, 1945 it was generally expected that the occasion would be utilised to declare a bonus to shareholders. But, besides the usual dividend the shareholders do not get anything. There was a rise in the quotation for the shares in expectation of a larger distribution but the quotation is again around Rs. 6-12.

* * * *

As has been pointed out on earlier occasions British India Corporation is one of the important companies which have considerably strengthened their financial position in wartime. In 1939, Sundry liabilities were Rs. 90,14,909, block Rs. 60,71,240 and liquid assets Rs. 1.77,25,114. Net liquid assets were thus Rs. 87,10,214. At the end of 1944. sundry liabilities were Rs. 2,66,43.591 block Rs. 52.15,879 and liquid assets Rs. 4.48.98.996. Net liquid assets were Rs. 1 82.55,405. As there is a decrease in block by Rs. 8.56 lakhs it should be said that the Corporation has been able to add to its resources to the extent of Rs. 1.74 crores. Having regard to the fact that the total paid-up capital is Rs. 1 25.15.000. Rs. 81 lakhs and 44.15 lakhs in Ordinary shares, it was generally expected that the directors would decide on a bonus issue.

The addition to the resources of the Company would be very much more if it is remembered that large tax refunds will be received in post-war years. B.I. Corporation shares are, therefore, the best for the small investors. Even at Rs. 6-10 cum-divided the yield on the shares is 3.9 tax-free The break-up value is nearly Rs. 4 per share.

* * * *

Buckingham & Carnatic and Bangalore & Woollen, two important companies in South India, have done well in spite of control and shortage of coal. The net profits for the latter half of 1944 are actually higher than the figure for the first six months of 1944.

Buckingham & Carnatic Company, Limited has made a net profit of Rs. 1,15,23,343 against Rs. 75,29,299 for the six months ended June, 1944. After providing Rs. 3,23,252 (Rs. 3,37,348) for depreciation and Rs. 87,50,000 (Rs. 52,50,000) for taxation and Rs. 18 lakhs to Reconstruction Reserve against Rs. 13 lakhs being part of the estimated compulsory deposit due to the Government, the dividend on ordinary shares has been maintained at Rs. 6/4 per share. Superannuation Fund receives Rs. 24,159 against Rs. 24.051 on the former occasion. The amount carried forward is Rs. 81,489 against Rs. 93,182 brought in. Just like B. I. Corporation, the shareholders of B & C have not derived any great advantage out of the improved conditions in the industry on account of the war though it should be said that there was a small increase in the distribution from 8 percent per annum to 12½ percent per annum. Against the increase in earnings, however, the slightly higher distribution to shareholders is of little significance especially if it is remembered that the dividend amount required for payment on ordinary shares is not very much in relation to earnings.

EXCELLENT WAR NEWS DEPRESSES MARKETS

(By Analyst)

BOMBAY, March. 9.

From the favourable news published in the Papers it looks as if the European war is coming to a close very soon. This must have been probably be the principal reason for the operators in Bombay to be bearish. The sagging tendency was more pronounced in the Steel section due to rumours that Tatas will be paying very much lower dividends than last year. Some operators were estimating that the dividend for deferreds will be only Rs. 109 (i.e., Rs. 20 lower). It is true that profits are lower but I feel that the dividend will be somewhere around naries. Usually, Marwari operators used to Rs. 115 for Deferreds and Rs. 20 for Ordilead the show in Tata Steels as well as other popular counters. This week some prominent Paris Bill operators seem to have sold their holdings and I hear that they are going to give delivery of the shares in the market. I will not, therefore, be surprised if Tata Steel deferreds decline to somewhere about Rs. 2,000. I would recommend investment purchases around this rate. Tata ordinaries have now declined to Rs. 390. Indian Irons also suffered a fall to Rs. 39-12 and Steel Corporations to Rs. 32-14.

Textiles, on the other hand, were slightly steadier since many of the operators sold Tata Steels and bought Bombay Dyeings and Kohinoors. Bombay Dyeings were remarkably firm around Rs. 1,856-4. It is said that due to a heavy short position in Dyeings and Kohinoors the private budla against the sellers was Rs. 3-12 in the case of Dyeings and Rs. 3 in the case of Kohinoors. These are abnormal and unheard of rates, particularly for Kohinoors. Kohinoors are quoting around Rs. 621 only due to the technical position of the market. There might be a further rise in Kohinoors and Dyeings, but I would recommend selling Dyeings and Kohinoors on a further rise. Swadeshi Mills, I hear, have declared a dividend of Rs. 22 as against Rs. 35 last year. The shares have now declined to Rs. 538. This is also a good investment scrip but I expect a fall of forty to fifty points and, therefore, I would recommend purchases only below Rs. 500 cum-dividend.

Among the low-priced scrips Apollos have come out with a very satisfactory report. Of course, the dividend is only four annas per share as against six annas in the previous year, but looking to the working of the mills I feel that Apollos will be able to maintain a dividend of four annas for the coming years. The shares look a good buy at the current price of Rs. 4-5 cum-dividend.

Madras mills have come out with very disappointing dividend declarations. I hear Dhanalakshmi Mills have declared only sixteen per cent as against fifty per cent last year, Radhakrishna Mills have declared a dividend of only 20 per cent as against 50 per cent. I have already mentioned in my previous gossip that Vasantas have paid only fifteen per cent as against 30 per cent last year. Therefore, there has been no activity in Madras Mill shares.

Calcutta also has been quiet due to profit-taking.

INDIAN TEA LICENSING COMMITTEE

Registration of Quota Transfers 1944/45.

PRODUCERS OF TEA ARE HEREBY NOTIFIED THAT the latest date for registration of transfers of Export Quota Rights in respect of the year 1944/45 is the 20th March, 1945. Quota transfers will not be registered unless the necessary transfer forms are received by the Joint Controller, from both parties to the transfer, by that date.

J. M. PYE,
Joint Controller.

GAYA SUGAR MILLS LIMITED

NOTICE is hereby given that the Twelfth Annual General Meeting of the SHAREHOLDERS of the above Comnay will be held on 25th March, 1945 at 12-30 p.m. at 'KRISHNA BHAVAN' Gaya for the purpose of receiving the Directors' Report, passing the accounts for the year ending 30th September, 1944, declaring dividends, electing Directors, appointing Audtiors, and transacting any other ordinary business that may be brought forward.

The SHARE TRANSFER Books of the Company will be closed from 11th March, 1945 to 25th March, 1945 both days inclusive.

By order of the Board,
M. M. RAZ,
Secretary.

THE BOMBAY DYEING & MFG. COMPANY, LIMITED

NOTICE is hereby given that an Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Neville House, Graham Road, Ballard Estate, Bombay, on Thursday, the 29th March, 1945 at 10-30 a.m. (Std. Time), for the transaction of the following business:—

(1) To adopt the Directors' Report, the Audited Balance Sheet and Profit and Loss Accounts for the year ended 31st December, 1944.
(2) To sanction the declaration of a dividend.
(3) To elect Directors in place of those who retire by rotation, but are eligible and offer themselves for re-election.
(4) To appoint Auditors for the current year and to fix their remuneration.
(5) To transact such other business as may be brought forward by the Directors.

Co., Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 29th day of March, 1945 at 10-45 o'clock in the forenoon (New Standard Time) or so soon threafter as the ordinary General Meeting fixed for the same day has been concluded, for the purpose of passing two resolutions as special resolutions in terms of the notice posted to Shareholders.

By order of the Board,
NOWROSJEE WADIA & SONS LTD.,
N. N. WADIA,
Director,
Agents,
The Bombay Dyeing & Mfg. Co., Ltd.
Bombay, 1st March, 1945.

INDIAN PAPER MAKERS ASSOCIATION

ACHIEVEMENT OF THE INDUSTRY IN WAR TIME

Speaking at the Annual General Meeting of the Association held on March 9 Mr. R. W. Mellor the Chairman said:

In my remarks at the General Meeting early in 1940 I referred to the effect of the impact of war on the paper industry. A lot has happened since then, and it is perhaps now time to take stock of what the paper industry in this country has been able to achieve during the five and a half years of war.

During the first few months of the war conditions were fairly normal. Production remained constant, but manufacturing costs began to rise with an ever-increasing tempo, so much so that today it is found that the main raw materials have advanced in cost by two to three hundred per cent; coal—an extremely important item in the production of chemical pulp—has increased in pits-mouth cost nearly three times and wages, including food benefits, by over two hundred per cent. There have been similar high increases in the costs of machine-clothing, chemicals and mill stores and, unfortunately, indications today are that costs have not yet reached the peak. Like other industries, adequate supplies of coal still constitute a serious problem. Transport of both raw materials and finished goods has been one of the main difficulties to contend with and coupled with it, there have been dicisions by the Railway Companies raising the rates of freight both on raw materials and finished paper. Paper, prices have, however, been practically stable for some time and the industry as a whole is now on a firm basis.

It may be opportunate now to refer to the recent proposal by Mr. Cuffe of the B. & A. Ry. to form a Central Railway Rates Committee to co-ordinate and fix railway freight rates all over the country. This, in my own personal view, is a suggestion well worth the serious consideration of all industrial Associations. In the post-war period, when competition begins and manufacturing costs have to be reduced, I forsee that the co-ordination of railway rates will be found to be very necessary.

In passing, I should like to take this opportunity of expressing, what again is my own personal opinion, that experienced and representative business men should always be permanently and practically associated with the Railway Board—a transport business undertaking of some magnitude.

With the encouragement and support of the Commerce Members and the present Supply Member, the paper industry, since the outbreak of the war, has suceeded in particularly doubling its total tonnage production and has been able to manufacture qualities previously not made in this country—qualities of especial importance to the Army and the war effort generally. For a short time Government actualy requisitioned 90 per cent of the total production of the mills and later reduced their demand to 70 per cent, leaving industry, trade and education to struggle along with the rather inadequate balance of 30 per cent. Recently, however, I am glad to say that the Government of India have introduced a stricter measure of price and distribution control through the Paper Directorate in Calcutta with, I hope, beneficial results to actual consumers and printers all over the country.

It has also recently been possible for Government to achieve much closer and more successful co-ordination in the matter of relative tonnage of supplies for Government and the civil demand. Further, a considerable tonnage of paper has been imported for Government account. The final result has been that the Government authorities concerned two months ago found it possible to release 55 per cent of the total output made in this country for the ordinary consumers and users of paper. This has been of great benefit especially to printers to text books, religious books and stationery manufacturers, who had been unavoidably working on short supplies. The division of paper for Government and the public is now very properly decided on a quarterly basis, and it is expected that in April the total production will be shared equally, which while not yet sufficiently adequate for the general market, is a decided improvement.

Paper makers as a whole still appreciate the paramount and vital importance of supplies of paper for Government administration and the Army, and have, in fact, placed this in the forefront of their manufacturing programmes, but they also recognise that it is important to the life of the country that an adequate supply of paper should be available to all and especially for education and the publishing industry. It may be some time before Dr. Sargent's scheme of universal education, to which I referred last year, can be put into operation, but I hope and trust that the scheme still remains a live one and that the eventual financial implications of it are already being worked out and planned. Postwar planning must surely give education high priority.

A good deal is being spoken nowadays about post-war problems and post-war planning. It is, I consider, difficult to plan ahead for the pulp and paper industry in this country on a realistic basis until we have an opportunity of considering how the present very much increased production of paper is likely to fit into the national peacetime economy. When the unusual Government and Army demand begins to decline, more paper will be available for civil consumption, and it is yet too early to judge to what extent and how soon the increased output will be absorbed by the growth of industry and trade and the advance in education. This is a very important point for Government consideration when imports are being sanctioned.

There is no doubt that one obvious result of the World War will be to generate a strong interest in world politics, worldwide social activities and the advancement of education. In these developments paper must play a great part. There then must be an increased demand for paper in this country, but this demand is essentially bound up with the educational policy of the Government of India and the Provinces and States.

It is a truism that modern civilisation is based on paper. There is no doubt whatever that India will be in a position after the war to supply its own full requirements of paper, except only a few specialities and those mechanical newsprint qualities, which are made extremely cheaply and economically in countries abroad, blessed with huge forests of timber and inexpensive river transport. I believe, however, that the paper industry here is now established on a sound and firm footing; but expansion must follow increased demand.

Before I conclude I should like to say that, associated as I have been with the Indian pulp and paper industry for the last twentyone years, I am glad that it has fallen to me to preside as Chairman of the Association during its Jubilee Year. The Association was founded in 1895 and I must admit that I was not its Chairman then! This Association of ours was formed on very humble and unpretentious lines. Only five mills were members and the total annual production of paper could not have been more than about 20,000 tons. Today the Association combines the interests of eight mills with a total of twentyfour machines, making seventyfive percent of the total production of paper in the country. The end of the last century was the time of pioneering in the indsutry, when bamboo as a raw meterial had not been seriously thought of, but when sabai grass was beginning to be used as the basic raw material both in Bengal and in Lucknow, in which places it is in fact still being used successfully in the three oldest paper mills in this country. Bamboo is now, however, the main fibre and is, in fact, a fibre second to none for flexibility and general purposes.

Between 1902 and 1905, two of the Mills, because of extreme competition from abroad were unable to continue to manufacture and they were eventually absorbed by one of the other larger mills. The industry continued to struggle for its existence till 1914, when war conditions gave the mills an opportunity to develop on a prosperous basis. The inevitable slump came, however, after the Great War, about 1920, and the outlook was very dark indeed, until the Tariff Board in 1924-25 decided in favour of the protection of the industry. From that time the paper mills began to recover their lost markets and were eventually able to begin to renovate their old machinery and plant, which had been used so continuously and so intensively during the war period.

From its early days the paper industry here has emerged through economic storms and competitive struggles to form one of the most important basic industries in the country—an industry alike valuable in peace as in war—producing well over 1,00,000 tons a year. In view of the high population of India, this tonnage may appear relatively low—as indeed it is—but with the gradual but sure growth of agriculture, education and industry, attended by a substantial improvement in the income of the common man, consumption of paper will soon increase, bringing with it immeasurable benefits to the country as a whole.

When peace comes, I believe that for a number of year after, a great many countries of the world will depend on America, Great Britain and the British Commonwealth for both raw materials and manufactured goods. India will take her share in this international trade, which in my view is likely to expand with the rehabilitation of the countries oppressed and ravaged in the war. Paper of all typets will be in increasing demand in India itself, as I have already said, consistent with the growth of education and trade, but it would be wrong to forget the fact that when war broke out in 1939 a state of overproduction in the paper industry in this country had been proved, with the result that severe internal competition set in. I trust, however, that when the Diamond Jubilee of this Association comes to be celebrated in ten years' time, wise counsels and careful planning will have resulted in continued prosperity for the industry as a whole.

This is the last year I shall preside at your meetings, and I should like to say how much I appreciate and value the unstinted cooperation and help I have always received from the member mills of the Association. I would also acknowledge once more the hard and efficient work of the Secretary and his staff.

UNITED COMMERCIAL BANK LIMITED

2, Royal Exchange Place, Calcutta.

NOTICE IS HEREBY GIVEN that the SECOND ORDINARY GENERAL MEETING of the Shareholders of THE UNITED COMMERCIAL BANK LIMITED will be held at the Registered Office of the Bank at 2, Royal Exchange Place, Calcutta, on Wednesday, the 28th March, 1945, at 4 p.m. to transact the following business:—

1. To receive the Report of the Directors and the Audited Balance Sheet as on 31st December, 1944 and Profit and Loss Account for the 9 months ended 31st December, 1944.
2. To elect four Directors in the place of—
   Mr. M. A. Ispahani
   Mr. I. P. Goenka
   Sir Adamjee Hajee Dawood Kt. and
   Mr. Motilal Tapuriah
   who retire under Article 95 of the Articles of Association of the Bank, but are eligible for re-election and offer themselves accordingly.
3. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
B. T. THAKUR,
General Manager.

Calcutta, 7th February, 1945.

N.B.—The Transfer Books of the Bank will be closed from 8th March to 28th March, 1945, both days inclusive.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 10.

Easier conditions have been noticeable on the Calcutta Stock Exchange in the past week and business passing was on a restricted scale. The sudden developments in the war situation and the expectations of an early end to the European war, combined with the weakness of Bombay and Madras markets, have been mainly responsible for the easier tone of the Calcutta Stock Exchange. But there has been no selling pressure and prices were only slightly lower than the highest levels touched at the end of last week following the announcement of satisfactory budget proposals. A steadier feeling is noticeable at the time of writing and it looks as if there cannot be any appreciable decline in prices. Coal shares were rather weak *Burrakurs* being lower at Rs. 42-12 and *South Karanpura* at Rs. 30-8, but there has been a recovery to Rs. 31-2. *Indian Irons* drooped more than a point to Rs. 39-8 and are now quoting Rs. 40-2. In the jute section *Howrahs* reacted sharply to Rs. 85-11, but are at present quoting Rs. 86-12. In view of the hesitation shown by operators it cannot be said with any definiteness what exactly will be the course of prices in the next few weeks though it can be said that there will always be a tendency to stage a recovery.

Giltedged securities section were steady with 3½ per cent Paper quoting Rs. 99-11 though among Terminable securities longdated loans were a shade easier. 3 per cent 1963-65 were Rs. 98-11, 3 per cent 1966-68 Rs. 98-4, and 4 per cent 1960-70 Rs. 112-13. 3½ per cent 1947-50 on the other hand were steady at Rs. 103-8, 2¾ per cent 1948-52 at Rs. 99-8. 3 per cent 1951-54 at Rs. 100-13 and 3 per cent 1953-55 Rs. 100-2.

Bank shares have been steady with *Reserve Bank* quoting Rs. 133. *Calcutta National Bank* changed hands at the higher price of Rs. 15-8, while *United Commercial Bank* were Rs. 18-8 ex-rights.

Cotton shares were uninteresting even after the dividend declaration by Madras Mills. *Cawnpore Textiles* quoted Rs. 13-10, *New Victoria* at Rs. 7-10 and *Basanti* Rs. 12-14.

Among Coal shares as stated above there was a reaction in *Burrakurs* to Rs. 42-10 from Rs. 44-8 at the end of last week. The quotation now is Rs. 43-4. *Equitable* were very steady at Rs. 70-10 on reports that the company was doing very well while *Bengal* were 10 points lower at Rs. 707. *Amalgamated* were steady at Rs. 54-4 as also *Bhalgora* at Rs. 20-15. *Nazira* were quiet at Rs. 22-2, but *New Manbhoom* have been in request at Rs. 41-4. There was good buying of *New Churulia* around Rs. 14. *South Karanpura* fluctuated between Rs. 31-8 and Rs. 31-4, but the close is steadier at the higher levels.

The Jute section reacted favourably on reports regarding the improvement in the coal situation but the fact that steam-driven mills have not been able to take full credit for the dues from the industrial pool has had a discouraging effect on values. The weakness of the other sections also has to a certain extent been responsible. *Howrahs* came down from Rs. 87-12 to Rs. 85-10, but have recovered to. Rs. 86-12. *Presidency* fluctuated around Rs. 12-4, while *Anglo-India* were Rs. 465. *India* were Rs. 7-12. *Kamarhatty* Rs. 668, *Megna* Rs. 125 and *National* Rs. 33-6. *Nellimarla* were very steady at Rs. 35-10. There was a sudden rise in *Northbrook* to Rs. 42-8, but *Nuddea* were lower at Rs. 128.

In the Engineering section, *Indian Irons* on heavy selling came down to Rs. 39-10, but with fresh buying there is no appreciable decline on balance. They are now quoting Rs. 42. *Steel Corporation* likewise came down to Rs. 32-10, but have recovered to Rs. 33-4. *Jessop & Co.*, were very steady at Rs. 25-12, while *Bhartia Electric Steel* were 2 points lower at Rs. 23. It appears that there is general enquiry for engineering shares, *Marshalls* being Rs. 5-4 and *Bridge & Roof* Rs. 24-2. *Braithwaites* were Rs. 12-13 cum-dividend.

In the Sugar section, there is a sharp rise in *Carew & Co.*, to Rs. 29-4, while *Ramnugger* have regained lost ground being quoted at Rs. 16. *Belsund* were Rs. 16-4 and *Darbhanga* at Rs. 28. *Samastipur Central* changed hands at Rs. 18-7 and *U. P. Sugar* at Rs. 29-8.

Steady conditions have been noticeable in the Tea section, *East India* being Rs. 17-8, *New Dooars* Rs. 1,456 and *Hansqua* Rs. 15-12. *Sonai River* were crossed at Rs. 26-12.

In the Miscellaneous section, Burma shares are rather quiet *Burma Corporation* being done at Rs. 5-10, *Consolidated Tin* Rs. 3-15 and *B. B. Petrol* Rs. 5-6. On the maintenance of the dividend of 4 annas per share *B. I. Corporation* have been marked back to Rs. 6-12. The expectation of a Jubilee bonus has not proved correct. *Dunlop Rubber* were 3 points higher at Rs. 63 while a single transaction was recorded in *Calcutta Trams* at Rs. 45-14. *Indian Cables* were very steady at Rs. 29 and *Indian Wood Products* at Rs. 31-8.

Paper shares were very firm with *Titaghur* at Rs. 28-8 and *India Paper Pulp* at Rs. 233. *Midnapore Zemindary* were sticky at Rs. 174 and *Assam Saw* at Rs. 6. *India General Navigation* were Rs. 193 and *Port Shipping* Rs. 30.

(Continued from page 313)

The total of the balance-sheet at the end of 1944 was Rs. 4,12,89,592. At the end of 1938 the figure was Rs. 214,27,733. The increase in the total of balance-sheet is due mainly to the addition to reserves, there being no change in the total of paid-up capital. Reserves amounted to the formidable figure of Rs. 1,20,36,917 at the end of 1944 while they were only Rs. 49,22,302 in 1938. Taxation reserve in 1944 was Rs. 93,95,694 against Rs. 420,709 while other liabilities were Rs. 87,92,880 against 48,99,593 in 1938. There was no big increase in the value of the block which has been substantially depreciated to Rs 47,88,807 in 1944 from Rs. 81,29,763. Having regard to the large increase in sales the rise in stock intrade cannot be regarded as excessive at Rs. 97,56,845 against Rs. 54,82 564 in 1938. Stores and spares were Rs. 38,12,377 against Rs. 24,55,258. Investments are Rs. 9 lakhs higher at Rs. 56.25 lakhs while the amount on E.P.T. deposits compulsory and optional is the substantial figure of Rs. 44.55 lakhs. Cash balances should be considered rather ample at Rs. 38.85 lakhs against only Rs. 2.13 lakhs six years back. As in the case of B.I. Corporation no credit has been taken for tax refunds nor for interest accrued on deposits.

* * * *

The sister company *Bangalore Woollen Cotton & Silk Mills Company, Limited* has also done well in the same halfyear. The net profit, before providing for taxation and depreciation is Rs. 30,91,950 against Rs. 20,89,487. As usual, the bulk of the increase in earnings has been taken up by additional provision for taxation and compulsory deposits, the amount transferred to income-tax supertax and E.P.T. being Rs. 13,89,000 against Rs. 12,88,000. Provision for depreciation is Rs. 4,94,753 against Rs. 4,04,776. The amount transferred to Reserve is Rs. 3 lakhs. Reconstruction Reserve Rs. 4 lakhs and Dividend Equalisation Reserve Rs. 1 lakh. There were no appropriations under these heads on the former occasion. Officers Retiring Fund received Rs. 10,000 (Rs. 30,000) and workpeople's housing Rs. 1 lakh (Rs. 30,000) and Fire and Accident Insurance Rs. 1 lakh (Rs. 30,000). Even after these substantial allocations to reserves the dividend on ordinary shares is Rs. 10 per share against Rs. 6-4 per share. The amount carried forward is slightly lower at Rs. 1,96,234 against Rs. 2,33,633 brought in.

WATCH-DOG.

*After transferring Rs. 25,000 from Dividend Equalisation Reserve.

†Includes Rs. 2,20,000 being excess provision for taxation in previous account, Rs. 1,50,000 estimated tax and refund recoverable and Rs. 1,75,000 transferred from Dividend Equalisation Account.

(Half-yearly General Meeting on 28-3-1945 at 12-25 p.m. Books closed from 15th March to 28th March, 1945).

Audited accounts for the half-year ended 30th November, 1944.

After making sundry adjustments, the results for the half-year show a profit of Rs. 92,691-3-8. After bringing forward the balance from the last account, there is a balance at the credit of Profit and Loss Account of Rs. 1,23,398-13-3 from which is recommended payment of Dividends on Preference Shares at Rs. 3-8 per share Rs. 35,000, and on Ordinary Shares at Rs. 7-8 per share Rs. 67,500, thus absorbing Rs. 1,02,500 and leaving Rs. 20,898-13-3 to be carried forward.

The Directors regret that during the halfyear there was a further deterioration both in the quantity and quality of coal supplies, and during the last five months of the halfyear the Mill was only able to work for five weeks.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. Out of a total of 1,414 working hours for the half-year, the Mill only worked 413 hours, however, and remained closed, during the remaining 1,001 hours.

Coal receipts since July have been deplorable. This has, of course, reacted severely on the Industrial Pool, and the Committee of the Indian Jute Mills Association have considered it necessary to issue an estimate of the financial position of the Pool Fund as at 31st December, 1944. In the Circular covering the financial position, it was suggested that Mill Companies take credit in full in their accounts for sums receivable from the Pool on account of Khoraki paid, and loss incurred on supplies of subsidised foodstuffs, to the labour during the periods they remained closed. but it was further suggested that in view of the position of the Pool Fund, it would be prudent meantime to limit the credit taken in the accounts for loom-hour payments, to 41.18 per cent of the full amount due under this head. The amounts receivable under both headings on the above basis have been credited in Profit and Loss Account. It is to be hoped that coal supplies will improve to such an extent as to permit of the Pool improving its financial position so that it may meet its obligations in full.

Such loom-hours as are paid for in full by the Industrial Pool will be cancelled under the Working Time Agreement. But apart from hours lost since the introduction of the Industrial Pool, the Company is still entitled to make up a total 998 hours, which consists of 924 hours mentioned in the last report and 74 hours which were lost in June before the Industrial Pool became effective on 1st July, 1944.

(Half-yearly General Meeting on 28-3-45 at 12-20 p.m. Books closed from 15th March to 28th March, 1945).

Audited accounts for the half-year ended 30th November, 1944.

After providing Rs. 10,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 1,53,365-15-7. After bringing forward the balance from the last account, there is a balance at the credit of Profit and Loss Account of Rs. 2,20,556-10-1 from which is recommended payment of Dividends on Preference Shares at Rs. 3 per share Rs. 15,000, and on Ordinary Shares at Rs. 10 per share Rs. 1.40,000, thus absorbing Rs. 1,55,000 and leaving Rs. 65,556-10-1 to be carried forward.

The directors regret that during the halfyear, there was a further deterioration both in the quantity and quality of coal supplies, and during the last five months of the halfyear the Mill was only able to work for five weeks.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating. Out of a total of 1,414 working hours for the half-year, the Mill only worked 418 hours, however, and remained closed during the remaining 996 hours.

(Annual General Meeting on 20-3-1945 at 12 noon. Books closed from 9th March to 20th March).

Audited accounts for the year ended 31st October, 1944.

The profit for the year, after providing for Depreciation and Taxation and placing Rs. 40,000 to General Reserve, was Rs. 86,363-4-0, to which is added the balance brought forward of Rs. 28,798-14-1, Total Rs. 1,15,162-2-1.

The directors recommend that the amount of Rs. 1,15,162-2-1 available for distribution be dealt with by paying a Dividend on Cumulative Preference Shares at 7 per cent per annum, free of income-tax Rs. 9,100, Dividend on Ordinary Shares at 12½ per cent per annum, free of income-tax Rs. 75,000, and Balance carried forward Rs. 31,062-2-1.

The Workshops continue to be fully occupied, chiefly on War Contracts.

(Annual General Meeting on 23-3-1945 at 4-15 p.m. Books closed from 13th March to 23rd March).

Audited accounts for the year ended 30th September, 1944.

The Gross Profit of Rs. 9,89,720-1-3 shows an increase of Rs. 1,16,200-9-6 when compared with Rs. 8,73,519-7-9 last year. After deducting overhead charges and providing Rs. 6,21,924-2-0 for Taxation (compared with Rs. 5,49,212-10-0 last year), the nett profit is Rs. 2,54,249-0-9 making the balance available for distribution Rs. 2,64,735-10-9. The directors recommend that this balance be disposed of as follows:

By payment of a Dividend of 14 per cent, without any deduction in respect of income-tax payable by the Company, on 1,20,000 Ordinary Shares of Rs. 10 each Rs. 1,68,000, by Reserve for compulsory Excess Profits Tax Deposit Rs. 87,976, to be carried forward Rs. 8,759-10-9.

The Factory was closed for the customary annual overhaul for three weeks in July, and all Machinery and Plant is in good condition.

The demand for the Company's products is in excess of its production, and the market can be considered to be very sound, but the difficulty of transporting finished products has not improved during the year. Difficulty over the transport of timber, the Company's raw material, was very great and to eliminate this the Company has purchased four Lease-lend lorries which worked satisfactorily.

*After providing for Taxation for which figures are not available in the balance sheet.

(*Annual General Meeting on* 23-3-1945 *at* 4 *p.m. Books closed from* 14th *to* 23rd *March*).

Audited accounts for the year ended 31st *December*, 1944.

After allowing for Taxation, Depreciation and Managers' Commission, the year's working shows a net profit of Rs. 75,46,909-6-2 which after taking into account the credit carried forward from the previous trading period leaves a balance at credit of Profit and Loss Appropriation Account of Rs. 75,95,866-13-1.

The Directors recommend that a dividend of 30 per cent be paid for the year, that a bonus of three months' wages (about Rs. 9,97,000), subject to rules be paid to workers, that Rs. 15,00,000 be placed to Renewal and Replacement Reserve and that the balance be carried forward.

Chairman.—Mr. J. M. Doak.

Div. % Defd.	...	1-8/ 7.39 As.	10/1.29

Audited accounts for the year ended 31st *October*, 1944.

The year's working shows a profit of Rs. 45,81,757-5-6 (including carry forward of Rs. 5,37,221-8-6), from which has to be deducted on account of Depreciation Rs. 1,96,137-11-0, Bonus to Workers and Staff for 1943 Rs. 43,596-1-3, Directors' and Secretaries' Commission Rs. 5,10,720, leaving at credit of Profit and Loss Account a sum of Rs. 38,31,303-9-3, which the Directors recommend being disposed of as under:—

(1) In payment of a dividend at 6 per cent on Preference Capital Rs. 1,56,330-0-0, (2) In payment of As. 2 per share dividend on Ordinary shares Rs. 1,14,494-2-0, (3) In provision of E. P. T. and Income-tax Rs. 30,89,667, (4) Bonus to Workers and Staff for 1944 Rs. 4,00,000, and (5) Carry forward Rs. 70,812-7-3.

In common with all other Textile Mills the profits for the year have been lower than those for the previous year; this is due to the successive reduction in the prices of cloth and yarn made every quarter by the Textile Commissioner under the Cloth and Yarn Control Order. As compared with the year 1942-43, the margin of profits has been very considerably reduced and this is reflected in the year's trading results.

Owing to an increase in the rates of taxation, which took place in March last, after the passing of last year's accounts, it has become necessary to provide a large sum for the payment of Government taxation, including Excess Profits Tax. Excess Profits have now been entirely absorbed to Government account either by way of taxation or freezing and while this position continues the payment of dividends to shareholders must be limited.

Secys.—M/s. J. P. Srivastava & Sons, Ld.

BRIDGE & ROOF CO. (INDIA), LIMITED

Audited accounts for the half-year ended 31st *December*, 1944.

The profit for the half-year, after providing for Debenture interest and Taxation was Rs. 1,31,963-6-0, to which is added the balance brought forward of Rs. 52,050-10-0, Total Rs. 1,84,014-0-0.

Out of the total of Rs. 1,84,014 the Directors have set aside Rs. 30,000 to Debenture Redemption Fund and Rs. 50,000 to Renovations and Replacements Reserve. This leaves a balance of Rs. 1,04,014 at the credit of Profit and Loss Account, which the Directors recommend be dealt with by paying a Dividend at the rate of 15 per cent per annum, absorbing Rs. 15,000-0-0 and Carry forward Rs. 59,014-0-0.

The Workshops continue to be fully occupied on War Contracts.

BENGAL FLOUR MILLS COMPANY, LIMITED

Audited accounts for the half-year ended 31st *December*, 1944.

Including the sum of Rs. 53,534-13-4 brought forward the amount available for distribution is Rs. 99,353-10-3, which the Directors recommend be dealt with by paying a Dividend at the rate of 12½ per cent per annum, absorbing Rs. 45,000, and Carry forward Rs. 54,353-10-3.

During the period, the purchase of wheat and the disposal of wheat products continued to be controlled by Government at prices fixed by them, and the Mill was called upon to work to about eighty per cent of its capacity.

(Continued from page 318)

ALUMINIUM CORPORATION OF INDIA LIMITED

Audited accounts for the year ending 31st March, 1944.

The Profit and Loss Account discloses a Loss of Rs. 7,89,337-15-3 including debenture interest. This with the figure of Rs. 10,98,004-0-8 brought forward from last year makes a total loss of Rs. 18,87,341-15-11, which is being carried forward.

Though the Alumina Plant was working during the period, the Reduction Plant had not started working. The Directors could not, therefore, make much headway in utilising the alumina—for alumina is primarily used to produce Aluminium metal which could be done only with the help of the Reduction Plant. Further, Alumina could not be sold extensively because the purposes for which Alumina is usable are limited.

In spite of the enormous difficulties the Directors had to face, the Corporation was able to tap the first Aluminium metal at the Works on the 10th July, 1944, which establishes a real land-mark in India in producing Aluminium metal from Indian bauxite. The Directors hope that as all the difficulties have now been overcome after a continuous struggle of about seven years the Corporation will be in an appreciably better position henceforward.

WORLD OF INDIAN FINANCE

Calcutta, Thursday Evening.

Extremely easy conditions continue to prevail in the money market and call money is quoting ¼ percent in Calcutta and ¼ percent in Bombay. There seems to be an appreciable decline in the demand for funds, the return of the scheduled banks for the week ended March 2, 1945 showing only a small increase in advances. The Imperial Bank statement for the week ended March 9, 1945 shows again a decrease in loans and advances. One would have expected, however, that with the large disbursements by the Government deposits of banks would have shown a bigger increase. At the auctions of treasury bills held this week applications were higher at Rs. 14.77 crores against Rs. 10.89 crores indicating that scheduled banks are more keen on short-term bills. But the average discount rate has again risen to 5 annas 6 pies percent per annum from 5 annas 3 pies. After the recent sharp decline in the yield on treasury bills the small rise in the discount rate in the past two weeks cannot, however, be considered as giving any indication of the general tone of the market. The offer for next week has again been maintained at Rs. 4 crores. With the lists for the New Loan opening on March 19, 1945 there may not possibly be any further increase in the treasury bills offer especially as maturities after the first week of April will be on a very much smaller scale. The short-term borrowing programme, however, will depend on the success of the new loan.

The Assam Government was successful last week in getting its requirements of treasury bills for Rs. 1 crore at 9 pies over the Central Government rate. Bidding also was very keen. Similarly, during the week the Government of Orissa was able to get its requirements at the same rate which is only 6 pies more than the Central Government treasury bills rate. Applications were as much as Rs. 2.2 crores against the offer of only Rs. 50 lakhs.

The announcement this week of the terms of the New Loan by the Central Government has not come as a surprise to the market as it was generally expected that the Finance Member would continue his earlier policy in respect of defence loans and that nothing would be done to disturb the giltedged market. The New Loan is thus a 3 percent 1959-61 Second Victory loan issued at par and redeemable at par. It will be on tap for an unlimited amount and subscriptions will be in the form of cash or cheque. As the Second Victory Loan has a later maturity date, the effect should be favourable on the giltedged market. After the announcement a general rise in prices was recorded, the improvement in quotations being particularly pronounced in medium-dated loans. Thus, 1953-55 loan was done up to Rs. 101/6; 1957 loan is quoting nearly at par while 1951-54 is a few annas higher at Rs. 100/14. Long-dated issues still continue to be unpopular. Whether the New Loan, which is more than a medium-dated loan, will satisfy the needs of the investor cannot be said just now. But for this loan to be a complete success Government support will have to be on a large scale. This question is discussed at greater length elsewhere in this issue.

The returns of the Reserve Bank for the week ended March 9, 1945 shows a further increase in notes issued, the excess of treasury bills maturities over sales and the absence of any subscriptions to loans making large-scale currency expansion necessary. Notes issued were Rs. 1,087.57 crores against Rs 1,068.78 crores Notes in circulation were Rs. 1078.07 crores against Rs. 1,068.32 crores. The increase is more pronounced in notes in circulation. Sterling securities were Rs. 10 crores higher at Rs. 971.33 while rupee coin showed a drop of Rs. 1.21 crores to Rs. 13.98 crores.

In the banking department, Central Government balances show a drop by as much as Rs. 21.53 crores. Other Government accounts, however, are higher by Rs. 10.79 crores at Rs. 26.77 crores. There was possibly some payment from the Centre to the Provincial Governments. For the second week in succession bank balances with the Reserve Bank show a big increase, the latest figure being Rs. 98.05 crores against Rs. 91.21 crores. Other deposits also were Rs. 1.07 crores higher at Rs. 20.82 crores. Both the Reserve Bank and the Imperial Bank have again been able to liquidate giltedged securities for a large amount. There is a decrease in the investment portfolio of the Reserve Bank by Rs. 3.68 crores to Rs. 17.34 crores. Balances held abroad are lower at Rs. 364.10 crores but if the transfer to the issue department of Rs. 10 crores is taken into consideration, there is a net receipt of Rs. 7.44 crores.

The statement of the Imperial Bank for the same week shows a decrease in deposits by Rs. 1.35 crores to Rs. 231.58 crores. But as investments and advances are lower by Rs. 4.56 crores there is an increase in cash balances by Rs. 3.26 crores. As remarked above, the decrease in advances to Rs. 70.06 crores from Rs. 71.1 crores shows clearly that trade demand for funds is now on a definitely smaller scale and that with the continued expansion of currency it should be possible for the Government to make a success of the Second Victory Loan.

The statement of the scheduled banks for the week ended March 2, 1945 shows a big increase in bank balances with the Reserve Bank even with the decrease in the working capital. Demand liabilities were Rs. 612.35 crores against Rs. 612.34 crores and Time liabilities Rs. 218.28 crores against Rs. 218.39 crores. Cash, however, was higher at Rs. 29.64 crores against Rs. 28.95 crores and balances with the Reserve Bank at Rs. 89.75 crores against Rs. 84.07 crores. Advances were Rs. 1 crore higher.

BOMBAY MARKETS

BULLION

(From our own correspondent)

Bombay, March 15.

Reports of German peace feelers have caused great excitement in the bullion market. Forward gold has declined to Rs. 68-10 today with spot quoting Rs 69 and Bulls are unloading hastily. The change in sentiment had come over the bazar even from Monday when the Reserve Bank announced larger sales of gold from 14,000 to 25,000 tolas and followed up with 32,000 tolas on Tuesday at Rs. 70 and 35,000 tolas on Wednesday at Rs. 70 and 35,000 tolas today at Rs. 69-10. The position of bulls is particularly vulnerable since on Monday in fear of losing control over market they supported near delivery and increased commitments. The offtake is 20,000 tolas, but in view of the decline in prices bazar is expecting a better offtake. Silver also has declined to Rs. 125-10 as against Rs. 127 on Saturday last, but spot is still six annas over. The undertone is nervous for both positions.

By Special Cable.

LEND-LEASE RENEWED FOR A YEAR

Washington, (*By Cable*)

The lines which Congressional debate on the Bretton Woods measures will take became evident last week in the testimony of Administration witnesses before the House of Representatives Banking Committee. In the discussion of the legislation to enable the United States to participate in the Fund and the Bank it made clear: Firstly, that the Administration will seek at the earliest moment approval without changes in substance, arguing that its hand thereby would be strengthened at the San Francisco Conference, and that failure to accept measures without alteration would necessitate calling a second Monetary Conference: Secondly, Republicans—the Minority members—indicated however their watchword will be anything but speed, and at the weekend no deadline was set for final action even in the Banking Committee.

The witnesses heard were the Secretary to the U. S. Treasury, Mr. Morgenthau, the Assistant Secretary of State,, Mr. Dean Acheson and (Assistant Secretary to the Treasury) Mr. Harry White, the principal author of the proposals. They added little to what has been said in support of the Bretton Woods agreement in the past except that Mr. Morgenthau defined the issue before Congress as "the first practical test of our willingness to co-operate in the work of world reconstruction and stabilization" and said it would be "helpful" if Congress takes affirmative action before the San Francisco Conference. A large body of opponents composed mainly of New York bankers has yet to be heard formally.

Meanwhile the House Foreign Affairs Committee has endorsed legislation to extend Lend-Lease programme for another year only in view of strenuous protests by Republicans against what they regarded as the possibility of Lend-Lease being used as a post-war reconstruction and rehabilitation vehicle. The Republicans wanted an amendment prohibiting such use in the written Bill itself, and failing to attain this, they probably will submit a minority report when measures are debated on the floor.

Their anxiety was aroused by a new agreement signed with France which provides for deliveries after the war ends in Europe of previously allocated materials on the conditions that the French will pay for them. The Foreign Economic Administrator Mr. Leo Crowley assured Congressmen that Lend-Lease would cease at the end of war.

The renewal of the Reciprocal Trade Agreements Act will soon be considered by Congress and in preparation therefor Administration officials went before the public by way of the Aradic last week to urge not only renewal but "broadcasting and strengthening" of legislation. Mr. Acheson said such was essential "if we are to negotiate further cuts in tariffs" Without the driving force of Mr. Cordell Hull who fathered the Act, the Opposition in Congress, may gain more ground than in previous instances. Legislation pending in the House Immigration Committee to permit immigration and naturalization of natives of India was linked to the future of reciprocal trade arrangements with India last week.

The Acting Secretary of State, Mr. Grew said in a letter to the Committee, he had advices from American officials in India that unless that country was placed on quota basis like other countries, sentiment might be such as to preclude extension of reciprocal trade treatment to the United States by India.

The New Loan

This week's announcement of the New Loan provides a fitting opportunity for reviewing Sir Jeremy Raisman's defence loan policy and programme. The Government's borrowings during the war years have been on a colossal scale; and each loan has been on more favourable terms to the Government than its predecessor. These two facts sum up the skill and success of Sir Jeremy as a planner of defence loans. It has always been the contention of "Indian Finance" that the only way of ensuring the success of a new loan is to make it slightly less favourable to the market than the existing loan. If this principle is not followed, that is to say, if the New Loan is designed on more favourable lines to the market, the immediate effect of the publication of the New Loan terms is to induce a downward movement in the giltedged market, so that, the yields on current securities will line up with the better yields offered on the New Loan. The announcement of the New Loan is thus accompanied by a selling pressure in the giltedged market; and this could hardly be described as a proper setting for the success of the New Loan. During the regimes of Sir George Schuster and Sir James Grigg as Finance Members, we had frequently criticised the loan policy of the Central Government as, on many occasions, adverse developments had followed the publication of new loan conditions. In the case of the loans planned and sponsored by Sir Jeremy, however, there has not been one instance in which the giltedged market has reacted adversely after the publication of the New Loan. In fact, every New Loan has induced and inspired a healthier feeling and a steadier rate in the whole range of giltedged securities.

In general terms, the Finance Member has stuck to the 3 per cent type of loan as his mainstay for wartime borrowings. Each succeeding loan, however, has been designed to mature at a later date. Beginning with an extremely short-dated loan as the first Defence Loan, the New Loan announced this week is due to be redeemed after 17 years with the option of the Government to repay at the end of 15 years. Thus, there has been a transition from a short-dated to a medium-dated loan; and the present experiment brings us to the early prospect of long-dated loans. The progress achieved in this regard is best appreciated by a close study of the Fourth Defence Loan and the two Victory Loans so far issued.

The first Defence Loan to be issued was in 1940 and took the form of 3 per cent 1946 bonds. That is, this was a short-dated loan with a maturity of six years. Moreover, the loan was to be redeemed in 1946 at a premium of Re. 1. The total amount that was secured from this loan was Rs. 65.14 crores. The present quotation is Rs. 102-5-6. The loan issued in 1941 was a 3 per cent 1949-52 which roped in Rs. 66.64 crores and whose present quotation is Rs. 101-6. The Defence Loan planned in 1942 was the 1951-54 loan, the total subscription for which came to Rs. 86.73 crores. The current market quotation is Rs. 101-1. The 3 per cent 1953-55, which was the Fourth Defence Loan, accounted for as much as Rs. 114.55 crores. This loan also is quoting at a premium, the present price being Rs. 100-6. The loan issued in 1944 was a 3 per cent 1957 Victory Loan; the final total subscription to this loan was stated to be Rs. 110 crores. This Loan is now quoting one to two annas discount. Meantime, the 3 per cent 1959-61 Second Victory Loan has been announced.

In addition to the Defence Loans and Victory Loans, the Government have, in continuation of the cheap money policy, been framing their borrowing programme so as to make available to the public a wide range of securities. The demand from banks for a short-term Government security was met by the creation of a special re-issue of the 2¾ per cent Loan 1948-52 to the extent of Rs. 50 crores. The continued demand from institutional investors for a long-term loan was met by the further creation of a 3 per cent Funding Loan 1966-68. From time to time, 3½ per cent Rupee Paper was also sold through the tap for considerable quantities.

The common points are that a 3 per cent type of loan has generally been adhered to; that the loans have been made available through the tap; and that each new loan, on the closing of the list, has steadily appreciated in value.

The interesting departure from orthodox loan policy was made in the Premium Bonds issued; but the sales, which have so far amounted to Rs. 4 crores, are lower than Government expectations. This is perhaps due partly to the fact that the issue has not been intensively publicised and partly to its proving less attractive than at one time seemed probable. The Government have decided to continue the experimental issue for the reason that it will help to draw out money from a class to whom other forms of investment do not make any great appeal.

Sir Jeremy announced in his Budget speech that the progressive total of public sales since the beginning of the war, up to the end of January, reached the impressive figure of Rs. 833 crores. This gives an average of Rs. 150 crores for the 5½ years of war. But the achievements, especially in the last two years, make magnificent showing. The total amount invested by the public in various forms of public loans reached Rs. 286 crores during the twelve months beginning with February 1, 1944 and ending January 31, 1945. This figure approximates with the total receipts for the previous twelve months. The New Loan programme for 1945-46 contemplates the raising of Rs. 300 crores. In the 'twenties and 'thirties, the average capacity of the Indian giltedged market in regard to subscriptions for new loans was of the order of Rs. 20 crores per annum. That this capacity has been increased fifteen-fold, and that this increased capacity has been accompanied by a healthier and stronger giltedged market, must be deemed a proud feather in Sir Jeremy's cap.

There has also been considerable expansion in the floating debt. From the pre-war average of Rs. 30 crores, treasury bill outstandings are now Rs. 70 crores to Rs. 80 crores higher. The short loan market has become healthier and stronger. The Central Government as well as the Provincial Governments are now able to secure their short-term accommodation at rates considerably cheaper than the rate paid by the British Government.

The public loans issued, especially in recent years, have not the same relevance to the ways and means budget. The colossal borrowings of the last two years must be regarded in this context and the other anti-inflationary measures suggested such as the hundred per cent immobilisation of excess profits, the pay-as-you-earn income-tax collections and the sales from gold and silver. The rupee loans issued for such colossal sums have also to be appreciated in relation to the redemption of all sterling loans and other replacements by rupee loans.

In the light of this review of Sir Jeremy's wartime borrowings, it is difficult to understand why the 3½ per cent Rupee Paper remains unredeemed so far. The basis of defence loans is the 3 per cent type of loan; and any continued sales of 3½ per cent Rupee Paper is so much unnecessary gift to investors. The 3½ per cent Rupee Paper reached par for the first time on November 16, 1944; and this unique event must have been utilised by the Government for undertaking the redemption of this stock by giving three months' notice. The cash position of the Government is so comfortable that the redemption of 3½ per cent rupee paper can now be tackled as a single operation. This redemption seems to us such an obvious course of action suggested by the present state of the giltedged market, such a logical climax to the loan policy of Sir Jeremy, that we are rather surprised that the Finance Member is retiring before putting through what would have constituted his most outstanding contribution to the credit of India and what would have been an epochal event in the annals of the Indian giltedged market.

Arguments for Tariffs

Assurances as to fiscal policy given by Sir Ardeshir Dalal several times this year, notably to glass manufacturers who desired the reconstitution of the Tariff Board have only been concerned with the maintenance of an advisory board capable of dealing with claims. That is the main reason for the acceptance last week of a comprehensive resolution dealing with future tariff policy. The Federation of Indian Chambers in asking for a declaration referred to industries that may be started hereafter and also to the extension of protection against internal competition. The distrust of affiliates of foreign concerns sheltered by the tariff explains the form and content of the resolution passed last week. But it is fairly clear that a declaration of policy must have the Indian legislature's approval, for a definite decision to extend Protection is a matter that touches the electorate. If it is urged that tariffs have never figured in election programmes so far, and the country has experience of protection for two decades and more, it is nonetheless important, to acquire previous sanction for a policy like the one recommended.

The freedom to regulate tariffs is not one arising wholly from the fiscal autonomy convention. It must spring from popular support for the planning programme of which tariff protection is an incident. Whether the Central legislature, united to the Executive and having no specific mandate, can decide peremptorily may be doubted, but representations made

GOVERNMENT OF INDIA

3% SECOND VICTORY LOAN 1959-61

Redeemable at par not earlier than 15th August, 1959 and not later than 15th August, 1961.

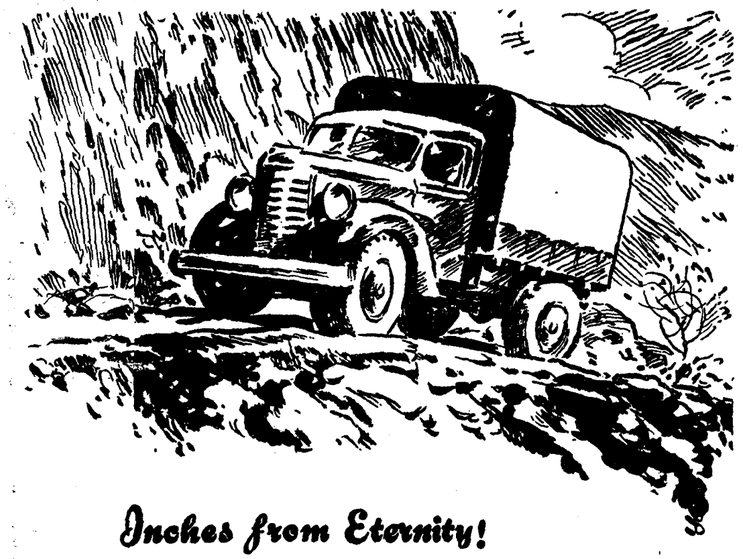
Subscriptions in cashcheque, unlimite d as to amount, will be received from 19th March, 1945, until further notice.

Issue price Rs. 100/-. As interest accrues from 15th February, 1945, recovery on account of net interest will be made at the rate of Rs. 0-2-8 per cent. from 19th March to 24th March, 1945, thereafter increasing by 8 pies per week.

Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras, at branches of the Imperial Bank of India at other places and at all Government Treasuries.

For full particulars apply to any of these Offices, Branches or Treasuries.

in this behalf cannot be dismissed as interested. The report in the **Daily Express** about India's future industrial development and British industrialists' partnership in new ventures may call for less attention than the offer of equal treatment for both Indian and foreign concerns in India. The External Capital Committee's recommendations may have no particular bearing at present, but it is prudent to recognise that the threat of internal competition may proceed wholly from the influx of British or joint ventures.



To decide on the attitude to adopt in such an eventuality, only the legislature is competent. We are free to recognise that debate can follow only a declaration of policy as to import control and other things, but the legislature can endorse by way of resolution one or all the recommendations made by the Federation. Experience confirms that an Advisory Committee on tariffs can alter the organisation of an industry. We must, however, guard against such a development, even as it appears unnecessary to calculate fair selling prices in the disturbed postwar period to determine the pitch of tariff protection. What must be reckoned important is not the state of demand or the competitive efficiency attained in any particular case, but the requirements of planning. It is on this point that Provincial Governments must give a lead and we certainly look for a contribution to post-war policy from the Provinces to whom the income-tax rather than customs revenue will appear important. It may be expected that the Provinces would look upon the employment aspect and the attainment of a higher standard of living in a more objective manner without excessive regard for future international commitments. We cannot, of course, expect the Central Government to discuss frequently and regularly, but inter-Government co-operation can be secured in so far as development plans will call for combined investment. It is only on the footing of co-operation that real guidance for the location of industry can be offered and compliance with advice tendered may be made a condition of tariff assistance.

The political situation may not permit such development, but it appears all the same necessary to acquire more than the formal sanction for the retention of the emergency surcharge and the renewal of protection. The legislature may readily define the functions of a permanent Tariff Board and make its advice binding on the Executive in every case heard. The problem may be easily dealt with by a responsible Central Government far more easily but under the present regime too, it should be possible to frame a Tariff Act and bring the trade agreements thereunder in such a way that Protection is not diluted. It may be cited against this view that a trade agreement with Britain would be of a distinctive nature, and Empire economic unity may be difficult to work away from. But against this view must be set the intention to plan from the ground and the requirements of capital invested by the State. If State ownership of industry looms large, and Central excises become more numerous, the Centre's attitude to imports may change radically. If home production becomes important for keeping up the return on capital, and a sales tax takes the chief place among indirect taxes, the entire attitude to tariffs must be different, for the issue would not be a consideration of private profit but the maintenance of the public revenue. This point is, however, less important than the issues concerned with Provincial agreement and legislative, if not electoral, approval. Competence to decide is not doubted but the major point connected with Planning is investment, not the safeguarding of revenue. The State's own attitude to private investment will doubtless be regulated by appreciation of efficiency, but it will also be influenced by the proportions of public to private capital. If this changes absolutely, prohibitions rather than tariffs may be common in the future and there may be no specific relationship between customs and excise revenue in the future for that reason.

Since the demand for a declaration has been made largely because of a fear of extensive imports of consumer goods under Government auspices, it is important to observe that Lend-Lease still distorts the foreign trade picture and the major problem after the war is not the effectiveness of demand, but the capacity of the supplier. Internal competition then may be a bigger issue than external competition, but in many cases, for instance matches, oil, sugar and tobacco, the excise may be a limiting factor in regard to removal of competition. An increase in production in nearly all existing industries has been called for. It is therefore doubtful if imports are wanted to make up any deficiency. A further factor making for reduced imports would be the loss of trade with Europe after the period of relief supplies. The entire character of India's trade may change for the reason that commodity agreements would regulate supplies and the outlook for jute or cotton would be settled by preliminary agreement. It may be doubted if these agreements should affect the level of tariffs imposed by India since the only operative consideration would be the decline of exports of food and raw materials from India. And even the repayment of debt owed to India in the form of capital goods would have no bearing on the tariff in the future since the tariff would not come directly into Indian costs.

While the Government's main concern may not be the levelling down of costs but the maintenance of foreign trade at a level proportioned to the progress of industry, there is the consideration that import controls would prevent undue enlargement of imports. The really important issue, whether imports should rise in direct ratio to the national income, cannot be ignored. The resolution referred to affords no guidance but it is well to assume that a normal growth of imports liable to import duties may have to be regarded in a different light. There is, however, no reason to hold that changing conditions must alter tariff policy, since the distinction between insular and continental economy is the only relevant criterion. What guarantees should be offered to enterprises launched after the sale of Government's surplus assets, and why, cannot be determined without reference to the wartime record of Indian industries. That may not be strictly relevant, but it is important to remember that changes in Tariff Board procedure (with little emphasis on the discrimination approved of in 1923) would be less important than the changes in Europe for example in relation to the woollen textile industry. The future problem may not be restriction of imports, but the securing of essential quotas for growing could industries and tariffs be kept up even on prescribed quotas of raw materials in order to provide revenue. While the universal tendency is to think of bounties and duties on manufactured imports, the major point is agricultural protection, which may of course be an issue again, if India has a surplus of food and imports from abroad threaten prices. Import duties on broken rice and wheat were levied without reference to the Tariff Board because the level of prices was endangered by a flood of imports. To couple tariff protection with a system of guaranteed minimum prices may be easier, if indirect advantages accrue in the form of agricultural income-tax to the Provinces. On the question of import duties on food, public opinion may already have greatly changed since the issue is not one of bringing costs and prices into line with the same elsewhere but of giving the Indian agriculturist a standard of living nearly as good as that of the townsman. As to this the resolution may be silent but it is well worth remarking that high prices alone can stimulate agricultural production and create an expanding market for Indian manufactures. Industrialisation may affect costs in agriculture (not always favourably) and a condition of guaranteed offtake of synthetic fertilisers or tools may be the limitation of food imports, should it prove necessary. Though this may seem a digression, one other point must be borne in mind. If agriculturists are guaranteed Protection, the general attitude to tariffs must be what is postulated by the resolution adverted to. We cannot assume that duty-free imports will be needed here after the emergency; and high costs in agriculture may be one way of raising rural wages to the desired extent.

There is no special reason to look upon Dominion practice as valid in regard to retention of the intermediate tariff, but the complete coincidence of social reform programmes with tariff protection in Australia and New Zealand would suggest that industry must be prepared to pay a price for unusual advantages. Possibly higher efficiency and the lower level of direct taxation may reconcile industries, old and new, to the new burdens that may fall on them. Planning will probably provide the safeguards required, and one other argument may conceivably be offered in defence of protection. High wages paid may be supported only by the tariff and closer correspondence between costs and wages may force the Government to look upon new industries as equally eligible with older protected industries for the salvation from competition demanded by our industrialists. Though tariff policy must reflect change, it is perhaps useful to cite in this connection the fact that labour welfare advanced after the advent of Protection and the worker had come to have a very real interest in defending the standard of living against Japanese dumping. If the resolution by-passed the ultimate interest of labour and the more important issue of constitutional sanction it made clear that the State contemplating substantial investment in new fields must view imports as more than a source of customs revenue. It is all to the good that a demand has been made, as we must ask for assurances relating to the safety of borrowed capital. Indeed, the tax-payer's principal concern may be the protection of public assets rather than preservation of the profits of private enterprise. If this striking difference justifies the main claim, the rest is easy to grasp for more than mere continuity must be preserved in tariff policy.

Inches from Eternity!

There is no room for excuses in executing war transport jobs. Over plains and hills, even mountain tracks—where a miscalculation of inches would send a vehicle hurtling into eternity—our transport fleets travel and arrive at their destination within stipulated time. We have gathered our experience in a hard school, it has taught us many lessons. We know now that it is not enough to have a large fleet of vehicles and a set of carefully trained drivers. In addition efficiency depends on first class maintenance and careful planning. Our experience in handling transport plus the largest fleet of transport vehicles in India enable us to undertake any transport job anywhere in this country with complete confidence. Whatever may be your requirements — goods or passenger — we are in a position to handle the job for you. We invite your enquiries.

Editorial Notes

Combined Amendments

The Finance Bill introduced last week is less important than the combined amendments to the Incometax and Excess Profits Tax Acts. The amending bill contains a definition of earned income and also the rules as to enhanced depreciation chargeable for factory machinery and buildings installed after March 1945. There is also a clause dealing with exemption of expenditure devoted to scientific research related to the business by amendment of Section 10. The exemption covers grants to associations, colleges etc.; and capital expenditure assigned for scientific research is also allowed to be deducted. Special rules relating to assets of scientific value and depreciation charged therefore are framed and the Central Board of Revenue is designated the authority to decide in case of dispute. The inclusion of Section 15A determines the exemption of a portion of earned income from tax and Section 17 provides duly for the deduction of earned income from total income.

The omission of words in Section 24 of the Incometax Act of 1922 is the chief change connected with suppression of tax avoidance. Authority to visit for enquiry and inspection of accounts is conferred by a new subsection which gives also power to stamp accounts inspected. Another section is to be amended by adding the words "but where such persons have no other personal income chargeable under this Act and none of such persons is an artificial juridical person as if such income profits or gains or such part thereof were the total income of an association of persons". In regard to E.P.T. also the officer is empowered to act without definite information. The statement of objects and reasons alludes to the need to strengthen the hands of the department assessing and collecting revenue. Reference is made in the notes on clauses to a Bombay case in which an incometax officer was forbidden to reopen an assessment in which he had misconstrued the law and to a Patna case in which the Incometax officer was forbidden to reopen an assessment in regard to a branch of business which he had in mind when he made the original assessment. The amendment is meant to bring Section 34 into line with the law in the United Kingdom.

Leather and Footwear

Sir Robert Menzies described at the Upper India Chamber's annual meeting the progress of tanning and leather manufacture. In 1944 only a small portion of the industry's output had been diverted to the civilian market according to Sir Robert. Controlled tanneries are permitted to sell up to 12½ percent leather produced in the civil market at ceiling prices fixed for all bark-tanned leather. Despite these measures the civil demand greatly exceeds supply, and the black market continues to flourish. Apart from a small increase in the price of raw buff hides last June, prices for raw stocks remained fairly constant. Increased activity of bag-tanners and the many orders prohibiting slaughter of cattle reduced the flow of hides to organised tanneries. After lengthy discussions, the Central Government decided to control all supplies of raw hides in India but give up the idea in favour of price control which applies to buffalo hides from January 1 and to cowhides from March 1. The zoning scheme in operation during 1944 ensured that supplies carried by rail went only to the main trade centres though it did not help to ensure adequate supplies for controlled tanneries. A price control scheme similar to that already in force for footwear applicable to leather grindery came into force but difficulties were encountered. Leather factories however kept up their output at a high level and Cawnpore alone produced five million pairs for Defence services. One Cawnpore factory during the war accounts for a total production of 18 million pairs of Army footwear equal to half of the production in the U.K. Sir Robert referred to the fact that Australia produced less than nine million pairs as compared with the 18 millions which came from a single factory in Cawnpore. The leather industry's reliance on village tanning and the relatively small proportion of modern tanning to current requirements are obviously connected with the problems reviewed. The greater part of the increase in tanning output has been secured by acceleration of the process. Though defence demands take precedence the leather industry's postwar outlook must be regulated by the fall in imports and the increase in local demand. Sir Robert Menzies did not deal with the probable reduction in military demand and the relationship of price control to supplies of footwear.

Cashews in India's Trade

The cashewkernel figures in India's export trade particularly with the U.S.A. and expanding exports of nuts in this case spring from an increase in production on the west coast of India. The marketing survey published last week draws attention to the large share of Madras and Travancore in the estimated annual output of 1,235,000 maunds. The fruit is gathered between February and May and a second crop is sometimes obtained; since kernel production has risen tenfold since 1925 the growers have obtained a good reward; and imports from East Africa merely supplement production for export. Both America and Britain have taken increasing quantities of kernels subject only to an agricultural cess of ¼ percent. Consumption within India has also increased in recent years particularly in the towns, and the processing industry too has acquired some importance. Lately machinery for exacting oil from the shells has been patented by Peirce Leslie who also introduced the rotary cylinder for roasting nuts. As far as processing goes, the most important centre is Quilon where the factories mostly work outside municipal limits. Six different grades for export are at present recognised and the inland market, too, is keen on standard grades. Gunnies are usually utilised for packing Cashew in 165 lb. bags, but for export, tins are preferred though the cost of packing has increased greatly since 1942. During the war the prices for kernels have risen owing to the advance in costs and freights but prices were lower in 1942 as compared with 1926. According to the survey, prices looked like rising. Improvement in distribution is desired owing to the spread between retail and wholesale prices. The optimistic conclusions as to export and consumption of cashew kernels, and the by-products notably shell-oil, are based on the trend of prices and production. The marketing survey looks to co-operative organisations to support a further increase in production, and believes that the demand for salted kernels would grow if they are popularised by the trade association which must also help in collecting market intelligence.

SUGGESTIONS ON HOW TO PLAN YOUR TRANSPORTATION NEEDS

Speculation about the resumption of manufacture of civilian products has been so prevalent of late that it has resulted in considerable "wishful thinking." Many have come to believe that new cars are "just around the corner."

These facts, however, remain: Automobile manufacturers are still building War Products. No date has been set for reconverting plants to the manufacture of automobiles.

Under the circumstances, there is just one wise thing to do:

Assume that your present car will be your motor car for 1945-then, plan to keep it in as sound and efficient condition as it is possible to do.

General Motors dealers are efficiently set up to put your present car in shape for 1945's driving, and to keep it in shape till new cars are available again.

See your local General Motors dealer for service on any car or truck. He will assist you in every possible way to keep your car "in commission."

Strain in Tibet

Though references to unauthorised cloth exports to Tibet are common at present, how Tibet has stood the strain of war is little known. Three months ago, a Moravian missionary described how the Tibetan lives in debt but cheerful always, how poverty has bred contentment and even made for remarkable adjustments to unexpected strain. The Rev. Walter Asboc recorded the effects of the cessation of caravan trade with Central Asia. The cessation of supplies through Kashmir put an end to the prosperity of the bazar at Leh and put an end also to the trade of Tibet with India and Chinese Turkestan. The direct result has been a steep rise in the prices of sugar, flour, tea, cloth and kerosene which hits the Tibetan though Western Tibet does not import food. Wages have risen only moderately, and price control has not helped greatly. Because the Tibetans are aware of the war owing to the radio they soon came to know of the rise in Indian prices and the difficulties of importers. The scarcity of cloth encouraged the Missions to bring in handlooms from Kashmir given by the State Government. Improvements in weaving led to the production of blankets, homespun, and knitted goods of which a proportion was supplied to the Indian Red Cross. The employment provides more than pocket money for many a family. The raw wool is directly distributed to women for spinning on small wooden spindles since they are averse to the wheel. The country's resources like borax or sulphur are difficult to exploit since Western Tibet is remote and the only means of transport is the pack pony which can carry at the most about 200 lbs. The trade in woollen piecegoods has developed on account of the war as demand exceeds supply but so far as can be seen, the trade of Tibet with Eastern India is likely to be more permanent owing to the Trade Agency arrangements. Tibet's primitive economy has been stabilised by the institution of a large priestly order wholly withdrawn from economic activity and the chronic lack of capital. The only real hope of improvement lies, therefore, in the reopening of trade with Central Asia in the near future.

Australia's Exports

Australia's limited wheat supplies will lead to a drop in exports. Out of available supplies of 100 million bushels 37.1 million bushels will be required in Australia and 48.2 million bushels will be kept for feed and other purposes leaving only 14.7 million bushels for exports. This reduction in supplies was made known to India earlier this year and the wheat Board's plans confirm what has been inferred from the meeting at Sydney of a conference devoted to relief problems in the Far East. The cut in wheat exports is less important than the postwar plans outlined by Mr. Curtin. The Prime Minister assured a conference that immediate postwar problems can be overcome only by retaining in modified form the machinery for price control, the grant of priorities in the building industry, and the prevention of unnecessary overseas expenditure. Postwar capital expenditure would be undertaken in consultation with private enterprise but munitions factories would be kept by the Government while other Government factories would be transferred in whole or in part so as to let private manufacturers return to peacetime production. Mr. Curtin spoke of the need to export at competitive prices. He added that Australia would stick to the policy of protecting industries adequately, when they were reasonably assured of sound opportunities, as far as possible. Mr. Curtin, however, said that industries which had sprung up during the war would have to undergo the Tariff Board's investigation.

Since trading banks in Australia are threatened by the Labour party's opinion as to credit control, the Premier's assurance that the supply of capital for industry would be augmented by banking legislation can only mean that reserves would be lent by the Commonwealth Bank as it liked and trading banks would inevitably find fewer opportunities. Mr. Curtin's programme covers decentralisation of secondary industries as well as tax relief. Australia has accepted the doctrine of jobs for all since the Premier has announced that progress by planning must take place in the field of secondary industry for which purpose skilled men would be released from the forces. The assurance against postwar unemployment is significant in relation to

EAST INDIAN RAILWAY

TENDER NOTICE.

Annual Contract Item Costing Over Rs. 8,000 Class I.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta on 10th April, 1945 at 12 o'clock noon.

Tender No. GB10/399/C for supply of Charcoal (Babool or, Dhak Wood) 1 ft. 2 ins. diameter.

Tender forms with full particulars can be had from the office of the Controller of Stores, E. I. Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores direct by money order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the Tender Box outside the Deputy General Manager's (Works) room, by the tenderer or his representative.

COLLECTIONS OF OUTSTANDINGS

Customers of the Hind Bank are encouraged to make use of the service developed by the Bank in collecting payments of their bills. This service is available not only at stations where the Hind Bank is established, but also at outstations anywhere in India. This is another aspect of the Hind Bank's policy of extending its customers' credit facilities.

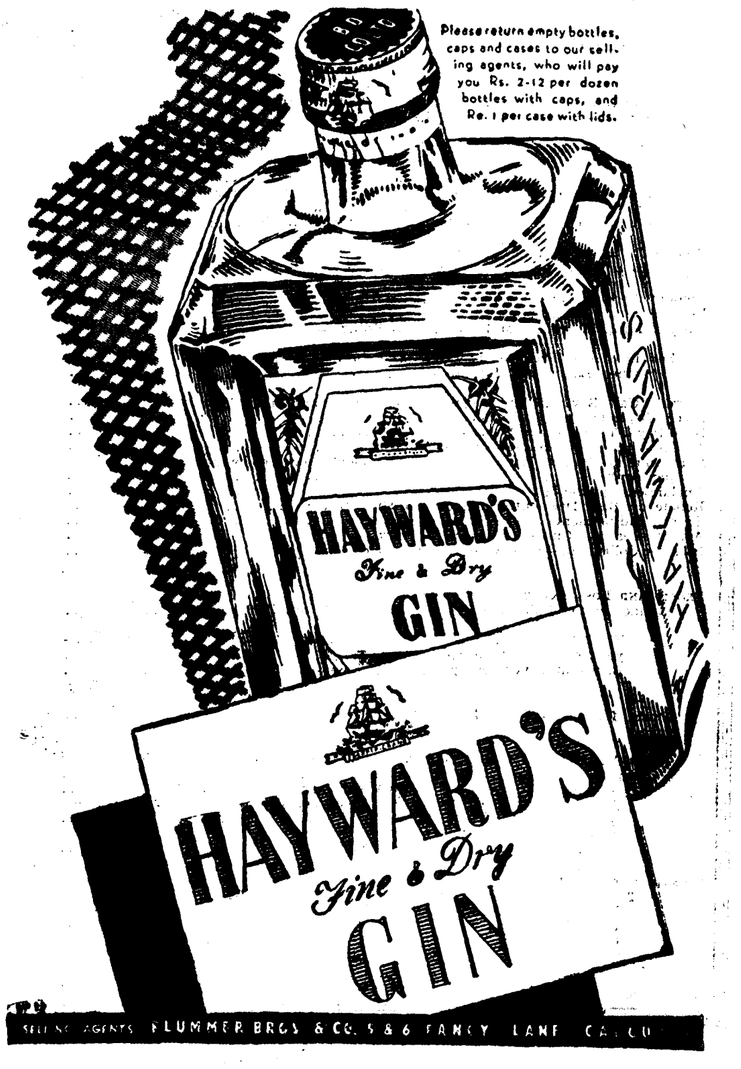
the programme for planned development. The failure to get the majority vote in the referendum apparently has not interfered with the Government's main proposal to turn resources and opportunities to advantage after the war.

Corresponding to the drop in wheat supplies, there will be a drop in wool supplies also. The income from exports is expected to fall by £7 million in 1944-45 and a further decline is predicted. This decrease must inevitably affect woollen goods manufacture in India and the recent official assurance that more goods at controlled rates will be available this year must be related to the hint of reduction in Australia's chief export. Though wool stocks in America may be large, and prices there cannot go up because the U.K. Government upholds fixed prices, the other importing countries must expect limited supplies at higher prices. When wheat and wool export fall, there will be an increase in production of dried fruit. Record production of currants, texias and sultanas in 1944 led to a great rise in exports as compared with the prewar figures. The trend of foreign trade has been favourable to others besides Australia. Imports of textiles, yarns and manufactured fibres in 1944-45 tended to increase. From India's standpoint Australia's increased takings of corn and flour bags are as important as the increase in her imports of cotton and linen, piecegoods recorded in 1944-45. It is only in regard to luxury imports that foreign trade has fallen away substantially. Australia's principal market continues to be the U.K. and the Empire and the increase recorded under food and mineral exports in the current year proceeded mainly from the increase in supplies.

Reparations in Kind



The U.S. Secretary of State announced on Monday that a Mixed Commission will be established at Moscow for assessing reparations in kind payable by Germany to devastated countries. The decision taken at Yalta has been confirmed without enquiry either into Germany's capacity to pay after an exhausting war or with the ultimate effects of the transfer of capital to other countries. The formation of a Mixed Commission to supervise Germany's economic disarmament with which reparation is inextricably connected will suggest that the territorial claims and adjustments are independent of the main decision as to recovery of loot taken by Germany. Though art treasures etc., may not go with the bill directly the conversion of German export industries into agencies collecting goods for others' use elsewhere, would bring on a process of dis-investment in Germany under Allied occupation and afterwards. The removal of plant and raw materials at arbitarily fixed prices must limit export opportunities in Europe but the main task of the Commission may not be the fixing of annual quotas for either coal or iron ore or the labour corps to serve abroad but the determination of claims for war damage.

The Russian claims are bound to be larger than those of Poland or Yugoslavia but Russia has already taken over Silesia and the Corridor so that takings on current account must be added to the bill in this case. If the Military control commission is saved the trouble of computing reparations payable in kind, the Russians are also spared the trouble of building up their export trade during reconstruction. Should income and capital fall, Germany can have no import surplus to be applied for rearmament or the restoration of standards of living But full employment with a low standard of living is ensured, and the shrunken Reich will probably have self-sufficiency in food even after East Prussia is lopped off. The use made of raw materials and equipment taken over under the reparations decree may not wholly correspond to expectations but factories for synthetic oil and rubber may be required by Russia rather than her allies. The receipts will probably limit internal borrowing and investment in Russia where normal saving may be dispensed with for years. Reparation in kind instead of the levy of occupation costs after Germany's unconditional surrender is meant to justify the claim to compensation. Experience is by no means decisive against collection of reparations but the really important issue is whether Russia may not choose to ship steel or coal obtained from Germany at special prices in case her own demands are limited. There is a direct threat to costs and prices everywhere if Russia ships coal and coal to the Mediterranean merely because she cannot ship grain or gold. The needs of an increasing population may however accord with the gratuitous imports and totalitarian discipline may obviate most difficulties arising at home from an abnormal increase in supplies. It is certain that the Continental steel and other cartels will collapse if the German output is alloted for reparations. The disappearance of German competition may therefore prove a very important advantage for younger industries in other countries including India.

Central Bank's Progress

The Central Bank of India's net profit for 1944 again exceeds Rs. 1 crore and the increase in the carry forward merely reflects the normal expansion in earnings consequent upon the increase in resources. The maintenance of the yearly distribution to shareholders is independent of the reduction in the provision for Reserve for it arises wholly from the rise of over 10½ lakhs in net profits. To what extent the rise proceeds from the increase in resources may be ascertained quite easily. In the balance sheet as on December 31, 1944, total deposits show an increase of nearly 13 crores and total resources are augmented by the increase in share capital made last year. Of special interest today is the reduction in cash balances at the end of the year. In the case of the Central Bank the cash ratio still remains high, but the reduction as compared with 1943, proves that the increase in Advances led to no decrease under investments. In the case of the Central Bank total investments in a year rose by nearly Rs. 13 crores and the pattern of distribution is unchanged. The increase in Advances from Rs. 26.59 crores to Rs. 32.44 crores is a clear indication of both the wea-

	97,13,792	0	0
The balance of Rs. 30,71,910-8-5 the Directors propose to dispose of as follows:—			
To pay a final dividend for the half-year ended 31st December 1944, at the rate of 10 per cent. per annum, free of Income-Tax, *i.e.* Re. 1/4 per Share on 10,04,088 Shares, which will absorb	12,55,110	0	0
To pay a Bonus to the Shareholders at Annas four per Share, on 10,04,088 Shares free of Income-Tax	2,51,022	0	0
To carry forward to next year's account ..	15,65,778	8	5
	1,27,85,702	8	5

BOARD OF DIRECTORS

The Bank's business during the year showed satisfactory progress. During the year under review, Branch Offices were opened at Multan and Nagpur and four Sub-Branch Offices and forty-eight Pay Offices were opened at various Centres.

During the year, one of your Directors, Sir Ardeshir Dalal, resigned his seat on the Board on his appointment to the Viceroy's Executive Council as Member for Planning and Development. The Board placed on record their warm appreciation of the valuable services rendered by Sir Ardeshir to the Bank and wished him success in the high office to which he had been called.

Three of your Directors, namely Mr. Nurmahomed M. Chinoy, Mr. Bapuji D. Lam and Mr. H. F. Commissariat retire under Article 94 of the Articles of Association read with Regulation 78 of Table "A" of the Indian Companies Act. They are eligible for re-election, and offer themselves accordingly.

The Shareholders are requested to appoint Auditors for the ensuing year, and to fix their remuneration.

Bombay 22nd February, 1945.

H. P. MODY, *Chairman.*

Statement pursuant to Section 132 A of the Indian Companies Act of 1913 as amended by Act XXII of 1936

The profits of two of the Subsidiary Companies of the Bank, namely The Central Bank Executor & Trustee Company, Limited, and The Depositors' Benefit Insurance Company, Limited, respectively, for the year ending 31st December 1943, have been included in the item "By interest etc." in the Profit and Loss Account to the extent of the dividends (in respect of the Bank's shareholdings) declared and paid by the said Subsidiary Companies.

Undistributed balances of the two above-named Subsidiary Companies have been carried forward or otherwise dealt with in the accounts of such Companies.

H. P. MODY, *Chairman.*

A. B. DUBASH. HARIDAS MADHAVDAS, DINSHAW D. ROMER, VITHALDAS KANJI, NURMAHOMED M. CHINOY, B. D. LAM, D. M. KHATAU, H. F. COMMISSARIAT, *Directors.*

H. C. CAPTAIN, *Managing Director.*

Bombay 22nd February, 1945.

Clive Street Gossip

In this final article in this series on the place of villages in post-war planning, I am committed to the formulation of a definite scheme by which to overcome the handicaps outlined in the earlier articles. The first handicap pertains to the agencies through which the various schemes of planning are to be executed. Corruption, especially in the conditions created by the war, has so benefited officials and contractors alike that a large part of the amounts spent on public works disappears en route. The actual benefits from such schemes will hardly be four to six annas in the rupee if existing agencies are entrusted with the carrying out of plans. The second handicap arises from the apathy, indifference, sloth and lack of public spirit and social consciousness in present-day villages. Unless the people in rural areas co-operate in a proper spirit in the execution of plans, it is doubtful if planning will be as effective as it is expected to be. From this point of view, my task in this final article is to furnish such a scheme as will guarantee an honest organisation for working the schemes, one which will engage and grip the affections and energies of the general population.

* * * *

My scheme contemplates, in the first instance, the grouping together of villages which have some kind of homogeneity in the district. For each such group of villages a limited company with a capital of Rs. 1,000 is to be found; and the shares will be of the value of Re. 1 each. These shares will be distributed among as many people in the group of villages as possible. The name I would suggest for the company is Popular Agencies Limited. On the Board of Directors of each company, we should enlist as many men as possible who have retired from service and have valuable administrative, or business or professional experience. It should, for instance, be possible to secure as directors a retired doctor, a retired accounts man, a retired engineer and a retired agricultural official.

* * * *

It may not be possible to get such a combination of retired talents in each and everyone of the groups. This is because most men after retirement prefer to settle down in cities owing to the greater amenities available in the cities and owing to their providing better facilities for the education of their children. This is, in fact, a most undesirable state of affairs; and I would go so far as to suggest that the Government should actively consider taking steps to induce the retired men to settle down in their villages. If, for instance, it is hereafter provided that the scale of pensions will be raised by 20 per cent in the case of people who, after retirement, take their residence in their own villages, it will have a striking influence in reversing the present unwholesome trend of migration of villagers to cities. Be this as it may, I need only emphasise, in this context, that, in spite of the preference of retired men to settle down in cities, there is, even under present conditions, a sufficient number of retired officers in the villages to be of great value as directors in Popular Agencies Limited. In addition to such retired officials, the Board of Directors will consist of men who have a leading position in the locality, as well as men who have an important role in the local economy and local affairs. This company will, thus, be truly representative of the group of villages and will be assured of adequate administrative experience and integrity. When the schemes in connection with post-war planning are executed, the Popular Agencies Limited can claim to be a ready-made organisation which, through its local knowledge and influence and the administrative and business experience of its personnel, is the fittest agency to be entrusted with the carrying out of the schemes. The schemes may involve the building of schools and hospitals or the construction of roads or the supervision of sanitation, public health and education. For all these tasks, the Popular Agencies Limited will be in a position to provide the most efficient and economical service.

* * * *

In this connection, I may narrate a recent incident to illustrate how more than full value can be obtained if any public work is to be done by enlisting local co-operation and enthusiasm. There is a two-furlong road leading from the main road to my village; and this little road had not known any repairs for years and years. The local board was in a position last January to give Rs. 300 for this road. If the repairing of the road was to be done through the routine agencies, the cost would have been three or four times the sanctioned amount. The villagers got together and said that the road must be repaired at any cost; and the more important of them offered facilities which were calculated to reduce the cost. One man agreed to supply bullock-carts, another resident of the village offered stone rubble; and the labourers decided that they would charge only their usual wages if their services were required for repairing the road. It turned out that the full repair work could be carried out within the available amount of Rs. 300. I have said that, if the routine agencies were utilised for the execution of schemes and other post-war planning, the actual value may be only between four to six annas in the rupee. On the other hand, if the people of the locality are identified with the execution of the scheme, so many different services in kind will be available that each rupee spent will have the ultimate value of 32 annas.

* * * *

But, then, it may be another two or three years before the stage is reached for launching the execution of schemes under planning: what is the Popular Agencies Limited to do in the meantime? This interregnum will, as a matter of fact, be most valuable if opportunities are created and exploited for training personnel, gathering experience and establishing goodwill. Under the auspices of the Popular Agencies Limited, service must from now be run which will have the effect of providing the amenities which are now lacking in villages. One section of the activities of Popular Agencies Limited should be to run what I may call a popular dispensary. Owing to the great demand for medical men in war service, our villages have now been completely depleted of medical practitioners. A large percentage of rural dispensaries have been closed down. There were, I understand,

25 rural dispensaries in my district; over 15 of them have now been closed. Owing to the poor quality of rice available and owing to the inadequate supply of milk and protected foods, people in villages have had a considerable deterioration in their general health. Some of the sepoys returning to their villages have brought in diseases. More than at any time before, rural areas are in urgent need of medical facilities; and even the scanty medical facilities available five years ago have now disappeared. To run a dispensary will thus be an important effort to bridge the gap. My proposal is that the Popular Agencies Limited should arrange for a travelling dispensary which can serve the entire group of villages. One doctor equipped with a bullock-cart provided with standardised medicines can arrange to visit one village in the morning and another in the afternoon. It may thus be possible to ensure two visits of the doctor to each village in the group. Medical advice will be free, but such people as can afford to pay will be charged 8 annas for one day's medicine. I have worked out details and I find that a dispensary of this kind charging 8 annas for medicines will become self-supporting in the course of a few months. It will also be the duty of this doctor to educate the people in his area in better and more sanitary methods of living.

* * * *

Another useful activity of the Popular Agencies Limited will be to run a travelling Fair Price Shop. Owing to the extreme scarcity of many of the essential commodities, the villagers find great difficulty in securing their requirements; and they have to pay the price asked for. The travelling Fair Price Shop I have in mind will stock the more important of the essential requirements of the village folk, and sell it to them at controlled rates or at reasonable margins of profit.

This Fair Price Shop can also develop as a friend and advisor of the agriculturists in the matter of securing seeds, manures, iron tyres, cement etc. We hear so much in the cities about the grow-more-food campaign. We are also being regaled with long accounts about this Excellency growing vegetables in Government House gardens or that Excellency visiting villages and talking to the village folk about growing more food. All this is only window dressing. Down in the districts and villages, the villagers have no means of knowing what exactly are the facilities that are available to them in pursuance of the grow-more-food campaign. And, even if one or two villages do know of such facilities, they have no means of finding out who are exactly the local officers to be approached. I myself tried to understand the position in this regard; and, despite my influential connections, I could not make real progress with regard to the actual efforts to be made for growing more food and more vegetables in my village. If even educated men are unable to get what they are entitled to in encouragement of their efforts to grow more food, it is easy to understand that, in practical terms, the villagers are not benefited to any extent from the high-sounding promises made by the sponsors of the grow-more-food campaign. It will be the task of the Fair Price Shop to get to know everything about the facilities and personnel from the point of view of grow-more-food plans, and to help the agriculturists in securing those facilities. This service will be most appreciated, and will prove valuable alike to Government and to the people.

* * * *

I would also suggest that the Popular Agencies Limited should try the experiment of what I may call popular canteens. It is not an exaggeration to say that the food problem in the villages from my experience in my recent South Indian tour, is even more serious than the food problem in a city like Calcutta. From the point of view of a balanced diet and of adequate nutritive value, our villagers are now getting a most unsatisfactory meal. If it is possible to provide, through a canteen, a well-balanced meal at a price within the reach of the rural population, it will play an important part in the rehabilitation of the physical health of the villagers. Villagers particularly in South India will be only too ready and willing to patronise such a canteen as even the remotest village in the Madras Presidency has what is known as a Coffee Club. Taking food and tiffin at an hotel is a more widespread habit in South India. If a canteen can give clean and wholesome food at a moderate price, it is assured of substantial custom. The aim of this canteen must be to inaugurate a broad-based dietetic reform.

* * * *

On more than one occasion, I had pointed out, in this column that the food crisis during the war in Britain had been converted into a wonderful opportunity for dietary reform. I had also stated that, India, too, can under proper leadership, change the curse of food shortage into a blessing of better diet. I have had considerable experience in running canteens for the lower and middle classes; and I have every confidence that a canteen under the auspices of the Popular Agencies Limited can turn out to be the best agency for ensuring for the population not only more food, but better food.

* * * *

As in the case of the travelling dispensary, the services rendered by the Fair Price Shop and the Popular Canteen would, in due course, be placed on a self-paying basis. There are other activities which can also be undertaken by the Popular Agencies Limited such as the supervision of schools and the sanitation of villages which will not require any financial outlay, and which requires only the zest and energy of the leading people. Through these activities, that is, the popular dispensary, the popular stores and the popular canteen, the Popular Agencies Limited will be able to establish a record of service that will make the people in the villages look upon it as their own organisation; by the rendering of these services, the Popular Agencies Limited will also have created a body of trained men and workers. Many of these workers will be drawn from people who are now in enforced idleness in the villages. This will thus be another important opportunity of providing employment in occupations that are of immense value to the localities concerned.

* * * *

I have discussed my scheme of Popular Agencies Limited with some officials who have had considerable administrative experience in the districts; and, while the general opinion is that the problem as I have stated it has definitely to be tackled, and while the scheme I have adumbrated has a lot to commend it, the best criterion for the suitability of the solution I have offered is to try the solution in one particular district and prove its practicability. It may well be that I may find myself obliged to act on the tip that the success of the scheme depends upon its being shown to be a success in a selected district.

I should make it clear before I close that Popular Agencies Limited is conceived as a non-political, non-communal and non-commercial institution. In this country, motive-hunting is a favourite pastime. People look behind even the most transparently bona fide schemes for some hidden motive. The Government, too, smell a political rat in every attempt to do good to the common people. But where the help of one and all is needed for success, the broadest common ground of co-operative action must be most meticulously preserved. Hence I say the Agencies should be on a non-profit basis and should be free from political or communal bias or affiliation of any kind.

* * * *

For the sponsors of the Art in Industry exhibition there must be satisfaction in bringing the best exhibits of the year to Calcutta and arranging the usual display. In the present Exhibition at the School of Art the exhibits fill the eye which can take it all in without effort. Professional critics may look for maturity and development of technique, but for the ordinary man who only knows what he likes the novelties are fewer and the display more convincing. To be sincerely welcomed is the escape from the war since even the posters are not too much concerned with the war and the escapist impulse has found gratification in other things besides interior decoration. What this year's exhibition for the first time achieves is to indicate what must be done about presentation of consumer goods. It is not merely a retailer's problem like the selection of showcards but of getting design to work with production right from the bottom. What has been attempted is decidedly an eye-opener even for those who like to take the Swadeshi cult very seriously. These should be even more impressed by the section given over to stressing industrial development. It is apparent that it is not as a franking device that the legend, Support Indian Industries was intended but to alter our attitude to industry. Press advertising has been adapted to interpret effectively the hopes for the future as much as the sense of achievement. Though awards for maximum Indian appeal have not altered greatly the principles of line and colour employed for either posters or showcards the original purpose to link Indian art tradition with modern needs has been fulfilled in some measure. Since last year's choicest exhibits went abroad, the Art in Industry movement has acquired permanence. A technical institute is planned so that five years' good work finds the supporters ready to go on. The appeal of the Exhibition has increased steadily, since attendance increases and donors multiply, while the commericial artists have found most encouragement in getting a regular yearly exhibition for themselves. The satisfactory outcome of Burma-Shell's Public Relations work deserves record once again; for art here looks beyond the war and it leans heavily towards indigenous industries' aspirations.

(FROM OUR CORRESPONDENT)

New Delhi, Mar. 12.

The straight vote of "no confidence" against the Government—the Congress Party's cut motion for total refusal of supplies under the Executive Council grant to censure the Government for maladministration—which the Assembly carried on Friday by 61 votes to 53 is still the talk of the capital. Mr. Abdul Qaiyum, who moved that the demand under the Executive Council be reduced to rupee one, said the vote of censure was not merely against the Government of India but in a way it was a vote of censure against H. M. G. whose agents were the Government of India. The debate occupied the whole day; both sides had mustered strong; no less than four Members of the Government defended themselves while the Opposition front-benchers included Mr. Bhulabhai Desai, Nawabzada Liaquat Ali Khan, Mr. Abdul Qaium and Dr. P. N. Banerjea. Member after Member of the Council was attacked. Sir Francis had to face statements such as "India is a vast prison house" and "concentration camp". The Food Member was called "Member of Starvation". The Information Member was charged with circulating "nine-tenths of false propaganda in the U. S. A." The Law Member was blamed for allowing the misinterpretation and misuse of the D. I. Rules. The Supply Department was described as the "Bribery Department" while the Planning Member was criticized for raising false hopes even though the Finance Member had dashed the hopes in the budget. Mr. Desai's speech—very indignant—was full of satirical thrusts. It would have been more becoming had it been of the Disraelian type. He did forget himself and volleyed: "By your own conduct you don't deserve confidence; you spend my money and you malign my country". "Stick on, stick on ad infinitum", 'Jobs, Jobs. Jobs', 'Have you advanced the freedom of the country by one inch?'—These were the constant cries. And it was quite clear that there was no case for the Government, however voluble were the Members

* * * *

Indeed it was a great event—legislators of the country, comprising representatives of the major political parties which according to Britain are not in mutual agreement, declaring that they have no confidence in the country's 'cabinet'. Though peculiarly composed and placed—Members are neither drawn from elected members of the Legislature nor responsible to it; nor can it be removed by it—the Executive Council is; it is clear, the counterpart of the Ministrties in the Provinces or in other countries. Specially so, when the Viceroy and the British Cabinet have been flourishing about that India is governed by an Executive Council consisting of a majority of Indians. Again, this 'cut' is different from other 'cuts'; as stated at the outset, this 'cut' is a straight vote of no-confidence' in entire Executive Council. Well then, will the Executive Council now resign? They ought to. specially after the 'no-confidence motion'. Constitutionally they need not—they are irremovable by the Legislature; the Viceroy can and will certify this grant, other grants and the entire Finance Bill when thrown out. And thrown out, it will and should be though responsivists may still feel they should be more realistic and throw out only certain grants and reduce others. But unconstitutionalism of the entire framework of the Government and the unconstitutional way the Viceroy, his Council and the Governors in the Provinces have been functioning are only too notorious. So why not the Council behave unconstitutionally now too, and resign in a body!

The next day also—Saturday—the Government suffered most budget defeats, this time two in a day and both on the Muslim League Party's cut motions. Hajee Abdul Sattar Hajee Essak Sait's motion to refuse supplies to the Planning and Development Department was carried by 59 votes to 48 while Mr. Yusuf Abdulla Haroon's cut on the demand for the Department of Industries and Civil Supplies to discuss 'the failure of controls, permit systems and supply of consumer goods' was carried by 57 votes to 48. The main complaint of the Opposition regarding Planning was that the Government had unceremoniously rejected the Assembly's resolution for the appointment of a committee to consider and report on post-war plans. 'Is the fate of 40 crores of people to be left in the hands of this irresponsible Government's—this was the theme of the legislators and Sir Ardeshir Dalal was subjected to mortar-fire; Leaders of the Congress and League Parties were trenchant in their offensives.

* * * *

India's 'Elders' have done a useful service. When the Council of State held general discussion of the budget last week Sir Shantidas Askuran did X-Ray the Hydari Mission's activities. Referring to Sir Jeremy's financial statement and the estimated Customs receipts, namely, over Rs. 55 crores during 1945-46, he well analysed that even after deducting the receipts arising out of the import of engines and wagons it was obvious that the rise of over Rs. 20 crores (1943-44 actuals of customs receipts were Rs. 26 crores) in the customs revenue would be due to the import of consumer goods. No Indian could, therefore, help entertaining the gravest apprehensions regarding the Hydari Mission and the figures gave away the case built up by the Finance Member that the Mission had gone really to make arrangements for the import of only such consumer goods as were immediately required without in any way affecting the economic structure or the industrial development of the country, he added. Why speculate and apprehend? Even before the mystery has been properly explained a flood of consumer goods seems to have begun, according to a reliable Bombay message. The following are the important points in that report:—A prominent Indian concern with its head office in Ahmedabad has already imported consumer goods worth Rs. 80,00.000 from America. The categories of imported goods include kerosene, wall-lamps, table-lamps. hurricane lanterns, tooth-brushes and buckles. Of the most important items is said to be Rs. 100,000 worth saws. Applications have been made for import licence for woollens and silks from America. The mission has already arranged with the British Government departments and industries for import into India of 40 categories of manufactured goods from Britain. These include motor cars, cycles, steels, cement, textiles and electrical goods. And the message puts a very significant question: Is the Hydari Mission's main task the short-circuiting of this American flood through an understanding between Whitehall and agents in New Delhi?

* * * *

'The cat is out of the bag; the fat is in the fire'—This is how nationalist India commented on the statement by Sir Olaf Caroe, External Affairs Secretary, in the Assembly last week that the Indian delegation to the San Francisco Conference would be at a ministerial level. And now the cat is only out of the bag, the more. It has been announced that Sir Ramaswami Mudaliar and Sir Firoz Khan Noon have been selected as India's representatives to the conferences to be shortly held in London and at San Francisco, and that at the invitation of the Crown Representative Sir V. T. Krishnamachari has agreed to serve as the third. What was worse two adjournment motions tabled by angry legislature to discuss the composition of the delegation were ruled out of order today. Which means—is it wrong to conclude—that there is the least likelihood of any change in the Government in the near future. In other words it is wrong to conclude that there is absolutely no chance for any sort of success of the efforts of Mr. Desai and the Parliamentarians. Two of the Executive Council against which a 'no-confidence' motion was carried by the Assembly to represent India at the world security!

* * * *

Referring to this 'Fancy Dress for San Francisco', the *Hindusthan Times* in a pungent editorial before the announcement was made said: 'The Government can have only two reasons for this perverse policy; the desire to maintain a deception at an international level by the professional actor's capacity for false personation and the desire to prevent further exposures abroad by nationalist leaders like Mrs. Pandit. The Government of India's representation would be considered false not only for San Francisco, but even for the neighbouring town of Los Angeles, where Hollywood has set up new levels of history. As for the counter-propaganda against the British Information Services and Sir G. S. Bajpai's office, one Congress leader has put British propaganda on the defensive. It has been the complaint of nationalist India that the U. S. A. has impaired Indo-American relations by per-

Bombay, Mar. 13.

In spite of all that has been said in the Assembly about the enormous military expenditure debited to India, the Government's withers are unwrung. There is, therefore, a note of positive distress mingled with a feeling of utter helplessness in the statement of the Indian Merchants' Chamber on the Budget. It is indeed a cruel joke of the interpretation of the financial settlement that crores of rupees should be debited to India's defence expenditure, just because the fighting took place on Indian soil, when this country has no voice in formulating any kind of policy of the Government. The Committee of the Chamber draw attention to the increase in the defence expenditure from the revised estimates of Rs. 262 crores for 1943-44 to the actual figure of Rs. 358 crores, and wonder if the huge increase of Rs. 100 crores could, on any ethical or other point of view, be said to have been incurred in the interest of India. The unfortunate fact is that there seems to be no check whatever on defence expenditure, as even the European group in the Assembly have realised. The commercial community notes with concern the growing volume of the reverse lease-lend expenditure; and though not loath to grant that victory has a price to be paid, it stands aghast at the colossal size of the war Budget. The special initial depreciation allowances in respect of new buildings and plant are, of course, welcomed, but the general feeling is that the Government have neglected every opportunity of building up industries in the war period and that the task is not going to be easier if the war ends. The greatest misgivings are entertained about the real purpose of the Hydari Mission and after Sir Akbar returns this week from England, it may well be a case of "after Akbar, the Deluge" of imports.

* * * *

The cotton futures market showed a slight improvement yesterday when the March Contract was quoted at Rs. 447. The bulls are not so bearish as they were last week when, owing to the unfavourable results of survey appeals, they hammered down the market. The bull operators feel that the Committees which consist mostly of spot traders have not been very rigorous in their Awards and that therefore too much cotton not up to the scratch has been allowed to be tendered. Actually, about 90 per cent of the bales tendered have been passed in the first few lots. The bears, of course, also complain that the survey has not made due allowance in regard to premiums according to the quality, and so goes on the familiar tussle between the sections of the market. The bull outstanding position is expected to be about 150,000 bales, but the bulls hope that they would not have to take delivery of more than 80,000 bales. The bears, on the other hand, are optimistic of being able to deliver 100,000 bales, aided by the transport position. The market represents the pulls of the two sections of opinion on this issue of tenders, and until some new factor crops up, there may not be much improvement in prices. All tenderable cotton lying in Bombay will be tendered against the March Contract and out of the 22,000 bales tendered, for instance, on March 1, 21,000 bales were Jarilla cotton which is of good quality this year. The bulls are ready to stick it, whatever may be the number of bales they have to take up.

* * * *

To-day and to-morrow there will be a special meeting of the Insurance Policy Committee specially convened by the Government of India to consider post-war insurance problems. Mr. L. S. Vaidyanathan, Superintendent of Insurance, is presiding over the meetings. The discussions at the recent 17th annual meeting of the Indian Life Assurance Offices' Association will probably provide the backdrop to the discussions. It will be remembered that at the above meeting a resolution was adopted welcoming the principle of limitation of overall expenditure, the crux of the present amending Bill. The Superintendent of Insurance was present at the above meeting. The above conference adopted the recommendations made by its special committee, providing for 30 per cent commission on the first year's premium and status quo of 5 per cent on renewals to the licensed agents. An over-riding commission of 25 per cent on the first year's premium was to be allowed to chief agents, thus confining the overall expenditure to within 80 per cent during the first year and 14 per cent in the subsequent years. The real factor of importance in the above discussions is the belief that, as the Superintendent of Insurance was present then and also guided the deliberations, the decisions of the conference may probably be accepted as amendments to the Select Committee's recommendations.

Reverting to the King Charles' head, namely the cloth shortage, it is said that the control authorities have arranged for the movement of cloth into the market from the quota holders with whom it had been frozen. Authorisations have accordingly been issued to more than 200 wholesale dealers nominated by the Board, to get cloth from the quota holders, pending the advent of B. class licensees. The retailers are slowly getting the cloth and it is only in the last two days that the necessary permits have been issued by the Provincial Controller. It is also said that in order to relieve the acute scarcity and arrange for quicker distribution, more approved shops are going to be opened in the city. It is incredible but true that the city is also starved of cloth like the rest of India, and it is a common sight to see the shops' shelves empty. The authorities have also published a new order restricting the activities of those who are procuring cloth for printing.

* * * *

The Bombay Government are extending the subsidised milk scheme to the urban areas in the Suburban district under the same conditions as in Bombay. While the beneficial effects of the distribution of milk are admitted on all hands, one hears the criticism that the skim milk powder has failed because milk prices in general have not come down. That is a fact. In a press note, the Bombay Government say that this criticism is unfair as the main object in requiring tea shops to use milk (skim) for tea and coffee was to release milk for the subsided supply scheme. A total daily supply of 1,400 maunds is now being made under the subsided scheme and the quantity will increase from week to week. This, according to the government, is the justification for the compulsory use of skim milk powder in shops. On the face of it, the case for skim milk

is strong, but one may be permitted to state that the quality of the powder supplied to tea shops is really bad. And no amount of propaganda, whether conducted by the Tea or Coffee expansion boards can be of avail, if skim milk coffee or tea is going to be rammed down the throats of unwilling drinkers of coffee or tea. There are stories that the scheme is after all a way of disposing of huge lots of unwanted skim milk powder rejected by the military authorities and that cities other than Bombay will have to shoulder their share very soon. These are perhaps no more than the uncharitable views of the incorrigible cynics.

* * * *

An important aspect of the nonferrous industries in India was stressed by Mr. R. H. Kamani at the shareholders' meeting of Jaipur Metal Industries Ltd. The company's factory claims the distinction of being the first in India to manufacture arsenical copper rods required by railways for locomotive boilers. Recently the rationalisation committee visited the works. The factory was constructed during the war with locally available plant and the progress made in the refining and manufacture of nonferrous metals and alloys is good. Mr. Kamani appealed to the Government to encourage mining of nonferrous metals in the country and urged that the dependence on imported copper, zinc, lead, tin, etc. should be reduced in course of years and that facilities should be provided for the imports of these virgin metals. The All-India Manufacturers' Association has made specific suggestions for importing these raw materials. It is time that the country stopped exporting non-ferrous scrap. It is also necessary that the import duties on these should be much reduced from the present level, in order to encourage this important industry in India.

(*Continued from page 340*)

mitting pernicious libels on the Congress to be circulated by British propaganda agents. Now is the time to end that sorry chapter. If American public opinion can risk British displeasure it should insist that India should not be defrauded at San Francisco. According to the present plan the architects of our national misfortunes will be the architects of world peace. Many questions of far-reaching importance are to come up before the conference, unless the Big Powers have decided that the Governments of the smaller powers should merely ditto their decrees. This is not a good beginning for world peace. The real menace to security are the members of a Government who know they have 'neither representative character nor real power but want to speak on behalf of a people who would not give a single vote for them in a fair contest at the polls.'

* * *

The question of cloth supply to the Provinces, especially Bengal, figured in the Assembly. A member questioned whether out of the quota allotted to Bengal appreciable quantities of cloth were being diverted to the manufacture of ready-made garments for the military and auxilliary personnel. Perhaps, this is one of the reasons for the cloth famine in Bengal, leading to the reported suicides by women due to their inability to obtain cloth to cover their nakedness. And the Commerce Member's reply was in fact an admission. The possibility of making a special quota outside the allotment is under the consideration of Government, he said. Two days later, the Commerce Member gave a more detailed answer. He said that the Government had undertaken to re-examine the whole question of cloth quotas on receipt of authoritative figures of pre-war Consumption from all Provinces and States. He added that it was for the Provincial Governments to regulate the movement of cloth after arrival in the zones. This point is not clear. The real issue is the prevention of the flow of cloth to black-markets and the prevention of the flow of cloth meant for Civilian consumption to non-civilian needs. Which means, it is up to the Provincial Government to kill racketeering and profiteering in cloths. But it is the duty of the Central Government, to see that there is no flow from the civilian quota to non-civilian uses.

HILL-BIRD.

(*Continued from page 333*)

sonal factor and the secular growth of demand for funds.

The increase in fixed deposits probably accounts for the increase recorded under Advances, but it will be noted duly that over 50 per cent of the assets are invested in giltedged securities and the proportion of Advances to total deposits is well under 40 per cent. The rise in the Reserves corresponds to the increase in capital while the increase in debts due to banks and others like that under branch adjustments is derived from the expansion of business. The opening of two branches, four sub-branches, and 48 pay offices last year, shows that extension of service contributed to the increase in resources described above. The profit and loss account reflects more accurately the progress made in relation to earning capacity since profits rose by Rs. 52.34 lakhs in 1944 though expenditure under nearly all heads rose last year. The Central Bank as the largest Indian joint stock bank has in three years more than doubled its deposits and has acquired the characteristic immunity from competition that compels agreement with the view that the entry of new banks does not affect the outlook for the bigger, older banks in India. In the Central Bank's balance sheet changes as between 1943 and 1944 one may discover easily the fact of continued growth even as one may find evidence as to the main trends in Indian banking. The more important conclusion to be drawn is that under Sir H. P. Mody and Mr. H. C. Captain the Central Bank's policy remains wholly adequate to the circumstances even as it defeats surmise as to the changing conditions in the field of banking.

South India

(*From Our Correspondent*)

Madras, March 14.

Sir Samuel Runganadhan, High Commissioner for India in London spoke at a meeting held here on the new English Education Act and the position of Indian students in England. Remembering Disraeli's words, "upon the education of the people of the country depends the fate of this country" the British people, he pointed out, though engaged in fighting a total war for the past six years have succeeded in enacting an Education Act which is said to be a landmark in the history of English education. The value of the Act lies in this, that it assures equality of educational opportunity to all citizens, there is provision for a remarkably wide diversity of educational courses, and what is more it gives a great measure of unity to English educational system. He commended the example of Great Britain to India, especially to Madras which province, he thought, would set an example to others.

Before the war there used to be 2,000 students in England. When the war broke out many returned home but a fair proportion stayed on. Of these many were serving with the British forces. He gave a word or two of advice to students who wish to go abroad after the war for higher studies. He thought there would be a tremendous rush of students to England after the war. Many of the men in that country who were in active service would return and continue their studies. Students from the Dominions would wish to study in British Universities. Sir Samuel had been told by heads of educational institutions that they would consider the claims of Indian students for admission on their merits. He therefore advised the Indian student not to go abroad unless he got a good degree at home. Talking from his experience here and abroad, he was of opinion that the under-graduate training and education offered by an Indian College was as good as that provided anywhere else. He asked students to go to England only for advanced research or for specialised training which they could not get here. Students should make an adequate reckoning of the cost of education in England and decide beforehand what courses of study they would pursue. That students should go abroad only for specialised training that is not available here has been said before times without number by the greatest scientist of India, Sir C. V. Raman. Even an English member of the Indian Medical Service, Lt.-Col. G. R. McRobert has expressed the view that it is waste of money for Indians to go abroad for becoming Licentiates and graduates in Medicine. But the best way of removing this fascination is not in solemn advice alone. So long as Governments—Central and Provincial—attach greater value to foreign degrees this waste is bound to go on.

That students have a part to play in the reconstruction of village life is now generally admitted. How they could effectively help is a matter on which opinion is not unanimous. Mr. S. V. Ramamurti, Adviser to the Governor of Madras, speaking at the village Mela of the Madras Christian College Rural Service Centre asked the English educated, who form a microscopic minority to carry to the village modern advancement in science and engineering but in return learn the ethic of village life—the ethics that has given village life stability, simplicity and contentment in a shifting world.

The English education the student received, said Mr. Ramamurti, was opposed to the old modes of production practised in the villages. But India being a poor country, her major problem is to increase her production. By mobilising science Europe has achieved in a few centuries far more than what India has done in as many centuries. Though there were irrigation schemes in India for ages yet they could not compare in achievement with the Tennesse Valley Authority in the U.S.A.

To-day the villager is unable to earn, even enough to feed himself throughout the year, though in theory it is recognised that every man has the right to be fed if he works and to share equally in the total wealth produced.

These rights could be ensured, said Mr. Ramamurti, if the village Panchayats were permitted to draw up and execute a Food Plan and Work Plan whereby the needs of the community were measured and the wants of its individuals met according to the amount of labour each had to contribute to produce the total wealth. In addition to these, there should also be a Worship Plan whereby the best instincts of the villager can be canalised into such service as 'cultural, social and educational uplift'. Mr. Ramamurti concluded "You will thus be able to re-establish on a firm economic basis a new design for living. Students must, therefore, learn this basic village ethics. There must be a give and take on both sides. We must get the old ethics restated by the new economics."

The Hindu Law Codification Committee which arrived here from Calcutta began taking evidence. Opinion on the code seemed divided and the opposition to the code was led by the orthodox people. Prominent among those who supported the main principles of the draft code were Rt. Hon. V. S. Srinivasa Sastri, Mr. V. V. Srinivasa Iyengar, Ex-Judge of the Madras High Court and Sir P. S. Sivaswami Iyer. Those who opposed the code included Dewan Bahadur R. V. Krishna Iyer, C.I.E., Dewan Bahadur K. S. Ramaswami Sastri, Rao Sahib N. Natesa Iyer, Thethiyur Subramania Sastriar, and representatives of Sri Sankaracharya. While the supporters of the code consider the draft as reasonable and timely the opposers think codification of Hindu law for the whole of India was both impossible and undesirable. It was contended that codification arrested growth and prevented judges from tempering the law if it was strict, for they had to stick to the letter of the law. The Hindu Law was based on spiritual outlook and was the chiselled product of intense meditation, introspection and experience of their sages. The remedies proposed in the Draft code went against the basic Hindu philosophy which took into consideration the life here and hereafter. They claimed that neither the people of the province nor their religious leader, Sri Sankaracharya, want the code.

The Eighth Conference of the All-India Opthalmological Society was held in Hyderabad and was inaugurated by the Nawab of Chhatari. The Nawab said that the science of opthalmology was young, the practitioners were working against heavy odds, and the task confronting them was stupendous.

Dr. E. V. Srinivasan of Madras who presided, appealed to the public to will away their eyes on death for the purpose of transplantation. If the appeal met with response it would become an easy matter to choose a great number of blind persons and making attempts to restore their vision. Recommending the study of geriatrics the doctor said, "It is not the fear of death so much as the dread of idleness or uselessness due to disease or blindness after a life of activity and loss of economic independence that should stimulate the study of geriatrics."

Appeals are being made in all parts of the province to the Viceroy to show clemency to the two unfortunate condemned young men in what is known as the Kulasekharapatnam case. The Privy Council has dismissed the appeal without hearing in detail. As one Federal Judge opined, the case against these young men has not been proved beyond the shadow of doubt. Besides, it is felt, that no useful purpose will be served by this execution and the convicts have already suffered great mental agony and pain by waiting for this length of time.

Resume of Commodity Markets

The feature of the week in the commodity markets is the break in bullion prices and the placing of orders by the United States Government for half the estimated requirements for the last six months of 1945. The jute manufactures market as a result is very firm. Raw jute prices also are higher in sympathy. But the raw cotton market has been rather weak as with mill selling and the expectations of a large increase in imports of foreign cotton, a rise in prices has been prevented. In the piecegoods market very difficult conditions continue to obtain and there is a shortage of cloth and yarn in all the centres. The Textile Control Board has been making every effort to relieve the shortage by releasing frozen goods and authorising B. class dealers to take delivery from quota holders.

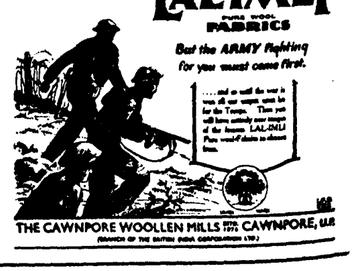
* * * *

The jute market cannot possibly be affected by the reports of fresh orders from the U.S.A. as the question is one still of coal supplies. But with the present mood of operators anything that is favourable from the point of view of investors is taken as an opportunity for pushing up prices for jute. Mofussil dealers are fully convinced that there will be a definite shortage of jute supplies next season especially as reports regarding sowings for the next season have so far not been encouraging and mills are willing to take up whatever quantity is offering at current rates.

* * * *

No details are yet available regarding the placing of the order for the latter half of 1945 by the U.S.A. but the early response to offers by the mills last week has been gratifying and mills are not prepared to enter into further commitments for any positions this year. Importers in the U.S.A. do not seem to be very eager to take up all the orders at maximum rates but mills too are not very much worried as they are confident of being able to sell out all the production and are not prepared to offer any discount at the present moment, even for far forward deliveries especially as there is a prospect of an increase in jute prices as the season progresses.

* * * *



Production figures for the last month emphasise the difficulties of mills regarding coal supplies. A lower level of production was generally expected as February was a short working month but the decline in total output is greater in proportion to the decrease in the number of working days. There are reports that the coal situation has improved in the past fortnight but mills are not inclined to be optimistic about a sustained improvement in coal supplies.

In contrast to the strength of bullion markets early last week, definitely easier conditions are now noticeable. Both silver and gold are several points lower on balance. Bulls seem to be losing their grip on the market as with the favourable war news and the weakness of the raw cotton market, there has been general selling. Offtake also is on a smaller scale. There were reports of selling from mofussil centres so that holders have shown anxiety to liquidate their stocks while the higher prices are available. Thus it was reported during the week that many of the prominent bulls sold through different agencies for ready delivery and made a show of purchase for forward deliveries in order to give the impression that bull operators are still sticking to their ideas. There is as yet no definite break in prices as even the lower values are substantially higher than the quotations for the first week of December 1944, that is, before the Rundstedt offensive started. There may be some buying by small consumers if there is a further decline in prices. But once this demand is satisfied the real downward movement in prices will start and that will perhaps provide an opportunity for bears to have their vengeance on the bulls.

* * * *

Quite a difficult situation has been created by the Nizam Government's decision to levy an export duty of 12 annas per palla on groundnuts as a result of the recent sharp rise in prices. The British Ministry of Food has suspended its purchases of oilseeds in this country. This has had an adverse effect on the market in Madras where a substantial decrease in prices has been reported. At a meeting of shippers and dealers during the week it was agreed that a refund of the export tax levied by the Nizam Government would be given if the former got a corresponding payment from the British Ministry of Food.

With the sugar production during the week ended February 22, 1945 at 66,526 tons total output of sugar for the season up to February 22 is 3,69,779 tons. Despatches during the week amounted to 18,528 tons making a progressive total of 1,24,818 tons. Physical stocks have thus increased by 46,928 tons to 514,967 tons. The percentage of total despatches to production is 19.5 per cent against 18.5 per cent. Balance of stock for 1942-43 and for 1943-44 season sugar as on February 22 was 28,312 tons or 6,658 tons less.

The Fatigue Factor

The ideal length of a working shift for various types of work has been, and still is, a matter of considerable thought and research. The International Labour Office at Geneva has in particular paid a great deal of attention to the subject. Many factors have to be considered in addition to that of the nature of the work concerned. Type of workers, factory conditions, physical strain, mental strain, rest pauses and many others. Of recent years it has been particularly noted that even during a shift well within the physical powers of the workers output frequently falls during the middle portion. Formerly this fall off was termed the 'fatigue factor', but modern industrialists now know that it is not due to loss of physical energy but to falling concentration.

One of the most valuable means of combating falling concentration is tea. Hot tea served to the worker on the job is eliminating the 'fatigue factor' completely in many thousands of factories throughout the world. To those interested in this subject much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, 15th March.

Mill production figures for the month of February have been published and confirm the expectation that they would be far below the target. This was inevitable, February not only being a short month but including a holiday, which in quite a few instances extended to two days. This combined with poor and irregular coal supplies brought the production down to 74,038 tons, a decline of 11,504 tons or 13½ per cent from the previous month. It also brings down the average for the season for the eight months, July to February, to just over 82,000 tons per month a cut of 1150 tons from the level at which it stood at the end of January. Of the total production, 8779 tons, or 11.9 per cent was on Government account, practically the same proportion as the previous month. Production comprised 30,973 tons of hessian, totalling 1159 lakhs yards, of which 1062 lakhs yards, or 28,040 tons, was on commercial account and 97 lakhs yards, or 2933 tons on Government account. Sackings amounted to a total of 39,972 tons or 948 lakhs yards of which 835 lakhs yards, or 34,596 tons was on commercial account and 113 lakhs yards, or 5376 tons on Government account.

As stocks at the end of February were recorded as 4385 tons lower, it is apparent that despatches of goods during the month totalled 78,423 tons, which is nearly 9000 tons below the figure at which the average of despatches stood at the end of the previous month, and brings the average for the eight months of the season down to just over 86,000 tons per month, which average however still keeps ahead of production. The total production for the eight months, July to February amounted to 656,415 tons while despatches for the same period totalled 688,504 tons. It seems obvious therefore that there is a market for more jute goods than mills can at present produce, if the necessary coal were only forthcoming to enable them to meet the demand. We are assured by colliery owners that coal is available at the pit-head but that waggons are in short supply. This can only be a matter of mal-distribution, for waggons are in almost embrassingly ample supply for the carriage of jute to mills and just at the moment, supplies of coal are of much greater importance to mills than supplies of jute. Some mills have actually had to request that despatches of jute shoud be deferred till they can get the existing jam cleared up. Why, in such circumstances, extra waggons cannot be switched to the coal fields instead of to the jute fields it is difficult to understand. This week arrivals of coal look like averaging about 50 waggons, better than in some recent weeks, but still far below the minimum requirements of the mills.

The February production of goods means a consumption of 4,09,430 bales of jute which brings the consumption figure by mills up to the end of February to 36.30,000 bales since the beginning of the season. For the same period of the previous season consumption was less than 32,00,000 bales but a year before that amounted to over 42,00,000 bales.

It is understood that an elaborate scheme is being worked out to be in readiness in case circumstances call upon the Central Government to redeem their undertaking to purchase jute to maintain prices at the minimum level agreed on. Representative stations all over Bengal have been selected at which purchases would be made and of course specific prices will have to be fixed for each station because the minimum is based upon the Calcutta landed rate and the freight varies with practically every station. But before going to all this trouble it might have been worth while to ponder over some of the major implications of the idea. As a gesture, the undertaking to support the market is an admirable one. But it is sincerely to be hoped that Government will never be called upon to implement it, for we frankly do not see how it is to be carried out. The crux of the whole position is storage accommodation. So long as mills are prepared to go on buying there is little likelihood of Government having to step in. But what is most likely to stop mills buying is lack of storing space. Mills normally carry heavier stocks of raw material than they are at present doing, and would most likely cheerfully increase their present level of stocks if they had space to put it in. If Government is forced in to buy, where are they going to store their purchases? There is no accommodation that we know of available in Calcutta where the jute will ultimately be required. Spare storage space up-country is very limited and is probably already fully occupied. Few balers have more storage accommodation than is necessary to take

Something out of Nothing

Doomed to spend their twelve waking hours, year in year out, in the loneliness, discomfort and utter boredom of prison camps, it is small wonder that the lives of our soldiers, sailors and airmen frequently hang on the regular arrival of Red Cross parcels.

German prisoner-of-war camps are equipped with only the bare minimum of furniture and utensils. Red Cross packing cases, which contained food, clothing, books and other comforts, are salvaged by the prisoners and made into tables, chairs and book-cases, while empty Red Cross tins are cleverly converted into cooking vessels and spoons and forks.

Our men are aided in this work by a special Red Cross booklet giving detailed methods of how to make themselves these useful things.

As we are entirely dependent on your support, we can only continue to send these much-needed parcels if you give us money regularly.

Please send your donations to the Hony. Treasurer, Indian Red Cross Appeal (Bengal), Government House, Calcutta.

INDIAN RED CROSS

Invest in Kindness

Space given by the Imperial Bank of India.

care of their normal turn-over, and they rely on getting regular shipping space to clear their storing godowns as to keep their business moving. If Government expects Balers and Dealers to hold purchases in stock for them up-country, the business of these Balers and Dealers will be brought to a standstill because they will be jammed with stored jute and they will have no room wherein to continue their business. Therefore they, as purchasers, will be put out of the market, the whole scheme will be brought to a standstill and, for lack of buyers, the mofussil markets will decline and the object of the Government will be self-defeated. Without ample storage space in which to lodge Government purchases, the scheme is simply unworkable, and storage space to the extent required, or anything approaching it, is simply not available in the mofussil, nor yet in Calcutta. There is another aspect of the question which we doubt has been considered. Storage business is no unusual feature of jute business in Calcutta but its scope has very definite limitations on account of the limited storing accomodation of suitable type. But it has been a regular, if small feature of business and terms have been evolved to cover the special conditions. These include a storage charge of two annas per maund to cover a period of six months, though there has recently been a tendency to demand a storage charge of half an anna per month. Then the seller is allowed two per cent for loss in weight over the period of storage. That is, when after six months the jute is delivered, the first two per cent shortage is borne by the buyer. At minimum levels this is equivalent to four annas per maund. The buyer also cares for the insurance of the goods while stored. All these various charges over six months storage would amount to not less than eight annas per maund. In the case of many of the godowns in which Government would have to store, if they did make purchases, the insurance rate would be high. But in any case it is obvious that, immediately Government started to buy jute, they would have to allow for charges of eight annas per maund over and above their purchase price straight away, so that unless and until they can raise the market by eight annas, they are on a losing wicket. But the main snag seems to us that the scheme is bound to break down simply for lack of godowns in which Government could store a sufficient quantity to make any appreciable difference to the market and until such godowns are available the scheme will remain an empty, if noble, gesture. Fortunately there appears at the moment no prospect of Government being called upon to fulfil their promise. Mofussil markets rule firm and well above minimum parity and though there is believed to be plenty of jute held in the interior, it is being firmly held and only fed to the markets so judiciously that there is no fear of the breaking rates. Such conditions will doubtless prevail till it becomes apparent to what extent the licensed acreage for the new crop will be sown. Up to date only small sowings on the low lands are reported, the higher ground not being cultivable unless there is more rain.

Practically nothing has been reported in the Pucca bale market during the past week either for export or for local mills. All grades except the very lowest continue on offer in ample quantity at minimum rates.

In Loose jute the turnover has been on a small scale though prices remain fully firm. European packing has been reported at Rs. 16/8 and Rs. 13/8 Mids and Bots and Indian Jat sold at Rs. 15/12 and Rs. 12/12. Supervised District jute sold earlier at Rs. 15/4 and Rs. 12/4 but is now held for four annas more. Indian District Tossa was done at Rs. 16. and Rs. 13. and is now difficult to buy at the price.

In the Fabrics section interest has mainly centred in the offers which were sent to U.S.A for their July/December hessian requirements which were calculated to amount to some 6 crores of yards per month. Naturally all offers went at maximum rates and it is believed that acceptances have been received for about half the above-noted quantity, only A & B group makes being taken. As practically all the goods needed are already held by shippers and other secondhands, it is doubtful if any will come on the market to be placed with mills. Meantime Mill sellers remain reserved unless for shipment beyond this year at maximum. Heavy goods also rule firm though business has not been extensive. "B" Twills for March have sold at maximum from mills and some covering of Cornsacks called for April shipment. Some near Heavy Cees for the country trade were required and Rs. 67. had to be paid to secure them.

SCAVENGERS

THE cleanliness and wholesomeness of their surroundings are things which British city dwellers today take for granted. Yet 300 years ago one of the sights of London was the number of kites, Nature's scavengers. Practically the only drains were open channels running down the narrow streets. Into these went all the sewage, garbage and rubbish from the houses. A city was a "stinking iniquity" where pestilence flourished. Queen Elizabeth even ostracised Sir John Harington for pointing out the advantages of his new invention, the water closet! Although the credit for the improvements that have been made must go first to the energy and vision of our municipal authorities and their public health services, these could have achieved little without the work of the research chemist and the products of the British chemical industry. When the development of natural bacterial methods of purifying sewage made large scale treatment possible the chemist assisted the process by the use of chemicals such as alum salts, iron salts and chlorine. He made possible ample supplies of clean and sterile water, which led not only to cleaner cities but to cleaner citizens. He devised new methods and chemicals for attacking the insects and other pests which threaten human life British cities were made cleaner and pleasanter places and the primary cause of many epidemics of the past was removed. Today the city sets the chemist a new set of tasks arising out of the smoke and fumes from mills and factories which foul the air, and the waste products of industry which, if untreated, pollute our rivers. By research into the chemistry of combustion and the extended use of smokeless fuels, the chemist is reducing the smoke nuisance, and has even developed a process to recover valuable sulphurs from factory smoke. Similarly he not only neutralises and disinfects the more harmful outpouring of industrial processes, but often manages to convert harmful waste products into substances with valuable applications. In the endless battle of the City against dirt and disease, municipal authorities rely upon the chemical industry as the spearhead of their attack

No. 25 in the "Services of an Industry" series issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

JUTE

(By Our Staff Correspondent).

Calcutta, March 15.

The raw jute market has been quietly steady during the past week with mills taking only a small interest in the market. Quotations were steady at previous levels, but towards the close, a definitely firmer tone is noticeable on reports that fresh orders have been placed with Calcutta mills by the U.S.A. for their requirements in the latter half of the year. It is expected that more orders will be forthcoming. With the pressure of demand for jute goods and the agitation by the industry for more coal supplies, it is expected that the average output for the year will be much better than the last four months and that demand for jute will be fairly large. As reports regarding the progress of sowings for the next crop are not quite satisfactory, there is no anxiety on the part of holders to dispose of their stocks. Anticipating a squeeze for supplies next season, mills are taking greater interest in the new crop even now and a good premium is offered. Sellers, however, are not inclined to enter into any commitments for forward positions.

In the loose section prices were around last levels till Thursday. In the last two days they are higher by 4 annas per maund. Good business was reported in Indian Jat Middles and Bottoms at Rs. 15-8 and Rs. 12-8 per maund and Supervised Jat Middles and Bottoms at Rs. 16-8 and Rs. 13-8 per maund respectively.

In the pucca bales section quieter conditions have been noticeable, export business being restricted. But on the strength of the loose jute section, sellers have not been very keen for business at minimum rates. If, for any reason, there is a large increase in the turnover there might possibly be an improvement in rates in this section. Mills are reported to have purchased S. M. R. and Cuttings at Rs. 51 and Rs. 47 per bale.

JUTE MANUFACTURES

(By Our Staff Correspondent).

Calcutta, March 15.

The jute manufactures market closed very firm thanks to the receipt of further orders from the U.S.A. for half the estimated requirements for the latter half of 1945. The expectations of mills have thus been fulfilled. Even last week they were rather reserved in anticipation of U. S. orders. As there is a feeling that more orders might be received there is no tendency on their part to enter into contracts for any position this year. Business has, however, been reported for deliveries early next year at maximum rates. The production figures for the month of February confirm the difficulties of mills in respect of coal supplies. There is a decrease of over 11,000 tons in the output. While this decrease was due to the smaller number of working days, the fall of over 11,000 tons is more than in proportion to the reduced number of working days. This has naturally a restricting influence on business.

The Heavy Goods section has been better with a greater amount of business on account of inter-bazar operators. Developments in the Far East have been encouraging for the market and it is expected that at no distant date, there will be an increase in exports of heavy goods. "B" twills are quoting at the maximum rate of Rs. 66-12, but mills are reserved.

Total production for the month of February was 74,038 tons. Of this output, hessian accounted for 30,973 tons and sacking 39,972 tons. Hessian, on civil account, was 28,040 tons and on military account 2,937 tons. Sacking, on civil account, was 34,596 tons and, on military account, 5,376 tons. Figures are given below.

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS.*

by the mills in the membership of the Association and also by Gagalbhai Mills.

Description.	Quantity.
1. TWIST & YARN—	
(a) for sale	1,357 tons
(b) all other, including that used in sewing bags	904 ,,
	415 ,,
2. CANVAS—	8,11,923 yards
3. GUNNY BAG (Tonnages exclude sewing twist)—	
(a) Hessian ..	2,299 tons
	77,43,020 yards
	39,49,112 number
(b) Sacking ..	31,186 tons
	7,57,58,640 yards
	3,29,62,203 number
4. GUNNY CLOTH—	
(a) Hessian ..	25,326 tons
	9,76,93,877 yards
(b) Sacking ..	3,410 tons
	77,47,733 yards
5. OTHER MANUFACTURES (including ropes) ..	362 tons
6. TOTAL PRODUCTION (above figures combined)—	
(i) All kinds ..	65,259 tons
(ii) Hessian (both as bags and cloth) ..	10,54,36,897 yards
(iii) Sacking (both as bags and cloth) ..	8,35,06,373 ,,
(iv) Canvas (both as bags and cloth) ..	8,11,923 ,,
7. Sandbags ..	Nil
8. Scrim Cloth ..	Nil
9. Hessian bags and cloth and canvas ..	2,933 tons
	96,86,948 yards
10. Sacking bags and cloth ..	5,376 tons
	1,13,35,343 yards
11. Ropes and twines	470 tons

*Exclusive of all Government Orders.

The return of Katihar has not been received and is excluded.

PIECEGOODS

Calcutta, March 15.

Scarcity in respect of cloth and yarn is still unrelieved and there are queues at all the controlled shops. It is reported that the Government of Bengal has been able to distribute the available goods through a larger number of shops and that arrivals into Calcutta have been more satisfactory in the past two weeks, but in the absence of any measures releasing immediately all frozen supplies and early distribution through a greater number of approved shops, it cannot possibly be expected that consumers requirements will be easily satisfied. Conditions in the mofussil are more difficult.

There is considerable controversy regarding the allotment of cloth and yarn supplies for the Bengal province. The Marwari Chamber of Commerce has issued a memorandum saying that even with the larger supplies received during the past few months, there is still a deficit of nearly 8.000 bales and that unless some supplies were forthcoming and black market trading was completely eliminated, it would not be possible to satisfy consumers' requirements. The Bengal Government has been criticised for the delay in taking suitable measures. It is suggested that the inclusion of non-official element on the distribution side will greatly eliminate corruption and suppress black market trading. Something has got to be done immediately to improve the present situation.

Stock Markets to-day and to-morrow:

FAVOURABLE EFFECT OF NEW LOAN

THE announcement of the New Loan early this week had a stimulating effect on the Calcutta Stock Exchange and a general rise in prices was recorded. The report regarding the placing of orders by the U. S. Government with the Calcutta jute mills was also an encouraging factor. But throughout the week the Bombay market was very irregular and the tendency on the part of bull operators was to liquidate holdings especially as the bullion market was weak. War news has been very satisfactory and there are expectations that there might be peace in April. As the Western centre is inclined to be bearish regarding the immediate outlook, if there is an early termination of hostilities, there was naturally a break in prices for Tata Deferreds and Bombay Dyeings. In the Calcutta market, however, steady conditions have been noticeable. Only in Friday's session a slightly easier feeling is in evidence. Operators are still inclined to be of the opinion that there cannot be any appreciable fluctuation in prices especially as it was reported during the week that industrial development in the postwar period would be on a large scale and that British manufacturers would act in co-operation with Indian industrialists. The emphasis on the large absorptive capacity of the Indian market and the bright future for textiles was taken as a confirmation of the views of the influential section in the market. But unless the outlook were clearer and it were possible to study the general reaction to actual termination of hostilities more closely, there might not be any inclination to enter into large commitments. For that reason, fluctuations in the markets in the coming weeks might make mixed showing.

* * * *

The results of three important jute companies have been published during the week and they show clearly that even with the working of the Industrial Pool Scheme the steam-driven units have not done well. Unless it were possible to take full credit for dues from the Industrial Pool earnings will be very low. For the Industrial Pool to work successfully coal supplies are needed. In view of the very low rate of arrivals in the past few months the pool has been working at a deficit. It has therefore been decided that steam-driven units should take only part credit for their dues from the pool. The foster mills, however, continue to do well as with the priorities for coal production has been kept up in full.

* * * *

Orient Mills is an instance of the successful working of foster mills. The results for the half-year ended November, 1944, show a large increase in the net profit, before providing for taxation and depreciation, to Rs. 5,12,155 against Rs. 1,48,380 for the previous six months. Sales were as much as Rs. 36.82 lakhs against Rs. 27.99 lakhs. As offtake was good, stocks are lower at Rs. 5.21 lakhs against Rs. 8.67 lakhs. Provision for taxation naturally takes up a good portion of the increase in earnings, but it is still possible to increase the dividend to shareholders to Rs. 4-8 per share from Rs. 3-8. The amount set aside for depreciation is Rs. 40,000 (same) while Mill Renovation Reserve receives Rs. 47,978 (nil). Provision for taxation is Rs. 3,15,000 (Rs. 60,000). After the distribution of the dividend, referred to above, the amount carried forward is Rs. 64,485 against Rs. 67,403 brought in. The mill lost only 58 working hours during the half-year and for this compensation is receivable from the Pool. The company has still a balance of 395 hours lost and it is entitled to make up these hours at a future date under the working time agreement.

* * * *

Caledonian and Delta Jute Mills, have not done very well as credit was taken in the accounts for loom hour payments only to the extent of 41.18 per cent of the full amount due under this head. The net profit of the *Caledonian Jute Mills Limited* for the six months ended November, 1944 was thus Rs. 1,19,763 against Rs. 1,78,647 for the previous six months. No provision has been made for taxation against Rs. 75,000 formerly but depreciation accounts for Rs. 25,000 (same). The dividend has been maintained at 7½ per cent. The amount carried forward is lower at Rs. 20,899 against Rs. 30,708 brought in.

* * * *

Delta Jute Mills Company, Limited for the same half-year has earned only Rs. 1,66,101 against Rs. 3,41,149 for the previous half-year. Provision for taxation is Rs. 10,000 (Rs. 2 lakhs). After maintaining the dividend at Rs. 10 per share the amount carried forward is not very much changed at Rs. 65,557 against Rs. 67,191 brought in.

If there is an improvement in the coal situation and it were possible to utilise fully the purchased loom rights the Industrial Pool would be able to meet its obligations in full. In which case it can be expected that both the Delta and the Caledonian will be able to get substantial sums. It should thus be said that the improvement in the coal situation, if it comes about, will be to the advantage of the steam-driven units which have large arrears of production to be made up and which have taken only part credit for the sums due from the Industrial Pool. Whether such a contingency would happen cannot, however, be said. It cannot even be said whether coal arrivals in the next few months will enable the Industrial Pool Scheme to be successfully worked. The current year will bear out this statement.

* * *

Arthur Butler & Company (Muzafferpore), Limited has been doing very well in the last three years. The working for the year ended October, 1944, shows a big increase in the net profit, before providing for taxation and depreciation to Rs. 3,65,729 from Rs. 2,82,613 for 1943-44. Taxation is higher at Rs. 2,15,113 against Rs. 1,33,691. Depreciation is Rs. 24,253 (Rs. 26,253) and Reserve Fund Rs. 40,000 (Rs. 50,000). The dividend has been increased to 12½ per cent from 10 per cent. The company is very busy and its workshops are fully occupied on war contracts. On the publication of the report there has been a rise in the quotation to Rs. 25. Even at this level the shares afford a good return.

It is rumoured that *Dunlop Rubber Company (India), Limited* will be paying a dividend of Rs. 3 per share for 1944 against Rs. 2-8 per share for 1943. The working for 1944 seems to be very satisfactory. In expectation of a higher dividend there was a rise in the quotation for the shares to Rs. 63. Dunlop Rubber is one of the important companies which have benefited from war conditions. There has been a tremendous improvement in the earnings of the Company and the experience gained in the war period may prove to be very useful in post-war years.

MARKET GOSSIP

By "Bear-Bull"

[The following is gossip in the literal sense of the term. The markets sway to and fro not in response to facts and developments, but in response to khabbar, true and untrue and slightly true and largely untrue. "Bear-Bull", right in the heart of the Exchange Ring, will relay, periodically, such gossip as has caused gyrations in prices and changes in sentiment.—Ed. I. F.]

On receipt of the Budget news, the share market in Calcutta registered a fair-sized improvement but unfortunately the rise proved only temporary as the publication of the budget was followed by prospects of early termination of hostilities in Europe which created a bearish feeling in the market. The lead for a decline was given by a slump in Tata Deferreds. Under the influence of Bombay, Calcutta prices also went down and about the close of last week they came down to a level lower than the pre-budget publication level.

This week, however, there has been a sudden change in speculative sentiment, as Germany has not made an unconditional surrender. The prevailing sentiment now is that this war is not coming to an end in a week or two and that it is likely to continue for some months at least. Due to this change in sentiment most of the ground lost has been recovered.

The outstanding performance of the last week was a sharp rise in the price of Howrah Jute. In my notes published on February 24, I said that financially strong parties were interested in buying these shares on all declines and that if the budget did not contain anything drastic affecting the dividends, these shares were in for a further rise. This prognostication of mine has proved correct.

A new entrant to the Stock Exchange speculative circle is reported to have amassed a holding of about 50,000 Howrah shares. The price of Howrahs touched Rs. 88-12-0 on Thursday. I feel that this share will soon cross the Rs. 90 level unless we receive news of German capitulation. Some speculators are confidently talking of this scrip to a century. Unless a further bear account is built up in this scrip I do not feel so optimistic but I feel certain that they can still go up by three or four rupees on the present position of the market.

The future course of this particular scrip will very much depend on the operation of one single speculator and when such becomes the case it is difficult for anyone to anticipate its future movements. But talking from an investor's point of view I feel that the intrinsic position of the company is sound and even if the European war comes to a close these shares will not go down below Rs. 80. At the same time investors will be well advised to clear their holdings if these shares go up to Rs. 92 or thereabout.

There has been no appreciable change in the price level of other jute shares but the prevailing sentiment is that even on the war coming to a close the prospects of the Indian jute industry are not bad and as the industry as a whole is in a very sound position shrewd speculators advise acquiring good jute shares if there is any decline in the market as a result of selling pressure when Germany surrenders.

Indian Irons after ruling steady for some days advanced by about a rupee during the week under review. It is believed that a large short account is outstanding in this scrip. The rise on Thursday was due to rumours of this company having sold to the U.S.A. about two lacs tons of pig iron for delivery in the present year. It is believed that if these news are correct these shares may go up by another two or three rupees. I do now know how much truth there is in this rumours. The market position of this particular scrip does not lead me to hope for any appreciable rise as the prevailing speculative sentiment is to sell these shares when they rise above Rs. 41.

There was considerable activity during the week in East Indian Coals. But for the fact that the company is a sterling company and liable to double taxation the intrinsic position of the company is very sound and the shares at this price are cheap. The total capital of the company is £1,20,000 divided into 1.20.000 shares of £1 each. The company owns more than 12000 bigas of coal land. It has also net liquid assets of more than a hundred thousand pounds. Even before the war the company used to raise about 4,00,000 tons of coal in a year and pay a steady dividend of 10% At the present price of shares the total value of the company comes to about Rs. 47,000,000. When we compare this price with the current price of other collieries it is very cheap. I therefore, will not be surprised if these shares appreciate further. There are rumours that some speculators are trying to get hold of there shares and that the Managing Agents too may try to increase their holdings. In any case it is a good investment and may prove profitable speculation.

In my notes published in the issue of Feb. 24, I referred to the fact that it has become a favourite pastime with some speculators to acquire a 51 per cent majority with a view to get control of a concern. I also referred to certain large block of some jute mill shares havings been sold to Dalmia Jain group. The Lothian jute mill was one of the concerns in which this group has acquired a majority holding. There was an attempt to change the entire Board of Directors and to remove the present managing agents from their office. The matter went up before the High Court in Calcutta. As the proceedings are of considerable interest to all the shareholders and the managing agents, I shall deal with the subject matter of the suit in my next week's notes.

THE MODERN MILLS, LTD.

NOTICE

Notice is hereby given that the Eleventh Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Wednesday, the 11th April 1945 at 4-15 p.m. (S.T.), (1) To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October 1944, (2) To declare a dividend and bonus, (3) To elect Directors in place of those who retire by rotation but who are eligible for re-election, and (4) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 23rd March 1945 to 11th April 1945, both days inclusive.

By Order of the Board,
N. SIRUR & CO., LTD.,
Managing Agents,

V. N. CHANDAVARKAR,
Managing Director.

N.B.—The dividend and bonus when declared will be made payable at the Registered Office of the Company on and after Wednesday, the 18th April 1945 between 12 noon and 3-00 p.m. on week days other than Saturdays, and between 12 noon and 1-30 p.m. on Saturdays to shareholders whose names stand on the Register of Members on the 23rd March 1945.

Bombay Investors & Indian Stock Exchange

PEACE RUMOURS AFFECT MARKETS

(By Analyst)

Bombay, March. 9.

The giltedged market this week has been steadier particularly after the announcement by the Government of India of the issue of a three per cent 1959-60 Second Victory Loan. For this loan to be a success I am afraid the Reserve Bank of India will have to undertake open market operations and bring up the price of securities by a few annas per cent. Three per cent 1957 Victory Loan has, of course, improved to Rs. 99-14, but this loan should really quote at 4 to 8 annas premium if the new loan to be issued should be a real success. I still continue to recommend purchases of three per cent Victory Loan for a small profit.

Last week Dalal Street closed quiet due to selling pressure in Tata Steels by prominent operators. Textiles followed in the wake of Steels despite the heavy short position in Bombay Dyeings and Kohinoors as could be seen from *Ulta Budla* rates of Rs. 3-12 and Rs. 3 respectively. In the beginning of this week, however, Dalal Street has recovered the lost ground particularly in textiles due to heavy bear covering. Steadier advices from Calcutta also were responsible for the recovery in the market. Again on Friday, market declined due to rumours that Hitler was negotiating for peace with the Allies. There seems to be no truth in this. But, as usual, Dalal Street was quiet with Tata Deferreds around Rs. 2,075 and Ordinaries around Rs. 1, 383. In Textiles, Dyeings and Kohinoor also declined from a higher level of Rs. 1.865 and Rs. 623 to Rs. 1,855 and Rs. 618.

Despite the bearish tendency in the Bombay market Calcutta has forged ahead with Jutes leading the show. *Howrah* touched a record price of Rs. 88-8 due to continuous buying by a prominent operator and it is rumoured in the market that there are attempts at cornering the shares.

Coals have also followed suit with *Equitable* around Rs. 70. Equitables are tipped for further substantial rise. *Bengal* were steadier at Rs. 710 and *Amalgamated* at Rs. 54-4.

Madras was, however, dull and unchanged and there is nothing special to report this week. Now that there are talks of peace and even Churchill feels that the war in Europe might come to an end by the summer it is high time that investors should think of the post-war prospect for every industry and every share. But before making an investment they should study the technical position of the market and, if necessary, wait patiently for the market to react. I had mentioned in one of my previous gossips that the major trend in Tata Steels is bullish and that I would recommend purchases of Tata Steel Deferreds and Ordinaries around Rs. 2,000 and Rs. 370 respectively. Indian Irons and Steel Corporations improved to Rs. 40-6 and Rs. 33-11, but declined at the close to Rs. 40-1 and Rs. 33-4. I continue to recommend liquidation of Indian Irons and Steel Corporations with a view to re-invest the proceeds in Tata Steels, when the markets react somewhere to around Rs. 2,000 as mentioned above. I think these figures might be seen in the market very soon and I would welcome investment buying despite a temporary bearish feeling in the market due to the possibility of lower dividends this year.

UNITED COMMERCIAL BANK LIMITED

ALL ROUND SATISFACTORY PROGRESS

CHAIRMAN'S REMARKS ON FUTURE OF BANKING

Statement of Mr. G. D. Birla, Chairman, to be presented to the Shareholders of the Bank at the Second Ordinary General Meeting to be held on Wednesday, the 28th March, 1945.

The Bank's accounts which are being submitted to you cover a period of nine months, from 1st April to 31st December 1944. The proposed Banking Legislation requires that the Balance Sheets of Banks should be prepared as at the end of every December and your Directors decided to adopt that date as the date for presentation of accounts to shareholders. Our future Balance Sheets will be prepared at the end of December every year.

Coming to the Balance Sheet, I am sure the shareholders will feel happy that within a short period of 19 months from the commencement of our banking business, the Bank has been able to build up deposits of Rs. 17.22 crores. Cash in hand and at bankers amounts to Rs. 3.76 crores and the Bank's investment in gilt-edged securities stands at Rs. 7.67 crores which is less than their market value. Cash and investments form 66 per cent of the total deposits. Advances stand at Rs. 7.63 crores, out of which Rs. 1.18 crores is in bills. You will notice that since the first published accounts for 31st March last, we have been able to build up a fair amount of advances, which now form 44 per cent of total deposits. Most of the advances are fully covered by good tangible securities.

By comparing the present Balance Sheet with the one issued on the 31st March last, Shareholders can see that the Bank has made an all-round satisfactory progress during the last nine months, but in achieving this progress, we have not ignored sound principles of banking nor gone out of our way to tempt business at unfair rates. We continue to pay special attention to the liquidity of our assets. The total of cash, free investments and bills is Rs. 12.13 crores, which is nearly 90 per cent of Demand Liabilities and 70 percent of total deposits. Actually our liquidity is much greater because almost all our advances are covered by first-class and readily realisable securities like Government Bonds, Stock Exchange Securities and goods.

I wish particularly to draw the attention of the Shareholders to the figures of our Dollar and Sterling Bills, Rs. 41.40 lacs, and Stering Bills re-discounted £99.339/- (Rs. 13,24,000 at 1/6), as indicative of the good progress we are making in foreign exchange business. As far as we can ascertain, we are handling the largest volume of business under this head, among the Indian Joint Stock Banks. Your Bank has a proper set-up to handle every kind of foreign exchange business with all part of the world at competitive rates; and it is hoped that our countrymen will find this branch of our business of special interest and service to them when dealing with the outside world.

The total working capital of the Bank is in the neighbourhood of Rs. 20 crores. The Shareholders will be glad to learn that we are today among the first 6 or 7 Joint Stock Banks of the country, out of nearly 500 such Banks and we should be particularly proud of this when we remember that this position has been achieved within less than two years of the incorporation of the Bank.

Turning to the earning side of the Bank, it is indeed gratifying that the Bank has made a net profit of Rs. 12,84.553-4-0 during the nine months under review. Including the balance of profit brought forward from the last accounting period, we have an available profit of Rs. 14,58,011-10-6. The Directors have already stated in their report to you that, after providing for Rs. 5.75 lacs for taxes, they propose to transfer Rs. 7,50 000 to Reserve Fund, to pay Rs. 85,000 as Bonus to staff and to carry forward the balance to the next year's account.

In deciding to take available profit to Reserve, your Directors are actuated by the single desire to put the Bank on a strong and solid foundation, so that those dealing with the Bank may be fully convinced that their interest is of paramount importance to the Directors and Shareholders alike; and that there is no intention whatsoever to hurriedly distribute the Bank's profits in the shape of dividends. The Shareholders do not suffer at all by such a long-sighted and wise view because transfer to Reserve Fund not only strengthens the value of their investment but also buttresses the Bank's future progress and profits.

Chief credit for the splendid development of the Bank in such a short time must go to our General Manager, Mr. B. T. Thakur, who has continuously worked hard with single-mindedness and devotion. He has gathered under him a band of experienced, enthusiastic and loyal workers, who delight to work in the same spirit as their Chief. To all of them I express my warm appreciation and thanks.

On account of the rapid expansion of your Bank's business, it was felt necessary to increase the Capital of the Bank. An offer of new shares at par was made to the Shareholders and applications in excess of the amount of Capital offered have been received. Looking at the large premium, nearly 80 per cent, at which the shares are quoted on the Stock Exchange, there was no doubt that the Shareholders would readily take up the offered shares. With the addition of the new Capital, your Bank's subscribed and paid-up Capitals will be doubled to Rs. 4 crores and Rs. 2 crores respectively.

Having explained our accounts and the progress made by the Bank, I may briefly refer to some of the important economic and financial events affecting India.

During 1944, the total deposits of Scheduled Banks increased from Rs. 660 crores to Rs. 820 crores or by 24 per cent. During the same period currency in circulation expanded from Rs. 840 crores to Rs. 1010 crores i.e. by 20 per cent. Monetary conditions were easy throughout the year, though the new methods of advance payment of Income-Tax and Excess Profit Tax and the energetic drives by the Government for investment in war loans, created at times great demand for money. Bank rate throughout the year was 3 per cent.

Questions are frequently asked in banking and financial circles:—

(1) Will bank deposits continue at the present level or go down on the termination of war?
(2) Will the bank rate be maintained at the present figure or be put up during the post-war period?

and

(3) Are the Banks likely to lose on their investments after the war?

During the period, August 1939 to December 1944, currency in circulation has expanded from Rs. 179 crores to Rs. 1010 crores or by 564 per cent. Deposits of Scheduled Banks in India in this period have increased from Rs. 249 crores to Rs. 820 crores i.e. by 330 per cent. The growth in bank deposits is far behind the increase in currency. Before the war bank deposits were about 139 per cent of notes, but to-day this percentage has come down to 81 per cent. Pre-war ratios of bank deposits to currency in England and America were 420 per cent and 790 per cent respectively, so that our pre-war percentage (139 per cent) is actually far below what could have been achieved under an efficient and fully expanded banking system.

In my address to you last year, I referred to the slow growth of bank deposits in relation to the expansion of the currency; and I attributed the phenomenon to the fact that a good part of the money disbursed by the Government found its way in the form of currency notes into the pockets of soldiers, workers, technicians and agriculturists. The situation is substantially unchanged even after a year of material expansion of branch banking; and this vast volume of currency notes will, perhaps, not find its way into the vaults of the banks until production is geared up and more goods are available to this body of consumers. On the other hand, large credits pumped by the Government find their way to the banks in the form of deposits, but a greater part of this is drained off again in the form of taxes and subscriptions to loans; and if this process continues long enough, some signs of scarcity of money in business circles might, in due course, become visible.

We need not, however, be pessimistic about the effect of this on bank deposits, as the enlargement of banking activities and expansion of branch banking will slowly but surely develop banking habit in remote districts and gather, in the form of small deposits, the currency which is lying idle; and if economic activity is keyed up and production is expanded, the growth of bank deposits might well be more rapid than we can permit ourselves now to think.

On the basis of the existing volume of currency, bank deposits must reach new heights. And if and when deflation takes place in currency, its contractionist effect on deposits will be largely offset by the taking up of the lag in the growth of deposits in relation to currency.

Deposits are partly created by borrowings, but during the present war there is very little of growth in bank deposits due to private or individual borrowings. This also removes one cause of contraction in deposits through decrease in advances in the post-war times. As India has been greatly starved in the production of consumers' goods, it is probable that on the termination of the war, production and distribution of such goods may actually enlarge borrowings from banks which in turn will stimulate bank deposits. Banks to-day maintain much larger cash reserves than are normally necessary, which provides ample room for growth of bank credit when times become normal. Finally, India has now a Central Bank of her own which must also deprecate any undue or hasty decrease in currency. Interplay of all these forces must result in the stabilisation of bank deposits, if not in their further growth.

Taking the second question of the bank rate, if the situation is properly handled, there should be no possibility of a rise in the bank rate in the post-war period. The Government is interested in keeping the service cost on public debt at a minimum and must do everything in their power to continue the present low rate of interest. Business and industry will find in large deposits enough provision for their immediate post-war needs. The Reserve Bank has a sufficient grip on money and security markets to maintain the present low rate, if necessary through large purchases of Government Bonds. India to-day is a creditor nation in the world; and a creditor country need have no fear of dear money.

The last question of loss on investments to banks in the post-war period can now be answered in the negative, particularly in the case of banks like yours, which though confident of the continuance of easy money conditions, are, nevertheless, prudent to keep a very large percentage of their securities in very early maturities.

To fully understand my remarks in regard to correlation between deposits and currency, and how it has been largely altered by the War, to provide considerable reserve for continuance of bank deposits at least at the present level, the shareholders can refer with advantage to the graphical representation given at the end of this statement. This has been prepared by your Bank's Economic and Statistical Department which studies economic and financial questions affecting India. Your General Manager proposes to widen the benefits of this study by publishing a monthly bulletin of the Bank as soon as conditions permit and the paper situation becomes easier.

I must refer to the Banking Bill pending before the Indian Legislature. It is a measure in the right direction and its effect must be to help safe and sound banking. In order that there may be the utmost economy in the circulation of money and that banking habit may grow nation-wide, it is necessary that depositors' interest must be fully protected. Advancement of Indian banking is very necessary for giving effect to our economic plans. It will be necessary to have some changes in the Bill to make it fully effective for the purpose it is meant to serve. I have every hope that before the measure is put on the Statute Book, our legislators will so improve its usefulness.

There has been a certain amount of criticism of the policy of the Reserve Bank in selling gold and silver. But I think the fault must be attributed to the Government who have allowed foreign countries to take

fullest advantage of the present artificial demand for bullion in this country. It would have been easy for India to buy gold and silver in the world market at the world price and retain the difference for the Indian Revenues. It is a paradox to many how, at the outbreak of the War, the Government controlled export of bullion which meant India's realising lower prices and later allowed those very foreign countries to sell bullion to India at a much higher price. The conclusion is irresistible that our Government's bullion policy is not entirely in keeping with our national interests.

In comparison to our man-power and natural resources, ours is one of the most backward industrial countries. It is a pity that the people of the country were not allowed to take fullest advantage of the war to start industries in the country as has been done by every other country in the Allied Camp. It is hoped that the appointment of Sir Ardeshir Dalal, as the Member in charge of Planning, is a sincere and honest effort on the part of the Government to advance our economic and industrial growth. The present is the most opportune time for laying the true foundation for post-war industrialisation. There are demands for Defence purposes which at present are met by the Indian industries. These demands must continue until the war against Japan terminates. Until these demands continue, the Indian consumers too must continue to starve. One, therefore, fails to understand why we are making no efforts to expand the existing capacity of the industry. More production will serve two purposes. It will relieve the strain on the consumer who is going about without goods and also will curb the present inflationary tendency. What is inflation after all? It is in fact the scarcity of goods in relation to the purchasing power. And this simple phenomenon of scarcity caused by war purchases has been given a high sounding name of inflation. People's attention thus has successfully been diverted from a simple and better remedy to one more complex and extremely harmful to the society at large. The better way to kill inflation is to create large supply of goods. The harmful method is to deflate, that is to immobilise the purchasing power of the people. It is like killing the hunger of the starved by creating dyspepsia and not by growing more food to appease the hungry stomach. Unfortunately in our country the Government is adopting the latter policy which is the most injurious method. Any Government careful of the welfare of its people would have adopted the other method. If the Planning Member is really anxious to plan post-war industrialisation. then he cannot ignore the war time expansion of production. The capacity to produce must be expanded here and now. Unfortunately, no attention is paid to this fundamental question. On the contrary, the Government has sent a mission to import consumers' goods from abroad. One fails, therefore, to understand how post-war industrialisation will succeed if the very sources are to be weakened now. It would be a strange planning indeed which plans creation for to-morrow but destruction for to-day.

There is another point needing serious attention. Before we can really plan successfully, the Government must energetically tackle questions like the liquidation of Sterling Balances and make an irrevocable declaration, granting protection to Indian industries until such time as they are fully grown to resist any outside interference or competition.

India is the largest overseas creditor of England with a claim, which at the end of the War may amount to over a thousand million pounds out of England's estimated total overseas indebtedness of three thousand million pounds. The future destiny of India, to a large extent, depends upon the satisfactory arrangements for the liquidation of our Sterling Balances and any tinkering with it will further increase the misery and went of millions of our countrymen, the forcible starvation of whose needs went up to accumulate these balances. It is hoped that England will be just and fair in settling India's claim.

India must take increasing advantage of the vast technical and scientific improvements which have taken place during the last few years. Recent visits of Indian scientists and businessmen to foreign countries must prove helpful to us and we must take the fullest benefit of the newer knowledge and information gained by them.

All countries are planning enlargements in their credit structure so as to provide necessary means to cope with special problems arising at the end of the war. In America a method is being evolved in the shape of group finance by large banks to pump credit into the country through smaller local banks. In England financial institutions are being started to provide capital and resources for industries. These devices abundantly prove that every country must pay special attention to its own needs and establish methods and means calculated to serve its economic purposes. I hope instances like this will stop for ever the bogey of precedents and examples, which has too long stifled our economic growth; and we should be able to have recourse to newer methods and newer ideas adopted to suit our case. I also hope that our Government too will no longer show their continued fondness for dumping foreign exports in India, whose value, as past experience shows, is indeed doubtful. Wedded to their own established conventions and conditions they have never shown a courageous and independent outlook so necessary for a country like ours.

Before the war, any attempt on the part of India for vigorous all round industrialisation was scoffed at on the ground that ours was a poor country and we had no money to launch such a programme. The war has proved beyond doubt how fallacious this argument is, and that what matters is not money, but national will. man's labour, confidence and credit. Want of money has proved to be no bar to the endless production of goods and providing of services for war, to feed the ever hungry and insatiable flames of mutual destruction; and much less should be its interference when the purpose is not destruction but uplifting of human standard through planned economic growth.

I have always stressed it to be one of our great needs that the Indian banks particularly the larger ones should have a closer association among themselves to solve satisfactorily questions concerning credit and finance. It is only in this collective manner that we can meet the needs of the country in post-war times. By remaining aloof and merrily looking to our own individual positions, we are depriving our country of her rightful claim on Indian credit institutions for fullest collaboration in future schemes. It is also the duty of the big banks to extend a helping hand to the smaller banks so that they too may grow in usefulness and in the service of the country.

There remains perhaps only one thing for me to refer to, namely, termination of hostilities, which I hope will be very soon, and the question of Peace. It is needless for me to remark that Peace will have a profound effect upon the fate of many nations. India needs no favour but only justice politically and justice economically. Most people in India have apprehensions, based on past historical experience and recent decisions arrived at various International Conferences, that again Indian claim for fullest freedom in developing her economic destiny may not receive full recognition. The Bretton Woods Conference brushed aside India's need of bringing liquidation of her sterling claims in the orbit of International Monetary decisions and denied her just claim for a permanent independent seat on a footing of equality with major countries, based on grounds of population, economic rank and even tremendous sacrifices made for the war. Conclusions of the Dumbarton Oaks Conference were equally disappointing. The Conference of Chambers of Commerce which met at Rye in the United States, was somewhat more sympathetic, but the British delegates were always conscious of being members of a race which ruled over India and insisted on continuance of existing conditions and rights of their country acquired through political domination; and never was any disposition to consider justice to India. At the Pacific Conference at Hot Springs we had an able unofficial ambassador in Mrs. Vijayalakshmi Pandit, who so logically represented demands of Eastern countries for just and fair treatment; but the complex that the East is East and the West is West seemed to dominate conclusions. The authors of the Peace if they really want to end war for ever must always keep a few

(Continued on page 354)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 16.

In spite of the irregular tone of the Bombay market and the extremely favourable war news steady conditions have been noticeable on the Calcutta Stock Exchange after the announcement of the terms of the New Loan was made early this week. Business has been professional in character and as investors have not shown great anxiety to liquidate their holdings the manipulations of prominent operators in selected counters have resulted in a sharp rise in prices. There is a tendency on the part of small operators and the average investor to await further developments though it is generally agreed that at least, so far as the Calcutta market is concerned, there may not be any appreciable fluctuation in prices.

The giltedged securities section, has been better after the announcement of the terms of the New Loan. The New Loan is a 3 per cent 1959-61 Loan issued at par and redeemable at par. The improvement in prices is naturally most pronounced in the Victory Loan 1957, which was quoting at a discount of 6 annas last week. They are now at par. 3 per cent 1953-58 also have improved by 4 annas to Rs. 100-7 and 3 per cent 1951-54 by 10 annas to Rs. 101-9. Long-dated issues have remained unchanged 3 per cent 1963-65 being Rs. 98-15, 3 per cent 1966-68 Rs. 98-7 and 4 per cent 1960-70 Rs. 112-15. 3½ per cent 1947-50 and 5 per cent 1945-55 were both unchanged at Rs. 103-7 and Rs. 102 respectively. The only transaction to be recorded in Provincial Loan was in 3 per cent U. P. 1952 at Rs. 100-3.

Bank shares have been better in sympathy with the giltedged securities section, *Calcutta National Bank* being done up to Rs. 15-8, *Imperial Bank* fully paids Rs. 1,985 and Contributories Rs. 495. *Reserve Bank* were Rs. 133. *United Commercial Bank* improved by 1 point to Rs. 20-12 premium.

Cotton shares were uninteresting, but the emphasis on the bright prospects for the cotton textile industry in the postwar period has resulted in a slight enquiry for the important shares towards the close. *Basanti* were Rs. 13-4 against Rs. 12-8, *Cawnpore Textiles* Rs. 13-10 and *Elgin* Rs. 65-4. *Dunbar* were Rs. 313 and *Kesoram* Rs. 17-10. *New Victoria* were a few annas higher at Rs. 7-12.

Coal shares were uninteresting in the early part of the week, but with renewed buying and the expectation of good dividends by both the McNeill and Bird Groups prominent shares have been marked higher. *Bengal* have improved by 15 points at Rs. 708, *Bhalgora* were very active being done up to Rs. 21-12 and *Bhulanbararee* to Rs. 31-14 from Rs. 31. *Bokaro* and *Ramgur* have risen from Rs. 48-12 to Rs. 49-12 and *Burrakur* to Rs. 43-8 from Rs. 42-12. A large number of transactions has been recorded in *East Indian* and the quotation is a point higher at Rs. 39-8. *Equitable* were further steady at Rs. 17-10. *Ghusick and Muslia* were in enquiry at Rs. 17-2. After being quiet for some time, *Nazira* have again turned active and the quotation is Rs. 23-2. *South Karanpura* were very steady at Rs. 30-6.

Jute shares were rather featureless, but on special buying and the reports that some orders have been placed by the United States with the jute mills, a rise of 10 to 15 points in the bigger shares has been recorded. The rise in *Howrah* is very significant the quotation at the end of last week was only Rs. 85-14. It is now nearly 3 points higher at Rs. 88-8. *Anglo-India* were Rs. 472 against Rs. 467; *Chitavalsah* are higher by 2 points at Rs. 34-12; *India* were Rs. 711 against Rs. 702 and *Kamarhatty* Rs. 695 against Rs. 688. *National* were a shade better at

COLABA LAND AND MILL COMPANY, LIMITED

Y-ended Dec.	1944	1943	1942
	Rs.	Rs.	Rs.
Net profit	37,20,397	49,15,391	34,37,482
Depreciation	1,99.169	3,83,099	2,71,990
Reserve F'ds	6,20,000	6,05,000	1,15,000
Taxation	27,10,000	36,50,000	17,75,000
Dividend A'mt	1,96,000	2,80,000	2,80,000
Carry F'd	5,780	10,552	13,260
Dividend %	7	10	10

(Annual General Meeting held on 5-3-1945).

Audited accounts for the year ended 31*st December,* 1944.

The working during the period under review has resulted as follows:—

Land and Property Account.—Net Revenue (after charging Proportion of fees, rent and allowance Rs. 7,785-1-10), Rs. 2,61,262-10-7, *Add*—Mill Profit Rs. 38,55,093-9-3. Total Rs. 41,16,356-3-10; *Deduct*—Amount of Managing Agents' Commission Rs. 3,95.959-13-9; *Add*—Balance of Profit from last year Rs. 10,552-7-4, showing a Net Profit of Rs. 37,30,948-13-5, which the Directors propose to distribute as follows:—Depreciation on Buildings and Roads Rs. 70,865-14-10, Depreciation on Mill Machinery, Plant, etc., Rs. 1,28,303-6-0, Provision for Taxation Rs. 27,10,000-0-0, Reserve Fund Rs. 6,05,000, Provision for Improvement of Flats Rs. 15,000, and declare a Dividend for the year ended 31st December, 1944, at the rate of Rs. 7 per Share, free of income-tax, absorbing Rs. 1,96 000, leaving a balance to be carried forward to next year Rs. 5,779-8-7.

The prices of cloth and yarn fixed by Government at the end of the year 1943 were subjected to successive reductions during the past year, and the margins of profit are now at a much lower level. In an endeavour to suppress the black market various measures of control over distribution have been and are still being introduced by the Authorities but so far these have only met with partial success. A considerable portion of the Company's plant continues to be engaged in the production of goods for War purposes.

The Company's property including Buildings, Machinery and Stock has been insured for Rs. 1,31,00,925 and the Profit and Standing Charges of the Company have been insured for Rs. 50.00,000 to cover a maximum stoppage of 24 months, such Insurance to run from 3rd January, 1945 to 2nd January, 1946.

The Company's Buildings, Machinery and Stock have been insured against War Risk in accordance with the Ordinance of the Government of India.

Mg. Agents.—M/s. W. H. Brady & Co., Ld.

THE CENTRAL BANK OF INDIA, LTD.

Notice is hereby given that the Thirty-Fourth Ordinary General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Central Bank Buildings, Mahatma Gandhi Road, Fort, Bombay, on Wednesday, the 28th day of March, 1945 at 4 p.m. (S. T.), to transact the following business:—

(1) To receive the Report of the Directors and the Audited Accounts for the period ending 31st December 1944.

(2) To declare a Dividend and a Bonus.

(3) To elect three Directors in place of Mr. Nurmahomed M. Chinoy, Mr. Bapuji D. Lam and Mr. H. F. Commissariat who retire by rotation under Article 94 of the Articles of Association read with Regulation 78 of Table "A" of the Indian Companies Act and who are eligible for re-election.

" Directors recommend final dividend 7 per cent making 14 per cent for year 1944 less income tax placing £60,000 ... sion Funds and £100,000/- to Contingencies account carrying forward £271,857-11-3 shareholders meeting 27th March".

THE BANK OF JAIPUR, LTD.

"The net profits of the Bank of Jaipur Ltd., for the year ended 31st December, 1944, inclusive of the amount brought forward from last year amount to Rs. 5,39,276/11/4. The Directors of the Bank have decided to distribute this sum thus: (a) To carry to Reserves Rs. 2,50,000/-, (b) Bonus to Staff Rs. 25,000/- (c) To carry forward the balance of Rs. 2,64,276/11/4 to next year's accounts."

(Continued from page 352)

Rs. 34-2; *Northbrook* were very firm at Rs. 44-4 against Rs. 41-10 while *Nuddea* were not very much changed at Rs. 129. *Presidency* have been active during the week around Rs. 12-12. In sympathy with *Howrah, Reliance* are higher at Rs. 75-12.

Not much activity was noticeable in Engineering shares but in sympathy with the other counters, *Indian Iron* recovered to Rs. 40/6 from Rs. 39/2 and Steel Corporation to Rs. 33/12 from Rs. 32/10. Other shares have been unchanged, *Braithwaite* being Rs. 12/13 cum. dividend, *Jessop & Co.*, Rs. 24/14, *Kumardhubi Eng* Rs. 11/8 and *Marshalls* Rs. 5/2.

In the Sugar section the only feature of interest was the rise in Carew & Co. to Rs. 28 from Rs. 27/2 *Ramnugger Cane & Sugar* were sticky at Rs. 15/9, *Balrampore* at Rs. 17/7 and *Belsund* at Rs. 16/1.

Tea shares remained firm, business being difficult owing to the scarcity of scrips, *Banarhat* were Rs. 918, *Loobah* Rs. 18/13, *New Dooars* Rs. 1485 and *Patrakola* Rs. 1335.

In the Miscellaneous section, there were no features of interest. Burma shares were unchanged, *Burma Corpn.* being Rs. 5/12 *Consolidated Tin* Rs. 3/12 and *B.B.Petrol* Rs. 5/6. *B. I. Corpn.* were sticky at Rs. 6/12; *Aluminium Corpn* were a shade better at Rs. 15/11 while *Dunlop Rubber* were very steady at Rs. 63.

Paper shares were unchanged, *India Paper Pulp* being Rs. 228 and *Titaghur Paper* Rs. 28/6. *Midnapore Zemindary* Rs. 172, *Assam Saw* Rs. 6/1 and *Port Shipping* Rs. 30.

Cement shares also were unchanged, *Assam Bengal Cement* being Rs. 17/4 and *Dalmia cement* Rs. 17/14. *Alkali & Chemicals* were for a time higher at Rs. 31/4.

(Continued from page 252)

fundamental truths before themselves, violation of which has always resulted in recurrence of a series of wars, each more tragic and more deadly than its predecessor. These fundamentals are:—

(a) Equality of nations regardless of colour or of race or of geographical location.

(b) Birthright of every nation to have complete freedom—political, economic and social.

(c) No right of domination of one country over another, however advanced the former may be and backward the latter and abolition of mandates and abandonment of the theory of Trusteeship, which though perhaps based on high sentiments and clothed in high-sounding words, have in practice meant exploitation of the weak by the strong.

(d) Honest and sincere disposition on the part of advanced countries to help the backward countries to come up to their own level.

Let us hope and pray that the Peace which will have cost so much in life blood and wealth will not be hastily lost by man's greed or lust for power.

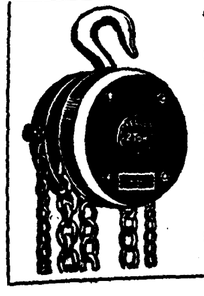
WORLD OF INDIAN FINANCE



Calcutta, Friday Evening.

Conditions in the short loan market have remained easy, with interbank call money quoting nominally ½ per cent in Calcutta and ¼ per cent in Bombay. As was to be expected in such circumstances, the Government were able to secure a more favourable rate at the weekly treasury bills auction. The amount on offer was Rs. 4 crores. Applications at Rs. 12.91 crores compared with Rs. 14.77 crores on March 13. In spite of the smaller applications, bidding was appreciably keener; and the average rate of accepted tenders was ½ anna cheaper at 5 annas per cent per annum. The offer for next week remains unchanged at Rs. 4 crores. The Assam Government, who were in the market on March 5 for their three months treasury bills for Rs. 1 crore, will again be tapping the market on March 26 for another Rs. 1 crore. Assam must be able to secure its requirements at a rate less than 6 annas per cent, which may prove a record low rate for Provincial treasury bills.

The returns of the Reserve Bank for the week ended March 16 show substantial sterling receipts from Allied Governments. Foreign balances in the banking department have increased by Rs. 19.40 crores to Rs. 383.51 crores. At the same time, sterling securities held in the issue department have risen by Rs. 4 crores to Rs. 975.33 crores. The increase in the total assets of the Reserve Bank is, thus, Rs. 23.40 crores. While there has been expansion of currency for Rs. 4 crores against sterling securities, active note circulation has increased by only Rs. 1.14 crores to Rs. 1,079.21 crores. Notes held in the banking department are higher by Rs. 2.48 crores. There has been an outflow of rupee coin to the extent of Rs. 33.05 lakhs. On account of the heavy sterling payments in respect of intergovernmental transactions, deposits maintained by the Central Government with the Reserve Bank have increased by Rs. 19.28 crores to Rs. 243.55 crores. The deposits of provincial governments as well as miscellaneous deposits have also gone up, the increase being Rs. 125.86 lakhs and Rs. 83.38 lakhs respectively. Deposits of Scheduled banks have risen by Rs. 52.66 lakhs to Rs. 98.58 lakhs. The Reserve Bank has been disposing of fairly large parcels of securities from its investment portfolio. Investments show a decline of Rs. 2.80 crores. On February 23, Bank's investments stood at Rs. 22.10 crores, which came down to Rs. 21.02 crores on March 2, Rs. 17.34 crores on March 9, and Rs. 14.54 crores on March 16. It was between January 19 and February 23, that the investment portfolio of the Bank expanded from Rs. 13.95 crores to Rs. 22.10 crores. Thus, between the middle of January and the middle of March, there was firstly a process of substantial purchases, and secondly there was a process of substantial sales. The possible explanation is that the Reserve Bank may have purchased from the open market 3 per cent Victory Loan for large amounts before the list for this loan closed. This loan was at a discount; and the Reserve Bank authorities might have felt that a necessary preparation for the Second Victory Loan was bringing up of the First Victory Loan to par. It is also possible that, after the closing of the list, institutional buyers might have desired to invest in the First Victory Loan as more attractive than the Second Victory Loan. The Reserve Bank might have met this demand; and this possibly accounts for the sharp shrinkage in the investment portfolio.

As March comes to an end, we are reminded that the busiest season for the tax-gatherer is also drawing to a close. In the fiscal year which will be rung out on March 31 next, there has not been much of the usual distinction between lean revenue months and excessive revenue months. This was the year in which full effect was given to the schemes of Excess Profits Tax advance payments and Pay-as-you-earn Income-tax payments. These collections had the effect of converting every month into a substantial revenue-producing month. Taking E.P.T., Income-tax and Corporation Tax, 1944-45 should have accounted for a good number of double payments. In the coming year, assesees will be experiencing relief in proportion to the strain of the current year. The most noteworthy feature of 1944-45 is that, in spite of the pressure of the usual payments plus advance payments, conditions in the money market remained consistently and persistently easy. It follows that, if expansion of currency continues at the present rate in the next year, the money market will experience continued and even more striking easy conditions. It has to be added, however, that new loans to be issued in 1945-46 are estimated at Rs. 350 crores. After allowing for the redemption of 5 per cent 1945-55, the net amount that will thus be taken away from the market is of the order of Rs. 300 crores. From the point of view of maintaining balanced conditions in the money market, it is of the utmost importance to ensure that the new loan programme of this magnitude is successfully and fully carried out.

Conditions in the exchange market have been lively and the market presented a brisk appearance. The turnover was, for a change, very satisfactory, dollar bills claiming prime attention.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 three months' Government of India Treasury Bills were opened on Tuesday, the March 20, 1945. Total amount offered was Rs. 12,91,25,000. Tenders at Rs. 99-14-9 per cent were allotted approximately 71 per cent. Lower tenders were rejected. Total amount accepted was Rs. 4,00.00,000, the average rate of accepted tenders being Re. 0-5-0 per cent per annum.

Tenders for Rs. 4,00,00,000 three months' Government of India Treasury Bills will be received on Tuesday, the March 27, 1945, at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the March 26, 1945 at other centres. Successful tenderers should make payment on Thursday, the March 29, 1945. Other conditions are as usual.

During the week ended the March 16, 1945, Government of India Treasury Bills for Rs. 4,05,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,00,00,000 of three months' Government of Assam Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta upto 11 a.m. on Monday, the March 26, 1945. Successful tenderers will be required to make payment and take up their bills on Thursday, the March 29, 1945. Other conditions are as usual.

War-time Public Debt

In the last week's issue, we examined the defence loan policies and plans of Sir Jeremy Raisman and recorded our appreciation of the judgement and skill he has shown in the framing of policies and of the success with which he has executed the plans. A survey of the Public Debt of the Government of India and an investigation into the effects of the war on the Public Debt provide corroborative testimony to Sir Jeremy's outstanding contribution as the steward of India's war finances and the architect of India's war borrowings. In spite of considerable capital expenditure and heavy revenue deficits, the gross increase in the total interest-bearing obligations of the Government is only two and a half times the revenue estimate in 1945-46 budget. The net increase in obligations is only one and a half times the revenue estimate. The increase in the uncovered debt is less than two times. The over-all interest payable on the amount representing the increase in total interest bearing obligations works out to 2 per cent. No other belligerent country in the world discloses so favourable a position in regard to obligations incurred during the war or interest paid on the borrowings in connection with the war.

The Explanatory Memorandum on the 1945-46 budget contains a compact and complete statement illustrating the effects of the war on India's Public Debt position; and it also contains an explanatory note which sets out the relevant facts so cogently and comprehensively that our task in editorially commenting on the changes in our Public Debt is greatly lightened. As is well-known, India undertook, in the last war, to make a contribution to Britain; and a good part of this amount has been paid. There is a residue of Rs. 20 62 crores which payment has been kept in abeyance, consequent on the cessation of payment of inter-allied war debt. Excluding this liability, which remains suspended, Government's total regular interest-bearing debt on March 31, 1939 amounted to Rs. 1,158 crores, which was made up as follows:

	Rs.
1. Sterling loans and Railway annuities ..	445 crores
2. Rupee loans and treasury bills	484 „
3. Unfunded debt (that is, Cash and National Savings Certificates, Savings Bank Deposits and Provident Funds)	229 „

In the course of the war years, changes have occurred both in the composition of the debt and in its size. Owing to the colossal accumulation of sterling assets and the utilisation of a part of such assets for sterling debt repatriation, the sterling debt of the Indian Government yet unredeemed is only Rs. 13½ crores, representing the holdings on the part of those who are outside the purview of the vesting orders of the British Treasury and of the Indian Government. The capital portion of annuities created in purchase of railways is about twice the above amount but appears under Public Debt only for accounting reasons and is offset by a corresponding deposit with His Majesty's Government. This deposit is also another operation in pursuance of the scheme of sterling debt repatriation. It may, therefore, be said that the sterling obligations that still remain outstanding are purely nominal. Sterling debt thus discharged has been replaced by rupee debt, which increased further on account of the accumulation of revenue deficits. The resulting position is that, by the end of 1944-45, the total regular interest-bearing debt is estimated to rise to Rs. 1.588 crores, which is made up as follows:

	Rs.
1. Sterling loans and Railway annuities ..	43 crores
2. Rupee loans and treasury bills	1,278 „
3. Unfunded debt	267 „

Budget estimates for 1945-46 provide for interest-bearing debt swelling up to Rs. 1.930 crores, comprising the following items:

	Rs.
1. Sterling loans and Railway annuities ..	39 crores
2. Rupee loans and treasury bills	1,571 „
3. Unfunded debt	320 „

Adjustments, however, have to be made in the above figures with respect to the capital portion of the railway annuities as this liability is offset by the deposit already kept with the British Treasury. The net regular debt will, therefore, be reduced to Rs. 1,559 crores on March 31, 1946.

Some further adjustments are necessary before the final figures can be arrived at. For, the Government are, in addition, liable to repay the balance of depreciation and reserve funds of Railways, Post and Telegraphs, etc., and certain other deposits mainly relating to Excess Profits Tax and Income-tax. These, it is expected, will have grown from Rs. 27 crores on March 31, 1939 to Rs. 240 crores on March 31, 1945 and Rs. 254 crores on March 31, 1946. That is to say, the total interest-bearing obligations will, on account of the effects of the war, have increased by Rs. 614 crores at the end of the current year and by Rs. 974 crores by the end of the next year.

Against this increase in the total debt, there is a considerable increase in the Government's cash balances and investments. In prewar years, the cash balances of the Central Government were generally on the small side: if these balances amounted to Rs. 30 crores or Rs. 40 crores, the Government used to consider themselves passing rich. The war has made a great difference in this respect. Both loans and treasury bills are now more linked up with measures designed as anti-inflationary drive than with the ways and means position of the Central Treasury. The result is that the era of lean cash balances has yielded place to one of plethoric affluence. Government's cash balances and investments, which stood at Rs. 30 crores on March 31, 1939, are expected to amount to as much as Rs. 547 crores on March 31, 1946. In other words, while the interest-bearing obigations will have increased by Rs. 974 crores at the end of next year, Government's cash balances and investments also will have increased by Rs. 517 crores. The net increase is, therefore, only Rs. 457 crores.

This increase of Rs. 457 crores may be said to be utilised towards meeting the revenue deficits and capital expenditure. It is important to note that this figure of Rs. 457 crores is less than the total of revenue deficits and capital expenditure. The accumulated revenue deficits, excluding the annual allocation of Rs. 3 crores to reduction or avoidance of debt (which is Rs. 21 crores in all in the war years), will have amounted to Rs. 611 crores by March 31, 1946 and the capital expenditure will be amounting to Rs. 253 crores. The total under these two heads is Rs. 864 crores, which compares with the net increase of Rs. 457 crores in our obligations. The question is: How has the balance of Rs. 407 crores been found? This amount of Rs. 407 crores will be covered by the net balance resulting from the other debt head transactions such as repayment of loans by provinces, issue of rupee coin to the Reserve Bank, small coins profit, war risk insurance fund, etc.

To the extent that the increase in the total debt is connected with revenue deficits, it is to be expected that there must be an expansion in unproductive debt. The Explanatory Memorandum claims, however, that by far the greater portion of the debt of Rs 2,159 crores is "what may compendiously be termed as productive." To strengthen this contention, the following argument and explanation is put forward:

> The capital outlay on Railways up to March 31, 1946, accounts for no less than Rs. 797 crores, on Post and Telegraphs and other Commercial Departments Rs. 42 crores, Loans and Advances (including the debt due from Burma) Rs. 144 crores and cash and investments Rs. 547 crores, making a total of Rs. 1,530 crores. This leaves an uncovered debt of Rs. 329 crores against the prewar figure of Rs. 208 crores. The whole of this cannot be called unproductive debt, for the large Defence Capital outlay of Rs. 167 crores is not entirely unremunerative and similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government accounts or is shown only as non-commercial (such as the Delhi Capital Outlay), is not without value.

The increase in total interest-bearing obligations is necessarily to be accompanied by an increase in the liability for interest charges. As on March 31, 1939 the Government of India paid Rs. 35.57 crores by way of interest on ordinary debt and Rs. 10.17 crores by way of interest on unfunded debt and other obligations; or Rs. 45.74 crores in all. A good part of this interest payment was, however, recovered from other departments. The Railways paid as interest Rs. 28.15 crores; Irrigation Rs. 7 lakhs; Post and Telegraphs Rs. 74 lakhs; Provinces Rs. 5.35 crores; and Miscellaneous Rs. 31 lakhs. Thus, while the Central Government incurred total interest charges of Rs. 45.74 crores, as much as Rs. 34 62 crores was transferred to Railways, Provinces, etc. The net interest payments debitable to Central revenues were Rs. 11.12 crores. This liability came down to Rs. 9 crores in 1939-40, and Rs. 6.40 crores in 1941-42. There was a slight rise to Rs. 6.97 crores in 1942-43. There was a rise to Rs. 9.09 crores in 1943-44. In 1944-45 revised figures and 1945-46 budget figures, provision is made for sharp increases. The net interest payments debitable to Central Revenues in 1944-45 are estimated at Rs. 19.61 crores and in 1945-46 at Rs. 30.95 crores. There will, thus, have been an increase of Rs. 19.83 crores between 1938-39 and 1945-46. During this period the total interest-bearing obligations will have increased by Rs. 974 crores. That is, the average interest on the additional debt works out to 2 per cent. Defence Loans are being raised on the basis of 3 per cent; treasury bills are being sold at interest rates well below 1 per cent; and considerable amounts

are being made available to the ways and means budget free of charge in respect of such transactions as delivery of rupee coins to the Reserve Bank and extra budgetary funds. It is these factors which have brought down the over-all interest rate to 2 per cent as compared with the 3 per cent paid for Defence Loans.

Cloth Famine & Cloth Rationing

Cloth shortage in Bengal has developed into a crisis in a manner painfully reminiscent of the development of the food crisis towards the end of 1943. There are factors in the national life of this Province which create scarcity out of shortage and famine out of scarcity. It was so in the case of the food problem more than a year ago; a lamentable incapacity on the part of those responsible to sense the coming storm, weak hands at the helm once it breaks and helpless and rapid drift thereafter towards the most dangerous shoals and eddies. Something similar seems to be happening in the case of clothing, a necessary of life, next only to food in importance to the general public. The resemblances between the food position and the cloth position are both striking and numerous. In both alike, Bengal is a deficit Province. In both its needs have been accentuated by the influx of the war services and of a large non-Bengalee population into the city of Calcutta. In both, there were before the crisis ill-thought—out schemes for the supersession of private trade by an inadequate official organisation. And both the problems have been worsened by corruption in various ranks of public services and the propensity of private trade to black marketing and profiteering.

There is, however, one vital difference between the development of the food crisis and that of the crisis in cloth, in that cloth famine in Bengal to-day follows the growth of the system of cotton cloth control over the rest of India to a comparatively high degree of efficiency. The same, however, cannot be said of the food crisis. While in 1942-43 the Government of India could not claim to have taken due note of Bengal's needs and provided for them adequately, to-day the Textile Controller at Bombay is in a position to assert that Bengal has been in receipt of cotton cloth sufficient to ensure a per capita consumption of 13 yards per annum. Likewise, the Bengal Government are not in a position to shift a large share of the blame for the present crisis to the shoulders of their predecessors in office. For the fact remains that in the all-India sphere the critical conditions in cotton cloth arose early in 1943 and that, as a result of the vigorous measures taken by the Government of India, the Controller of Textiles was able to claim, before the end of the year, substantial achievements to his credit both in respect of the distribution of cloth in the deficit areas and in respect of their prices. The main principles on which cotton cloth control in the all-India sphere has functioned during the last one year or more are such as to deny the Bengal Government the facility of a handy scapegoat. Even if Bengal's production and the amount of cloth allotted to her by the Controller of Textiles were insufficient for Bengal's requirements, it would only be a justification for a lower rate of per capita consumption and could by itself be no explanation of the conditions of famine now prevalent throughout the Province.

Since, however, no crisis can arise in conditions of adequate stocks, it is necessary to examine the supply position as it can be surmised from the statements emanating from authoritative sources. It may be recalled that when complaints about cloth shortage were first heard on the eve of the last Pujah season, the Controller of Textiles, who paid a visit to Calcutta at that time, contended that Bengal had been in receipt of her quota of cloth and such difficulties as might have been experienced must be attributed solely to the defects of the distributing system for which the Controller of Textiles had little direct responsibility. However the public was given to understand at that time that improvements in the distributing system were in prospect. But actually difficulties have been steadily increasing since then with the result that the conditions of September last seem almost ideal besides those of to-day. It is obvious that, though Bengal may not have been unfairly treated from the point of view of the total available supplies in India and the legitimate share of this Province thereon, the acute shortage of to-day must be traced to an inescapable gap between demand and supply. Differences of opinion as to the extent of this gap are, no doubt, inevitable; and the impartial observer can do no more than determine for himself the range of such differences of opinion. According to the Textile Controller, Bengal has received during the 6 months ending December, 1944 159,004 bales of cloth which, on the basis of 1,500 yards per bale, work out to 23.35 crores yards, whereas her quota on the basis of 10 yards per head per annum was only 130,500 bales. Since Assam was constituted as an independent unit, the Province of Bengal, it is said, was entitled to receive during the seven months ending January 1945, 1,20,050 bales of cloth while she actually received 1,79,034 bales. It is contended on this basis that Bengal received about 58,984 bales of cloth more than she is entitled to during the seven months ending January 1945 and this was in addition to Bengal's own production of about 20,000 bales which she is allowed to retain for herself.

This statement emanating from Bombay has been contested by the Marwari Chamber of Commerce in a memorandum on the subject. The Committee of the Chamber point out that the average of 1,500 yards of bale which is taken by the Government as the basis of their calculations is incorrect in as much as the average is only 1,200 yards per bale. They also contend that till November 7, 1944, on which date the ban on the export to Assam was introduced, large quantities of cloth were exported to Assam. At least 8 crores of yards equal to about 67,000 bales had been diverted to Assam from the allocation to Bengal. Bengal's own production, which is put at 20,000 bales per month by the Government of India, is estimated at only 16,000 bales by the Marwari Chamber. (10,000 bales mills, and 6,000 bales handlooms). The Chamber has also put Bengal's population at a higher figure. They argue therefore, "assuming the present population of Bengal to be about 7 crores the required quantity of cloth in seven months according to the quota allotted by the Central Government would be 41 crores of yards to which must be added the share obtained by Assam for the 2 crores of her population for 5 months till November 7, 1944 which would work out to nearly 8 crores yards. So the total quantity comes to about 49 crores yards, equal to 408,000 bales on the basis of 1,200 yards per bale. Thus taking the figures of despatches from the producing centres at 179,004 bales as stated in the aforesaid press reports and of Bengal's own production at 112,000 bales, there has been a clear deficit of not less than 116,966 bales in the seven months, that is about 28 per cent. This line of argument has been adopted by Mr. Suhrawardy in a statement at a Press Conference on Wednesday last. Mr. Suhrawardy has contended that in the allocation made by the Government of India, Bengal has been unfairly treated as compared with the Punjab in the matter of cotton cloth, and as compared with Madras in yarn. The Minister for Civil Supplies has also groused against the constitution of the Textile Control Board and its refusal to give even the lapsed quotas to the Provincial Governments. The provision for allowing mills to sell 12 per cent of their production directly and through their own retail shops has also been criticised.

From the general trend of the controversy on the issues connected with the shortage of cloth in Bengal it seems fair to conclude that, while there has been a tendency to exaggerate the allotment made to this Province, the Bengal Government was at no stage able to convince the Central authorities of their ability to ensure fair distribution. It is difficult not to interpret the refusal of the Textile Control Board to hand over the lapsed quotas to the Government, instead of reallotting them to the existing quota holders, as a reflection on the Bengal Government itself. Indeed, while the Minister's statement has been replete with figures to refute the contention of the Central Government and with allegations against other Provinces, it is notably free from any indication of the fate of the cloth and yarn which have come into the Province. This was the case at the time of the food crisis more than a year ago. There is in Government circles in Bengal, an eagerness to treat every untoward development as a mere reinforcement of the case for complete control and rationing. It seems to have been forgotten all too conveniently that the experiences of food rationing during the last one year and more are not such as to induce the public to welcome the extension of these methods to cloth. In the case of food, control and rationing in Bengal was part of a wider scheme for the whole of India. But in the case of cotton cloth the proposals now made by the Minister for Civil Supplies are peculiar to this Province; and the public can reasonably wonder whether the uniqueness in this respect should be attributed to the Government or to other factors. That the Government has much to answer for, there seems to be little doubt. It is neither justice to the individuals nor service to the public interest to regard the institution of control and quota as an opportunity for changing the personnel of the trade. While individual traders and firms known to be guilty of profiteering and dealing in black markets should, no doubt, be excluded, any attempt to transfer the trade to favoured new comers must be scrupulously avoided. On the other hand, there is a specially heavy responsibility on the authorities to root out favouritism and corruption. And on this matter, public apprehensions have grown rather than declined. It would be folly to extend the orbit of control to cotton cloth, while the report of the Famine Enquiry Committee is still being withheld from the public.

Fair Prices for Agriculture

Since price control has been applied to cotton, jute and most agricultural products, enquiry as to optimum prices or the state of demand could not be delayed. There is a widespread impression that farm incomes (real, not money incomes) have risen owing to the war and ceilings rather than guaranteed minimum prices are therefore to be regarded as appropriate. Since the requisitioning of what is regarded as surplus produce at fixed prices is general, and the Provinces are keener on enlargement of output than special encouragement by subsidies, the real or proximate issue is not stabilisation. In relation to wages paid, the return on working capital, and seasonal fluctuations in the matter of both prices and wages, the business of farming differs greatly from manufacture. It is realisation of this difference that has led up to the appointment of an enquiry committee concerned as much with price fixing as the preservation of markets.

The main issues, however, lie away from the objects of the enquiry as to prices. The actual share of agriculture in the national income must be determined with a view to its increase. At least the study of price spreads arising from marketing investigations indicates the real need to help producers by maximising the direct return from agriculture. The whole problem has been reviewed in the past by the various banking enquiry committees, but their primary concern then was rural credit whereas, the new committee has to ascertain the relation between costs and prices before it can decide about stabilisation. The second report on Reconstruction regarded the question of prices as coming under food policy, offering only familiar suggestions as to purchase of surpluses and adjustment of imports to production and not offering positive suggestions as to guaranteed prices. We may look at the price situation as the main reason for the proposed enquiry. Experience indicates the need for direct Government assistance to arrest sudden breaks in prices. In the case of commercial crops, whether we like it or not, Government has a definite role when demand flags and prices droop. Would the same principle apply to all crops in the future, firstly in the interests of food procurement, and secondly in the interests of planned development? A steady rise in output without a corresponding drop in costs would certainly create an unusual situation. If the benefit to the consumer is real and immediate, there is the point that the main purpose of planning is to increase the income of the agriculturist and thereby raise his standard of living. To consider the consequences first agricultural depression would neutralise much effort in other fields and spoil the chances of agriculture obtaining the capital needed, also of delaying execution of irrigation and other schemes. If surpluses appear hypothetical, when crop planning comes into force, the other issue; one of subsidies for special purposes must be considered. This must be examined in relation to the land revenue system and the burden of indirect taxation on the rural classes. Variations will necessarily persist, but two points require notice at once. The present trend elsewhere is definitely to give tariff protection to agriculture so as to stimulate production, and secondly, to give rural workers the benefits of social insurance, previously available only to workers in organised industry. Where peasant farming for subsistence is the rule, the same measure of protection may not be applicable, but it will be deemed expedient to project the system of minimum prices (first applied to sugarcane) in the interest of agriculturists.

As for the relationship between Indian and world prices much depends upon the quantum of exports. Should there be no shortstaple cotton for sale abroad it would be possible to keep Indian prices high. In fact, high prices for grain have determined the minima and maxima fixed for jute and cotton. The main issue up for decision is not whether the wartime policy can be continued, but whether Indian industry in the future can afford to pay high prices and shoulder high costs. We need not be surprised if differences of opinion develop but the Committee need not look over the organisation of Indian agriculture to ascertain what should be done to prevent boom or slump in this case. Essentially the problem is one of cyclical fluctuation, but in the case of agriculture, other influences are undeniably present. To stabilise world demand by international agreement may not be easy even in the future but we have to take note of the general principles of U. S. farm policy meant to advance the producers' interests as well as the rise in the prices of both imported and domestic manufactures. The general price-level will, therefore, be an important factor, and we would do well to repeat that normal deflationary methods cannot apply after this war since currency depreciation is deep and universal, and probably permanent.

The amount of State expenditure in the future would be an effective element in the situation; so would an increase in taxation after the war. There are many factors making for higher prices apart from the pent-up demand for relief or other purposes. It may not be necessary to review here the movements of general price indices or the rural cost of living in this case. The system of monopoly procurement may be trusted to limit any increase and the producers' surplus in any case must be adequate to ensure the improvement of agriculture. It is singular that agriculture seldom produces a reserve for expansion of output. We have to take note of the burden of debt and the necessity for the amortisation. We have to take note also of the existing relations between U. S. prices and Indian prices for say cotton or wheat to find out whether stimuli for expansion may not be necessary. There is a conspicuous exception in the case of plantation products like tea and rubber, but we are concerned most with the need to secure a part of capital expenditure on agriculture through self-liquidating advances.

The large field for experiment in this connection would naturally suggest that stabilisation must not be limited to temporary intervention in the market, but must deal with the unsettled relationships between the cost of manufactures and, the cost of grain. Superficially, there is resemblance,

but enquiry, will establish that the surplus purchasing power in India has by no means passed to agriculturists in wartime. It shoud be easy to ascertain how little, apart from the reduction in debt, has been the accretion of capital in the hands of agriculturists. It should then be easy to relate the needs t. future policy, for the convenient fiction of prosperity would be then exploded. In so far as controls have not stabilised costs, and the visible marks of rural progress are few, the stabilisation of prices must be undertaken without regard to a possible reduction in prices for Indian manufactures. The latter certainly will respond to the prospect of imports whereas food generally is too scarce at present to be imported. Of course, restrictionism has not been practised to raise prices except in the case of certain commercial crops for which the foreign markets are not available at present. There is still a direct need to enhance output and familiar incentives are required. In the future, the situation may be greatly modified, but high prices for a diminished volume of exports may be dictated by circumstances not unrelated to the influx of capital or capital goods. Measurement of social phenomena may lie outside the scope of an investigation into the chances of stabilisation, but we must indicate here that revolutionary changes have taken place owing to famine and the recuperative powers of agriculture must be sustained by special means. The actual risks faced and the nature of agricultural profits, as also an enquiry into the consumer's surplus available in cases may not be undertaken, but it is legitimate to indicate that these elements in the situation cannot be overlooked. In a sense agricultural income in India is a residual share, far smaller in proportion to costs than imagined. In industry profit margins are safeguarded even under price control, whereas agricultural profits are liable always to drastic reduction. In the past, a relatively greater burden has been imposed on the land, but it is not altogether a question of compensation; it is one of adjusting the differences in agricultural efficiency as between India and other countries. These differences may be interpreted variously, but in the light of changes in ownership and the degradation of small cultivators, there is plainly a case for using stabilisation as a means to rectify inequality of wealth. Since metayage is the rule the advantages may accrue to non-cultivating proprietors as well. But Central excises and cesses can be made to provide the cost of special relief in case of emergency. The Gregory Committee, apart from indicating the conditions for price control, advocated the examination of the cost of cultivation of marginal lands. Since an increase in food supply is more important than a fall in prices by arrangements, the main problem may arise when determining costs of articles entering into costs of production of cultivators. The recognition of the differences in costs between deficit and surplus provinces accounts for existing differences in prices, but the cultivators' position as a whole over the war years, requires assessment. It is to be hoped that the Committee would review changes, past and prospective, to consider the means of making agriculture pay.

There is nothing that adds more to the natural charm and beauty of a woman than does a saree. The grace and simple dignity that it gives the wearer is a striking tribute to this colourful costume which can flatter the most sylphlike figure. Lakshmiratan Cotton Mills' sarees are worked in designs simple yet striking and set off by pretty, gay borders. There is a wide and varied selection to suit all tastes. Also shirtings and suitings and other household fabrics —smart and of the finest quality.

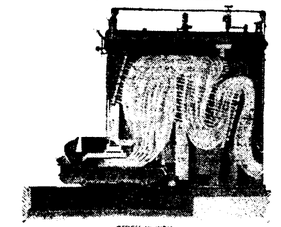
Editorial Notes

Punjab Budget

Presenting his ninth budget to the Punjab Assembly, Sir Manoharlal, the Finance Minister, revealed a surplus of Rs. 139 lakhs for the current year (after a provision of Rs. 315 lakhs for the Special Funds), and a prospective surplus of Rs. 192 lakhs in 1945-46. As in recent years Estimates have differed widely from Actuals; and this is explained by the uncertainty of prices, monsoon vagaries, war exigencies, etc. The revenue receipts for 1945-46 are placed at Rs. 21,17 lakhs while the expenditure comes to Rs. 19,25 lakhs. As the war is drawing to a close, provincial budgets can more profitably be reviewed from the point of view of successful preparation for Peace than from the usual angle of examining the sufficiency of the different allocations and how the competing claims of the departments are satisfactorily met. Provincial sources of revenue are notoriously exposed to the vagaries of rain and winds and the recent increases in receipts are accounted for by rise in prices, Government trading activities, sale of lands, etc., factors which may not long survive the war. The economic development of India in post-war years is necessarily a problem of Central planning, but the provincial governments will have to bear heavy burdens in the actual execution of schemes and provinces which reduce their dependence on the Centre to the minimum can be said to have strengthened their capacity for early economic progress. Further, the financing of the Government of India plans is itself not fully clarified and the nature and extent of help the provinces will receive from the Centre is still a matter of conjecture. In these circumstances, the best possible way of reviewing how the finances of a province are shaping now would be to apply the question: how far the province has equipped itself to face the strenuous tasks of peacetime reconstruction and development? The tests to be applied are broadly as follows:—How big are the Special Funds? How far has the Province improved its debt position and strengthened its credit? Can the recent increase in revenues be retained when peace arrives? Has the province neglected the sources of future income or has it taken steps to encourage agriculture and industry so as to strengthen the taxable capacity of the people? Has the province initiated adequate capital works to add to future revenues? And then, is the provincial Government ready with post-war plans to face the urgent problems of transition, *e.g.*, demobilisation of military personnel, etc.?



Applying these tests to the wartime budgets of the Punjab, it can be seen that Sir Manoharlal's record is indeed creditable. Punjab's finances to-day stand on ampler and surer footing than ever before. From Rs. 10.4 crores in 1937-38, the revenues have nearly doubled to Rs. 20.2 crores in 1945-46. The current year marked a record in the size of revenues and though increases under Excise could be criticised by the advocate of prohibition, the other heads reveal a healthy trend and are not likely to dwindle suddenly even if hostilities cease to-day. The Special Funds of Punjab have come up to Rs. 551 lakhs with the year's allotment and the Forest Research Fund, created last year, has received further attention. Sir Manoharlal stated that Punjab can afford to spend a sum of Rs. 100 crores on post-war schemes during the next five years. The Punjab has plans ready for spending Rs. 40 crores on irrigation, and electrical development, Rs. 12 crores on roads, Rs. 5 crores on agriculture, Rs. 5 crores on industries, Rs. 10 crores on education and Rs. 12 crores on medical and public health. Great strides have already been taken in irrigation works and Punjab agriculture and cottage industries would be immensely benefited by improved supply of water and electricity, particularly in rural areas. The debt position shows improvement as the net debt of the province has decreased from Rs. 32½ crores in 1937 to Rs. 27 crores. As against this debt the capital wealth, as represented by capital expenditure upto the end of 1946 stands at Rs. 58¼ crores. While the expenditure policy of the Punjab Government can be criticised for inadequate allotment to education and failure to evolve a comprehensive industrial policy for the province, it has to be remembered that 26 per cent of the total revenues (excluding the irrigation prospects, and road schemes) is absorbed by the Beneficient Departments. Much leeway has still to be made no doubt, but it cannot be doubted that the Finance Minister of the Punjab has carefully husbanded the provincial resources, and prepared the ground, as far as it is possible for the province under wartime conditions, for successful handling of the problems of peace.

Labour Legislation

Labour Legislation in India in 1944 comprised both Central and Provincial measures. The important measures include the Maternity Benefits Act passed in Assam. There are now six Provinces where the Act is in force. The Assam Act introduced on February 1, applies to labour on plantations but not in mines. A woman worker in Assam is entitled to four weeks' leave before confinement and to four weeks' leave after confinement, but employers can put women on light work recommended by doctors. The Assam Act calls for the provision of free medical treatment for pregnant women and acceptance of treatment alone qualifies for the weekly maternity benefit which is payable to anyone who has been in service for 150 days or more. Dismissal by the employer in order to avoid payment of the benefit is forbidden under the Act. In Bombay the Government adopted a Non-Urban Housing and Shops Act to deal with the provision of sanitary facilities in areas outside municipal and cantonment limits. The Act was passed because of the danger of epidemics in rural areas where workers in temporary employment are exposed to danger. Because District Boards cannot enforce regulations, the Government seeks to put in controlling Officers to look after sanitation in the place of work. Regulations framed by the Government are to be complied with by all employers who have to furnish details relating to work and workers. In case of failure, the Controlling Officer is authorised to carry out public health measures and collect the cost from the employer. The licensing of eating house falls within the scope of the Controlling Officer's duties. The main purpose is to ensure the rural worker the same advantages in regard to prevention of disease as obtain in towns. Sind amended the Shops Act to provide for changes in time and additional exemptions.

The Central Government legislated only for the mining industry. The new Welfare Cess of 4 annas per ton is collected under the Ordinance administered by the Mines Department. The proceeds of the Cess are to be applied for the improvement of public health and medical facilities, water supply, educational facilities and recreation as also transport from or to the place of work. Grants for approved purposes can be made from the Welfare Fund to a local authority or the employer. The Fund is administered by a composite committee under an official chairman. Women workers have obtained separate representation and after the committee was set up welfare workers under the Labour Department were appointed for the coal mines. The Central Legislature amended the Factories Act and the main change made is that all factories must provide washing facilities for workers. Extension of working hours for women and children up to a maximum of 13 hours per day even up to 8-30 p.m. is only for the duration of the war and comes under the list of exemptions to be authorised by Provincial Governments. The National Labour Service Ordinance was amended in October so as

to cover seamen. Ships, so far as technical personnel are concerned, are treated like factories and the Tribunal can ask a qualified officer to take employment in a shipping company or direct a shipping company to release surplus officers for work elsewhere. The war injuries compensation scheme of 1943 also was amended in December. Employers whose quarterly wages bill is less than Rs. 1,500 are not compelled to insure, and the minimum premium payable by an employer is fixed at Rs. 8. The Act relating to compensation for war injuries has since been extended to administered areas and the French Establishments in India.

Japan's Misdeeds

The New Order in Burma accounts for the famine and depopulation noted on reconquest. Elsewhere it has been the same according to an Australian correspondent returned from Manila after three years' internment. The Japanese have pillaged all occupied territories and the shortage of food is universal. In Luzon, bananas, once cheap and plentiful, sell at 15 shillings each and oranges at 75 shillings or over, while coconuts sell for 23 shillings. Even at these prices locally grown fruit is not available. Flour is dear; so is sugar though the Philippines before the war was an important producer of sugar. Tobacco, a local product is also scarce and expensive. This rocketing of prices is attributed to the influx of military yen. The Japanese army plugged paper money recklessly and depreciation followed, so that the Peso fell to a rate of 30 to the dollar. The inflation in the Philippines finds a close parallel in Burma where the removal of food and clothing left the population without the means of payment.

The Japanese occupation led to total drives for metals, vehicles, fuel and machine tools. Fuel shortage led to the breakdown of transport and the closing down of gas and electrical undertakings. In the Philippines' capital starvation was common. The description may suggest that exports from the Philippines are not going to make a big difference in respect of world supplies of sugar, copra or tobacco. The impoverishment is decisively against a sudden revival of anything except strategic exports from the islands. Restoration of the regular Government might lead to currency stabilisation, but production for export can only follow extensive relief. This subject has been discussed at Sydney and the U.N.R.R.A. has been promised important Australian support. But the main burden will fall upon the U.S.A. this year. Cuts in U.S. meat rations, so as to keep the armed forces well supplied, may be followed by others in the interest of relief. The looting described may impel a demand for reparations; but the six-point plan associated with Mr. Morgenthau's name did not mention compensation for the Philippines or other occupied territory.

Indo-China

General de Gaulle in his observations on the crisis in Indo-China recognised that the Allies must deal with the lost colony as a territory occupied by the enemy temporarily. His observations throw the responsibility for deliverance on the Allies who have to recognise that Admiral Decoux took steps to resist the Japanese army mainly because of the strength of the Resistance Movement. Why Japan should show her hand in Indo-China is ascertainable from the map. Retreat in Burma or South China would make the Colony's raw materials, particularly, rice valuable when sea routes are in danger. The developments in the Philippines and Burma have forced the Japanese to consolidate their position in Thailand and Indo-China. Since the long-awaited break with collaboration came in Hanoi the declaration of war against Japan by France has proved useful. Temporary mastery appears to be ensured in consequence of the Colony's military weakness but Japan's action in declaring the Anuanite empire autonomous will probably lead to a problem of another kind after the war. The five colonies may have to be grouped afresh after the experience of intervention from September 1940 when Vichy accepted the invitation to make a treaty with Japan.

That treaty has been broken because something more than collaboration was demanded by the Japanese Government which alludes to the necessity, but offers no justification. The exercise of strong arm methods in a friendly area may have no effects in Macao but it is not going to help greatly in Japan's future relations with Russia or Portugal. The cooperation of Thailand under pressure may put the Japanese temporarily at an advantage but Japan's proceedings are merged in the war as General de Gaulle promptly recognised. The shrinkage of the co-prosperity sphere is admitted in the events reported last week-end. The Japanese have only the French garrison to deal with at present but may be exposed to attack from S.-W. China. Saigon has been attacked like Camranh Bay early this year but the Allies' retaliatory measures may take other forms besides air raids. Invasion from the Philippines may bring the naval weakness to light as also the Indo-Chinese opinion as to co-prosperity if experience is identical with that of Thailand. The Allies were perhaps ready for the new preparations undertaken by Japan and a direct result of the events at Saigon may be the modification of Chinese aspirations in one quarter. The French claim to keep their window on the Pacific is admittedly strengthened by the revolt and its suppression. The status of Indo-China will probably be the same as before France fell in 1940 and the Japanese contribution to the restoration will perhaps prove decisive.

Landlord's View

The British Indian Association's opinion as to agricultural reconstruction must always command attention for the landlord's eye view in this case is not concerned so much with tenures as with the means to increase food supply. Mr. P. N. Singh Roy's really original point is that concerned with the limit set to food production. After a time when yields respond to improved methods India must produce cash crops for export. The growing of commercial crops would raise purchasing power and soon create a market for manufactures. The place given to agriculture in the reconstruction scheme is decidedly high but the memorandum issued last year does not offer special suggestions, apart from insisting that after nutritional requirements are satisfied India must be in a position to export food and obtain manufactures in exchange. It is not surprising that the means of developing soil fertility, especially, in Bengal take precedence over the fixation of targets in the case of industry or agriculture. Opinion as to mechanisation in a Province in which 31 millions live by agriculture is definitely against what is said about collective farming. Peasant farming has a future, according to the survey of conditions in Bengal where labour is more abundant than supposed. The support given to the proposals for river control and development, particularly, with reference to the Damodar is as interesting as the advocacy of fodder crops to supplement straw. In the charges made as to the decay of agriculture under tenancy legislation is one as to retardation of consolidation of holdings. The crop-sharing system which belonged to the Economic Transition is regarded as the most suitable though only about one-fifth of Bengal is cultivated under the barga system. The main conclusions however lie away from the defence of landlordism in as much as the memorandum analyses the existing situation and details the methods of improvement. The mixture of sentiment in the argument for agricultural improvement may be measured by the plea for guaranteed minimum prices but the memorandum hardly touches jute, subject to price control for two years. An expression of opinion would have been valuable in view of the recent debate as to optimum prices.

Soldiers' Colony

Ex-soldiers' colonies for reconstruction have been recommended by many besides Brigadier F. L. Brayne. Wether it is part of rural development or post-war demobilisation measures, the land settlement plan in Nizamabad District adopted by the Nizam's Government marks a useful beginning. Though 75 soldiers only have gone on the land, the Colony's plan covers housing, water supply and advances for cultivation. The Fatehnagar colony scheme is meant to turn the regular soldier on discharge towards agriculture. The land grants fixed are definitely in favour of economic holdings of 40 acres for commissioned officers, 20 acres for sub-commissioned officers and 8 acres for other ranks while menials get 5 acres apiece. Agriculture on retirement or discharge is regarded as a supplementary occupation but capital will be provided by the State. At Fatehnagar, the colonists have started with preliminary training obtained at the Government Farm at Rudror. For the colonists the houses required are provided by the Government but two-thirds of the cost of construction is to be recovered in eight equal instalments The medical and veterinary departments of the Army have assisted in launching the new colony at present limited to 1,125 acres under the Nizamsagar Project. The civil authorities intend to assist by road construction and improvement of educational facilities. The construction is not over but the colony promises to be different from the usual settlement since it is meant for Regulars with twenty years' service who are too old or unwilling to enter civil occupations. The main feature would not be the training given in advance of settlement, but the creation of a colony for military pensioners. Obviously their experience and discipline may lead to a vigorous growth of rural co-operation. The Hyderabad scheme probably is meant to give the ex-soldier the best value for gratuities taken on discharge but the additional cost per soldier settled on the land must be regarded as a generous supplementary grant. The Indian schemes for post-war welfare may be different in purpose, but execution will probably depend upon what happens to the Fatehnagar colony.

Interest in Burma Shares

The capture of Maymyo preceded the capture of Mandalay where the siege was on from last week. Market reactions are practically absent but that does not mean that important rises in oil and other shares would not follow. Interest in Burma shares has increased greatly this year and some useful rises have been recorded with the result that most Burma Shares are over par. The more important reason for the subsidence of interest last month is the report that mining cannot be resumed without power supply. War news then has been neutralised by doubt as to renewal of operations by the Burma Corporation. It is however important to note that rubber shares have revived in London and after a long spell there has been business in Straits dollar rubber shares locally pointing to a decisive change of sentiment. Though, specific comparisons would be out of place assurances as to Allied naval co-operation in the Pacific must be related to hope of a shortening of the war in the East. The prospects for Burma shares are also dependent upon the programme of industrial development in India since the main market for minerals in the future may be India rather than Britain. Regret concerning the lack of a nonferrous metal industry in India may easily lead to a large increase in imports on the basis of assistance as to working capital and exchange of personnel for developing lead or other deposits in India. Though it is easy to indicate the ways in which Burma's minerals or China's can be taken by India the ultimate prospects depend upon the restoration of the Burma Government. It is quite possible that the visit of Sir R. Dorman-Smith to London may lead to the transfer of the Government, perhaps to Maymyo that alone may produce a definite change in the investor's attitude to Burma shares. For some the recovery of earning power is not so important as the peacetime record of Burma enterprises. It is not surprising to learn that Burma Cement shares are fancied in more than one market. But much depends upon the share assigned to Indian capital and enterprise in the reconstruction of Burma, and satisfactory as Mr. Amery's statement may appear, only a direct promise of compensation will provide an inducement to look upon Burma shares more hopefully than at present.

Justifiable Discrimination

With reference to the amendments to the Insurance Act seeking to limit expenses, it has been pointed out by Mr. M. N. Seth, the President of the Federation of Indian Insurance Companies, that rebating and other evils arise from competition, and instead of checking the competition present, it is desirable to check high expenditure both by prohibiting rebates and fixing a limit to the ratio. Mr. Seth has referred to the amending act as an experimental measure which may be amended further in the light of experience after five or ten years. According to Mr. Seth, the foreign insurers and the few old Indian companies, are not affected by rules as to expenses and commissions. It should also be remembered that non-life insurance business is in the hands of associations dominated by foreign formation of a State-aided Corporation to increased competition on the part of U. S. insurance companies after the war particularly when Indian companies lack statutory protection, has been mentioned in connexion with the need for increased stability. The firmation of a State-aided Corporation to deal with re-insurance is regarded as a remedy for possible dangers arising from competition. There is, apart from a plea for special consideration of younger insurance companies' position, the argument that taxation must be readjusted. The really important suggestion of Mr. Seth is that relating to differential treatment. In fire, accident and marine business special expenses have to be incurred by the Head Offices for reinsurances, treaty accounts etc. Companies which operate only as branches in India should not be allowed the same rate of expenses as is allowed to companies which have their Head Offices in India. The latter should be allowed an extra 5 percent to cover their expenses; otherwise most Indian Offices would be placed at a disadvantage compared with the majority of foreign insurers who operate through branch offices in this country. There has so far been no exact comparison between the expenses incurred by Indian and foreign insurers generally, and the actual measure of control over foreign insurance remains very slight. This may favour separate treatment for Indian companies on the lines recommended by Mr. Seth.

Mandalay

Fort Dufferin in Mandalay, now taken after a siege, commemorates the Third Burmese War. In Sir Alfred Lyall's Life of Lord Dufferin there is reference to the withdrawal of the British Resident from Mandalay in 1879 and the injuries suffered by British commercial interests from King Theebaw's misrule. But the direct provocation for the annexation was offered only by the report of a treaty with France. There was then uneasiness over the Panjdeh Incident but Lord Dufferin wrote to the Chief Commissioner that he should not hesitate to annex the country. A fine imposed on the Burmah Trade Corporation led to a demand for arbitration. But it was learnt soon that the French proposed to set up a bank in Mandalay under the treaty; and an ultimatum designed to exclude them from the Upper Irrawaddy Valley followed. Lord Dufferin rejected the idea of leaving Upper Burma in the position of a buffer state. General Prendergast marched in November 1985 upon Mandalay which was occupied within ten days. King Theebaw was made prisoner and provisional occupation of the Kingdom followed. Lord Dufferin in the company of Lord Roberts visited Mandalay in February 1886 and drew up a scheme for the annexation of Upper Burma with special

arrangements for the border tracts. In a letter to Lady Dartrey he recorded that Mandalay far exceeded his expectations and called the moat with its running water a real feature. Lord Dufferin in a despatch written after the annexation referred to the difficulties of pacification of a country with a population of four million but larger than France and ill served by communications. Indian troops and police supported by English troops had to be employed. But Lord Dufferin recalled that it took more than three years to subdue Pegu. On the death of Sir Herbert Macpherson, Lord Roberts was sent out to Burma in 1886 to complete the occupation. It was claimed that within two years a strong and efficient government was functioning. Sir Charles Bernard, the Chief Commissioner, played a part in assimiliating Upper Burma to the Lower Provinces. There was no reaction in China which signed in 1886 a formal Convention recognising the last addition to the Indian Empire.

Inflation in America

The increase in incomes and bank deposits following a shortage of goods causes a rise in prices. Controls are not universally efficacious as the U.S.A. has now learnt. Inflation accounts for the rise in share prices which is altogether independent of the drop in production and Company profits. Commodity prices also rose during February and enlarged supplies of food did not lead to a prediction that prices would fall. Farmers asked for subsidies to keep prices up which were 104.9 per cent above the 1926 average at a higher level this year. Cotton and grain prices advanced under the impetus of promises made as to subsidies A reduction in U.S. cloth prices ordered last month did not meet with approval mainly on the ground that mill profits would suffer because their own costs remained high. The increase in retail trade after Christmas helped U.S. manufacturers of clothing to keep prices up. The shortfall in output led to an increase in steel prices on the basis of a sanctioned increase in the price for pig iron. The rise in prices followed the increase in wages, and proved that the coal shortage was not the only factor making for higher prices in this case. Though the fall in war production is not the real cause of higher prices in the U.S.A. the tax programme and borrowing have not dealt with the surplus of purchasing power. The U.S.A. like Britain has experienced a rise in the cost of living but some special comparisons as to costs and prices suggest that the rise in prices has been greater in the U.S.A. than the rise in the cost of living. This may justify claims for an advance in the prices of imported articles, for example, coffee, cocoa and jute. This does not however mean that price control would be relaxed as the authority has been renewed for retaining the economic stabilisation measures.

Irrigation Outlay

The Public Works Department's demand for a grant of Rs. 1,31,31,000 for Irrigation led to a discussion in the Bengal Assembly of the river control measures in Bengal. The Opposition complaint was that much land lay fallow for lack of irrigation while danger from flood persisted. Though the Central Government has shown latterly much interest in curbing the Damodar's vagaries the Opposition complained that prevention of floods was not specifically undertaken. The material suggestion was the setting up of a River Commission and despatch of officers for training in America. The Minister in reply gave an assurance that six candidates would be despatched for training abroad. In his review of what has been done he referred to the completion of 13 emergency irrigation projects costing Rs. 4 lakhs and work in progress on 19 other schemes. A number of other emergency schemes, according to the Minister, are under examination and preparation. Rehabilitation schemes numbering 101 spread over almost the whole Province were also under execution. The estimated cost is put at Rs. 52 lakhs. In addition, the Bengal Government allotted Rs. 26 lakhs to Collectors for the execution of minor irrigation schemes in the Districts. District Boards also were allotted funds for carrying out minor schemes. Sanction for carrying out 57 schemes costing Rs. 65½ lakhs through the agency of District Boards had been given. These schemes are expected to be complete by May 1946.

Comparing the previous expenditure on Irrigation the Minister pointed out that under the Waterways Act the total outlay for five years came to Rs. 33 lakhs whereas expenditure in 1944-45 amounted to Rs. 216.64 lakhs, showing a great increase over expenditure of Rs. 75 lakhs in 11 months of 1943-44. The Ministry had framed a programme to cost over Rs. 2 crores in the coming year. The Minister suggested that a complete solution of drainage and irrigation problems would have to be reached in order to avert the danger of famine in the future. The increase in civil works expenditure is less important than the increase in irrigation expenditure. Bengal's budget for the past two years has shown increased provision for irrigation but borrowing for the purpose has not been undertaken. The Public Works Minister did not indicate the complete cost of protection through irrigation while he assured the House that the Ministry was working for a bigger thing. The Opposition complaint as to neglect of the right bank of the Damodar arose from the sharing of responsibility and expenditure by the Central Government which is interested mainly in the safety of the railway. The Minister did not allude to the share of expenditure now falling on Bengal or to the actual progress of measures undertaken to prevent recurrence of floods.

Dehydration Progress

Since dehydration is well established in India owing to the war progress in other countries merits notice. Australia has readily adapted dehydration to eggs and dried eggs powder has become a leading export. Both milk and vegetables are exported in quantity owing to dehydration, while the manufacture of eggs powder was undertaken to satisfy Britain. Australia converted five million dozen eggs into two and a half million lbs of egg powder in 1942-43 but this represented only one-sixteenth of Australian production. Twelve plants produce egg powder and the output increased twofold last year while a further increase has taken place since demand still exceeds supply. More than 50 per cent of eggs can go forth in the form of dried powder. Equally striking is the progress of dehydration of vegetables. The Pacific war has made Australian food supply all important and vegetables had to become an important export. Since 1942-43 progress has been steady and 33 plants have been set up to get the water out of fresh vegetables and convert them into concentrated food that will take up less space during transport. Dried fruit production was well established before the war as also the manufacture of milk powder. Dehydration represents a cure for seasonal gluts so that primary producers benefit directly. Australia's own food supply has been improved through the increase in processed foodstuffs. It is believed that after the war permanent markets for all dehydrated foods will be obtained. Provisioning of ships at ports may be greatly easier and within Australia food supplies for

work-camps would present no problem. Enquiry is in progress as to the future value of new dehydration plants. Export of dried milk, vegetable and eggs to Britain would probably continue and new markets would be secured in the Dutch Indies. Obviously the increase in supplies would help relief work in liberated territories and the U.N.R.R.A. would become an important customer for Australia's surplus when there is one.

Eyes on Singapore

Sir James Somerville outlined on Monday part of the programme of naval operations. He referred to the reopening of the Straits of Malacca and the early capture of Singapore in his broadcast because the U.S. Navy in the Pacific wants to obtain fuel from the Persian Gulf. Though Singapore has been raided by U. S. bombers the first direct mention of the forthcoming Allied attack comes only after the Allied successes in Burma. There is little prospect of voluntary withdrawal by the Japanese from Singapore since they are bent upon keeping Sumatra at least for the oil required for their fleet. Last month Palembang was attacked mainly to spoil Japan's chief source of oil but the naval changes of December have not so far yielded important results. Sir James Somerville's statement, however, suggests that the East Indies Squadron like the Pacific Fleet has very definite tasks in view. Apart from facilitating Allied intervention in Indo-China very soon the deliverance of Singapore would be the starting point for the restoration of Colonial economy. The rubber situation must change greatly, if and when Singapore is retaken. There are, of course, no visible effects on markets, but the majority of observers should not lose sight of the effect it may have on both rubber and mining shares. The capture of Singapore would accelerate the conquest of Burma and at the same time, create propitious conditions for Indian export trade, when another sea route is open. The possible effects of greater pressure on oil supplied from Iran may be reckoned unimportant as compared with the changes of turning back to the oilfields in the East Indies. Most probably, special loans from the U.S.A. to the Netherlands Government which do not come under the ban laid by the Johnson Act, will be provided since the U.S. Navy may like to take its oil where it finds it. Singapore cannot be viewed separately from Malaya where a Japanese experiment in regional self-Government furnished a variation in rule by puppet regimes. In some ways Malaya has got off lightly under the New Order in East Asia, but much depends upon the early restoration of a free port in the future. Since a desire to re-establish a naval base has been noted, it is manifest that Singapore must be viewed as an Imperial base for which others besides the United Kingdom must bear the cost. This is not a point for immediate decision but the recovery of the port and the mainland will create a demand for capital and labour that India must satisfy in part. Possibly the export of private capital to reoccupied territory would be put on a special footing. Among possible results of outlay is complete protection of the resident Indian labourer. The more proximate results may include a revival in rubber shares through special encouragement to native producers who can sell their rubber cheap which is not exactly advantageous to the Indian planting industry.

Idle Fears

The oil of the Middle East now feeds India and the Middle East and through a small pipeline reaches the Mediterranean. This is the only statement of Mr. J. M. Landis to which everyone will subscribe, for his picture of international rivalry in the future, as in the past, is as inaccurate as the assumption that the world's oil centre could shift from the U.S.A. The assurance that no new concessions have been assigned in Iran during the war like the Anglo-American Oil Agreement reached last year certainly counter the belief of Mr. Landis that more than normal competition may develop. The interests of the Powers are well defined and Russia's attempt to get into Iran has obviously failed. For the benefit of the consuming countries, it has been accepted that the competition must be curbed, and development of new sources of oil since 1938 has not led to aggravated competition, with oil as an instrument of foreign policy. The Iraq revolt was not connected with oil and the shake-up in Iran was due to the irruption of enemy agents.

The vast dispersal of oil areas in the New World will at least suggest that production and prices will always be determined by the U.S.A. Interest in the oil found in the Middle East is due entirely to the war, and inasmuchas the Allies have the Arab countries behind them, the conflict can never develop from local causes. The vast increase in Iran's oil production may, however, cut into traditional U. S. export markets, but it has to be remembered that sources of oil in the Far East have suffered great damage. The real problem is one for the N.E.I. after liberation, not for the Middle East, which because of the new pipeline from Chittagong to China can acquire an unexpectedly large market. Instead of a surplus leading to quarrels there may be actually a strain on the Middle Eastern sources of oil, because Rumania and Russia may be unable to supply Europe with oil, and the Middle East rather than U.S.A. is the convenient source, once the new pipeline is available. There is, however, the consideration that development would call for U.S. co-operation, for example in Arabia and Palestine, and Britain along with Holland would be preoccupied with the salvage of oil interests in the N.E.I. after the war. Russia's desire to acquire a stake in the Middle East does not constitute a threat to Anglo-American oil interests, for the concessions in North Iran have not been acquired and South Persia remains definitely in Britain's grasp.

The course of international co-operation since December 1943 indicates that oil has not caused any difference of opinion so far. It has been an excellent lubricant in view of the end of Saudi Arabia's neutrality and the preservation of the *status quo* in Iran. Though the brief cable refers to competition it is hardly possible that competition exists. Indeed the available figures suggest that Bahrein and Arabia have so far developed little export trade in oil as compared with Iran where production has been developed for the common purposes of the war. If his forecast of a surplus in peacetime may be correct, Mr. Landis' fear of unhealthy competition is disproved by the use made of oil for reverse Lend-Lease purposes and even more for the combined assistance to China. The struggle for oil in Asia has not bred war so far; and Mr. Landis has no substantial grounds for apprehension.

The Congo's Contribution

Because Belgium is at war since May 1940 the Congo's contribution remains important. In 1943, there was an increase in rubber and tin supplies as in the previous year and exports to the Allies rose. Though uneconomic the collection of wild rubber was carried on and the Congo cut down gold mining for the sake of an increase in tin output. Though exports of palm kernels were lower, the production and export of palm oil increased. The Belgian Economic Service's annual report records the fact that prices of exports were not enhanced to suit the rise in the cost of manufactures imported by the Congo. Import control kept down the supplies of consumption goods to the minimum. Exports from India declined; as also those from South Africa. An attempt was made to procure goods from South America, but turned out a disappointment. Difficulties regarding the replacement of wornout equipment were experienced, and it was only in relation to textiles for the natives that any improvement took place.

The shortage of imports led to the development of local industries. Internal trade was brisk on account of the increase in the purchasing power. There was a rise in prices for the same reason and price control was instituted after the Government had authorised an increase in salaries and wages. The Belgian Congo had its Victory Loan to drain off surplus currency. Exports provided enough sterling for imports and the expenses for the Government in London. Imports in

1944, for local consumption were less than the exports, but the quantities involved were greater than in 1938. The rise in the Congo's exports was due to the increase under copper, tin, zinc and manganese exports. The substantial increase in the production of diamonds was a result of the war. It is, however, noteworthy that food exports declined on account of the increase in local consumption. A fall under maize and sugar exports is similar to that noted under timber which was taken largely for local construction. The Congo's rubber exports in 1943 amounted to 7,975 tons only so that it may be inferred that the plantation product is not seriously threatened at present by wild rubber. The new item in export trade is palm kernel oil suggesting that a crushing industry has been set up. The enlarged production led to a steady increase in shipping and railway tonnage figures. The growth of miscellaneous industries is reflected in the power consumption figures. The increase in the number of trading firms is a measure of wartime activity like the emergence of local industry. Increased output of cement, cotton cloth footwear, beer and soap shows how the Congo's industry has been aided by the fall in imports of consumers' goods. The Belgian Empire's war contribution since 1941, has received notice in view of the currency, trade, and tariff arrangements with Britain, but it may be added that opportunities for others after the war would not be determined wholly by old treaties, but by the capacity of others to assist the Congo in further development.

Safeguards For Assessees

The Federation of Indian Chambers in dealing with the principal clauses of the Indian Income-tax Amendment Bill refers to the special initial depreciation allowable from March 31. These will not be treated as an allowance for E.P.T. purposes. The Federation points out that unless such allowances are treated as such for E.P.T. purposes, it would not amount to any relief to the assessee with regard to the early re-equipment of his plant and machinery installed at a considerably inflated price. It is suggested that the Government should consider cases in which new plant is installed or new buildings are erected during the period the E.P.T. Act is in operation. The Federation has submitted that the initial allowance should be increased or else the enhanced deprecation should be treated as an allowance for E.P.T. purposes. The amendment of sections meant to reopen assessment at the instance of the taxing officer does not meet with approval. It is recalled that in 1938, certain safeguards for asseesees were put in, and they should not be withdrawn in order to benefit the revenue. The discussions in Select Committees during 1938, were against entrustment of power to act without definite information, according to the Federation, which urges that the assessee is entitled to protection at the hands of the Government from uncalled for harassment. The power to visit business premises and inspect accounts is deprecated. The Assembly refused permission to add a similar clause in 1938, and it is urged that sudden visits by the tax officer for such reasons would reflect on the credit and reputation of the assessee. The Federation objects to both clauses as unnecessary and asks for their deletion because there was complete and thorough reform of the law in 1938. The Federation concludes by saying that the decisions then taken on sound grounds would not be revoked by the Assembly in accepting these clauses.

THIRD REPORT OF DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1944

To The Shareholders.

Gentlemen,

The Directors have pleasure in submitting herein the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December 1944 together with the Auditors' Report.

	Rs.	As.	P.
The net profit for the year, including the amount of Rs. 2,36,564-6-3, brought forward from last year's accounts, amounts to	7,44,437	8	2
The Directors have transferred to Reserve Fund	1,00,000	0	0
The disposal of the balance of Rs. 6,44,437-8-2 is recommended by the Directors as follows:—			
Payment of a dividend on Preference Shares for the year ended 31st Dec. 1944 at the rate of 3 p.c. per annum i.e., Rs. 1/8/- per share on 50,000 Shares Rs. 75,000/- less deduction of Income-tax and Corporation tax Rs. 30,468-12-0	44,531	4	0
Payment of a dividon Ordinary Shares for the year ended 31st December 1944 at the rate of 6 p.c. per annum i.e., Rs. 3/- per share on 50,000 Shares Rs. 1,50,000/- le deduction of Income-tax and Corporation tax Rs. 70,312-8 ...	79,687	8	0
Payment of a annu to Shareholder at the rate of p.c. per annum i.e., Re. 1/- per share on 50,000 Preference Shares and 50,000 Ordinary Sh Rs. 1,00,000/- le deduction of Income-tax and Corporation tax Rs. 46,875-0 ...	53,125	0	0
Transfer to Charity Account, to be disbursed at the discretion of the Directors	15,000	0	0
To carry forward to next year's account			

(including Provision for Taxation about Rs. 1,00,000/- as most of the tax payable has been deducted at source on Government Securities) ... 4,52,093 12 2

Total ... 7,44,437 8 2

The business and progress of the Bank have, by God's grace, continued to be satisfactory.

During the year under report, a branch of the Bank was opened in Karachi which is functioning satisfactorily. The opening of other branches in the principal provincial cities is under contemplation.

After transfer of a sum of Rs. 1 lac, as stated above, the Reserve Fund now stands at Rs. 3,00,000/-.

In accordance with Article 87, Mr. Esmail Abdulkarim Panju retires from the Board and being eligible, offers himself for re-election.

In accordance with Article 95, two more Directors, Mr. Ahmed Habib and Mr. Mahomedali Habib retire from the Board and being eligible, offer themselves for re-election.

You are requested to appoint Auditors for the year 1945 and fix their remuneration.

By order of the Board of Directors,
AHMED HABIB,
President.

Bombay, 3rd March, 1945.

Bengal Breweries

The decision to increase the paid-up capital of *Bengal Breweries, Limited*, follows the success of the concern. The reception given to Double "B" has been wholly gratifying and the manufacture of Malt to Government order is fully established. The latest offer covers both ordinary and deferred shares. In view of the rapid completion of arrangements for brewing beer (up to standard) the increase in capital so soon for extension should not be surprising. The announcement to-day indicates that reduction would increase, and the public has a definite interest in the success of the present issue. The Bengal Breweries' report when it is out should produce a real impression, but in the interval, the assurance that the new company is unable to cope with even a fraction of the demand must suffice. The new shares are again offered at par but preference in allotment is duly guaranteed for those who hold B. B. shares already. What is known about the investment status of brewery shares, foreign or local, ensures prompt and adequate response in this case.

Thomcos Bank, Ltd.

Paying a dividend of 6 per cent for 1944 on its paid-up capital Thomcos Bank, Ltd., whose balance sheet is published to-day, takes its place among the smaller, self-sufficient institutions that have demonstrated the vitality of banking in South India. Though the figures are not cast in the big bow-wow manner common to-day, they are worth attention for the reason that 1944 led to an increase in resources apart from the increase in capital; and the bulk of the earnings is earmarked for the Reserve Fund. important feature is the unusual proportion of Advances to total assets. It is certainly suggestive that Investments are inconsiderable in the case of Thomcos bank, earning a net return of over 7 per cent on the paid-up capital even after the sanctioned increase. The cash ratio is commendably high in this case since cash and bank balances exceed Rs. 11.49 lakhs against Deposits of Rs. 38.96 lakhs. The assurance of security is certainly present, and so far as shareholders are concerned, the increase in the Bank's profits, struck after taxation, is the real guiding factor for the future. Thomcos Bank's balance sheet indicates the nature and distribution of Advances along with the significant elimination of bad or doubtful debts. The Alleppey Bank, of which Mr. A. V. Thomas is Chairman, has made a useful beginning as regards Bills and the effective conservation of earning power has stimulated the expansion shown under fixed and savings deposits. The Board in expressing satisfaction with the results remark on the contribution of public co-operation and confidence to the success achieved in 1944. The co-operation and confidence should certainly grow in view of the very satisfactory beginning recorded in the second year's report and accounts. Appreciation of the Bank's connections with the South Indian planting industry should also assist in the development desired.

FERTILITY

AGRICULTURE today recognises that though fertility — the power of the land to produce abundant and healthy crops — is the result of many factors, it is inseparable from chemistry and the work of the research chemist. Fertility depends on light and air; on methods of cultivation; and on the presence in the soil of water; organic matter (humus); of bacteria; of nitrogen, potash, phosphates and calcium; and of small quantities of what are known as the minor elements. All these factors are inter-related so that all must be maintained at the right level if fertility is not to suffer. Nitrogen particularly is essential for all vigorous plant growth, and the soil of India is nitrogen-starved. It is important to note that nitrogen is released by the decomposition or disintegration of organic matter. In the past all sorts of methods were used to obtain it. It was extracted directly from waste products, or recovered in the form of sulphate of ammonia as a by-product of coal. Then came the great chemical discovery of how to combine the nitrogen released to the air with hydrogen from water to form ammonia. Nitrogen applied to the land as an inorganic fertilizer enables heavier crops to be grown, and therefore more vegetable matter to be ploughed back. Heavier crops make it possible to feed more stock, which means more dung. In other words the element released from organic matter is applied inorganically, but then passes back again to the soil through plant or beast as organic matter. The "fertilizer" of this season supplies more dung or humus next year. Fertility is a cycle in which the products and processes of Nature and the skill of the farmer are inseparable from chemical research and the products of the chemical industry.

ICI

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Habib Bank

The remarkable growth of the Habib Bank in its very first year indicated more than the advent of new blood in the banking field. It showed the real nature and scope for expansion. In 1944 the Bank's resources expanded at a slower pace as compared with previous years, but the balance sheet contains the pristine features to the degree expected. It is evident that limited branch extension has not at all retarded the acquisition of resources and the improvement in profits is a direct result of the increase in Deposits. But it will be noted that the Habib Bank remains agreeably conservative in regard to expansion of its business for nearly two-thirds of the Deposits totalling Rs. 3.95 crores have gone into Government securities. The cash ratio in this case exceeds 25 per cent and cash and bank balances actually exceeded the total shown under Advances at the end of the year. The increase in profits accounts for both the increase in carry forward and the increase in the bonus paid to ordinary and preference shareholders.

The balance sheet published to-day signifies something more than exceptional liquidity in the case of a new, well-established bank. It attests the remarkable conservation of resources required for effective post-war expansion. Though the Bank's reserve, namely Rs. 3 lakhs is modest in relation to its capital of Rs. 50 lakhs the dividend has been more than maintained, and they may derive satisfaction from the more than conventional appropriation to Charity account that claimed notice in the review of the first year's report. It is a more than meritorious achievement to have strengthened both investments and profit-earning capacity, and the Bank's constituents are entitled to reflect again that more than usual conservatism has contributed to the very satisfactory record of 1944. The first year's report contained proof of the exceptional advantages enjoyed by the Habib Bank. The third report confirms the impression that after the increase in capital, the Bank's progress has been sure and steady. It would indeed be difficult to find a truly comparable achievement. The complete final explanation for the market rating of the shares is also forthcoming in the balance sheet figures to which attention is drawn.

Clive Street Gossip

Last week, I brought to a formal close the series of articles on the machinery and methods of rural reconstruction and rural uplift. The careful reader must have noted that, though the significance of the problem was far-reaching, I framed it for my purpose in a definite and narrow range and gave my solution in the most concrete and clear cut terms that one might desire. The problem was firstly, how to ensure that the appropriation for public works in rural areas will not be lost to the public in large part, owing to the corruption that is now rampant all over the country and secondly, how to awaken the village folk from their century-old torpor and how to clear and enrich the springs of public spirit in the mind of the average villager. As a solution to both these problems, I suggested the formation of what I have called Popular Agencies, Limited, a Ministry of all Talents (Retired) for each group of villages, which will function as a non-communal, non-political body on a non-profit basis. I also indicated the work that this body might engage in in the period of probation which must intervene between now and the beginning of real post-war planning.

* * * *

But this Popular Agencies, Limited, let me hasten to tell the reader, is only a key move. While it can give the decisive strategic advantage, it is not the whole of the game. After all, rural reconstruction in the conditions of India is a ponderous bundle of intricate problems, each with a number of different facets. The Popular Agencies is only an instrument. It will be ready to take on hand any given work, provided it is given the resources and shown the way it should proceed. It will be prepared, as I said in my last week's gossip, to run fair price shops, maintain dispensaries, provide medical service, manage educational institutions and supervise public works of various kinds. But only if it is shown the way and given the lead in every matter. Atleast in the initial stages, it would be folly to look to it for much of originality or initiative. It would be unfair to ask of it more than mere public spirit of an untutored, germinal kind. If it is asked to build roads in places too marshy in the monsoon and too dusty in summer, or clear slums or improve housing, where building materials are non-existent, it would naturally wonder whether it was expected to achieve its ends by some kind of magic. There is need, thus, to consider separately and in detail each of the problems that the Popular Agencies will be asked to tackle and to examine the methods that should be employed in each case. In education, for instance, we have to consider the ways by which the educational institutions of the rural areas can be made more organically a part of the life of each village. In the matter of public health, a process of simplifying the pharmacopea and treatment so as to adjust the needs and conditions of the villages has to be thought of. In housing, simpler methods of construction which can make the most of local resources and which will draw least from external sources have to be made known. Roads, which will have to be left to the charge of the local people, can be made only by methods which the local people can adopt.

* * * *

In all these matters, I have during the last few months been assiduously picking the brains of technical men who are not too high-brow to take rural conditions into account. The pickings, I have carefully docketted. And from time to time, I shall be bringing them to the knowledge of a wide public through the medium of these columns. That is why I started by saying that I brought this series of articles to a formal close last week, by which I mean there is a large bunch of ancillary problems which I shall be discussing in these columns, when my own enquiry into each of them gets ripe.

* * * *

By all standards, housing and road making are two of the thorniest problems that we have to tackle in regard to rural reconstruction. Between what we can ordinarily do in the villages and what is needed, there is a gap which modern technical developments have not enabled us to bridge. In Britain, where German aerial bombing has destroyed every third house, they are able to talk of prefabricated houses and of building homes which will be cheap in cost, but fit for heroes come back from war. That is mainly because of the advanced stage of British industry and, let me add, the small size of the country. Here in India, we have to deal with seven lakhs of villages dotted over the length and breadth of a vast sub-continent. Villages vary so widely in size, in situation, in the resources of the inhabitants and in needs as determined by climatic and other physical conditions that technical men may well despair of meeting all these varied needs. What has been said of housing applies with equal force to road making. It would be incredible, if it were not true, that the solution of these problems is within my direct personal knowledge. It is some time since I first saw the methods which I shall presently describe.

* * * *

But, though I was as much impressed with them then as I am now, there were good reasons for my postponing the description of these methods. For one thing, I had not developed the interest in rural reconstruction which now almost consumes me and I could not, therefore, make these methods of house-building and road-making part of a scheme of wider import. And for another, Mr. S. N. Dutt, who has developed these methods, was in no mood to acquiesce in wider publicity being accorded to his work in this line. Now, both these factors have weakened a great deal. For my part, I consider that as part of our effort to ensure rural reconstruction on economic and effective lines, Mr. Dutt's work should be made known. And Mr. Dutt, for his part, is less disinclined towards publicity, partly because of the setting it gets in this series of articles, and partly because he is more confident than ever before, thanks to certain large scale works he has executed recently, of the soundness and suitability of his methods.

* * * *

I think I have already said that Mr. Dutt has evolved special methods both of house-building and of road-making. He is a retired Railway Engineer who has been engaged in experiments in these lines over a period of more than three decades. Once his work got beyond the experimental stage, his aim has been to make the most of his results in the cause of nation-building. I do not know if I can describe the principles and methods involved sufficiently clearly for ordinary lay understanding. But I should certainly be able to pick out the more salient and the more significant points. But let me first state Mr. Dutt's methods of house-building with a minimum of technical jargon. The methods are compendiously described by the term, "plycrete," which is suggestive of the principle of plywood adapted to the use of cement for house-building.

* * * * *

Plycrete, as the name implies, is a method of constructing panel fillings, partitions, walls, floors, etc., on the multiple-ply principle. A specially made jute fabric is stretched between the supporting framing. This is given a wash with cement milk; and then a cement plaster of about 1/16 inch thickness is applied on both sides at the same time. When this is set and hard, cement plasters of thicknesses of 1/8 inch to ¼ inch are applied alternately on both surfaces, allowing sufficient time for each

coat to set and harden. The required thickness of wall (1/8 inch to 1¾ inch) is built up in this way; and herein lies the multiple-ply principle. As the wall is built up in laminated layers like plywood, it is hard and strong and can replace brick panels in buildings. The mass of materials in the wall being small, the quantity of heat absorbed is also surprisingly small, and therefore the rooms are comparatively cool in the hot months due to absence of radiated heat to any sensible extent. Here, then, is a method, which is simple, admits of speed in building and ensures freedom from the extremes of climatic conditions.

* * * *

But how about strength and durability? The individual plies are capable of infinitesimal sliding movement induced by temperature stresses. And due to variation in the composition of the mortar in the different layers, what is called the co-efficient of expansion is different for the different layers. On account of these two factors, cracks in the plaster are reduced to a negligible point and are practically absent when steel framing is used. The speed in this method of construction is almost incredible. Certain military barracks in an Air Field (Plinth area 4,52,000 s.ft) were built within thirteen weeks.

* * * *

As regards cost, the abnormal conditions of the present war period prevent this aspect from being seen in its true light. Much depends on the price of steel, timber, cement, sand, special jute fabric and transport, particularly road transport which is very expensive at present. At the present stage, the number of workers trained in this work is naturally small; and their wages and salaries are comparatively high. With a wide extension of activities, these elements in costs will come down. But to convey a rough idea of costs, it should suffice to say that for the kind of bungalow for which a young officer of any of the covenanted services will gladly pay Rs. 250 a month even in peacetime, the outlay on the building is no more than Rs. 11,000 at wartime prices of material.

* * * *

So far, this type of construction has been adopted for barracks, better type quarters for superior officers, for godowns and stores, hospitals, houses for villagers and for factory workers, surface drains, Garden walks, pathways and platforms. Plycrete construction is admirably suitable for hospital buildings. The single wall may be built inside, keeping the posts and the timber framing outside. In this way, costs may be kept down to about Rs. 3-8 per sq. ft. of plinth area of the building. The wall surface inside the rooms being plain, it affords no room for dirt, and may be easily cleaned with water or a moist rag. A very pleasing appearance can be given to the wall by applying a coat of distemper.

* * * *

Now, in these matters, seeing is believing; and mere verbal description is an inadequate means of conveying to others a picture of these methods. One has to see the work in progress to appreciate its simplicity, the enormous saving in material which has been made possible and the surprisingly little time taken in construction. One must go round the houses that are now in use to realise what nice homes they make. And a little of imaginative calculation will show how new uses for jute are being devised, uses which will obviate the need for jute restriction, once these methods come into wide vogue.

* * * *

I may now turn to road-making, where Mr. Dutt has given his method the name of "soil stabilisation." The term is very expressive and largely self explanatory. Soil-stabilisation is the process of hardening the ordinary soil to make it strong enough to bear weight. The deplorable state of most of the mofussil roads is to be attributed to the damage caused by seepage, percolation and capillary action of water. To prevent this damage and harden the soil, it is necessary to make it impervious to water both from below and from above and from the sides. Different soils require different treatment and different percentages of cement and water; and the moisture density control is a determining factor for success. Soil is stabilised by mixing the proper quality of soil with cement which varies from 8 to 15% by volume of the compacted mixture depending on the nature of the soil. More cement is required where the soil has a high colloidal or cement. Where the proportion of clay is high, sand and/or gravel may be mixed in certain proportions in order to reduce the proportion of cement and to reduce the clay content per unit volume. The chemical and mechanical properties have also to be considered to determine soil-aggregate mixture.

* * * *

Soil-stabilisation when carried out on this basis produces a material which is not brittle and is not liable to crack like a purely concrete surface. It possesses the quality of small yield under heavy traffic and traffic under hard and narrow wheels, and thus damage is minimised. To seal out water from under the base of the Stabilised Soil, (and if necessary from the sides) and to give the Stabilised Soil a dry base to rest on, an Anti-Seepage Base on the prepared formation or sub-grade and a Plycrete Sealing Coat laid on the Anti-Seepage Base are provided. These two seal out water and ensure the success of soil stabilisation. The depth of the compacted road may be 4 inches to 8 inches depending on the duty to be performed. Footpaths need not be more than 3 inches thick. Such a road with 6 inches depth of compacted soil when properly constructed will take 400 to 500 vehicles in 24 hours.

* * * *

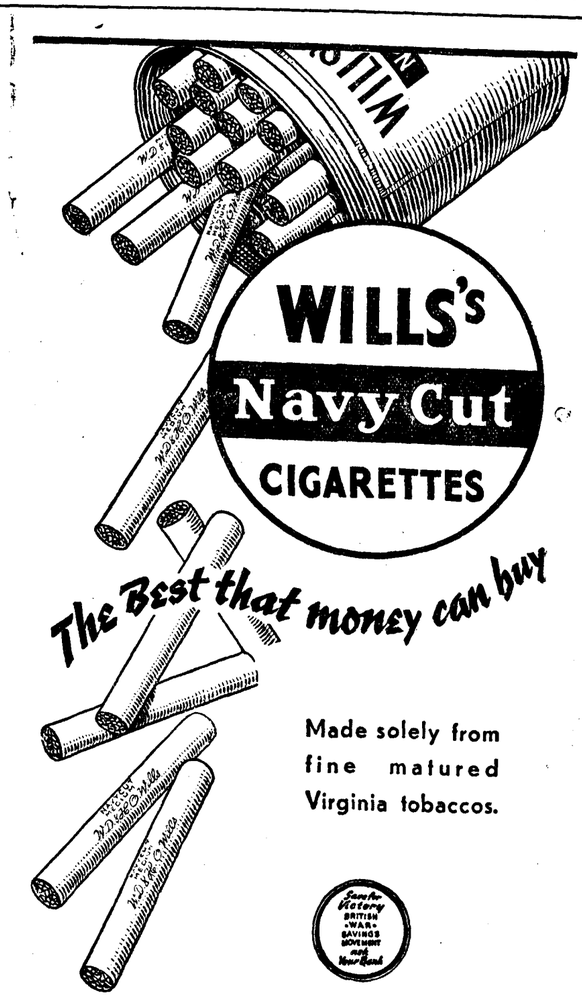
Incredible as it may seem, the crushing strength of Stabilised Soil could be as high as 134 tons per sq. ft. or nearly a ton per sq. inch. Some tests carried out at the Government Test House, Alipore with samples of Stabilised Soil cut out from actual work have actually given this result. Military roads constructed with a thickness of 6 inches Stabilised Soil in a certain area near Calcutta and used by heavy American Lorries have proved very satisfactory in service. One would be justified in assuming that such a Stabilised Soil Road will comfortably carry a moving load of 10 tons per sq. ft. with ample margin and factor for safety. To prevent water percolating below and to act as a wearing surface the top of the Stabilised Soil should be sealed in a satisfactory manner with a layer of Bitumen with 3/8 inch to 1 inch hard stone metals or with ¾ inch cement concrete laid and compacted before the Stabilised Soil has finally set. The intimate mixing of the Soil and cement is very essential to ensure success. It has been found by actual experience that mixing in a concrete mixer or even mixing by hand with care produces a better and more intimate mix than one can obtain by employing such devices as disc harrows and graders.

* * * *

In some respects, Soil Stabilisation is even more suited to the requirements of rural reconstruction than even the Plycrete methods of house-building. For, in the case of the former, the utilisation of the material and labour available on the spot is even more pronounced than in the case of the latter. The trouble in most schemes of road transport is that the methods involve the use of a lot of material which, far from being locally available, has actually to be imported from abroad. A technique of road building which simply takes the soil on the spot and brings it up to the requirements of a durable road surface should be assured of widespread adoption. It is relevant to state here that, though Mr. Dutt has patented the methods he has developed, the motive is not to make monopolistic profits, but to protect the technique from the bad name which incompetent or unscrupulous imitators may easily bring on them. Though these methods are far past the stage of experimentation and have been adopted on a large scale for barracks and other military establishments, they have not been tried in a practical scheme of rural reconstruction. Slum clearance is the laudable aim of the highest in this Province. The resources, mental and material, of a great city like Calcutta certainly justify optimism, though the gap between thought and action does not seem to have been narrowed much. But the rural areas don't catch the eye and cannot touch the heart of Governors. It is my hope that before long, with Mr. Dutt's help, the application of plycrete and soil stabilisation to selected rural areas will be begun in actual practice.

* * * *

The development of the cotton cloth crisis almost exactly on the lines on which the food crisis of 1943 flared forth into famine must make many wonder whether we can be content with treating each trouble as it arises. As in the case of food, the Ministry considers any trouble in any market as constituting a case for complete control and rationing. But every increase in control implies an increase in the power of the Government. With the best of Governments, people are chary of adding to its power. And in the face of the allegations of nepotism made against the present Ministry on the floor of the House, the Government of India can hardly be expected to agree to place the despatches of cloth, which other Provinces are making at a sacrifice, wholly at the mercy of the present ministry. The findings of the Famine Commission are still being withheld from the public. And if rumours are to be believed, the enquiries of the Commission have set them or other nominees of the Government of India on the track to other misdemeanors. And rumour has it that the enquiries which follow from the Famine Enquiry are meeting with obstruction in the most unexpected quarters.



* * * *

The entrenchments of corruption are clearly growing. And it is high time that the Government of India and the public, particularly the European bloc in the local legislature, learned to regard the whole position with a fresh outlook. Politics ordinarily understood is the least part of it. Whether India is to be a dependency or a Dominion, whether she is to be within the Empire or without, Britain can ill afford to have her name fouled in the last stages of her stay in India. The European bloc and the Government of India must be determined on a moral clean-up in this Province. During the war period there has been much to detract from the Britisher's name for rational and purposive honesty. It is time to cry halt and do all that may be necessary to raise standards of integrity. The present ministry must go, if it cannot be above board, not to speak of rooting out corruption.

* * * *

Jamshedpur is fortunate in the numerous occasions it gets for mutual felicitations between the management and the workers. Each is deserving of the other's regard and affections. It is not surprising that on the award of a Knighthood to J. J. Ghandy, the whole of the Steel City gathered to pay tributes to Sir Jehangir. I can well imagine the spontaneity and genuineness of the address as well as the reply. No tickle-me-Toby affair that! The impressive advances which the Tisco made during wartime are attributable in no small part to Sir Jehangir's enthusiasm and example. But, as Sir Jehangir was careful to point out, most of these had been in project even before the clouds of war rose on the horizon.

(FROM OUR CORRESPONDENT)

New Delhi, March 19.

THE last week has seen more than one event calculated to increase the political confusion. Dr. Khan Sahib, Premier of the Frontier Congress Cabinet which along with the other Congress Ministries went out of office, was requested by the N.W.F.P. Governor to form a Ministry and now there is a "purely" Congress Ministry in what is often described as the foremost Pakistan Province. It is widely mentioned that Dr. Khan Sahib has assumed office only with the approval of Gandhiji and Khan Abdul Ghaffar Khan, who has now been released by Dr. Khan Sahib. Qazi Attaullah, former Congress Education Minister, has been released and he is to assume office of Minister direct from the jail gate. Several other security prisoners have also been released. Not far away, in Sind, has been set up what is claimed a "purely" League Ministry. Sir Ghulam Hussain Hidayatullah, who was overthrown, was expected to form a coalition Government. The Sind Governor did not call upon the Opposition leader to form a Government nor did Sir Ghulam form a Coalition Ministry. Instead, as per Mr. Jinnah's directive that members of the League should not join a Government with non-Muslims, he set up a League Ministry—how long it will last is not difficult to predict—ejecting Haji Moula Bux. The Unionist Ministry in the Punjab is going on unabashed keeping Congress M.L.A.'s in prison and facing the mortar-fire of the League-Congress offensive, the League being the bitterest fighter. In the U.P., one of the prominent Congress Ministry Provinces and now under Section 93, the Benares District Magistrate has banned the Congress Assembly meeting. There has absolutely been no indication of H.M.G's or the Viceroy's response to the reported Desai-Liaquat Ali Khan efforts at a pact. On the contrary Sir A. Ramaswami Mudaliar, Sir Firoz Khan Noon and Sir V. T. Krishnamachari are being sent to represent India at the London and San-Francisco conferences despite the country-wide protest, the "no-confidence" motion of the Assembly against the entire Executive Council, and the Nawab of Bhopal's protest to the Crown Representative against the choice of Sir V. T. Krishnamachari without consulting even a single member of the Chamber of Princes. The above is the chaotic picture.

* * * *

Why did Mr. Jinnah issue such a directive? Does this mean that Messrs. Desai and Liaquat Ali have not made much headway in their efforts? Why was the Frontier question left to Frontier Congressmen? Did Dr. Khan Sahib form a "purely" Congress Ministry only because Mr. Jinnah had issued that ominous directive? How is it that the Frontier Governor called upon Dr. Khan Sahib to form a Ministry whereas the Sind Governor did not call upon the Opposition leaders to do likewise? The biggest question, of course, is "what next?" in the other Provinces where also Congress Ministries resigned at the time of the general resignation. If Khan Abdul Ghaffar Khan and other Congressmen in the Frontier could be released and if Dr. Khan Sahib could return to the Premiership, and that too in the Frontier, how can Congress M.L.A's be in jail in the Punjab and other provinces? Will there be a come-back of Congress in other provinces also? Again, what face can the Punjab Ministry have if they now continue to keep in detention the Province's Congress M.L.A's? How can the U.P. ban on Congress Assembly meeting be justified in these circumstances? It is all a muddle, there is no doubt. The country awaits a lead from Gandhiji. It is also awaiting an explanation from Mr. Jinnah and the Leaguers. Most of all does she await an explanation from the Governors of the Section 93 Provinces for keeping in detention Congressmen, including the legislators, and going on merrily with Adviser regimes. Some observers do visualise a return to 1937 conditions, leading to greater changes and happenings. But according to opinion in political and commercial circles in general here the Frontier incident will stop at being "an isolated act", if members of Congress Working Committee are not released unconditionally and a real national Government is not formed at the Centre. It is only too well-known that the real cause of the breakdown of the Provincial autonomy and Congress Ministries was the presence of the irresponsible, irremoveable and completely unnational Government at the Centre.

* * * *

The Frontier incident is a very significant gesture from Congress to the Government and Dr. Khan Sahib would certainly have made it a gesture to the League also by making it an all-parties Government, but for the directive of Mr. Jinnah. Mr. Jinnah's "myth" the Frontier is the foremost Pakistan province—has been exposed and he should, if he chooses, realise it. It is now upto the Government to take the sails. More is it up to Mr. Jinnah to stop his dilatory and obstructive tactics. The unity between the League and Congress parliamentarians in the Assembly is a lucky chance for him to retrieve himself from the condemned position he now occupies in India's politics. But nothing can happen as long as there is no change of vision and heart on the part of Whitehall. The people of the Frontier wanted Dr. Khan Sahib to assume Premiership; the people of the Frontier wanted Khan Abdul Ghaffar Khan to be released; the people wanted their leaders to save them from the terrible economic stresses and strains. People all over the country demand unconditional release of members of Congress Working Committee; people all over the country demand liquidation of the present Executive Council; and people all over the provinces, specially in Section 93 provinces, demand establishment of popular governments. If Congress leaders of the Frontier can be outside the jails without any detriment to the prosecution of the war, there is absolutely no reason to conclude that their being outside jails all over the country will be detrimental to prosecution of the war. Will H.M.G. and the Viceroy respond to Congress gesture? If they do not, they alone will stand condemned before the bar of world opinion.

* * * *

The absence of two Executive Councillors from India in connection with the San-Francisco Conference is not likely to call for any special arrangements during the period they would be away in London and San-Francisco, which will be for about 2 or 2½ months—the period being so short that the secretaries could carry on the work. It is gathered that the period of the proposed visit of Sir Ardeshir Dalal to Britain and the U.S.A. is also likely to extend to two or three months. Among proposed official changes in the Secretariat is the appointment of Mr. Ramachandra as Secretary, Defence Department, in place of Sir Charles Ogilvie, Mr. N. P. Engineer, Advocate-General, Bombay will succeed Sir B. L. Mitter as Advocate-General of India. It is also likely that Mr. C. V. F. Williams, a Madras civilian, will join the Home Department as Joint Secretary, when Mr. Conran Smith, Secretary, goes on leave.

* * * *

Last week the Law Member answered a number of questions in the Assembly on the work of the League of Nations and the need for continuing India's contributions. He gave figures showing that in the four years 1940-44 India had paid as much as Rs. 43 lakhs. In the coming year she will have to pay Rs. 13 lakhs—about Rs. 5 lakhs more than last year's grant. A Congress Member told the Government that the "League was doing very little work, why this big grant?" Mr. Manu Subedar pursued saying "Is not the San-Francisco conference intended to put an end to this white elephant?" In his speech on the Finance Bill Mr. T. T. Krishnamachari also referred in detail to India's contributions to the International conferences. He did not deny that the League was doing work, but he asked what India was getting in return. So far as India's financial contribution was concerned this country was second to only the United Kingdom. Nearly ten years ago the Assembly had passed a resolution demanding India's withdrawal from the League. One of the reasons mentioned was the unduly high contributions fixed for India. The latest figures show that instead of reducing the figure the League authorities have increased India's contribution by five lakhs. Mr. T. T. Krishnamachari further complained that in the League organization Indians were practically nowhere.

* * * *

In answer to an interpellation, the Commerce Member explained the Government's intentions regarding the proposed delegation of industrialists to England. He said: "The industrialists have been invited by the Government of India to visit the United Kingdom—the visit was unofficial in character and the members were free to arrange their programme and discuss any matter unfettered by any terms of reference or any form of Government guidance—the industrialists will bear their own expenses". As regards the object of the visit the Commerce Member said it was "to enable the industrialists of the country to study the developments and technical advances made by the industries during the past few years in furtherance of their own postwar industrial plans and to have contacts with the industrialists of the United Kingdom".

(*From Our Correspondent*)

Madras, March 21.

THE Madras Government's budget for 1945-46 has just been published. The revenue estimate for the coming year has been put at Rs. 41,25,29,000 and the expenditure at Rs. 40,45,14,000, and a revenue surplus of Rs. 80,15,000 is anticipated. The surplus anticipated in the coming year is many times more than the surplus for 1944-45, according to revised estimates, which is only Rs. 17,43,000. The interesting development in last year's finances is the large increase in revenue from Rs. 29,84,20,000. This increase is explained by the level of prices all round, increase in industrial and business activity and favourable seasonal conditions.

The removal of prohibition by the present government has resulted in quick returns of profit. The re-opening of 'arrack' shops in pre-prohibition districts, the increase in the rate of duty on Indian made, foreign made, and rectified spirit, the high price of opium etc., all this constitute the increase of Rs. 124.32 lakhs in the revenue estimates for 1945-46.

On the expenditure side mention may be made of the allotment of Rs. 4 crores for payment of dearness and war allowances for government and local bodies' servants and temporary increase on small pensions. A sum of Rs. 68 lakhs has been allotted to the fund for development of rural water supply. It has been decided to launch a literacy campaign and elementary education is to be made compulsory. There is also a proposal to supply mid-day meal to poor children in elementary schools. A sum of Rs. 210.57 lakhs has been set apart for these purposes. To help local bodies which start new schemes Rs. 76.98 lakhs have been allotted. Procurement and distribution of foodgrains, price-control and industrial development, these also have received allotments.

Provision has been made in the budget for Rs. 175.62 lakhs of capital expenditure. Of this Rs. 172.22 lakhs is claimed to be remunerative expenditure, including as it does Rs. 62.50 lakhs for the Tungabadra project and Rs. 37 lakhs for electricity schemes.

Post-war development plans received due attention at the hands of the Government. Formulation of post-war plans is making rapid progress. An outline of a five year plan for post-war development has already been drawn up and is likely to be published shortly. Large amounts will be transferred from the revenue reserve fund for the purpose of financing the plan.

It might not be superfluous to add that the budget estimates have been framed on the assumptions that seasonal conditions will be normal, the improvement in the war situation will continue and there will not be any rapid or large fall in the general prices resulting in fall of revenue.

Problems governing municipal finances were discussed by a deputation of the chairmen of Municipal Councils led by the Mayor of Madras with the Adviser-in-charge of Local Administration Department of the Government of Madras. In a memorandum which they presented to the Adviser, the deputationists said that local bodies, unlike local bodies in other provinces, are able to render a very satisfactory account of themselves during the past twenty years. Municipal towns being radiating centres of culture from which villages received inspiration, they urged, that in any scheme of post-war development, development of towns should precede that of rural areas. The memorandum criticised as retrograde the policy of the Government in superseding local bodies on the ground of maladministration, instead of ordering a general election as provided in the Act. The memorandum further said that few towns could boast of a satisfactory system of protected water-supply, drainage, good roads and decent parks. The urgent need of all towns, the memorandum went on, is to improve their finances first, for, plans and blue prints would be of no value, if the wherewithal to meet the cost of improvements is not forthcoming. As municipalities had taxed themselves to the utmost government was requested to assign further sources of taxation. Among the new sources suggested, levy of a duty on all transfer of property as in the case of the Madras Corporation which has been levying 2 per cent duty on the value of the property or the consideration paid, levy of a company tax, an advertisement tax, tax on dispensaries and hospitals, timber tax, and assigning a portion of the sales tax and excise revenue collected by Government. The Adviser has promised consideration to the proposals but the importance of augmenting the revenue of the local bodies, cannot be minimised.

The Public Works Department, Madras, is investigating the giant project, called the Tungabadra Project, across the Godavari. The proposed reservoir will hold five times the water which the Mettur Reservoir holds. The main problem of this project is the foundations. Deep borings made by Calyx drills appear to have established that the foundations have to go as far deep as two hundred feet below the bed of the river.

Mr. Savage, Chief Designing Engineer, U. S. Bureau of Reclamation, inspected the site, 25 miles above Rajahmundry, and has given as his opinion the feasibility of the project but he has reserved his final opinion until he has reached America, regarding the type of dam, as the designing and construction of this dam is something not attempted even in America. The project will be a combined irrigation and hydro-electric project, capable of irrigating two million acres of paddy lands and producing atleast 75,000 K.W. of continuous electricity. The cost is estimated at Rs. 70 crores, nearly treble the amount spent on all the Irrigation works put together in this Province during the past one hundred years. A geophysical investigation was conducted last year for determining by electrical methods the location of a hard rock. Representatives of the Madras and Hyderabad Governments met recently in regard to settling a number of administrative and financial details in the joint construction of the project. The Conference discussed and arrived at decisions on the broad lines of procedure in the execution of the project. The cost of construction of the dam and the cost of acquisition of lands for the reservoir will be met in equal shares by the two Governments. The rest of the works on the Madras side and Hyderabad will be under the control of the respective governments and will be their own sole concern. The execution of the reservoir is to be in the hands of a Board consisting of the Chief Engineer for Irrigation, Madras, and Chief Engineer, Hyderabad. Generally speaking, each Government will provide half the staff. The work relating to financial control and audit will be distributed between the Governments.

BOMBAY MARKETS

BULLION

(From our own correspondent)

Bombay, March 22.

THE bullion market is firm again on the subsidence of peace rumours. Bulls have again established a firm grip by buying up continuously all amounts offered by the Reserve Bank. 300 bars of silver were offered at Rs. 126-6, the lowest quotation, on Monday, while on Tuesday 600 bars were taken up at Rs. 127-4 and to-day 295 bars at Rs. 127-4. Again, bears have naturally covered open positions and forward silver rose from Rs. 125-6 to Rs. 127-3 on Monday. Settlement opened at Rs. 126-11 and rose to Rs. 128-8 on Tuesday, when bulls carried all offerings. Silver is now quoting Rs. 128-2 with a premium of a rupee for spot. Although a flareup in the war situation is imminent there is such a stringency of stocks that a wholesale squeeze of hapless bears is expected in the current settlement.

A similar position in gold exists with this difference that firmness of the market is derived more from demand and less from technical manipulation. The offtake varying between 60,000 tolas and 40,000 tolas, depending upon price, has absorbed offerings. The Reserve Bank sold 35,000 tolas on Monday at Rs. 70-5; 32,000 tolas on Tuesday at Rs. 71-7 and to-day also. First settlement has shot up from Rs. 69-10 on Saturday to Rs. 72-4 on Tuesday and is now Rs. 71-10 owing to decreased offtake and estimated local stocks of 50,000 tolas only. Spot is quoting one rupee over forward. It is reported that American coined gold dollars weighing one ounce have been put in circulation in China. This may cause a decline in the offtake in the local market on Calcutta account.

ALLEPPEY

EXTRACTS FROM THE SECOND ANNUAL REPORT OF THE DIRECTORS TO THE SHAREHOLDERS

1. The Directors have pleasure in reporting that the working of the Bank during the year has been quite satisfactory. The authorised capital of the Bank was raised to Rs. 20 lakhs by resolution of the shareholders at an Extraordinary General Meeting held on 31st March, 1944. Out of this an issue of 50,000 shares of Rs. 10 each, Rs. 5 called up on each share was made on 24th April, 1944, after obtaining the sanction of the Examiners of Capital Issues with the Government of India, and Travancore and Cochin States.

This issue was subscribed in full by the 30th June, 1944, and the paid-up capital raised to Rs. 5 lakhs.

2. THE NET PROFIT OF THE BANK as per the Profit and Loss Account after providing Rs. 35,000 for Income-tax, writing off all preliminary expenses and payment of two months' salary *pro rata* as bonus to all members of the staff is Rs. 70,525-12-8. This together with the balance of Rs. 39-7-8 brought forward from last year amounts to Rs. 70,565-4-4.

Deducting from this the interim dividend at the rate of 6 per cent per annum (free of Travancore Income-tax), amounting to Rs. 7,815-8-5 paid on 30th June, 1944, there remains a balance of Rs. 62,749-11-11 which the Directors recommend be disposed of as under:—

	Rs.	A.	P.
To place to Reserve Fund, raising it to Rs. 70,000	45,000	0	0
To pay a final dividend of 3 per cent on the Paid-up Capital: Thus making in all 6 PER CENT PER ANNUM, FREE OF TRAVANCORE INCOME-TAX FOR THE YEAR ended 31st December, 1944	15,000	0	0
To carry forward to next year's account ..	2,749	11	11
Total ..	62,749	11	11

The Directors take this opportunity to express their thanks to all the constituents and shareholders whose co-operation and great confidence in the Bank have helped it to achieve this success in the year under report.

A. V. THOMAS, *Chairman.*

N. MARTHANDA PILLAI, *Secretary.*

Airway Port

(From Our Correspondent)

Karachi, March 16.

UNLIKE other provinces where provincial autonomy has resulted in the emergence of clear cut political parties, Sind has always wallowed in the mire of uncertainty. When the budget session of the Assembly opened this year, it was an open secret that Sir Ghulam Hussain would meet his political Waterloo. On the fourth day of the session, Shaikh Abdul Majid's cut motion was carried and the Ministry beaten. Everyone thought that Sir Ghulam would resign. But contrary to expectations, the Governor prorogued the Assembly for a few days. Thinking that he could stabilise his position only by expanding the Ministry, Sir Ghulam Hussain took in Haji Moula Baksh, brother of the late Allah Baksh, who had a following of eight members of Assembly with him. Mr. Jinnah, however, would not allow this new arrangement and insisted that there should be no coalition with non-League Muslims in the Assembly. Strenuous efforts were made to convert Moula Baksh to the League fold but he refused to join the League. The only other alternative for the Premier was to cut away from the League moorings himself or make up his difference with some of the Leaguers who were in revolt. At the behest of Jinnah, he preferred the latter course. He tendered resignation of the whole Cabinet, got rid of Moula Baksh and two Hindu Ministers and constituted a new Ministry. It remains to be seen whether Sir Ghulam would tide over the present session of the Assembly, because the opposition is still strong and some more defections from the League are expected.

A protest against Sind Government's trading policy has been made in a statement by Seth Sukhdev Udhavdas, President of the Karachi Indian Merchants' Association. It is estimated that Sind at present supplies about 30,000 tons of food grains every month to deficit provinces which means that one crore of maunds move out of Sind in one year, bringing 27 lakhs of rupees net revenue to the Government. A profit of Rs. 2 is made on each maund sold outside. Normally, there should be a profit of more than a crore, but the actual profits are only Rs. 27 lakhs. This difference is due to working expenses of procurement and the payment of commission to government agents. Mr. Udhawdas says that if Government allow normal trade channels to function, it will be more profitable to the Zamindars, the Government and the deficit provinces. He calculates the net income to Government at Rs. 33 lakhs. The Zamindars would make Rs. 66 lakhs more and the deficit provinces would profit to the extent of As. 8 to Re. 1 per maund. At the same time, consumers in the deficit provinces will get much better quality of food grains.

The question of financial contribution which the Punjab is to make to Sind towards the projected construction of two new barrages has not been settled. Sind Government has not given up attempts at reaching a mutually agreed solution. To this end, it is understood, they have lately made some concrete proposals and forwarded them to the Government of the Punjab. Sind urged the claim for a contribution of Rs. 14 crores by the Punjab Government. It may be mentioned that the Rau Commission appointed in 1941 recommended a contribution of Rs. 2 crores by the Punjab to Sind. The two barrages are estimated to cost about Rs. 28 crores. In the budget for 1945-46, Government have made provision for Rs. 20 lakhs for the purchase of excavating machinery.

The Sind Government has received directive from the Government of India that it shall not charge special export rates for rice as it was doing hitherto. In consequence of this, the export of rice from Sind will be on the basis of no profit, no loss, from March 1. Export of wheat and millets has been on the basis of no profit, no loss for a considerable time already.

Details have been collected from all wholesale dealers of cloth of their previous indents of Indian mills cloth and a list has been prepared strictly in order of the number of bales of cloth imported. When the Government has to select 25 importers, the first 25 from the list will be selected. Sind Government is in favour of allowing mills to open their own shops in the province so that white cloth and other similar cloth which is scarce now may be available to the consumers.

Managing Agents:
MESSRS. KHAR & CO., LTD.

Distributors for India:
MESSRS. PHIPSON & CO., LTD.,
Calcutta.

OBJECTS:

The Board of Directors are pleased to announce that in spite of the severe War time conditions preventing procurement of the essential supplies, not only the construction of the Brewery with elaborate modern equipment has been completed within a year, but that under still more difficult emergency conditions the Company has been able to place in the market conditioned Beer equivalent to the best imported quality which has stood the test of the Chief Chemical Examiner to the Government of Bengal. The Company is maintaining a regular, and steady supply to military and Civilian consumers and all important dealers. So great has been the popularity of "Double B" Beer that the Company has been unable to cope with even a fraction of its demands.

The Company with the increase of capital and prospect of improved conditions assures to place its production of "Double B" Beer in increasing quantities within the reach of the public.

The Company has also been producing and supplying malt and malt extract to many leading pharmaceutical firms and have received contracts for very large supply of malt to the Food Department, Government of India.

To meet the increasing demand of the Company's products the Company has been granted sanction by the Government of India for issue of further capital for extention of the Brewery. The Directors have therefore pleasure in offering shares worth Rs. 5,00,000 and have pleasure in announcing that extention has already been taken in hand in order to achieve the dual object of

(1) effecting increased production, and

(2) taking measures with regard to both technique and distribution for assured stabilisation of this industry under competitive postwar conditions.

Application for shares may be made either to the Company or to its Brokers or to its Bankers and must be accompanied with application money for shares applied for.

The Directors reserve to themselves the right to close the subscription list at any time and to allot only such shares as may be available after allotment is made to the existing members.

Resume of Commodity Markets

THE recovery in bullion prices is the feature in the commodity markets in the past few days. Towards the close of last week there was heavy selling by bears and public institutions, but the large increase in the off-take, at the lower levels, has resulted in a rally in prices and quotations are appreciably higher on balance. The jute market has remained quietly steady while the jute manufactures market is firm. The raw cotton market has been fluctuating in narrow limits. In the piecegoods market business is very difficult as there is a shortage of supplies. It has been decided that the Bengal Government should start rationing of cloth and yarn supplies at an early date.

* * * *

The jute market has been featureless. It appears that there will not be any important fluctuations in prices for some time. It is still too early to form any definite idea regarding the size of the crop for the next season though reports regarding the progress of sowings in the lowlands have so far been satisfactory. A slight improvement in weather conditions would help the cultivators to a great extent. There may not, however, be any appreciable increase in the area under the crop and available supplies will be completely absorbed. That is the reason why holders in upcountry centres are very reserved and arrivals in February have shown a tendency to decline though they are still above the figure for the corresponding month last year.

* * * *

The report that Indian cotton has been considered unsuitable for purposes of hedge contract in the Liverpool market and that France and Belgium have not been able to utilise effectively Indian staples is rather bad news. Lack of uniform staple length and the difficulty in ensuring quality have been the main reasons for the unpopularity of Indian cotton outside this country. It is also said that prices of Indian cotton compare unfavourably with those of other countries. Owing to the possibility of heavy competition from both America and Egypt efforts should be made from now on to improve the quality of Indian cotton and penalise attempts at mixing.

* * * *

The raw cotton market has fluctuated in narrow limits during the period. Owing to the rejection of a large quantity of tenderable cotton by the Super-Appeal Committee the Spot market is tight and bulls have the upper hand. It is feared that nearly all available supplies of higher-grade cotton are in strong hands and that the premium for these qualities is expected to increase. As there is difficulty in regard to the movement of cotton from C. P. and Berar bears have been obliged to cover their open positions. In spite of the adverse news referred to above quotations are even higher on balance.

* * * *

Bengal's difficulties in respect of cloth and yarn supplies have received so much importance that both the Textile Control Board and the Central Government have been obliged to reconsider the question of the allocation of quotas to the respective provinces. It is felt that Punjab and some other Provinces are favourably placed with a per capita pre-war consumption of 18 yards. Total supplies of cloth and yarn should be equitably distributed and special factors taken into consideration. Bengal may thus have an additional allotment. The problem of distribution has not been easy of solution and even the new scheme, which was introduced sometime back, has not yielded satisfactory results. The shortage is very acute in respect of sarees and dhoties and it might be necessary to readjust production at some mills so as to increase the output of certain much-needed qualities.

The Textile Commissioner has not found it possible to increase the total of supplies for civilian consumption as it is said that it would not be possible to reduce exports or the takings by the Defence services. If the situation permits there might be imports from other countries particularly from the U. K.

While the Bengal Government has decided on complete rationing of all available cloth and yarn (it is not clear as to how it is proposed to achieve it), the Bombay City and the Suburban District has made a beginning in respect of the distribution of mill-made dhoties and sarees. Distribution has been controlled as from Wednesday this week. Under the Government scheme each head of the family will be eligible for a pair of dhoties and a pair of sarees for a period of six months commencing from that date on the production of a foodgrains ration card issued in the name of the head of the family. About 300 Government approved shops will be entitled to sell dhoties and sarees in accordance with the new order. The order does not apply to dhoties and sarees manufactured on powerlooms and handlooms as well as to printed sarees which will be available as hitherto at controlled rates. The order seeks to guarantee that one pair of dhoties and one pair of sarees will at least reach one genuine consumer.

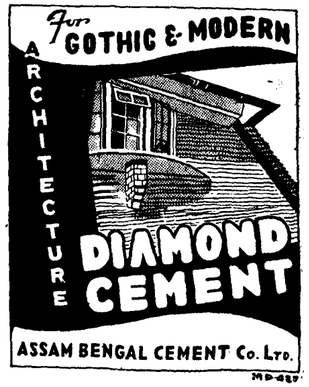
* * * *

The Textile Commissioner announced at a press conference in Lahore recently that all despatches of yarn to the provinces would be controlled as from the beginning of next month. As there are no imports of yarn from outside and there is a large gap between demand and supply it is said that a strict rationing of all available supplies is necessary and that the requirements of the various provinces should be carefully considered.

* * * *

It is reported that negotiations have been very nearly completed by the British Ministry of Food for the purchase of the total exportable surplus of tea from India, Ceylon and East Africa. This tea will be allocated by the Combined Foods Board on the advice of its Tea Committee among the Allied and neutral nations. In addition to the sources mentioned above, Britain used to receive tea before the war from Dutch East Indies. East Africa, China, Japan and Formosa. The gardens of India and Ceylon which did not previously grow green tea have now changed over to the production of this quality for the consumption of North African countries, which prefer this type.

* * * *



It is feared that the acute shortage of cane supplies will result in a reduction of sugar in the current season by as much as 2 lakhs tons, the estimate of production of sugar in 1944-45 being only about one million tons against 12.2 lakhs tons in 1943-44. The factories in U. P. and Bihar have commenced crushing rather late in the season and are expected to close early on account of cane shortage. The output of Bengal will still be only a small fraction of the pre-war output as labour is scarce and there are other difficulties. 150 cane factories are estimated to be working in the current season against 151 in the last season.

* * * *

A survey of the sugar position of all producing areas in India for the week ended February 28, 1945, reveals total production at 686,865 tons or an increase of 47,086 tons for the previous week. Despatches during the week were 17,172 tons making total despatches for the season up to the end of February to 144,185 tons. Total stocks, as a consequence, have increased to 544,970 tons. Balance stock for 1942-43 and 1943-44 season's sugar were estimated at 25,830 tons.

* * * *

A Bill to provide for the creation of a fund to set up a specially constituted committee for the improvement and development of the cultivation and marketing of oilseeds and of the production and marketing of oilseeds products was introduced in the Central Legislative Assembly early this month. The Bill authorises the levy on all oilseeds crushed in any mill in British India, whether produced or imported from outside British India, an excise duty on such rates not exceeding one anna per maund as the Central Government may from time to time and after consulting the committee fixed in this behalf. After the Bill becomes Law, the Central Government will set up an Indian Central Oilseeds Committee consisting of the following members: The Vice-Chairman Imperial Council of Agricultural Research (President); the Agricultural Commissioner with the Government of India; one representative each of the Government of India Departments of Commerce, Industries and Civil Supplies and Food; seven persons representing respectively the departments concerned with the oilseed crushing industry in the States; nineteen persons representing growers of oilseeds in different parts of British India and the States; one representative of the co-operative movement; one oilseed technologist; two representatives of the village oilseed crushing industry; two representative of exporters of oilseeds; one of the Federated Chambers of Commerce; one of the Associated Chambers of Commerce; four of trade and industry generally; three representatives of consumers of oilseeds products; and such additional persons, not more than three in number, as the Central Government may appoint to represent interests not otherwise represented. The Committee shall apply the Fund to meeting its expenses and the cost of such measures as it may consider necessary or expedient to take for the improvement and development of the cultivation and marketing of oilseeds and of oilseed products.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, March 22

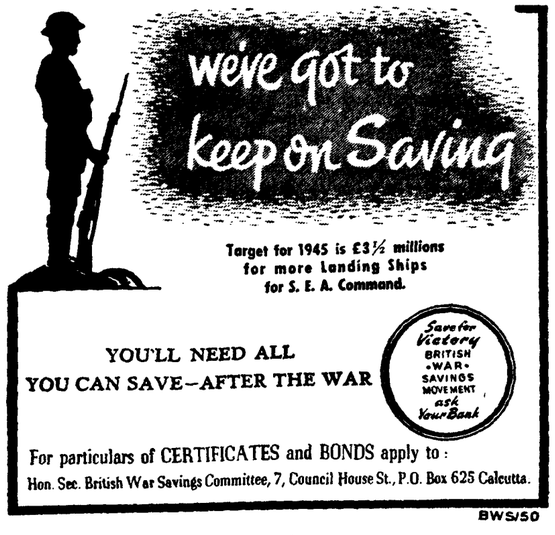
It has now been officially announced that the Jute Purchasing Panel set up in Calcutta is to consist of Messrs. I. G. Kennedy, Chairman, Graham Smith, The Collector of Customs, Calcutta, M. Isphani, K. D. Jalan and F. H. Kidd, members. Their function will be to regulate the purchase of jute on behalf of Government if the state of the market should require such purchases to support prices at the fixed minima. Theirs is no enviable job if they are ever called upon to exercise it. We pointed out in these columns last week that the main difficulty in the way was the lack of suitable storing accommodation. The validity of that opinion has been called in question in view of the vast number of godowns of all descriptions to be found throughout the jute districts. At a casual glance it might appear that Bengal was well provided with godowns and that there ought to be no difficulty in requisitioning all the accommodation which Government might require for their purpose. But a closer examination of the circumstances will expose this fallacy. To start with, the number of godowns really suitable for the storage of jute for any prolonged period, is very limited. There is a profusion of godowns of sorts indeed, but mainly of the most "kutcha" description, utterly unsuited for protracted storage and insurable only at ruinous rates if insurable at all. Whether this latter factor would enter into the calculations of Government, we do not know, but we imagine it at least ought to. Of the really suitable storage accommodation available, a very large proportion has already been requisitioned either by the military or the civil supply authorities, and the balance available for the storage of jute purchases is of inconsiderable extent, and what there might be is the working godown space of balers and dealers. Now, the only way in which a market level can be maintained in the mofussil is if balers can pursue their business and take up most, if not all, of the imports offering. If balers are forced to stop or curtail their business, demand will subside, imports will not be saleable and the market price will decline.

These are the circumstances which would bring into action the Government purchase undertaking, through the Jute Purchase Panel. The idea is that, failing purchases by mills, Government woud purchase from the mofussil balers to continue business, taking up the imports as they came into the market. But we have already pointed out that very few balers have any extensive holding capacity for jute. They require their godowns to be cleared regularly by despatches to enable them to continue their business. So unless Government can take delivery of their purchases from the balers upcountry the whole object of the scheme will be nullified by the inability of the balers to carry on their business owing to the fact that they will be jammed with stock jute. It is obvious therefore that, to carry the scheme through successfully, Government must take delivery of the jute they purchase from the mofussil baler. And if they do so, where are they going to store it? Echo answers, where? We confess we do not know. By far the largest capacity for storage is that of the jute mills which is already restricted by more than half by requisitioning, and the free balance remaining is already, in almost every case, overtaxed. So however willing they might be, the mills are unlikely to be able to help. As things stand at present it would appear probable that, if circumstances developed to require Government purchases for the support of the market, no inconsiderable quantity would be necessary to effect the purpose, and while accomodation might be found for purchases to a very limited extent, the storage problem would put such severe limitation on Government operations as to render the whole scheme nugatory.

There is one obvious way whereby Government can help the industry to save from their dilemma, and that is by the provision of more ample coal supplies. Whether mills have any storage space to spare or not, they are all concerned with the question of whether they will get coal supplies wherewith to work up their jute purchases of jute with much greater confidence than they can at present. It is understood that average coal arrivals this week have again fallen off and are only some wagons per day so far, against minimum requirements of 77. Receipt of coal is of much greater moment to mills at present than receipt of jute by rail, and so far as can be asertained, wagons are in sufficient supply, but not in the right place. The suggestion is at the disposal of Government for what it is worth. Give the mills larger supplies of coal and and they can forget about their liability to come into the market as jute purchasers to support the price level.

We might also repeat another suggestion which we made as an alternative to the purchase of jute, annd that is the purchase of gunnies instead. Government purchase of gunnies for forward shipment would have the identical effect as the purchase of ready raw jute without the attendant difficulties. Such purchase of goods from mills would bring the mills themselves out as purchasers of jute to cover the sales, which being in the normal course of trade, would probably be more effective in supporting the price level of jute than any outside support where the purchases would ultimately have to be resold into trade channels. Moreover, by purchasing forward goods, competition by the Bazar would be immediately stimulated—no unimportant factor and one which might easily enable Government to clear their hands of their purchases on a rising mrket without ever having to take delivery of their purchases. Even if Government did have to take up and pay for their purchases when due, they would not be faced with the problem of storage, for mills normally undertake to carry sold goods in store for considerable periods and have accommodation for doing so. We commend these two ideas, jointly and severally, as much more feasible propositions than the proposed purchase of raw jute, and as worthy of careful consideration.

Arrivals of jute during February were shorter than the short month would account for, the main drop being in rail arrivals which were down by 3 lakhs of maunds, but still nearly 5 lakhs of maunds better than last year, which confirms the view that wagons are in better supply. Arrivals for the first half of March are estimated at 2,15,000 bales against 1,68,000 bales for the same period a year ago, while total arrivals to mid-March for this year are 46,99,000 bales against 37,88,000 bales at the same time a year ago.



Some progress can be recorded in the settlement of the trouble which arose over the routing of jute from Narayanganj and other stations via Khulna. Such despatches will henceforth be confined to through-booking by two transport companies and there will be no more non-negotiable documents issued. It now remains to be seen whether arrngements can be made to synchronise the rates charged, which at present still show considerable disparity for an identical service.

There is nothing to record in the Pucca Bale market this week, neither export demand nor enquiry from local mills having

WANTED

Applications in prescribed form are invited for the post of the Director, Jute Agricultural Research under the Indian Central Jute Committee on Rs. 750—50—1,250 p.m. A higher initial salary upto Rs. 1,000 p.m. may be given if the qualifications of the candidate so merit. Qualifications required are an initial degree in Agriculture or Botany followed by a post-graduate degree in plant breeding, not below a 1st Class M.Sc. of a recognised University, with subsequent practical experience of research in plant breeding. Evidence of ability to direct research in biological sciences must be produced. The last date for the receipt of applications is the 30th April, 1945. Further particulars and the prescribed application form can be obtained from the undersigned.

been at all in evidence. Rates continue at minimum for all grades except Rejections and Cuttings.

In Loose Jute the turnover has been on modest lines. A few small sales of New Crop have been recorded, mainly in Supervised Jat at Rs. 16/8 and Rs. 13/8 for Mids and Bots on a 50/50 basis, also some Northern District at Rs. 15/12 and Rs. 12/12. There has been some enquiry for Indian District Tossa at Rs. 16/- and Rs. 13- and Indian Jat Bottoms alone were reported at Rs. 13/4. European packing is on offer at Rs. 16/8 and Rs. 13/8 more freely than a week ago, as also is supervised Jat. It is announced that a consolidated supplementary Review of the 1944-45 Jute Crop in the four Provinces will be published on 31st March.

The Hessian market ruled firm till it appeared that the U.S.A. acceptances of the offers sent to cover their July/December requirements amounted to rather less than had been expected, only some 30 crores having been taken according to the most reliable estimates available. The tone then eased somewhat but has firmed at the close owing to the report of a further Government order having been placed with mills. Mill sellers are reserved and will consider nothing under maximum up to a year ahead, but second-hand sellers have been at times in evidence offering forward positions at a slight discount.

There has been a moderate general enquiry in the Heavy Goods section, some of it for overseas, for instance Cuban Sugars which have been bought in anticipation up to Rs. 79/-, and some of it for speculative account or for cover. Among the sales recorded are Cornsacks for July/December at Rs. 64/-, Liverpool Twills for May/December at Rs. 73/- and "B" Twills at Rs. 64/12 for April/June. Near "B" Twills have ruled easier and are quoted down from Rs. 66/8 for ready and March, but March Heavy Cees commanded maximum price at Rs. 67/12.

JUTE

(*By Our Staff Correspondent*).

Calcutta, March 22.

THE raw jute market was quietly steady with mill buying on a small scale. The improvement in the coal situation has continued to be in evidence, but mills would prefer to wait for some time as with the larger arrivals in recent months, there are plenty of jute stocks on hand and godown space is taxed to the fullest extent. The absence of any large buying by mills, however, has not resulted in a decline in prices. As a matter of fact, for bottom grades prices are even a shade higher. Reports regarding the progress of sowings have not been quite satisfactory and it is expected that the total crop might turn out to be smaller than originally expected. Mofussil markets are very firm especially as arrivals have been on a smaller scale and there is demand for all the jute offering.

In the loose jute section a fair amount of business has been reported. Sellers are not very keen for business though they are accepting whatever orders are placed by mills. European packing Middles and Bottoms sold at Rs. 16-8 and Rs. 13-8 per maund and Supervised Middles and Bottoms at Rs. 16 and Rs. 13 per maund. There is good demand for bottom grades.

In the pucca bales section, export business has been rather poor. In spite of the strength of the loose jute section balers are keen to do business at the minimum rates. Mills also have been poor buyers. Only a small business has been reported in Firsts at Rs. 79 per bale and Lightnings at Rs. 75 per bale. Cuttings and Rejections are still required at a premium.

JUTE MANUFACTURES

(*By Our Staff Correspondent*)

Calcutta, March 22.

THE jute manufactures market has continued firm though the bazar has been keen seller for October-March position. Mills are fully sold for the near positions so that for early deliveries a premium is available in the black market. As the U. S. requirements have been satisfied by shippers and there has been no squeeze in the bazar it is pointed out that it would be easier to get deliveries later in the year. As mills have still unsold production if there is no large increase in the demand prices might be lower, especially with an improvement in the coal situation. It remains to be seen whether bazar expectations will be fulfilled.

In the heavy goods section, easier conditions have been noticeable. The reports that there might be greater demand for sugar bags have not resulted in any increase in prices. In the absence of any fresh business in "B" twills and "A" twills there is a decline in the bazar quotation for "B" twills to Rs. 66-4 for ready delivery. Mills, however, are not sellers below the maximum rate.

PIECEGOODS

Calcutta, March 22.

THE crisis in the piecegoods market has led to the dramatic announcement by the Bengal Minister that there would be rationing of cotton cloth and yarn throughout the whole of Bengal province in six weeks. There is great difficulty in respect of sarees and dhoties and black market trading is going on uninterrupted. The quantity distributed through approved shops is too small to have any appreciable effect on the market. It is emphasised that the difficulty is mainly in regard to supplies and unless there is effective control of all goods coming into the province there is no way of ensuring equitable distribution. It is expected that the representations made by the Government of Bengal for an increase in the quota allotted to Bengal will be successful.

Stock Markets to-day and to-morrow:

DUNLOP RUBBER 1944 ACCOUNTS

In contrast to the firmness of the bullion market, stock exchanges have been rather hesitant in the past few days and there is a tendency on the part of both investors and operators to await further developments. Earlier in the week, bears in the Calcutta market tried to depress prices but as there was no selling by investors and the bullion market firmed up, there could not be any appreciable decline in prices. In the last two days almost the whole of the lost ground has been recovered though the undertone is quiet. A big decline in prices may be contested, but there will not be any appreciable rise in prices pending a clearer outlook. The table given below will show that, with the exception of Howrahs, quotations for the leading counters are not very much changed on balance.

	22.3.45	19.3.45	14.3.45
	Rs. A.	Rs. A.	Rs. A.
Tata Deferred ..	2,098 12	2,085 0	2,092 8
Bombay Dyeing	1,862 8	1,848 12	1,875 0
Kohinoor ..	615 0	619 0	620 0
Indian Iron ..	39 15	39 11	39 11
Steel Corporation	33 0	33 12	33 5
Howrah ..	89 7	87 13	87 6
Burrakur ..	42 3	42 0	43 2
Gold (Ready)..	72 9	71 12	69 14
Gold (Forward)	71 15	70 12	69 9
Silver (Ready)	129 4	126 13	126 12
Silver(Forward)	128 4	126 6	125 8
Cotton(May) ..	455 0	450 12	449 12

Both gold and silver have registered a sharp recovery in prices. It is said that the improvement in bullion values is due to the subsidence of peace reports. But, by the same token, there should have been a rally in the stock markets also. In the bullion markets bull manipulations are still on a large scale and with the absorption of the Reserve Bank's offerings by the Bull Syndicate the spot position is always tight. There is also an increase in the offtake with a sizeable reduction in prices.

* * * *

It is rather surprising that even with the prospect of an appreciable decline in prices in the post-war period for gold and silver and the rejection by the Senate Committee of the demand for an increase in the dollar price for gold, there should still be a large demand for hoarding purposes. It cannot be said whether the preference for the precious metals over stock exchange securities has anything to do with the official enquiry into the working of the stock exchanges by the Government of India. For, the questionnaire issued by Dr. P. J. Thomas of the Finance Department, National Investment section, has only asked for details regarding the present working of the leading stock exchanges in this country and suggestions for suitable stock exchange legislation in the post-war period. The preference for bullion by black market traders is perhaps due to the ease with which money can be kept in hiding. If it were held in shares, the need for transferring holdings and drawing dividends might possibly give a clue about the real owners and lead to an enquiry in cases where there has been an abnormal increase in assets. It is, therefore, important that side by side with an enquiry into the working of stock exchanges, the Reserve Bank should also make sure about the holdings of both gold and silver, at least to the extent of its sales, and ensure that they are properly distributed. As it is, the policy of the Reserve Bank to absorb surplus money from the small investor is defeated. The decline in bullion prices might not thus be so rapid as was originally expected, after the cessation of hostilities in the West or with the resumption of free trade.

* * * *

So far as stock exchanges are concerned, the position is different. Investors are firm in their ideas and as there is a greater disposition on the part of Indian industrialists to get control of companies, which are still under foreign management, there will be a tendency to part with holdings only at the higher levels. In so far as the prospects for Indian industries are assured in the post-war period and any improvement in the political situation would affect their position favourably, it stands to reason that prices, even in the event of a sudden termination of hostilities, will not be marked down appreciably.

Electric issues have not received the same attention as they should. Owing to the difficulties in running the concerns and the black-out of information regarding earnings not much attention has been paid to the shares of these Companies. But, in spite of the numerous handicaps, dividends have been more or less maintained. In the post-war period, there will be a large development programme and consumption of electrical energy will increase to a great extent. Post-war prospects for electrical undertakings are thus assured. As there is every likelihood of a reduction in the borrowing rate of the Government, electrical shares ,which are considered semi-giltedged, should be marked higher. In the event of the State deciding on the acquisition of Public Utilities, there is no fear of capital depreciation as the purchase price will, in any case, be decided according to the market value and the investor will always be assured of his capital.

* * * *

I understand that Burrakur will be paying a dividend of twelve annas per share for the half-year ended December, 1944 against ten annas per share for the previous half-year, Bhulanbararee twelve annas per share against eight annas, Sendra eight annas against four annas and Standard one rupee against eight annas. The increase in the distribution for Bhulanbararee and Standard has been favourably received by the market and there is a rise in the quotation for the shares to Rs. 33-4 and Rs. 44 respectively. In the case of Burrakur it was expected that the dividend would be higher especially as it was reported that raisings were above the target level. The accounts are not yet available.

* * *

The accounts of the *Dunlop Rubber Company (India) Limited*, for the year ended December 31, 1944, make very satisfactory showing, there being a big rise in the earnings over 1943 thanks to the further expansion of the company's manufacturing

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

FREE EXPERT ADVICE ON ROPEWAYS BY BIRD & CO., Calcutta

capacity and the considerable increase in the volume of business. Total sales in 1944 were Rs.5.15 crores against Rs. 3.62 crores in 1943. The net profit, before providing for taxation and depreciation, was Rs. 1,12,47,261 against Rs. 74,63,382 for the previous twelve months. Provision for taxation, as usual, takes up the greater portion of the increase in earnings, the total under this head being Rs. 74,86,189 against Rs. 46,83,207. The transfer to Reserve for Contingencies is slightly lower at Rs. 2 lakhs (Rs. 2.5 lakhs) The Dividend Equalisation Fund gets Rs. 7 lakhs (nil). In view of the increase in earnings the directors have recommended a higher rate of dividend on ordinary shares (as given in these columns last week) 30 percent against 25 percent formerly.

* * * *

The increase in the earnings capacity of the Company in the war period, will be clear from the table given below.

The net profits before providing for taxation but after depreciation for the past six years are:

			Rs.
1939	...	...	32,79,446
1940	...	...	38,78,247
1941	...	...	67,15,966
1942	...	...	80,74,173
1943	...	...	66,28,170
1944	...	...	1,02,77,624

It will be seen that the net earnings have increased from Rs. 32.79 lakhs in 1939 to Rs. 1.03 crores in 1944. The balance-sheet position is very sound. In 1939 surplus and reserves were Rs. 11,14,382. They have increased to Rs. 48,50,088 in 1944. There is an increase in the net block from Rs. 56,35,820 in 1939 to Rs. 72,68,418 in 1944. The net liquid assets were Rs. 95,81,670 against Rs 87,50,182. No credit has been taken for that portion of E.P.T. liability for 1944 or the previous year which is refundable within three years of the termination of hostilities and is estimated at Rs. 8.29 lakhs.

The shares are at present quoting Rs. 63 cum-dividend and are good for investment purposes.

* * * *

Owing to a big reduction in the earnings of the *Vasanta Cotton Mills Ld.*, for the year ended December 31, 1944 it has been necessary to reduce the distribution to shareholders from 30 percent in 1943 to 15 percent in 1944. The net profit, before providing for taxation and depreciation, is Rs. 16,17,087 against Rs. 42,50,197 for the previous year. Provision for taxation is Rs. 11 62,000 against Rs. 32,45,000 while the sum transferred to Reserve for Compulsory E.P.T. deposit is Rs. 2.5 lakhs against Rs. 5.45 lakhs.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 23.

IRREGULAR conditions have been noticeable on the Calcutta Stock Exchange during the past week. Rather quiet conditions were evident in the early part of the period under review but the rise in bullion prices and forced covering by bears have resulted in an improvement in values in the past two days. The undertone, however, is not quite steady and there is a general tendency to await further developments. Coal shares were easier while Jute shares were better with Howrahs in special request. Engineering shares were steady around last levels. Sugar shares were definitely easier. There was a broadening of enquiry in Tea shares.

The Giltedged Securities section has been rather quiet, the persistence of easy money conditions having no effect on giltedged values. There is no great anxiety to place funds in medium-dated or long-dated loans. Thus, 3 per cent 1957 Loan is lower on balance at Rs. 99-14. The quotation was temporarily at par last week. 3 per cent 1951-54 were Rs. 100-13, 3 per cent 1953-55 Rs. 100-6 and 3 per cent 1949-52 Rs. 101-2. Among long-dated issues, 3 per cent 1963-65 were Rs. 99-2 and 3 per cent 1966-68 Rs. 98-8. Among non-terminable loans, 3½ per cent Government Paper was quiet around Rs. 99-10. The only transaction recorded in Provincial Loans was in 3 per cent 1952 U. P. Loan at Rs. 100-4.

Bank shares have continued steady with *Calcutta National* at Rs. 15-8, *United Commercial* Rs. 21 premium and *Reserve Bank* Rs. 133-8. There was a rise in the quotation for Reserve to Rs. 135. *Imperial Bank* fully paids were unchanged at Rs. 1.980.

Cotton shares were uninteresting with very few transactions reported. *Cawnpore Textiles* were Rs. 13-6, *Elgin* Rs. 66-4 and *Kesoram* Rs. 17-11. *Muir* were steady at Rs. 435, *Bengal-Nagpur* at Rs. 42-6 and *New Victoria* at Rs. 7-8.

In the Coal section, a smaller number of transactions was reported. The rumours regarding the possibility of higher dividends by some of the important coal companies had a stimulating effect towards the close. *Burrakur* were lower at Rs. 41-12 against Rs. 43-8 at the end of last week, the close is slightly better at Rs. 42-2. *Bengal* also have declined by 10 points to Rs. 696 while *Bhalgora* were more than a point lower at Rs. 20-6. *Central Kurkend* were Rs. 33 against Rs. 33-12. *East India* were relatively steady at Rs. 38-8, *Nazira* shed a point to Rs. 21-14. *Ghusick and Muslia* were Rs. 16-4 and *New Beerbhoom* Rs. 40-8. *New Manbhoom* registered a sharp rise to Rs. 89 from Rs. 83-4 and were the general exception to the trend of the market. *South Karanpura* were quieter at Rs. 29-12.

In the Jute section, there was a sharp rise in *Howrah* on special buying and bear covering owing to the scarcity of scrips. The quotation has been marked up to Rs. 90-6 against Rs. 88-8 at the end of last week. Other shares, however, are unchanged, *India* being Rs. 702, *Kamarhatty* Rs. 690, *Anglo-India* Rs. 467 and *National* Rs. 33-14. *Presidency* fluctuated around Rs. 12-8. There was a rise in *Reliance* in sympathy with *Howrah* to Rs. 76-12.

In the Engineering section, *Indian Iron* in sympathy with Howrahs improved to Rs. 40-8 and *Steel Corporation* to Rs. 33-7. Renewed selling at the higher levels has resulted in the weaker close at Rs. 39-14 and Rs. 33 respectively. Other shares were unchanged, *Arthur Butler* were Rs. 24-8 ex-dividend, *Indian Malleable Castings* Rs. 9-4, *Jessop* Rs. 24-8, *Kumardhubi Engineering* Rs. 11-4 and *Marshalls* Rs. 5-2.

Sugar shares were quieter on reports that production in the current season will be appreciably lower. *Carew & Co.* were Rs. 27-6, *Ramnugger Cane and Sugar* Rs. 15-2 and *Balrampore* Rs. 16-12.

On the reports that negotiations have been nearly completed for the purchase of exportable tea by the British Ministry of Food greater interest has been shown in tea shares, *East India* being higher at Rs. 17-12, *Grob "A"* Rs. 24-12 and *Tezpur* Rs. 21-12. *Patrakola* were in request at Rs. 1,367 and *Desai and Parbuttia* at Rs. 434.

In the Miscellaneous section, *Burma Corporation* were lower at Rs. 5-6 while *Consolidated Tin* were unchanged at Rs. 3-14. *B. B. Petrol* were sticky at Rs. 5-5 and *B. I. Corporation* at Rs. 6-11. There was a rise in *National Insulated Cables* to Rs. 14-6 on reports of a higher dividend. *Calcutta Trams* were steady at Rs. 45-8. *Aluminium Corporation* changed hands at Rs. 15-8 and *Indian National Airways* (Ordy.) at Rs. 25-4. Paper shares were quietly steady, *Titaghur Paper* being Rs. 27-14, *Bengal* Rs. 227, *Orient Paper* Rs. 31-12. *Midnapore Zemindary* were in request earlier in the week, but the close is 4 points lower at Rs. 174. *Assam Sang* were Rs. 5-15. Shipping shares were steady, *Port Shipping* being Rs. 29-12.

THE EMPIRE JUTE COMPANY, LIMITED

The Sixty-fifth Ordinary General Meeting of the Shareholders of The Empire Jute Company, Limited, will be held at McLeod House, No. 28, Dalhousie Square, Calcutta, the Registered Office of the Company, on Monday, the 16th April, 1945, at 11-45 a.m., for the following purposes :—

Div. % Pref.	8	8	8

*E. P. T. Deposit.

(Annual General Meeting on 24-3-1945 at Cawnpore. Books closed from 28-2 to 28-3).

The profit for the year, after making all the usual allowances (including the sum of Rs. 9,00,000 for Depreciation), including Income from Investments, providing for a gratuity to Employees, and setting aside Rs. 85,25,000 for estimated Taxation and Rs. 15,00,000 against the Compulsory E.P.T. Deposit, amounts to Rs. 17,90,355-8-1 to which has to be added the amount brought forward from last year, namely Rs. 2,65,092-8-11, making the total sum available Rs. 20,55,448-1. The Directors recommend that this sum should be disposed of in the following manner:—

(1) Dividend for the year to 31st December, 1944, on the Cumulative Preference Shares (8 per cent per annum), free of income-tax Rs. 6,48,000, (2) Dividend for the year to 31st December, 1944, on the Ordinary Shares at 4 annas per Share, free of income-tax Rs. 11,03,750, and (3) Carry Forward to next Account Rs. 3,03,698.

In 1944, the sales recorded by the Branches of the Corporation again exceeded Rs. 10 crores. This total is slightly less than in the previous year. Had, however, the necessary raw, and other materials been available in full sufficiency, the total Sales in 1944 would have been considerably greater.

The Labour employed by the Corporation again put in an apparently contented and industrious year. The supply of foodgrains to workers by all Branches of the Corporation continued throughout the year at prices considerably below ruling Government controlled rates and, throughout the year, War Dear Food Allowance, according to the cost of living index figure, has again been paid to all workers. The accounts once more make provision for the payment of a gratuity to workers in respect of the year 1944.

The Corporation attained its Silver Jubilee on 24th February, 1945. Due to the War, the celebration of this event was, perforce, on a modest scale. The Corporation's Branches did not work on that day and all daily-paid, and piece workers will receive a day's pay in respect of this holiday. A Silver Jubilee Medal is being presented to the 1,140 Members of the Staff and Workers, still in employment, who have faithfully served the Corporation since its inception.

Chairman.—R. Menzies.

Authorised Capital—Rs. 3,65,00,000. *Issued and Subscribed—Rs.* 1,25,15,000 *in* 81,000 *Pref. shares of Rs.* 100 *each and* 44,15,000 *Ordy. shares of Re.* 1 *each, both fully paid-up.*

NOTICE

Control of Capital Issues

The following additions are made to the list already published of questions to be answered in applications for consent or recognition to the issue of capital by companies.

Q. 4(a). "Note: Mere reference to the objects stated in the Memorandum of Association is usually unacceptable."

Q. 4(b). "Note 2: This does not refer to the company's head office (see Q. 2) but to the place of actual operations, (e.g. in the cases of industries, location of factory).

New Q. 5A. "MANAGING AGENTS. Give name and address of Managing Agents, if any, appointed or to be appointed."

Q. 6. "And describing the voting rights of each class of share."

Q. 8(d). "In respect of capital goods, state whether an application for registration has been made to the Chief Controller of Imports and if so, whether registration has been accorded (quote number and date of registration certificate)."

(Sd.) A. H. Lloyd.
Examiner of Capital Issues.
13th March, 1945.

WORLD OF INDIAN FINANCE

Calcutta, Thursday Evening.

Interbank call money continues to quote nominally ½ per cent in Calcutta and ¼ per cent in Bombay. On the weekly treasury bills tender day, applications came to Rs. 12.83 crores against Rs. 4 crores on offer. The average rate of accepted tenders was 5 annas per cent per annum, which is the same rate as last week. The offer of India treasury bills for next week is unchanged at Rs. 4 crores.

The increase in the Reserve Bank's portfolio of sterling securities is reflected in the increased share of the Central Government in the surplus profits of the Reserve Bank from year to year. In 1942-43, the surplus profits of the Reserve Bank paid to the Government amounted to Rs. 3.24 crores. There was a sharp jump in 1943-44 to Rs. 7.50 crores. There was an equally striking increase in 1944-45 to Rs. 10.07 crores. Budget estimate for 1945-46 provides for the same figure as in 1944-45. While it is natural and satisfactory that Government's share of the surplus profits of the Reserve Bank has shown substantial increases, we cannot help posing two important questions, the significance of which stresses the fact that the share of the Government in surplus profits must be very much higher than the present figures. The two questions that we have to ask are: Firstly, on the total amount of sterling securities held by the Reserve Bank, is the earning indicated in the annual profits of the Reserve Bank adequate by ordinary standards? Secondly, is the assumption of the same profit for 1945-46 as in 1944-45 justified? In the 1943-44 balance-sheet of the Reserve Bank, the total of sterling securities in the issue department as well as in the banking department was Rs. 1,000 crores as on June 30, 1944. There are other interest-bearing securities such as rupee securities held in the issue department and the investment portfolio held in the banking department. Inclusive of interest on these securities, and inclusive of the other earnings of the bank such as discount, exchange, commission, etc., the gross income of the bank is shown at Rs. 12.81 crores. It is reasonable to infer from this that the average income earned on sterling securities held by the Reserve Bank is 1 per cent per annum. We may further infer that most of the bank's investments in sterling securities seem to be in British treasury bills. Otherwise, so low an yield as 1 per cent cannot be explained.

With sterling assets so much in excess of Rs. 1,000 crores, and with no near prospect of any settlement with respect to our sterling balances, what exactly is the purpose of the Reserve Bank in keeping its funds in treasury bills carrying a low rate of interest rather than in British funds on which a much higher yield can be secured? That is to say, if there was any prospect or need to realise our sterling securities in the immediate or near future, investment in treasury bills would certainly be justified. By the trend of discussions in British circles, there does not appear any early prospect of settlement regarding sterling balances—much less is there any near prospect of convertibility of our sterling assets. What, then, is the sense or meaning in keeping most of our sterling assets in low-yielding treasury bills? The simple effect of this is that His Majesty's Government shares a portion of war expenses in India only in name; that, in actual fact, the financing of this expenditure is the entire responsibility of the Indian Government; and that the liability undertaken by H.M.G. for this service of the Indian Government is interest payment at the rate of 1 per cent. The Indian Government, on their part, are paying 3 per cent on the bulk of the finance that they have raised for discharging their work as agents of the Allied Governments. In sum, the Indian Government are out of pocket by 2 per cent every year on the cumulative finance provided by India for the Allied Governments. If the budget estimates that the share of the Central Government in the Reserve Bank's surplus profits is Rs. 10 crores in 1945-46, this profit is only a paper profit, being an additional entry in the books of the British Government; actually, this paper profit of Rs. 10 crores means, definitely and clearly, a loss of Rs. 20 crores to the Indian Government, being the difference between the interest rate paid for raising loans in India and the interest rate received on sterling securities.

Apart from India piling up securities on whose ultimate value doubt is cast by the attitude and comments of the British press, while this injury is piling up without let or hindrance and without any right for India to demand a policy suitable to her interest, there is the added insult of the cumulative losses caused by the difference in interest rates. In the circumstances, the least that must be demanded by the Indian Government and conceded to by the British Government is a guarantee by H.M.G. that the interest payable on our sterling securities will not be less than the interest which the Indian Government have to pay to provide the finance for meeting Allied war commitments in India.

It is difficult to say what particularly is the position of the Reserve Bank vis-a-vis the Government of India in various matters of policy and operation. If it is a question of the exchange value of the rupee, the Central Board of the Reserve Bank is curtly told that it is none of their business. We wonder whether the same attitude will be taken with regard to the right of the Central Board to demand that the investments of the Reserve Bank so far as sterling securities are concerned must be not in treasury bills but in stocks that will yield a suitabe rate. This matter has not received the attention of the public so far, nor do the members of the Central Board of the Reserve Bank appear to have brought up this question for discussion. Possibly, the Finance Member may not have looked at this problem from this point of view. India has been put to a grievous loss for her very generosity and helpfulness. And, as custodian of India's finances, it is up to the Finance Member to take steps which will end this unsatisfactory state of affairs.

Nor is there any validity in the contention that the Reserve Bank Act specifically prescribed the classes of sterling securities which the Reserve Bank may hold. Some of the more important sections of the Act are now under suspension. If the Act as it was laid down in 1933 held force, sterling securities could not have been allowed to mount to the present level. Statutory restrictions take a secondary place in Ordinance rule.

TREASURY BILLS

Central Government:

tenderers should make payment on Friday.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the March 27, 1945. Total amount offered was Rs. 12,83,00,000. Tenders at Rs. 99-15-0 per cent were accepted in full and those at Rs. 99-14-9 per cent were allotted approximately 98 per cent. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Re. 0-5-0 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the April 3, 1945 at ombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the April 2, 1945 at other centres. Successful the April 6, 1945. Other conditions are as usual.

During the week ended the March 23, 1945, Government of India Treasury Bills for Rs. 3,72,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam Government:

Tenders for Rs. 1,00,00,000 of three months' Assam Government Treasury Bills were opened on Monday, the March 26, 1945. Total amount offered was Rs. 2,10,00,000. Tenders at Rs. 99-14-6 per cent were accepted in full and those at Rs. 99-14-6 per cent were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 27 per cent cent were allotted approximately 27 per cent. Total amount accepted was Rs. 1,00,00,000, the average rate of accepted tenders being Re. 0-6-5 per cent per annum.

PRESSURE ON THE U.S. LARDER

CONGRESS ORDERS INQUIRY

WASHINGTON, Mar. 28.

Congress ordered a full-dress investigation into the Nation's food supply. Preoccupation with causes for the so-salled shortage has taken precedence over virtually all other domestic matters in the past fortnight. The erroneous impression could be obtained easily in countries closer to the war and less blessed by agricultural output than the United States.

Statistics show that United States civilians actually consumed seven per cent more food last year than in 1939 although a considerable reduction is in prospect this year. But demands on the United States larder have unquestionably brought concern about her continued ability to meet commitments. The War Mobilisation Director, Mr. J.M. Byrnes has set up a committee which will exercise the closest overseership regarding exports.

From the welter of charges and counter charges running throughout Industry and War Agencies only one fact is clearly discernible as Congress began the inquiry, namely, that there will be less meat for civilians this year than last. The average consumption per capita last year was 145 lbs. Some authorities estimate there will be 12 per cent less meat than last year, 11 per cent less chickens, 11 per cent less butter, 12 per cent less sugar five per cent less of vegetables and the Washington explanation for declining food supply lies in higher military purchases and increasing numbers of war prisoners fed, the liberated areas to be supplied, the decline in domestic pork production, the drought in Australia, requiring larger allocations from the United States, increased family purchasing power which make for larger demands on the over-all supply.

Against this background Mr. Roosevelt asked Congress to approve United States participation in the U.N.R.R.A's Food and Agriculture Organization, recommended at the Hot Springs conference in 1943.

Mr. Clayton lane, who was Economic Advisor to the American Mission to New Delhi, has returned here and given a pause to U. S. exports who had envisaged larger post-war trade with India than circumstances perhaps will warrant, Mr. Lane predicted that sterling balances will be responsible for the return of India's trade to Britain as Lend Lease items gradually returned to commercial channels. Mr. Lane also foresaw close controls over India's imports to protect growing industries after the war but for American products, which might be noncompetitive, he predicted a reasonably good market in India. The Foreign Economic Administration initially has turned down the efforts of the Indian Supply Mission to have automotive parts put under Lend-Lease allocation instead of through comercial channals. The Mission referred the matter to the Government of India for advice. FEA officials understand that Indian commercial circles are opposed to the Supply Mission's move.

Provincial Finances

With the receipt of the last of the Provincial Budgets for 1945-46 and on the assumption that this is the last war budget, it is possible to survey broadly the effects of the war on Provincial finances and to set them in relation to the needs of post-war development. Two years ago, when the scale of expenditure on civil defence, dearness allowances and other charges created by the war threatened to rise sharply with no prospect of early decline, it seemed as though the war would leave Provincial finances in a sadly enfeebled condition and in a position of dependence on the Centre for restoration of soundness and stability. This threat passed off sooner than one dared to expect and gave place to conditions of ease and comfort which even the Finance Ministers and Advisers in the various Provinces were inclined seriously to under-rate. The large increases which the revised estimates for the current year show in more than one Province over the budget estimates suggest clearly that the change had largely eluded even the custodians of Provincial finances. Pleasant surprises of this kind are rarely treated as occasions for charges of lack of financial foresight, particularly because the consequent underestimates of revenue have little to do with the neglect of schemes of development. An implicit consensus of opinion seems to have grown during the last two years in favour of postponing even immediately possible schemes of development to a time when their relation to more comprehensive plans can be more clearly seen. The public is prepared to acquiesce in, and even applaud, the accumulation of surpluses for the purposes of post-war development. The emphasis, therefore, turns from immediate appropriation to the assiduous gathering of available revenue and the creation of good-sized funds for purposes of development. It is, indeed, significant that the earlier attitude of opposition to Adviser Governments continuing the levies initiated by their Congress predecessors has considerably weakened of late. On the other hand, proposals of new taxation even in the Provinces in which revenue surpluses are large have failed to evoke the opposition that one would expect.

The political deadlock and the bitterness it has created have not interfered with the public's judgment of the requirements of public finance during the present period. While in the Centre there is, no doubt, opposition to the scale of military expenditure, in the Provinces, the public has learned to judge current developments from the standpoint of post-war planning. It is regrettable that all the Provinces have not been able to make the same degree of progress. While in the majority of Provinces, revenues have more than doubled, allocations to reserve have not been on the same scale. This is to be attributed, in the main, to the unequal incidence of war expenditure, and the even greater disparities caused by opportunities of profitable trading for some and the necessity for a few others of outlay on famine relief and the like. The creation of a fund of Rs. 14 crores for post-war development in the case of the U P. is explained by the smaller scale of expenditure on civil supplies. In the case of Bengal, the effects of an unsound start in the financial sphere, dating as far back as the inauguration of the Montford Reforms, have been aggravated by the famine of 1943-44 and its aftermath. Madras provides a striking contrast to Bengal. The Province has all along preserved a sound financial system in spite of all the vicissitudes and acerbities of its Provincial politics. While for a long time Bengal gave room for the charge that she did not tax herself sufficiently, Madras has erred on the side of over-taxation. Before anything is done to lighten the load of land revenue, the proposal to levy an agricultural income-tax has been duly formulated. Likewise, the sales-tax, which was intended to make good the revenue which the Congress ministry deliberately sacrificed for the sake of prohibition, has now become only an addition to the old schedule of taxes. All these explain the phenomenal increase in revenue and the large sized fund of Rs. 25 crores which the Province has now been able to set apart for post-war purposes. The U. P. comes as a distant second with a sum of Rs. 14 crores. Bombay and the Punjab have about Rs. 7 crores each, while C. P. and Sind have about Rs. 3 crores each. In the case of Sind, Government trading in grain accounts for the sudden prosperity of Provincial finances. With the debts re-paid, Sind will not figure among the Provinces requiring subventions from the Centre for ordinary purposes.

Taking the composite picture of Provincial finances as a whole, the main feature is the increase in total revenue from Rs. 84.74 crores in 1938-39 to about Rs. 185 crores in the budget estimates for 1945-46. Expenditure has no doubt had a roughly corresponding increase. Expenditure, in the case of some provinces covers hidden reserves; and it is possible that, if the war comes to an earlier end than expected, expenditure may show a decline. The important point, however, is that, while in the case of the Centre increase in revenue has been offset by increase in expenditure to the point of large additions to Central revenue, in the case of the Provinces, it has left handsome surpluses in the majority of cases. The main avenues of increased expenditure are civil defence, increase in salaries and establishment and dearness allowances. From the point of view of funds for post-war development, it is necessary to see the possible trends of revenue and expenditure in the years following the war. On the expenditure side, a large part of the increase in salaries and establishments dating from before the war must be deemed to have come to stay, since there is no reason to think that prices will come down sufficiently to justify a return to the old scales of pay. Expenditure on civil defence is obviously a case of expenditure peculiar to war time; and in so far as some Provinces have already reduced the appropriation in this regard, some savings have already accrued. Expenditure on civil supplies in respect of procurement and distribution, rationed or other, may well continue after the war till it becomes part of the expenditure on the controls of the planned regime.

On the revenue side, out of a total increase of nearly Rs. 100 crores over 1938-39, over Rs. 20 crores is accounted for by the increase in the Provincial share of the income-tax. In fact, there was a time when, owing to the Railways incurring a loss, the Provinces got nothing by way of their share of the income-tax. While, therefore, income-tax is an important contributory to Provincial revenues, the bulk of the increase must be attributed to factors which are peculiar to each Province. A detailed study of Provincial finances from this angle will be attempted in these columns in later issues. Here it should suffice to note that, though Provincial autonomy was short-lived in the majority of Provinces, popular ministries have been successful in that they added to the Provincial financial system taxes which have a fair degree of elasticity. In the case of Bengal, the general financial position even before the war required the introduction of measures of new taxation. The entertainment tax, the electricity tax, a fixed tax on incomes, these were introduced in the very first year of the new regime. And under pressure of large scale expenditure on famine relief, agricultural income-tax and sales-tax have been added. In Madras, the sales-tax has proved to be a genuinely elastic source of revenue capable of significant expansion during the war period. Indeed, the sales-tax has been so eminently suitable that the proposal to apply it uniformly to all Provinces and collect it centrally for the benefit of the Provinces has been put forward by Sir Jeremy Raisman. There is no doubt that with the addition of these new taxes the inelasticity of Provincial revenues has been very considerably reduced. In fact, it is certain that even during the present war period they would not have increased to the extent they have done, but for these taxes having been introduced before the war or at an early stage of it. If the general increase in money incomes and in prices could have brought about this expansion of Provincial revenues, we may well imagine that in the conditions of steadily increasing general prosperity, which the economic planning of the future may be depended upon to create, the ability of the Provinces to take their share of public expenditure will also show a steady increase. With the introduction of death duties at the Centre for the benefit of the Provinces, the amounts that Provincial Governments will have at their command will be vastly greater than the most optimistic of us would have supposed a few years ago.

This examination of Provincial finances, cursory as it is for lack of details about the budgets of some of the Provinces, seems to call for correction of some of the prevalent ideas about the financial implications of economic planning. The public has been prone to assume that the Provinces are only leading a hand-to-mouth existence on the basis of low standards and that, when economic plans are taken up for practical execution, the Provinces will depend wholly on the Centre for subsidies, subventions and financial aids of all kinds. We have now to remember in the first place that the Provinces, taken together, have a total revenue reserve of over Rs. 60 crores for post-war purposes. Secondly, Provincial revenues have risen during the war period by Rs. 100 crores. It is not easy to determine how much of the expenditure now incurred may be attributed to the war and may therefore be saved after peace. But of revenue, it is certain that far the bigger part of the increase is a genuine expansion, though such expansion has only been made possible by the increase of the present war period in money incomes and prices. If no time is lost in replacing wartime inflation with peacetime development, then revenue is bound to be maintained, while expenditure will reveal under careful scrutiny good scope for economy. Since even in the present conditions a surplus of Rs. 60 crores has been gathered together in about three or four years, it would be reasonable to assume that in the first five years of the Plan to come the Provincial Governments will have, even on the basis of the present taxation, about Rs. 150 crores or Rs. 30 crores a year

to spend on new schemes in addition to the reserves already accumulated.

It is useful to consider this in relation to the financial forecasts made in the Second Report of the Reconstruction Committee. This report, it will be remembered, confirmed Sir Jeremy's reading that the Government can afford to spend Rs. 1,000 crores on planning in the first five years of the plan, leaving Rs. 500 crores for private investment. From a careful analysis of the revenues of the Central Government, it would appear that from revenue alone the Government of India will be able, in the conditions of the post-war period to find as much as Rs. 600 crores in the first five years. We have now to add to this the Rs. 60 crores of Provincial reserves and the Rs. 150 crores which Provincial Governments may be able to find from their own revenues. The financial outlook of economic planning would thus appear to be far brighter than even Sir Jeremy Raisman dared to think a year ago. It is, therefore, a question for consideration, particularly as the end of the war is near, whether the progress of planning should not be speeded up, and whether representative Governments should not be instituted at the Centre and the Provinces to make a sound beginning without waiting for the formal end of the war.

The Madras Budget

The Madras Budget for 1945-46 shows clearly that while other provinces may have the advantage over the Southern Presidency in the matter of war profits, industrialisation and the like, Madras leads in increase in general provincial revenues and allocations for post-war reconstruction. Comment on the Budget on the usual lines is precluded by the fact that the province is now under an Adviser regime which is admittedly a stop-gap arrangement; and the Government have repeatedly made it clear that their purpose is to build up a Revenue Reserve Fund, "so that the yield from the commercial taxes should be made available to any future Ministry to facilitate development of its policy". While the unconscionably long term of this regime may detract from the essential reasonableness of this viewpoint, it is idle to disguise one's satisfaction that a sum of Rs. 25 crores has already been put by for development which is best begun as part of a comprehensive policy and by a popular Ministry. The financial position in Madras is only another argument for ending the political deadlock and allowing the popular ministry to take up the broken threads of its pre-war policies in what is virtually a post-war setting. We may now turn to the figures disclosed in the Budget.

The record revenue and the increase in allocation to Revenue Reserve by Rs. 6.46 crores shown in the Revised Estimates prove that 1944-45 was a very good year for Madras, and if the rise in excise receipts is treated as a windfall assignable to Reserve, the mainstay of fresh expenditure may be the emergency taxation—the enhanced stamp duty, betting tax and sales tax. Shifting of the new taxation is not in dispute and the consumer's own contribution to food subsidies may be easily measured by the rise of Rs. 1.24 crores in the yield of the general sales tax for 1944-45. The budget estimates for 1944-45 assumed a total revenue of Rs. 30.2 crores and expenditure of Rs. 23.95 crores. Though Revised estimates point to a rise of 9.99 crores in expenditure, the estimated revenue rose by Rs. 10.18 crores and the sum of Rs. 5½ crores provided for post-war schemes was duly supplemented by Rs. 6¼ crores—almost equal to the year's estimated surplus of Rs. 6.44 crores. In the coming year, revenue is expected to rise further to Rs. 41.25 crores and after meeting expenditure totalling Rs. 40.45 crores in 1945-46 the Madras Government expects a revenue surplus of Rs. 80 lakhs, almost the same as last year's surplus. The totals should naturally suggest that the reduced allocation to Reserve Fund (Rs. 10 crores for 1945-46 against Rs. 12 crores previously) is due to the presumptive rise of Rs. 6¼ crores in revenue expenditure including of ccurse the aforesaid allocation to the Revenue Reserve Fund. The place of such Funds in relation to short-term requirements may not be glimpsed from the assurance that any floating debt incurred will be discharged. They may play a part in sustaining the giltedged market, should it develop symptoms of weakness at any time particularly as the development expenditure in Madras has been deferred. From that angle the budget is more than reassuring, and the working capital of Rs. 35.28 crores shown in the Madras Budget may easily fulfil more than one purpose.

The pleasing prospect opened up by the accumulations in the Revenue Reserve Fund requires careful analysis. The third successive revenue surplus is not very large in relation to the steady rise in revenue. The increase in revenue for 1944-45 was secured largely through a drastic departure in regard to Prohibition. And it is no defence of the change in policy to say that temperance is to be promoted by the revision of excise duty on both potable and non-potable liquor. Criticism on this score must be however subordinated to the application of accepted criteria in regard to public expenditure. It is noteworthy that revenue expenditure is expected to increase beyond the limit reached in 1944-45. This may cause less apprehension than the rigorous limit set to capital outlay in the coming year or the retention of emergency taxation such as the increase in the sales tax when the purposes for which it is devoted do not command universal approval.

There will, however, be appreciation for the progressive improvement in revenue. Seasonal conditions in 1944-45 promise stability of revenue which is important because of the reduction in the Province's share of income-tax (already foreshadowed) and countered by a proposal to tax agricultural incomes. There will inevitably be suspicion as to underestimate of revenue in view of 1944-45 expenses when the Revised Estimates of revenue show a total of Rs. 40.30 crores as against total estimates of Rs. 30.2 crores in last year's budget. This increase is not wholly attributable to the rise of Rs. 5.67 crores in excise receipts recorded in 1944-45; nor is it derived from the rise in prices siphoned off through the General Sales Tax for the Provincial revenues. It is scarcely possible to ascertain the proportion of direct to indirect taxation in Madras. Obviously, the latter has increased to the point at which prompt rectification must be secured but Centralisation of the sales tax, as of the tobacco duty, may be regarded as a compelling reason. The agricultural income-tax if it is meant as a cure for the Permanent Settlement (widely prevalent) will have to be viewed as more than a simple revenue measure balancing the direct demand on the land at a pitch suited to a rise of 151 per cent in the prices for food grains. What is more important to note is the probable contribution that the new tax may make to the Reserve Fund. Obviously, the expenditure estimated for 1945-46, namely Rs. 40.45 crores, does not allow for the additional revenue derivable from agricultural income-tax, and the allocation to Reserve may therefore be higher than the sum of Rs. 10 crores shown in the budget estimates. To that extent capital for post-war schemes will be augmented by new taxation.

Inasmuch as debt and debt service show a reduction in the war period in Madras too Provincial finance has cut a new course for itself as in the Punjab. It is hard to calculate how far Provincial taxation has increased in relation to the rise in expenditure and how far debt has grown. The retarding factor in respect of the latter is the drastic curtailment of capital expenditure. Capital outlay last year was put at Rs. 89.64 lakhs. For 1945-46, the estimate is severely limited to Rs. 175.62 lakhs, though provision for commuted pensions is included along with a sum of Rs. 62.5 lakhs for the Tungabhadra Project in the first year of its execution. A more difficult issue is that raised by the proportion of the year's revenue assigned to Reserve. Obviously commercial principles cannot apply, for the annual provision of Rs. 12 crores in 1944-45 and Rs. 10 crores in 1945-46 is unduly large in proportion to beneficial expenditure. It is apparent that in India Central control over Provincial income and outlay is small, and the Provinces have, during the war, the benefit of the Niemeyer Award. Surely their expenditure on fruitful objects must expand creditably.

This has not been so obvious as the rise in expenditure attributable to inflation and the Madras Government's increased expenditure on Education and grants to local bodies is based on the fall in expenditure on Irrigation and civil defence next year. Subventions and compensation to local bodies must certainly reflect the rise in the Provincial budget; and as for Educational expansion, the schemes are conventionally patchy. Inasmuch as Provincial revenue has not been so far sacrificed to furthering the war effort, unless it be for the outlay on the National War Front, and the burden of indebtedness has been lightened, the increase in expenditure to Rs. 40.45 crores as against the revised estimate of Rs. 40.38 crores for 1944-45 should be considered extremely small. But a caretaker's government has few specific obligations and compartmental finance inhibits the forward policy noted in Australia and Canada where the relinquishment of income-tax by the States in exchange for agreed shares has supported progress. The limitation of expenditure in the interests of the future when normal depreciation and reserve policy must be vastly different for Government may prove a dangerous tradition. It is on this score only that it is difficult to defend the constant search for surpluses. It is useful to remark that, if the Provincial Government cannot make any estimates of income, consumption and taxable surplus with reference to the conditions of economic progress, it could settle the order of schemes for execution after the war. Only a very vague outline of

developments, in contrast to what has been prepared in Bombay has been propounded. And hostility to emergency taxation is in no wise diminished by what may be said of the sales tax's validity or usefulness. Even more important is the proportion of casual or emergency expenditure to total expenditure in the case of Madras. If the increase is not substantial or permanent and it is only the allocation to Reserve Fund that entails the withdrawal of usual land revenue remissions and the retreat from Prohibition, the taxpayer would be entitled to object.

It is not unlikely that the main burden of post-war reconstruction may fall on Central revenues and inasmuch as the Constitution secures a share in the Centre's direct tax revenue, the Provinces can usefully limit the increase in borrowing or taxation. U. S. finance during the Depression certainly provides a useful guide to follow, because Federal tax revenue was more readily stepped up to deal with problems of capital outlay and the States, called upon to tax property rather than income, had little to do but co-operate with Federal agency. If such a situation arises in India, the mere reduction or extinction of Provincial debt cannot be regarded as the legitimate, primary purpose of either revenue surplus or the reserve funds. Madras's budgetary experience indeed suggests that debt is going down, not merely through recovery of advances but through the increase in the sinking fund balances.

If it is pertinent to draw attention to the inordinately large allocation to Reserve Funds raising the over-all total to Rs. 35.28 crores, a figure exceeding the interest-bearing debt, it is equally pertinent to draw attention to the Madras Government's very favourable experience in regard to food purchases and distribution. Though nearly all the results of the State trading fall on the revenue it has been consistently legitimate, primary purpose of either revenue surpluses or the consumers of millets and firewood have been provided from general revenues. In effect, extraordinary charges covering the value of stocks held, sit very lightly on the Madras budget and trading losses are debited to subsidy account. The distinction that may be drawn as between Bengal and Madras on this account must however take note of the many and real differences. What we have to note is the fact that grain purchase and sales have not caused any addition to debt or any increase in administrative expenditure or capital outlay. The fact that both public and private accounts in Bengal have in the past two years reflected losses on trading in grain invests Madras' favourable experience with some significance. The causes may be readily listed, but it is the results which matter, for total net outlay in 1944-45 was Rs. 95.32 lakhs, offset in part by the higher value of stocks held at year-end. The dissimiliarity may well claim notice but for the difference that famine disorganised the whole scheme of controlled purchases for two years.

EAST INDIAN RAILWAY

Tender Notice

Annual Contract Item Costing Over Rs. 8,000 Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, upto noon on 24th April, 1945.

Tender No. SP|E|Est|6|Gb8|Pt.I for the supply of 500 Nos. Almirahs Steel large 6'—6"×4'—6"×1'—6" deep with 6 shelves including bottom.

Tender forms with full particulars can be had from the Office of the Controller of Stores, East Indian Railway, Calcutta on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores, direct by money order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's office and then put into the tender box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

Editorial Notes

Fate of the Finance Bill

In throwing out the Finance Bill, the Assembly has acted as a representative legislative body should in the conditions of the present and is sure of country-wide applause. And it is not striking a note of dissent to say that the adverse vote of the Lower House on the Finance Bill is not necessarily a vote of censure on the Finance Member. In our leading articles on the Budget, we stressed the difference between the stand which is appropriate to the leader of the Opposition and the standpoint from which useful comment can be made. That Sir Jeremy could not have done better as he is placed today is no argument why the Assembly should not withhold its sanction for the present Government doing anything in the name of the people. The fate of the Finance Bill is the most important index of the relation between the people and the Government of the day; and that the parties in the Assembly have sufficient co-operation among themselves to inflict more than one defeat on the Government is one of the few heartening features of our political life today. It will, of course, be a dubious satisfaction, if it fails to lead to more enduring and more creative forms of co-operation. Hopes in this regard, which seemed so forlorn a year ago, appear now to be better grounded. The Bhulabhai-Liaquat Ali Khan understanding must be attributed to the growing habit of the opposition parties walking into the same lobby. And even if this understanding should prove to be illusory or otherwise sterile, Lord Wavell appears to have been disturbed by successive defeats of his Government in the Legislature and to be in the mood to consider basic questions of political policy. The Viceroy's visit to London is one of those events into which too much or too little can be read. Truth probably lies along the golden mean. What it will lead to depends more upon the Government in Britain than upon such ideas as the Viceroy may have tentatively formed. But there is no doubt that the eventless, though palpably unequal, tussle between the Government and the Congress has brought about the kind of war-weariness which has so often been the prelude to parleys and peace. The rejection of the Finance Bill may not after all prove to be a mere gesture or an act of impotent petulance.

Reserve Bank & Bank Investigations

The Agricultural Credit Department in the Reserve Bank was an afterthought in the original plan of the bank; it has been a misfit all through; and it is marked by curious and strange development. Both in the 1926 draft and 1933 draft of the Reserve Bank Bill, there was no chapter on agricutural credit: There was, in fact, no reference at all to this subject. Some of the over-zealous sponsors of rural interests in the Central Legislative Assembly of 1933 took an aggressive line that one of the important functions of the Reserve Bank should be to take a leading part in the provision of agricultural credit. Sir George Schuster, who piloted the Bill, did not believe that the Reserve Bank could do anything for agriculture as part of its legitimate functions. It was even urged in the Assembly that the interest of agriculture must be looked after by some other institution; and there is no parallel in any country for a central banking institution being charged with important responsibility for agricultural credit. The Advocates of the agricultural interests in the Assembly, however, were obdurate; and the chapter on Agricultural Credit in the Reserve Bank Act is more a gesture of humouring them than a realisation on the part of the Government that the suggestion was practical. In line with the obligations imposed by the Act, the Reserve Bank did open an Agricultural Credit section; but, apart from a few more or less indifferent studies on the Co-operative movement, the contribution of the Agricultural Credit Department towards the purposes set out in the Act is practically nothing.

It was, perhaps, because of the lack of any important work in this department, that the functions pertaining to the study of bank's statistics and investigation of banks were handed over to the Agricultural Credit section. When any scheduled bank in trouble receives a letter from the Officer-in-charge of the Agricultural Credit Department, there is certainly matter for speculation as to what commercial banking has to do with agricultural credit. But the fact is there: it is the Agricultural Credit Department which is keeping itself posted with affairs pertaining to the working of banks, and which undertakes the investigation of scheduled banks whose position warrants examination as well as the investigation of banks seeking to be included in the schedule. This work of investigation has now assumed considerable proportions. Investigation from this point of view will assume great importance once the new Bank Bill is placed on the statute book. It will become necessary for the investigation department of the Reserve Bank to expand and strengthen its personnel for the new responsibilities. In particular, while the officials who have already gathered valuable experience in this regard will have to be given better status and more attractive prospects, it will also be necessary to recruit additional staff verst in the lore of central banking as well as commercial banking. In fact, we visualise great expansion and strengthening of this department, which is sure to become a vital element in the Reserve Bank organisation. In view of the development thus envisaged, the Reserve Bank will do well to consider whether such important functions as bank investigations should continue to be an appendage to a section mythically described as agricultural credit. In sum, the time has arrived for the creation of a separate department to deal with all those matters which pertain to commerical banks *vis-a-vis* the Reserve Bank.

New Taxation

The Finance Bill meant to impose new taxation from April 1st was introduced with a statement to the effect that the Bill is meant to continue the additional duty of customs imposed by Sec. 6 of the Finance Act of 1942 and to increase certain duties while altering the excise duty on tobacco. The preamble refers to the continuance of the Excess Profits Act and the revision of rates for inland postal parcels. Sections 4, 5 and 6 of the Bill are already in force under the Provisional Collection of Taxes Act 1931. The first section of the Finance Bill maintains the salt duty at Rs. 1/9 per standard maund. The first schedule to the Bill fixes inland postage rates. These are unchanged except for the increase in charge for parcels. The rate from April 1st is to be six annas for a weight not exceeding 40 tolas and six annas for every 40 tolas or fraction thereof. The important change in Sec. 4 will claim general notice. The tariff surcharges are retained for a year but in the case of spirits, the additional duty shall be one-half instead of one-fifth of the customs duty leviable. There is to be no additional duty on tobacco which comes under Sec. 4 of the new Bill because of the increase in the excise duty. The rates of excise are determined in proportion to the amount of imported tobacco used for cigarette manufacture. Sec. 7 deals with income-tax and super-tax and a sub-section exempts one-tenth of earned income, subject to a maximum of Rs. 2,000. Life Insurance companies are benefited by a rule laying down that super-tax on profits and gains from business shall be at the rate of six pies in the rupee and rates of tax generally are fixed at the level of 1942. Provision for refund of income-tax in cases where assessee's income does not exceed Rs. 6,000 per annum is made by sub-section 7. The second schedule to the Finance Bill prescribes the rates of tax. In the case of every company and local authority the rate levied on the whole of total income is to be 2½ annas in the rupee. The rate of supertax in the case of every company is to be three annas in the rupee.

Hand-loom Board

The Fact-Finding Inquiry Committee's report of 1941 has been duly given effect to by the appointment of a Board to advance the interests of the handloom weaving industry and to administer the Central Government's grants. These grants date back to 1935 but they are admitedly small. It may well be suggested that a small excise duty on mill yarn used outside the handloom industry could be levied with advantage so as to strengthen the resources at the disposal of the Handloom Board. The new Board is to be composite; probably the representatives of Governments will stand up for the consumer, but the place assigned to the Textile Control Board in the constitution of the new Handloom Board will be important. The principle involved may be that yarn producers require the same measure of representation as consumers of yarn, but the number of workers engaged in the two branches of the textile industry should also regulate choice. A caution against giving excessive weightage to middlemen may appear superfluous. The announcement from Bombay speaks of yarn distribution, assistance to weavers in obtaining essential materials, and improvement of marketing. The widening of the home market is scarcely necessary when cloth shortage persists but the future will probably require special measures to stimulate consumption so that research outside the laboratory may be regarded as important. No figures are available to indicate how far handloom products have lost ground when mill output has increased. But it is obvious that the handloom industry has derived little benefit from the war. It is important to know whether wool and silk would come within the scope of the Handloom Board. Since the handloom industry is not sectionalised the principles of fair wages and limitation of middlemen's profits may be applied to advantage in the case of carpet weavers or other craftsmen. The really important questions will relate to hours and wages for independent workers. Some anti-sweating devices must be prepared by the Handloom Board as early as possible so that inequalities between operatives in organised industry and the home worker may be abolished. The success attained in that direction will be the real measure of the Board's effectiveness in helping the handloom weaver.

Seamen's Wages and Welfare

On March 23 the Commerce Member announced that the Government had special plans for the welfare of Indian seamen. The Commerce Department through a new Directorate under Mr. Mervyn Armstrong intends to provide amenities for both Indian and British Allied seamen. Seamen's wages have been raised with retrospective effect recently. Wages in some cases are five times the prewar wages and in certain cases four times. The Commerce Member pointed out that lascar's minimum wages had been raised even more than the pay for cooks, tindals and serangs. Apart from the claim for equality of wages for Indian seamen serving in British ships outside India, there has been an increase in benefits. As High Commissioner Sir Azizul Haque made representations which led to the opening of hostels and welfare centres for Indian seamen in the U.K. The increase of pay for seamen ordered in December provided for higher pay as from December 1942.

The prolonged negotiations led to a satisfactory outcome and the Commerce Member added "Here the shipping companies have to be specially thanked for their ungrudging support. The Calcutta Liners Conference was thanked, for, as the Commerce Member pointed out, "Representing as they did the shipping companies in the U. K. the ultimate decision must largely be due to the views of their agents in this country and to their firm support." Regarding the increase in pay he gave illustrations. "An average Indian seaman of the lowest rank received about Rs. 22 to Rs. 25 before the present war. He will be now getting five times that amount. A man who was getting Rs. 33 will now receive Rs. 165. But anyone whose prewar pay was higher than Rs. 33 will, under the present increase receive an additional increase, of Rs. 66. only. In order that every seaman may be able to save a part of his money and learn thrift half of the increase will be funded to his credit as post-war credit, so that a man getting Rs. 125 under the new scale will actually be drawing Rs. 100 in cash with Rs. 25 as post-war credit. In conclusion he pointed out that present basic wages for seamen are double their prewar wages. Their war risk money used to be till recently equal to their prewar wages. Now they have got another 200 per cent increase in war risk money also with a ceiling of Rs. 66 per mensem. For amenities at ports a grant of Rs. 6 lakhs from the Viceroy's War Purposes Fund and Welfare Committees have been set up at ports. Welfare officers are to be appointed at Cochin, Karachi and Madras in addition to those appointed at Bombay and Calcutta. Relief for seamen in distress supplements the welfare arrangements. Welfare arrangements cover foreign ports and the lascar in Colonial and foreign ports is to receive special attention partly because Consular arrangements may not extend to them. The Commerce Member offered a promise that recommendations made at the International Labour Conference would be examined in addition to schemes for sickness insurance and old age pensions.

Fish Grievances

Fisheries are associated always with Agriculture and all tank development schemes fall under the grow-more-food plans.During the Budget debate in the Bengal Assembly last week both Ministerialists and Opposition members insisted that the new Fisheries Department must be worked hard to increase supplies of fish to the market. Last year's loud complaints regarding ice did not figure in the speeches since ice is already subject to a new Control order but there was a representation to the effect that transport, ice and rehabilitation of fishermen should be dealt with by the new Department alone. The most interesting revelation made was in regard to a fish ring which conspired to raise prices in 1943 when supplies were actually larger than in 1941 and has been at work since to engineer scarcity. Allegations as to the fictitious auctions at receiving stations were made in connection with the ring. There has been obviously no official enquiry into the marketing of fish to rebut such charges, but the charges as to middlemen's takings require special notice owing to the chronic scarcity reported last year. Alternative system of marketing has been advocated. Co-operation may not offer a remedy but the import of fish from the U.P and Orissa may bring down prices, even if they are manipulated by a ring at present. Producer's agreements invariably provoke suspicions in spite of the Agriculture Minister's assurance that no ring as alleged exists, and price control here cannot be worked effectively because supplies must vary from day to day. Yet there will linger the feeling that contractors rather than fishermen have enjoyed the benefits of high prices. If the Provincial Government uses its own craft for fishing in new grounds sufficiently near to Calcutta and the supplies are placed directly on the market through consumer's co-operative societies, there may be a fall in prices. But the scheme would be difficult to work and development rather than strict control appears to be the keynote of the Bengal Government's fisheries policy at present.

Adulteration and Artificial Ghee

Problems relating to the production of what is known as Vanaspathi or artificial ghee, it is understood, have engaged the attention of the Central Food Advisory Committee at its last meeting in New Delhi. And the Committee is said to have favoured the grant of priority, in the matter of permits to import machinery, to areas like East and South India, which are comparatively poor in resources for the production of natural or animal ghee. This question arises from the large number of applications from all parts of India for machinery for the manufacture of artificial ghee. Thanks to the enormous strain on our stocks of food products during the war period and the facility and impunity with which adulteration of food can be carried on, the demand for what is known as artificial ghee has far outstripped supplies; and the profits made by the producers point to it as the most fertile field for new investment during the post-war period. The Food Advisory Committee appear to have viewed this outburst of entrepreneurial interest in this field as a welcome development and to have concerned itself with an equitable distribution of its benefits. It is true that there is much to be said for an increase in the production of Vanaspathi. The Central Exchequer itself has a large vested interest in it deriving, as it does, more than Rs. 110 lakhs from the excise duty thereon. An increase in the domestic consumption of oilseeds is also to be welcomed for the reduced dependence on export markets and for ensuring a larger supply of oilcake as manure and as cattle feed. The value of vegetable oil as a cooking medium of standardised quality is also very high. But the fillip which the production of artificial ghee has given to adulteration of genuine ghee should hardly be overlooked. Considering the food value of ghee and its importance to the producer and consumer alike, it is necessary that Vanaspathi should be recognisable for what it is and prevented from masquerading under a more respectable name or garb. It is a question for consideration whether the manufacturers should not be compelled to drop the word, "ghee", in the description of their product. And if the oil should also be marketted in small tins, the scale of adulteration may be reduced considerably.

Fans and Lamps

The electrical branch of the engineering industry in India in view of the plans for power development has acquired more than usual importance. Prewar production was insufficient to meet India's demand and the imports naturally exceeded India's production of lamps, fans, batteries etc. The war led to a great fall in imports and a direct result was the increase in the manufacture of wires and cables, motors and appliances like fans and lamps. The manufacture of conduit pipes, signalling cables etc., was launched owing to Government's demand. So far, the electrical industry has been forced to depend, to some extent, on imported components and use locally made substitutes when foreign supplies could not be had. Progress in manufacture has been limited owing to the scarcity of supplies, but in the case of lamps, both glass shells and brass caps are now manufactured in India and production has increased steadily. In the case of bulbs India's production has increased from 2¾ millions before the war to 5 millions and Government's own takings have increased. India's normal consumption however, is 14 millions bulbs per annum or more; and imports are essential. There is scarcity despite price control. There are at present ten concerns making bulbs but the most important lamp factory belongs to a group of foreign manufacturers. Two new firms which imported machinery during wartime have started manufacture. Lamp manufacture is under the Supply Department's control. One of the factories produces its own glass. But it is difficult to assess post-war prospects for the new concerns when most components have to be imported from overseas.

The manufacture of fans was undertaken by seven firms before the war and seven new companies have been started during the war. Only one factory was able to raise its output of fans quickly because it had stocks of materials. Machinery has been imported but enough skilled labour has not been obtained to further plans for increase of output. Though output fell in 1942 there has been a recovery. It was clear that prewar output was not enough when imports disappeared. A very large increase in the output of both ceiling and table fans was planend for 1944 but the estimated output per year may be put at 60,000 ceiling fans and 12,000 table fans. The largest producer of fans appears to be the India Electric Works of Calcutta. It is believed that established manufacturers can satisfy India's peacetime requirements, while new firms may find it hard to meet foreign competition. The main handicap is that winding wires have to be got from abroad. Cable companies set up in India have to show special favours to a new, growing industry according to representations made for State assistance. The electric manufacturers have to obtain ball bearings from abroad and independent, local manufacture appears to be out of the question. It may be noted here that both branches of the industry are limited to Calcutta because of the original dependence upon imported components. The Government since 1942 has given material assistance by procuring essential imports from the U.S.A. and India's fan output has risen in 1943 and 1944.

Factory Figures

The increase in factory employment continued during 1943 as official figures relating to Bombay, Madras and the U.P. show. As compared with 1942, there was an increase both in the number of factories and the number of workers. In Bombay the number of factory workers rose from 651,324 in 1942 to 711,525 in 1943. The largest increase in employment took place outside the textile industry. The absolute increase in wages paid reflects most of all the rise in prices and had little or no contribution to make to the improvement in the lot of the workers. Working condiions did not improve owing to difficulties experienced as regards construction. Factory workers suffered to some extent from strain. Accidents increased again but the rise is attributable in large part to the influv of new or semi-skilled workers. In some establishments safety installation was inadequate. While more adults obtained work there was no important increase in the number of women and children engaged in factories. The war influenced welfare work to some extent but industrial labour suffered from bad housing. In the U.P. the number of factories subject to the Act of 1934 increased as before and the number of workers rose from 232,524 to 254,839. The majority of factories worked the 54-hour week and the practice of overlapping shifts was reported in many large factories. The Inspectorate concentrated on the public health side and some improvement in water-supply and sanitary arrangements was secured. But improvement of lighting and ventilation was slow in coming because of the shortage of materials. As in Bombay, the factory accident rate increased, and for similar reasons. Progress in welfare work carried on by a few large firms corresponded to the increasing popularity of the Government welfare centre. But it is admitted that the housing of workers and the conditions under which they lived remained much the same as in the previous year. The increase in the number of perennial factories working in Madras led to a rise in employment. In the 2,400 factories reporting under the Act, the total number employed was 262,347. Wages paid increased substantially but the number of inspections decreased. Most of the perennial factories worked for 48 hours or more per week, while the seasonal factories worked usually 54 hours or more. Owing to the war 20 factories were allowed to work more than the maximum permitted. Health and housing, after allowing for special circumstances, remained good, and many factories provided medical facilities as well as housing A weekly holiday was the rule and most of the factories allowed a rest interval as required by the Factories Act. Accidents were larger in number than in the U.P.: but only 38 were fatal. The increase in accidents may be useful contrasted with the improvement noticed in Britain where the greater experience of workers and reduced strain made for a reduction in the accident rate.

Motor Manufacture Plans

The Australian House of Representatives has been called up to consider an official motion connected with an automobile factory scheme. The main interest of the proposal lies in the fact that an American, not a local concern, has framed the scheme for producing five-seater sedan cars adapted to Australian conditions. The special importance of the proposal lies in the fact that previous findings as to the state of demand and conditions for manufacture of cars in Australia are overruled. The mere fact that General Motors Corporation, not a local company, has made the proposal invests it with significance. The experience obtained in aircraft factories at present may put Australian workers at an advantage in car manufacture. But Australian-made cars cannot be marketed only in the country of manufacture and exports would certainly start after the company gets going. The General Manager puts the costs of the new factory at £2½ million and the time taken for beginning production as two years. These figures are of interest to would-be manufacturers in India.

It would certainly be in line with G. M. policy to branch out in foreign countries. Before the war G.M., apart from the 18 assembly plants in 14 countries had acquired, in Germany the large plant of the Opel Co., a leading manufacturing firm in addition to the acquisition of a bankrupt English Company. If the Australian scheme leads to another successful jump over tariff walls the export market for British cars would necessarily be smaller. Production in Australia may not cheapen production costs to any extent but it would certainly bring about rivalry in Colonial markets as between U.S. and Australian-made cars in the future. Details would probably be forthcoming next month but Mr. Dedman's support to the scheme indicates that the whole proposal may be viewed as one connected with employment in Australia. Possibly New South Wales may provide the factory site and there would be no question of issue of capital since G.M. has so much surplus cash that even bank finance for wartime expansion has not been required.

French Offer to Indo-China

A declaration of policy as to Indo-China follows a Deputy's warning to the U.S.A. to refrain from suggesting international government for French territory. A plan for union to support a plan for federation has been announced. Equality of status for Indo-China under treaty would certainly correspond to the offer made by Queen Wilhelmina to the Dutch East Indies in May 1942. The pre-war arrangements were simple and the federal arrangements were of the loosest kind. Japan's occupation did not alter it but local resistance has evoked appreciation to the point that Indo-China has been freed completely. From the official announcement it is not clear whether the Protectorates would be assimilated to the position of Colonies: nor is it clear if the French residents are to have special rights and safeguards. The major change propounded is that French Indo-China should be economically independent and the peastre (now tied to the Yen) should be an independent currency. It was asked to the franc at 10 fcs. to the peastre formerly. This means that French imports would not preponderate in the Colony's foreign trade as in the past and also that trade relations would be settled by the Union government. Obviously a regular meeting of delegations ss provided for, since the new autonomy scheme does not allow for direct representation in Paris.

The French Minister for Colonies claims the scheme is original but the Governor-General would probably be Prime Minister rather than Head of State and if he is French, indirect control would always be exercised by France. In that case Indo-China would not be a Dominion but a composite republic with an Executive answerable however, to the new, federal legislature. From the course of events Indo-China's own part in constitution making would necessarily be small, and if the two Princes obtain special representation the parallel with India would be very nearly complete. There is of course the old claim that the French empire consisted of 100 million Frenchmen. and the whole project of union may be dictated entirely by the need to recover influence with the aid of the overseas possessions. From the announcement on the week-end it may be inferred that other colonies are also going to be emancipated and France is going to give up her version of empire economic unity. If the details of the scheme support such a guess, it is evident that India's trade with France after the war may show a sharp recovery. A possible result of the enlargement of trade may be that the special tariff imposed on rice imported from Indo-China may be hard to retain in the event of Indo-China becoming an important, new market for textile or other manufacturers exported by India.

Ceaseless Search

The cloth trade's reaction to the special search for hoarded stock begun on Sunday and still in progress has been both strong and prompt. The suspension of business marks the displeasure of the trade associations. it will be recalled that the distributors in 1943 recorded similar protests. when the mills readily submitted to the Control Order, and signified their approval of price and profit margins. The new steps are taken entirely by the Provincial Government chose to act peremptorily can be ascertained from the results of the search, though the quantity uncovered so far is in dispute. The popularity of anti-hoarding

(Continued on page 414)

THE INDIAN BANK, LIMITED

SEVENTY-FIFTH DIRECTORS' REPORT

The Directors have pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1944. The Auditors' Report is also annexed.

The Net Profit of the Bank for the year amounts to Rs. 14,65,123-12-2 and together with the sum of Rs. 48,226-15-5 carried from the last year's account, makes a total of Rs. 15,13,350-11-7.

Out of this sum, the Directors have made the following *interim* appropriations:

	Rs.	A.	P.
Placed to Reserve Fund	1,50,000	0	0
An *ad interim* dividend at the rate of 10 per cent per annum (free of income-tax) was paid for the half-year ended 30th June, 1944, which absorbed	1,44,794	8	5

The Directors now recmomend that the following further appropriations may be made:—

	Rs.	A.	P.
To pay a final dividend at the rate of 10 per cent per annum (free of income-tax), for the half-year ended 31st December, 1944, and a bonus of 4 per cent per annum for the year 1944, amounting to about	2,93,425	0	0
To provision for taxes	7,50,000	0	0
To transfer to Bank's Buildings Account ..	22,606	12	5
To further place to Reserve Fund raising it to Rs. 33 lakhs	1,00,000	0	0
To carry forward to next year's account ..	52,524	6	9
Total Rs. ..	15,13,350	11	7

The Bank rate remained unchanged at 3 per cent during the year.

During the year, Sub-Offices of the Bank were opened at Dindigul, Virudunagar, Tadepalligudem Ponur, Governorpet, Shiyali and Chitaldrug.

We are glad to mention that the Bank's business in the year has been very satisfactory.

Of the Directors, Messrs. K. Balasubramania Iyer, C. Krishnamoorthy Mudaliar, P. S. Sathappa Chettiar, and T. Ranganatha Mehta retire this year by rotation and they, being eligible, offer themselves for re-election.

Clive Street Gossip

India, which stood still while the world outside was being convulsed by war, now looks like being on the move. The present session of the Central Assembly has been characterised by developments which are far more than the histrionics of a powerless opposition. Even before the session met, the leaders of the principal Opposition parties entered into an agreement on the composition of a representative Cabinet if the powers that be should agree to institute one at the Centre. And since the session began, both the nature of the discussions and the results of the voting show that the Government of India cannot continue for long on the present basis. By the debate on post-war planning and commercial safe-guards and the voting on the Finance Bill, the Assembly showed clearly that it will no longer agree to keep up the present farce and the British Government must take up steps to reform the Central Cabinet. Events in the Provinces, too, are exerting pressure in favour of reform. The Frontier Province has seen the return of a Congress Ministry without any obligation to take extraneous elements into its composition. The position of the Muslim League in the Provinces which have not come under the sway of Section 93 of the Government of India Act has considerably weakened during the last one month. Lord Wavell's visit to London, during this phase of Indian politics, is naturally the basis of heartening political speculation. The Viceroy is expected to stay in London for a month; and even without Mr. Amery's statement to that effect, one might expect a full discussion between the British Government and the Viceroy on all outstanding issues.

* * * *

Are we on the eve of real change in our political life? Personally, I am inclined to be hopeful. I have always believed that Lord Wavell is not the man to feel happy about his present position, though, of course, I do not rush to the other extreme of supposing that he will offer to the Congress on a plate the absolute government of the country. One thing seems to me to be unquestionable. A current of events, which is by no means favourable to the Muslim League and the pure obstructionists therein, has been allowed to flow unimpeded and even to gather momentum. We may date these events from the dismissal of Hyat Khan from the Punjab Ministry or later. It reached in the Frontier what up to now must be regarded as its climax, though surely it may yet gain in strength in the near future. As I write this line, news has reached me of the defeat of the Bengal ministry. While on the one hand, much has been done to undermine Mr. Jinnah's over-confidence and the League's feeling of security, Mr. Bhulabhai Desai has also had not a little encouragement in his efforts to arrive at the basis of formation of a National Government. More than that, one cannot venture to suggest. And these by themselves mean little.

* * * *

Where the demand for a National Government is not compelling, the key to future changes lies in the motives of the donor and not the moods of the donee. What has happened during the last one month and more to make the British Government more dissatisfied than before with the present state of affairs in India? To speak the truth, Nothing. It is wrong to imagine, as I have seen some people do, that the British Government want to make some significant change during the next few weeks, so that they may have nothing to explain or explain away at the San Fransisco Conference. It is most unlikely, to say the least of it. Some deeper motives, some calculations of a long-term kind, or even mere disgust with a situation which, if it has discomfited the Congress, may as well confront the British Government with a serious dilemma—these, and not a squeamish regard for America's good opinion, must explain the change, if, indeed, there is any, in the attitude of the British Government towards the Indian problem. I have no desire to discuss these factors at length. But it is not impossible that British statesmen have formed ideas of post-war security which require India to be strengthened and drawn more closely towards Britain in bonds of friendship. Or, it may be, there is clearer recognition of the fact that in foiling the Congress, the British have created endless difficulties for themselves and that a solution of the Indian problem must be found before these difficulties, which now are of the Government's making, gain an independent footing and grow to formidable proportions. There is yet a third possibility, that the British have begun to see the value to themselves of genuine economic development in India and the dangers of Indian stagnation in this regard, to appreciate the impossibility of executing an economic plan, with all the sacrifices and controls that it entails, without more representative Government at the Centre and in the Provinces. The cumulative effect of a number of different considerations, each of which is too light by itself to affect the course of events, may also explain what is now supposed to be afoot in London.

* * * *

I confess I am inclined to attach the greatest importance to the prospects of economic planning in India. The more I think of it, the more I feel that it is bound to alter the face of the world. Economically prosperous, India will also be politically powerful. With political and economic strength, Indian culture, with its dominant note of pacifism, will in a short time dominate world politics as well. But then, you might ask, "Is economic planning anything more than a will-o'-the-wisp?" Those who entertain any doubts in this matter overlook the historical forces which make planning more or less inevitable. In India's planned development there is, I hold, a convergence of usually conflicting interests, which may be relied on to remove all the major obstacles from our path. Even an unreformed Government of India will be obliged to adopt a plan, if only to keep things going and to provide for demobilised soldiers. The public in India will welcome planning and the educated classes will need it badly as the alternative is a relapse into the stark indigence of the pre-war days. British industry will have to face a bleak future, if it cannot annex the advantage of a planned regime in India and preparation for meeting its needs, ahead of all its competitors. Other nations, too, know they have a great deal to gain by increase in India's economic prosperity. Political difficulties of course, there are; but they are never known to have overridden economic considerations and motives. The prospect of planning in India is one of the major factors of world politics today.

* * * *

The importance of this factor is seen not in Lord Wavell's visit to London—the motives behind it are still dubious—but in the recent debate in the Central Assembly on commercial safeguards and the clauses relating to them in the Government of India Act 1935. The motion recommending "to the Governor-General in Council that early action be taken for the removal of Sections 111 to 121 (both inclusive) of the Government of India Act 1935" was introduced into the Assembly with a freedom from fuss or fanfire, which one would hardly expect in so important and vexatious an issue as commercial safeguards. A year or two ago, it would have been preceded by a tearing country-wide campaign; and passions would have been aroused on both sides. The issues would have been gravely confused and

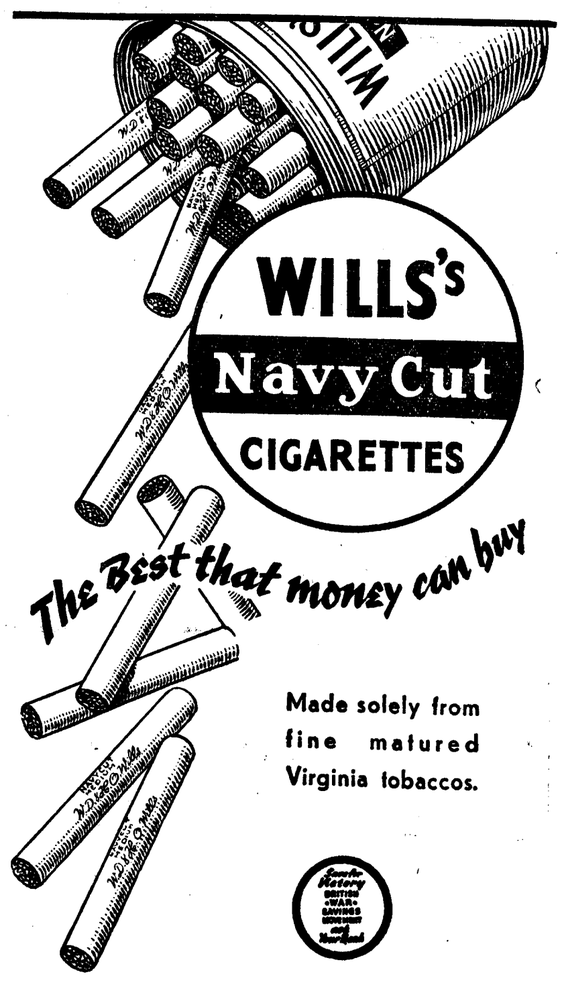
all manner of irrelevancies introduced. But the general presumption in favour of India's freedom has been so strong of late, that Mr. Manu Subedar was able to move the resolution, as if it related to the re-organisation of some Government department and not a fundamental principle underlying the Government of India Act. In fact, Mr. Subedar began by saying, "I am not attempting to deal with any large political issue involved in the 321 sections of the Government of India Act. I am only referring to the removal of certain offensive clauses in the Government of India Act which have crept in by the back-door." The quiet self assurance of these words marks a change which cannot but be significant. And the importance of this change cannot be reduced by the historical fact that these clauses crept in "by the backdoor." The grounds on which their removal is demanded are not the sentimental grounds of offence to India's self respect or distrust of Indian goodwill or integrity, but the very practical one: "What is the Planning Member to do so long as these sections are in the Statute Book?" Planning, then, more than the Congress or the League or the slogan of Swaraj being our birth right, requires as a practical expedient the sovereignty of the Indian Legislature. It requires that there shall be no limits to the power of the Assembly to treat Indian and foreigner as equally within its legislative jurisdiction, and to regulate the economic life of the country to suit the requirements of successful planning.

* * * *

The change that planning has wrought is not perhaps as widely appreciated as it should be. But, apart from this, there are other circumstances which have cut the ground from the demand for commercial safeguards. And, what is more, it never stood on any firm ground either. One has only to look into the earlier statements of British statesmen to realise the qualms, doubts and hesitancy with which they approached the question. After all, the whole question of India's freedom, since it depends so little on our power to wrest it, rests in the last resort on the Britisher's mental adjustment to the changes it involves. The Simon Commission definitely stated it as their conclusion that it was not feasible to prevent discriminatory legislation by attempting to define it in a constitutional instrument. Any such provision would in their opinion have to be drawn so widely as to be little more than a statement of abstract principles affording no precise guidance to courts in deciding whether any action complained of was discriminatory.



* * * *

The Montagu-Chelmsford Report, which did not have to look Indian freedom so closely in the face, was more impressively sagacious in its treatment of this question. It talked of "the duty of British commerce in India to identify itself with the interests of India" and "the duty of Indian politicians to respect the expectations which have been implicitly held out and to abstain from advocating differential treatment aimed not so much at promoting Indian as at injuring British commerce." Even the first Round Table Conference, while it professed more lively fears of discrimination did not ask for more than a convention based on reciprocity for the purpose of regulating these rights. It was at the time of the second R.T.C. that the position was taken that, while the future Federal Government should negotiate the convention, suitable provisions should be embodied in the meanwhile in the Constitution Act. The third R.T.C. differentiated between legislative and administrative discrimination, the former to be prevented by statute, and the latter by the special responsibilities of the Governor-General and the Governors. From now, the advocates of commercial safeguards began to overreach themselves. There followed then the recommendations of the Reading Committee, the White Paper of 1933 embodying them, the memorandum of the Secretary of State to the Joint Parliamentary Committee and the Committee's recommendations. Commercial safe-guards assumed monstrous forms. Indian opinion exasperated, as it was, was ignored with lofty unconcern. And the preposterous demand for "unconditional eligibility to subsidies" was made, by the sheer momentum of unreflective unreasonableness. British business had no compunction in asking for a share in subsidies drawn from taxation of the poor masses of this country.

* * * *

The worst enemy of a weak case is patent overstatement. And today when India is on the eve of economic planning, —planning that may involve countless privations for the average Indian—the absurdity of British business being included among the direct beneficiaries of such planning is too obvious to be ignored or denied. There could, therefore, be no reply to Mr. Manu Subedar's broadside. Sir Ardeshir Dalal in his reply congratulated Mr. Subedar on the studied moderation of his tone and his speech and, recounting the history of commercial safeguards which in itself is a telling brief, stated that the problem is "to consider whether it is possible to arrive at any kind of convention or agreement now, without waiting for a complete constitutional settlement, so that the industrial development of the country may not be hampered." The change is, indeed, striking. And it could hardly be otherwise since all the relevant facts have changed. While at the time of the passing of the Act, India owed large sums to Britain, today it is Britain that owes far

(Continued on page 413).

OUR LONDON LETTER

(From Our Correspondent).

SPECIAL FOR "INDAN FINANCE"

London, March 16.

RIGHT on the heels of the "Foot Plan" for self-government of the coal industry, a plan devised by the salaried Chairman of the Mining Association, Mr. Robert Foot, comes a similar scheme adopted this week by the representatives of the British iron and steel industry. They, too, want to run the steel industry according to their own notions; and they, too, pledge themselves to be efficient. In fact, the parallelism between the two cartel schemes is very close.

Cartel Scheme for British Steel

The steel people demand the right to fix their own prices through the Standing Committee of the British Iron and Steel Federation which pledges itself to base prices "on the costs of economically efficient plants". But they remain the sole judges of efficiency. Normally, efficiency would be determined under a competitive system by the fact that inefficient firms have to face the threat of bankruptcy, but the Steel industry apparently anticipates no such unhappy and rigorous fate for any of its members.

Not stated in the proposed Constitution, but certainly implicit in it, is that Government will continue to protect British steelmakers from foreign competition, either by tariffs or import quotas or both, and that Government will not prevent the Federation from joining the International Steel Cartel, if it sees fit to do so. The constitution also is discreetly silent whether or not membership in the Federation will be compulsory and what powers will be available to prevent newcomers entering the industry or to prevent those who are already members from entering fields which they had not hitherto occupied.

Sometime ago, Sir Andrew Duncan, who was himself independent Chairman of the Steel Federation before the War, announced in the House of Commons that Government were investigating ways and means for ensuring that the steel industry is raised to the highest possible efficiency.

The Press displays no enthusiasm for the new steel scheme. There appears to be a wide-spread feeling that, thanks partly to Government's apathy, if not open sympathy, many of these British cartels have sheltered gross inefficiency and were responsible, in large measure, for the high level of British manufacturing costs. However, if the general election returns a Conservative Government with a reasonably good majority, there is little evidence that post-war Government will place anything stronger in their way than the amateurish Import Duties Advisory Committee devised by the Baldwin Government.

The Trade Union Congress sometime ago proposed a scheme for public ownership and control of the steel industry; but the Labour movement is doing very little to explain and popularise the idea.

Disquiet in British Banking Circles

Banking circles are considerably jarred by the reports of the proposed scheme of the Australian Government for control of commercial banking in that country.

According to the Financial Editor of *The Times*, the keenest anxiety has been caused here by cabled reports that the Australian Government intends to continue permanently the war-time provision whereby commercial banks must deposit with the Commonwealth Bank the whole of their excess funds over the 1939 level, while at the same time the Central Bank will be given enlarged powers to enter the commercial field. Apparently, the Australian idea is that competition from the Commonwealth Bank will compel Commercial Banks to lower their charges for loans and perhaps make conditions for borrowers easier in other respects as well.

While only cabled accounts of the proposed legislation are thus far available and the full text of the Government Bill may be somewhat more reassuring, there is no question that London bankers would be disconcerted to have these Australian ideas dangled before the British public. Thus far, the British Labour Party contented itself with proposing "nationalisation" of banking, that is, that the Government will purchase the ownership from existing shareholders, whereafter everything in the garden of the British finance and industry will be lovely. But if small businessmen in Britain got an idea that the Bank of England, by entering commercial banking, could drive down interest rates on ordinary commercial loans, that would create a more serious situation than the Labour Party's more or less academic talk of "nationalizing Banks".

Private Company in the S.-E.

Quite a sensation was caused in the Stock Exchange by the announcement that a firm of stock brokers has applied for permission to convert itself into a private company with unlimited liability. There has been some talk that jobbers might take this step; but there is no expectation that brokers would do so. Hence considerable surprise. It is assumed that the basic idea is that such a private company would suffer less drastically from death duties levied upon "shareholder's" estate than would the joint funds of private partnership. However, some financial writers contend that this view is incorrect and that members of this firm will find eventually that Inland Revenue will make no concessions, when occasion arises to levy death duties. Nevertheless, Stock Exchange firms are finding extreme difficulty in establishing and maintaining sufficient capital and this particular scheme will be closely watched and may even secure imitators.

Labour for the Textile Industry

Both the Dundee jute industry and the Belfast linen industry are complaining of "lost battalions" of skilled textile workers, women and girls who during war have gone under Government direction into rayon and find that handling rayon is far less disagreeable than handling jute or flax. Cotton textiles also lost thousands of workers to the expanding rayon industry.

The biggest surprise in the textile field has been the flat refusal of cotton workers to work overtime, despite pressure from their own trade unions. Cotton workers are long reputed to be one of the most conservative sections of the British workers; their trade unions have always been "right-wing" unions and the rank and file has given much less trouble than many other sections. But when they balloted recently on the proposal made by the Cotton Controller for overtime in order to meet urgent requirements for the Armed Forces, 78.24 per cent of spinning-room operatives and 77.82 per cent of card-room operatives voted "NO". There is general consternation. The explanation suggested is that war-time operatives are almost entirely elderly and have been pretty well exhausted by war-time conditions both in and outside the mills.

The National Farmers' Union reported secretly compiling a "black list" of M.P's who have not supported their demands. This is very rare in politics.

Dumping charge against U.S.A.

Sir George H. Nelson, Chairman of the English Electric Co., Ltd., and President of the Federation of British Industries, has startled industrial and political circles by charging bluntly that the much-dreaded trade war has already started.

Addressing the shareholders of the English Electric Co., Ltd., Sir George tossed the cat among international pigeons by alleging that certain unnamed "foreign manufacturers" are offering heavy electrical equipment "in British markets . . . . at prices obviously considerably below their home prices and below their true costs of production".

Describing this as "violent competition", Sir George continued: "No doubt, many of these prices are being put out as feelers regarding world level of prices and in order to establish themselves in our markets. It is, however, most unfortunate that manufacturers should be permitted by their Governments to submit prices below the true costs of production in the countries concerned. Such a policy is inconsistent with such international agreements as that made at Bretton Woods for stabilization of currencies. Submission of prices below costs of production has the same dislocating effect upon world trade as has currency manipulation". He urged that Governments should take this up without delay.

While there has been much rumbling about the probability of severe post-war trade competition, Sir George has been the first spokesman to allege that it has already started, and started unfairly in the form of "dumping".

The Press has commented guardedly with *The Manchester Guardian* suggesting that there can be no mass production of heavy electrical equipment—such as generators and motors. Hence, there is every probability that American prices and costs should be higher than British. The Government has maintained a studious silence.

Indications of Price Cuts

The Government trade returns certainly suggest, though not actually prove, that there was some slashing of prices in exports of heavy electrical equipment last year.

Taking exports of electrical generators and dividing their value by number of tons, the following picture emerges: Price per ton of exports of generators to foreign countries (excluding empire markets) were:

1938	£189.5
1939	£215.2
1940	£212.5
1941	£229.6
1942	£295.7
1943	£446.4
1944	£250.7

It has been stated that shipments to Russia were a big factor in many export lines last year. That might account for the steep decline in the average price per ton last year. Or, price slashing due to American competition might be the explanation. A third factor is the technical one, when generators for hydro-electric enterprises are shipped on any large scale, they raise the average price per ton quite sharply, and, contrawise, when they dwindle in volume, the average price tends to be lower.

But there is no doubt that Sir George raised the question of alleged American "dumping" very deliberately and in full confidence that the British Government will try to do something about it.

Files of trade journals show that there has been competition between British and Ameri-

(Continued on page 415).

Olympus

(FROM OUR CORRESPONDENT)

NEW DELHI, March 26

The political and economic differences lasting over a month reached their climax today, when party leaders had their final say and the Central Assembly threw out India's sixth war budget. The division on the motion to take the Finance Bill into consideration was carried by 58 votes to 50, all the opposition parties (Congress, Muslim League and Nationalist) voting together.

* * * *

One sad feature that pained me while I, along with a record crowd was watching, was the ease, indifference and non-chalance of members of the Executive Council—sad indeed it is that Indian Members of the Council too should feel so much at ease even after the voting has been done and the results are to be announced. Is it not due to the sense of security and confidence that, no matter what the country's representatives say, the Government will be carried on? Is it not the confidence that the Bill will be placed before the House in a recommended form tomorrow and will be certified by the Viceroy when the Assembly throws it out again?

* * * *

In a forceful speech, Mr. Bhulabhai Desai made the San Francisco Conference the test of British and Allied sincerity. No representative of this country, he said, would go there except on a footing of equality and as a member of a free nation. Asking Members of the Government, specially the Indian Members, to quit their posts, he asked Sir Sultan Ahmed and his colleagues "to go while the going is good." As regards the Wavell mission, he did not forsake hope; but until that hope materialized, he would not vote for the Bill. Another world war would be inevitable, if Asia and Africa were kept under white subjection.

* * * *

The main theme of the speech of the Muslim League spokesman was that Government must submit war expenditure to the scrutiny of party leaders and that any agreement signed by the present Government at San Francisco would not be binding on India. And one important statement he made was when he described as a "cock and bull story" the report of an agreement between him and Mr. Bhulabhai Desai but declared that the Muslim League stood for India's freedom, which for the League meant Pakistan.

Speaking for over an hour, Dr. Banerjee, Nationalist Leader, demanded an inquiry into the financial burdens thrown on India during the war.

* * * *

Sir Henry Richardson did not wish to say too much. Sensing that times were again changing, he recalled the words of Gandhiji that Britons would be welcomed as equals in a Free India and put up this advice as the best for India. He seemed to feel as if he was delivering a funeral oration, for he said "the life of the present Assembly is drawing peacefully to a close and it may be, there will be considerable alteration in the seating arrangement before we meet again."

* * * *

Sir Jeremy Raisman confessed that economics could not be isolated from politics and pleaded that inflation was due to the fact that political parties opposite did not co-operate with the Government nor participate in the Government. The Opposition retorted that the Government refused to see light. He tried patiently to answer the various criticisms levelled against the budget and the Government's financial and economic policy. But one could easily feel the hollowness of the arguments and on none of the points raised by the legislators did the Government spokesman give a satisfactory answer. The only gratifying part of Sir Jeremy Raisman's long and somewhat discursive reply to the debate was that at long last he fell into line with Indian economists as to the manner India's war-time economy should be transformed to problems of peace. Being his last budget, he concluded in very light vein with thanks to his colleagues, Members of the House and his subordinates.

Pressure of events, rather than a desire on the part of H.M.G. to resolve the Indian political deadlock, has sent Lord Wavell and party to England. But more pressure is needed to produce anything tangible. The force is gathering momentum and the extent to which it gathers more momentum in the coming days will shape the London talks. But the most difficult thing to forecast is the move of Britain vis-a-vis India for the matter of fact the move of any Imperialist power vis-a-vis a colony and that too the brightest jewel. The above sums up the view of unattached political quarters here on the sudden departure of the Viceroy and party to Britain last week. As far as I am concerned, I would only say that the ripples in India's politics to which I referred last week have been multiplied, causing more confusion. It is, therefore, useless to prophesy the shape of things to come. But it will be useful—nay it is very necessary—to force the pace of events. In the absence of any clue to the mind of the Churchill-Amery combine, one can only cite the facts and group them according to the way they point.

* * * *

The heartening circumstances are:

1. All sections of the people except vested interests, which include those profiteering either as a result of services or through war business, are disgusted with the present Government at the Centre and in the provinces and this disgust has evidenced itself in all sorts of ways. And for the first time unofficialdom in Britain is aware of it.

2. It is gathered that Wavell, the idealist and a soldier with real soldierliness, is struck with the League-Congress united opposition in the Legislature.

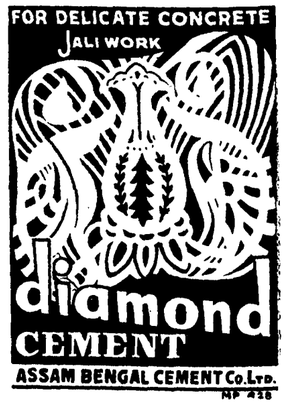
3. Information reaching India shows that American opinion is veering round well, following the naked exposures of British anti-Indian propaganda in that country.

4. Even the Muslim League has unequivocally condemned the Section 93 administrations in those provinces where the constitution remains suspended. The recent editorial of the Dawn the Muslim League organ, is heartening.

5. It is not merely Wavell who has gone but also Sir Evan Jenkins and Mr. V. P. Menon, who, according to reports current here, had been examining the provisions of the Government of India Act following the Viceroy-Desai talks.

6. The significant happening in the Frontier—the significance is that it is the Congress which has not been unwilling to "grasp the hand of friendship". Sir Francis Mudie, the "strong man", Home Member, speaking in the Assembly on Thursday said something unlike Mudie-like and unlike Home Member-like. "The lesson to be drawn from what has happened in the N.W.F.P. is that, whenever the hand of co-operation and the hand of friendship is extended, we won't be backward in grasping it". Well, this statement was after Wavell had left India and Sir John Colville had assumed acting Viceroyalty. One point has to be made clear—it is Congress that responded. Anyway the Home Member's statement following Wavell's departure suggests positively that the Viceroy is bound to stress in Britain this event.

7. Neither the Frontier Governor nor the Assam Governor has shown any signs of interfering with their Ministries' Congress prisoners release programme and the Home Member has clearly said that the question of release is purely a matter with the provinces. Indeed a significant statement.



8. Mr. Amery has admitted in the Commons, that the Indian question will be discussed during the Viceroy's stay in Britain.

9. Lastly the usually anti-Indian paper the Times has struck a new line. Commenting on Wavell's trip it has openly urged initiative on the part of Britain and the need to win India's co-operation by settling the issue.

To turn the medal:

1. As I said at the beginning, the force of events has to gather yet further momentum. Otherwise Mr. Jinnah would'nt have said what he said on Wednesday last. When he referred to Sewagram saying that no Muslim can tolerate a Ministry subordinate to and obeying Sewagram's directives, the words he used and the views he expressed were quite unwarranted. Which means the change in Jinnah is yet to come.

(From Our Correspondent)

Bombay, Mar. 27.

The belated drive in Bengal against hoarding and black-market trading of textiles is welcomed in Control circles here. As has been repeatedly pointed out, the despatches of cloth to Bengal have been much in excess of the quota determined for her, and yet lurid stories of cloth shortage have been spreading from Bengal. Textile control circles had been well-nigh despairing of ever being able to satisfy Bengal, but the awakening of the provincial authorities in Calcutta gives room for hope of better distribution. The embarrassment to the Central authorities has been not a little, since the Eastern Province has, ever since the Famine, been able to command a measure of sympathy and attention which frankly she did not deserve. The Central Government have been attacked also by the Bengal Members of the Assembly, and the final result is that, as always, Bengal is qualifying herself for better treatment. The Textile Control Board will, no doubt, review the problem in its proper proportions when it meets shortly. It is to be hoped that the claims of other provinces, which have, if anything, a greater claim to sympathy on account of the very fine way in which they have been working the scheme of textile control, will receive their meed of attention. It should not be that mere clamour succeeds where ineptitude has been proved.

* * * *

Sarees and dhoties have been made available for a week now from the approved Government shops and this rationing has been helpful to bona fide buyers. But it has been noticed that many, who are ordinarily not wearers of dhoties, are also queueing up to receive their quota of two pairs. One can often notice in the queues many a potential black market retail trader, and as the shops have instructions to issue the quota per head of each family on production of the ration card, no discrimination could be made between the genuine consumer and the spurious. It only shows the great difficulties that any scheme of control in India has to contend with. Appeals to the people for forgoing a part of their usual needs, such as Mr. Vellodi has been urging, fall on deaf ears. In the last two years, the social conscience has been corrupted to a degree which does not admit of any psychological response to appeals to social instincts and impulses. It should be said that the dhoties and sarees supplied are of very good quality. Indeed, it is doubtful if the public are prepared to take any other stuff. Even the worker in the factory to-day wants mercerised dhoties woven from yarn of at least 80 counts! This serves to remind us of the real difficulty of the problem of production, because it is clear that the public is not prepared to buy any and every kind of cloth. In other words, it is simply unwilling to treat the present period as a national emergency. They want only the finer varieties of cloth. And these are in extremely short supply. Nor could their output be increased because of the difficulty of importing foreign cotton. It is, therefore, a vicious circle. Lots of standard cloth, which in 1943-44 the mills could be persuaded to produce only with the greatest difficulty and which they did manufacture almost at cost price, are lying idle, with no one becoming a purchaser. The people of to-day have no use for such coarse varieties of cloth.

* * * *

In some circles, the need for increasing the output of the mills has prompted them to suggest new ways and means of achieving the same. The mills are producing thousands of varieties of cloth to-day and it is said that these should be reduced to a few hundreds, production being concentrated on white sorts. It is also suggested that the best Indian cotton only should be allotted so that mills may manufacture cloth in which yarn of 40s warp and 60s weft will be used. These are, no doubt, good suggestions, but their practicability is open to doubt for these reasons:—First, the reduction in styles may reduce just these varieties which are needed by a number of consuming centres, and that would lead to accumulation of stocks either with the mills or with the quota holders. In fact, some time back, a fair quantity of standard cloth of a better description was produced, but it turned out to be unsaleable as the expected markets never consumed the same. Secondly, the suggestion to stop using imported finer cotton and to increase the manufacture of cloth that can be produced from Indian cotton is not workable, in view of the definite change in the tastes of the consumer in India to-day. It is therefore clear that an overall increase in the supply of cloth has to be brought about in other ways and by other means.

* * * *

It is therefore all the more distressing to learn from the latest statement of Krishnaraj M. D. Thakersey to-day, that the Government of India's attitude on this question has been very unsympathetic. Mr. Krishnaraj said that the industry has on many occasions reminded the Government of India that the allowance granted to the mills for depreciation is grossly inadequate and that, therefore, the incentive to further production is lacking. It is, however, heartening to hear that, at the forthcoming meetings of the Board and of the Industry Committee to be held in the first week of April, this matter will be thoroughly gone into and all practicable steps to increase production will be considered. The Chairman of the Board also envisages a revision of the present scheme of distribution of provincial quotas which are based roughly on pre-war consumption in each province. Incidentally, Mr. Thakersey has also taken the opportunity to dispose of the unedifying mixture of mis-statements, half-truths, and prejudicial reports, which have emanated from official as well as non-official circles about the precise position of textile supplies to-day.

(From Our Correspondent)

Madras, March 28.

THE publication of the bill to tax agricultural income came as a surprise to many and a shock to some. Suggestions and objections to the bill should reach the Government by the 21st May, 1945—a period considered too short for a bill of this far reaching nature. The bill is to be made law by a Government which has no popular backing. What is more, the present Government has undone many things which the previous popular ministry did. While the present Government boasts of a surplus budget, people ask, where is the necessity for a tax measure of this nature. Sir Norman Strathie argues that the present land revenue system is iniquitous. A ryot, he points out, who gets Rs. 10 as profit from Cholam grown on an acre of land pays to-day the same tax as another who grows tobacco and gets Rs. 400 per acre and that a poor ryot whose holding extends, but to an acre pays Rs. 10, while a rich ryot who owns 1,000 acres pays at the same rate of Rs. 10 per acre. One can understand the argument. One admits that the revenue system is iniquitous. But the iniquity cannot be removed by raising the burden on one class while the other class, poor ryots, are allowed to groan under the weight of taxation. The argument that such a tax is levied in some other provinces and in Travancore cannot hold water. In the other provinces land tenure is not the same as in Madras. As a matter of fact, in Bihar land is largely held under Zamindari tenure. In Travancore such a tax is justified because the tax will fall not on cultivators of paddy or millets, but on the growers of coffee, tea, rubber, etc., which are managed as any other industry. Turning to the provisions, every person whose total agricultural income in the Province is not less than Rs. 5,000 is liable to pay the tax. This limit is considered, and rightly, to be too low in war time when prices are inflated. On the whole, the opinion seems to be that the bill is unnecessary at present.

Opening a porcelain factory at Nellore, Mr. S. V. Ramamurti, C.I.E., I.C.S., Adviser to the Governor of Madras, announced that the Government of Madras has selected Gudur in the Nellore district for the establishment of a model ceramic factory. The importance of ceramic industry and its possibilities have long been known. As a matter of fact, in 1930 Government sanctioned the survey of the Ceramic resources of the province. Reports published by the Geological Survey show that china clay, ball and pipe clay, and rock including felspar, quartz, steatite and other minerals are available in adequate quantities in many districts. Yet it is indeed anomalous, as Mr. Ramamurti pointed out, that an industry for which there were enough raw materials in the country and which had markets to supply, was still in its infancy. But one has to seek consolation in the fact that Government seems to realise its responsibility. A ceramic Expert to Government has been appointed in 1944 and his services are available to industrialists. Provision has also been made for the training of technical personnel. A two-year course has been started in Madras and young men, who successfully complete the course will have little difficulty in finding employment in ceramic factories as supervisors and foremen. Village potters and small manufacturers could not, it is realised, appoint ceramic experts. Hence Government ceramic demonstrators have been posted in important pottery areas to advise and guide village potters. Cottage workers are also being supplied with glazes and other materials from the ceramic section of the School of Arts and Crafts, Madras. To teach village potters modern techniques of manufacture of improved earthenware and glazed pottery, demonstration and training centres have been established at Cuddappah, Batimcherla, and Harpanhalli. The attempts so far made to eliminate waste of raw materials, fuel and reduce breakage in the process of drying and firing are successful. Subsidies are also offered by Government to potters' organisations. These are attempts made to develop pottery into porcelain. To replace pottery by porcelain is to create a new level of living. There is a large gap between the mud pots of Asia and the porcelain plates and cups of Europe, which represent different levels of living. Mr. Ramamurti concluding said, 'If mankind is to have peace, there is need for a common gear of living. Europe runs on a high gear. Asia runs on a low gear and Africa on a lower one still. If there is to be a common gear of living, it seems to me it can be found by India which culturally and historically links Asia and Europe. In the porcelain that this factory and others in India make, we need a balance between the quality articles of Europe and the cheap articles of Japan. Height of production implied by quality needs to be balanced by width of consumption implied by price'.

The Government of Mysore has decided to transfer the industrial concerns started by Government to private enterprise after they had been placed on a sound basis. This is with a view to drawing off in part from the hands of the public excess purchasing power caused by the inflation during the present war. Accordingly the Government Industrial and Testing Laboratory will be converted into a joint stock company called the Mysore Industrial and Testing Laboratory Ltd. Government will take 25 per cent of the shares of the new company. Government's requirements of drugs and medicines will be obtained from the company at cost price plus 10 per cent profit, provided the quality is satisfactory. Three out of the ten directors including the Chairman, will be Government nominees.

Although it is 30 years since the Co-operative Department was started in Hyderabad, the problem of rural indebtedness is as great as ever, and the lot of the peasant has slowly deteriorated. The Hyderabad Government, as part of its food policy, has decided to establish Taluka Development Unions who will collect As. 12 per pallah on the issue of permits for the export of groundnut and other pulses. Hyderabad, it may be mentioned, is exporting to other provinces about 30 lakhs pallahs of groundnut, 7 lakhs pallahs of pulses and a very large quantity of 'til' seeds. The collections thus made, along with the Rs. 10 shares the Unions propose to sell to their members, would constitute the assets of the Unions for the year. The proceeds from these would be nearly Rs. 50 lakhs. The collection would be utilised to further the rural upliftment programme of the Government.

The number of grain banks functioning in the State is 700. But it is proposed to have a grain bank for each of the 22,000 villages, sooner or later. The grain bank would be a democratic institution working purely for the welfare of the agriculturists. There would be a huge trust behind the grain banks. The trust will get a subsidy of Rs. 60 lakhs from Government. The amounts lying with the Hyderabad Commercial Corporation, received on the export of pulses last year, would be transferred to the trust. With these funds, godowns would be constructed to assist the working of grain banks.

WAR TIME *Saving Plan* FOR YOU

The first fourth of a man's income buys existence; the second quarter a few comforts; the third quarter lets him spread a bit; the fourth quarter should be used to guarantee the first quarter and as much as possible of the second and third.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, March. 29.

Coal again is becoming the crucial factor so far as the Jute Industry is concerned. Some little time back there were indications that supplies might be expected to come forward at a higher level and for a few weeks they actually did. Alas the effort has not been maintained and though some idle mills have recently been able to get started, it is unlikely that any but foster mills will be able to keep running in the coming week. At the same time there is a report current that a scheme is mooted for the bringing of coal to Calcutta by river. There is nothing new in this idea. It was suggested when wagon shortage first threatened to become acute. Then again when the railway was badly breached and traffic largely interrupted, the idea was once more brought forward, but beyond a few experimental cargos, no serious attempt was made to work the scheme systematically. If it is a fact, as we are informed, that there are actually stocks of coal at the pit-heads, the shortage of coal locally for all purposes is now so acute that the scheme ought to receive widespread support and there is no reason to believe that it is not workable. Certainly it is worth giving a thorough trial, for any coal imported by river would relieve the pressure on the railways, or if railway imports are to be maintained, as there is no reason that they shoud not be, the additional supplies would be very welcome accretion to a very meagrely furnished market.

Coal shortage is not a peculiarity to India Dundee Mills are complaining of difficulties in working up to their full capacity on account of combined shortages of coal and labour. Electricity for industrial purposes was recently cut by 25 per cent. This was the result of strikes in the Scottish coal mines which cut production by 100,000 tons. In the U.S.A. also there are threats of trouble in the coal mining industry. India is fortunate at least in that the coal shortage is not the result of strikes but rather of transport shortage, though we have expressed the opinion that the transport difficulty is more one of mal-distribution of the available wagons than of real shortage. The idea to utilise river transport to relieve the situation is certainly well worth trying out, but to stand any reasonable chance of success it would have to be worked on a properly organised basis, and on a sufficiently large scale to demonstrate its utility.

It may be suggested that to divert river transport to the carriage of coal would militate against the delivery of jute to the mills, but we do not think that this argument will hold water. For one thing, we believe that only farey shallow-draft craft could navigate the waters in the region of the coal fields which would immediately bar the larger and deeper craft normally employed in the carriage of jute, though it might mean the diversion of numbers, of the smaller barges to coal transport. But the craft mainly employable would be of the country boat type, which would probably have to be requisitioned for the purpose, for the navigators of such craft are notoriously averse to plying in any but waters with which they are intimately acquainted. It is hoped to give the scheme a fair chance of success that it will be possible to furnish towage, which would not only speed up the turn round of the boats employed, but would also encourage the supply of the type of boat required for the traffic. To revert to the argument we were refuting the supply of coal is of much greater moment to mills at the present juncture than the supply of jute, of which latter commodity most millls have as much, if not more, than they can comfortably accommodate. What they urgently want is sufficient and sustained supplies of coal to enable them to use up the jute they have in stock. Much of the present restraint both in buying of jute and in selling of manufactured goods is due to the uncertainty of future coal supplies. If these were assured, business would go forward with greater confidence than at present, and a sufficiency of freight space would still be available to take care of adequate supplies of jute to the mills.

While on the subject of the transport of jute to mills, we regret we were somewhat premature when we recorded last week that all jute routed *via* Khulna would be shipped by certain specified lines which had through-booking arrangements with the B. & A. Railway. Certainly trade interests had been assured that this had finally been arranged and had come into force from 1st March. But it is regrettable to have to record that documents continue to come forward, dated far into March, which require re-booking at Khulna because they have been shipped from the station of origin by a line which is not included in the through-booking arrangement. How this has come about it is difficult to understand if those responsible for the carrying out of the River Transport Control's orders at upcountry stations are attending to their business. The trade has been sufficiently harrassd by the faulty working of this Khulna scheme, instituted at the instance of the Transport Board to conserve freight space. Negotiations to achieve a satisfactory solution have been going on for five months or more and it is intolerable that, when a working basis has been achieved at last, it shoud be sabotaged by the agents of the Transport Control themselves. If the "Pool" system on the River Transport is not another illusion, all the freight available at any station is at the disposal of the local Committee or agent, as the case may be of the Transport Control for allotment to shippers according to quotas and according to the freight offering. There can, may be, of the Transport Control for allotor certainly should not, be any question of a shipper making arrangements for freight direct with any carrying concern. The shipper can only get his freight allotment from the representative of the Transport Control and the shipper has no option but to accept what freight is allotted to him, at the risk of having his quota cancelled if he refuses. There have been headaches enough over this Khulna shipment question and there are more to come before the question of synchronising the differing freight rates is settled. Unfortunately, while the Director of River Transport can issue orders as to how traffic is to be routed, he has no authority to define the rate of freight to be charged. It is to be hoped that this authority will yet be given to him. But meantime it should not be too much to expect that his representatives in upcountry stations should have the intelligence to carry out his routing instructions correctly.

There is little to record in the Pucca Bale market. Demand for export is negligible and locally the only business reported was some special Lightnings at Rs. 76- combined with Cuttings. Mills generally have shown no interest. Shipments of Raw Jute abroad during February amounted only to 83,000 bales, compared with 104,000 bales in January and 109,000 bales in February last year. For the eight months, July-February this season total exports amounted to 6,16,000 bales, against 6,96,000 bales for the similar period in the previous season.

(Continued from page 411)

Property owners of Bombay at a meeting held last Thursday under the chairmanship of Sir Chimanlal Setalvad passed a resolution urging the Government of Bombay to repeal the Urban Immovable Property Tax. The history of the tax is well-known. The Congress Ministry introduced it in 1939 as a means of offsetting the loss of revenue entailed by the introduction of prohibition. Strictly speaking, the tax should have gone too when the Ministry went out of office, and Prohibition also was practically discarded. But then, the present regime has tasted the fruit and is not prepared to forge this lucrative source of revenue. Sir Chimanlal condemned the tax as iniquitous as the tax singled out one class of investment to bear the burden, while incomes from other investments were exempt. The tax, though nominally 7 per cent of the ratable value, really took away 13 per cent and more of the net income of the owners of immovable property. Both in regard to the sales tax and the property tax, the present government has really no moral right to utilise the proceeds, as none of the progressive development schemes of the Congress Ministry have been persisted with. The present regime has use only for the expedients of popular ministries and none for their idealism, which alone lent some justification to the levies. They can't have it both ways.

(Continued from page 408)

bigger sums to this country. As Mr. Subedar put it, "the boot is on the other leg." Likewise, in the purely political sphere, the British Government still stand committed to the Cripps Offer which relegates "safe-guards" to the position of a subject for negotiation between two independent Governments. This fact has been time and again stressed in Parliament by the spokesmen of the British Government; and in this sense and to that extent statutory safeguards are not a live issue. But neither Britain nor India can afford to overlook the uncertainty of the date of the political unsettlement, while the needs of planning and planned development cannot wait. It is well therefore that, as Sir Ardeshir Dalal clearly stated, the Government of India are fully seized of this matter and it is engaging their active and earnest consideration.

(*Continued from page 410*)

2. Almost at the same time, Mr. Amery from Britain also struck. His words that there is no cause for any undue jubilance and his harping on the oft-repeated tune—agreement in India—are definitely dampers.

3. The obstinacy of the Government of India in sending Sir A. R. Mudaliar and Sir Firoz Khan Noon and Sir V. T. Krishnamachari to the San Francisco talks despite the country-wide protest and condemnation and the Assembly's virtual vote of "no-confidence" in the existing Executive Council.

4. There are some London cables which are almost positive that the whole thing is a "Tory Trick" to catch vote. It is indeed ominous.

* * * *

Though numerically there are nine items on the credit side against four in the debit column, the four in the latter are so weighty as to make anyone pessimistic. With all that, there are many observers here who feel that that some time in April or May, India may find all-party Governments installed at the Centre and in the provinces. They are also inclined to the view that by that time all political prisoners in the country will have been unconditionally released. I would only repeat that it all depends on the momentum the force of events will yet gather.

* * * *

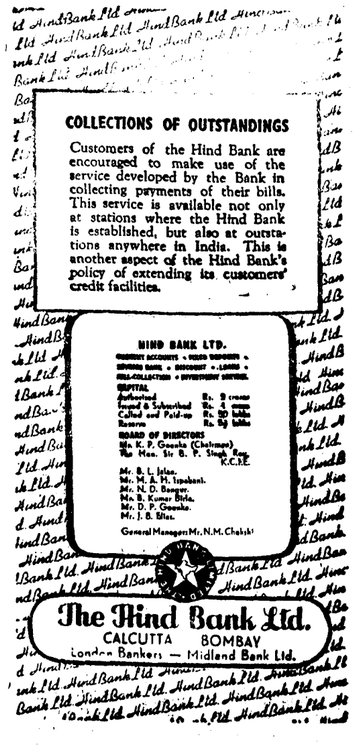
Reviewing the India Government's expansion of the list of permitted imports, the **Manchester Guardian's** Financial Editor declares this is a valuable opportunity for British exporters to re-establish themselves in the Indian market, though supplies are still severely restricted and the probable prices must be solved on long-term lines Indeed an ominously significant declaration in a usually well-informed paper in Britain where now the Hydari Mission is active in the 'dumping drive'. Which means Sir Azizul Haque, Commerce Member, Government of India, stands further exposed. Speaking on the Finance Bill in the Assembly last week, he refuted the charge that consumer goods were imported to the detriment of the existing industries. He went on to point out "that we required anything between 15 to 16 million bulbs a year while our indigenous production was hardly nine lakhs" and he asked where was the harm in importing urgently required bulbs. "We needed a large number of cycles and though our productive capacity was stated to be about 70,000 to 80,000 cycles we never succeeded in getting more than 20,000 to 30,000 cycles". The point is that the Commerce Member wanted to prove that, if goods are being imported, it is because they are urgently needed and are not being produced in India. On the other hand, the declaration of the Financial Editor of the **Guardian** tells a different tale—it is the result of a concerted attempt on the part of Britain and the Government of India, her agent, to flood India with British goods and exploit the Indian market. No wonder the Hydari Mission is "reported to be getting on well" in Britain. Again, the Commerce Member's statement is an open admission of the present Government's lack of policy to industrialize the country. It is well-known why the Hind Cycles firm had to suspend production. And last week there was issued a cryptic Press Note by the Civil Supplies authorities in Delhi. According to that the system of permits for cycles, watches, fountain pens and a host of other goods will end from April 1 as there will be large stocks in the market. Meanwhile, there has appeared in a Calcutta contemporary usually pro-British that the Government of India may shortly effect a general fall in the prices of several consumer goods. This report has synchronised with the **Guardian** Financial Editor's declaration which contains the following also: "It would be fatal for British traders to take undue advantage of temporary scarcity abroad by asking immoderate prices for they must get long-term customers. Between these opposing trends our prices must be nicely balanced". Pieced together, the conclusion is clear and definite that threre is an all-out attempt on the part of British Big Business and their agents, the British Government and the Government of India, to flood the country with consumer goods, if need be, at slightly lower prices in order to make the man-in-the-street take to them. But the country knows only too much that this move, if it succeeds will, have far reaching and nearly disastrous consequences.

HILL-BIRD.

(*Continued from page 403*)

measures will not be doubted, nor will the Minister's intention to distribute stocks first to the mofussil be disapproved. For time, it has been evident that Calcutta got more supplies than the Provinces, and Calcutta has to wait for fresh supplies rather than help itself to existing stocks. The fall in black market prices that followed the search is less important than the new decision to put the poor first. There is, however, little chance of yearn supplies being increased by the search, and it seems surprising that the proposals to set up two cotton spinning mills to provide handloom weavers with yarn has not been carried out. There is however reason to regard the temporary suspension of business as calculated to retard distribution of yarn of the unfrozen varieties. It is therefore important to get the new difficulty out of the way. The continuance of the search for hidden stocks should not hamper distinguished from the restoration of controlled price in the market, follow the provision of about 15 wagons of cloth per diem from stocks in Bombay. The introduction of cloth rationing in Bombay shoud favour increased despatches to other Provinces; but exclusive allocation of imports from overseas to Bengal may also prove necessary.

Indian Bank. Ltd.



The greatly improved results reported by the Indian Bank Ltd., owe much to the expansion in resources that is the outstanding feature of the balance sheet published today. Though the increase in profits is drained by taxation, there is an increase in the appropriation to Reserve and a significant addition to the bonus payable to shareholders. The improvement in profits coincides with the opening of six sub-offices last year. The changes in the balance sheet as compared with that published in March last are not limited to the increases in paid-up capital and Reserve Fund. Total Deposits are higher by Rs. 2.4 crores at Rs. 10.52 crores and increased business activity is mirrored in the changes under Bills, Drafts, Branch Adjustments, and foreign bills negotiated. On the assets side the increase in cash balances, totalling Rs. 2.33 crores at the end of December, follows the rise in Deposits of which the greater part has obviously gone into the Bank's investments. Investments in this case exceed 50 per cent of the liability to Depositors and exceed the total for Advances shown in the balance sheet. As compared with the figures issued a year ago Advances have risen by Rs. 2.03 crores, so that the explanation for the increase of Rs. 3.8 lakhs nearly in the Bank's net profit for 1944 is available. In view of the high cash ratio and the proportion of investments to Deposits, the balance sheet discloses a very liquid position; but of more interest is the improvement in resources following the addition to capital made last year so that the Directors again express satisfaction with the results. Shareholders should note that Reserve Fund is already nearly up to paid up Capital and the increase in the year's distribution is almost identical with that available to shareholders of other banks and the appreciation of share values in this case is supported by an increase in earning power commensurate with the expansion of Deposits. The remarkable progress made since 1942 is again attested by figures that inspire satisfaction. An increase of over 50 per cent in the balance sheet total certainly affords remarkable proof of what has been achieved in South Indian banking.

(*Continued from page 395*)

Even on the basis of investment in treasury bills, the budget estimate of Rs. 10 crores as the Government's share in the Reserve Bank's surplus profit for 1945-46 seems to be unjustified, except on the ground that, in regard to this head of revenue, the custom has been to repeat in budget estimate the figure of the revised estimate. The sterling securities that will have to be taken into account in reckoning the profit for 1945-46 will be higher than the previous year by an average of Rs. 200 crores. It will be safe to say that the revised estimate for 1945-46 will show the Central Government's share of Reserve Bank's surplus profit at a figure higher than the budget figure by at least Rs. 2½ crores.

The returns of the Reserve Bank for the week ended March 23 show no further expansion in currency but there is an increase in notes in circulation to Rs. 1.081.67 crores from Rs. 1,079.21 crores with a reduction in notes held in the banking department. Sterling securities are unchanged while there is a slight increase in rupee coin to Rs. 13.81 crores from Rs. 13.60 crores.

In the Banking department Central government balances have risen over Rs. 2 crores to Rs. 245.64 crores. There is a jump in other government accounts to Rs. 34.74 crores from Rs. 28.03 crores. Bank balances have declined to Rs. 89.15 crores from Rs. 95.58 crores. Sterling balances are nearly Rs. 5 crores higher at Rs. 388.35 crores. The increase in investments by Rs. 2.3 crores is suggestive of official support to the giltedged market.

JUTE

(By Our Staff Correspondent).

Calcutta, March 29.

THE raw jute market has been quietly steady with a small amount of business passing. With the improvement in the coal situation it is expected that mills would take greater interest in the market. But with the pressure on godown space and the sufficiency of stocks on hand mills have not taken any large interest. Only the firmness of up-country centres and the reports regarding unfavourable weather conditions in the jute growing districts have enabled sellers to maintain prices at last levels. If there is a further improvement in the enquiry for 'hessians and offtake of heavy goods improves mills might possibly buy on a large scale, but it is expected any large increase in mill buying will not come about unless sowings for the next season are well advanced. It is reported that a larger area will be placed on jute for the next crop and that, given favourable weather conditions, the yield might be expected to be larger. Some mills have been interested in the purchase of new crop and business has been reported in both loose jute and pucca bales at a premium, but such business has not been large. Sellers are prepared to accept orders for later deliveries but most of the demand is now for delivery in July-end and early August.

In the loose jute section business has been on a moderate scale. Mill buying has not been to the extent anticipated as there is still no faith in coal supplies being maintained at a steady level. Steam-driven units resumed working after a long time, but this week, with the falling off in supplies, not all mills have been able to work. European packing Jat Middles and Bottoms were done at Rs. 16-8 and Rs. 13-8 per maund. Business in new crop was reported eight annas higher. Supervised Jat Middles and Bottoms were done at Rs. 15-12 and Rs. 12-12 respectively.

JUTE MANUFACTURES

Calcutta, March 29.

THE jute manufactures market has been firm. The enquiry for 10 oz. hessian for April-June 1945 has given rise to the hopes that the demand for hessians from the United States in the latter half of the year might be for larger quantities. Sellers have therefore been very reserved and no business has been reported for positions this year. It was expected that the improvement in production, with the restarting of steam-driven units, might have a slightly discouraging effect on the market but it is now argued that any increase in production for near deliveries will be very welcome especially as mills are completely booked and it will not be possible to take up new orders unless there is surplus production. Also bazar is heavily oversold.

In the heavy goods section business has been restricted but there has been better enquiry for Cuban Sugars and "A" twills. There is a rise in price for Cuban sugar, the quotation being Rs. 81-2 (maximum rate) against Rs. 78 last week. "B" twills are quoting higher at Rs. 66-4 for ready.

PIECEGOODS

Calcutta, March 29.

FOLLOWING the action of the Bengal Government early this week to discourage black market trading by organising large search parties and sealing a large number of cloth shops and godowns, business in the piece-goods market is at a standstill. Cloth is being sold only through approved shops at controlled rates up to a maximum of 6 yards per head. Even in the few Government controlled shops only coating and heavier styles are obtainable. There is acute shortage of dhoties and sarees. It is reported that the Textile Control Board has made an additional allotment of 3,000 bales to relieve the scarcity in Bengal Province and that already 1,000 bales have been despatched. The dehoarding of large stocks and the receipt of fresh supplies will, it is believed, relieve the situation to a certain extent, but unless it is definitely known how the Bengal Government proposes to dispose of stocks, under its control, confusion will prevail in the market. It is feared that the rationing system will be difficult of execution if no proper basis is evolved, as requirements vary with individuals and so many varieties are involved.

(*Continued from page 399*)

can manufacturers of heavy electrical equipment in three important fields, Egypt, in connection with the Assuan Dam project; the River Tigris project and in Portugal. British manufacturers would probably regard all the three as fundamentally "British markets".

Mobile Mills for Liberated Areas

Manchester reports that hundreds of small mobile flour-mills are being manufactured by a local firm, on orders from Government, for use throughout liberated Europe wherever prewar local mills have been damaged or destroyed. It is stated that they are simple to operate and virtually fool-proof and can be moved from village to village with ease. This is almost the only cheerful and constructive item regarding postwar European relief which has thus far appeared. But it is also interesting as suggesting a relatively cheap way in which populations suffering from exactions of flour-milling "rings" or "combines" may escape. These mills may possibly figure in Britain's postwar exports.

Stock markets continue to exhibit that brittleness which has been such a marked characteristic for many months. Prices especially of leading industrials work slowly upwards for several weeks; then they pause for several days, unable to make further headway; then they suddenly slump, losing in a single day all that they had gained in several weeks. This has been the pattern ever since last August.

Future of British Industries

The whole situation has been described as a battle between the pressure of cheap money, forcing prices upward, and widespread misgivings regarding the future of these British enterprises. Can they make the transition from war basis to peace basis with sufficient speed and skill to enable them to recover their share of post-war markets. Or will they, like the cotton industry to-day, find themselves short of manpower and woman-power? Are British prices too high? Are British designs attractive? Is it too late to start scientific research? These are the chief questions raised by the pessimists while the usual reply of optimists is that all these things will probably be true without affecting in the slightest degree the one big overwhelming fact that the whole world is starved for capital goods and consumer's goods and that British factories and workshops will for several years be working day and night to fill orders flowing in from every corner of the globe.

But stocks merely reflect the widespread uncertainty of the man-in-the-street, who is dubious whether civilization as he knows it can actually stand the shock of two world wars only a quarter century apart. Some pundits here profess to detect same misgivings in "American Imperialism". They argue that American rush to collect orders from all over the world is too frantic to be really formidable, that it conceals beneath an air of bravado the same sort of secret worries as bother Englishmen.

The Gloomy Dean casts Gloom!

Meantime Dr. W. R. Inge, world famous for many years as the "Gloomy Dean" of St. Paul's Cathedral, emerges from his retirement to express opinion that, thanks to the "planners", Britons are "on the road to serfdom and to the loss of all that has made our civilization great", adding, for good measure, the prediction of a "financial crash" exceeding anything ever known.

Stock Markets to-day and to-morrow:

GENERALLY WEAKER MARKETS

THE crossing of the Rhine by the Allied armies has not been so difficult as was at first expected. The developments in the war situation later have been so satisfactory that they have exceeded even the most optimistic expectations of the Allied Command. Peace in the west is now expected in a few weeks and more than one pronouncement has been made to the effect by prominent statesmen. The reaction in the stock markets in the principal centres in this country to the favourable war news and prospects of early peace has been bearish and a general decline in prices has been recorded. The drop is pronounced in the Madras market as sentiment in that centre has been affected by the disappointing dividend declarations by South Indian cotton mills. In the Bombay market, Steels and Textiles are lower on bear selling. In Calcutta two to three point declines have been recorded in sympathy with other centres. There is a generally cautious attitude and both investors and operators are inclined to await further developments.

There has not been any panicky selling by investors. It is generally agreed that after an initial decline in prices there would be a recovery and that the fresh developments in the war situation would enable a clearer idea regarding the future outlook being formed. In the next two or three weeks, therefore, there may be a wide fluctuation in prices.

It is rather interesting to note that bullion prices are only slightly lower and that, compared to the easier tone of the stock markets, there is no sign of nervousness.

* * * *

The reports of the *Albion and Cheviot Mills* published during the week for the half-year ended November, 1944, show that the arrangement between the two companies regarding working has been very satisfactory and that both the companies have been able to report an appreciable increase in earnings. Albion Jute Mills Company was requisitioned in March last year, and it was decided that the loom hours should be utilised by the Cheviot Mills. As Cheviot Mill is an electrical unit there was no problem. As a matter of fact, it has been even possible to utilise a small portion of the loom hours at the Albion Mills lost before the introduction of the Industrial Pool. The dividend on the ordinary shares of Albion has been increased to Rs. 4 per share from Rs. 3-8 per share while it has been maintained in the case of Cheviot.

* * * *

The net profit before providing for taxation and depreciation, of the *Albion Jute Mills Company, Limited* for the half-year under mention is Rs. 6,74,827 against Rs. 1,49,220 for the previous seven months. A good portion of the earnings is set aside for taxation, Rs. 5,15,000 against Rs. 58,000. The sum of Rs. 25,000 (nil) is set aside to Mill Renovation Reserve. After paying the ordinary dividend of Rs. 4 per share against Rs. 3-8 per share the amount carried forward is Rs. 42,534 against Rs. 37,207 brought in.

* * * *

Cheviot Mills Company, Limited has earned Rs. 7,89,783 in the same half-year against Rs. 6,62,226 in the previous six months. The provision for taxation is Rs. 5,50,000 against Rs. 4,60,000. After setting aside Rs. 50,000 (same) to depreciation and transferring Rs. 56,147 (nil) to Mill Renovation Reserve the ordinary dividend has been maintained at Rs. 6 per share.

The Company has given the Albion Jute Mills Company, Limited three months notice of termination of the existing arrangement with regard to the double shift working of the mill by which the production of Albion Company is made good. It has at the same time advised the Albion Jute Mills Company, Limited that pending expiry of the notice it is prepared to discuss some other equitable arrangement by purchase of the Albion Company loom hours or otherwise by which the mill will continue to operate 108 hours per week.

* * * *

Svadeshi Mills Company, Limited reports a rather sharp decrease in earnings for the year ended December, 1944 to Rs. 82,10,228 from Rs. 1,13,70,697 in 1943. The provision for taxation is Rs. 61 lakhs against Rs. 84 lakhs while the amount set aside to depreciation is Rs. 4 lakhs (Rs. 5 lakhs). The transfer to Reserve Fund is Rs. 9.9 lakhs (Rs. 13.43 lakhs). The dividend on ordinary shares is Rs. 16 per share and bonus Rs. 6 per share against a dividend of Rs. 20 and bonus of Rs. 15 per share on the former occasion.

Possession of the Girghum Estate was given to the purchasers on the 1st March, 1944 on their paying the balance of the purchase money, except for a sum of Rs. 50,000 pending execution of the necessary documents. The sum of Rs. 50,000 also will be received shortly. The surplus of about Rs. 17,80,000 realised from the sale of the Estate has been transferred to the Reserve Fund Account.

In the balance sheet there is a decrease in the net block to Rs. 76,74,075 from Rs. 1,04,22,264 as a result of the sale of the above mentioned property. Reserves are higher at Rs. 72,70,257 against Rs. 45,00,000.

* * * *

The report of the first tea company to be published in the current year has come as a great disappointment to the market. The reduction in the dividend of *Dessai and Parbuttia Tea Company, Limited*, for the year ended December, 1944 to 15 per cent from 30 per cent was not expected, even though it was believed that labour shortage and other difficulties would result in a lower level of earnings and a smaller dividend.

The net profit, before providing for taxation and depreciation, for 1944 is Rs. 1,65,189 against Rs. 3,11,042 for 1943. The amount set aside to depreciation is Rs. 15,000 (Rs. 25,000) while the provision for taxation is Rs. 47,000 (Rs. 95,000). No amount is transferred to Reserves against Rs. 15,000. The dividend is reduced to 15 per cent from 30 per cent. The amount carried forward is Rs. 47,699 against Rs. 44,510 brought in.

The outturn of tea at the company's estates was very much lower at 9,95,973 lbs. against 1,122,469 lbs. in 1943. The average selling price was higher at 14 annas 11 pies per lb. against 13 annas 5 pies in 1943.

Markets Sharply Lower

MADRAS TEXTILES VERY WEAK

(By Analyst)

Bombay, March 29.

It looks as if the European war might come to a close this week or next week. Dalal Street has grown very bearish and Tata Steels, particularly, have broken the previous lows, i.e., Rs. 2,060 and Rs. 380, and were marked down to Rs. 2,015 and Rs. 375. Indian Irons and Bengal Steels also followed suit and declined to Rs. 38-6 and Rs. 31-10 though closed slightly steadier. Thus, the intermediate trend in Steels is bearish though, as mentioned earlier, the major trend is bullish. I, therefore, look for a further reaction and I would not be surprised if Tata Deferreds touch Rs. 1,900 and ordinaries Rs. 355.

In the Textile section even Dyeings and Kohinoors wherein there was a heavy short position, as evidenced by the ulta budla in the previous week, declined to Rs. 1,815 and Rs. 598 though closed a little better on short covering. Other mill shares are also lower. Among the low-priced scrips, Apollo are weak at Rs. 3-13 and India United deferreds Rs. 2-14. There are rumours in the market that the India United Mill might pay ten annas per ordinary and three annas per deferred share as against fifteen and five annas in the previous year.

Madras mills shares also had a rude shock particularly after the announcement that the Cambodia Mill had declared only a dividend of twelve annas, i.e., 7½ per cent as against Rs. 7, i.e., 70 per cent in the previous year. Bombay investors were surprised but I feel that they should really have expected a drastic reduction since the Managing Agents did not allocate the necessary amount for E.P.T. compulsory deposit in order to pay a fabulous dividend. I am unable to explain on what grounds. Naturally, this year the Managing Agents are forced to pay E.P.T. deposit for two years. Cambodia, which was quoting already low at Rs. 29, as against a high of Rs. 55 last year, slumped suddenly on the declaration of a disappointing and shocking dividend. I look for a further decline in textiles but would like investors to watch and pick up Dyeings around Rs. 1,750 c.d. or Rs. 1,700 x.d.

Tea Companies in Assam might show lower profits in 1944 due to labour trouble and food situation. But any reaction on account of publication of disappointing reports should be availed of for making fresh investment purchases from the point of view of post-war prospects.

Madras tea shares have continued to sag and the sagging tendency has been in evidence in the last six months. But for the fact I expect a further decline in Bombay and Calcutta I would have certainly recommended investment purchases of South Indian tea shares at current market levels. I would, therefore, wait till Bombay prices have touched the bottom. Since Madras is bound to follow suit giving an excellent opportunity for genuine investors to make cheap bargains.

(Continued from page 417)

ease the public mind as to the evils of inflation while the increase in business activity following the expansion of resources would suggest ordinarily that Banks have retained more than usual stability in and after 1944. For Central Bank shareholders the tit-bit of the speech undoubtedly is the promise to stop contributions to the sinking fund. Since the Chairman is duly satisfied as to the size of Reserves in proportion to the increased Capital, the saving of Rs. 3 lacs per year must redound to the advantage of shareholders.

Sir Homi Mody justified the increase in share capital, which procured an addition to Reserve also, and indicated that the Central Bank's own resources put it ahead of its rivals. Remarks which he had to offer regarding competition and the need for respecting tradition appears wholly reassuring in the context.

The survey of the year's results puts the balance sheet changes in the right setting. The record profits spring from the improvement in Advances, but the search for security has been completed by the addition to Investments of which Rs. 21 crores have gone into loans which fall due within the next ten years. Sir Homi Mody's tribute to the Finance Member in the course of his survey and his astringent observations on private planning reflect not his previous connections only, but the financiar's middle-of-the road opinion which must limit ambition though not enterprise. The Central Bank's Chairman has extended approval to the Banking Bill while drawing attention to what he described as its restrictive features, that might favour non-Indian banks. The most important conclusion to be drawn from Sir Homi Mody's speech (published in full on another page) is that banks have absorbed much of surplus currency, invested more, lent more, and generally prevented the development of hoarding or the frantic hunt for hedges against inflation. To the extent that the Central Bank has helped in the good work thanks are certainly due to the Board and staff of the Central Bank.

* * * *

Mr. C. H. Bhabha told Apollo Mills' shareholders last week that price control had slashed profits, while expenses remained high. But shareholders getting 12.5 per cent on their capital have reason to feel distinctly satisfied; and even the reduction in the 1944 dividend is meant to conserve the company's resources which are ample in relation to current liabilities. Shareholders have been reminded of the proportion of Net Block to total assets in the latest balance sheet and of the improved financial position to which only the liability to high taxation in wartime is a drawback. Since Mr. Bhabha foresees increased demand for cotton cloth, and little or no competition at home, the cotton industry's earnings may respond to post-war changes that include a reduction of taxation. There was, of course, a caution as to future capital expenditure required for uptodate, efficient machinery. Apollo Mills' recent record warrants the confidence in the future developed by the Chairman, who puts the fall in disposable profits in its place, under Control Orders he finds little to dismay shareholders who should be greatly encouraged by a frank and full analysis of the 1944 results.

It was mistakenly given last week that Sendra will be paying a dividend of eight annas for the half-year ended December, 1944. It is now stated that the dividend will be only four annas per share.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 30.

RATHER weak conditions have been noticeable on the Calcutta Stock Exchange throughout the past week. Only with the resistance to selling pressure at the lower levels and the calmness of investors a further decline in prices has been avoided. The extremely favourable war news and the rumours regarding early peace have been mainly responsible for the selling by bears in the first three days. On Thursday, there was a slight rally in prices on bear covering. The recovery was noticeable mainly in Coal shares. The undertone is quiet but there is no suggestion of any big decline in prices. Nothing definite, however, can be said as the developments in the war situation might upset calculations.

The giltedged securities section has been quiet without any appreciable change in prices. 3½ per cent Paper was a shade easier at Rs. 99-10. Among terminable loans, 3 per cent 1957 were quoting two annas discount, 3 per cent 1953-55 were Rs. 100-6, 3 per cent 1949 52 Rs. 101-8, 3 per cent 1963-65 Rs. 98-14 and 3½ per cent 1947-50 Rs. 103-9. Among provincial loans, 3 per cent U. P. 1958 changed hands at Rs. 99-2. Easy conditions continue to prevail in the money market and the Central Government again secured its requirements of treasury bills at five annas per cent.

Cotton shares were lower with *Cawnpore Textiles* at Rs. 13-2, *New Victoria* were not very much changed at Rs. 7-2. *Kesoram* were Rs. 17 and *Bengal-Nagpur* Rs. 40-8.

Coal shares improved early in the week on the reports that higher dividends would be paid by the Bird-Heilgers group of coal companies, the dividends of Bhulanbararee and Standard being particularly gratifying. There was a rise in the quotation for *Bhulanbararee* to Rs. 33-4 and *Standard* to Rs. 34. *Burrakur* improved to Rs. 42-6. In the selling, early this week, *Burrakur* declined to Rs. 40-12, *Bhulanbararee* to Rs. 32-8 and *Standard* to Rs. 42-4. *Burrakur* closed at Rs. 42-8. *Bhulanbararee* at Rs. 32 and *Standard* at Rs. 42-8. Among others, *Bengal* were quoted at Rs. 684. *Bhalgora* declined to Rs. 19-12 from Rs. 21-2. The close was a shade better at Rs. 20-2. *Pench Valley* provided the exception being steady at Rs. 52-8. *New Beerbhoom* also were relatively steady at Rs. 39-8.

In the Jute section, a rather firm tendency was noticeable at the time of last writing on the reports regarding the improvement in the coal situation and the prospects of an increase in exports. But the general weakness of the market has resulted in a decline in prices in this section also. *Howrah* came down to Rs. 87-12 from Rs. 90-4. The close was little better at Rs. 88-4. *Anglo-India* were Rs. 466 against Rs. 477, *India* Rs. 695 against Rs. 705 and *Nuddea* Rs. 124-8 against Rs. 128. *Presidency* are only a few annas lower at Rs. 12-4. There was a rise in *Reliance* in sympathy with *Howrah* to Rs. 76-12, but the quotation is now Rs. 74-8.

(Continued on page 422)

CENTRAL BANK OF INDIA LTD.

NEW RECORDS SET UP: SIR HOMI MODY ON THE BANKING BILL

INCREASES IN CAPITAL AND RESERVES

Presiding at the Annual General Meeting of the Shareholders of the Central Bank of India, Ltd., Sir Homi Mody, the Chairman said:—

GENTLEMEN,

In presenting to you the Directors' Report and the Audited Statement of Accounts, I shall make a few observations on matters of financial and economic interest, and on the operations of the Bank during the year ended 31st December, 1944.

A relatively high level of economic activity was maintained in the year under review with a steady trade demand for funds. There was a further substantial increase in paper currency in circulation, which went up from Rs. 822 crores to Rs. 994 crores. The volume of payments made by the United Kingdom for her purchases of goods and services in this country may be judged from the fact that Sterling Securities in the Issue Department of the Reserve Bank and "Balances Held Abroad" went up by about Rs. 390 crores during the year. The reason why sterling payments made by the U. K. are not fully reflected in the volume of currency in circulation is largely to be found in the various measures adopted by the Government of India to check the rise in prices and to withdraw funds from the market. The anti-inflationary measures initiated in 1943 were intensified, and despite the activities of a section of people, who have made it their business to defeat controls and evade payment of taxes, a fair measure of success was achieved. The index number of wholesale prices compiled by the Economic Adviser to the Government of India recorded an increase of only 13 points as against an increase of 52 points in the previous year. It was also found possible to keep the cost of living under control as the result of the extension of rationing to wider areas in the country, and the inclusion of a large number of consumer goods in the rationing scheme.

Easy money conditions prevailed throughout the year—the average rate for Call Money was only a ¼ per cent—and the resources of Joint Stock Banks recorded a further increase. Deposits of the Scheduled Banks rose from Rs. 651 crores to Rs. 815 crores. As before, demand deposits were responsible for a substantial share of this increase. During the year, an increasing proportion of the resources at the disposal of Banks was utilized for making advances and discounting bills. Although the outlet for funds did not broaden in proportion to their increase, the percentage of advances and bills discounted to the total volume of deposits rose from 25.33 to 28.80. Compared with the pre-war period, however, the bulk of the resources of the Bank still continues to be invested in Government Securities. The cash position of the Banks also showed an improvement, and compared favourably with that before the war.

As a result of the considerable increase in the volume of deposits, the capital structure of many Joint Stock Banks had been thrown out of balance. The ratio of Paid-up Capital and Reserves to Deposits had fallen considerably below the pre-war level. It was a favourable moment for rectifying this lack of balance, and a number of Banks carried out a capital reorganization during the year. Apart from imparting a much desired stability to the structure of Banking in this country, the move resulted, as in the case of our Bank, in substantial additions to the Reserves.

In my speech at the last Annual General Meeting, I commented upon the difference in the trends of Banking in this country and the United Kingdom. The relation of Deposits to the volume of paper currency is an illustration in point. In India, the total volume of Deposits since the outbreak of war has increased by about Rs. 580 crores, while the increase in paper currency has been Rs. 800 crores. In the U. K. and other countries, however, where the use of cheques is widespread, the reverse trend has been in evidence, and the growth of Bank Deposits is much larger than the increase in the note issue. Such a variation is quite natural. In countries where currency is still the chief medium of exchange, obviously the volume of paper currency would increase more rapidly than the volume of Bank Deposits.

The Budget statement recently presented to the Central Legislature by the Finance Member is his last, and I would like to take this opportunity of saying a word or two by way of recognition of the work he has done in a period of unexampled difficulty. There is nothing so easy or agreeable anywhere as criticising the unfortunate individual whose business it is to impose taxes and to handle the finances of a country, and a Finance Minister would be well advised in taking a philosophic view of all that he hears about himself in the course of a budget debate. Whatever the criticism, I think there is general recognition of the ability, integrity and level headedness with which Sir Jeremy Raisman has looked after the financial interests of this country. It is not a little due to him that in the sixth year of the war, India finds her financial structure strong and stable, and her Credit standing higher than ever before. I know of very few countries in the world which are in a better position than India to face the post-war problems of development and reconstruction. Our principal trouble would appear to lie in the multiplicity of Plans which are flooding the country! A little less of airy blueprints and a little more of practical schemes would do us all a lot of good.

I would conclude this general review by a reference to the bill to amend the law relating to Banking Companies in India. The bill was introduced in the Central Legislative Assembly in November last, and was circulated for public opinion. The need for codifying the banking law of the country has long been felt, and insofar as the measure aims at safeguarding the interests of depositors by prescribing certain minimum capital standards, prohibiting Banking concerns from engaging in trade and providing for the inspection of their books by the Reserve Bank when necessary, it must command the support of all who desire to see the Banking structure of the country established on sound foundations. There are, however, certain restrictive features of the bill which are calculated adversely to affect the interests of Indian Banks, particularly the older established institutions, and which are likely to help non-Indian Exchange Banks, established in this country, which could not have been the object of the framers of the bill. It is necessary, therefore, that there should be a further examination of the various provisions and the views of those engaged in Banking given every consideration before the measure is put on the Statute Book.

Turning to the Balance Sheet, I would first refer you to the figures of the Authorized and Issued Capital of the Bank. The Authorized Capital has been increased from Rs. 3,50,00,000 divided into 7 lacs shares of Rs. 50 each to Rs. 5,25,00,000 divided into 10,50,000 shares of Rs. 50 each. The Issued Capital has been raised from Rs. 3,36,25,400 divided into 6,72,528 shares to Rs. 5,04,39,500 divided into 10,08,792 shares. The number of shares subscribed upto the date of the Balance Sheet is 10,04,088 shares, and the total amount called up and paid at the rate of Rs. 25 per share is shown at Rs. 2,51,02,200. Out of the total number of 3,36 264 new shares issued by the Bank, 4,704 shares still remain to be taken up. In respect of some of these shares, applications have been submitted by heirs or representatives of deceased shareholders, and after investigation and on proper proof being furnished such shares will be allotted to the rightful claimants. As regards the remaining shares, the Bank has not been able to contact so far some shareholders in foreign or enemy countries, and in fairness to such shareholders, the Directors have decided, at least for the time being, to keep the cases pending.

I would next ask you to turn to the Directors' Report and the Audited Balance Sheet and Statement of Profit and Loss Account. The figures show all round progress, and I hope the result will be considered satisfactory by the Shareholders. I would mention that the profits this year have been the highest since the inception of the Bank.

Throughout the year, the deposit figures were mounting up, and you will see from the Balance Sheet that at the end of the year, the total deposits stood at nearly 94½ crores, showing an increase of nearly 12 crores, compared with the corresponding figures of the previous year. It may be of interest for the shareholders to know that at one time during the year the total deposits had gone as high as 99 crores. The enormous funds at our disposal had to be profitably employed, and as you will find from the Directors' Report, a number of new offices were opened during the year. We have recently extended our activities to the Central Provinces by recently opening a Branch at Nagpur. It is gratifying to note that during the short period since its opening, the Branch has received satisfactory support notwithstanding keen competition from other Institutions, and we hope, at suitable opportunities to go further afield and open at other business centres in the Province. The demand for advances was somewhat restricted in Bombay and other large centres, but as a result of Branch expansion we were able to employ larger funds, and our Advances which stood at a little over 26½ crores at the end of December, 1943, rose to nearly 32½ crores at the end of 1944. The figures of advances, at one time during the year, had gone upto nearly 35 crores.

Even after employing these large amounts in advances, there was still a substantial surplus left on our hands, and the Investments of the Bank had necessarily to be increased, as we could not afford to let large funds remain idle without earning any interest. The Investment portfolio at the end of the year under review stood at a little over 56 crores, showing an increase of about 14 crores over the figures of the previous year. Out of the total, nearly 52½ crores are invested in Government and other Giltedged securities. Over 49 crores are in dated loans, more than 21 crores of which fall due within the next ten years.

The item headed "Deposits with H. E. H. the Nizam's Government under their Compulsory Savings Scheme" appearing on the Assets Side of the Balance Sheet under the first heading of "Cash and Investments", calls for an explanation. As the Shareholders are aware we have several offices functioning in the Nizam's Dominions, and under their Compulsory Savings Scheme recently introduced, the Bank was required to deposit with the Nizam's Government the sum Rs. 1,14,000 and odd, calculated on a certain percentage basis on the actual Book Profits earned by the said offices during the year 1942 and 1943. These Compulsory Savings Deposits are repayable two years after the cessation of war, and will carry, in the meantime, interest at the rate of 2 per cent per annum.

The next item which requires special mention on the Assets Side is the item of "Lands and Buildings". During the year, we sold off properties of the book value of Rs. 5,66,000 and the total figure has been reduced to Rs. 98¼ lacs. Against this account, we hold a Sinking Fund of Rs. 52,72,000 as shown on the Liabilities Side of the Balance Sheet. As the Shareholders are aware, for the last several years right upto the year 1943, we had been adding to the Sinking Fund Rs. 3 lacs annually out of the profits, in addition to Compound interest at 6 per cent on the balance standing to the credit of the account. Besides these additions, some of the Branches every year set apart from their profits certain fixed amounts for being added to the Sinking Fund. As a result of all these additions the Sinking Fund has increased from Rs. 15,79,000 at the end of 1936 to Rs. 52,72,000 at the end of 1944, whereas the balance in the Lands and Buildings Account has dropped from Rs. 1 crore and 30 lacs at the end of 1936 to Rs. 98,25,000 at the end of 1944. The Property Account will be further reduced by about Rs. 4,20,000, when sales are completed of two more properties which have already been contracted to be sold. Having regard to the value of the properties remaining in our hands and the very substantial Sinking Fund held by the Bank, the Directors have, after careful consideration, decided not to set apart from the Profits any further amount for the Sinking Fund.

I have already referred to the increase of Capital. The Shareholders are aware that the additional shares were issued at a premium of Rs. 25 per share, and the Extra-

(Continued on next Page)

APOLLO MILLS LTD.

FINANCIAL POSITION UNCHANGED

CHAIRMAN ON TAX LIABILITY AND PRICE CONTROL

Presiding over the Annual General Meeting of The Apollo Mills Limited, on the 22nd March, 1945, Mr. C. H. Bhabha, M.A., B.Com., J.P., observed.

GENTLEMEN,

The Report of the Directors to the Shareholders and the Profit and Loss Account and the Balance Sheet of the Company for the year ended 31st December, 1944, have been in your hands for some time past and with your permission I shall take them as read.

The past year witnessed a further reduction in price of cloth and yarn. It has been a matter of common knowledge that at the end of 1944, the price of textiles had decreased substantially as compared to prices ruling at the beginning of that year. This reduction has told on the profit of the industry in no uncertain degrees. Contrary to expected opinion, along with the reduction in prices of textiles there has been no appreciable reduction in the cost of production. While labour charges continued to be a constant factor, other expenses on stores, cotton, etc., showed no tendency to go down. Naturally the profit curve has taken a downward trend.

While on the subject of reduction in prices of textiles during the year, it is necessary to say a few words about the control measures and their effectiveness. The one great and laudable result of textile control has been the substantial reduction in the prices of cotton goods. It is a regrettable fact that in spite of the vehement efforts and best intentions of the authorities, it has failed to provide cloth to the ordinary man in the country. Probably this is the result of the control having been imposed from the wrong end. It is reassuring, however, to note that this defect is being gradually appreciated and an effective control over the basic distributive side is now tried to be enforced which is very likely to achieve the long cherished hope of an equitable distribution among the masses of India.

During the year under review, before providing for Taxation and depreciations, a profit of Rs. 53,14,295 has been recorded. The Company has been able to set apart after meeting Taxation and Depreciation charges, a sum of Rs. 6,25,000 for payment of dividends. This figure indicates a return of 12.50 per cent on the Capital invested by the Shareholders. The peak period of the Company was undoubtedly the previous year, during which the profit was Rs. 80,20,089.

But the fall in the profit margin does not necessarily connote a reduced ability of the Company. The financial position of the Company remains practically the same as in the preceding year. The Company would have maintained last year's dividend level, but it has been considered essential by the Directors to reduce this level this year with a view to conserving the resources of the Company for the future.

It will be observed from the Balance Sheet that the liabilities of the Company during the year under review are a little lower than those of last year and that they are well covered by Floating Assets aggregating in all Rs. 1,11,31,630.

The Net Block amount has been reduced to so low a level as Rs. 24,67,218 which is only a little more than 1/5 of the total Assets. Thus the financial position of the Company is sound and it should be considered as satisfactory.

As regards the recent Taxation proposals *vis-a-vis* the Mill Industry, the *status quo* is practically being kept up. The profit devouring E. P. T. will continue at the present rate along with the scheme of Compulsory Deposits for one year at least. The inequitous Corporation Tax which has the effect of limiting the dividend and which is detrimental to the interest of the small investors will also continue. This taxation coupled with the pay-in-advance Income-tax will necessarily deplete the liquid resources of the Company.

There is, however, a small measure of relief in the grant of special Depreciation allowance in respect of New Buildings, Plant and Machinery, which may be erected after 31st March, 1945, for re-equipment of Industry, as also in respect of expenditure on scientific research, by Industry. The allowance in respect of the Buildings is 10 per cent and the Plant and Machinery is 20 per cent. One feels Government should have been more lavish in this special Depreciation allowance in respect of new Plant and Machinery by making it 25 per cent instead of 20 per cent as has been proposed in the U. K. It is disappointing to find that the Government have given no indication about the feasibility for reconstruction *now*. All that we know is that the Government of India are negotiating with British interests for securing Textile Machinery for purposes of renovations and replacements.

As regards prospects for the Mill Industry, I will not venture to speculate, in view of the apparently uncertain factors created by the war. However, taking a short-range view, I feel reasonably optimistic about a period of say two or three years after the cessation of hostilities, when the world will be short of stocks and there will be a great demand for cloth. During this short period we will not have to face any price cutting competition in the home market or from abroad. So at least during this period, our Mills will be running at full capacity and selling cloth at remunerative rates. The burden of taxation will also be relieved as has been indicated by the Finance Member's assertion that "the war-time expedient of E. P. T. will vanish with the emergency which brought it into being and that taxes on non-agricultural income can hardly be expected to play the overwhelming part in the scheme of National Finance that they now do".

Thus, taking a short-range view, we have no reason to be pessimistic, but from the long-range point of view, we must be alert and cautious. Our reconstruction plans should not be haphazard or amateurish. They should be in accordance with our peculiar requirements and should be prepared with due regard to our probably earnings in normal times on the Capital outlay. There has been a move in certain quarters requesting Government for giving facilities for importing reconditioned machinery. This move is fatal and must be combated. Reconditioned machinery can never stand competition with the latest machinery fitted with the latest innovations, and our long-term reconstruction plans must take into account the possibility of very keen competition from overseas manufacturers equipped with such latest machinery.

(Continued from previous page)

ordinary General Meeting of the Shareholders, whilst sanctioning the issue of additonal capital, *interalia* resolved that the premium received by the Bank on the new shares should be treated as capital receipts, and should be added to the Reserve Fund of the Company, and the cost of issuing the shares should be treated as capital expenditure and be deducted from the total of such premium. The amount of premium at Rs. 25 per share on 331,560 shares subscribed and paid for upto 31st December, 1944, came to Rs. 82,89,000 and after keeping in hand Rs. 89,000 for expenses, the Directors decided to transfer Rs. 82 lacs to the Reserve and Contingency Fund. If and when the remaining 4,704 shares are allotted on all the pending cases being disposed of, a further sum of Rs. 1,17,600 will be received as premium, and it is expected that after paying all the expenses, a sum of over Rs. 1 lac will be added to the Reserve and Contingency Fund. The total of our Reserve and Contingency Fund stands at Rs. 2 crores and 2 lacs, and adding thereto the Sinking Fund, which is also in the nature of a Reserve, the aggregate amounts to nearly Rs. 2 crores and 55 lacs, which exceeds the figure of our Paid-up Capital. In view of the very substantial amount of Rs. 82 lacs having been added at one stroke to the Reserve and Contingency Fund, the Directors have not thought it necessary to transfer to the Reserve Fund any further amount from the profits of the year.

The Establishment Charges have, undoubtedly, gone up. This is accounted for by the opening of new officers during the year under review, the granting of a general increment in March 1944 and the raising of the scale of dearness allowance to the Staff. We are passing through very hard times, and the interests of the Staff called for a substantial measure of relief. In my speech last year, I referred to the competition from other Banking Institutions and the various attempts made by them to take away our trained men by offering them handsome emoluments. It was not considered in the interests of the Bank to raise salaries to figures offered by other Institutions, and we lost the services of some trained and experienced hands. I may tell you that the situation, if anything, has become more acute. I hope this kind of unhealthy competition, which, in the long run, will not be in the interests of all concerned, will soon come to an end, and the well recognized traditions and practice of not tempting away men from sister Institutions will once again be respected and observed. I trust shareholders will appreciate that notwithstanding the increase in the Establishment charges the Bank has been able to show higher profits than was shown in any of the previous years.

We have had to provide the very large sum of Rs. 75 lacs for Taxation. The Income-tax authorities have not finished scrutinizing the statements which have been submitted by the Bank, and it is therefore not possible to determine the amount that will be required to be paid by way of Income-tax, Corporation tax and Excess Profit Tax, but the Directors have been advised that the balance in hand of the provision made from profits of previous years, together with the amount set apart from the profits of last year, would cover the demands for all such taxes.

You will see from the Directors' Report that the bonus of eight annas per share paid annually to the Shareholders was split up last year and an *ad-interim* bonus of four annas was paid, for the half-year ended 30th June, 1944, and the Directors have recommended the payment of a bonus of four annas for the half-year ended 31st December, 1944. As you are aware, the new shares were to rank for dividends on the profits of the Bank accruing and earned as from 1st July, 1944, and in order to have a fair distribution of profits so far as the old shares were concerned, the bonus was decided to be split up. This mode of payment has, however, not in any way affected the rate of dividend or the bonus, and the Shareholders will receive in all 12 per cent per annum, free of Income-tax.

As regards the future, there will be difficult times ahead and we shall have to meet with keener competition from some of the newly established Banks. The Directors are fully alive to the situation and alert to take measures to consolidate and strengthen the position of the Bank. The Bank's resources are considerable, and the goodwill it has established is a priceless asset. The Bank will enter the post-war era with the courage and confidence borne of its inherent strength and the sound policies it has consistently pursued. Without being unduly optimistic, I would say the Bank can look forward to rendering even greater service than ever before to the commercial and industrial community, and to making the contribution that is due from it to the enormous development that awaits the country in the years after the war.

The Staff at the Head Office and at the Branches have worked with loyalty and efficiency under conditions which imposed a considerable strain on them. To them I would say that the Directors are ever mindful of their interests, and that the Staff will have no occasion to regret their association with the Bank. The Managing Director, Mr. H. C. Captain, inspite of ill-health, has not spared himself in the service of the Bank, and I am sure you will want me to acknowledge the very valuable work he has been consistently doing.

Gentlemen, I now move that the Directors' Report and the Audited Statement of Accounts be, and are hereby, adopted.

COMPANY REPORTS

DUNLOP RUBBER CO. (India), LTD.

Y-ended Dec.	1944	1943	1942
	Rs.	Rs.	Rs.
Sales	5,14,60,702	3,61,89,549	3,88,99,957

Div. % Pref.	6	6	6

(Annual General Meeting on 4-4-1945 at 3-30 p.m. Books closed from 12th to 28th March, 1945).

Accounts for the year ended 31st December, 1944.

Adding to the 1944 net profit of Rs. 1,02,77,624 the sum of Rs. 4,57,402-15 brought forward from the previous year the total profits now available for appropriation amount to Rs. 1,07,35,026-9 and the Directors' recommendations are as follows:—

Transfer to Taxation Reserve Rs. 74,86,188-8; Dividend for the year 1944 on the Guaranteed Preference Shares at 6 per cent, free of tax, absorbing Rs. 1,80,000; Dividend for the year 1944 on the Second Preference Shares at 6 per cent less income-tax, absorbing Rs. 1,68,750; Dividend for the year 1944 on the Ordinary Shares at 30 per cent, free of tax, absorbing Rs. 15,00,000; Transfer to Reserve for Contingencies Rs 2,00,000; Transfer to Dividend Equalisation Reserve Rs. 7,50,000; and Balance carried forward to next account Rs. 5,00,088-1.

The provision for Taxation represents an increase of Rs. 28,02,981 over the preceding year, due to the enhanced profits. The estimated tax liability on the 1944 results amounts to 75 per cent of the total profits earned. No credit has been taken for that portion of the Excess Profits Tax liability for this and the previous year which is refundable within three years of the termination of hostilities, estimated at Rs. 8,29,000.

The year under review witnessed further expansion of the Company's manufacturing capacity and considerable increases in volume of business and profits compared with previous years.

In view of the increased earnings the Directors feel justified in increasing the rate of dividend on the Ordinary Shares to 30 per cent and at the same time providing for the future by transferring Rs. 7,00,000 to Dividend Equalisation Reserve. The transfer of Rs. 2,00,000 to Reserve for Contingencies further strengthens the Company's finances.

Inventories have been conservatively valued, all raw materials having been taken at the lower of cost or market prices at 31st December last. Ample provision has been made for bad and doubtful debts and every known loss has been provided for in the accounts.

Secretary.—Mr. A. W. Gillespie.

(Annual General Meeting on 9-4-1945 at Bombay. Books closed from 31st March to 19th April, 1945).

Audited accounts for the year ended 31st December, 1944.

The profit for the year, after making a provision of Rs. 4,00,000 for depreciation and of Rs. 61,00,000 for taxation, amounts to Rs. 17,10,228; Adding thereto the balance brought forward from the accounts of the previous year, etc., Rs. 55,230; the total comes to Rs. 17,65,458; from this sum the Directors have carried to the Reserve Fund Rs. 9,90,000; leaving a balance of Rs. 7,75,458.

The Directors recommend the appropriation of this sum as follows:—

Payment of dividends and bonus, both free of income-tax, for the year ended 31st December, 1944: (*a*) Dividend at Rs. 5 per share on Preference shares Rs. 75,000; (*b*) Dividend at Rs. 16 and bonus at Rs. 6 per share, making a total of Rs. 22 per share, on Ordinary shares Rs. 6,60,000; and to be carried forward to the accounts of the next year Rs. 40,458.

It will be seen that the figure of profit shows a considerable reduction compared to the previous year.

Possession of the Girgaum Estate was given to the purchasers on the 1st March, 1944, on their paying the balance of the purchase money, except for a sum of Rs. 50,000, pending execution of the necessary documents. The sum of Rs. 50 000 also will be received shortly. The surplus of about Rs. 17,80,000 realised from the sale of the Estate has been transferred to the Reserve Fund Account.

The Directors regret to inform that as a result of the explosions that occurred in the Bombay Dock area on the 14th April, 1944, the Company's godown at Masjid Siding Street was almost completely destroyed. A sum of Rs. 26,659 was received from the Government against the claim for the loss. Of the contents of the godown at the time of the explosions 53 bales of cloth were found missing. Our claim for the value of these bales is still pending.

The Company's mills and factories with their contents and the stocks of yarn and cloth have been insured for Rs. 2,35,65,000. Profits and standing charges have been insured for a sum of Rs. 70,00,000 per annum, indemnity being payable for 24 months. Insurance has also been taken under the War Risks (Factories) Insurance Ordinance for Rs. 1,06,93,000. Under the War Risks (Goods) Insurance Ordinance all insurable stocks were kept fully covered throughout the year.

(Annual General Meeting on 10-4-1945 *at* 2-45 *p.m. Books closed from* 27*th March to* 10*th April,* 1945).

Audited accounts for the year ended 31*st December,* 1944.

After writing off Rs. 50,531-1-3 for depreciation, and setting aside Rs. 23,450 for reserves, and a sum of Rs. 1,90,506-6 for Income-tax and Excess Profits Tax, there is a balance of Rs. 82,838-2-11 to which has to be added the sum of Rs. 24,866-12-7 carried over from the last account, making a final balance of Rs. 1,07,704-15-6 which the directors recommend be dealt with as follows:—

Payment of a dividend of 11 per cent per annum on the Preferred Ordinary shares, absorbing Rs. 23,122; Payment of a dividend of 12 per cent per annum, on the Ordinary shares, absorbing Rs. 25,224; Transfer to General Reserve Rs. 35,000, thereby bringing it to Rs. 2,65,000, Rs. 35,000; and carry forward Rs. 24,359.

The manufacture and distribution of producer gas plants continue to be the Company's main source of income. This is, however, dependent upon the number of lease-lend vehicles released to the public, and it is not known what the volume of release in future is going to be. In the light of the uncertainty surrounding this class of business, as well as revenue from engineering contracts handled by the workshop, and the difficulties the Company may be faced with in the immediate post-war period, the directors feel that the general reserve should be strengthened by the addition of Rs. 35,000 out of the nett profits.

Managing Director.—Mr. V. M. Nair.

Authorised Capital—Rs. 40,00,000. *Issued and Subscribed—Rs.* 4,20,400 *in* 2,10,200 *Preferred Ordinary of Re.* 1 *and* 2,10,200 *Ordinary shares of Re.* 1 *each, both fully paid up.*

VASANTA MILLS, LTD.

Audited accounts for the year ending 31*st December,* 1944.

After payment of all expenses including a sum of Rs. 81,079 paid as bonus to the employees and after providing Rs. 1,30,783 for depreciation on assets, the year's trading has resulted in a profit of Rs. 15,46,304; *Add*—balance as per last balance sheet Rs. 5,236; Total Rs. 15,51,540; which the directors recommend to be appropriated as under: Provision for Income and Excess Profit Taxes Rs. 11,62,000; To transfer for Reserve Fund from which the deposit under Section 10 of the Finance Act, will be paid Rs. 2,50,000; Preference share dividend paid Rs. 28,500; Dividend at 15 per cent, free of tax on the Ordinary shares Rs. 1,05,000; and to be carried to next year's account Rs. 6,040.

The fall in the level of profits for the year under review as compared with the previous year is due to the considerable reductions in the ex-mill prices of yarn and cloth prescribed by the authorities. On the level of prices and cost of production prevailing, the profits made must be considered as satisfactory. In the current year also the company has been supplying its quota of yarn and cloth for defence requirements and standard cloth for civilian use at panel rates.

The company's buildings and machinery have been insured against accident by fire for their replacement value and the stocks of cotton, yarn and cloth have been insured against fire and war risk. The company's legal liability to workmen has also been covered by workmen's compensation insurance.

(*Continued from page* 418)

In the Engineering section, *Indian Iron* have declined to Rs. 38-6 from Rs. 40-6. There was a recovery to Rs. 38-13, but the improvement has not been maintained. *Steel Corporation* declined to Rs. 31-10 from Rs. 33-2. They are now quoting Rs. 32-1. *Arthur Butler* have registered a sharp rise on special buying to Rs. 28. *Jessop* declined to Rs. 23-12, *Marshalls* were Rs. 4-12 and *National Iron and Steel* Rs. 11-12.

Sugar shares have been featureless with *Balrampore* quoting Rs. 16-12, *Carew* Rs. 26-10, *Ramnugger Cane and Sugar* Rs. 14-12 and *New Savan* Rs. 26.

Tea shares have been quieter with the disappointing dividend by *Dessai and Parbuttia* for 1944. There was selling from Bombay. Local sellers, however, are rather reserved at the lower levels. *Banarhat* were Rs. 908, *Bishnauth* Rs. 45-4 and *Central Cachar* Rs. 129.

In the Miscellaneous section, Burma shares were neglected *Burma Corporation* being done as low as Rs. 5-1. *Consolidated Tin* were Rs. 3-9 and *B. B. Petrol* Rs. 4-15. *B. I. Corporation* were Rs. 6-4 ex-dividend. *Karanpura Development* were in good request at Rs. 30-12. Among Paper shares, *Titaghur Paper* were Rs. 27-2, *India Paper Pulp* Rs. 227 and *Star* Rs. 16. Among others, *I. G. N.* were Rs. 184 and *Calcutta Landing and Shipping* Rs. 37-4.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is no change to report in the short loan market. interbank call money continuing to quote nominally ½ per cent in Calcutta and ¼ per cent in Bombay. Contrary to the state of affairs in the short loan market, treasury bill results this week show a hardening tendency in discount rate. Bidding is also definitely on the small side. The amount of India treasury bills offered for sale on April 3 was Rs. 4 crores. the same as on March 27. While applications last week amounted to Rs. 12.83 crores. tenders this week were less than half at Rs. 6.01 crores. Owing to reduced applications and lesser keenness in bidding. the average discount rate has increased from annas 5 per cent per annum on March 27 to annas 5 pies 7 per cent on April 3. This week's treasury bill results are thus at variance with the sentiment and trends in the money market ; and. we believe. this only shows that treasury bill tenders as well as discount rate are not necessarily connected with the state of the money market, but rather with treasury bill maturities from week to week. In a week during which treasury bill maturities are large. tenders in that week are also on the large side. Conversely. if treasury bill maturities in a particular week are on the small side. applications. too. make poor showing. In spite of a considerable wartime expansion in the size of the floating debt. the treasury bill market in India has yet to develop attributes of lively activity and resilience. Such attributes can develop and grow only if there is a regular bill market and if there are appreciable transactions in rediscounting of bills. In the absence of such a bill market and such rediscounting. treasury bill results from week to week will be not so much an index of the money market as a reflection of treasury bill maturities from time to time.

The Reserve Bank returns for the week ended March 30 disclose currency expansion for Rs. 3 crores against sterling securities. There has been an inflow of rupee coin into currency reserve to the extent of Rs. 26.11 lakhs ; and this must be considered a welcome reversal of recent trends. In the result. active note circulation has expanded by Rs. 3.22 crores to Rs. 1.084.88 crores. The year-end activity of tax-gatherers is reflected in a substantial increase of Rs. 8.17 crores in Central Government's deposits with the Reserve Bank. These deposits now stand at Rs. 253.81 crores. Deposits of Provincial Governments. however, are down by Rs. 5.51 crores to Rs. 29.23 crores. It is quite possible that tax payments account for the reduction in the deposits of scheduled banks from Rs. 89.15 crores to Rs. 85.46 crores. Foreign balances in the banking department have declined by Rs. 3.30 crores to Rs. 385.06 crores. As the addition to sterling securities in the issue department is Rs. 3 crores, it may be inferred that. on the week's transactions, the Reserve Bank has lost some sterling assets. The lethargic attitude of the gilt-edged market towards Victory Loans may have induced the Reserve Bank to take active open market measures ; and this, possibly. explains the increase in investments from Rs. 16.82 crores to Rs. 18.19 crores.

The statement of the Imperial Bank for the week ended March 30 shows an increase in deposits to Rs. 234.14 crores as compared with Rs. 232.75 crores on March 23. Loans and advances disclose a sharp rise of Rs. 3.41 crores to Rs. 69.85 crores. Cash has gone down by Rs. 2.40 crores to Rs. 45.65 crores.

While the last two years have been a period during which many new banks with large capital have made their debut, and many of the existing banks have strengthened their capital structure by the issue of additional shares. one cannot fail to note that all this hectic activity in bank issues has been confined to the sphere of commercial banking. The result is that there is cause for apprehension that there may be unhealthy competition and unnecessary overcrowding in the field of commercial banking. It is a matter for surprise that none of the promoters of such banking enterprises seem to have given any thought to the devising of such other types of banking as would make the Indian banking system an organic whole. We have said that this is a matter for "surprise." On deeper reflection, we should. perhaps, withdraw this expression. For. from our intimate acquaintance of the Indian capital market for the last 25 years, the most striking feature in our opinion is that company promoters in India have what may be called the 'goat' mentality. Let us make our meaning more explicit. In the postwar boom in 1919-20, the Currimbhoys started a woollen mill, say. on Monday. The Morarjis came out with another woollen mill on Tuesday. And D. N. Wadia came out with a third woollen mill on Wednesday. Not one of these mills showed any sign of prosperity for over two decades ; in fact. the Currimbhoy woollen mills never saw the light of day. the shareholders deeming themselves fortunate that the capital was refunded. There was a similar goat-like performance with regard to insurance companies. Until 1919, there was no composite insurance company under Indian management. The first general insurance company to be started was the New India Assurance Company in the middle of 1919. Almost soon thereafter, the Jupiter Insurance Company was brought into existence. In quick succession followed the Vulcan Insurance, the British India General Insurance, the Universal Insurance, Himalaya Assurance and the Alpha Insurance Company. In the booming conditions of this war also, the tendency towards puerile imitation has been manifest again and again. Over half a dozen banks designed to transact commercial banking business have been ushered into existence. without their sponsors having any clear ideas as to the scope and utility open to them. By the same token, quite a number of general insurance companies have been registered. the new belief being that every managing agency house must have an insurance company of its own. India waited all these years for a motor car manufacturing company ; but when the propitious moment came, India is to have not one motor car company but two. Now that there are so many banks in India with imposing capital plans, taking the old banks as well as the new ones, it is worth the effort and planning of some one to devise a scheme for an Indian Exchange Bank. The absence of an Indian exchange bank renders our banking system definitely incomplete. It is a practicable proposition to bring into being an Indian exchange bank with an adequate capital. relying upon pro rata contributions from the Indian commercial banks and upon response from the public. Our scheme will be somewhat as follows : The Indian Exchange Bank is to have a capital of Rs. 10 crores, of which Rs. 5 crores will be issued and paid up. All

The Old Finance Member & The New

In a few days, Sir Jeremy Raisman will be handing over charge of his office to Sir Archibald Rowlands. In the event of some of the speculative political forecasts proving true Sir Archibald may yield place at quite an early stage to a member of an Indian National Government. In any case, Sir Jeremy's successor will be taking over the custody of India's finances at what will be, to all intents and purposes, the end of the war and the eve of post-war planning in India. In the twilight between war and peace, clear vision is more than ordinarily difficult and it is also possible that hostilities taper off to a tame end, rather than cease abruptly with the declaration of an armistice. It may even be that the war in the East drags longer than one would suppose from the determination of the Neutrality Pact between Japan and Soviet Russia; in which case India may be in for a prolongation of the orgy of war expenditure on our account. All these possibilities notwithstanding, the present moment seems apt for taking stock of the position and determining the tasks of the coming Finance Member in the light of a critical appraisement of Sir Jeremy's achievements.

It will be generally agreed that Sir Jeremy's problems during his term of office and, to a lesser, but considerable, extent, his solutions are the result of the special needs and conditions of the present war period. Within the limits set by his positon as a member of a subordinate Government, Sir Jeremy has applied himself to his tasks with zeal, vision and uncommon practical sense. If, on the one hand, he had no choice in the matter of financing allied war expenditure by additions to the note circulation at home and sterling balances in London, on the other, he could claim credit for a strenuous and successful fight against the effects of inflation and for putting through a stupendous programme of repayment of the Government's sterling debts. Likewise, if, in India's war expenditure, others besides the Government of India have a voice, he can point to a financial settlement which submits allocation of expenditure to a process which is not without value or effect. He can pride himself even more on substantial reductions in the volume of the unproductive debt on war account effected by a set of new taxes, which have not only mitigated the effects of inflation, but have also laid the basis of a system of public finance more suited to the functions of ogvernment in the postwar period. These are, indeed, great achievements; but, carried out amidst the pre-occupations and unsettlements of a war that brought the enemy even to our soil, they are inevitably incomplete, leaving some loose ends to be tied up and, even more, opening the door to even greater achievements of a similar kind.

The repayment of the sterling debt paves the way to an overhaul of the whole structure of our public debt. The beginning that has been made in the accumulation of "dollar fund" is only a reminder of what remains to be done in regard to our foreign balances. If there have been a set of new taxes with good current yield and not inconsiderable future prospects, they only show that, against the background of war time conditions and in the light of post-war plans, India's public finance can be made more indubitably fit to carry on the heavy burden of expenditure on post-war development. The financial relations between the Centre and the Provinces, which have hitherto been approached with inter-provincial jealousies and suspicions of the Centre, must now be revised so as to suit the requirements of planning. And last but not least, the anti-inflationary measures which consist largely in plugging the loopholes for tax evasion have to be perfected. Corruption, which has followed in the wake of large war expenditure and the introduction of numerous controls, has got to be eradicated. All these are tasks which flow from the very nature of Sir Jeremy's achievements during the period of office. And they are equally important, whether Sir Jeremy is succeeded by a member of a National Government or has to hand over charge to Sir Archibald Rowlands.

It is necessary, therefore, to examine these problems and the lines on which the new Finance Member must proceed in order to solve them satisfactorily. Leaving the more complicated issues of public finance to a later stage of this series, we may concentrate attention on tasks of an administrative kind. Among these tasks, the completion and perfection of the measures designed to prevent evasion of income-tax and excess profits tax come first and foremost, since they are equally important both for fighting inflation now and for finding increased revenue for post-war development. From this point of view, legislation empowering income-tax officers to enter premises, examine books and sign them, so as to prevent duplicate and triplicate sets of accounts must be welcomed: It is no use overlooking the fact that the law has to tackle an unusually wily set for tax-dodgers. The typical bania, it is said, keeps three sets of books, one for his own edification, the other for the information of his sleeping partner, and the third for presentation to the tax authorities. This elaborate method of tax evasion can be foiled only if income-tax officers are empowered to enter the premises, examine books and initial them to prevent their being replaced by made-up accounts at a later stage. And what is more, such visits must be of the nature of a surprise visit, which gives no time for manipulations and dodges of any kind. Notice of a month is more than sufficient to provide the time and opportunity for the wily bania to do away with the unnecessary set of books. It follows from this that, even if Sir Jeremy had succeeded in getting his bill passed by the Assembly, not much practical result would have followed from it.

This brings us to the task awaiting Sir Archibald Rowlands, the new Finance Member. He must, in our view, address himself first and foremost to the eradication of corruption in the large number of spending departments, to the stoppage of the wide-spread evasion of taxes, and to secure a reflow into the coffers of the State of all black money, that is, money representing the accumulation of amounts that were built up by evasion of tax in the past few years. First, eradication of corruption. The Finance Department exercises scrutiny on the spending departments through Financial Advisers attached to each such department. This system must be extended and strengthened and the officials vested with more power. The Indian Audit Service has, since its inauguration two generations ago, established a reputation for the highest integrity, independence and incorruptibility. The calibre of this Service has suffered somewhat lately on account of the old system of competitive examination being modified by nomination to redress communal inequalities. This is not a department where efficiency can be sacrificed to communal hankerings. The first essential, therefore, is to re-establish the Indian Audit Service exclusively on a basis of competitive examination. Through such an examination, a large number of suitable hands must be recruited. And the Financial Adviser in every department must be provided with an adequate, reliable and competent staff.

As for tax-evasion, the calibre of income-tax officers must be greatly improved. Under present conditions, they are over-worked and under-paid. From below Rs. 20 crores before the war, these taxes have grown to over Rs. 200 crores per year (not including advance tax payments and E.P.T. deposit). The staff has not been expanded to a corresponding extent. Nor have their emoluments been raised to a level which will make the officers proof to corruption. One of the most vital of services in India's public finance today is the Income-tax officers and allied officers. The best men should be in charge; they should be given an adequate, reliable, competent and suitably-paid staff of officers and assistants. There is another matter to which attention should be drawn. The Income-tax officers in certain Provinces have established the finest records for efficiency, quick disposal and integrity. The officers from such provinces must be brought in to the other provinces as leaven. This is particularly necessary in the case of centres where it would appear tax payments prima facie are not on the same scale as profits made.

To combat tax evasion adequately, it is obviously necessary to secure as much of detailed information as possible from each locality about the various devices and strategems pressed into service for tax evasion. It is only in the full knowledge of such devices and strategems that remedial measures can be taken. Some months ago, attention was drawn in the columns of "Indian Finance" to the sprouting of the Katni market as an informal adjunct to the Calcutta Stock Exchange. This Katni market continues to flourish like the green bay tree. There is a kind of Katni market attached to all the commodities in which speculation takes place. The feature of this market is daily settlement, losses or profits being paid or taken in cash. It follows that the profits made by hundreds and hundreds of operators in Katni markets are totally immune from taxation. Even within the stock exchange, it is alleged, there is an increasing tendency for adjustment of differences being made by payments in cash. This is the most important circumstance to bear in mind: there are now more transactions settled on the basis of cash payment than through cheques. It will be safe to infer that the cash involved in these transactions is largely black money; and that transactions in cash are motivated by the desire to avoid the recording of these transactions in account books. Fullest investigation in regard to Katni markets and in regard to cash transactions in the various exchanges is urgent and imperative.

Another strategem to which considerable recourse has been had in recent years by tax-dodgers is the opening of accounts in fictitious names with banks. These accounts are kept alive only for the duration of any particular business. The business chosen is usually a short-term business. As soon as the particular business is finished, the profits are taken out of the bank account and the account is closed altogether. It would appear that the scale of these operations is very large and that there are parties who operate twenty to thirty accounts at a time. It should be possible for the Finance Member to get the fullest relevant information from the banks and thus track down the colossal sums that have thus escaped taxation.

It should not be forgotten, however, that black money figures only fitfully in bank accounts in fictitious names and that the bulk of it is kept in the form of currency notes or bullion or shares held in blank transfers. Certain foreign Governments, like those of France and Belgium and lately of Great Britain, have led the way in the matter of forcing black money into the open. Under an Order in Council issued towards the close of January last, the Bank of England was empowered to call in its notes of £5 and upwards. This followed the cessation of the issues of notes of £10 and upwards as early as in April, 1943. According to reports from London received this week, the Bank of England has since given notice calling in the £10 and higher notes on 30th April, 1945. The £5 and lower notes, however, remain unaffected. But under section 1 (4) of the U. K. Currency and Bank Notes Act of 1928, the Bank of England already has power to call in the £1 and 10s. notes.

Now that the Bank of England has given notice calling in the £10 and higher notes, they will cease to be legal tender, but the Bank's liability to pay any such notes when they are subsequently presented has not ceased. The presentation of such notes, however, will have to be done in person and not through post. They may also be presented through ordinary banks, but the latter are unlikely to take up the responsibility, unless they make sure that the persons who send these are not of the dubious type. The calling in of notes of larger denominations besides leading to simplification of currency will prove a valuable check to black market activities and also to the evasion of exchange control regulations, which might assume large proportions if and when postal censorship is removed after the war. When the notes of £10 and upwards ceased to be issued in 1943, the Chancellor of the Exchequer stated that the object was "to simplify the production and handling of the note issue and to provide additional handicap to those who may contemplate breaches of exchange control and other regulations." The foregoing step taken by the U. K. provides, in our opinion, one more concrete example for the Indian Government to follow in its fight against black market money and tax evasions which have now assumed enormous proportions.

The suggestions made in this article will, we trust, greatly help Sir Archibald Rowlands in the continuance of a relentless campaign against those forces which inspire and accentuate inflation. Our contention has been that inflation reached its worst stage when the holders of black money diverted their attentions and activities to the investment of such black money in whatever commodity could be got hold of. Rice control and control of commodities have reduced the scope for these undesired activities. But until black money is eradicated at the root, that is to say, until corruption and tax evasion are made impossible, the latent forces making for inflation will persist.

The Bombay Budget

The Bombay budget for 1945-46 is true to the type with which the public is increasingly familiar during the present war period. Swollen revenue and increasing expenditure with, however, considerable surpluses which raise nice problems of reduction of taxation, immediate increases in appropriation or allocation to reserves, are the distinctive features of the Bombay budget as of the budgets of a few other Provinces. There is also another of the familiar features common to provincial budgets, serious under-estimates of revenue, both in the budget estimates for 1944-45 and the revised estimates of the previous year. For the year 1943-44 only a nominal surplus of 0.46 lakhs was assumed in the budget. The year, however, closed with a surplus amounting to as much as Rs. 370.55 lakhs. Little blame can attach to the Finance Department on this score, as the increase was due to such factors as the increase in the divisible pool of income-tax and enhancement of certain taxes during the course of the year. But the same feature of wide disparity also characterises the budget estimates and revised estimates for 1944-45. While the increase in the surplus is only from Rs. 0.86 lakh to Rs. 89.78 lakhs, the revised estimates show an increase of Rs. 7.23 crores in revenue to Rs. 6.34 crores in expenditure. Taxes on income again reveal an increase amounting to Rs. 57.40 lakhs under income-tax. By far the largest increase is under Provincial excise; and the rise of Rs. 2.65 crores under this head is said "to reflect an all-round increase of purchasing power." Forests are now expected to yield Rs. 117.49 lakhs more, while other taxes, which include the sales tax and the levy on race course attendance and entertainments, show a rise in the revised estimates of as much as Rs. 131.59 lakhs.

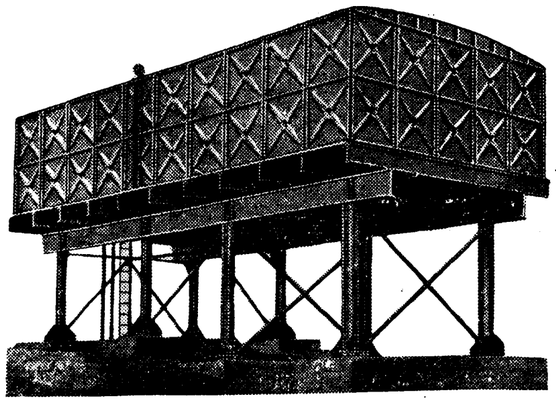
As compared with the revised estimates for 1944-45, the budget estimates for the new year show a marked fall, revenue falling from Rs. 32.12 crores to Rs. 29.09 crores and expenditure from Rs. 31.22 crores to Rs. 29.09 crores. The fall in revenue is accounted for by the drop in income-tax from Rs. 5.31 crores to Rs. 4.66 crores and in "forests" from Rs. 2.87 crores to Rs. 1.59 crores. While, compared to the expansion of revenue, there have been but small increases in the expenditure on nation-building departments, large amounts have been allocated to special funds both in the budget for 1945-46 and in the revised estimates for 1944-45. An amount of Rs. 2 crores was transferred to the Debt Redemption and avoidance Fund; as also an amount of Rs. 150 lakhs to the special Development Fund. During the new financial year, a further transfer of Rs. 4 crores is expected to be effected and the total provision in this fund will be Rs. 11 crores at the end of 1945-46. The balances are expected to rise from Rs. 13.98 crores to Rs. 16.86 crores.

These are, indeed, ideal conditions for animated discussion of the merits of available alternatives. It is open to the Government either to give up some of the present taxes or increase the allotments under certain heads of expenditure instead of building up funds. In regard to the sacrifice of certain taxes like the excise on country liquor or the urban immovable property tax, some definite obligations may be said to have descended on the Government, since the latter was first conceived as a substitute for the former and there can be no justification for the excise, when public expenditure bears but lightly on available revenue. These obligations are, however, differently viewed by the Government and their position has been clearly, if not too convincingly, stated in the following:

> In 1940 certain changes had, on account of legal decisions, to be effected in prohibition arrangements, and Government at that time stated that it intended 'to devote any additional revenue from these changes to the relief of taxation under the property tax'. It was added that 'it should not be assumed that any large relief will be possible, since the Government anticipates that these arrangements will mean the continued sacrifice of most of the revenue from the sale of country liquor and toddy'. The revenue on these latter items continues to be foregone in Bombay and Ahmedabad. This revenue amounted to about Rs. 1 crore per annum at the time of introduction of prohibition, and would, of course, have been much larger at the present time on account of increase in population and purchasing power. The revenue from foreign liquor, in the same areas, amounted to about Rs. 24 lakhs, when prohibition was introduced, whereas, at the current rates of levy of the urban immovable property tax, no less than one and a half times that amount, or Rs. 36 lakhs, is the relief obtained by the tax-payer as over-all reduction in the original incidence of the tax. Neither this nor any other degree of relief must any longer be regarded as automatically admissible, and, though it has been decided to continue the existing rates of levy, without increase, for another year, it is emphasized that, for the reasons already stated, the Government of Bombay now holds itself at liberty to alter those rates without reference to extraneous factors such as fluctuations in excise revenue.

Those who are free from sentimental attachment to the Congress programme of prohibition and give post-war finance greater importance will rejoice over the progressive accumulation of funds and the increase in the capacity of the Bombay Government to raise loans for future development. The Bombay Government seem confident of striking a sympathetic chord in the public mind when they state the main considerations underlying the budget proposals:

> (i) The most legitimate use of current war-time increase in revenue is that which subserves either future reconstruction on present essential development; just as escapable, and therefore inflationary, expenditure, is its least legitimate use, particularly where such expenditure further involves a recurring and permanent commitment.
>
> (ii) Ample provision must therefore be made for post-war reconstruction, and essential schemes of development must in the mean time proceed; while non-essential expenditure must be severely curtailed, and extreme caution practised in committing the Province to permanent increases in expenditure.
>
> (iii) To the extent that ability to finance reconstruction depends on future borrowing it is necessary and prudent to make reasonable provision for the early liquidation of the existing liabilities of the Province.



These principles are, indeed, unexceptionable and it is of interest to examine the position of general revenues and the public debt of the Province. An examination of the main heads of revenue during the war period shows that, while land revenue, which was formerly the mainstay of Provincial finances, has been singularly inelastic, Provincial finance has shown more elasticity than it had for a long time been credited with. In the case of Bombay as that of other Provinces, it is extremely difficult to separate the effects of war-time inflations. Excise revenue, which has more than trebled during the war period, is obviously the most susceptible to the increase in general purchasing power. And the increase under "forests" looks more like a short-lived spurt than as a reliably steady expansion. These circumstances may account for the tone of finality adopted in the remarks on budgetary policy quoted in an earlier paragraph. Those who would insist on liquor revenue being sacrificed sooner or later will have to pin their hopes on the sales tax and the forthcoming death duties.

Turning to the debt position, one can go so far as to suggest that the material change disclosed by the figures is not so much in regard to revenue as in regard to debt. Bombay, relieved of Sind, has now achieved an exceptional position. The net annual provision for interest is about Rs. 15.67 lakhs and the enhanced contribution to Sinking Funds in two years point to an impending extinction of liabilities. This is as important from the standpoint of the future as the accumulation of funds raising the balances from Rs. 13.98 crores at the end of 1944-45 to Rs. 16.86 crores at the end of 1945-46. In fact, the Bombay Budget shows that public debt is less than the accumulations in the funds, and so far as future borrowings go, Bombay is singularly well-placed. The Acting Governor's hint that Bombay's borrowing may start only after 1950 is important for the reason that abstention by one Province may lead to the abstention of others leaving the Centre free to tap the Indian capital market. In the Bombay budget famine relief scarcely figures but preventive measures in Bijapur and elsewhere at a cost of nearly Rs. 75 lakhs have been provided for along with Rs. 28 lakhs for irrigation. This may easily raise the yield of land revenue which accounts for about one-tenth of the Provincial revenues at present. The failure to reduce civil expenditure will not be regarded as important as the increase in allotments for nation-building departments. Bombay's expenditure has doubled since 1940-41 and the rise of Rs. 1 crore as compared with 1944-45 was described as the chief feature to recommend these proposals. Bombay's civil supplies experience cannot be indicated by reference to the budget figures. There is little information as to grain purchase and sale, stocks and depreciation allowable. Operations are evidently self-liquidating; for Bombay's permanent debt alone claims notice in the latest statement; there is no floating debt and revenue balances totalling Rs. 850 lakhs have made it unnecessary to resort to treasury bills.

Inasmuch as debt is again reduced and reserves are higher, the Bombay budget can be viewed as a very encouraging balance-sheet of the concern in which Bombay taxpayers are the shareholders. The dividends payable in 1945-46 in a sense are higher, so that the increased provision for Reserves need not occasion discontent. If it appears inadvisable to assume that, in the future, Bombay will fare consistently well, it may be also urged that extraordinary expenditure, e.g., on famine relief, would not recur and the Bombay Government would possibly get more out of death duties than other Provincial Governments, if the rules for sharing the new tax are similar to those applied to income-tax. The more important feature is that, as in Madras, capital outlay is deliberately restricted in order to limit the demand for materials and men; also that in Bombay, too, accumulation rather than planning of expenditure is the ruling principle. This may evoke dissatisfaction for certain reasons, but it must be said that prudent accounting will more than pay for itself, and any surplus derived from an increase in revenue receipts should help the taxpayer in the future.

FUTURE OF WORLD SHIPPING

SURFEIT OF AMERICAN TONNAGE

PROBLEM OF POST-WAR DISPOSAL

(BY OUR AMERICAN CORRESPONDENT)

When the war ends and nations resume the normal pursuit of peacetime trade, the United States will own three-fifths of the world's cargo ship tonnage—some 5,500 vessels totaling about 57,500,000 gross tons. This is five times as much shipping as the United States owned before the war and only ten million tons short of the world's total prewar tonnage.

While the merchant fleet of the United States has grown, those of other countries have diminished. The British, working their shipyards at capacity to replace sinkings, have lost slightly more than they have been able to rebuild Norwegians, Dutch and French, with no opportunity for replacements, have lost heavily. And the Axis countries have lost catastrophically.

The following figures from Lloyds Register show the prewar relationship in millions of gross tons:

Great Britain ..	21.
United States ..	11.5
Japan ..	5.6
Norway ..	4.8
Germany ..	4.5
Italy ..	3.4
Netherlands ..	3
France ..	2.9
All others ..	11.8
Total ..	68.5

Post-war figures can only be estimated. Italy's merchant fleet has shrunk from 3,400,000 tons to under 400,000 Norway has lost over half its tonnage. French, Danish and Dutch ships have almost vanished from the seas. British empire shipping is estimated to have diminished about 15 per cent.

All these countries are expected to buy surplus American ships after the war. In addition, countries not previously among the world's great maritime powers will presumably be customers—such as Russia, China, India, Brazil and Argentina.

How many ships will the United States have for sale? When the fighting is over, a considerable number of old and obsolete ships are expected to be junked. There is a proposal to lay up, or "sterilize," in an emergency reserve 1,000 ships of the 10,800 ton Liberty model. But even if these measures are taken there will remain for sale to private investors or foreign governments approximately 4,640 vessels—46,000,000 tons.

How many of these will be bought? Not all of them will be equally desirable to shiplines planning postwar operations. Some 2,545 will be Liberty ships—good, serviceable craft which bore the brunt of the wartime supply problem, but slow, heavy fuel eaters, and too big for the average tramp service. About 60 Liberty tankers will be subject to the same objections. Even at bargain prices. the Libertys may be hard to sell, and many may be destined for the scrap dealer's torch.

But the Libertys are only half of the picture. There will be before about 2,000 merchant ships of excellent quality, fast and modern, competitive against anything afloat. These will include over 500 large, high speed tankers, about 500 Victorys mass-produced 10,000-tonners equipped with 6,000 horse-power turbine and capable of 15 to 17 knots—and upwards of 700 of the crack C-type ships. Largest of the last-named class is the 12,000 ton 6-3 with turbine or diesel propulsion and a speed of 16 knots. It can be converted into a passenger vessel with minor alterations.

The United States will also have for sale about 230 coastal vessels and 27 refrigerated cargo ships, both likely to be popular items because of shortages in those categories.

How many of each type will be reserved for American buyers and how many may be sold abroad? Admiral Emory S. Land, Chairman of the United States Maritime Commission, believes the United States should have a post-war merchant fleet of at least 15,000,000 tons, perhaps as much as 20,000,000. Some private American ship owners deplore any tendency to sell high quality ships to foreigners and say that the United States should operate even more than 20,000,000 tons.

Washington spokesmen, however. have made it clear that the United States does not intend to set up a world shipping monopoly On March 2, Acting Secretary of State Joseph R. Grew sent a letter to the House Maritime Committee—then beginning consideration of the Bland-Bailey ship sales bill—urging that the United States not adopt any "narrowly nationalistic policy" in view of its "somewhat monopolistic position as owner of the major portion" of the world's ships.

"If the United States," Mr. Grew said, "were to attempt to take advantage of the war losses of other countries and of the wartime increase in its own merchant fleet to establish itself in a dominant shipping position, it would be acting contrary to its basic policy of promoting sound international economic relations and increasing the flow of commerce."

What terms of sale will be offered to American and foreign buyers? There is no desire to repeat the unhappy experience of the last war.

When war came in 1917, the United States began to build ships faster than they had ever been built before. But the end of the war came before a single ship was in service, and all American troops who went overseas sailed in allied vessels. Construction continued under its own momentum for some years after the war's end—a total of about 13,500,000 tons was built from 1917 to 1922. Some of these ships were later scrapped. Others were laid up to rust in creeks and backwaters—of which a few were reconditioned for use in the present war. Most were put on the auction block and sold to the highest bidder.

The world market became glutted with ships. Prices dropped from $200 per ton to $100 in 1920 and 25 in 1922. Finally, many of the ships were sold for scrap as low as $5 per ton.

At the same time, American shipyards, unable to put out new tonnage at prices competing with the bargains offered by government auctioneers, practically went out of business. Only two ocean-going cargo vessels were built in the United States from 1922 until the beginning of a new government-sponsored construction program in 1936. Meanwhile, by heavy subsidies to their shipyards, Great Britain, Germany, Japan and the Scandinavian countries increased their merchant fleets.

After the last war established American shiplines were hard hit by the competition of speculative operators—some American, some foreign who went into business with cheap ships. Companies which had bought ships at the price of production were threatened with bankruptcy. And when the present war came, the United States had to reconstruct its ship-building industry from the ground up.

To avoid these pitfalls of the last war, present plans call for gradual sale of ships at substantial prices. Some construction of special types of ships now in short supply, such as passenger liners and refrigerated ships, will continue. Admiral Land has called for the laying down of a least ten 50,000 ton passenger liners in the near future. It is hoped through such building to taper off gradually the use of great warborn shipyards employing hundreds of thousands of workers around which mushroom cities have grown up.

The Bland-Bailey bill, previously referred to, provides a formula for ship sales based on "normal" cost of production, minus cost of military features, cost of modification for peacetime service and depreciation. But the key clause provides that a ship's price "shall not be less than the cost of constructing the vessel in a foreign ship-building center." Elsewhere the bill fixes a minimum price of $50 a ton, believed to be as low as British or Swedish yards can profitably turn out ships equal in quality to the American Liberty. This is a modification of the original bill. The first one, which fixed a minimum first of $150, later of $100 per ton for Libertys, was discarded after it was argued that at those prices foreign ship buyers would take their orders to European yards while the American ships were left to rust.

The Bland-Bailey bill would permit Americans to buy ships from the government for a down payment of 12½ percent with the balance payable over 20 yards at 3½ percent interest. Libertys could be bought on somewhat more favourable terms.

The same bill provides that sales of ships to foreigners shall be or cash. But this may be modified by granting of United States government credits to friendly governments or by the operations of the Lend Lease Act. The first instance of such sale of ships not entirely for war purposes was contained in the Lend Lease agreement concluded with France early in March, 1945. which provided for sale to the French, beginning March 1, 1946, of $145,000,000 worth of merchant ships on terms as favourable as those granted Americans—in some respects more favourable.

Reportedly, Greek and Norwegian interests have already made offers between $300,000 and $400,000 for Liberty ships which would cost around $500,000 under the Bland-Bailey bill.

Another problem to be solved is that of excess American ship-building capacity. Of 563 ways in the country, only 187 are privately owned. The others were thrown up at government expense to meet the war emergency. It is expected that government yards will be dismantled. But those left will be the best ones—still able to turn out more big, high speed ships than the United States is likely to be able to use or sell. In this connec-

(Continued on page 460).

Editorial Notes

Why this Solicitude?

The Bengal Government attach unnecessary importance to the sanctity of the expiring dates of the licenses held by the Calcutta Electric Supply Corporation. On earlier occasions, we had discussed the various issues involved in the discussions on the action to be taken with respect to some of the licenses due to expire shortly. We are concerned, in this comment, mainly with the solicitude shown by the Bengal Government as regards the rights of the Calcutta Electric Supply Corporation with reference to the licenses that expire in the later years. The proceedings as they are developing in Bengal, seem to suggest that no official in the Writers' Buildings is aware of the various contracts which had been terminated before the expiry dates, at the instance of the Government of India and in pursuance of the scheme for sterling debt repatriation. All the holders of the various India sterling loans were paid off before the dates on which the loans were due for redemption; and this was done without any fuss and with the simple recourse to a vesting order passed by the British Treasury and a vesting order passed by the Government of India. We have not so far heard of any grouses from the bondholders that, under compulsion, they were obliged to accept payment before the due dates. Nor was this operation of sterling debt repayment marked by pleas and counter-pleas for suitable compensation in view of an earlier payment. The vesting orders, we have referred to, provided for the bondholders being paid at the rates at which the sterling loans were quoting in the market on the day on which the orders were promulgated.

By the same token, the agreements in the case of some of the Indian Railways were terminated before the contract dates. The procedure adopted was quite simple; and there does not appear to have been any great excitement or controversy about the settlement of compensation. In reply to Mr. Manu Subedar's interpellation in the Central Legislative Assembly, Sir Edward Benthall, War Transport Member, furnished facts and figures about the railway contracts, which may be usefully studied by the Bengal officials dealing with the Calcutta Electric Supply Corporation. Sir Edward's statement explains how the purchase price of three out of eight railways acquired by the Government after the outbreak of the war worked in terms of £100 of ordinary stock, after excluding the amounts required for the discharge of preference shares and debentures. The figures were: Bengal—Dooabs Railway £226. N. W. Railway £251 and Rohilkand Kumaon Railway £330. These three railways were Company-owned and Company-managed. The remaining five railways, namely, Assam Bengal, B. B. & C. I., South Indian, M. & S. M. and Bengal-Nagpur Railways were instances of State ownership and Company-management. The companies were only holding certain limited capital which had to be repaid at par o nthe termination of the working contracts. The Assam Bengal and B. B. & C. I. Railways were purchased at par as they were taken over on the termination of the working contracts. The Assam Bengal was paid its share capital of £1½ million, and B. B. & C. I. Railway its share capital of £2 million. As the contracts for South Indian, M. & S. M. and Bengal Nagpur Railways were terminated prematurely, 21 months before the due date in the case of South Indian and M. & S. M. Railways and six years and three months before the due date in the case of the Bengal Nagpur Railway, the companies had to be compensated for the loss of profits; and the total payments made were: South Indian Railway £1,112,500 representing £111¼ per £100 of stock; the Madras and Southern Mahratta Railway £5.275,000 representing £105¼ per £100 of stock; Bengal Nagpur Railway £3,600,000 representing £120 per £100 of stock. It will, thus, be seen that though the contract in the case of B. N. R., was terminated six years and three months before the due date, the compensation paid was 20 per cent on the ordinary stock. In the case of the Calcutta Electric Supply Corporation, a similar settlement as to the kind and nature of compensation to be given must be easy. The Central Government have put through a number of deals in this regard; and the Bengal Government cannot do better than request the good offices of New Delhi for a settlement that will be fair to the Electric Supply Corporation and that will be in consonance with the general policy of nationalisation of electrical undertakings and in line with the aims and objects of sterling debt repatriation.

The five Company-managed railways in whose cases the State has taken over management during the war years, accounted for a total sterling outlay of less than £15 million. From the point of view of sterling debt repatriation, the outlay involved in the case of the Calcutta Electric Supply Corporation will be more impressive than the outlay involved in all the five railway companies put together. The Calcutta Electric Supply—as also the Calcutta Tramways Company—are, from this point of view, of far greater importance in the programme to utilise India's surplus sterling for reducing India's liabilities in sterling.

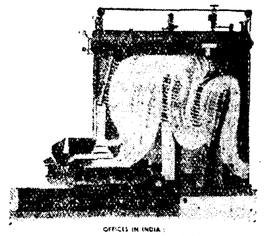
If all-India utilities like railways have been considered as coming within the orbit of plans for sterling debt repatriation, it follows that the next category of undertakings to be embraced in sterling debt repatriation programmes is local public utilities like Electric Supply and Tramways. Some of the telephone companies in India were sterling companies; the present position, however, is

EAST INDIA FUND

Roceipts for week ending 29th March, 1945 Rs. 6,450

Total to date - Rs. 1,20.76,117

Contributions may be sent for the general purposes of the fund or earmarked for the following specific charities:—



1. H. E. the Governor of Bengal's War Purposes Fund for Amenities for Troops.
2. King George's Fund for Sailors.
3. The Lord Mayor's National Air Raid Distress Fund.
4. Jt. War Committee of the Indian Red Cross and St. John Ambulance.
5. British Red Cross.
6. Royal Indian Navy.
7. Merchant Service in England.
8. St. Dunstan's Fund.
9. High Commissioner for India's Comforts Fund for Indian Troops.
10. Royal Air Force Benevolent Fund.

that the entire telephone system has been nationalised and the capital at charge put on a rupee basis. The entire railway system in India is now nationalised and put on a rupee basis. The nationalisation and transfer of capital from sterling to rupee basis in the case of the local public utilities can no longer be delayed. It is now for the Bengal Government to perceive clearly that the matters pertaining to the licenses of the Calcutta Electric Supply Corporation have an all-India setting in relation to sterling debt repatriation; and that, for this and other reasons, the Bengal Government must seek solution through the good offices of the Government of India.

Madras Tax Proposal

If the Madras Government has been quick in taking the cue by announcing a proposal to tax agricultural incomes as from 1945-46 the reasons assigned for the introduction of a new tax do not appear to command general approval. The Adviser's defence is that well-to-do landlords do not pay as much as they ought to; also that high prices warrant fresh taxation. The exemption limit proposed is Rs. 5,000 and the tax would hardly be at a flat rate. Since the tax has been introduced in three Provinces there is little doubt as to constitutional propriety at present, while there is much doubt as to the purposes for which the additional revenue will be applied. Madras has a relatively small debt bearing interest—less than a year's revenue and less than the credit balances secured from surpluses. There is no need to cite the Todhunter Committee's opinion as to what should be done to replace land revenue by a tax on the profits of agriculture. What is important to note is that land revenue in an unreformed state would remain after the agricultural income-tax comes into force. Whether new taxation would come into costs and lever up prices to the disadvantage of the consumer is not ascertainable, but there is certainly force in the argument that new taxation would keep prices up and affect the standard of living of non-agriculturists. The proportion of ryotwari to permanently settled land must always be a consideration. When fixed water rates etc. supplement the land revenue assessment, it is rather difficult to justify an agricultural income-tax. For the planting industry still paying royalty on land rather than revenue, the principles of income-tax may apply but the imposition of new excises and the taxation of non-agricultural profits must detract from the force of arguments that may be adduced. The Madras proposal is to be distinguished from the innovation made in Bengal. In the case of the latter the Centre advocated higher taxation for financing famine relief expenditure and made the increase in taxation a condition for subventions. Madras is not compelled to raise taxes for any reason. It may be urged that a graduated inheritance tax applicable to landed property would meet the needs of the future. Over and above the question of ability to pay or convenience of collection, there is the prime question of a popular mandate. The Adviser regime cannot suggest that it has a duty to the electorate, much less can it urge that Congress in office would have imposed the same tax as that proposed by the Government.

The U. P. Budget

The Note on the Budget Estimates for the U. P. for the year 1945-46 prepared by Sir Tennant Sloan, the Financial Adviser to the U. P. Governor, revealed an anticipated surplus of Rs. 426 lakhs. The estimates of revenue receipts and charges for the coming year are Rs. 2,752 lakhs and Rs. 2,737 lakhs. The revised estimates for the current year disclosed an increase of Rs. 3.2 crores under revenue receipts and of Rs. 3.4 crores under the expenditure. The increase in receipts is mostly accounted for by Taxes on Income (128 lakhs) and Excise (83 lakhs). Increases under expenditure covered Rs. 142 lakhs transferred to the Revenue Reserve Fund and the Miscellaneous charges and Civil works accounted for Rs. 165 lakhs. Owing to larger war orders working expenses of the Forest Department recorded an increase. Capital expenditure for 1944-45 has risen by Rs. 209 lakhs out of which irrigation, hydro-electric and civil works and agricultural improvements alone accounted for Rs. 66 lakhs. The outlay on supply schemes has been much less than was originally anticipated, the estimates having come down from Rs. 4,758 lakhs to Rs. 2,799 lakhs. For the year 1945-46 Sir Tennant announced a further increase of excise duties (to take effect from 1st April) calculated to yield a revenue of Rs. 27 lakhs for the year ahead. The surplus of Rs. 426 lakhs has been disposed of as follows: Revenue Reserve Fund Rs. 261 lakhs, U. P. Road Fund Rs. 50 lakhs, Hospitals Fund Rs. 50 lakhs, Sinking Funds Rs. 50 lakhs and the surplus left over is Rs. 15 lakhs. The special Funds now amount to Rs. 1,430 lakhs out of which U. P. could utilise at least Rs. 1,300 lakhs for post-war development schemes. The Financial Adviser revealed that the U. P. Government have already made certain necessary preparations for the introduction of a Sales Tax but, owing to the fact that Sir Jeremy Raisman has envisaged a sales tax for All-India and since the bottleneck of personnel is there, the proposal has been postponed for the present.

The C. P. and Berar Budget

The sixth wartime budget for the Central Provinces and Berar authorised by the Governor revealed the actuals of the 1943-44, the revised estimates for 1944-45 and the budget estimates for 1945-46 as follows:

	1943-44 Ac.	1944-45 Rev.	1945-46 Est.
Revenue ..	856	948.7	948.14
Expenditure ..	855	945.0	946.60
Surplus ..	1	3.7	1.60

The accounts for 1943-44 resulted in a surplus of Rs. 201 lakhs out of which Rs. 30 lakhs have been credited to "Appropriation for reduction or avoidance of debt", and Rs. 170 lakhs to the post-war reconstruction Fund. Increases in revenue occured under Taxes on income, Land revenue, Excise, Stamps and Forest while increases in expenditure are accounted for partly by excesses over budget provision under General Administration, Forest, Jails and Police and by enhanced rates of Compensatory Cost of Living Allowance. The debt position is considered satisfactory since the net debt remains less than one year's estimated revenue and a sizable portion of the consolidated debt to the Government of India has been paid by recourse to market loans. For the year 1945-46 no fresh taxation is proposed though existing taxes are extended for one more year. The budget estimates for the coming year expect increases under Land Revenue (Rs. 18 lakhs), Excise (Rs. 17 lakhs) and Civil Works (Rs. 11.7 lakhs). The total allotment for really new expenditure is only Rs. 53 lakhs out of which the post-war schemes receive Rs. 14 lakhs. The Post-war Fund stood at Rs. 198 lakhs at the beginning of the year and the accounts for 1944-45 added Rs. 239 lakhs more. The Estimates for 1945-46 provides Rs. 190 lakhs more so that the Fund will stand at Rs. 614 lakhs on 31st March, 1946. The C. P. and Berar has a post-war plan involving an expenditure of Rs. 40 crores during the five years from 1947-48. The Post-war Fund will, it is expected, amount to Rs. 8 crores on 1st April 1947; Rs. 5 crores are expected to come from annual surpluses assumed at Rs. 1 crore per year and Rs. 9 crores from borrowing and fresh taxation. A subvention of Rs. 18 crores is expected from the Centre. A separate department, named the Development and Resettlement Department, has been formed for preparing detailed post-war schemes. A Mining Adviser will also be appointed to advise the Government on planned exploitation of the mineral resources of the C. P. and Berar.

Ardil—The New Synthetic Fibre

Out of groundnut British chemists of the Imperial Chemical Industries have evolved a new sympathetic fibre, which is wool-like, does not shrink and is not attacked by moths. The material is known as Ardil from the fact that the idea was developed and the experimental work carried out at the I. C. I. works at Ardeer—a factory founded by Alfred Nobel. Ardil is a cream-coloured, crimped, resilent fibre which is soft and warm to the touch. It absorbs moisture like wool, and has a similar heat of wetting. It dyes like wool.

Wool is an animal protein fibre, while Ardil is composed of vegetable protein. The animal eats vegetable proteins in the form of grass, seeds, and seed-cakes and in its elaborate digestive processes breaks them up into simple units, the amino-acids. Only a small part of the protein finds its way into the hair of the animal. All this is a complicated, slow and wasteful process so far as the production of wool is concerned and the I. C. I. set out to make fibres more directly. The protein is simply extracted from groundnuts with dilute alkali, precipitated and then made into a spinning solution. The spinning solution is extruded through the very small

BENGAL CENTRAL BANK LTD.

TWENTY-SIXTH REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1944 TO THE SHAREHOLDERS OF THE BENGAL CENTRAL BANK LIMITED

GENTLEMEN,

The Directors have pleasure in placing before the Shareholders the Audited Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1944 together with the Auditors' Report thereon.

During the year under review, the business of the Bank showed very satisfactory expansion and progress. Three new Branches were opened during the year, namely, at Gaya, Patna, and Burrabazar (Calcutta). With a view to further expand the Bank, attempts are being made to purchase properties at Bombay, Delhi and Cawnpore for opening Branches at these important trade centres in Bank's own premises.

The net profit for the year including Rs. 73,843-4-1 brought forward from the previous year's accounts, is Rs. 4,58,979-8-8 out of which the Directors have transferred Rs. 1,00,000 to the Reserve Fund, leaving Rs. 3,58,979-8-8 for payment of Dividend, Income-tax etc.

The Directors recommend for payment of a Dividend at the rate of 6¼ per cent per annum, free of Income-tax, on the paid-up amount of shares in terms of the Bank's Articles of Association in this behalf. The Dividend, if sanctioned by the Shareholders, will be *Payable on Application.*

The state of Cash and liquid assets of the Bank as at 31st December, 1944, in comparison to the Bank's Deposit liabilities is a special feature of the Bank. A reference to the audited Balance Sheet accompanying this Report would show that the Deposits amount to Rs. 5,76,23,515-2-10 against which the Cash and Bank Balances together with the market value of the Investments amount to Rs. 5,16,10,565-3-3. In other words, about 89 per cent of the Deposits is represented by liquid and easily convertible funds. This is an unassailable position and the Directors believe that this fact, in itself, would beyond doubt indicate how cautious has been their business policy for primarily safeguarding the interests of the Bank's Depositors.

Messrs. S. K. Sen and J. M. Dutt joined the Board during the year under review. They retire under Art. 123 of the Articles of Association of the Bank but, being eligible, offer themselves for re-election. Of the other Directors, Messrs. B. N. Chaturvedi and R. C. Sett, being longest in the office, also retire but, being eligible, they offer themselves for re-election.

Messrs. Ray & Ray, the Auditors of the Bank, also retire but, being eligible, they offer themselves for re-appointment.

The Directors avail themselves of this opportunity in conveying their sincerest thanks to the members of Advisory Committees, Shareholders and Constituents of the Bank for their continued support and active co-operation for the progressive development of the Bank. They also thank the officers and staff of the Bank for their devoted services.

AUDITORS' REPORT.

We hereby certify that we have audited the above Balance Sheet, dated the 31st December, 1944, and the attached Profit and Loss Account for the year ending 31st December, 1944, with the books and accounts as kept at the Head Office. in which are incorporated the certified Returns of the Branches. We have verified Cash and Securities of the Head Office. We have to report that we have obtained all the information and explanations we have required, and that, in our opinion, the above Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanation given to us and as shown by the books of the Bank. In our opinion the books of accounts have been kept as required by law.

Solicitors and Notaries Public, Bombay.

Objects of the Issue.

The Company was originally incorporated in February 1940 as a Private limited Co. with a share Capital of Rs. 2,500 divided into 250 shares of Rs. 10 each. But as a result of the remarkable development of the Company and in order to cope with the increased magnitude of its business and especially to carry on and develop on an all-India basis the sale of **"Philips Tea"** and **"Philips Coffee"** which are the principal lines of the Company and which had become very popular with the Public and to develop the other existing business of the Company, the Company was recently converted into a public limited Company in the above mentioned capital.

A true copy of the Memorandum of Association of the Company is annexed hereto and forms part of this Prospectus.

PROSPECTS.

The existing lines of business of the Company and the proposed developments in its business may be indicated as follows:

1. **Tea.**
   (a) To make bulk purchases of Tea direct from Tea Estates in S. India, Assam and Calcutta.
   (b) To make bulk sale of Tea at wholesale rates to *merchants* and other consumers in Bombay and elsewhere.
   (c) The marketing of "Philips Tea" packets which is a special blend envolved as the result of prolonged experiments and study of popular taste and which has become highly popular in Bombay and other places.
2. **Chain Stores.**
   People in India are not familiar with the staggering growth in Europe and America of trading organisations known as multiple shops or chain stores. On a small scale the Company's six branches in Bombay have demonstrated the possibilities for expansion in India of this line of business. The Company proposes to open immediately as many branches or chain stores as possible in the city of Bombay and other suitable places and it also visualises hundreds of such multiple shops or chain stores throughout the country.
3. **Coffee.**
   The Company purchases Coffee direct from Coffee Estates in Mysore, Nilgiris and elsewhere or from the representatives of the 'Pool' and sells at wholesale prices. The selection, packing and marketing of "Philips Coffee" are being made by experts having several years experience in the line. This brand has caught the public fancy and has become extremely popular.
4. **Cardamom.**
   Very few people seem to be aware of the fact that though cardamom is grown exclusively in India and is an article of daily consumption in almost every household, the best varieties of cardamom, namely the "Green Berry" is mostly exported to foreign countries. Cardamom was till a few years back a neglected commodity in India. The Company has already taken steps to popularise superior cardamom by introducing and marketing well got up packets of **"Philips Green Cardamoms."**
5. **Cashew Nuts.**
   America was the first country to find out the nutritive value and the wholesome qualties of these nuts. European countries have begun to appreciate this. The Company proposes to improve the process of preserving these nuts and to introduce them throughout India in attractive tins and bottle packing.
6. **Rubber Latex.**
   This is one of the commodities which is now being sold by the Company. It is proposed to develop this business and also to take up the manufacture and marketing of rubber goods of all kinds which are in universal demand in India.
7. **Mosquito Coils.**
   The Company has a fully equipped factory for producing mosquito coils and had been manufacturing them before the war when exports are permitted facturing and selling the same. It is expected and raw materials could be freely imported the scope of this factory will be great. Efforts are also being made to supply these coils to Army.
8. The Company proposes to deal in and market the best varieties of **Pepper, edibile white Copra (Cocoanut), dry Ginger, Lemon grass Oil, Tapioca powder,** and **Starch** and other allied products. Care will be taken that in *quality and price they will maintain the tradi*tions of the Company's "Philips" brands of Tea, Coffee and other products.
9. The Company has already been devoting *its attention through its six shops in Bombay for* the marketing of its well known brands of Philips Tea, Philips Coffee and philips coffee powder for the past several years and the results establish beyond doubt that its products have been highly appreciated by the public.
10. It is well known that as a result of the Propaganda activities of the Indian Coffee Board under the patronage of the Government of India and of Indian States like Mysore and Travancore where most of the Coffee estates are situated, the demand for Coffee has grown to huge proportions and that the quantity of Coffee available for distribution has become inadequate.

Estimated Profits.

From its past experience the Company calculates on a very conservative basis the following estimates of net profits from its dealings in Tea and Coffee only:—

By bulk sale of Tea at wholesale rates of, say, 1,00,000 lbs. in a year at an average profit of one anna per lb. ... Rs. 6,250
By retail sale of loose Tea of, say, 1,00,000 lbs. in a year at a profit of 2 annas per lb. ... ... Rs. 12,500
By sale of Philips Tea packets which are now well known and widely appreciated. This line will have unlimited possibilities of expansion, particularly in the post-war period. The Company by its past experience expects to dispose of about a lakh of lbs. in packets at a profit of 2 annas per lb. ... ... Rs. 12,500
By bulk sale of Raw Coffee Seeds at wholesale rates of, say, 64,000 lbs. in a year at an average profit of ½ anna per lb. ... ... Rs. 2,000
By sale of Raw Coffee in retail of, say, 8,000 lbs. per year at a profit of 2 annas per lb. ... ... Rs. 1,000
By sale of Philips Coffee Powder. The sale of this has been controlled and the controller at present allows a margin of profit of 4 annas per lb. between the wholesale and the retail prices. On an estimated sale of 60,000 lbs. of Coffee Powder per year at a profit of 3 annas per lb. it would yield .. Rs. 11,250
Total estimated nett profits Rs. 45,500

This is more than 18 per cent of the total issued Capital of the Company.

Substantial profits far above the calculation can be confidently expected as a result of the vast expansion in each of the several lines of business in which the Company is interested, when the war is over.

Several plantation companies have addressed the Company, letters appreciating the Company's business and its proposed expansion and have promised assistance and co-operation. It is one of the aims of the Company to establish branches or offices in the Middle East and elsewhere after the present hostilities are over and also export to Russia, America and other countries where there are potential markets for Indian Tea and Coffee, Cashew nuts and Cardamoms.

Directors' qualification and Remuneration.

The qualification of a Director, other than a Director Ex-officio or alternate Director, shall be the holding of at least 100 shares in the Company.

The remuneration of each Director shall be at the rate of Rs. 25 or such other sum as may from time to time determined by the Company in Ordinary General Meeting for each of the meeting of the Board attended by him.

A Director shall be entitled to travelling, hotel and other expenses incurred in connection with the business of the Company.

If any Director is called upon to perform any extra or special service in the interests of the Company, the Company may remunerate him for such service as determined by the Directors.

Directors' Interest.

Messrs. K. M. Philip and K. C. Mathulla are partners in the firm of M/S. Young India Agencies *(Bombay)*, the Managing Agents of the Company and as such are interested in the remuneration and commission payable to the said Managing Agents. All the Directors are further interested only in so far as they hold shares in the Company and receive fees from it as Directors.

Management.

The general management of the business of the Company, subject to the provisions of the Companies Act and to the control and supervision of the Directors shall be carried on by the Managing Agents. The Articles appoint the firm of Messrs. Young India Agencies (Bombay) as now constituted or as may be constituted hereafter and their permitted assigns as the Managing Agents of the Company for a period of twenty years from the 21st day of February 1945., on a remuneration consisting of an office allowance of Rs. 500 per month and a commission of 10. per cent on the nett profits of the Company calculated in accordance with Section 87 C. of the Act. The remuneration does not provide for a minimum payment in case of absence of or inadequacy of profits, but the said office allowance is exclusive of rents of office premises and all incidental expenses in connection with the running of the office, including salaries, wages, etc. The Managing Agents are also authorised to nominate a person or persons not exceeding two to be Ex-officio Directors of the Company.

Voting Rights.

On a show of hands every member, not indebted to the Company in respect of his shares, who shall be present in person shall have one vote. Upon a poll every member who is present in person or by proxy shall have one vote for every share held by him.

Transfers.

The Directors may decline to register any transfer of shares whilst any *member* executing the same is indebted to the Company or unless the Directors in their absolute discretion shall approve such transferee. No reasons need be given by the Directors for any disapproval.

Brokerage and Underwritings.

The Company reserves the rights to remunerate such Brokers, Banks and other persons or firms subscribing to or instrumental in procuring subscriptions to the issue of shares as it may choose to so remunerate, by commission not exceeding 5 per cent of the face value of the shares.

Any underwriting commission or brokerage may be paid by the Company in cash. The Company shall pay a brokerage of 2½ percent i.e. 4 annas per share to certified Brokers or Bankers on all allotments made on applications bearing their stamp.

Inspection of Documents.

Copies of the following documents are open to inspection at the Registered office of the Company and at the office of Mr. P. R. Subramanyam at 61, Stock exchange buildings, Apollo Street, Fort, Bombay, during business hours:—

(1) The Company's Memorandum and Articles of Association.
(2) Copies of letters addressed by leading Planting Companies to the Company.

Accounts.

The report of the Auditors, as required by the provisions of Section 93(1A) and (1B) of the Indian Companies Act 1913, is annexed hereto and forms part of the prospectus.

General.

Application for the shares must be accompanied by a remittance of the sum payable on application and made payable to the Company or its Bankers or its Managing Agents or to its Brokers.

Where no allotment is made the application money will be refunded in full. Where partial allotment is made, the surplus remaining thereafter will be refunded. The Directors reserve their rights to reject any application without assigning any reason therefor.

An application form for shares is appended hereto. Additional forms and copies of this prospectus may be obtained from:—

(1) The Registered office of the Company.
(2) The Bankers of the Company.
(3) The Brokers of the Company.
(4) Young India Agencies Ltd., Thambu Chetty St. Madras.

PROSPECTUS

Objects

The Company has been formed generally for the purposes set out in its Memorandum of Association and particularly for the purposes of taking a transfer from Messrs. P. A. Hormarjee and Co., of the Managing Agency, of the Moon Mills Ltd., of Bombay, and to acquire the Selling Agency and the Brokerage and Muccadamage of the Moon Mills Ltd., and also to acquire 750 Shares of the Moon Mills Ltd., and to carry on business as Managing Agents, Selling Agents, Brokers and Muccadams of the said Company.

By an Agreement dated the 1st May, 1944, entered into by Messrs. Soorajmull Nagarmull on behalf of Messrs. M. L. Jalan and N. K. Jalan, Promoters of the Company, with Messrs. P. A. Hormarjee and Co., Messrs. P. A. Hormarjee and Co. agreed to transfer to Messrs. Soorajmull Nagarmull or their nominees the Managing Agency of the Moon Mills Ltd., held by them under an Agreement dated the 28th June, 1943, made between the Moon Mills Ltd., and Messrs. P. A. Hormarjee and Co. , as also the Cloth Selling Agency, Muccadamage and Brokerage of the Moon Mills Ltd,, in terms of the said Agreement.

Messrs. Soorajmull Nagarmull acting on behalf of Messrs. M. L. Jalan and N. K. Jalan nominated the Company of the office of the Managing Agents of the Moon Mills Ltd., and for transfer of all rights under the said Agreement dated the 28th June, 1943, and by a resolution passed at the Extraordinary General Meeting of the Moon mills Ltd., held on the 17th July, 1944, Moon Mills, Ltd., has approved of the transfer to the office of the Managing Agents and of all rights under the said Agreement dated the 28th June, 1943,, to this Company.

The 750 Shares of the Moon Mills Ltd., have also been taken over by the Company.

Cotton industry is an industry of world-wide importance and it is anticipated that the company will derive its share of the prosperity which the industry is expected to maintain. On account of the present War, it is impossible to import foreign piecegoods and piecegoods of Indian manufacture are in very great demad.

The Company will be entitled to the remuneration, emoluments, and commission payable by the Moon Mills Ltd., under the said Agreement dated the 28th June 1943, as follows:—

(a) The entire Managing Agency allowance and commission as from the 1st of January, 1944.

(b) Muccadamage and brokerage as from the 1st of April 1944, subject to the payment of actual out-of-pocket charges in respect of cotton delivered on and from the 1st of April, 1944, in respect of contracts entered into prior to the 1st of May, 1944. The out-of-pocket charges will include the remuneration and brokerage of Muccadums employed by the previous Managing Agents.

(c) Selling Agency Commission as from the 1st April, 1944, subject to the payment of actual out-of-pocket charges in respect of Contracts entered into prior to the said 1st of May, 1944, and delivery made against the same on or after the 1st of April, 1944. The out-of-pocket charges will include the commission and remuneration of the Sub-Agents employed by the former Managing Agents.

Mr. C. P. Wadia and Mr. Adi C. P. Wadia are the partners of Messrs. P. A. Hormarjee and Co of 70, Forbes Street, Temple Bar Building, Fort. Bombay. This partnership came into existence in 1942 and as such we are setting out below the profits of the parternership firm for 1942 and 1943.

Sources of income.	1942 Rs.	A.	P.	1943 Rs.	A.	P.
Agents' Remuneration	2,59,432	9	9	4,30,500	11	0
Commission on cloth sales ..	2 67,307	2	9	4,23,857	3	9
Maccadamage	28,384	0	6	29,606	1	6
Cotton Brokerage ..	6,602	6	6	10,871	11	0
Total ..	5,61,726	3	6	8,94,835	11	3

As previously stated Messrs P. A. Hormarjee and Co. was a partnership firm and from information which is available it appears that it had no balance Sheet prepared.

The gross receipts on the above sources in 1943 has been as under:—

Agents' Remuneration	...	4,30,500
Cloth Selling Commision	...	4,23,357
		8,54,357
Muccadamage	...	29,606
Cloth Selling Commission	...	4,23,857
		8,92,909

In addition to this there is devidend on 750 shares held by the Company. It is expected, therefore, that the income of the Company from the above sources only will be fairly substantial for some time to come in addition to income from other activities which the Company proposes to undertake under the Articles of Association.

Minimum Subscription

The Company was originally incorporated as a private limited company. The necessary sanction for issuing capital has been obtained from the Examiner of Capital Issues, Government of India, which included a condition that the Company shall constitute a Machinery Renewal Reserve Fund equal at least to the Mill's existing liquid assets and shall insert a clause in the Articles of Association that the fund shall not be distributed or otherwise used except for actual renewals of machinery without the approval of the general body of shareholders. Accordingly the clause has been inserted in the Articles of the Company. The Company has started doing its business and as such no question of minimum subscription arises.

In the opinion of the Directors, the minimum amount required to provide for the purchase price of all the property, that is, the Managing Agency business and the shares is Rs. 67,50,000 and for preliminary expenses including brokerage and underwriting commission and stamp duty is Rs. 75,000.

The purchase price of the Managing Agency Selling Agency, Brokerage and Muccadams etc., of Messrs. P. A. Hormarjee and Co. together with 750 Shares of the Moon Mills Ltd., to Asiatic Textile Co. Ltd., is Rs. 67,50,000 as per Prospectus. As the above Company was started on the 13th May 1944 no account has become due yet and as such no account has been prepared.

The Issued and Subscribed Capital will at present be Rs. 50,00,000. The balance of Rs. 17,50,000 will be provided from borrowing, as also all further finances required for the purposes of the business of the Company.

Underwriters.

Nil

Interest of Directors

The following Directors are interested in the formation of the Company to the extent indicated hereunder.

Messrs. M. L. Jalan and N. K. Jalan are the promoters of the Company.

No sums have been or will be paid to any Director in cash or share or otherwise to qualify him as a Director.

Agreements

The following Agreement has been entered into by or on behalf of the Company.

Agreement dated the 1st May 1944, between Messrs. Soorajmull Nagarmull acting on behalf of Messrs. M. L. Jalan and N. K. Jalan of the one part and Messrs. P.A. Hormarjee and Co., of the other part under which the Company has acquired the Managing Agency, Selling Agency, Muccadamage and Brokerage to herein above together with 750 Ordinary shares of the Moon Mills for a consideration of Rs. 67½ Lakhs.

fineholes of a spinnerette into a coagulating bath and fine filaments are obtained, which could be cut to required length. They may be mixed with wool, cotton or rayon and yarns may be made on the worsted, woollen or cotton systems according to the type of fibre required. Groundnuts grow in large quantities in India and West, South and East Africa as well as in China, Borneo and America. Before the war about 8 million tons per annum were harvested. The oil is used for human consumption—such as salad oils and margarine—and the residue after the protein has been extracted for the manufacture of Ardil, can be used as cattle feed.

It is expected that Ardil will be cheaper than wool and so reduce the price of such fabrics. It is not merely a substitute for wool nor is it competitive with wool It is a complementary fibre and may enable lighter woollen fabrics to be made. Fabrics with the feel and appearance of wool have been made from Ardil and rayon. This indicates a field in which great textile developments are possible.

Guide to Official Statistics Vol. II

If paucity of economic statistics has been the chief bother of the research scholars and financial journalists in India the reliability of the data placed before the public till recently has been no less so. Lack of an efficient organisation for periodic collection of statistical material has long been a stumbling block along the path of efficient administration, economic planning, tax reform and organisation of marketing of products. However, striking changes have recently occurred to indicate that the Central Government has at last now taken up the question of Statistical organisation in good earnest and the Economic Adviser's index number of prices, has borne testimony to the coming progress. While careful collection and regular publication of reliable data is no doubt a positive service to the country, the clear exposition of the limitations of the Government statistical publications is no less important for the correct handling of the materials. Mr. S. Subramanian, Statistician to the Economic Adviser to the Government of India, has fully explained in "Guide to current official statistics, Vol. I". (Published in 1943) the sources of statistical details, how they are complied and how they should be understood. He has carefully coordinated the very widely scattered sources of information and has satisfactorily resolved the apparent contradictions in the Government statistical publications. While Volume I, covered only Production and Prices, Vol. II, just now published, covers eighteen other detailed heads like Trade, Transport and Communications, Finance etc. The incomplete and scrappy nature of official figures is mentioned with due emphasis. The case for an elaborate machinery to collect trade statistics cannot be built better than on the expert findings of Mr. Subramanian. His frank observations on internal trade statistics, road borne traffic, index number of profit, etc., underline the urgent need for a proper machinery for a satisfactory collection of economic data and more comprehensive statistical publications for popular use. This critical estimate of Government figures also contains a two-fold index, viz., the "Publication index" and "Subject index' saving lot of precious time, and would be followed by another volume covering Public Finance, Education, Public Health, and Labour statistics. The publication of this explanatory volume marks another step towards better commercial intelligence service, badly needed in these days when people have learnt to think in terms of bold planning. The Economic Adviser and his Statistician deserve congratulations for making Government statistics really useful and intelligible.

National Planning of Elec. Development

The address delivered recently by M Mathews, Electrical Commissioner with the Government of India and Chairman of the Central Technical Power Board to the Institute of Engineers, New Delhi, brings out the scope for electricity development in the country, the existing maldistribution of electrical energy and, most important of all, the goal that is aimed. The total electrical energy generated in India in 1943 was approximately 3,578 million k.w. about the same as the weekly production of energy in the U. S. In the U. S. about 180 times as much energy was used per head of population as in India,

(Continued on age 450)

ASIATIC TEXTILE COMPANY LIMITED PROSPECTUS—Contd.

Deed of Transfer and Assignment of the Managing Agency and all other rights under the Agreement dated 28th June, 1943, from Messrs. P. A. Hormarjee and Co., to this Company.

Directors' Qualification and Remuneration

Under the Articles of Association the qualifications of every Director, other than ex-Officio Director, shall be the holding of in his own name or jointly with any other person whether beneficially or as trustee or otherwise of 50 Ordinary shares in the Company of the face value of Rs. 5,000 and until otherwise determined by the Company in General Meeting the remuneration of each Director, including an ex-Officio Director, for his services as such shall be Rs. 50 for every meeting of the Directors which he attends.

Preliminary Expenses

Messrs. M. L. Jalan and N.K. Jalan are the promoters of the Company and they have negotiated the preliminary Agreement and all matters relating to the flotation and registration of the Company. They are meeting all preliminary expenses of and incidental to the formation and registration of this Company and are entitled to be reimbursed and indemnified against the whole of this expenditure and all liabilities incurred on behalf of this Company. Messrs. M. L. Jalan and N. K. Jalan are receiving nothing for their services as promoters. The preliminary expenses are estimated not to exceed Rs. 10,000 (exclusive of stamp duties and brokerage).

Borrowing Powers

The Articles provide that the Directors may from time to time at their discreation raise or borrow and may themselves lend and secure the payment of any sum or sums of money for the purpose of the Company.

Voting Power

On a show of hands every member present in person at a meeting and holding at least one ordinary share shall have one vote. Upon a poll every member present in person or by proxy shall have one vote for every ordinary share.

Restriction of Right to Transfer and Vote

The Directors may decline to register any transfer of share upon which the Company has a lien and in the case of shares not fully paid-up may refuse to register a transfer to a transferee of whom they do not aprove.

No member may vote, act as a proxy or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

Powers of Directors

No restrictions are imposed by the Articles of Association on the Directors' powers of management and the control of the Company's affairs is vested in the Directors.

The powers of the Directors are, however, subject to any regulations not being inconsistent with the Articles of Association or the Indian Companies Act which may be made by the Company in General Meeting.

Documents

Copies of the Memorandum and Articles of Association of the Company and the Agreement hereinfore referred to can be inspected whilst the subscription list is open, during the usual business hours, at the Registered Office of the Company or at the office of the Company's solicitor.

Application for Share

Application for Ordinary shares should be made on the appropriate form accompaying this Prospectus and sent to the Company or any branches of the Company's Bankers together with a remittance of the amount wayable. Where no alterrments are made the deposit will be returned in full, where the number of shares allotted is less than the number of shares applied for, the balance of the deposit after providing for payment in full on the shares allotted will be returned.

Brokerage

A brokerage of one per cent. in the case of the Ordinary shares will be paid up by the Company on allotments made in respect of applications bearing the stamp of any recognised firm of Stock Brokers.

Copies of the Prospectus and form of application for shares may be obtained from the Registered Office of the Company.

Clive Street Gossip

In the last week's issue, I referred to the important developments in regard to the question of commercial safeguards. And it is indicative of the changed mood of which I wrote that Mr. Subedar's motion has now been carried without a division. Sir Ardeshir Dalal deserves well of the country for extricating this question from its political entanglement and emphasising that this question is directly connected with the issues arising from economic planning for India. That is to say, the much-vexed question of commercial safeguards has now been lifted out of the political sphere and brought into the economic sphere. This is a great gain. It seems also likely that Sir Ardeshir will be shortly proceeding to London in order to implement the Government undertaking to open negotiations for a convention or a treaty so that such a convention or treaty will displace the obnoxious statutory provisions. In this connection, it is necessary to have a clear idea of the earlier history and of the present position, as well as to have some idea of the shape of things to come in the postwar years. The most important thing to note is that, except in the later stages of the Round Table Conference, there had been general agreement that the kind of protection which British trade interests in India needed is best secured, not by statute, but through a convention. This was the view of the Montford Reforms. This was the view of the Simon Commission. The second important thing to bear in mind is that, as late as 1926, the External Capital Committee unanimously reported that, in certain categories of industrial undertakings, there should be a majority of Indian interests in the capital, directorate and management. Sir Basil Blackett, who was then Finance Member, and Sir Charles Innes, who was then Commerce Member, were on this committee; and they subscribed to the view that discrimination in favour of Indian interests was necessary and justified in certain industries and in certain circumstances. Within less than six years, this view which had the support of the then Government was abandoned in favour of the so-called reciprocal idea—that is to say, if there is no discrimination against Indians in Britain, there could be no discrimination against the British in India. It is strange that an admission of the 'twenties was thus negatived by legislation of the 'thirties.

* * * *

At the time when the External Capital Committee reported, no British interest in India put forward any claims for special safeguards. It is, therefore, pertinent to enquire what exactly put the idea of safeguards into the heads of the British community in India. As I have more than once stressed in these columns, it is the unbalanced propaganda carried on by the Scindia interests for Coastal reservation, that had the effect of, so to say, waking the sleeping dog. At that time, the sponsors of the propaganda for Coastal reservation had no doubt in their mind that they were doing invaluable national work. The intensity of the propaganda provoked a no less intense campaign for protection or safeguards by the British vested interests in India. So far as Coastal reservation is concerned, the flamboyant propaganda has not advanced the cause one inch. But this induced such violent reactions in the leaders of British trade and commerce in India, that they launched a powerful counter-offensive and exerted all the influence they had on public policy relating to India. The result is that, though there was no question of commercial safeguards in 1926, this had become by 1930 a colossal issue. The British interests had grown so overwhelmingly powerful by the time of the third Round Table Conference that they carried everything before them and succeeded in placing on the Statute Book clauses on safeguards which in their scope and practical effectiveness, far exceeded their most sanguine expectations.

* * * *

As is to be expected, these safeguards have evoked more and more bitterness. The attitude of the British business community in Calcutta, far from helping to assuage feeling, has been responsible for fanning the flame of bitterness. The more powerful managing agency houses in Calcutta are the British houses. But, bar a few exceptions, the majority of shareholders in the companies under British managing agencies has been Indians. In some cases, Indian shareholders and British shareholders in such companies are ten to one. In spite of the actual proprietors being so predominantly Indian, and in spite of the business being run in India and profits made in India, British managing agency houses have been adopting the most unreasonable attitude in the dispensing of patronage arising from their business. Take the question of directorate. One would think that, with Indian shareholders being seventy to eighty per cent of the total, the majority of directors in such companies will be Indians. Far from it. A typical directorate in Clive Street is a representative of the managing agency firm, a partner of a broker's firm and a partner of a firm of solicitors. The commonsense assumption is that the directors are representatives of the shareholders. But how can a solicitor be considered in any sense a representative of shareholders? Equally, how is a share-broker fitted for such a role? In many of such cases, the broker-director and the solicitor-director do not perhaps even have qualification shares. The managing agents oblige them by lending shares which they continue to keep with themselves with a blank transfer. The routine directorate in Clive Street is just the managing agents and their satellites. This practice persists to this day. And what are we to think of our British friends who are still complacent over this state of affairs?

Or, take the question of the banking and insurance business arising from the management of these companies. I made enquiries a few years ago; and, unless you consider the Imperial Bank of India a genuine Indian institution, there was hardly a British-managed industrial concern in Calcutta which had an account with an Indian bank. I remember only two occasions when two British friends sought my assistance to open an account in an Indian bank. In both these cases, the request was accompanied by another to arrange for overdraft facilities for them! British managing agency houses do not place any of the insurance business with Indian companies. I may be told that this is an extreme statement. For, in recent years, some of the British agency houses have been representing Indian insurance companies. But the fact I seek to emphasise is that the experience of the Indian insurance companies has been that the business that is passed on to them by the British agency houses is pretty poor class business. The best class business is reserved for the insurance company whose shares are held by the managing agency house—most of the managing agency houses have a controlling interest in some insurance company or other. The better-class business is passed on to such foreign companies as have given their chief agency to the managing agents. The worst risks are passed on to the Indian companies. By the same token, Indian brokers, shippers, loose jute sellers do not bask in the sun of the British bosses as do their British compeers. The Briton in Calcutta is the worst specimen of a political diehard. All the political changes in India, and throughout the world in the last six years, have taught him nothing. He has yet seen no necessity for changing his ways and for developing a newer and more understanding relationship with Indian clients and constituents.

It is for this reason that the public shows sympathy towards the movement for the displacement of British capital. Thanks to the colossal accumulation of

tax evasion money, and thanks to the facilities provided by stock exchange securities for the diversion of black money, there has been widespread and brisk cornering of shares of companies under British agency groups. I understand that the shares of Albion, Lothian, Hastings, Budge-Budge and New Central jute mills belonging to the Andrew Yule group as well as Clive belonging to the Bird group and Soorah belonging to the McLeod group have been subjected to the attentions and affections of the corner-mongers; and, in many cases, cornering has been successful to the extent of the operators securing more than 50 percent of the capital. I also understand that even the shares of Reliance are steadily accumulating in the hands of some Indian magnates. These attempts to corner shares are not confined only to jute mills. Colliery shares like West Jamuria and Hurriladih belonging to the MacNeill group and Central Kurkend and Bokaro and Ramgur belonging to Anderson Wrights have similarly received the attention of the enthusiasts in cornering.

* * * *

For my part, I must frankly own that I am far from happy at this tactics of cornering. If these cornerings succeed, the effect may well be that a group of stock exchange gamblers will be getting control of concerns which were more or less well run by experienced British managing agents. The mere change from white capitalists to black capitalists leaves me cold. If these developments are taking place, it is our British friends who must take the main blame.. There are still companies like Empire, Alexandria, Reliance and Khardah on whose directorate there is not one Indian. Some jute mills have recently taken steps to admit Indians to the board; but such Indians belong mostly to the category of **Jo Hookum**. Unless there is a drastic change in the attitude of the British managing agency houses, the general sympathy of the public will be in favour of those who wish to supplant them.

* * * *

As I have said, I am not enamoured of a mere change in the complexion of the capitalists. While I have been candid and outspoken in my criticism of British industrialists in India, I must be equally frank in my examination of the behaviour and attitude of Indian industrialists. This examination becomes all the more necessary in view of the sorry record that they have built up during the war years.

INDIAN TOOL MANUFACTURERS LTD.
Bank Street, Fort - BOMBAY

The record of Indian business during the present war period considered as a whole is such as it would take it many years to live down. The working of the controls in every market, the circumstances of their inception, the scale of operations in the black markets, the scale of tax evasion and the singular absence of a sense of obligation to the nation and to the public at large—these features of Indian business during war time have not escaped the attention of any member of the public. One has only to run one's mind back over the last six years, from the moment the declaration of war was made known, to recall all the machinations, dodges and subterfuges that the business classes in every section of our business life resorted to in order to make the most of wartime scarcity with no thought whatsoever for the poor consumer. That, in some respects and some areas, official controls have added to the privations and sufferings of the people is by no means an extenuation of the offences which many Indian businessmen are guilty of. Take rice, the commodity in which acute scarcity was experienced earliest. Considering its importance to the people, one would expect all rice dealers to band themselves together, put forward a scheme for equitable distribution at fair prices and show themselves capable of eliminating profiteering from their ranks. Instead, the lives of a whole people were held to ransom. Even where Governments were quick to interfere, the immediate effect was an increase in the sufferings of the people. Let us not forget that, in almost every case in which a Government official is suspected, or found to be guilty, of corruption, there are more than one businessman to aid and abet the crime. Even today after full two years of official procurement and rationing, the black market in rice is far from extinct.

* * * *

Or, take the case of cotton cloth. The cotton mills of India, which for decades have been the first charge on the Indian's public spirit and capacity for self sacrifice, have shown no compunction in taking advantage of wartime scarcity to fleece the consumer. I have been told that a scheme for the regulation of prices was put up by one section of mill-owners at an early stage of the war and rejected by the others. I do not know how far that is true. And if it is, it makes the indictment even worse. But even if it were not, an analysis of the balance sheets of cotton mill companies, such as "Indian Finance" published some time ago, should suffice to show that the mills had fleeced the consumers, even though they themselves could profit little by it, thanks to the E.P.T. Instances of this attitude are indeed legion. They all go to show that the Indian business classes have been weighed during this war period and found wanting.

* * * *

I do not wish to indulge in the kind of cant that is also national self depreciation. Nothing is gained by exaggerating the virtues of others. But the fact remains that most Indian businessmen have missed the fine points of the game of commerce. It is one thing to make the most of legitimate advantage. It is quite another to fatten on the sufferings of the people. If we reach the stage when certain things are far dearer in Chandny or Canning Street than in Whiteaways or Hall and Andersons, places where, the average Indian used to think, prices are forbiddingly stiff, there is something fundamentally wrong with our notions of business. The temptation to exploit every degree of shortage or scarcity is found too strong to be resisted. No value is set on the reputation and goodwill which can be built up by fair dealing in critical times. While British firms maintain their prices at a fair level, irrespective of fall in production or increase in demand, no similar claim can be made for the majority of Indian firms. The immediate is the enemy of the distant—that is a truth which Indian businessmen seem flatly to deny. Even well-established prosperous firms remain eternally suspect of short deliveries; they do not seem to have outgrown their belief in such malpractices —the need for them is out of the question. Such is commercial morality in India that our trade commissioners abroad never tire of dwelling on the harm done to India's good name in foreign markets. So long as Indian business lacks the substance of commercial morality, it is idle to look for its progress, or for the progress of the national economy, for the matter of that. There can be no such progress, unless Indians learn to run their business on an increasingly impersonal and institutional basis, functioning according to well understood principles, alike of profit-making and of service to the public. Business run on narrow lines with undue dependence on the personal gifts of a few individuals, and, in the nature of things, exposed to their foibles, can have no stable or bright future. Only too often is it the case in India that even the biggest and the most complicated concerns are just family affairs, run almost as part of the households concerned, jealously conserving every pice in the pockets of its own members and taking no thought for the sum and kind of ability that the business requires for its progress. Nothing is gained by overlooking these features of Indian business; and they are extremely relevant to the nature of the convention, we must enter into with Great Britain. But that is a topic I must reserve for discussion in a later issue.

(FROM OUR CORRESPONDENT)

New Delhi, April 2.

Delhi has witnessed a spate of speculation during the last week such as it had never seen before. That is only to be expected. Lord Wavell's visit to London with Mr. Menon in his entourage, the approach of the end of the war and, even more certainly, of the San Fransisco Conference, the departure of Sir Francis Mudie to point the Viceroy London—all these provide a setting in which political speculation is a natural growth. The naturalness, however, hardly makes a difference to the job of appraising the rumours that are afloat. But there are great expectations; though the shape of things to come is still busy even in its broad outlines.

Two days ago, a news agency forecast that the Central Assembly before it concludes its session will hear an announcement of the results of the Wavell Mission and that the entire theme of the announcement will be formation of an all-party Government at the Centre etc. Some observe that Lord Wavell will make this pronouncement at a joint session of the Council of State and the Central Assembly, say on April 12. Another forecast is that the Viceroy will make a declaration at the National Defence Council which is meeting here on April 16. Certain political observers are inclined to the view that the announcement will be made in the House of Commons after the Easter recess. Meanwhile there are others who prophesy that Lord Wavell and party, including Sir Francis Mudie, Mr. Conran-Smith, Mr. Jenkins and Menon, will all return to India in the second week of April, invite Mahatma Gandhi, Mr. Jinnah, Sir Tej Bahadur Sapru, leaders of other political parties, Party leaders in the Assembly and former Congress Premiers to a conference, announce their plans and discuss them. Besides these, some expect another "Cripps" here, to be followed by meetings and conferences. The above sums up the sea of speculations.

* * * *

Meanwhile Sir Tej Bahadur Sapru on behalf of the Conciliation Committee, which is in session here now has cabled to Lord Wavell a resolution which the Committee has unanimously adopted. The resolution contains the following four-point plan of the Conciliators for resolving the Indian deadlock:—

1. Immediate release of all political prisoners and detenus;

2. India should, by a Royal proclamation, be declared an independent State and treated as a full Dominion, although till such time as the new constitution comes into force, the Government of the country will have to be carried on generally within the framework of the Constitution Act of 1935;

3. Section 93 of the Act in the Provinces should be withdrawn forthwith and Legislatures allowed to resume their normal functions along with popular Ministries; and

4. Formation of a national Government at the Centre.

I learn that the Conciliation Committee had originally no idea of adopting resolution incorporating their general plan now—in the midst of their session. Nor had they any idea of cabling it to London at this stage. It appears the decision was revised so that the views of the Committee to which, according to reports, the Viceroy attaches the greatest importance, might be available to the British Cabinet and the Viceroy during his talks with the British Government. It is also gathered that the Viceroy has been earnestly awaiting the [illegible]

It looks that the Government of India have decided to drop the Income-tax Bill. The Finance Member announced in the Assembly to-day (Monday), that he was not in a position to move the motion for consideration of the Bill as reported by the Select Committee. Obviously party leaders and members are not agreeing to the desire of the Government to re-introduce those clauses in the Bill which have been rejected by the Select Committee and the Government are sticking to the threat that without these clauses they would be forced to give up the Bill—which means that the few small benefits which the other provisions confer will be lost to the tax-paying public. The Select Committee, it is recalled, omitted Clause 8 empowering an Income-tax Officer to visit the premises of persons liable or believed by him to be liable to assessment and if necessary to enter such premises and call for and inspect accounts. Members apprehend that if such powers are given to the Income-tax Officers they may lead to harassment.

* * * *

The fate of the Income-tax Amendment Bill also hangs in balance. The European Group, it is freely mentioned, are moving Heaven and Earth to remove the clauses inserted by the Select Committee for limitation of overall expenses for fire insurance companies. It is said that Sir Azizul Haque has informed party leaders that unless there is concensus of agreement among them, he would be compelled to drop the Insurance Bill.

* * * *

The Assembly to-day disposed of six official motions, Dr. Ambedkar's Bill to provide for holidays with pay for factory workers was passed. The Labour Member accepted Mr. Ananthasayanam Ayyangar's amendment raising the number of holidays with pay from 7 to 10 days in a year. The House adopted Sir Azizul Haque's Bill to amend the Indian Companies Act, 1913. The Bill is intended to facilitate the withdrawal of an employer's contribution to provident funds. The House passed the Commerce Member's Indian Merchandise Marks (Amendment) Supplementary Act, 1945, as reported by the Select Committee and the Indian Patents and Designs (Amendment) Act, 1945. The Law Member's Repealing and Amending Act, 1945 was also passed. The House then agreed to Mr. J. D. Tyson's motion that the Indian Central Oil Seeds Committee Act 1945 be referred to a Select Committee. He explained that the Act sought to finance researches in oil seeds by means of a cess at a rate not exceeding one anna a maund. He estimated that the levy would fetch about Rs. 25 lakhs. The fund would be administered by a committee. He hoped that co-ordinated research would prove helpful to the grower, manufacturer and the consumer.

"HILL-BIRD".

(Continued from page 427)

banks in India whose capital is above Rs. 25 lakhs will be invited to contribute towards 50 per cent of this capital of Rs. 5 crores. The contribution by the banks will be in proportion to their paid-up capital plus reserves. The balance of Rs. 2½ crores is to be thrown open to the public. The directorate will be composed as to half of representatives elected by banks, and as to the other half representatives elected by the shareholders. If an exchange bank under such auspices is started, we have no doubt in our mind that the Reserve Bank will be only too happy to extend to it all the facilities and credentials necessary to secure for it due recognition in international financial centres. This is a matter in which Sir Homi Mody as the Chairman of India's largest joint stock banks must take the lead.

The exchange market has witnessed lively business and healthy sentiment.

Tea and Coffee

The advent of branded goods and chain stores makes it unnecessary to discuss prospects for a company like the India Coffee and Tea Distributing Company, Limited, whose prospectus sets out, in great deal the intentions of the promoters. The branch of wholesale business which the company will conduct is the least risky imaginable, and the line of goods it is intended to handle is both safe and remunerative. Profit margins in retailing must be necessarily moderate but the total estimated in relation to issued Capital ensures the payment of dividend from the outset. It is the latter point which will claim notice as it marks off the distributing company from the average plantations. There is a public for PHILIPS TEA already and the tradition of merchandising may assist the new company which has important connections with South Indian planting interests. If the present issue is modest, it may well be pointed out that capital outlay is not required in this case, and turnover rather than resources must determine profits. The Ordinary shares represent a very fair proposition albeit of new kind and it is on this score that the investor's attention must be directed to them. The ten rupee shares are calculated to interest those who have a regional or local interest in such an interesting venture as that described in to-day's prospectus.

(From Our Correspondent)

BOMBAY, April 3

The new provincial budgets, by reason of the considerable affluence which they indicate in provincial finances generally, evoke a strong feeling of nostalgia for popular ministries; but this is perhaps the most pronounced in the case of Bombay. For, post-war planning looms naturally large in the budget and when a regime functioning under Section 93 of the Government of India Act affects the idiom of a people's ministry, there is a strange air of unreality about the whole thing. The Bombay Budget for 1945-46 in fact contains the hope expressed by the Governor of Bombay that this will be Bombay's last war-time budget and "perhaps also, the last budget under Section 93". The war time prosperity of the province is evident in the budget, and while it is a matter for some satisfaction that the resources have been properly husbanded, it is not untinged wih a regret that so little has been done during the war period itself. The emphasis on action in the post-war period is heavy and recurrent. And as if to lay the flattering unction to their heart that something has been done to make use of the better revenue position, the Adviser regime merely effects token increases in the expenditure on the so-called nation building services. It is therefore correct to say that, while the present administration has been aware of the need to conserve resources for the future for which it undoubtedly deserves a measure of credit, it has been content to mark time so far as expansion is concerned.

* * * *

Unexceptionable indeed are the criteria formulated by the Governor in the budget proposals. These have been stated thus:—(1) the most legitimate use of current war time increase in revenue is that which subserves post war economic rehabilitation; (2) to the extent that the financing of reconstruction depends on the future capacity to borrow, it is necessary to safeguard the credit-worthiness of the province by making all reasonable provisions for the early liquidation of existing debt liabilities, (3) while essential schemes for development must not in the meantime be held up, non-essential and therefore inflationary expenditure must be severely checked (?) and extreme caution observed in committing the province to permanent increases in the expenditure. Few would be disposed to quarrel with the first two observations, and it is only in regard to what could have been done during the war period itself that criticism would fasten. A refreshing feature of the budget statement is that it falls neatly into the three categories viz. Post-war reconstruction, Debt redemption and Nation building, and avoids the matter-of-fact tone of mere accounting.

* * * *

The major proposals of the budget may be briefly reviewed under the above categories. The growth of the post-war reconstruction fund has already been indicated on a previous occasion by me when adverting to the financing of the provincial plan. Suffice it to say that it is proposed to add Rs. 4 crores to the fund during the year so that it will stand at Rs. 11 crores at the end of 1945-46. A further Rs. 4 crores is expected to be added in the coming year, so that in 1947-48 when the reconstruction programme is scheduled to start, the fund will have Rs. 15 crores. The commencement of the reconstruction programme it to be synchornised with the complete redemption of the existing debt of Rs. 21 crores, towards which a specific fund called the debt redemption fund has been instituted during the current year and a sum of Rs. 2 crores has already been transferred to it. The accelerated liquidation of existing debt is a very laudable idea. The debt position of the province today is that an amount of Rs. 10½ crores is owed to the public and Rs. 10½ crores is owed to the Government of India. The first is made up of three loans maturing in 1955, 1956 and 1958 respectively. These loans were utilised for reducing the consolidated debt owed to the Government of India and in fact, thereby the province effected a saving of 1½ per cent since the rate of interest charged on the consolidated debt previously was 4½ per cent whereas present loans carry interest at 3 per cent. For the amortisation of the 3 per cent loans, separate sinking funds already exist. The remainder of the consolidated debt (Rs. 10½ crores) is to be repaid in half-yearly equated instalments spread over a period extending to 1982, with an option in 1960 to repay the whole or any part of the balances then outstanding. It is a good thing that the debt redemption fund has been started since it supplements the existing provisions and helps both to increase the rate of amortisation of the 3 per cent loans and to enable repayment of the consolidated debt at the earliest moment. A sum of Rs. 2 crores has been transferred to the fund during the current year and a like amount is provided in the buget for 1945-46. If similar allocations could be made in the coming budget, the fund should require no contribution after 1948-49. The broad idea is that, as a result of these contributions, the existing debt of the province will have been completely provided for by the year 1950, when reconstruction is likely to start. It is eminently desirable that, before new debt liabilities are entered into, the old ones should be wiped off. This part of the budget has been framed with a pre-vision that is most commendable. The nation building services, no doubt, get increased allotment, but as already, they fall short of what they could have been in a budget of Rs. 29 crores. The sum allotted is only Rs. 6.4 crores, an increase of just a crore over the 1944-45 outlay. The cash balance is impressive as it is expected to be Rs. 16.86 crores at the end of 1945-46 as against Rs. 13.98, the revised estimate for the current year, and Rs. 4.5 crores at the end of 1943-44.

* * *

People who live in glass houses cannot afford to throw stones at others, runs the old adage, but apparently Bengal officials have no use for that. The shouting has started that the main cause of scarcity of cloth in Bengal is the low quota alloted by the Textile Commissioner, and no doubt, this will soon rise to a great outcry. Actually, Bengal receives today 10 yards per head as against the 11 yards she was consuming in pre-war days. She is allowed to retain not only the 20,000 bales per month she has received an excess supply of

South India

(From Our Correspondent)

Madras, April. 2nd.

"In no uncertain voice must every patriot of this country refute the two nation theory of Mr. Jinnah" says Sir Alladi Krishnaswami Iyer, former Advocate-General, Madras, in his memorandum to the Sapru Committee in reply to its questionnaire and urges that the political unity of India must not be impaired. As regards minorities, he suggests the provision of certain legislative safeguards in regard to matters affecting particular communities and cultural safeguards on the Russian model.

He agrees with Mr. Coupland that the problem of Indian states is more important than the problem of Pakistan. As a possible solution he suggests 'If the Indian States are not prepared to join the Federation, accepting the natural legal and political consequences, the only course left open is to leave alone the non-acceding states and to go ahead with such of the States as are willing to accede to the federation. We can trust to the patriotism of enligtened rulers of the States to make the necessary sacrifice and join the larger Dominion of India.' In regard to the method of framing the constitution he is in agreement with the proposals of Sir Stafford Cripps or with the suggestion of Sir Maurice Gwyer of following the Canadian and Australian example. He does not think that the Convention procedure adopted in America or in some of the European States can be adopted in the peculiar conditions of this country.

The Tamil Nad Journalists' Federation Conference met in Coimbatore under the presidentship of Mr. K.P. Viswanatha Iyer, of the Hindu. Dewan Bahadur C. S. Ratnasabapathi Mudaliar, Chairman of the Southern India Mill Owners' Association who declared the Conference open, paid a tribute to journalists whose influence and power were such that they had become the keepers of the Nation's conscience. A scrupulous regard for truth had always been the basic virtue of their profession and they had to retain public confidence in their integrity. Doubtless, he said, occasions had arisen when their views had displeased the Government or a 'mighty and popular' individual and on such occasions great journalists like Mr. G. Subramaniya Aiyar had displayed superb courage neither freightened by threats nor corrupted by chances of material advancement. The integrity and independence of the Press, he continued, were a measure of the moral growth of a Nation. They were the most powerful factors in moulding public opinion and no individual, however gifted, no government, however powerful and popular, could ignore them. There was the unmistakable voice of the public and had to prevail in the end and their service to the nation was continuous, uninterrupted and indispensable.

Mr. Viswanatha Aiyar regretted that the relations between the Press and the Government authorities had not improved since their last meeting. The **Janmabhoomi** and **Forum** had to get redress in the High Court against the high handedness of the Executive. The rebuff that Bureaucracy got in the court had not discouraged them from further attacks on the Press. The **Blitz** had been asked to deposit a security of Rs. 3,000.

To improve the conditions of working journalists he asked journalists to strengthen their organisation for they would be heard in proportion as they took themselves seriously. Two things were essential to strengthen their organisation, he said, "You must respect your organisation and strengthen it in all ways, first and foremost by giving it your power of attorney, join the body in hundreds and thousands, not after it picks up some strength, but here and now. And secondly, work to build up on national as well as on provincial lines."

Referring to the future of the Press and the profession, Mr. Viswanatha Aiyar said that the technique of modern production had rendered a large amount of capital necessary for the production of up-to-date papers and smaller papers had tended to amalgamate themselves with larger papers. Papers like the **"Times"** are organised as a public trust and controlled by journalists under the guidance of an impartial public service trustees drawn from many leaders of national life . Above all, there is no reason why working journalists themselves should not run, news-papers on their own account. In our country, especially, the opportunities for such papers are bound to become great, he concluded.

Partly due to war conditions and partly due to increase of work, the activities of the Madras Agricultural Department have expanded considerably during the year 1944-45. As an aid to war effort the "Grow More Food" campaign continued to be the main departmental activity and a major portion of the time of the Staff was concentrated on it. Production targets were fixed by the Director of Agriculture for each district. Arrangements have also been made for the publication of a monthly journal in Tamil and Telugu containing timely hints to the ryots on crop husbandry, the concessions granted by the Government and the methods to be adopted in the control of pests and diseases. More land was brought under cultivation in the Tanjore District, with the help of tractors. A special staff for the reclamation of waste and fallow lands in Pattukottai taluk of the Cauvery-Mettur Project area was

(Continued on Page 450)

LICENSING OF MUSTARD OIL MILLS AND DEALERS

Under the provisions of Bengal Mustard Oil Control Order, which came into force on the 2nd April, 1945, all mustard oil mills and wholesale dealers in mustard oil in the Calcutta and Howrah Initial Rationed Area are required to take out licenses from the Civil Supplies Department by the 17th April, 1945.

The following scale of licence fees has been prescribed under the Order:—

MILLERS—Rs. 2/- per Ghani per year upto a maximum of Rs. 500/- (for the purpose of assessing licence fees each Expeller will be counted as equivalent to 36 Ghanis).

WHOLESALERS—Rs. 75/- per year for those with a monthly turnover of 1,000 maunds or above; and Rs. 25/- per year for those with a monthly turnover of less than 1,000 maunds.

A miller will be required to take out a wholesaler's licence in addition to a miller's licence, but in his case no separate fees will be charged for the wholesales's licence.

RETAILERS—Rs. 10/- per year.

Licenses will be issued only to wholesalers and retailers who have been dealing in mustard oil since the 1st January 1942 or earlier. An exception to this rule will however be made in the case of the Agents of U. P. Mills whose Depots in Calcutta and the mofussil districts were recognised by Government during the year 1944-45.

All applications for licenses should be made in prescribed application forms which have been priced one anna each and which will be available at (1) the Publication Sales Depot, Writers' Buildings and (2) Bengal Government Press, Publication Branch, 38, Gopalnagar Road, Alipore. Applications for Millers' or Wholesalers' licenses should be addressed to Mr. S. Sen, Assistant Director of Supply (Edible Oils), 7, Church Lane, Calcutta. The method of paying licence fees will be indicated by the Assistant Director after the applications are scrutinised and found to be in order.

DEPARTMENT OF CIVIL SUPPLIES, BENGAL

Resume of Commodity Markets

THE feature of the week is the strength of the bullion market, in spite of the extremely favourable developments in the war situation. There was some selling in mid-week and the quotation for gold especially recorded a decline of over one point but towards the close, prices are not very much changed on balance. The raw jute market and the jute manufactures markets have been quietly steady, while the raw cotton market has turned easier in the latter half of the week on reports that there was considerable excess of cotton production over mill consumption and that it would be necessary to curtail to a great extent the growth of cotton. In the piecegoods market difficult conditions continue to prevail and in spite of the best efforts of the Textile Control Board and the Government of Bengal, the position in the Bengal province especially is very unsatisfactory.

* * * *

Even with a lower level of exports and poor mill buying, the raw jute market has remained very steady. Reports regarding the progress of sowings for the next season have so far been encouraging from the market point of view as the unfavourable weather in the jute growing districts has retarded cultivation of jute. It is said that more rains are needed before any appreciable progress can be made. It is not possible to form any idea of the size of the new crop for the next season for a larger area of land has been prepared and unless sowings are finally completed it will not be possible to form any estimate. But there is no great anxiety regarding the ability to dispose of all available supplies of jute even in the face of poor exports. Calcutta mill consumption can be expected to increase if, after the termination of hostilities in the west, there is a large increase in the demand for jute manufactures. Signs at the present moment are not discouraging. The resumption of business through private trade channels will, it is believed, increase exports though in the next three or four months the shipping position might be the bottleneck. After July, however, it can be expected that no great difficulty will be experienced.

* * * *

The announcement after the meeting of the International Cotton Advisory Committee that against the total estimated world cotton output of 50 million bales, mill consumption was only 25 million bales and that there was need for a reduction in the area under the crop in the various producing areas to be able to regulate effectively prices has had a bearish effect on the market. The raw cotton market would have otherwise reacted favourable to the satisfactory developments in the war situation. It was also reported during the week that the U.S.A. has been successful in selling further quantities of U.S. cotton to countries on the Continent, thus gradually shutting out Indian cotton from overseas markets. It cannot be really said that the termination of hostilities would automatically result in an increase of exports of Indian cotton as, in the absence of Japan as an effective producer, no large increase in the consumption of Indian cotton can be expected. For mixing purposes U.S. might also take larger quantities and the U.K. might also, under the agreement, endeavour to consume more of Indian cotton. But unless efforts are made from now to discourage the growth of short staple cotton and increase consumption by cotton mills in this country, it cannot be expected that it will be possible to maintain cotton prices at satisfactory levels.

Mill consumption of Indian cotton during the month of January 1945 was 302,115 bales in British India and 59,758 bales in Indian States, making a total of 361,873 bales in the corresponding period last year. Consumption by mills in British India was held at 292,966 bales and in Indian States 59,943 bales, the total quantity at 352,909 bales thus showing a decrease of nearly 9,000 bales. Since September 1, 1944, mills in British India consumed 471,857 bales against 487,654 bales and Indian States 293,398 bales against 302,365 bales. The total quantity was 766,255 bales, showing a decrease of only about 28,000 bales. Having regard to the difficulties in respect of coal supplies in recent months, the level of consumption should be considered satisfactory.

* * * *

The Textile Control Board at its meeting this month will have many problems to be solved, the most important among them being the re-allocation of quotas for the different provinces ensuring a minimum per capita consumption regardless of prewar despatches. It will be remembered that till very recently the allotment to the various provinces were based on prewar figures. It was found on working that certain areas were very favourably placed. As total available supplies are much below estimated requirements it is considered necessary that an equitable distribution of existing supplies should be made.

* * *

The Bengal Government is contemplating distribution of cloth on a rationed basis and it is expected to be introduced in Calcutta shortly. Stocks are being built up, the Textile Control Board having recently allotted special quotas for Bengal. The increased supplies from Bombay and the unearthing of large hoarded stocks in Calcutta will, it is believed, strengthen the hands of the distributing machinery. It is expected to make a success of the rationing scheme. Having regard to past experience, however, it is not possible to be enthusiastic about the proposals made by the Bengal Government especially as there is considerable opposition from the trade.

* * * *

To distribute effectively the hoarded stocks four handling agents have been appointed. After the cloth has been got together in one place it will then be sent to the mofussil centres for distribution and sale under the supervision of the Civil Supply Department. The Director of Textiles issued an order that receivers of licenses under the Cotton Cloth and Yarn Control Order, 1943, shall on demand make over the sale of cloth in their possession to certain handling agents ap-

THE SUN LIFE OF CANADA IS AN INSTITUTION OF PUBLIC SERVICE conducted in the interests of its policyholders. Such was the purpose of its founders in 1865, a purpose which has been proudly maintained through nearly eight decades of continuous development. And such will be the purpose that will guide the destiny of this Company in the generations yet to be.

In the past year, the new business secured by the Sun Life of Canada amounted to Rs. 60,36,25,047. The assurances in force increased by Rs. 38,11,17,696 and now total Rs. 9,07,54,12,126. The benefits paid during the year were Rs. 22,07,75,126, which brings the total amount paid since the founding of the Company to Rs. 4,68,61,54,419. The Company's activities during 1944 give ample evidence of its continued progress. The business and the assets of the Company have increased, and substanial additions have been made to surplus and other funds to further safeguard policy-holder's interests.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance".

CALCUTTA 5th. April 1945.

The total 1944 jute acreage was 20,59,555 acres and the revised yield is estimated at 54,93,275 bales of 400lbs each according to the consolidated supplementary review of the jute crop issued this week by the Department of Agriculture, Bengal Government. These figures which relate to Bengal, Cooch Behar Tripura States, Bihar, Orissa and Assam show a yield per acre of very nearly 2.67 bales. The supplementary review very closely approximates Government's final forecast for the season 1944-45, the figures for which were given as 20,60,000 acres under jute yielding a crop of 54,93,000 bales.

The supply of coal to the industry during the week ending 31st, March last was again on an inadequate scale, the average daily arrival of coal wagons at the Association's Dump being only thirty-two. In consequence, some of the mills which had re-started recently during a brief spell of improvement in coal supplies have been forced to close down once more. A report is current (the authenticity of which we are not prepared to vouch for), that the powers that be have made definite arrangements to ensure the supply of 45,000 tons of coal to the jute industry during April. No doubt it is only coincidental, but the appreciable improvement in deliveries noticeable since the first day of this month provided yet another opportunity for the more optimistic among us to give credence to such a report. As a matter of fact the trade has been disappointed so often in the past in its expectations of a sustained improvement in coal supplies even though these expectations were sometimes based on promises given by representatives of officialdom at its highest level, that nothing short of a successful effort in maintaining adequate supplies over a prolonged period will convince Mills that their interests are at long last receiving the attention which they merit. It is fully realised that Railways have worked and are still working under a great strain with a depleted, and in many cases, untrained staff due to the War and that uniformed criticism of the Railway administration, for these reasons, is to be deplored. Several times in the past, however, we have contended that the mal-distribution of wagons has been greatly responsible for the irregular and usually inadequate deliveries of Coal to the Jute Industry and it seems that in this contention we are not alone. Although we cannot, in truth, say that he had the Jute Industry in particular in mind when he referred to the lack of co-ordination as between transport and output at the mines, it is perhaps of interest to record that the President of the Indian Mining Federation at the annual meeting held in Calcutta recently, stated that, invariably, when the mines put forth plenty of Coal the Railways failed to provide the necessary wagons and when production declined the wagons were there but hardly enough Coal to fill them. In fact it seems that alternate shortages of transport and output pursue each other in a vicious circle.

The Indian Central Jute Committee "Bulletin" for March reports that, through the medium of the appropriate branch of the Argentinian Ministry of Agriculture an agreement has been reached by which the manufacturers of Jute will purchase the crop of nationally produced fibre of the season 1944-45 up to a quantity of 3,000 Tons. It is understood that the prices guarantee a fair return to the grower in order to encourage him to continue the production of a Jute Crop. The prices have been fixed in accordance with officially adopted types, as follows:—

Jute stripped by hand, per ton placed on wagon or Barge in Buenos Aires; type A=Rs. 702-2-0; type B=Rs. 624-0-0 and type C=Rs. 546-0-0.

Jute mechanically stripped: type (1) Rs. 546-0-0 type (2)= Rs. 468-0-0 and type (3)=Rs. 390-0-0 per ton on wagon or Barge in Buenos Aires.

The adoption of these standard types, it is believed, will facilitate the sale of the fibre and the agreement of purchase will permit the grower to receive all the margin of profit which would have been received by others in the process of indirect marketing. The Ministry has also recommended that growers should make use of family help to secure economy in the cost of production and are encouraging growers to adopt the best methods of cultivation and handling. The typification and official checking will also facilitate the granting of credits for the cultivation and harvesting of the crop by the National Bank which is now engaged in studying the concession of such credits.

Arrivals of Jute during March were 5,33,000 Bales compared with 4,57,000 Bales for the same month last year. Total arrivals to end of March for this year amount to 50,17,000 Bales against 40,77,000 Bales at the same time a year ago.

In the Pucca Bale market small business was reported this week in special Lightnings at Rs. 77/- for local consumption. Some business for export was also recorded in Firsts at Rs. 76/- and Lightnings at Rs. 71/-. With the exception of Rejections, Ropes and Cuttings, quotations are at the minima and dealers are free sellers.

In Loose jute the tone of the market is steady due mainly to the continued firmness of the mofussil markets. Mills generally are showing only a meagre interest although small business has been taking place from day to day. European packing 50/50 assortment came to business at Rs. 16/8 and Rs. 13/8 for Middles and Bottoms with Tossa at eight annas higher. A moderate quantity of supervised Jat Bottoms was sold at Rs. 13/- (with a few lots of distressed Middles only at Rs 15/4/-). Small lots of supervised Jat Tossa were done at Rs. 16/8 and Rs. 13/8 with Supervised Jat white jute at Rs. 16/- and Rs. 13/-. Marwari District Tossa sold at Rs. 15/12 to Rs. 16/- for Middles and Rs. 12/12 to Rs. 13/- for Bottoms according to the District. Business was also done in New Crop at Rs. 17/- and Rs. 14/- for European Middles and Bottoms and Rs. 19/-, Rs. 17/- and Rs. 14/- for Tops, Middles and Bottoms. Supervised District Bottoms and some Marwari District Bottoms were reported done at Rs 12/8.

The Hessian market ruled firm with buyers at maximum prices up to the end of the year but mills are unwilling to increase their commitments. Small business has been reported in 10 oz. and 7½ oz. at maximum rates for delivery Jan/March 1946.

There has been a good demand in the Heavy Goods section with Mills selling sparingly to speculative buyers of Cornsacks at Rs. 67/12 for July/Septr. 1945 and Cubans at Rs. 81/- for Oct./Decr. 1945. Small business has been done in Liverpools and B Twills at maximum rates for May shipment. The market is very firm with a scarcity of goods for near positions.

WANTED

Applications in prescribed form are invited for the post of the Director, Jute Agricultural Research under the Indian Central Jute Committee on Rs. 750—50—1,250 p.m. A higher initial salary upto Rs. 1,000 p.m. may be given if the qualifications of the candidate so merit. Qualifications required are an initial degree in Agriculture or Botany followed by a post-graduate degree in plant breeding, not below a 1st Class M.Sc. of a recognised University, with subsequent practical experience of research in plant breeding. Evidence of ability to direct research in biological sciences must be produced. The last date for the receipt of applications is the 30th April, 1945. Further particulars and the prescribed application form can be obtained from the undersigned.

(*Continued from page 441*)

while in the U. K. the figure was about 100 times. These comparisons give an indication of the vast scope for the development of electricity in India. Over 43 per cent of electrical energy generated throughout India is at present utilised in the cities of Bombay and Calcutta and less than 7 per cent is in domestic consumption. As a matter of fact, India uses a larger proportion of the total electrical energy generated for driving industry than the more highly developed Western countries.

But electricity can and should play a part in rural development, in improving the economic standards of the 390 million people living in 657,000 rural communities. Only 1,200 of these have some sort of electrical supply at present. In making electricity available in the villages, it is taking a narrow view to compare the direct revenue from the sale of electricity in rural areas with the capital investment involved. If this view were to prevail, villages will never get the benefit of electricity. The indirect benefits accruing to the people, to whom the service is made available, must not be lost sight of. It is useful to have a number of Nursery Power Schemes for Rural Load Development on the principle of building up load in rural areas by laying down the simplest possible network of lines radiating from a small and temporary Power station with an installed capacity of not more than 500 Kw. It may be desirable, and not quite unsound, too to postpone the collection of regular charges for current consumed until the villagers understand and appreciate the value of electricity.

In the postwar world when there will be a wide expansion of industries, industries should obtain power from electrical public utilities rather than by individual factory generation. Basic industries could be more fully developed, the textile industry could be more widely dispersed and the demand for electricity would then be as widely distributed as its supply. It is thought that fertiliser production would expand using electrolytic processes. But this view is not shared by Mr. Mathews and some others. They opine that this is a prodigal use of electricity. In Mr. Mathews' opinion, the fertiliser plant to be erected in Bihar to produce 350,000 tons per annum of ammonium sulphate would require 27,000 Kw of power—a very substantial load—necessitating possibly a generating plant all its own. Electrification of the railways is another possibility in the postwar period, particularly as the cost of locomotive coal in India after the war would probably be much higher than it was before the war. The load of railway electrification would thus become of considerable interest in electric power planning. The economic production in India of electrical distributing equipment is one of the developments which one can legitimately look for. A real increase in electric development can be attained only by planning studies and design work. One of the urgent needs is to survey the hydro-electric resources of India. With a strong engineering organisation attached to it, the Central Power Board, could assist Provincial and State Governments in this direction. The Board can initiate the broad lines of research programme desirable for the requirements of special conditions in the electric power development in India. In this country there is a shortage of manpower with adequate technical experience. To offer facilities for higher training for Power engineers-civil, hydraulic, mechanical and electrical—a Power Engineering College open to any Indian Engineering graduate and offering most intensive theoretical and practical training is a necessity. If these steps could be taken the first objective of the Electrical Commissioner with the Government of India viz., to treble the output of electrical energy and make it available on a really wide scale, could be attained within a few years.

Today's Prospectus

A prospectus published to-day relates to the issue of ordinary shares by a managing agency firm as distinct from a textile manufacturing concern. Since Messrs, Soorajmull Nagarmull of Calcutta are associated directly with the flotation there must be a ready market for that part of the share capital now offered for subscription. Estimates of profits suggest that a dividend of over 10 per cent is likely on the assumption that agency profits run at a level, not wholly independent of post-war prospects for the cotton textile industry. It is important to note in this connection that the acquisition of agency representa represents a convenient method of safeguarding the profits for the Moon Mills Co. of which 750 shares are taken over and of creating for Messrs. Soorajmull a stake in the cotton mill industry. Details as to the transactions concluded are furnished in the prospectus along with the conditions for application on April 7 when the list closes. The promoters have obtained the greater part of the capital required and the success of the issue is ensured both by the standing of the promoters and the safe nature of the business acquired.

(*Continued from page 432*)

tion, American ship-builders are studying with interest a British plan whereby wartime licensing authority now vested in the Admiralty and Ministry of War Transport would be turned over to a joint committee of the ship-building and operating industries. This committee, it is understood, would rotate orders among the various yards and see that British buyers got at least as good terms as foreigners.

In getting back to a peacetime basis, many difficulties will have to be ironed out among the world's maritime nations. To this end, various interested parties have called for a shipping conference to be held promptly when hostilities are over, and it is generally expected that such a meeting will be held at the earliest possible time. The National Maritime Union, largest trade union of American seamen, has been urging such an international meeting for over a year. Recently Basil Harris, president of the United States Lines, called for a meeting of American and British ship operators to "reconcile their maritime aspirations with the least possible friction." In July, 1944, the State Department announced after the Allied Shipping Conference in London that the Combined Shipping Adjustment Board, which has allocated shipping for war purposes, will continue to function for six months after fighting ends in the Pacific. Some shipping circles think it would be a good idea if this body continued its operations still longer.

The world, facing its greatest problem of reconstruction after its most terrible war, has on hand a greater supply of shipping than it has ever possessed before. If full and effective use of these ships can be assured, an important contribution will have been made to the task of rebuilding a peaceful world.

way. Poor and deserving ryots were supplied with seed and manures free of cost. Schemes for the production of Indian and English vegetables, including potatoes for supply to the military were sanctioned. There has been an increase of 9.21 lakhs of acres under food crops over that of last year in the Province as a whole. A notable advancement in the field of Agricultural education is the increase in the number of students admitted into the Agricultural college, Coimbatore, from 48 to 96 with a view to meeting the acute shortage of trained men required for several "Grow More Food" schemes and post-war reconstruction work. In the coming year women students are to be admitted into the college.

The Government of Madras have approved a scheme prepared by the Registrar of Co-operative Societies for the expansion of the activities of the Madras Milk Supply Union, by which it is estimated that there would be an increase in the milk supply to the city by about 6,000 measures. The scheme comes into effect from April 1, 1945. The scheme provides for the formation of milk supply societies in the city and in rural areas close to Madras for increasing the milk supply to the city and for financing the societies to be so organised. The Government have agreed to provide interest-free advances of Rs. 4.20 lakhs for the grant of loans to the members of the city and rural milk supply societies under the scheme, to enable them to purchase milch cattle. To ensure that members of the milk supply societies maintained good breeds of cattle and fed them properly milk recording schemes are to be introduced in the city and to pay a subsidy of Rs. 300 per annum to each society for meeting the pay of a milk recorder and for the award of prizes.

(*Continued from page 446*)

60,000 bales in the seven months ended January. Huge hoards of cloth are being unearthed in Calcutta itself. And yet, Bengal's Ministers attempt to refute the charge that the cloth sent to Bengal is going underground, and claim that all is lovely in the Bengal garden. There have been appeals from many quarters for increase of production, but this is easier said than done. Not until coal supply is put in order will the problem of cloth scarcity be properly resolved. And so far, there is no sign that the Central Government have done anything to increase the supply of coal to the mills. The matter will be raised again in the discussions of the Textile Control Board. Sir Akbar Hydari has got to do something about it, otherwise his undoubtedly hard working department is likely to be labelled as inefficient. The chances of increasing production from handloom and power-looms may perhaps be more fully explored. It is seldom realised that these two sources have accounted for a fair expansion of supply. One calculation has it that out of the quantity of cloth of 6,700 million yards per annum produced, the handloom and the power-looms account for 1,900 million yards. In view of the coal shortage, it is not prudent to expect the mills to increase output. On the other hand, there is great scope still for the cottage industry to increase production.

JUTE

(By Our Staff Correspondent).

Calcutta, April 5.

QUIETLY steady conditions have been noticeable in the raw jute market during the past week. Business was rather restricted. It was expected that the improvement in the coal situation would lead to larger mill buying. But as coal arrivals during the week have been erratic and mills have sufficient stocks on hand there has been no great anxiety on the part of buyers to enter into any fresh commitments. But for the hopes of a large increase in exports of jute manufactures in the latter half of the year and the firm ideas of holders, prices would have been marked lower. The Calcutta market has derived strength from the mofussil centres instead of it being the other way about. Sellers are still keen for business, but are not prepared to offer any discount in rates. Progress with the new crop sowings has not been quite satisfactory as weather conditions in the mofussil have been unfavourable. In the lowlands some sowings have been reported but more showers will be needed before cultivation can be proceeded with in the midlands.

In the loose jute section business was reported in Supervised Jat Middles and Bottoms at Rs. 15-12 and Rs. 12-12 respectively. Bottoms alone have been done up to Rs. 13-4 while a small discount was offered for Middles. European packing Middles and Bottoms were Rs. 16-8 and Rs. 13-8 per maund with new crop at 8 annas premium.

In the pucca bales section export business was poor though in the later half of the week shippers are reported to have purchased Firsts and Lightnings at minimum prices. Pending a solution of the difficulties of Dundee Mills and those of the Continent no appreciable improvement in the rate of exports is anticipated. Mills purchased Special Lightnings at Rs. 75 per bale and also Rejections and Cuttings at previous rates.

JUTE MANUFACTURES

Calcutta, April 5.

THERE is nothing of importance to be recorded in the jute manufactures market. It was hoped, that the position in respect of near deliveries would improve with the resumption of working by the steam-driven mills, but the fall in coal supplies this week has chilled all expectations in this regard. Mills are not free sellers for positions earlier than March, 1946, while they are rather anxious to take up fresh orders for further forward positions. It is confidently expected that the present jute prices will not be maintained and that contracts on the basis of the present market rates would be really profitable.

In the Heavy Goods section, there has been greater enquiry, "A" twills and Sugar bags being in good request. Bazar quotations are at maximum rates, but mills are not free sellers for selected qualities though for other lines goods are freely available. The U. S. War Production Board has announced that it is now prepared to authorise private importation of sugar bags from India for transshipment to Cuba and Puerto Rico. Authorisation will be on the basis of 50 per cent of the 1940 requirements. It was on this announcement that there was a rush for covering last week and Cuban Sugars were marked up to Rs. 81.

PIECEGOODS

Calcutta, April 5.

CONDITIONS in the piecegoods market are still unsettled though the Bengal Government has announced the appointment of four handling agents and the Director of Enforcement with the help of the Police has proceeded with the work of taking over the sealed goods and giving them to the handling agents. As was reported earlier, the unearthed stocks are to be utilised by mofussil centres where there is an acute scarcity of goods of all descriptions. The Textile Control Board also has increased its despatches recently, the total arrivals in the first week of April being estimated at 4,571 bales. There is still a large quantity of goods to be released by the authorities. Unless the rationing scheme gets into its full stride and the distributing machinery is properly arranged it cannot be expected that the consuming public will be able to get its requirements even to a certain exent. Not unnaturally there has been opposition from the business community to the Government proposal for conducting the trade through the handling agents.

(*Continued from page 448*)

pointed by the Government. The Order also fixes the prices payable for the goods as follows: Quota goods (millmade cloth sold to dealers entitled to buy it direct from the mills), of quotaholders of Bengal Mills, 3 per cent over the ex-mill price; quota goods of quota-holders of mills outside Bengal and goods imported from outside the Province and in the possession of the importers, 6½ per cent over the ex-mill price; and all other goods—7 per cent over the ex-mill price. The Director Textiles has also passed an order requiring that all cloth and yarn coming into Calcutta and industrial areas shall be sold to one of the handling agents and the sale shall be effected by handing over the railway receipt or bill of lading. The prices payable in these cases have also been prescribed.

* * * * *

At the recent meeting of the Production and Marketing Committee of the Indian Rubber Production Board, the question of utilising rejected rubber was considered. It has been found that certain quantities of rubber tendered for sale to the authorities by planters do not come under any classification and that they had to be rejected. In view of the need for keeping up the production at a high level and using all available supplies, it is now said that the Rubber Production Officer would retain all rejected and degraded rubber till the close of the current bonus quarter and allow dealers till May 15 to recondition and deliver it. It is felt that the bonus scheme has not worked successfully. Instead of the payment of bonus for satisfactory deliveries it would be better if higher prices were paid to the planters to encourage them to produce more rubber and deliver them in time.

East, west, north, south we know all the roads running throughout the length and breadth of India. Roads for transport through her cities, towns and villages — roads winding over her hills and valleys — we know them by heart. Handling transport was our job long before the war But since the war began transport jobs of every conceivable kind have been entrusted to us — jobs so exacting that they have taught us things which civilian transport could never teach. To-day, there is no transport job that we do not feel competent to tackle, no road so difficult that our trained men and perfectly conditioned transport fleet cannot traverse. If you have a transport job anywhere in India — send us your enquiries — we guarantee you trouble-free service.

Vol. XXXV. No. 14 SATURDAY, APRIL 7, 1945 Price Re. 1

Stock Markets to-day and to-morrow:

McLEOD JUTE GROUP RESULTS

THE past week is important in more than one respect for stock markets. For, it is in the last few days the various theories regarding the possibility of fluctuation in prices in the event of peace have been put to test. The very favourable developments in the war situation have given rise to the hopes of peace before the end of this month. It is interesting to note that expectations of the influential section of operators, regarding the maintenance of stock exchange values even in the event of the termination of hostilities in the west, have been more than fulfilled. It is true that there was some selling earlier in the week and a slight decline in prices was recorded all round especially as Bombay advices were not encouraging. But in the last three days bears have shown anxiety to cover their open positions while investors are definitely disinclined to part with their holdings, the confidence regarding the outlook for Indian industries and the difficulties in reinvestment preventing them fron disposing of their holdings.

* * * *

With the denouncement of the neutrality pact by Russia, there is a feeling that the Japanese war too might not be prolonged though it is not clear as yet whether Russia will actually take part in the war against Japan. The effect of the Moscow announcement has naturally been bearsh but in Friday's session, in the Calcutta market, the decline in prices is again only small and quotations are still around the lowst levels touched a few days back. Hopes of political settlement leading to the restoration of a popular government and facilitating large-scale industrial development in the postwar years, the continuance of industrial activity at high levels, war or no war, are favurable points for the market operator. So long as there are large surplus funds seekig investment and the volume of surplus mony will not be in any way affected by increases in imports of consumer goods, it cannot be expected that even if anticipations are not completely fulfilled, there will be a debacle in prices. The actual conclusion of peace might possibly result in a decrease in quotations by 10 to 15 per cent, but thereafter there might be an improvement in prices. Fluctuations in the markets in the next few weeks will prove to be very interesting.

* * * *

It is rather significant that gold and silver prices have not been affected to any great extent by reports of an early peace. There is no nervousness on the part of holders and bull liquidation is completely absorbed. The Reserve Bank offerings, as usual, are being taken up by the Bull Syndicate and the offtake is in excess of total sales. It is said that it will be a long time before free trading conditions are restored and that, unless investors in bullion are able to find alternative channels of investment, there cannot possibly be any big break in prices. In view of the behaviour of the markets in recent weeks, it is very difficult to form any definite opinion.

* * * *

With the exception of Soorah Jute Mills Company, Limited, which has benefited through requisitioning by the military authorities, the McLeod group of jute companies reports a lower level of profits for the half-year ended December, 1944. Soorah resumes the ordinary dividend with a distribution of 8 annas per share after a long time. Presidency, for the same half-year, pays 2 annas per ordinary share against nil for the previous half-year, but this payment is facilitated by the excess provision of Excess Profits Tax with the deficiency in earnings in the latter half of 1944. Dividends in other cases have been maintained at previous levels. Nellimarla is paying an ordinary dividend of 12 annas per share, Empire 8 annas per share, Chitavalsah 8 annas per share and Kelvin Rs. 15 per share. Only Empire and Kelvin jute mills had no difficulties regarding coal supplies, being electrically driven, but the whole group suffered on account of the scarcity of labour. The earnings of both Nellimarla and Chitavalsah were adversely affected by the Madras General Sales Tax.

* * * *

Soorah Jute Mills Company, Limited, has been able to make a net profit before providing for taxation and depreciation of Rs. 2,25,807 against Rs. 93,536 for the previous six months. After providing Rs. 80,000 (Rs. 13,700) for taxation and Rs. 11,000 (nil) for E. P. T. deposit the ordinary dividend of 8 annas per share (nil) is to be paid. The amount set aside to depreciation is Rs. 25,000 (Rs. 40,000). The amount carried forward is Rs. 7,622 against Rs. 7,814 brought in. Preference shares receive arrears of dividend for the half-year ended June 1944 as also dividend for the half-year ended December, 1944.

Due to shortage of labour, the hours of certain looms were sold to other mills under the same managing agency. With the reduced complement of 279 looms the mills worked 60 hours per week, when circumstances permitted. These arrangements continued until the end of July, when the mills ceased production and were closed down having been requisitioned by Government for military purposes. Following the Requisition Order becoming effective, the permissible loom hours which this mill could work were sold to other mills in the McLeod group at the rate of annas 12 per loom hour. Rentals for the property requisitioned are a direct payment by Government to the Industrial Pool and all expenditure incurred as the direct result of requisitioning is recoverable from Government by the Company. Receipt of the amount due on this account up to the close of the year is now awaited. The mills are steam-driven and working time lost during the half-year up to the date, when requisitioning took place and still to be made up by sales amounted to 50,975½ loom hours.

* * * *

The net profit of *Kelvin Jute Mills Company, Limited*, for the same half-year is Rs. 11,82,268 against Rs. 11,24,074 for the previous six months. After setting aside Rs. 8,15,000 (Rs. 7,86,000) for taxation, Rs. 1,70,000 (same) for E. P. T. deposit, and depreciation Rs. 50,000 (Rs. 67,000) the dividend has been maintained at Rs. 15 per share.

Markets Lower on Favourable War Developments

MADRAS TEA SHARES VERY WEAK

(By Analyst)

Bombay, April 5.

WITH the steady influx of favourable war news, peace is expected in the coming weeks and Stock markets all over India are evincing a sagging tendency. A further decline of about five to seven and a half per cent from the present market levels in all sections is not unlikely. As expected last week, *Tata Steel* Deferreds and Ordinaries declined and touched a low of Rs. 1,995 and Rs. 374 though towards the close the shares recovered to Rs. 2,011-4 and Rs. 384 respectively due to short covering. I would recommend purchases only around Rs. 1,900 and Rs. 355 respectively. Indian Irons and Bengal Steels after receding to Rs. 38-6 and Rs. 32 closed slightly better at Rs. 38-10 and Rs. 32-4. As in Tata Steels, I look for a reaction of nearly 2 to 3 points in each scrip. In spite of a heavy short position, Dyeings and Kohinoors continued to rule quiet, probably due to persistent selling from genuine investors. *Dyeing* were around Rs. 1,838-12 and *Kohinoor* at Rs. 599. *Swadeshi* were also lower at Rs. 537.

Madras Textiles also were lower with *Madura* at Rs. 68-8, *Buckingham* at Rs. 316-2, *Sitaram* at Rs. 167 and *Vasanta* at Rs. 302-8. I like Maduras at around Rs. 60 and Buckinghams even at current levels.

In the Cement section, *Associated Cement* were quiet around Rs. 222-6. They look a good buy around Rs. 215, particularly in view of the fact that, in the event of the Company getting permission from the Government for issuing new shares, a buyer of these shares would be entitle to subscribe for the new issue. *Andhra Cement* are steady around Rs. 117 whilst *Dalmia* were neglected at Rs. 17.

In Calcutta, Jutes were quiet whilst Coals were slightly easier in sympathy with the weakness in other sections. *Howrah* changed hands at Rs. 87-11, *India Jute* at Rs. 690 and *Champdany* at Rs. 257-1. I would recommend investment purchases of Howrah around Rs. 82 and *India* around Rs. 650. Megnas also deserve attention on a further fall.

In the Plantation group, Calcutta Tea shares were lower particularly this week probably due to the cut in the dividend of Dessai and Parbuttia for the year ended December, 1944. Central Cachars have declined to Rs. 116 as against a high of Rs. 132-8, sometime ago. In Madras, the sagging tendency continued and most of the shares have been marked down further probably due to the circulation of the Madras Agricultural Income-tax Bill for eliciting public opinion. This question has already been discussed in these columns immediately after the Finance Member's hint to the Provinces that they should raise moneys by way of Agricultural Income-tax. Readers may, perhaps, be aware that the Travancore Government have already stolen a march over British India in this respect by levying an Agricultural Income-tax last year. I had also mentioned that Tea companies will have to pay Agricultural Income-tax only on 60 per cent of their income since 40 per cent is liable to Income-tax and Super-tax. I find from the Bill that these conditions have been satisfied and the Agricultural Income-tax is only As. 2 in the Rupee. The Rubber and Coffee companies which were entirely exempt from Income-tax will now be liable for As. 2 in the Rupee on their entire income. I hear that Bengal is also contemplating Agricultural Income-tax on the same lines. The Bill is likely to be passed in the Bengal Assembly in the next session. I would not be surprised if Agricultural Income-tax is levied in all the Provinces in the next few months.

As for Rubber, the production bonus scheme has been stopped in Ceylon and a flat rate of Re. 1 per lb. of rubber will be paid to Ceylon producers. I would not be surprised if Government of India also follow suit. I, for my part, would welcome this flat rate of Re. 1 instead of the unfair production bonus scheme now in vogue.

DEALINGS IN STOCKS AND SHARES

GOVERNMENT TO HOLD ENQUIRY

The Government of India have appointed Dr. P. J. Thomas of Finance Department National Investment Section to enquire into the working of the Stock Exchanges and stock share dealings and have circulated the following questionnaire to the Stock Exchanges in India, including the Madras Stock Exchange.

1. Give a brief account of the history, constitution and powers of the local Stock Exchange (or Exchanges if there is more than one). Please append a copy of the Rules and Regulations.
2. Explain the working of the Stock Exchange; part played by brokers, dealers, etc.
3. Total turnover of business. What proportion (roughly) of local share dealings goes through the Stock Exchange?
4. If there is no Stock Exchange, or if any dealings are going on outside the Stock Exchange, explain how those dealings are conducted.
5. What part has lately been played by Company promoters (and their friends) in the dealings in new shares? Has stagging by them been going on lately? With what results?
6. Has there been a growth of unhealthy speculation in shares lately? If so, in what class of shares has it been chiefly noticeable? Why? How far is the speculation due to the diversion of funds resulting from the discouragement of speculation in other lines?
7. What part do banks play in speculative share dealings? Has this led to bank credit expansion?
8. Has speculation in shares aggravated inflation? If so, how?
9. Should speculation lead to a crisis, as has happened before (e.g. Bombay 1910-1), how would it affect (i) banks and the money market and (ii) Stock Exchanges and brokers? Give your experience of any previous crisis.
10. If there are any investment trusts in your area explain what their functions are. Is the position satisfactory? To what extent do such trusts subscribe to new issues of shares?
11. Do you think that stock and share dealings should be regulated. If so, what are your suggestions?
12. Have you any suggestions regarding (a) the constitution and powers of the Stock Exchanges, and (b) their Rules and Regulations?
13. How would you prevent unhealthy speculation? Would it be desirable to render void all transactions involving the transfer of shares unless the transferer's name is registered in the books of the company as that of the owner? If not, how else would you prevent fictitious transactions with borrowed scrip?
14. Is it agreed that undesirable speculative activities are furthered by the maintenance of secrecy between the time when the directors of a company prepare their report under Section 131-A of the Companies Act and the time when such report is published? If so, what action should be taken to prevent this?

(Note:—It is reported that the present rules of the London Stock Exchange require the immediate supply of such

BENGAL CENTRAL BANK
LIMITED

RAPID RISE IN DEPOSITS:
EXCELLENT WORKING RESULTS

CHAIRMAN ON PROGRESS OF INSTITUTION

Presiding at the Twenty-Sixth Annual General Meeting of the Bengal Central Bank Limited, Mr. J. C. Das, Chairman and Managing Director of the Bank said:—

Fellow Share-holders,

In presenting the Directors' Report and Audited Acounts of the Bengal Central Bank for the year ended December 31, 1944 I shall with your permission take the Report and audited acounts as read, these documents having been circulated to the share-holders well ahead of this meeting.

During the year under review, I have had to bear the responsibility of being the Managing Director as well as Chairman; and it is in a spirit of the most serious recognition of duty that I agreed to undertake such a responsibility. It therefore gives me all the greater pride and pleasure that my review of the Bank's working in 1944 is an account that should prove gratifying to shareholders, depositors and constituents of Bank alike.

For the excellent showing which the 1944 results make, the Bank is under great obligation for the active co-operation received from my colleagues on the board as well as the large number of officers and other staff working at Head office and branches. With the great increase in the working funds of the bank and the important investment problems thereby raised, the assistance that was readily forthcoming from the Directors and particularly those who have occupied or occupy a leading position in the Stock Exchange, has been most valuable.

By every criterion, the year that is past has been one of all-round expansion and healthy progress. There is nothing spectacular but the progress is steady. The paid-up capital of the Bank has increased from Rs. 26.62 lakhs at the end of 1943 to Rs. 40.12 lakhs at end of 1944 and at present it is over Rs. 45 lakhs. The subscribed capital of the Bank being Rs. 50 lakhs, the paid-up capital will also attain this figure before long.

The Reserve Fund has risen from Rs. 6 lakhs to Rs. 7 lakhs and the market value of the Bank's investments exceeds the book value by a substantial margin.

The deposits of the Bank have advanced from Rs. 4.24 crores at the end of 1943 to Rs. 5.76 crores at the end of 1944. Considerable as is this rate of increase in deposits I am happy to be able to report that this upward tendency continues in fulll force in the current year as well. In the first quarter of 1945 there has been a further increase in deposits.

The rapid rise in deposits has, as our Board has interpreted it, imposed upon us the task of vindicating and strengthening the greater and greater confidence shown by depositors in the Bank. The Bengal Central Bank has always aimed at maintaining a high percentage of liquidity. Recent developments have only emphasised this progress. Cash and Bank Balances plus investments at the end of 1944 amount to Rs. 5.16 crores, compared with Rs. 5.76 crores in deposit liability. Our liquid assets were therefore 89 per cent of our deposit liability on 31st December, 1944. In regard to this high level of liquidity, our Bank may claim to hold a place second to none in India. The impending Banking legislation more than anything else aims to assure safety to depositors. Your Bank offers an absolute and unquestionable safety to its depositors.

Loans and Advances have increased from Rs. 1.03 crores at the end of 1943 to Rs. 1.18 crores at the end of 1944. The most remunerative head in the balance-sheet is loans and advances; and we would have liked to see faster rate of growth in this respect. But your Directors have made in their definite policy that advances made by the Bank must be only of the highest grade of security. At present it stands about Rs. 1.40 crores.

In spite of the Bank holding more than Rs. 5 crores in cash and trustee securities, the 1944 profit makes good showing. Including the amount brought forward from the previous year, the net profit amounts to Rs. 4,55,979. Rs. 1 lakh is transferred to the Reserve Fund; and a dividend at the rate of 6¼ per cent per annum free of income-tax is being recommended for distribution to shareholders. We have reverted to our usual system of recommending tax-free dividend as many shareholders do not like a dividend subject to deduction of taxes.

The Bengal Central Bank has so far been content to limit its activities to Bengal and the neighbouring province of Bihar. The progress achived in the last three years has been so gratifying that the Board thinks that the time has arrived for the Bank to extend its activities to the more important trading centres in India, and thereby serve a wider clientele as well as provide more comprehensive service to existing clientele. We has thus the hope that the Bengal Central Bank will, ere long, be equipped in every way to play its role in the all-India sphere.

Towards this end we are negotiating for the securing of suitable premises in such centres as Bombay, Delhi and Cownpore. A Capital of only Rs. 50 lakhs is not considered sufficiently adequate for our programme of expansion. It may therefore be necessary to increase the capital. The investing public appear to consider the shares of the Bengal Central Bank as a very good investment with brighter future prospects. Our shares are therefore very much in demand. If and when we increase our shares, I have no doubt they will be taken up at a good premium.

While accommodation in war conditions is, no doubt, one of the main difficulties in expansion, an even greater difficulty is in regard to personnel. A large number of new Banks have come into existence in recent months; there has been a scramble for men with any kind of training in banking. We anticipated this situation, and provided for a training scheme of apprentices under our own auspices. We have been successful in enlisting as apprentices some youths of brilliant attainments and promise; and the training scheme has functioned smoothly. We have also been able to secure efficient officers. For the programme of expansion, that is ahead of us, we will thus be properly equipped in the matter of the right kind of personnel.

I take this opportunity to inform the share-holders and constituents of the Bank that Mr. I. B. Sen, the Bank's Deputy Chairman has been elected President of the Bengal National Chamber of Commerce for the current session. It is indeed a matter of great pleasure and gratification to us. I must also pay a tribute to the valuable services rendered to the Bank by Mr. Sen at considerable personal sacrifice.

I thank you all, Gentlemen, for giving me a patient hearing.

MINERVA MILLS LTD.

To

The Holders of the 5½% First Mortgage Debentures.

Holders of the debentures of the above mentioned series are reminded that the principal monies secured thereby will become payable on the 1st July, 1945 in accordance with the provisions of such debentures. The 1st July, 1945 being a Sunday, the offices of the Company will be closed on that day. Notice is hereby given that in consequence the Company will on the 2nd July, 1945 pay at the Mill Office of the Company at Bangalore all principal moneys and interest secured by such debentures to the respective holders thereof on presentation and surrender of the Debentures at the Mill Office of the Company in Bangalore. Interest will cease to run on the principal money secured by any Debenture from 1st July, 1945.

N. SIRUR & CO., LTD.,
V. N. CHANDAVARKAR,
Managing Director,
Managing Agents.

29th March, 1945.

NOTICE

Control of Capital Issues

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the tender box outside the Deputy General Manager's (Works) room by the tenderer or his representative.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 6.

RATHER quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week. Both operators and investors are undecided. The extremely favourable developments in the war situation had an unsettling effect on the market. Earlier in the week there was some selling, but at the lower levels covering and fresh buying resulted in a recovery in prices. There is no tendency to enter into fresh commitments, but there is no tendency either to liquidate existing holdings. Coal shares were rather quiet though closing prices are higher than the lowest levels for the week. Business in jute shares was very restricted. There was selling of *Howrahs* at the higher levels and the quotation came down to Rs. 87-10. Engineering shares were fluctuating in narrow limits. Selected Tea continued in request though Bombay sellers were always present in the market. In the Miscellaneous section, there are no features of interest. The undertone is generally quiet.

The giltedged securities section, has been featureless with very little buying interest. Quotations were barely maintained, 3½ per cent Paper being done at Rs. 99-10 and 3 per cent Paper at Rs. 91-12. There has been an upward revision of minimum prices of 3 per cent. Paper, 3½ per cent Paper and 3 per cent 1957 Victory loan. These upward revisions have no meaning for the market as present quotations are considerably above the revised minimum prices. Among terminable loans, 3 per cent Victory Loan 1957 quoted Rs. 99-10, 3 per cent 1963-65 Rs. 98-14, 3 per cent 1953-55 Rs. 100-9, 3 per cent 1951-54 Rs. 100-13 and 4 per cent 1960-70 Rs. 112-13. There were no transactions in provincial loans. Easy conditions have continued to prevail in the money market and call money rates are unchanged. It was necessary, however, for the Central Government to accord an increase in the average discount rate to five annas and seven pies per cent from five annas per cent to get the full amount on offer.

Bank shares were unchanged with *Calcutta National* at Rs. 15-6, *Imperial* fully paids at Rs. 1,980 and *Reserve Bank* at Rs. 134. *United Commercial* quoted at a premium of Rs. 20.

Cotton shares were uninteresting with no important fluctuations in prices. *Cawnpore Textiles* were Rs. 12-15, *Bengal-Nagpur* Rs. 40-8, *Dunbar* Rs. 285 and *Kesoram* Rs. 16-12. *New Victoria* were rather steady at Rs. 7-3.

In the Coal section, there was selling earlier in the week with *Burrakur* being marked down to Rs. 40-12 and *South Karanpura* to Rs. 28-8. There was some buying in midweek and a slight gain was noted but quotations are lower on balance. *Bengal* were Rs. 675 against Rs. 684, *Bhulanbararee* Rs. 31-12 against Rs. 32-10 and *Bokaro and Ramgur* Rs. 47-6 against Rs. 48-4. There was a rise in *Bhalgora* to Rs. 21 on rumours of a good dividend, but the close is quieter at Rs. 20. *Amalgamated* were not very much changed at Rs. 52, but *Equitable* have shed one point to Rs. 66-7. *New Beerbhoom* were relatively steady at Rs. 39-4, but *Nazira* were more than a point lower at Rs. 19-10. *Pench Valley* changed hands at Rs. 51-4 against Rs. 52-4, *Standard* at Rs. 42 and *South Karanpura* at Rs. 28-8.

In the Jute section, only a few transactions have been recorded. *Howrah* are lower by one and a half points at Rs. 87-2. *Anglo-India* were Rs. 468 against Rs. 474, *India* Rs. 691 against Rs. 698 and *Presidency* Rs. 11-15 against Rs. 12-3. *Nuddea* were noted at Rs. 124, *Kamarhatty* at Rs. 688 and *Rameshwara* at Rs. 19-12. The reports that the authorities are endeavouring to ensure a minimum supply of coal to the industry should have an encouraging effect on the market. At the present moment sellers are not prepared to dispose of their holdings rather freely.

In the Engineering section, Indian Irons and Steel Corporations have been fluctuating in narrow limits. There is good buying at the lower levels. After being lower at Rs. 38-4, there was a recovery to Rs. 38-14, but there is again a drop to Rs. 38-6. *Steel Corporation* improved from Rs. 31-14 to Rs. 32-6, but are again quoting Rs. 31-12. *Jessop* were quiet at Rs. 23-12, *Marshalls* four annas lower at Rs. 4-11 and *Kumardhubi Engineering* one point lower at Rs. 10-2. *Arthur Butler* were Rs. 25-1 against Rs. 26-8 and *Bhartia Electric* Rs. 21-4 against Rs. 21-8. *Braithwaite* were crossed at Rs. 12-8.

Sugar shares have been neglected, *Balrampore* being dealt in at Rs. 16-4, *Carew* at Rs. 26-5 and *Ramnugger Cane* Rs. 14-2.

Tea shares were easier though there was still enquiry for selected stocks. *New Cinnatolliah* were Rs. 482-8, *Rutema* Rs. 19-8 and *Mothola* Rs. 625. *East India* were unchanged at Rs. 17-10, and *Bishnauth* at Rs. 45-4.

In the Miscellaneous section, *Burma Corporation* were Rs. 5-1 and *Indian Copper* Rs. 2-14. *B. B. Petrol* also were lower at Rs. 4-11. *Alkali and Chemical* were Rs. 28-4. *Assam Bengal Cement* were very steady at Rs. 17-12 though *Dalmia Cement* were lower at Rs. 16-12. *Paper* shares were quietly steady with *Titaghur* at Rs. 27, *India Paper Pulp* at Rs. 220 and *Star Paper* at Rs. 15-7. *Assam Saw* were steady at Rs. 5-14. *Midnapore Zemindary* have dropped six points to Rs. 168.

(*Continued from page* 454)

of such reports to the Exchange where they are given publicity.)

15. Is it agreed that forward dealings in shares contribute to undesirable speculative activity? If so, should something on the lines of Rule 94-C of the Defence of India Rules be made part of the permanent law of the country? Otherwise, should legislation on the lines of the Bombay Securities Contracts Control Act 1925, be made applicable to the whole of India? Have you any suggestions to make as to the amendment of the Bombay Securities Contracts Control Act?

16. Should a minimum proportion of the shares of new flotations be allotted for public sale?

17. Should there be **only one** Stock Exchange in a City or Town.

18. Should the bulk of the share dealings come under the Stock Exchange? If so, how can this be carried out?

19. Should stock and share dealings be regulated by special legislation? If so, what are your suggestions? If not, how would you regulate them?

(Note.—In the United Kingdom, the Prevention of Frauds (Investment) Act, 1939 provides for the licensing of dealers and the official recognition of Stock Exchanges.)

20. To what extent are the functions of (i) issuing houses and underwriters, and (ii) brokers and jobbers, combined in India? Is this satisfactory? If not what modification would you suggest?

21. What machinery would you suggest for the administration of any legislation that may be passed?

22. Any other suggestions?

(*Continued from page* 453)

The amount carried forward is Rs. 20,578 against Rs. 20,311 brought in. The slightly higher level of profits is due to the working of a larger number of hours through the purchase of loom hours from other mills. From August 29, the mills have been working 60 hours per week. This additional working being rendered possible by the purchase of loom hours from the Soorah Jute Mills Company, Ltd.

• • •

Nellimarla Jute Mills Company, Limited, reports a decline in earnings for the latter half of 1944 to Rs. 6,13,042 from Rs. 8,35,364 for the previous half-year. Sales were actually higher but the increase in manufacturing expenses and the incidence of Madras Sales Tax have adversely affected earnings. Provision for taxation is lower at Rs. 4,36,000 against Rs. 6,02,000 as also compulsory E.P.T. deposit at Rs. 80,000 against Rs. 1,31,000. The amount set aside for depreciation is Rs. 25,000 (Rs. 46,000). As a result of the smaller tax provision and depreciation the dividend has been maintained at 12 annas per share.

WATCH-DOG.

Bengal Central Bank

To his own skilful interpretation of figures appearing in the report and balance sheet of the Bengal Central Bank published to-day Mr. J. C. Das added a comparative analysis that makes formal comment superfluous. The 1944 results are wholly encouraging since Deposits are up by Rs. 1½ crores to stand at Rs. 5.76 crores in the latest balance sheet. The dividend of 6½ per cent tax free is well covered by the year's net profit from which Rs. 1 lakh is allocated to the Reserve Fund. The increase in paid up capital has supported the steady expansion in resources to which Mr. Das called attention when surveying the results of experienced and prudent management. It is the programme of expansion promised that will interest shareholders most. It is only proper that the oldest Bengali bank should again be in the van. How well, and how far, future problems have been dealt with in advance is the true measure of success that is going to attend the efforts to branch out beyond Bengal and Bihar. The status attained in recent years should contribute decisively to the success anticipated in regard to a future issue of share capital among other things.

The most outstanding feature of the balance sheet is the proportion of Investments to total assets. Investments in Government securities are large enough to provide ample security, while the cash ratio (around 20 per cent in this case) is pitched high enough to warrant the claim that absolute security and safety to Depositors is offered by the Bank. The further accretion to capital referred to follows the progress reported by the Chairman. It is noteworthy that competition has been more than met and the Bengal Central's prospects are now wholly secure. In the five years into which the progress of one quarter of a century has been compressed, Mr. Das has necessarily played the most conspicuous part in steering the boat. but his tribute to the crew is both well-deserved and apt. The Bengal Central's future expansion may be determined by the plans to which Mr. Das referred. It should also be shaped by a Board whose vitality has been enriched by new blood again. Others besides the shareholders and constituents will share the satisfaction of Mr. Das with what has been achieved in 1944, when security has been preserved to the hilt and the Bengal Central's service has been consistent and fair, to judge only by figures relating to Advances and Bills.

(*Half-yearly General Meeting on* 20-4-1945 *at* 12-20 *p.m. Books closed from 7th to 20th April,* 1945).

Audited accounts for the half-year ended 30th November, 1944.

After transferring Rs. 25,000 to Mill Renovation Reserve, providing Rs. 5,15,000 for Taxation and after making sundry adjustments, the results for the half-year show a profit of Rs. 1,34,827-0-6. After bringing forward the balance from the last Account and transferring Rs. 50,000 to Dividend Equalization Reserve there is a balance at the credit of Profit and Loss Account of Rs. 1,22,033-13-7 from which the directors recommend payment as follows:—

Dividend on Preference shares at Rs. 3-8 per share Rs. 31,500; and on Ordinary shares at Rs. 4-0 per share Rs. 48,000; thus absorbing Rs. 79,500 and leaving Rs. 42,533-13-7 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating and the output of the Mill has been maintained in the Mill belonging to the Cheviot Mills Co., Ltd., in accordance with the arrangements described in the last Report. As was anticipated the Mill has not been affected by the general shortage of coal, but the Mills Industrial Pool was established with effect from 1st July, 1944. As from that date the Mill is liable to pay the Pool a cess of 2 annas for each loom hour actually worked and provision for this has been made in the Accounts. Against this, however, the Company has benefited by the fact of Cheviot Mills being electrified and in consequence to a very great degree unaffected by the coal shortage.

During the half-year the working of the Cheviot Mills extra 32 looms enabled the Mill to make up 85 of the hours previously lost leaving a balance of 1,011 hours still to be made up under the Working Time Agreement.

The Directors of the Cheviot Mills Co., Ltd., have given three months notice of termination of the present agreement which will herefore expire on the 30th April, 1945, but they have at the same time intimated they will be glad to discuss some alternative arrangement to be mutually agreed.

(*Half-yearly General Meeting on* 20-4-1945 *at* 12-25 *p.m. Books closed from 7th to 20th April,* 1945).

Audited accounts for the half-year ended 30th November, 1944.

After transferring Rs. 56,147 to Mill Renovation Reserve, providing Rs. 50,000 for Depreciation and Rs. 5,50,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 1,25,636-0-3. After bringing forward the balance from the last account, there is a balance at the credit of the Profit and Loss Account of Rs. 1,87,725-11-2, from which the directors recommend payment as follows:—

Dividends on Preference shares at Rs. 3-8 per share Rs. 35,000; and on Ordinary shares at Rs. 6-0 per share Rs. 95,700; thus absorbing Rs. 1,30,700 and leaving Rs. 57,024-11-2 to be carried forward.

The weekly hours of working under the Indian Jute Mills Association Working Time Agreement remained unchanged throughout the half-year at 54 hours per week with all looms operating, any the Mill has worked 108 hours per week in order to make good the production of the Albion Jute Mills Company's Mill in accordance with the arrangements described in the last Report. The Mills Industrial Pool was established with effect from 1st July, 1944. As from that date the Mill is herefore liable to pay the Pool a cess of 2 annas for each loom hour actually worked and provision for this has been made in the Accounts.

The Company has given the Albion Jute Mills Co., Ltd., 3 months notice of termination of the existing arrangement with regard to the double shift working of the Mill by which the production of Albion Co., is made good. They have at the same time advised the Albion Jute Mills Co., Ltd., that pending expiry of the notice they are prepared to discuss some other equitable arrangement by purchase of the Albion Co.'s loom hours or otherwise by which the Mill will continue to operate 108 hours per week.

BOUQUETS & BRICKBATS

(From our Readers)

Homer Nods

Untrue to his name, *Analyst* has not been quite alert. In the issue of April 7, he says: "I hear that Bengal is also contemplating Agricultural Income-tax on the same lines".

Bengal is long past the contemplation stage. Agricultural income-tax is an accomplished legislation in the province.

Homer Nods again:

In the interests of Industrial Bombay, we should perhaps write to you to correct a slight inaccuracy which has crept into your Editorial Notes of 31st March, 1945.

On page 403 under the heading "Fans and Lamps", there is a reference to seven firms having commenced the manufacture of fans before the war and seven new companies having started during the war. Later on, you say:

> "It may be noted here that both branches of the industry are limited to Calcutta".

The fact is that so far as ceiling fans are concerned, one factory in operation in Bombay before the war is to-day producing more than one-seventh of the quoted estimated total production from All-India, and has come to rely increasingly on indigenous products, although dependence on imported components is not entirely removed.

At the insistent request of correspondents, we have opened this new feature, in which a selected number from Eavesdropper's weekly mail-bag and from letters addressed to the Editor and Watch-dog will be published. While we gladly take this step in response to the complaint that we do not generally give publicity to the points raised by our readers, we have a request to make: we deprecate the universal desire of our correspondents to be publicised through nom-de-plumes rather than in their own names. The utility and piquancy of this column is in direct ratio to the readiness of readers to back their views with their names.

—*Editor.*

Tax Evasion:

You have hit the nail when you point out that measures to check tax-evasion must be inspired by knowledge of the devices and strategems employed by tax-dodgers. And you have catalogued some of the subterfuges in vogue.

It seems to me that your list is not exhaustive. May I add one or two items to the list?

First.—What about the large amounts secreted in the purchase of landed properties? I wonder if the income-tax department has arrangements for cross-references from the Land Registration Offices.

It must be stressed, in this context, that a subterfuge usually practised is that the sale-deed mentions a price much smaller than the actual price. The seller receives in cheque the price stated in the document and in cash the balance. The cash payment is from 'black money'.

Second.—As you have yourself pointed out, shares with blank transfer are a convenient refuge for black money; but you have suggested no solution. The tax authorities can certainly get information from each of the Companies as regards the parties who actually received (either directly or through banks) the dividends on shares held on blank transfer.

Third.—It is a notorious fact that, with regard to new capital issues, quite a considerable sum is received in cash. All cash payments are presumably from traffickers in black markets. The Application receipt books of companies must be investigated by tax-officers who can, thereby, trace the full circumstances about those who prefer to pay in cash rather than by cheque.

* * * *

It is not sufficiently realised that war-time taxes (and the loopholes) are engendering a mentality of reckless spending, which may turn out to be a grave nation-wide problem. Let me narrate a recent incident.

A friend bought a tin of State Express cigarettes for Rs. 10; and I could not help exclaiming "what sinful extravagance!" He quickly retorted: "Do you know 555 at Rs. 10 now is cheaper than before the war. In the old days, it cost Rs. 1-8. Nowadays, it costs only 8 annas; the other Rs. 9-8 is paid by the Government.

The argument is simple. The cigarettes are debited to "Entertainment". And E. P. T. is saved to the extent of 94 per cent on Rs. 10.

Calcutta Electric Supply Licenses:

You have posed the query "why this solicitude?" And this query implies a complaint against the Bengal Government.

Don't you think that you are yourself suffering from solicitude in the solution you suggest?

For, there is the straightforward solution on the analogy of the scheme of sterling debt repayment. In the case of sterling loans, the holders were notified that they would be paid off on the basis of the market rates ruling on the day the vesting order was issued. All that need be done in the case of Calcutta Electric Supply Corporation, is for the Government of India and the British Treasury to issue vesting orders requiring the shareholders to surrender their scrips on payment at the rates prevailing in the London market on the date of announcement.

It is, of course, true that the good offices of the Government of India and, through them, of the British Government must be secured. If their good offices had been available for sterling repatriation to the extent of over £400 million so far, why should we think that their offices will not be similarly available for repatriation of the sterling capital of all utility Companies in India amounting to, say, £30 millions?

British Vested Interests:

If the Scots still rule Clive Street, it is because the Indians who own the majority of shares are Marwarees. And, till recently, a patronising smile by the smallest of Sahebs could make a Marwaree feel so flattered that he would hand over proxies and all to the Saheb. Failing to secure effect from a smile, the Saheb can pass on business on which the Marwaree broker makes, say, Rs. 12-8 or Rs. 25; and this trick will surely secure the proxies.

The fact of the matter is that the real control has long been in Marwaree hands; and it is only recently that Marwarees have begun to dare bearding the British lion in the Clive Street den.

* * * *

I agree with all that you say about the Clive Street firms dispensing their patronage to their jatwallahs. But this is true not only of British firms, but of every managing agency house.

Marwaree managing agents dump Marwarees into all jobs—even the technical jobs. Moslem firms patronise only Moslems. Jew firms prefer Jews. (I take it, there is a preponderance of South Indians in *Indian Finance*).

These parochial preferences are *natur*, as Sam Weller would say. The Englishman has equally valid grouses that the Scotch firms employ but few Englishmen.

* * * *

Eavesdropper will be the first man to give the devil his due. And, I am sure, he will agree that, with all their faults and shortcomings, British firms have built Clive Street prosperity on such solid foundations that Eastern India fares well because of British leadership and pioneering.

Every Company under British managing agency has the strongest financial position; and the factories are kept in tip-top condition. You need only compare the state of any jute mill in Calcutta with that of any cotton mill in Bombay. Or any British-owned colliery or tea estate with any Indian-owned colliery or tea estate.

* * * *

I am glad you have rubbed it into the cotton mill-owners. They have never missed an opportunity to fleece the consumers. For whose benefit? The beneficiary is Sir Jeremy Raisman. Our nationalist mill-owners have been nothing but tax-gatherers for this alien Government.

I am d—d if I shall wear any swadeshi cloth after this war. And, in saying this, I am repeating what everyone is saying.

* * * *

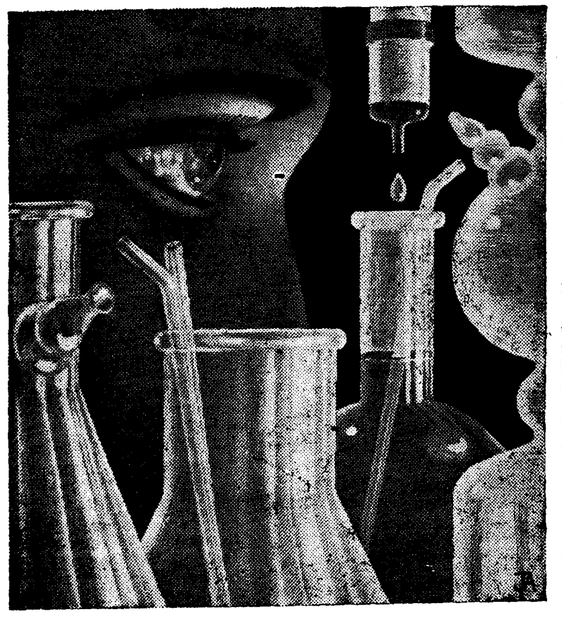
You have referred to Indians getting control of Companies now managed by British firms. Is this a gain for Bengal?

Everyone of the manipulators who have figured so prominently is a Marwaree. Change from the literal Scots to the metaphorical Scots is not a change to thrill anyone. You say it leaves you cold. Yes, it leaves me cold, too.

* * * *

Vagaries in Clive Street will be effectively controlled only if we had a watch-dog like J. J. Kapadia in our midst.

J. J. Kapadia has done much to establish the rights of shareholders in the Western Presidency. His mission has been a success there. He will be rendering a great service if he centres his activities and habitat in Calcutta for some time.



Incidentally, it will be worth his while as a knowledgable share-broker like him is assured of a large clientele in this city.

* * * *

It is not pleasant to heave a brickbat at one whom I admire, though somewhat fitfully. Much as I like breezy writing and appreciate the uses of exaggeration, I feel, *Eavesdropper's* attack on Indian businessmen is definitely overdone.

Not that I am afraid the Philistines may rejoice. But the article is lacking in appreciation of the circumstances that help to build up commercial morality. The political and economic status of India had, till recently, confined Indian business to mere speculation, and prosperous speculators are slowly moving into industry. Traditions and qualities are hard to build; and though probably *Eavesdropper* was thinking of some concrete cases, he exhibits an unseemly eagerness to tar All-Indian businessmen with the same brush. And the implication is more damning than the explicit statement.

AT YOUR SERVICE

IMPROVEMENTS in our daily life follow one another so swiftly that we tend to accept them as a matter of course. We note advances in the colour, finish and texture of our dress materials or the fabrics which go to furnish our houses. We even use without surprise entirely new types of textiles and other materials. We read with only a passing wonder of the strides being made in the prevention and cure of disease among men and animals, and for our protection, in the detection of crime. We have ceased to be astonished at the developments which make our daily round and common task, in kitchen, work-room and garden, simpler or more enjoyable. We accept without comment the progressive advance in quality of such entertainments as the cinema and radio. Even in a world at war we seldom pause to inquire how it is that we are still able to enjoy efficient substitutes for the articles which are temporarily no longer obtainable. Or how it comes about that the evils of undernourishment and the scourge of epidemic disease have been kept so firmly in control. We shall do better to remind ourselves occasionally that none of these things come of their own accord. In each one of them we shall, if we trouble to inquire, find the hand of the research chemist and of the chemical industry—and not least of the British chemical industry. The record of history shows that British chemists have always been in the van of invention and discovery. It is not the least of Britain's justifications for the regard of other nations that, even stretched on the rack of war though she is, her sons and daughters, fleets and armies scattered all over the globe, her chemists have stood to their task. Today, as in peacetime, British laboratories and chemical factories are working with undiminished resource and energy to see that the benefits of science are increasingly applied in our daily life.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on April 10. Total amount offered was Rs. 9,05,25,000. Tenders at Rs. 99-14-9 per cent and above were accepted in full and those at Rs. 99-14-6 per cent were allotted approximately 33 per cent. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being As. 5-7 per cent. per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on April 17 at Bombay up to 11 a.m. and up to the close of business on April 16, at other centres.

During the week ended April 6 Government of India Treasury Bills for Rs. 3,36,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

SILVER BLOC EMERGES AGAIN

INSISTENCE ON STATUS FOR SILVER AS INTERNATIONAL MONETARY MEDIUM

SPECIAL FOR "INDIAN FINANCE"

Washington, April 10.

The Senate Silver Bloc is preparing again "to do something for silver". This time the move will be in the direction of writing some provision for silver into the Brettonwoods proposals. This is inevitable ever since Silver Senators, who are numerous enough to constitute the balance of power in the Brettonwoods legislation, should they so determine, wrote to Roosevelt before Brettonwoods urging that silver as well as gold should be given place in the international stabilization scheme. But they lacked representation at the monetary conference and failing again to get any support from India, Mexico was left the sole sponsor of silver. But Silver advocates have emerged again as the Brettonwoods legislation moves towards the Senate for consideration. The purpose of this powerful bloc, as defined by the leader, Senator Pat McCarrn, is to obtain "world recognition for silver as a monetary metal". The Bloc is probably in mood to dicker with the Administration but if the aim is to alter the Brettonwoods legislation on behalf of silver provision it will find an adamant Administration. The latter contends that even supposing that the Treasury will aim to insert silver provisions, which it will not, it would be impossible because that would necessitate another International conference.

The Silver Bloc's views are set forth thoroughly in a recent edition of the "New York Times" whose Financial Correspondent writes: "A series of questions and answers led to acknowledgment by ex-Senator McCarrn group that it would like some sort of provision in Government like that". Then the "New York Times" Correspondent tells of inquiries in executive departments where the impression was that the Silver Bloc wanted "either international recognition of silver in the Brettonwoods legislation or whatever else they could get to serve special interests". It is reported also that Mexico wants an early conference to be called to seek a place for silver as an international monetary medium. The "New York Times" editorially says that "the Silver Senators had political influence fantastically out of proportion to their numbers or the interests they represent. Only to the extent the international gold standard is eventually restored is the world likely, in the long run, to have stable exchanges, great volume of international trade and final escape from chaos of nationally managed currencies." The injection of silver issue would merely delay such result and further confuse public thought. There can be no excuse for amendments merely calculated to embarrass the working of agreements or designed to appease some selfish interests or pressure group. Much more will be heard about silver as the Brettonwoods proposals occupy the attention of the Senate.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Short credits have been in abundant supply with inter-bank call money quoting ½ per cent. in Calcutta and ¼ per cent. in Bombay. On the weekly Treasury Bill tender day, against Rs. 4 crores on offer, applications came to Rs. 9.05 crores. The average rate of accepted tenders was unchanged at annas 5 pies 7 per cent. per annum. The offer for next week remains unchanged at Rs. 4 crores.

The returns of the Reserve Bank for the week ended April 6, disclose drastic changes. There is an increase of Rs 15.43 crores in active note circulation which now exceeds the Rs. 1,100 crores mark. This is due to expansion of currency against sterling securities for Rs. 10 crores and also to the delivery of rupee coin by the Government for Rs. 5 crores. The Central Government's deposits have gone up by Rs 9.57 crores to Rs. 263.38 crores, while those of provincial governments have gone down by Rs. 7.35 crores to Rs 21.87 crores. The deposits of banks show a small rise of Rs. 44.76 lakhs to Rs. 85.90 crores. Investments of the Reserve Bank in the banking department show a sharp rise of Rs. 6.35 crores to Rs. 24.54 crores ; and, if this is due to open market operations, the inference is clear that the Reserve Bank had carried out most thorough-going open market purchases during the week.

The return of the Imperial Bank for the week ended April 6 shows a decline in deposits to Rs. 228.66 crores, which are lower than last week by Rs. 5.47 crores. The investment portfolio shows an expansion by Rs. 2.47 crores, while advances are slightly less. In the result, cash has gone down by Rs. 7.71 crores.

The period November to March is significant in more ways than one. This is the time during which various crops are moved from the up-country areas to the consuming centres. This is also the period when tax collections are heaviest. In normal conditions, exports from India are most active in these months. These activities are necessarily reflected in note circulation. Between November 3, 1944, and March 30, 1945, active note circulation has risen from Rs. 964.90 crores to Rs. 1,084.88 crores, that is to say, by Rs. 119.98 crores. The Reserve Bank has pumped into the market as much as Rs. 120 crores of new currency in these five months. During this period, the demand liabilities of scheduled banks have gone down from Rs. 614.30 crores to Rs. 596.67 crores, that is, by Rs. 17.63 crores. While current account deposits have declined, fixed deposits have risen by Rs. 23.33 crores to Rs. 220.79 crores. The net increase in deposits is, thus, Rs. 5.70 crores. Active note circulation has gone up by Rs. 120 crores. Of this, only Rs. 5.70 crores has come into the coffers of banks. What has happened to the balance of Rs. 114 crores ? The increased circulation that is to be expected in a period of vigorous crop movement may be said to account for, say, half of this Rs. 114 crores. Another factor which leads to the retention of notes in the hands of the people is the expansion and intensification of the war in Burma. The large military operations in Assam and Burma have to be financed with currency notes which remain, for the time being, entirely abstracted from the money market proper. These are regions which have hardly any banks. The various spending agencies have to carry large sums in the till ; and the various classes of people to whom payments are made have also to keep them largely in the form of cash. The day-to-day expenditure in Assam and Burma must be very heavy indeed. To cope with the turnover of transactions in the Northeastern Frontier, the total amount of currency notes that are engaged and held up in this activity must easily exceed Rs. 50 crores. We admit that these are only guestimates ; but, with the limited information at our disposal, nothing better than guestimates is possible.

The exchange market is steady with a few export bills showing.

Call money quoted ½ per cent in Calcutta and ¼ per cent in Bombay. 3 to 5 months ½ per cent; 6 to 11 months ¾ per cent and 12 months 1¼ per cent.

Bank's buying 90 days/St. at 1s. 6 7/32d., for 1 and 2 months; Bank's buying 90 days/St. at 1s. 6¼d., for 3 to 6 months.

B.C. rates T.T. 1s. 5 15/16d., B.C. rates D.D. 1s. 5 15/16d. Bank's selling T.T. 1s. 5 31/32d. Bank's selling D.D. 1s. 5 31/32d. Bank's buying T.T. 1s. 6 1/32d. Bank's buying D.D. 1s. 6 3/32d.

London—New York.—X'Rates $4.02½/3½; Bank's selling T.T. Rs. 332¾; Bank's selling D.D. Rs. 332¾. Bank's buying T.T. Rs. 329½. Bank's buying D.D. Rs. 327½.

London-Montreal.—X'Rates $4.43/47; Bank's selling T.T. Rs. 302½; Bank's selling D.D. Rs. 302½. Bank's buying T.T. Rs. 297¾; Bank's buying D.D. Rs. 295¾.

GOVERNMENT OF INDIA

3% FIRST DEVELOPMENT LOAN, 1970-75

Available for cash subscriptions from 16th April, 1945

The loan will be closed without notice as soon as subscriptions amount to Rs. 40 crores and in any case not later than the 18th April, 1945.

ISSUE PRICE Rs. 97 PER CENT

5 Per cent. Income Tax Free Loan, 1945-55, notified for repayment on the 15th October, 1945, will also be accepted as subscriptions at Rs. 102-8-0 for every Rs. 100 nominal tendered for conversion.

Applications will be received at the offices of the Reserve Bank of India at Bombay, Calcutta, Cawnpore, Delhi and Madras, at the branches of the Imperial Bank of India at other places and at all Government Treasuries.

For full particulars, apply to any of these Offices, Branches or Treasuries.

Task Before New Finance Member*

Another important task before Sir Archibald Rowlands is the pursuit of the borrowing programme with a view to strengthen its effect as an anti-inflationary measure and also with a view to strengthen the credit of India by the very process of borrowing. In the past two years, Government's borrowings, short-term as well as long-term, have significance not only as ways and means operations but also as an important plank in the drive against inflation. It is for this reason that Central Treasury Bills continue to be sold every week though, from the point of view of the ways and means budget, sales of Treasury Bills can be completely stopped. It is also for this reason that the revised estimate for 1944-45 provides for the Central Government's closing balance of as much as Rs. 286 crores, and, even more significant the closing balance in the budget estimate for 1945-46 is the high figure of Rs. 521 crores. That is to say, the closing balance of the Central Government is to be allowed to expand by Rs. 235 crores in the course of the current year. As the new loan programme for 1945-46 is estimated at Rs 350 crores and as, out of this amount, Rs. 60 crores will be required for the discharge of the permanent debt, it may be said that the balance of Rs. 290 crores is being raised by way of loans mainly for increasing the closing balance by Rs. 235 crores.

To the extent that the Government are raising loans, so to say, not out of necessity, but as a luxury, they may be described as an exceptionally strong borrower; and they are in a position, therefore, to dictate the terms on the basis of which they are prepared to take funds from the market. During the war years, it has certainly been demonstrated that a strong borrower can reverse the traditional role of the lender being the topdog and bully. It is the borrower today that can bully the lender. This has been clearly proved in the case of Britain where the rate paid for short-term bonds issued recently was only 1¼ per cent. In India also, the defence loan programme during 1940-45 must be described as a great success in the sense and to the extent that every new loan has been on terms and conditions more favourable to the Government than its predecessor.

Our contention is that the success achieved in the past and the favourable ways and means position now attained by the Government warrant bolder policies and more thorough-going operations in the future. No attempt has so far been made in India to depart from the 3 per cent type of loan. The Finance Member has been content to extend, with each new loan, the date of maturity; and the last loan devised by Sir Jeremy Raisman is a definitely long-term loan maturing after 25-30 years. The new loan (3 per cent 1970-75 at Rs. 97) is limited to a total of Rs. 43 crores. Holders of 1945-55 have been given inducement to convert into this loan. Taking all circumstances into account, the list for the new loan may be expected to close within a few days. The conversion of the 1945-55 loan is thus provided for; and Sir Archibald can afford to take a more detached view of the further stages of new loan planning this year.

We suggest that the conditions that confront Sir Archibald are ideal for initiating the move to replace the 3 per cent type of loan by a 2½ per cent type for medium and long-dated loans and 2 per cent type for short term loan. The first essential for the success of such a move is the redemption of 3½ per cent non-dated rupee-loan. We cannot understand why the authorities have so far failed to take a definite and positive stand in regard to the redemption of this loan. Much less can we understand the policy of the Government underlying their sale of 3½ per cent paper at par a few months ago. On more than one occasion, we have stressed our view that, from the point of view of the present giltedged market and future giltedged outlook and from the point of view of the high credit which India enjoys both at home and abroad as well as from the point of view of the comfortable ways and means position of the Central Government, the Government cannot long delay the redemption of 3½ per cent non-dated rupee stock. On the earlier occasions when we put forward this suggestion, we had to contemplate the redemption to be carried out in stages. The cash position of the Government is now so comfortable that the redemption of 3½ per cent rupee stock can be undertaken in one single operation. The moment an announcement of the decision of the Government to repay this loan is made, the giltedged market in India will receive a most powerful reinforcement of confidence and optimism. It may be taken as certain that over 90 per cent of the holders of 3½ per cent rupee stock will convert into whatever new loan is offered for the purpose. Only a negligible number of holders of this scrip will elect to receive payment in cash.

With 3½ per cent rupee stock out of the way, the giltedged market will be in the best condition to provide a favourable response to the 2½ per cent type of loan for medium-dated and a 2 per cent type of loan for short-dated. Sir Jeremy Raisman established his reputation by making this a 3 per cent war. Coming events may well prove that Sir Archibald Rowlands succeeds in making it a 2½ per cent war.

Finally we may consider the possible objection to our insistence on a progressive decline in the borrowing rate of the Government. Since its inception, "Indian Finance" has maintained the firmest attitude with regard to the credit of India and her ability to borrow on the most favourable terms. From an altitude of 6½ per cent in 1931, the Central Government's borrowing rate has steadily declined to 3 per cent in the war years. In fact, we have also had a loan of 2½ per cent type. The critic may argue that a drop from 6½ per cent to 3 per cent is a big enough drop, and that to suggest a further decline to below 3 per cent may have the effect of making the giltedged securities altogether unattractive to investors. This line of criticism arises from the belief that, the higher the yield offered on a security, the greater will its appeal be to investors. This is one of the popular fallacies. The exact opposite is the truth. Bonafide investors have greater confidence in a security which is put out by the authorities with a comparatively lower yield. As between the bank which offers 4 per cent for deposits and another which offers 1½ per cent for deposits, it is the latter which secures the preference and affection of depositors. The suspicion of a depositor is automatically engendered by the very fact of the high rate offered by a bank. He argues to himself: "This bank must not be having much of deposits, otherwise it would not be offering such a high rate to allure deposits." The borrower who higgles and haggles about the rate of interest commands greater credit with the lenders. That a borrower is willing to pay a high rate of interest, is straightaway put down as a point against him. The more particular the Government is with regard to its borrowing rate, the more credit it commands and sustains This is axiomatic.

We may also recall the experience of our banks with regard to the interest allowed on current account deposits. In the 'twenties, banks in India were allowing interest at 2 per cent on current account. When the proposal was mooted for reducing the current account rate to 1 per cent, some banks expressed apprehension that this would have the effect of reducing deposits. In spite of the apprehensions held in some quarters, the banks decided on the reduction of current account rate to 1 per cent. Far from deposits coming down, the real increase in banks' deposits in this country began in the 'thirties. Since then, the interest rate on current accounts has been further lowered; and the present situation is that depositors have come to dismiss from their mind any thought of earning interest on current account. Thus, while deposits in current account earn hardly any interest, the demand liabilities of banks have gone up by leaps and bounds; and it is also a well-known fact that current account deposits are three times the fixed deposits. This experience of banks may be advanced as clear proof that the main consideration with depositors is not the rate of interest, but the sense of security.

Time was when as high a rate as 8 per cent was paid by the Central Government on treasury bills. Who could have dreamed in those times that the same Government would one day be able to borrow on the basis of one-third per cent for three months bills! Bankers in the specious days of 7 per cent and 8 per cent would certainly have argued that one-third per cent per annum on treasury bills was altogether an uneconomical rate. Yet, we have today in India the phenomenon of the Central treasury rate being 60 per cent lower than the British treasury rate, and the lower rate in India attracting far more funds from banks than the earlier high rates.

We are definitely of the view that further reduction in the Government's borrowing rate will be deemed to be a definitely favourable factor. For the last fourteen years, the British Government as well as the Indian Government have been unwavering adherents to a policy of cheap money. With modern monetary technique, the financial authorities have been able to pursue a cheap money policy with determination and success. That this cheap money policy has been carried out with unique success in the midst of war conditions, marks this war as an altogether different war in the financial sphere from its predecessors. We believe that the period after this war will prove to be entirely different from its predecessors. We do not apprehend any postwar slump. We look forward, on the contrary, to greatly quickened activity in the economic sphere. For the successful accomplishment of the new economic policies and programmes, cheap money policy, which has been so successfully vindicated in the war period will have to be continued and even strengthened in the after-war years. Holding this view, we venture to prophesy that, if this war has been a 2½ per cent war, the postwar period on this occasion will see the establishment of a 2 per cent borrowing rate for Governments with progressive and constructive financial policies.

*The first article in this series appeared on April 7.

Farm Income and Economic Prosperity

Recent research into the relation between farm income and the volume of employment in the U. S. A. has led to the formulation of a few extremely interesting propositions about the place of the prices of agricultural produce in national prosperity. These propositions may be stated in simple terms: (1) that farm income is the key factor in our system of making a living, the start of the cycle of exchange and the barometer of purchasing power; (2) that there is a rate of turnover to this raw material income as it passes through the various stages of economic use; (3) that the dollar of agricultural income has a larger influence and a higher rate of turnover; and (4) that consumers do not gain from low farm prices but lose and all groups other than agricultural "should insist on proper farm prices if they wish to have a job at an American price level." These propositions are based on analysis of statistical data relating to a long period. On this basis, it is said that the ratio of the total annual farm income to the total national income has been constant, at one to seven, through all the vicissitudes of boom and slump, but that the shrinkage of farm income during a slump slows down the turnover, limits the general purchasing power and curtails employment. It is worth while quoting the more concrete findings as given in an article in "Country Gentleman".

> In 1850 one half of our labour force was required in the production of raw materials, and the turnover was only twice. By 1925-29 our national efficiency had risen so that a much smaller part of our population was required to produce the raw materials and the turn for the five-year period averaged 3.9. It is now up to a fivefold turn, with only one-fifth of our working population engaged in raw material production. The other four-fifths are now enabled to earn their living by taking the raw-materials to the factories, processing them, distributing the finished goods and performing other services called for by our standard of living. But the amount of raw-material production and the prices it brings determine the amount of national income that can be distributed among these other groups. The new income this provides is the starter for the whole machinery of exchange. If large, the machine runs at full speed. If small, the machine slows down and we have bad times. For the rate of turnover operates as an economic constant.

The practical guidance to economic policy which this analysis provides is, no doubt, valuable. It gives statistical form, in an appropriately narrow range, to the theory that under-consumption is almost the sole cause of unemployment and slump. And it is socially desirable that Governments, which till now have been unduly susceptible to the influence of industry and big business, should recognise the paramount importance of farm income in the smooth working of the national economic machinery. Nevertheless, it seems desirable to emphasise that the empiricism of this line of enquiry provides a somewhat insecure basis for the conclusions arrived at and that it is, at any rate, not sufficient warrant for presenting them as scientific truths. The importance of farm income or, indeed, of the income of any single distinguishable group depends on the relation between the ratio of the group to the total population and the ratio of its income to the total national income. It is necessary to mention these two factors separately, since neither by itself can determine the nature and extent of consumer demand for which it is directly or indirectly responsible. In a land of Zamindars, a large proportion of total farm income may be concentrated in the hands of a few, and fluctuations in such farm income will affect the demand for luxury goods or the volume of savings, rather than the volume of demand for ordinary consumer's goods. Likewise, in a land in which the agriculturists are a large mass of small scale cultivators, a fall in total farm income may impinge on the demand for the necessaries of life, while a rise therein can rarely be sufficient to stimulate new forces of productive activity.

Conditions in the United States are radically different from the cases we have so far supposed. In the States, agriculture is not a subsistence occupation. Except in very bad times, farm income leaves a considerable margin as effective demand for a wide variety of goods and services. But the farmers bear a low proportion to the total population—"only a fifth of our working population is engaged in raw material production." One has, therefore, to be on guard against exaggerating the importance of the income of a fifth of the total population. The fact that raw material production is chronologically the beginning of productive activity and, therefore, of the exchange of values that is inseparable from the productive process does not mean that logically also the income of the producers of raw material should have primacy. In a national economy which is a going concern, there is, indeed, no such thing as the starting point of the cycle of exchange. It is the attribute of a circle that one point comes before or after another, according to where you make the start. It would be as valid to say that prices of farm produce are dependent on the total income of other groups—which is indeed the bigger group with a larger income—as that farm income sets the pace of industrial activity. The fact that the ratio between total farm income and total national income has been constant cannot by itself establish the paramount importance of the former. It is not known whether a similar phenomenon is, or is not, present in the case of the incomes of other groups. But we are told that "the value of manufactures, labour pay rolls and employment, retail sales, transportation income and volume of construction work are limited by farm income" and that "they follow its course, for better or worse, at an interval of roughly three to six months." It could hardly be otherwise, since all these values have to find their level in a predominantly free economy.

If it is to be established that farm income sets the pace of production, the causation has to be more definitely established, every link in the chain of cause and effect being brought out more clearly. In an advanced economic system, like that of the United States, the primacy of the agriculturalist in problems of distribution is by no means indubitable. For one thing, agriculturists form only a fifth of the total population, while their share of the total income is a seventh. And it is strange that in the article under comment the demand is made, not for a rise in farmers' share commensurate with their numerical strength, but for the maintenance of the 1:7 ratio at a high, instead of a low, level. Some of the most familiar economic issues would seem to have been burked thereby. If the ratio is constant, the terms of exchange between agriculturists and the rest of the community are constant, too; in which case, no disastrous results other than those caused by the time lag should ensue. But life differs so far from theory that one can appreciate the help which a higher level of total income and farm income can give to the maintenance of business activity and of employment.

Whatever may have been the state of affairs in the United States, in India, there can be no doubt about the importance of agricultural income to the tempo of national economic progress. The factors which are absent in the United States are not only present in India, but are particularly powerful. Agricultural workers form about 80 per cent of the total working population and farm income is sometimes computed at 30 to 40 per cent of the total national income. But in India a large part of the national income accounted for by "Services" is dependent directly and solely on the volume of farm income. One may, therefore, even question the correctness of counting the income of the "Services" as a separate entity. In any case, the effect of farm income on the working of the economic machinery is far more in India than in any other country. The effects are felt not only through the volume of demand which the agriculturists make for consumer's goods, but also through the income of certain other groups which are more or less unrelated to the truly productive sections of the economic organisation. The impact of agricultural incomes on the national economic life is therefore far more than may seem at first sight. It is difficult to illustrate this proposition historically., India has rarely, if ever, had rising prices in a period in which the surplus in the hands of agriculturists could exert its effect on the mechanism of production. In the present war period, there are obstacles to increased production which no rise in agricultural incomes can posssibly overcome. Of the effect of falling farm incomes on indigenous production and imports, the instances are only too many The larger proportion in India of agriculturists to total population and of agricultural income to total income and the degree of dependence which "Services" have on agricultural income make it obvious that the tempo of business is set by agricultural incomes.

These facts are of obvious relevance to problems of distribution in the planning of the post-war period. They show that expansion of industrial production must be broad-based on an expansion of agricultural income. While in former times it was doubtful whether agriculture was at all remunerative, in the future, we have to ensure a fair surplus in the hands of the agriculturist over and above his requirements for the necessaries of life. Only such a surplus can act as a spur to increased productive activities on the part of other sections of the community.

Marketing of Agricultural Produce in India

(Contributed)

In a country like India, where nearly ninety percent of the population live on agriculture, and agricultural produce forms the vast bulk of the internal and the export trade, the problem of marketing the products of the soil should be considered of vital importance. In most other countries, especially in the West, the State has been taking up the responsibilities in this sphere in right time and the peasants themselves are intelligent, educated and resourceful enough to organise themselves to attain increasing efficiency in their marketing methods. In India, however, the State has come into the field rather late in the day and the agriculturists even now are indifferent, with the result that not only do the agriculturists, especially the poorer among them lose heavily, but there results a wastage of material which may run to the value of several crores annually. The enormity of this waste is not easily recognised, because its spread is so vast and its occurrence is in such small trickles that its evaluation on a national scale is impossible and frequently even its physical recognition difficult. It is only when an expert like Dr. Coyne tells us that rats eat Rs. 3 crores worth of Indian food grains every year and other insects account for similar quantities, that we realise even vaguely the extent of loss to the country through inefficient marketing methods.

The problem of agricultural marketing in India has two main aspects. One concerns the protection of the interests of the cultivator or the grower as against the merchants or middlemen through whom he has to sell his produce. The other relates to retaining and improving the reputation of India's raw produce in foreign markets. Both are ultimately inter-related to a large extent, but the organisation and methods of work in tackling these two aspects are different.

In the marketing of the cash crops like cotton, oil seeds, jute, etc, it is a point of advantage that powerful capitalist interests, both Indian and foreign, are interested in it. Foreign industrial firms who purchase Indian raw materials have frequently their agents in India, who either take part in the wholesale trade of the produce, sometimes even entering into the primary village markets for it, or keep the exporting firms in prompt touch with every relevant development in the international market. Commodities like tea, rubber etc., are mostly in the hands of big capitalist producers who either singly or in combination, are able to adjust their production and marketing methods to the changing needs of foreign markets. Nor have the Government been insensible of their interests in this field, as the foreign trade and the prosperity of big business within the country have a direct bearing on Government revenues—though, even here, Government could well be accused of tardiness—the appointment of Trade Commissioners in many of the principal commercial capitals of the world and their work should have been of more substantial advantage to the Indian producers and commercial interests. The Government have also taken steps to fix commercial standards, acceptable in the international markets, for many commodities. These standards, as in the case of tobacco and groundnuts, are gaining acceptance at the hands of the producers and the processing firms who are increasingly becoming aware of the advantages accruing to them through strict adherence to the standards.

The position of the small agricultural producer, however, is still far from satisfactory. He is handicapped by his own chronic poverty, his conservatism, lack of education, absence of easy credit and storage facilities, primitive transport conditions and the unscrupulousness of the trading class. He has often to dispose of his produce to a dealer to whom he may already be indebted and obliged to sell, on the dealer's own conditions. These conditions will invariably be one-sided and, from the side of the trader, scruples play a very subordinate part in his dealings with the unsophisticated ryots. Very often, the merchant, who might have lent money at very high rates to the cultivator, goes to him at the time of the harvest and buys the produce, at his own price, deducts all previous dues from the payment and sometimes even pays only in instalments. Fraudulent weights and measures are commonly used and the producer is cheated of a considerable quantity of the produce in this fashion. The latter cannot put off selling his produce owing to his pressing pecuniary needs, nor can he sell to anybody else, being previously bound to a particular merchant of whom he had borrowed money. Even in the absence of any such prior obligation, the poor ryot will find that the familiar devil is always less troublesome than an unfamiliar one. The postponement of sales to the future would also necessitate good storage facilities, which are not obtained in the smaller towns. If a grower takes his produce to a primary market, worse conditions greet him there. There are a host of market functionaries, brokers, dalals, weighmen, accountants, who are all keen on defrauding him. Even if he were offered a price higher than what he could secure at his door step, this is more than discounted by the innumerable deductions charged to his account. Some of these deductions like those given for charity or cow protection may be considered reasonable, though even here, the man who pays has no voice in the expenditure of the money. But impurities, possible future losses to the purchaser the accountants' fee, the weighmen's charges, free gifts etc., are most indefensible and these combine to loot a good portion of the seller's money. No wonder that many ryots prefer to sell for a lower price at their own door rather than face this extortion at the market. There are also other insidious methods of cheating the seller. It is observed in many places that the weighmen are paid in proportion to their ability to manipulate the scales and measures and often the weights themselves will be nothing more than unpolished stones or wood pieces carrying a label which is only the merchant's testimony to their correctness. The position may not be so acute in all places and the gradual emergence of the competitive economy in the villages is leading to an improved state of affairs, but there are many places all over India where this picture represents, without exaggeration, the actual conditions.

These conditions could be remedied only if the State takes the initiative, both through direct reforms, and through the spread of education and the co-operative habit among the peasantry. Co-operation has scarcely touched the fringe of the problem, as far as agricultural marketing is concerned; and for the few successful organisations dotted here and there, there are many more who just limp and many have died out after a few months' activity. The field for co-operation in agricultural marketing is immense; and more benefits are likely to accrue to the cultivator through developments in this direction than any other reform. The experience of foreign countries may yield valuable lessons, though methods employed elsewhere may need modifications to suit local conditions.

An important direction in which the State has undertaken reform is through the institution of what are known as the Regulated Markets. For a long time, a few such markets have been working in the Central Provinces, but it is only after the Agricultural Commission emphasised their manifold advantages, that the question has been taken up in sufficient earnestness by the various Provinces and States in India. Just now, there are Regulated Markets in Madras, Bombay, Central Provinces and Berar; and among the States, Hyderabad and Gwalior have established them. Many other Provincial and States Governments have passed legislation for the establishment of these markets; probably its enforcement is delayed owing to the war. In Madras, the Act covers three crops, cotton, groundnuts and tobacco, in C. P. it covers cotton and grain, while in Hyderabad and Bombay all agricultural produce is brought within the scope of the Regulated Markets. It should be admitted that the markets now functioning have gone a long way towards eliminating many of the unfair and oppressive market practices which obtained previously in the respective areas and the agriculturists are also appreciating their benefits.

Even in these Regulated Markets, it is not always the cultivator who derives the advantages resulting from them. These advantages consist mainly in the enforcement of correct weights and measures, the licensing of market functionaries like the Adatya (Commission agent), the weighmen etc., the penalisation of all miscellaneous and unfair deductions and discounts, the maintenance of records of transactions, the insistence on prompt and full payment of the price due to the seller and arrangements for the speedy and equitable settlement of disputes between the buyer and seller. All these benefits can accrue only to those who effect their sales within the area under the jurisdiction of the Market. It is found that in most of the Markets in British India as well as the States, very often those who actually bring the produce for sale within the Regulated Markets are not the growers but petty dealers or agents of money-lenders or business houses, who effect a first deal with the cultivator outside the Market and come for a second formal transaction in the Market. To the extent that the benefits intended through the institution of the Regulated Markets do not go to the genuine cultivator, and are taken advantage of by others, the purpose of Regulation is defeated. The writer is engaged in a special inquiry into these questions and hopes to publish the results from time to time in these columns.

Apart from this, there are still many serious disabilities from which the Indian peasant suffers, in respect of marketing his products; and it is essential that in any scheme of post-war planning, there should be a sincere attempt to tackle them. The standardization of weights and measures, of which there are at present a bewildering variety in India, the provision of easy marketing credit, of adequate and up-to-date storage facilities, the supply of prompt and correct market information to the producers and merchants, making available to the ryots in a prompt and practicable fashion the results of relevant scientific research and, above all, the development of rural transport are matters that demand immediate attention.

The extent of non-Indian control over the marketing of agricultural produce in India is also not sufficiently realised in the country. It would be an interesting investigation to explore the nature and scope of this control, though its removal is a problem which concerns the broader issues of Indian politics.

PEEPS INTO POST-WAR BRITAIN

TRENDS TOWARDS CARTELS

OLD STYLE COMPETITION FORGOTTEN

LABOUR'S DEFECTIONS & DISSENSIONS

London, March 23.

The rapid approach of the end of the European war finds the British public in a fairly grim mood. For while Peace—even in instalments—is welcome, this one threatens to be the toughest peace in British history. Its problems, at home and abroad, are seen to be staggering.

At the end of the last war, the outlook was sufficiently unattractive to induce nearly a dozen British politicians to tiptoe into the House of Lords as into a sanctuary. It was not valorous, but it was smart; for the two decades ensuing wrecked every important political reputation in Britain, including those of Mr. Lloyd George and Mr. Churchill. And yet the skies in the twenties were sunny, compared with the dark lowering cumuli which are seen gathering to-day.

However, there are some assets to-day which need not and should not, be minimized. For one thing, ending European war will find fully installed what promises to be an almost completely non-controversial system of gradual demobilization of men and women in the armed forces and of munitions. This was totally lacking in 1918, and represents an immense gain.

Another advantage is that a thorough overhaul of Britain's educational system has been contemplated—the first stage will be effective from April 1st; and there are reasonable grounds for hoping that the terrific shortcomings, which the two wars and the intervening peace have revealed will be overcome in the next decade.

The third advantage is that the world hunger for goods, both capital and consumers' goods, is so obvious that peace should begin with "full employment,' thus giving the Government much needed time to look around.

And finally there is a stock of 1,000 million bricks on hand towards rebuilding Britain. This is about one year's supply, with current output running about 200 million monthly. But these bricks are expensive, costing £5 per 1,000, compared to the pre-war price of £2-10-0.

But if these, or something like these, represent the country's assets, the liabilities are overwhelmingly greater. The Board of Trade stoutly insists that plans for a change-over from war—or part-war—to peace are far advanced But Samuel Courtauld, addressing shareholders, complained bitterly of the Company's frustration in attempting to secure release of a few key men needed for a big post-war expansion programme. As rayon virtually "sells itself" nowadays and is obviously one of the easiest of Britain's export sectors to exploit in the post-war period, this governmental stickiness is widely interpreted as a sign that plans are still far from complete.

Competition with the United States in the export trade is another difficulty which no one minimizes. Out of 66 countries whose import totals are compiled and published annually by the League of Nations, there are 54 countries whose chief supplier of goods is either Britain or Germany or the United States (Figures for the year 1937). The last-named was the chief supplier of goods to 22 countries, while the United Kingdom and Germany were each chief supplier of goods to 16 countries. With Germany completely out of the picture, the post-war trade struggle may be envisaged as a battle to replace or supplant Germany in 16 countries. The feeling is that the United States is getting off to an early start on the most aggressive, individualistic, early Victorian lines, while British industrialists—so the complaint runs—have waxed fat and slothful behind domestic and international cartels and have forgotten the very alphabet of oldstyle competition.

According to the speeches recently made in the House of Lords debate, about 2,000 large firms dominate fields occupied by 250,000 firms, while about 1,000 very largest firms are responsible for nearly one-half of the entire national production. They have virtually extinguished domestic competition and show a strong disposition to enter international cartels for the extinction of international competition.

The real point is that the debate, which in the United States began in the 1870's and reached the conclusion that combines are an unmitigated evil which should be forcibly suppressed, is only just beginning in Britain and so far Britain has hesitated to condemn it outright. For example, Mr. Herbert Morrison, in his speeches up and down the country, condemns combines, but contents himself with proposing that they should be placed under constant government inspection, so that they can be checked, if they do wrong. But some of these combines —like the Iron and Steel Federation—operate in closest conjunction with the Government.

So far as the home front is concerned, apart from the education programme, everything is in the melting pot, from re-building blitzed Britain to further extensions of social insurance. The basic recommendations of Scott, Barlow and Uthwatt Commissions on various aspects of physical reconstruction have been rejected under pressure from the Right, while the Beveridge Report has been drastically whittled down. These are battles postponed, not problems solved. It is scarcely going too far to say that education and reform of workmen's compensation are the only two domestic problems which the Press and the politicians regard as satisfactorily solved.

Problems arising of the Colonial Empire are considered as in a somewhat different category, since they involve simpler technique, that of retaining complete control of pace or rate of improvement and firmly refusing to be hustled by other Allies, especially the United States. This is a simpler technique because, on the whole, the Labour Party does not have to be appeased as only a small minority takes a thorough-going anti-imperialistic attitude. The Labour Party's patriotic attitude towards retention of the colonial empire is fully matched by a similar attitude in the Dutch and French Socialist parties, so that it appears that pre-war empires will be fully supported by the European working classes who are most directly interested in them.

To what extent the forthcoming General Election will alter the terms under which these problems shall be solved is quite uncertain. There is general agreement that the Conservatives will lose a good many seats, but no agreement whether they will be reduced to such a small minority that they will not be able to govern Their strongest asset would appear to be the stubborn refusal by the leaders of the Labour Party to make any agreement with other parties of the Left looking towards post-war Left Coalition. With the Left hopelessly divided, the country might quite easily regard the Right as the only section capable of governing.

On the whole, the country may face a whole series of crises in the next few years rivalling those of the 1920's.

Editorial Notes

Darkness and Doubt

Comment on the work of the Hydari Mission is rendered more than ordinarily difficult, not only by the suspicion and hostility with which the public has regarded it, but also by the meagerness of the information provided by the Government. Public hostility to a mission of this kind is natural, since this is not the first time that the Government of India is finding specious pleas for befriending British industry. But one would have thought that, in view of this hostility, the Government would take special care to provide full information about the work of the Mission. Though the official communique on the subject was released towards the end of last week, the material on hand up to the time of our going to Press is a summary of a quasi-official news agency. A biggish booklet setting out the main provisions and affording explanations where necessary is the least that the press can expect to have on a question of this kind. Judging from the press summary, this country seems to have been placed in the negotiations of the Hydari Mission at unmerited disadvantage. The language of His Majesty's Government is lofty. India need not figure as a humble supplicant, where the upshot of the negotiations is benefit to British, and possible injury to Indian industry. Of the four aims of the Mission stated in the communique, the reduction of the demands of the defence services on Indian production, which is so visibly and so severely strained, is no favour to this country, while imports of consumer goods are, to the exporting country. Procurement of raw materials and mill stores may be said to stand in between. It would be unfair and unwise to overlook the crisis in consumer goods and to deny the desirability of additions to present stocks merely for fear of possible harm to a few small industries. But the official communique makes no attempt to show the two sides of the account; and comment on the work of the Hydari Mission has perforce to be postponed.

U.S. Reserves and Reserve Ratio

The U.S. Senate Banking Committee has approved of a bill to lower the minimum gold backing of Federal Reserve Notes from 40 per cent to 25 per cent and the backing of Reserve deposits from 35 per cent to 25 per cent. The significance and motive of this step are thus explained by 'Time':—

"The U.S. Gold hoard, which amounted to a historic $22,737,000 at the time of Pearl Harbour, is now down to $20,452,000. This might shrink even further if foreign balances in the U.S. of $5.3 millions are converted into gold. Reason for today's lowered total: the U.S. has been paying cash for more than half of its war imports and purchases in foreign lands (most of its vast exports are lend-lease, bring home no U.S. dollars). Thus the gold which powered into the U.S. in the 930s is now going out again.

But U.S. Currency in circulation has tripled since 1940 to an all time high of $26 billions: so that, in spite of still having a large gold hoard, gold reserves against Federal Reserve notes and deposits have dropped from 91 per cent to 49 per cent, are expected to hit 40 per cent by year's end".

The reason for the lowering of legal reserve provisions is, thus, the vastly increased bank deposits and money in the hands of the public. In almost every country, suitable changes in reserve ratio have to be effected, thanks to the abnormal conditions created by the war. That the U.S.A. was able to adhere to statutory requirements during all these war years, is due to the colossal gold stocks. The methods adopted for financing the war were largely inflationary; and the impact of inflationary policies was necessarily in the direction of pushing down reserve ratios. While the proposal to reduce statutory reserve requirements was sponsored by the Administration, an alternative proposed by Democratic Senators McFarland and Scrugham seeks to raise the price of gold from 35 dollars to 56 dollars an ounce. Nothing will, however, come of this proposal as Administration spokesmen have immediately repudiated the idea.

Indianisation (?) and Imperial Bank:

It has been officially announced that the London visit of the Home Member is connected with the recruitment of British personnel for such Imperial services as the Indian Civil Service and the Indian Police. We are not concerned with the political and constitutional aspects of the proposed recruitment: this question will be tackled under more competent and authoritative auspices. In fact, the Sapru Conciliation Committee has entered a vigorous and well-reasoned protest. For our part, our apprehension is that this may be treated as a precedent by the Imperial Bank of India. From the facts and instances mentioned in "Indian Finance" on earlier occasions, our readers would have drawn the inference that the authorities of the Bank have so far given effect to the principle of Indianisation only in a faint-hearted and half-hearted manner. The much-advertised scheme of Indian apprentices has, in effect, been a snare for youths with the highest qualifications starting their careers in great hope and ending them in utter disappointment. In spite of over two decades of this Indianisation scheme, there is hardly one Indian with a substantive salary of Rs. 1,500 per month. Let alone the Secretaryship, no Indian has so far been found fit and competent to rise up to the Deputy Secretaryship or even Chief Accountantship. In recent months, there have been quite a number of Imperial Bank officers who, after a service of 20 years and over, have preferred to leave the Bank even though another five years' service would have entitled them to pension; and some of these officers have been absorbed in other banks on emoluments double of what they were receiving in the Imperial Bank. That there is something rotten in the treatment of Indian personnel by the Imperial Bank authorities, and that the Indian directors of the Bank have not so far been able to do anything tangible in their behalf, are facts too well-known to be reiterated.

The only favourable sign in the horizon is that many of the senior European officers are now due for retirement; and that some of them would have retired already but for the war. It follows that, once the

war comes to an end, there will be a large number of vacancies in the higher rungs. It is these impending vacancies that will, at long last, provide real opportunities for the Indian staff officers who have hitherto been kept under. The apprehension, to which we have given expression at the beginning of this note, is this: Will the Indian officers be deprived of this opportunity by the importing of British personnel in the wake of the example set in regard to the Secretary of State's services. That is to say, will there be a campaign to recruit staff for the higher grades from among the demobilised men in Britain? This is a danger against which the Directors of the Imperial Bank must be on the alert from now. There can be no manner of justification for dumping British officers in the higher grades of services for which the existing Indian personnel have every qualification, equipment and claim. The Central Board of the Imperial Bank must, in fact, lay down the definite policy that, except for jobs that require expert knowledge, the entire personnel to be recruited hereafter must be Indian. It may be recalled that, while Sir Osborne Smith was the Managing Governor of the Imperial Bank, he stopped foreign recruitment altogether as from 1931. After a few years, his successor restarted the enlistment of European staff; and this received a check when the war began. There can be no justification for resuming the recruitment of any European personnel after the war. The policy of Indianisation has been successfully pursued in the case of the Reserve Bank; and it has been possible to secure Indians for some of the highest jobs. Indianisation in the case of the Imperial Bank must be established as a bona-fide and effective policy. If the Governor and the Deputy Governor of the Reserve Bank can be Indians, can no Indian be found who is fit to be even a Chief Accountant or Agent of an important branch of the Imperial Bank like Cawnpore? It is time that the directors of the Imperial Bank bestir themselves in a way which will convince the Indian public that they are men who can lay down and enforce a correct policy in so important a matter as the career and prospects of the Indian personnel of the Bank.

Ahmedabad Mills and The Future

A wide range of problems affecting Indian industry as a whole and cotton textiles in particular were dealt with by Mr. Sakarlal Balabhai in his presidential speech at the last annual meeting of the Ahmedabad Millowners' Association. The cotton textile industry shares with other industries in India some of the main difficulties in the way of planning for a prosperous future. National industries can prepare for the future if the Government of India have done their best in clearly explaining their objectives, indicating their conclusions regarding tariff protection, utilisation of sterling balances, postwar taxation, liquidation of wartime controls, etc. In other countries, the readiness of the Government is taken for granted; and industries can, therefore, go ahead with their postwar schemes. In India too many things are in the melting pot now, making it impossible for any industry to plan ahead. The political deadlock accounts for a major uncertainty of an almost paralysing kind. Hopes of rapid industrialisation with the help of our large sterling balances have been dashed to the ground. On the other hand, the fear that India's sterling balances might be used as a pretext for dumping foreign manufactures is widespread. It is not clear when and how wartime controls will be relaxed. Taxation policy during the past five years left very little for postwar industrial recuperation and building. While industrialists are clamouring for tax relief, the Government of India have given them an additional shock that people should be prepared for heavier taxation in the future. War is coming to a close no doubt; but since the European war will end earlier than the war against Japan, India would continue as a war base while the U. K. and other European countries would switch over to peacetime production and dump consumers' goods in the Indian market. In the absence of a National Government in India, international agreements, economic or political, are not likely to be helpful to India. The Finance Member has, further, stated categorically "Postwar Reconstruction is Postwar Reconstruction and not Wartime Reconstruction." While foreign Governments have made a good start in postwar planning the India Government refuses to make a beginning even at this hour. The cry for nationalising some of the key industries, as Mr. Sakarlal pointed out, would only lead to greater British domination over Indian industries unless a National Government is set up. Further, the existing lack of co-ordination of the Departments of Commerce, Industries and Civil Supplies and Planning reveals an inherent defect in the Government for handling postwar economic planning.

While these fears and handicaps are common to all the Indian industries, there are special problems to be solved by the Bombay Textile Industry. The Government of India is committed to a better distribution of industries in the provinces and States, and this, Mr. Sakarlal pointed out, involves some restraint on the future erection of cotton mills in Bombay. Though he is not opposed to regionalisation he points out that at present Bombay cotton mills have got capacity enough to meet India's demands. While there is considerable scope for expansion in the Bombay mills, the cotton textile industry in the deficit zones cannot expect rapid expansion in future. Further, if scientific planning is to be achieved, it will necessarily mean the expansion of uneconomical small units to optimum size and unbalanced units will have to acquire the necessary internal harmony and proportion. He referred to the Flatt Report and said that American industry is by far superior to the British or the Indian. A worker, for instance, attends to approximately 1,300 spindles in the U.S.A. and 900 in the U.K. In India he attends to hardly 300. While in the U.S.A. automatic looms cover 95 per cent of the industry they do not exist in Ahmedabad to-day. If the Indian cotton textile industry is to compete satisfactorily against the American textile industry, a scheme has to be evolved to increase the production per manhour and the co-operation of labour is of great importance. The race for technological improvement should not be overlooked and Bombay mills must pay attention to industrial research with particular reference to textile technology. The decision to establish a Research Institute for Textile Technology in Ahmedabad is therefore most timely and welcome. This institute, it is stated, would also train scientific men whose researches would be of great use to the industry in the long run. Referring to the problem of acute shortage of cloth in India Mr. Sakarlal placed the blame on inefficient administration and pleaded for a complete ban, at least for the time being, on exports. He revealed that owing to lack of coal supplied the Ahmedabad industry lost a production of 25 million yards, during January and February of 1945. The coal crisis has made it clear that Bombay mills should look to alternative fuel in the future. The worries of the Bombay textile industry as explained by Mr. Sakarlal arise out of lack of active and sustained support from the Government. If this vital industry of India is to expand satisfactorily during the years after the war, the Government should clarify its postwar programmes and policies. While this is in doubt, Mr. Sakarlal's speech points to a determination on the part of the Ahmedabad Mills to put their hands to essential tasks of rationalisation. The removal of the stigma of low output is a responsibility which the Government, the industry and labour should take on themselves with equal enthusiasm.

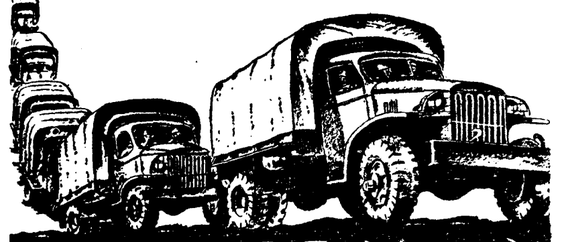
Storage of Food Materials

The war has brought to light in a measure hitherto unsuspected, many shortcomings of our national economy. Procurement and rationing in a large scale have added to the importance of the problem of scientific storage. In a pamphlet issued by the Food Department, Government of India, Dr. Coyne estimates that about three million tons of cereals is going waste every year due to rats food water and cover under which they multiply at the rate of one to fourhundred a year. Climatic conditions in most parts methods of storing grain in the villages give rats, insects and moisture. The customary the rats food, water and cover under which they multiply at the rate of one to four hundred a year. Climatic conditions in most parts of India are such that a huge loss results and that godowns on up-to-date methods should be constructed all over the country. The pamphlet contains also elaborate instructions for the maintenance and inspection of such godowns.

The Banking Enquiry Committee recommended an efficient system of ware-houses which might form the basis of a wide and easy supply of marketing credit. Short-term credit on the security of the warehouse receipt has been found to be a very successful method in many other countries. Proper warehouses will thus satisfy a double purpose, good storage and easy credit. But the problem remains as to who would be the agency to provide it. The individual ryot cannot do it. Co-operative organisations are yet to make enough headway. It is doubtful whether this can be undertaken as a service by banks or other business interests, especially as it has the handicap of being more or less a seasonal business. Whether the State can fill the gap is a question that has not been examined. But glaring omission of private business are as a rule suitable field for State enterprise.

Waterways Commission

The decision of the Government of India to set up a Central Waterways Irrigation and Navigation Commission is a right step to formulate schemes for postwar agricultural development. It is of a piece with the formation of the Central Power Board. This Commission, it is stated, would be a fact-finding, planning and co-ordinated organisation entrusted with the task of advising on the most advantageous methods of utilising the rivers of India for national economic progress. It will initiate and carry out exhaustive surveys and investigations regarding the potentialities of Indian rivers and also evolve schemes for the planned utilisation of India's water resources. It would, in consultation with the



TREMENDOUS PRODUCTION

MEETS A TREMENDOUS WORLD-WIDE TRANSPORTATION PROBLEM

CHEVROLET trucks are serving on battlefronts all over the world with the same rugged stamina and dependability which have always characterized their performance at home.

CHEVROLET has been supplying the armed forces with thousands of four-wheelers with all wheels driven, four-wheelers with rear-wheel drive, and six-wheeled vehicles with six wheels driven. It takes tremendous production of all these units to meet a tremendous world-wide transportation problem: and CHEVROLET—largest builder of trucks in peacetime—is doing its full share to meet this need as part of its programme of VOLUME FOR VICTORY.

DIRECTORS' REPORT FOR THE SECOND YEAR'S WORKING

GENTLEMEN,

Your Directors have pleasure in submitting to you the Second Audited Balance Sheet and the Profit and Loss Account for the year ending 31st December, 1944. The Auditors' Report is also annexed.

During the year under review, the gross earnings of the Bank amounted to Rs. 8,64,121-3-6 as against Rs. 2,27,487-14-6 for the period ending 31st December, 1943.

After deducting all the expenses as shown in the Profit and Loss Account attached hereto, there results a net profit of Rs. 1,95,693-11-8. Your Directors propose that the said amount be appropriated as under:—

	Rs.	A.	P.
1. To write off the net loss of the previous year less refund of income-tax	11,553	11	4
2. To write off a portion of brokerage on shares	10,000	0	0
3. To write off a part of the preliminary expenses	3,117	4	6
4. To transfer to Reserve Fund	40,000	0	0
5. To pay dividend at 3 per cent on Ordinary Shares on which allotment money was received on or before 31st December, 1944, including dividend on calls received in advance (subject to deduction of tax) ..	62,463	0	0
6. (*a*) To pay Dividend free of income-tax on 4 per cent Cumulative Preference Shares for the year 1943 as shown in last Balance Sheet	3,915	5	9
(*b*) To pay Dividend free of income-tax on 4 per cent Cumulative Preference Shares for the year 1944 on which allotment money was received on or before 31st December, 1944, including Dividend on calls received in advance	16,026	2	6
7. And to carry forward to next year's accounts (including provision for taxation) ..	43,618	3	7

Further your Directors propose that a sum of Rs. 14,740 received by way of premium on shares be set off against the remaining part of preliminary expenses, thus writing off the said item entirely.

During the period under review, 7 more offices of the Bank have been opened in India at Karachi, Delhi, Nagpur, Amritsar, Akola, Badnera (Amraoti), and Shahupuri (Kolhapur). Though, as already pointed out to you by your Directors in their First Report, opening of branch offices and that too in these days is a very expensive affair, your Directors believe that expansion of the institution on the right and conservative lines is very essential. Since the beginning of the year 1945, your Directors have taken the first step towards expansion overseas and have opened the first Overseas Branch of the Bank at Colombo. Your Directors are happy to say that all the offices are progressing satisfactory. Further branch expansion on right lines is seriously engaging the attention of your Directors, who will see that all-round expansion of the Bank's is continued in years to come.

Your Directors take pleasure in giving hereunder the comparative progress the Bank has achieved during the period of last about 1 year and 10 months.

	Statutory Report. 15-7-1943 Rs.	1st Balance Sheet. 31-12-1943 Rs.	2nd Balance Sheet. 31-12-1944 Rs.
Paid-up Capital ..	12,06,470	15,78,645	25,05,155
Number of offices ..	3	7	14

Your Directors feel that the progress of the Bank will meet with your approval.

In terms of Articles 119 of the Articles of Association of the Bank, 4 Directors namely Mr. Shantilal Mangaldas, Mr. Anandji Govindji Shah, Mr. Govinddas Maneklal and Mr. Ramchandra Lalbhai Banker retire in rotation, but being eligible, they offer themselves for re-election.

You are requested to appoint Auditors for the year 1945 and, to determine their remuneration.

Your Directors thankfully acknowledge your wholehearted support and also the co-operation that has been extended to your Bank by the General Public and Local Advisory Committee Members without whose co-operation the progress so far achieved would not have been possible.

Your Directors highly appreciate and place on record the valuable services rendered by your Managing Director, Mr. J. M. Akhaney through whose untiring efforts, foresight and devotion to duty the Bank could achieve the present position during such a short-time.

Your Directors also acknowledge and appreciate the co-operation and loyalty shown by the officers and other members of the staff both at Head Office and Branches.

Your Directors have pleasure to add that with effect from 1st January, 1945, in order to permanently benefit the officers and the staff of your Bank, they have sanctioned and accordingly started a Provident Fund Scheme on usual lines as adopted by various Banking Institutions.

Your Directors once again take this opportunity of thanking you and trust that every shareholders of the Bank will consider the Bank as his own institution and will help it in every possible manner in mutual interests.

By Order of the Board,
SHANTILAL MANGALDAS,
Chairman.

Bombay, 8th March, 1945.

Main Road, Trivandrum.

CONSTITUTION.

The Company is constituted in terms of the Memorandum and Articles of Association which can be inspected either at the Registered Office of the company or at the British Indian Office.

This company has been registered under the Travancore Companies Regulation IX of 1114. The date of incorporation is 22-9-1945 and the certificate of commencement of business was obtained on 15-12-1943. Copies of the said Companies Regulation and the Memorandum and Articles of Association together with copies of the agreements mentioned in para 9 of this prospectus can be inspected at the Registered Office in Trivandrum or at the office of the company in Trichinopoly, or at The Indian Bank Ltd., Bangalore City, or at Ernakulam, Cochin State.

The Company is in its construction stage and there are no data for exhibition in compliance with section 122 (2) of the Travancore Companies Regulation or Section 95 (1) A of the Indian Companies Act. The Company has not submitted any accounts to the General Body till now nor have any dividends been paid or declared.

PROSPECTUS.

1. **Objects.**—The Company has been formed generally with the objects set out in the Memorandum of Association and in particular for the purpose of working the concessions agreed to be afforded by the State of Travancore to Messrs Seshasayee Brothers Ltd., for establishing and carrying on the manufacture of Fertilisers, Chemicals, and other Industries.

2. **Scope and Prospects.**—Kundara Works. Construction work on a Sulphuric acid factory designed to produce 5 tons of sulphuric acid per day by the well-known Chamber Process with provision for duplicating the plant, has already made good progress and the factory is expected to commence production this year. The Government of Travancore have very kindly leased out to the company the necessary sites and accorded facilities in the matter of procuring construction materials; the Government of India have released, under priority, lead, steel, sulphur and other controled materials. The scheme visualises the production of Superphosphate manures by utilising to the extent possible, the mineral sands which have a rich Phosphatic content.

THE FERTILISER FACTORY.—Arrangements have been made for establishing a large Fertiliser Plant on the banks of the Periyar River at Alwaye. The Government of Travancore have very kindly acquired for this Company a convenient site of about, 200 acres, where construction of the buildings has already been taken on hand. The present plan is to establish a factory for the manufacture of 50,000 tons of Sulphate of Ammonia annually. Work in this connection has already made substantial progress.

The Directors are indebted to the Government of India for having afforded Dollar Exchange facilities to the extent of 3.2 million Dollars for the purchase of machinery from the United States. The Government of India have further assured the Company of all reasonable assistance in regard to the procurement of controlled materials that may be necessary for completing the erection of the Factory. The Company have been fortunate in securing the services of Charles Owen Brown, the well known consulting Engineer and specialist on the fixation of Atmospheric Nitrogen, for designing the plant and for technical advice for the erection of the Factory. Mr. Brown has established his reputation as principal designing Engineer for the Ammonium Nitrate plant erected for the Tennessee Valley Authority at Muscle Shoals, Alabama, in the United States. He has ,considerable experience of Fertiliser Plants, and has been in charge of the erection of one of the biggest plants operating in the world today. Mr. Brown has also been responsible for the erection of Ammonia Factories in Soviet Russia.

The Company have secured the services of the Intercontinent Corporation of New York for the purchase of plant and machinery and for the erection of the factory and installation of the plant at Alwaye. Their staff of technicians are now at work at Alwaye and in the United States for implementing their undertaking. They will also be responsible for running the factory for a period of three months after commencement of rated capacity production. Messrs. Singmaster and Breyer, a well-known firm of Chemical Engineers of New York, is associated with the Intercontinent Corporation in the work they have undertaken in connection with this fertiliser factory and its expert services are also available to the Company.

The Directors consider themselves fortunate in securing the services of Messrs. Seshasayee Brothers Limited, the well-known firm of Engineers, who are Managing Agents of the South Madras Electric Supply Corporation Ltd., and the Mettur Chemical and Industrial Corporation Ltd.

Three Directors of this company, viz. Messrs. V. Seshasayee and A.C.K. Krishnaswami, Directors of Seshasayee Bros. Ltd., and Mr. K.P.P. Menon, Electrical Engineer to the Government of Travancore, have been visiting the United States, to consult experts, on the plant and machinery to be purchased for the Company, and to inspect Fertiliser and Machine Factories of diverse description in the United States. It is expected that the knowledge acquired during their recent visit to America will be of considerable value to the Company.

Thus on the technical side, the efficient working of the company has been abundantly secured.

PROSPECTS FOR AMMONIUM SULPHATE. The report of the Food Grains Policy Committee of the Government of India, which was presided over by Sir Theodore Gregory, published in November 1943, says as follows:—

"The imperative necessity of increasing the supply of Ammonium Sulphate is obvious, if effective action is desired to increase the supplies of foodgrains quickly....Experiments carried out so far indicate that in certain parts of the country particularly in Eastern India, application of Sulphate of Ammonia at the rate of 16-20 lbs. of Nitrogen per acre would result in an increased yield of the order of 3 maunds of cleaned rice per acre.

As there would appear to be no alternative other than the provision of adequate quantity of Ammonium Sulphate for increasing the yield of rice quickly the Committee would most earnestly and strongly recommend to the Government of India to give, with least possible delay necessary assistance and facilities for the importation of the plants for the manufacture of this fertilizer, to the extent of at least 3,50,000 tons a year which would ensure sufficient increase in production to meet half the average deficit in rice."

The following figures of rice production per acre given in the report of the Paddy and Rice Enquiry Committee of the Government of Bengal, 1935 will show the imperative need for sulphate of ammonia for increasing Indian rice production.

Sulphate of Ammonia Fertiliser is being used, widely for sugarcane, tea and other cash crop cultivation in South India and Ceylon.

The extent of the potential demand for Sulphate of Amonia in India may be guaged from the 'Science News Letter' of December 25th 1943, according to which the rate of production of commercial fertilizers in 1941 in the United States of America is, 9 million tons of what is known as 3-9-5 synthetic fertilizer, which means that in U.S.A. no less than 5.4 million tons of Nitrogen or 27 million tons of Ammonia sulphate equivalent, have been produced in 1941.

The Government of India have likewise recognised the need for the indigenous production of Ammonium Sulphate in this country and based on the Gregory Committee report, and the recommendations of the Technical Mission which came from England, are contemplating the establishment of a suitable plant in the North of the Country. The Directors feel, that having regard to the potential demand of this fertiliser in the years to come, and based on figures of consumption in advanced countries abroad, there is scope for many Ammonium Sulphate factories in the Country; and the output of the Alwaye Factory will be easily absorbed in South India and Ceylon for paddy and cash crop cultivation.

LOCATION. Alwaye was selected as the most suitable site for the factory in consultation with experts from America who visited Travansore at the invitation of the company in July 1944. The situation of Alwaye affords unique facilities: There is abundance of fresh water and cheap electric power, besides the possibility of economic manufacture of charcoal, an essential raw material, from fire-wood of the nearby rich tropical forests. It is twelve miles from the Cochin Harbour with which it is connected by the Periyar river: convenient and cheap transport for raw material and finished product can be provided on the Travancore waterways.

3. **Directors, Qualification and Remuneration:** The qualification of a diredtor other than first director or directors and ex-officio or nominated directors shall be the holding, whether solely or jointly, of shares of the company, of a nominal amount of not less than Rs. 10,000. Each director shall be entitled to get out of the funds, by way of remuneration for his services, such amount not exceeding Rs. 100 for every meeting of the Directors or of the committee of Directors, attended by him, as may be determined by the Board. This remuneration will be independent of any remuneration which any director whether as being Chairman or member of any Executive or other Committee or local Board or otherwise may receive.

The Directors may, out of the funds of the company, pay to any director who shall travel for the purpose of attending the meetings of the Board or committee of the Board such sums as they may consider reasonable and fair compensation for his travel and hotel and other expenses. This allowance may be in addition to the fees for attending meetings referred to above.

If any director, being willing, shall be called upon to perform extra services or to make any special exertion in going or residing away from the place of his residence for the time being, for any of the purposes of the company or gives special attention to the business of the company as a member of the committee of Directors, the Directors may remunerate the Director so doing, either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Board and such remuneration may be either in addition to, or in substitution for his or their share in the remuneration above provided however that he shall not, without the consent of the company in general meeting, be appointed to any salaried office of the company.

4. **Nature and Extent of Directors' interest:** Messrs. V. Seshasayee and A.C.K. Krishnaswami, are Directors and shareholders of Seshasayee Bros. Ltd., the Managing Agents of the Company and as such are interested in the remuneration of the Managing Agents. Messrs S. Narayn Iyer, K.P.P. Menon and Dr. K. L. Moudgill are nominees of the Government of Travancore. No other director is interested in the promotion of the company except to the extent of his holding shares in the company and to the extent of the remuneration he is entitled to under the Articles of Association.

Article 76 of the company, as now subsisting, provides for nominated Directors representing the Madras and Cochin Governments so long as each of these Governments holds shares of the nominal value of not less than Rupees ten lakhs in this Company.

5. **Management of the Company.**—Messrs Seshasayee Bros. Ltd., are appointed as Managing Agents of the Company as per the agreement executed by the Directors on behalf of the Company on 15-10-1943 and by a supplemental agreement dated 7-10-1944. The terms of the two agreements among other things provide:—

(1) The appointment of the Managing Agents shall be for a period of 20 years from the date of incorporation of the Company.

(2) the remuneration of the Managing Agents shall be as follows:—

(a) A commission of 10 per cent on the net profits of the company each year. For this purpose net profit shall bear the meaning given to it in Sec. 106 of the Travancore Companies Regulation IX of 1114.

(b) In addition to the commission, the Managing Agents will be paid a fixed monthly allowances of Rs. 1,500.

6. **Minimum Subscription:**—Article 11 provides that the minimum subscription on which the Company may proceed to allot is Rupees ten lakhs, and as this amount had been subscribed, the Company obtained certificate of commencement of business on 15th Dec. 1943. In respect of the present issue, the directors have fixed the Minimum subscription upon which the Company may proceed to allotment as Rupees one crore, divided into 10,00,000 shares of Rs. 10 each, and since this has been agreed to be taken up by the Government of Travancore, and their nominees, Directors will proceed to allotment.

7. **Brokerage and Underwriting.**—The Articles of Association provide for payment of an underwriting commission not exceeding 3 per cent of the nominal value of the shares and a brokerage not exceeding 1½ per cent on the number of shares allotted through recognised brokers and bankers. The issue of 7,50,000 shares of Rs. 10 each now being made to the public in British India, Travancore, Cochin and Mysore has been underwritten for a commission of 2 per cent by the following firms

(1) Messrs. Swastik and Co.,
Stock-Brokers, 11, Vazhuthacaud, Trivandrum.

(2) Messrs. Champaklal Devidas,
Stock and share brokers, Agakhan Building, Dalal Street, Fort, Bombay.

(3) Messrs. Manmohandas Nemidas and Co., 58-64 Bora Bazaar Street, Fort, Bombay.

The Directors believe that the resources of the underwriters are sufficient to discharge their underwriting obligations.

Brokerage at the rate of one anna per share will be paid and borne by the underwriters in respect of shares allotted on applications bearing the rubber stamp of recognised brokers and bankers.

8. **Preliminary Expenses.**—The company has so far spent Rs. 15,491-6-8 by way of Preliminary Expenses, of which Rs. 274-8-0 represents brokerage for the first issue of 2,50,000 ordinary shares.

The preliminary expenses for the present issue exclusive of brokerage and underwriting Commission, are estimated not to exceed Rs. 50,000 and this will be borne by the Company.

9. **Agreements.**—The following agreements have been entered into by the company:—

(i) Agreement with Messrs. Seshasayee Bros. Ltd. dated 15-10-43 and supplementary agreement dated 7-10-1944 appointing them as Managing Agents.

(ii) Agreement with the Government of Travancore dated 12-10-1943

(iii) Underwriting agreement with Messrs. Swastik and Co., Trivandrum.

(iv) Underwriting agreement with Messrs. Champaklal Devidas, Bombay.

CAPITAL

AUTHORISED - - - -	**Rs. 5,00,00,000**
Divided into 50,00,000 Ordinary Shares of Rs. 10/- each.	
Since the date of the first prospectus issued in Travancore and in British India, the authorised capital of the company has been increased to Rs. 5,00,00,000 by a special resolution.	
ISSUED & SUBSCRIBED - - -	**Rs. 25,00,000**
Divided into 2,50,000 Ordinary Shares of Rs. 10/- each.	
AMOUNT PAID on the shares allotted as on 28th February 1945 is - - - -	**Rs. 24,06,585**
PRESENT ISSUE - - - -	**Rs. 2,00,00,000**
Divided into 20,00,000 Ordinary Shares of Rs. 10/- each payable as follows :—	
On application - - Rs. 2-8-0	**On allotment - - Rs. 2-8-0**

The balance of Rs. 5 will be called up in instalments of Rs. 2-8-0 each at an interval of not less than two months between the calls, the first of such calls being made not earlier than two months from the date of allotment.

Out of this Issue, 10,00,000 shares have been agreed to be subscribed by the Government of His Highness the Maharaja of Travancore and their nominees in accordance with the agreement, dated 12th October, 1943, subsisting between this Company and the Government of Travancore and 50,000 shares have been agreed to be subscribed by the Government of His Highness the Maharaja of Cochin. 2,00,000 shares have been offered by the Directors to the Government of Madras and orders in this regard are expected to issue shortly.

Sanction of the Government of India for the issue of 5,00,000 shares in British India (exclusive of the number of the shares that may be subscribed by the Government of Madras) has been obtained and accordingly, the maximum number of shares that can be allotted against British Indian applications is limited to 5,00,000 shares.

The Directors would like to make it clear that subjects of Travancore State will receive preferential allotment.

THE FERTILISERS & CHEMICALS TRAVANCORE LIMITED.

(v) Underwriting agreement with Messrs. Manmohandas Nemidas and Co. Bombay.

10. **Voting.**—Acording to the Articles, subject to the special rights or restrictions for the time being attached to the shares, at each general meeting at which he is entitled to be present and vote, every member present in person shall, on a show of hands, have one vote only and every member present in persons or by proxy shall on a poll, have one vote for every share held by him.

11. **Transfer of shares.**—The Articles provide that the Directors may refuse to consider any transfer of shares whether fully paid up or not, to a person of whom they do not approve and may also decline to register any transfer on which the company has a lien.

12. **General.**—The Directors reserve to themselves the right to reject any application without assigning reasons therefor and also to dispose of all or any of the shares in any manner they think most beneficial to the Company. Where the number of shares allotted is less than the number applied for, the balance of application money will be applied towards the amount payable on allotment and the balance, if any, remaining thereafter, will be refunded to the applicant. Applications should be made on the form accompanying the Prospectus or any similar form and forwarded along with a remittance of the amount payable on application to the Registered Office of the Company, or to the office of the Company's Underwriters and Brokers or to anyone of the Company's Bankers mentined in the Prospectus. Cheques towards application moneys payable on stations other than Trivandrum, Madras, Bombay, Cochin, Calcutta, Quilon, or Trichinopoly will have to include collection charges thereon.

Copies of the Prospectus and forms of applications can be had at any of the following offices:

The Company's Registered Office, Trivandrum.

The Office of Messrs. Sashasayee Bros. Ltd. Trichinopol.

and The Office of the Company's Bankers Underwriters and Brokers signed :—

States and Provinces, press forward schemes for the conservation, control and regulation of water and waterways. This Commission would also function as an advisory body in respect of the principles governing water rights and interprovincial disputes. It is also charged with the responsibility of fixing the appropriate basis of agreement between the parties in dispute regarding water rights etc., and also in laying down priorities as between the various projects.

Under the existing constitution planning and execution of irrigation and waterways works rest with the provinces and States. But the Government of India have learnt a lesson from the recent famine. Sir William Stampe, the Irrigation Advisor to the Government of India, has definitely advised regional planning of waterways and hydro-electric works. Regionalisation is a form of effective strategy to fight want and disease. "Waterlogging, fever and debt go hand in hand," said Sir Malcolm Darling two decades ago. 50,000 acres of precious land are going out of cultivation every year in India. Natural configuration does not often coincide with political boundaries and the lesson of the T.V.A. is clear that regional exploitation and utilisation of water resources yield the best results. Rivers, it should be noted, are a source of electricity, a means of transport and a reservoir of water for the fields, besides being a potential source of malaria. Control of waterways, therefore, involves a coordination of different departments and the problems to be faced are surely intricate and varied. Agricultural producton can be speeded up, crop planning introduced and soil erosion tackled only on the basis of regional co-operation. It is well-known that in the past we have had little of inter-provincial and inter-State co-operation. The delay in the execution of projects like the Tungabhadra Project shows the need for a central agency which will settle disputes and speed up beneficent work. The Government of India issued a detailed questionnaire to provinces and States last year and much useful data have, it is believed, already been obtained on the subject. Many provincial projects are ready for regional co-ordination. Since subjects other than irrigation have to be dealt with and co-ordination on an All-India basis assured, the formation of the Waterways Commission charged with bigger tasks and wider responsibilities will be welcomed by the public if not the local Governments. This Commission, when their task of fact-finding is finished, would most usefully serve as a clearing-house of ideas, a source of correct irrigation and drainage schemes for different provinces and States and also as a board of referees to settle rival claims.

Canada's War Production

Canada has been more than the distant air training ground for the Allies. Her war production alone puts her above all the United Nations excepting the U.S.A. and Britain. Though reserve capacity is limited Canada has conspicuous advantages in regard to minerals over other members of the British Commonwealth. A recent estimate of Canada's material contribution to Allied war effort dwells on the fact that before the war the Dominions produced no military equipment except for some minor items. Today her production covers a wide field. Figures for the war period up to December 1944 made available recently show that Canada built ships, aircraft and tanks in hundreds and thousands. As a producer of mechanical transport she has acquired great importance. Shipbuilding accounted for the delivery of 314 ships of 10,000 tons and 31 vessels of 4700 tons. Heavy ammunition produced runs to millions of shells and production of chemicals and explosives alone accounts for one and a half million short tons. The resession in war production during 1943 was only temporary and December 1944 saw the Canadian industrial index going higher than ever in spite of the drop noted under Wood Products. Canada's most noteworthy contributions range from frigates and heavy bombers to drugs and dehydrated foods. In regard to many minerals Canada leads all countries and she ranks fourth as a maker of steel, although production fell off slightly in 1944. The cumulative progress of war production is decidedly more important than the draft difficulties that have brought Canada to the brink of a general election. Civilian manufacture, too, has shown some progress; her production of a new 'dry' ammonium nitrate fertiliser optical instruments and sulfa drugs reveals how many-sided the war effort turns out to be. The C.E.F. in Europe represents only a part of the Canadian contribution. The votes of credit for mutual aid, like Canada's abstention from receiving assistance under lend-lease, represent a bigger contribution to the United Nations war programme. Inevitably, Canada's export trade has changed. Food does not enjoy its former primacy, since Canada is primarily a manufacturing country as the exports of locomotives and wagons since January 1943 indicate. When Canada comes behind other countries in regard to ships and aircraft, it has not been due to inadequate development of Canadian industry but to manpower difficulties for Canada's population is still small in relation to her resources. The more important aspect of the war production is that it has been closely and continuously integrated with that of the U.S.A. Ogdensburg came significantly before the Atlantic Charter; and U.S. Canadian relations have provided the pattern for the greater alliance created by the war.

Solving the Cloth Crisis

At a press conference on Tuesday, Mr. Krishnaraj Thackersey refuted the allegation that the industry had not done its duty. He blamed the defective distribution and Government's apathy in supplying coal, the result of which is the loss of 100 million yards in production in three months. The Industry Committee has passed a resolution stressing difficulties in raising production, namely, poor coal supply and non-release of building material for housing labour, militating against longer working hours. They urge complete stoppage of exports and adjustment of supply and specifications suitably. The industry is fully aware of the mounting indignation in the country and is belatedly thinking frantically of remedies. New proposals comprise drastic production in cloth varieties and in yarn counts with increased production of dhoties. Also the utilisation of capacity for producing utility cloth like shirtings. Official assurance has been given that imports of fine styles will not prejudice the industry's interests and that mills may stop production of fine styles without apprehension, Sir Akbar appears to have reassured the industry on this point. Rationalisation is expected to improve supplies by 100 million yards. With good fuel and three shift working the total production target visualised is 6,000 million yards. It is attainable perhaps a year hence. Sir Shree Ram explained the technical handicaps and said that the chief bottleneck was on the spinning side necessitating yardage adjustment through wider looms. He gave the assurance that the production of luxuries and furnishing fabrics will stop completely.

Indian Aluminium Company

The increase in the share capital of the Indian Aluminium Company Limited to which an announcement appearing today referred was indeed confidently anticipated by a part of the investing public which was aware of the promoters' desire to let Indian capital participate. The operating results for three years of the company are less important in relation to its prospects than the very influential connexions of the company. The most significant or original feature is the absence of a managing agency agreement which implies, in this case, far greater chances for the shareholder. Since the Alwaye and Belur works are both in commission, and the industry is assured of tariff protection after the war, it is quite easy to develop optimism as to the home market particularly as the essential pioneering stage is over; and the company invites public support as a successful established enterprise. The preference shares, being redeemable, may not command so much attention but 5 per cent shares of prime quality offered at par are equal to gilt-edged and our institutional investors should duly note that a new short-term security is available for them at par. While the ordinary shares are easily distinguishable from anything that may be put before the public since they qualify for a share in profits earned after September 30th 1944 they are certainly more attractive. The list opened on April 12 is to close on April 26 or earlier. Heavy subscription must be expected while the reservation of shares made for investors applying from Bombay implies that allotment would be fractional and a premium would be established almost immediately. It will be agreed that the prospectus of the year requires no comment or explanation here since the terms of the offer are fair, precise and exceptionally attractive for all investors appreciative of the high status of the new investment.

Opening Possibilities for New Industries

ALUMINIUM HYDROXIDE & OXIDE

of very high grade now in production.

● **ALUMINIUM HYDROXIDE:** Used in the manufacture of Aluminium Compounds for textiles, dyeing, paper, printing ink, water purification and as a catalyst in synthesising acetates, tannates, etc.

● **ALUMINIUM OXIDE:** Manufactured in several grades for decolourising and deodorizing solutions, grinding and polishing metals, manufacture of abrasives, grinding wheels and high grade laboratory ware, etc.

● *Sodium Aluminate & Aluminium Sulphate are also manufactured at our works.*

Clive Street Gossip

The nature of the convention or treaty between India and Great Britain regarding the industrial and commercial interests of the latter in this country is the theme on which I promised to hold out this week. Perhaps, the promise was rashly made. It would be difficult to sketch here the terms of such a convention. But what I meant, and shall attempt, to do is to indicate the main principles of that convention as they flow from the points I discussed in my gossip of the last two weeks. The reader, I trust, will remember that I laid special emphasis on the untoward turns which the question of safeguards took during the last stages of the Government of India Act, the ways of British businessmen in India towards Indian, and the none too few blemishes in the record of Indian business, particularly in recent times. The last mentioned is suggestive of the need for the infusion, in appropriate quantities and on suitable terms, of a British element in major Indian enterprises. The first two emphasise the justice of a thorough change in the attitude of British business in India towards the whole question of safeguards. Normally, there should be no need to stress the need for such a change. For, if India were to attain genuine independence, the change in political status will suffice to bring a reasonable frame of mind both among British businessmen and their champions in Whitehall. But genuine independence is not attained overnight. Neither the deletion of the sections 111 to 121 of the Government of India Act nor the acceptance on the one side, and the actual implementing on the other, of the Cripps Offer or any similar scheme can give India the independence which will bring about automatically the requisite change in the attitude of the British Government.

* * * *

In this country, we exaggerate the value of formal changes in the law and the Constitution. Supposing India were to be declared an independent sovereign nation, and her Ministry were to proceed, on the strength of it, to interfere with the rights of the British, there would be nothing—not even a common Kellogg Pact—to prevent His Majesty's Government from handing to our Ministry a strongly worded note of protest and following it up with action that will bring us to our knees. Far from being a hindrance to such a course, our independence will be an invaluable aid and pretext; and once it is embarked on, it may even pay good dividends, contrary to the saying that war does not pay. You may think that it is too late in the day for anyone to contemplate such action. But the world will never be too good to let a strong nation, with a grievance to play up, to settle its scores with a weak country. Let us not, therefore, exaggerate the value of formal changes. Let us rather recognise the value of British co-operation secured on equitable and well-understood terms, not only for securing our general economic progress, but also for our progress towards that state of genuine independence, in which we can rely more on our might than on the other country's sense of right. That this state cannot be attained without the help of an advanced industrial nation, no one will deny. Since there is to be an ally in this war against our backwardness, it is fair that Britain should have the first refusal.

The fact remains, however, that so far, neither nation has learned to regard the other as an ally. Indians remember the long record of exploitation, in the bad sense of the term, remember, too, the superciliousness and the haughtiness of the average Briton and summarily rule out the chances of genuine partnership. They are afraid, too, that concessions to British business might well prove the means of prolonging our political and economic inferiority alike. The average nationalist-minded Indian, who has not given much of careful thought to this question, would go no farther than affording certain guarantees to British interests which the future Indian Government may be in a position to affect adversely. He takes note of the fact that these interests have shrunk a great deal during these six years of war. Not only our sterling debts have been repaid, but Britain owes us far more than we ever owed her. Pensions and similar future obligations of ours have been provided for. Even the shareholding of Britons in many British concerns in India has shrunk appreciably. It is true that the value of British interests which have survived the war can be easily inflated. But then, so the argument may run, managing agency rights must be adjudged within the framework of the principles which ought to govern company law. And if this position is granted and if the majority of shareholders are allowed to determine the nature and personnel of their executive, the monetary value of British commercial interests may fall very considerably. Another point which may be stressed is that the companies which have been started during recent years, that is, while the controversy was current about safeguards, cannot claim the same consideration as British commercial interests of longer standing. The Indian nationalist will, therefore, be inclined to grant whatever safeguards may be asked for these interests properly circumscribed and to look for what I have termed an economic ally among the other nations of the world.

* * * *

It would be severely one-sided to stigmatise this attitude as unreasonable. For it is not in the argument, whether it is reasonable or otherwise, but in the attitude and behaviour of the British Government and of British business towards India and her problems. The past is all against the British and all on the side of the nationalist Indian. It is irritating, exasperating and not at all calculated to inspire faith in the possibility of future comradeship. But the future can be different. It is not difficult to infuse confidence and inspire a spirit of co-operation, where sycophancy has been followed only recently by impotent sullenness. But it all depends upon the way the problems relating to the Convention are viewed. In the context of Anglo-Indian politics and in the sequence of events leading up to it, it is possible for the British to view it as a kind of last rampart behind which the diehards can securely entrench themselves. I have no doubt many a Briton would like to regard it that way. They can look upon it as a strategic retreat and seek to incorporate in it provisions which can be twisted to support the most unreasonable demands on the Indian Government and the most truculent attitude on the part of the British. History shows more than one instance of such an attitude. In Egypt, the British had always stuck to their commercial rights so called, and enforced treaties which the Egyptian Government had not accepted. Foreign Capital in almost every country, which had either need for it or had it thrust on itself, has invariably taken the course of unilateral treaties and high-handed action in support of the rights thereunder.

* * * *

Such a course would be more than ordinarily indefensible in the case of India. Let no Briton forget the fact that Britain's debts to India exceed the most liberal estimate of the value of British commercial interests in this country. Let him remember, too, that if the ordinary processes of exchange had been allowed, all these interests would have been sold to Indians to find rupees for financing Britain' war expenditure in this country. If the interests are still in India without any change of ownership, it is because Britain has used her political overlordship to secure loans from India without

her explicit consent or any overt action on the part of this country. These are very material considerations; and they boil down to this: that the interests for which safeguards are sought through a Convention should, in the natural course of things, not have been here. So far as I know, there is no historical precedent for this, a creditor retaining the bonds in the face of far larger borrowings from his "debtor" and wanting a warrant against him. But then, these differences in the merits of the case may not weigh with British diehards. What may weigh with them is the fact that, if history shows prolonged truculence on the part of foreign capital, it also shows that in the long run—and not too long at that—foreign capital has only too often had to suffer uncompensated expropriation at the hands of exasperated national Governments. I remember, when a few years ago a news item was received regarding negotiation about compensation for the British oil interests in Soviet Russia, an irate sub-editor of an Indian daily gave the headline "Go, and get it!" He was reacting to the British outcry against a purely imagined expropriation in India. I say this only to emphasise that history has at least as many instances of such expropriations to show as of temporarily successful truculence on the part of foreign capital.

* * * *

It would be running counter to all the teachings of history, if Britain were to believe that India alone could be treated eternally as a weak subject country. Already, a great deal of change has come over India's status. Even if Indian politicians were to continue as unrealistic as they have been till now, it would hardly mean that Great Britain could do what she liked with this country. And what is most important of all, Britain's needs do not stop with the safeguarding of her existing interests in this country. Her position in internatinal trade, that is, competitively, and the position of her national economy and the economic needs of her people require new opportunities and avenues of trade, which certainly cannot be created by Acts of Parliament or unilateral and forced treaties. While the old attitude cannot create new lines of export trade, it can easily dry up the existing channels and endanger existing interests. The points that Britain has to remember are: (1) that India has to be treated as an independent nation which will before long be able to protect her legitimate interests; (2) that British interests in India have shrunk a great deal since safeguards were first thought of; (3) that what interests there are in India should, strictly speaking, have changed hands; (4) that Britain's real need is not so much the protection of these interests as the creation of new avenues of trade with India and new sources of profit for her nationals; and (5) that in making treaties of this kind, future trends rather than present position should be considered important.

* * * *

On our side, India must recognise: (1) that a change in formal status does not mean factual equality: (2) that while Britain has been guilty of exploitation, in the bad sense of the term, she has also some real exploitation of our economic resources to her credit; (3) that we need the help of a genuine economic ally in our war against our poverty and backwardness; and (4) that an ally must be treated as such, and not as a mere agent for bringing in the requisite reinforcement.

* * * *

If the two countries recognise these facts, the main principles of convention will not be difficult to lay down. The convention has to refer to (1) the protection of existing British interests, (2) the trade relations between the two countries, and (3) the rights and obligations which Britain will have as our economic ally. Needless to say, in regard to the first, the old ideas about administrative discrimination must go over-board. Nor could any special sanctity attach to British interests, merely because they are not owned by the nations of the country: There can be no question of Indians being taxed to provide subsidies for foreign industrialists. What the Convention can forbid is discrimination as such, that is legislation, which, in the words of the Montford Report aims "not so much at promoting Indian as at injuring British commerce." The second question, namely, trade relations between India and Britain forms a ticklish problem. The uncertainties of future world trade and of our needs and requirements must caution us against unduly rigid commitments. Sentiment in India and the merits of the case alike argue against Imperial preference as such; and India can do no more than assure Britain of a most favoured nation treatment. The third aspect is, in fact, the most important from the point of view of both the countries. It is a question whether the provisions in this respect can be so conceived as to ensure the necessary commitments, without unduly restricting freedom of action where such freedom would be necessary. But the close of the unfortunate controversy about safeguards must be made the occasion for forging a new link of genuine friendship between the two nations. While India cannot bind herself to take all the requirements of machinery and technical talent only from Britain, it would be a gain, if, on a basis of mutual advantage, the terms of co-operation between the two countries in our tasks of economic development could be laid down. An old feud is best ended if it gives place to a new comradeship.

* * * *

The investing public in India should be properly impressed by what appears to be the South's most ambitious industrial flotation so far. Fertilisers and chemicals represent the essence of further industrial development and when multi-Government support is secured and famous U. S. experts are associated with the plans already translated into achievement at Kundara and Alwaye public expectation was quickened. Interest in the scheme was certainly kept up by visits and reports as to exchange facilities for essential imports required by the company. Since the capital structure is admirably simple and the preponderance of Government capital ensures running on quasi-government lines we have admittedly been provided with a real departure in private enterprise, of some significance for the period of planning. In today's prospectus appear details relating to consultants, the Directors' mission to the U.S.A. and the managing agency agreement. Already established as pioneers of a chemical industry in the South Messrs. Seshasayee Brothers have found their biggest opportunity in what promises to be the forerunner of the bigger industry to be set up under State auspices. The present issue to the public is restricted to the extent desired, and inasmuch as preferential allotment is promised for Travancore subjects, there should be an unsatisfied demand for the ordinary shares, conveniently priced to give every investor his chance to participate in an enterprise which is public in the sense that it is identified with national welfare. Food supply and fertiliser manufacture are interwoven and Grow More Food plans in the South acquire a real validity from the inception of the fertiliser plant. Of real importance for all industry is the plan for sulphuric acid manufacture. Consumption has outstripped supplies in regard to this essential chemical and every addition to existing production will be welcomed. Why Alwaye in the north, owing to water supply, availability of power and transport facilities etc. appears suitable, and why Cochin has developed an interest in this flotation can be ascertained easily. As to the market, the plantation industry in South India and Ceylon removes all ele-

The consent of the Central Government under Rule 94A, Defence of India Rules, and of the Government of Travancore under Rule 94B, Defence of Travancore Rules, has been obtained for this issue. It must be distinctly understood that in giving their consent, the respective Governments concerned do not take any responsibility for the financial soundness of any schemes or for the correctness of any statements or opinions expressed with regard to them.

INDIAN ALUMINIUM COMPANY, LTD.

(Incorporated under the Indian Companies Act, 1913)

(Formerly known as: Aluminium Production Company of India Ltd.)

AUTHORISED CAPITAL - Rs. 2,00,00,000/-

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL Rs. 1,36,50,000/-

Divided into 1,36,500 Ordinary Shares of Rs. 100/- each.

The Company has decided to ISSUE AT PAR for public subscription

40,000 5% Cumulative Redeemable Preference Shares of Rs. 100/- each (subject to income-tax) having equal voting rights with the Ordinary Shares and redeemable at the option of the Company on 90 days' notice given so as to expire not earlier than 30th September, 1950, at a premium of Rs. 5/- per share.

20,000 Ordinary Shares of Rs. 100/- each.

PAYABLE

as to the full amount thereof on application. These Shares will rank for dividends in respect of profits earned subsequent to the year ended 30th September, 1944.

DIRECTORS.

Lawson Greene Bash, of New York, U.S.A. (Substitute: Purushottam Jhinaram Pathak, of Chorvad, Kathiawar).
Maharajadhiraja Bahadur Uday Chand Mahatab of Burdwan, of Burdwan and Calcutta.
Rai Bahadur Biraj Mohan Das, of Calcutta.
Kenneth Hall, of Calcutta.
William Milles Martin, O.B.E., J.P., of Bombay.
Himchand Kapurchand Shah, of Calcutta.
Mann Subedar, M.L.A. (Central), of Bombay.
John Callow Surrey, of Calcutta. (Substitute: Ernest Albert Langham, of Calcutta).

REGISTERED OFFICE.

8, Council House Street, Calcutta.

THE COMPANY HAS NO MANAGING AGENTS.

1. **Subscription List** will open on 12th April, 1945, and will close on 26th April, 1945, or earlier at the discretion of the Directors. 2. **Applications for Shares.** Applicants for Preference Shares may apply for one Ordinary Share for every Preference Share applied for, but no applications for Ordinary Shares alone will be considered, nor applications for a total of less than ten shares. 3. **Brokerage** will be paid at the rate of Re. 1/- per share on allotment made in respect of applications made through recognised brokers. 4. **Reservation** of a portion of the Shares offered by the Prospectus is being made for British Indian subjects of the Province of Bombay.

5. **General Information.** It has always been the declared intention of the Company to invite substantial participation on the part of the Indian public, once initial difficulties had been overcome, and the Company's works constructed and in successful commercial operation. It is felt that the present is an opportune time simultaneously to extend the Company's activities and to invite such participation. Aluminium was produced for the first time in India in March, 1943, at the Company's Reduction Works in Travancore State, and since then these works have been in continuous production. The Rolling Mills near Calcutta, have been in operation since August, 1941, and are at present fully engaged on Government work. The Company also holds mining leases covering desirable and extensive bauxite deposits in Bihar and Bombay Provinces, and is at present engaged in the construction of an Alumina Works and the expansion of the Rolling Mills. In the construction and operation of its works, the Company has had the full benefit of the technical advice and resources of the leading Canadian and British aluminium producers, and will retain the benefits of this technical collaboration and these world contacts in the future development of the aluminium industry in India. An assurance of protection to the industry after the war has been given by the Government of India.

FULL PARTICULARS as to the terms upon which the Shares are being issued and as to the rights, privileges and conditions attaching to the Preference and Ordinary Shares respectively and also all relevant and statutory information concerning the Company together with Forms of Application for Shares will be found in and accompanying the Prospectus, copies of which have been filed for registration with the Registrars of Joint Stock Companies, Bengal, and Travancore. Copies of the Prospectus and accompanying Forms of Application are obtainable from the Company's Bankers, Lloyds Bank Limited, Calcutta and Bombay, and from the Registered Office of the Company.

Olympus

(FROM OUR CORRESPONDENT)

New Delhi, Monday.

"Here is a way out; Mr. Jinnah can say he is not accepting a Congress solution; Congress can have the satisfaction that it has not to subject to the dictation of the Fuehrer Jinnah; the British Government can have the sadistic comfort that they have not to bow before Congress which has been asking them to "quit" the country; moderate and reasonable are the proposals". Thus feels the man-in-the-street about the Conciliation Committee's interim report embodying the Conciliators' solution to resolve the Indian impasse. The 4,500-word document is a collection of the resolutions adopted by the Committee during their Delhi session which was well-attended and which ended on April 6. The first part of the report relating to the immediate changes—interim government—is the urgent cable which the Committee sent Lord Wavell and which has already been reported. Suggestions regarding the Constitution making Body and the Committee's plan of the future constitution of India are in the second and third parts.

* * * *

The highlights of the report are an emphatic declaration against the division of India into separate sovereign States as well as against non-accession and secession of any unit; parity of representation between Caste Hindus and Muslims on the Constitution-making Body, the proposed Union Legislature and the Executive; full equality regarding civic and political rights to the Scheduled Classes, backward classes and minorities and suggestion to set up Minorities' Commissions to further safeguard minorities' interests; separate allocation of seats to Scheduled Castes on the Constitution-making Body and the proposed Union Legislature, and finally composite Ministries at the Centre and in the Provinces. Parity of representation to Hindus and Muslims despite the disparity in the communities' population strength is based on the assumption that there shall be joint electorates with reservation of seats. If joint electorates were, for instance, not to be conceded, the entire scheme of the Committee would fall to the ground.

* * * *

Other important points stressed by the Committee are that the decisions by the Constitution-making Body shall be by three-fourths majority; residuary powers are to be left with the units and that if a satisfactory arrangement is not reached by parties and communities on the basis of the Committee's proposals or on any other basis, the British Government should enact a constitution for India on the basis of the Conciliation Committee's proposals.

"This is another giving-away to Mr. Jinnah; parity of representation and effective safeguards are more than an alternative to Pakistan. Mr. Jinnah has been put to a big test. Orthodox Congressmen and Hindu-mahasabhaites are not likely to immediately react favourably to the proposals but the great concession to the League is worth giving in the interest of the country. Congress taking into consideration the wider aspect of the situation—independence—is sure to make this sacrifice and support the proposals except that they would like to have international arbitration rather than arbitration by Britain on questions not agreed upon"—the above points the trend of the reactions in Congress circles here to the Sapru Committee report. Some Congress M.L.A.s I met also shared the above view though they feel that the Committee should have specified that in case of disagreements the differences should be resolved by international arbitration.

* * * *

Muslim masses also reacted favourably to the fundamentals enunciated by the Committee. But how far will Muslim leadership—Mr. Jinnah and League statesmen—guide the masses properly, take the opportunity now offered, further discuss with leaders of other communities and parties and compose the differences and force the hands of Britain is yet to be seen. The *Dawn*, the League organ, publishing the Committee's resolutions used an ominous headline—"Sapruites' verdict against Pakistan". Does this mean that Mr. Jinnah will play the dog-in-the-manger policy again, and this time only to expose himself further? The *Times* which was helpful recently has now published a particularly vicious attack from its Bombay correspondent on the Sapru Committee and their proposals for the interim period. Which means will the Wavell Mission ultimately prove a Tory vote-catching device? If there had not been other tests of British professions and statesmanship, the Sapru Committee's proposals constitute a really acid test, a test as it is of Muslim leadership too.

* * * * *

A 1,300-word Government of India notification announces the achievements (?) of the Hydari Mission. The Mission, it is announced, sought relief under the following heads: (1) Reduction in the demands of the defence services on Indian production, thus making the production so released available for the civil consumer in India; (2) imports of such consumer goods as are at present either not produced at all in India or are produced in insufficient quantities; (3) procurement of raw materials and working stores required for the manufacture of consumer goods in India; and (4) expediting the procurement and dispatch of equipment and stores ordered by the several departments of the Government of India in aid of the war effort or the maintenance of civil economy. The more important heads under which relief was sought were steel, leather, timber, woollens, cement and cotton textiles. Relief in 1945 will be about Rs. 4 crores and in 1946 about Rs. 70 crores. The most important item under which relief has been obtained is cotton textiles. An agreement has been concluded with H.M.G. under which India shall be enabled mainly by reduction of her commitments to supply cotton textiles for military use (800 million yards in 1945) and for export (600 million yards) to increase the supply available to Indian consumer this year by 600 to 800 million yards. The Government will proceed on the basis of military orders of 600 million yards and exports of 400 million yards in 1946. Considerable headway has been made regarding procurement and dispatch of stores, equipment and machinery already ordered or about to be ordered such as agricultural machinery and fertilizers. As regards requirements of finished consumer goods and raw materials and working stores needed for the manufacture of consumer goods, increases from all sources over the 1944 figures should reach about Rs. 26 crores in 1945, rising to Rs. 48 crores in 1946. The above are the achievements on paper. The facts are that relief sought is more remote than immediate. The argument that import of consumer goods has been arranged due to paucity at home sounds least convincing. Firstly it exposes the Government's hitherto fallacious industrial policy, secondly it is portentous—the opportunity might be seized to stifle the very industries whose production, it is said, are not up to the requirements and because of which the flood of consumer goods has been arranged. The benefits which the Mission professes it has conferred will be judged by how the aims and decisions are implemented. The most vicious aspect of the whole thing is that the Mission has

ANNOUNCEMENT
Require complete up-to-date plants for manufacture of Biscuits, Paper and Straw Board, Cotton Textiles, and Plastic Materials. Apply stating full technical specifications, lowest prices and possible date of delivery to Messrs. Ramdas Mahadeo Parsad, 28A, Pollock Street, (Pollock House) Calcutta.

virtually concluded a trade pact and certainly involving policy contrary to the profession that the "Hydari Mission is not a policy mission". As regards textiles the announcement has served a great purpose—confirming the fears of the people of this country that the cloth famine is due to the abnormal share of the production taken for defence requirements and exports. No wonder women are reported to have committed suicide for want of cloth and people are said to have become bitter and broken-hearted failing to secure shrouds for the dead.

And yet another test both of the intentions of the India Government and of the British community in the light of the Cripps proposals and Britain's promise to grant India self-Government after the war was provided on Wednesday last when the Central Assembly passed Mr. Manu Subedar's resolution urging early removal of Sections 111 to 121 of the Government of India Act, 1935, which provide commercial safeguards for Britons or rather guarantee them a privileged position in India's commercial life. The entire opposition parties spoke with one voice. It is gratifying that the Planning Member, Sir Ardeshir Dalal, at least recognised the need to review the question because of the changed circumstances, namely, the fact that India is no longer indebted to England. But the attitude displayed by the British community did surprise me.

* * * *

The Clive Street leader, Sir Henry Richardson, almost attempted to bully the House and the Government. Apparently what the European leader wants is not the removal of safeguards but "reorientation of methods". He was prepared for some kind of negative discrimination, namely, that subsidy may be given to Indian and not to British manufactures in India. An unabashed question he put was when he asked how the safeguards had prevented industrial development in the past and how they would block post-war planning. Can any basic industry be started with Indian control so long as the commercial safeguards exist? Sir Edward Benthall found himself in a predicament. His own hope is that the Government of India would be successful in securing "at least a temporary understanding". Mr. Bhulabhai Desai gave more than a rejoinder to the European leader's tactics. "I claim I have the right to legislate unfettered, to legislate in the best interests of the country. When the interests of this country conflict with the interests of any country, including Britain, I am proud to say we will legislate against you." He further pointed out that co-operation between Britons and Indians must not mean imposition by a superior on an inferior but if Europeans supported complete freedom for India, "we will see to it that in so far as your trade here is concerned, we will accept you as honourable friends". The debate amply showed as to who might prove to be the hurdles in the path of the settlement of the Indian question.

* * * *

The sensational disclosures made by the Special Representative of the *Hindustan Times* in the course of his four articles on conditions of life of Indian soldiers and officers in the Middle East and Italy formed the subject of an adjournment motion in the Assembly to-day. The censure motion was carried without a division after over an hour of debate. Even the European party supported the motion which was moved by Mr. T. T. Krishnamachari who urged that even though soldiers joined the army from the economic motive it was India's duty to see that they were not treated as coolies overseas.

(From Our Correspondent)

MADRAS, April 11

Objections to the proposed Agricultural Income Tax continue to be received from all quarters—even from unexpected circles. Mr W.K.M. Langley M.L.A., Leader of the European Group in the Madras Assembly, Dewan Bahadur N. Swaminatha Aiyar, Retired Chief Engineer to the Madras Government, and Sir T. S. Venkataraman, to name only representative few, oppose the measure Mr. Langley asserts that he is not concerned to defend the big Zamindars or the large Planning Companies. But if it is thought, he continues, that their contribution to provincial taxation should be larger it would have been easy to revise their assessment in the case of the latter and extend the ryotwari system to Zamindari areas, in the case of the former, as Congress Minister Prakasam wanted to do. It is repugnant to British principles and traditions, he adds, that a fiscal enactment of this nature should be imposed by an 'uncontrolled executive.' 'The parrot cry of preventing inflation may be dismissed,' he says, 'the Government of India is quite capable of looking after that.' Sir Norman Strathie, Mr. Langley goes on to point out, has stressed the inequality of the present land tax and has singled out tobacco as earning unduly large profits and invites him to read the following passage appearing in the Government pamphlet entitled The Madras Land Revenue System (1933) :—"If you grow a garden or an industrial crop such as tobacco or groundnut, your profits will be greater but Government will take no notice of that." "I thought," he concludes, "this war was being fought for Democracy. The way in which this proposal has been launched seems to be the very negation of this principle." Mr. Swaminatha Aiyar remarks that the proposed agricultural income tax is unnecessary because the budget has a surplus. In his opinion the analogy of Bengal and Assam is wrong. For the former is a permanently settled area and the latter is a province of planters. Madras is neither. What is more, the land assessment in Madras is the highest in India. Moreover, due to the war, agriculturists have been hard hit owing to the scarcity of labour, and the highly increased cost of cultivation due to the high prices of cattle, manure and agricultural implements. On the top of this is the Sales Tax, which though not necessary owing to the abolition of Prohibition, is still being continued. The ryots are also being constrained to contribute towards the War Fund, war loans and defence certificates which they can ill-afford. The Grow More Food campaign has not yielded appreciable results despite the fact that all avaflable areas have been taken up. This points to the necessity of intensive cultivation, which it is not possible to adopt, owing to the prohibitive cost of cultivation. In these circumstances the imposition of the new tax will be injudicious, unjust and unnecessary. Sir Venkataraman points out that in this country, in many crops our yields are the lowest in the world. Our most urgent problem is their increase at the earliest period possible. When Government is busy planning post war development of agriculture, to levy a tax on agricultural incomes is hardly the right thing to do.

"It had been calculated that the earth's yield could support not only its present population, but five times that number. It was a pity that from such a large country as India, people should go to neighbouring little tracts as coolies and it was the result of inefficiency of production on their part. What they should do was to put their shoulders to the wheel. India would then, in ten years, be consierably richer" said Mr. S. V. Ramamurti, Adviser to the Governor of Madras, presiding over a meeting held here. The message brought from Hotsprings, by Indian representatives, Mr. Ramamurti continued, indicated that there was every possibility of India increasing her food production. The country was gifted with many favourable conditions for agricultural development. But we have made very little use yet of the rivers in the province, except perhaps the Cauvery, for agricultural purposes There were fertile lands around the Madras Presidency in regard to which the only trouble they had to encounter was malaria. Investigations are going on to find out if it would be possible to get rid of this malaria at a cheap cost. If they succeed in this, more land would be at their disposal. The Adviser did not believe that mechanised cultivation was suitable for this country. In his opinion the fixation of the atmospheric nitrogen in the soil, should be taken advantage of to improve the fertility of the soil. Mr. Ramamurti concluding pointed out that attention had to be bestowed not only on the question of production of wealth but also on that of distribution of wealth. In his address 'Development of Agriculture' Dr. B. Viswanath said that it was possible to maintain not only the present population, but also the population that was likely to increase in the next fifty years, if there was a sustained and continuous effort to develop agriculture and increase production. On a comparative study of conditions in England, where increase in population had been greater, and of the measures taken by that country to feed the increased population, he did not think that people in this country had reason to despair. Dr. Viswanath thought there was really not much of waste land which could be usefully and effectively brought under cultivation. As regards the plea that

Resume of Commodity Markets

The features of the week are the strength of the bullion market and the weakness of the cotton market. In spite of the favourable developments in the war situation, bullion prices have been maintained at high levels. There has actually been a rise in prices in the last two days on reports that peace is not so imminent. The fall in prices for raw cotton was due to heavy bull liquidation and bear selling on the feeling that the world statistical position of cotton was not quite sound and that there was no prospect of any large increase in exports of Indian cotton. The raw jute market has been steadier while the jute manufactures market has remained firm. There is nothing of interest in the other markets

* * * *

Jute

The steadier tone of the jute market has been due to the feeling that the expected improvement in the coal situation would come about as mining machinery will be received in this country before the beginning of the monsoon in order to enable higher raisings. Also, the approval of the scheme of the Indian Jute Mills Association regarding the requisitioning of mills by the Government of Bengal has given rise to the feeling that the worst days of the jute industry have been left behind. Whether this feeling is justified cannot be said as even during the past few days coal arrivals have not been maintained and not all the steam-driven units have been able to work. Sellers are, however, inclined to be more optimistic regarding a higher level of mill consumption in the next season Some justification has been provided by the stock figures for the last month. It is not clear yet as to whether the increase in total stocks by 10,600 tons was due to a higher level of production but it is pointed out that shipping instructions in the past few weeks have been satisfactory and some of the steam-driven mills were able to resume work Weather conditions in the mofussil districts also have been favourable for market operators as sowings have been considerably delayed. It is not yet possible to form any definite idea regarding the size of the crop for the next season. As has been pointed out earlier with the larger area under preparation for the cultivation of jute, beneficial showers might help sowings to a great extent and the yield from the crop might not be smaller than was anticipated. Developments in the next few weeks will prove to be interesting.

* * * *

Cotton

There has been a landslide in prices for raw cotton and Jharilla March has come down to Rs. 411-12 from Rs 439-12 last week, a drop of 28 points in less than a week. The decline in prices is pronounced also for forward positions. Jharilla September being quoted at Rs. 429 against Rs. 452 The obvious reason for the slump in raw cotton, in spite of the steady offtake in the ready market, is the unsound world statistical position for cotton and the lack of encouraging hopes of an improvement in Indian cotton exports after the cessation of hostilities in the west. It is true there has been a rise in exports of Indian cotton to France and Belgium but the advantage of higher exports will be offset by larger imports of foreign cotton. In view of the smaller crop and the larger interest taken by mills it is, however, felt that a further decline in prices cannot be pronounced. If there is satisfaction regarding the international cotton agreement there may actually be an improvement in prices.

* * * *

Bullion

The behaviour of the bullion market has upset all calculations and the changes in the war situation have no relevance for the bullion market operator at the present moment. Quotations are appreciably higher on balance and the Reserve Bank has not been able to control speculative activity at any stage. total sales of both gold and silver being considerably smaller than market demand. The position in the silver market especially is peculiar. The movement in prices was divorced from gold and a quotation as high as Rs. 134 was touched by silver ready. There were reports that a prominent operator had sent very large stocks of silver upcountry. In the gold market offtake of 60,000 tolas daily is considerably in excess of Reserve Bank sales averaging 25,000 tolas. As ready stocks are very small and bulls have a tight grip on the market there has been a slow and steady rise in prices. The reports that peace might be delayed have resulted in a rather sharp rise in prices towards the close, gold ready quoting Rs. 75 and forward Rs. 74/8. Earlier in the week, in the silver market, the discount for forward over ready was as much as 3¼ points. Forced covering by bears has resulted in a narrowing in the discount to 8 annas towards the close. The premium for gold ready over forward has been unchanged throughout the week at 8 annas.

* * * *

Rubber

It was only recently that the question of the revision of the Bonus scheme was considered by the Rubber Production Advisory Committee at its meeting in Kottayam. It was felt that the scheme for bonus payment had a certain amount of speculation about the prices to be secured by the planter and that it would be far better if a flat rate were paid on all rubber produced. Since the meeting of the Rubber Production Advisory Com-

Man-Power and Output

The supply of labour is a problem—the proportion of skilled to unskilled workers is a problem—the ratio of output to man hours is a problem. All these and other allied matters are problems because the urgent need of every industrial plant in India is to speed victory by keeping production at a very high level, yet, at the same time, conserving manpower and materials.

Tremendous attention is, therefore, focussed on the efficiency of the individual worker and his ability to maintain a high standard of physical effort and concentration for long periods. Anything that promotes this is a very real boon to the factory manager. In a great many factories tea has been found of great value. It has been proved in practice that tea served to the worker on the job materially increases his power to maintain efficiency to the end of his shift.

To those interested in this subject, much valuable advice and assistance will be gladly given by the Indian Tea Market Expansion Board, 101, Clive Street, Calcutta.

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

IK 144

mittee, the Ceylon Government has announced a flat rate of Re. 1 per lb for Ms. sheet.

* * * *

The issue of a press communique by the Government of India saying that the Bonus scheme has worked well is perhaps an indication that the recommendation by the Committee is not quite acceptable. It is said that a bonus Rs. 33-5-3 per 100 lbs. was paid. This is the maximum bonus under the scheme and it has been possible for producers to secure the maximum Bonus because deliveries of rubber in the first quarter of this year reached the required tonnage.

The present scheme expires at the end of June 1945.

Piecegoods:

It is very satisfactory to note that at the meeting of the Textile Control Board this week the Chairman announced that rationalisation and standardisation with the drastic reduction in the number of varieties of cloth and counts of yarn produced by mills, the utilisation of maximum available productive capacity for manufacturing utility cloth and the elimination of the production of such qualities of cloth, which require a larger quantity of yarn, it would be possible to increase the total mill output by 400 million yards annually. It is also said that the increase in coal supplies and power to the industry would help the mills in their efforts to a great extent. Coupled with the decision of the Textile Control Board to increase output by 400 million yards per annum, the Hydari Mission's success in bringing about a reduction in the demand on the Indian industries by 600 million yards should result in a considerable improvement in the cloth situation within the country.

* * * *

In 1946 it is expected that the demand under military will be reduced from 800 million yards and that exports will be lower at 400 million yards against 600 million yards. The U. K. has promised imports to the extent of 200 million yards. If conditions were satisfactory it can be expected that larger imports will be available. It has been pointed out in these columns on more than one occasion that there should be a reduction in the demand on account of defence services and that exports also should be curtailed. The decision to concentrate on the production of sarees and dhoties to a greater extent is also in line with our recommendations It is hoped that with the efforts to improve the supply position and the more efficient distributive machinery the cloth crisis will be satisfactorily overcome.

India's Sterling Assets

In a small book of 47 pages (published by Padma Publications, Bombay, Re. 1) Mr. Bhatawdekar offers his conclusions as to the growth and future application of India's sterling balances. They are decidedly helpful since the problem of repayment looms large in current discussions. The purchase of war supplies in India led to the accumulation; and high prices paid have determined the rate of growth. Deferred payment has been promised but in what form is not known. It is to be remarked here that the author recognises that the Government of India has received the money and repudiation in the ordinary sense is impossible. The estimate of the National Debt (furnished on p. 17) as exceeding at present £100,000 million might appear extravagant in relation to more authoritative figures available. If the conventional fear as to the revision of the rupee exchange rate finds a place in the review of possibilities the circumstances of the past year explain the consideration of the issue. It is, however, recognised that the £ has not depreciated during the war to any great extent, and a fall in prices in India after the war would not be very important. The most valuable conclusion reached undoubtedly is that export trade revival is incompatible with indefinite blocking of sterling balances. Repayment over a term of 20 years is expected though the actual rate would be determined by India's ability to develop her own resources. The author's political bias does not affect his general argument in favour of imports on a generous scale, particularly of capital goods.

(Continued from page 486)

collectivisation methods should be adopted and mechanisation of agriculture should be introduced, he quoted figures to show that these methods were not likely to lead to beneficial results. For one thing a very large population would be displaced from land. For another the problem which the small holder in India, in Madras, in particular, faced was how to increase production on small units of agricultural land. Turning to the cattle problem, he said that because there was not adequate food for cattle, their output was low; consequently the agriculturist had to mainain more animals Because production was on a low level, cattle had to be underfed. Chances of agricultural development depended on breaking this vicious circle at some point. And he advocated what he called the mixed farm system by which the land would support the cattle and the cattle the land. In conclusion, Dr. Viswanath said that whatever plans and programmes they drew out, the human element had to be given the first and foremost attention and the cultivator should be so educated as to make him feel that he should rely on himself and do his best. This would solve their problem and the agriculturists who had magnificantly responded to the call for the production of increased food, would certainly co-operate with them.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, April 12.

In a recent address to the members of the Dundee Chamber of Commerce the President of the Chamber, Mr. Stewart, is reported to have said that the man-hours required to produce one ton of yarn in the Calcutta Mills are four times as many as would be necessary in a modernised Dundee Mill. Mr. Stewart is also reported to have said that although the cost of production of jute goods in Dundee has increased, the cost of production for jute goods in Calcutta has risen too and is not likely to be reduced in the post war era. If these statements are facts, then it appears that the industry here will have its work cut out to remain in a competitive position with Dundee in foreign markets after the war unless steps are taken to maintain that position. Also, Calcutta may lose some or all of the new lines in Jute fabrics developed during the period of the war. The solution seems to lie with the modernisation of the industries machinery as new plant becomes available. To our mind the Calcutta Jute industry can no longer depend for its continued prosperous existence entirely on the fact that a lower level of wages is paid here; the Indian Jute Mills Association must prepare, if they are not already doing so, for the development of the industry after the war on the lines of modernising its machinery and by encouraging the production, on a large scale, of those types of fabrics which formerly were exploited by foreign manufactures.

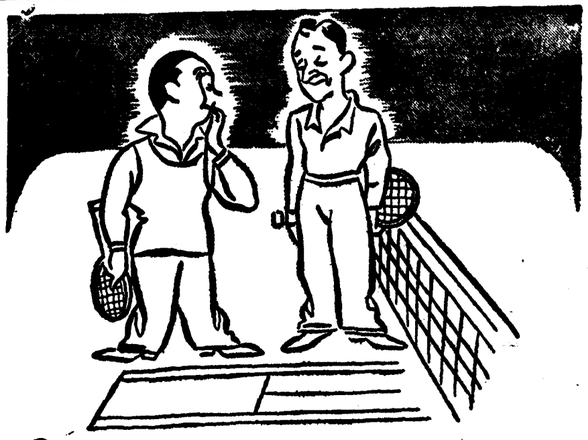
The Indian Jute Mills industry is a highly organised body and years of prosperity have been the means whereby substantial reserves have accumulated. In a spirit of enterprise it should not be difficult for the industry to adopt measures necessary to maintain a competitive position in foreign markets.

Coal deliveries to the I.J.M.A's Dump during the week ended Saturday 7th instant averaged fifty eight wagons daily, a distinct improvement on the previous week's sorry showing of thirty two wagons per day. The improvement has been maintained in the current week, and at the time of writing it is anticipated that most of the single shift steam driven mills now idle will be enabled to work during the second half of this month at least. Should this come to pass it will be something of an achievement as the above mentioned units worked only one week in March and that after months of idleness. It is to be hoped that the present improvement in supply will not be offset to any extent by deterioration in quality as has been the case so often in the past and that we are now on the way to better and more regular supplies of this most essential commodity.

It is understood that an estimate of the financial position of the Indian Jute Mills Association Industrial Pool for February last indicated a deficit on the month's working of approximately Rs. 12.65 lakhs. Since the start of the agreement until the end of February the working of the Pool shows a deficit of nearly 90 lakhs of rupees.

We are reliably informed that the Government of India have at last signed the agreement regarding the requisitioning of mills as approved by the Government representatives in July last year. The question of insurance against war risks has also been settled. In the case of mills which have been completely requisitioned, Companies are required to insure the machinery only. Where only part of the buildings have been requisitioned, companies will be required to insure those parts which they still occupy and also the machinery. Where insurances have been made on property which under this decision need not be insured, refunds will be made.

In the Pucca Bale market mills have shown very little interest but good business was done for export in Firsts, Lightnings, Daisee & Tossa at minimum rates. Prices are quoted at the minimum for all descriptions except S. M. Rejections, ropes and cuttings with dealers free sellers.



In the Loose Jute section the market continues steady. European baling is on offer at Rs. 16/12 and Rs. 13/12 for Middles and Bottoms and a small quantity came to business at these rates. European business in Bottoms alone was also done at Rs. 13/12, Supervised Jat 50/50 assortment sold at Rs. 16-and Rs. 13- Middles and Bottoms and the same rates were paid for quite a fair amount of District Tossa both Supervised and Bengali marks. Business also reported in Supervised Bottoms at Rs. 13-to Rs. 13/4. Marwari District Tossa was done at Rs. 15/8 and Rs 12/8 and Bengali Tossa Middles at Rs. 16 for District Jute.

The Hessian market is very firm with business limited by scarcity of sellers. Mills have sold hessian at maximum rates for delivery October/December 1945 and January/March 1946.

During the week business in Heavy Goods was extensive. The demand was very satisfactory but buyers are unwilling to concede higher prices for forward delivery. Mills sold to bazar speculators Heavy Cees at Rs. 65-8, B Twills at Rs. 65 and Flours at Rs. 77 all for delivery October 1945 to March 1946. B Twills also went to the bazaar at maximum rate for May/June 1945.

Business Efficiency
Business efficiency depends to a large extent on the state of your health. You can't afford to get ill NOW. The Spring will be here soon and they call for extra precautions. ments of risk. Leading Bombay brokers figure as underwriters for the present issue which ties up Bombay capital with the industrial progress of the South and breaks down conventional barriers in no uncertain manner. Admirably explicit as to preparatory work, the prospectus is properly recent as to estimated profits, for price policy in the case of a quasi-monopoly can scarcely be indicated at this juncture. But the Board is stiffened by official representation ensuring the security and incentive to progress noticed in the case of most Mysore companies. That Travancore has adapted Mysore practice and also sought to bring in outside enterprise into the State will certainly suggest that in relation to regional development all Authority today looks beyond precedent. What kind of response may be expected is ascertainable from previous interest shown in the quotation by markets which knew that the plum was ripening and applicants merely had to get ready for the 16th—the day on which the lists open.

* * * *

Every aspect of the banking situation today is covered in a speech that is reproduced in this week's issue. Mr. Shantidas Mangaldas, guiding what appears to be a very lusty infant, has reason to be wholly optimistic about banking trends in India. The resources and the opportunities coincide; the management too is equal to the needs. But caution is rightly dictated and Mr Mangaldas endorses what has been said here frequently about cheap money now, and forever. The beneficiaries of cheap money are many and diverse. Banks too stand to gain from the indefinite continuance of low interest rates; for the stimulus to saving is not the reward earned, but the growth of confidence to which the banking habit contributes. If Mr. Mangaldas described what has been done in the field of foreign bills by his own bank, he has certainly supported what was said here only last week about the need to cut a new groove for Indian banking. The Exchange Bank has opened up African markets; it has got a branch at Colombo in direct relationship with the London agents; and the Dominions too will be swept into the net, for exchange barriers within the Empire do not exist. Activity in this case is influenced by the growth of resources. Capital, branches and deposits have grown to attest the vitality of the new bank which contemplates further branch expansion. In no sense is the pace forced; for the important point is that India occupies (as Mr. Amery indicated readily) the pivotal position in the Indian Ocean; and Africa is not so far away as imagined.

* * * *

The Exchange Bank of I. A. has a balance-sheet of an orthodox type calling for little comment here. It has put aside money for Reserve and started to pay dividends. That is less remarkable than the accelerated rise in the working funds which evokes the satisfaction of the Directors. The acquisition of outside contacts is planned for. That should support the growth of profits which should follow the deconcentration of deposits and a gradual increase in time liabilities such as one authority looks forward to. There is reason to feel encouraged by what supports Indian Finance's familiar conclusions in respect of additions to public debt, future borrowing, and the course of money rates, and above all, the stability of the giltedged market. To find Mr Mangaldas a ready subscriber to what were once daring opinions makes one feel that our bankers have studied well the financial history of the thirties.

* * * *

It is too early to fix the place of the 31st President of the U.S.A in world history; but it should be certainly high—higher than that of Wilson; for Mr. Roosevelt, even before the war, became the pivotal figure of Western civilisation and denied courageously that the West had declined. If one cares to look upon the Four Terms as an organic whole, it would be easy to find that Mr. Roosevelt in spite of late compromises had evolved a working philosophy that appealed to working men as well as intellectuals who decided that rugged individualism was out of place in the 20th century. That philosophy may explain the hold that Mr Roosevelt kept on the vast, loyal electorate which voted him into a Fourth Term so readily last November. Of Mr. Roosevelt, it can be said that he defeated both men and nature, beat physical and other handicaps and overcame tradition to the extent that a man of his own class could say that he was elected on the Lincoln Highway long before the polling day. What Mr. Roosevelt did for the U.S.A. in the Depression is now part of the heritage of planning just as his job budget puts the copingstone on the new theory of full employment. It is certain that his great programme will survive his death. That implies that the world, even before it is set free, may take the day of mourning in an appropriately stoical manner. Even his sudden end towards the climax of an unparalleled career makes comparison with Alexander or Caeser inappropriate; for Mr. Roosevelt was a civilian through and through, and always put more faith in covenants than in arms.

"EAVESDROPPER".

Rice In Assam

The area under rice in Assam is usually about 5½ million acres or 75 per cent of the cultivated area, and Assam claims 7 per cent of the total area under rice in India. According to Dr. H. K. Nandi's recent article in Indian Farming, rice is a natural rain fed crop in the two valleys. but most of the land bears only one crop per year. Cultivation methods in Assam are not different from those practised in other Provinces. The most common manure used in Assam is cowdung. Summer, winter, and spring varieties are recognised and so far seed goes, the local varieties appear quite suitable. Rice is the most important food grain. And the main direction of improvement appears to be double cropping latterly on land under aman crop, a second crop has taken successfully, especially, in the Assam Valley where a little irrigation supplements the moisture in the soil. Research at the Karimganj Station has been directed towards producing better breeding varieties suited to the local climates. So far 37 pure line types have been isolated with the assistance of the ICAR foreign types have been used for plant breeding. The main advantage presented by the seed of improved varieties is that the yield increases by 10 to 15 per cent and agricultural farms in Assam are therefore engaged in seed distribution to cultivators. Disease-resisting crosses have lately been evolved and the yield in these cases shows an improvement of 20 to 25 per cent. In 1943 two new hybrid varieties occupied 30,000 acres in Assam and further extension on the basis of improved types is expected in Assam. Assam grows rice on both hills and dales. Heavy rainfall ensures complete success and yields of 2,500 lbs. per acre and more have been recorded. Land settlement might lead to an extension of rice cultivation, similar to that noted in the Punjab where rice, like sugarcane, is prominent aready among secondary crops. Where hills and high rainfall combine, as in Assam to raise average yields, rice appears more suited than in the deltas and Dr. Burns has noted already that the best yields per acre are obtained in Coorg. Under the grow-more food scheme there has been a marked increase in Assam's rice production, the estimated increase in 1942-43 being 11.55 per cent. What is most important to add here is that Assam in 1911-12 produced much more rice than to-day. The scope for improvement therefore can be related to previous record in this case because the average total yield in the Province may be increased by a reduction in the area under jute.

INDIA & BURMA

JUTE

(By Our Staff Correspondent).

Calcutta, April 12.

STEADIER conditions have been noticeable in the raw jute market during the past week. A large amount of business was reported as mills were buying on a bigger scale and there was better enquiry for export. The continued unfavourable weather conditions in the mofussil districts have also had an encouraging effect on values. The improved coal situation has resulted in the greater interest by mills in the market. There is a feeling that the improvement in the coal situation might be sustained and that, with the signing of the agreement with the Indian Jute Mills Association regarding requisitioning, it would be possible to maintain production very near the target level. The local stock figures for the month of March, revealing an increase in stocks of 10,000 tons is also taken to mean that March production was very much higher. Sellers have been rather reserved towards the close as they do not want to enter into further commitments unless at higher prices. There is a disposition to await the developments in the mofussil centres and also watch the progress of sowings. It is said that the hot and dry weather has hampered the growth of the standing crop.

In the loose Jute section business has been reported in European packing Middles and Bottoms at Rs. 16-12 and Rs. 13-12 per maund. Business in new crop has been reported eight annas higher. Supervised Jat Middles and Bottoms were done at a discount as last week. As mentioned above sellers have been reserved towards the close.

In the pucca bales section a larger amount of business has been reported for export, Firsts, Lightnings and Dundee Daisee 2/3 being put through at minimum rates. Mills also purchased Firsts and Lightnings at previous rates. There is still demand for ropes and rejections but there are not many sellers. It is felt that, if the firm conditions in the loose jute section continue, balers may ask for an increase in rates especially as export enquiry has been better.

JUTE MANUFACTURES

Calcutta, April 12.

The jute manufactures market, has been firm. The increase in production for hessian last month has come in very handy and mills are said to have taken advantage of the position by offering hessian for near positions in combination with heavy goods. A fair amount of business has been put through. With the more optimistic estimates regarding the trend of production in the latter half of the year, there has been free selling for positions beyond September at maximum rates and a large amount of business has been concluded. Export enquiry has been better. If the shipping position improves there can be a large improvement in the volume of exports.

In the Heavy Goods section, mills are keen for business at maximum rates, but they are not prepared to offer any discount for ready. For forward positions, however, a small discount is available. The local stock figures for the month of March, 1945, show an increase in total stocks by 10,000 tons. Total stocks of hessian at the end of March were 73,473 tons against 67,226 tons and sacking 98,865 tons against 95,121 tons. The increase in hessian stocks has been purely on civil account, the figure at the end of March being 36,362 tons against 29,515 tons and, on military account, 37,111 tons against 37,711 tons. Sacking, on civil account, were higher at 88,310 tons against 84,942 tons while, on military account, were lower at 10,555 tons against 10,629 tons. The figures are given below:

Total reported stocks of manufactured goods exclusive of Government Orders.

N.B.—March stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Calcutta, Kedarnath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and of Gagalbhai for the month of February, 1945.

PIECEGOODS

Calcutta, April 12.

CONDITIONS in the piecegoods market have remained unchanged. So far as Calcutta is concerned the distribution scheme through approved shops has not yet come into being on a large scale as seized goods are being sent to upcountry centres. In some areas there would appear to be a slight improvement, but the distress in mofussil centres is still unrelieved.

MINDING A NATION'S BUSINESS

The first essential to any planned economy is to know what is produced and how much it costs. From the smallest farm to the biggest factory account-keeping is vital. A great variety of paper is needed for the job Ledgers may have to be preserved for many years; a shop's cash-memo need only last a few hours. A small farmer needs record-books which are cheap and strong.

Titaghur make suitable grades for the body and covers of all kinds of books. The best printers and stationers know the most economical weight, size and quality for the purpose—from the toughest of ledger-paper to be punched for loose-leaf systems to the light-substance stocks for engagement pads and the like.

BRASS UTENSILS —PRICES FURTHER REDUCED

With effect from 10th February 1945, the ceiling prices of brass utensils have again been lowered. In the case of the large quantity of brass utensils manufactured under Government control and sold through approved dealers in almost all important towns, these prices are actually *stamped* on the articles. Look for that! The new prices range from Rs. 1/10/- to Rs. 2/- per lb. The ceiling price of Moradabad utensils with Moradabad Kalai both sides is Rs. 2/12/- per lb. The ceiling price for all other brass utensils is Rs. 2/5/- per lb. Do not pay more.

A list of approved dealers is incorporated in the Brass Utensils (Control) Order, 1944, a copy of which can be obtained from the Manager of Publications, Civil Lines, Delhi on payment. If any approved dealer attempts to charge more than the price stamped on the utensil do not hesitate to report him to your District Magistrate or the Controller General of Civil Supplies, Bombay.

ALUMINIUM UTENSILS PRICE CONTROL

As from 15th March 1945, the prices of all aluminium utensils are controlled under the Aluminium Utensils (Control) Order, 1945. These ceiling prices range from Rs. 2/14/- to Rs. 3/8/- per lb. for various kinds of utensils, the average price now being Rs. 3/- per lb. or 5 pice per tola, as against the former uncontrolled price of about Rs. 5/4/- per lb. As quickly as possible, substantial quantities of aluminium utensils manufactured under Government control are being placed on sale everywhere through the usual dealers, and these utensils will have the controlled prices stamped on them. About 5,000 tons of aluminium per year are being released for this purpose.

Stock Markets to-day and to-morrow:

BIRD-HEILGERS COAL GROUP RESULTS

It is a week of interesting developments in the stock and bullion markets. In spite of the spectacular advances made by the Allied armies inside Germany there has been a recovery in values on the Calcutta Stock Exchange. Only towards the close on Thursday a slightly easier feeling has been noticeable. The Bombay market was rather weak in the early days but in that centre, too, a steadier feeling has prevailed though quotations are very much lower on balance, with the exception of steels. The bullion market has been steady throughout and closing quotations are at the highest levels for the week.

* * * *

It is said that the recovery in stock exchange values is due to the feeling that peace is not so imminent. It is not quite clear as to how stock market operators got this feeling especially as American armies have overrun very nearly the whole of Western Germany and are only a short distance from Berlin. In the Calcutta market, there seems to be a general conviction that prices will be maintained at the present levels and that there may even be an upward movement after some time. The Bull Syndicate is in a strong position. As shares have been fully paid for, there is not much of floating stocks. Small buying by the Bull Syndicate resulted in a rush for covering by bears and an all-round rise in prices was recorded on Wednesday. There is satisfaction with the results of the Hydari Mission though the relief in the form of compensatory imports in the current year may not be upto expectations. But this is a hardship for the individual consumer while a bullish point for the industrialist and stock exchange operator.

* * *

As the announcement regarding the sudden death of President Roosevelt on Thursday afternoon was received only on Friday morning and as markets will not reopen before Monday one cannot judge the effect of the news on market prices. It can be said, however, that the U.S. President's death at this stage cannot have any effect on the course of the war and that ideas of operators might not possibly undergo any large revision.

* * * *

The accounts of the Bird & Heilgers Group of coal companies for the half-year ended December, 1944 make satisfactory showing, those of the Burrakur Coal Company, Limited in particular. The improvement in the wagon position and the introduction of women labour underground have resulted in an increase both in raisings and despatches though collieries in the Raneegunge coalfields continued to suffer from labour shortage owing to competition from other quarters. Profits are generally higher. As was announced in these columns earlier, Burrakur is able to pay a dividend of 8 annas and a bonus of 4 annas per share against the same dividend and a bonus of 2 annas per share for the previous half-year. Bhulanbararee is paying the same dividend of eight annas per share but there is a bonus of 4 annas in addition. Standard is increasing the distribution to Re. 1 per share from 8 annas while Sendra has only maintained the dividend at the previous level of 4 annas per share.

* * * *

Owing to labour shortage it has not been possible for all the collieries to take advantage of the bonus scheme. Standard has earned a small target bonus for the half-year ended September, 1944 as also Burrakur and Bhulanbararee. But both Bhulanbararee and Standard are not hopeful of earning any bonus in the half-year ended March, 1945 though Burrakur is confident that as much as Rs. 5 lakhs will be received as bonus during this period and that the benefit of this bonus payment will be reflected in the accounts for the current half-year.

* * *

The net profit of the *Burrakur Coal Company, Limited* for the six months under reference is Rs. 24,86,883 against Rs. 17,10,796 for the previous accounting period. The earnings are the highest for over a decade. Raisings also are the highest since the Loyabad disaster. During the half-year the Director of Open-cut Mining continued to provide mechanical equipment at Teetulmuri quarry from which there has been a substantial output. Raisings were 464,086 tons against 423,362 tons and despatches 473,445 tons against 422,180 tons in the previous half-year. Coke production was higher at 33,047 tons against 29,840 tons. But in spite of the improvement the plant was unable to maintain production at full capacity owing to restricted coal supplies. The net profit mentioned above includes Rs. 20,711 earned under the target bonus scheme.

* * * *

Provision for taxation very nearly takes up the increase in earnings, the figure being Rs. 17,10,000 against Rs. 10,21,428. The amount transferred to Reserve for Post-war Contingencies is Rs. 2.3 lakhs (Rs. 1.5 lakhs). The amount set aside to depreciation is lower at Rs. 1,27,139 against Rs. 1,62,368. A sum of Rs. 23,075 has been written off premium on purchases of Government securities. After paying a dividend and bonus of 12 annas per share (10 annas) the amount carried forward is lower at Rs. 41,199 against Rs. 60,991 brought in.

* * * *

Even on the assumption that earnings for the next half-year show an increase of only Rs. 5 lakhs, as a result of bonus payment, which assumption is very conservative in view of the fact that larger raisings mean larger earnings, it can be expected that there will be a considerable increases in the distribution for the current half-year especially as the bonus payments are not liable for E.P.T. and only income-tax and super-tax is to be paid. Which means that the utilisation of bonus payments alone, after payment of tax, for distribution as dividends might enable the payment of as much as Rs. 1-4 per share. It is not surprising that on the publication of the report there has been a rise in the quotation for the shares from Rs. 40-12 to Rs. 42-8.

* * * *

Standard Coal Company, Limited has earned for the same half-year a net profit,

YARN SUPPLIES
FOR INDUSTRIAL PURPOSES
OTHER THAN MANUFACTURE OF CLOTH

The allotment of yarn for necessary industries other than the manufacture of cloth is under review. Applications for allotments for such yarn for the Calcutta area should be submitted to the Director of Textiles at 21, Chittaranjan Avenue, Calcutta, by the 21st April, 1945.

Applications for allotments in the Districts should be made to the Subdivisional Officer concerned.

Application Form

1. Name and address of the Owner/Agent
3. Licence No.
2. Address of Works and Office
4. Number of Looms working
5. Number of persons engaged in production
6. State separately for 1940, 1941 & 1942
   (a) Quantity of yarn consumed under count heads
   (b) Who supplied the yarn
7. Production per month
   (a) Description
   (b) Quantity
8. State minimum monthly requirements now in lbs. under count heads.
9. Details of estimated production from this minimum quantity.
10. Where will these goods be sold.

I certify that the above is a true statement.

Signed.....(Applicant).

DEPARTMENT OF CIVIL SUPPLIES, BENGAL

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 13.

The Calcutta Stock Exchange has been definitely steadier in the past few days in spite of the further progress made by the Allied armies inside Germany. A rather quiet tendency was noticeable earlier in the week but at the lower levels there was fresh buying and bear covering. The reports that peace might not be concluded immediately helped the Bull Syndicate. The highest levels for the week were touched on Wednesday. In the early hours of Thursday also quotations were maintained around recovery levels but in the afternoon there was some selling and profit, taking as it was felt that there might be fresh developments in the war situation during the long week-end and it was not advisabe to carry large commitments. The decline in prices, however, is not anything appreciable. It must be said that the quotations are higher on balance. Coal shares were better on the publication of satisfactory earning reports by the Bird & Heilgers group. Jute shares also were steadier on reports that the coal situation had improved and that it would be possible for mills to report a high level of production. Engineering issues have been quietly steady. There are no new features in the other sections. The general undertone is satisfactory.

In the giltedged securities section the announcement of the First Development Loan 1970-75 has not had any effect on the market and it appears that the Reserve Bank has had to afford considerable support to the market to keep up prices, banks being keen on realising investments to increase their cash balances. The First Development Loan having a maturity period of 25 to 30 years is issued at a discount of 3 percent for cash. Holders of 5 percent 1945-55 loan are given conversion terms, subscriptions in the form of 5 per cent 1945-55 bonds being accepted at a premium of Rs 2/8 per cent for every Rs. 100 nominal It is stated that total subscriptions for both cash and conversion will be received for Rs. 40 crores and the list will be closed as soon as this figure is approximately reached. The subscription list opens on April 16 and closes on April 18 or earlier if necessary. 3½ per cent paper has been steady around Rs. 99|14. For a time the quotation was at par. Among terminable loans, 3 per cent 1957 were slightly above par at Rs. 100|1, 3 per cent 1963-65 Rs. 99, 3 percent 1953-55 Rs. 100/6 and 3 percent 1949-52 Rs. 101/6. 3 percent 1966-68 were Rs. 98/8. Easy conditions continue to prevail in the money market and the Central Government has been able to get its offer of treasury bills accepted at the unchanged rate of 5 annas 7 pies percent per annum.

Bank shares were unchanged with *United Commercial* quoting Rs. 19/8 premium, *Imperial Bank* Contributories Rs. 489, *Calcutta National* Bank Rs. 15/8 and *Reserve Bank* Rs. 133.

Cotton textile issues were featureless and the statement by the Chairman of the Textile Control Board that the industry will be afforded greater facilities for increasing production has not been noted in the market. *Cawnpore Textiles* were Rs. 12/14, Dunbar Rs. 294, *Elgin* Rs. 63/8, *Kesoram* Rs. 17/4 and *New Victoria* Rs. 7/1.

Coal shares have come into their own as it was felt that with the improvement in coal raisings and the receipt of bonus payments, companies will be able to pay larger dividends. There is a prospect of a further increase in raisings with the import of mining machinery from abroad, thanks to the efforts of the Hydari Mission. The report of the Burrakur Coal Company for the halfyear ended December, 1944 has been very well received and there has been a rise in the quotation from Rs. 41 to Rs.42/8 though the close is easier at Rs. 42/4. *Amalgamated* were unchanged at Rs. 52 as also *Bengal* at Rs. 682. *Bhalgora* were sticky at Rs. 19/14. *Bhulanbararee* improved to Rs. 32|12 but have receded to Rs. 32. There is greater activity in *Bokaro & Ramgur* on the announcement that the registered office of the subsidiary coal company of Tata Iron & Steel Company is in the same premises as Bokaro & Ramgur. Bokaro & Ramgur will be considerably benefited by the large payment from the steel company. The report for the halfyear ended December, 1944 is due to be published shortly and may contain some reference in this connection. Bokaro & Ramgur have been done up to Rs. 48/4, the quotation at the end of last week being Rs. 46/12. *Central Kurkend* also are higher at Rs. 35/8, *Equitable* were uninteresting at Rs. 66/ , *Nazira* at Rs. 19/4, *New Beerbhoom* at Rs. 38/12 and *Sendra* at Rs. 22/14. The rise in *South Karanpura* to Rs. 30|3 has not been well maintained, the close being Rs. 29/6.

There is not much of activity in the jute section but quotations are higher. *Howrah* improved to Rs. 89/8 from Rs. 87/4 at the end of last month. They are now quoting Rs. 89. *Anglo-India* were 15 points higher at Rs. 478, *Bally* 12 points higher at Rs. 513, *India* 10 points higher at Rs. 702 and *Kanknarrah* 5 points higher at Rs. 578. The smaller shares were slightly beter, *Presidency* being quoted Rs. 11|12, *National* Rs. 33|8 and Chitavalsah Rs. 32|8.

In the Engineering section, both *Indian Iron and Steel Corporation* improved on bear covering to Rs. 39/8 and Rs. 32/10 respectively but on selling towards the close there is a slight recession to Rs. 38/15 and Rs. 32/2. There is not very much speculation regarding the interim dividend of *Indian Iron* for the year ended March, 1945. *Jessop and Co.*, were better at Rs. 24/4 and *Kumardhubi Engineering* Rs. 10/14. *Marshalls* were Rs. 4/13 and *National Iron and Steel* Rs. 11/9.

In the Sugar section, there is nothing interesting, *Belsund* were Rs. 14/8, *Ramnugger Cane and Sugar* Rs. 14|4 *Champarun* Rs. 35/12 and *Samastipur* Rs. 15/12.

Tea shares were steady even without suport from Bombay. *Bishnauth* changed hands at Rs. 44|12; *Central Cachar* were a few points lower at Rs. 116 and *Dessai and Parbuttia* Rs. 396 ex-dividend.

In the miscellaneous section there was a sharp rise in *Karanpura Development* to Rs. 33/6 on the publication of the report saying that some of the properties had been leased and that a new mining syndicate has been formed. Burma shares were dull with *Burma Corporation* at Rs. 5/2, *Consolidated Tin* at Rs. 2/12 and *B. B. Petrol* at Rs. 5. Among other shares, *Dalmia Cement* ord. were Rs. 16/5, *Indian Wood Products* Rs. 31/8, *Calcutta Trams* Rs. 43 and *New India Investment* Rs. 90. *Midnapore zemindary* were higher at Rs. 170 and *Calcutta Landing and Shipping* at Rs. 37-8. Paper shares were unchanged with *Titaghur* A and B at Rs. 27, *Sree Gopal* at Rs. 18-2, *Star* at Rs. 15/10 and *India Paper Pulp* at Rs. 222.

Div. per cent	30	40	40

(Annual General Meeting held on 29-3-1945 Dividend payable on or after 7-4-1945).

Audited accounts for the year ended 31st December 1944.

After making the necessary provisions for Excess Profits-tax, Income-tax and Corporation-tax, amounting to Rs. 1,64,00,000 and compulsory E. P. T. deposit of Rs. 39,50,000, the balance for the year is Rs. 23,35,166-0-0 to which has to be added Rs. 7,52,770-1-8 brought forward from last year's account, making a total of Rs. 30,87,936-2-5.

The directors have already paid on the 25th September 1944, an 'Ad Interim' dividend of Rs. 25 per share absorbing Rs. 6,27,450 leaving a balance of Rs. 24,60,486-2-5.

They now recommend to set aside a sum of Rs. 8,00,000 to the Dividend Equalization Fund, and from the balance, to declare a final dividend at the rate of Rs. 50 per share, free of tax, absorbing Rs. 12,54,900 and to carry forward Rs. 4,05,586-2-5 to this year's account.

Trading Conditions.—The Textile Control Board fixed the ceiling prices from time to time, and made successive reductions during the year. This has resulted in reducing the price to the consumer, and, to a limited extent, has helped to check the activities of the black market by various measures of control over distribution taken by the authorities from time to time. But these measures, by themselves, have not so far succeeded in eliminating the black market activities. However, in view of the reduction in prices, the results of the working of the Company may be considered satisfactory.

Agents.—Messrs. Nowrosjee Wadia & Sons Ltd.

Authorised Capital—Rs. 64,00,000. Issued and Subscribed—Rs. 62,74,500 in 25,098 shares of Rs. 250 each, fully paid up.

(Half-yearly General Meeting on 16-4-1945 at 12-15 p.m. Books closed from 2nd to 16th April, 1945).

Audited accounts for the half-year ended 31st December, 1944.

The Profit and Loss Account, including the balance brought forward from last half-year and after providing for Interest, Debenture Interest, Commissions and Taxation, and transferring the sum of Rs. 1,35,000 to Excess Profit Tax Deposit Fund Account, shows a credit balance of Rs. 1,95,551-14-7 which sum, the Directors recommend, should be dealt with as follows :—

Pay the dividend due on the Rs. 5,00,000 7 per cent. Cumulative Preference Shares for the half-year ended 31st December, 1944, Rs. 17,500; Pay a dividend on the Rs. 10,05,000 Ordinary Shares at the rate of 10 per cent. per annum or As. 8 per share for the half-year ended 31st December, 1944, Rs. 50,250; Write off to Depreciation Rs. 1,00,000 ; and Carried forward to Profit and Loss Account Rs. 27,802.

Jute Stocks are shown at or under cost. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In terms of the Indian Jute Mills Association Agreement, these Mills were permitted to work 54 hours per week but they actually worked 60 hours per week with all looms in commission through the purchase of loom hours from other Mills under the Managing Agency of Messrs. McLeod & Co., Ld.

Trading results was adversely affected by payments of Madras General Sales Tax and also by the introduction of The Jute (Price Control) Order, 1944.

Managing Agents.—McLeod & Co., Ld.

Authorised, Issued and Subscribed Capital —Rs. 15,05,000 in 1,00,500 Ordinary shares of Rs. 10 and 5,000, 7 per cent Cumulative Preference shares of Rs. 100, both fully paid up.

(Half-yearly General Meeting on 16-4-1945 at 11-45 a.m. Books closed from 2nd to 16th April, 1945).

Audited accounts for the half-year ended 31st December, 1944.

The Profit and Loss Account, including the balance brought forward from last half-year and after providing for Interest, Debenture Interest, Commissions and Taxation, and transferring the sum of Rs. 1,20,000 to Excess Profits Tax Deposit Fund Account, shows a credit balance of Rs. 1,24,617-15-5 which sum, the directors recommend, should be dealt with as follows :—

Pay the dividend due on the Rs. 10,00,000 7 per cent Cumulative Preference Shares at 31st December, 1944, Rs. 35,000; Pay a dividend on the Rs. 6,00,000 Ordinary Shares at the rate of 10 per cent. per annum, or As. 8 per share for the half-year Rs. 30,000 ; Write off to Depreciation Rs. 50,000; and Carried forward to Profit and Loss Account Rs. 9,618.

Jute Stocks are shown at or under cost. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In accordance with the Indian Jute Mills Association Working Time Agreement, these Mills were permitted to work 54 hours per week with all looms in commission. They actually worked 58 hours per week until 29th August through the purchase of loom hours from other Mills under the Managing Agency of Messrs. McLeod & Co., Ltd. Thereafter, and until the close of the period under review, the Mills worked 60 hours per week, this additional working being rendered possible by the purchase of loom hours from the Soorah Jute Mills Co., Ltd., which Mills were placed under Government requisition.

Being electrically driven, these Mills did not suffer as a result of the prevailing coal shortage but productive capacity was impaired to a small extent as the result of labour shortage, workers having been attracted by employment offering in various Government concerns in the district.

Managing Agents.—McLeod & Co., Ld.

Authorised Capital—Rs. 20,00,000. Issued and Subscribed—Rs. 16,00,000 in 60,000 Ordy. shares of Rs. 10 each, and 10,000, 7 per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

Synopsis of balance sheet as at 31-12-1944.

Liabilities.	Rs.	*Assets.*	Rs.

(Half-yearly General Meeting on 16-4-1945 at 11-30 a.m. Books closed from 2nd to 16th April, 1945).

Audited accounts for the half-year ended 31st December, 1944.

The Profit and Loss Account, including the balance brought forward from last half-year and after providing for Interest, Commissions and Taxation and transferring the sum of Rs. 1,77,000 to Excess Profits Tax Deposit Fund Account, shows a credit balance of Rs. 2,10,578-3-6 which sum, the directors recommend, should be dealt with as follows :—

Pay the dividend due on the Rs. 10,00,000 7 per cent Cumulative Preference Shares at 31st December, 1944, Rs. 35,000 ; Pay a dividend on the Rs. 7,00,000 Ordinary Shares at the rate of 30 per cent. per annum, or Rs. 15 per share for the half-year Rs. 1,05,000; Write off to Depreciation Rs. 50,000 ; and Carried forward to Profit and Loss Account Rs. 20,578; Total Rs. 2,10,578.

Jute Stocks are shown at or under cost. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In accordance with the Indian Jute Mills Association Working Time Agreement, these Mills were permitted to work 54 hours per week with all looms in commission. They actually worked 58 hours per week until 29th August through the purchase of loom hours from other Mills under the Managing Agency of Messrs. McLeod & Co., Ld Thereafter, and until the close of the period under review the Mills worked 60 hours per week, this additional working being rendered possible by the purchase of loom hours from the Soorah Jute Mills Co., Ld. which Mills were placed under Government requisition.

Being electrically driven, these Mills did not suffer as a result of the prevailing coal shortage and, generally, productive capacity was maintained, although there was a definite tendency on the part of the labour to drift away to employment in various Government concerns in the district.

EXCHANGE BANK OF INDIA & AFRICA, LTD.

SUCCESSFUL WORKING IN 1944

Mr. SHANTILAL MANGALDAS ON THE PROGRESS OF INDIAN BANKING

Presiding at the 2nd Annual General Meeting, held on the 31st March, 1945, the Chairman, Mr. Shantilal Mangaldas, said:—

GENTLEMEN,

"The Balance Sheet and the Directors' Report are already in your hands. From the Directors' Report you will find that by conservative management and good response received from the public the Bank has been successful enough to write off the first year's working loss, as also preliminary expenses in toto. Brokerage expenses have been written off in part and it is hoped that the entire expenses on this account will be written off next year. Similarly, liability for preference dividend for the year 1943 has been wiped out and the dividend for 1944 on the Preference Shares has already been provided for. The expenses for opening of branches till the date of the Balance Sheet have been written off from the Profit and Loss Account for the period and a net profit of Rs. 1,95,693-11-8 shown in the Balance Sheet represents the clear profit after taking into consideration all the known expenses incurred during the period. Thus the Bank now carries no liability for arrears of dividend or and contingent expenditure.

The figures of progress as to deposits, working funds, number of accounts, etc., indicated in the Directors' Report tell their own tale and I need not dilate on them. Turning to the Balance Sheet which with your permission I take as read, you will find that against the total deposits of Rs. 3,17,16,869, the Bank has liquid resources, *viz.*, cash and investments of Rs. 2,02,08,000, which gives a percentage of 63.6 per cent of total deposits. You will notice that the investments have been valued for the Balance Sheet purposes at the market value, as this procedure was adopted at the suggestion of your Auditors last year. However, it must be made clear that the difference between the market value of these securities and their cost has not been taken into Profit and Loss Account. As regards investment in Government securities, I would like to mention here that all our holdings in Government securities as shown in the Balance Sheet are in the shape of short and medium-dated terminable Government of India and Provincial Government Loans. You will notice that the Loans and Advances amount to Rs. 1,42,50,170-7-0 out of which Rs. 88,51,000 are fully secured which gives a percentage of 62.1 of the Secured Advances. The net profit of the Bank amounting to Rs. 1,95,693 against a paid-up Capital of Rs. 25,00,000 works out to 7.82 per cent.

The rapid progress in the branch banking activity of the Scheduled Banks in India since the outbreak of the war is illustrated in the following table:

	Total number of offices.				
	1938 (Pre-war)	1941	1942	1943	1944
Imperial Bank of India ..	358	401	392	398	419
Other Scheduled Banks ..	677	954	974	1,400	1,902
Foreign Banks	93	99	84	84	86
Total Scheduled Banks ..	1,128	1,454	1,450	1,882	2,401

It will be seen from the foregoing table that, as compared with 1938, the total number of offices has more than doubled, the expansion in the offices of "other Scheduled Banks" being phenomenal—it is nearly threefold. It may thus be seen from the data available that, although the bulk of this expansion represents opening of branches in centres where banking facilities already existed, quite a good number of branches were opened in places which were not previously served by either a Scheduled Bank or a non-Scheduled Bank. Such a wholesome trend cannot but be welcomed.

In spite of this rapid expansion of branch banking in India, it is remarkable to note that overseas expansion has not engaged the attention of India Banks. This is not a happy position, because unless and until banks finance the inland and foreign trade of a country, the resultant advantage will not be to the maximum trade and industry if the country as a whole. To achieve this end, Indian Banks should extend their activities overseas by opening their branches at useful trade centres. With this object in view, our Bank has opened the first Overseas Branch at Colombo in Ceylon and I am glad to inform you that the same is receiving good support from the mercantile community of that Island. I trust that the Indian mercantile community who have business connections with Ceylon will extend their patronage to the Bank and help in making our Colombo Branch successful in every respect.

I may inform you that your Directors are also seriously considering further expansion overseas in Africa and other foreign countries and some definite step may be taken by us in this direction in the very near future.

I think it will be appreciated if I give here the summary of the total amount of foreign business handled by your Bank during the year under review:

Sterling Credits opened ..	£ 44,595
Dollar Credits opened through local Banks	$ 262,848
Foreign Bills and Transfers handled	£146,980

The figures, though not large, prove that we are gradually handling an increasing volume of foreign business and thus helping to finance the foreign trade of our coutrry as well, although, on account of export and import restrictions, scope for this business is restricted, and perhaps, will continue to be so restricted till the war is over.

I may add for your information that all our sterling credits, amounting to £44,595, were opened by us directly with our London Agents, the Midland Bank Ltd., and the Foreign Bills and Transfers amounting to £146,980 were handled through our Overseas Agents, the Midland Bank Ltd., London and Barclays Bank (Dominion, Colonial and Overseas) in East and South Africa. Thus all our foreign business is being put through directly with our foreign agents overseas. The bills negotiated were drawn on different centres such as London, Durban, Johannesburg, Nairobi, Mombasa, etc.

Our Overseas Branch, *viz.*, Colombo Branch, has also been authorised to handle sterling exchange business in terms of the regulation of the Ceylon Exchange Control and is having direct connections with our London Agents separately. Thus our Colombo Office is also dealing directly with London (and not through any other local bank on their side).

Similarly, arrangements for direct dealing with Australia and New Zealand are nearly completed and we hope to extend the facilities for foreign exchange business with Australia and New Zealand directly and not through any local medium in a short time.

One more special feature of the Bank is that in addition to our elaborate internal audit system, our branches are being regularly audited by external Government Certified Auditors. It will thus be seen that every effort is made to see that the interests of the shareholders and the depositors are duly safeguarded in every possible manner.

You will be pleased to learn that all our upcountry Branches are also making satisfactory progress and I am confident that in the years to come they will show still greater progress.

Having thus elucidated briefly the progress of the Bank, I shall, with your leave, proceed to a consideration of the factors and forces that are likely to determine the shape of things to come in the banking world.

Gentlemen, the most outstanding achievement of the Indian banking system to date is the abundant evidence of adaptability, resilience and vigour it has shown in the face of the immense stresses and strains set up by the war. Few things in the economic picture of India during the war have been so heartening as the big strides of progress made by Indian banking, and this goes far to inspire confidence about the economic future of our country. The war, though it brought with it severe limitation in the way of traditional banking business, has yet helped our banks to consolidate their position, thanks to the colossal expansion of deposits flowing from the expansion of currency resorted to by the Currency Authority. We have, it is obvious, travelled far, far indeed, from the days when the foreign experts associated with the Central Banking Enquiry Committee, with so little prescience as it turns out now, expressed the presentiment that "India was not bounding with untapped (banking) possibilities". Such pessimism is typical of the 'twenties when agriculture was backward and industrialisation proceeded at a snail's pace. To-day, you will perhaps agree with me, the position is happily very different. Banking in India is no longer in the stage of a child todding and falling and getting up again but has reached full adolescence, waiting to play its rightful part in shaping the country's economic progress. Indeed, the changes that have come over the face of Indian banking during the last six years are so profound, so extensive that few people to-day can envisage adequately the possibility of a reversion to pre-war conditions.

PROSPECT AND RETROSPECT.

The imminence of the collapse of Nazism makes the present a very appropriate moment both to look back in retrospect over the hard road travelled hitherto as well as to view the prospect that lies ahead. To start at the beginning, the outbreak of war brought with it a spectacular increase in Government's power to control the activities of financial institutions, which have, therefore, had to function within the framework of restrictions imposed by Government. Every aspect of banking activity is hedged in by one aspect or the other of official policy. Thus, the inflation of currency led to the increase of bank deposits; the import and export restrictions and exchange control affected the demand for trade financing, and the scope for bank advances became considerably circumscribed also by the finance provided by Government agencies themselves to contractors and industry; and as for investments, the third limb of banking, the closure of all other avenues for employment of funds naturally led to the banks taking a major interest in the Government Loans and thereby directly aiding the war effort. It will thus be clear that what I would call the three limbs of banking were directly resting on official policy and whatever progress was made had to be within that framework. The credit for the banks is, therefore, all the greater that they have managed their business so prudently, and shall I say, also so patriotically. I shall briefly consider each of these branches of activities both as to how they have developed hitherto and how they are likely to be influenced by future policies.

To take up deposits first, the total deposits of Scheduled Banks have increased from Rs. 236.6 crores on 1st September, 1939, to Rs. 828.4 crores on 2nd March, 1944. I need hardly add that this expansion of deposits is derived from the colossal expenditure in rupee currency of the Government of India and Allied Governments. The volume of note circulation in the period noted above increased from Rs. 172.39 crores to Rs. 1,078.8 crores. The tempo of increase was greatest in 1942 and 1943. It is natural that so large an addition to the purchasing power should have led to an expansion in bank deposits and in fact this has been the motive power for not only the emergence of new banking institutions, but the extension of old ones by the opening of several branches all over the country. And it is, perhaps, as well that the bankers should have so assiduously attracted surplus money to their vaults as otherwise the inflationary tendency would have been of much greater intensity in the country and would have aggravated the economic distress resulting from the vicious spiral of rising costs and prices. Furthermore, the active canvassing by banks has enabled the masses to get over the hoary habit of hoarding. Instead of keeping their currency notes, coin,

bullion, etc., buried underground, our countrymen have become more banking-minded. The service rendered to the country by the banks in this respect is seldom properly appreciated. Apart from being banking-minded, the public, to some extent, became savings-minded as well, since the deposits accruing from unwanted currency have enabled the banks to employ more funds in Government loans or industry. This abatement in the hoarding habit within the country is, in my opinion, likely to stand the country in good stead in the years of post-war planning when every pie of popular savings will be needed. I am aware that there is still a large disparity between the growth of deposits and the expansion of currency, the latter being still ahead of the former to the tune of Rs. 315 crores, but I suppose the gap is bound to remain as long as the bulk of the rupee disbursements incurred in India is for soldiers, agriculturists, etc., and as long as production of consumers' goods remains at the present famine level. The non-Scheduled Banks' deposits have also risen, but on the whole, the bulk of the increase in deposits is concentrated in a few banks in the country.

The composition of bank deposits conforms to wartime trends noticed all over the world. The dominant feature is, of course, the liquidity preference shown by the public which prefers demand deposits to time deposits as a rule. Thus, you will find that whereas demand liabilities of Scheduled Banks increased from Rs. 134.4 crores on 1st September, 1939, to Rs. 612.4 crores on 1st March, 1945, time deposits over the period rose by only Rs. 116 crores. The percentage of demand liabilities to total liabilities has increased to about 75 per cent. but that of time liabilities is stubbornly remaining at about 25 per cent. only. An interesting feature is that, in the case of non-Scheduled Banks, time liabilities are almost keeping abreast of the demand liabilities. This, I would interpret as a heartening sign, particularly as it shows that in rural parts, where these banks mostly operate, there is a real desire to invest funds in deposits other than in current accounts. Naturally, these manifestations of preference for larger liquidity on the part of the public have obliged the banks, scheduled and non-scheduled, to keep a high cash ratio on the whole. The Scheduled Banks have been maintaining always fairly large surplus balances over the statutory minimum with the Reserve Bank, averaging about Rs. 100 crores.

FUTURE TREND OF DEPOSITS

The question uppermost in the minds of bankers nowadays is what will be the future trend of bank deposits, once the war ends? This is a matter for active concern, especially as the bulk of bank profits are to-day derived directly from the increase in working capital resulting from increased deposits arising from expansion of currency. To my mind, the question has a short-term aspect and a long-term aspect. On the short-term view, I consider that, as branch banking extends and presumably new banks come into existence, the idle currency which is lying dormant in odd corners of the country will be drawn into deposits and the lag between deposits and currency will be less. Moreover, I presume that we have by no means seen the end of currency expansion in India. If and when the war in the West comes to a close, the offensive against Japan will be taken up in earnest and as India is the most suitable springboard for an offensive against Japan, rupee disbursements of the Allies will increase, and further currency expansion is bound to take place. In fact, I would even go so far as to venture the opinion that inflationary conditions in India will receive fresh fillip after the termination of hostilities in the West. I am, of course, aware that the Hon'ble the Finance Member has said in his Budget Speech that efforts are being made to lighten the load of war on Indian economy and that war demands will be met from other sources. There is also the important factor of the Government of India importing large quantities of goods as a result of the Hydari Mission, to which I shall again refer later. It is possible that the diversion of war orders to other countries and the large imports of capital and consumer goods are together sufficient to offset the effects of increased currency expansion in this country, but such a consummation may not take place for some months to come, until at any rate the war in the West has definitely ended. There is, therefore, reason to think that the rising trend of bank deposits will not come to a standstill. It will certainly not be reversed, in the short-term view.

The long-term aspect will naturally be conditioned by the kind of economic forces that will be in play in the post-war period, i.e., after the defeat of Japan. A declining trend of bank deposits may conceivably be brought about by the withdrawals by the public arising from either or all of the following factors:—(1) Repayment of loans taken for financing war activity, (2) the redemption of Government obligations by taxes or otherwise, (3) unfavourable balance of trade, resulting from a deficiency of our exports. As regards the first, it is enough to say that the calling up of bank loans will not affect the position much for the simple reason that there have not been much of loans advanced since war activity has mostly proceeded on a self-financing basis, thanks to the system of progress payments. Advances are to-day standing at bare minima. As for the second factor, it is important to note that fairly large amounts of Government of India Loans come up for redemption year after year hereafter:—

Year			Crores Rs.
1945	..	..	56.7
1946	..	..	65.1
1947-50	..	..	55.9
1948-52	..	..	62.0
1948-53	..	..	5.0
1949-52	..	..	66.6
1950-55	..	..	6.7
1951-54	..	..	86.7
1953-55	..	..	114.4
1954-59	..	..	12.4
1955-60	..	..	9.1
1957	..	..	117
1958-68	..	..	5.8
1960-70	..	..	63.3
1963-65	..	..	91.2
1966-68	..	..	75.1
Undated	..	..	272.9

Both the size of the maturing loans and the periods in which they mature make it highly improbable that taxation will figure largely in finding the wherewithal for economic development. In the era of planning that is to come after the war, a net reduction in Government borrowing is unlikely. In fact, I shall not be surprised if I am told that, in the years to come, the traditional concepts of budgetary equilibrium will go by the board. The budgetary gaps will perforce have to be bridged by public borrowings. Also, the economic plans will lead to increased purchasing power in the community, and stabilise bank deposits.

The factor which ultimately, in my opinion, is going to decide the trend of our bank deposits will be the trend of trade. This country has, for years now, been starved of capital and consumer goods, the paucity of which will take years to overcome. And then, there are the needs from the post-war planning point of view. Together, they will make a large amount, and it is obvious that our export trade cannot regain its former dimensions, with the result that we shall be left with an unfavourable balance of payments on an international account. The imports will entail a contraction of our external resources, the counterpart of which will be a falling tendency in bank deposits, until, at any rate, the imports of capital equipment lead to a higher *tempo* of industrial activity which will bring in its wake expansion of general incomes and of savings. Much would depend upon the policy pursued at the time, because a sudden deflationary policy can lead to a rapid contraction of deposits. I hope our authorities will avoid effecting such abrupt transition from war to peace-time economy, as the resulting jolt to the economic set-up will be catastrophic. The official policy should be to stimulate activity through wise planning to such levels that there would be the minimum need to deflate currency.

INVESTMENTS OF BANKS

I shall now proceed to a consideration of investments of banks, which, alike from their point of view, as well as of the State, has come to assume a great deal of importance in the affairs of banks. A direct consequence of the restricted scope for bank loans existing side by side with greatly augmented working resources has been the emergence of the investments portfolio to the first place as a bank's most remunerative assets. Expansion of the investments portfolio has no doubt been a sort of *force majeure*, but bankers doubtless deem it a privilege to have thus been able to contribute to the success of the Government's borrowing plans, especially as such borrowing has provided the bulk of the sinews of war. Direct figures of investments are not available, but it is correct to assume that, on an average, 50 per cent. of bankers' assets are to-day invested in Gilt-edged and short-term bills. There are some banks who, by virtue of their large clientele and large deposits, have been obliged to invest up to 70 per cent. in Gilt-edged securities. The result is the striking success which has attended the flotation of the various Defence Loans of the Government of India, beginning with the issue of 3 per cent. 1946 Defence Bonds to the Victory Loan 3 per cent. 1957. The Government spokesmen have been the first to acknowledge the contribution made by banks to the loans. Treasury Bill borrowing, in particular, has been effected at very cheap rates. The floating debt stood at Rs. 111 crores in 1944 which compares with peace-time average of about Rs. 25 crores, and is to-day around Rs. 80 crores and yet, the authorities have seldom paid more than nine annas per cent. per annum, on Treasury Bills.

The displacement of bank loans and bills discounted by Government Paper in the affairs of a bank has naturally been a great factor in the maintenance of cheap money policy. Per contra, the banks have come to acquire a heavy stake in maintainihg Gilt-edged values. For, the maintenance of Gilt-edged prices depends upon low rates of interest and banks cannot afford to raise the rate on advances and loans beyond a point, as that would recoil on them in the shape of falling security values which would entail capital depreciation on a large scale. The banks, therefore, have a very vital stake in the continuance of cheap money, and so have the insurance companies for that matter. Together, they would form a formidable bulwark against erosions of the structure of interest rates and therefore may be expected to play an important role in the days that lie ahead.

The position has also another facet. As a result of the large investments made by the banks in Government securities, Government has come to acquire great power indirectly to control the business of banks and to establish a closer nexus between the Reserve Bank and the Scheduled Banks. The stability of the banking system becomes, therefore, a matter of great concern to the authorities from this point of view also. The full implications of this inter-dependence between the Government, on the one hand, and the Banks, on the other, cannot be envisaged at the present moment. Suffice it to say, here, that so far the ascendancy of Gilt-edged securities in bank investments has been profitable to the banks and useful to the country at large. I might here draw your attention to the growing potentialities of the Treasury as a result of the large extra budgetary funds at its command. If you look at the statement of the Reserve Bank, you will find that the Central Government's balances alone are Rs. 250 crores. The Government balances in 1938-39 were only Rs. 27.3 crores. In addition to these large cash balances, there is the unfunded rupee debt of the Government and the large volume of cash and securities held on treasury account. Taken together, they add up to a large total, thereby stressing large resources available to Government, which they can deploy at will to control the Gilt-edged market through suitable open market operations or control the rate of interest. There are some who think that the funds and securities available to the Government in this way are larger than those held by the Reserve Bank. They even visualise in this a transfer of the mainsprings of control from the central banking institution to the Treasury.

MONEY RATES AFTER THE WAR

As for money rates, the end of war naturally prompts one to ask what the structure of money rates will be after the war. I have already said enough to show that the Government is interested in keeping the service charges on the public debt of the country, now expanded to very high levels, as low as possible. They have, therefore, everything to gain and not much to lose by adhering strictly and scrupulously to the present policy. To-day, the Reserve Bank has enough resources and sufficient grip on all markets to maintain the present rate, if not to reduce it still further. After all, since the beginning of the war and up to the end of January, 1945, the Government of India have been able to raise public loans to the undoubtedly impressive extent of Rs. 833 crores, of which nearly Rs. 570 crores have been raised in the last two years alone. And all these moneys have been raised on a 3 per cent. basis. There is no reason why, with all the enormous supply of money, they should not be able to make 3 per cent. borrowing as the sheet-anchor of financial policy for the future also. I may observe here, in passing, that discussions on credit and monetary policy all too often assume that the battle for cheap money has been won and won for ever. It is often ignored that even to-day, over a wide part of the structure of interest rates, the benefits of cheap money have scarcely percolated. It is only in the money market, in the issue of securities by the Government and other trustee borrowers that the price of borrowed money has established itself at a level which can be termed "cheap". There are many points at which the interest rate paid by the individual borrower or the industrial borrower still remains at a rather onerous level. I cannot dilate upon the subject at greater length, and I would content myself here with urging the need for giving thought to this subject. Far from having been won, the battle for cheap money has just been joined. The preservation of low money rates is an indispensable prerequisite for the success of post-war planning schemes. It should not require much argument to prove that, unless public savings can be stimulated at as low a rate as possible, the outlay on projects of expansion and the servicing of the capital debt so incurred will mount up to a breaking point in the national economy. The necessity for conscious endeavour for keeping money rates low will be all the more since the end of the war might give rise to a whole set of deflationary forces whose cumulative impact on the country might be to force a dear money economy on India. The closest vigilance in this regard will be the price of a survival in the after-war period.

FUTURE ROLE OF BANKS

That takes us almost inevitably to the part that our banks will be called upon to play in fashioning and sustaining the brave new worlds, the blue-prints of which have been drawn up in the Bombay Plan by our eminent captains of industry or in the official plans slowly being chalked out by the Government of India Planning Departmet under the guidance of the Hon'ble Sir Ardeshir Dalal. My only concern here is that, if and when the plans for rehabilition, reinovation and expansion of industry and trade are set in motion, the banks ought to be able to play their part and make effective contribution to such a development.

The progress achieved by our banks in the war period should not blind us to the basic facts of our economy. The following figures of comparative national incomes are interesting:—

Country.		National income per head of working population (international units).
U. S. A.	..	1,485
Canada	..	1,352
U. K.	..	1,275
Australia	..	1,212
Germany	..	828
France	..	641
Japan	..	837
India	..	178

They show the low rank we still occupy among countries of the world, and emphasise what an awful lot of slack remains yet to be taken up as regards industrial and agricultural development. Economic progress is the utilisation of the potentialities of production in a country to the highest pitch and this should be the desideratum of banking development. It is axiomatic that banking progress not only follows in the wake of economic development, but it also greatly helps the latter by providing industry and trade with the sinews of finance. The two are thus complementary; each tends to subserve and push the other to a higher level. As our agricultural and industrial production moves to new peaks in point of both efficiency and output, the ideal conditions for the growth of banking, i.e., a community rich in national income, will tend to be obtained. The financing of agriculture, foreign trade and industry will fall more and more to Joint Stock Banks, although undoubtedly an element of competition, of risk and uncertainty will be inherent in the taking on of such enlarged financing functions. It is then that we shall feel most acutely the deficiencies that now obtain, namely, the absence of a proper bill market in India, the lack of a forthright policy by the central banking institution of the country which is still unready and disinclined to discount eligible commercial bills, and the pitifully poor role played by Indian banks in the financing of our foreign trade. Considering that the future progress of joint stock banking is indissolubly linked up with the economic regeneration of our country, I hope our banks will show themselves equal to every opportunity that comes in their way. The first need is for greater inter-bank co-operation, which is but tardily realised. The proposed Indian Bankers' Association has not gone far, although it is nearly a year since the idea took shape and a committee was entrusted with the task of framing a constitution.

While dwelling on this question of industrial developments, I should perhaps emphasise that, while heterodoxy in banking methods will not be advisable in the years to come, we should also take due note of changed views prevailing in other countries as regards the functions which a bank will have to asume willynilly in future. In Britain, for instance, time was when bankers thought it a sin against the Holy Ghost to participate in the equity of industry. It was customary to scoff at the Continental systems in which banks were often shareholders in industry. But to-day even in Briain, the bastion of financial conservatism, things have changed. The Chairmen of the Big Five in their speeches at the annual meetings foreshadow conscious departures in the matter of bank advances in the future and look forward to the extension of long-term loans to industry after the war. Clearly, much water has flown under the bridge in the last few years. The question has been debated ever since the Macmillan Committee's report and during the great depression whether adequate facilities existed for the provision of capital to industry. And now the question has been answered. British banks are going to provide the finance necessary for industry, not only for making good past obsolescence but also for laying the foundation of future development.

It is interesting to note that Canada has also been planning the financial structure of post-war industrial developments. An Industrial Development Bank with a capital of 25 million Canadian dollers has been started which is specially designed to assist small induries. The new bank will be subsidiary of the Central Bank, the Bank of Canada, but its character as well as the scope of its activity are designed to make it an instrument of constructive industrial policy and not merely one of salvaging sinking concerns. The progress if these and other official industrial banks will be watched with interest and it is probable that their working may have many lessons to teach for our Government also. The point, I would stress here, is that a too hidebound attachment to the time-honoured concepts of the function of banks in relation to the industrial economy should be avoided if the country is to make any headway in its programme of industrialisation. This does not mean that the ordinary requirements of prudent management should be neglected with impunity. What would be needed is a wise compromise between the two.

STERLING BALANCES

It would probably be an act of serious ommission on my part not to say a few words, in passing at least, on the vexed fact is that they are still allowed to mount question of sterling balances. For the stark up at a rapid pace, until to-day they stand at 1,030 millions, while it is somewhat gratifying to hear from the Finance Member that the rate of accrual is likely to be slowed down hereafter as a result of the diversion of some of the demands now made on India to other sources of supply and the increase in compensatory imports, this country cannot but feel the greatest misgivings at the insidious attempts made in London to suggest that India has indulged in profiteering and that sterling balances just represent so much loot. Heaven knows at what terrible privations and misery to the common people war has been carried on, to which the sterling balances represent but a poor equivalent on any valuation. Lord Keynes' categorical assurance that these balances will be honourably and fully paid still stands, and that is some consolation in this cynical and selfish world. But, I am sure, you will share my regrets that the question of the orderly liquidation of these balances has been deferred. It was bad enough that the Bretton Woods Conference rejected out of hand the proposal of the Indian delegation to provide for partial multi-lateral clearing of war balances through the machinery of the International Monetary Fund. And now, to be told by the Finance Member himself that the negotiations with Britain on the subject have had to be put off indefinitely is still more disappointing. I feel that, in the interest alike of assisting in the realisation of the broad objectives of the Fund to secure expansion of multilateral trade and of the economic development of backward countries, some provision ought to have been made by the American and British financial experts for at least partial multilateral clearing of the abnormal war balances. The relegation to bilateral channels of the whole of the large area of trading involved in the settlement of war balances is bound to curtail the scope of multilateral

EAST INDIAN RAILWAY

TENDER NOTICE.

Annual Contract Item Costing Over Rs. 800 Class I.

Sealed tenders are invited for the following and will be received in the General Manager's Office, E. I. Railway, 105, Clive Street, Calcutta, on 17th April, 1945 at 12 o'clock noon.

Tender No. GB10/68/C for supply of 50,000 Nos. Baskets Jhanker.

Tender form with full particulars can be had from the Controller of Stores' Office, E. I. Railway, Calcutta on payment of Rs. 2 per copy to the Treasurer, E. I. Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores direct by money order.

No refund is permissible after payment.

Sealed terders delivered by hand should be presented for Registration in the General Manager's Office and then put into the Tender Box outside Deputy General Manager's (Works) room by the Tenderer or his representative.

transactions. And so, we are thrown back upon the remedy of settling our problem with our debtor Britain.

The Finance Member said the other day that the vicissitudes of the Western War have upset the time-table for negotiations with Britain on the subject. It would appear that, as data like British export capacity after the war and India's import requirements, cannot still be gauged with reasonable accuracy, the negotiations could only be taken up later. Such, at any rate, was the defence of the Finance Member. It is hard to see eye to eye with him on this issue. While it is generally realised that a good portion of these balances has to be liquidated through the purchase of goods in the United Kingdom, there is general apprehension in this country that the capital needs of Indian industry and, therefore, the rehabilitation and expansion in our country, will have to wait until Britain chooses to send goods at her sweet will and pleasure. There is also the danger that the bill for goods supplied to India might be deliberately inflated so that a larger volume of sterling can be written off in relation to a definite volume of goods. I need not elaborate the drawbacks inherent in our having to wait at the doorstep of British industry for our requirements, even though we are flattered with creditor status. In this case at least, I am afraid, it is the debtor who is going to call the tune. The very meagre allotment of dollars, namely, $20 millions, in spite of the large dollar proceeds of Indo-American trade makes it difficult, if not impossible, to obtain our requirements from the United States. It is really a case of very unfair discrimination that Egypt, for instance, should have been given a much larger quota of hard currencies than India.

BANKING BILL

I shall now conclude with a few words about the proposed measure for improving the structure of banking in India. The Bill raises many complex issues and it would obviously be impossibe for me to consider them all now. The criticisms of the Bill range from those such as the Bombay Chamber of Commerce makes—viz., that there is no need for legislative control at all—to those which contend that the Bill does not go far enough, particularly as foreign banks will be outside the scope of its application. The truth probably lies somewhere between the two extremes of criticism. It is undeniable that the present measure still falls short, as it has no provisions for bringing the indigenous bankers and the Reserve Bank closer. Section 11, for instance, discriminates against banks registered in Indian States *vis-a-vis* those registered in British India and the United Kingdom. Fairness demands that banks registered anywhere in India should be treated on the same footing provided they observed the principles of safety. The other provisions regarding the giving of loans, the licensing of banks, the cash reserve and the disposition of assets, all have been subjected to a good deal of criticism, and we shall no doubt hear more about them when the Assembly takes up consideration of the Bill.

Gentlemen, each day brings us nearer the end of the war, the cost of which in terms of human and economic values we shall perhaps ever be able to reckon. The strength of the past, of the present, and of the future of the peoples of the world has been sacrificed at the altar of civilisation. A new world is struggling to be born, and the throes of suffering have not yet ended. The seemingly interminable night's vigil is happily drawing to a close. Whether we shall be happy in the morrow will depend entirely upon our unflagging efforts to build a better world."

(Half-yearly General Meeting on 16-4-1945 *at* 12-30 *p.m. Books closed from* 2nd *to* 16th *April,* 1945).

Audited accounts for the half-year ended 31st December, 1944.

The Profit and Loss Account, including the balance brought forward from last half-year and after providing for Interest, Debenture Interest, Commissions and Taxation, and transferring the sum of Rs. 80,000 to Excess Profits Tax Deposit Fund Account, shows a credit balance of Rs. 1,07,200-3-7 which sum, the directors recommend, should be dealt with as follows :—

Pay the dividend due on the Rs. 5,00,000 6 per cent. Cumulative Preference Shares for the half-year ended 31st December, 1944, Rs. 15,000 ; pay a dividend on the Rs. 7,50,000 Ordinary Shares at the rate of 15 per cent. per annum or As. 12 per share for the half-year ended 31st December, 1944, Rs. 56,250; write off to Depreciation Rs. 25,000; and carried forward to Profit and Loss Account Rs. 10,950-3-7 Total Rs. 1,07,200-3-7.

Jute Stocks are shown at or under cost. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In terms of the Indian Jute Mills Association Agreement, these Mills were permitted to work 54 hours per week but they actually worked 60 hours per week with all looms in commission through the purchase of loom hours from other Mills under the Managing Agency of Messrs. McLeod & Co., Ld.

Trading results were adversely affected by payments of Madras General Sales Tax and also by the introduction of The Jute (Price Control) Order, 1944.

†After taking into credit a sum of Rs. 87,442, being Refund of Excess Profits Tax.

Audited accounts for the half-year ended 31st December, 1944.

Profit and Loss Account, including the balance brought forward from last half-year and after providig for Interest, Debenture Interest and Commissions, and transferring the sum of Rs. 87,442 being Excess Profits Tax refunded, shows a credit balance of Rs. 1,92,528-0-3, which sum, the directors recommend, should be dealt with as follows :—

Pay a dividend on the 5,00,000 Ordinary Shares at the rate of 5 per cent. per annum or As. 2 per share for the half-year Rs. 62,500; Write off to Depreciation Rs. 90,000; and Carried forward to Profit and Loss Account Rs. 40,028-0-3; Total Rs 1,92,528-0-3.

Jute Stocks are shown at or under cost price. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In terms of the Indian Jute Mills Association Agreement these Mills were permitted to work 54 hours per week with all looms in commission but due to the abnormal conditions obtaining, the loom hours of 89 looms were sold to other Mills under the Managing Agency of Messrs. McLeod & Co., Ld., and a reduced complement of 311 looms worked 60 hours per week when possible.

At the end of July, the Soorah Jute Mills Co., Ld., closed down under Government requisition and a portion of their loom hours so released were purchased by these Mills. This entailed the the introduction of double shift working, i.e., 108 hours per week and these arrangements became effective from 14th August, inclusive. The Mills thus fell into the "foster" category which entitled them to preference in coal supplies when these were available.

Certain godown accommodation is under occupation by the U. S. A. Forces and rents for the property requisitioned are paid direct by Govern- to the Mills' Industrial Pool.

Efforts to obtain the additional labour complement to enable the Mills to run double shift have been unremitting and although Soorah workers were given every encouragement to accept employment at Presidency, results have not met with any great measure of success. At the close of the period under review only 264 looms were working under double shift conditions although as many as 300 had been for a brief period. The difficulty in securing adequate and efficient labour is largely due to the fact that more lucrative employment is obtainable in Government projects elsewhere.

These Mills are steam-driven and working time lost during the half-year and still to be made up extends to 51,626 loom hours. This loss of working time coupled with labour shortage has affected trading results adversely.

Managing Agents.—McLeod & Co., Ld.

†For two half-years ended 31st December, 1944.

*For two half-years ended 31st December, 1943.

**Includes Rs. 70,000, being transferred from taxation reserves.

Audited accounts for the half-year ended 31st December, 1944.

The Profit and Loss Account—including the balance brought forward from last half-year and after providing for Interest, Debenture Interest, Commissions and Taxation, and after transferring the sum of Rs. 11,000 to Excess Profits Tax Deposit Fund Account, shows a credit balance of Rs. 1,37,621-10-2 which sum, the directors recommend, should be dealt with as follows :—

Pay the dividend due on the Rs. 10,00,000 7 per cent. Cumulative Preference Shares for the two half-years ended 31st December, 1944, Rs. 70,000 ; pay a dividend on the Rs. 7,00,000 Ordinary Shares at the rate of 10 per cent. per annum or As. 8 per share for the half-year ended 31st December, 1944, Rs. 35,000; Write off to Depreciation Rs. 25,000; and Carried forward to Profit and Loss Account Rs. 7,621-10-2.

Jute Stocks are shown at or under cost price. Stocks of Gunnies, none of which are unsold, have been calculated at contract sale price.

In terms of the Indian Jute Mills Association Agreement, these Mills were permitted to work 54 hours per week but due to the shortage of labour, the hours of certain looms were sold to other Mills under the Managing Agency of Messrs. McLeod & Co., Ld., and a reduced complement of 279 looms worked 60 hours per week when circumstances permitted. These arrangements continued until the end of July when the Mills ceased production and were closed down having been requisitioned by Government for Military purposes. Following the Requisition Order becoming effective, the permissible loom hours which this Mill could work were sold to other Mills in the McLeod Group at the rate of annas 12 per loom hour. Rentals for the property requisitioned are a direct payment by Government to the Industrial Pool and all expenditure incurred as the direct result of requisitioning is recoverable from Government by the Company. Receipt of the amount due on this account up to the close of the year is now awaited.

The Mills are steam-driven and working time lost during the half-year up to the date when requisitioning took place and still to be made up by sales amounted to 50,975½ loom hours.

(*Continued on Page* 503)

Continued from Page 501)

Audited accounts of the Company for the year ended 30th September, 1944.

They show a profit for the year of Rs. 1,60,469; from which has been deducted :—

Provision for Taxation Rs. 60,000; Amount written off Discount on Debentures Rs. 75,000 ; Loss on Belvita Account Rs. 14,794 ; Leaving Rs. 10,674; to which falls to be added the balance brought forward from last year of Rs. 4,238; and making the balance to be carried forward to next year Rs. 14,912.

The balance of Rs. 75,000-0-0 remaining under the heading of Discount on Debentures in the Balance Sheet will fall to be written off out of future profits.

Full depreciation on Sugar Factory Block amounting to Rs. 1,14,138;4-4 has been charged in the accounts. During the year the Buildings and Machinery necessary for the full-scale production of Belvita (Yeast Extract) were completed and the plant was in operation from July, 1944. Depreciation on these Block items amounting to Rs. 4,253-3-6, being one-quarter of a full year's depreciation, has been charged in the accounts.

The crushing season opened on 16th December, 1943, and finished on 19th March, 1944, during which period 15,18,328 maunds of cane were handled : the percentage recovery of sugar from cane was 11.09, producing 1,68,421 maunds of sugar, of which 1,65,165 maunds had been sold by 31st December, 1944, or allotted by the Sugar Controller for despatch in accordance with the orders of the Provincial Administrations, at an average price of Rs. 15-7-3 per maund ; 28,586 maunds remained to be delivered at that date. The average cost of cane at the factory was 14.48 annas per maund.

*For 5 years from 1938 to 1942.

Audited accounts of the Company for the year ended 31st August, 1944.

The Factory started crushing on the 11th January ,1944, and closed down on the 26th April after crushing 11,63,363 maunds of cane with an average recovery of 9.5 per cent. as compared with 8.37 per cent. in the previous season. The small crush was due to the paucity of outside cane in spite of the fact that the Government of Bengal, with a view to maximising sugar production in this Province, granted the industry a subsidy of 4 annas per maund of cane to be paid to the cultivators as an inducement to deliver their cane to the factories rather than convert it into 'gur.' Even so, however, the mill could only procure 1,34,956 maunds of cultivators' cane, the balance of 10,28,407 maunds being drawn from the Company's own farm. This shortage of outside cane was due chiefly to the fact that cultivators had grown less owing to the prices of other crops being more remunerative and also to the diversion of cane for the manufacture of 'gur,' the prices of which, being uncontrolled, had risen to very high levels.

The subsidy referred to above was not paid in respect of the Company's own cane.

The higher recovery obtained is entirely the result of the improved varieties of cane which the Company has introduced.

Unfortunately due to the small amount of cane crushed and high cane prices ruling in this Province, the total cost of the Company's sugar was higher than the controlled selling prices thereby resulting in a manufacturing loss. On the other hand, the Zemindary side of the business made a very satisfactory profit.

After giving credit for this sum the summarised position of the Account is as follows :—

The Profit and Loss Account after deducting all working charges, commissions, etc., and after providing Rs. 1,57,394 for depreciation and Rs. 37,900 as a reserve for Tax on the Agricultural Income shows a profit of Rs. 2,13,125-7-10; from which must be deducted : the Debit Balance from last year Rs. 4,671-15-5; part expenses of the issue of Convertable Notes already converted 17,734-6-9; leaving a credit balance of Rs. 1,90,719-1-8; which the Directors recommend should be dealt with as follows :—

To writing off the Balance of Convertable Notes issue expenses Rs. 14,608-3-3; to payment of arrears of Cumulative Preference Dividend at 6 per cent. per annum from 1st March, 1938, to 31st August, 1942, Rs. 1,08,000; and to be carried forward Rs. 68,110-14-5; Total Rs. 1,90,719-1-8.

Prospects for 1944-45 Season.—The mills started crushing on the 3rd January, 1945, and, although outside cane supplies are again likely to be small, it is very satisfactory to report that the recovery from our own canes shows a marked improvement on even last year's figure.

TATA CHEMICALS, LIMITED

Audited accounts for the year ended 30th June, 1944.

The year's working has been unsatisfactory. After meeting expenses of operation and management debitable to revenue, there is a loss of Rs. 6,50,247 reduced to Rs. 4,92,551 on account of carry forward of Rs. 1,57,696 from the previous year's accounts.

Operations at the works during the year under review were affected by difficulties of an unexpected character. In July, 1943, within a few weeks of the commencement of production of heavy chemicals, an unprecedentedly heavy rainfall occurred at Mithapur and in the surrounding areas which resulted in heavy floods causing a considerable dislocation of manufacturing operations and the washing away of quantities of salt which were stored at the works. Manufacturing activities had, however, to be suspended for a period of nearly two months to enable the flood water to be drained off the works site and plant and machinery to be dried and cleaned.

In the wake of the floods, there came an acute shortage of labour which generally felt throughout Kathiawar and the causes of which could be traced to the exceptionally good harvests throughout this area, resulting in a marked drift of labour from Mithapur and other factories to the neighbouring agricultural districts. A serious epidemic of malaria in many parts of Kathiawar and Gujarat, caused mainly by the floods, added to the tale of woe, in the shape of increased absenteeism both among labour and the higher staff. Active steps were immediately taken to remedy the situation : preventive measures to check the epidemic and the grant of increased war dearness allowances and other concessions to preserve labour. Efforts were also made to recruit labour from areas outside the normal sources of supply.

All these causes inevitably delayed the completion of the soda ash plant—the most important unit in the works—and the manufacture of soda ash started in February. After completion of the tuning period, soda ash of standard specification was produced and was well received in the market but this was immediately followed by a serious deterioration in the coal position throughout the country. As coal supplies to the works were reduced to negligible quantities, it was found necessary to close the process house temporarily and to carry on with the electrolytic plants on a greatly reduced basis.

By the end of the year under review, therefore, although the struggle to complete the plans included in the original programme of production, was brought to a successful termination, the Company was denied the opportunity to profit from its labours. The Company produced during the year, besides salt and its by-products, epsom salt and magnesium chloride, the following heavy chemicals namely, liquid chlorine, bleaching powder, caustic soda, zinc chloride, hydrochloric acid and potassium bromide, and finally soda ash. Sales of surplus lime have also been made.

The quantity of salt despatched to Calcutta during the year showed a substantial decline as compared with the previous year as shipping space otherwise available was diverted to the transport of foodgrains to Bengal, and also because salt lifting operations were affected by the heavy floods. The freight on salt ruled steady throughout this period and the price continued to be favourable.

The sales agency agreement with the Tata Oil Mills Co., Ltd., initially for three years was extended for a further term of two years and that Company waived the minimum commission payable to it for the first year. The sales of several of the Company's chemical products are subject to Government control which is usually exercised to control distribution only and does not extend to prices.

The total premia paid under the War Risks (Factories) Ordinance have so far amounted to Rs. 6,70,625 out of which Rs. 3,05,000 pertains to the year under review.

In terms of the second option attaching to the Debenture Issue, Rs. 7,03,100 worth of debentures were, during the year, converted into ordinary shares. As a result of this and the conversion carried out in the previous year under the first option, the share capital of the Company has increased from Rs. 1,25,00,000 to Rs. 1,51,52,160 and the outstanding debentures have been reduced from Rs. 35,00,000 to Rs. 1,80,300.

(*Continued from page* 493)

before providing for taxation and depreciation, of Rs. 3,99,160 against Rs. 1,52,799 for the previous six months. The amount set aside to depreciation is Rs. 68,166 against Rs. 70,088 while the provision for taxation is very much higher at Rs. 1,05,000 against Rs. 40,000. A sum of Rs. 25,000 (nil) has been placed to the Dividend Equalisation Fund and a similar sum (nil) to Stores Revaluation Reserve. Even after these increased allocations the dividend has been doubled to Re. 1 per share. The amount carried forward is Rs. 16,559 against Rs. 10,564 brought in.

Raisings during the half-year were 88,869 tons against 81,650 tons and despatches 93,115 tons against 81,641 tons.

During the half-year the sale of Koordih Mouza in the Katras properties was completed. This Mouza is undeveloped and contains coal from 8 seam downwards. The purchase price realised was Rs. 1,00,000.

* * * *

Bhulanbararee Coal Company, Limited has earned a net profit before providing for taxation and depreciation of Rs. 2,00,904 against Rs. 1,66,137. The amount set aside to depreciation is Rs. 54,326 (Rs. 50,700). Provision for taxation is Rs. 70,000 (Rs. 30,000). It has been possible to pay a dividend of 12 annas per share (8 annas). The amount carried forward is slightly lower at Rs. 4,753 against Rs. [illegible]

It is rather interestin[illegible] case of all the three c[illegible] despatches are in exces[illegible]

a commentary on the improved wagon position.

* * * *

Karanpura Development Company, Limited has not been able to report any appreciable improvement in earnings but it has been possible to reduce the debit balance brought in. The company has entered into an agreement with the Karanpura Mining Syndicate for the development of its properties. It is expected that raisings will commence in October, 1945. As a result of this arrangement it will be possible to report improved earnings.

From the published reports it is revealed that three companies in the Bird-Heilgers group are interested in the Karanpura Mining Syndicate, Churulia Coal Company having subscribed Rs. 3 lakhs, Ondal Coal Company for a similar sum and Sendra Coal Rs. 1½ lakhs.

* * * *

Churulia Coal Company, Limited reflects the changes on account of the sale of the properties and the receipt of the sum of Rs. 6,54,500 in consideration thereof. In the half-year ended June, 1944 debts were Rs. 6,83,680 while at the end of December, 1944 there were practically no sundry liabilities. Investments were as much as Rs. 7,05,384. The net increase in investments is due to the surplus of Rs. 5,49,399 over book value realised on the sale of the properties. This sum has been transferred to General Reserve. As a participant in the activities of the Karanpura Mining Syndicate it will be possible to report a higher level of earnings after some time. There may not be any appreciable change, however, in the profit and loss account for the current half-year. Out of the interest on investments and income from other sources the dividend has been maintained at 3 1/8 per cent.

* * * *

The decrease in earnings of the *Bombay Dyeing and Manufacturing Company, Limited* for the year ended December, 1944 by over Rs. 80 lakhs is not surprising as there was a successive reduction in ceiling prices for cloth and yarn in 1944. Total sales, having regard to the lower average prices realised, are not very much lower at Rs. 6.31 crores against Rs. 6.91 crores but working expenses are relatively higher. The greater portion of total earnings is taken up by taxation, provision for E.P.T. income-tax and corporation tax being Rs. 1.64 crores and E.P.T. compulsory deposit Rs. 39.5 lakhs. The total appropriation under this head in 1943 was Rs. 2.79 crores. The amount set aside for depreciation is Rs. 3,99,375 against Rs. 4,40,036. But for the anticipation of a further decline in earnings of the Company it would have been possible for the directors to prevent any large reduction in the distribution to shareholders. There is a transfer of Rs. 8 lakhs to Dividend Equalisation Fund. The final dividend of Rs. 50 per share, with the interim dividend of Rs. 25 per share already paid, makes only Rs. 75 per share for the whole year against Rs. 100 per share for 1943. The amount carried forward is lower at Rs. 4,05,586 against Rs. 7,52,770 brought in.

The balance sheet, as usual, makes impressive showing. The total block of Rs. 3.15 crores is drastically depreciated, machinery being written off in full. Building depreciation fund is Rs. 73.94 lakhs against the book value of buildings of Rs. 82.23 lakhs. Other funds are Rs. 1.22 crores and the General Reserve is fully Rs. 1 crore. Paid-up capital [illegible] Rs. 62.75 lakhs. There are invest[illegible] Rs. 2 crores most of them in Go[illegible] and Trustee securities at cost.

WATCH-DOG.

BOUQUETS & BRICKBATS

(From our Readers)

Congrats

May I congratulate you on your new feature, 'Bouquets & Brickbats'. And, may I say, knowing 'Indian Finance' and its personnel and policy for 17 years, you will value brickbats, perhaps, even more than bouquets.

I entirely agree with your plea that correspondents must be prepared to back their views with their names.

N. R. SARKER

Milch Cow running Dry

While most bankers in India have kept at a respectful distance from 3½ per cent Rupee Paper, I have always set a high value on this stock as an investment; and the stake of my bank in Rupee Paper is, perhaps, bigger than that of any other bank.

For my part, I would like to continue to earn 3½ per cent on giltedged, which I can do only on this scrip.

But I agree that, while the Government's borrowing rate is now 3 per cent and must come down still further, there is no sense in Government selling 3½ per cent paper at par.

J. C. DAS.

* * * *

A Matter of Opinion

In your editorial on Farm Income and Economic Prosperity, you argue at one place that 'the fact that raw material production is chronologically the beginning of productive activity and therefore of the exchange of values that is inseparable from the productive process does not mean that logically also the income of the producers of raw material should have primacy". At another place, referring to India, you remark that "the impact of agricultural incomes on the national economic life is far more than may seem at first sight"; and the latter point has also been elaborated in a way in the paragraph concerned. Read together the two statements will tell you that your first statement has to be considerably modified according to conditions in particular countries. The ratio and the volume of the farm income may or need not be a fixed quantity, as a basis of alround economic prosperity, but as long as the percentage of the section employed in agriculture does keep a certain level to the rest of the population in any properly organised economy, the stability of that ratio is not only somewhat inevitable but should be considered necessary under normal conditions.

Your statement that there is no starting point for the cycle of exchange is indeed unchallengeable. But substitute for the phrase 'cycle of exchange', the term 'process of exchange' and then you can discover a starting point which will be at the stage of the production of raw materials; this is too obvious a point to be stressed.

PROF. OF ECONOMICS.

* * * *

Allow me to congratulate you on your well-reasoned article 'Farm Income and Economic Prosperity' appearing in "Indian Finance" dated 14.4.45. You hit the nail on the head when you remark: "The importance of Farm income or indeed, of the income of any single distinguishable group depends on the relation between the ratio of the group to total population and the ratio of its income to the total national income." In drawing an analogy from the U. S. A. to India one cannot forget your remarks: "Whatever may have been the state of affairs in the United States, in India, there can be no doubt about the importance of agricultural income to the tempo of national economic progress". The factors as you rightly point out, which are absent in the U.S. are not only present in India, but are particularly powerful. Why are you so cautious as to say: "While in former time it was doubtful whether agriculture was at all remunerative".....is it not common knowledge that agriculture in the past was unremunerative? Anyway, Kisans are grateful to you when you say "In the future we have to ensure a fair surplus in the hands of the agriculturist over and above his requirements for the necessaries of life"

KISAN.

* * * *

Passing of a Protege?

"Indian Finance" can claim to have been, from the beginning, the godfather of 3½ per cent Rupee Paper. While bankers and orthodox investors have fought shy of this scrip, "Indian Finance" has always stressed its status and authority as the barometer of the giltedged market

It follows that you have a special affection for the 3½ percent Rupee Paper. It follows further that, if your suggestion to redeem it is accepted, one of your proteges will disappear from the scene. Even so the case you make out for its immediate repayment is unanswerable.

India's credit, among the belligerent countries, is the highest, from the point of view of budgetary position and public debt. And it is not in accord with this credit that the Government should be selling 3½ percent Paper through the tap. On the other hand, they should buy up the whole lot by exercising the option to repay.

I agree with you that our Government has not yet realised the appositeness and inevitability of a 2½ percent borrowing rate for India.

B. S. GUPTA.

* * * *

Still a Lot to Learn

The writer of the letter "British Vested Interests" which appeared in last week's issue, has unfortunately wrongly chosen the Marwaree as his target for attack.

Whatever may be his fault—if to be very enterprising in business is considered to be a fault—the Marwaree in Calcutta has certainly opened the eyes of a Bengalee as to the possibilities of business. As a result, the latter is now fairly on the way of doing business on good and sound lines, though lacking the vigour and the cuteness of the former.

It may not be generally known that Bengalees have large investments in the Tea Industry and that the Tea Share Market is the exclusive monopoly of one or two Bengalee firms. Bengalees are unmistakably coming up and I only wish they diverted their attention to other spheres of Trade and Commerce as well.

As regards the position of Indians getting control of companies now managed by British firms, the writer asks, "Is this a gain for Bengalee"? Oh! after all, Marwarees are also Indians, having their firm footing on the soil of Bengal; and so long as Bengalees prefer quill-driving for their livelihood. it is naturally left to Marwarees to come into the picture and shine so brightly. Why not Bengalees take a leaf out of the book of Marwarees?

Eavesdropper's attack on Indian businessmen in general is definitely more than justified. Indian businessmen have absolutely no requisite fore-thought and broad outlook of Europeans in regard to expansion, control and management of business. They have still a lot to learn. It is true, of course, merely for fear of possible harm to a few small industries". (*Indian Finance* p. 471).

I take my Hat off to you, for that, Mr. Editor—the Hat, that I mean to purchase, immediately consumer goods become once more available in this country!

And may that day not be far off!

And as for "the possible harm" to our blessed industries, both great and small, the way they have fleeced, exploited and harrassed me, the consumer, all these years, I should be an Angel if I don't say, "Go to H-L".

M. S. N.

BOUQUETS & BRICKBATS

there are a few Indian business houses standing on paripassu with the best managed European firms, but I look forward to the day when the whole of Clive Street passes into the hands of the ablest Indians, be they Marwarees or Bengalees. In other words both of them should sit together in Board Meetings!

In the meantime, Eavesdropper should not cease pointing out the glaring defects which he might find in Indians.

V. L. N. MOORTHY.

* * * *

Deceptive Dialectic

I am sure I am not the only person who has followed *Eavesdropper's* gossip on the question of commercial safeguards. But I think I shall be alone in saying that, in this gossip, if I may mix metaphors, *Eavesdropper* both skates on thin ice and rides a coach and four. He is careful and chooses his words when criticising European businessmen, but lets himself go when it comes to trouncing Indian businessmen. But that is a minor matter compared to his general dialectic. I don't deny that he anticipates many of the arguments on the other side. But only verbally. They do not enter into his reasoning or his final conclusions. He urges the need for "the infusion on suitable terms of a British element in major Indian enterprises," after suggesting that British managing agency houses must be content to remain within the framework of a reasonable Indian company law. I am sure he means what he says and envisages British managing agencies yielding place to Indian executives. If that were so, would it not amount to saying that they should be thrown out by one window and brought in by another, to be reinstated in the proprietorship as well as the executive of Indian business units? I wonder what virtue *Eavesdropper* claims for this ingenious process! Does he imagine that British business will be content to co-operate on the basis of lending us paid technicians and business managers? Or what, I wonder!

—"REALIST".

* * * *

Insufficient Exaggeration!

You are perfectly right when you say that we in this country exaggerate the value of formal changes in the law and the constitution. But the fault lies not in our exaggerating its value, but in stopping with it and not going beyond it—or in other words in not exploiting the full value of formal changes in the law and the constitution.

In the very next sentence of your gossip, you hold out the grim prospect of "His Majesty's Government handing to our Ministry a strongly worded note of protest and following it up with action that would bring us to our knees."

Now, there, Mr. Eavesdropper, you are under-estimating the value of formal changes in the law and the constitution. Since we are in a region of speculation (and there is no risk in speculating except in stocks and shares) let me add that before an Independent and Sovereign India could start interfering with the "rights" of the British, that sovereign India will have built up certain other very material resources which would make H.M.G. rather chary of such notes and actions as you portend.

The fact that "war does not pay" would then be realised by both parties, instead of only the weaker one, as now!

So, please don't underestimate the value of certain formal changes!

Consuming the Consumer

"It would be unfair and unwise to overlook the crisis in consumer goods and to deny the desirability of additions to present stocks

AGENCIES IN ALL IMPORTANT CITIES OF INDIA

NOTICE

GOVERNMENT OF INDIA

DIRECTORATE GENERAL OF MUNITIONS PRODUCTION

General Service Electric Lamps

Large quantities of electric lamps have recently been imported by Government to supplement the normal commercial imports and indigenous production. It is hoped that the total quantity of lamps which would be available to the market in 1945 will be sufficient to meet all reasonable demands.

2. Arrangements have been made for distribution of these Government imported lamps by the following Government Stockists through their distributing agencies:—

(1) Messrs. Philips Electrical Co. Ltd.,
Calcutta:—Heysham Road.
Bombay:—C/O Precious Elec. Co. Yusuf Building Churchgate Street, P.O. Box. 752.

(2) Messrs. G. E. C. (India) Ltd.
Calcutta:—Central Avenue South.
Bombay:—Kaiser-i-Hind Building, Ballard Estate.

(3) Messrs. Greaves Cotton & Crompton Parkinson Ltd.,
Calcutta:—4, Mission Row Extension.
Bombay:—1, Forbes Street.

(4) F. & C. Osler Ltd.,
Calcutta:—Post Box No. 137,
Bombay:—New Queens Road.

(5) Messrs. Siemens Electric Lamps & Supplies Ltd.,
Calcutta:—E5, Clive Buildings,
Bombay:—Eruch Shaw Building (4th Floor), 249 Hornby Road.

(6) Messrs. Associated Electrical Industries (I) Ltd.,
Calcutta:—6, Mission Row,
Bombay:—Post Box 484.

(7) Messrs. Balmer Lawrie & Co. Ltd.,
Calcutta:—103, Clive Street.
Bombay:—5, Graham Road, Ballard Estate.

(8) Messrs. I.G.E.C. (India) Ltd.,
Calcutta:—7, Wellesley Place, Calcutta.
Bombay:—Thackersey House, Ballard Estate.

(9) Messrs. Kaycee Industries Ltd.,
Lahore:—Lakshmi Mansions, The Mall.
Bombay:—Asian Building, Nicol Road, Ballard Estate.

(10) Messrs. Volkart Bros.,
Calcutta:—Clive Buildings, 8, Clive Street.
Bombay:—Graham Road, Ballard Estate.

(11) Messrs. Oriental Mercantile Co. Ltd.,
Calcutta:—36A & B, Pratapaditya Road.
Bombay:—11, Bank Street, Fort.

(12) Messrs. Lux Lamps Ltd.,
Calcutta:—Norton Buildings.

3. For the distribution of these Government imported lamps, Consumers have been classified as:—

(i) Non-Government indentors like Electric Supply Undertakings and Industrial Concerns who normally purchase direct from producers and importers.

(ii) Other consumers.

Category (i) above are entitled to get their requirements of imported lamps from Stockists at the issue rates shown in the Schedule. Stockists have the option of selling 50 p. c. of the quantity demanded from their own import and manufacture at rates not exceeding those shown in the Schedule. Orders for less than Rs. 500/- for twelve months requirements and/or for quantities less than four standard packages of lamps upto and including 200 watts may be refused by Stockists. Consumers whose orders are refused on the above account will come under category (ii) above and will only be entitled to purchase lamps at retail rates shown in the Schedule.

In respect of category (ii) a definite quota will be allotted from these Government imported stocks for supply to Electrical Dealers for sale to consumers and retail dealers not entitled to get their lamps from stockists. Allocation of supplies by Stockists to Electrical Dealers will be at the discretion of the Stockists and subject to the conditions imposed by the Controller General of Civil Supplies in the Department of Industries and Civil Supplies just as in the case of release of commercial supplies through normal trade channels. Stockists will charge their issue rates, as shown in the Schedule, on sales to dealers. The maximum rates which the latter may charge when reselling to other dealers are the wholesale rates shown in the Schedule and the maximum rates which any dealer may charge when re-selling to the ultimate consumers are the retail rates shown in the Schedule:

Note:—

(i) The Stockists' Issue Rates are f.o.r. any railway station in India by goods train or free within 6 miles of Stockists' warehouse.

1 p. c. extra on these rates will be charged if passenger train delivery is required.

(ii) The wholesale rates are free ex the supplying dealer's warehouse.

(iii) Insurance of despatches, if required, will be at the purchaser's cost.

(iv) Claims for breakages or replacement of defectives will not be entertained by Government or Government Stockists.

GOVERNMENT OF INDIA

Department of Supply

COTTON

Subject:—*Import of Metal Cutting Tools from U.S.A.*

Importers of Metal Cutting Tools from U.S.A. are advised that certain quantities of the following tools are understood to be available and will be lincensed for import from U.S.A. during January/June 1945:—

(1) Chasers other than coventry & Hand
(2) Button Dies
(3) Dies other Types
(4) Ordinary Hacksaw Blades
(5) Circular Saws
(6) Milling Cutters
(7) Hobs
(8) H.S.S. Drills up to 1"
(9) Carbide Tools & Tips
(10) Tool Holders & Tool Bits
(11) Reamers
(12) Tape Cut thread
(13) Screw Plates
(14) Hand Stocks & Die Sets
(15) H.S.S. Hacksaw Blades
(16) H.S.S. Drills 1" and over
(17) C. S. Twist Drills
(18) Combined Drills & Counterlinks
(19) Knurling Tools.

Importers wishing to import should immediately ascertain from their Principals, Shippers or Agents in the U.S.A. the quantities which could be shipped by June 1945 and make an application for an import licence for the quantities which they are prepared to order and which can be shipped.

Quantities which can be licensed for import are in many cases very limited. Importers should submit 5 copies of indents for their requirements for each of the above categories separately together with the I.T.C. form duly completed. Forms may be had from the Import Trade Controllers of the various ports and applications must reach the Director of American & Panel Imports, 7/8, Ezra Mansions, Calcutta within 3 weeks from the date of this notice appearing in the Press. The extent of past imports from U.S.A. for the above categories should also be mentioned when forwarding applications.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions have continued to prevail in the money market and call rates are unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay. But at the treasury bills auctions this week bidding was less keen and applications were sharply lower at Rs. 6.2 crores against Rs. 9.05 crores. The amount of Rs. 4 crores could be obtained only with a slight increase in the average discount rate to 5 annas 9 pies per cent per annum. With the increase in deposits of scheduled banks and the absence of any demand for funds, it was even expected that banks would show greater interest in treasury bills but with their pre-occupation over the First Development Loan not much of interest was taken in treasury bills especially as maturities were on the small side. The offer for next week has been maintained at Rs. 4 crores.

The returns of the Reserve Bank for the week ended April 13, 1945, reveal a further increase in the total notes issued, there being expansion of currency for Rs. 10 crores against sterling securities. Total notes issued were Rs. 1,118.18 crores against Rs. 1,108.9 crores. The increase in notes in circulation is not very much pronounced, there being only a rise of Rs. 7.68 crores to Rs. 1,108.00 crores. Notes in the banking department, as a result, are higher at Rs. 10.18 crores against Rs. 8.59 crores. Rupee coin are lower at Rs. 17.59 crores against Rs. 18.32 crores.

In the banking department, Central Government's balances do not show any appreciable increase at Rs. 268.56 crores, reflecting perhaps the lower level of tax collections. Other Government accounts also are sharply lower at Rs. 15.18 crores against Rs. 21.87 crores. There is no increase in bank balances with the Reserve Bank. The increase in the working capital was perhaps utilised for investments in giltedged securities. Balances held abroad are Rs. 5 crores lower at Rs. 380.04 crores but if the transfer to the issue department is taken into consideration there has been a net receipt of Rs. 5 crores during the week.

The statement of the Imperial Bank for the same week shows an increase in deposits to Rs. 229.8 crores from Rs. 228.66 crores. Investments are higher at Rs. 132.56 crores against Rs. 131.03 crores.

The new loan is not quite the success as was anticipated by the authorities. The list for the loan had to be kept open for three days and it is reported that the response was not quite satisfactory. In the absence of any communique by the Reserve Bank it cannot be said what exactly was the amount of subscriptions, both cash and conversion, but the anxiety to make a re-issue of 2½ per cent 1948-52 for Rs. 25 crores shows that the Government is keen on maintaining the level of subscriptions to the various loans, and that they have not completely succeeded in their policy of converting the market to be more kindly towards long-dated issues. It might be that holders of 5 per cent 1945-55 conversion loan also did not elect to take advantage of the conversion offer. In the case of banks there would have been no anxiety to place funds on a long-term basis. Insurance companies, however, would have taken advantage of the offer and converted their holdings into 3 per cent 1970-75.

In the Bombay bullion market bulls have still the upper hand and all efforts by bears to depress prices, with the extremely favourable war situation, have proved in vain. The poor Reserve Bank sales and the cornering of all available stocks have been mainly responsible for the maintenance of bullion prices at high levels. The heavy budlee charges have forced bears every time to cover their open positions.

The question of deliveries was considered by the Committee of the Bullion Exchange this week. It was decided that bulls could buy in the open market in case of non-delivery but it was said that in no case the penalty could exceed Re. 1 per 100 tolas in the case of silver and 10 annas for gold. As a result of the representations by the Bullion Exchange, the Reserve Bank has effected certain changes in its method of selling but there has been no increase in total sales. In the absence of any measures for relieving the scarcity in the market and preventing the accumulation of stocks in strong hands, it cannot possibly be expected that bullion prices will be marked lower. The Reserve Bank's representations to banks not to effect large advances against bullion cannot check speculative activity as by far the greater proportion of the bullion trade is financed by hoarded money and no great help is needed from banks. Unless there is an enquiry into the purchases of gold sales and there is free selling it cannot be expected that there will be any break in prices both for gold and silver even with the termination of hostilities in the West.

The Exchange market has been steady with fair remittance demand and a small amount of export bills.

EAST INDIA FUND

Receipts for week ending 12th April, 1945 Rs. 12,808

Total to date - Rs. 1,20,99,431

Contributions may be sent for the general purposes of the fund or earmarked for the following specific charities:—

1. H. E. the Governor of Bengal's War Purposes Fund for Amenities for Troops.
2. King George's Fund for Sailors.

Overhaul of Public Finance in India *

In the last two articles of this series on the tasks before the new Finance Member, we dealt with the prevention of tax evasion and the reconstruction of India's public debt. Both these are special aspects of the larger problem of reconstructing the whole system of public finance in India with a view to render it fit to bear the burden of post-war economic development. This task necessarily devolves on the custodian of India's finances during the closing stages of the present war and is, to some extent, independent of the political and constitutional problems. While it is tempting to regard the political uncertainties as a valid ground for postponing consideration of this problem, Sir Archibald Rowlands, we trust, will recognise that the present is the most appropriate time for tackling a task of this kind and that, if this opportunity were missed, his successors may be seriously handicapped in the solution of this problem. The present is the appropriate time because during these years of the war, our public finance, thanks to wartime inflation, has lost its wooden character and can now be cast in new moulds. Public revenue, both at the Centre and in the Provinces, has risen well above the low subsistence levels of the pre-war period. So long as Governments could do no more than keep the administrative machinery going and preserve law and order, the close interdependence of national development and expansion of public revenue, of taxable capacity and expenditure on nation-building, meant a vicious circle which it was impossible to break. In that position, not only was no development possible, but it was also futile to discuss such problems as the division of the heads of revenue between the Centre and the Provinces, though some sections of opinion were inclined to exaggerate their importance. From this predicament war conditions would seem to have rescued India. That this improvement is largely lacking in substance and is but an illusion set up by wartime inflation is not quite germane to this context. For, the problem, as we can formulate it in our present undeveloped conditions, is to raise revenues for developmental purposes; the increase in national income and taxable capacity is possible only at a much later stage. In so far as inflation has enabled the Government to raise revenue without making the incidence of taxation consciously heavy, the vicious circle mentioned earlier must be deemed to have been broken. The additional revenue is not available for expenditure on nation-building. But it is conceivable, though obviously not practicable to the same extent, that an extension of the present system of taxation into the post-war period will make available for nation-building expenditure the moneys that are now being expended on the war as distinct from the peace time defence budget.

The problem, then, is to ensure that with the return of peace the vicious circle will not close again and hold the national finance and economy in its deadly grip. While the volume of currency circulation and the value of the rupee, internal and external, will have to be determined by a very wide range of considerations, it is necessary to maintain intact the ability of the Government to raise revenues well above the old standards of peacetime expenditure and sufficient to finance the various projects comprised in the first phase of post-war planning. It is axiomatic that this should apply as much to the Provinces and the States as to the Centre and should extend to even organs of local Government like District Boards. No system of public finance can be said to be sound unless the revenues of every governmental authority are roughly equal to the responsibilities which it is entrusted with. As the experience of the Montford Reforms showed clearly, autonomy is meaningless and even a mockery, if there are no independent sources of revenue with which to exercise that autonomy. It must be remembered, however, that our ideas in regard to the functions of each tier of the Governmental hierarchy are by no means unchanging and that the financial devolution must change with the devolution of the functions of Government. In addition to the problem of raising the total of public revenues to the requisite level, there is also the problem of ensuring a division of tax resources and of responsibilities appropriate to the main objectives of public policy in the future.

In this context, it is necessary to emphasise the change in our ideas of financial devolution. When the Government of India Act, 1935, was on the anvil, it was assumed that the Indian constitution was to be of the predominantly Federal type and that the autonomy of the constituent units was the most important consideration and objective. The system of public finance which was then envisaged was one which would embody all the distinctive features of a system of federal finance. The main heads of taxation were sought to be divided between the Centre and the Provinces, the States standing on a separate footing of their own. This division of revenue heads did not, it was generally realised, accord with the division of the functions of a modern Government between the Centre and the Provinces. The Provinces which were charged with duties involving steadily increasing expenditure got the more inelastic sources of revenue, while the Centre was in a comparatively advantageous position, so far as expansion of revenue, natural or forced, was concerned. But fundamentally, the problem arose from the low taxable capacity of the people and from the failure to give the objective economic and financial conditions their due primacy in questions of this kind. It did not weigh much with the authors of the Government of India Act that Sir Walter Layton, who was financial Assessor to the Simon Commission, had found that public finance in India, considered in relation to the economic and social problems as well as the taxable capacity of the people and the facility of raising revenue through taxation, was not favourable to the maintenance of a federal constitution. Sir Walter was also inclined to the view that the motive power of reconstruction in India would have to be derived from a large volume of centrally collected taxes. But the authors of the Government of India Act had little concern for the basic realities of the financial conditions in India. The political parties, too, had little or no thought for the financial problems which would set severe limits to their capacity to function as truly popular Governments. The Congress Party, in fact, started with the sacrifice of excise revenue in the Provinces and endeavoured to make good that loss by certain new taxation measures of no great significance to the future. At the Centre, the change in the position of the Railways from a profitable commercial concern of the State to one which incurred huge deficits obliged the Central Government to utilise for itself the whole of the income tax and belie the expectations of the Provinces for a share therein. The political repercussions of this position were avoided by the outbreak of the war and the end of parliamentary Government in the majority of Provinces.

What the war period has done is not only to raise public revenue and incidentally probe new sources of it, but also to teach Government and people alike to take note of, and heed to, the needs of economic development. While formerly there was insistence on the paramountcy of Provincial autonomy and a readiness to subordinate other requirements to the requirements of such autonomy, people are now more disposed to recognise the paramountcy of economic development and adjust even political ideas to some extent, to the more imperative needs of such development. It is recognised that even in a period of phenomenal increase in public revenues, the Centre is almost the sole beneficiary of such increase and that, even were these conditions to continue, it would be more or less impossible to devise a system of public finance which would leave the Provinces in possession of adequately fertile and expansive sources of revenue. In other words, it will be a long time, if ever, before Indian conditions will favour federalism in finance as well as the political constitution.

For no one misses the fact that, while Central revenues have gone up from the Rs. 90 crores of pre-war days to the Rs. 200 crores of to-day, the Provincial budgets have only moved up from about Rs. 12 crores to about Rs. 30 crores on an average. While a large part of this increase in Provincial revenues would be hard to retain in the post-war period, the needs of the Provinces for developmental purposes are out of all proportion to the increase in resources. Of the chief elastic sources of revenue available to the Provinces, income tax is linked up with the fate of the Railways. The sales tax is a new tax and its development as an important source of revenue would seem to depend a great deal upon uniformity in the rate and scope of the levy and the manner of its collection. Likewise, death duties by their very nature call for Central initiative in introduction and collection. If the three important sources of revenue are thus dependent to such a large extent on the action of the Central Government, financial devolution as the basis of provincial autonomy would seem to be something of a pretence. For, once the Centre steps in as the originator and collector of new taxes for the benefit of the Provinces, it is idle to expect that the Centre would be content to hand over the money to the Provinces according to the latter's notions of proper or equitable distribution. The Centre would rightly insist that the source of revenue is not the sole criterion of distribution of the collections. And sooner or later, the needs of the Provinces would displace the source of collection as the proper criterion.

It would, indeed, be hard to deny the justice of such a change. In a country in which the turnover of the products of protected industries is the principal source of public revenue, the apportionment of public revenues among the Provinces according to the source of collection would involve a double injury to the backward Provinces. Assam or Bihar or C.P., or even Madras, would not only be continuing the existing handicaps on themselves for economic development, but

*The first two articles in this series appeared on April 7 and April 14.

would be paying to increase the hiatus between themselves on the one hand, and Bombay and Bengal on the other. The profits of Assam's tea and Bihar's iron and steel would be swelling the death duties and income tax payable to Bengal or Bombay. While these anomalies would, no doubt, be reasonable within limits and people may be expected to acquiesce in them normally, in a period in which public passion for planned development has been carefully worked up, they would appear as serious injustices. A Province like Assam would stand aghast at the gulf that yawns between the outlay that is needed for reasonable development and the resources that she can expect to have under such a quasifederal financial regime. Where the Provinces are unequal in resources and in the leeway to be made up, it is natural to look up to the Centre to find ways and means of ironing out these differences. And a demand in this regard would be hard to resist if the Centre is obliged by circumstances to act as the agency for collecting a number of important taxes. India is thus gravitating visibly to the idea of a Central pool of revenue for developmental purposes.

It is well to remember in this context that it is financial considerations alone that militate against the scrupulous observance of the principle of federation in our national life. Nearly every report that has been brought out on questions of post-war planning has had to stress the need for Central direction and control. Provincial autonomy in a vast country of uneven attainments necessarily leads to dangerous differences in standards of administration and administrative achievement. Even in education and public health, uniformity is not attained automatically without the conscious effort of the Centre to secure it. In the case of irrigation, forestry and power development, the need for Central direction is even more glaring and urgent. In the matter of transport, it is almost axiomatic. Irrigation and hydro-electric power projects have been only too often delayed and thwarted by the difficulty of negotiation between two or more Governments. And when State enterprise extends to a few more commercial monopolies inclusive of an industry like coal mining, the place and powers of the Centre will be vastly increased. It is in consideration of these facts that many people have begun to see something anachronistic in a purely federal constitution. And what has been said of the Provinces should apply in an even greater measure to District Boards and other organs of local Government. Few people believe now in these institutions as a preparation for self-Government. While modern life enables an individual with the necessary qualities to make his mark in public life, wherever he may be placed, District Boards continue to remain in the Governmental framework, sheltering corruption and inefficiency, but innocuous otherwise for lack of financial resources of their own. They are not, however, wholly innocuous, since they have enough to do with education, public health and roads to lower standards of administration in these vital matters.

The time has now arrived when the Finance Member of the Government of India has to review the whole system of public finance in India from the point of view of the requirements of post-war development. While it may not be proper for him to pre-judge political and constitutional issues to which the principal political parties may still attach a great deal of importance, it is both his right and his duty to go ahead with his task of preparing the financial system for the tasks ahead. If the objective conditions in regard to taxable capacity and facility of collection and the administrative and other requirements of economic planning alike suggest a greater degree of financial centralisation, the Finance Member cannot allow undue respect for political susceptibilities to interfere with so important a task. It is possible that such preparation in the financial sphere for post-war planning may involve a fait accompli in more than one current political problem. But that would be only another reason for the gratitude of future generations. Into the nature of these tasks we propose to go in detail in our later issues.

The Food Problem in Europe

With the approach of Deliverance Day, the Food Problem in Europe, particularly of the liberated countries, seems to have become more, instead of less formidable. The United Nations Relief and Rehabilitation Administration has still had no notable success to its credit; and its task is becoming distinctly more onerous. For the past three or four years the Germans somehow managed to stave off critical conditions since they introduced improved methods of agricultural production and organisation. Distribution of foodstuffs had been efficient, though discrimination against the Jews, Greeks and Poles was freely practised. The war did not end as soon as the Allies had expected, and the planned withdrawal of the Nazi armies left vast areas desolate and practically barren for the time being. The Russians have regained their agricultural tracts, but the damage caused by the German occupation has resulted in tremendous dislocation of agricultural operations. While liberation has come by swift moves of the Allied armies, lack of fuel, transport, fertilisers, seeds, cattle and manpower remained. Farmers have been uprooted from villages owing to forced evacuation and emigrant rural folk do not rush back to their fields the day they are free. Normally, countries east of Germany are more or less self-sufficient in foodgrains while the countries in the west produced less than they consumed. France produced only 80 per cent of her requirements and the Netherlands could find only 67 per cent of her needs. Half of Belgium's food supply came from abroad and Norway's dependence on the outside world was for 57 percent of her needs. It is calculated by an authority on the subject that Europe as a whole would require 200 to 300 million bushels of wheat alone during the first year of liberation. If the requirements of cattle feed needed to increase milk supply are also taken into consideration, the figure will probably go up still further. But the food shortage in Europe is likely to be particularly severe in the countries west of Germany and hordes of profiteers and black marketeers have to be tackled before order can be restored in the distributing agencies.

When people are hungry, it is but natural that bitter criticisms are levelled against the authorities, old or new. Under the pressure of public opinion, the U.S. officials in France administered urgent warnings to the U. S. Government. The suspicion that the British have hoarded part of the supplies which should have been sent to Europe had to be dispelled; and Mr. Churchill loudly protested in the Parliament that England has not hoarded food to the detriment of liberated Europe The British are themselves grumbling about the recent cut in Lend-Lease meat supplies. It is also pointed out in several parts of hungry Europe that the United States officials assured in 1942 that part of the U.S. crop would be set apart to build up stocks for the liberated peoples of Europe. But three years have passed and, judging by events, there have been no stocks built up. In Europe peacetime as a whole has been deficient in foodgrains and there are no other regions to which this Continent can turn for food at present. Unfortunately, most of Asia's food exporting areas are even to-day occupied by the Japs. The chief wheat producing countries like the U.S. and Canada have already passed the peak year of food production and the forecast that the coming year promises only a decline, adds to the poignancy of the European food situation. It is found that during the last few years only the North Americans ate more food during wartime than before the war. This would be used for propaganda purposes by interested parties in Germany and elsewhere, if not to-day, to-morrow. White Europe necessitates more economy in the consumption of Allied countries, Canada hesitates to resume meat rationing and the U.S. Administration shrinks from asking the civilians to cut their supplies still further.

This leads us to attempt a review of the U.N.R.R.A., set up two years ago, in the European continent. This organisation has never suffered for want of financial resources, though as Dr. Evatt, the Australian Minister for External Affairs, pointed out at the recent Sydney Conference, over-centralisation in the administrative machinery, absence of personnel, shortage of shipping space, etc., have delayed its operations to some extent. But the chief trouble arose out of the fact that this organisation was subordinated to the currents and cross-currents of power politics.

The food crisis in Europe to-day has several lessons for civilians and others alike to note. Hunger of the masses, if neglected, can generate forces to shake even strongly entrenched empires and can bring in bloody revolutions. The free countries, if they are exposed to the ravages of famine are not likely to forget the bitter experience in the future years to come when the United Nations will be constructing an international order to preserve liberty and prosperity for the world. If famine conditions are allowed to continue further, Germany, which is defeated on the battlefield may actually score a victory during the years of peace when the basis of wartime difficulties after Allied successes on the Continent. The failure of the U.N.R.R.A. is tragic and it shows that this war is not going to be the last war since it has not resulted in perfect Allied co-operation even on such matters as feeding the civilian populations. It is also to be remembered that since 1942 the chief agricultural nations of the world, U.S., Canada and Australia, have taken deliberate steps to decrease wheat acreage in favour of augmenting the production of their commercial crops. While the U.N.R.R.A. has been set up the important nations have failed to back it up by developing the food stocks required for feeding the liberated peoples. If the future is to be made safe for democracy and the revival of Nazi Germany prevented, steps must be immediately taken to rush food supplies, medicines, clothing, etc., to the war-weary nations of Europe and full co-operation of the Allies is to be ensured if a clean and encouraging start is to be made by the planners of peace.

OUR LONDON LETTER:

Budget Day arouses languid Interest—Mining pleads for lower Taxation—Indian Industrial Mission—Stock Markets moderately bullish—

London, April 4.

Remarkable claims for the benefits accruing to the United Kingdom's economy from ownership of overseas mining enterprises are advanced by a Committee of financiers and mining finance houses, in a memorandum to the Treasury begging for lessening the present "onerous" and unfair taxation.

They claim that mining enterprises owned by British stockholders furnish one job in every 85 jobs available to adult workers in the United Kingdom. The committee says, "This is a far larger proportion than generally realized."

In addition, during the years 1936-38, these mining enterprises sent home a total of £53.6 millions annually to the national income, which in the year 1938, according to a White Paper was £4,600 millions, or about 1 per cent. of the national income.

What the committee calls "primary income from overseas mining" is estimated at £11.7 millions, divided into:—

From exports of machinery and stores from the U.K.	£8.3	millions
Freight paid to British shipping for both inward and outward traffic ...	£2.3	,,
Insurance premiums on cargoes, overseas properties and personnel ...	£0.5	,,
Net selling commission on metal and ores sold abroad and warehousing charges thereon, not less than	£0.3	,,
Export of services in the form of engineering advice and management ...	£0.3	,,

This "primary income" of £11.7 millions, according to the Committee furnishes "secondary income" of the same amount; that is, individuals in the U.K. who receive and spend it, thereby furnish income to others of the same amount. In addition, the Committee estimates gross dividends and interest received in the United Kingdom as averaging £29.2 millions, plus remittances to the U.K. from overseas staff of not less than £1.0 million, making a grand total of £53.6 millions.

These figures furnish a useful supplement to the Government's calculations of national income. By deducting "secondary income" of £11.7 millions from the total, the Committee shows a total of £41.9 millions of foreign exchange made available to the United Kingdom. During the years 1936-38, they estimate the total foreign exchange from all sources available to the U.K. at about £937 millions, of which the £41.9 millions derived from ownership of mining enterprises furnishes 4.5 per cent, in other words, about £4-10-0 out of every £100.

This memorandum, was drafted before the Treasury announced certain recent concessions to mining enterprises; but in the main, the Committee still feels that the British fiscal system is much less fair to the mining enterprises than is the system in the United States. They want a drastic revision which starts from the premise that a mine is a wasting asset and that investors must be allowed sufficient annual return to permit them to treat part of it as instalment of repayment of their capital. This theory has never been challenged; but its neatness has been messed up considerably by the fact that improvement in mining technique has frequently resulted in extending notably the lives of mines, which in the early days were regarded as short-lived. Noticing this fact, Governments everywhere have been more and more inclined to treat mines like ordinary industrial enterprises with more or less indefinite lift.

The approach of Budget day arouses only languid interest. It is universally recognized that no easing of the burden of taxation is possible, while the ending of the European war in the near future will mean a big spurt in expenditure—those end-war gratuities to men and women in the defence forces, those final payments of all sorts. And this spurt in expenditure will mean a fresh drive for war savings, which will be the more urgent, because the public will inevitably be in a relaxed mood and inclined to cast around for much-needed consumer's goods (which will probably not be available in the shops). In short, the budget is quite unlikely to contain any "good news" for either the City of London or the "man in the street."

Some pundits think that these end-war special expenditures may compel the Chancellor to approach the Parliament with a supplementary budget, even as the sharp rise in the war expenditure from the beginning of war compelled resort to supplementary budgets.

The announcement that a fact-finding mission of ten leading Indian Industrialists will arrive in London towards the end of April is bound to cause a flurry in higher levels of British industry, though the arrival of the mission is eclipsed for the moment by the discussion of Lord Wavell's visit.

It is intimated that the visiting Indians will not concern themselves with discussions regarding the huge sterling balances in London, but will concentrate on getting the clearest possible picture of the United Kingdom's resources, especially the capital goods needed by India for her post-war industrialisation. They will, it is understood, have their own technicians, and complete freedom to arrange their own programmes.

The Stock market seems determined to fool those pundits who have been predicting that the end of the European war would see a severe slump due to the unwillingness of speculators and investors to hold issues at the current high prices until post-war outlook is clearer. With the end coming visibly closer day by day, very little of stock is being offered and the little demand is proving sufficient to boost prices. Some indices have already passed the January peak, while others are approaching it. Even Home Railway issues, which have been lifeless for months, are beginning to rise.

Nevertheless, this moderate bullishness—the result of private calculations of innumerable private individuals—carries no great weight with those who are studying Britain's future. There is certainly less "defeatism" visible than, say, in the dark days of 1940 ahd 1941; but, on the other hand, there is clearer sense than then of just how immense and complicated are the problems confronting the country.

HELPING INDUSTRY

To prospective and existing industrial undertakings requiring expert organising skill, technical advice and financial assistance, the J. K. Commercial Corporation Limited., offer their services as Managing or Selling Agents.

Authorised Capital	... Rs.	1,00,00,000
Subscribed Capital	... Rs.	10,08,000
Paid-up Capital	... Rs.	5,79,000

The Corporation's Board of Directors is composed of industrialists and businessmen having a record of consistently successful careers in industrial and commercial spheres.

Directors:
1. Late Purshotamdas Singhania.
2. Late Sital Prasad.
3. Late Sohanlal Singhania.
4. P. D. Chande Rana, Esq.
5. Sazai Mallm, Esq.

Editorial Notes

Reserve Bank's Agency:

There has been an insistent demand that the Imperial Bank should no longer continue to have a monopoly of the agency work of the Reserve Bank of India. The details of this demand have not been made precise; and the question of the alternative or supplementary agencies and of the considerations to be kept in view in the choice of such agencies has not even been posed. Current discussions only betray a sense of injustice against the monopolistic arrangement. The matter is, on close scrutiny, not so simple. We are particularly concerned with the subsisting agreement between the Reserve and Imperial Banks. No proposal for modification or change in the agency arrangement can be entertained if it involves a violation of the agreement we have referred to. It is, therefore, necessary to examine the terms and conditions of this document, with particular reference to the period for which it is to be in force. Section 45 of the Reserve Bank of India Act, 1934, provides for the Agreement with the Imperial Bank "to come into force on the date on which this Chapter comes into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side." That is to say, the Reserve Bank came into being on April 1, 1935; and it has just completed ten years of its existence. The completion of the tenth year is important as, in case the agreement is to be terminated at the end of the period mentiond therein, the five years' notice to be given must have been given on March 31, 1945. We have no reasons to think that any such notice was given to the Imperial Bank.

Even if the Reserve Bank authorities were indifferent about giving notice for termination, there is another important consideration which requires important action to be taken by the Reserve Bank at the end of the first ten years. The Third Schedule to the Reserve Bank Act sets out the "provisions to be contained in the agreement between the Reserve Bank of India and the Imperial Bank of India." Clause 2 of the Schedule specifies the remuneration to the Imperial Bank, which shall be

> ". . . . a sum which shall be for the first ten years during which this agreement is in force a commission calculated at one-sixteenth of one per cent on the first Rs. 250 crores and one thirty-second of one per cent on the remainder of the total of the receipts and disbursements dealt with annually on account of Government by the Imperial Bank of India on behalf of the Reserve Bank of India. At the close of the said ten years the remuneration to be paid by the Reserve Bank of India to the Imperial Bank of India for the performance of these functions shall be revised and the remuneration for the ensuing five years shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation, of performing the said functions. The remuneration so determined shall thereafter be subject to revision in like manner at the end of each period of five years so long as this agreement remains in force. If any dispute arises between the Reserve Bank of India and the Imperial Bank of India as to the amount of the said remuneration the matter shall be referred for final decision to the Governor-General-in-Council who may require from the Imperial Bank such information and may order such accounting investigation as he thinks fit."

In other words, the remuneration of the Imperial Bank is due for reconsideration as from the 1st April, 1945, (mark the words "shall be revised"); and this is to be determined on the basis of the actual cost to the Imperial Bank, as ascertained by expert accounting investigation. Was such expert accounting investigation undertaken? Who was the expert to whom this investigation was entrusted? Did the Imperial Bank produce suitable returns covering the ten-year period to enable the expert to ascertain the actual cost on Government work as distinguished from the actual cost on the other-than-Government's work of the Imperial Bank? Did the expert send his report in time to facilitate the new arrangement about remuneration to take effect from April 1, 1945? How does the new scheme of remuneration on actual cost basis differ from the rough-and-ready-calculation percentage contained in the Third Schedule?

If we remember aright, the Central Board, three years ago, appointed the Auditor-General as the expert contemplated in Clause 2 of the Schedule; and the Auditor-General, in consultation with the Reserve Bank and Imperial Bank authorities, issued instructions to the latter as regards the data to be compiled for the investigation. We, however, consider it possible that, amid the preoccupations of war finance and war controls, the authorities concerned might not have taken a serious view of the nature and significance of the statutory expert investigation. The public must needs be taken into full confidence on the action taken by the Reserve Bank in this regard. For subsection (2) of Section 45 of the Reserve Bank Act makes it clear that the agreement between the Reserve Bank and the Imperial Bank "shall, as soon as may be after it is made, be laid before the Central Legislature." It follows that any modifications in the Agreement shall also be laid before the Central Legislature.

War and U.S. Investment

Quite interesting changes have occurred in the financial structure of the different nations involved in this world war, but the effect of global operations since 1941 on U.S. investment abroad and foreigners' funds in that country is particularly significant.

The known and unknown obligations arising out of the Lend-Lease arrangements cannot be ascertained; but the American public have been told that four years of war have impaired considerably U.S. investments in foreign countries while the funds of the Allied Nations in U.S. have been safe and have actually increased in value. U.S. citizens have invested $13.3 billion in the industrial plants, plantations, mines, and other properties of 112 foreign countries. $90 million of this is in Axis-controlled countries, the share of Germany and Japan being $1.3 billion and $90 million respectively. The damage caused by the European and Pacific wars to industrial property is not fully assessed, but, in their report published in March, the National Foreign Trade Council has definitely presented a pessimistic picture. Allied bombing of the Opel works at Russelsheim in Germany resulted in a writing off of $35 million for American automobile interests. The damage to Antwerp, Passy, Shanghai and Yokohama has told on the investments of the Ford Motor Company. The Chrysler plant in Antwerp must have suffered in value since it could not escape fire and explosions. The scorched earth policy carried out in Sumatra oil wells affected the Standard Oil Company; and the International Telephone and Telegraph Corporation plant in Budapest valued at $5 million has been assumed as totally destroyed. The Japs, it is sure, would destroy or carry away valuable plants before they are finally subdued. This has its own significance for the future of U.S. investment in the Far East. On the other side of the picture, foreign funds flowed into the U.S. and the accumulation of dollar assets by the Allied Nations has gone on by leaps and bounds. Europe will shortly be on peace basis while the war against Japan may drag on. This would lead to interesting developments but it is too early to predict the flow of gold out of the U.S. just because, on a rough reckoning, there has been a depreciation of U.S. investments abroad.

Rifts in the Lute?

As the date of the San Francisco Conference approaches, doubts about its meeting on schedule seem to be on the increase. Not to speak of the upset that the death of Roosevelt may have caused, the personnel of the Soviet Delegation seems to have come as a rude shock to American opinion, which had allowed itself to be taken in by rosy tales of the work done at Dumbarton Oaks and its furtherance at Yalta. Till M. Molotov proceeded to the U.S. to attend the funeral of Mr. Roosevelt and was therefore conveniently included in the Russian Delegation, the Delegation was definitely second rate; and it was interpreted as Stalin's way of telling the world what he thinks of the Conference. The disillusionment is heightened by the slow trickle of details about the higgling at Yalta. That the Lublin Government was a main bone of contention was well known and could, in any case, have been easily guessed. But it is not as well known that Mr. Roosevelt agreed to Soviet Russia having three seats in the Assembly in return for a similar concession to the U.S. Britain's reported indifference to this log-rolling between the U.S. and the U.S.S.R. is even more intriguing. On the face of it, the Dumbarton Oaks plan concentrates power in the Security Council while providing an innocuous forum for all nations, big and small, in the Assembly. If Stalin is keen on having more seats in the Assembly and Britain is banking on the reality of power vested in the Council, the stage would seem to have been set for deeper diplomatic moves than the world can now think of. Stalin's move in according an exalted status to some members of the U.S.S.R. is universally interpreted as a preparation for accommodating new territorial and racial units in the vast Soviet constitution. Will that enable him in course of time to shift the centre of gravity in the world organisation from the Council to the Assembly?

If one may be a little imaginative, the Ukrainian Soviet Republic, the White Russian Soviet Republic with, God knows, what additions, Manchuria and the like, may well constitute a new class of members in the Assembly, different alike from the British Dominions and the dependencies of the British, French and the Dutch Empires. The report that appeared some time ago that Soviet Russia might support India's independent representation in the Assembly in return for the representation of her protege republics is an index of what is in store. Meanwhile, France bristles, to ward off attacks on her colonial empire. With her experience of the representation of the Colonies in the Chamber, France would seem to be ready to make a thorough re-organisation of the "French Union". But that European nations will be hard put to it to cling to their Empires, there is no doubt.

Power Alcohol in the U. P.

The Notification issued by the Government of U.P. fixing the price, and regulating the quality and distribution, of power alcohol has come in for criticism. The manufacturers have reasons to feel that the policy of the U.P. Government is detrimental to the growth of this industry. The Notification requires that rectified spirit destined for use as power alcohol should be sold to the Provincial Government and none else. While this is in itself a restriction, the price fixed namely, Re. 0—14—6 per gallon is obviously very low, especially in a period as the present. While the price is thus fixed so low, the consumer has to pay Rs. 2—3—6 per gallon and the margin of Rs. 1—5—0 is more than sufficient to meet transportation and distribution costs. If the Government wishes to get revenue out of this proposition, how are they justified in sharing the profit with the Burmah Oil Company which is entrusted with the distribution? Moreover, the stipulation that the fuel alcohol should be denatured with kerosene before any issues are made from a distillery is harmful to the growth of the power alcohol industry. It is true, appreciable progress could not be made by Indian distilleries because the U. S. Government did not supply power alcohol plants. But some of the distilleries now under erection definitely hope to produce power alcohol. And it is obviously the duty of the Government to come forward with special provisions to help the manufacturers

Five Year Plan for Assam

The blueprint of Postwar Reconstruction for Assam has been prepared not so much to bring the schemes within the reach of the financial resources of the province, as on the basis of the minimum needs of the people. A fiveyear plan involving an expenditure of Rs. 83.86 crores has been drawn up and, as regards the progress of planning, the order of priorities has been fixed as follows: (I) Agriculture and Forestry (2) Communications (3) Hygiene (4) Industrialisation (5) Social Services & Education. Due emphasis is placed on communications which receives Rs. 54.48 crores under the plan. Assam will have 13,680 miles of national and provincial highways and district and village roads. Education receives Rs. 8.55 crores and Public Health and Medical schemes Rs. 8.39 crores. Rs. 2.84 crores has been allotted for Agriculture and Animal Husbandry and Rs. 2.35 crores will be spent on industrialisation. Assam has been more directly affected by war than most other parts of India. For the past two years Civil administration has been more completely eclipsed and the problem of working out the transition to Peace is specially acute. Assam has considerable mineral and forest resources and the future progress depends to a great extent on the opening of air and land routes to China and Burma, the development of main railway communications and the oil pipelines. The Forestry Plan for Assam envisages the growing of sufficient timber for provincial consumption and profitable export, manufacture of paper, plastics, matches, resins, turpentine, etc. Industrial development is directly related to schemes of utilising the coal mines and realising the hydro-electric potentialities of the province, to be ascertained by fuller survey. Regarding the financing of the five-year plan, the Resources Committee have favoured a Sales Tax and a Terminal Tax on goods carried by rail or river into the province. Abnormal conditions still persist and any estimate of the revenue of Assam in the post-war years is considered difficult. The industrialisation of the province depends more on the Government of India's policy than on the attitude or activities of the Assam Government. Only 15,000 men have been recruited in Assam for the army and how many of these would want land again is unknown, but plans to meet the requirements of the demobilised military personnel are stated to be ready. Like other provinces Assam looks to the Centre for substantial financial help for the success of her economic plans.

Industrial Development of the C.P.

The report of the Provincial Industries Committee of the C.P. and Berar has revealed unexpected possibilities for the province on account of its being rich in mineral and forest resources. The Committee was appointed in November last; and working under the necessity of submitting their recommendations as early as possible, it could only undertake a rapid industrial survey and make the best of the available data and expert opinion on various aspects of the economic life of the Province. Emphasis is laid in the report on organised power development to facilitate rapid industrial progress. An immediate survey of the hydro-electric possibilities of the C.P.

and Berar has been called for and five thermal stations are also recommended in chosen areas. These stations should be linked so as to form one Provincial Grid which would be properly connected in due course to the All-India Grid system. Opinion is further expressed that the State should work the coal mines to supply coal to power stations which should be owned and managed only by the Government. The prime consideration determining the rate to be charged for electricity should be industrial development of the province and not profit or cost of production. The C.P. practically holds the monopoly of Indian manganese and the resources are by no means inexhaustible. The Committee, therefore, recommend that the State should acquire manganese mines after the termination of the contracts on payment of compensation and regulate mining with a view to conserving the mineral for national economic development and for exporting them for reciprocal advantages with foreign countries. Scope for cement and aluminium industries is also outlined and a plea for the expansion of the potteries industry is also entered. The production of mill cloth in the province is considered meagre and an increase of 52 million yards (from 184 million yards to 236 million yards) is suggested. Dealing with industrial chemicals, the Committee have recommended the establishment of an ammonium sulphate factory at Katni area and of factories for the manufacture of nitric acid, nitrocellulose, sulphuric acid, soda ash, caustic soda, chlorine and bleaching powder The Committee have also favoured the reorganisation of the Industries Department and the constitution of an Economic Civil Service to study and solve the industrial questions facing the province. The attitude of the State towards industries is clarified and the need for a thorough overhaul of the labour code stressed. The province is situated in the centre of India and possesses a large labour population, vast resources and transport systems radiate on all sides closely linking several other provinces and states. The Committee bring out the special claims of the C.P. for the location of textile, oil, paper, leather, pottery, iron and steel and aluminium industries. Valuable suggestions are also given for technical education schemes and town planning. The recommendations of the Committee are of great significance to the C.P. where the standard of living of the masses is pitiably low. Since the recommendations are all based on verified information regarding the ample resources of the province they are practicable and should be implemented without delay. The variety of resources which the C.P. has will invest planning in that province with special interest.

Planning in Agriculture

In his opening speech at the Second Meeting of the Policy Committee on Agriculture, Sir Jogendra Singh touched on practically every apect of the Indian rural problem, from the preparation of the land for cultivation to the final disposal of the agricultural produce. As the address comes at a preliminary stage in the discussions on Post-war Planning, it, is not surprising that the Hon'ble Member for Lands contented himself with a mere review of the various phases of the problem without giving any indication of either his own views or government policy for the future. Though he raised the issue of the future pattern of farming and that of the need for agriculturists' organisations, Sir J. Singh has not mentioned anything as to how far the State could take the initiative and assist in these directions. To some extent, natural economic forces are altering conditions in the villages; and the war has itself permeated the rural parts as a powerful educational force. But to think that the voluntary organisations of the poor and illiterate ryots can develop and contribute in any vital measure to their economic improvement is to put more reliance and faith on these organisations than experience warrants. The State cannot absolve itself of the primary, if by no means exclusive, responsibility of helping the Indian ryot to achieve tolerable conditions of life.

Indo-Mercantile Bank Ltd.

The first scheduled Bank in Cochin the Indo-Mercantile Bank from its inception eight years ago has made very steady progress to which the balance sheet figures bear witness. The extremely liquid position shown is perhaps less noteworthy than the progressive improvement under both Advances and Investments. That profits have responded strongly to every successive addition to resources indicates the complete success of this West Coast institution which enjoys the advantages of a composite Board and growing connections with many places outside Cochin State. Increased appropriations for Reserve and Taxation follow the increase in net profits which permits the dividend to be maintained at 6 per cent. The proportion of Advances including bills purchased to working funds (almost 50 per cent in this case) will rightly claim more attention than the ratio of net earnings to the gross profits returned for the year. The Directors' report records satisfaction with the results for 1944 and refers to the opening of new branches and an increase in share capital. The rapid expansion of profits since 1939 accounts for the ready enlargement of capital last year when the Indo Mercantile Bank's capital exceeded the conventional minimum of Rs. 5 lakhs laid down for admission to the 2nd Schedule.

Inasmuch as a further increase in capital is desired because of the Bank's branches and the marked increase in deposits since 1942 it will be agreed that the Indo Mercantile Bank's position warrants the addition to share capital. The balancesheet certainly shows that bills constitute a fair proportion of the assets and raise the percentage of the Bank's fully secured loans to Advances. The cash ratio for a new bank is necessarily high but the appreciation of the Bank's investments indicates that it is likely to add to its investments in the future, should deposits continue to expand at the rate of 1944 when Rs. 38¼ lakhs was added to the Bank's total liability to depositors of all classes. The Indo-Mercantile's outstanding progress is not merely derived from local knowledge and experience but on the application of sound principles of management while shareholders certainly will find in the Managing Director's waiver of honararium a very pleasing departure.

DIRECTORS NINETY-EIGHTH REPORT TO THE SHAREHOLDERS

For the year ended 31st December, 1944

The General Board of Directors begs to submit to the shareholders the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1944, together with the Auditors' Report.

The transactions for the year under report have resulted in a profit of Rs. 22,93,045-7-5 to which may be added Rs. 90,910-10-7 brought forward from the last year. After making provisions, etc., as per Profit and Loss Account annexed, there remains an available balance of Rs. 4,22,647-13-6. The Directors recommend that the same be utilized as under:—

	Rs.	A.	P.
1. Towards payment of interest on advance money received on shares at dividend rate and *ad-interim* dividend for the half-year ended 30th June, 1944, at 9 per cent. per annum free of income-tax which has absorbed	1,37,000	0	0
2. To payment of interest on advance money received on shares at dividend rate for the half-year ending 31st December, 1944 ..	2,534	9	3
3. To payment of final dividend free of income-tax for the half-year ended 31st December, 1944, at 9 per cent. per annum	1,72,330	10	1
4. To carry forward to next year's account ..	1,10,782	10	2
TOTAL ..	4,22,647	13	6

The Reserve Fund has increased from Rs. 31,56,219-1-1 to Rs. 63,00,000 which includes Rs. 25,00,000 received as premium on the further issue of 25,000 shares of Rs. 100 each, whereas our paid-up capital stands at Rs. 58,10,439-2-6. The general business and working capital of the Bank has also increased. This should be considered a satisfactory progress during the year under reference.

Since the last report we have opened offices at:

(1) Gurdaspur; (2) Kohat Cantt.; (3) Lahore (Badamibagh); (4) Amritsar (Putlighar); (5) Palwal; (6) Surat; (7) Cawnpore (Meston Road), (8) Muree; (9) Jullundur (Chowk Sudan); (10) Nagpur (Itwari); (11) Dalhousie; (12) Ghaziabad; (13) Vihari; (14) Lahore (Nilagumbad); (15) Ajmer; (16) Phillaur; (17) Jaipur; (18) Hapur; (19) Bombay (Mandvi); (20) Multan City (Chowk Bazar); (21) Tandlianwala; (22) Jamke Chatta; (23) Delhi (Paharganj); (24) Chichawatni; (25) Nakodar; (26) Jandialaguru; (27) Toba Tek Singh; (28) Kamalia; (29) Pirmahal; (30) Budhlada; (31) Delhi (Kashmiri Gate); (32) Meerut City (Sarafa Bazar); (33) Bahadurgarh; (34) Mandi (State); (35) Gorakhpur; (36) Shujabad; ((37) Jhang Mandi; (38) Baroda; (39) Lahore (Lohari Mandi); (40) Amritsar (Bazar Kathian); (41) Muttra; (42) Poona; (43) Kosi Kalan; (44) Hodel; (45) Montgomery Mandi; (46) Nagpur (Kingsway); (47) Maler-Kotla.

During the year your Bank donated Rs. 50,000 in charity.

The Directors are thankful to their colleagues on the various Local Boards and Local Advisory Committees for their co-operation. The Board heartily thanks the Staff for the results achieved. They also warmly thank the constituents of the Bank for their continued patronage and confidence.

By Order of the General Board of Directors.

AUDITORS' REPORT

We have verified the Balance Sheet of The Punjab National Bank, Limited, as on 31st December, 1944, along with the Profit and Loss Account for the year ended that date, as above set forth, with the books and accounts as kept at the Head Office and the Returns received from the several Branches, and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account is drawn up in conformity with the Law, and the Balance Sheet exhibits a true and correct view of the Bank's affairs according to the best of our information and explanations given to us and as shown by the Branches' Returns and Head Office books which have been kept as required by Section 130 of the Indian Companies Act.

Dated 21st February, 1945.

Authorised Capital - - - Rs. 10,00,000
Divided into 2,000 Preference Shares of Rs. 100 each and 80,000 Ordinary Shares of Rs. 10 each.
Payable in case of both the shares half on application and half on allotment.

PRESENT ISSUE

2,000, 5% Cum. Preference shares of Rs. 100 each	Rs.	2,00,000
40,000 Ordinary Shares of Rs. 10 each -	,,	4,00,000
	Rs.	6,00,000

The Managing Agents, Directors and their friends have agreed to take up 30,000 Ordinary Shares and the same shall be allotted to them in full. 2,000 Preference Shares and 10,000 Ordinary Shares are now available for allotment to applicants.

Mr. Nagarmal Bhuwalka, one of the promoters and directors of the Company has entered into an Agreement with Rai Bahadur Gunendra Nath Roy of Dhanbad to take a sublease for 900 years of the Huntodih Colliery at a salami of Rs. 1,50,000 and also for purchase of certain machinery and other properties at Rs. 1,75,000.

It has been agreed between Mr. Nagarmal Bhuwalka and the company that Mr. Nagarmal Bhuwalka will transfer all his rights under the said agreement in respect of the said sub-lease and the said properties to the Company at the same price and subject to the terms and conditions on which he acquired same and that the working and development of the Colliery upto the date of completion of the sale shall be on account of the Company. No profit will be paid to Mr. Bhuwalka for the said acquisition, but he will be entitled to all the moneys paid or spent by him in connection with the purchase of and subsequent working of the said colliery with interest thereon at 5 per cent per annum. The entire purchase price is payable in cash.

The Huntodih Coal properties consist of two adjoining mouzas, Huntodih and Mechara, the total area being about 1,432 bighas. The properties consist of selected high-grade coal. The Colliery is already working satisfactorily and is equipped with the necessary machinery, boilers and other equipment besides owning a big bungalow and quarters for office staff and labour. The Colliery is served by two Railway sidings and is on Mohuda Railway Station on the Bengal-Nagpur Railway.

The properties were formerly worked by the Huntodih Coal Company, Limited (Managing Agents, Shaw Wallace & Co.), and later by the North-west Coal Co., Ltd. (Managing Agents, Andrew Yule & Co., Ltd.)

The Colliery is capable of a monthly output of more than 10,000 tons and to increase the present raisings to enable the company to reach this production figure, two pits which are now under water have to be dewatered and some of the existing machinery has to be reconditioned.

As is well-known, the margin of profit under current conditions is substantial in a coal mine. There is every reason to believe that the price of coal will, for some considerable time, continue to be at levels that will provide a reasonable margin of profit. The various post-war reconstruction schemes may be regarded as factors guaranteeing increasing demand for coal in accordance with accelerated industrial and economic expansion.

The coal mines stand in a particularly advantageous position with regard to Excess Profits Tax as compared with other industries. In the case of coal companies, bonus is payable on raisings in excess of a fixed target. This company particularly should be in a position to derive considerable benefit from the bonus allowance on excess raisings.

Recently the Bihar Government sanctioned extension to the Mohuda Power House managed by Messrs. Andrew Yule & Co., Ltd. This Power House is situated close to the above Colliery and sufficient electric power is assured to the Company in the near future. This will be of immense value in the development of the mines.

It is expected that the company will be in a position to pay dividends shortly.

COMMISSION AND BROKERAGE.

The Articles of Association provide for the payment of commission not exceeding 10 per cent of the nominal value of the shares. In addition to the above, the Company may also pay usual brokerage to approved brokers.

The Directors have decided to pay brokerage at the rate of One Rupee per Preference Share and Four Annas per Ordinary Share to recognised Brokers or Bankers on allotment made in respect of applications bearing the stamp of such Brokers or Bankers. No commission will be paid in respect of the present issue.

MANAGING AGENTS.

The Articles of Association provide for the appointment of Messrs. Bhuwalka Bros. Ltd., as Managing Agents of the Company from the date of incorporation of the Company for a period of 20 years on the following remuneration:—

(i) An office allowance of Rs. 1,000 per month; and
(ii) A commission of 10 per cent on the nett annual profits of the Company as defined in Section 87C(3) of the Act before setting aside for taxes.

INTEREST OF DIRECTORS.

M/s. NAGARMAL BHUWALKA, RAMKUMAR BHUWALKA and B. S. GUPTA, three of the Directors are Promoters of the Company and are interested in the remuneration and commission payable to the Managing Agents. Mr. Nagarmal Bhuwalka is also a Director of the Managing Agents' Company and is the Vendor of the various properties to the Company mentioned above.

No promotion money will be paid by the Company either in cash or in shares or otherwise.

Full details are furnished in the prospectus which will be supplied on request and on the basis of which alone application for shares will be considered. Copies of the prospectus can be had from the registered office of the Company or its Bankers.

A copy of the Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal. Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

Clive Street Gossip

A correspondent, who, among others, has been closely following my gossip on the question of commercial safeguards and the Convention which should take their place, has suggested that my comments and suggestions boil down to this: that British managing agencies will be thrown out by one window and brought in by another to be re-instated in the proprietorship as well as the Executive of Indian business units. He asks, what virtue I can claim for this ingenious process. I must concede that, if my comments amount to no more than this, not only can no virtue be claimed for this process, it cannot be called ingenious either. But I contend that what I have been writing on this subject during the last few weeks certainly does not amount to this. The careful reader—and I must say, my correspondent does not come under this category—would have noted that I have been dealing with two different, though inter-related, problems. The first concerns the removal of commercial safeguards and the rights of British commercial interests in the new regime. And the other is the use we may make of British industry and commerce to remove some of our shortcomings and meet more satisfactorily some of our vital needs. The two problems are distinct, though it is possible to link them together and make the solution of each of these problems more readily acceptable to the parties concerned. It will be possible for the British interests to feel that, if they give up some of their rights without a fight, they will be getting more than mere compensation in the larger opportunities which active co-operation in India's economic development will afford them. Likewise, Indians may feel that, if they have accepted the obligation to exercise restraint in their dealings with long standing British commercial interests in India, they will also have the advantage of the close co-operation of British industry in India's industrial development, an advantage, which normal unregulated trade relations with any foreign country cannot be expected to yield.

* * * *

Intrinsically, the two problems I have considered are separable both in thought and in actual policy. It is possible to deal with the future of British interests separately and look round for the kind of economic ally which, I believe, it will be agreed on all hands, we need badly. In that case, the solution of these problems would be left to the opportunism of the parties concerned and the help that each may find in the adventitious aids of changing circumstance. The door would always be open for pressing every advantage, for hard bargaining as well as for intimidation of every kind. The chances of strongly worded demarches can not then be ruled out. Nor, for the matter of that, the chances of every industrial nation, which will be in a position to help us, holding out for special privileges. But when these two problems are taken together, the solutions are seen in their proper perspective. Every sacrifice or concession is balanced against a corresponding gain; and the bitterness of feeling which negotiations between two nations always engender and which are inevitable because of the proneness to take an one-sided view is minimised. It is in this view that I have dealt with these problems together. And it is, to say the least of it, an unfair representation of my comments to suggest that they amount to no more than throwing the British interests by one window and bringing them in by another It sounds plausible. But it is all the more unfair for that reason. It is not the physical presence of the foreigner that matters. If there are people in India who think otherwise, the sooner they are cured of these stupid notions, the better. Foreigners increase, not dwindle, in numbers, with the increase in the commercial and industrial importance of a country. In fact, it used to be said that there were more Germans in Paris in the old days than in all the German colonies put together. The question is not whether foreigners are present in large numbers or small, but whether the basis of their activities is mutual or one-sided advantage. If I have suggested the infusion of a British element in Indian enterprises, I have asked only for the change from one-sided advantage to mutual advantage.

* * * *

The point may, perhaps, become clearer if I go a little more into detail. Why is it that we have learned to look on British industrial and trading interests in India as responsible for a drain of wealth from this country? It is certainly not because that, as a worker, the average Briton is not worth his hire or does not earn his keep. Indians, who have employed Europeans in their offices and factories, have rarely had to complain that they do not give value for their money. Though, no doubt, they have certain advantages over the average Indian by reason of their belonging to the ruling class, these advantages do not by any means fill the whole picture. It is not the efficiency of the individual then that is in question What Indians object to is the system that has grown with British business in India, a system that has steadily increased the handicaps of India and Indians, and not unoften added insult to injury. One dominant British concern in any branch of business automatically leads to a hundred disadvantages for Indians in many other branches of life. It means not only that there is less room for Indians in that walk of life, but it means a handicap for Indian banking and Indian insurance. Indian brokers are more at a disadvantage for that. Indian industry is put back by reason of orders for spares consistently going abroad. It means, too, that Indian shareholders are kept away from an effective control of the business concerned. It is this state of affairs that we are out to put right, not to deny the British the opportunities of fair exchange which they have as a matter of course with any other country in the world.

* * * *

To change all this at a stroke would not only be impossible, but would also involve a certain amount of injustice. To pass a whole bunch of statutes which would cut to the bone the business of British Banks and Insurance Companies, drive British brokers to despair if not bankruptcy, turn Managing Agents out of office and all that and all that is happily impossible and inexpedient. Indian business has grown in the face of all these handicaps; and what is more, British interests in India have shrunk. The political mood also seems to have changed for the better. There is not the same sort of cocksureness about the equitability of commercial safeguards That is on one side. On the other, India is on the eve of planned economic development. She wants to develop a large part of her potential power resources. She wants to make machines and build engines. She wants to build a Navy, and an air force and possess a modern mechanised army. She wants an automobile industry and all basic and heavy industries. All this represents a task to which our native genius and acquired talent are not yet quite equal. It is both fair and wise, and discreet, to ask ourselves: Why not use this situation to come to an understanding with Britain which, by a fair distribution of advantages and of sacrifice, would satisfy both parties, teach them both to look forward instead of backward and thus erase the least traces of bitterness about the past? That, I emphasise again, is the point which I have been trying to drive in the last few weeks.

* * * *

Such an understanding is possible only if each party is prepared to consider also the paramount needs of the other party. There must be readiness to get over the acerbities of the past and to make the

most of the future for building up a new fund of goodwill. On our side, it would be well not to harp any more on the old drain theory but to mention, when the context calls for or allows it, such good as British capital may have done to India. We must be prepared to bear in mind the extremely difficult position of Britain's national economy in the post-war period and the gain that may accrue to her if we desist from spitefully turning our custom to foreign countries. We must recognise, too, what a help Britain can be in our economic regeneration, if we can clarify the basis of co-operation to her satisfaction. Of course, what we shall do will depend a great deal on Britain's disposition to change her attitude to India. And at the end of this world war, it would be hard even for Britain to cling to her old illusions about the benefits of British rule. We have passed through a famine in which Nature had but little part. We had been helpless, though only for a time, before the advance of a particularly relentless enemy. The course of the war had shown at every stage that, in keeping India down, Britain had also weakened herself. If the whole world is today interested in the Indian problem and its judgment is not complimentary to Britain, it is because the world realises how much Britain had enfeebled the forces of civilisation by obstructing the progress of this country. Britain must make amends in an appropriately contrite spirit. Not only must she give up the old spirit of obstructionism and accept all the implications of India's independence, she must also be ready to do her best in the future for the economic progress of this country.

* * * *

Given such a change of spirit on both sides, the transformation of British business in India from the blighting bossdom of old to a truly vitalising co-operation will be almost a natural development. The exact basis on which individual Britons will co-operate in Indian enterprises is not defined by statute or convention, but evolved and clarified from time to time by the individuals concerned. The history of the Tata Iron and Steel Co., is an illuminating example of such co-operation. It may be that times are different now and foreigners will refuse to co-operate in the development of Indian industry without something like control or proprietory interest. It depends upon the public spirit and business acumen of Indian industrialists to obtain the co-operation of foreign industrialists on the best possible terms, while it will be for the Government to be on the look out and ensure that no concessions, which are not in accord with the national economic policy, are made to foreign collaborators. Questions of general policy are always distinguishable from the concrete instances of contracts between private parties which will naturally be governed by the exigencies of the position on hand It is not correct, therefore, to say that my proposals involve the reinstatement of Britons in the proprietorship as well as the executives of Indian enterprises. It may be partnership in a few cases, mere employment in most others and a mixture of the two in many. But that cannot be regulated. What public policy will concern itself with is whether the association of foreigners is of one sided or of mutual interest. It will aim at the promotion of a proper spirit of mutual helpfulness by making and giving concessions in matters amenable to policy and leaving the door open, within limits, for collaboration of foreign nationals. That is why I said that the Convention, which India will conclude with Britain, should assure the latter of M.F.N. treatment in matters of trade and also of a general preference in the placing of orders and contracts either for goods or for services. If India could only assure Britain that she will afford her every help she can, consistently with her own interest, in the solution of the latter's post-war economic problems, the outlook of the future will be immensely brighter in every sphere of national and international life.

* * * *

The Golden Jubilee of the Punjab National Bank is an occasion for all-round feelings of gratification. One of the oldest Indian joint stock banks, it is in one view the oldest. In banking more than in any other sphere of business, survival is sure testimony to a number of sterling qualities. I have reason to be specially jubilant over the Jubilee of the Punjab National. My mind runs back to the days when the Punjab National had more than one rebuff in its efforts to enter the clearing in Calcutta. A leading bank is a national institution, with a life and longevity in which fifty years is no long span.

* * * *

On another page appears a comprehensive and precise review of the career of the Punjab National Bank Limited by the Chairman who presided over the golden jubilee on 13th April, 1945. The observations which duly supplement the history of the Bank (now the third largest in India) throw into focus both durable, past achievement and the stabler prospects to which all look forward. The latest balancesheet shows how securely the position has been built up to warrant Lala Yodhraj's serene confidence. Inasmuchas bills accepted show up well in comparison with other assets it may be said that the Punjab National has made full use of its opportunities. Advances total Rs. 10.28 crores; Bills total Rs. 6.10 crores and exceed the cash balances amounting to Rs. 5.85 crores The Punjab National Bank's favourable experience in the past year reinforces also the opinion expressed as to possibilities arising from a steady increase in resources. It is, of course, unnecessary to dwell on the features of the balancesheet in detail to indicate how far the Punjab National Bank can derive advantages from a speed-up of industrial development. The main fact is that Deposits would continue to flow since the supply of money would not fall off and future dishoarding would contribute to the expansion of deposits foreseen at this juncture. Lala Yodhraj's reliance on the spread of the banking habit, as and when branch extension continues, would appear to be unexceptionable. The decay of moneylending to which he referred is a cardinal factor for the future expansion of banking, having regard also to the real prospects in countries adjoining India. The Punjab National Bank's meritorious achievement lies not merely in having surmounted the crises of infancy and maturity but in having opened 173 branches and pay offices and consolidated an organisation that is fully equipped to serve its clients all over Northern India. There are many cities in which the Punjab National has more than one branch to serve its still growing clientele who well might derive satisfaction from the 50 years' record analysed to prove that the Punjab National Bank because of its modest beginnings and unclouded record has a special claim on their loyalty. To the chapter added by Lala Yodhraj to the story of success their attention needs to be drawn again because the war years have been marked by a skilful, single-minded policy for which there can be nothing but praise.

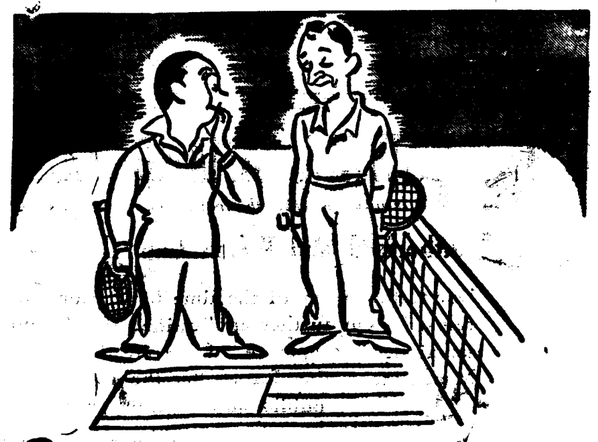
National Bank

The banker's view of the ordered sequence of events in India and beyond elevates Mr. Langford's address to the National Bank's shareholders well above the routine level of such reviews. His views on India's industrial progress might seem refreshingly optimistic to those with direct experience of shortages here. But his individual opinion that Indian capitalists can be relied upon to develop industries without any attempt at hothouse forcing puts a wholly different complexion upon the work of the industrial panels invited to assist the Planning and Development department. The National Bank's enhanced resources with deposits totalling £61 million in view of an increase of £4.75 million in 1944 hardly require special notice, but the doubling of deposits within five years at least should suggest that exchange banks have obtained their due share of the increase in bank deposits recorded in India. The Chairman's view of the Indian population problem is related to his own advocacy of agricultural improvement in the interests of food supply. This is a practical view to which Indian economists have drawn attention and the Central Government's 1,000 crore plan for Indian agriculture indicates that renewed emphasis on the contrasted merits of industrial and agricultural development has not been lost sight of to-day. The survey of a successful year is made complete by the appreciative reference to the overseas staff. Some idea of what has been done with limited personnel has been obtained through the recent controversy over home passages for civilians, but Mr. Langford James' account of what has been done to reduce strain and what is due to be done should prove of unusual interest for those who know that long-established banks have far too much on their hands and have been even known to turn away business.

Eastern Bank



Sir James Leigh-Wood in a statement to the shareholders of the Eastern Bank has indicated clearly and admirably how the Exchange Banks have been by-passed by the trade controls in force but have made real progress in the matter of resources and their employment to advantage. The Eastern Bank territories served include Iraq where inflation has been acute and has been dealt with in the ways adopted in India. The issue of prize bonds and special loans to absorb vagrant purchasing power recalls the manufactures of Indian financial history in 1943-45 as much as the difficulties arising from Allied war expenture in countries at war but without actual experience of effective price controls The Iraq currency problem is on all fours with that of India to whose circumstances Sir James devoted a paragraph in the statement circulated. The Eastern Bank's ability to maintain the dividend for 1944 at 5½ per cent is less noteworthy than the neat outline of the future presented by the Chairman. The entry of the U.S.A. into the Middle East, Britain's pending export trade revival and the scope for real recovery in exchange banking generally are indicated in a more than formal review of the Eastern Bank's operations in the past year. They deserve notice in India for several reasons apart from the Bank's connections with the Sassoon dynasty. To his own confident estimate of trade revival miners control some interest attaches in view of the Prime Minister's declared preference for Free Enterprise.

New Huntodih Coal

An announcement relating to the offer of shares in a new coal company will be studied with interest by investors to whom coal prices and prospects have been absorbing topics. The new company takes over high grade properties already developed with railway sidings adjacent to Mohuda station on the B.N.R. Formerly part of the Northwest Coal Company's property, the colliery has an estimated output of over 10,000 tons per month and only dewatering of two pits and reconditioning of machinery have to be carried out. Apart from the guarantee of high prices there is the official revised bonus scheme to stimulate output and the promoters duly stress the point that the new company will be in a position to pay dividends shortly on both preference and ordinary shares. Half the issued capital has been taken up by the Directors and their friends and the present offer at par relates to 2,000 preference shares and 10,000 ordinary shares. In view of the coal share market being so firm and active these days, it may be assumed that New Huntodih under its new Board will appeal to a large circle of investors for whom coal will always appear as raw power, unlimited.

SHARES

Some Ordinary shares of ARYAN SILK & COTTON MILLS LTD. of 12, Chowringhee Sq., Calcutta have been forfeited and are accordingly available for sale at par i.e., at Rs. 50 per share. Interested buyers may communicate to the above address. Application from Bonafide Share selling Agents can also be entertained.

Other Branches:
"JAIPURIA HOUSE", KALBADEVI ROAD, BOMBAY
SARASPUR GATE, AHMEDABAD

The Subscription list will open on 21st April, 1945 and will close as soon as it is estimated that application for over 87,903 shares are received and in any case not later then 15th May, 1945.

Gateway of India

(From Our Correspondent)

BOMBAY, April 17, 1945.

The problem of cloth scarcity in the country received last week extended notice at the hands of those responsible for directing the affairs of the Textile industry. It is a heartening sign that there is a feeling of apprehension sometimes bordering on nervousness, on the part of those concerned that the prevailing public distress and outcry against cloth shortage may reach disturbing proportions. Yet, curiously enough, one could notice at the same time the absence of adequate appreciation of the precise objective position as regards cloth shortage and as regards the sufferings of the people. Mr. Krishnaraj M. D. Thackersey, both at the press conference held last week and in the speech at the meeting of the Control Board, paid an unconscious compliment to the press of the country when he complained that the press had exaggerated the situation and had, besides, blamed the industry for the present state of affairs. It is true that some of the vernacular papers have been guilty of a lack of restraint in portraying the public distress, but the charge against the other sections of the press is hardly substantial. The difficulty is that those in charge of textile supply, control and distribution are themselves at variance with one another in regard to the precise factors responsible for the present scarcity. The press cannot very well be blamed therefore for trying to discharge its duty in so baffling a situation. On the other hand, it deserves a measure of credit for accepting without question the **bona fides** of the industry and of the authorities. It has also done a great service to the country by focussing the searchlight of public opinion on this question. To adopt a surgical metaphor, the press has merely applied fomentation to a boil which has taken too long to burst, and such opening of the boil was certainly necessary to enable the bad matter to be thrown out of the body.

* * * *

It is a sad thing to reflect that the controlling authorities themselves admit that there is no getting away from that fact. The distribution scheme has been a grievous failure, while the loss of production is increasing on account of the lack of good quality coal. In the last three months alone, the loss of production on account of coal shortage is said to have been 100 million yards. The shortage of fuel is expected to become worse unless something is done about it, and of that there is no hope. As Sir Shri Ram explained at the press conference last week, the real difficulty has been lack of quality coal, and he said that as far as fuel goes, the emphasis on supplies of good quality coal cannot be exaggerated. Another difficulty has been that the mills are not in a position to work more shifts which depend really on the availability of labour. Unless the government are prepared to release building materials for the construction of dwellings for the mill hands they cannot be really persuaded to work more shifts. Mr. Krishnaraj regretted that government have been unable to appreciate this point of view and has warned them that without some assistance in this regard, the increase of production cannot be achieved.

By far, the most important decision taken by the industry is towards reduction of the number of varieties manufactured by them, so as to concentrate upon what has been called 'utility cloth.' As the government appears to have given an assurance not to import cloth of finer qualities, the mills can with an easy conscience devote themselves to the production of medium styles. These will include sarees, dhoties, shirtings, etc., which the ordinary consumer habitually wears. The public must be trained to be content with cloth of medium counts, as otherwise the distortions it produces in several directions may affect the position as regards supply. For, the production of fine cloth requires special machinery and the trouble and the labour of producing it cannot justifiably be undergone in the present cloth impasse. It is therefore interesting to note that the Standardisation Committee of the Textile Board has recommended the standardisation of production along a few lines. Sir Shri Ram stated that in a few months the adoption of this programme will help the supply position to the extent of 400 million yards in a year. The job is not going to be easy as it involves technical difficulties, but we may expect the mills to surmount them in course of time. The expert committee has suggested a drastic reduction in the number of varieties of cloth and counts of yarn produced by the mills, besides the cutting out of the production of such qualities as consume too much yarn such as furnishing fabrics, heavy drills and luxury cloth.

* * * *

In its resolution dated 7th April, 1945, the Industry Committee of the Board stated its awareness of the acute situation in the country and urged every millowner to increase the supply of cloth and yarn by reorganising their spinning sections and working longer hours. It has also requested government to increase the supply of raw materials needed by the industry such as coal, power, millstores spare parts, etc., and ensure quick transport. An important recommendation is that the entire distributive machinery in the country should be placed under the direction and control of the Textile Commissioner. It has also urged the complete stoppage of the export of cloth and yarn in the present emergency, besides requesting the Supply Department to reduce their specifications as well as the demand both directly and by the substitution of other fibres in place of cotton.

A slightly anomalous position prevails in the control of handloom products. While it is gratifying to note the progress made by the handloom industry and the way it has come to the rescue of the consumer, it is perhaps not entirely advisable that handloom products should remain uncontrolled as they now are. To a question put to them on this point, both Mr. Krishnaraj and Sir. Shri Ram stated that these are matters which come within the purview of the newly created Handloom Board. The handloom industry may require separate consideration at the hands of a separate body, but so far as the supply and price control aspects are concerned, it would have been better if the Textile Control Board had been charged with the responsibility for control and supervision. As it is, the position smacks of a dyarchy which bodes no good, at least as far as the public is concerned.

(From Our Correspondent)

MADRAS, April 18.

"I must frankly tell you that the Gandhian way of planning is the only sound planning for this country. Gandhiji wants to develop cottage industries in order to establish a new social and economic order based on non-violence, non-exploitation, dignity of labour and human values. He wants to uphold a civilisation which is based on simple living and high thinking," said Mr. Agarwal, the author of the Gandhian Plan, opening the second Madras Provincial Handloom Weavers' Conference, held at Mandapeta. The 'charka,' therefore, symbolised, he continued, not merely a cottage industry but a new kind of civilisation which alone was capable of establishing lasting peace and prosperity not merely in this country, but in the whole world. Capitalism, he added, had failed to establish peace on earth ; it had resulted in bloody wars of ruthless destruction. Communism had given bread to millions in Russia, but had robbed them of their legitimate individual freedom. If we wanted to steer clear of both these extremes, we must find shelter in Gandhism. "People think" he further remarked, "that Gandhiji is mediaeval in his outlook and that he is trying to put the hands of the clock back. But I am convinced that Gandhiji is not behind, but a century ahead of his time. He is the prophet of the future world order which will be based on simplicity, decentralisation and cottage industrialism." Turning to the problems of handloom weavers, he said, the first was the severe competition the weavers had to face from the mills. Although handloom weaving absorbed about ten million people and the total number of handlooms was two million and the value of hand-woven cloth per annum amounted to Rs. 73 crores, the fact remained that the plight of the handloom weaver which was bad, deteriorated during the war years. One of the ways in which the present competition between the mills and the handlooms could be easily eliminated was the imposition of restrictions on the types of cloth which the mills and handlooms should be allowed to produce respectively. The Provincial Government might enact that the mills should not produce sarees, dhoties, towels and handkerchiefs. This would be substantial protection to the handloom industry. The State could arrange to market handloom products at remunerative prices, it could carry research in technical improvement and make available the fruits of research to the handloom industry. But the real and lasting protection of the weavers, in Mr. Agarwal's opinion, lay in the 'Charka.' So long as the weavers continued to depend on the "kindness" of the mill-owners for their yarn they would never be able to stand on their own feet, he concluded.

Rationing of firewood in the city of Madras was introduced in March last year after a good deal of procrastination. Even then full ration could be given only three months later. This did not ensure people that they were at the end of their troubles in regard to firewood. For, the Government did not take advantage of the time they had at their disposal to build there stocks. The rains came down in November and December as was expected. In January and February many people were subjected to great hardship for want of timely supply at the depots, but they bore it all on the assurance that the matter was engaging the active consideration of the Government and that supplies were being rushed to the city. Pleading the same excuse viz. depletion of supplies in November and December due to rains in the districts, the Government now suggest a further reduction in the ration. It is remarkable that a Government which has the resources of the whole Province at its disposal and unlimited powers to take whatever action, it deems fit, with no end of special officers and no dearth of funds should still find itself nowhere near the solution. It is expected that the government will fulfil the promise made at the Fire Wood Committee meeting to get supplies from nearer places like Chengluput, Chittoor and Nellore, Transport is said to be the bottleneck and if it is so, it is hoped A. R. P. and military motor lorries should be utilised to supplement railway facilities for prompt transport of firewood to the city.

Resume of Commodity Markets

The features of the week in the commodity markets are again the strength of the bullion market and the weakness of the cotton market. The statement by General Eisenhower that the war will continue to a finish and that the announcement of the termination of hostilities will not come about until the whole of Germany is occupied and the death of President Roosevelt were encouraging factors for bullion operators. But a definitely irregular tendency is noticeable in the last three days and offtake is not very large. As for the cotton market the lowering in the basis of tenderable cotton and the fears that there will not be any large increase in exports have resulted in a further decrease in prices. The jute market has been steadier while the jute manufactures market is slightly easier for forward positions, expectations of an improvement in production and a decrease in prices after March 1946 being responsible for the quiter undertone. The position in the piecegoods market is unchanged in all the centres. The decision of the Government to re-allocate quotas to the various provinces is eagerly awaited. It is felt that the Textile Commissioner for India will be able to formulate a scheme after completing his tour of Eastern India.

* * * *

The raw jute market has been definitely steadier in spite of reports of favourable weather conditions in the jute growing districts. As there is shortage of agricultural labour and as there has already been considerable delay in sowings, it is felt that a speeding up of cultivation will not be possible. Any small increase in the yield will be absorbed as mill consumption during the remainder of this year will be on a larger scale and exports also might be expected to improve, particularly to France. That is the reason why even with the easier tone of the jute manufactures market, holders of jute in the mofussil centres have not been keen to dispose of their stocks. Actually, during the period under report a rise in prices has been recorded. There is a shortage in bottom grades and a good premium is offered for all varieties.

In the jute manufactures market the future outlook is not clear though it is generally agreed that for the rest of the year there will be good demand for hessian and mills cannot have any great difficulty in disposing of their output. As for Heavy Goods, there is a feeling that the conditions of October-November last year might repeat themselves and that if there is no large improvement in demand from the Far Eastern countries following their reconquest, it may even be necessary to seal a small percentage of sacking looms.

* * * *

Important decisions are being taken by the Textile Control Board in consultation with the Government of India. It is admitted that the cloth crisis is not capable of easy solution especially as in 1945 there can be no large exports of finer styles from abroad. With hoarded stocks very nearly consumed and with no reserve capacity, it is feared that it will not be possible to meet the requirements of the average consumer unless there is a re-adjustment in production in the cotton textile industry and mills are enabled to produce as much as they can with suitable supplies of mill stores and fuel. It is proposed that there should be a complete rationalisation of the industry's output and that the "utility cloth" scheme should be introduced in place of the standard cloth scheme which has now outlived its usefulness. Fears are entertained in some quarters, that the "utility cloth" scheme might meet the same fate as the standard cloth scheme owing to the difficulty in determining the tastes of the various classes of consumers and the obstacles in production. It is pointed out that even at the present moment many styles have gone out of production with the shortage of chemicals and other supplies and that rationalisation of production or any other scheme cannot possibly result in any large increase in output. By the time the experiment succeeds, the position in the industry would have vastly altered and the efforts of the various producers to make the scheme a success would have been in vain.

* * * *

It is to be expected that these considerations would not have been overlooked by the Textile Control Board and that the best under the present circumstances would be done. The move on the part of the Textile Commissioner for India to re-allocate quotas for the various provinces, with allowances for changes in climatic conditions, is perhaps the wisest under the circumstances as it could be then expected that all available supplies of cloth and yarn would be equally distributed in both the surplus and deficit areas.

* * * *

There has been a cry that textile goods have been smuggled into China from Bengal through Tibet in recent months. It is rather curious to note that the Secretary of the Department of Industries and Civil Supplies said in the Council of State that only very small quantities have been sent to China. The Secretary's reference is perhaps only to official exports and cannot be regarded as a refutal of the grievances of Calcutta piecegoods traders. The Textile Commissioner for India who is on a visit to this province, is perhaps in a better position to get information on this point.

BOMBAY MARKETS

BULLION

Bombay, April 20.

It has been an interesting week for silver. Heavy bear sales encouraged bulls to demand delivery. Since available stocks were concentrated in a few hands bears were obliged to pay penalty for non-delivery as high as Rs. 4-4. The Committee of the Bullion Exchange discussed the question and resolved that, if shorts defaulted in delivery, the buyer may buy in open auction but shall not demand more than one rupee penalty for silver and ten annas for gold above the rate for new delivery prevailing on that day at 1 p.m. The rule is effective from April 16.

The Exchange authorities also petitioned to the Reserve Bank to increase offerings to relieve scarcity. On Tuesday Budlee rose to Rs. 4-8 against bears and the Reserve Bank offered additional 300 bars at the fixed rate of Rs. 132-8. As a result of this special measure the market declined by Rs. 2 to Rs. 127-8 on Wednesday but to-day a brisk offtake and the announcement that there would be no offering by the Bank Friday caused a spurt in the price to Rs. 129-1 with spot quoting Rs. 131-1. Gold settlement price declined from Rs. 74-8 to Rs. 72-12 on Monday thanks to the resolutions of the Committee but the daily offtake estimated at 50,000 tolas has steadied the market. Gold forward is now quoting at Rs. 74-3, spot being firm.

The Reserve Bank initiated this week the system of selling 25 bars only to each broker to counteract bull tactics but this is easily got round. The Bank authorities have also circularised banks that the maximum advance against bullion should not exceed Rs. 10 lakhs and are pressing banks to ask higher margins. The market is undeterred by these measures as loopholes are legion for speculators. The policy of checking speculation is half hearted in the absence of steps ensuring that supplies do not accumulate in few hands. The decision to stop offerings on Friday in this crucial week is deplorable.

Jute and Jute Manufactures

(From Our Correspondent)
Special to "Indian Finance"

Calcutta, April 19.

According to the published figures the Mills produced a total of 90,367 tons during March an increase of more than 16,000 tons over the production for February which, however, was a short month made shorter by a holiday. The production in March brings the average for the nine months July 1944 to March 1945 to 82,976 tons or 924 tons better than the average standing at the end of February. In fact the production level reached in March exceeded that of any other month of the current season with the exception of August and October. Of the total production, 11,786 tons or 13 per cent was on Government account, higher by one per cent compared with the previous month. Hessian production amounted to 37,907 tons comprising 14,29,62,945 yards of which 33,880 tons or 1,308 lakhs yards was on Commercial account and 4,027 tons or over 120 lakhs yards on Government account. Sacking production comprised 48,687 tons or over 1,165 lakhs yards of which 41,440 tons or 1,010 lakhs yards were on Commercial account and 7,247 tons or 154 lakhs yards on Government account. It would seem that the slight improvement in the coal position during March assisted in increasing production to some extent.

The increased output of manufactured goods during March has been reflected in the stock position. Stocks of manufactured goods held by member mills of the Indian Jute Mills Association, including those held by the Gagalbhai Mills, at the end of March discloses an increase over the previous month of nearly 10,000 tons. Both Hessian and sacking stocks have shared in the increase the former being 6,247 tons higher and the latter 3,744 tons higher than February. It seems unlikely that the increase in stocks is in any way due to curtailment in the available shipping space as in view of the war situation at present, no valid reason occurs to us in support of such a contention.

Analysis of Jute Imports into Calcutta and the Mills stations shows that the arrivals in March viz. 25,65,246 maunds were higher than the February figure by over 1 lakh maunds but were almost 2 lakhs maunds below the average for the eight months July 1944 to February 1945. In March the arrivals by boat decreased sharply and amounted to only 52 per cent of the average monthly figure for the previous eight months. Similarly arrivals by vessel and rail declined by about 8 per cent and 3 per cent respectively. However, the total arrivals upto March this year compares favourly with the total arrivals for the same period in the season 1943-44 being 2,46,09,865 maunds as against 2,00,12,551 maunds indicating a corresponding improvement in transport facilities during the present season.

Several of the single shift steam driven mills are working this week but it is highly probable that they will have to close down again in a few days' time unless more coal is forthcoming.

Although details are not available, it is reported that the U.S.A. would be prepared to take over some of the sandbags lying in stock with Mills and that negotiations towards this end are now in progress. As the total quantity held in Mills' godowns on Government account is 20,234 tons there can be no doubt that mills will be very glad to get rid of them for reasons of godown space alone.

In the Pucca Bale market no business is reported with Mills but business for export has been done in Firsts and Lightnings at minimum rates. Business done in the last few weeks has been sufficient to ease sellers' position and therefore pressure to sell is not so much in evidence today. In fact some sellers have advanced their prices for Firsts and Lightnings by one rupee.

Mills have taken a moderate interest in Loose Jute offerings and business has been done almost daily but not on any large scale. Supervised Jat Bottoms alone were done at Rs. 13/4 to Rs. 13/8 with buyers over. European packing sold at Rs. 16/12 and Rs. 13/12 for Middles and Bottoms. Supervised Jat in assortment was done at Rs. 16/- and Rs. 13/- and Middles alone sold at Rs. 15/12. Megna side Jat jute was sold at Rs. 16/4 and Rs. 13/4 and Bottoms alone at Rs. 13/8. Sellers are now keener to do business in Middles alone (which are offered at a discount) than in Bottoms alone the demand for which is fairly widespread with few sellers in evidence. The present tendency is towards higher prices in spite of more favourable reports on new crop prospects which have greatly improved due to rainfall in the jute districts, especially Eastern Bengal.

Until a day or two ago there was a good demand for Hessian and Mills sold a fair quantity at maximum rates up to March 1946.

There has not been the same strength in the Heavy Goods section as in hessian although maximum prices have been paid for Heavy Goods up to September this year. Some of the heavy goods business for forward delivery at maximum prices was done in combination with hessians for near delivery. Quotations on Thursday, 19th April 1945 were as follows:—

WANTED

Applications in prescribed form are invited for the post of the Director, Jute Agricultural Research under the Indian Central Jute Committee on Rs. 750—50—1,250—p.m. A higher initial salary upto Rs. 1,000 p.m. may be given if the qualifications of the candidate so merit. Qualifications required are an initial degree in Agriculture or Botany followed by a post-graduate degree in plant breeding, not below a 1st Class M.Sc. of a recognised University, with subsequent practical experience of research in plant breeding. Evidence of ability to direct research in biological sciences must be produced. The last date for the receipt of applications is the 30th April, 1945. Further particulars and the prescribed application form can be obtained from the undersigned.

B. DAS GUPTA,
Secretary,
Indian Central Jute Committee,
No. 4, Hastings Street, Calcutta.

JUTE

(By Our Staff Correspondent).

Calcutta, April 19.

Steadier conditions have been noticeable in the raw jute market during the past week. The publication of encouraging production figures for March and the reports about the possibility of a sustained improvement in the coal situation have given rise to hopes that mill consumption would be larger in the coming months. It is also felt that exports would improve and that France would soon be in a position to take up large quantities of jute. Mill buying has not increased to any great extent but it is stated that purchases cannot be long delayed and that with the completion of the negotiations for the disposal of sandbags, mills would be purchasing larger quantities of jute in the future. But for the slightly easier tone of the goods market for the forward positions jute prices would have been marked even higher. During this week a rise of four to eight annas has been recorded.

There are reports of beneficial showers in the jute growing districts but it would appear that these have not been very helpful and the trade does not seem to be worried about any large increase in the yield. Normally, there would have been a reduction in prices with reports about favourable weather conditions.

In the loose jute section a moderate amount of business has been reported. Supervised Middles and Bottoms being done at Rs. 16-4 and Rs. 13-4 per maund. European packing Middles and Bottoms were Rs. 16-12 and Rs. 13-12. There is a scarcity of bottom grades and a good premium is obtainable. Mofussil markets are firm and sellers are waiting for higher prices.

In the pucca bales section export business has not been large but balers are not quite eager for business as the recent orders will keep them going for sometime. Actually prices are one or two points higher than the minimum rates as the loose jute section is firm. Mills are reported to have purchased Firsts and Lightnings at one rupee higher.

JUTE MANUFACTURES

(From Our Correspondent).

Calcutta, April 19.

The jute manufactures market has continued firm but there is not the same enthusiasm on the part of buyers to enter into commitments for forward positions. The hopes regarding an improvement in production and the possibility of a reduction in prices have kept back buyers but for the near positions there is no weakness and mills have been able to do combined business in heavy goods by offering the surplus hessian production for the nearer months. It is true there has been a reduction in black market rates. Mills are anxious to do business for positions beyond March, 1946 but they are not prepared to offer any discount in rates.

In the heavy goods section quotations are at the maximum rates for certain descriptions. For positions beyond September mills are anxious for business and are offering a discount in rates but buyers cannot be induced.

The production figures for March have been published and as expected they show a large increase. Total output was 90,387 tons, an increase of 14,000 tons over February. Hessian output was 37,907 tons and sacking 48,687 tons.

PIECEGOODS

Calcutta, April 19.

The piecegoods market has not shown any signs of improvement though it is expected that with the handing over of stocks to handling agents conditions would be better. The Textile Commissioner for India is in Calcutta and has been discussing with the various chambers of commerce regarding the solution of the cloth crisis. The question of allotment of quotas to various provinces is also under consideration.

JESSOP & Co Ltd

Sixty Years' Service
TO INDUSTRY

Our services to the Iron, Steel and other Indian Industries started sixty years ago at the growing port of Karachi, but today they spread all over India. As the largest engineering concern in North-West India, we have carried out many successful contracts both at home and abroad.

We manufacture:

Steel Doors and Windows; Pressed Steel Tanks; Equipment for Textile and Sugar Mills; Powerhouses and Factories; Garden Rollers; Water Supply Systems; Motor Launches; Plastiplug; Waterproofing, etc.

We stock:

Motor Trolleys; Marine Engines; Asphalt Boilers; Jenkins Clod Breakers; Structural and General Engineering Stores; Bitumastic, Pudlo and Solignum; Steel and other Metals; Cements, etc.

We can advise you on all your engineering and building problems; why not consult us without any obligation.

BRASS UTENSILS —PRICES FURTHER REDUCED

With effect from 10th February 1945, the ceiling prices of brass utensils have again been lowered. In the case of the large quantity of brass utensils manufactured under Government control and sold through approved dealers in almost all important towns, these prices are actually *stamped* on the articles. Look for that! The new prices range from Rs. 1/10/- to Rs. 2/- per lb. The ceiling price of Moradabad utensils with Moradabad Kalai both sides is Rs. 2/12/- per lb. The ceiling price for all other brass utensils is Rs. 2/5/- per lb. Do not pay more.

A list of approved dealers is incorporated in the Brass Utensils (Control) Order, 1944, a copy of which can be obtained from the Manager of Publications, Civil Lines, Delhi on payment. If any approved dealer attempts to charge more than the price stamped on the utensil do not hesitate to report him to your District Magistrate or the Controller General of Civil Supplies Bombay.

ALUMINIUM UTENSILS PRICE CONTROL

As from 15th March 1945, the prices of all aluminium utensils are controlled under the Aluminium Utensils (Control) Order, 1945. These ceiling prices range from Rs. 2/14/- to Rs. 3/8/- per lb. for various kinds of utensils, the average price now being Rs. 3/- per lb. or 5 pice per tola, as against the former uncontrolled price of about Rs. 5/4/- per lb. As quickly as possible, substantial quantities of aluminium utensils manufactured under Government control are being placed on sale everywhere through the usual dealers, and these utensils will have the controlled prices stamped on them. About 5,000 tons of aluminium per year are being released for this purpose.

Stock Markets to-day and to-morrow:

MARKETS CONTINUE STEADY

Quite steady conditions were noticeable both in Calcutta and Bombay till Wednesday this week. Only on Thursday a slightly easier tone was noticeable in Calcutta while, there was some selling in the Western centre also. The general undertone, however, in both the centres is very steady. It is expected that there will be no appreciable fluctuations in prices even with spectacular developments in the war situation especially as the bullion market has not shown any signs of weakness and there is no great anxiety on the part of investors to liquidate their holdings.

* * * *

In Calcutta, a firmer tendency has been noticeable both in the Coal and Jute sections in anticipation of a higher level of dividends by the Macneill group of coal companies and a large increase in exports of jute manufactures. In view of the possibility of the war reaching its climax next week, and the discussions in connection with the San Francisco Conference there is a disposition on the part of operators to await further developments.

As deliveries in respect of the four counters under the clearing scheme, Indian Irons, Steel Corporations, Burrakurs and Howrahs, are now being effected regularly it is felt that there is no need for the ban on business in these four counters on Fridays. As from next week members will be free to do business in all shares.

* *

The announcement by the Government of India during the week that they have decided to increase cement production by 3 million tons per year by 1952, is a bullish factor not only for the Cement industry, but also for other industries such as steel. Even at the Annual General Meeting of the Associated Cement Companies Limited, the Chairman, Sir H. P. Mody, was very optimistic regarding the future of the industry and said that the company had already made plans for expansion in the postwar period. In the press note issued this week, it is stated that the Central Government has accepted the plans submitted by the Associated Cement Companies and Dalmias for an expansion of 1.75 million tons in output. It has also accepted the scheme for the production of cement in Jamnagar State up to 100,000 tons a year. These arrangements will leave a balance of 1.15 million tons of production per year to be achieved in the first five-year period after the war.

* * * *

The Central Government considers that steps should be taken to prevent monopolistic conditions in the industry, and has therefore decided that in the allocation of the balance firms other than the Associated Cement and Dalmia should be given preference.

In this connection it is important to note that other producers such as Sone Valley Portland, Andhra Cement and Assam Bengal as also one or two small producers will benefit if the expansion in the capacity of industry is to be utilised by the companies mentioned above. Already there has been a sharp rise in the quotation for Assam Bengal to Rs. 19.

* * * *

The balance-sheets of Central Kurkend and Bokaro and Ramgur for the half-year ended December, 1944, are rather disappointing. It was generally expected that these two companies would be able to report an improvement in earnings over the previous half-year. Acute shortage of labour, however, resulted in a considerable decrease in raisings and the decline in earnings of Bokaro and Ramgur especially is very pronounced.

* * *

The net profit, before providing for taxation and depreciation, for the half-year under mention is only Rs. 98,146 against Rs. 2,68,845 for the previous six months. Owing to the very small provision for taxation, it has been possible to maintain the dividend at 8 annas per share. The amount set aside to depreciation is Rs. 50,000 (Rs. 40,000) while the provision for taxation is Rs. 5,000 (Rs. 1.5 lakhs). No amount has been placed to E. P. T. deposit reserve against Rs. 17,000. The Directors point out in their report that the output from Dhori Colliery was adversely affected through colliery labour being employed by contractors carrying out their work in the district. It is satisfactory to note, however, that the position had considerably improved by the end of the year and that it would be possible to expect better results for the current half-year.

It was expected that the Directors' report would contain some reference regarding the sale of lands by the company to the Tata Iron and Steel Company, but there is no mention regarding the sale of any properties.

* * * *

The balance-sheet of *Central Kurkend Coal Company, Limited* for the same half-year reveals a decrease in earnings, the net profit, before providing for taxation and depreciation, being Rs. 1,91,754 against Rs. 3,67,185 for the previous six months. The provision for taxation is Rs. 1,12,000 (Rs. 2,40,000) and depreciation Rs. 35,000 (same). The Capital Redemption Reserve Fund receives Rs. 10,000 (same), while there is no transfer to E. P. T. deposit reserve (Rs. 52,300). In spite of the lower level of earnings, the dividend on the ordinary shares is actually higher at 5 per cent against 3¾ per cent. The rise in the quotation for the shares during the week to Rs. 38 must be attributed to special buying and not to the publication of accounts.

* * * *

Two important cotton mills have published their accounts for the year ended December, 1944. Both of them report an appreciable decrease in earnings owing to the reduction in ceiling prices. The decline in earnings of the *Lakshmi Cotton Mills Company, Limited*, is more pronounced than *Vishnu*. The net profit, before providing for taxation and depreciation, is Rs. 48,37,889 against Rs. 75,19,802. Sales were Rs. 20 lakhs lower at Rs. 1.84 crores. As working expenses were relatively higher, the decrease in earnings is not surprising. After providing Rs. 35.2 lakhs for taxation (Rs. 54 lakhs) and transferring Rs. 9.5 lakhs (Rs. 10 lakhs) to reserve fund, the dividend on ordinary shares is slightly lower at 30 per cent against 34 per cent. Last year the Dividend Equalisation Fund received Rs. 2 lakhs.

* * * *

Vishnu Cotton Mill Limited, for the same period has earned a net profit of Rs. 52,50,026 against Rs. 77,17,138. Sales were only Rs. 10 lakhs lower at Rs. 2.2 crores. Provision for taxation is appreciably lower at Rs. 39.25 lakhs (Rs. 60.5 lakhs) while allocation to Reserve Fund is Rs. 9.25 lakhs (Rs. 9.5 lakhs). The dividend on ordinary shares is Rs. 26 per share against Rs. 34 per share formerly.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 20.

Steady conditions have continued to prevail on the Calcutta Stock Exchange though business passing has been restricted and there is not much of outside investment buying. The fresh developments in the war situation have not had any effect on prices. Even the long week-end, markets being closed to-day on account of *Sri Ram Navami*, has not induced any selling. The end of the war is expected any moment, though it was felt earlier, with the Allied Supreme Command's statement, that the war would not be officially over until the whole of Germany was completely occupied. Coal and Jute shares have provided the features this week, the reports regarding the possibility of satisfactory dividends by the Macneill Coal Group and the optimistic expectations regarding the immediate outlook for the jute industry being responsible for the upward trend in values. Engineering shares have been firmer on rumours that the interim dividend of Indian Iron might be actually higher. There were no features in other sections. The general undertone is steady.

The giltedged securities section has been firm, the good demand for short and medium-dated loans resulting in a rise in prices. 3½ per cent Rupee Paper was done considerably above par at Rs. 100-6, but the close is slightly lower at Rs. 100-2. It was reported that the Reserve Bank was a free seller above par. Terminable loans also are steadier with 3 per cent 1957 at Rs. 99-15, 3 per cent 1949-52 at Rs. 101-6, 3 per cent 1953-55 at Rs. 100-9 and 3 per cent 1963-65 at Rs. 99. 3 per cent 1966-68 changed hands at Rs. 98-4. The only transaction to be recorded in Provincial Loans was 3 per cent U. P. 1958 at Rs. 99-6. Easy conditions have continued to prevail in the money market though it has not been possible for the Central Government to get its requirements of treasury bills at last week's rate, there being a slight increase to annas 5 pies 9 per cent per annum.

Bank shares have remained steady with *Calcutta National* at Rs. 15-6, *Imperial Bank* Contributories at Rs. 490, *United Commercial* at Rs. 19-12 prem. and *Reserve Bank* at Rs. 132.

Cotton shares were featureless, *Cawnpore Textiles* being Rs. 12-14, *Elgin* Rs. 63-8, *Dunbar* Rs. 298-8, *New Victoria* Rs. 7-2. The proposals for an increase in production by mills and the rationalisation of the industry have not had any favourable effect on prices.

Coal shares were steady with *Amalgamated* at Rs. 52, *Bengal* at Rs. 682 and *Burrakur* at Rs. 42-4. *Bhulanbararee* recovered to Rs. 32-12 from Rs. 32, while *Bhalgora* were quiet at Rs. 19-14. There is a sharp rise in *Central Kurkend* on sudden buying from Rs. 35-8 to Rs. 38-8. *Bokaro and Ramgur* were fully steady at Rs. 48-12. The dividend for the half-year ended December 1944 being maintained at 8 annas per share. *Equitable* were better at Rs. 68-8 on reports of a higher dividend as also *Hurriladih* at Rs. 38. *New Beerbhoom* improved to Rs. 39-8, but *Nazira* were depressed at Rs. 19-6. *New Churulia* were marked higher at Rs. 13-14. *South Karanpura* improved to Rs. 30-10 though the close was lower at Rs. 30-4, *Standard* were steady at Rs. 43 and *West Jamuria* at Rs. 60-2.

There is a general rise in prices, though small, in the Jute section on the hopes of a larger production in the coming months. This might result in higher earnings especially as it has been possible to dispose of the whole output at maximum prices. On speculative buying, *Howrah* were marked up to Rs. 91-2, the highest level touched for a long time. *Anglo-India* were Rs. 475, there was special buying of *Cheviot* and the quotation was marked up to Rs. 335. *Budge-Budge* were 8 points higher at Rs. 522 and *Delta* at Rs. 578 against Rs. 566, *Gourepore* were unchanged at Rs. 876. *Kamarhatty* were Rs. 706 against Rs. 693-8 and *India* Rs. 701 against Rs. 695. *Kanknarrah* improved by 10 points to Rs. 578, *National* were 8 annas higher at Rs. 34-8 while *Nuddea* were 3 points higher at Rs. 37-8, *Presidency* were not very much changed at Rs. 11-15.

In the Engineering section, *Indian Iron* were better at Rs. 39-12 while *Steel Corporation* were unchanged at Rs. 32-10. On the announcement of an interim dividend of Re. 1 per share for the year ended October, 1944, *Jessop* were marked higher at Rs. 24-13. *Kumardhubi* were Rs. 10-8 and *Marshalls* Rs. 4-14.

In the Sugar section there is nothing of interest, quotations being actually lower with *Balrampore* quoting Rs. 16, *Carew & Co.*, Rs. 26-7, *New Savan* Rs. 26-2 and *Ramnugger Cane and Sugar* Rs. 14-2.

There was not much of interest in the Tea section, sellers being keen to dispose of their holdings. *Central Cachar* were Rs. 111, *Teloijan* Rs. 14-2 and *Rajnagar* Rs. 18-4.

In the Miscellaneous section, *B. I. Corporation* were Rs. 6-5. On the announcement of the plans for developing the cement industry, *Assam Bengal Cement* were sharply higher at Rs. 19-6. *Dalmia* were not very much changed at Rs. 16-9. *Burma Corporation* were steady at Rs. 5-4 and *Karanpura Development* at Rs. 33-12. *B. B. Petroleum* were a shade better at Rs. 5-2.

Paper shares were unchanged with *Titaghur Paper* Rs. 27-2, *India Paper Pulp* Rs. 221-8 and *Star* Rs. 15-4. *Midnapore Zemindary* were quiet at Rs. 170 and *Assam Saw* at Rs. 5-14. Shipping shares were easier with *I. G. N.* at Rs. 183 and *Port Shipping* Rs. 29-2.

GOLDEN JUBILEE OF OLDEST INDIAN BANK

PUNJAB NATIONAL'S ACHIEVEMENT

CREDITABLE PAST AND BRIGHT FUTURE

Mr. YODH RAJ'S ADDRESS

Speech delivered by Mr. Yodh Raj, Chairman and General Manager of the Punjab National Bank Ltd., on the occasion of the Golden Jubilee function of the Bank, held in Lahore on 13th April, 1945.

As I rise to-day my thoughts go back to the nineties of the last century when modern joint stock enterprise, not to speak of joint stock banking, was comparatively unknown to the Punjab.

Western institutions whether economic or social were looked down upon with suspicion and considered detrimental to the country's interest. Amidst such an atmosphere of suspicion and hostility, the Punjab National Bank Ltd., was founded on 12th of April, 1895.

The Bank started in a humble way and in a small office opposite to the Arya Samaj Mandir Anarkali, Lahore, with a modest paid-up capital of Rs. 20,090. It has come to occupy now the third place in India's Big Five with accumulated assets of over Rs. 46 Crores and 173 Offices working all over the country.

It is presumptuous on my part to trace the history of the Bank to the present day. This has been admirably done by Professor A. N. Bali, our Economic Adviser, in the Souvenir Volume which we are publishing on this occasion. It would be sufficient for me to say that to this record of progress and prosperity attained by the Bank many factors and persons have coutributed. I take this opportunity of publicly thanking all such persons and acknowledge with gratitude and appreciation the work done by our predecessors and contemporaries. Our thanks are also due to the general public on whose continued and abiding good-will the Bank has made so much progress.

The tiny seedling which was planted on the Baisakhi Day—12th of April, 1895, has now grown into a huge and far spreading Banyan tree, which affords shelter to thousands of individuals, merchants, bankers and industrialists and is tended by an army of no less than 4,000 devoted workers day and night. It is difficult for the present generation used to hundreds of banks working round it to visualise and evaluate properly the pioneering work done by the Punjab National Bank Ltd. There were in the field in the nineties of the last century only a few successful Indian Banks. Their number excluding the Presidency Banks could be counted on the fingers of only one hand. Even in 1900 their number was only 9 of which two survive to-day—The Punjab National Bank Ltd, being one of these two. All these eight Banks in their inception, working and executive control, were non-Indian. The Punjab National Bank thus, was truly the first Indian Bank started in the country. For some years it was the only Indian Bank working successfully in the country

It is a matter of great pleasure and satisfaction to every Indian to find that the lead given by us has been followed successfully by others, till at present there are nine Indian Banks, whose working capital exceeds Rs. 10 crores. This progress has not been achieved overnight. The Indian Banks have passed through difficult periods of trials and troubles. Though the weaker have gone to the wall the Indian Banks as a whole have weathered successfully the storms and stresses brought by economic depression, banking crises, and the two World-Wars.

Lessons have been learnt, pit-falls avoided, and an earnest effort is made by all to serve the country to the best of their abilities. The foundation of the Reserve Bank has been a landmark on the road of progress. The Indian Banking can now look forward to a period of greater prosperity and usefulness in the years to come.

We on our part have always believed in working on sound, conservative and cautious lines. Our aim throughout has been to set up ourselves as a commercial Bank. We have always believed in keeping a high proportion of our assets in a liquid form. We refused in the past and intend refusing in the future to follow the example of some other institutions in advancing funds directly to aid industries. Indirectly, however, our services have always been at the disposal of the Industrialists. It is because of this policy that the Bank has passed through the least and shortest periods of rushes and runs of any kind and always emerged from these triumphant and stronger.

The War has brought about a fundamental change in the composition of the assets of the banks in India. In the pre-war period the banks kept over 60 per cent. of their assets in the form of Loans and Advances and about 30 per cent. as investments in Government securities and equities. The position has now been almost reversed. The decline in the relative position of advances has been due to the reduction in the volume of import and export trade, Government policy and procedure in respect of contracts, economic controls and the restrictions on advances against staple commercial commodities. In order to meet the exigencies of War the banks have also been maintaining a greater margin of safety by way of increased cash balances and liquid assets. In times of war the credit system becomes more responsive to the oscillations of war than to the economic conditions of the country. A high liquidity of assets for the Banks becomes a 'sine qua non' for their working.

The result of all these influences has been that the Banks have been maintaining large cash balances. For example, Scheduled Banks are required to maintain with the Reserve Bank of India balances equal to 2 per cent time and 5 per cent of their demand liabilities. But in actual practice they have held balances with the Reserve Bank of India over and above the statutory minimum amounting sometime as much as Rs. 79 crores.

Since the out-break of War in September, 1939, to March, 1945, it is estimated that the Scheduled Banks have increased their investments by Rs. 375 crores while their deposits increased by 583 crores. It would thus be seen that they used about 64 per cent of the increased deposits for the investments in Government Securities, which now constitute about 50 per cent. of their total assets. This has been due to the fact that in spite of the many oscillations caused by changing fortunes of War the Government was able to improve and maintain the price of Government Paper with the help of affluent money conditions. They consistently followed a policy of cheap money.

In the post-war period when the reconstruction work starts, it would be necessary for the Banks to increase their advances to meet the financial needs of Industry and Commerce.

All the plans of post-war reconstruction—the Bombay plan, the People's plan and the Government of India plan depend for a considerable portion of their finance on 'created money.' The Bombay plan for example envisages the creation of Rs. 5,400 crores of additional currency in 15 year's time.

The Government of India plan to spend Rs. 1000 Crores on agriculaural reconstruction alone in 10 year's time. Their programme of road construction amounts to Rs. 450 Crores in twenty year's time. The Provincial Governments have in addition formulated their own plans. The Punjab is planning to spend Rs. 100 Crores in five year's time. The total of provincial plans so far announced—Punjab, Bombay and Bihar etc. comes to Rs. 350 Crores.

If the mistakes of the last post-war period are to be avoided, the country must be ready to take immediate measures in hand to neutralise the effects of cessation of Government War orders on the termination of hostilities. The amount of currency remaining what it is, an abrupt cessation of War production will only accentuate its inflationary effects. The plan mentioned above are a sure remedy which could be applied to mitigate the disadvantages of post-war reaction and prevent large scale unemployment. These plans will have to be executed in part or full. Work has to be found for about three millions of demobilised soldiers and non-combatants, a fair proportion of whom consists of educated or technically trained personnel recruited frm Urban areas.

There has been not an inconsiderable expansion of industrial production both machine and cottage during the War period. This increased industrial activity will have to be harnessed in the post-war period to the production of civilian consumer's goods. It is thus obvious that an 'Industrial India' will have to be built up along with 'Agricultural India'. The lopsided development of Indian economy must become a thing of the past.

To finance the increased industrial activity whether through private industry or through Government initiative ample resources will be needed and in my opinion will be readily forthcoming.

While taking stock of the Bank's position at this Golden Jubilee day of our Bank, I must refer to another question that is exercising the minds of many a people at the present moment. With peace in sight everybody is anxious to know the future of banking in our country and the possibility of maintaining the present rate of expansion in the post-war period. There are some pessimists who maintain that there is not much scope for further expansion of banking in India. In their opinion India is already over banked. Facts, however, show that it is the other way about.

I do not foresee any shrinkage of bank deposits in the near future. Firstly there is plethora of funds with cultivators; soldiers and workers of all types which sooner or later must come out in circulation. Secondly, Demobilisation would mean grant of war gratuities on a liberal scale to a very large number of Emergency Commissioned Officers, N.C.O.'s and other ranks of Indian Army. The former two classes are already habituated to dealing with banks. Thirdly, there is a considerable amount of currency hoarded in homesales and deposit vaults, which when the uncertainties of War are over will be dug out for investment in business.

Fourthly all the post-war plans involve increased production and distribution of goods for which Bank credit will have to be utilised and this in turn would create further deposits.

The Indian Banks have successfully launched a programme of branch banking. There are now 5,043 banking offices all over the country as compared to 1755 five years ago. But even now there are 66 towns with a population of 20,000 or more which still have no banking office at all. In fact the vast hinterland of India is still lying unexploited by modern banking. The old moneylending system has received a knock-out blow by debt legislation passed in various provinces during the period of depression.

It has now received a "coup de grace" by wartime prosperty of the erst-while borrowing classes. If only certain changes were made in the law to safeguard the interests of the joint stock banks, there is no doubt that a vast field for banking activity in rural areas will be opened up—a field that could best be exploited by smaller banks in the country

As regards the other point he will be a bold-man indeed who maintains that India is over banked. On the contrary it is much behind other countries in this respect. It has much leeway to make up. Of the considerable volume of India's foreign trade very little is financed by Indian Banks. These could usefully extend their business to East African colonies, the Middle East and the far Eastern countries which have close trade relations with India.

The finance for 'overland' trade with our neighbouring countries would also be very well provided by Indian Banks if by reciprocal arrangement Government of India could get them facilities for opening branches in those countries.

To sum up, there is considerable scope for Indian Banks to provide an increasing share of the finance needed for India's expanding 'overseas', 'inland' and 'overland' trade in the post-war years. I therefore, see a bright future for Indian Banking.

EXCHANGE BANK OF INDIA AND AFRICA LIMITED

The first Kathiawar Branch of the Exchange Bank of India and Africa Limited, Bombay was declared open at Rajkot by Sheth Shantilal Mangaldas, Millowner of Ahmedabad on the 9th April, 1945 in the presence of a large and distinguished gathering.

The Managing Director Mr. J. M. Akhaney was personally present to Welcome the guests.

BHARAT BANK LIMITED

The working of the Bank for the year ending 31st March, 1944, resulted in a net profit Rs. 19,27,232 (subject to Audit, which together with the amount of Rs. 91,005 brought forward from the previous year, makes a total of Rs. 20,18,237. The total working capital has exceeded Rs. 26 crores.

Company Meeting.

THE NATIONAL BANK OF INDIA LTD.

CHAIRMAN'S STATEMENT AT ANNUAL MEETING

The Annual General Meeting of The National Bank of India, Limited, was held at 24, Bishopsgate, London, E.C., on March 27.

The following is a statement by the Chairman (Mr. R. Langford James), circulated with the report and accounts:—

In my address to the Shareholders last year I commented on the admirable manner in which the many difficulties arising from the War had been tackled successively and overcome by business concerns and I mentioned that assistance in this respect had come from a speeding up of the overseas mail service. The regularity and speed of the Eastern mail service have been still further improved and this is exemplified by the fact that, whereas in 1943 we found it impossible to place our report and the annual accounts in the hands of the shareholders before the middle of May and last year not before the middle of April this year we are able to hold our annual meeting at its accustomed time, the end of March.

The total of the Balance Sheet at £66,623,503 1s. 9d. creates another record for the Bank. It is an increase of about £4,750,000 over the previous year. It is accounted for entirely by an increase under the heading Current. Fixed Deposit and other Accounts reflect the continued increase in the volume of money passing into the hands of the Bank's constituents largely as the result of War Expenditure. It is of interest to note that the total of the Current. Fixed Deposit and other Accounts at about £61,000,000 is more than double the total of these same accounts in our Balance Sheet of December 31, 1939.

Cash on hand and with our Bankers and Money at Call at £23,000,000 shew an increase of nearly £2,000.000. This with our large holding of Treasury Bills which has increased by over £2,000,000 constituutes a very liquid position which in these times is highly desirable. Government securities are up by almost £1,000,000.

Since we met last what a remarkable and what a heartening change has been effected in the war situation! But though this affects all of us, of course—and the temptation to dwell on the broad subject must be obvious—I will confine myself to affairs in the territories that principally concern the Bank—India, Burma and Ceylon. Of these Burma presents most interest, for in the past few months the Allies have embarked on large scale operations which are surely, though necessarily comparatively slowly, evicting the Japanese from that country. We have in Burma two Branches, in Rangoon and Mandalay, awaiting re-opening and our arrangements for doing so are complete so far as it lies in our power to make them. There still appears to be some doubt as to whether the Government's plans are in a corresponding state of advancement, but this is presumably a matter that is receiving unremitting attention.

INDIA'S INDUSTRIALIZATION

The Japanese are being pressed back with much success and, in the case of India and Ceylon, it is not being over-optimistic to suppose, that, so far as actual fighting is concerned, they have seen the last of the War. But of course they are still intimately concerned with India as an arsenal and a producer of supplies of every description and Ceylon as the headquarters of the South-East Asia Command. To both—and particularly to India—the war has brought great prosperity. It is probably not an overstatement to say that, without the war the degree of industrialization attained in India in the past five years might not have been reached within perhaps twenty-five—possibly more. Achievements to date have quite naturally fired enthusiasm and so, in addition to the Bombay Plan, to which I referred last year, other "plans" for the economic development of India have been produced. Indian capitalists are shrewd and my individual opinion is that they could be relied upon to develop industries at a pace at which the resulting products would find markets without any attempt at hot house forcing.

Be that as it may, however, and whether any cut and dried programme is adopted or not, I venture once again to stress the vital importance of giving agriculture a foremost position. The distressing famine conditions of 1943 are sufficiently vivid in the minds of all interested in India for them to be regarded as a solemn warning. In a lecture at Delhi in January, Sir Jogendra Singh estimated that by 1971, the population of India may be about 580 millions. Industrialization would come naturally and normally (that seems obvious) but to me it appears that the primary need of the country is such an improvement in agricultural methods that the increase in food production shall keep pace with the expected increase in the numbers to be fed.

DEPLETION OF STAFF

I have mentioned on more than one occasion our concern at the obvious effect of war strain on our Eastern staff and last year I told you there was some prospect of short periods of furlough being arranged, I am glad to report that in the past few months we have been able to get several of the staff home for a short rest and we are grateful to the Authorities for their consideration in this matter. Unavoidably this has meant, of course, additional strain on those whose turn for furlough has not yet come. To them and to all the staff, whether abroad or at Head Office, it gives us pleasure to extend again our cordial thanks for their work on behalf of the Bank. Overseas we are working with a depleted European staff and at Head Office the war-time staff is of necessity somewhat lacking in experience, and yet the results leave little to be desired, the enthusiasm behind them nothing. We are indeed grateful for their efforts on our behalf.

As you know, many of our staff are serving with the Forces of the Crown both at home and abroad. Casualties amongst them have not been light, no less than eight having made the supreme sacrifice; three are missing, and we are without news of them; and three are prisoners of war. One of our Eastern staff died at sea owing to enemy action and two of our London staff lost their lives in air raids. An expression of the deep sympathy of the Bank has been sent to the relatives of all of them.

THE INDIA UNITED MILLS, LIMITED.

NOTICE

NOTICE Is Hereby Given that the Twenty-fifth Ordinary General Meeting of the Shareholders of THE INDIA UNITED MILLS, LIMITED will be held at the Registered Office of the Company at E. D. Sassoon Building, Dougall Road, Ballard Estate, Bombay, on Friday the 11th May, 1945, at 3 P.M. (S. T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statements of Accounts upto 31st December, 1944.
(2) To declare a Dividend on Ordinary and Deferred Shares.
(3) To elect three Directors in place of those, who retire by rotation but are eligible for re-election.
(4) To elect Directors who retain their Office until the General Meeting under Article 92 of the Company's Articles of Association, but are eligible for re-election.
(5) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from Friday, the 20th April, 1945, to Wednesday, the 16th May, 1945, both days inclusive.

Notice is further given that letters have been received by the Company from three shareholders intimating that each of them intends to propose Messrs. Shah & Co. of Kalbadevi Road, Bombay, to be additional Auditors of the Company for auditing the accounts for the year 1945.

By Order of the Board,
AGARWAL & CO.,
Agents.

Bombay, 5th April, 1945.

Note:—The Dividend, if sanctioned at the General Meeting, will be payable from Wednesday the 30th May, 1945, to the Shareholders whose names stand on the Register of the Company on the 20th April, 1945, and Dividend Warrants will be posted to the registered addresses of such Shareholders.

JESSOP & COMPANY, LIMITED

Notice is hereby given that the Directors have declared the payment on 1st May 1945 of the Dividend due on the 5 per cent Cumulative Preference Shares of the Company for the half year ended 30th April 1945 and ad interim Dividend, without and deduction in respect of Income-Tax paid by the Company, on the Ordinary Shares on account of the profits for the year ended 31st October 1944 of Re. 1 per share.

The Share Transfer Registers of the Company will be closed from 26th April to 1st May 1945, both days inclusive.

Dividends are paid only to registered shareholders or their mandatees.

By Order of the Board,
S. A. FULLER,
Secretary.

93, Clive Street.
Dated 16th April, 1945.

THE CENTRAL KURKEND COAL CO., LTD.

NOTICE IS HEREBY GIVEN that the Eighty-seventh Ordinary General Meeting of the Shareholders of The Central Kurkend Coal Co., Ltd. will be held at the Registered Office of the Company, No. 7, Wellesley Plase, Calcutta, on Wednesday, the 2nd May, 1945, at 3-15 P.M. to transact the following business:—

(1) To receive the Report of the Directors and to pass the Audited Balance Sheet and Profit and Loss Account for the half-year ended 31st December, 1944.
(2) To declare dividends on the Preference and Ordinary Shares.
(3) To elect a Director.
(4) To appoint Auditors and to fix their remuneration.
(5) To transact such other business as may be brought before the Meeting.

The Transfer Register will be closed from the 25th April, 1945, to the 2nd May, 1945, both days inclusive.

ANDERSON, WRIGHT & CO.,
Managing Agents.

Calcutta, 10th April, 1945.

BOKARO & RAMGUR LTD.

NOTICE IS HEREBY GIVEN that the Seventy-fifth Ordinary General Meeting of the Shareholders of Bokaro and Ramgur Limited, will be held at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta, on Wednesday, the 2nd May, 1945, at 2-45 P.M. to transact the following business:—

(1) To receive the Report of the Directors and to pass the Audited Balance Sheet and Profit and Loss Account for the half-year ended 31st December, 1944.
(2) To declare a dividend.
(3) To elect a Director.
(4) To appoint Auditors and to fix their remuneration.
(5) To transact such other business as may be brought before the Meeting.

The Transfer Register will be closed from the 25th April, 1945, to the 2nd May, 1945, both days inclusive.

ANDERSON, WRIGHT & CO.,
Managing Agents.

Calcutta, 10th April, 1945.

COMPANY MEETING.

EASTERN BANK LTD.

INCREASE IN INVESTMENTS AND DEPOSITS

SIR JAMES LEIGH-WOOD ON POST-WAR PROSPECTS

A very welcome improvement in the speed of mails from the East has enabled us to present to you our Report and Accounts for 1944 with all the promptness of pre-war years. We have thus been able to revert to the former practice of recommending a final dividend for your approval at the General Meeting to be held on 21st March, instead of declaring a second interim dividend prior to the Meeting. The rate of 3s. per share proposed for the final dividend will make the total distribution for the year equal to 5½ per cent as for 1943 when the figures shown were within two hundred pounds of the present net profit of £98,704-14-0d.

In pursuance of the policy to increase the published Reserve Fund the Board have appropriated £50,000 from net profit and a further £50,000 from Contingencies Account, bringing the Fund upto £700,000. After allowing for the interim dividend paid in October and the final dividend now proposed, the balance of Profit to be carried forward will be £72,876-2-1d. against £79,171-8-1d. brought in.

I referred last year to the sale of our freehold properties in India and I am glad to inform you that we have satisfactorily disposed of all but one of about £30,000 book value, yielding a good revenue.

As customary the figure of net profit was reached after appropriations to the credit of Contingencies Account, out of which account provision has now been made for all remaining assets in Singapore except balances with other banks there. Whilst it is hoped that the assets thus written off are not irretrievably lost, it was considered prudent to face an unfavourable outcome.

Of other changes in the Balance Sheet the most striking by comparison with the figures of the preceding year is the reduction in liabilities on Current and Deposit Accounts of some £1,375,000 which is reflected in the smaller holding of Cash by £735,425 and of Bills Receivable by £695,357. These changes were in fact transitory, record higher levels being reached in the first few days of January. Our holding of Government Securities is greater by £300,000—in round figures—and there is a slight increase in Advance to Customers.

There has been no marked change in the commercial situation in India and Ceylon during the past year. With few exceptions the surplus of commodities available for export is purchased by British Government Departments and paid for by Telegraphic Transfer on London. It is to be supposed that this method must continue for some time yet, whilst the absence of consumer goods for import still further restricts the functions of the Exchange Banks as formerly practised.

In India the establishment of several indigenous Banks, under strong local auspices, has necessarily resulted in keen competition for advances.

During the year a steady stream of Government Loans has been issued, both in India and Ceylon, all of which have been readily subscribed. Further, in India there have been substantial sales of gold and silver through the Reserve Bank. Notwithstanding these efforts to control inflation the note circulation in each country is now about six times the pre-war figure. This is a prodigious increase and as the note issue in each case is to a large extent represented by sterling securities and balances in this country, a problem of great complexity must be faced at the end of the war.

The situation in Iraq is very similar as the supply of money is more than ample. There is an urgent demand for consumer goods in the Bazaars which cannot be wholly met at present from this country owing to a shortage of manufacture and shipping.

There are, however, signs of an improvement of imports though great competion has to be faced from the United States who are becoming increasingly active in Iraq as well as in the Middle East generally.

The Government of Iraq have recently issued an Internal Loan amounting to One Million Dinars at the low rate of interest of 2 per cent with prizes for Bonds drawn annually for redemption. This Issue was an immediate success and evidently to the liking of the Iraqi people. A second Loan for One Million Dinars, carrying 3 per cent for a fixed period of three years was also subscribed. It was hoped that these issues would tend to contract the note circulation but this has not so far been affected and the circulation continues to stand at about nine times pre-war figures, covered by Sterling securities held by the Iraq Currency Board in London.

The progress of the war with Germany encourages the hope that when we next meet, hostilities will have ceased and I wish to offer a few observations on our present position and our future.

Our profits are now largely derived from interest on Government Securities the wherewithal having been provided by the great increase in deposits. Whilst such investments result in assured returns, trade and commerce are not thereby encouraged and nourished as they would be from Loans and Bills of Exchange to finance the manufacture and movement of goods.

With the cessation of hostilities this country will enter a period of reconstruction calling for co-operation and goodwill in every direction. With the long experience and adaptability of our manufacturers and merchants and the skill of our craftsmen we should win through although the road will be long and hard. The recent vigorous speech of Mr. Brendan Bracken was encouraging and as gradually the letters on trade imposed by the war are removed we shall hope to return step by step to our long held position as a great exporting nation with benefit to our people in every direction.

I wish to express my warm thanks to our staff at home and overseas who have served us well. We have endeavoured to ease their financial situation by grants-in-aid which have materially added to establishment charges though this has been a pleasurable duty. I am very glad to report that we have been able to grant home leave to a few of our Officers in the East but reliefs and passages are still difficult to arrange.

I conclude by adding my usual but by no means perfunctory tribute to Mr. Golder, our General Manager.

Sri Bhawani Anand Cotton Mills

Permission given to extend the date of subscription for the unissued capital of the Sri Bhawani Anand Cotton Mills creates an opportunity for those partial to textile shares, available at par in this case. An announcement to-day sets out the conditions under which the offer is made, and it is necessary to recall that the well-known trading and banking Jaipuria family sponsors the issue for which there has been adequate response.

TEA ESTATE
FOR SALE

At the Calcutta Tea Brokers' Association Sale Room, Mission Row, Calcutta.

The undersigned will offer for sale by Public Auction on Thursday, the 31st May, 1945, at 11 a.m., as a going concern as from the 1st January, 1945, that valuable property.

DOOMNI TEA ESTATE

Situate in the Kamrup District of Assam, comprising some 875 acres under tea.

For full particulars and conditions of sale apply to:

A. W. FIGGIS & CO.
D. BLOCK, CLIVE BUILDINGS, CALCUTTA

The sale is subject to a reserved price to be fixed by the vendor who reserves the right to withdraw the property from the sale at any time before it has been knocked down, without declaring the reserved price.

From this the Directors recommend:— Payment of a Dividend for the year ended 30-11-44 at the rate of Rs. 2-0-0 per share Free of Income-tax	...	1 05,000	0	0
Leaving to be carried forward to next year's account	...	1,063	13	10

During the year under review, the demand for the Company's ore from the U.S.A. continued unabated but owing to the acute labour shortage which prevailed throughout the year, the shipments effected amounted to something less than half the tonnage shipped during the preceding year.

The demand for labour set up by Government's "Grow more food" campaign and the numerous Defence measures have depleted the numbers of local labourers which are usually available and have drained the widespread recruiting areas from which the Company has hitherto endeavoured and still endeavours to procure a large part of its labour force.

In consequence, the raisings of ore have fallen to about 63 p. c. of last year's production and mining costs have, during the year, again shown an increase. The Mines are, however in good order and there is every opportunity for increased production immediately more labour becomes available—present indications go to show that all such increased production could be readily sold.

It was found impracticable, owing to the restrictions on railings of ore from the C.P., to continue making fresh purchases of the C.P. Ore for shipment in conjunction with the Company's Ore.

No agreement has yet been reached in respect of the Company's E.P.T. liability and pending a settlement with the Taxation authorities, Income-tax and Super-tax assessments remain outstanding. A further provision of Rs. 88,841-1-11 for Taxation has been made from the profits of the year, which with the provisions brought forward from previous year it is considered will be sufficient to cover the eventual liability for Taxation on profits upto 30-11-44 based on all factors previously allowed. The Income Tax Officer however threatens to disallow the payment of Vendor's Royalty as Revenue Expenditure and if he maintains this view and assesses the Company on this basis it will become necessary for the Company to consider appealing against such assessments. No provision for taxation which, in this event, would become payable, has been made but it should be possible to meet any demand on this account from the existing General Reserve account. Two instalments of Income-tax and Super-tax under the 'pay you earn' scheme and provisional payments, including of E.P.T., aggregating Rs. 6,72,563-2-9 were made and in addition to the balance of the Company's eventual liabilities for taxation on profits upto 30th November 1944, further sums will be payable as deposits at interest at 2 p. c. under Section 10 of the Finance Act, 1942 on settlement of the Company's liability for E. P. T. On the other hand no credit has been taken into the accounts for the post-war Refunds of E. P. T. the net amount of which is indeterminate.

Authorised Capital—Rs. 7,50,000. *Issued and Subscribed—Rs.* 5,25,000 *in* 52,500 *shares of Rs.* 10 *each, fully paid up.*

NOTICE

NOTICE is hereby given that the Thirty-fifth Ordinary General Meeting of the Shareholders of the above-named Company will be held at the Registered Office of the Company at E. D. Sassoon Building, Dougall Road, Ballard Estate, Bombay, on Monday, the 7th May 1945, at 4-00 P.M. (N.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the audited Statements of Account upto 31st December 1944.
(2) To declare a dividend.
(3) To elect two Directors in place of those, who retire by rotation but are eligible for re-election.
(4) To confirm the appointment of a Director, who retires under Article 111 of the Company's Articles of Association but is eligible for re-election.
(5) To appoint Auditors and fix their remuneration.

The Transfer Books of the Company will be closed from Friday, the 13th April 1945, to Monday, the 7th May 1945, both days inclusive.

By Order of the Board,
E. D. SASSON & CO., LTD.,
Agents.

Bombay, 5th April, 1945.

Note:—The Dividend, if sanctioned at the General Meeting, will be payable from Monday, the 21st May 1945, to the Shareholders whose names stand on the Register of the Company on the 7th May 1945, and Dividend Warrants will be posted to the Registered addresses of such Shareholders.

To the Shareholders of the Meyer Mills, Limited.

BOUQUETS & BRICKBATS

(From our Readers)

Reserve Bank's Agency:

You have unearthed some important particulars about the agency arrangement between the Reserve Bank and the Imperial Bank; and it is strange that no attention was drawn to this matter on the eve of April 1, 1945, when the changes (if any) as regards the remuneration payable to the Imperial Bank were due for revision.

You have raised some questions in this connection. May I add a few more pertinent questions?

Did this matter come up before the Central Board of the Reserve Bank? In more precise terms, did the Central Board consider it well in advance so as to provide for a detailed expert investigation? Were the results of the investigation placed before the Board well before April 1, 1945? Did any member of the Board raise for discussion the issues connected with the popular demand for terminating the monopoly arrangement with the Imperial Bank?

The Central Board consists of well-known businessmen; so much so, the Federation of Indian Chambers could well be thought to be an important electorate for this Board. As Federation members, they make themselves heard on any and every question. As members of the Reserve Bank Central Board, are they equally effective even if they cannot, in the nature of the case, be equally vociferous?

Indianisation (?) in Imperial Bank:

You have, in your issue of April 14, another go at this question, the earlier comments on which have made the entire Indian staff of the Bank look upon you as their godfather. Keep rubbing it in. For, the authorities of the Imperial Bank are even more impervious than the official bureaucracy

But, it is even more important that you should keep and continue to keep in the forefront the issue of an Indian Managing Director to succeed Sir William Lamond.

In the context of the vast changes pending in the political status of India and in relation to Indianisation already effected in the Reserve Bank, there can be no excuse for the Imperial Bank Board to miss this opportunity to appoint a suitable Indian to the highest job in the Bank.

Surely there is no dearth of suitable Indians.

N. L. GHOSH.

* * * *

You seem to gloat over Indian staff (with experience of 20 years and over) leaving the Imperial Bank and joining other banks.

I wonder whether you read Sir Homy Mody's reference to this undesirable practice of one bank filching the staff of another bank. The biggest offender in this respect is a bank recently started and current beating the drum in pompous style.

This may be an easy and cheap way of buying the experience built up by other institutions over a series of years. But is it cricket?

I would like to ask a simple question: Do the banks who take away the staff from other banks have the courtesy of making a reference to the latter before employing such staff? When you employ a menial in your house, you ask for credentials about past service and make enquiries. In the case of bank staff, this elementary precaution is not observed. Who knows, what kind of men the new banks are thus getting! Their past may be shady; their experience and reliability may not be such as is made out by themselves. Yet, these men are to handle vast sums belonging to the public!

For my part, I am old-fashioned enough to regard loyalty as a virtue.

CONTENTED BANK-OFFICER.

* * * *

There is, as you realise, an unseemly scramble and unhealthy bidding for personnel with any banking experience. I do not say this, however, in the spirit of grumbling. On the other hand, it is the first ray of light in the prospects of those serving in banks under trying conditions and without corresponding recognition in terms of remuneration.

At the same time, there must be some proportion on this scramble which, especially for the higher executives, has passed the limits of decency. I wish to put forward a proposal which will afford relief in this regard.

Not many in this country know that the staff in the Imperial Bank on retirement are not allowed to accept jobs in any other bank. If they do take any such job, their pensions will be suspended. This rule was relaxed in the old days in some instances as in the case of the gentleman who is now the Official Liquidator of the Travancore National and Quilon Bank. But, I understand, the Imperial Bank authorities are now in no mood to relax the rule.

* * * *

Many officers of the Imperial Bank are able to retire on pension in their late forties. Such retired officials have certainly another ten years of vital and useful work. To prevent them from joining any other bank is the worst form of dog-in-the-manger policy.

That so much experience and specialised talent should be bottled up while a man is still only 45 or so, is nothing but a national waste. The Imperial Bank authorities must be made to give up this dog-in-the-manger attitude.

ONE-WHO-SUFFERS.

* * * *

Commercial Safeguards:

I congratulate you on the most sensible article I have so far seen on this much-vexed question. It gives a correct lead to the Indian public, to British Commerce and to the British and Indian Governments.

Some of our fire-eaters and some of the British diehards may not like it. The measure of their disapproval is the measure of the right poise attained in your masterly contribution to this subject.

A REGULAR READER.

* * * *

Three Cheers to "Analyst":

Let me thank you, Mr. Analyst, for the very informative weekly column "Bombay Investors and Indian Stock Exchanges".

Would you mind, please, to suggest low-priced shares round about par for bonafide investors? For which I shall feel ever grateful to you.

This request is made as I think very highly indeed of your opinion and judgment in the selection of shares.

If I can serve you in any way whatsoever, please let me know about that too. I shall be only too glad to do so, and it will be a pleasure to me.

(Prof.) H. D. WOHRA.

BOUQUETS & BRICKBATS

Regret and Rejoicing:

I read with interest your note on "Indianisation(?) and Imperial Bank" in your issue of the 14th instant. I am glad you have at last reverted to this very important subject. I have indeed been very much disappointed that you allowed this question to languish for so long after your vigorous and well reasoned attack of some months ago—an attack for which you get the grateful thanks of a member of the staff of the Bank.

But my disappointment now is greater when I find in the note in question you have confined yourself solely to the matter of stopping European recruitment to the higher grades of service in the Bank after the war. In your previous articles on the subject you made the bold but quite legitimate demand that the Managing Directorship of the I.B.I. should go to an eminent Indian when Sir William Lamond vacates his office.

You took the correct view that without an Indian at the helm of affairs of the I.B.I., it is futile to talk of the Indianisation of its service.

Have you now reconciled yourself to this high office going automatically to the next man in service, or are you giving up the fight because you feel it is hopeless? Neither attitude is characteristic of you.

P. R. SESHAN

BOOK REVIEWS

Cost of Living Index

The Economic Adviser's Office deserves congratulations for having brought out a critical study of the cost of living index numbers in India. In the small book "Supplement to Guide to Current Official Statistics, Volume I—Working class Cost of Living Index Numbers in India," (Published by the Manager of Publications, New Delhi, Price annas 12 or 1sh.) Mr. S. Subramanian, Statistician to the Economic Adviser, has discussed the scope and method of the family budget enquiries in the different provinces and examined the collection of current price data for constructing index numbers. The cost of living index number can be either "the ratio of actual expenditures of an average family during two specified periods" or, in the alternative, "the ratio that the current cost of a fixed collection of goods and services bears to the cost of the same collection of goods and services during a base period". The latter method has been accepted as a working basis in India as elsewhere. The defects in the numbers constructed in Bombay, Madras, C.P., Bihar and Orissa, Punjab and the U.P. are clearly brought out in the booklet. Lack of experienced staff for the collection of data, wide divergence in the base periods followed in the different centres, the omission of items like house rent in the numbers for C.P., Bihar and Orissa are some of the glaring blemishes explained by the Statistician. A plea for the collection of exhaustive data, and the adoption of a uniform method, is entered. Eight valuable appendices relating to the classification of families by income groups and the constitution of the provincial indices are annexed to the text. India is on the threshold of significant developments in political status and industrial progress. Prices can be stabilised and disputes between Labour and Capital minimised only if reliable cost of living index numbers are collected. The booklet will therefore be of great use to students of statistics. But its importance lies more in exposing the present unsatisfactory position and thus bringing reform nearer.

From Farmer to Consumer

One of the effectve ways of helping the agriculturist is to offer him excellent facilities for easy marketing of his products at satisfactory prices. In this respect the Indian ryot is very badly served at present and the cry of exploitation by the middleman has been almost universal and insistent. Middlemen might have grown up as a direct result of the spread of the factory system and modern transport systems; but the ryot remained helpless without organisation, finance, warehouses and intelligence service. Others also did the producer's job and knocked off what should have been his if the Government had adopted an enlightened policy

(*Continued on page* 565)

RUFFS AND CUFFS

THE weekly wash nowadays is not nearly so complicated a business as it was when men as well as women wore ruffs and cuffs, frills and flounces. Today the housewife has simpler clothes to tackle, but both the work of home laundering and the results she is able to achieve are helped by the skill of the research chemist and the products of the British chemical industry. Soap is, of course, her first requisite. If asked how soap does its work the technical man might reply "Soap has the property of detaching soiling matter from textile fabrics and maintaining it in suspension in the washing liquor, thus permitting its removal without redisposition on the fabric". In other words, soap loosens the dirt from clothes or curtains and enables them to be washed clean. To discover precisely how it does this, and consequently to make better and more efficient soaps, have meant a great deal of patient and complex research. Soap cannot work unless it lathers, and it will not lather easily in hard water. The harder the water the more soap will be used, so that in these days when strict economy is necessary, the careful housewife will add washing soda — sodium carbonate — to soften the water and save soap. In addition to the service he gives to the great soap-making industry, the chemist has provided a number of other aids to domestic washing — ultramarine or "blue", and chemicals such as hypochlorites, borates, perborates, percarbonates, silicates and various forms of phosphates. For the laundries, of course, there is a further range of chemical products. These may not be suitable for home use, but play a valuable part in helping the laundries to give efficient service in difficult conditions.

Starch is today required for food, for making surgical spirit and other uses of national importance. When Peace brings back the starch to our collars, it may be expected also to bring new and improved chemical aids alike for the laundry and the weekly wash.

TREASURY BILLS

Central Government:

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 24th April, 1945. Total amount offered was Rs. 5,14,50,000. Tenders at Rs. 99-14-6 per cent and above were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 72 per cent. Total amount accepted was Rs. 4,00,00,000, the average rate of accepten tenders being Re. 0-6-9 per cent per annum.

Tenders for Rs. 4,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 1st May, 1945 at Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 30th April, 1945 at other centres. Successful tenderers should make payment on Friday, the 4th May, 1945. Other conditions are as usual.

During the week ended the 20th April, 1945, Government of India Treasury Bills for Rs. 89,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Assam:

Tenders for Rs. 3,00,00,000 of three months' Assam Government Treasury Bills were opened on Monday, the 23rd April, 1945. Total amount offered was Rs. 3,85,00,000. Tenders at Rs. 99-14-6 per cent were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 79 per cent. Lower tenders were rejected. Total amount accepted was Rs. 3,00,00,000, the average rate of accepted tenders being Re. 0-6-10 per cent per annum.

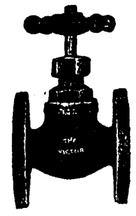
THE NEW PRESIDENT'S POLICIES

FOLLOWING THE ROOSEVELT PATH

More Cautious Procedure Likely

WASHINGTON, April 23.

Mr. Truman, little known abroad until Mr. Roosevelt's death has given evidence that there will be undisturbed continuity in foreign, economic and political policies formulated by the late President. In foreign capitals, curiosity on this point must be second only to the shock of learning that Mr. Roosevelt had died. They had not long to wait; for, the new President addressed the Congress on his fourth day in office and stated, "We learned to fight with other nations in common defence of freedom. We must now learn to live with other nations for our mutual good. We must learn to trade more with other nations so that there may be—for our mutual advantage—increased production, increased employment and better standards of living throughout the world." He followed this up by a general statement supporting Mr. Roosevelt's philosophies with an unequivocal endorsement of the Bretton Woods proposals and legislation for the renewal of the Reciprocal trade Act to which the Roosevelt Administration has asked for amendment providing that tariffs can be reduced by fifty per cent. from current levels.



Both these are controversial issues in the Congress and may test Mr. Truman's intended policy of close co-operation with the Congress. This latter was the first result of his elevation to the Presidency and during recent years relations between the White House and the Congress have been strained, but Mr. Truman has moved immediately to inaugurate an era of co-operation. Commentators were forecasting within a few days of his occupancy of the White House that his close affiliation with the Congress in which he has served long as a Senator, augured well for the ratification of treaties in international and economic fields as well as that of politics and military security. It remains to be seen, however, how far the Republicans will co-operate with Mr. Truman. The Opposition to the Bretton Woods proposals and the Trade Act is plentiful and may call into play Mr. Truman's long standing ability to work out compromises.

On the domestic front, the new President won the confidence of the nation within the first week of his office. How reconversion to peace-time economy is accomplished will depend almost entirely on Mr. Truman's leadership; for here, Mr. Roosevelt had left no clearly marked path. Judged by his known views, Mr. Truman will firstly, support Mr. Roosevelt's public and power policies, secondly, favour obtaining capital for reconversion as far as possible through the sales of bonds and stocks to private investors, thirdly, relax Government controls as soon as feasible, fourthly, will favour the marketing of surplus goods in such manner as would not disturb the confidence of the business or retard conversion. Generally speaking, Mr. Truman will pursue many of Mr. Roosevelt's objectives, but will institute new methods. Where Mr. Roosevelt often relied on sheer force of his personality to swing the United States public behind him, Mr. Truman will follow the advice of Congressional leaders, move cautiously, perhaps, more conservatively. During the next four years many left-wing New Dealers will be disappearing from Washington; but no one predicts any reversion to the pre-Roosevelt philosophies, social, economic or otherwise.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions have continued to prevail in the money market with call rates unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay but it has again been a little difficult for the Central Government to get its offer of treasuries accepted. The smaller amount of treasury bills maturities and the subscriptions to the First Development Loan, with the need for funds by the Assam Government, have resulted in a further decline in the amount of applications to Rs. 5.15 crores from Rs. 6.2 crores. As bidding was not keen there was naturally a sharp rise in the average discount rate to 6 annas 9 pies per cent from 5 annas 9 pies per cent. The offer for next week has again been maintained at Rs. 4 crores. The Assam Government was able to get its requirements at the rate of 6 annas 10 pies percent. The total amount of applications was Rs. 3.85 crores against the offer of Rs. 3 crores. Perhaps the whole offer was taken up by special quarters.

The response to the 3 per cent 1970-75 First Development Loan has not come up to expectations. The following communique has been issued by the Government:

"Subscriptions to the 3 per cent First Development Loan 1970-75 amounted to Rs. 27 crores. The balance of Rs. 13 crores has been taken up by Government in their investment account and will be available for sale through the Reserve Bank of India as usual at prices to be ascertained from the Bank."

That the public have taken up Rs. 27 crores and that the balance of Rs. 13 crores represents the temporary investment account of the Central Government, is a conclusion which must be considered satisfactory. In some quarters, the fact that the Government had to take up as much as Rs. 13 crores of the loan, is apt to be construed as an ominous sign and signal in the giltedged outlook. We must deprecate any tendency to indulge in such interpretations. With Government balances in super-plethoric condition, it is part and parcel of normal ways and means adjustment to take up such portions of new loans as are not subscribed for the public, and to sell the balance of the loan through the tap. This is correct and appropriate procedure. There need be no doubt that, before long, the Reserve Bank will be able to dispose of the Rs. 13 crores of the Development Loan at rates perhaps even more favourable than 97 per cent. The fact of the matter is that, owing to the wartime vogue of simultaneous sales of a number of loans through the tap, banks in general have developed a leisurely attitude with regard to subscriptions to new loans. Experience so far has been that, immediately following the announcement of every new loan, the market has been mostly apathetic; and it is only towards the concluding stages of the loan that public response becomes accelerated. The Development Loan remained open only for three days; and this short period of three days is somewhat out of accord with the leisurely attitude that has been engendered.

Moreover, it must be remembered that a considerable part of the 5 per cent 1945-55 loan, through change of hands in the past many months, has come to be held by banks as a kind of long-term treasury bill. To the extent that scrips of 1945-55 were held not as an investment but as a treasury bill, the holders in this regard would not have elected to convert into a long-term loan such as the 3 per cent 1970-75 is. In other words, those holders who regard the 5 per cent 1945-55 as an attractive short-term investment are likely to be attracted if the Government make an offer of a short-dated security. We, therefore, welcome the announcement of the Government to create a further issue of 2¾ per cent 1948-52 loan for Rs. 25 crores. This is just the security that should win the affections of such holders of 1945-55 loan as have been keeping the stock as a long-term treasury bill. The Reserve Bank was selling 2¾ per cent 1948-52 loan at Rs. 99-14; but, after the creation of this further issue of Rs. 25 crores, the tap rate has been raised to Rs. 100. It may, perhaps, be worth while to link this issue of Rs. 25 crores with some kind of conversion scheme applicable to the holders of 5 per cent 1945-55 loan. We welcome the further issue of 2¾ per cent loan also for the reason that it may mark the transition from a 3 per cent type of loan to a 2½ per cent type of loan.

The returns of the Reserve Bank for the week ended April 20 do not show any important change so far as the Issue Department is concerned. There has been no further expansion of currency. Only notes in circulation are Rs. 69 lakhs higher at Rs. 1108.69 crores. There is a decline in rupee coin by Rs. 18 lakhs. In the Banking Department, Central Government balances are appreciably higher at Rs. 14.1 crores, due perhaps to subscriptions on account of 3 per cent 1970-75 loan. Other Government accounts also are Rs. 7.93 crores higher at Rs. 23.11 crores. Bank balances have declined by Rs. 7.75 crores to Rs. 78.68 crores. Other deposits have improved by Rs. 1.05 crores. Balances held abroad are sharply higher at Rs. 394.19 crores, an increase of Rs. 14.14 crores. There is a rise under investments of Rs. 21.49 crores from Rs. 20.42 crores.

The statement of the Imperial Bank for the same week shows a decrease in deposits by Rs. 1.02 crores to Rs. 228.78 crores. There is a jump in investments from Rs. 132.56 crores to Rs. 140.41 crores. Advances are lower at Rs. 69.20 crores against Rs. 69.81 crores. As a result of the decrease in deposits and an increase in investments, cash balances are lower at Rs. 29.18 crores.

The statement of scheduled banks for the week ended April 13 shows a big drop in Demand liabilities to Rs. 597.59 crores from Rs. 604.23 crores but Time liabilities are again higher at Rs. 223.18 crores against Rs. 221.64 crores. The decline in working capital, however, has not affected cash balances, as cash on hand was Rs. 29.2 crores against Rs. 28.93 crores and Balances with the Reserve Bank were Rs. 84.66 crores against Rs. 84.53 crores. There is a decrease in advances by Rs. 53 lakhs to Rs. 280.7 crores. Bills discounted are lower at Rs. 14.76 crores against Rs. 15.17 crores. Against the decrease in advances and bills by Rs. 93 lakhs, total cash balances are Rs.50 lakhs higher. As there is a net decrease of Rs. 4.77 crores in working capital there have been realisations of investments to

(*Continued on page* 563)

Future Industrial Policy

The Government of India's statement on the future industrial policy is to be welcomed if only because it clears up a number of maior uncertainties which may be deemed to hold up private as well as public economic planning. The statement bears to the reports of the Reconstruction Committees the same relation as the Second Part of the Bombay Plan bears to the first. It is concerned in the main with the ideological issues and questions of policy which increase alike in significance and in vagueness with the acceptance of economic planning as an established official policy. While planning, in Indian conditions, increases, qualitatively and quantitatively, the responsibilities and opportunities of private enterprise, the progress of its plans is hindered by the absence of a recognisable limit to State interference in business. The average citizen, too, once he has been encouraged to look forward to increase in employment, per capita income and the amenities and values of civilised life, is eager to know the lines on which the State will regulate its relation with private industry and determine its role in planned development. All the problems relating to distribution, and to the ownership and management of industry, which in theory and in practice have been found to be so vexatious, are, doubtless, involved in this; and it is heartening to find that the authors of the statement have a clear grasp of these issues and their relative importance in the present context of the Indian economic problem.

The statement takes in one broad sweep questions as varied as the immediate future of war industries, the scope of nationalisation and centralisation and the nature and extent of Government control and assistance to industry. These questions have their bearing on larger political and constitutional problems. Not only is the political future vague, but there has not been sufficient time for the Central Government to consult Provincial and State Governments. Nevertheless, the Government have taken the view, and rightly, that they "have reached a stage in their planning of industrial development when they consider it would be in the public interest to make an announcement of the conclusions reached by them on various aspects of policy". "The conclusions reached," they admit, "are to some extent provisional," and they emphasise that "this arrangement has no long range constitutional implications. It is intended to be in operation for so long as the present constitution lasts; and to what extent it will survive beyond that period is a matter to be decided by the future." It would, no doubt, be highly improper for the present Government of India to take any step which would deprive the future National Government of freedom of choice in crucial questions of policy. At the same time, the Government cannot shirk its duty to further the progress of planning, official and private, by deciding issues which will not suffer postponement.

The test of the policy now announced is how far these incompatible objectives have been secured. The Government of India have certainly distinguished between immediate needs, questions of policy which have to be decided more or less finally and at once to facilitate progress and questions of long-term policy in which tentative decisions must be made without barring the door for changes in the future. To the first category belongs the future of industries which have been established for the sake of the war effort. The Government have certain commitments as well as moral obligations to these industries. After the outbreak of war the Government had to hold forth the assurance that war industries would not be cynically abandoned to their fate, once the war was over. But the future of these industries is also linked up with the general fiscal policy. Here, too, the Government stand committed to a liberalisation of the terms on which protection will be granted to industry. The statement therefore assures industry that, while "the formulation of a tariff policy appropriate to post-war needs and conditions of the country is under consideration," the machinery for the investigation of the claims of war industries to protection or other assistance will be set up without delay" "This," the statement affirms, "is a short-term measure pending the formulation of long-term tariff policy and the establishment of permanent machinery for the purpose."

War industries, however, fill a small place in the picture of Indian industry as it is or as it will be in each stage of the planned development of the future. To give a usefully clear and comprehensive idea of the industrial policy of the future, it is necessary to deal with the objectives, the basic principles and the modes of action The modes of action naturally include the role of the State as well as the re-adjustment of the powers and functions of the various Governments. The fundamental objects of industrialisation are stated to be (1) increase of national wealth by the fullest and most effective utilisation of the country's resources, (2) better preparation of the country for defence and (3) a high and stable level of employment. As for the underlying principles, laissez faire has been abandoned for good, discriminating protection is acknowledged to be inadequate and the "Government have decided to take positive steps to encourage and promote the rapid industrialisation of the country to the fullest extent possible." Due place is to be given to consumption goods industries, so that the daily life and well-being of the people will not suffer by the importance attached to the development of those industries which constitute the foundation of modern industrial life. And "it is axiomatic," says the Government statement, "that the additional wealth created by industrial development should be distributed in a manner that may be regarded as socially equitable." That is vague language; but what is intended to be conveyed is clear.

While these objectives and principles are unexceptionable, the issues connected with the modes of action are of a highly controversial kind. There is first the constitutional question of the powers of the Centre and the Provinces and States. There is then the political question of the extent of Government control over industry and businss. And lastly there are the issues connected with Nationalisation. In all these, a Government of an avowedly temporary nature should fight shy of rigid or final decisions. But since there can be doubt that the country has wholeheartedly accepted economic planning and the exigencies of planning are the same both for a foreign and for a National Government, there can be little objection to the present Government making the decisions, that are necessary for immediate progress Planned development is inconceivable in a setting of conflicting political authorities; and conflict must be eliminated either by conscious co-operation or supercession, where necessary, of local authority by Central. In the case of British India, the Central Government has power even under the present constitution to declare by law that the development of certain industries under Central control is expedient in the public interest; and the development of such industries becomes thereon a Central subject, though industry as such is a Provincial subject. Though no such legislation has been passed, the responsibility of the Central Government in regard to industrial development has increased steadily owing to the simple fact that all the factors and circumstances which are important to industrial development have been under Central control. While there is need for the Centre to discuss many points of detail with the Provinces and the States, there can be no question that an increase in the responsibilities and powers of the Centre in this regard will to some extent be welcomed by the Provinces at least, if not also the States. For, however jealous the local Governments may be of their powers, experience has shown that no local Government can by itself do much for industrial development within its territory. In fact, it is, a question of very wide import and significance, whether the Indian public should not from now learn to think of India as a unitary, rather than as a federal political entity. However, since the basic conditions of economic development like wide distribution of power, adequate transport facilities, and growth of key and basic industries are altogether absent and since they cannot be provided by each Province acting on its own, opposition to extension of central authority can only be based on rapid political sentiment.

The essence of the industrial policy that has now been enunciated lies therefore in three measures, firstly, the declaration that certain industries will be treated as central subjects, secondly, the control of industries through licensing and other measures with a view to secure certain specific objectives, and thirdly, the choice of certain industries for nationalisation. While the justification for control lies in a variety of broadly social considerations, the criteria for determining the industries fit for centralisation or nationalisation are to some extent common. Control is sought to be exercised primarily by the power to grant or withhold licenses for the establishment of new factories or extensions of existing ones. The aim is to secure certain social ends which we cannot expect to realise by giving freeplay to economic forces. Of these, location of industries is by far the most important The concentration of industries in areas which are vulnerable to enemy attacks is obviously undesirable. Less obvious, but as indisputable, is the danger of allowing lop-sided development of industry. The old idea that, if industry tends to be concentrated in a few areas, there must be overwhelming economic considerations behind such a development, no longer goes unquestioned. The waste caused by avoidable transport charges and the gains caused by such dispersion of industry as the natural distribution of resources justifies, are now recognised. Indeed, industrially backward provinces will applaud the Government's action in going further and declaring that targets must be fixed and allocated on a regional basis. With such an allocation, licenses can be granted or withheld according to well understood principles. The fear that all industrial projects will have to wait on the Government for sanction is disarmed by the assurance that "in order to avoid unnecessary delays it is proposed to set a monetary limit to the plants or projects requiring license so that very small plants, moderate extension of existing plants or replacements which do not add to output should not be subject to licensing. Details of this legislation are under consideration. It is also made clear that the administration of the licensing "system must be such as to assure Indian States that their legitimate desire for industrial development is not overlooked. It is accordingly proposed that a Board should be constituted at a high level to advise the Central Government in the matter of granting licenses."

Apart from the regulation of location through licensing, the object of the controls is to secure balanced investment and a fair wage for industrial workers, to prevent excessive profits for industry, to ensure the quality of industrial products and to prevent the concentration of tangible assets or technical skill to the detriment of any one or more communities.

Turning to the choice of industries for central direction and control, it would appear that the Government of India have chosen key industries, basic industries, protected industries and industries like Radio engineering which have a special significance of their own. Once these industries are brought under the centre only the cottage industries and a few industries like soap and vegetable ghee will be left under the sway of the Provinces. The transfer of industry wholesale from the Provinces to the Centre is probably deemed to involve a fundamental question which is best left "to be decided by the future." But the practical importance of the distinction now sought to be made is next to nothing, since all the material aids to industry such as research, expert advice, help in securing machinery, geological survey and provision of technical training are in the hands of the Central Government.

Far transcending all these issues in its importance to the business community is the question of nationalisation of industries. There is, indeed, a strange irony in that the Government of India, should be the first of all governments of the world, barring Soviet Russia's, to talk of nationalisation as if it were no matter of burning controversy, but one of ordinary reform. But in India, nationalisation has had a better start than in any other country in that ordnance factories, railways and public utilities have had for special reasons to be State-owned and State-managed.

The sentiment of the general public, as distinct from the business classes, is also favourable to further extension of nationalisation in so far as the public feels and has reason to feel, that it has had on the whole a raw deal from Indian industries in general and the protected industries in particular. Another circumstance which favours the extension of nationalisation is that the country cannot wait on private enterprise for so urgent a task as the provision of the basic conditions of economic development such as generation and distribution of power on an adequate scale, widespread transport facilities and key industries It seems hardly in question that for the generation of power, vital transport services and public utilities of various kinds, State enterprise is the most appropriate method. It is indispensable too in industries which deal with palpably limited natural resources. The demarcation of spheres for public and private enterprise, which not long ago was shirked by the Government and the authors of the Bombay Plan, is now courageously made in the following:

> Apart from ordinance factories, public utilities and railways, basic industries of national importance may be nationalised provided adequate private capital is not forthcoming and it is regarded as essential, in the national interests, to promote such industries. For the purpose of Government policy, basic industries can be defined as including aircraft, automobiles and tractors, chemical dyes, iron and steel, prime movers, transport vehicles, electrical machinery, machine tools, electro-chemical and non-ferrous metal industries. It is contemplated also that Government may take over certain industries in which the tax element is much more predominating than the profit element and it is necessary and convenient for the State to take over the industry. An example of such action in the past is "Salt Manufacture". All other industries will be left to private enterprise under varying degrees of control.

If the policy outlined above is put into force, India will have a far wider sector of nationalised industries than any country outside Soviet Russia. It may seem a grim prospect in the eyes of many. But precisely for that reason, it will appeal to others. But it should be recognised that, while in the advanced industrial nations, nationalisation is a question of the State acquiring established industries, in India, it will be more a matter of the State taking upon itself a specific share of the tasks of development that lie ahead. Some of the familiar cries against nationalisation will apply far less in this case. But it should not be forgotten that more than the merits of nationalisation as they are ordinarily understood, it is the probable fate of nationalised industries that is important. And that fate depends in the last resort on the character of the Government and the people, not on the theories or prejudices of participants in academic or interested debates.

Post-war Stabilisation of Agricultural Prices

Agriculture in India has for several decades past been the Cindrella of our national economy, although the Government and the politicians alike have been lavish in verbal tributes to its importance. Committees and commissions, there have been galore; but for various reasons little has till now been done to give a helping hand to the helpless cultivator. Thanks to the war, certain factors have already begun to operate in favour of post-war prosperity for our agriculturists. Indian industrialists have now clearly understood that, if they should prosper and if their prosperity is to be maintained in the long run, the prosperity of the villagers must be assured. Agriculturists form a big market for the industrial manufactures. The British Government and foreign interests in India also agree that, if India is to be developed as a lucrative market, the problem of augmenting the purchasing power of the millions of villagers in India is of supreme importance. That is why we find to-day British interests, Indian interests which is to some extent a separate entity, the Government of India, all of them agree on the supreme necessity of rehabilitating Indian agriculture. The post-war agricultural plan placed before the country assures us that the days of laissez-faire with regard to agriculture shall be over and the Centre will take a more active part in directing provinces and States to keep agriculture on a safe and steady level. If the industrialist and urban interests can make much of their part in the war effort, the agriculturists' claim is not less but more than that. It is well-known that a huge majority of the Indian military personnel come from the villages. The raw materials and labour population to sustain the factories working for the war effort have come from our villages. As a result of the strain on Indian economy caused by wartime controls and administrative inefficiency, the villagers have suffered more than the urban interests. The galloping inflation, initiated a few years ago to keep wartime economy at a high tempo, have impinged upon the lives of the poorer classes; and the famine conditions in Bengal, South India and Rajputana are clear testimony to the sacrifice made by the rural and agricultural classes during these years of the present war.

Many are the reforms needed to pull the ryot out of his present plight. Land tenure has to be modernised, villagers have to be educated, their indebtedness reduced, more credit facilities given and improved methods of agriculture introduced. But in a capitalistic economy, price is a cardinal factor to bring in prosperity to the families of the cultivators; and if the Government can assure them of a fair and comparatively attractive prices for their produce, it can be safely asserted that this reform would redound to the advantage of other sectors of Indian economy as well. Five years of price control have revealed that the piecemeal and halfhearted measures of the Government of India have not really benefited the lower ranks of the village communities. During this war very often, and in almost every place, the prices of manufactures needed for comfortable living have gone far ahead of the price of foodgrains. Rural indebtedness might have been reduced, but the smaller cultivators have in several areas been uprooted and there has been a concentration of land into fewer and fewer hands. The war and all its consequences, therefore, have shaken Indian agriculture to its roots. The Policy Committee on Agriculture decided, in June 1944, that the question of helping Indian agriculture should be thoroughly investigated and suitable steps taken if post-war development plans are to take root and fructify.

The Government of India, therefore, deserves congratulations on the appointment of a sub-committee under Sir V. T. Krishnamachari which is charged with the task of going into the question of stabilisation of agricultural prices in post-war years. This committee is to consider (a) the principles on which producers' prices of agricultural produce, whether crops grown for industrial purposes or for food or the produce of animal husbandry of all descriptions, should be fixed and (b) the methods by which the fixed prices could be made effective and an assured market provided. The Committee would make recommendations in relation to the conditions expected to prevail in post-war India, (1) in which the Government control over the procurement, distribution and prices of commodities exist in a substantial measure and (2) in which such control has been released or abolished and normal trade channels restored. A fair price to the cultivator is an excellent desideratum no doubt, but the difficulties in the way of achieving the end are so many. Any scheme of stabilisation of agricultural prices shall be based on a thorough study of the cost of articles entering into the cultivator's cost of production and also the cost of commodities whose cost enter into his standard of living. This involves careful collection of data over wide and representative areas. Recently, Mr. Hudson made an announcement in the House of Commons that the policy of

OUR LONDON LETTER :

BRITAIN TO SPEND ON COLONIES ?

OPPOSITION TO NATIONALISATION BY LABOUR

ROOSEVELT'S DEATH UPSETS THE CITY, NOT MARKETS

LONDON, April, 13.

President Roosevelt's death has upset the City without upsetting the markets, a paradox which has been seen before during the war. That is, while the higher circles in industry, commerce and finance were forced to reconsider all their tentative post-war plans in the light of the fact that a new, totally unknown, personality would be the Chief Magistrate of the United States for at least three years, the lower decided to sit tight and not sell. Industrial shares showed a tendency to drift somewhat lower, but dealers were quite willing to absorb all offerings.

Perhaps the biggest conundrum facing the City is whether President Truman will prove to be a highly nationalistic Chief Executive, rather predisposed to listen to those business interests with short-term views to advance, or whether he has absorbed Mr. Roosevelt's internationalist viewpoint and will be willing and able to enforce long-term views of a more co-operative character upon the business community. Pessimism and optimism seem about equally visible.

The war in Europe itself is raising problems sufficiently staggering. When Hitler drove into the Low Countries and France in 1940, he deliberately used several million refugees to congest roads and hamper the Allied forces, both air and ground forces; to-day, he is again resorting to the same device or, at any rate, availing himself of the same phenomenon to throw an enormous burden upon the Allied military headquarters. Hundreds of thousands of industrial conscripts drawn into Germany from the Low Countries and France are now "trekking" back home, crowding roads, sleeping in barns and hayfields, almost starving, since the countryside cannot feed them. The fear that they may carry typhus or perhaps other diseases into the liberated countries is widespread; and this uncontrolled or almost uncontrollable migration is the first major post-war problem confronting the Allies.

This apparently is largely responsible for the big emergency orders received here for steel sheets suitable for the construction of temporary houses. The steel industry hears that Belgium is urgently pressing for steel houses similar to the so-called "Portal" steel house which the British Government originally planned to use for temporary housing for those whose homes had been blitzed. For various reasons, the Government abandoned the idea of steel houses for home use.

Colonel Oliver Stanley, the Colonial Secretary, has provoked some expressions of scepticism in financial quarters regarding his programme for expenditure to the extent of £120,000,000 for development of colonies during the next ten years. He told the Parliament in February that the Colonial Office will set its face against "get-rich-quick" adventurers who attempt to exploit the colonies in post-war period ; there is no use in their gambling in hopes of "staggering profits." Furthermore, the Colonial Office will frown upon any "uncoordinated, sporadic enterprises."

But the City, which has had a long experience of colonial enterprises believes that all such enterprises are fundamentally speculative. Some succeed and pay handsome dividends over long term years, but very many fail. The Colonel himself, apparently addressing himself to the anti-imperialists of America who firmly believe that Britain has grown fabulously rich from colonial enterprises, quoted Lord Hailey's calculation that British investors over the past 50 years had received about what they would have received if they had invested their money in gilt-edged Government stock. Colonel Stanley cited as typical of many colonial enterprises the £1,000,000 spent by British investors on the building of railways in Bermuda which never paid one penny of dividend—nearly all the capital had been lost.

According to the City view, these risks are inseparable from colonial development and there is very little evidence that the Colonial Office Civil Service will find, or succeed any better than the City of London in finding, completely safe openings for Government funds.

On the other hand, British public opinion has become during the past few years increasingly sensitive to criticism, both British and American, of the backwardness of the whole of the Colonial Empire. One point which especially stunned people was the statement, that the United States were spending more money even during the war in developing Puerto Rico and raising the standard of living there than the British Government are spending on the entire Colonial Empire. This may have something to do with the new programme.

The Stock market shows some uneasiness regarding the possibility that the Labour Party, if victorious in the General Election, will initiate steps for the complete nationalisation of transport, including railroads, canals and road transport. This has been an old demand of the Labour party, though not one whereon their pamphleteers and theoreticians consumed much paper. The British railways are highly capitalized, with the bulk of the capital in the form of preferred stock and debentures. This would have to be compensated in full and would make government purchase fairly expensive, quite apart from whatever valuation may be placed upon the ordinary shares. Furthermore, railroads are severely run down owing to the war's exorbitant demands upon them and several years must elapse before they are in a position to make a good showing. Last year, for example, their operating ratio, ratio of expenditure to gross receipts, which has been falling year by year through the war, rose sharply, thus reversing the trend.

The business community will, doubtless, oppose nationalization under the auspices of the Labour Government but many think it would not be averse to it if it could be done under the auspices of the Conservatives. In other words, they have found Government control of railroads during war time much more successful during this war than during the last, and if the proposal could be divested of its political and "ideological" flavour, many would not resist it.

But if nationalization of transport is the thin end of the wedge, then they would be up in arms against it.

Another group which is up in arms is the Association of Electric Power Companies which is afraid that they may be bought out and the entire network unified in a nation-wide system.

(Continued from previous Page)

guaranteed prices and markets would be continued and that prices would be determined every February after an examination of farmers' costs. Fortunately, farming costs have been studied for many years past by the several advisory centres in the United Kingdom. In fact, recently, the collection of statistics extended further and covered numerous new items too. The British Government to-day have figures regarded as sufficient, comprehensive and representative to serve as a safe basis for an official price policy. Though, the considerations that will decide the prices to be fixed have not yet been decided, there is no doubt that the U. K has enough data on which to go ahead with a programme of stabilisation of agricultural prices. But in India we know only too well that the farmer rarely keeps accounts, if at all. In this country agriculture is more a way of living than a business and the agricultural produce enters the market for sale only after meeting the requirements of the village cultivator and his family. In other words, it is generally the surplus that comes into the market and the ryot does not produce for the market as his sole object and the extreme fragmentation of agricultural holdings has made the position worse.

Another consideration to be borne in mind when agricultural prices are sought to be stabilised is the impact of international trade on Indian economy. Many agricultural commodities like oilseeds are governed by international prices and this intimate link with outside prices has its repercussions on Indian agriculture as well as non-agricultural prices. Wheat, rubber and tea are governed by international agreements. There cannot be a national and a local fixing of prices for items like these. Further, we have to be clear on another point: are we going to stabilise agricultural prices during a period of comparative prosperity or will there be the necessity to stabilise prices during a period of declining price level? It is wellknown that price stabilisation is easier during a period of rising prices than during periods of slump. Whether after this war India will be faced with a sharp decline in prices or whether the Government of India will do their best to increase production and keep prices at a stable level is still unknown. It is too early to assess the factors, national and international, which may operate in relation to Indian prices. But if the Government of India are really in earnest regarding their post-war development plans, we may expect an expanding economy ; and price stabilisation during a period of expanding economy may not be very difficult to achieve. The size of the country is itself a great stumbling block to unify price control and the innumerable varieties of agricultural commodities is another complication preventing satisfactory price fixation. The division of the country into separate administrative areas like Provinces and States is likely to add another headache and the absence of organised consumers' opinion will leave the field more to the advantage of the producer. It is also possible that only the prices of some important agricultural commodities need be stabilised. But, if national economic development is our prime objective, the necessity for a vigorous and all-round control cannot be exaggerated.

Editorial Notes

Dog in the Manger

A correspondent, whose letter is published in this week's "Bouquets & Brickbats," has drawn attention to the importance of the Imperial Bank relaxing the restrictions on its retired officers taking up service with other banks. According to the service rules of the Bank, we understand, an officer must be in retirement if he is to continue to receive pensions and that, if he wishes to take service with another bank, he must obtain the permission of the Bank. Our correspondent questions the equity, from the broad national point of view, of these restrictions. In a country in which personnel is notoriously the bottleneck in many lines of development and banking is no exception, the policy and attitude of the Imperial have all the characteristics of the dog in the manger. If retired Government servants can take up active service under private employers, why not the ex-officials of the Imperial Bank? There is, of course, the obvious difference that the Imperial Bank is a commercial institution which may justly be jealous of conserving to itself the benefits of experience gained in its ranks. And the Bank may contend, too, that its retired officials cannot ask for the benefits both of active service and of the pension which pertains to retirement. This argument, plausible as it seems, is weakened by the fact that the pensions in the Imperial Bank are contributory pensions; and, with the expectation of life as it is in this country, cases in which the Bank had to pay pensions from its own resources must be rare, indeed. Denial of pension on whatever grounds is, up to a point at least, appropriation of monies that belong to the officer concerned.

If it is correct from a wider standpoint that the retired officials of the Imperial should be allowed to take service with other banks, the question of pensions should not be allowed to stand in the way. The Bank's anxiety to prevent other competitive institutions from getting the benefit of the experience gained in its service will evoke but little sympathy in the public at large, not to speak of the banks which feel the shortage of qualified men. After all, the Imperial has shown but little concern to keep its employees to itself. And, more important than all, there is the fact that the Imperial Bank of India is not an ordinary joint stock enterprise, but a public institution which has gained in profit and prestige by its close association with the Government or the Reserve Bank. When the Imperial Bank of India Act was passed, it was the intention of the Legislature that this privileged institution should do its best to help the development of banking; and the suggestion that retired officials of the Imperial should be free to take service with other banks without loss of pension is in keeping with the policy behind the Imperial Bank of India Act.

Britain's Budget

The 1944-45 Budget estimates presented to the House of Commons by Sir John Anderson clearly indicate the determination of Great Britain not to relax her efforts till the war against Japan is over. For the first time in Britain's history, the expenditure has exceeded £6,000 million. The actual expenditure is placed at £6,063 million, which is £123 million more than the original estimates. The magnitude of Britain's strain in the war is to be measured by the expenditure incurred on all services during the past five years and this burden is revealed as £27,400 million, nearly half of which has been met from current revenues. Revenue from taxation accounted for 37 per cent in 1941 and 50 per cent in 1944-45 but the present estimates put the figure higher still, at 53 per cent. The revenue for the budget year has been placed at £2,029 million, this itself being an increase of £29 million over previous expenditure. The yields from Income-tax, Excess Profits Tax and National Defence contributions and Beer Duty have all increased beyond expectations. Income-tax totals £1,317 million and beer has yielded £20 million more than the estimates. The Chancellor stated that the rate of taxation would remain unchanged and that sterling liabilities which exceed £3,000 million now are likely to reach £4,000 million before the war is finally over. Britain had to liquidate her overseas assets under the strain of war and the problem of retaining pre-war standards of living cannot be easily achieved. Britain's hope of quick economic progress is directly linked with her capacity to increase her production and maintain foreign markets. It is made clear that the promise of tax relief can be sustained only when the operations in the Far East come to a successful end during the year. Sir John deserves praise for having maintained complete stability in the cost of living index for the past one year. 42 per cent of the whole of the personal income of the British community has been turned over to financing Government's expenditure. Sir John Anderson's statement that it would be contrary to the elementary principles of justice and fair dealing between nations that these sterling obligations which Britain had undertaken should be treated as ordinary commercial debts has a direct relevance to the problem of liquidating India's sterling balances.

Working of P. & T. Department

The Annual Report of the Posts and Telegraphs Department reveals some interesting features. The financial result of the working of the Department for the year showed a surplus of just over Rs. 9 crores, the highest surplus so far earned. This is partly as a result of enhanced rates imposed for the purpose of earning revenue to meet the increased costs of the Government in prosecuting the war. The volume of traffic handled by the Department during the year exceeded the figures reached during any of the preceding years and these increases show a marked contrast to normal pre-war traffic returns. During the year the Department handled 1,575 million postal articles of all kinds as compared with 1,241 million in 1938-39. The number of telegrams transmitted increased from 16.4 million to 27.9 million. The total monetary transactions of the Department amounted to Rs. 430 crores which compares well with Rs. 302 crores for 1938-39. There was a rise from Rs. 40,00,000 to Rs. 3,50,00,000 in Defence Savings balances. The number of Defence Savings Bank Accounts had increased from 94,000 at the beginning of the year to 2,308,000 at the end of the year under review. The total balances in Defence Savings Bank Accounts at

the close of the year were Rs. 3.5 crores as against Rs. 10.6 lakhs at the end of the previous year. This phenomenal increase in the number of small investors is the result of the Department's anti-inflationary drive. Considerable progress was made during the year in the Rs. 16 crores Tele-communication Development Scheme initiated in 1942-43. Under this scheme, a very large number of telephone and telegraph carrier channels have been installed. There has also been addition of substantial length to the trunk lines and wires. When the war will be over, these should afford welcome relief to the overworked Posts and Telegraphs system. Some progress had been made in the field of technical research. The building up of wireless transmitters, both short-wave and medium wave, in the departmental workshops with components manufactured in India, the utilisation of medium wave transmitters for short wave reception by the use of specially designed adapters and improvements in automatic telephone equipment have all enabled the Department not only to overcome technical difficulties consequent on the war, but also to give, in some respects at least, a more efficient service to the public.

The Union Budget

Preparation for post-war prosperity is not the special feature of the budget of any country, but the last wartime budget (for 1945-46) of the Union of South Africa showed that the change-over to peace-time economy is taken to be a gradual process since savings in war expenditure can be achieved only step by step. The Minister of Finance introducing the budget estimates for 1944-45 reveals a revenue of £118 million while the estimate of expenditure stood at £115 million, yielding an estimated surplus of £3 million. There has been a notable saving in the expenditure under the headings, National Debt, Pensions and Agriculture. Revenue increased by about £4 million though Customs revenue decreased by £400,000. Inland Revenue has yielded £4 million more than the expected figure and the Post Office revenue continues to go up as before. The yield from Death Duties has come down by £1 million and gold mining reveals a decrease of nearly £0.9 million. There has been an increase of £2.5 million under Excess Profits Duty and the normal Income Tax and Trade Profits Special Levy showed remarkable results. Expenditure for 1945-46 is estimated at £124 million and revenue is placed at £123 million. The resulting deficit of £545,655 is proposed to be met by additional taxes as follows: on Brokers' Notes £250,000, Duty on beer £30,000 and an increase in Personal and Savings Fund Levy, £180,000. This would still leave a net deficit of £85,656. The Finance Minister announced that the policy of dividing Defence expenditure—which was estimated at £101 million for 1944-45—in equal proportions between Revenue and Loan Accounts will be charged this year to a 55-45 basis. No relief in taxation is promised since social security involves greater expenditure and a heavier burden of taxation. The Railways and Harbours Budget for 1944-45 placed the revenue at £61 million and the expenditure at £60 million, yielding an estimated surplus of about £1 million. Loan operations during the year have been eminently successful and budget estimates are framed with a view to achieving an orderly transition from war to peace time economy.

Technical Labour in India

In his address to the Chairmen of the National Service Labour Tribunals at Simla, delivered a few days ago, Dr. Ambedkar said that the Tribunals had directed 15,000 technicians into National service, and controlled their movement, which the Government wanted the Tribunals to tighten up. He realised that a very heavy strain had been imposed upon the workers because of the war and Government wished to ensure that further sacrifices shall not be demanded arbitrarily. He wanted to see that labour conditions did not deteriorate, or the dignity of labour was not lowered, whatever may be the pressure from employers. He wished to bring together the employers and the employed in the same way as the Minister of Labour in the U.K. did by exercising his powers in both directions against employers as well as workers.

Dealing with resettlement of demobilised personnel and workers in war industries, he said this was a heavy responsibility entrusted to the Labour Department. But this question can be dealt with effectively only with the full co-operation of the Provinces. The Provincial National Labour Service Tribunals will continue and their chairmen will be in close contact with the central Labour Department on the one hand and the Provincial Department on the other. The resettlement organisation will, in addition to finding service for demobilised men, lay the foundation of an efficient employment service in the country. The important feature of such a service was a co-ordinated system of employment exchanges, a few of which had already been set up and doing good work. These exchanges are to be under trained Managers and Assistant Managers and will be housed in convenient buildings where workers can come and go. The resettlement organisation would have to concern itself with the training and reconditioning of demobilised personnel and their welfare and would have to watch their interests in the new employment.

Mid-East Oil.

The fabulous wealth of power and world industrial potential in Middle Eastern Oil is the generally hushed competitive objective of the Big Three Powers—America, Russia and Britain. All the three powers have troops stationed in Iran and all three have designs on Iranian oil development which will figure greatly in the post-war world. Oil from this area has been the sinews of Allied war in the East, Africa and Mediterranean, and what has been obtained till now is but a fraction of its total potentialities. In describing the Middle East potential sober-minded oil prospectors talk freely in superlatives. The Texan geologist DeGoyler, who headed the technical Oil Mission to the Middle East, reported to the Petroleum Reserves Corporation at Washington, as follows: "For the next 10 or 15 years, at least, the Middle East is likely to develop and maintain production capacity of asmuch as four times its probable market outlet. So great are the known and probable reserves of petroleum in the Middle East, following an almost unbelievably small amount of prospecting and development, that the region ranks on equal footing with the highly developed United States as a future source of oil even under the most conservative basis of appraisal."

The British monopoly is held by the Anglo-Iranian Oil Company Limited which operates a huge refinery in the Persian Gulf at Abadan with a long past behind it and a longer future ahead under an old concession. But American companies have the upper hand in the entire Middle East oil reserves, holding about 60 per cent to about 40 per per cent of the British. Up to now, the Russians have had no concessions outside their own country, and they are clamouring for a share in the Persian Oil prospect. In the impatient belief that the war was nearly over, and post-war planning was in order, American companies sent negotiators to dicker with the Iranian Government last year for oil concessions, British likewise gave indication of further interest in Persian oil and eventually the third ally with troops in Iran sent in a deputy commisar from Moscow. The rivalry among Americans, British and Russians and the internal political repercussions became so hopelessly entangled that the Persian officials called off all negotiations until the troops of all three powers were withdrawn from the soil. The Soviet Press bitterly attacked the Persian decision to call off all negotiations for oil concessions in Persia until the end of the war. The Russians contend that Iran has not treated all foreigners alike and that Russia has been discriminated against.

Co-operative Societies in Bengal

The progress of the Co-operative movement in Bengal during 1942-43 has been reviewed in a Government Press Note published last week. From the figures disclosed it seems that the working of the Co-operative Societies in the Province has been affected less by the comparative abundance of money available among the community than by adverse circumstances such as scarcity and high prices of foodstuffs and other essential commodities, poor harvest of paddy, slump in jute trade and flood and cyclone in certain districts. Though the number of societies of all classes increased from 41,247 to 41,265, the total membership and the working capital registered a net decline. Two Central Banks closed during the year, the number of non-agricultural societies fell from 3,089 to 2,930 due to the winding up of non-working credit societies among them; the Producers' Unions remained steady at 16, while the agricultural societies saw 179 additions. Two new jute sale societies were also formed, one at Jalpaiguri and the other at Mymensingh.

MORALE
THE LAST WORD IN DEFENCE

Defence of a country, particularly in modern warfare, largely depends on the excellent morale of the people, irrespective of whether they are directly engaged in war work or not. It is the unshaken morale of the people of Great Britain that helped in the magnificent defence against the terrible Air Bombardment by Germany and gave the Germans the first setback. It is the knowledge of every individual and the satisfaction that their country is well defended that creates such morale. In the defence against Air Raids Baloon Barrage plays an important part. So also the efficiency of the fire fighting services and the Rescue parties. All these need—and an essential need of course—suitable and strong ropes. Hartons play the leading role in these supplies. Whatever the kind of quality in ropes may be Hartons have the variety to choose from.

UNDER THE PATRONAGE OF AND LARGELY SUPPORTED BY THE GOVT., OF HIS HIGHNESS THE MAHARAJA OF JAIPUR.

THE BANK OF JAIPUR LIMITED

(INCORPORATED IN JAIPUR LIABILITY OF MEMBERS LIMITED)

DIRECTORS' REPORT TO THE SHAREHOLDERS.

The Directors have much pleasure to present to the Shareholders the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur Ltd., for the year ended 31st December, 1944. The Shareholders will be pleased to note that the Gross Income of the Bank for the year was Rs. 10,45,340-3-5 and after providing in full for all expenses including Preliminary Expenses incurred by the Bank in connection with the opening of new Branches at important Cities in India such as Calcutta, Delhi, Madras, Bangalore, Coimbatore, etc., the net profit of the Bank amounts to Rs. 4,46,335-1-2. The total amount now available for disposal inclusive of the amount brought forward from the last year is Rs. 5,39,276-11-4 which the Directors recommend to be appropriated as under:

Bonus to Staff	..	Rs. 25,000.
To carry to Reserve	..	Rs. 2,50,000.
and the balance of	..	Rs. 2,64,276-11-4 to be carried forward to next year's accounts.

During the year under review the Bank opened branches at:

Calcutta, Delhi, Madras, Bangalore, Coimbatore, Fatehpur, Jhunjhunu, Sikar, and Hindaun (Pay Office) in Jaipur State.

As most of the important new branches were opened in the last quarter of the year 1944, the results of their working will be known only at the end of this year. The Directors are confident that these new branches will be a source of strength to this Bank.

During this year Seth Govind Ram Seksaria resigned, and Seth Kanai Lall Jatia joined the Board of Directors of the Bank.

The Directors take this opportunity of expressing their thanks to all the constituents who have extended their generous support to this Bank. The Directors are also glad to place on record their appreciation of the efficient, hard and devoted service of all the members of the staff.

Three Directors of the Bank namely: Sir Padampat Singhania, Seth Ramnath A. Podar and Raja Sardar Singh Bahadur of Khetri retire under Article 113 of the Articles of Association and being eligible offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

JAIPUR, PADAMPAT SINGHANIA,
5th March, 1945. *Chairman.*

Among the Land Mortgage Banks, 4 new and 3 of the old 5 banks could not issue any loan, for want of finance and only 3 of the 5 old banks could show a profit on the year's working. While the finances of joint stock institutions should have expanded generally during this period, co-operative finance has only shrunk. The press note states that "war time necessities increased a demand for co-operative stores and many Central and Urban Banks were permitted, as an emergent measure, to open a store-section for equitable distribution of controlled commodities". That the co-operative organisations were not availed of in any notable measure, either in the procurement or in the distribution of controlled commodities, as they could have been done, has to be inferred.

Sodium Sulphide in Jodhpur

The other day our South Indian correspondent reported that the Mysore Government are transferring State industrial undertakings to private management. Another State, Jodhpur, it appears, contemplates moves on the same line. The Sodium sulphide factory in the Jodhpur State, which was started at the instance of the Supply Department, for encouraging the production of this important heavy chemical has a capacity of 3,000 tons. So far, the industrial needs of the country, which are about 3,000 tons per annum, were met by imports from abroad. The raw material for this chemical is sodium sulphate and it is available at a cheap price, it being the bye-product of common salt. It is estimated that 300,000 tons of sodium sulphate are available in the State. Such is the position of the sodium sulphide industry in which the Jodhpur Government invites industrialists to participate. The factory is offered at Rs. 6 lakhs which is the book value. The Government, no doubt, promises a number of concessions to prospective buyers but wishes to know what percentage they are prepared to pay to the State Government on the total value of the finished product. With the assurance of help promised by Jodhpur Government, private enterprise should take up the offer since the chemical is important and raw materials are sufficient and cheap.

Distribution of Pulses

In order to assure an equitable and regular distribution of pulses to the different deficit areas, the Government of India have devised a new plan which will come into force from May 1, 1945. This plan is based on the understanding that the co-operation of traders and dealers in pulses would be necessary if complete success of the scheme is to be at all aimed. Merchants understand the actual working of markets in the localities and can be expected to do their jobs as distributors much better than inexperienced Government officials, though, of course, strict vigilance will have to be enforced if the scheme is to be executed to everybody's satisfaction. The new plan for pulse distribution is based on the following procedure: all surplus and deficit administrations will declare, at the end of each crop year, their estimated surplus or deficit to the Central Food Department after consulting the local traders. The Central Food Department will examine these figures and on the basis of these figures allocate quotas to the deficit areas. The movement of the quota of pulses will receive the required assistance for quick transport as other foodgrains receive under the Basic Plan. The surplus administrations which came forward to supply pulses will issue permits to bonafide licensed traders in their provinces for exporting pulses to the deficit areas. Licenses will be issued only up to quantities specified in the allocation plan subject to a price ceiling for different kinds of pulses. The permits will be valid for three months. At the other end, deficit administrations will announce to the receiving areas the maximum price ceilings prescribed for different kinds of pulses and also furnish them with the current market prices of the principal pulses. The receiving areas will nominate bonafide local dealers in pulses to receive the quota allotted to their province after direct negotiations with the nominated export dealers. These dealers would be responsible for the distribution within the deficit provinces or States. The deficit administrations will also prescribe the maximum prices for each kind of pulses calculated on the basis of the ceiling prices fixed in the exporting areas plus transport and other incidental charges and a reasonable

TEA ESTATE
FOR SALE

At the Calcutta Tea Brokers' Association Sale Room, Mission Row, Calcutta.

The undersigned will offer for sale by Public Auction on Thursday, the 31st May, 1945, at 11 a.m., as a going concern as from the 1st January, 1945, that valuable property.

DOOMNI TEA ESTATE

Situate in the Kamrup District of Assam, comprising some 875 acres under tea.

For full particulars and conditions of sale apply to:

A. W. FIGGIS & CO.
D. BLOCK, CLIVE BUILDINGS, CALCUTTA

The sale is subject to a reserved price to be fixed by the vendor who reserves the right to withdraw the property from the sale at any time before it has been knocked down, without declaring the reserved price.

remuneration to the licensed exporters. Both the exporting and receiving areas will be required to furnish fortnightly reports to the Central Food Department giving details regarding the progress made in the procurement and distribution of pulses. Since this new plan of pulse distribution is based on the active co-operation of expert traders in the line, it can be expected that the plan would be met with an early success.

12 Crore Plan for Kolhapur

Land utilisation receives due emphasis in the post-war development plan for Kolhapur explained by Mr. M. R. Bagve, the Development Minister of the State. The State turns to agriculture for substantial results and a Land Utilisation Officer has been appointed to evolve a programme and execute it in a period of about five years from June 1945. Sample investigations would be first carried out, then the officials of the Revenue, Forest and Agricultural Departments would be trained and then only the schemes would be carried out. Suitable legislation to reduce rural indebtedness and ample facilities for rural education are also provided for. The State has decided to carry out a comprehensive survey of cottage industries and a forest policy is also in the offing. The total cost is estimated at Rs. 12 crores. It is believed that the current revenues of Kolhapur would yield seven crores and two crores could be raised by loans. Local taxation and donations can contribute a crore and two crores can be made out of existing investments and cash.

Development of Fisheries in India

Important and far reaching are the recommendations made by the Fazal Rahimtoolah Sub-Committee, which was appointed recently by the Government of India to report on the development of fisheries in India. The Committee is of opinion that no material increase in fish production nor improvement in the trade is possible unless a comprehensive programme of development based on an All-India policy is adopted and enforced at an early date. The first thing to be done towards this end is to obtain detailed knowledge about the sea, the fishes, catching methods, organisation of the fish trade and the economic conditions of the fishermen. Detailed statistics have also to be collected. A preliminary survey of the commercial fisheries of the country such as fishing grounds, vessels and boats employed for catch should also be undertaken. Utilisation of fishery products, etc., is to be conducted. The committee, as also Dr. B. Prasad, recommend the establishment of a Central Fishery Research Institute like the Forest Research Institute and College. The work of the Institute will be divided under four heads: biological, physio-chemical, statistical, technological and educational. The Institute will not only collate research work in the various provinces, but also constitute a centre for training the personnel necessary for the various State and Provincial departments. This pre-supposes the starting and re-organising, as the case may be, of the Fishery Departments in the Provinces. Marine stations and inland stations should also be started in the various provinces. All these institutions will cost nearly Rs. 60 lakhs. But what the Government of India is at present spending on Fisheries is a negligible amount, compared to the U.K., U.S.A. and Japan. It is not out of place to remark that the Japanese fishing industry was so well developed that Jap trawlers used to fish in the Bay of Bengal before the War. Among other things, better exploitation of shark liver oil industry and improving the economic, social and educational conditions of the fishermen deserve attention. To ensure to the people not only a quantitatively sufficient food but also a balanced diet, development of fisheries is imperative.

A Correction

In the note on "Power Alcohol in the U. P." which appeared in our last week's issue, the element of the excise duty in the selling price was overlooked. The law relating to the excise duty is so wide in its scope that power alcohol, rectified spirit and all such articles are equally liable to pay the duty. It will be readily appreciated that with As. 15 so accounted for, the difference between the ex-factory price and the ultimate selling price is much narrower and leaves little room for charges of unfair profit margins. We understand that the oil companies—it is not alone the Burma Shell—have in this case done little more than offer the help of their distributive organisations to the U. P. Government. If we allow for the excise duty and the transport charges incurred by the Government in moving the rectified spirit from the factory to the pumps, the difference between the ex-factory price and the selling price will leave but little more than the cost of the services rendered.

may be inspected by bonafide applicants at the Registered Office of the Company by appointment.

APPLICATIONS FOR SHARES:

Applications for shares may be made at the Registered Office of the Company or M/s. Stuart Co., Stock and Share Brokers of No. 4, Lyons Range, Calcutta or Company's Offices at Dhani Ram Road, Anarkali, Lahore, Collectorate Road, Agra.

(Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent he Government of India do not take any responsibility for the financial soundness of any schemes or for correctness of any of the statements made or opinion expressed with regard to them).

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

"The consent of the Central and Travancore Governments has been obtained to this issue under Defence of India Rule 94A and Defence of Travancore Rule 94B. It must be distinctly understood that in giving this consent the Government of India or the Government of Travancore do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them".

THE TRAVANCORE ELECTRO-CHEMICAL INDUSTRIES LIMITED

(Incorporated under the Travancore Companies Act IX of 1114).
(Liability of the members is limited).

AUTHORISED CAPITAL - - - - Rs. 25,00,000
Divided into (a) 22,500 Ordinary Shares of Rs. 100/- each and (b) 12,500 Deferred Shares of Rs. 20/- each.

ISSUED CAPITAL - - - - Rs. 10,20,000
Divided into 9,000 Ordinary Shares of Rs. 100/- each and 6,000 Deferred Shares of Rs. 20/- each.

The Government of Travancore have reserved for themselves and their subjects 3,000 Ordinary shares of which the Government have agreed to take 2,000 shares for themselves. Since the date of the publication of the prospectus the underwriters have procured subscriptions for 3,000 Ordinary shares and the remaining 3,000 Ordinary shares are offered to the public on the basis of the prospectus payable as follows :—

On Application Rs. 25 per share; on allotment Rs. 25 per share and the balance of Rs. 50 per share will be called, as and when required, in two instalments of Rs. 25 each at an interval of not less than 3 months.

Of the Deferred shares, Mr. M. S. Bhandarkar of the Managing Agency Company has agreed to take 5,000 shares on terms and conditions set down under the clause of agreements. The balance of 1,000 Deferred shares of Rs. 20 each is offered to the public payable as follows :—

On Application Rs. 10 per share; on allotment Rs. 10 per share. Preferential allotment will be given to subjects of Travancore State. Applications for deferred shares alone will not be considered.

DIRECTORS.

1. RAJYASEVANIRATHA S. CHATTANATHA KARAYALAR, Deputy President, Sri Mulam Assembly (Travancore), Chairman, The Travancore Ogale Glass Manufacturing Co., Ltd., etc., Vice-Chairman, The Fertilisers & Chemicals (Travancore), Ltd., and Director, The Travancore Sugars and Chemicals, Ltd., etc.

BANKERS.

1. THE INDIAN OVERSEAS BANK, LTD., Bombay, Madras and Alleppey.
2. THE INDIAN BANK, LTD., Bombay, Madras and Trivandrum.

RIGHTS OF ORDINARY AND DEFERRED SHARES:

The Ordinary Shares shall confer the right to a dividend upto 7½ per cent per annum and the Deferred Shares shall confer the right to a dividend up to 7½ per cent out of the profits, if any, after the payment of 7½ per cent dividend on Ordinary Shares. Surplus profits, if any, decided to be distributed among the shareholders in any particular year shall be divided in the proportion of 3: 1 between Ordinary and Deferred shares by way of additional divend. In a winding up the Ordinary share capital shall rank in priority to the deferred shares for repayment of capital. Any surplus assets after payment of the capital paid up on the ordinary and deferred shares shall be divided in the proportion of 3: 1 between ordinary and deferred shares.

OBJECTS:

The Company has been formed with the objects set down in the Memorandum of Association and in particular to manufacture carbon and graphite materials that form the basic requirements for electrometallurgical, electro-chemical, electrical, textile, paper and other industries and also electro-chemical and chemical materials, furnace products and equipment for their production.

SITUATION OF FACTORY AND PLANT AND MACHINERY:

The factory will be situated at Kothamangalam (20 miles from the industrial centre of Alwaye) and this site is specially advantageous in view of the availability of cheap electric power from the Travancore Electricity Department and also the facilities of the Cochin Harbour through which it is easy to maintain communication by sea both with the western (Bombay) and eastern (Calcutta) markets as well as the south Indian markets. The plant is intended to produce annually carbon and graphite materials of the peace time value of Rs. 10,00,000 and the factory will have provision for future expansion. It is confidently expected that the company will be in a position to place their products on the market within a few months of the erection of the plant, which it is estimated will not exceed one year as a large portion of the plant including necessary electric furnaces is being built up locally also resulting in considerable economy in the cost of the plant.

PROFITS:

Detailed calculations have been made on the basis of selling prices in the prewar period and it is estimated on a conservative basis that the company will be in a position to make a net profit of 10 per cent on the capital employed.

CONCESSIONS:

(a) The Government of Travancore have kindly granted the following facilities and concessions: The site for the factory will be acquired by Government and leased but to the Company for a period of 25 years in the first instance renewable at the option of the Company for a like period and on similar terms, provided Government are satisfied that the purpose aforesaid for which the

Bank of Jaipur, Ltd.

Sir Padampat Singhania's review of the Bank of Jaipur's working in 1944 throws into relief the branch expansion policy of new banks and the augmentation of resources is not the only consequence of the forward policy pursued. In the case of a new bank, the share of profits retained in the books is always important, and the auspicious inauguration of the Reserve Fund with Rs. 2½ lakhs from disposable profits like the greatly improved carry-forward confers importance on the accounts published today. The advent of a new Director in Mr. Kanai Lal Jatia strengthens the new bank's connexions with Calcutta. In the balance sheet the outstanding features are the proportion of Bills to other assets and the extremely comfortable cash position at the end of the year. Total deposits of Rs. 5.43 crores are invested to real advantage inasmuchas Advance totalling Rs. 2.6 crores appear to be the most considerable item. The extinction of liabilities, such as brokerage and preliminary expenses, should produce the most favourable impression in relation to the net profit returned for the year. Capitalisation is fairly high but the rating of prospects in this case has established a premium on the shares of the Bank of Jaipur long ago. The satisfactory growth of deposits in the second year of working justifies the market rating of the shares in so far as the Bank of Jaipur is very widely represented outside the State. The Bank of Jaipur has its Government directors but the greatest advantage held today is the presence of Mr. B. M. Bhargava, with his vast experience of banking in Bombay on the Board. The second report admittedly suggests that prompt and full use has been again made of opportunities, and the promise of better results to come, is reinforced by the Chairman's commendation of the staff and the expression of gratitude to the Bank's clients.

To-day's Prospectus

II. Our readers are referred to an announcement concerning a new Travancore Company published today. The offer of shares made therein is readily related to the objects detailed. The capital structure may appear modest but the new Company, Travancore Electro-Chemical Industries, has State backing, inevitable in the case of one launched under exceptional auspices, as may be inferred from the support extended by the Council of Scientific and Industrial Research. The State has offered concessions at factory site in regard to rent, power supply and the procurement of raw materials. The Department of Supply also has shown real apreciation of the effort made to develop manufacture of both carbons and electrodes. Electrification for outside South India should receive a real impetus from the new and striking departure in the industrial field. It is certain that the response to an announcement in respect of an issue, in which leading Bombay brokers have shown very substantial and practical interest already would be satisfactory. Electrical equipment shares rated necessarily among the best industrials everywhere are too few in India and a single addition to the list of extremely eligible securities is a matter of high importance for both investors and their advisers. They should certainly examine with attention the announcement appearing today. As to their favourable verdict, there can be no doubt in view of the impressive advantages to which reference has been made above.

THE TRAVANCORE ELECTRO-CHEMICAL INDUSTRIES, LIMITED—*Contd.*

Company is constituted is carried out satisfactorily by the Company. Rent will be levied in respect of the land at a rate equivalent to 3½ per cent per annum for the first two years and at 5 per cent thereafter on the capital cost involved in the acquisition of the land. Electrical power will be supplied to the Company to the extent of 1,500 K.V.A. at the rate of Rs. 135 per K.V.A. when the new generating set which the Government are installing is ready for operation. Facilities will be given to the Company for obtaining the necessary natural raw materials such as quartz, silica and graphite in the state. Unfair competition will be guarded against and no better terms will be given to any competitor in the same business. The Company shall, as far as possible, employ Travancore labour and staff in the factory consistently with efficiency. One-third of the share capital of the Company shall be reserved for subscription by the Travancore Government or by subjects of the state. The Travancore Government shall be entitled to nominate two directors to represent them on the board of management and it shall not be necessary for such Directors to hold any shares in the Company. The Company shall permit the Accountant-General of the Government or any other person authorised by him to inspect the books of account and records of the Company and have access to all vouchers, invoices and other documents which he or they may require.

(b) *The Government of India (Department of Supply) have been good enough to assure their help in arranging for the necessary transport facilities and also priorities for machines to be imported from abroad.*

AGREEMENTS:

Messrs. Indian Industries, Ltd., have been appointed Managing Agents for a period of ten years from the date of incorporation (4th April, 1945) on an office allowance of Rs. 1,500 per mensem (the Managing Agents have agreed to draw only Rs. 1,000 per mensem till the factory commences production) and a commission of 10 per cent on the net annual profits as defined by the Travancore Companies Act. Mr. M. S. Bhandarkar, the Managing Director of the Managing Agency Co., is receiving 5,000 fully paid-up deferred shares in consideration of the pioneering work done by him and also for organising, erecting and establishing the carbon and graphite electrode plant and the company has also authorised the Managing Agents to enter into an agreement with the Council of Scientific and Industrial Research for acquiring rights, if any, and securing their technical advice in commercial development of the process on the basis of royalty not exceeding 2 per cent payable during a period not exceeding fifteen years on the sales of carbon and graphite electrodes manufactured by the company.

UNDERWRITING & BROKERAGE:

An underwriting arrangement has been entered into with Mr. P. R. Subramanyam, Stock, Share and Finance Broker, 61, Stock Exchange Building, Apollo Street, Fort, Bombay for underwriting Rs. 6,00,000 on a commission of 3 per cent. The underwriter will pay a refund of 1 per cent to brokers on allotments made on applications bearing their stamp.

PRELIMINARY EXPENSES:

Preliminary expenses exclusive of brokerage and commission are estimated not to exceed Rs. 25,000.

VOTING RIGHTS:

On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every ordinary share or every two deferred shares held by him.

TRANSFER OF SHARES:

The directors may at any time in their absolute discretion and without assigning any reason decline to register any proposed transfer of shares partially paid.

APPLICATION FOR SHARES:

Applications for shares are invited on the basis of the prospectus which may be obtained at the Registered Office of the Company or from the offices of the underwriter and brokers or from the Bankers of the Company.

Copies of the Memorandum and Articles of Association of the Company, Managing Agency Agreement, Underwriting Agreement and the Travancore Companies Act IX of 1114, may be inspected at the Registered Office of the Company, during usual business hours and also at the offices of the Underwriter, Brokers and Bankers of the Company.

Clive Street Gossip

After completing my quota of work, I left in time to spend the week-end in Delhi. The occasion was a meeting of the Paper Control Committee; and I could not help comparing the temper and atmosphere of this meeting with that of the first meeting in Bombay. From famine to comparative affluence is a transformation at once surprising and gratifying. To Sir Akbar Hydari and his colleagues, particularly Messrs. Patel and Kaul, fell the task of sugar-coating the bitterest pill at the Bombay Conference where were unfolded the circumstances necessitating so drastic a cut as 70 per cent. As artists in sugar-coating, they easily carry off the first prize. They are firm and appreciative of individual hardships; and, by a process of preparing for the worst and doing their best, they have served public and individual interests in the most satisfying way. By timely control, the crisis was tided over; by subsequent remedial measures, the path was paved for the improvement which reaches the climax of 100 per cent quota in certain deserving cases. Mr. H. M. Patel, presiding at the week-end meeting in New Delhi, stood, therefore, in comfortable relation with the members assembled from all over India and representing varied interests. He gave without reserve or equivocation all the information asked for; he was most solicitous to know where the shoe pinched; and he was eager to find the right solutions.

* * * *

It is all to the good that the Civil Supplies Department, which has, of all sections of Central Government, the most of direct and detailed contacts with the general public, is, thus, manned by officers possessed of poise and judgment. The working of controls calls for administrative efficiency and thoroughness on the one hand, and for the appreciation of human qualities on the other. The country is fortunate that a department charged with such vital functions is in the hands of men who are genuinely human and administratively efficient.

* * *

Nothing less than hundred per cent of such attributes will do; for, the range and scope of their control is as wide as life and as far-flung as this sub-continent. In the morning, they have to be experts in coal and know everything about mining and quarrying, steam coal and metallurgical coal, stowing and transporting, bull-dozers and underground labour. The after noon arrives; and they blossom into experts on cotton warp and weft, yarns of this count, that and the other, cloth for the poor and cloth for the rich, and cloth for the others, black markets and strategems and subterfuges. By the evening, the know-all journalists have to be tackled; and they must maintain their policy while the scribes leave with their self-importance gratified. The following day calls for detailed knowledge of imports, exports, domestic production, British production, war requirements, relations of one industry to another, and so on and so forth. The versatility required of the occupants of the top jobs in the Civil Supplies Department is something stupendous; and Sir Akbar and his team have produced the versatility when the demand came.

* * * *

Many a reader has enquired why "Indian Finance" was content to give just one para to the Hydari Mission's work in Britain; and our answer is that we could do no more on the data contained in the press summary. I utilised my Delhi stay to secure all relevant information from Sir Akbar; and what struck me most—and this is a point which has not so far been noted in press discussions—is that the Hydari Mission's work is highly significant as facilitating the transition from war production to peace-time production by conferring on Indian industries the double advantage of the cushion of continuing war orders and the opportunity of re-developing civilian markets. But it was not for the sake of Indian industry primarily that the Mission was undertaken. The aim was rather to prevent the deterioration of the home front, as it is called, by increasing the supplies of goods for the domestic consumer. The salient features of the situation at home are indeed too well-known to call for detailed description here. Consumers in India have been suffering from a cut in supplies from two different directions. The first is the stoppage of imports and the other is the demand which the armed forces are making on our slender resources. And the Mission sought to secure relief in both these directions. The major item and, in fact, the more acceptable form of relief is the reduction of the demands of the Defence Services on our internal production. And here the Mission secured relief which may be estimated at Rs. 4 crores in 1945 and Rs. 70 crores in 1946, as compared to 1944. An equally welcome change is that H.M.G. have agreed to expedite the import into this country of raw materials and working stores required for the manufacture of consumer goods in this country. And here, the Government of India have to benefit as much as the private or individual consumers. It is only too well-known that the production of many an Indian industry has been held up among other things by the lack of stores and necessary raw materials which have to be imported. In fact, if we remember that a considerable part of Indian industry so called is to-day only assembling of imported parts, we shall recognise what a handicap this paucity of imports is. It is only in the case of finished consumer's goods that some doubts may persist whether the work of the Mission is not a curse in disguise. The doubt is due to the fear that the importers may establish themselves in the Indian market, while indigenous industry is working on war orders, or otherwise disabled for tightening its hold on the home market. This fear, natural enough in view of our past history, must not be allowed to get the better of our reason. I have been given to understand that imports of consumers goods have been arranged for, in the main, to satisfy that part of the Government's requirements which indigenous industry is unable to meet. And what is more, imports have also been secured to improve the productive capacity of Indian industry. The case of bicycles was specially instanced to me. Considering how hard pressed the consumer is, industry can ask for no more than that its prospects should not be prejudiced by action taken in this critical situation. If the problem is to provide relief for the consumer without jeopardising the future of Indian industry, it must be deemed to have been solved in a large measure, since the work of the Mission enables industry to continue to derive the benefit of war orders and at the same time turn its attention, even while the war is on, to normal civilian consumption.

* * * *

My comments on the question of commercial safeguards have induced one reader at least to send a letter of appreciation. But, while I value that letter, I do not overlook the fact that there are some at least who will swear at it, the same as my correspondent is prepared to swear by it. That is a pity. And the reason is that commercial safeguards are still politics, and not business, the difference between the two being that, while business is on its guard against passion and sentiment, politics preserves a premium on them. Political outcries do not change with the conditions that gave birth to them. Once they are raised, they set a pattern of mental reactions, which is repeated every time the cry is raised. I am not surprised, therefore, that the changes on which I laid so much stress matter little to Mr. Master of the Scindias. What if Mr. Subedar's motion in the Assembly is passed without a division? What if Sir Ardeshir declares on behalf of the Government that the question of a convention

is engaging the active attention of the Government? Without the red rag, the bull is a lamb. So commercial safeguards must not be allowed to recede into the background. In fairness, I must refer to the rumour that British business, too, is in a similar mood and that a Delegation is to leave shortly for England to see that statutory protection does not give place to a convention or treaty between the two countries. In both cases, there is, I affirm again, the same incapacity to see the trends of a changing situation. In the case of Mr. Master, he goes so far as to affirm that "India would prefer to go without industrial development rather than allow the creation of new East India Companies in this country." These statements about India's preferences this way or that are all right in Mahatma Gandhi or Jawaharlal Nehru. I had not learned to think of Mr. Master as one of the accredited spokesmen of the whole nation. But even if he were one, he cannot claim the right to describe any and every measure of co-operation with British business as the creation of new East India Companies. And, after all, is it true that India would prefer to go without industrial development rather than try to achieve it with the necessary British help? This kind of heroics is not in our national temperament. There is a joke current in the South about the young man whose choice, according to him, was clear cut between marrying a near relative and becoming a Sanyasin. But life does offer a wholesome third alternative to incest and celibacy. There is no need for India to tell herself that she would rather suffer the poverty of the present and all the political and economic handicaps that go with it, than attempt to get out of it with foreign help; for foreign help, is not only indispensable but can be had on terms, dignified and profitable. It is high time that public opinion in India learned to shake off the thraldom of these empty, high-sounding phrases. India's preference is Scindia's profit, not the well-being of the masses!

* * * *

Travel, these days, is notoriously a hardship. But while I appreciate the difficulty of providing more trains and similar reliefs, I see no reason why food should be so hard to get on railway journeys or why they should be charged so stiff. In South India, where I had been not long ago, my whole family, consisting, besides myself, of my wife and three children had a sumptuous meal at less than Rs. 2. Here in the north, on my way to Delhi and back, no meal cost me less than Rs. 2. Sometimes the waiters demanded as much as Rs. 5! and when the bill was demanded, it was presented for Rs. 3-12. I see no reason why vegetarian food in the Indian Restaurants should cost as much as that. And I would plead for the adoption in the North of the system in the South Indian Railways of selling packets of food in the platform for As. 2. If this is a question of efficiency in the management of refreshment rooms, it is far better to get down a few managers from the South than to continue to harass and fleece the travelling public with unsatisfadtory service and unconscionable prices.

* * * *

A personal note again is wholly appropriate in welcoming the appointment of Mr. Subbiah Pillai as General Manager of the Indian Overseas Bank in Madras. In his case, long training and experience, superimposed by knowledge available to Staff Officers of the Imperial Bank promise a happy association for both bank and banker. To his equipment of years in the Central Office, Mr. Pillai has wisely added by a useful sojourn in London where I found that he was absorbing, during his leave, much knowledge of financial conditions and practice in Britain. Mr. Pillai fortunately is on the right side of fifty at present, and the Indian Overseas Bank, which is celebrated for picking the right man for the top position, has shown real judgment and resolution in getting one whose own unblemished record of 25 years' meritorious service with the Imperial Bank appears the decisive consideration. Whether the Imperial Bank helped a less mature Indian institution in this case or adopted an obstructive, unimaginative attitude is a different question. It is not for me to guess if deficiency of sympathy again clouded judgment to the point at which criticism might be offered. But all is well that has ended well, and in Mr. Subbiah, the Board has gained an executive who should be a force from now and always in the banking world.

* * * *

There is no real break with the past in the elevation of a Nagarathar to the Presidential Chair of the Southern India Chamber of Commerce, so solid and well-established as to eclipse all the new organisations claiming to speak for business interests in Madras. But Dr. Alagappa Chettiar is distinguished from the members of his eminently conservative community in ways that can only evoke admiration. He went for higher education abroad, obtained direct, practical experience of high finance in the City of London, and came back with a new outlook, equipped in every way to look out through new windows of his own fashioning. That refreshing blend of idealism with varied experience of business has indeed carried him very far towards a special place in his own community, celebrated rightly for its generosity and encouragement of learning. To the community's gifts, Dr. Chettiar has added his own, meant to serve new, wider, and certainly higher ends. To have compressed great achievement into a career of hardly ten years and shown an intensely practical interest in learning for its own sake is an enviable distinction for one who has been a determined friend to all good

(FROM OUR CORRESPONDENT)

New Delhi, April 23.

Obviously to side-track the political issue and raise a mist before if not throw dust in the eyes of the "Security Conferencers" at San Francisco the Government of India issued yesterday a 5,000-word manifesto on their future "Industrial Policy". The increase of national wealth by the maximum utilization of the country's resources in men and material, the better preparation of the country for defence and the provision of a high and stable level of employment will be the fundamental objectives of industrialization, they say. These objectives, they go on, are proposed to be attained through such measures as Government participation in the industrial field where needed in the public interest, various types of assistance to industry and the introduction of appropriate controls to regulate balanced and regionalized development. In giving effect to this policy the necessity for a balance between the development of basic industries and that of consumption goods industries will be borne in mind.

* * * *

The Central Government, it is stated, will take over in consultation with the Provinces the development of 12 essential industries, including the iron and the steel industry, the manufacture of prime movers, automobiles and tractors and aircraft, shipbuilding and marine engineering. Government may also take over certain industries like salt manufacture in which the tax element is much more predominant than the profit element and it is necessary and convenient for the State to take over the industry. All the other industries will be left to private enterprise under varying degrees of control. The case of coal is to be examined and dealt with later. Within the field considered open for State enterprise, the question whether the existing units which are privately owned should be taken over by State will be examined on the merits of each case. Certain industries of national importance may be run by the State and as well as by private capitalists.

* * * *

Government propose to take over power by legislating to license the starting of new factories and the expansion of old ones. Government's assistance will extend to the giving of adequate financial support to research organizations set up by industrial associations representing organized industries and of grants to universities for approved schemes of research. Government will subject to reasonable safeguards as to quality and prices continue to encourage Indian industry by buying its products in preference to others.

Assistance will be afforded to industry in the procurement of the capital goods required by it and organizations will be set up in the United Kingdom and the U. S. A. for this purpose. The services of experts will be available to industry where their advice is particularly essential.

The statement is prefaced with the words that it has been released to help "clear up the uncertainty which appears at present to be impeding the plans of development by private industry." An extremely unexceptionable sentiment. Equally unexceptionable are the other sentiments in the report. But the statement while professing to remove old impediments will only result in creating new ones!—this is the view of political and commercial quarters here. Instead of giving concrete proposals as to what instrument is to be used for achieving the goal and the manner and process of achieving it, the statement is merely platitudinous. What is to be the standard of life? What are the targets of production? Which industries the Government want industrialists to operate? What financial or other assistance Government is prepared to offer? What is to be the proportion between agriculture and industry? What will constitute "balanced investment in industry, agriculture and social services"? How is the licensing board to be constituted? No answers have been given to these fundamentals. The most dangerous principle enunciated is that which threatens to introduce communalism even in the sphere of industrial enterprise. As worded the Parsee community and Hindus generally can be asked to keep their hands off industrial enterprises.

* * * *

The other big snag—perhaps the biggest—is that there is no reference to the commercial safeguards clause. This one clause can nullify the operative part of the entire report and the government's so-called industrial policy. If the intentions of the Government were bona fide Sir Ardeshir Dalal should have referred to this, specially on the eve of his departure for Britain. The country, everyone knows only too well, has no trust in the present Government, specially in the existing Executive Council. And hence it is freely mentioned here that even the favourable aspect of the statement will vanish into thin air when the time for action comes.

Are the extension by another 12 months from April 1 of Section 93 regimes in the Provinces where Advisers rule and Lord Listowell's red address to the younger generations pointers? This is the question asked here today. Mr. Amery harping on the same tune sees no change yet in the Provinces. And his Deputy though he has attempted to dramatize himself by saying that "any unquestionable delay in granting the essentials of self-government would poison our relations with India for many generations to come" still sings the old songs the "end of the grim war" will see India free; nothing could contribute more effectively than this wider loyalty to reconcile political factions, to evoke mutual respect and trust and to preserve India from internal disruption by class antagonisms and communal differences. And little is now being heard of the activities of the Wavell Mission. On the other hand the Government of India have published the rigmarole of their post-war economic plans. Do all these mean that the Churchill-Amery combine is playing the trick once again and that Wavell's visit is after all a Tory vote-catching device? Or are the Empire-defenders watching the San Francisco trends?

* * * *

Two interesting reports will shortly be ready—one in South India's hill station, Ootacamund, and the other in Simla. Sir John Woodhead, Chairman of the Famine Inquiry Commission, is reported to have reached Ootacamund, after a short visit to Bangalore and will soon be giving the finishing touches to his report. The Bhore Committee's office is also moving to Simla this month. The Woodhead Committee is said to have collected a vast amount of material. If the anticipations prove true, the report will not be pleasant reading either to the officials of the Government of India or to their counterparts in Bengal. It is also believed that the Bhore committee is extremely critical of the way in which both the Central and Provincial Governments have been dealing with national health problems. The Committee is, it is gathered, seeking a via media between Centralization and Provincialization of Health. The Committee will also recommend the creation of a separate Health Department in every Government.

(From Our Correspondent)

Bombay, April 24.

The inaugural address of Sir Henry Knight Governor of Bombay, at the meeting of the Bombay Provincial Rural Development Board contained a forceful plea for co-operation between the Provinces and the States in the working out of new schemes. He referred to the Tennessee Valley Project, the larges achievement in recent times in harnes both human effort and natural power and resources, transcending mere boundaries, and said that an authority similar to the T. V. A. should be responsible for the execution of rural plans. He cited food, control of epidemics, soil conservation and irrigation as instances in which such co-operation between the provinces and the States is essential if the aims of planners are to be achieved. Sir Henry did not fail to concede that in many things British India has to learn from the States and that it is not always the other way round as is often imagined. Baroda, for instance, has several interesting schemes, e.g., the buying out of the landlords in certain villages and the making of experiments in such villages in various forms of state controlled co-operative farming. The simplified administrative system obtaining in small States enables experiments of great economic value to be made more easily than in Bombay Presidency with its complex land-revenue system. On the other hand, Bombay is better placed to maintain institutions for Research and make experiments in public health and agriculture. Mr. Jenkins, the Director of Agriculture is now in the U. S. A. studying soil conservation. Bombay is willing to place its knowledge arising from these studies at the disposal of the States. The Baroda State representative reciprocated the sentiments of Sir Henry and declared his Durbar's readiness to co-operate with Bombay in post-war schemes. A move in the right direction has thus been taken by Bombay, without looking up-to the complicated and often slow machinery of the Government of India Political Department.

* * * *

The Advisers then followed the Governor and explained the plans in respect of the subjects in their portfolios. Mr. G. F. S. Collins stated that roads have been put in the forefront of the programme. The Nagpur Plan estimated a cost of Rs. 199 crores and as it was felt that this is beyond the ability of the Province to bear, a revision of the plan on the basis of adopting minimum specifications of width etc. has been decided upon, the target of spending being Rs. 90 crores to be spread over three or four 5 year phases. Rs. 20 crores has been provided for the first five-year phase. The house building programme is recognised as an important limb of post-war planning, and it was heartening to hear that the fullest use of local materials will be made.

* * * *

The Grid scheme is easily the most important of new developments. In fact, the late Government started working on it with the idea of linking up of existing stations so as to pool and increase the supply of power. The idea has been taken farther and the Grid Board will carry out hydro-electric projects; and in undeveloped areas, it is proposed to instal nursery sets for generation of power, which will gradually build up a load until it becomes economical to merge them in the Grid scheme. Two hydro-electric schemes are already in an advanced state of survey, and may be put into operation within the next four years. When completed, they will supply the north and north eastern districts and the southern carnatic at a later stage. As regards nursery sets, schemes involving the connecting up of a few villages near urban areas are being worked out. Even with the payment of large subsidies, their success will depend upon the quantum of demand for power for lighting, for pumps for irrigation and for other small industries. The authorities assume that the mechanically minded section of the returned soldiers will help to provide the demand for power. The Grid is a Central subject and will entail the passing of an Act of legislature, when other provinces have also completed their plans. A film on the America T. V. A. was shown to the members of the Board and others who attended the meeting.

* * * *

Road planing was also referred to by Mr. Turnbull at the Annual Meeting of the Bombay Branch of the I.R.T.D.A. It was interesting to hear from him that it had been estimated that for every Rs. 100 spent on road, the return to the community in the form of increased earnings would be about Rs. 277. Besides, there would be increased traffic for the railways through larger use of road transport. It is commonly believed that there is an antimony between road and rail transport, but this is erroneous; and in a well planned economy, the two could be complementary. In fact, at one time, it was even suggested that it would pay the railways to construct roads from their own funds. Feeder roads are an important adjunct to the railways. Mr. Turnbull hoped that the Bombay Government had its plans ready to implement the road programme, as the war may end soon. One of the most vexatious aspects of road construction is the difficulty of land acquisition, which impedes progress. With the Central Government actively interested in the running of lorries for railways, for which the Assembly recently voted a grant of Rs. 82 lakhs, and with the formation of a Road Board comprising departmental personnel, there is room for hope that road planning will be put through earlier than others.

* * * *

Mendicancy is a problem of staggering dimensions in India, but the Bombay Government, always ready to tackle a problem however difficult, have decided to end this blot on our social escutcheon. Last year, representatives of the Government, the Municipality and other social reform institutions agreed on the need for legislation of a reformative character and a small committee had been working on the problem. The result is a Bill which has been published in the Bombay Gazette, providing for the prevention of begging and for the training of able-bodied mendicants n useful trades. After all, we shall be having after the war a number of returned soldiers who may be suffering from physical disabilities of various sorts and in this respect, mendicants would be on a par with them. The draft bill suggests the need for a Beggars' Act and seeks to empower the police and magistrates to detain beggars in proper institutions. The emphasis is happily on the reformative character and it is proposed to teach able-bodied beggars so as to make them suitable for some form of employment. Some provisions are directed against the evil of exploitation by beggars, some against habitual vagrancy, while child beggars are to be dealt with separately. One aspect which reflects credit on the drafters of the Bill is that all classes of beggars are not lumped together, but there will be different treatment for each according to his incapacity or capacity. The new legislation will be enforced first in the city of Bombay as an experiment and will later be extended to the whole of the Bombay on duly notified dates. Although there are a few institutions doing good work for the beggar popuation, it is obvious that many more would be required if the present venture in the sphere of social reform is to be rewarded. Now that the provincial Government themselves have taken up the queston, it is to be hoped that Bombay's millionaires, who have always been ready to respond on behalf of good or forlorn causes, will come forward with fresh proofs of their habitual munificence.

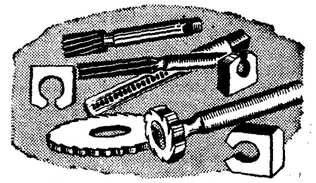
(From Our Correspondent)

April, 25.

The first meeting of the Indian Central Cocoanut Committee held at Trivandrum marks not only the beginning of the career of the committee but also an important step in the development of the cultivation, marketing and utilisation of the cocoanut industry. Mr. Stewart, Vice-Chairman of the Imperial Council of Agricultural Research, who presided over the meeting, pointed out in his welcome address, that though the cocoanut industry has been the mainstay of the local population in the southern part of the west coast of India from time immemorial, the industry has not been marked by material progress or scientific development. To-day there is acute world shortage of copra and cocoanut oil and India which used to be one of the chief sources of supply for world markets has not only ceased to export either copra or oil but has to import considerable quantities of these products from outside. The need is, therefore, urgent and the time opportune for initiating concerted measures for intensifying production, for better utilisation of cocoanuts and cocoanut bye-products and for rehabilitation of an industry which in the past appeared not to have had full scope for development because of outside competition. Sir C. P. Ramaswami Aiyar in his inaugural address, emphasised that cocoanut was literally the mainstay of life in Travancore, Cochin, and Malabar, but the various problems of the industry were not the special concern of the producers but of the whole country. He opined that the Committee had been constituted not a moment too soon. To make it up to date, the industry needed stimulus, research, and organisation. He stressed the need for propaganda for cocoanut on the lines of other commodities like tea.



The Indian Central Cocoanut Committee was founded on the principle that the trade concerned should provide necessary funds for the improvement of the product through the levy of a cess or duty on it at some stage, such as export, mill consumption, internal sale or factory production. The purpose of the Committee is not to replace the work of the Provincial or State Department or other agencies connected with the commodities but work in collaboration with them and stimulate and supplement the functions which they are discharging. The functions of the committee fall under four main heads. They are concerned with the conduct of research—agricultural and technological—for improvement of the commodity and with the application of the results of that research in everyday practice ; the marketing of the commodity and its products ; to act as bureaux of information for departments of the Government, the trade, and the general public on all matters relevant to the industry ; and to act as advisory bodies in respect of policy both agricultural and commercial on all matters connected with the development of the industry.' If the committee required any amount for research over and above the cess proposed to be levied, the Travancore Government were prepared to bear fifty per cent. of such additional expenditure.

Addressing the Association of Mysore Engineers (Madras) Mr. A. Khaleeli, Director of Industries and Commerce, Madras, appealed to the engineers to make a keen study of the engineering works in ancient India in respect of their historic monuments, temples and mosques, so that it might stimulate in them new lines of thought in engineering science. He said that even though plans were in progress for tackling various schemes of post-war reconstruction the important consideration was how to give effect to them. The most essential problem to be tackled in this respect was the question of trained men to carry out the schemes. Young people fully qualified to do such jobs, had to be sent to other countries with a view to affording them a good chance to learn what was being done in other parts of the world in respect of industrial development. The question of what industries should be developed in this province and what industries were capable of being developed was engaging the attention of the Post-War Reconstruction Committee. The Planning Member of the Government of India was not very optimistic about the possibilities of developing a steel industry or chemical industry. Perhaps he had not all the data before him before expressing his opinion regarding the former. The question was being examined now and in the opinion of Sir Padamji Ginwala such an industry could be started if trained personnel was available. In Salem they had got fine iron ore. For development of such projects past experience had shown that it was not the best policy to depend upon the experts from abroad coming here on short-term contracts. It was best to depend on their own human resources for the development of such industries.

The Government of Mysore, it is understood, have under their consideration, as part of their post-war schemes, proposals involving an expenditure of about Rs. 14 lakhs for the development of sericulture. The proposals include the starting of 12 mulberry nurseries in several parts of the State, the opening of depots to be attached to the existing farms for stocking and selling manure required by the sericulturists, opening of two new stations for rearing foreign race seeds, starting additional 180 grainages for improving supply of disease-free layings, starting four fully equipped cocoon markets with provision for store-room, stifling chambers, etc., establishing an up-to-date Silk Conditioning and Testing House, opening a Central Training School at a cost of about two lakhs of rupees for imparting higher technical training, plant breeding, silk worm breeding, the chemistry of sericulture, silk reeling and sericutural textiles and the opening of a Research Institute in Chennapatna at a cost of about Rs. 3 lakhs.

Dr. Rm. Alagappa Chettiar, M.A., D.Litt., LL.D., has been elected President of the Southern Indian Chamber of Commerce.

Resume of Commodity Markets

For three weeks in succession the bullion market has remained firm. Even with the decision of the Committee of the Bullion Exchange to fix the penalty at Re. 1 for silver and 10 annas for gold over the price for settlement, in case of non-delivery, bears have been forced to cover their positions. Buyers have very often refused to wait for delivery. The raw cotton market has continued weak, quotations being at the lowest levels for some time. The reports that the Bull Syndicate would push up prices have not so far materialised. The raw jute market is quietly steady with business rather restricted while in the jute manufactures market there is nothing of importance. Conditions in the piecegoods market are unchanged. It is felt that no appreciable improvement could take place pending an increase in production by mills and a liberal supply of imported goods.

* * * *

The raw jute market has been steady although business has not been as large as in the previous weeks, mills preferring to await further developments. It is expected that the recent favourable rains would result in a large yield in the crop for next season and that the scarcity in respect of jute supplies might not be so keenly felt as was anticipated earlier.

The absence of any large buying by mills, however, has not resulted in a decline in prices as upcountry markets are still firm. It is stated that the arrangements for the regular import into Calcutta and the adjoining areas of jute supplies, to the extent of 130,000 tons per month, pre-supposes an increase both in mill consumption and exports. For the consumption of 100,000 tons per month by mills in Bengal they would have to work 54 hours per week throughout the month, the steam-driven units also included. There would have to be a large improvement in the coal position to admit of such a high level of production. There has certainly been an improvement in coal supplies in recent weeks, but such an improvement in coal arrivals as there has been, does not admit of the target production of 10,000 tons per month. Even now most of the steam-driven units are idle and are not sure of being able to start the next day. It may be that the authorities are hopeful of an improvement in regard to the coal situation after the arrival of the mining machinery from the U. K. But the more important thing to be ensured is that such regular supplies of jute as come into Calcutta will have to be absorbed by mills. Which means, that their purchasing programme should be regular and co-ordinated. In the plans for a regular import of 130,000 tons per month the Indian Jute Mills Association does not seem to have been consulted. It remains to be seen whether success could be made of the proposals mentioned above. As for exports, the total for the season so far is a little over 7 lakhs tons. France is expected to take larger quantities of the yellow fibre, but as Germany was the important consumer in the prewar days, it cannot be expected that there will be an increase to the level expected. It will be a surprise if total exports for the current year exceed 15 lakhs bales.

* * * *

The position in the raw cotton market is not quite clear. There seems to be a regular tussle, as in the bullion market, between bulls and bears. Only there is this difference. While bulls have the upper hand in the bullion market, bears seem to have their own way in the raw cotton market. In the spot market business was rather satisfactory, mills being interested in finer staples, but they are taking whatever is offering. The bearish sentiment, in spite of the present high level of consumption, seems to be due to the feeling that there might be a larger import of foreign cotton with the cessation of hostilities. Export trade in Indian cotton also might not show any appreciable improvement. Pending a clearer outlook it cannot possibly be expected that prices will register an appreciable rise.

* * * *

Resolutions passed by the Committee of the Bombay Bullion Exchange last week have not improved matters to any great extent. Bulls have still the upper hand. With the acute shortage of supplies and steady investment demand prices have been maintained at higher levels. Developments in the war situation have no relevance to the bullion market and closing quotations are at the highest levels for the week. In the silver market, especially, offtake has been very large, on days being as much as 300 bars. The Reserve Bank's sales have averaged 25,000 tolas of gold and 300 bars of silver daily.

* * * *

The crisis in the cloth trade in the Bengal Province has stirred the authorities into activity and it is expected that before long several important decisions will be taken as a result of the recent visit of the Textile Commissioner of India to Calcutta. Apart from the reallocation of quotas to the various provinces

(Continued from page 543)

policy towards the villages. In India land tax is heavy, and rural indebtedness has grown to huge proportions with the result that the ryot has very little staying capacity to wait for the opportune moment for the disposal of his commodity. Co-operative movement, it is now well recognised, has not, all these two decades and more, touched even the fringe of the rural problem. Hence, the trader or the middleman gets a tremendous advantage over the primary producer and succeeds in depressing the producer's share in the price paid by the consumer. Distribution costs, it is felt, has gone too high in India. In order to study this question the Research Department of the Federation of Indian Chambers of Commerce and Industry has conducted an enquiry. Mr. M. C. Munshi in charge of the Research Department has come out with his findings based mainly on the reports of the Marketing Adviser to the Government of India. ("From the Farmer to the Consumer", Federation of Indian Chambers of Commerce and Industry, New Delhi Rs. 2). The author's conclusion is that the margin between the producer's share and the consumer's price is justified and that in fact distribution costs are much lower in India than in some foreign countries (e.g. U. S. A.). Stress is duly laid on the risks undertaken by the middlemen though the insufficiency of their services and the utter helplessness of the primary producers are conceded. The study succeeds in placing the problem of marketing against the larger background of Indian Agriculture. At present the middlemen, traders, money-lenders, enterpreneurs—all are often rolled in one. But this need not be so. On existing facts the middlemen's share may be justified but if agriculture is to be modernised and ryot's standard of living raised the producer's share will be higher still. The compliment to middlemen in India should rest on more solid grounds than mere comparison of the percentage share in consumer's price in India and elsewhere. The picture, to be complete, should include a comparison of the cost of production in India and abroad for the commodity in question and the profit margin also should be indicated. A comparison of the relative economic efficiency of the middlemen in India and in countries like U.S.A. would prove useful. In India agriculture is not a profitable job for the many. Whatever the percentage share of the ryot in the consumer's price it cannot be established that he is carrying on a profitable business. However, Mr. Munshi's study is a valuable contribution to the literature on marketing of agricultural products in India and the need to tackle our marketing problems against the general background of our rural economy is brought out on the basis of available facts and figures.

Industrial Problems of India

A new co-operative survey of the industrial problems of India admittedly has large gaps; but the purpose of the symposium edited by Mr. P. C. Jain (Industrial Problems of India, Kitabistan Rs. 5/4) is plainly praiseworthy. The review of resources and opportunities is meant to direct attention to large-scale planning after the war. Its other object is to indicate defects of structure and policy. Both purposes are accomplished and incidentally the factual record is made up-to-date by a fresh edition. The inclusion of chapters on labour disputes and industrial efficiency has a high relevance since planning always must take note of manpower questions. In India the employer has to wait on the progress of labour welfare to which State has made a most important contribution. The problems of surplus capacity are not fully discussed. What emerges from the composite narrative is that State assistance has been limited to the point of ineffectiveness. A drastically new attitude is advocated, and the academic bent does not stand in the way of cogent advocacy of vital changes. To that extent the ten economists are in full agreement and the agreement is established by an introduction enunciating fresh principles. Dr. Gyan Chand affirms that planning can only have economic objectives, and industrial development can have useful immediate results, while Professor Adarkar urges that full utilisation of resources can bring no real loss of revenue to the State if fiscal policy is modified to meet new requirements. The measure of accord established by analysis extends to small-scale industries whose position is examined in detail by Dr. V. K. R. V. Rao to produce a series of conclusions that compel assent, especially, as the introduction urges that welfare is as important as wealth. The twelve essays assembled by Mr Jain produce the impression that the case for industrialisation cannot be put higher than by the precise appraisal of work done and work lying before us. The war-time changes confer interest on the survey of mineral and power resources to which attention must be drawn in view of regional development schemes under way.

(Continued from page 545)

the extent of Rs. 3.8 crores. It need not therefore, be emphasised that the buying movement in giltedged noticeable in the previous week proved to be only short-lived.

The exchange market has been very steady with a shortage of sterling for near positions. The Reserve Bank has agreed to meet the request of banks by offering to sell ready sterling at 1s. 53/64d. What effect this development will have on the short loan market is too early to say. With the disparity between short money rates in India and the Treasury Bill rate in London, there may be a tendency on the part of banks to buy sterling at ready and invest the proceeds at a better rate of interest in the London market. Such purchases of Sterling by banks will, in effect, be anti-inflationary; but, on balance, the deflation on such account cannot amount to much as sale of ready T. T. will be simultaneous with purchase of T. T. for three months' forward position.

(Continued from page 560)

causes, as we wish to remember particularly when felicitating Dr. Chettiar on attaining a position for which he is so well qualified that the Southern India Chamber must be reckoned distinctly a gainer. In the Presidential chair his qualities of urbanity and humanity, supported by an unbending modesty which extending fame has no wise diminished, should be seen to great advantage.

Jute and Jute Manufactures

(From Our Correspondent)

Special to "Indian Finance"

Calcutta, 26th April.

The Transport authorities have issued for comment an appreciation of the transport situation as it affects the shipment of jute from the mofussil to Calcutta destinations during the coming season. They have set their target figures at 100,000 tons per month for mills and 30,000 tons per month for export requirements, both of which figures may be considered by some as unduly optimistic, not only as to requirements but as to the probability of accomplishment. The appreciation starts on the assumption that military demands on river transport will preclude any possibility of increased carrying capacity being available by that mode. So the increase in the target aimed at is entirely thrown on the railways, and in considering the proposals it must at once be asked whether the allotment of waggons for coal transport has also been increased relatively to the proposed increased allotment for jute carriage. For mills to attain the target figure of 100,000 tons per month production set by H. M. G. and the Central Government the present rate of coal supplies is definitely insufficient and there is little object in aiming at supplying them with 100,000 tons of jute per month unless the means of working up that quantity into goods is also provided. Excess supplies of jute indeed would merely be an embarrassment to mills in present circumstances when their limited storage capacity is taxed to the limit. And as the railways apparently propose to undertake all the increased quota of deliveries of jute, it is pertinent to ask if they can equally undertake to supply sufficient waggons to deliver the requisite increased quantity of coal to mills. It would probably also be desirable to consult the Supply Department Coal officials as to the prospect of sufficient coal being available at pit-head before committing themselves to any final policy. For the three aspects of the situation are vitally connected. Surplus jute is of no interest to mills unless they are to have the coal wherewith to work it up into gunnies. Surplus coal waggons are wasted unless the coal is at the pit head to be transported. And surplus coal is of no more than academic interest to mills unless there is an adequate supply of waggons to deliver it to them It is to be hoped, therefore, that the three interlinked aspects of the situation have been duly weighed up by the authorities concerned before forming their conclusions. These are the most pertinent comments from the point of view of the mill target figure of 100,000 tons per month. The mills can absorb that quantity of jute if the necessary coal is forthcoming, and there is no immediate indication that the world cannot absorb that quantity of manufactured goods.

Turning to the Export target of 30,000 tons per month, there are more cogent grounds for considering this an over-optimistic estimate. The current rate of exports, when there has already been some demand from liberated countries in Europe is only in the region of 170,000 tons per annum, which is less than half the traget set for the coming year by the Transport authorities. It is not improbable that export demand during the coming season will show an advance on the current season, but one hundred per cent increase is scarcely to be expected. Germany itself was in pre-war days the largest consumer on the continent of Europe and it will be to the rehabilitation of mills outside that country that attention will first be paid, and even that must of necessity take some time.

It may be, of course, that in fixing their targets, the authorities have almost literally hitched their *waggons to a star in anti*cipation of some short-fall in accomplishment. Generally speaking it would appear that a short-fall of 10,000 tons per month in the deliveries aimed at could be contemplated with equanimity. One further comment might be made on the proposals. The allotment of waggons to different districts in the mofussil appears to be made on a hard and fast basis for the entire season. But purchasing demand does not necessarily cover all districts proportionately throughout the season. Various factors, time of maturity, price and quality, all affect the demand for jute from particular districts. In the appreciation there is no suggestion of flexibility as regards the transfer of waggons from one district to another to cope with demand where it arises. Without some such adjustment there is every chance of a surfeit of unwanted waggons in one district and a dearth of them in another. Indication of elasticity in the arrangements in this respect would be reassuring.

An experimental measure in the method of making appointments to the panel of Arbitrators for raw jute arbitrations has been announced. Hitherto appointments have been made from a panel exclusively composed of members of the Bengal Chamber of Commerce, or their employees, competent by experience to adjudicate in such disputes, but for some time past there has been agitation from certain quarters that the selection should not be so confined, and that individuals and interests outside the Chamber membership should be represented. This has now been arranged by the invitation of names from trade associations whose members are intimately connected with the raw jute trade but are not members of the Bengal Chamber of Commerce. Such nominations will be scrutinised by a Special Advisory Board appointed by the I. J. M. A. Committee and a specified number of names selected and appointed to the panel by this Board. It is curious to note that according to schedule set out, the I. J. M. A. is described as the only Buying interest, while a concern like the Calcutta Baled Jute Association is described only as a Selling interest. Actually of course the C. B. J. A., which comprises all the Pucca Balers, is in normal times quite a large buying interest and only of late years has it become a selling interest to any extent so far as the Calcutta market is concerned. It will be interesting to watch the progress of this experiment and how it affects the admittedly high reputation for unbiassed impartiality already enjoyed by the Tribunal of Arbitration of the Bengal Chamber of Commerce.

An interesting point arises in connection with a recent amendment of the Price Control Order which provides that it is an offence for any seller to insist on a buyer purchasing an article which he does not actually want as a condition to selling him what he *does* want. It is notorious that much business has been, and continues to be done by Mills, mainly to the Bazar, whereby enhanced prices are obtained for forward Heavy Goods in conjunction with sales of lots of near shipment goods. It is common knowledge that near delivery Hessians stand at a premium on the "Black" market, while Mills may not charge more than the scheduled maximum rate. So, to secure any surplus near hessians which mills may have to sell, Bazar operators, whether willingly or not, it is hard to say, have to load themselves up with an appropriate quantity of whatever form of forward goods that particular mill desires to sell. Such transactions certainly come to sailing very near the wind in terms of the new amendment.

JUTE

(By Our Staff Correspondent).

Calcutta, April 26.

The raw jute market has been quietly steady. A slightly easier tone was noticeable in mid-week though prices were unchanged. Favourable weather conditions have helped sowings. As export demand appears to have been satisfied for the time being and mills also have not taken any great interest, with arrivals coming in rather freely, there is a fear that it will not be possible to accommodate all the stocks if the offtake of jute goods is not on a larger scale. There is also a feeling that expectations of a higher crop might result in a revision of ideas and that there is no great hurry for entering into fresh commitments just at the moment. Upcountry centres have not been affected in any way by the reports of favourable weather conditions and satisfactory progress of sowings. Holders are still firm in their ideas as they are of the opinion that before the new crop arrives, there will be good demand for all the old crop and mills will be obliged to pay the prices asked for.

In the loose jute section a moderate amount of business is reported, European packing Middles and Bottoms being done at Rs. 16-12 and Rs. 13-12. Supervised Middles and Bottoms were Rs. 16-4 and Rs. 13-4 per maund respectively. Bottoms alone were Rs. 13-8 per maund and in good demand. Tossa varieties are 8 annas higher.

In the pucca bales section export business has not been large. Mills are reported to have purchased Dundee Lightnings at Rs. 110 and S. M. R. at Rs. 59 per bale. Some business has been reported in new crop at Re. 1 premium.

JUTE MANUFACTURES

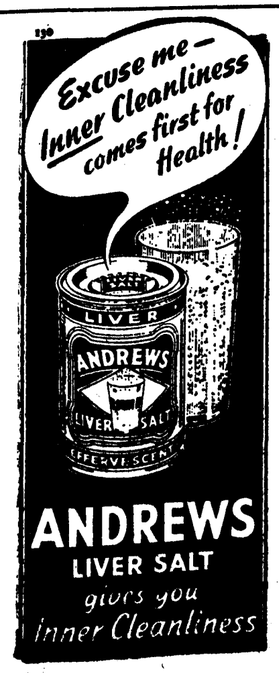
Calcutta, April 26.

In the jute manufactures market steady conditions have continued to prevail though buyers are not very keen for deliveries beyond December. Mills are anxious to do business but are not prepared to offer any discount. They are confident that it will be possible to market all the supplies without any difficulty. For near deliveries demand is still unsatisfied and any increase in production can be disposed of easily.

In the Heavy Goods section for near deliveries mills have been able to do business in Liverpools at Rs. 74 and Cuban Sugars at Rs. 81, but beyond September a good discount is available for most of the varieties. For October-December deliveries, Liverpools are available at a discount of Rs. 1 8 "B" twills at Rs. 2-2 and Cornsacks at Rs. 1-4.

PIECEGOODS

Calcutta, April 26.



The piecegoods market is uninteresting. Private trading is virtually at a standstill. At the Press Conference in Calcutta the Textile Commissioner for India stated that rationing would be introduced in this City shortly and that it was hoped to give each individual, above 12 years, a ration of 2 dhoties or 2 sarees or 7 yards of cloth (the equivalent of 2 shirts). The handling agents have been busy distributing cloth in the mofussil, but the distress is still unrelieved as the available supplies are not large. It is hoped that the promise of more sarees and dhoties from the Western Presidency will improve the position regarding cloth. The Textile Commissioner for India seems to be of the opinion that famine for cloth is not so acute as it is made out, and that a good portion of the purchasing public can afford to wait for some time to replenish their stocks. It is the lower, middle and poorer classes who are greatly handicapped and whose needs have to be attended to first.

(Continued from Page 564)

and the readjustment of production of various styles, it is believed that the large imports of finer yarn from U. S. will enable Indian mills increase production of the finer goods. It is feared, however, that so long as yarn production of the Shanghai and Japanese mills are not available there will be a world shortage of textile goods and that production in the important producing countries like the U. S. A., U. K., and India will have to be vastly stepped up if the shortage is to be overcome. Under any conditions, however, it will not be possible for this country to export larger quantities.

* * * *

The All-India Sugarcane Forecast for 1944-45 published during the year estimates the area under sugarcane at 4,134,000 acres against 4,234,000 acres or a decrease of 2 per cent. The decline in the yield of raw sugar is even more pronounced, the estimated yield being 5,422,000 tons against 5,848,000 tons according to the corresponding forecast for 1943-44, a decrease of 7 per cent. The crop was affected by unfavourable weather conditions in places.

Stock Markets to-day and to-morrow:

BALMER LAWRIE 1944 ACCOUNTS

Both the Bombay and Calcutta stock exchanges have been firm during the past week. The slightly easier feeling noticeable in Bombay earlier in the period following the publication of the Government *communique* regarding the industrial policy in the postwar period proved to be short-lived as the Development Member removed the misgivings of industrialists in a press conference later in the week. In the Calcutta market operators were inclined to be of the opinion that any scheme of industrial development in the postwar period should favourably affect markets. As such, there was even a rise in prices on Tuesday inspite of the weakness of Bombay. In Thursday's session there was a slight decline in prices in Calcutta on profit-taking, but on Friday all the losses have been more than regained and the close in both Calcutta and Bombay is firm. It is rather interesting to note that peace has been completely discounted and that there is no talk at the present moment about the possibility of an appreciable decrease in prices with the actual cessation of hostilities. It might be that for sometime there is a decline in prices by about 5 to 10 per cent, but it is generally admitted that with the continuance of the war against Japan and the possibility of industrial profits being maintained at fairly high levels, there is no fear of any appreciable setback in values.

* * * *

Sir Ardeshir Dalal's statement at the press conference on Wednesday fully justifies the hopes of a bright future for Indian industries in the postwar period. It was at first feared that the Government control of the basic industries would amount actually to management and ownership, but it has now been made clear that centralisation as opposed to nationalisation will not affect the existing industries to any great extent and that Government policy will be only directed towards future development and rendering such assistance as is needed by the new companies. The proposals for nationalisation would only affect Public Utilities and Railways. The management of the fertiliser industry and generation of electric power in bulk will also be under state auspices. Shipbuilding and locomotives and boiler construction will be both under state and private auspices. The case of the coal industry will be separately considered and an announcement will be made by Government at a later stage.

Suitable changes in the fiscal policy of the Government and the formation of an Industrial Investment Corporation under Government auspices should also prove advantageous to new enterprises. There is nothing, therefore, to be worried about Government interference in the affairs of industries in detail or the limitation of profits or dividends. As such, any programme of large-scale industrial development should prove to be of great advantage to existing industries. Which means, shares of established companies will be in greater preference.

* * *

The accounts of four cotton mills published during the week show a big decline in earnings for 1944. On account of the heavy incidence of taxation, with a very poor level of profits for the standard period, dividends have been drastically reduced. *David Mills Company* has made a net profit of Rs. 73,52,110 for the year ended December 1944 against Rs. 1,04,83,849 for 1943. Taxation takes up as much as Rs. 55.16 lakhs against Rs. 79.25 lakhs. The amount set aside to depreciation is very much lower at Rs. 3,71,177 (Rs. 20,50,000) but the transfer to reserve is much higher at Rs. 12.9 lakhs (Rs. 2 lakhs). The dividend is reduced to 10 percent from 35 percent. The amount carried forward is higher at Rs. 238,033 against Rs. 141.693 brought in. The directors could have declared a slightly higher dividend but the expectations of a further decline in earnings have possibly been responsible for such a small dividend.

* * * *

Edward Textiles Limited has earned for the same accounting period a net profit, before providing for taxation and depreciation, of Rs. 36,67,637 against Rs. 69,46,569 for the previous year. The amount set aside to taxation is Rs. 27,60,000 (Rs. 52,50,000) and depreciation Rs. 1,99,776 (Rs. 13 lakhs). The transfer to Reserve Fund is the substantial sum of Rs. 6.35 lakhs (Rs. 1 lakh). The ordinary dividend is only 7½ per cent against 15 per cent. The amount carried forward is lower at Rs. 92,886 against Rs. 1,47,535 brought in.

Meyer Mills Ltd., has earned a net profit of Rs. 45,39,775 against Rs. 72,82,636. Taxation accounts for Rs. 33,53,000 (Rs. 54,50,000) and depreciation Rs. 232.862 (Rs. 9 lakhs). The allocation to Reserve Fund is Rs. 7.45 lakhs (Rs. 2.5 lakhs). The dividend is only 7 per cent against 20 per cent. The amount carried forward is lower at Rs. 73,263 against Rs. 1,44,370 brought in.

* * *

Cambodia Mills Limited, is perhaps the only case of a mill which has reduced the ordinary dividend from 70 per cent in 1943 to only 7½ per cent in 1944. The managing agents seem to have been rather hasty in their dividend policy in regard to the profits of 1943. The net profit, before providing for taxation and depreciation, for 1944 is only Rs. 27.41,103 against Rs. 51.64.208 for the previous year. On account of the smaller provision for taxation in the previous accounts, the amount set aside for this purpose in the latest balance-sheet is as much as Rs. 21.4 lakhs. Provision on the last occasion was Rs. 39.3 lakhs. The amount set aside to depreciation is Rs. 1,15.093 against Rs. 1,17,027. Allocations to funds are higher at Rs. 4.72 lakhs (Rs 3.4 lakhs). The dividend, as stated above, has been reduced to 7½ per cent from 70 per cent. The amount carried forward is the small sum of Rs. 12,470 against Rs. 80,550, brought in.

* * * *

Balmer Lawrie & Company Limited, has done very well in the last year. As the company again experienced an active year's trading and all works and factories were employed to full capacity the profit before providing for taxation and depreciation is higher a Rs. 40,06,655 against Rs. 35,60,655 for the previous 12 months. After providing for taxation Rs. 26,85,887 against Rs. 23,15,365, for depreciation Rs. 1,81,629 against Rs. 1,09,748 and transferring to reserve Rs 1.68 lakhs against Rs 1.24 lakhs

Government Scheme for Post-War Industrial Development

Its Effect on Stock Markets

(By Analyst)

Bombay, April 26.

The Government notification, a couple of days ago, regarding industrial development in the post-war period, was misunderstood in the first instance and every one thought that most of the key industries will be immediately taken over by the Government. Sir Ardeshir Dalal's explanation that the proposals are more in the nature of centralisation of industries rather than nationalisation seems to have brought some relief to many businessmen and also to many professional operators in Dalal Street.

Now that most of the railways have been taken over by Government, other public utilities, particularly electric companies, might become State-owned very shortly. Key Industries like Steel, Ship-building, Automobile etc., might come under the jurisdiction of the Central Government; but I am sure Government will think thousand times before taking up the management of such industries since most of us are aware what Government management is. It is good that Sir Ardeshir Dalal has clarified this issue by issuing a further statement on Thursday regarding this point. Every one is glad to note that Government are prepared to give active assistance in the shape of loans, share of capital, guarantee of dividends etc., to industrialists and thus encourage them in the promotion of new industries.

The news that the Government propose to set up a machinery without delay for the investigation of claims of protection not only of such industries as were given assurance of such protection in 1940 but also a large number of other industries which have helped to sustain national economy during the war, should be welcome to one and all, particularly to the industrialists who have promoted new industries in the last two years. I also welcome the proposal to form an Industrial Investment Corporation on the lines of the London Finance Corporation in order to give a kind of fillip for the industrial development of the country in general. Whatever may be the criticisms of of several capitalists, I welcome this communique of the Government and some good will result particularly in view of the fact that Sir Ardeshir Dalal is at the helm of affairs in the Development and Plainning Department. Of course, genuine post-war industrial development will definitely depend on our getting a National Government at an early date.

Just at the time when the Government of India is seriously considering the question of post-war industrial development, Travancore seems to have scored by well-laid out plans for the industrial development of the State, incidentally helping British India also by the encouragement the State affords for the new industries.

A few years ago, Travancore would mean to businessmen or a stock exchange operator, a State full of plantations, mainly rubber, tea, a little of coffee, cardamoms etc. In recent years, Travancore Sugars and Chemicals have come up very well, particularly after the management was taken over by Messrs. Parry and Co. Later, the Travancore Plywood Company was floated by an Ahmedabad Knight. A few months ago, it was known that Travancore Government have come to an arrangement with the Scindia Steam Navigation Co. Ltd. and a steam navigation company, partly with Scindia capital and partly with Government capital, was formed even before the flotation of this Company. Fertilisers and Chemicals (Travancore) Ltd., was first promoted under the managing agency of Messrs. Seshasayee Bros. with a paid-up capital of Rs. 25 lakhs with the Government holding over 50 per cent of the paid-up capital. Very recently a further issue of Rs. 2 crores was made with a view to establish a larger factory in Travancore for the manufacture of 50,000 tons of Sulphate of Ammonia. Out of this issue, the Government of Travancore agreed to subscribe shares worth Rs. 1 crore, Cochin Government Rs. 5 lakhs, and the Madras Government Rs. 20 lakhs. The balance available for public subscription was Rs. 75 lakhs and this was oversubscribed on the opening day i.e., on the 16th of this month.

Immediately following this industry, Travancore Electro-Chemicals and Industries Ltd., has been started under the auspices and patronage of the Government of Travancore for the manufacture of carbon materials like electrodes, carbon rods, plates etc., etc. I understand that the first Board meeting was held at Ooty on the 9th instant under the Chairmanship of the Dewan of Travancore and the Government of Travancore agreed to take Rs. 2 lakhs out of the total paid-up ordinary capital of Rs. 9 lakhs. Rs. 1 lakh was taken up by a few prominent Travancoreans. Out of the balance of Rs. 6 lakhs a few of the Directors and their friends have taken up Rs. 3 lakhs and the balance of 3,000 Ordinary shares are now offered to the public and the list opened on Thursday, April 26. I hear that the list is being kept open for three days as per rules of the Bombay Stock Exchange in order to enable the Company to have the shares listed in the Bombay market, particularly in view of the fact that four Directors of the Company emanate from Bombay. The Government of Travancore have given valuable concessions in the form of land and cheap power and have promised full co-operation. The Government of India also have given the necessary priorities and I hear, are anxious that the Company should start production at an early date. The management will be in the hands of a scientist, Mr. Bhandarkar, who has spent several years in perfecting the process of carbon manufacture and the technical advisers will be the Council of Scientific and Industrial Research, since this Company has agreed to pay a Royalty to the Council of Scientific and Industrial Research on the sales of carbon and graphite electrodes.

When I heard that Travancore was forging ahead at a very fast rate, curiosity led me to make enquiries and I found that Travancore was planning to start several new industries under the leadership of the enlightened Dewan Sir C. P. Ramaswami Aiyar. I understood that a leading Madras industrialist is trying to start a new rayon industry on a very big scale. In Travancore several other new industries are also under contemplation and it would be no surprise if the Travancore State comes out with a state Bank like Mysore.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 27

Generally steady conditions were noticeable on the Calcutta Stock Exchange till Wednesday this week. Further successes of the Allied armies have again had no impression on markets. As a matter of fact, the announcement regarding the policy of industrial development in the postwar period was taken as an indication that Government meant business and that the expectation of a higher level of industrial activity in the postwar period would be fulfilled even if only a part of the plans were put into effect. Jute shares have been the feature of the week with a rise of 15 to 20 points in the bigger denomination shares. As there were some doubts regarding the future of the Coal industry, that is about Government's policy towards the industry, coal shares were rather quiet. In the jute section generally easier conditions were noticeable in Thursday's session and prices were marked lower. The general undertone, however, is steady and a better feeling is noticeable in the market at the time of writing. On the announcement of a higher interim dividend Indian Irons improved to Rs. 40/10 but as it was said that the final dividend might be correspondingly lower the rise in prices was not well held. The close, however, is higher on balance at Rs. 40/4. Among other sections, Sugar shares have been slightly better with Ramnugger Cane & Sugars done up to Rs. 15/8.

The giltedged securities section has been steady throughout the week though business passing has been on a smaller scale. 3½ per cent Paper was very firm the quotation being marked at one time as high as Rs. 100/8. With Reserve Bank selling the quotation is lower at Rs. 100/1. Among terminable loans, 3 percent Bonds 1946 were Rs. 102/7, 3 percent 1949-52 Rs. 101/12, 3 percent 1953-55 Rs. 100/8 and 3 percent 1963-65 Rs. 99. 3 percent 1957 were quoted at one anna premium, 5 percent 1945-55 at Rs. 102/1 and 4 percent 1960-70 at Rs. 112/7. Among Provincial Loans, 3 percent U. P. Loan 1952 was crossed at Rs. 100/2. Easy conditions have continued to prevail in the money market but the Central Government has not been able to get its requirements of treasury bills at the previous week's rate and there is a rise of one anna to six annas and nine pies percent.

Bank shares were slightly better with *Imperial Bank* fully paids at Rs. 1962. *Reserve Bank* were Rs. 133, *United Commercial Bank* Rs. 20/4 premium, *Calcutta National Bank* Rs. 15/8, and *Hooghly* new ordinary Rs. 13.

Textile issues have been slightly better with *Elgin* done up to Rs. 64/8 and *New Victoria* Rs. 7/5. Closing quotations, however, are not very much changed on balance. *Cawnpore Textiles* were Rs. 12/13, *Elgin* Rs. 63/14 and *New Victoria* Rs. 7/5. *Bengal-Nagpur* were noted at Rs. 40/2 and *Dhakeswari* at Rs. 27.

Coal shares have been neglected, the statement to the effect that the problems of the coal industry will be dealt with separately having a discouraging effect on the market. *Burrakur* came down to Rs. 41/7 from Rs. 42/4 earlier in the week and *Equitable* to Rs. 67/12 from Rs. 68/4. *New Beerbhoom* were 8 annas lower at Rs. 39 and *South Karanpura* at Rs. 29/11. *Standard* were unchanged at Rs. 43 and *Bhulanbararee* at Rs. 32/6. *Bokaro & Ramgur* were a little quieter at Rs. 48/4 but *Central Kurkend* were fully steady at Rs. 38/12. *Bhalgora* were uninteresting at Rs. 19/10 and *Talcher* at Rs. 11/8.

As mentioned above, the Jute section has provided the feature of the week, the expectations of an increase in the rate of exports and the improvement in the coal situation

and to carry forward ..	12,469	11	0

During the year under review good trading conditions continued to exist and the Company was able to market its full production at ceiling prices fixed under the Government Cloth and yarn Control Ordinance of 1943. It may here be mentioned that during 1944, these ceiling prices were three times reduced and this naturally had an adverse effect on the margin of profit on yarn sold as, productional costs, although lower, have not decreased in the same proportion as yarn prices have done.

The Company has continued to receive orders for war purposes from Government Departments and special orders from the Madras Handloom Weavers' Provincial Co-operative Society Ltd., which were executed in full.

Chairman.—Mr. W. K. M. Langley.

CARRON TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1944.

They disclose a profit of Rs. 1,26,135-0-5. On transfer of this sum to Profit and Loss Account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 1,62,422-1-1, of which the directors have transferred Rs. 10,000-0-0 to Reserve.

An interim dividend of 10 per cent. was paid on 17th November last and it is now proposed that a final dividend of 55 per cent. be declared at the annual meeting, leaving Rs. 54,922-1-1 to be carried forward.

Crop made was 6,226 maunds as against 6,962 maunds in 1943 and the average price was 13 annas 5 pies per lb. compared with 12 annas 4 pies per lb. in the previous year.

Planted Area remains at 603.32 acres.

Estimates for 1945 provide for a crop of 5,500 maunds at an outlay of Rs. 2,99,159-0-0, including inland freight and sale charges.

(*Annual General Meeting on 5th July, 1945 at 12 noon. Books closed from 18th May to 5th June, 1945*).

The Company has again experienced an active year's trading. All Works and Factories have been employed to full capacity, whilst the turnover of the merchant business has continued to be satisfactory.

Towards the close of the year, the long connection with the Calcutta Ice Association Ltd. came to an end, as a result of the sale of the Ice Factory. The sale involved the discontinuance of the business of the Association and it was put into voluntary liquidation.

During the year, the Clive Street Central Property, Ltd., which the Company were the beneficial owners of the whole of the share capital, was wound up, the Company having served its purpose, and become merely a source of extra expense in the form of double taxation. As a result the heading, "Investment in Subsidiary Company's Shares," has disappeared from the Balance Sheet. In its place, the cost of the Land and Buildings taken over, have been included under the Fixed Assets, and, per contra, the surplus realised on the liquidation has been credited to a Property Reserve, to which, in addition, an appropriation of Rs. 60,000 from the year's profits has been placed.

	Rs.	As.	P.
The profit for the year, after providing for Taxation was ..	11,20,987	1	2
To which is added the balance brought forward from 1943 of ..	3,64,664	9	3
Total Rs. ..	14,85,651	10	5

Out of this total the Directors paid the Preferential Dividend on the Ordinary Shares amounting to Rs. 1,50,035 on the 23rd September, 1944, and have transferred to the Reserve Fund Rs. 1,50,000, leaving a balance of Rs. 11,85,616-10-5 available for distribution which they recommend be dealt with as follows:—

	Rs.	As.	P.
Final Dividend of 7½ per cent. on the Ordinary Shares	2,25,052	8	0
Dividend of 7½ per cent. on the Deferred Shares	75,000	0	0
Bonus of 12½ per cent. on the Ordinary and Deferred Shares ..	5,00,087	8	0
Balance carried forward	3,85,476	10	5
Total Rs. ..	11,85,616	10	5

Director.—N. Airth Grant.

BHARAT COLLIERIES LIMITED DECLARATION

NOTICE

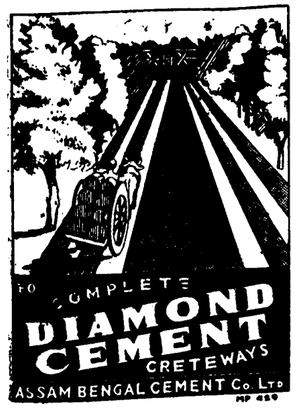
is hereby given to all the Ordinary Share-holders of Bharat Collieries Ltd., that the Directors of the Company have declared an ad-interim dividend at As. 4 per ordinary share payable on or after the 1st June, 1945, to those shareholders whose names appear in the books of the Company on the 31st May, 1945, and have also resolved that the transfer books of the Company be closed from 20th May, 1945 to 31st May, 1945, both days inclusive.

By Order,
S. P. JAIN,
Managing Director.

GOVERNMENT OF INDIA
DEPARTMENT OF SUPPLY TENDER

NOTICE

The Controller of Supplies (Disposals), 2, Fairlie Place, Calcutta, invites offer for the purchase and removal of 590 Cwts. of serviceable Activated Charcoal available at the Gun and Shell Factory, Cossipore. Intending purchasers may inspect the store at site between 10 a.m. and 1 p.m. on any working day. Tenders should be submitted in purchasers own forms and enclosed in sealed cover superscribed "Tender No. CDD/CHM-3" should reach the office of the Controller of Supplies (disposals) on or before 4 p.m. on 1-5-45 and should remain open for 30 days thereafter. All sales will be made subject to the conditions of contract copies of which are obtainable from this office on request."



THE INDIAN IRON & STEEL CO., LTD.

Notice is hereby given that an Interim Dividend of Ten Annas per share on the Ordinary shares of the Company ranking for dividend for the year ended 31st March, 1945, has been sanctioned by the Board. The Transfer Books of the Company will be closed from 18th May to 1st June, 1945, both days inclusive. Payment will be made on and after the 12th June, 1945, to those Members or their Mandatees whose names appear on the Registers on the 17th May, 1945.

In sanctioning the above interim dividend of Ten Annas, per share, the Directors have acceded to the request made by shareholders at the last Annual General Meeting of the Company, namely, that the amount of the first interim dividend should be enhanced so that the difference between the amount of the first and second interim dividends should not be as great as in past years.

Shareholders should therefore clearly understand that the increased interim dividend is made in deference to the shareholders' wishes, and the enchanced payment now sanctioned in no way indicates that excessive trading results have been achieved during the year.

By Order of the Board,
BURN & CO.,
Managing Agents.

ANGLO-INDIA JUTE MILLS CO., LTD.

NOTICE is hereby given that the Fifty-seventh Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, 101, Clive Street, Calcutta, on Friday, 18th May, 1945, at noon for the following purposes:—

1. To receive the Report of the Directors, and to pass the Audited Accounts for the half-year ended 31st March, 1945.
2. To declare dividends.
3. To elect Directors.
4. To transact such other competent business as may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from 6th to 18th May, 1945, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board of Directors,
DUNCAN BROTHERS & CO., LTD.,
Managing Agents.

Calcutta, 28th April, 1945.

RESERVE BANK OF INDIA

Central Office,
Bombay.
The 23rd April, 1945.

NOTICE.

It is hereby notified that the Shares Registers of the Bank will be closed and the registration of transfers suspended from the 8th June, 1945, to the 30th June, 1945 (both days inclusive).

(Sd.) C. D. DESHMUKH,
Governor.

(*Continued from Page* 569)

the dividend on ordinary and deferred shares have been maintained at 25 and 20 per cent respectively.

The conversion of the Calcutta Tanneries, Limited into a public company is recorded in an announcement describing the limited offer to investors of both preference and ordinary shares. The sequence of events in the local tanning industry can be duly related to the conversion which duly brings about the introduction of the CTL mark to investors who might learn that the saying there is nothing like leather has today wider and more interesting application than presumed. Gearing is conventional so that the preference dividend is very well covered and the 5 per cent tax-free capital is limited in proportion to the ordinary capital of which part has been already subscribed for. The Calcutta Tanneries of Kanknarrah is long distinguished as a progressive undertaking, and the investor's participation therein should be well rewarded since tanning will appear a business singularly removed from peacetime risks.

WATCH-DOG.

(*Continued from Page* 570)

being mainly responsible for the greater interest in these shares. *Howrah*, on further speculative buying touched a new high level of Rs. 93. On Thursday there was a setback to Rs. 92/2 but the quotation is again better at Rs. 93/4. *Anglo-India* improved to Rs 485 from Rs. 477 but closed at Rs. 481. *Auckland* rose by 10 points to Rs. 340. *Budge-Budge* were 23 points higher at Rs. 543. With selling at the higher levels there was a setback to Rs. 532/8. *Caledonian*, likewise, improved to Rs. 588 but closed at Rs. 580, *National* were done up to Rs. 35/6 from Rs. 34/12 only to close at the latter level. *Nellimarla* are quoting Rs. 34/11 after being higher at Rs. 35/2, *Nuddea* have retained their gains being marked up to Rs. 131. There has been good buying of *Reliance* business being reported up to Rs. 78/4. *India* were 15 points better at Rs. 715 while *Hukumchand* were well held at Rs. 45/8. Both Kanknarrah and Kamarhatty rose by 15 points, *Kamarhatty* especially were noted as high as Rs. 722.

In the Engineering section, the feature of the week is the announcement by Indian Iron & Steel Company of the payment of an interim dividend of 10 annas per share for the year ended March, 1945 against 6 annas per share for the previous accounting period. In declaring the dividend, the directors have stated that the increase in the distribution is in deference to the request made by the shareholders for a smaller difference between the first and final payments. It is thus said that the higher interim dividend is not necessarily due to increased profits and that the shareholders would not be justified in expecting a higher final dividend. On the news of the dividend payment there was a rise in the quotation for Indian Irons to Rs. 40/10 but subsequent selling has resulted in a setback to Rs. 40/4. In sympathy with Indian Irons, Steel Corporation improved to Rs. 32/14. They are now quoting Rs. 32/10. *Jessop* & Co. were very steady at Rs. 25/4 while *Braithwaite* were very quiet at Rs. 11/13. *Kumardhubi Engineering* were Rs. 10, *Indian Steel & Wire Products* deferred Rs. 36/8 and *National Iron and Steel* Rs. 11/8.

In the Sugar ection a slightly better sentiment was noticeable with *Balrampore* being done at Rs. 16/4. *Cawnpore* were Rs. 36/6 and *Murree Brewery* Rs. 26/4. *Ramnugger Cane & Sugar* have been in special request and done up to Rs. 15/8 from Rs. 14/12. *U. P. Sugar* were neglected at Rs. 26.

There was practically little or no business in Tea shares. The reports that prices for tea for internal consumption will be controlled had a discouraging effect but it has since been decided that there is no need for control over prices and that the affairs of the industry do not call for any further interference. The prospect of lower dividends, however, has prevented buyers from entering the market. *Bishnauth* were quoted Rs. 44/4 *Patrakola* Rs. 1,330, *Tezpore* Rs. 21/6 and *Central Cachar* Rs. 110. *East India* were not very much better at Rs. 17/2.

UPPER JUMMA VALLEY ELECTRICITY SUPPLY COMPANY, LD.

NOTICE is hereby given that the Twenty-Ninth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday, the 16th May, 1945, at 11-0 A.M. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-year ended 30th September, 1944, and to transact any other ordinary business of the Company."

BOUQUETS & BRICKBATS

(From our Readers)

Retired Officials of Imperial Bank:

Your reference to retired officials of the Imperial Bank of India needs to be amplified. It is true that, except with the permission of the Bank, no retired Officer can accept an appointment in another bank unless he is prepared to forego his pension. But the fact, which is important to note and which has not been mentioned by you, is that the pension is kept in abeyance only during the period the Officer is employed in another bank and is resumed as soon as he gives up this employment.

This procedure is in accord with that in Government service. If a retired Government Official is re-employed, he does not, while so employed, draw any pension. During this war, many officers who had retired from Government service have been re-employed on such conditions.

There are, it is true, some cases where a special salary has been fixed in addition to pension. In the case of the Imperial Bank also, special arrangements of this kind can be cited.

"FAIRPLAY."

* * * *

I am astounded to hear that Indian officials of the Imperial Bank retire while they are still in their forties. Is their retirement voluntary? If so, it needs to be elucidated as to why officials who can serve until 55 retire a good few years earlier.

I take it that an official qualifies for pension after he has completed 25 years' service; that, however, there is no kind of compulsion that he should retire, once he becomes eligible for pension; that the retirement age is really 55; and that, if he chooses, he can stay in service till 55.

In other words, an official has the option of retiring after qualifying for pension but has the right to continue in service till 55. Why do Indian officials prefer to avail themselves of this option rather than exercise the right? Is the answer to this question connected with the poor prospects open to Indians even if they serve full term?

"SPHINX."

* * * *

2½ per cent Borrowing Rate:

You have made a valiant effort to cover up the partial failure (or, if you prefer it, the partial success) of the First Development Loan. Your thesis is ingenious; but I am not so sure if it is convincing. All the same I admit that the unsubscribed portion (which is now taken up on Government's investment account) will be easily disposed of through the tap.

For my part, I would have preferred a more reassuring success for a loan which has been definitely linked with (Post-war) development. There must be many more Development Loans; and it is up to the authorities to create the conditions which will ensure a better fate for them. Repayment of 3½ per cent Rupee Paper must certainly help in this objective.

You talk glibly of a 2½ per cent borrowing rate. Do you realise that savings under these conditions have to be trebled if a retired man wants to get now the yield that he deemed necessary, say, in the last war?

INTEREST-ED

Bird in the hand—

The policy of co-operation in the sphere of Industrial Development for the mutual benefit of India and Great Britain advocated by you in your gossip in the Indian Finance dated 21st April, 1945 is the most sensible thing under the existing circumstances. Where India stands to benefit more than 50 per cent in the form of profits and the payment of wages to the Indian labour there should be no hesitation in co-operating with British Industrialists. Such joint working will not only benefit the country economically but may also prove beneficial politically. A strong organisation of British and Indian industrialists will successfully prevent the forces of disruption breaking the country into pieces. It is time indeed that our Indian industrialists forgot the past bitterness and followed this new policy for the mutual benefit of the two countries.

SAJJAN SINGH, M.Sc.

* * * *

Inflation and Posterity

Inflation has more far-reaching consequences than usually supposed. The nourishment of the rising generation is impeded by the exhorbitant prices which force parents to neglect the adequate nourishment of the children. These ill-nourished children, when they grow to be young men and young women, are sure to be very weak and immature; and they will not be able to face the world as they should face it. This is one of the greatest problems that arise from inflation. It needs proper attention by the parents as well as by the State.

The history of the German inflation of 1922-23 is a good example of the damage done to children by the meteoric rise of prices.

The emblem of Quality

This emblem is your guarantee of high quality in small tools.

Dagger Brand Tools are manufactured under expert supervision in the largest and best equipped tool factory in India. In quality these compare favourably with the best imported tools and conform to B.S.S. Prices are most reasonable and always competitive.

BOUQUETS & BRICKBATS

During periods of inflation the superior food stuffs are substituted by the inferior and imitation products. This leads to malnutrition. Thus in India to-day wheat and rice have been replaced by gram and bajra in some poor families; the consumption of meat, eggs, butter, cereals and other energising things has fallen considerably. Similarly vegetable ghee has been substituted for cow's ghee. All these have a great bearing on the future of India.

The present generation has not been impinged as much the next generation (children below 10 years) is being impinged. The older people may or may not but they are suffering and may not be able to recover so early. We should not lose sight of this side of the problem and shoud give it the attention it requires.

D. B. SRIVASTAVA.

* * * *

Your correspondent, who has referred to the attitude of the Imperial Bank with regard to the re-employment of retired officials in other banks, has raised an issue which is of much wider significance than as a mere whim of the Bank authorities. I shall narrate two instances which go to show a most undesirable policy.

Mr. Sivasankara Mudaliar was a senior staff officer who retired in the thirties. A few months after his retirement, the Reserve Bank offered him a special job; and this special work was connected with Sir Osborne Smith's decision to have a study made of the efficient branch-banking service of South Indian banks with a view to strengthen their hands further in this important work and with a view to introduce similar banking practices elsewhere.

Mr. Mudaliar was asked to undertake this study; and the Imperial Bank allowed him to accept this job without losing his pension. Sir Osborne's successor had no such faith in branch-banking studies; and one of the banks, which were to be included in this study, was subjected to a heavy raid over a period of three months during which the Reserve Bank authorities did not lift their little finger—did not so much as arrange for the Governor or Deputy Governor to proceed to the spot to examine the position. The bank closed its doors; and Mr. Mudaliar, who had been appointed as the underwriter of the future prosperity of South Indian Banks, became the undertaker of one of these banks. He has not finished the funeral rites; and he continues to get the Liquidator's salary plus the pension from the Imperial Bank.

In your last issue, you have eulogised the ability of Mr. Subbiah Pillai, who, retiring from the Imperial Bank some months ago as a Staff Officer, has now become the General Manager of the Indian Overseas Bank. And my information is that the Imperial Bank has refused to permit him to draw pension while in the service of the Indian Overseas Bank.

The moral is simple: The Imperial Bank will allow its retired officials to be associated with dead banks, but not with live banks.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions have continued to prevail in the money market with call rates nominally unchanged at ½ per cent at Calcutta and ¼ per cent in Bombay. It would appear that banks have large surplus funds at their disposal especially as deposits have shown a tendency to increase in recent weeks. But there is a disposition to place money either in treasury bills or in government securities as there is an anxiety to keep large cash resources on hand ready for any emergency. Also, with the excess of the treasury bills sales over maturities since the beginning of April there has been a net addition to investments in short-term bills. At the auctions held this week bidding was naturally not very keen even though applications were very much higher at Rs. 7.67 crores against Rs. 5.15 crores. The average discount rate has increased for the third week in succession though the latest rise is only fractional at six annas and eleven pies per cent per annum. The offer for next week has again been maintained at Rs. 4 crores.

The returns of the Reserve Bank relating to the period ended April 27, 1945 again do not show any addition to the note issue, the total being slightly higher at Rs. 1,118.18 crores owing to the increase in the amount of rupee coin. Notes in circulation are actually lower by Rs. 1.66 crores to Rs. 1,107.03 crores.

In the banking department, Central Government balances have declined by Rs. 2.33 crores as also other Government accounts by Rs. 3.72 crores. As a result, bank balances with the Reserve Bank are higher by Rs. 5.14 crores at Rs. 26.00 crores. There is a decrease in the holdings of Treasury Bills by Rs. 2.8 crores to Rs. 6.18 crores. Foreign balances have risen to Rs. 396.89 crores from Rs. 394.19 crores. Investments do not show any change.

The statement of the Imperial Bank for the same week reveals an increase of about Rs. 1 crore in deposits. Advances also have improved by Rs. 3.03 crores to Rs. 72.24 crores. Cash balances as a result have declined to Rs. 27.04 crores from Rs. 29.18 crores.

The statement of Scheduled Banks for the week-ended April, 20, 1945 contains an important correction relating to demand liabilities. It was rather surprising to note that in the week ended April 13, 1944 it was stated that demand liabilities had sharply declined. The figure of Rs. 597.91 crores, however, has now been corrected to read Rs. 605.23 crores. There is a further increase in the latest return to Rs. 606.94 crores. Time liabilities have continued to improve. the latest figure at Rs. 234.43 being higher by Rs. 1.24 crores over the previous week. With the slight decrease in advances and the larger working capital one would have expected an increase in cash balances but they are sharply lower. Balances with Reserve Bank are Rs. 78.01 crores against Rs. 94.66 crores. Cash on hand, however, showed an increase to Rs. 30.47 crores from Rs. 29.2 crores. The decrease in total cash balances must have been due to the net addition to the floating debt and fresh investments in Government Securities. Both advances and bills discounted show a small decline.

Through a short notice question, Mr. Manu Subedar raised an important issue in the recent session of the Assembly with regard to the Hydari Mission. He suggested that consumers, merchants and industrialists in India were all interested, from their own points of view, in full particulars of the commodities which had been contracted for so far, price per unit, and the machinery through which they would be distributed. Will Government issue every month full particulars of the goods which are due to arrive from time to time? The Government will do well to do so in their own interest. The main criticism against the Hydari Mission is that the British goods imported into India as a result of its efforts might compete with Indian goods and might adversely affect the Indian industries. The best answer to this criticism is to furnish from time to time information, which will prove that the commodities imported are not goods that are being made in India or are goods which are in definite shortage. This monthly bulletin will be welcome as valuable addition to available economic data.

On an earlier occasion it was pointed out that the frequent additions to currency might be for the use of the liberating forces in Burma. It was stated during the week that till recently the liberating forces were making payments in rupee currency and that, as from the beginning of this month, the British Military Administration would be issuing its own currency. It is also said that the old Burmese notes of all denominations, except Rs. 1,000 and Rs. 10,000, will be legal tender and that all the three currencies will circulate side by side and at par with one another. It will be remembered that after the complete Japanese occupation of Burma notes in circulation to the extent of Rs. 28.72 crores, shown in the Reserve Bank returns were omitted and the amount was kept by the Government of India in suspense. How exactly the authorities would decide on the Burmese currency policy when civil administration is restored is not clear.

The Exchange market is steady with a large number of export bills and some remittance demand.

Call money quoted ½ per cent in Calcutta and ¼ per cent in Bombay. 3 to 5 months ½ per cent; 6 to 11 months ¾ per cent and 12 months 1¼ per cent.
